In addition to my anecdotal observations, the current scientific literature does not suggest an increased incidence of asthma or respiratory disease in pulp mill workers. In trying to determine why the advisory board indicates that hydrogen sulfide at the current levels exacerbates asthma, they refer to a study done by Jappinen et al, which was published in 1990. This study was performed in Finland with the subjects consisting of 26 male pulp workers, including smokers, and 10 documented asthmatic

subjects. The pulp mill workers had their spirometric lung parameters measured before work and then measured following exposure to hydrogen sulfide at their workplace. There was essentially no change in the spirometric parameters before and after exposure, with these parameters including the forced vital capacity and the forced expiratory volume at one second. These are the standard parameters used to measure airway obstruction and airway responsiveness. Additionally in this study, they took 10 documented asthmatic subjects, removed their medication from them for two days, and then exposed them to a known concentration of hydrogen sulfide at two parts per million which is equivalent to 2700 $\mu g/m^2$. This is 600 μg higher than the current acceptable ambient levels of hydrogen sulfide. The pre and post exposure spirometric values were virtually identical in the asthmatic group.

In the asthmatic subjects only, a parameter called "airway resistance and airway conductance" was measured by using a body plethysmograph. This was not performed on the pulp mill workers. In two subjects, the airway resistance rose by greater than 30 percent. To someone not experienced in respiratory physiology, this would sound like a tremendous increase. However, airway resistance by body plethysmography is a very sensitive tool that has very poor specificity and generally has little clinical usefulness. To put this in context, a normal individual's airway resistance measured pre and post exercise can rise by as much as 50 percent. The authors of this study specifically concluded that exposure to low concentrations of hydrogen sulfide did not cause any noticeable effects on respiratory function both in pulp mill workers and in asthmatics.

It is my suspicion that some of our scientific advisory board members are looking at this term of airway resistance and simply falsely interpreting its significance. In my opinion, it is irresponsible for the scientific advisory board to recommend these dramatic reductions in hydrogen sulfide given their profound economic consequences and the total lack of objective data supporting any adverse outcomes based on current exposure levels.

Sincerely,

Roy N. Everett, MD, FCCP

Litter Report 2003

This report is prepared pursuant to Session Law 2001-512, Sections 9 and 10[1] and provides information describing the outcome of North Carolina's 2003 anti-litter campaign.

The state's 2003 anti-litter campaign brings together three components:

- Litter cleanup
- Education/prevention
- Enforcement

2003 Litter Report Summary

Statewide roadside litter cleanups collected more than nine million pounds during 2003. The large amount of litter collected indicates a litter problem still exists in North Carolina. More litter would have been picked up if the crews and volunteers were not hampered by bad weather. This past year, the state experienced an extremely wet spring season and a hurricane in the fall. These two weather conditions limited statewide litter pick-up during the state's major litter pick-up initiatives - Spring and Fall Litter Sweep.

During 2003, the North Carolina Department of Transportation (NCDOT), its Office of Beautification Programs and other state agencies collectively supported statewide anti-litter initiatives. The other agencies included the Administrative Office of the Courts, Departments of Correction, Crime Control and Public Safety, and Environmental and Natural Resources.

The NCDOT maintains 78,500 state roadway miles, and in 2003 it picked up litter on 59,909 shoulder miles. More than $13.9 million was spent to cleanup the roadside litter found on state maintained roadsides.

Anti-litter education/prevention activities continued even though budget restraints were still in effect. The Office of Beautification Programs promoted and supported anti-litter projects through various channels. These channels included enhancements to its Internet home page, participation on various statewide organizational boards, promoting anti-litter information at conferences and the state fair, and supplying anti-litter promotional items to a multitude of local organizations. It also completed work on an anti-litter radio campaign scheduled to begin in January 2004, and sought to upgrade hardware and software to its Adopt-A-Highway hotline reporting system.

Law enforcement was near the pace with that of previous years in the number of charges for littering violations. A 2003 recap from the Administrative Office the Courts shows the number of charges and convictions by offense code, by county and by type of law enforcement officers. In addition, the Conference of the District Court Judges provided an alternative to first time offenders charged with littering of less than 15 pounds. It gives these offenders a means to pay a litter fine without going through the judicial process (effective 1 January 2004). It's similar to paying for a parking ticket.

[1] See Attachment A - page 37

Statewide Roadside Litter Cleanup 2003

North Carolina Department of Transportation

The North Carolina Department of Transportation (NCDOT) maintains 78,500 state roadway miles. In order to maintain environmentally and aesthetically clean, safe and attractive roadsides, the NCDOT has built relationships with citizens, other agencies, local governments and organizations/industries. Examples include the Adopt-A-Highway (AAH) volunteers, an alliance with the Department of Correction (DOC), participating on organizational boards as that of Keep America Beautiful and Big Sweep, and working with the North Carolina Soft Drink Association.

NCDOT Adopt-A-Highway Program

The NCDOT through its Office of Beautification Programs continues to administer the Adopt-A-Highway (AAH) program. It's a partnership endeavor between community volunteers and the NCDOT. The volunteer groups are primarily made up of school, civic, business, professional, religious and social groups, although many individuals and families also adopt roadside sections.

The AAH program is a fine example of state government working with citizens to improve the cleanliness and quality of life in communities across North Carolina. To assist with the local AAH roadside adoption, the NCDOT has 56 AAH Coordinators who oversee the adoption process in their assigned counties. The program cost $293,357 in 2003 versus $590,092 spent in 2002. The lower cost amount is attributed to the new BISIPS data entry process.

Citizens of North Carolina continue to support local roadside litter cleanup by adopting a two-mile stretch of roadside and volunteering their time to pick up litter. In 2003, the AAH program had some 6,000 groups who had adopted approximately 12,000 roadside miles. The volunteer cleanup efforts of the AAH program saved the state's taxpayers $3.2 million dollars in cleanup costs in 2003, and over the last three years, the AAH program has had cumulative savings of more than $11 million dollars in roadside litter cleanup costs.

Annual Comparison of AAH program Taxpayer Savings:

	Hours Worked	Cleanup Cost Savings
2003	326,776	$3.2 million
2002	384,248	$3.8 million
2001	402,335	$4.0 million

When it comes to the amount of litter collected, the actual number may be higher than what was reported by AAH groups. Some litter is not counted, as automobile components and construction debris that are too large or too heavy to fit into the bags. There were also times when the AAH volunteers would do the cleanup, but fail to report their participation and consequently the reported amount of litter picked up could be less than the actual amount.

In addition, the Office of Beautification Programs AAH reporting system experienced occasional downtime due to the age of the hardware and software used in gathering cleanup report data. The data not collected in 2003 would have increased the number of hours worked and the amount of litter

collected. To remedy the situation of AAH groups not being able to call in their reports, both the hardware and software have been scheduled for an upgrade in early 2004.

The table below provides data representing the amount of litter collected annually through the AAH program over the last three years.

Year	Total Pounds Collected Statewide by Adopt-A-Highway Groups
2003	3,649,360
2002	4,241,100
2001	4,379,760

As mentioned previously, the lower amount collected during 2003 is due to the effects of a wet spring and the fall hurricane. Of the 3.6 million pounds collected, the AAH groups also recycled 383,380 pounds as follows: 168,660 lbs. of metal, 121,200 lbs. of glass and 93,520 lbs. of plastic.

The NC Department of Transportation (NCDOT) also sponsored Litter Sweep, the biannual roadside litter cleanup. Litter Sweep is typically held the last two weeks of April and September. Volunteers are asked on a statewide basis to contribute their time for roadside litter pick up. During Litter Sweep, the NCDOT provides volunteers safety vests, gloves and bags for roadside litter cleanups. It also provides additional manpower to ensure full bags are picked up for immediate disposal.

NCDOT and Department of Correction (DOC)

The NCDOT alliance with the DOC is critical in keeping roadside litter to a minimum on many heavily traveled routes throughout the state. This alliance makes it possible to have 1,360 inmates performing litter pick up on a daily basis (weather permitting).

The wet spring hampered DOC inmate crews in their litter pick up efforts, and after the hurricane, many eastern North Carolina counties suspended litter cleanup activities in lieu of storm damaged road maintenance and storm debris removal. Even so, there was a still a substantial amount of litter picked up during each Litter Sweep. The number of pounds collected does not include items which did not fit within a bag i.e. tire and construction debris.

Here is the breakdown and description of the inmate crews:

110 Medium Custody Eight-man Road Squads

- Armed DOC staff is required to supervise these inmates (two officers to eight inmates).
- NCDOT transfers $10,170,000 to the DOC for medium custody inmate labor for roadside litter cleanup. Approximately 90% of all medium custody inmate labor were spent on litter pick-up.
- An additional $27,878 was expended for support cost related to working with DOC officers on work assignments.

60 Minimum Custody Highway Work Crews.

- Correctional officers supervised minimum custody inmates (one officer per eight inmates).
- Assigned primary responsibility for removing litter from major highways statewide.
- The labor cost for these crews is included in the NCDOT $10,170,000 transfer to the DOC.

Minimum Custody Road Squads

- NCDOT staff, trained by the DOC, supervised minimum custody inmates.
- Inmate labor was billed at $1 per day per inmate for litter cleanup. In 2003 there were 11,905 man-days at a charge of $11,905.
- NCDOT spent and additional $79,346 for supervision and transportation costs.

115 Governor's Community Work Program (CWP) crews.

- Through this program, a correction officer supervises a crew of up to 10 minimum-custody inmates on short-term, manual labor projects for local governments and state agencies.
- These crews are dedicated to litter pick up during Litter Sweep.
- There is no charge for this labor.

During the 2003 Spring and Fall Litter Sweep, the NCDOT picked up 455,490 pounds of litter versus 847,545 pounds in 2002, and expended approximately 21,548 man-days of its employees and inmates for picking up litter on 16,553 highway miles. The amount of litter picked up during both the 2003 Spring and Fall Litter Sweep by the DOC inmates was 2,123,601 pounds versus 2,680,635 pounds in 2002.

NCDOT and DOC Inmate Litter Sweep Roadside Cleanup Comparison:

	Pounds Collected
2003	2,579,091
2002	3,919,590
2001	3,558,885

Community Service Work Programs (CSWP).

- Members of these work crews are not in the prison system, but are citizens who have been assigned community service through the court system.
- CSWP is a sentencing option operated by the Division of Community Corrections (DCC). The Courts order, as a condition of either supervised or unsupervised probation, lower risk offenders to perform community service hours.
- DCC-CSWP maintains agreements with local government or non-profit agencies statewide where offenders are placed to perform the community service hours. Offenders perform work that benefits the agency and the community, with many agencies supervising Litter Cleanup projects.
- For calendar year 2003, approximately 202,493 hours were worked and 3,222,675 pounds of litter collected.

CSWP Annual Roadside Litter Cleanup Comparison

	Pounds Collected
2003	3,222,675
2002	4,498,590
2001	4,121,325

The DOC inmate crews and the CSWP litter pickups are performed separately and independently of one another. The pounds of litter reported above represent the litter pick up efforts of each separately.

