

**Report to the North Carolina General Assembly
Joint Legislative Oversight Committee on Natural and
Economic Resources, the Environmental Review
Commission, and the Fiscal Research Division**

***Report on Individually Permitted
Discharging Systems***

October 1, 2024

Division of Water Resources

**NORTH CAROLINA DEPARTMENT OF
ENVIRONMENTAL QUALITY**

Pursuant to G.S. 143-215.9A(a)

Status Report on Individually Permitted Discharging Systems For the Period Beginning July 1, 2023 and Ending June 30, 2024.

Summary

North Carolina General Statute (N.C.G.S.) 143-215.9A requires the Department of Environmental Quality to report to the Environmental Review Commission and the Fiscal Research Division on the status of facilities discharging into surface waters during the previous fiscal year. Facilities discharging into surface waters are required by N.C.G.S. 143-215.1 to first apply for and secure a permit from the Environmental Management Commission. As a result, the data provided within this fiscal report is captured for those facilities individually permitted with National Pollutant Discharge Elimination System (NPDES) permits.

The attached report details the inspections completed and the enforcement actions taken in North Carolina during fiscal year 2023-2024 by the Division of Water Resources. In addition, information on Special Orders by Consent is included. The report also includes a table showing the number of permits issued by region and the names and locations of the individually permitted discharging facilities.

The attached tables list totals for each of the Department's regional offices as well as State totals. The regional offices are noted as follows:

- ◆ ARO – Asheville Regional Office
- ◆ FRO – Fayetteville Regional Office
- ◆ MRO – Mooresville Regional Office
- ◆ RRO – Raleigh Regional Office
- ◆ WARO – Washington Regional Office
- ◆ WIRO – Wilmington Regional Office
- ◆ WSRO – Winston-Salem Regional Office

If any additional information or clarification is needed, please contact Sydney Deuterman via email at sydney.deuterman@deq.nc.gov or by phone at (919) 707-3712.

CONTENTS

Table 1	Enforcement actions taken, Civil Penalties assessed and collected, and Remissions Requested from July 1, 2023 through June 30, 2024.
Table 2	Permits Issued and Inspections completed from July 1, 2023 through June 30, 2024.
Table 3	Special Orders by Consent (SOCs) active and pending from July 1, 2023 through June 30, 2024.
Table 4	Names and locations of individually permitted discharging facilities as of August 1, 2024.
Table 5	Violation information for each inspection completed from July 1, 2023 through June 30, 2024. (Sent as a separate Excel file for readability)
Addendum	Support information

ADDENDUM

The following is provided to support the information in the above status report.

- The Division of Water Resources does not have the data or management system in place to currently track information on the number of violations found during each inspection, the date of the violation, or the nature of the violation. Therefore, at this time, the Division is unable to provide such information as requested in the amended G.S. 143-215.9A(a)(3).
- As found in Table 2, “Other Inspections” include:
 - **Audit Inspections**, a comprehensive review of all elements of a municipal’s pretreatment program including a records review & an inspection of an industrial facility conducted once every 5 years;
 - **Bioassay Compliance Inspections**, evaluates the biological effect of a permittee’s effluent discharge on test organisms using acute and chronic toxicity testing;
 - **Compliance Sampling Inspections**, a sampling inspection designed to verify the permittee’s compliance with applicable permit self-monitoring requirements -- analytical results from representative samples collected during the inspection are used to evaluate the permittee’s compliance;
 - **Diagnostic Inspections**, focuses on Publicly Owned Treatment Works that have not achieved permit compliance – the purpose is to identify the causes of noncompliance, suggest immediate remedies, and support current or future enforcement action;
 - **Operation & Maintenance Inspections**, focuses on the operation and maintenance aspect of a facility;
 - **Performance Audit Inspections**, inspections that include actual observation of the permittee performing the self-monitoring process from sample collection and flow measurements through laboratory analyses, data work-up and reporting;
 - **Pre-Treatment Inspections**, an annual inspection of a municipal’s pretreatment program; and
 - **Toxicity Sampling Inspections**, same as CSI – however, increased emphasis is placed on toxic substances regulated by the NPDES Permit.
- Effective July 1, 1998, the Director of the Division of Water Quality delegated each Regional Water Quality Supervisor the authority to sign all Civil Penalty Assessments for fast-track enforcement actions for violations of NPDES Permit effluent limits and/or monitoring frequencies in accordance with NCGS 143-215.6A.
- As found in Table 1, “Other Permit Condition Violations” may include
 - discharge violations (resulting from collection system overflows);
 - submitting late Discharge Monitoring Reports; and
 - permit condition violations (examples, violations of pre-treatment program, improper operation & maintenance of treatment works, or by-pass of treatment works)
- Due to the length of the post assessment process, total civil penalties assessed and total civil penalties collected will not coincide.

