Governor Appointee (Teacher)

Cathy Tomon
Governor Appointee (Principal)

Jenny Wood
Governor Appointee (Teacher)

Mission Statement

The North Carolina Teacher Academy is a professional development program for teachers established and funded by the North Carolina General Assembly. The mission of the Academy is to enrich instruction and impact student achievement by supporting the growth and retention of highly qualified teachers through research-based professional development in the areas of school leadership, instructional methodology, core content, and technology.

History

In 1993 the General Assembly established the Task Force on Teacher Staff Development to create a Teacher Academy plan. The Task Force consisted of twenty- one members which included classroom teachers, administrators, and other educators and was housed in the Department of Public Instruction. The original legislation stated, *“The Task Force shall develop for consideration by the General Assembly a Teacher Academy Plan to establish a statewide network of high quality, integrated, comprehensive, collaborative, and sustained professional development for teachers in school committee leadership and the core content areas. The plan shall integrate fully the resources of the State and local units.”* As a means to achieve this plan, the Task Force conducted focus groups and surveys to create the design of the Teacher Academy.

The first Teacher Academy sessions were held during the summer of 1994 at ten colleges and universities across the state as five-day residential academies. A cadre of one hundred North Carolina teachers facilitated the first module, *“Creating Professional Workplaces,”* and more than 3,600 educators participated.

From its opening session in July of 1994 through the 2008-2009 fiscal year, the Academy has trained 45,450 teachers and principals during summer Teacher Academy sessions, representing schools from every local education agency in North Carolina. In addition to the traditional summer sessions in 2008-2009, there were ten summer five-day sessions presented in collaboration with the Public School Forum of North Carolina.

In 1995, the North Carolina General Assembly transferred the Teacher Academy from the Department of Public Instruction to The University of North Carolina General Administration. The Task Force was renamed the North Carolina Teacher Academy Board of Trustees. The legislation stated, *“The Board of Governors of The University of North Carolina shall delegate to the Board of Trustees all the powers and duties the Board of Governors considers necessary or appropriate for the effective discharge of the functions of the North Carolina Teacher Academy. The North Carolina Teacher Academy Board of Trustees shall establish a statewide network of high quality, integrated, comprehensive, collaborative, and substantial professional development for teachers, which shall be provided through summer programs.”* The Teacher Academy Board of Trustees meets three times annually to oversee the affairs of the Teacher Academy, including the appointment of the Executive Director. In 2006, the North Carolina General Assembly transferred the Teacher Academy to the State Board of Education. (G.S.115-C-296.4). The North Carolina Teacher Academy Organizational Chart is found in **Attachment 1**.

North Carolina Teacher Academy Trainers

The North Carolina Teacher Academy “trainer reinvestment model” provides the most qualified professional instruction, while providing a cost effective solution to program development and instruction. All professional development is delivered by a cadre of North Carolina classroom teachers who have received extensive training in one or more content areas. Two hundred fifty-four teachers work with the Teacher Academy during the summer then return to their schools where, during the school year, they bring the expertise that they have gained to their classrooms and their districts. A primary advantage of this organization is that it places researched best practices combined with North Carolina expertise into the classrooms in North Carolina. Many trainers are trained in more than one content area. Each school district in North Carolina is invited to submit names of teachers to be trained as Teacher Academy trainers.