2003 Roadside Litter Pick Up Summary - NCDOT, AAH, DOC and CSWP

Roadside Litter Cleanup Recap and Comparison:

Litter Amounts Picked Up In Pounds by Year				Three-year Cumulative Amount by Group
	2003	2002	2001	
NCDOT *	455,490	847,545	1,620,900	2,923,935
DOC *	2,123,601	2,680,635	1,547,550	6,351,786
Other volunteers *	382,590	391,410	390,405	781,815
AAH**	3,649,360	4,241,325	4,379,760	12,270,445
CSWP**	3,222,675	4,498,590	4,121,325	11,842,590
Sum	9,833,716	12,659,505	12,059,940	34,553,161

* Litter Sweep (only) litter pick up amount

**Annual litter pick up amount

The three-year cumulative amount of 34,553,161 pounds of litter equates to 2,303,544 bags of litter based on the average bag weighing 15 pounds.

NCDOT 2003 Roadside Litter Pick Up Expenditure

NCDOT Litter Cleanup Expenditure Recap By Year			
	2003	2002	2001
NCDOT Employees	$3,328,699	$4,324,947	$4,098,679
Adopt-A-Highway	293,357	590,092	543,213
DOC (Medium and Minimum Custody Inmates)	10,289,129	10,457,854	6,342,509
Expenditures by year:	$13,911,185	$15,372,893	$10,984,401

Department Of Environmental and Natural Resources

Division of Parks and Recreation 2003 Litter Cleanup Summary

Everyday, staff at each state park, spends four to eight man-hours, on average, emptying trashcans and picking up litter. In addition, all units of the state parks system hold litter cleanup days with the help of various community volunteers. During 2003, approximately 120 volunteer litter cleanups were held across the state park system. Ten of these cleanups were part of the annual Big Sweep event occurring on September 20, 2003. Volunteers during these cleanups collected approximately 17,500 pounds of trash. There were also 700 bags and 10 truckloads which were not weighed.

Over the course of 2003, approximately 35,000 pounds of materials were collected for recycling in North Carolina's parks: 5,343 pounds of aluminum; 3,488 pounds of plastic; 4,322 pounds of glass; 5,350 pounds of paper; and 16, 427 pounds of other materials. This is versus 41,000 pounds in 2002 which included 6,900 pounds of metals; 3,200 pounds of plastic; 13,200 pounds of glass; and 8,000 pounds of paper. Ice storms, spring flooding and the aftermath of Hurricane Isabel closed some of the parks for several weeks in 2003, which may account for the smaller amounts of recycling in 2003 versus 2002.

Division of Parks and Recreation – Litter Cleanup Efforts – January–December 2003

Note: "No activity" means that there were no *additional* litter cleanups *beyond* the daily litter collection done by park staff. For example, at a small park, such as Pilot Mountain, the park staff often picks up a total of 300 bags of trash during one year.

Park	Date	# volunteers	# bags of trash or # man-hours	# lbs. of trash
CABE	7-31-03 8-05-03 8-14-03 11-03-03 11-06-03	2 2 1 1 2	5.5 man-hours 5.5 man-hours 2 man-hours 2.75 man-hours 5.5 man-hours

	3-21-03	?	35 man-hours	Approx. 60 pounds
	4-24-03	?	3 man-hours	
	5-29-03	?	8 man-hours	
	10-24-03	10	11 bags	
	10-31-03	14	10 bags	

The above information describes the Division of Parks and Recreation litter cleanup efforts. During 2003, approximately 120 litter cleanups were held across the state park system, beyond the normal daily maintenance carried out by staff. As mentioned previously, a total of 17,500 pounds of trash was collected. There were also 700 bags and 10 truckloads that were not weighed.

The Division of Parks and Recreation Recycling Recap:

Number of Pounds Recycled		
Item	2003	2002
Aluminum	5,343	
Plastic	3,448	3,200
Glass	4,322	13,200
Metal		6,900
Paper	5,350	8,000
Other	16,427	
Total	34,760	41,000

The 2003 recycling totals above are listed by park in the following recap.

Park	# of Sites	Location of Sites	Aluminum	Plastic	Glass	Paper	Other	(#lbs.) Collected

Other Statewide Litter Cleanups

North Carolina Big Sweep

1n 1989 North Carolina Big Sweep, Inc became a 501(c)(3) nonprofit organization whose purpose is to promote environmental education, and to plan and coordinate the annual waterway cleanup, including watershed areas. Its origins go back to 1987, when Dr. Lundie Spence, of the NC Sea Grant College Program founded it. More information can be found through its Internet address www.ncbigsweep.org.

NC Big Sweep is normally held the third Saturday in September. For 2004 the date of the annual litter pick up has been changed to October 2, 2004. The reason is to avoid the inclement weather, which is usually present during September.

NC Keep America Beautiful

North Carolina Keep America Beautiful (NCKAB) is a nonprofit public education organization dedicated to enhancing the natural beauty of North Carolina communities, improving waste handling practices and empowering individuals to take greater responsibility for improving community environments. NCKAB is comprised of local, independent affiliates located in communities all across North Carolina.

The KAB Affiliates participated in their 2003 Great American Cleanup™. This cleanup ran from March to the end of May. The volunteers worked on a number of projects such as litter pick up, removing debris and junk cars, eliminating illegal dumps, restoring playgrounds and planting trees, flowers and bulbs. They had 32,677 volunteers that expended more than 130,700 hours in these various initiatives, and overall saved the state's taxpayers in equivalent labor costs through all their volunteer efforts. The reported amount of litter picked up during their NC Great American Cleanup was 1,176,478 pounds.

Anti-Litter Education/Prevention – 2003

Department of Environmental and Natural Resources (DENR)

Division of Pollution Prevention and Environmental Assistance (DPPEA)

The DPPEA distributed more than 10,000 recycling activity books as well as 100,000 Recycle Guys packets to schools local governmental and civic organizations in 2003. The campaign promoted waste reduction and recycling. More information about teaching aids and educational efforts can be found through their web site at www.p2pays.org.

In addition to this, the DPPEA had anti-litter ads, which reached 60% of the counties in North Carolina through the cable network. The ads promoted anti-litter behavior through recycling.

Division of Parks and Recreation

Each unit in the state park system provides an adequate number of trashcans in convenient locations to encourage visitors to keep the parks clean and provides at least one recycling center for visitors and campers.

The Division of Parks and Recreation also seeks to exemplify and encourage good stewardship of natural resources by reducing, reusing and renewing materials where possible. To reduce the amount of paper that might become litter, the Division uses Internet servers instead of printed materials where possible. Park maps and other information can be viewed online, or via computer interactive exhibits in park offices. In 2003, 15 citations were written for littering within North Carolina State Parks and Recreation areas.

Division of Marine Fisheries - Marine Patrol

The Division of Marine Fisheries' Marine Patrol Officers patrol the waters of North Carolina working to control the discharge of litter into the state's coastal waterways along with their other patrol duties. Officers are stationed along the coastal counties from the Virginia state line to South Carolina state line and as part of their daily patrol, officers ensure the disposal of trash, discarded equipment and abandoned fishing gear is done properly.

NC Wildlife Resources Commission

The Division of Engineering Services maintains 191 boating access areas and 36 public fishing access areas across the state. Approximately 3,500 hours was spent policing and removing litter form these sites. "Littering is Illegal" signs are maintained on all sites.

The Division of Wildlife Management reports 120 hours of general litter pick-up on game lands across the state. The Division of Enforcement Officers participated in numerous public service announcements pertaining to the proper disposal of lawfully taken wildlife.

NCDOT - Office of Beautification Programs

During 2003 the Office of Beautification Programs placed emphasis on enhancing their web site to promote anti-litter education. Currently the Union County - Yes! Yes! We Can Stop Littering Campaign and the Gaston County - 2003-2004 Beautification and Environmental Education Programs are provided in their entirety. The intent of this site is to be a resource for educators in need of classroom curriculum material. The information can be found at the Office of Beautification Programs web site homepage at www.ncdot.org/~beautification through the NCDOT Anti-Litter Efforts link. The curriculums can be downloaded for classroom usage.

In addition, the Office of Beautification provided a variety of educational materials for schools, civic groups and others. This included anti-litter stickers, decals, pencils, car litterbags, temporary tattoos, leaflets and Swat-A-Litterbug cards. Other items available through their Internet web site included links i.e. to Swat-A-Litterbug, Adopt-A-Highway, Litter Sweep, printable activity pages, and litter activity book with lessons and activities for 2nd and 3rd grades and information about NCDOT's fight against litter.

The Office of Beautification Programs also distributed car litterbags in the tens of thousands through rest areas, welcome centers and the NC State Fair and on request to numerous groups.

Annual Litter Prevention Awards Contest: The NCDOT, along with the Office of the Governor and the NC Soft Drink Association, sponsors a litter prevention awards contest annually. Eligible categories are as follows: Government Agencies, Schools/Youth Groups and Nonprofits. Each category offers first place prizes of $1,000 and second place prizes of $500. Winning groups are required to use their winnings to expand existing litter prevention programs. Winners are posted to the Office of Beautification Programs web site's Litter Prevention Contest link.

Yes! Yes! We Can Stop Littering Campaign: An alliance between the Union County Rotary Clubs, the Union County Public School System, county charter and private schools, local businesses and the NCDOT to prevent littering. The overall purpose over a five-year period is to cultivate a cultural change to stop littering in Union County and the state. The program is in its third year with approximately 6,000 students having participated. It's estimated that these 6,000 students by sharing their experiences have increased awareness to over 20,000 people.

The objectives are to promote awareness, change attitudes through enhancing pride in a clean environment and creating a positive action by citizens to prevent littering and polluting the environment. The Union County Rotary Clubs are the major drivers of this initiative with other sponsors providing various assists as the program moves forward. The NCDOT Office of Beautification Programs for example, provides items as litterbags, stickers and tattoos with anti-littering messages, promotional pencils and plaques to support the "Yes! Yes! We Can Stop Littering Campaign".

Swat-A-Litterbug program: The Office of Beautification Programs continues to administer the Swat-A-Litterbug program. Through this program those who are observed littering can be reported on-line through the Office of Beautification Programs web site at www.ncdot.org/~beautification, or through the mail (Swat-A-Litterbug cards), or by calling *HP or calling the NCDOT Customer Service Office at 1-877-DOT-4YOU.

The information required in a Swat-A-Litterbug report is the vehicle license plate number, time, date, street, city, county, and a description of the littering offense. In 2003, more than 6,000 Swat-A-Litterbug letters were mailed to those observed littering. In 2002 there were 5,000 letters mailed.

Swat-A-Litterbug is viewed as an educational tool, which informs those observed violating the litter law. The letters, which are signed by the Colonel of the State Highway Patrol, inform recipients of their littering, that littering is illegal and the penalties they could receive if convicted. Those submitting the license plate numbers are anonymous. There are no citations or warnings issued from these reports and no record is kept regarding who receives the letter. Again, this is mainly a tool to help educate those observed littering.