Table 1
Status of Civil Penalty Assessments
For the Period Beginning July 1, 2023, and Ending June 30, 2024*

	ARO	FRO	MRO	RRO	WARO	WIRO	WSRO	State Totals

VIOLATION COMMENT

Only one clarifier was fully operational and the drive unit was not functioning properly at the time of the inspection. The loading dock for the chlorine building was showing signs of being structurally unsound. The sulfur dioxide gas cylinders were kept outside at the time of the inspection which leads to corrosion of the valve

Currently, sampling is time-based (100 mL/hour). Per the permit, flow-proportional composite sampling is required. Currently, sampling is time-based (100 mL/hour). Per the permit, flow-proportional composite sampling is required.

Semi-annual samples had IUP parameters #7-9 missing for Exela Augusta (IUP 0020).

Each SBR tank holds only 100,000 gallons therefore, both SBR tanks need to be operational to be in accordance with

The dechlorination area is difficult to sample because it is a continuous stream flowing that is difficult to reach from the
The thermometer was broken in the composite sampling fridge.
There was no thermometer in the composite sampling fridge.

The Annual Wastewater Performance Report has not been done. See summary for details.

Effluent was brown and turbulent.

Excessive grease was observed within the EQ basin. All alarms were operable, but located within a shed where the
Only one of the blowers is operational for the aeration basin and there is no backup available. There were no solids observed
Rags were observed in the digester. There were no solids observed in the digester at the time of the inspection.
Total residual chlorine levels (398 micrograms/liter) were well-above the permitted amount (50 micrograms/liter).
The bar screen does not appear to be adequately filtering rags and larger debris from entering the plant. Multiple rags
The manual bar screen is undersized and ineffective, despite regular cleaning. A recent clog in the sludge return pipe

The ORC did not take document the overflow from the digester or pumping activities that occurred on 2/13 and 2/15
The sludge blanket within the clarifier is not an acceptable depth (6in of 7ft depth).

There were excessive solids observed in the chlorine contact chamber (1ft of solids of 3ft depth) and chlorine levels
There were excessive solids observed in the chlorine contact chamber (1ft of solids of 3ft depth).

There were no solids present at the time of the inspection. Only one of the two blowers is operational.

The effluent flow was not being measured by an approved method.

The UV bulbs need to be cleaned at least annually & extra UV bulbs need to be kept onsite or be available at the OF

At the time of the inspection, the sludge blanket level in clarifier #1 was 10 ft. out of 13 ft. In clarifier #2 the blanket le

The facility keeps up to 1500 lbs of chlorine on-site. At the time of the inspection, the sludge blanket in chlorine conta

The generator does not run the blowers in the digester. The digital gauge reading was 0 at the time of the inspection

The primary clarifiers are essentially being used as pass-through basins. The solids level is still very high as indicate

Solids continue to be high throughout the plant.

Analytical results are not consistent with the data that is being reported on DMR's.

Composite sampling is not flow-proportional.

There was evidence of leakage of untreated raw sewage somewhere between the school's collection system and the

There were no tablets in the chlorinator tubes at the time of the inspection. Chlorine & de-chlorinating tablets need to

The chlorine contact chamber was full of sand/solids. The contact chamber has a depth of approximate 4 feet accor
The ORC stated that no one knows where the outfall is located.