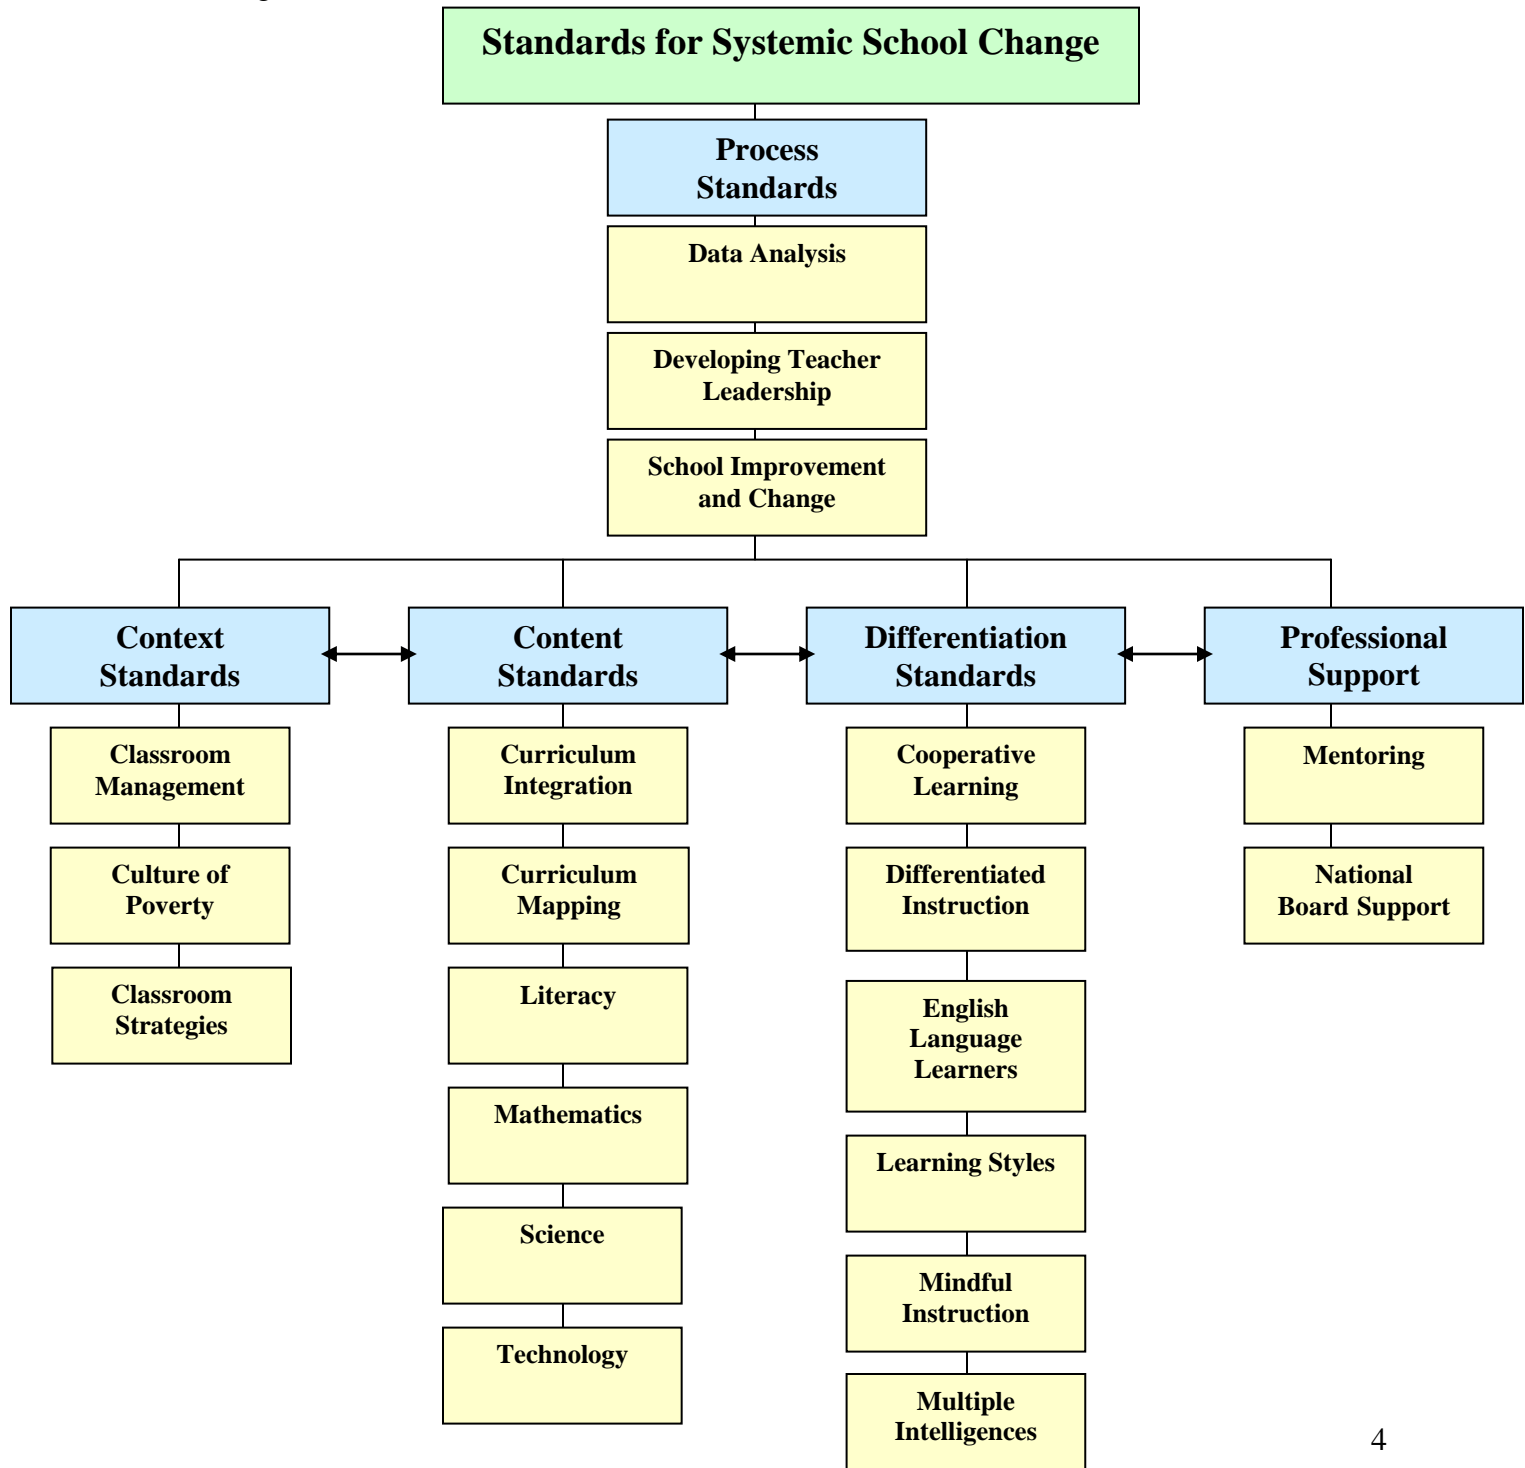

Type of trainer	Number of Trainers
Reading in the Content Areas	23
Building Professional Learning Communities	26
Classroom Management	35
Differentiated Instruction	60
Elementary Literacy	31
Elementary Science	38

North Carolina Teacher Academy Professional Development Standards

The North Carolina Teacher Academy Professional Development Standards were developed in alignment with the National Staff Development Council Standards for Staff Development and are designed to assist schools in outlining school improvement goals. Results-driven, standards-based, and job-embedded professional development is concentrated in five core areas: process, context, content, differentiation, and professional support. All of the Teacher Academy professional development modules are organized within these five standards.

North Carolina Teacher Academy Standards Descriptions

Process Standards

Professional development maximizes student growth by using disaggregated data to identify learning priorities and structure school improvement plans; fosters leadership by promoting collaborative decision-making and providing ultimate working conditions for sustaining cultural changes; and uses multiple assessment processes for monitoring and evaluating school progress.

Context Standards

Professional development maximizes student growth by creating learning communities that celebrate student diversity and cultural differences; establishes a context for building significant relationships and institutionalizes high expectations; and maintains safe and orderly school environments that illustrate citizenry needed to function in a global society.

Content Standards

Professional development maximizes student growth by meeting rigorous academic standards; deepens content knowledge by implementing researched-based instructional strategies, technological competencies, and integrated curricula; and encourages academic autonomy and life-long learning.

Differentiation Standards

Professional development maximizes student growth by improving teacher identification of learning modalities; employs pedagogical methods designed to differentiate instruction for all students; and incorporates a variety of approaches to engage all students in the learning process.

Professional Support Standards

Professional development maximizes student growth by providing learning opportunities to support the recruitment and retention of highly qualified teachers; invests in the development of initially licensed and lateral entry teachers through mentoring; and supports experienced teachers in earning National Board Certification.

