## MEMORANDUM

TO: ENVIRONMENTAL REVIEW COMMISSION  
The Honorable Jimmy Dixon, Co-Chairman  
The Honorable Chuck McGrady, Co-Chairman  
The Honorable Trudy Wade, Co-Chairman

FROM: Mollie Young, Director of Legislative Affairs

SUBJECT: Dry-Cleaning Solvent Cleanup Act Program Annual Report

Pursuant to G.S. 143-215.104A, this report provides an annual update on activities conducted in the DSCA program in fiscal year (FY) 2015-16. The DSCA of 1997 and its amendments created a fund for assessment and cleanup of dry-cleaning solvent environmental contamination at dry-cleaning and wholesale distribution facilities and also authorized the program to develop and enforce rules relating to the prevention of dry-cleaning solvent releases at operating facilities.

If you have any questions or need additional information, please contact me by phone at 919-707-8618 or by email at [mollie.young@ncdenr.gov](mailto:mollie.young@ncdenr.gov).

# ***DRY-CLEANING SOLVENT CLEANUP ACT 2016 ANNUAL REPORT***

## **Executive Summary**

As required by the Dry-Cleaning Solvent Cleanup Act (DSCA) of 1997 and amendments (G.S. 143-215.104A *et seq.*), this report provides an annual update on activities conducted in the DSCA program in fiscal year (FY) 2015-16. The DSCA of 1997 and its amendments created a fund for assessment and cleanup of dry-cleaning solvent environmental contamination at dry-cleaning and wholesale distribution facilities and also authorized the program to develop and enforce rules relating to the prevention of dry-cleaning solvent releases at operating facilities.

Since the start of the DSCA program, 439 sites with known or suspected dry-cleaning solvent contamination have been reported to the N.C. Department of Environmental Quality's (DEQ) Division of Waste Management (DWM). Of these, 379 have been certified into the DSCA Program.

During FY 2015-16, the DSCA program continued to make significant progress in all aspects of program implementation. Highlights of DSCA's accomplishments in remediating sites, protecting human health and preventing future releases, include:

- Issuing No Further Action (NFA) Notices for 13 remediated sites, with 32 additional sites identified as ready for NFA status.
- Providing municipal water to three residences, and temporary bottled or filtration systems to five residences.
- Installing vapor mitigation systems for one residence and four businesses to protect occupants from contaminant vapor intrusion risks.
- Implementing four groundwater remedies and two soil remedies at six DSCA sites.
- Conducting 552 full compliance inspections at 538 active dry-cleaners.
- Performing outreach visits at 27 facilities to educate and assist new business owners/operators with environmental compliance.
- Delivering approximately 440 compliance calendars to assist with dry-cleaners with record-keeping requirements.

The DSCA Fund continues to be solvent with an end-of-fiscal year fund balance of approximately \$5.6 million and encumbered funds totaling \$2.8 million. The small decrease in the fund balance over last year is attributed to an increase in expenditures to address the increased number of sites, to assess vapor intrusion and mitigate as needed, and to continue to assess and remediate certified sites to ensure the protection of human health. Control measures are being implemented to help ensure that funds are available to address sites that pose greater potential risks. The program is using its resources efficiently, and expenditures are being closely monitored to ensure adequate funding is maintained. Based on data on site cleanup costs in North Carolina and the nation, cleaning up the 379 sites that have been certified in DSCA will cost an estimated \$125 million. DEQ estimates there may be as many as 1,500 contaminated dry-cleaning sites in North Carolina.

## *Program Activity*

The General Assembly enacted DSCA to: 1) clean up contamination from dry-cleaning solvents at both retail dry-cleaners and wholesale solvent distribution sites and 2) protect human health and the environment by preventing future dry-cleaning solvent contamination. DEQ made significant progress during fiscal year 2015-16 in implementing the cleanup and compliance components of DSCA.

