The Community College New and Expanded Industry Training

Management Study

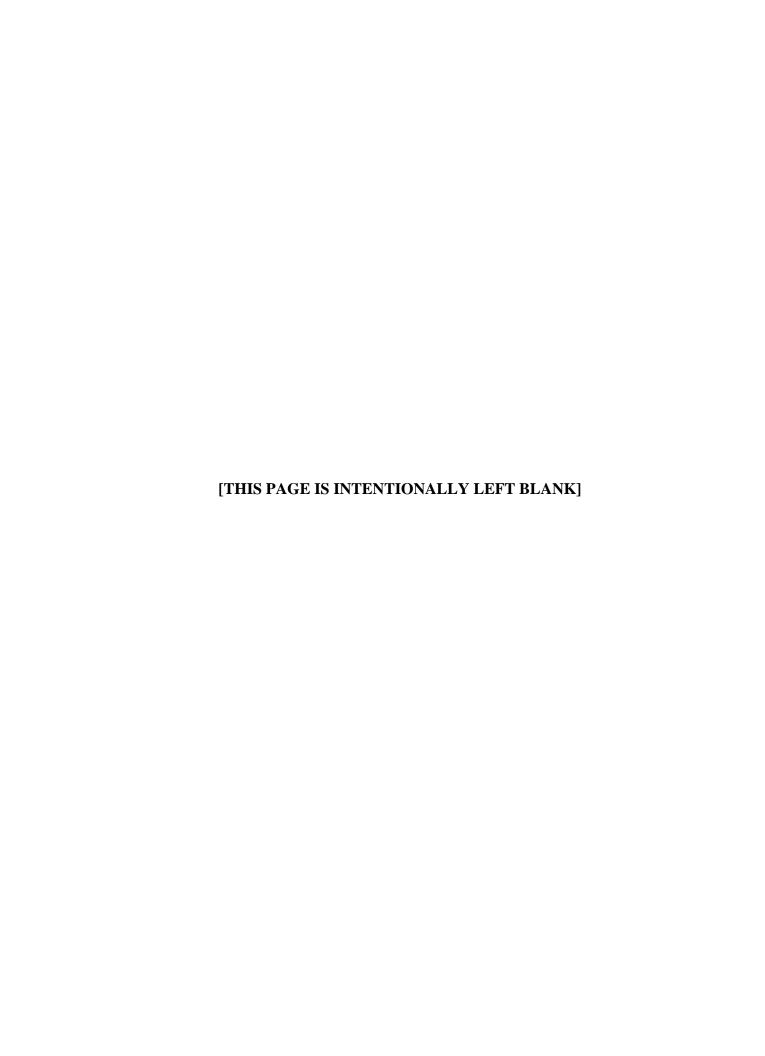

As Directed by Section 8.7 of Session Law 2006-66

April 2007

Prepared By:

Office of State Budget and Management

INTRODUCTION

Scope of Study

The Office of the State Budget and Management (OSBM) was directed by the General Assembly in Sections 8.7 of Session Law 2006-66 to conduct a study to analyze and evaluate the New and Expanding Industry Training (NEIT) Program of the North Carolina Community College System. This study examines the companies served, the number of times each company has been served, the number of jobs created, the length of time the company remained in North Carolina after receiving NEIT funds, and whether the company has maintained employment levels at the same level promised when training was received.

At the request of the Community College System, we expanded the scope of the study to include several issues System officials believed should be studied for improving the overall effectiveness of the NEIT Program. These include:

- 1. Determining whether NEIT funds should be held in a restricted reserve account to ensure funds are available for approved projects in future years,
- 2. Analyzing the adequacy of the NEIT administrative cost allowance,
- 3. Reviewing the types of training other than manufacturing which should be included in the NEIT Program.
- 4. Reviewing the relationship between the NEIT Program and the Focused Industry Training (FIT) and Customized Industry Training (CIT) programs,
- Reviewing how the NEIT Program is leveraged with funds from other sources, such as the Golden Leaf Foundation, the North Carolina Work Force Development Commission, and the One North Carolina Fund, and
- 6. Determining whether NEIT training should generate budgeted full time equivalent (FTE) credits.