North Carolina Teacher Academy Program Descriptions

Currently, the Teacher Academy offers professional development in twenty-three program areas that support the North Carolina State Board of Education Priorities: High Student Performance; Quality Teachers, Administrators, and Staff; Healthy Students in Safe, Orderly, and Caring Schools; Effective and Efficient Operations; and Strong Family, Community, and Business Support. The Teacher Academy provides continuous research-based professional development to support and retain a highly qualified teacher in every classroom. As the needs of teachers change, the North Carolina Teacher Academy continues to evaluate existing programs and implement new ones. A comprehensive program evaluation was conducted to determine the impact of professional development delivered by the North Carolina Teacher Academy on classroom practice. Summer programs were offered in the following areas. Complete program descriptions and current fiscal year attendance are available in **Attachment 2**.

Differentiated Instruction

- Classroom Strategies that Work
- Differentiation in K-12 Classrooms
- Learning Styles
- Multiple Intelligences
- Using Brain Research to Differentiate Classroom Instruction

Instructional Technology

- Technology Literacy for 21st Century Schools

Literacy

- Developing Inquiry in Reading and Writing
- Informational Text
- Literacy Strategies for Elementary Grades
- Reading in the Content Areas

School Improvement and Change

- Building Professional Learning Communities
- Building Teacher Leadership
- Classroom Management

Mathematics

- Developing Algebraic Reasoning in Middle Grades
- Developing Arithmetic Reasoning in Elementary Grades

Science

- Elementary Physical Science

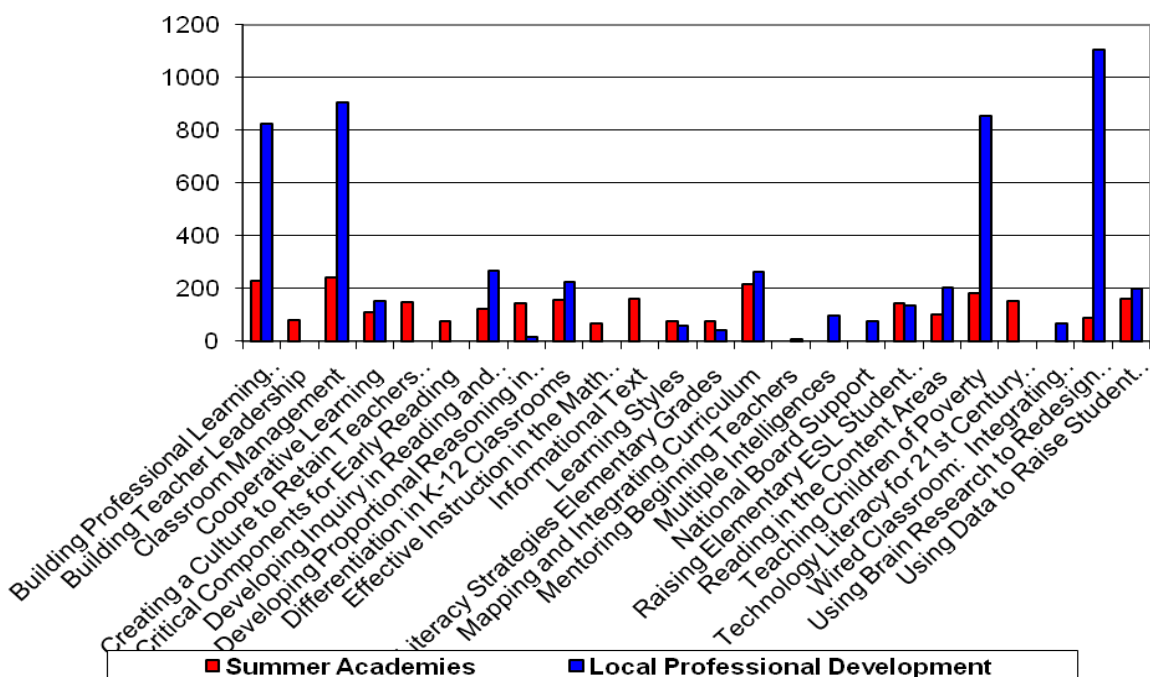

Program Delivery Model

The North Carolina Teacher Academy has a three-pronged delivery approach to meet the needs of educators in North Carolina, including summer residential and LEA/NCTA partnership academies along with customized local professional development.

- Summer Programs** (72,960 contact hours in 2008-2009)
 - Summer LEA/NCTA Partnership Academies** are offered in local school districts for teams of educators from a single school or from multiple schools within the district in one of the summer program areas. LEA/NCTA Partnership Academies provide an opportunity for a larger number of educators from a single district to receive the same professional development in order to implement the new skills broadly within the district.
 - Summer Residential Academies** are housed on college campuses and offer teams of teachers and administrators the opportunity for intensive professional development in one of the summer program areas. The residential academy provides a setting away from the local district in an atmosphere that promotes collegiality and collaborative planning.
 - Summer Academy Follow-up** sessions are provided for teams who attend summer residential or LEA/NCTA partnership academies in the fall and the spring of the next academic year to learn new skills and to receive support for program implementation in their schools. Follow-ups were offered online this year using the Blackboard learning community.
- Local Professional Development** (54,360 contact hours in 2008-2009) is offered at the local level during the school year on designated workdays and weekends at the request of a school or school district to meet an identified need.

Attachment 3 provides participant information for each LEA and **Attachment 4** provides participant information for each module.

North Carolina Teacher Academy 2008-2009 Module Participation

North Carolina Teacher Academy Fiscal Year 2008-2009 Operating Budget Summary

Program Development and Program Delivery account for 94% of the Teacher Academy operating budget, representing training that goes directly back into the classrooms in North Carolina. Budget reversions of 14% implemented in late spring resulted in direct reductions to late spring and early summer program delivery.

<u>Object Code</u>	<u>Object Description</u>	<u>Operating Expense</u>

Summary of 2008-2009 Professional Development in Leandro Districts

In July 2005 the North Carolina Teacher Academy was directed to provide professional development and support to the sixteen school districts identified by the State Board of Education to receive Disadvantaged Student Supplemental Funds (DSSF). Those districts include Edgecombe, Elizabeth City-Pasquotank, Franklin, Halifax, Hertford, Hoke, Hyde, Lexington City, Montgomery, Northampton, Robeson, Thomasville City, Vance, Warren, Washington, and Weldon City.

