Subject: Jordan Lake is vital to our community

Dear Mr. Gannon,

I've lived in the Triangle for more than 25 years and NC all my life. I watched Jordan Lake be built. We were warned of its potential to be the destination for run-off and pollution as its watershed drains area that has been rapidly developed and urbanized and it is a very shallow lake overall. And now it is a critical water source for many local communities, including Cary, where I now live. Yes, I'm very concerned.

The water quantity obviously makes a difference and we can better control what we use and enforce conservation requirements(including development which expands use). Yet it is the quality in Jordan Lake and its tributaries that threatens the natural beauty of our landscape and the health of those consuming the water. We have no right to pollute this resource for our children or grandchildren. As an active outdoors person we boat regularly on Jordan Lake, picnicing and hiking. I take youth groups and scout groups to camp on its banks and swim at its "beaches". As our youth group contemplated a Jordan Lake afternoon for this fall, we rejected it in light of both the drought, lower water levels and the higher levels of pollution which concentrate when water is low.

This problem didn't develop overnight, nor will it be fixed quickly but the EMC can act now to clean up this lake - action can be taken now that will begin the clean-up process. Further delays in mandating compliance simply postpone the inevitable and make the clean-up that much harder. We must take action now to restrict the sources of pollution and hold those responsible accountable for violations and their contributions to the pollution.

I also believe the proposed rules can be strengthened in at least two ways:

The proposed rules have a 2016 deadline, almost a decade away. This is unacceptable. An earlier version of the proposed rules set that date at 2011, which we think is fair and achievable. Please modify the rules to require wastewater plant upgrades by 2011.

Secondly, the proposed rules are very vague about what local governments must do to control pollution from existing development. We have sufficient understanding of the science and what it will take to bring Jordan Lake back to health: controlling the runoff from existing development and perhaps even putting further development on hold until pollution is under control. Expanding the demands for use and the developed land around the lake is the wrong way to go. We must tackle the sources of pollution today, not tomorrow, by being specific and explicit about what we expect local governments to do. Only then can we hold anyone accountable.

The right thing to do for ourselves and as responsible stewards of our lakes, streams and waterways for today and the future is to cleanup our act, restrict the problem sources, implement rules sooner rather than later and stay watchful, enforcing whatever rules go into place, because unenforced rules are no rules at all.

Thank you for your time, your commitment and your action on this matter.

Sincerely,
Allison Stafford

Subject: Take Action Now for Jordan Lake

Dear Mr. Gannon,

Please accept this letter of support for strengthening rules regarding pollution controls for Jordan Lake. I am the Important Bird Areas Coordinator for Audubon North Carolina and Jordan Lake is one of only a handful of sites in the Piedmont that qualify to be an Important Bird Area. Many species use its shores for nesting, feeding and resting during migration, and for over-wintering habitats. Its waters are used for foraging and resting by several high conservation concern species, Bald Eagles, Osprey, and numerous shorebird and waterfowl species.

Our local Audubon Chapter, New Hope Audubon in Chapel Hill has adopted Jordan Lake through our Adopt an Important Bird Area program and has committed time, resources, and effort to monitor birds, work with our State Parks partners, and educate the general public about this wonderful resource so close to our State's Capital.

We urge strengthening of the proposed rules to retain the current 2011 date for municipal reduction of nitrogen loads flowing into the lake, and for more aggressive and explicit guidelines on reducing non-point source sediment and eutrophication from run-off and development in the watershed.

But most of all, we encourage the North Carolina Environmental Management Commission, and surrounding governmental units, to take action now to improve water quality at Jordan Lake. Our birds, our communities, our economies depend on decisive action. With the population of North Carolina forecast to rise by 50% by 2025, and for 80% of that to occur in the Piedmont crescent, it is imperative that steps be taken now to tackle this difficult problem. It will only get worse through time and inaction.

Thank you for your consideration.

Curtis Smalling Important Bird Areas Coordinator Audubon North Carolina

Sincerely,
Curtis Smalling

Subject: Clean up Jordan Lake

Dear Mr. Gannon,

Alternative ways must be not only implemented but mandated, to reduce effluent into streams, reservoirs, and ultimately the ocean. Living systems and public health depend on it.

Governments and their wealthy supporters keep putting this off, "one more golf course", "just one more huge subdivision", but we have already degraded the landscape quite a bit and it won't get any better until we adopt sustainable development.

Maybe then we'll actually have a high quality environment some day instead of sprawl, traffic, pollution and energy inefficiency.

Require wastewater upgrades by 2011 and make the rules specific enough to be meaningful.

Thank you.

Sincerely,
Liane Salgado

Subject: My backyard

Dear Mr. Gannon,

Dear Mr. Gannon, I live mere minutes from Jordan Lake and find it to be a beautiful aquatic resource for humans and wildlife alike. I admire the personnel responsible for policing the lake and the adjacent wetlands. The safety personnel do an exemplary job of protecting this area.

I often enjoy visits to the lake and it's tributaries, In fact, I live next to a major tributary to the lake, Stinking Creek. It does not stink, but is very dry right now, to the point of distress for the creatures living in it.

Stinking Creek feeds into Jordan Lake. I watch the amount of pollution and overly nitrated waters flow to my drinking water, to the fish, the places where we swim. My family cares about the watershed's attractiveness to new employers. We intend to live here for a long time and wish for clean sustainable industry to provide our children's jobs and livelihood. A poisoned lake will not attract that sort of opportunity.

Could the EMC be specific about what local governments must do to begin controlling runoff from existing development? I am concerned about the upcoming development in my area and the ways it will impact water quality in the lake and in Stinking Creek.

Please avoid delay and act now to clean up Jordan Lake and the surrounding watershed. Thank you for your prompt action on this issue. I know that intelligent persons will make intelligent decisions.

Sincerely,
Dan Cahoon

Subject: Building Codes and Composting Toilets

Dear Mr. Gannon,

Want to reduce water consumption and at the same time reduce nitrogen (from sewage) into our water systems? Then help change building codes, in surrounding counties, to adopt and encourage the use of composting toilets!!!

The outdated outhouses of long past, have been technologically redesigned and are far safer, saner, and convenient to use in the home. To introduce this concept to the public, NC should introduce the idea in public parks by actually using these toilets in their restrooms (Jordan Lake for example).

Greywater is safer than sewage. Not a sales rep, just an enlightened individual.

Sincerely,
Karen Meilleur

Subject: Cleaning up Jordan Lake

Dear Mr. Gannon,

Please do not delay any more. Jordan Lake needs to be cleaned up because so many people depend on it as a source for water. Also, our area will be a much different place for the worse if the natural habitat is changed.

