Subject: Fw: Additonal information coastal stormwater

TO: Mr. George F. Givens

I wanted to send you the attached information regarding closures of S.A. waters. Read the email below as an explanation of the 2 charts. The year 2007 data does not match up with the rest of the numbers due to NCDSFS changing their accounting methods and going to a GIS system. The main point is trends of acreage closed from 1971 thru 2006, and excluding the change over year of 2007.

Thanks.

Attached are two excel spreadsheets.

The one with the closures was received from NC Shellfish Sanitation for some counties.

The other one I created using the data from the first.

I did not use 2007 data because they have changed to a GIS data base and for some reason, the acreage changed significantly.

I have not seen any data on the number of acres closed due to marinas, etc for all counties. I would like to have that.
