

## **Voice Interoperability Plan for Emergency Responders**

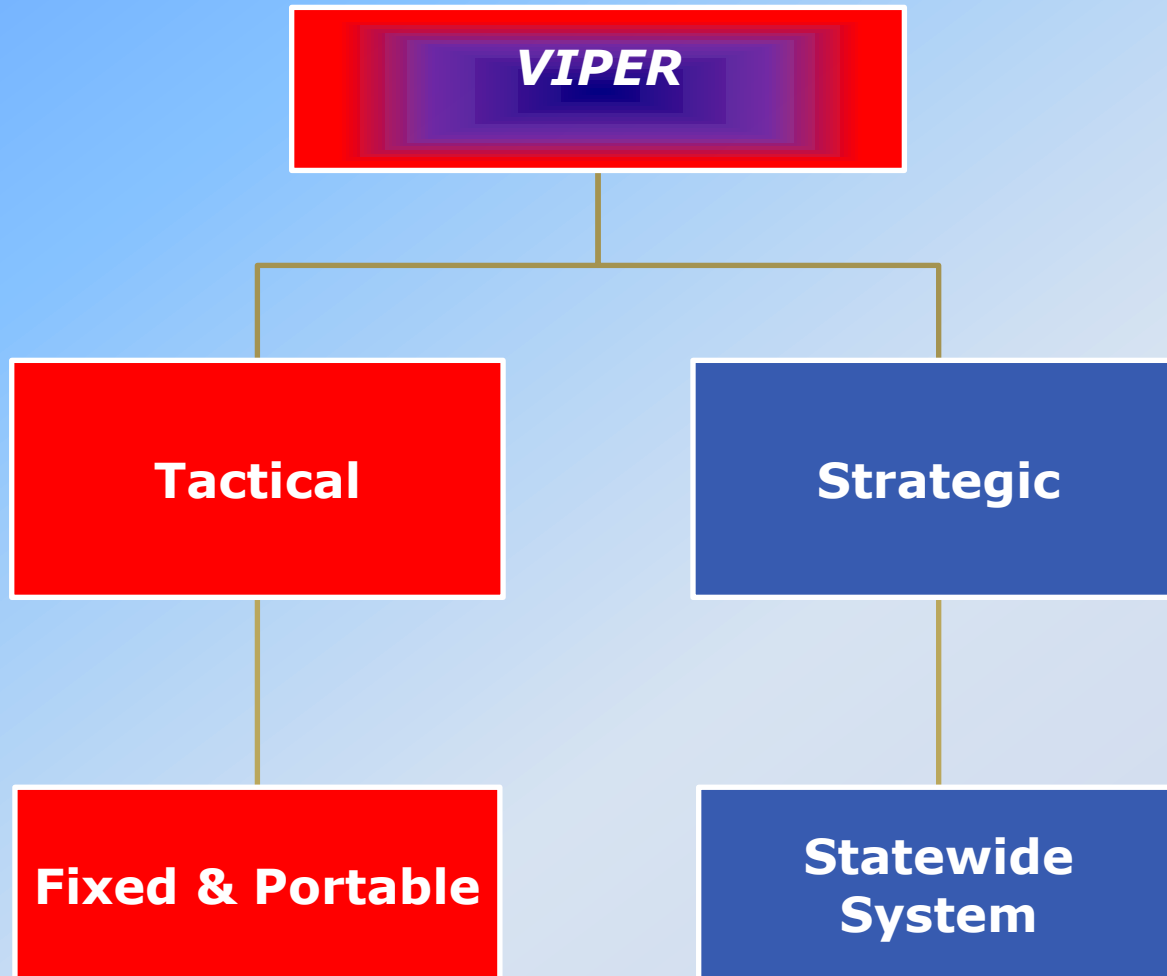

## Voice Interoperability Plan for Emergency Responders

A CJIN Module

# Voice Interoperability Plan for Emergency Responders

# What is the VIPER Tactical Solution?

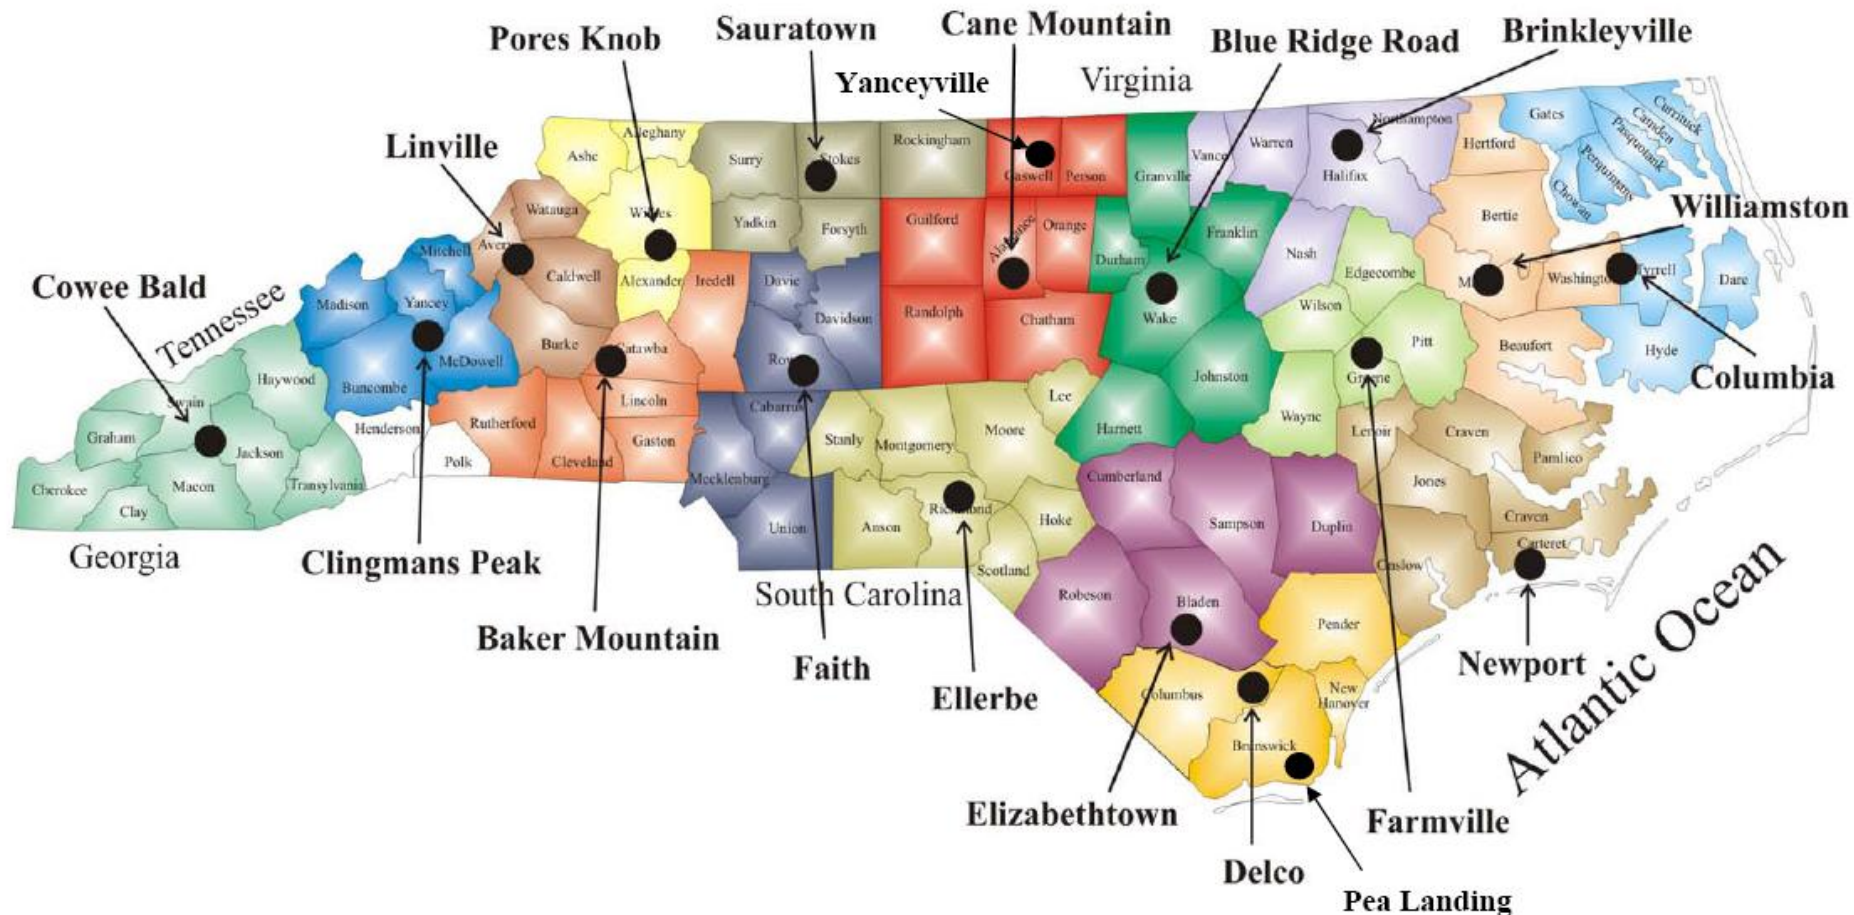

- Temporary solution for interoperable emergency communications
- 19 remote fixed sites with 2 pre-programmed radio's for each county
  1. Law Enforcement
  2. Fire/Rescue or EMS
- Patches are actually done at SHP Communications centers & State EOC
- System is in place now and costs locals \$0 to use
- Support is currently provided by NC Highway Patrol

# Who Can Authorize the Activation of a VIPER Tactical Patch?

- Agency Dispatch Center Supervisor
- State or Local E.M. Coordinator
- Event Incident Commander
- Any Technical Staff Member of the VIPER Group

# VIPER Inter-Agency Interop Sites

# Mobile Solution (Tactical)

- 7 mobile interoperable communications towers to eliminate diminished capacity for extended periods
- Pre-positioned across the state
- Long term incidents / events
  - More than 6 to 8 hours
- Enhanced unit to support 800 MHz systems and operate as a stand-alone communications system
- Large special events