The Teacher Academy organized the delivery of services to achieve the following goals:

1. Promote an understanding of the North Carolina Teacher Working Conditions Survey focusing on data analysis of the survey to create optimal teaching and learning climates in schools to improve teacher retention and student achievement and to apply the results to their school improvement plans.
2. Customize staff development for teachers and administrators in individual schools and/or districts to address specific instructional needs to improve student achievement and fill the professional development needs as outlined in their school improvement plans.
3. Provide summer academies that offer in-depth staff development in one of the following areas: classroom management, understanding the impact of poverty on student success, mentoring beginning teachers, differentiated instruction and learning, instructional technology, teaching strategies for students with limited English proficiency, improving K-12 literacy skills and comprehension, using data to improve school climate, K-12 mathematics, and elementary science.
4. Support initially-licensed teachers and candidates for National Board Certification to enhance teacher leadership skills and build school level capacity.

During the 2008-2009 fiscal year, the Teacher Academy provided services to the sixteen DSSF districts individually and through collaborative projects. Schools participated in staff development workshops and academies ranging from one-half to five days. Many teachers and administrators attended multiple staff development activities. Three hundred fifteen (315) teachers participated in residential and LEA/NCTA summer academies for a total of 9,450 contact hours. One thousand eight hundred ninety three (1,893) teachers participated in local staff development sessions during the fiscal year. **Attachment 6** provides an overview of achievement in the DSSF districts.

21st Century Middle School Literacy Coaches

In July 2006 the North Carolina Teacher Academy was directed to provide training and support for one hundred 21st century middle school literacy coaches as an integral piece of North Carolina's Literacy Coach Initiative. The initiative was implemented as a result of statistical research that focused on reasons for the low graduation rate of North Carolina high school students. The initiative was intended to help middle school students reach literacy proficiency before entering high school.

A literacy coach position was first offered to the 100 lowest performing (based on a three year span of reading EOG scores) middle schools in the state that contained an 8th grade class. In July 2007, the General Assembly appropriated funding for an additional one hundred 21st century middle school literacy coaches. All middle schools that were feeder schools to Turnaround or Learn and Earn high schools were invited to one of five regional meetings to explain the initiative and the responsibility of the coach and the school district. Schools were invited to submit applications for one of the positions.

The 21st century literacy coaches were hired by the elected School Improvement Teams in each school in order to insure that the staff accepted the responsibility for the improved student outcomes. System level and school level administrators each signed Memoranda of Understanding related to the role of the literacy coach in their schools. During the three years since the program was initiated, there has been turnover in administration both at the school level and the district level, as well as teacher turnover in some of the 200 schools. In 2008 a third cohort of middle school literacy coaches was created to provide training for new coaches hired in any of the two hundred schools as the result of attrition of literacy coaches in those schools.

The middle school literacy coaches were initially charged with working with the eighth grade teachers of students who scored level 1 or level 2 on the previous year's (the student's seventh grade) End of Grade Reading test. The coaches assessed individual student performance using the Qualitative Reading Inventory (QRI), which measures student reading comprehension and then assigns a grade-level reading score. Each level 1 or level 2 student was assessed using this tool at the beginning of the school year and again at the end of the school year. **Attachment 4** reflects the results of that QRI testing as well as the End of Grade Reading and Math results for the 8th graders at the respective schools.

North Carolina Teacher Academy 2009 Comprehensive Professional Development Questionnaire and Survey Results

Survey Goals

The North Carolina Teacher Academy determined the necessity of administering a Comprehensive Professional Development Questionnaire and Survey in an effort to maintain and enhance its commitment to enrich instruction and impact student achievement by supporting the growth and retention of highly qualified teachers. Obtaining data related specifically to the nature, quality, and effectiveness of programming is critical for the assessment and continuous improvement of the content and delivery of the Academy's professional development services to public school teachers in North Carolina.

Participants

Individuals who participated in the survey were North Carolina public school teachers who previously participated in a Teacher Academy summer session during the years 2006, 2007, or 2008.

Administration of Survey

Ten thousand (10,000) teachers were invited to complete the *North Carolina Teacher Academy Comprehensive Professional Development Questionnaire and Survey* which was available online from July 8 through August 14, 2009. Participants were contacted using email addresses they provided at the time of their summer academy registration. A direct link to the online survey was included in the email. Initial notification yielded an estimated 1,000 returned emails. A reminder encouraging participation was emailed on August 10, 2009. Survey access data verifies at least 1,483 received notification, and 91% of those who accessed the survey completed it in its entirety.

Survey Methodology

The survey was comprised of four sections: (1) demographic information, (2) professional development processes, (3) evaluation of North Carolina Teacher Academy participation, and (4) feedback on improving learning experiences and suggestions for developing new content and delivery methods. In an effort to receive the most comprehensive data, a variety of survey questions were used.

The survey consisted of seventy items: fifty-two statements to which responses were based on a four-interval Likert scale of strongly agree, agree, disagree, and strongly disagree describing evaluation of Teacher Academy participation; ten close-ended questions requesting demographic data and information about school staff development processes; five open-ended questions regarding school professional development processes and feedback on improving learning experiences and suggestions for developing new content and delivery methods; and three nominal multiple selection questions applicable to school professional development processes.

Survey Results

The results are delineated by the four sections of the survey (demographic information, professional development processes, evaluation of North Carolina Teacher Academy participation, and feedback for improving learning experiences and suggestion for developing new content and delivery methods). Percentages reported in these results are based on the number of responses per question or statement as reported by Survey Monkey, the online vehicle by which participants accessed and completed the survey.

Demographic Information

This portion of the survey was designed to identify the teaching experience, credentials, and statewide geographic location of individuals who responded to the survey. The majority of the teachers (73%) have at least four and no more than twenty-four years of teaching experience. Cross tabulating work experience and years teaching in North Carolina of this group of participants indicates respondents have spent their entire careers teaching in North Carolina (80%). Teachers holding Masters' degrees made up 45% of participating teachers, and a number of participants have earned National Board Certification (12%).