The two following facts were brought to my attention:

The proposed rules won't require wastewater plants to reduce nitrogen pollution until 2016, almost a decade away. An earlier version of the proposed rules set that date at 2011, which we think is fair and achievable. We are urging the EMC to require wastewater plant upgrades by 2011.

And the proposed rules are very vague about what local governments must do to control pollution from existing development. The science is clear that Jordan Lake cannot become healthy again unless we tackle this source of pollution. We are urging the EMC to be specific about what local governments must do to begin controlling runoff from existing development.

For the best interest of everyone involved, that is to say, everyone in the area, please act now. Thank you.

Sincerely,
Jamie Bort

Subject: Jordan Lake clean up

Dear Mr. Gannon,

I like to visit the Jordan Lake parks/gamelands to watch birds and plants, often with small groups. As such, I'm strongly in favor of any efforts to reduce the pollution that is negatively affecting not only this property, but connected rivers and streams.

I'm optimistic about the current efforts of the EMC, but would urge:

1) that we require wastewater plants to reduce nitrogen levels by 2011, and not wait until 2016. 2016 is a very long way off; and,

2) that we be very clear and specific about the actions needed to be taken by local governments to control runoff from their specific areas as these relate to existing development.

I think access to clean water, in its varied forms, could spawn the next "civil war" if we aren't more progressive and aggressive about how we manage it. Our society is way too casual about this precious resource.

Sincerely,
John A. Gerwin

Subject: Clean up Jordan Lake

Dear Mr. Gannon,

Dear NC Environmental Management Commission,

Please, please, PLEASE, do ALL that you can to CLEAN UP Jordan Lake. Since eleven creeks feed Jordan Lake, obviously, there is an immense need for co-operation among municipalities. ALL who have businesses, farms, residences, or any responsibility for what is put in the creeks need to experience high levels of conscious. Careless ignorance is becoming inexcusable.

The cost of caring for the earth, the skies, specifically water and air is paid back to humans and other species that are oxygen dependent with each breath. This is a time to pay attention to the fact that Global Warming is real. . .VERY REAL, and all this is connected to our insistence that nitrogen from wastewater treatment plants should be reduced by the year 2011.

PREVENTION of filth is the key. In fact, you would have my support in banning all gas-powered craft from Jordan Lake before the cure is impossible. It is sad to realize that we probably have no more really natural, untreated, 'fresh' water running from our taps.

Note that our bodies, according to research done by Dr. Emoto, requires healthy water for us to be healthy. Even treated water does not have the same nutritional aspects as clean spring water. Since 70% of our bodies is water, it's alarming to know that every drink of water has been treated. I wonder sometimes if the public thinks that the water can be cleaned up from every poison, since humans just keep putting the mess in the water.

Thank you for your diligence in these matters and I URGE you to PASS STRONG RULES NOW. Our health can not wait.

Enclosed are others who feel also feel it is necessary to CLEAN UP JORDAN LAKE!

We look forward to your response.

Sincerely,

Elizabeth R. Hutchby 401 S. West St.

Subject: Jordan Lake Needs Help NOW

Dear Mr. Gannon,

As a citizen of Wake County, I am very concerned about the health of Jordan Lake for recreation, drinking water for Wake County residents and the wildlife that also depend on the lake.

I urge you to act now to clean up the lake. I request that you strengthen the proposed rules by doing the following:

1. Set the date for wastewater plants to reduce nitrogen pollution to 2011. We can't wait any longer with all the development and people moving to NC.
2. Be very specific about what local governments must do to begin controlling runoff from existing development. The very people who live near the lake are doing tremendous damage - time to make them and the local governments responsible citizens.

Thank you for the work you do in protecting North Carolina.

Sincerely,
Lena Gallitano

Subject: Clean up Jordan Lake

Dear Mr. Gannon,

Although I am not a local resident of the Jordan Lake area, I have been there several times since moving to North Carolina in 1998. I grew up in Michigan and watched the Great Lakes become completely disgusting throughout my adolescence. As I child, I remember my disappointment when I was told I couldn't go swimming in Lake Huron or Lake Michigan because of bacteria, mercury, or lead exposure. And then came the zebra mussels. Long before these disasters, the Detroit River became a cess pool of bacteria and industrial waste. Back in the 1940's, people used to swim in the river. In 1956, my oldest brother almost died from bacterial meningitis he contracted from swimming there. In short, Michigan took too little action far too late. The Michigan economy is a mess, and people leave the state in droves. This isn't all because Detroit has laid off or shipped off jobs- it is because the state was horribly mismanaged and it did not take responsible care of its natural resources which was a big reason lots of people lived there in the first place!

When I moved to North Carolina, I was awed by its beauty, and the diversity of that beauty. From Banner Elk to Ocracoke, I have traveled all over the state, and there is still so much I have to explore! As a wildlife enthusiast, I spend most of my free time outdoors. My vacations are spent camping all over the state. I like to kayak and canoe with my young nieces and nephews, and help them explore nature and its creatures. I am concerned about the pollution in all of North Carolina's lakes, and Jordan lake has some particular needs right now that cannot be ignored.

The NC EMC needs to act sooner to require wastewater plant upgrades to reduce nitrogen. The current proposal will be too little too late. I also urge the EMC to be specific about what local governments must do to begin controlling runoff from existing development. This is a terrible problem all over the state, and I urge the EMC to be specific and tough. Local governments need the expertise of the EMC, not vague guidelines that can be manipulated by business interests.

Sustainable development and responsible water management needs to be a priority of the state and local governments. The increasing heat waves and droughts should make this clear if nothing else. Let NC be a model to the rest of the country on how to do this right!

Thank you for your time and consideration.

Sincerely,
Jennifer Oas

Subject: A New York native begs you, don't turn NC to NYC

Dear Mr. Gannon,

I was born and raised in NYC, came here 25 years ago when my husband was stationed at Fort Bragg. I hated this state at first; it wasn't what I was used to. I missed the concrete, the dirt, the noise. You had trees here; I saw rabbits, foxes, hawks, and even buzzards, right out in the open, outside of zoos or a TV screen. I couldn't wait for him to serve his time and go home. Couldn't wait to go back to where I grew up and the crowds and the 'progress'.

He's been out 11 years and we are still here. I couldn't go back to living in NYC, in that filth, that crowded, dirty environment. Progress and development? I was born and raised in it for the first 26 years of my life. And I've lived in one of the most beautiful places in the world for this second 25 years of my life. I had to choose one of these two places to raise the three kids that were born here. I chose North Carolina, I chose their native state, not mine. I chose for my children to grow up here, instead of NYC where my husband and I were raised. Didn't need to choose I guess, NYC followed us here.