The WWTP has two large sand filter beds. One filter bed had clear ponding, uneven distribution, and organic matter
At the time of the inspection, the sand bed had excessive ponding and algae growth.

The composite sampler is not set to do flow-proportional sampling.

Rusted grating is a safety hazard.

Sampler tubing was dirty and a new thermometer is needed.

The color of the activated sludge was slightly gray. Settleable solids levels at 30 minutes were 27% in Basin 1 and 4

The flow meter is overdue for calibration. It was last calibrated on 6/13/2023.

There was no clear supernatant in the clarifiers. Solids were not settling well and there was some bulking evident.

Chlorination tablets were not being used in either of the tubes.

No septic tank pumping records were available.

An updated IWS was conducted in 2022, but was not submitted to the Pretreatment Division. This will need to be co

Samples are not being collected by the POTW quarterly, which is the specified STMP frequency requirement. The S

The Headworks Analysis that was due 8/1/2023 has not been completed or submitted.

Both audible and visual alarms need to be operational.

Effluent pipe could not be found at the time of the inspection.

The settleable solids volume was 870ml/1000ml at 30 minutes for the aeration basin sludge.

The sign at the WWTP is obsolete and needs to be updated to reflect new ownership and contacts.
The standard pumps in the influent pump station are not working. A temporary line from the pump station to the WW
The effluent pipe could not be located during the inspection.
The EQ basin does not have a functioning audible alarm.

Due to the older model flow meter, the meter cannot accommodate flow proportional sampling. The composite sample
the settleable solids and sludge blanket levels are out of the standard operating range and the solids level need to be
James and James has not yet located the effluent pipe.
The secondary clarifier in the first plant has only a few inches of clear supernatant. The clarifier in the second plant
There were some solids in both chlorine contact chambers. Ms. James said that the contact chambers can be pumped
Effluent composite sampling is not flow-proportional.

Only one of the two blowers is working.
The permanent sampler is broken and a portable sampler is being used that is set for time-based composite sampling
The wall dividing the digester and aeration basins has a large rust hole in it that is allowing sludge to pass between them
At the time of the inspection, there was no thermometer in the sampling fridge.
At the time of the inspection, the high level visual and audible alarms were not working.
At the time of the inspection, the sludge blanket in the contact chamber was 1.5' out of 3.25 feet of water.
Effluent sampling was not conducted when the trout farm was in operation from around 2019-2021.

The solids continue to be high throughout the plant.
New pump installed one week prior to inspection. The visual alarm was not working.
Sludge blanket levels Train 1: 10' out of 11' depth and 6' out of 8' depth. Train 2: 10' out of 11' depth, and 7' out of 8'
Timed composite sampling is currently being performed rather than flow proportional sampling. Mr. Barr said the safe
Entry into the de-chlorination chamber is unsafe. Additional safety equipment should be installed.
Severely rusted gratings over the equalization basin are a safety hazard.
The tertiary filter plastic media sheets are broken and warped.
The current process for adding dechlorination tablets involves an unsafe confined space entry.
The generator is currently broken.
The metal gratings over some of the basins are extremely rusted and unsafe to walk on.
The tertiary filters are still warped and damaged, allowing shorting circuiting and pass-through of solids.

A de-chlorination system is required for this system.
A disinfection system is required for this system.

Septic tank pumping records were not provided.
System components could not be located, including the septic tank, sand filter, tablet chlorination unit, and effluent pump
Annual effluent sampling has not been conducted.
At the time of the inspection, no maintenance or pumping records were available.
The effluent pipe could not be located during the inspection.

The septic tank needs to be located, checked annually, and pumped at least once every five years.

At the time of the inspection, no tank pumping records were available, and it could not be determined if both pumps
At the time of the inspection, there were no dechlorination tablets in the tube or on the property.

The flow meter needs to be calibrated annually.