Methodology

In order to conduct the study, the OSBM team performed the following tasks:

- Reviewed General Statutes related to the NEIT and other training programs,
- Interviewed community college officials,
- Identified the number of NEIT projects completed between July 1, 2002 and December 31, 2006 and the number of active NEIT projects as of June 30, 2006,
- Obtained NEIT Program appropriations and expenditures from July 1, 2001 to June 30, 2006,
- Visited nine community colleges (see Appendix A for more details),
- Obtained employment information from the North Carolina Employment Security Commission, and
- Analyzed program and financial information related to the NEIT Program.

BACKGROUND

The beginning of the NEIT Program dates back to 1958 when North Carolina created the first customized training program in the United States. While the Program has changed over the years, the basic concept of providing industry-based skilled training to North Carolina's workforce is still in place today. The NEIT Program provides customized training assistance in support of new full-time jobs created in North Carolina. The Program enhances the growth potential of companies located in the State while preparing North Carolina's workforce with skills essential for successful employment in emerging industries.

The NEIT Program supports training assessments, program development, instructional costs, and on-the-job training for new employees involved in the direct production of goods and services and their first-line supervisors. Services include pre-employment assistance, training, facilities, equipment, supplies, and customized materials. The training is provided through community college faculty, third party contract instructors, and qualified company employees. The facilities, equipment, supplies, and materials are provided as needed for individual training courses. The length of NEIT projects is determined primarily by the amount of training needed for each type of job and the number of projected jobs. The maximum time that an NEIT project can last is 36 months.

To qualify for the NEIT Program, companies must create 12 or more new production jobs in excess of their previous 3-year maximum employment level and fall into an approved industry category. Selected North American Industry

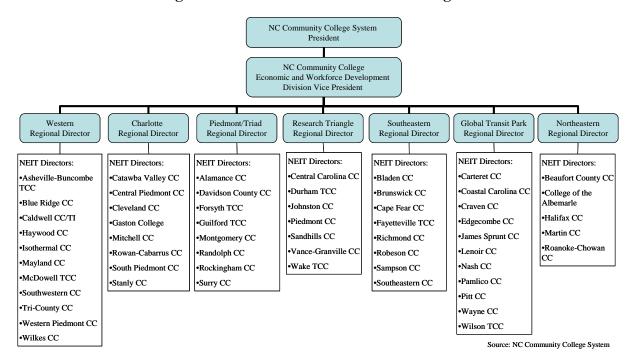

Classification System industry codes are used by the Community College System to determine the industries eligible for the Program. Presently, the Program is limited to 95 industry codes within seven industry categories—manufacturing; transportation and warehousing; information; professional, scientific, and technical services; construction; wholesale trade; and administrative and support. Table 1 shows that 87 percent of the industry codes eligible for the NEIT Program are related to manufacturing industries. Appendix B lists the 95 eligible industry codes.

| | | i abie i | | | | |
|--|-----------------|----------|--|--|--|--|
| Distribution of NEIT Eligible Industry Codes | | | | | | |
| Industry Category | Number of Codes | Percent | | | | |
| Manufacturing | 83 | 87.4% | | | | |
| Information | 4 | 4.2% | | | | |
| Transportation and Warehousing | 3 | 3.2% | | | | |

Organizational Structure and Program Process

The Economic and Workforce Development Division of the North Carolina Community College System is responsible for the oversight and management of the NEIT Program. Exhibit 1 depicts the organizational structure of the NEIT Program.

Exhibit 1
Organizational Structure of the NEIT Program

Organizationally, the NEIT Program is managed by seven Regional Directors and administered by Program Directors at the 58 community college. Exhibit 2 identifies the seven NEIT regions. Some colleges have a limited number of NEIT projects; and therefore, the Program Directors at these colleges have other duties, such as managing the Focused Industry Training Program, Customized Industry Training Program, and/or other continuing education programs.