### *Site Cleanups*

During the past fiscal year, DWM directed significant energy towards assessment and remediation of sites with contamination from dry-cleaning solvents. DWM continued to implement initiatives to ensure protection of human health by mitigating vapor intrusion (indoor air pollution from solvent contamination in the soil or groundwater) and providing clean water supplies to residents and businesses. During FY 2015-16, DWM staff and the program's four independent contractors performed the following activities:

- screened sites for imminent hazards such as threatened water supply wells and vapor intrusion into buildings
- abated indoor vapor hazards from contaminated soils and groundwater
- provided temporary and permanent clean water supplies
- conducted comprehensive site assessments delineating extent of contamination
- remediated contaminated soil
- remediated contaminated groundwater
- evaluated site risks and prepared sites for closure

### *Sites in the Program*

Eighteen new sites were certified into DSCA during FY 2015-16. Table 1 provides current and cumulative statistics for sites certified into the DSCA program. A site becomes certified when a petitioner enters into an assessment and remediation agreement with DWM. Figure 1 depicts the number of contaminated dry-cleaning sites participating in the DSCA program through time. A list of certified sites, along with current site status, is provided in Appendix A.

Rules that establish a risk-based approach to assessing and cleaning up certified sites in the DSCA Program became effective on Oct. 1, 2007. These rules and associated guidance allow program staff to determine the risk posed to human health and the environment at each site and, if necessary, to calculate the appropriate cleanup levels for soil and groundwater.

During FY 2015-16, DWM issued No Further Action (NFA) notices for 13 contaminated dry-cleaning sites in the DSCA Program, bringing the total to 64 DSCA sites that have been given NFA status since the risk-based rules became effective in October 2007. DWM is recommending no further action at an additional 32 DSCA sites ("Sites Pending Closure" in Table 1). The program anticipates issuing between eight and 12 NFA notices in the coming fiscal year. Preparing a site for No Further Action involves completing an assessment of the extent and magnitude of contamination, evaluating the risks posed by the contaminants,

mitigating any unacceptable risks, remediating contamination as needed, ensuring stability of the groundwater contaminant plume, preparing a risk management plan, soliciting public input, and recording notices to ensure that site conditions remain protective. In accordance with DSCA statutes, the program provides the proposed risk management plan and associated notices to the appropriate local governments (counties and municipalities), and announces the availability of the plan to the public through local newspapers, direct mailings to property owners on or adjacent to the contamination site and by posting a notice at the site.

**Table 1. Cumulative DSCA Site Statistics (through June 30, 2016).**

Certification Status	Number	Percent of Total
Contaminated Sites	439	100 %
Sites Certified	379	86 %
Sites Determined Ineligible	4	1 %
Sites not Certified	56	13 %
<i>Site Status</i>		
Sites Certified	379	100 %
Certified Sites in Assessment/Remediation	283	75 %
Certified Sites Pending Closure	32	8 %
Certified Sites Closed	64	17 %
<i>Site Classification of Certified Sites</i>		
Abandoned	247	65 %
Wholesale Distribution	2	1 %
Operating	130	34 %
<i>Small Size (1-4 employees)</i>	65	50 %
<i>Medium Size (5 - 9 employees)</i>	39	30 %
<i>Large Size (&gt; 10 employees)</i>	26	20 %