Samples are being collected every 30 minutes.

The June 2023 eDMR has not been submitted.

The annual report has not been completed.

The Division understands that the town has had some difficulty in employing certified operators. DWR records indicate

The February 2023 eDMR was the last monthly report that was submitted by the town.

Town of Troy has not been sampling for Oil and Grease at the approved frequency.

Failed to send the Administrative Order to NC DEQ Pretreatment Section

4 Expired Industrial User Permits, Incorrect detection levels on LTMP sampling, Lack of Toxic Organic Management

Clarifier is covered in duckweed with vegetation growing in the center well as well as in multiple locations throughout
Composite sampler not running so inspector could not verify temperature. Ice still used to maintain temperature inside

On eDMR for April 2024, the ammonia data point was incorrectly reported in date row for 22nd instead of 26th as listed. Analytical results reviewed were not consistent with eDMR reporting. Reviewed February 2022 and found: Conductivity. The automatic composite sampler set up at effluent's refrigerated cabinet thermometer appeared to read 6°C. The same automatic composite sampler set up at influent does not have a refrigerated cabinet or thermometer to inspect.

A Backup ORC was not designated within 120 days following the departure of the previous Backup ORC in December.

Both clarifiers and components (weirs, scum railing, skimmer arms, etc.) are severely rusted and deteriorated with old paint. The metal flooring for the shakers was severely rusted and deteriorated causing a potential safety hazard. The November 2022 eDMR was submitted late.

The facility staff were collecting time-based (constant time/constant volume) composite effluent samples. The facility staff were also collecting influent composite BOD and TSS samples. The subject permit requires influent composite BOD and TSS samples. The facility staff were collecting time-based

Time based composite samples were being collected however, the subject permit requires flow proportional. Please see the attached report for details. The City failed to properly implement the Pretreatment Program that include failures to perform SIU inspections in 2023.

The November 2022, January 2023 and March 2023 eDMRs were submitted late.

At time of inspection effluent was high in fine gray suspended solids with septic smell.

At time of inspection MLSS was gray with septic smell.

eDMR's have not been submitted for this facility from October 2023 through February 2024.

The current permit was issued in June 1, 2019 and expired November 30, 2023. During preparation for inspection it

The Town was not properly implementing the Pretreatment Program.

August - December 2023 eDMRs were submitted late. Documentation regarding composite sampling was not being

One of the skimmer systems was not operational. The second and operational skimmer needs to be evaluated to en

The bar screen is partially submerged in the aeration basin and does not adequately remove paper debris (wipes, et

Wastewater solids had accumulated in the receiving stream for approximately 100 ft. downstream of the discharge c

The Town has not submitted the 2023 Annual Performance Report to date. The Town goes by the calendar year.

Civil Penalties unpaid

Copy of Annual Report has not been sent to Mooresville Regional Office.

Engineering Assessment

BORC not designated

Effluent composite sampler collects aliquots of 160 mL every 20 minutes and is therefore not flow proportional.

Effluent flow meter was last calibrated September 10, 2020.

Mr. Marshburn stated that the effluent composite sampler collects constant volume aliquots of 200 mL at a constant rate. The thermometer used to monitor the effluent composite sample storage refrigerator had no documented verification. The unverified thermometer monitoring the effluent composite sample storage refrigerator temperature indicated 9 °C.

Excessive foam was noted in the aeration basin, which covered more than 50% of the basin's surface. DO was higher than expected. Field parameters have not been analyzed by certified personnel or laboratory since Red Bird Utility Operating Company was notified. Floating sludge noted in the clarifiers probably due to the excessive foam in the aeration basin. Sludge blankets were noted in the clarifiers. The audible and visual alarms were not operable at the time of inspection. Facility is planning to install telemetry at the clarifiers. Time paced composite samples are collected.

The sand bed filter had several inches of standing water across its entire surface, indicative of media blinded by solids. An open drain is present in the center of the chemical storage room. There is no secondary containment for the chemicals. The supplement to permit cover sheet of the subject permit lists a "wastewater drying bed" as a facility component. No secondary containment is present. There is no permanent standby power source on site. The permittee stated that portable generators are stored at the site.