Community College System officials involved in the development and approval of NEIT projects include the Economic and Workforce Development Division staff, Regional NEIT Directors, and local community college NEIT Program Directors. The System makes financial and training commitments to the companies to persuade them to relocate to North Carolina or expand their existing workforce. It is important that the respective parties honor these commitments to ensure the State retains its reputation with the business community and assist businesses wishing to expand or relocate to North Carolina. Appendix C illustrates the approval process for NEIT projects.

The NEIT Program receives annual appropriation from the General Fund instead of generating funds through the traditional full-time equivalent method. General Statute 115D-5.1 allows local community colleges to receive five percent, not to exceed \$60,000 per year, of the NEIT project's cost as an administrative cost allowance.

Historical Financial and Program Data

Funding for the NEIT Program averaged \$13.4 million for fiscal years 2001-02 through 2005-06. Actual expenditures for the same period averaged \$5.1 million. Table 2 shows the amounts budgeted and expended for the Program for each fiscal years. The relatively low expenditures for fiscal years 2001-02 through 2004-05 are attributed to several factors. First, the economic decline during these years caused some industries to not expand their operations or relocate to North Carolina. Second, some industries that participated in NEIT projects during the economic decline reduced the number of new jobs which, in turn, reduced the amount spent for training. Lastly, expenditures for active projects are obligated at the time projects are approved, but may not be expended until future years. Since NEIT projects can last

Table 2

| Funding for the NEIT Program FY 2002 - FY 2006 | | | | | |
|---|----|------------|----|------------|--|
| Fiscal Year | | Budgeted | | Expended | |
| 2001-02 | \$ | 20,891,667 | \$ | 3,662,583 | |
| 2002-03 | \$ | 16,017,723 | \$ | 3,351,350 | |
| 2003-04 | \$ | 10,140,253 | \$ | 4,156,409 | |
| 2004-05 | \$ | 9,791,302 | \$ | 5,864,351 | |
| 2005-06 | \$ | 10,253,366 | \$ | 8,703,156 | |
| Total | \$ | 67,094,311 | \$ | 25,737,849 | |
| Source: Year-end BD 701Reports | | | | | |

up to three years, the expenditures for these projects may be spread over a three year period. However the funds are reflected in the Community College System's budget as unobligated until they are expended. Thus, at any given

time the funds in the NEIT Program budget will appear to be greater than what is actually available for future NEIT projects.

The average number of new and expanded NEIT projects for fiscal years 2001-02 through 2005-06 was 63 and 90, respectively. During the five year period, an average of 14,339 individuals was trained for the NEIT projects with

67.4 percent of the training being provided by the community colleges or contractors and 32.6 percent by company instructors. The average cost per trainee was \$387 during the five fiscal years. Table 3 shows trends for the NEIT Program for fiscal years 2001-02 through 2005-06. Additional NEIT Program information is included in the Results section of this report starting on page 5.

Related Programs and Activities

The Community College System is responsible for two other industry training programs—Focused Industry Training (FIT) and Customized Industry Training (CIT). These programs provide training for companies and individuals that do not qualify for training under the NEIT Program. The FIT Program is designed to serve the special training needs of existing North Carolina industries by providing critical skills for existing workers as new technologies or procedural processes emerge for these industries. Through individualized needs assessments and consultations the FIT Program designs and implements training tailored for companies that need upgraded workers' skills because of changing technology. The CIT is a fairly new training program that provides greater flexibility for the Community College System to meet the retraining needs for workers of existing businesses. The CIT provides customized training for existing businesses and industries to improve their productivity and profitability and also ensure they remain in North Carolina.