**Figure 1: Known dry-cleaning solvent contaminated sites in North Carolina.**

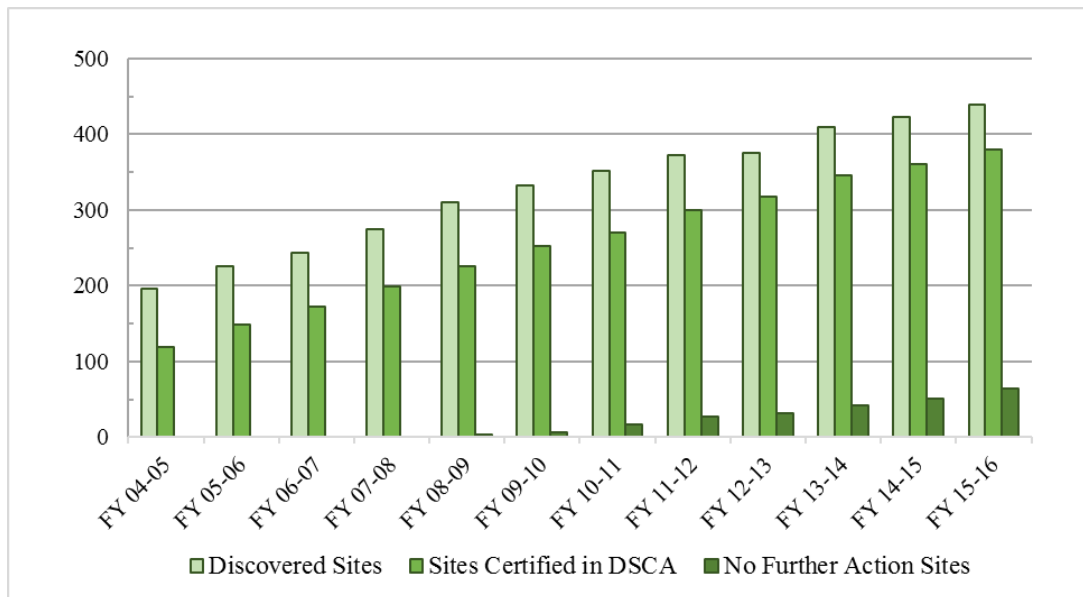

Table 2 provides a summary of actions undertaken to address direct threats to human health and the environment. During FY 2015-16, DWM connected three residences to municipal water, and provided temporary clean water to five. The program maintains filtration systems at three residences where municipal water is not available. In total, DWM has provided municipal water to 64 residences and 11 businesses that have had their water supply wells impacted or threatened by dry-cleaning solvent contamination from 17 DSCA sites.

**Table 2. DSCA Site Cleanup Statistics**

<b>Accomplishments</b>	<b>FY 2015-16</b>	<b>Cumulative</b>
<b><i>Water Supply Provided</i></b>		
Municipal Water Connection - residences	<b>3</b>	<b>64</b>
Municipal Water Connection - businesses	-	<b>11</b>
Temporary Water Supplied - residences	<b>5</b>	<b>31</b>
Temporary Water Supplied - businesses	-	<b>6</b>
# of DSCA sites involved	<b>3</b>	<b>17</b>
<b><i>Vapor Intrusion (VI) Mitigated</i></b>		
VI Control System Installed - residences	<b>1</b>	<b>14</b>
VI Control System Installed - businesses	<b>4</b>	<b>63</b>
# of DSCA sites involved	<b>4</b>	<b>50</b>
<b><i>Active Remediation Implemented</i></b>		
# of DSCA Soil Remediations Implemented	<b>2</b>	<b>88</b>
# of DSCA sites involved	<b>2</b>	<b>79</b>
# of DSCA Groundwater Remediations Implemented	<b>4</b>	<b>68</b>
# of DSCA sites involved	<b>4</b>	<b>49</b>

Addressing indoor air pollution from tetrachloroethylene (PERC) releases continues to be a high priority, since many DSCA sites have occupied structures on or adjacent to PERC contamination. The program has identified a number of buildings where soil and/or groundwater contamination has produced unacceptably high concentrations of PERC vapor in indoor air that required mitigation. During FY 2015-16, DWM installed vapor mitigation systems at one residence and four businesses to control unacceptable vapors caused by releases at four DSCA sites. Since 2006, DWM has installed vapor control measures at 63 businesses and 14 residences as a result of dry-cleaning solvent contamination from 50 DSCA sites.

Many DSCA sites require soil and groundwater cleanup to protect human health and the environment. In order to remove contaminant sources that threaten indoor air in buildings and cause further degradation of groundwater, DWM conducted soil vapor extraction remedies at two DSCA sites. During FY 2015-16, the program also monitored the effectiveness of groundwater remedies at 23 DSCA sites, maintained active groundwater remediation systems at two sites, and implemented groundwater remedies at four sites. During the life of the DSCA Program, DWM has implemented 88 soil cleanup actions at 79 DSCA sites, and conducted 68 groundwater cleanup actions at 49 DSCA sites.