Litter License Plate: The General Assembly approved the Anti Litter License plate during the 2000 session. The initial 300 plates were sold in 2001 and the plate became available through the tag agencies by the beginning of 2002. Ten dollars of each plate sold will be diverted to a "Litter Prevention Fund" on a quarterly basis. The remainder of the money is used to help support other statewide anti litter efforts. As of this report date, there have been 425 plates issued.

Litter Enforcement – 2003 Summary

Department of Crime Control and Public Safety

In 2003, the State Highway Patrol issued 683 tickets for littering. The State Highway Patrol also cooperates with NC Department of Transportation (NCDOT) to offer the *HP as an option for reporting littering activity on the highways. Information provided by callers is captured by the State Highway Patrol and when appropriate it is submitted to the NCDOT Swat-A-Litterbug program for processing.

State Highway Patrol Recap of Litter Charges G.S. 14-399 and local ordinances:

Year	Number of Charges
2003	683
2002	699
2001	748

The Division of Motor Vehicle (DMV) Enforcement Officers were transferred from the NCDOT to the Department of Crime Control and Public Safety State Highway Patrol in January of 2003. In the table below the tickets issued for G.S. 20-116(g) violations during 2003 represent the combined tickets issued by the State Highway Patrol and the DMV enforcement officers. The other years are the DMV only.

DMV's Enforcement Section Recap of Improper Loading/covering of Vehicle G.S. 20-116(g):

Year	Number of Charges
2003 *	1,161
2002	1,066
2001	1,683

* Combined DMV and SHP

Division of Parks and Recreation

Each unit in the state park system provides an adequate number of trashcans in convenient locations to encourage visitors to keep the parks clean and provides at least one recycling center for visitors and campers.

The Division of Parks and Recreation also seeks to exemplify and encourage good stewardship of natural resources by reducing, reusing and renewing materials where possible. To reduce the amount of paper that might become litter, the Division uses Internet servers instead of printed materials where possible. Park maps and other information can be viewed online, or via computer interactive exhibits in park offices. In 2003, 15 citations were written for littering within North Carolina State parks and recreation areas.

Division of Marine Fisheries - Marine Patrol

Marine Patrol Officers issued 5 citations and four warning citations with 54 hours spent on these cases in 2003. Officers issued 11 citations and six warning citations with 53 hours spent on these cases in 2002. In 2001 there were19 citations and one warning citation issued with 10.5 hours spent on those cases.

Marine Patrol Citation Recap

Year	Citations	Warnings	Time Spent
2003	5	4	54 hours
2002	11	6	53 hours
2001	19	1	10.5 hours

NC Wildlife Resources Commission

The Division of Engineering Services maintains 191 boating access areas and 36 public fishing access areas across the state. Approximately 3,500 hours was spent policing and removing litter form these sites. "Littering is Illegal" signs are maintained on all sites.

The Division of Wildlife Management reports 120 hours of general litter pick-up on game lands across the state.

The Division of Enforcement Officers participated in numerous public service announcements pertaining to the proper disposal of lawfully taken wildlife. There were six charges and three convictions in violations of G.S. 75A-10c (littering the state's waterways)..

REPORT ON LITTERING CHARGES AND CONVICTIONS

Pursuant to Session Law 2001-512, Section 9

February 1, 2004

This report provides detailed information about littering offenses for calendar year 2003.

Data are presented on the number of charges and convictions by county and charges by law enforcement agency. The data are from the Administrative Office of the Courts (AOC) Automated Criminal/Infraction System.

Data are provided for the following eleven offenses:

Offense Code		
4425	Improper Loading/Covering of Vehicle	§ 20-116(g)
5370	Commercial Littering	§ 14-399(e)
5371	Littering Hazardous Waste	§ 14-399(e)
5372	Littering not more than 15 pounds	§ 14-399(c)
5373	Littering more than 15 but less than 500 pounds	§ 14-399(d)
5374	Littering more than 500 pounds	§ 14-399(e)
5375	Unintentional Littering not more than 15 Pounds	§ 14-399(c1)
5376	Unintentional Littering more than 15 but less than 500 Pounds	§ 14-399(d1)
5377	Unintentional Littering more than 500 Pounds	§ 14-399(e1)
6248	Litter Gameland/Access Area	§ 113-264(a)
8514	Littering Beer/Wine Container	local ordinance

Calendar 2003

NUMBER OF LITTERING CHARGES AND CONVICTIONS BY COUNTY AND CHARGING AGENCY

The following data are from the AOC's Automated Criminal/Infraction System for the most recent calendar year. The number of charges and convictions represents totals from district and superior court filings. Some of the defendants have other charges in addition to a littering offense. It is possible for a defendant to be charged in one calendar year and convicted in the next. Thus, for any given calendar year, the defendants convicted are not necessarily the same defendants charged in that year.

With respect to the charging agency, "Other" represents only those cases in which clerks did not indicate the charging agency or an invalid agency name was entered. All littering offense codes are listed for the statewide data. County data include only the codes for which there were any charges.

					Number Of Charges By Charging Agency							
	Offense Code	Number of Charges	Number of Convic-tions		ABC	ALE	Police	DMV	Sheriff	SHP	WRC	Other
STATEWIDE				STATEWIDE

Court Costs Associated with Disposing of Littering Charges

Calendar 2003

I. PUNISHMENT LEVEL

(1) Class I Felony

The following three littering offenses are punishable as Class I felonies:

5370	Commercial Littering	§ 14-399(e)
5371	Littering Hazardous Waste	§ 14-399(e)
5374	Littering more than 500 pounds	§ 14-399(e)

(2) Class 3 Misdemeanor

The following four littering offenses are punishable as Class 3 misdemeanors:

5372	Littering not more than 15 pounds	§ 14-399(c)
5373	Littering more than 15 but less than 500 pounds	§ 14-399(d)
6248	Litter Gameland/Access Area	§ 113-264(a)
8514	Littering Beer/Wine Container	local ordinance

(3) Infraction

The following four offenses are punishable as infractions:

4425	Improper loading/covering of vehicle	§ 20-116(g)
5375	Unintentional Littering not more than 15 Pounds	§ 14-399(c1)
5376	Unintentional Littering more than 15 but less than 500 Pounds	§ 14-399(d1)
5377	Unintentional Littering more than 500 Pounds	§ 14-399(e1)

II. COSTS OF DISPOSITION

These estimates do not purport to represent the cost of operating the court system. The estimates here include only the personnel-related costs for court personnel who are active participants in courtroom proceedings. These estimates do not include costs for appeals, indigent defense, support staff who are not actually present in the courtroom, bailiffs and facilities (as these are county expenses), or operating expenses such as equipment and supplies.

A. GUILTY PLEA

Class I felony plea in superior court: AOC data indicate that processing each guilty plea for a Class I felony requires an average of 0.36 hours of in-court time at an average cost of $91.

Class 3 misdemeanor plea in district court: AOC data indicate that processing each guilty plea for a Class 3 misdemeanor requires an average of 0.22 hours of in-court time at an average cost of $41.

Infraction waiver: AOC's best estimate is that processing each waiver requires a minimum of 10 minutes of a deputy clerk's time. At a rate of $15.60 per hour for a clerk's time, processing each waiver costs approximately $2.60 in clerk time.

B. TRIAL

Class I felony trial in superior court: AOC data indicate that each Class I felony trial in superior court lasts an average of 1.62 days of in-court time at an average cost of $2,974.

Class 3 misdemeanor bench trial in district court: AOC data indicate that each Class 3 misdemeanor disposition in district court requires an average of 0.77 hours of in-court time at an average cost of $862.

Infraction: AOC's best estimate is that disposing of each infraction in district court requires a minimum of 10 minutes of in-court time and 5 minutes of a clerk's time to process the file, for a total of approximately $32.

C. DISMISSAL

AOC's best estimate is that it requires a minimum of 5 minutes of a clerk's time to process a dismissal without trial. At a rate of $15.60 per hour for a clerk's time, processing each dismissal of any of the littering offenses above would cost approximately $1.30 in clerk time.

WAIVER OF LITTERING OFFENSES

A defendant charged with littering in an amount not exceeding 15 pounds and not for commercial purposes under NCGS 14-399(c) may waive his court appearance and pay a $250 fine plus court costs.

Effective January 1, 2004, a defendant charged with unintentional littering in an amount not exceeding 15 pounds under NCGS 14-399(c1) may waive his court appearance and pay a fine of $25 plus court costs. The Conference of Chief District Court Judges added this littering offense to the waiver list on October 8, 2003 pursuant to NCGS 7A-148.

The waiver policy for these two littering offenses applies only to first-time offenders; a defendant charged with a second offense under NCGS 14-399(c) or (c1) would be required to appear in court to answer the charge.

This information can be found at the North Carolina Court System web site at http://www.nccourts.org/Forms/Documents/788.pdf.

ATTACHMENT A: Session Law 2001-512, Sections 9 and 10

SECTION 9. The text of G.S. 147-12 is designated as subsection (a) of that section, and G.S. 147-12 is further amended by adding a new subsection to read: "(b) The Department of Transportation, the Department of Correction, the Department of Crime Control and Public Safety, the State Highway Patrol, the Wildlife Resources Commission, the Division of Parks and Recreation in the Department of Environment and Natural Resources, and the Division of Marine Fisheries in the Department of Environment and Natural Resources shall deliver to the Governor by February 1 and August 1 of each year detailed information on the agency's litter enforcement, litter prevention, and litter removal efforts. The Administrative Office of the Courts shall deliver to the Governor by February 1 and August 1 of each year detailed information on the enforcement of the littering laws of the State, including the number of charges and convictions under the littering laws of the State. The Governor shall gather the information submitted by the respective agencies and deliver a consolidated semiannual report on or before March 1 and September 1 of each year to the Environmental Review Commission, the Joint Legislative Transportation Oversight Committee, and the House of Representatives and the Senate Appropriations Subcommittees on Natural and Economic Resources."

SECTION 10. The first reports required to be delivered by the Department of Transportation, the Department of Correction, the Department of Crime Control and Public Safety, the State Highway Patrol, the Wildlife Resources Commission, the Division of Parks and Recreation in the Department of Environment and Natural Resources, the Division of Marine Fisheries in the Department of Environment and Natural Resources, and the Administrative Office of the Courts to the Governor under G.S. 147-12(b), as enacted by Section 10 of this act, shall be due February 1, 2002. The first report required to be delivered by the Governor to the Environmental Review Commission, the Joint Legislative Transportation Oversight Committee, and the House of Representatives and the Senate Appropriations Subcommittees on Natural and Economic Resources under G.S. 147-12(b), as enacted by Section 10 of this act, shall be due March 1, 2002.