Take a trip to NY, take a good look around; not the theatres, not the museums, not the homes of the rich and affluent. Go to Brooklyn where I grew up, go to Queens where my husband was raised. Go to the South Bronx. Then look at what is around you now and ask yourselves the obvious questions: is it better to live with rats and roaches, than deer and foxes; are pigeons really better looking than hawks; is concrete really better than trees? Put some brakes on the development, some kind of regulations, or your children, your grandchildren, will be running around in open johnny pumps instead of swimming in the lakes and streams that you remember. Change with the times, change to keep this state from becoming economically depressed, change to replace the industry we've lost, but don't change so much that North Carolina is no longer North Carolina. If you don't pass some type of regulation, put some type of checks in place, then you might as well refill Jordan Lake and cover it over with concrete, because it will end up worth more as a parking lot.

It amazes me that the place I hated so much at first is now looking so much like the place I left and thought I loved. What amazes me more is how much it hurts.

Sincerely,
Vincenza Carter

Subject: Clean up Jordan Lake ASAP PLEASE

Dear Mr. Gannon,

I have lived in the area since before Jordan Lake was built. I have watched it become a real natural habitat for wildlife as well as a great recreation area. I have also seen it deteriorate when there isn't fresh rain to dilute the pollutants.

My husband and I, and everyone we know, care deeply about protecting the Lake, for people and wildlife, for drinking water and because it is the right thing to do for future generations. Growth pressures can kill the lake -- it's happening already. Please do enact the strongest rules as soon as possible, for existing homes as well as future developments, and for all point and non-point source polluters.

However, I do hope you will take into account those communities which have made great strides of late toward water protection, and allow them realistic economic assistance to catch up with more modern innovations in water quality protection.

Sincerely,
Jennifer Miller

Subject: Keep Jordan Lake Clean - Sam Zamani, Apex NC

Dear Mr. Gannon,

Keeping Jordan Lake clean is very important to me. I'm an avid windsurfer and use the waters of the Lake for recreation. There are fewer and fewer places where I can find clean waters in the Triangle area these days. Crabtree Lake is too polluted to even fish and swimming has recently been banned from Lake Wheeler because of pollution. It would be a sad day to when Jordan Lake gets so polluted that you can't even swim in it. In the passed few years I have noticed that I get a slight head cold the day after swimming in Jordan Lake. I hope that we stop this trend of abusing our natural resources in this way and can hopefully reverse the damage that has already been done. It is a beautiful lake that we should preserve for not only our generation but for future generations. Please, let's be strong and swift in this matter and clean up our mess.
Regards, Sam Zamani

Sincerely,
Sam Zamani

Subject: Concern for Lake Jordan

Dear Mr. Gannon,

As a member of the community I want to urge you to take action now to put rules in place to reduce nitrogen pollution in Lake Jordan. Action must be complete by 2011 and should not be put off until 2016.

Control to oversee compliance with keeping pollution from making its way into our environment and water should fall to local governments. I believe it is their responsibility to protect the future of our environment and water supply.

Although development is necessary for the financial growth of our area, it should not happen at the expense of our environment.

Please ensure the proposed rules to clean up Jordan Lake by improved wastewater treatment upstream, and controlling polluted runoff from new and existing development are put in place by 2011.

Sincerely,
Laura Parkinson

Subject: Please Clean up Jordan Lake

Dear Mr. Gannon,

* Please act now and avoid further delay in cleaning up the lake.

* Please strengthen the proposed rules in two ways:

The proposed rules won't require wastewater plants to reduce nitrogen pollution until 2016, almost a decade away. An earlier version of the proposed rules set that date at 2011, which we think is fair and achievable.

Please, EMC, require wastewater plant upgrades by 2011.

The proposed rules are very vague about what local governments must do to control pollution from existing development.

The science is clear that Jordan Lake cannot become healthy again unless we tackle this source of pollution.

EMC, please be specific about what local governments must do to begin controlling runoff from existing development.

Thank you!

Sincerely,
D Antkoviak

Subject: Jordan Lake needs our help

Dear Mr. Gannon,

I've lived in this area for many years, and have enjoyed swimming and other recreation in Jordan Lake. I'm concerned about the quality of its water, however. Since I moved to North Carolina in the late 90s, I've been aware that its pollution levels can be dangerously high. Now it seems you can help change that. Please revise the rules for water quality to require reduction of nitrogen pollution by 2011.

And please include specific requirements for local communities aimed at improving water quality. Jordan Lake is not the only thing that suffers when we don't hold ourselves accountable for our own waste; the streams and rivers that feed it, which many of us hold dear, are also profoundly affected.

Adhering to clean water standards is not too much to ask, especially when it has such deep implications for our quality of life.

Sincerely,
Anna Lena Phillips

Subject: Please help keep our water clean

Dear Mr. Gannon,

I live along the Cape Fear River downstream from Jordan Lake and enjoy its beauty and diversity of wildlife. Just the other day I was down by the river watching two long-nosed gar swim in the shallow waters. In addition I have seen deer, turkey, migratory birds, and hawks along the river. If we allow Jordan Lake and its tributaries to continue to be polluted not only will wildlife be threatened but also our drinking water. The importance of clean water for all (humans and animals) should be very evident in this time of drought. Let's protect it while we still can. Please adopt strong rules that will help clean up Jordan Lake, such as requiring wastewater plants to reduce nitrogen by 2011 and setting down specific guidelines for local governments to control runoff. I thank you in advance for helping protect our natural resources.

Sincerely,
Amber Williams

Subject: Protect Jordan Lake

Dear Mr. Gannon,

Please protect Jordan Lake from polluters. Lots of people swim there plus we depend on it for drinking water. I think that having a polluted lake reflects badly on us as a region.

If the rules about nitrogen in wastewater could be implemented by 2011 instead of 2016, that would be a big help. My understanding is that the wastewater plants could implement the new policies by then. Also, there is a specific source of pollution that is not clearly outlined in the policies: runoff from already developed land. Being more specific about this will enable the lake to recover from pollution more quickly.

Thank you for your attention.

Sincerely,
Michele Easter

Subject: I Love Jordan Lake

Dear Mr. Gannon,

Jordan lake is a wonderful resource to have in the triangle. When I was younger I thought it was so great to have such a natural place to visit that is so close by. However, more and more people in recent years have been wary of the adverse health affects of swimming in Jordan's waters and no longer decide to swim there. Increased pollution would really endanger the wonderful diversity of life there, and instead of birds and other interesting wildlife, runoff from fertilizers could create an excess of algae, which is neither attractive nor environmentally beneficial. If we wish to have this wonderful natural resource available for safe drinking and recreation for years to come, we need to act now to limit the affects of pollution and development on our beloved lake. Although it may not seem economical now, the well-being of the lake in the long run is much more valuable.

Thanks you for your time and careful consideration of this issue.