No effluent flow meter.

The system is long out of use and needs thorough assessment and likely repair or replacement prior to use.

Current permit expired 10/31/2020.

Effluent has not been sampled and analyzed.

Possible untreated wastewater ponding in some areas

The inspector was unable to locate the chlorinator.

The inspector was unable to locate the effluent pipe.

Unable to locate chlorinator

Unable to locate effluent pipe

Home owner was not able to be contacted to provide records. Last inspection in 2019 indicated no pumping of septi
No chlorine tablets found. Contact chamber was a concrete riser. Contact chamber was filled with water indicating ;
Outfall was grown up and potentially buried under dirt/leaves. There was also a falling fence down on a approximate o
Standing water present near chlorinator

No effluent pipe found. Effluent pipe from contact chamber was blocked, and presumably the end of the effluent discharge pipe was also blocked. Single chlorinator was uncapped, did not have an inner tablet tube, and has not had tablets added. The contact chamber had a cracked lid, and the chlorinator was uncapped, and did not have an internal tablet pipe. The contact chamber had a cracked lid, and the effluent pipe could not be located.

No tablets were observed in the chlorinator.

Permittee could not provide documentation that the septic tank had been pumped in the last 5 years.

The chlorination tube was identified, but had no cap or internal screen. No tablets were present in the pipe at the time of inspection.

The chlorinator was uncapped, and did not have an internal screen.

The effluent pipe could not be located.

Failure to complete the ownership change form

Failure to analyze the effluent

Failure to maintain Chlorine in the chlorinator

Failure to provide proof of septic tank pumping

Failure to maintain the outlet location

No effluent monitoring has been conducted.

Tablets are not regularly applied to the chlorinator tube.

The location of the outfall is unknown. Previous inspections in 2010, 2015, and 2019 also noted that the outfall locati

Failure to request a change of ownership

CoC expired due to overdue annual fees from 2020, 2021, & 2022 totaling a \$180 balance

No effluent monitoring has been conducted

Effluent has not been sampled and analyzed.

The tenant did not have a supply of chlorine tablets, no tablets were observed in the chlorinator.

Failure to maintain the chlorinator

No dechlorination tablets were observed at the time of inspection.

No evidence that the septic tank has been pumped in the last 5 years.

The permit has expired because of past due invoices for 2015 and 2016.

Failure to maintain dechlorination tablets
Failure to pay 2024, 2021, 2020 invoices
Failure to pump the septic tank
Failure to sample the effluent annually

A disk was removed from one of the shafts supposed to power the aeration basin. Trees were noticed growing out of the shaft. A sludge buildup was witnessed within the contact chamber. The beginning of the contact chamber had over two feet of sludge. The facility had various plants growing from the aeration basin and the clarifiers. The facility has a disk filter that was bypassed on the day of inspection. A hole was cut into the top of the line going to the clarifiers. The mechanical bar screen was not operational during the inspection. A disk was removed from one of the shafts supposed to power the aeration basin. Trees were noticed growing out of the shaft. The breaker powering the second clarifier was flipped at the time of the inspection. Once flipped, power returned to the facility.

Copper and Zinc limits

Failure to renew IUP for HERR prior to expiration date.

Failure to submit IUP for Columbus Regional Healthcare to the Division for review 30days prior to the effective date.

The annual report is missing for 2022 and 2023.

The effluent flow meter is not working correctly.

The Equalization Basin is not usable because of the lock on the bypass valve.

The permit contains conditions for Part I A (4) Mercury Minimization Plan and Part I A (5) Schedule of Compliance for Upper Aeration Basin and Clarifier do not work. Grit chamber not operational.

The annual report is missing for 2022 and 2023.