2003 North Carolina Interagency Report
on
Litter Cleanup, Education/Prevention and Enforcement

I. 2003 Roadside Litter Pick Up Summary - NCDOT, AAH, DOC and CSWP

A. Roadside Litter Cleanup Recap and Comparison (Pages 3-7):

Litter Amounts Picked Up In Pounds by Year				Three-year Cumulative Amount by Group
	2003	2002	2001	
NCDOT *	455,490	847,545	1,620,900	2,923,935
DOC *	2,123,601	2,680,635	1,547,550	6,351,786
Other volunteers *	382,590	391,410	390,405	781,815
AAH**	3,649,360	4,241,325	4,379,760	12,270,445
CSWP**	3,222,675	4,498,590	4,121,325	11,842,590
Sum	9,833,716	12,659,505	12,059,940	34,553,161

* Litter Sweep (only) litter pick up amount

**Annual litter pick up amount

The three-year cumulative amount of 34,553,161 pounds of litter equates to 2,303,544 bags of litter based on the average bag weighing 15 pounds.

B. NCDOT 2003 Roadside Litter Pick Up Expenditure (Page 7)

NCDOT Litter Cleanup Expenditure Recap By Year			
	2003	2002	2001
NCDOT Employees	$3,328,699	$4,324,947	$4,098,679
Adopt-A-Highway	293,357	590,092	543,213
DOC (Medium and Minimum Custody Inmates)	10,289,129	10,457,854	6,342,509
Expenditures by year:	$13,911,185	$15,372,893	$10,984,401

C. Other Litter Cleanups (DENR, Big Sweep, KAB)

1. The Division of Parks and Recreation Recycling Recap (Pages 8-13):

Number of Pounds Recycled		
Item	2003	2002
Aluminum	5,343	
Plastic	3,448	3,200
Glass	4,322	13,200
Metal		6,900
Paper	5,350	8,000
Other	16,427	
Total	34,760	41,000

2. NC Big Sweep - watershed, beach, rivers and creek sides (Page 14-16)

	Sites	Volunteers	Miles	Tires	Bags	Pounds
2003 TOTALS	430	13,757	1,305	2,346	16,318	451,073

NC Big Sweep is normally held the third Saturday in September. For 2004 the date of the annual litter pick up has been changed to October 2, 2004. The reason is to avoid the inclement weather, which is usually present during September.

3. Keep America Beautiful Affiliates (Page 17)

KAB Affiliate	Number of Volunteers	Number of Volunteer Hours All Projects	2003 NC Great American Cleanup Litter Amount Picked Up In Pounds
Totals	32,677	130,708	1,176,478

II. Anti-Litter Education/Prevention – 2003

A. Department of Environmental and Natural Resources (DENR)

Division of Pollution Prevention and Environmental Assistance (DPPEA Page 18)

- Distributed more than 10,000 recycling activity books as well as 100,000 Recycle Guys packets to schools local governmental and civic organizations in 2003.
- The campaign promoted waste reduction and recycling.

Division of Parks and Recreation (Page 18)

- Trashcans are provided in convenient locations to encourage visitors to keep the parks clean and provide at least one recycling center for visitors and campers.
- The Division uses Internet servers instead of printed materials where possible. Park maps and other information can be viewed online, or via computer interactive exhibits in park offices.

Division of Marine Fisheries - Marine Patrol (Page 18)

- Officers patrol the waters of North Carolina working to control the discharge of litter into the state's coastal waterways along with their other patrol duties.
- Officers are stationed along the coastal counties from the Virginia State line to South Carolina State line and as part of their daily patrol to ensure proper disposal of trash, discarded equipment and abandoned fishing gear is done properly.

B. NC Wildlife Resources Commission (Page 18)

- The Division of Engineering Services maintains 191 boating access areas and 36 public fishing access areas across the state.
- Approximately 3,500 hours were spent policing and removing litter from these sites. "Littering is Illegal" signs are maintained on all sites.
- The Division of Wildlife Management reports 120 hours of general litter pick-up on game lands across the state. Enforcement Officers participate in numerous public service announcements regarding disposal of lawfully taken wildlife.

C. NC Department of Transportation

Office of Beautification Programs (Pages 19-20)

- During 2003 the Office of Beautification Programs placed emphasis on enhancing their web site to promote anti-litter education. The intent of this site is to be a resource for educators in need of classroom curriculum material. The curriculums can be downloaded for classroom usage.

- Provided a variety of educational materials for schools, civic groups and others. This included thousands of anti-litter stickers, decals, pencils, car litterbags, temporary tattoos, leaflets and Swat-A-Litterbug cards.

- Other items available through their Internet web site included links i.e. to the Litter Law, Swat-A-Litterbug, Adopt-A-Highway, Litter Sweep, Current Events/News, printable activity pages, and litter activity book with lessons and activities for 2nd and 3rd grades and information about NCDOT's fight against litter.

- Distributed car litterbags in the tens of thousands through rest areas, welcome centers and the NC State Fair and on request to numerous groups.

- Annual Litter Prevention Awards Competition: The NCDOT, the Office of the Governor and the NC Soft Drink Association, sponsors a litter prevention awards contest annually. Eligible categories are as follows:
  - Government Agencies, Schools/Youth Groups and Nonprofits.
  - Each category offers first place prizes of $1,000 and second place prizes of $500. Winning groups are required to use their winnings to expand existing litter prevention programs.
  - Winners are posted to the Office of Beautification Programs web site's Litter Prevention Contest link.

- Swat-A-Litterbug program: The Office of Beautification Programs continues to administer the Swat-A-Litterbug program. Through this program those who are observed littering can be reported on-line through the Office of Beautification Programs web site at www.ncdot.org/~beautification, or through the mail (Swat-A-Litterbug cards), or by calling *HP or calling the NCDOT Customer Service Office at 1-877-DOT-4YOU.
  - The information required in a Swat-A-Litterbug report is the vehicle license plate number, time, date, street, city, county, and a description of the littering offense.
  - In 2003, more than 6,000 Swat-A-Litterbug letters were mailed to those observed littering. In 2002 there were 5,000 letters mailed.
  - Swat-A-Litterbug is viewed as an educational tool, which informs those observed violating the litter law. The letters, which are signed by the Colonel of the State Highway Patrol, inform recipients of their littering, that littering is illegal and the penalties they could receive if convicted. Those submitting the license plate numbers are anonymous. There are no citations or warnings issued from these reports and no record is kept regarding who receives the letter. Again, this is mainly a tool to help educate those observed littering.

- Litter License Plate: As of this report date, there have been 425 plates issued.

III. Litter Enforcement – 2003 Summary

A. Department of Crime Control and Public Safety (Page 21)

- The State Highway Patrol issued 683 tickets for littering. The State Highway Patrol also cooperates with NC Department of Transportation (NCDOT) to offer the *HP as an option for reporting littering activity on the highways.

- State Highway Patrol Recap of Litter Charges G.S. 14-399 and local ordinances (Page 21):

Year	Number of Charges
2003	683
2002	699
2001	748

- DMV's Enforcement Section Recap of Improper Loading/covering of Vehicle G.S. 20-116(g):

Year	Number of Charges
2003 *	1,161
2002	1,066
2001	1,683

* Combined DMV and SHP

B. Department of Environmental and Natural Resources (Pages 21-22)

- Division of Parks and Recreation - In 2003, 15 citations were written for littering within North Carolina State parks and recreation areas.

- Division of Marine Fisheries - Marine Patrol Citation Recap

Year	Citations	Warnings	Time Spent
2003	5	4	54 hours
2002	11	6	53 hours
2001	19	1	10.5 hours

C. Wildlife Resources Commission (Page 22)

- There were six charges and three convictions in violations of G.S. 75A-10c (littering the state's waterways).
- Wildlife Resources Commission (WRC) Recap of Litter Charges G.S. 14-399 and local ordinances:

Year	Charges
2003	646
2002	748
2001	866

D. Administrative Office of the Courts (Page 23-36)

20 April 2004

TO: Persons Interested in the Phase II Stormwater Rules

FROM: George F. Givens, Commission Counsel

CC: Members – Environmental Review Commission

RE: Phase II Stormwater Management Working Group – 27 April 2004

This memorandum is a follow up to my memoranda of 4 March and 13 April 2004 regarding the possibility of initiating a Phase II Stormwater Management Working Group. None of the dates/times that were proposed in the 13 April memorandum proved to be satisfactory to a sufficient number of interested parties. However, while no time works for everyone, it appears that a critical mass of those who represent the principal interest groups are available to meet on the afternoon of 27 April. **Accordingly, a Phase II Stormwater Management Working Group will meet at 2:00 p.m. on Tuesday 27 April 2004 in Room 605 of the Legislative Office Building in Raleigh.** If, as appears likely, one or more additional meetings will be required, these will be scheduled at the meeting on 27 April.

The 13 April memorandum contains language regarding the status of discussions on this matter that may have been misleading. There is no agreement at this time on how to resolve the issues involved in Phase II stormwater management. Rather, in general, there is agreement among representatives of the principal interest groups that a 605 discussion of these issues may be useful. Whether consensus legislation will result and the extent to which any consensus legislation will address the full range of outstanding issues remains to be seen. I regret any misunderstanding that may have resulted from the 13 April memorandum.

If you have questions or concerns, please feel free to call me at (919) 733-2578.

DRAFT

MINUTES
ENVIRONMENTAL REVIEW COMMISSION
April 22, 2004
Asheville, NC

The Environmental Review Commission (ERC) met on Thursday 22 April 2004 at 1:30 p.m. in the Arabian Room, Holiday Inn, Asheville Airport.

Senator Charles Albertson presided over the 22 April 2004 meeting. The following members were present: Senators Albertson, Clodfelter, and Dorsett, and Representatives Gibson and Williams. Representative Ray Rapp, representing Haywood, Yancey and Madison counties, also attended the meeting. Mr. George Givens, Commission Counsel, Jennifer McGinnis, Assistant Commission Counsel, Susan Iddings, Assistant Commission Counsel, Tim Dodge, Research Assistant, Stephanie Smith, Fiscal Research, Jennifer Haygood, Fiscal Research, and Mary Watson, Commission Clerk were also present.

On 6 April 2004, notice was sent to members and interested parties via e-mail and regular mail. A copy of the notice is included in the attachments to these minutes as **Exhibit A**. A copy of the visitor registration and the agenda for the meeting are included in the attachments as **Exhibits B and C**.

Senator Albertson called the meeting to order and welcomed members and visitors attending the meeting. He asked members to introduce themselves.

George Givens, Commission Counsel, was asked to explain the agenda. He thanked everyone present and also thanked those who made it possible for us to meet here today.

Mr. Givens introduced General Assembly staff members present. He thanked Representative Gibson, Richard Rogers and Nan Guthrie for coordinating today's meeting. He also thanked Steve Pagano, State Parks and Recreation for arranging the tour of Gorges State Park and Dianne Beasley, Division of Forest Resources who arranged transportation for the tours.

Mr. Givens thanked Kate Dixson, Land for Tomorrow Coalition, for today's lunch and Betty Huskins, Advantage West, for the reception tonight at Biltmore Estate.

Ms. Betty R. Huskins, Vice President, Public Affairs and Corporate Development, AdvantageWest, gave a PowerPoint presentation on the designation of the Blue Ridge National Heritage Area by the Western North Carolina Regional Economic Development Commission. A copy of AdvantageWest's 2003 Annual Report is listed as **Exhibit D**.