### *Site Prioritization System*

DSCA requires that site cleanup disbursements be made on higher priority sites first. Data from the program's vapor intrusion investigations indicate that this type of direct human exposure is occurring at a number of DSCA sites. To ensure that this particular health concern receives appropriate attention, the program has revised its prioritization method to include potential indoor air threats. Due to the growing number of DSCA sites and the complex nature of assessing and remediating PERC contamination, the DSCA program continues to evaluate and implement cost efficient measures to help ensure solvency of the fund.

### *Vapor Intrusion*

Among states with dry-cleaning programs, the North Carolina DSCA Program has continued to work at the forefront in addressing vapor intrusion (VI) issues at dry-cleaning solvent-contaminated sites. Due to the volatility of PERC, one of the most common dry-cleaning solvents, the potential for vapor intrusion exists at many dry-cleaning sites. The DSCA program has shared its large library of North Carolina vapor intrusion data with EPA to supplement data they use to establish attenuation factors and screening levels. EPA welcomed North Carolina's data from commercial structures in the southeastern United States.

An emerging issue that may affect some contaminated dry-cleaning sites involves the presence of trichloroethylene (TCE) in indoor air. Not only is TCE a chemical produced by the breakdown of PERC in the environment, but TCE is also a spotting agent in the dry-cleaning industry as well as a common solvent in many industrial settings. At contaminated sites, health threats from volatile contaminants in indoor air are often associated with long-term (chronic) exposure to chemicals migrating from subsurface into indoor air. Recent studies along with other toxicological information suggest that short-term (acute) exposure to trichloroethylene (TCE) in indoor air raises a risk for fetal heart malformation during the first trimester of pregnancy. Staff from the division's cleanup programs, including DSCA, are working with the department to develop protocols to promptly address acute exposure situations.

### *Investigation of Potential New Sites*

In 2007, DSCA was amended to allow the program to spend up to 1 percent of the DSCA fund balance each year to investigate active and abandoned dry-cleaning sites that the program believes may be contaminated. If dry-cleaning solvent contamination is found, the potential responsible party is given the choice of entering the program as a petitioner or allowing the site to be addressed under the Inactive Hazardous Sites (IHS) program. If they choose the latter, the responsible party may be required to reimburse DSCA for the investigation costs. Under this provision, the program initiated investigations at eight potential dry-cleaning contaminated sites during FY 2015-16. Since 2007, DSCA has investigated 89 sites for potential dry-cleaning solvent contamination, with 60 of those sites becoming certified into the program.

DSCA continues to partner with other agencies to identify new sites and to coordinate assessment and cleanup efforts to ensure effective use of state resources. Data provided by DEQ's Underground Storage Tank (UST), Brownfields, Inactive Hazardous Sites, Public

Water Supply, and municipal environmental programs reveal monitoring wells and supply wells with contaminants that may be from dry-cleaning operations. DSCA staff compare contaminated well locations to known locations of more than 2,000 active and abandoned dry-cleaning facility sites to help identify potential dry-cleaning contaminant sources. DSCA also shares data and coordinates assessment and cleanup activities data with other DWM programs, such as Brownfields and the UST Section, to ensure that remedial strategies are protective and implemented effectively.

### *Identified Contamination Sites*

A total of 439 sites known or suspected to be contaminated by dry-cleaning solvents have been reported to the department. To date, DSCA has certified 379 of these sites into the program, as noted in Table 1. Appendix A lists, by county, the sites with known or suspected dry-cleaning solvent contamination reported to the department, and the sites certified in the program. During FY 2015-16, DSCA certified 18 new sites into the program, and three of these were identified as a contaminant source with the program's 1 percent investigation allowance. As noted above, the program anticipates that additional dry-cleaning solvent contamination sites will be discovered using the investigative allowance in FY 2016-17.