Sincerely,
Jarrett Grimm

Subject: Jordan Lake Should be Cleaned per Regulations

Dear Mr. Gannon,

I have boated in Jordan Lake, and hiked its tributaries. The water quality of Jordan Lake affects me and the wildlife it supports.

I urge the EMC to take action now rather than later. I am a firm believer that better economics today is not a proper benchmark for destruction of our environment. I can not see any other benefit to nonenforcement of the law then to appease the industrial polluters.

On the other hand the list is large to those who benefit by the immediate cleanup. This would include longterm economic gain. Businesses will want to continue to move into the area if it is healthy, vibrant, and will stay that way.

I also believe that the EMC should strengthen the proposed rules. The first method that the rules can improve is to change the date of the nitrogen pollution reduction from 2016 to 2011 pollution. This is an achievable goal. The second method that the rules can change is to be specific about what local governments must do to begin controlling runoff from existing developments.

Sincerely,
Keith Rutter

Subject: Clean Up Jordan Lake!

Dear Mr. Gannon,

There is no substitute for clean water. That's why I'm writing you about the perilous condition of Jordan Lake. It is unconscionable to allow a drop of precious water to be polluted in any way; especially in times of drought and climate change!

I demand that the rules concerning nitrogen pollutants be sharply defined, and strongly enforced. Why wait until 2016 to clean up our water? Please shorten the deadline to 2011 or sooner.

How long can you, or any of us live w/o clean water? Stewardship of irreplaceable resources must trump profit, laziness or any other reason not to care. Pollution of our air, water and land should be punishable by lengthy jail terms rather than fines which often amount to merely a slap on the wrist.

Sincerely,
Tim Keim

Subject: Clean up Jordan Lake

Dear Mr. Gannon,

From the beginning, some of us believed the construction of Jordan Lake was a mistake, that it would fill with silt quickly and become a swamp. That prediction did not come to pass as soon as it was feared, but now the real and serious problem of pollution threatens the Lake. Please do what you can to limit sources of pollution and clean up those that exist already. We don't need a nasty polluted swamp! We need a clean source of fresh water for the Future.

Thank you.

Subject: Lake Jordan

Dear Mr. Gannon,

North Carolina lobbyists for the Clean Water Act have lobbied the Capitol for years, in direct opposition to big money backed lobbyists representing land developers, especially housing developers. The truth all over our planet continues to express itself through threat and in some cases, depletion, of what is essential to life.

The bottom line is evident. We can learn to appreciate and make strong decisions based upon the wisdom of maintaining of our natural resources rather than manipulate and sacrifice them for greed and financial gain, or we can suffer the consequences. The Earth is not the threat. The threat is our weakness in saying *no* to wealth that in the immediate as well as final analysis, buys us a damaged good.

Sincerely,
Deborah Welch

Subject: Clean Up Jordan Lake!

Dear Mr. Gannon,

Although the impact of rampant development on our water supply should have been thought of BEFORE allowing such devastation to happen (and WAS by the majority of us!), I urge you do take all measures possible in an attempt to clean up and protect whatever is left of Jordan Lake. -
- - I am frankly of the opinion that it is too late to reverse the environmental impact that was inevitable when uncontrolled development was sanctioned, and, as a long-term Chatham County resident, I can assure you that those of us who continue to try to "Live" here are feeling the negative effects in such ways as wells going dry, atmospheric pollution, noise pollution, increased crime, the never-ending rape of our forests and disappearance of our indigenous wildlife, etc. Many of us have been forced to leave the area due to increased property taxes, as well as an intolerable "quality" of life. - - - Is it too much to ask that our elected officials take some interest in us and whatever remains of our water supply and what used to be a healthy, beautiful recreation area?????

Sincerely,
Martha Geiger

Subject: Land Use and Water Quality

Dear Mr. Gannon,

The state's proposed rules treat symptoms while ignoring causes. They ignore the most efficient water purification device of all – the tree! A mature tree recycles over 200 gallons a day. Pollution begins when excessive tree canopy and roots are removed. More retention ponds require more tree cutting, to fix the problem created by tree cutting.

As towns expand they sacrifice natural resources, and pollution is a price of this progress. Chapel Hill is rewriting its ordinance to maintain its canopy. We all should minimize runoff at the source, instead of treating it later. Active staff and citizens can conserve water, from fixing wasteful irrigation systems to enhancing buffers to ensuring that 'saved' trees actually survive construction.

Development that retains tree canopy costs a bit more, but pays off because most homebuyers prefer a wooded lot. Homeowners create polluted runoff when they invest in turfgrass instead of restoring more trees, shrubs and flowers that cycle water back into the earth.

Every landowner and every town should do unto others downstream as they would have done for them. The state needs to see that the cause of pollution is corrected, instead of treating the effects.

The proposed rules do little to address what local governments must do to control pollution from existing and future development. Jordan Lake cannot become healthy again unless we tackle the source of pollution. The EMC must be specific about retaining living trees and topsoil, to control runoff from urban areas.

Sincerely,
Guy Meilleur

Subject: Get off your "duffs" and do something before it's too late!

Dear Mr. Gannon,

I live in the area that supplies rain and stream water runoff to Jordan lake. I use the lake for sport fishing and swimming with my grandkids. I stopped using fertilizers and pesticides over 10 years ago so the residue would not get into the water supply. However, I don't eat the fish I catch and am very cautious about my swimming use of the lake, especially in hot weather and when the water level is down.

I know that not everyone limits the use of products hazardous to our environment and I know municipalities are slow to limit waste disposal through proper methods.

Won't you do the job that you are supposed to do? You know the rules that have been changed are not effective and need to be made more stringent and need to be made more timely. Let's get "off your duffs" and do the job or get out of the way and let someone else do it.

Sincerely,
James Devore

Subject: Jordan Lake - Environment

Dear Mr. Gannon,

I love the Jordan Lake and spend time in the three seasons fishing and swimming. The lake also serves as the reservoir that many people drink from.

I urge you to clean the lake now by considering the following:

Please require wastewater plant upgrades by 2011, not 2016. That still provides lots of time. Cleaning dirty water is much more expensive - people's health are at stake too.

I am also asking that there be specific and achievable steps for local governments to follow to find and stop pollution at its source. Whether it be developments, developing areas, corporations or anything else, everyone must play a part.

Thanks so much and please let me know what happens.. keep me updated.. thanks

Sincerely,

Subject: Cleaning up Jordan Lake

Dear Mr. Gannon,

To Whom It May Concern:

As a user of Jordan Lake I was very pleased to see the EMC is committed to protecting the water quality of Jordan Lake.

However, I have concerns that the efforts thus far have "no teeth" when it comes to actually affecting an improvement in water quality.