Additionally, survey participants tended to teach in rural communities (63%) in the piedmont (66%) of North Carolina. Teachers whose schools are located in the coastal region made up 26% of all individuals who accessed the survey, and teachers working in schools located in the mountains had an 8% participation rate.

Professional Development Processes

This portion of the survey was designed to determine the professional development processes and practices regarding alignment, planning, and selection of content which take place at the school level. Survey results are reported in combined percentages of respondents who agreed and strongly agreed with the criteria described. Overwhelmingly, teachers say they understand the professional development processes taking place in their school. Teachers of a large majority (95%) are aware of the goals of the school's professional development plan. Teachers say that their professional development plan is aligned with the School Improvement Plan (92%) and indicate said plan is linked to increasing student achievement (96%). Some teachers believe the professional development plan is tied to the teacher evaluation process (70%) while others are not sure (25%), and a small number says there is no connection between the two (5%).

The majority of participants indicated their local staff development opportunities are primarily held either before or after school (77%), at the beginning of the academic year (76%), or during the summer (61%). Respondents indicate that learning opportunities are offered during the school day (53%), and many have participated in some form of staff development during their planning periods (49%). Most professional learning takes place either through Professional Learning Communities (42%) or online (39%). The survey provided an opportunity for participants to specify additional times and methods by which professional development is offered at the school level. Although no job-embedded learning opportunities were described, participants indicated that most staff development takes place in their school on early release days (25%) or on teacher workdays (10%). The North Carolina Teacher Academy was identified as an additional mechanism by which schools engage in professional learning by at least 5% of participants. Citation of the Teacher Academy may refer specifically to Teacher Academy staff development offerings available for purchase during the academic year.

In addition to attending North Carolina Teacher Academy summer sessions, teachers participate in other professional growth activities such as workshops and seminars (89%), professional development related to an Individual Growth Plan (86%), informal and formal teacher observations and evaluations (76%), conferences (66%), and School Improvement Committees (64%). Hands-on technology was identified by 56% as an essential type of professional learning activity, and eLearning courses through Moodle, Blackboard, or some other online medium also rated highly (41%). Beyond the survey's prescribed choices, respondents supplied other types of professional development activities in which they have participated, including practices related to professional growth through the National Board Certification process (23%), independent study and/or teacher-initiated attendance in graduate, community, or

adult education courses and/or training (20%), and opportunities for reflection and renewal through other teacher-focused residential programs (12%).

The content of school professional development is primarily determined by building level administrators (76%). However, district leadership was also identified by teachers (74%) as playing a significant role in identifying what is important to teacher growth and instructional practice. Teachers agreed that they were consulted regarding the content of their professional development activities (45%). It is interesting that although participants indicate that staff development takes place through Professional Learning Communities (42 % as indentified under professional development practices), Professional Learning Communities in most cases have limited decision-making power about the content of their learning activities (42%). Additionally, the individuals who prioritize the school's professional development plan do not actually participate in content selection (16%).

North Carolina Teacher Academy Participation Evaluation

This portion of the survey was designed to determine the effectiveness of the North Carolina Teacher Academy summer sessions in fulfilling the Academy's mission of enriching instruction and impacting student achievement by supporting the growth and retention of highly qualified teachers. Receiving feedback about improving learning experiences and soliciting suggestions for developing new content and delivery methods are essential to determining the future direction of the North Carolina Teacher Academy. Teachers cite that the overall effectiveness of the North Carolina Teacher Academy impacts teacher professional growth and confidence as well as influences student learning and achievement, as illustrated by the following survey results.

A population mean of 98% of survey participants agrees that the North Carolina Teacher Academy professional development in which they participated was a positive, meaningful experience, meeting teachers' needs. Scheduling academies during the summer months proves to be the most expedient and suitable method for providing staff development as respondents indicated the professional development was offered at a convenient time (99%), and the time was well spent (97%). Residential sessions were held in clean, comfortable training facilities (98%). Sessions were considered nonthreatening, engaging, and interactive (98%), providing various opportunities to network with teachers across the state (95%). Trainers were regarded as effective facilitators who demonstrated a thorough knowledge of the content (99%). Training sessions were supplemented with materials which proved to be useful to classroom instruction (95%).

Participation in a North Carolina Teacher Academy summer session benefits professional growth as teachers indicated they learned practical instructional strategies (97%), new knowledge and skills (98%) and the theory behind practice (97%). Moreover, teachers recognized the Academy's continuous efforts to connect new learning to prior knowledge (97%). As a result of participating in a summer academy, respondents indicated they experimented, practiced, implemented and/or applied the new practices in their classroom instruction (96%), and noticed long lasting changes in their teaching (97%). Teachers feel their efforts are recognized (86%), having received affirming feedback from supervisors (89%), and seeing positive effects on their performance evaluations (88%). Teachers are proud of their own accomplishments (97%). Rather than allowing the compensation of a stipend to influence attendance (81%), many teachers cite earning renewal credit (89%), gaining efficiency and

productivity in their job performance (95%), being empowered and finding a renewed passion for teaching (94%) as rewarding outcomes of their Teacher Academy experience.

Aside from its positive impact on school cultures and climates (94%), participation in the Teacher Academy had a positive impact on student learning according to 97% of respondents. Students have become more actively engaged and involved in their own learning (97%) and have gained increasing confidence as learners (96%) based on teachers' professional learning experiences with the Academy. As a result, teachers believe that student achievement has increased (96%), and achievement gains can be evidenced on state and district assessments (93%). In addition to student learning, student behavior is significantly influenced (92%) as respondents report that student behavior is positively impacted as teachers' classroom management skills have improved (93%).

Feedback and Suggestions

This open-ended portion of the survey was designed to obtain feedback on improving learning experiences and soliciting suggestions for new content and delivery methods. Categorizing comments resulted in three major focus areas (in ranking order):

(1) Technology:

Teachers described an ever-present and constantly changing need to meet the needs of and provide skills for 21st century learners. Although participants acknowledged and acclaimed Teacher Academy's efforts in this area, repeated requests suggested maintaining, increasing, and continuously updating professional development in technology. Additionally, participants believe professional developers should model 21st century skills by using the latest technology in their delivery.