A number of organizations provide assistance, funding, and other resources that complement the NEIT Program by contributing to economic incentive packages to entice companies to re-locate to or stay in North Carolina. Some of these funds may support certain types of training and equipment purchases that are not allowed under the NEIT Program. The Golden Leaf Foundation is one of these organizations. Its overall purpose is to provide grants to strengthen North Carolina's long-term economy in communities that have been tobacco-dependent and/or economically depressed. While not directly involved with the NEIT Program, the Foundation has provided grants for some economic incentive packages in which new or expanding industries participated in NEIT training. Another organization is the North Carolina Commission on Workforce Development². Its mission is to establish and guide a world class workforce development system that produces well-educated, highly skilled workers who perform at high levels and work in economically viable businesses that provide good jobs at good wages. In this capacity, the Commission has provided some tangential assistance to the NEIT Program through economic development and providing employment and training services. A third source of assistance is the One North Carolina Fund³ which helps the State in recruiting and expanding quality jobs. The Fund also provides financial assistance to businesses and industries that are important to the healthy and growing North Carolina economy and are making significant efforts to expand in the State. Companies rely upon the Fund to install or purchase equipment; repair, improve, or renovate existing buildings; and construct new or improve existing utility services, but typically not training services.

_

¹ The Golden Leaf Foundation was created in 1999 as a nonprofit organization to administer half of North Carolina's share of the settlement with cigarette manufacturers.

² The North Carolina Commission on Workforce Development was established in March 1993 to serve as the State's principle policy group for workforce development.

³ The One North Carolina Fund was created in 1993 to help the State achieve its stated goal of economic growth through uniform regional prosperity.

RESULTS

NEIT Program Efforts and Accomplishments

There were 268 NEIT projects completed between July 1, 2002 and December 31, 2006, resulting in 29,258 new jobs in North Carolina. The total expenditures for the completed projects were about \$16.8 million for an average cost of \$575 per job created. For these projects, the community colleges trained 25,184 individual with their own faculty or contract instructors and company instructors trained 19,048 individuals. In many instances individuals were trained by both community college and company instructors. Table 4 shows the number of completed projects by community college and Appendix D lists the companies and some details about each project.

In addition to completed projects, the community colleges had 125 active projects⁴ as of June 30, 2006. For these active projects, the community colleges and companies together trained 19,508 individuals at a cost of \$7.3 million. These active projects are projected to create 20,780 new jobs in the State. Table 4 also shows the number of active projects by community college and Appendix E lists the companies and some details about each project.

-

⁴ Thirteen projects that were active as of June 30, 2006 were subsequently completed before December 31, 2006, and have been included in the list of completed projects.

The length of time spent on projects can range from one month to three years. Time variances are due to the complexity of job skills required, the number of jobs needed, and the momentum of a company's expansion. The average time spent by community colleges for the 268 completed projects was 22 months with 40 percent of the project taking 2-years or longer to complete. The estimated average time to complete the 125 active projects is 30 months. Table 5 shows the breakdown of projects by the length of time to complete.

The 393 completed and active projects shown in Appendices D and E represent 336 companies. A 10-year history of these companies revealed 79 percent of the companies received NEIT services only one time. Seventy companies (21%) participated in the Program two or more times. Table 6 shows the number of times these companies participated in the NEIT Program and the status of their respective projects. Appendix F identifies the companies and their 10year history with the NEIT Program.

Employment Status

The Employment Security Commission (ESC) provided employment information as of September 2006 for 172 of the 268 projects⁵ completed between July 1, 2002 and December 31, 2006. Of the 172 companies, 155 (90%) are still operating in North Carolina and 17 (10%) have closed. companies still operating in the State, 45 (29%) are within their first year of operation since completing their NEIT projects. Table 7 shows the length of time the 172 companies have operated in North Carolina since completing their NEIT projects.

Table 7

| Length of Time Companies Operated in NC | | | | | |

| 17 | 2 | Over 42 months | | | |
| 155 | 17 | | | | |

Source: The Employment Security Commission, the NC Community College System, local chambers of commerce, and local economic development organizations.

The ESC was unable to provide the employment levels for 96 of the 268 companies because of missing ESC information, inconsistencies between Community College System and ESC data, companies with multiple ESC accounts, and errors in companies' employee records.