### *DSCA Contracts*

The program currently manages four contracts with state-lead environmental engineering firms, with a total end-of-fiscal year encumbrance of approximately \$2.8 million. The contracts establish terms and conditions under which qualified environmental engineering firms assess and remediate contaminated dry-cleaning sites in the DSCA program.

### *Customer Service Initiatives*

During FY 2015-16, the program continued to promote the DEQ mission of excellent customer service by making public records more accessible, providing easy access to DSCA site locations, engaging communities affected by dry-cleaning solvent contamination, and sharing program updates with interested stakeholders on a regular basis. The program uses its website to host a variety of information including, but not limited to maps, public records access, forms, rules and statutes, updates on sites of interest, stakeholder meeting information, and staff contact information.

#### Public Records

Improving the accessibility to public records has been a high priority for all DWM programs. To date, all of the DSCA cleanup program's current and legacy records have been digitized, and the frequently requested document types have been uploaded to the Laserfiche document management system. Laserfiche is available through DEQ's and DWM's websites and allows users the ability to search and download public records.

#### Site Location Information

The availability of site location information is important to the public and many decision makers, including property buyers and sellers, lenders, municipalities, and

state and local environmental programs. The program continues to maintain location data on a web-based map viewer on the DWM website. In addition, the program has consistently supported and been involved in the development of DWM's well permitting support system, which is an online site locator tool based on ARC-GIS Online platform.

#### Information Sessions and Presentations

During FY 2015-16, the DSCA program participated in information sessions for two sites in Charlotte, one site in Southport and one site in Garner. These sessions provide interested residents with information about assessment and remediation activities conducted at DSCA sites in their community. The program's outreach efforts focus on educating local residents on vapor intrusion, explaining assessment and cleanup goals, and addressing questions and concerns, and have been well-received. DSCA staff also made presentations at the Brownfields 2015 Conference, the September 2015 DSCA Stakeholder meeting and the State Coalition for the Remediation of Drycleaners teleconference in October 2015.

#### Stakeholder Meetings

The DWM continues to encourage stakeholder involvement in the DSCA program. The existing stakeholder group is comprised of representatives from the dry-cleaning industry, environmental organizations, attorneys, environmental consultants and the public. Program representatives hold semi-annual meetings to report on accomplishments and initiatives, to solicit feedback on topics that affect the program, and to present remediation projects of interest to the attendees.

### **Facility Compliance**

The Environmental Management Commission has been authorized under the Dry-Cleaning Solvent Cleanup Act to develop rules that operating dry-cleaning facilities must follow to prevent environmental contamination by dry-cleaning solvents. During FY 2015-16, the DSCA Program had five inspectors performing outreach visits, inspections and enforcement at dry-cleaning facilities and wholesale distribution facilities across the state.

In addition to the program's Minimum Management Practices (MMP) regulations, enforcement authority is delegated to the DWM for violations of applicable air quality rules, and the Hazardous Waste Section has granted authority to the DSCA Compliance Program to inspect dry-cleaners for compliance with the Resource Conservation and Recovery Act (RCRA) Hazardous Waste regulations. This allows one program in DEQ to ensure compliance with all environmental regulatory requirements and gives dry cleaners and the public a single DEQ point-of-contact for compliance questions or concerns.

#### *Educational Assistance Visits*

During FY 2015-16, DWM inspectors conducted 27 educational assistance visits at active dry-cleaning facilities. To date, DSCA inspectors performed 791 educational outreach visits at active dry-cleaners, many of which had not previously been inspected by a DEQ program. This

outreach trains owners and operators regarding the MMPs, hazardous waste, and air quality regulations. Inspectors also use these visits to thoroughly document all compliance issues that are observed.