Ms. Huskins said that AdvantageWest has a 19-member board, co-located with the North Carolina Department of Commerce. There are nine full-time staff members and three profession consultants as well as advisory boards who are employed by AdvantageWest.

Ms. Huskins said that AdvantageWest works in retention and recruitment. In retention, they have formed the North Carolina Training Alliance. In recruitment, AdvantageWest started the Certified Industrial Site Program, now adopted by the State.

Ms. Huskins said that in tourism and development in Western North Carolina, they are fortunate to have three private organizations representing over 700 tourism businesses.

Ms. Huskins said that the Blue Ridge National Heritage Area is a Congressional designation. There are 24 different heritage areas in the United States and each one is diversely different.

Ms. Huskins said that the Blue Ridge National Heritage Areas in western North Carolina have many advantages. Both the Eastern Band of the Cherokee and Natural Attraction are privately owned national heritage areas.

Ms. Huskins said that AdvantageWest has already put in over $180,000 a year in co-op advertising for the tourism industry and will focus them toward the Blue Ridge Heritage area as a marketing umbrella.

Ms. Huskins said that with the development of a 10-year management plan, they would be calling on many folks to work with them and encouraged members and visitors to see her if they were interested.

Senator Clodfelter asked how outcome is measured.

Ms. Huskins said that $25,000 has been allocated for the first year to work with the three universities to develop a baseline research project.

Representative Gibson asked what is needed to help interface these projects.

Ms. Huskins said that folks would need to come to the table with them when they have specific issues, once the management plan is prepared.

Representative Gibson asked if the projects would be constructive projects.

Ms. Huskins answered in the affirmative.

Representative asked if they would be worried about sedimentation or buffers or regulatory process.

Ms. Huskins said that whatever the development guidelines are that they are wrestling with right now would need to be in place for these projects.

Senator Albertson asked Ms. Huskins if the film industry was on the decline in North Carolina.

Ms. Huskins said that was absolutely true. They have had the worst two years with the film industry in North Carolina because of lack of funding.

Richard E. Rogers, Jr., Director, Office of Conservation & Community Affairs, DENR, gave a report on progress toward attaining the State's goal of protecting one million acres of farmland, open space, and conservation lands. A copy of his report is listed as **Exhibit E**.

On the first page of Mr. Rogers' report, he noted that the number of acres permanently protected has changed from 225,892 to 228,239.

Mr. Rogers said that the Million Acre Initiative has been engaged for about a year and one half. The idea is that conservation and the need for stewardship of our natural resources is not just about the acquisition of land but also about the restoring of our farmland and forestland across the State.

Mr. Rogers said that regional plans are being developed for eight different regions. A grant from Z. Smith Reynolds is being used to develop these plans. The plans are to interact with local governments and constituency to get their ideas on what they believe is important for conservation in their region.

Mr. Rogers said that all of the information collected from the regions would be compiled into a central map to be updated on a regular basis. A webpage will be developed for the public to view.

Mr. Rogers said that funding is important for acquisition of those areas around military closings.

Mr. Rogers said that short term needs range from $70-90 million for land acquisitions and restoration.

Mr. Rogers said that water conservation in the estuarine systems is critically important and funding is very important for this.

Mr. Rogers said that the long term needs for the Million Acres Program run around $176 million annually.

Senator Clodfelter asked if was a version of the report that lists, by agency or type of plan.

Mr. Rogers said that they do not have such version but could format it that way.

Senator Clodfelter asked how we know that we have the right acreage that we need for conservation.

Mr. Rogers said that the concept behind the map is including the priorities of conservation interests and the interests of the people so that future focus areas can be developed.

Senator Clodfelter said that funding couldn't be granted until a strategic plan is in place.

Representative Gibson asked Mr. Rogers if he assure that the necessary land purchases were being made through the million-acre initiative.

Mr. Rogers said they were trying to stay in close communication in identifying purchase or new land and projects on those purchases.

Senator Albertson asked Mr. Rogers about the Lake James project and Crescent Resources.

Mr. Rogers said that Crescent Resources has a 3,000-acre alongside Lake James, going up into the Linville Gorge area that will be made for purchase. He asked Lewis Ledford, new Division Director of Park and Recreations, DENR, to answer Senator Albertson's question.

Senator Albertson asked Mr. Ledford if there was a time certainty when the land would be available for purchase.

Mr. Ledford said that they did not have a time certainty at this time, but are getting appraisals on the property. They think that the land could available for purchase in one to two years.

Mr. Rogers said that there is a wealth of interest and excitement about this project that would benefit tourism and the economy.

Representative Gibson told Mr. Ledford that when they are doing projects such as this; don't be afraid to bring in folks from the private sector to provide as much assistance as possible.

Senator Clodfelter asked Mr. Rogers what percentage of money should be split for opportunistic purchases such as the Lake James project and how much should be reserved for more strategic acquisitions. What is the relative breakdown of what we ought to think about those spending choices?

Mr. Rogers said that the split is about 75/25.

Senator Albertson asked anyone in the audience if they had any questions to ask Mr. Rogers about the Million Acre Initiative.

Mr. William M. Eaker, Land of Sky Regional Council, said that the Million Acre Initiative should be addressing land protection within water supply watersheds.

Mr. Rogers asked members to look at the Wildlife North Carolina magazine, Exhibit E, placed in front of them and note the article on

Conservation Visions. He also pointed out the articles on Wilson Bay and the Wildest Day of the Year.

Mr. Lewis R. Ledford, Director, Division of Parks and Recreation, DENR, gave a report on allocations from the Parks and Recreation Trust Fund from the prior fiscal year. A copy of the Parks and Recreation Trust Fund progress report and the 2002-2003 Annual Report is listed as **Exhibit F**.

Mr. Ledford summarized the report by saying that 5% of real estate deed transfer tax goes to the Coastal Beach Access program, 30% goes to local governments and 65% comes to the State system for Capital Development and Land Acquisition.

Mr. Ledford recognized Wendell Begley, who serves on the Parks and Recreation Trust Fund Authority, who was present at the meeting.

Senator Dorsett asked Mr. Ledford asked about the counties who did not receive grants and those who did not apply for grants.

Mr. Ledford said this could be based on these counties not have a local Parks and Recreation Department to submit an application.

Mr. Ledford said there are seven recreational consultants who travel throughout the counties and municipal systems to make them aware of grant opportunities.

Senator Dorsett asked Mr. Ledford if there were any instances where counties have gone together to apply for grants.

Mr. Ledford said he was not aware of any.

Senator Clodfelter asked Mr. Ledford if it the half of the excise tax that local governments receive earmarked for a specific purpose or are they free to use it as they please.

Mr. Bill Holman said that it goes into a general fund.

Senator Albertson asked if $250,000 was the maximum grant amount.

Mr. Ledford said that in 2005, it would be raised to $500,000.

Senator Albertson asked if a State appropriation paid his salaries.

Mr. Ledford said that it was.

Senator Albertson asked Mr. Ledford what the starting salary was for an Officer or Ranger.

Mr. Ledford said that a Ranger I start at $21,000 with a four-year degree. They are hired and sent to law enforcement training and about

$16,000 to $17,000 to train these new Rangers. It is not uncommon for local law enforcement to hire these employees from the State.

Senator Albertson asked what the turnover rate was in employment of Rangers.

Mr. Ledford said that the first two years of a new hire for Ranger position is of the greatest concern.

Representative Gibson asked Mr. Ledford if they have to have law enforcement training.

Mr. Ledford said that they become a full law enforcement officer with full powers of arrest, with statewide jurisdiction and full subject matter jurisdiction.

Senator Albertson asked if the Forest Rangers had the same full subject matter jurisdiction as Wildlife officers.

Mr. Ledford said they have full subject matter jurisdiction also. Their officers are restricted by policy; however, if they are traveling and see a felony, they can take action.

Representative Gibson asked Mr. Ledford what the current attitude is of the visitors to our parks as far as fees and maintenance.

Mr. Ledford said that with 12 to 13 million visitors per year to our state parks, North Carolina has geared their rules to cater to our visitors. He said that one of the things they have tried to address through the Parks and Recreation Trust Fund is to allocate $1.2 million to the district superintendents in the four districts to address some of the major maintenance needs.

Representative Gibson asked if the legislature should look at NCSU graduate students, or park personnel to do a survey of park users, to see if we could generate enough money and a reasonable fee structure to sustain our parks.

Mr. Ledford said that he personally had reservations about this approach; given our state heritage and the clientele they serve.

Senator Clodfelter asked if we had exhausted all opportunity to charge special users, other than general admission.

Mr. Ledford said that a number of special uses have been addressed. Fees were raised last year. One of the examples of a special use permit is a bike race, where the extra fees are deposited back into a general fund.

Senator Clodfelter asked if there were any suggestions as to how we can tweak the Trust Fund in how the money should be used.

Mr. Ledford said that applications well exceed percentages of monies granted and feels that they are adequately balanced.

Ms. Linda Pearsall, Director, North Carolina Natural Heritage Program, Office of Conservation & Community Affairs, DENR, gave a report on allocations from the Natural Heritage Trust Fund from the prior fiscal year. A copy of her report for 2003 and a handout on Grant Awards, Spring 2004 Project Locations is listed as **Exhibit G**.

Ms. Pearsall said that in 2003, the Natural Heritage Trust had $37.5 million requested for grants and were able to provide $13.4 million for 25 projects, representing almost 27,000 acres.

Ms. Pearsall said that in 2004, $13.3 million was requested, $6.6 million available, and 15 grants representing over 15,000 acres.

Representative Gibson asked if the Black River project is contiguous with the 1999-2000 South River project.

Mr. Holman said that that it was more of a mixture of projects.

Ms. Pearsall added that when projects come to the Heritage Trust, they look for public access.

Representative Gibson then asked if the Boiling Springs tract was going toward the power plant and if it was a single tract.

Ms. Pearsall said that it was not a single tract but a piece that the Nature Conservancy has been consolidating into blocks for acquisition by the State Department of Agriculture. It is still a bit of a patchwork but soon they will be able to fill in all of the gaps.

Representative Gibson asked Ms. Pearsall about the Eno River site and the arguments going on with the Durham Loop.

Ms. Pearsall said that the piece acquired with the Heritage Trust funds was not anywhere near the proposed road.

Senator Albertson asked Ms. Pearsall if the site in Boiling Springs had venus flytraps located on it.

Ms. Pearsall answered in the affirmative.

Mr. Richard Rogers gave an annual report on the implementation of the Conservation Easements Program and inventory of all conservation easements held by DENR. A copy of this report is listed as **Exhibit H**.

Mr. Rogers said that the overall conservation tax credit program allows folks to donate property and easements on their property with a tax credit on 25 percent of the appraised market value of the property. Individuals can get up to $250,000 on the property and corporations up to $500,000.

Mr. Rogers said that through this program has received over 109,000 acres put under conservation in excess of $305 billion in donated land.