Approximately 70 percent of the 17 closed companies stopped operating within one year of completing NEIT training. Table 8 shows information for the 17 companies that had closed as of December 31, 2006. The 17 companies remained open after completing their NEIT training an average of 13.5 months. One company never started operating and two companies stopped operating prior to completing their NEIT projects. The State spent \$390,497 providing pre-employment assistance and training to the 17 companies. The 17 companies had planned to create 1,681 new jobs, but they hired only 497 before closing their operations.

| Parentheses denote the number of months the companies were closed before the NEIT project was closed by the Community College System. | | | | | | | | |

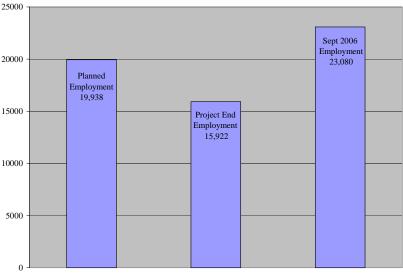

For the 155 companies still operating in North Carolina, we analyzed the planned employment levels and the actual jobs filled at the time the projects ended and as September 2006. These companies planned to create 19,938 new jobs in North Carolina and at the end of the projects 15,922 new jobs had been filled. These companies achieved 80

Source: ESC, local economic development organizations, Chambers of Commerce, and local community colleges

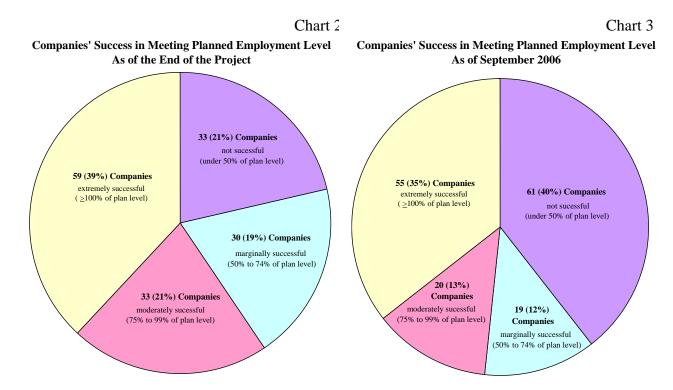

percent of their planned employment by the time the project ended. However, as of September 2006 the employment level for these companies had increased to 23,080, representing 116 percent of the planned employment level. Chart 1 shows the planned verses the actual employment levels for the 155 companies.

Fifty-nine of the 155 companies had reached the planned employment levels at the time that their NEIT projects ended and 55 companies had maintained their planned employment levels as of September 2006. Some companies came within a few jobs of meeting their planned

Planned vs. Actual Employment Levels for 155 Companies

employment levels while others were significantly below their planned levels. Chart 2 shows company's success in meeting planned employment levels at the end of the project and Chart 3 shows companies' success in meeting planned employment as of September 2006. According to community college officials, many of the projects may not reach the planned employment levels because (1) planned numbers of new jobs are the companies' best estimates, (2) downturns in the economy impacts companies expected production, (3) anticipated contracts for companies' products do not materialize, and (4) technology efficiencies result in fewer employees being needed to accomplish production needs.

FINDINGS AND RECOMMENDATIONS

While addressing the issues mandated by Sections 8.7 of Session Law 2006-66, we noted a number of other issues that the General Assembly and Community College System may consider in their efforts to improve the effectiveness and efficiency of the NEIT Program.

Accounting for Obligated Funds

NEIT projects can last up to three years. Expenditures for these projects may be spread over a three year period; however the funds needed for these projects are reflected in the Community College System's budget as unobligated until they are expended. Thus, at any given time the funds in the NEIT Program budget will be greater than what is actually available for future NEIT projects. Currently, several large NEIT projects are committed to spend a million dollars or more on each project. Yet, much of the funding for these projects will appear as part of the NEIT Program's unobligated budget until the System actually incurs expenditures for these and other projects. System officials believe that keeping the funds committed to projects in its unobligated budget gives the impression that the NEIT Program has more funds for future projects than is actually available.