(2) Content-Specific Instruction:

Teachers believe learning experiences should be improved by having professional development presented in ways that demonstrate how to tie instructional practices to specific content areas. Equally, teachers requested professional development which focuses on the teaching of specific contents. Specific content areas mentioned included (in ranking order): math, science, arts, music, special education, vocational and technical classes, foreign language, and physical education.

(3) Follow-Up:

Teachers' feedback concerning Teacher Academy follow-up requirements related primarily to the online delivery method, which they describe as lengthy, time-consuming processes occurring at busy times during the academic year. Suggestions included returning to a traditional face-to-face delivery method; giving teachers a choice of delivery methods (face-to-face or online); and offering follow-ups at the end of the summer to facilitate implementation when schools begin. Other comments generally related to follow-ups included providing digital communities by which participants may contact each other, trainers, and previous individuals who attended the session for networking and problem-solving issues as session content is implemented.

Nearly a quarter of all comments provided to this portion of the survey specifically indicated no suggestions were needed and various comments encouraged the Teacher Academy to continue to deliver practical, timely, relevant research-based staff development.

Considerations

Based on the results of the *North Carolina Teacher Academy Comprehensive Questionnaire and Survey*, a number of considerations for improving learning experiences, content and delivery of services can be determined.

1. To increase survey response, the North Carolina Teacher Academy may consider sending future surveys during the fall of the academic year, perhaps along with fall follow-up notifications, to ensure participants receive them.
2. To address the needs of 21st century teachers and learners, the North Carolina Teacher Academy should continue to develop and deliver technology modules that keep pace with rapid changes in technology.
3. To fulfill requests for content specific programming, the North Carolina Teacher Academy may consider incorporating content-specific examples into existing professional development curricula and explore possibilities for module development in specific academic disciplines.
4. To quell concerns about follow-up requirements, the North Carolina Teacher Academy may first consider sharing relevant research from the National Staff Development Council's most recent report *Professional Learning in the Learning Profession* (2009), which emphasizes that short, episodic staff development has little impact on teacher practice, requiring at the minimum 49 hours over a six to twelve-month period. Considering such research, the Academy may consider extending the length of time participants have to complete online activities. Additionally, online

follow-up courses may be designed to provide year-long forums through which participants may network.

Conclusions

In review of the overall results of the *North Carolina Teacher Academy Comprehensive Questionnaire and Survey*, it can be determined that the Teacher Academy is continuously improving, revisiting, and revising the content and delivery of its services. Teachers find the Academy's work to be beneficial, professional, and to have significant impact on teacher practice and student performance. Moreover, the survey illustrates the value the Academy places on receiving and implementing teacher input.