Mr. Rogers said that in 1998-99 the acquisition of conservation lands by the state was at $23 million below the appraised market value and over the duration of the programs the grantees saved more than $48.1 million in bargain sales facilitated by the tax credit incentive.

Mr. Rogers said that HB887 has been written to make the tax credit program more appealing to prospective land acquisitions. The issue of refund ability would provide a cash refund on the tax credit to 50 percent of the tax credit after three years of being in the program.

Representative Gibson asked about where we are in mapping as it relates to the initiative by some of the best management practices. He asked if there was a map piece that has the federal, state and local government acquisition territories.

Mr. Rogers said that the gaps they are trying to fill are the local governments and local entities. They have approximately 98 percent of what is out there with regards to future acquisitions. An updated map will be available in the fall.

Mr. Gerry Cohn, Director, Southeast Regional Office, American Farmland Trust, asked if numbers were cross-referenced in million acres report, Attachment B, show up in the annual report.

Mr. Rogers said that the million-acre report does not reflect this data but it would be rolling into the next report due in 2004.

Mr. Edgar Miller, Director of Government Relations, Conservation Trust for North Carolina asked Mr. Rogers to speak to the Department's efforts to develop more guidelines for the tax credit.

Mr. Rogers said they are currently working to develop guidelines for the different types of conservation easements. Also on the table is the issue of golf courses. They are trying to develop guidelines to bring people into the program and will be easy for them to follow.

Mr. Rogers said that the program does not address the assessment or value put on the property, which is not in their jurisdiction.

Senator Clodfelter added that the Revenue Laws Study Commission is addressing the value of the property.

Mr. Edgar Miller, Director of Government Relations, Conservation Trust for North Carolina, gave a report on the Farmland Preservation Trust Fund. A copy of a fact sheet for Conservation Trust and a copy of the Grant Awards report for 2002-2003 are listed as **Exhibit I**.

Mr. Miller reviewed the both the fact sheet and listed highlights from the Farmland Preservation Trust Fund report. A copy of his slide presentation is also listed as Exhibit I.

Mr. Gerry Cohn, Director, Southeast Regional Office, American Farmland Trust, gave a slide presentation on the American Farmland Trust. A copy of a fact sheet and a copy of his presentation are listed as **Exhibit J**.

Mr. Cohn said he see a lot positive signs on creating incentives for landowners to hold on to their farms to pass them on to future generations. He believes the significant piece missing is funding for these projects.

Senator Dorsett asked Mr. Cohn about the chart and the program created in the State of Maryland in 1977. She asked if there are some lessons that we can learn from a small state such as Maryland that would help North Carolina.

Mr. Cohn said that the big strength for Maryland is that they have created dedicated sources of funding so organizations have been able to plan a steady stream of income there. Maryland has also had a real estate transfer tax.

Mr. Miller added that New Jersey was able to come into the federal program requesting a lower match because of their size and large contributions they brought to the state.

Senator Clodfelter asked if there were any states used Transfer Development Rights (TDR) programs instead of publicly funded purchase programs.

Mr. Cohn said that a TDR program uses the private market to provided sources and funds for development rights. This requires a strong local planning component rather than that of a a state level. The State of Georgia has a TDR program.

Senator Clodfelter said these programs are a lot cheaper.

Mr. Cohn said they are a lot cheaper but require a very strong local planning component.

Senator Clodfelter asked Mr. Cohn if he would suggest TDR's for our state.

Mr. Cohn said TDR programs are a great option but we need to see examples of how it actually works before we bring them to North Carolina.

Senator Albertson said that it looks like we will have to find another way of funding of Farmland Preservation Trust unless the budget situation improves.

Representative Gibson asked what surrounding states have state funded programs.

Mr. Cohn said that none of the surrounding states have state funded programs at present. South Carolina is close to funding their conservation bank, which will be a dedicated source of funding, and farmland will be one of the components.

Representative Gibson asked Mr. Cohn where South Carolina's funding would come from.

Mr. Cohn said it would come from deed stamps.

Representative Gibson asked if it would be a percentage or a set fee.

Mr. Cohn said that it would be a set fee.

Representative Gibson asked if it would legislative or executive.

Mr. Cohn said that it would be legislative.

Representative Gibson asked how much revenue is anticipated from this fee.

Mr. Cohn said it was about $10 million annually.

Representative Ray Rapp asked if he could make a copy of his PowerPoint presentation available.

Mr. Cohn said that he would be happy to provide Representative Rapp with this report.

Senator Albertson recognized three members of the Land of Sky Regional Council: Joe McKinney, Jim Stokoe and Bill Eaker.

Mr. William E. Holman, Executive Director, Clean Water Management Trust Fund, gave a report on implementation of the Clean Water Management Trust Fund. A copy of the Annual Report on the Clean Water Management Trust Fund and a copy of a memorandum accompanying the report, which listed highlights from the report, are listed as **Exhibit K**.

Mr. Holman introduced Karen Cragnolin from Asheville, one of the original 21 trustees of the CWMTF appointed by the General Assembly and the Governor.

Mr. Holman highlighted projects from the annual report and listed several of the issues related to the CWMTF.

Representative Gibson asked what kind of match are we getting for the our dollars.

Mr. Holman said that the CWMTF has put up about $10 million to leverage about $210 million in federal funds and a total state match of $40 million. The processing of transactions needs to be improved in order to receive funding.

Representative Gibson asked if changes in the farm bill this year would change the KREP operations or would they stay like they are.

Mr. Holman said he believed that Congress is wrestling with how much money they can allocate for funding.

Mr. Holman said that the Eco Systems Enhancement Program (ESEP), formerly known as the Wetlands Restoration Program, is the combined efforts of DOT and DENR. All restoration and acquisition programs from the CWMTF are sent to the ESEP.

Senator Albertson asked if the water quality is improving in our state.

Mr. Holman said that water quality differed all over the state.

Mr. Givens asked if issues raised were listed in the handout.

Mr. Holman said that they were.

Mr. Givens asked if there was litigation with the project in Dupont Forest.

Mr. Holman said there was litigation with the value of the property. The State Attorney General's office and the State Property Office settled with Mr. Anthony.

Senator Clodfelter stated that if we continue to use fee simple acquisition, there should not be a need for large appropriations of monies.

Representative Gibson asked Mr. Holman is there would be legislation for counties to use fee simple.

Mr. Holman said there would be legislation.

Representative Gibson asked if County Commissioners Association has been involved in this.

Mr. Holman said that almost all of the acquisition projects use the conservation income tax credit as a valuable tool to lower the price of land.

Mr. Givens said that he and Mr. Holman would get together on draft legislation for the upcoming session.

Representative Rapp commended Mr. Holman on the good job he is doing.

Ms. Katherine (Kate) M. Dixon, Government Relations Project Director, The Nature Conservancy, gave a report by the Land for Tomorrow Coalition on the results of its conservation needs assessment. A copy of her presentation and a handout entitled Land for Tomorrow, and an Executive Summary of the Statewide North Carolina Public Poll for 2003 and 2004 are listed as **Exhibit L**.

Representative Gibson said he would be interested in seeing the results of the changes from 2002-2003 as it relates to overall perception of the environment.

Representative Gibson asked Ms. Dixon where the environment stands in the overall poll.

Ms. Dixon said that what happens with the poll is that you end up with a lot of specific topics so it is hard to tell where it stands.

Senator Clodfelter asked Mr. Givens how the mechanism of certifications of participation (COPs) is structured.

Ms. Dixon said that the dedicated funding stream is not what is central but it uses the land as the asset.

Senator Clodfelter asked if someone makes sure that the Treasurer's office says that acquisition of lands for conservation is a proper, legal use of COPs.

Mr. Givens said that this answer would be researched.

Mr. Terry Albrecht, Program Director, Waste Reduction Partners (administered by Land-of Sky Regional Council in special partnership with the Division of Pollution Prevention and Environmental Assistance, DENR), gave a report on the Waste Reduction Partners Program. A copy of Mr. Albrecht's slide presentation, a copy of an article from the Mountaineer, and a handout on Waste Reduction Partners 2003 Highlights are listed as **Exhibit M**.

Mr. Albrecht highlighted some of the programs and gave examples of waste reduction projects done over the past year.

Mr. Albrecht introduced Mr. Tom McCullough, volunteer with the Waste Reduction Partners Program, a native of Hendersonville, who spoke on his involvement with the program.

Mr. McCullough said that he leads the solid waste efforts by organizing the recycling of pallets, paper and other product that makes waste.

Senator Albertson commended Mr. McCullough on his efforts and thanked him for being at the meeting.

Mr. Givens invited everyone present to a reception sponsored by the Biltmore Winery and Advantage West, following the meeting.

Representative Gibson recognized members of Advantage West and asked them to introduce themselves.

Senator Albertson thanked those who were responsible for organizing the meeting in Asheville and thanked everyone for attending.

The meeting was adjourned at 5:15 p.m.

Senator Charles Albertson Presiding Co-Chair	Mary R. Watson Commission Clerk

RE: **Notice of Meetings - 20 April and 22 April 2004; Additional Information**

COMMISSION MEETING – 20 APRIL 2004:

The Environmental Review Commission will meet at 9:00 a.m. on Tuesday 20 April 2004 in Room 1228 of the Legislative Building in Raleigh. Please note the change in time and location from the normal meeting schedule.

At this meeting, the Commission will hear reports from State agencies, consider studies for which the Commission is responsible, discuss topics to be considered at future meetings, and attend to other matters. The meeting is expected to conclude around 12:00 noon. Listed below are potential agenda topics for this meeting. More specific information regarding the agenda for the 20 April meeting of the Commission will be developed at the public staff planning meeting.

1) Report on options to protect water quality and endangered species in the portion of Swift Creek that is located east of Nash County Road 1003 (S.L. 2003-433, Sec. 3)

2) Update on issues related to the Phase II stormwater rules

3) Discussion on the proposed modification of the rule setting out the acceptable ambient level (AAL) for hydrogen sulfide under rules adopted by the Environmental Management Commission that govern the emission of toxic air pollutants

4) Status report on the One-Stop Permit Assistance and Coordination Program. (S.L. 2001-424, Sec. 19.6)

5) Report on the Express Review Pilot Program and whether the Pilot Program be continued or expanded (S.L. 2003-284, Sec. 11.4A(e))

6) Annual report on the status of leaking petroleum underground storage tanks, the State cleanup funds, and the Groundwater Protection Loan Fund (G.S. 143-215.94M)

7) Report on issues related to the Leaking Petroleum Underground Storage Tank Cleanup Program (S.L. 2003-352, Sec. 12.(a))

8) Information item on the Transportation Demand Management Program

9) Semiannual report on agency litter enforcement, litter prevention, and litter removal efforts (G.S. 147-12(b))

10) Annual report on recycling efforts of public schools in the State (S.L. 2001-512, Sec. 11)

11) Information item on the NC GreenPower Program

12) Other matters related to the Commission's powers and duties under G.S. 120-10.43

SPECIAL BUSINESS MEETING – 22 APRIL 2004:

The Commission will hold a special business meeting at the Holiday Inn, Asheville Airport in Fletcher, North Carolina at 1:30 p.m. on Thursday 22 April 2004. This special meeting will focus primarily on various matters related to land conservation and preservation of open spaces and will be held in connection with a tour of Gorges State Park and Dupont State Forest on Thursday 22 April 2004 and Friday 23 April 2004. Listed below are potential agenda topics for this meeting.

