

August 11, 2007

Dear NC Environmental Management Commission,

Please, please, PLEASE, do ALL that you can to CLEAN UP Jordan Lake. Since eleven creeks feed Jordan Lake, obviously, there is an immense need for co-operation among municipalities. ALL who have businesses, farms, residences, or any responsibility for what is put in the creeks need to experience high levels of conscious. Careless ignorance is becoming inexcusable.

The cost of caring for the earth, the skies, specifically water and air is paid back to humans and other species that are oxygen dependent with each breath. This is a time to pay attention to the fact that Global Warming is real. . . VERY REAL, and all this is connected to our insistence that nitrogen from wastewater treatment plants should be reduced by the year 2011.

PREVENTION of filth is the key. In fact, you would have my support in banning all gas-powered craft from Jordan Lake before the cure is impossible. It is sad to realize that we probably have no more really natural, untreated, "fresh" water running from our taps.

Note that our bodies, according to research done by Dr. Emoto, requires healthy water for us to be healthy. Even treated water does not have the same nutritional aspects as clean spring water. Since 70% of our bodies is water, it's alarming to know that every drink of water has been treated. I wonder sometimes if the public thinks that the water can be cleaned up from every poison, since humans just keep putting the mess in the water.

Thank you for your diligence in these matters and I URGE you to PASS STRONG RULES NOW. Our health can not wait.

Enclosed are others who feel also feel it is necessary to CLEAN UP JORDAN LAKE!

We look forward to your response.

Sincerely,

Elizabeth R. Hutchby  
401 S. West St.  
Cary, NC, 27511

# Petition to the State of North Carolina to Clean Up Jordan Lake

We, the undersigned, urge the NC Environmental Management Commission to pass strong rules *now* to reduce nutrient pollution in Jordan Lake from all sources, including existing development. We want clean water for drinking, recreation and wildlife. We believe that nitrogen from wastewater treatment plants should be reduced by the year 2011 – *we cannot wait until 2016 for clean water!*