A tall, slender metal lattice tower stands vertically against a clear blue sky. A large, white, parabolic satellite dish is mounted on the tower's upper section. Several thin, dark cables or guy wires extend from the tower to the ground. The base of the tower is partially obscured by the green foliage of trees. The overall image has a slightly faded or semi-transparent quality.

# VIPER Strategic

# Background

- Original CJIN Voice Trunking Network (VTN)- 1992
- Recommended in a CJIN Legislative Study by Price Waterhouse - 1995
- Re-Validated in a CJIN re-fresh study by the Gartner Group - 2002

# Examples of Lack of Voice Interoperability

- American Eagle Commuter Crash at RDU 1994
- FBI Murrah Building, Oklahoma City 1995
- Hurricane Fran 1996
- Hurricane Floyd 1999
- Columbine High School 1999
- Twin Towers, New York City 2001

# Strategic Solution Overview

- Statewide 800 MHz trunked radio system available for *all emergency responders (local, State, Federal)*
- Goal: 95% in-street portable coverage based on a 3 watt portable radio
- Network infrastructure consisting of towers linked via microwave
- Implementation (build-out), Operations and Maintenance provided by NC Highway Patrol
- Compatible with 29 local, trunked voice systems throughout North Carolina
- End-user requirement to join the network – purchase their own radios

# Partnerships

Progress Energy

Time Warner Cable

NC Electric Membership Co-ops

UNC-TV

NC Forestry Service

US Forestry Service

Dominion Power

Duke Energy

NC D.O.T.

NC Wildlife Resources Commission

Multiple Local Governments

# Network Status

- 242 total sites planned for statewide coverage
- 189 sites constructed and on-the-air
- 30 sites under construction
- 23 sites remaining
- VIPER is 78% complete (number of sites) with 189 sites on-the-air
- 64,412 users are currently on the VIPER Network
  - 260 Emergency Responding agencies (including federal, state and local agencies) makeup the 64,412 radio users
- 37 counties use VIPER as their primary means of communication
- SC has the same type Interoperable System; NC/SC can talk to each other using the same type user device

# Funding

- Operations & Maintenance (\$7.5M at the completion of VIPER)
  - Current: \$2.5M recurring (\$1.3M for positions and \$1.2M for other O&M expenses)
  - Requesting: Additional \$2.5M recurring to support the existing network
  - At completion of build-out: additional \$2.5M to support the entire network

An example of recurring funds used to support VIPER:

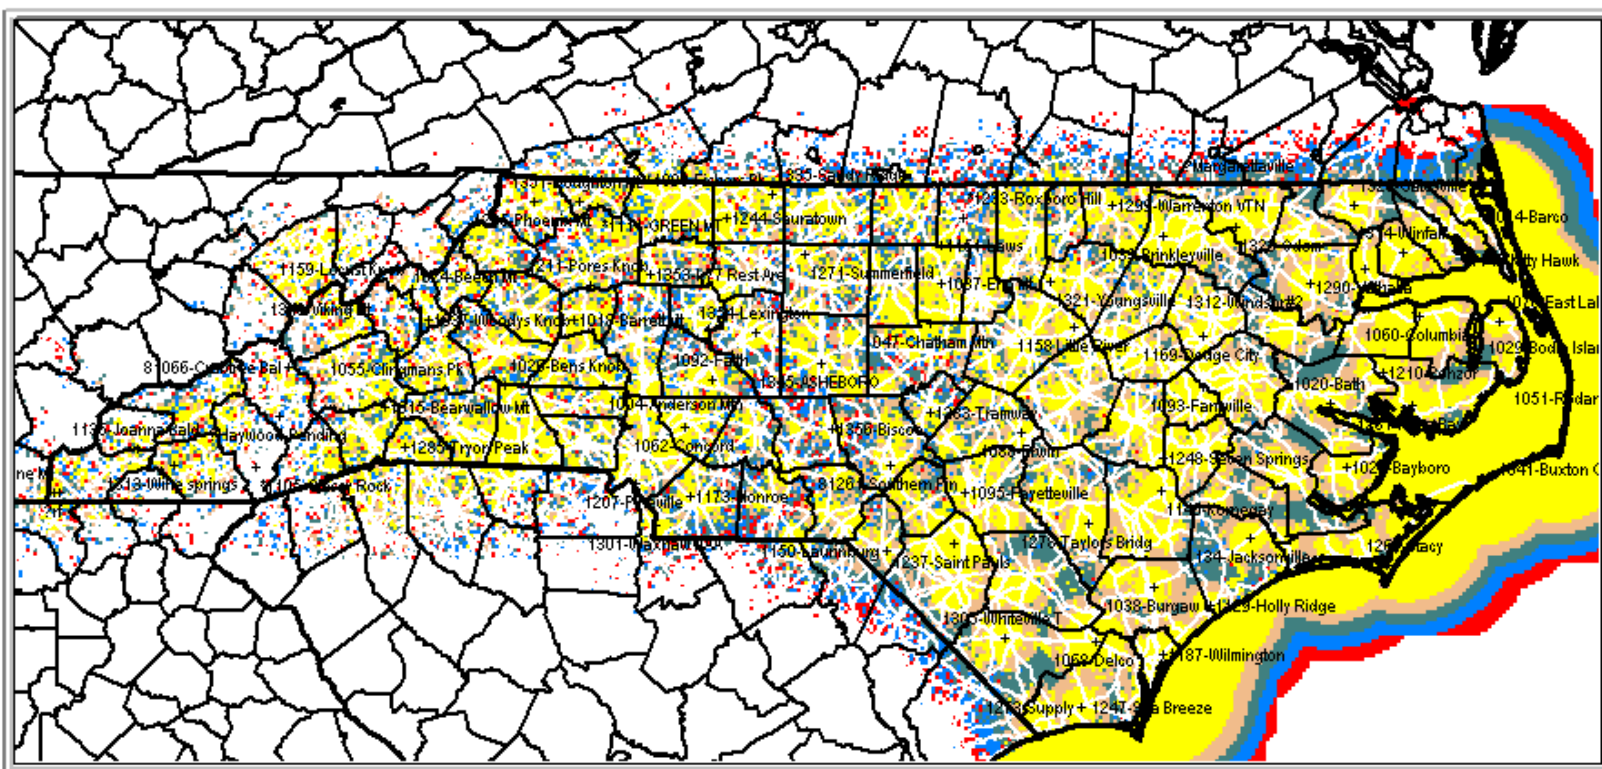

Lightning damage sustained at the Hosley Forest VIPER site in Franklin County costing approximately \$5k - \$10k.

- Left picture – tower foundation blown up
- Left bottom corner – transfer switch damage
- Right bottom corner – lightning arrestor damage