The Community College System should be allowed to earmark the funds committed to a project when the project is approved. This would provide a more accurate accounting of obligated and unobligated funds and provide a more accurate representation of NEIT activities. The committed funds could be transferred into a restricted, non-reverting account within the NEIT budget. If the Community College System is allowed to earmark the committed funds in a

restricted, non-reverting account, it should be diligent in de-obligating any unused funds as soon as projects are completed.

Administrative Cost Allowance

General Statute 115D-5.1 allows local community colleges to receive five percent, not to exceed \$60,000 per year, of the NEIT project's cost as an administrative cost allowance. All of the NEIT Directors at the community colleges we visited believed that the administrative cost allowance percentage should be increased, although none could provide us with the exact cost related to the development and start up of projects or the cost to manage the projects once training begins. According to the Vice President of the Economic and Workforce Development Division of the Community College System, a recent study of state industry training programs shows that North Carolina has one of the lowest administrative cost allowances in the United States, and many states have administrative allowances of 10 to 20 percent.

Some Program Directors believed that a fixed administrative allowance should be used to cover the development and start up of projects and a percentage factor applied to the projects' cost to cover the day to day administrative cost of managing projects after the training phase begins. Community College System managers also believed that the current five percent allowance does not adequately cover the colleges' administrative cost of developing and managing NEIT projects. While System managers agreed that the fixed administrative allowance seems feasible, they recommended that the fixed allowance be based on a sliding scale according to the size of the individual projects rather than one fixed amount for all projects. In addition to the fixed allowance, System managers felt that the five percent administrative allowance should be increased.

OSBM believes that the current administrative cost allowance for local community colleges does not adequately cover all of the administrative costs of developing and managing NEIT projects, and that the \$60,000 annual limit for individual projects should be eliminated. Further, the administrative costs incurred by community colleges in developing and managing their NEIT projects should be studied to determine a more reasonable process for covering the true administrative cost associated with the NEIT Program.

Industries Eligible to Participate in the NEIT Program

Selected North American Industry Classification System industry codes are used to determine the industries eligible for the Program. To participate in the NEIT Program, companies must qualify under one of the approved industry codes. Presently, the Program is limited to 95 industry codes that fall within seven industry categories—manufacturing; administrative and support; transportation and warehousing; information; construction; wholesale trade; and professional, scientific, and technical services. As shown in table 1 on Page 2, the manufacturing category has 87% of the codes (See Appendix B for a list of the 95 codes).

Over the last 15 to 20 years, North Carolina's economy has shifted from manufacturing industries to technology, health, and other nonmanufacturing industries. The Community College System has expanded the types of industries that are eligible to participate in the NEIT Program in recent years to include some of these industries. However, as shown in Table 9 the types of industries represented by the 111

| Active and Completed Projects by Industry Category | | | | | |
|--|-----------------------|--------------------|-------------------|---------|--|
| Industry Category | Completed Projects | Active Projects | Total Projects | Percent | |
| Manufacturing | 67 | 28 | 95 | 85.6% | |
| Administrative and Support | 4 | 5 | 9 | 8.1% | |
| Transportation and Warehousing | 4 | 0 | 4 | 3.6% | |
| Information | 1 | 2 | 3 | 2.7% | |
| Construction | 0 | 0 | 0 | 0.0% | |
| Wholesale Trade | 0 | 0 | 0 | 0.0% | |
| Professional, Scientific, and Technical Services | 0 | 0 | 0 | 0.0% | |
| Total | 76 | 35 | 111 | 100.0% | |

completed and active projects reviewed at nine community colleges were predominantly manufacturing.

Community college Program Directors believe that the list of eligible industry codes should be further expanded to bring the Program's training more in line with the training needs of newer types of industries in the State. The Program Directors identified a number of industries that they believe should be eligible to participate in the NEIT

Program to include information technology, research and development, agri-business, health and medicine, biotechnology, and golf course/landscaping management. The Community College System should examine its current list of eligible industries, and look for opportunities to expand the list to include newer types of industries that are becoming a greater part of North Carolina's economy.