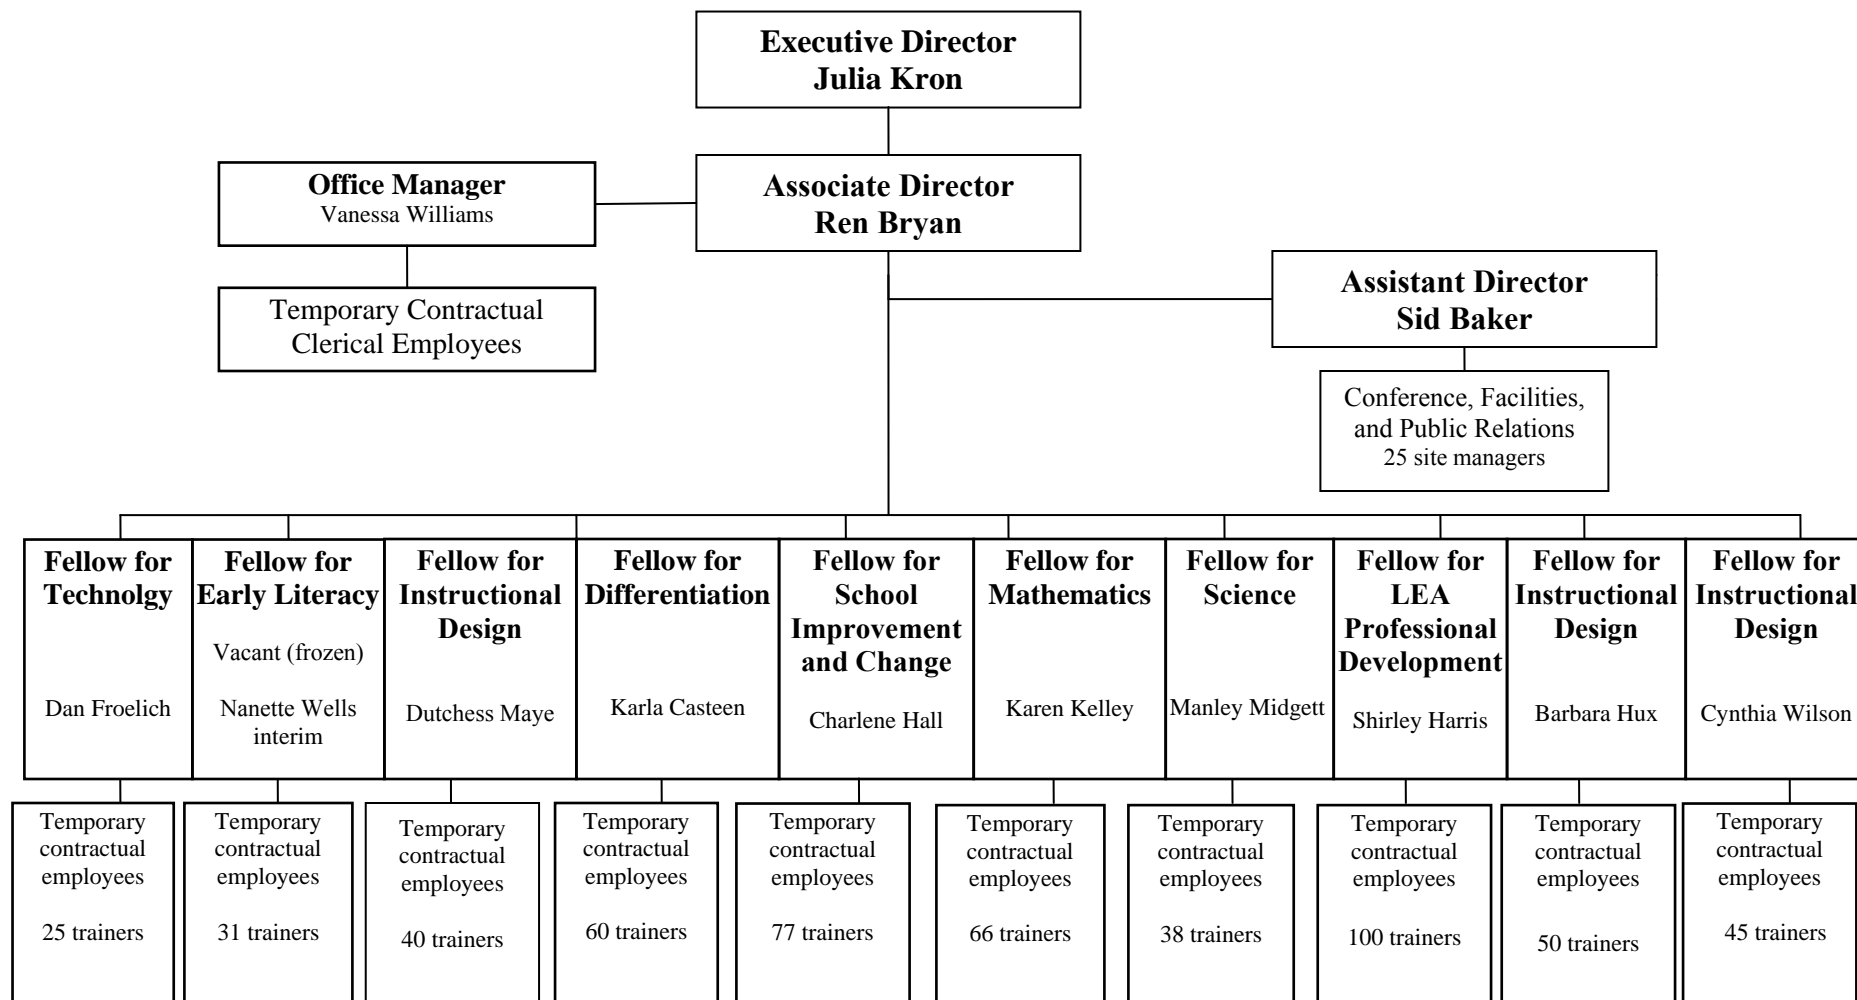

Attachment 8 contains the Professional Development Evaluation Report response data.

North Carolina Teacher Academy Impact on Classroom Instruction

More than 127,320 hours of professional development were provided for teachers in North Carolina school districts during 2008-2009. The North Carolina Teacher Academy held 34 summer sessions and more than 161 single and multiple-day local professional development sessions for 8697 educators, representing 100 school districts during the 2008-2009 fiscal year. Twenty two percent of the Teacher Academy professional development contact hours were invested into Disadvantaged Student Supplemental Funding districts addressing strategic service needs and improvement goals identified by the State Board of Education and the individual school districts.

- **Attachment 2** identifies the summer program participation for both residential and LEA/NCTA Partnership academies.
- **Attachment 3** identifies the number of educators in each North Carolina district for both summer program and local professional development participation. The total contact hours of professional development received by each district are also included.
- **Attachment 4** identifies the number of participants for summer and local professional development sessions for each module.
- **Attachment 5** features two North Carolina maps. The first map of Teacher Academy participation highlights the total percent of schools in each county that have sent teams to summer sessions since 1994. The second map illustrates the impact of the North Carolina Teacher Academy on individual North Carolina school districts in 2007-2008.
- **Attachment 6** identifies the professional development provided in Disadvantaged Student Supplemental Funding districts along with indicators of achievement.
- **Attachment 7** identifies the highlights of the reported improvement in schools with Middle School Literacy Coaches.

North Carolina Teacher Academy Organizational Chart

Attachment 2

2008-2009 North Carolina Teacher Academy Programs and Summer Attendance

The Teacher Academy held 25 residential and nine LEA/NCTA partnership academies for a total of 34 summer sessions during fiscal year 2008-2009. Summer academy participation included 2,450 teachers and administrators, representing 88 local education agencies. Residential attendance totaled 1,896 participants and LEA/NCTA partnership attendance totaled 554 participants.

The residential sessions were held at seven sites across the state: Appalachian State University, Chowan University, Elon University, Lenoir-Rhyne University, North Carolina A&T State University, the Radisson/Governor's Inn, and Western Carolina University. For the eighth year, LEA/NCTA partnership academies were held locally in schools and professional development centers. Ten summer sessions were held in collaboration with the Public School Forum of North Carolina in Caswell County, Greene County, Mitchell County, Warren County and Washington County. Each county received one week of training in *Multiple Intelligences* and one week of training in *Using Data to Build Classroom Learning Communities*. Summer academies for Cohort 2 and Cohort 3 of the Middle School Literacy Coaches were cancelled due to budget restrictions.

Differentiated Instruction

Differentiation in K-12 Classrooms explores how teachers design instruction in response to an increasingly broad spectrum of student needs and why personalization is important for today's classrooms. Teachers explore how to differentiate for content, process, and assessment focusing on student readiness, student interest, and student learning profile. Two sessions of this module were held during this fiscal year, and 155 participants attended.

Learning Styles focuses on using a variety of teaching strategies to improve student achievement in grades K-12. Based on the Dunn and Dunn model, participants in this program learn how to identify and teach to the learning strengths of each student. Participants learn new ways to differentiate instruction by developing materials for tactual, kinesthetic, visual, and auditory learners. Teachers also look at various methods for redesigning the conventional classroom to implement a learning styles focus. The Academy held two sessions and trained a total of 147 teachers and administrators in this program during the 2008-2009 fiscal year.

Mindful Instruction-Using Brain Research to Differentiate Instruction focuses on how students' brains operate and what impacts their thinking, learning, and memory. Based on training from Eric Jensen, Pat Wolfe, Debbie Estes, Rich Allen, and David Sousa, participants in this program gain a better understanding of how brain research can help them work with today's diverse learners. Teachers learn twenty instructional strategies that transform their classrooms into areas of high energy, enthusiasm, and fun, thus engaging all students in the learning process. Teachers also learn how "states" play an important role in student learning. Two sessions were offered to 140 teachers and administrators.