It is most important that the actions that we take have meaning and will have a measurable benefit, else all these efforts are in vain. The EMC should decrease the time frame for compliance back to the original target year 2011.

Also, as North Carolina's rural areas are turned into more subdivisions we really need to set the bar for the minimization of development's impact on all our natural resources. I urge you to fight for legislation that is specific and scientific in its approach to standards for developments that impact the basin.

Thank you for your time.

Sincerely,

Subject: Let's clean up Jordan Lake now!

Dear Mr. Gannon,

I read Lyle Estill's opinion piece in the Chapel Hill News this week, and I agree with everything he said:

1. Jordan Lake should be clean enough for swimming. If we must ban powerboats in order to support swimming, I'm all for it!
2. Riparian zones should be expanded and protected. The more we learn about riparian ecosystems, the more we learn about how important it is to keep all forms of pollution under stricter controls--be it toxins, fertilizers, or even just sediment resulting from poor erosion control or lacadasical land stewardship. Lyle proposes expanding the riparian buffer to 100', and I say "at least!"
3. We should do more to protect the dark skies around Jordan lake. I am supremely disappointed that the night skies in Chatham County, once quite dark, are filled with light pollution. We should look at what the Europeans do, which is to **TURN OFF THE DAMN LIGHTS AFTER MIDNIGHT!** We should implement the International Dark Sky (IDA) model lighting ordinance (which is the proposed draft standard, but not yet ratified). A dark night sky is filled with such stars as fuels a generation's imagination.
4. We should use Jordan Lake as a centerpiece for making the Triangle Area a "Best Place To Live" for wildlife, and thereby make it a better place for the human species to live, too. The water quality of Jordan Lake tells us how well, or how poorly, we are caring for our natural resources. We should ace this test, not fail it (as we are right now).

Sincerely,
Michael Tiemann

Subject: Jordan Water Supply Nutrient Reduction Goals

Dear Mr. Gannon,

As a resident of Cary, my water comes from Jordan Lake. I am very concerned about the quality of that water.

As someone who enjoys wildlife, I am concerned about the quality of Jordan Lake as a wildlife habit.

I urge the Environmental Management Commission to adopt strong rules to protect Jordan Lake.

Regarding the proposed rules, I object to allowing wastewater treatment facilities until the year 2016 to be subject to the total nitrogen permit limits. I think that an earlier date, such as calendar year 2011, should provide adequate time to comply with the limits.

Sincerely,
John Shaw

Subject: Clean up Jordan Lake and protect upstream water quality and watersheds

Dear Mr. Gannon,

I am a resident of Guilford County, an area which, as you know, is experiencing rapid population growth and conversion of farms and woodlands to urban sprawl. By proactively issuing strong storm water rules regulating polluted runoff from golf courses and housing developments and strong and immediate wastewater treatment regulations that go into effect as quickly as possible, can protect our vital watersheds and ensure good water quality for the future. Delaying will only allow developers, some of whom now buying land, particularly in NE Guilford County along the Haw River, have bad track records for protecting the environment, and as I understand, have been cited by the state for violating existing rules on other projects. As you know, water quality in Jordan Lake is a huge problem, and we cannot clean it up and keep it that way without providing strong protections upstream.

The conversion from rural to urban landscape may be inevitable, but it can be done responsibly and sustainably so that quality of life for existing residents and those moving in to these new developments is preserved. Excellent water quality for fishing, canoeing, supporting wildlife and drinking is not a luxury but essential to that end.

Thank you for acting in the public interest now and not delaying watershed protection far into the future when the damage will already be done. In Guilford County, we need regulation now.

Sincerely,
Deborah Fields

Subject: Please adopt stricter rules for Jordan Lake's Health

Dear Mr. Gannon,

Lately, it appears that government is pro-business and not pro-humanity. Let's change that by taking care of our natural resources - water being the most important one to humanity. My husband and I will build our dream home just across the road from Jordan Lake and we want to be able to enjoy it - not worry about it's health.

I urge the EMC to require wastewater plant upgrades by 2001 AND require the EMC to be specific about what local governments must do to begin controlling runoff from existing and future developments.

Thank you.

Sincerely,
Susan Hustace

Subject: Clean up Jordan Lake

Dear Mr. Gannon,

We are well aware that good, clean water--the precious gift of life!-- is getting more & more rare in North Carolina as well as elsewhere in the world.

Jordan Lake symbolizes to us the responsibilities we have in our region to provide safe drinking water for our increasing populations as well as water that's safe for swimming & other water recreations as well as for fish and other life that keep our water systems whole and healthy (& beautiful).

We have learned that Jordan Lake was officially added to the federal list of "impaired waters" in 2002. This means the Clean Water Act requires the state environmental agency to prepare a plan to restore the lake's health by cutting pollution from all contributing sources.

We definitely need strong rules to clean up Jordan Lake--they are already years overdue: the state legislature first called for action on reducing phosphorus and nitrogen in 1997!

So, it's clear that making rules that set a date of 2016 are NOT what's needed. We strongly urge you to require the EMC to require wastewater plant upgrades by 2011.

Also, the science clearly shows that we cannot have a healthy lake unless local governments control pollution from existing development. We need the EMC to be specific about what local governments must do to begin controlling runoff from existing development--no "grandfathering" old bad habits.

We are clearly in a time of advanced tides of trouble for our common resources; water is one of the most fragile of these. Moving slowly now to restore this lake's health may be equal to killing it.

Thanks for your 100% effort to save Jordan Lake for us and for posterity!

Sincerely,
Nancy & Howard Carter

Subject: Clean up Jordan Lake!

Dear Mr. Gannon,

Please get regulations in place to address the current pollution & contamination in Jordan Lake, and to prevent more! The lake is a valuable recreational area & water source, & needs to be clean enough to swim in... fish from... drink out of! PLEASE require wastewater plant upgrades by 2011; that is already 4 years away! The lake can't wait any longer. Please make sure we give specific guidance & rules to the different local governments to set clear limits on pollution & development runoff; it is much easier to prevent future damage than it is to undo what is done (which we are already facing; let's not let it get worse!)

The health of Jordan Lake is EXTREMELY important to central NC: recreationally & aesthetically, but more important, for the continued health of our people & our environment.
Thank you!

Sincerely,
Sina Barney

Subject: Cleaning up Jordan Lake

Dear Mr. Gannon,

A clean Jordan Lake is both necessary and desirable. It takes care of both wants and needs. Mankind made the lake and mankind must preserve it!

I'm 81 years old and grew up in Seattle, WN. Lake WN borders the entire east side of Seattle and Seattle's waste went into Puget Sound and the Pacific Ocean. I swam, boated, waterskied, etc in the Lake. It was wonderful.