### *Inspections and Enforcement*

DSCA conducts unannounced, full compliance inspections at dry-cleaning facilities and wholesale distribution facilities to ensure that dry-cleaning facilities are compliant with all applicable regulations. In setting inspection priorities, the program considers multiple factors including facility specific compliance history, business owner/operator changes, emerging solvents or equipment, and regulatory changes at the federal, state or municipal level. During FY 2015-16, DSCA conducted 552 full inspections at 538 active dry-cleaning facilities. Violations identified included failure to install spill containment under dry-cleaning machines and waste solvent storage areas, failure to seal waste solvent containers, failure to inspect dry-cleaning equipment, and failure to record and maintain National Emission Standards for Hazardous Air Pollutants (NESHAP) recordkeeping logs.

To be eligible to participate in the DSCA cleanup program, all operating dry-cleaning facilities and wholesale distribution facilities must be compliant with the DSCA MMPs. During FY 2015-16, DSCA staff inspected six active facilities seeking entry into the cleanup program and 80 active facilities that are already certified to ensure that DSCA cleanup funds are being used where owners and operators are diligent about preventing dry-cleaning solvent releases.

### *Additional Compliance Outreach*

The DSCA compliance program continues to evaluate and implement program enhancements to improve compliance rates among the regulated community.

Since 2007, the DSCA program has produced a PERC compliance calendar that provides all applicable rules, recordkeeping, guidance and reference information in one document for the convenience of facility owners and operators. The calendar has received positive reviews from dry-cleaners in North Carolina and industry officials in other states, where it has been praised for its comprehensive scope and functionality. For the 2016 calendar year, the program also developed and produced a petroleum solvent compliance calendar for cleaners who operate dry-cleaning machines that use regulated petroleum solvent. The calendars include instructions in Spanish and Korean. The program mailed or hand-delivered approximately 360 PERC calendars and 80 petroleum calendars to dry-cleaning facilities statewide for the 2016 calendar year.

The program also employs an inspector who speaks Korean fluently and translates outreach materials and regulations to better serve our regulated community. Reducing language and cultural barriers is expected to improve education and compliance among Korean-speaking owners and operators of dry-cleaning facilities. The Korean-speaking members of the dry-cleaning community have responded very positively to the new inspector, and during the next fiscal year we anticipate continued improvement in compliance rates. The program continues to evaluate ways to better enable compliance among all the dry-cleaners and wholesale distribution facilities in North Carolina.

**Program Financial Status and Projections**

**Fund Receipts and Disbursements**

The primary funding sources for the dry-cleaning solvent cleanup fund are a tax on dry-cleaning solvents, the state portion of the current sales tax on dry-cleaning, and co-payments from petitioners participating in the cleanup program. Disbursements consist primarily of payments to the program’s independent contractors for site assessment and remediation and program administration costs. DSCA Fund receipts and disbursements for the FY 2015-16, and for the life of the DSCA Program are shown in Table 3.

**Table 3: DSCA Fund through Fiscal Year 2015-16**

<b><u>Receipts</u></b>	<b><u>FY 2015-16</u></b>	<b><u>Duration of Program</u></b> <i>(through 6/30/16)</i>
Solvent Tax Revenue	\$ 232,457.40	\$ 11,701,958.75
Sales Tax Revenue	\$ 7,928,448.74	\$ 103,390,207.32
Petitioner Payments	\$ 123,376.38	\$ 1,508,143.33
Miscellaneous (investigation)	\$ 533.00	\$ 919.93
Rebate	\$ 0	\$ 28,794.34
Interest	\$ 0	\$ 7,522,262.17
<b>TOTAL</b>	<b>\$ 8,284,815.52</b>	<b>\$ 124,152,285.84</b>
<b><u>Disbursements</u></b>		
Dept. of Revenue <sup>1</sup>	\$ 0	\$ 57,272.02
Petitioner Reimbursements	\$ 0	\$ 1,963,991.89
Contracts	\$ 7,259,929.32	\$ 91,895,012.29
Well Permit Fees	\$ 52,950.00	\$ 345,480.00
Hazardous Waste Fees	\$ 103,950.00	\$ 1,340,953.41
Transfer to Inactive Haz Sites	\$ 0	\$ 400,000.00
Transfer to Green Square Project	\$ 0	\$ 1,291,035.00
Transfer – Budget Shortfall	\$ 0	\$ 6,475,812.93
DEQ Administration	\$ 1,324,690.12	\$ 14,760,643.25
<b>TOTAL</b>	<b>\$ 8,741,519.44</b>	<b>\$ 118,530,200.79</b>
	<b>Fund Balance</b>	<b>\$ 5,622,085.05</b>
	Funds Encumbered in Contracts	\$ 2,750,043.97
<sup>1</sup> Represents the actual amount charged by the Department of Revenue for its expenses. The Department of Revenue is authorized by DSCA to charge no more than \$125,000 per year.		

