

Re: Jordan Lake

I am concerned about pollution at Jordan Lake. This is a resource for our drinking water. Drought is decreasing water tables making pollution more concentrated. Development near Jordan needs to be stopped as people are not curbing use of fertilizers, pesticides, and runoff of clay from building. Water is a precious resource now and we need to face that fact.

Another aspect of pollution not looked at in our drinking water is oil & gas from recreation vehicles. Petroleum should not be in our water that we drink.

Why not stop further development by not issuing any more permits.

Why not stop recreation vehicles to save the purity of our water.