Post WWII, municipalities sprang up all around the lake. Their sewage ended up in Lake Washington and finally, swimming was prohibited in the LAKE.

Fortunately and wisely, the regional leaders adopted a new idea (at the time), i.e. Metro Government. And a metropolitan government (Metro) was established for the region around the lake which established new Metro laws directed at reducing the lake's pollution. It did so remarkably quickly and we could again swim in the Lake.

Re: Lake Gaston: respect it and form a regional unit of government w/ the powers needed to clean up the Lake. This means that this burden will be shared by the major as well as the minor municipalities.

Subject: Jordan Lake Clean-up

Dear Mr. Gannon,

Since it would be possible to move the effective date for wastewater plants to reduce nitrogen pollution to 2011, that should be the time required. Industry, and by extension, consumers, are doing too much damage to water systems to delay remediation any longer than absolutely necessary.

Local government will do as little as possible to enforce anything that might cost them some money (tax dollars) or good will from industry or taxpayers. They need to be forcibly nudged, and state mandates should be accompanied by state money. It is fair to make this a state responsibility involving a shared financial burden.

What will improve the health of one lake is most probably good for all lakes.

Sincerely,
carola Cohn

Subject: Jordan Lake

Dear Mr. Gannon,

We lived in Raleigh for 19 years before relocating to Gastonia, and still visit there frequently. Therefore, we are very familiar with Jordan Lake and its importance to that region. Please do everything necessary to clean up Jordan Lake. At its origin, the water was some of the purest quality in the state; please do not let it become a casualty of development.

Sincerely, Mr. and Mrs. Kenneth Eddins

Sincerely,

Subject: Cleaner water for all to enjoy

Dear Mr. Gannon,

As a relocated Yankee to North Carolina, I was fortunate to grow up with pristine lakes, streams, and well drinking water in Maine. Those lakes should serve as something to live up to, a commodity not to be thought of lightly. I have lived here 8 years, all the while getting my drinking water from Jordan Lake, and visiting there for recreation. It appalls me to think about what could result if strict measures are not enacted now. Would you want you and your family drinking from it, or swimming in it? What affect will further pollution have on all the species of plants and animals? Do what it takes to make sure the water will be safe to drink, and available for future generations of families and animals to enjoy a beautiful afternoon on this North Carolina lake.

Sincerely,
Jessica Ramsberger

Subject: Jordan Lake

Dear Mr. Gannon,

I am writing to urge the EMC to act now and avoid further delay in cleaning up Jordan Lake.

During the summer, I spend as many weekends at the lake as I can. One of the benefits of living in this area is the convenience of outdoor recreation so close. I would like to see conservation issues emphasized in NC in general and the viability and cleanliness of Jordan Lake in particular.

The proposed rules won't require wastewater plants to reduce nitrogen pollution until 2016, almost a decade away. An earlier version of the proposed rules set that date at 2011, which we think is fair and achievable. We are urging the EMC to require wastewater plant upgrades by 2011.

The proposed rules are very vague about what local governments must do to control pollution from existing development. The science is clear that Jordan Lake cannot become healthy again unless we tackle this source of pollution. We are urging the EMC to be specific about what local governments must do to begin controlling runoff from existing development.

Thank you!

Sincerely,
David Cosentino

Subject: Please Protect NC from Becoming another NJ

Dear Mr. Gannon,

I love North Carolina. Born and raised here, and committed to quality of life issues her.

Jordan Lake is a litmus test for how North Carolina will steward and manage growth, or doom itself to polluted legacy.

PLEASE act now to stop the pollution already underway, clean up the damage already done, and make clear tough rules for a clean and livable future for Jordan Lake, and ultimately North Carolina.

We have an opportunity to learn from other state's mistakes, and not repeat those mistakes here in the Tarheel state. New Jersey allowed corporate/industrial interests, unguided economic growth at all costs, developer lobbying, municipal greed to all drag their air and water pollution to horrific levels.

As a result, New Jersey became the butt of innumerable jokes. That reputation persists to this day; deserved or not.

Protect NC from becoming another New Jersey. Let's plan for and create a clean legacy for North Carolina.

Clean up the lake now, and strengthen the rules to make sure it never gets this bad again.

Sincerely,
Duane Bryant

Subject: Please Protect Jordan Lake

Dear Mr. Gannon,

As a fairly new resident of Chatham County (5 years), my family has grown to love and enjoy Jordan Lake. This is the type of recreation -- fishing, boating, swimming, hiking, and camping -- that is wholesome and healthy for families and that make Chatham County a great place to live! Please don't let this beautiful North Carolina gem become more polluted. Surely we have learned enough from past history what waiting too long can do to destroy our natural environment. We are depending upon you, the NC EMC to take strong and timely measures to assure an attractive and clean future for Jordan Lake. Thank you for representing the citizens on this most urgent matter.

Sincerely,
Patrice Neal

Subject: Jordan Lake pollution

Dear Mr. Gannon,

Safe water for drinking is very important to me. I don't understand why the date for achieving it was changed from 2011 to 2016, when it is such a vital health factor. Run-off from construction, sewage plants, and roadways needs to be regulated so that these sources don't increase the problem.

North Carolina has too much to lose if we can't deal with this problem effectively and quickly....Health, attractiveness for business, and for tourism. EMC needs to take the lead and be specific about what local governments must begin to do to put an end to this problem. I'm sure funds are tight, but clean, healthy drinking water is not a luxury. It is a necessity!

Sincerely,
Valeria Peters

Subject: water quality in Jordan Lake

Dear Mr. Gannon,

I wish to speak to the proposed rules that the EMC is considering for cleaning up Jordan Lake. My husband and I love kayaking in Jordan Lake, with frequent stops for swimming. We are very concerned that Jordan is getting more and more polluted. We urge you to consider implementing new rules regarding the pollution that enters Jordan Lake as soon as possible. These rules should include requiring wastewater plants to reduce their nitrogen release by 2011, not the current plan for 2016.

Also, since significant pollution comes from existing developments, the rules mandating that local governments control this pollution must be spelled out clearly and specifically.

We are very glad that the EMC is taking steps to clean up Jordan Lake. Please set comprehensive standards that will make a difference for years to come.

Sincerely,
Beth Harvat

Subject: Lake Jordan

Dear Mr. Gannon,

Originally from New Orleans, I left because in part because of the political scene there. Politicians notoriously did not listen to the constituents. Once, though, I was heartened when we were able to vote a governor in who kept his word on cleaning up the Lake Pontchartrain. He was in office only one term, but his efforts worked.

He banned dredging for roadbed shell. The dead zones created by dredging returned to life w/in 10 years. In some places, the water became clear.

In a city where the drinking water is taken from the Mississippi River and which happens to have an extremely high rate of cancer, you (politicians) from other areas REALLY should look at history, and learn from it.