**Estimated Future Assessment and Remediation Expenditures**

During FY 2015-16, fund expenditures directly related to implementation of DSCA decreased from the previous fiscal year (see DSCA-Related Disbursements in Table 4 and Figure 2). As the fund balance decreases, the program continues to implement control measures to help ensure that funds are available to address sites that pose greater potential risks. DSCA closely monitors program expenditures to ensure adequate funding is maintained to assess all sites,

perform mitigation and remediation activities when needed, and move sites toward closure. Site work expenditures have reduced the fund balance from its peak of \$37.6 million in 2008 to \$5.6 million in 2016. DSCA Fund receipts for the past seven years have been relatively stable, ranging between approximately \$8million-\$9 million per year. Consistent with prior years, the total FY 2015-16 receipts from the solvent tax, sales and use tax, and petitioner payments remain stable, and only slightly (1.2 percent) higher than the total receipts for FY 2014-15. During FY 2014-15, legislative changes to the DSCA statutes re-directed the interest from the DSCA Fund back into the General Fund.

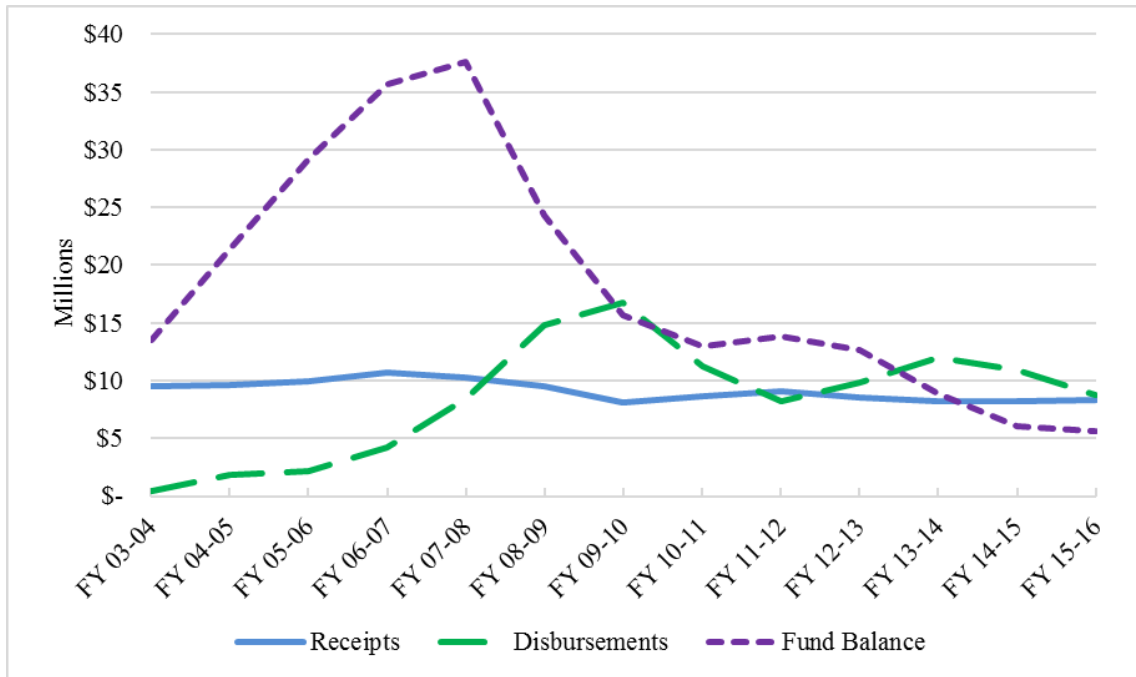

Using the DSCA Program’s state-lead cleanup costs and national estimates of total average costs to clean up contaminated dry-cleaning sites, the program can project the estimated costs to address the sites currently certified in the DSCA program. Using an estimated average total cleanup cost of \$330,000 per site, it will take approximately \$125 million (not including DEQ’s administrative costs) to address the 379 sites that have been certified in the program. Based on data from the N.C. Department of Labor, there are at least 2,000 active and abandoned dry-cleaning facilities in the state. Investigations performed across the nation indicate that contamination is present in at least 75 percent of all dry-cleaning operations.

**Table 4: Historic DSCA Fund Statistics**

<b>Fiscal Year</b>	<b>Receipts</b>	<b>Total Disbursements</b>	<b>DSCA-Related Disbursements</b>	<b>Fund Balance</b>
FY 03-04	9,487,233.94	489,024.96	489,024.96	13,547,987.50
FY 04-05	9,660,612.84	1,806,911.93	1,806,911.93	21,401,688.41
FY 05-06	9,913,615.29	2,126,835.62	2,126,835.62	29,188,468.08

FY 14-15	8,181,706.31	10,939,433.40	10,939,433.40	6,078,788.97
FY 15-16	8,284,815.52	8,741,519.44	8,741,519.44	5,622,085.05

\* Difference in Total Disbursements and DSCA-Related disbursements due to Non-DSCA related fund transfers