1) Annual Report on allocations from the Parks and Recreation Trust Fund from the prior fiscal year (G.S. 113-44.15(c))

2) Annual Report on acquisitions made with funds from the Natural Heritage Trust Fund (G.S. 113-77.9(e))

3) Annual report on progress towards attaining the State's goal of protecting one million acres of farmland, open space, and conservation lands (G.S. 113A-241(c))

4) Annual report on implementation of the Conservation Easements Program and inventory of all conservation easements held by DENR (G.S. 113A-235(c))

5) Annual Report on implementation of the Clean Water Management Trust Fund (G.S. 113-145.6A(a))

6) Report by the Land for Tomorrow Coalition on the results of its conservation needs assessment

7) Report on the designation of the Blue Ridge National Heritage Area (S.L. 2001-491, Sec. 18.10)

8) Report on the Waste Reduction Partners Program

9) Other matters related to the Commission's powers and duties under G.S. 120-10.43

Directions to the Holiday Inn, Asheville Airport: From Asheville, take Interstate 26 south to exit 40 (formerly exit 9). At the top of the off ramp, turn left over the bridge. The Holiday Inn will be visible on the left. The hotel telephone number is (828) 684-1213.

PLANNING MEETING:

To facilitate development of the agenda for the 20 April and 22 April meetings of the Commission and to receive input from interested persons regarding the future work of the Commission, the Commission Counsel will hold an informal public planning meeting at **10:00 a.m. on Tuesday 13 April 2004 in Room 605 of the Legislative Office Building**. Persons who wish to participate in the development of the agenda for meetings of the Commission, or who are interested in any matter before the Commission, are invited to attend. Commission members are not expected to attend these meetings.

FUTURE MEETINGS:

The Commission will hold a regular business meeting at **9:30 a.m. on Wednesday 5 May 2004 in Room 643 of the Legislative Office Building.**

The 2004 Regular Session is scheduled to begin at 12:00 noon on Monday 10 May. The Commission normally meets shortly after the beginning of the session to complete work on legislative proposals prior to the commission/ committee bill request deadline, which in 2004 is 4:00 p.m. Wednesday 12 May. A Commission meeting at 2:30 p.m. on Tuesday 11 May is tentatively scheduled for this purpose.

OTHER MEETINGS:

The Commission Counsel will hold meetings of interested parties on specific topics as indicated below.

Leaking Petroleum Underground Storage Tank Working Group
2:00 p.m. Monday 19 April 2004– 605 Legislative Office Building

ADDITIONAL INFORMATION:

If you have questions related to the Commission, please feel free to contact the Commission Counsel at (919) 733-2578.

AGENDA
1:30 p.m. Thursday 22 April 2004
Arabian Room, Holiday Inn, Asheville Airport

1. Call to order
   Senator Charles W. Albertson, Presiding

2. Introductory remarks by Cochairs
   Senator Charles W. Albertson
   Senator Daniel G. Clodfelter
   Representative Pryor A. Gibson
   Representative Daniel F. McComas

3. Report to the Commission and explanation of agenda items
   George F. Givens, Commission Counsel

4. Report on the designation of the Blue Ridge National Heritage Area by the Western North Carolina Regional Economic Development Commission (AdvantageWest) (S.L. 2001-491, Sec. 18.10)
   Betty R. Huskins, Vice President, Public Affairs and Corporate Development
   AdvantageWest

5. Annual report on progress towards attaining the State's goal of protecting one million acres of farmland, open space, and conservation lands (G.S. 113A-241(c))
   Richard E. Rogers, Jr., Director
   Office of Conservation & Community Affairs, DENR

6. Annual report on allocations from the Parks and Recreation Trust Fund from the prior fiscal year (G.S. 113-44.15(c))
   Lewis R. Ledford, Director
   Division of Parks and Recreation, DENR

7. Annual report on allocations from the Natural Heritage Trust Fund from the prior fiscal year (G.S. 113-77.9(e))
   Linda P. Pearsall, Director
   North Carolina Natural Heritage Program,
   Office of Conservation & Community Affairs, DENR

8. Annual report on implementation of the Conservation Easements Program and inventory of all conservation easements held by DENR (G.S. 113A-235(c))
   Richard E. Rogers, Jr., Director
   Office of Conservation & Community Affairs, DENR

9. Report on the Farmland Preservation Trust Fund
   Edgar Miller, Director of Government Relations
   Conservation Trust for North Carolina

   Gerry Cohn, Director
   Southeast Regional Office, American Farmland Trust

10. Annual Report on implementation of the Clean Water Management Trust Fund (G.S. 113-145.6A(a))
    William E. Holman, Executive Director
    Clean Water Management Trust Fund

11. Report by the Land for Tomorrow Coalition on the results of its conservation needs assessment
    Katherine "Kate" M. Dixon, Government Relations Project Director
    The Nature Conservancy

12. Report on the Waste Reduction Partners Program
    Terry Albrecht, P.E., Program Director
    Waste Reduction Partners (administered by Land-of-Sky Regional Council in special partnership with the Division of Pollution Prevention and Environmental Assistance, DENR)

13. Commission discussion and announcements

14. Adjourn

SCHEDULE OF FUTURE MEETINGS:

Friday 23 April 2004 – Tour of Dupont State Forest

Wednesday 5 May 2004 -- Regular Business Meeting
Time: 9:30 a.m.
Location: 643 Legislative Office Building

Tuesday 11 May 2004 -- Regular Business Meeting
Time: 2:30 p.m. (tentative)
Location: 643 Legislative Office Building

OTHER MEETINGS:

The Commission Counsel will hold meetings of interested parties on specific topics as indicated below:

Leaking Petroleum Underground Storage Tank Working Group
10:00 a.m. 4 May 2004 – 605 Legislative Office Building

Phase II Stormwater Management Working Group
2:00 p.m. 27 April 2004 – 605 Legislative Office Building

ADVANTAGEWEST
NORTH CAROLINA

Strength in Numbe

When I became chairman of AdvantageWest nearly ten years ago, th challenges facing western North Carolina were long-standing and well documented. At that time, many of our economic challenges put us in contrast with more urban areas of the state such as Charlotte and the Research Triangle, where growth and prosperity seemed limitless. Few if any of us saw the day coming when urban and rural areas alike would compete for jobs not with Atlanta or Greenville, but with India or China. We now wake up each morning in a state where nearly a quarter-million people are without jobs. Our unemployment rate of 6.4 percent remains one of the nation's highest. If you've picked up a newspaper or ıtched television recently, you don't need me to tell you about some of the challenges we face our economy.

ıd yet there is good news in western North Carolina. We stood at a crossroads in 2003, with ınufacturing jobs leaving our state, never to return. We've faced war and an ever-expanding global onomy. At the crossroads, we could have turned back. We could have stood around and ımed each other and gone our separate ways. Instead, as a region, western North Carolina ıck together. And together, we are learning that there is strength in numbers.

ıe General Assembly has been steadfast in its investments to create new jobs and rebuild our ıte's economy. Through investing in AdvantageWest, this has helped leverage private 'estments from a growing number of private sector partners, who even in a down economy ve invested vigorously in the communities in which they do business.

embers of our U.S. Congressional delegation have helped bring needed federal dollars to t gion for critical economic development initiatives. Private foundations and federal agencie have partnered with AdvantageWest during the past year to fund many of the priorities and iatives listed in this report. Local governments have seen the value of partnerships, and have lized matching grants from AdvantageWest to create jobs in their communities, and used lvantageWest as a conduit to find and secure additional funding.

ır board and professional staff, the 23 counties in our service area and local governments hin those counties, our private sector partners, our representatives in Congress and the neral Assembly, our institutions of higher learning — together we are finding that there is ength in numbers. We're putting the old adage to work in the new economy, because we're onger working together than we are apart.

e 2003 AdvantageWest annual report documents our strength in numbers, representing od news for our economy now and the initiatives and programs we have put in place to pare for the future. If you're already involved with our work at AdvantageWest, I want to nk you for your leadership on behalf of western North Carolina. If you want to learn more out how you can be involved, please contact us at: 828-687-7234.

cerely,

rdon Myers

rdon Myers
airman of the Board

Federal Agencies, private foundations and educational institutions also provide funding and support for many AdvantageWest initiatives. These include:

Golden LEAF Foundation
Appalachian Regional Commission

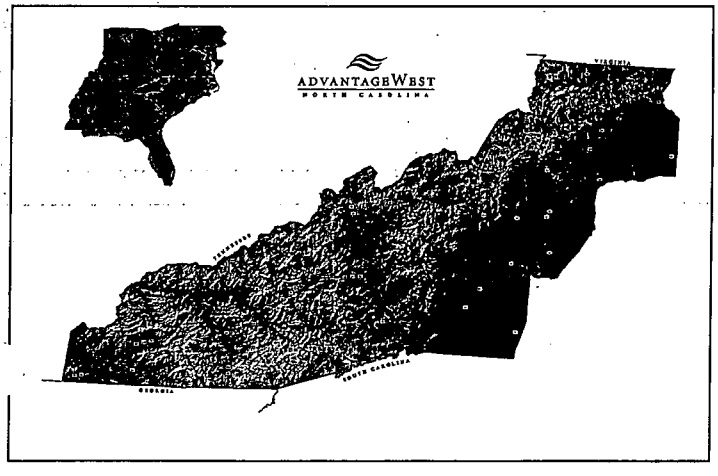
Mission Statement

The Western North Carolina Regional Economic Development Commission shall promote and advocate the creation of improved economic opportunity in our region, while encouraging stewardship of the culture, heritage and natural resources of western North Carolina.



Regional strengths. Regional advantages.

AdvantageWest is a marketing-focused public/private partnership providing a broad range of economic development services to the twenty-three westernmost counties of North Carolina.

Business Leaders

19

who serve on our board!

Strength in Numbers

Created by an act of the N.C. General Assembly in 1993, the Western North Carolina Regional Economic Development Commission incorporated as a 501(C)(3) non-profit in 1994. Realizing that "Western North Carolina Regional Economic Development Commission" is a mouthful, the commission adopted a marketing brand — AdvantageWest North Carolina — to reflect its mission of promoting the advantages of the region to business leaders, decision makers, film producers, leisure travelers, the general public and other audiences.