Clean up Lake Jordan, do it now, and put reasonable regulations into place. If it takes too much money for wastewater plants to step up to the standards, then the standards need to be changed for the benefit of the people.

Thank you.

Joan Oriol

Subject: clean up Jordan Lake

Dear Mr. Gannon,

I write to urge that action be taken to clean Jordan Lake. Relatives of mine live and work in the area and therefore depend on water from the lake. I also kayak/swim in the area so water quality matters to me. The health of the lake will not improve until the sources of run off pollution from development and wastewater treatment upstream are cleaned up, that needs to be done as soon as possible. The EMC should strengthen rules by specifically making clear provisions pertaining to development and time tables. I prefer the 2011 date proposed or as soon as realistically possible. The laws should favor water quality rather than developers to avoid these problems in the future and because clean water benefits everyone.

Thank you for the opportunity to express my views.

Sincerely,
Terry Woods

Subject: stop ruining our beautiful resources

Dear Mr. Gannon,

To Whom It May Concern:

Now is the time to stop polluting this wonderful lake, before it is too late.

Having grown up and lived on Deep River in Randolph County all my life, I have seen first hand how sewage and runoff can ruin a pristine waterway.

As a child (some 60 years ago) we swam in Deep River, fished (and ate our catch) and enjoyed the fresh water of this river.... But not in the last thirty or forty years. We've allowed our streams to become dumping grounds for our waste. When will we understand the damage to our eco-system and stop this terrible act of polluting?

NOW IS THE TIME!!

Sincerely,
james Albright

Subject: clean up jordan lake

Dear Mr. Gannon,

The proposed rules won't require wastewater plants to reduce nitrogen pollution until 2016, almost a decade away. An earlier version of the proposed rules set that date at 2011, which we think is fair and achievable. We are urging the EMC to require wastewater plant upgrades by 2011.

The proposed rules are very vague about what local governments must do to control pollution from existing development. The science is clear that Jordan Lake cannot become healthy again unless we tackle this source of pollution. We are urging the EMC to be specific about what local governments must do to begin controlling runoff from existing development.

Sincerely,
Linda Silwedel

Subject: Clean up Lake Jordan and Keep it Clean

Dear Mr. Gannon,

We all have a responsibility for the water of Lake Jordan. I have witnessed pollution and pollution that has been left unattended many times thru the years, and always, if we leave it until the waters reach crisis, the recovery is too long too expensive and too much a sign that we cannot act responsibly.

Don't let this happen at Lake Jordan. Take action as planned now - curb run off and polluting systems.

Sincerely,
Phyllis Lisle

Subject: The water is cleaner in Mexico - how embarrassing to US!

Dear Mr. Gannon,

We are very concerned about the quality of water in Jordan Lake and ask that you do your part to help clean up this lake!

My husband and I relocated from PA where we had a spring-fed well supplying our home with water. We knew our new home would probably not offer the quality of water we had there but never expected it to be so bad! We can't believe how disgusting the drinking water is - I have seen cleaner water in Mexico!

We love North Carolina and this area but please do something about the water in the state, especially at Jordan Lake! You have the power to make a difference. Please be specific about what local governments must to do begin controlling runoff from existing development and require wastewater plant upgrades by 2011 - no later!

Sincerely,
Barbara Dolny

Subject: Jordan Lake

Dear Mr. Gannon,

Please keep Jordan Lake clean. It is important for a multitude of reasons: drinking water, water sports, attractive to new businesses that will use that water (if unpolluted), etc. Jordan Lake is already in trouble, and unless something is done, things will only get worse. Please install the upgrades to the wastewater plant now to avoid future nitrogen poisoning of the lake. And work with local governments to solve the issue of run-off from new developments. These 2 solutions will greatly affect the cleanliness of the lake. Thank you for your time.

Subject: Trouble in Jordan's Waters

Dear Mr. Gannon,

Dear Legislator, Jordan Lake is a resource for many causes, the primary and most important is drinking water. If the communities up stream are allowed to dump sewage and the developments (they are many and more to come) let their runoff into the feeder creeks and streams, this lake is already becoming a cesspool. The sooner the communities get their sewage cleaner the better. No one can afford to wait until 2016. Lets get r done.

Thanks, John Haywood

Subject: Jordan Lake

Dear Mr. Gannon,

I remember flying over the then-filling Jordan Lake and bemoaning its necessity. I was told this was needed to help quell the increasing thirst of new residents. Now I was alarmed to discover the Lake was already compromised. This is a resource for our area and needs to be kept looking beautiful but, as important, is its function to help with a chronically poor water supply. It is disappointing to learn that man's pollution has brought about disgraceful compromise. People need to be educated about the consequences of their neglect. Unfortunately education is not enough and rules need to be instituted. EMC should do what it can to have wastewater plants control their run-off as soon as possible and should help local governments achieve this goal.

Subject: clean up Jordan Lake

Dear Mr. Gannon,

I am writing to urge the EMC to act now in cleaning up Jordan Lake, an important drinking water resource to the Triangle Area.

Specifically, the proposed rules should be strengthened in two ways:

1. Implement the nitrogen reductions much sooner than 2016. This is much too far in the future, and the lake will be severely impaired by then. Wastewater plant upgrades should be required by 2011 at the very latest.
2. Be more specific about what local governments must do to control runoff from existing development. Special designation of this area under NPDES Phase II regulation is one option.

Thank you for your consideration of this important matter, and working to clean up our drinking water resource Jordan Lake.

Sincerely,

Subject: Corporate and Municipal Poisoning of Lake Jordan is Great

Dear Mr. Gannon,

Don't listen to these tree hugging water sipping sissies. Corporate NC knows what's good for them and is tired of dealing with these seditious environmental meddlers! Let we the corporate know it alls continue to write and interpret legislation, rules, and policy to our benefit.

Those environmental blood suckers have slightly slowed our profits by trying to invoke the rule of law set forth in the Clean Air and Clean Water Acts. Please know that it is our best short term / bottom line interests to shut down the opposition to our business efforts. We can (AND WILL) both support your support and oppose your non-support of our interests.

Polluting is most profitable. If any noticeable damages occur be assured that health and quality of life consequences will occur to population segments of no consequence (per our normal policy of not screwing with the "haves" and the "have mores"). Additionally know that we can continue to throw vast resources to refute scientific fact and legal precedent. We can provide the cover that makes it simple for your commission to ignore public trust or benefit issues. (Like wise we can apply the muscle to make it difficult for you if you begin to actually consider stopping our corporately beneficial actions that unavoidably inflict a bit of collateral damage.)