Multiple Intelligences examines all the ways students are smart, not just in the language and math subjects around which traditional instruction is built. Howard Gardner's theory opens the door to a wide variety of easily implemented teaching strategies that increase student achievement. Teachers learn how to differentiate instruction by interpreting the nature and quality of their students' intelligences, discovering how to create a classroom that respects the diversity of their students, giving students the opportunity to learn content in many ways. During this fiscal year, two sessions were offered to 118 teachers.

Classroom Strategies that Work focuses on key research findings of the nine essential strategies that have positive effects on learning, identified by Dr. Robert Marzano. Researchers at Mid-continent Research for Education and Learning (McREL) conducted a meta-analysis on instructional strategies that could be used in the classroom. The result of this analysis provided the basis for the strategies identified by Dr. Marzano. Teachers engage in each of the strategies and develop the skills necessary for implementation in their classrooms. Participants train in summarizing and note taking, cooperative learning, similarities and differences, nonlinguistic representations, homework and practice, setting objectives and providing recognition, generating and testing hypotheses, reinforcing effort and feedback, questions, cues, and advance organizers. There were two sessions for 168 participants.

Instructional Technology

The goal of *Technology Literacy for 21st Century Schools* is to make technology an instructional tool used by classroom teachers as an integral part of the curriculum they deliver. With the facilitation of experienced technology trainers in computer labs, participants acquire skills in multimedia authoring tools, grant writing, the use of software for graphic organizers, and the development of integrated activities. During this fiscal year, 202 teachers and administrators participated in three sessions.

Literacy

Developing Inquiry in Reading and Writing provides primary, elementary, and middle school teachers with strategies to actively engage students in self-learning by providing instruction in collaborative inquiry, oral responses to literature, and Readers' and Writers' Workshop. Through utilizing strategies in storytelling, poetry, and drama, teachers enable students to draw on their creative abilities and inquisitiveness to enhance literacy learning. One session was held with 64 participants.

The module *Informational Text* provides teachers with information about the different genres of informational text and guides them to develop strategies to incorporate these strategies into their classrooms. Teachers also relate the use of informational text to research-based twenty first century literacy skills of accessing, transforming, and sharing information. During the 2008-2009 fiscal year 51 teachers participated in one session.

The Teacher Academy's literacy module *Literacy Strategies for Elementary Grades* provides primary, elementary, and middle school teachers with an overview of the reading process and

cueing system. Whole group learning activities and mini-sessions offer a wide-range of instructional strategies in reading and writing to improve student achievement. This practical, hands-on program offers participants the opportunity to make a variety of books and to design games in order to teach to individual student strengths and create a classroom environment conducive to learning. During the 2008-2009 fiscal year 57 teachers and administrators participated in the single session dedicated to this program.

The module *Reading in the Content Areas* focuses on strategies to help middle and high school students learn and retain content information. These strategies enable teachers to help students comprehend information across the curriculum and throughout grade levels. The students gather information through all types of learning tasks, thereby becoming better readers and writers in all subject areas. The training topics include vocabulary and concept development, discussion and writing strategies, text patterns and structures, and organizational models. One session was held during the 2008-2009 fiscal year with 58 teachers attending.

Mathematics

Developing Arithmetic and Algebraic Reasoning in Elementary Grades enables elementary teachers to see the connections between arithmetic and algebraic reasoning, and for teachers to be able to recognize that students can and do reason algebraically in the elementary grades. The expectations for this module are for teachers to engage in examining instructional practices as they relate to fostering algebraic thinking, to analyze and understand student thinking by looking at student conjectures, and to extend and deepen knowledge of the algebraic strand in the North Carolina curriculum. There were four sessions for 334 participants.

Developing Algebraic Reasoning in Middle Grades Mathematics includes hands-on problem solving experiences that provide participants an opportunity to explore and learn a variety of effective teaching techniques. The expectations for this module include investigating and discussing mathematics with a focus on Algebraic Habits of Mind, developing language for talking and thinking algebraically in order to promote mathematical discourse, reflecting and analyzing student thinking in their written work, applying questioning techniques that elicit conceptual understanding, and “algebrafying” mathematics problems to enhance algebraic thinking. One session was held for 64 participants.

School Improvement and Change

Building Professional Learning Communities provides both knowledge and know-how for constructing and implementing a “professional learning community.” The session includes instruction on implementing strategies for increasing collaboration between both students and colleagues and gives participants an opportunity to build a toolbox of strategies for group problem-solving and shared decision-making. During 2008-2009, six sessions were held for 442 participants.

Building Teacher Leadership is built on the research of Michael Fullan, Andy Hargreaves, and Linda Lambert and supports the importance of teacher leadership in contributing to the quality and success of teachers. This module provides teachers with skills necessary to become effective

leaders in their schools by learning how to be effective coaches, how to conduct efficient and productive meetings, and how to implement strategies for establishing sustainable teacher leadership. During the 2008-2009 fiscal year this module had three sessions with 218 participants.

The module *Classroom Management* provides K-12 teachers with the skills necessary to meet classroom management challenges successfully. With the use of research-based strategies, teachers learn to manage classrooms proactively, deter inappropriate behaviors, and create a learning atmosphere where students are self-governing. Teachers learn to cultivate productive student-teacher relationships, develop a heightened awareness and emotional objectivity relative to classroom situations, distinguish between rules and procedures; examine disciplinary interventions that work, and guide students in the creation of a self-managing learning environment. During fiscal year 2008-2009 one session was held for 69 teachers and administrators.

Science

Elementary Physical Science

Principles of physical science cut across all science subjects and topics. These same principles apply, in predictable ways, throughout the universe. Students who have an understanding of these principles are better able to explain the physical world around them. They are able to see that all parts of their world are inter-connected in many ways. They are equipped to construct a more accurate and complete understanding of earth and life science concepts and processes. Training topics are grade-level specific and include:

- Properties and relationships of common materials and objects
- Interactions among matter and energy
- Forces and motions
- Sound and light
- Magnetism and electricity
- The Solar System

Two sessions with 163 participants were held in this fiscal year.