**Figure 2: DSCA Fund Trends**

**DSCA Administrative Costs**

According to DSCA, up to 20 percent of annual revenues deposited into the fund may be used by DEQ and the North Carolina Attorney General’s Office to administer the program. The administrative costs-to-revenue ratio has been relatively steady, fluctuating between 15 percent and 17 percent since FY 2009-10. The current administrative cost-to-revenue ratio is at 16 percent, and is expected to remain steady in the coming fiscal year.

**Actions to Ensure Fund Solvency**

From 2008 until 2011, the increased expenditures on site cleanups had substantially reduced the fund balance (Figure 1). During past three fiscal years, the program experienced an increase in the number of sites petitioning into the cleanup program, along with an increase in vapor intrusion-related assessment and mitigation. The fund balance is currently at \$5.6 million, and as demonstrated during previous years, the program continues to closely monitor and adjust expenditures to ensure that funds are available to address sites certified in the DSCA program through a prioritization strategy to help ensure that sites requiring remediation are addressed in priority order while maintaining fund solvency.

As noted above, total collections for fiscal 2015-16 were approximately \$8.3 million. The fund has a balance of approximately \$5.6 million, with monies encumbered or pending encumbrance totaling \$2.8 million. The DSCA Fund is solvent.

**DSCA Site Status Definitions**

- Certified:** The DSCA program has entered into an agreement with a petitioner and is in the process of assigning a state-hired, independent environmental contractor to conduct a prioritization assessment.
- Assessment:** The DSCA program's independent environmental contractor is determining the extent of soil and groundwater contamination at the site.
- Monitoring:** The DSCA program's independent environmental contractor is monitoring the levels of contaminants in the groundwater at the site.
- Remediation:** The DSCA program's independent environmental contractor is performing cleanup at the site.
- Interim Action:** Site conditions are favorable for source removal or for conducting a pilot study for remediation.
- Emergency:** The DSCA program has determined there is an immediate need for corrective action to abate a potential hazard to human health or the environment.
- On Hold:** Please contact the site's project manager for more details.
- Closure:** The extent of contamination is defined and considered stable. The DSCA Program is developing and implementing a risk management plan to protect human health and the environment from remaining contamination.
- NFA:** No Further Action Required