Full Time Equivalent Credits vs. Appropriations from General Funds

Unlike traditional curriculum degrees offered by the Community Colleges System which are funded by full time equivalent (FTE) credits, the NEIT Program is supported by annual appropriations from the General Fund. This allows the System more flexibility in providing NEIT training that often includes classes with a small number of students and instructors with special expertise who command higher instructional fees. In both cases, the NEIT Program enjoys the flexibility of designing training courses that meet the needs of participating industries, without being limited by the restrictions of generating FTE credits. Because of the uniqueness of the NEIT Program, OSBM believes that the funding for the NEIT Program should continue from appropriated funds.

Review and Update the NEIT Program Guidelines and Policies

The NEIT Program guidelines currently being used by the Community College System date back to April 18, 1997. While much of the guidance is still applicable for the Program, we noted some areas where the guidelines no longer adequately address certain aspects of the Program. Specifically,

- There were very diverse methods in the ways the community colleges' NEIT Program Directors and staffs maintained documentation at the nine colleges we visited. The difference among NEIT projects ranged from well organized files for individual projects at some schools to missing or incomplete documentation for projects at other schools. In some instances, the NEIT Project Directors had to request documentation from the Regional NEIT Director or the Community College System. We also noted inconsistencies among colleges in the information recorded on the project profiles and other documents.
- Company personnel that are used as NEIT instructors are reimbursed at their normal hourly rate, not to exceed \$26.50 per hour. In contrast, the hourly rates for some contract instructors are over \$600, especially for instructors with specialized skills. Even the community college instructors' salaries are higher than \$26.50 per hour.
- There were considerable delays between the times some companies stopped receiving training or the company began downsizing and the close out of the projects. In fact, some projects were not closed by the community college NEIT Program Directors until 6 to 8 months after the training ended.
- The NEIT Program appears to have considerable turnover in the NEIT Program Directors at the community college level, thus creating uncertainty for new personnel in managing the NEIT projects. This turnover in personnel may be contributing to the inconsistencies in project documentation.

Because of these issues, OSBM believes that the Community College System should review and update its current guidelines and policies for the NEIT Program to ensure completeness and uniformity among the local community colleges. Further, the Community College System should consider including in its guidelines a requirement that all new NEIT Regional and Program Directors receiving training related to the administration and management of the Program to ensure complete and uniform management and documentation for the NEIT Program throughout the System.

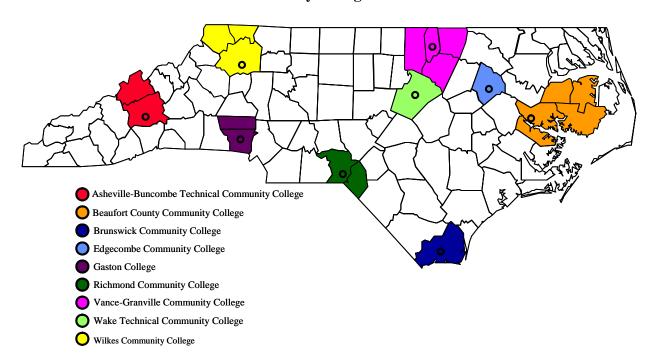

ACKNOWLEDGEMENTS

OSBM wishes to express its appreciation to the staff and managers of the Community College System and Employment Security Commission for their cooperation during the performance of this study.

Community College Site Visits

To verify the accuracy and completeness of the information reported by the Community College System for the NEIT Program, nine community colleges were visited. The selection was based on the community college's geographical location and the number of completed and active NEIT projects. The map shows the colleges that were visited and the College's service area. The sample selection represented 28.2 percent of all NEIT projects and 27.8 percent of all jobs created or anticipated for the-review period of June 1, 2002 through June 30, 2006.

Community Colleges Visited

A total of 111 projects were reviewed and included 76 projects completed between July 1, 2002 and December 31, 2006 and 35 active projects as of June 30, 2006. The completed projects resulted in 8,603 new jobs and the active projects are anticipated to create 5,287 new jobs. The Table shows the distribution of projects and job creation for each of the colleges visited.