Please avoid any consideration of requiring all permitted discharges going into the watershed to meet the standards of water being removed (drinking water standards). Such a policy sounds healthy and feasible on the surface, but money saved by the lack of disease and reduced treatment requirements and the increased income from fish populations and recreation uses is all money that does not come to our corporate pockets. Please remember the business of business is business. Profit is good, more profit is better. Cost avoidance (of the full free market cost of doing business) is a major profit center. To mess with a major profit center is something not recommended for state agencies or commissions.

I trust you will do the right thing.

P.S. I will pray for your souls as well.

Sincerely,
Dale Weston

Subject: Jordan Lake Clean Up

Dear Mr. Gannon,

Please revisit the existing, vague rules encompassing dumping and run off into Jordan Lake. The proposed rules won't require wastewater plants to reduce nitrogen pollution until 2016, almost a decade away. An earlier version of the proposed rules set that date at 2011, which we think is fair and achievable. We are urging the EMC to require wastewater plant upgrades by 2011. Being a resident of Cary, the drinking water for my children is sourced from Jordan Lake. In concert, we frequently participate in recreational activity on and around the lake including: swimming, camping, hiking and bird watching. By allowing such lax rules and guidelines to exist, we are threatening the future of the lake, fish, and encompassing wildlife. Thank you for your time.

Sincerely,
Tom Fitz

Subject: Please Clean up Jordan Lake

Dear Mr. Gannon,

Jordan Lake and upstream rivers and creeks matters to me and I care about other living beings as well that rely on the lake to survive. From a business standpoint, a clean lake will attract business and tourists.

Please act now and avoid further delay in cleaning up the lake.

Please strengthen the proposed rules in two ways:

1) The proposed rules won't require wastewater plants to reduce nitrogen pollution until 2016, almost a decade away. An earlier version of the proposed rules set that date at 2011, which we think is fair and achievable.

Please require wastewater plant upgrades by 2011.

2) The proposed rules are very vague about what local governments must do to control pollution from existing development. The science is clear that Jordan Lake cannot become healthy again unless we tackle this source of pollution.

Please be specific about what local governments must do to begin controlling runoff from existing development.

Thank you very much.

"The greatness of a nation and its moral progress can be judged by the way its animals are treated." -Gandhi

Sincerely,
D Brown

Subject: Save Jordan Lake

Dear Mr. Gannon,

I regularly kayak on Jordan Lake, and my grandchildren delight in visits with my wife and me to the Lake. In the past three years, however, I have noticed a steady decline in the clarity of the water. I take my grandkids now only to a small section that is not completely attached to the main body of the Lake and on which gasoline-driven boats are banned. Many of us have for years found this part of North Carolina a wonderful place to call home. Unfortunately, the number of people who feel this way grows enormously each year. You must take action NOW to protect central North Carolina from the effects of the unbridled growth we are experiencing. Individual communities must do their part, but it is your unique responsibility to take the wider view needed to protect our environment. I am sure that you hear much from developers and towns who stand to profit from this growth, but you must stand for what it takes to protect the area we love and they are marketing from that growth. This will necessarily raise the price of development, but this will help keep the developers and towns from killing the goose that has laid their golden egg. Nitrogen pollution must be brought under control ASAP - not in 20016, but in 2011. Municipalities must be given a CLEAR and complete set of rules with which they must comply. If you take the responsibility to do this now, it will actually save municipalities time and money, in that there will be less time wasted in "interpreting" and arguing about rules. Change is difficult, but clearly laid out change is easier than vague implementation of change. If you act decisively now, it will save the State and its citizens money in the long run. Thank you.

Sincerely,
Barry Lentz

Subject: We need to take steps to conserve and clean all water supplies!

Dear Mr. Gannon,

Local governments need to take appropriate steps and enact specific rules and guidelines concerning chemicals, waste facilities, factories and other sources of water pollutants.

Please take a stand in protecting all water sources for our children and their children!

Sincerely,

Charles L. Rose Jr.

Sincerely,
Chuck Rose

Subject: Please clean up Jordan Lake

Dear Mr. Gannon,

My dog and I swim in Jordan lake several times a week, I bring friends and family there when they visit, it is very important to me and to everyone who uses the lake for drinking water and recreation that the pollution is minimized. Please do everything you can to expedite the cleanup efforts. I do what I can to pick up litter around the lake, but I don't think I can personally stop the water pollution at its sources-but you CAN! Please do!!! Thank you very much.

Sincerely,
Kirsten Trowbridge

Subject: Jordan Lake Clean UP

Dear Mr. Gannon,

I urge you to avoid any delay in adopting the rules to clean up Jordan Lake and prevent further pollution of our major source of drinking water. It is a beautiful and critical resource for our community and I cannot believe that anyone would want to see it's decline.

I just read an article in the newspaper about the revival of the Bald Eagle and Jordan Lake has one of the largest populations of Bald Eagles.

Please encourage the EMC to be specific about how governments can control runoff from development and require nitrogen reductions in wastewater plants sooner than 2016.

Sincerely,
Connie Winstead

Subject: Jordan lake cleanup

Dear Mr. Gannon,

I urge the EMC to act now and avoid further delay in cleaning up the Jordan Lake, and to strengthen the proposed rules in the following ways:

1. Require wastewater plants to reduce nitrogen pollution by 2011, not in 2016, when it might be too late.
2. Be specific about what local governments must do to control runoff from developments.

Sincerely,
sue-Anne solem

Subject: save Jordan Lake

Dear Mr. Gannon,

Even before I moved here I enjoyed seeing Jordan Lake. I hate to think that marvelous lake would be marred by further pollution.

Please act now and avoid further delay in cleaning up the lake.

You can strengthen the proposed rules in two ways:

- require wastewater plant upgrades by 2011.
- be specific about what local governments must do to begin controlling runoff from existing development.

Sincerely,
E. Rourke

Subject: Clean Up Jordan Lake

Dear Mr. Gannon,

Wastewater from sewage treatment plants, plus runoff from development, has damaged upstream creeks and brought more pollution than Jordan Lake can handle. Algae blooms and extreme chemical conditions show that the lake is in trouble. If we don't act, these problems will get worse: fish will die, people swimming in the lake will get sick, and the cost to treat water for drinking will increase.

Please act now and avoid further delay in cleaning up the lake. I urge you to strengthen the proposed rules in two ways:

(1)The proposed rules won't require wastewater plants to reduce nitrogen pollution until 2016, almost a decade away. An earlier version of the proposed rules set that date at 2011, which we think is fair and achievable. We are urging the EMC to require wastewater plant upgrades by 2011.

(2)The proposed rules are very vague about what local governments must do to control pollution from existing development. The science is clear that Jordan Lake cannot become healthy again unless we tackle this source of pollution. We are urging the EMC to be specific about what local governments must do to begin controlling runoff from existing development.

Thank you.