Missing monitoring reports

Effluent total ammonia (NH₃-N) samples have been taken from the clarifier effluent before chlorination and de-chlorination. Mr. Allred estimates and reports influent flow of incoming domestic waste based on a meter that totals influent pump flow. Effluent total ammonia (NH₃-N) samples have been taken from the clarifier effluent before chlorination and de-chlorination. Permit ownership and contact information in the DWR database is no longer correct. Please use the attached change order.

The effluent composite sampler collects constant time/constant volume samples (50 mL per 15 minutes) and therefore provides a representative sample of the effluent. An old aeration basin has been converted into an EQ lagoon that is used solely for influent flow equalization. This EQ

1. Many components of the POTW are out of service and some of these components have been out of service since 6 surface aerators in use / 1 out of service. DO levels have been on ongoing issue in the basin. DO readings are < Continuing to use water hose - spraying pre UV channel to disperse scum and floating solids. This is a repeat violation. Grit removal system has been out of service for ~3 years. One channel is out of service and has been for ~3 years. The unit is not in good condition.

According to DWR records, a Back-up ORC has not been properly designated and reported to the Division. Calibration and/or verification records for the field lab dissolved oxygen (DO) meter were not present during the inspection. Mr. Lewallen stated that upstream sampling has been conducted at the nearest upstream bridge, which appears to be 1/2 mile upstream. No standby power source was present during the inspection.

Recent DMRs have reported effluent flow, but no effluent flow meter was present during the inspection. Mr. Lewallen stated that the effluent sampler currently pulls samples just before final re-aeration. Although operators moved the sample point to the influent pump station. The only permanent onsite generator can power only the influent pump station. There is no generator for the remainder of the plant. The oxidation ditch (OD) is not in very good condition but will be upgraded under the current ongoing project. There is no generator for the remainder of the plant. The effluent sampler currently pulls samples just before final re-aeration. Although operators moved the sample point to the influent pump station. There is no generator for the remainder of the plant. The oxidation ditch (OD) is not in very good condition but will be upgraded under the current ongoing project. There is no generator for the remainder of the plant.

The ORC had no records of the last flow meter calibration.

The effluent composite sampler was programmed to collect constant volume aliquots at a constant time interval, regardless of flow. The secondary clarifiers appeared to have unequal flow across the overflow weirs, possibly due to the weirs not being level.

The flow meter had not been calibrated as required.

Composite sampling is not flow proportional.

Permittee does NOT have a field laboratory certification.

Violation: The #2 blower has been inoperable for over six months. Also, two diffuser drop pipes were inoperable in the
The flow meter was not calibrated as required.
The flow meter was not calibrated as required.

No standby power is present for the treatment system.

The effluent flow meter used for monitoring and reporting purposes had not been calibrated or verified since its installation. A data discrepancy was discovered upon review of the July 2023 DMR. The operator recorded effluent temperature
Components from both item 1 and item 2 of the supplement to permit cover sheet are in present and in use. The facility
During the inspection it was noted that the operator attendance log was missing several entries of proof that the WWTP
During the inspection the sludge blanket was observed surging over the weirs of the secondary clarifier and discharging
The UV disinfection unit has been inoperable since March 31, 2024
Flow meter was not calibrated as required.

Foam was observed covering approximately 60% of the aeration basin's surface. Excessive solids were observed at the
The effluent composite sampler is programmed to collect 100 mL aliquots per pulse and the frequency of pulses is 1
The effluent composite sampler was programmed to collect 96 constant volume aliquots of 120 mL at a constant time
Some excessive floating sludge was observed in the secondary clarifiers.

Part I Section A. General Condition E. Weekly, a downstream reach of the receiving stream shall be visually inspected
Part I Section A. General Condition F. Sampling for Settleable Solids, Total Suspended Solids, Total Ammonia Nitrogen
The facility could not produce any records or log books.
The permit became effective December 1, 2021, and will expire on November 30, 2026.

The chlorinator was found with no tablets in the tubes.

The septic tank was located and appeared to be structurally compromised and would need repaired or replaced.

According to DWR records, a Back-up ORC has not been properly designated and reported to the Division.