Today, AdvantageWest's program of work is guided by a board of 19 business leaders appointed by the Governor, Lieutenant Governor and General Assembly of North Carolina. With funding from the General Assembly and other partners, AdvantageWest provides diverse regional services and grants programs to help western North Carolina's economy grow and prosper. In addition to the General Assembly, which provides funding for AdvantageWest and six other economic development regions covering the entire state, our funding comes from the following diversified sources:

- Private industry such as Progress Energy, Duke Power and Wachovia
- Federal agencies such as the Appalachian Regional Commission
- Grants from private foundations such as the Z. Smith Reynolds Foundation, the Golden LEAF Foundation and The Community Foundation of Western North Carolina.

Ongoing Work: Getting Stronger Every Day

Blue Ridge Heritage Designation

AdvantageWest is part of a coalition of federal, state, local and private sector entities working to protect and promote the national treasures of North Carolina's mountains, while maximizing the economic value of our assets for the communities and citizens of the region. AdvantageWest helped create a state commission to study the potential of creating a National Heritage Area in western North Carolina, and in 2001 the N.C. General Assembly passed legislation supporting the cause. In March, 2002, western North Carolina's own U.S. Rep. Charles Taylor introduced federal legislation in conjunction with WNC colleagues U.S. Rep. Cass Ballenger and U.S. Rep. Richard Burr, and in September, 2002, similar legislation was introduced in the Senate by Sen. John Edwards.

Higher Education VISION Planning Summit

As directed by the General Assembly based on legislation originally introduced by WNC Senator Walter Dalton, AdvantageWest helped facilitate a long-term VISION planning process, bridging the critical gaps between higher education and economic development planning. Presidents of western North Carolina's community colleges joined Chancellors from Western Carolina University, Appalachian State University, The University of North Carolina-Asheville and leadership from the area private colleges and universities for an August planning summit. The initiative, co-chaired by Chancellor Bardo of Western Carolina University, President Bill Lewis of Isothermal Community College and AdvantageWest Chairman Gordon Myers, will produce a regional VISION plan that will make policy recommendations on curriculum improvements and updates. Ultimately, the plan will help position WNC's workforce as a strategic asset for creating new economy jobs for western North Carolina.

MountainSouth USA Symposium

In August, 2003, MountainSouth USA held a symposium on international tourism for all the organization's partners and area tourism leaders at The Grove Park Inn Resort & Spa. For the first time in western North Carolina, leading international tourism marketing strategists shared the stage, covering a wide range of topics including international tourism research, the role of airlines and other strategic partners, co-op advertising and marketing, the role of wholesalers and receptive service providers, and more.

Speakers included George Thomas, from the U.S. Department of Commerce export division, Susan Phillips, of the Asheville Regional Airport, Steve McClanahan of Unique Tours & Travel, Chris Mackey of the N.C. Division of Tourism, and other state and national experts on international tourism promotion. More than 70 people attended the meeting, and despite a shrinking market for the global traveler in many U.S. destinations, the MountainSouth USA partnership is helping to keep the Southern Highlands on the radar screen of international tourists with measurable success.

Economic Developers Advisory Council (EDAC) Industrial Marketing Retreat

In February, 2003, AdvantageWest's EDAC group, comprised of local and corporate economic developers from across the AdvantageWest region, convened for a marketing retreat facilitated by AdvantageWest board member Craig Madison, President & CEO of The Grove Park Inn Resort & Spa and founder of the Asheville-based marketing firm, The Alpha Group. The group, working with local representatives of the North Carolina Department of Commerce and Western Carolina University's Center for Regional Development, pieced together a comprehensive regional marketing strategy that AdvantageWest is implementing on their behalf. The plan covers targeted industry clusters and geographic markets, as well as specific action items designed to ensure measurable success. The EDAC members meet regularly at AdvantageWest and play a vital role in carrying out the plan.

Bolstering the Bottom Line: Investment and Inspiration

The State of North Carolina is the largest financial supporter of AdvantageWest. None of the accomplishments, initiatives or services outlined in this report would be possible without the leadership and financial support of the General Assembly. The state's investment in AdvantageWest continues to be leveraged by a growing number of additional sources.

Ongoing support from our private investors is a key component of fulfilling our mission. Our investors provide critical ongoing financial support, and stand ready to further assist individuals, groups or corporations interested in doing business in western North Carolina.

Our largest private-sector supporters, Sustaining Partners, typically provide annual support ranging from $10,000 - $25,000 annually. These partners include:

Progress Energy
Wachovia
Duke Energy
BellSouth
Verizon
RBC Centura
First Citizens
PSNC Energy
Macon Savings Bank
The Eastern Band of the Cherokee Indian
Carolina First
(formerly known as MountainBank)

Additional corporate partners participate in a variety of ways, from financial support to in-kind donations of goods or services. These include:

Western North Carolina Film Commission

Dollars spent

$37 million

on regional film production

Strength in Numbers

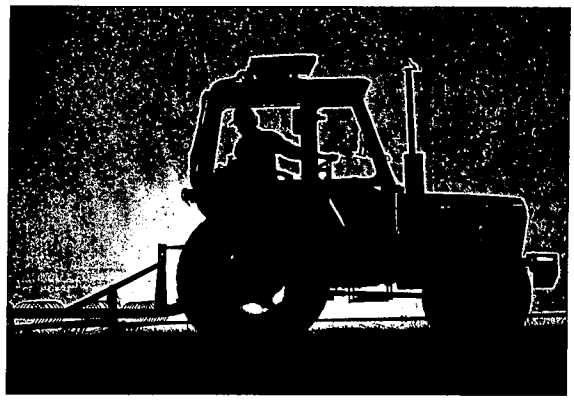
Western North Carolina's beauty provides an ideal backdrop for blockbuster films, still photography and television commercial projects alike. Since 1995, western North Carolina film projects have generated more than 37 million in direct spending in the region, ranging from local crew wages to spending on hotels, catering and even services like dry cleaning. The Western North Carolina Film Commission, an initiative of AdvantageWest recruits these projects, provides location scouting and logistics support and works to ensure they have a pleasant and productive stay in western North Carolina. Our Film Commission website, www.wncfilm.net, as well as a published film directory for the region, market our locations and talent around the world. And, AdvantageWest is partnering this year with the City of Asheville to help bring a world-class film festival to the region, providing even greater exposure for film making possibilities in our Blue Ridge Mountains.

MountainSouth USA

Today, most of the visitors to the mountains of North Carolina are from the Southeast, and in many cases adjacent states or even other parts of North Carolina.

Today, most of the visitors to the mountains of North Carolina are from the Southeast, and in many cases adjacent states or even other parts of North Carolina. These visitors make a tremendous economic impact on our region, but AdvantageWest is committed to finding new and innovative ways to grow western North Carolina's economy. One example is MountainSouth USA, a cooperative initiative of AdvantageWest and other partners from both the public and private sectors. MountainSouth USA markets the region to travelers in select overseas markets — currently focusing primarily on the United Kingdom and Germany. These markets are promising because the average vacation visit of a foreign traveler is significantly longer than most U.S.-based travelers, meaning a greater economic impact to the region per visitor. Since MountainSouth USA's inception, UK and German visitors to our region have risen steadily, even as international travel to the U.S. overall has slowed. The initiative's website, www.mountainsouthusa.com, provides detailed itineraries, regional information geared towards international travel agents and travelers, and more.

Blue Ridge Food Ventures



Family farms were once a mainstay of the mountain economy, but today are considered by many to be an endangered species. And while there are no easy answers to this growing trend across America, it's a known fact that growers can reap higher margins and enhanced profits by selling value-added foods, such as apple butter, rather than raw commodities, such as apples, on the wholesale market.

BLUE RIDGE
FOOD VENTURES

With funding support from Progress Energy, The Z. Smith Reynolds Foundation, the Golden LEAF Foundation, The Asheville Merchants Fund of The Community Foundation of Western North Carolina and other sponsors, AdvantageWest is partnering with the North Carolina Department of Agriculture to build a value-added food processing facility in western North Carolina. Current plans call for an 11,000 sq. ft. commercial kitchen, to be located at the A-B Tech Enka Campus, that area growers can use to create value-added food products.

Major Events in 2003

Getting up-to-date, accurate and insightful information on the local economy into the hands of business leaders and decision makers is a critical step in growing our economy.

AdvantageWest is committed to providing valuable, localized data for a variety of purposes, from convincing a global business to expand into our region, to helping an entrepreneur gauge market potential for a new venture.

In early 2003, a team of Appalachian State University economists and geographers set out to devise a new "index" to measure economic conditions across western North Carolina. With leadership from Dr. Paul Combs of ASU's Appalachian Regional Development Institute and Dr. Ken Peacock, Dean of the Walker College of Business, AdvantageWest agreed to help sponsor and launch the index, which is today published online monthly and featured in new publications across the region. The Index was launched during an April luncheon attended by financial supporters of AdvantageWest and The Walker College of Business, as well as area media.

The Index is compiled by Dr. Todd Cherry, Associate Professor of Economics, Dr. John Dawson, Associate Professor of Economics and Dr. Richard Crepeau, Associate Professor of Geography. The region corresponds closely to the AdvantageWest regional economic development region, but also includes the Hickory-Morganton-Lenoir Metropolitan areas. Wondering which western North Carolina counties are outpacing the state average in job creation? Curious how our region's employment is tracking compared to the rest of the state? Check out the Index each month in the WNC Business section of the *Asheville Citizen-Times* or online at: www.business.appstate.edu/wncindex.asp.

Building Entrepreneurial Communities/Carolina Connect

Co-hosted by AdvantageWest and the Appalachian Regional Commission, this event featured more than 360 participants from across the nation. Economic developers, business incubator operators, entrepreneurs and venture capitalists all came together for a two-day summit in September at The Grove Park Inn Resort & Spa. On the final day of the conference, N.C. State Treasurer Richard Moore kicked the meeting off, and more than $1 billion of venture capital was represented in the audience as local entrepreneurs presented their business plans. At least one business has since landed new investors, which could translate into new jobs for western North Carolina down the road.

This legislation is making its way through Congress, and could soon bring a National Heritage Area federal designation to the mountains of North Carolina. AdvantageWest is working with a long list of strategic partners in the effort, including Handmade in America, privately operated tourist attractions and two national parks, all of whom are working hard to ensure the designation is a success.

Tourism Marketing and Development

Look around the world and it's hard to find a place with a better reputation for great outdoors, authentic culture and heritage, and an all-around good time than the North Carolina mountains.

But that's not by accident; our region is home to skilled and dedicated tourism industry practitioners who work hard to put us on the map as a heralded destination.

AdvantageWest brings these professionals together for regular meetings as our Tourism Advisory Council. The council is comprised of our Corporate Partners from the tourism industry, representatives from the region's three sub-regional tourism host organizations, and major public attractions, including the Great Smoky Mountains National Park and the Blue Ridge Parkway. The council plays an important policy role, but also focuses on regional marketing efforts such as cooperative advertising.

Industrial Marketing, Recruitment and Retention

Central to the AdvantageWest mission is promoting, or marketing, North Carolina's Blue Ridge Region to the rest of the world.

With the help of strategic partners and under the direction of the region's local economic developers, AdvantageWest develops an industrial marketing plan that encompasses print advertising, direct mail, targeted call missions, select trade show participation and online marketing.

The focus of the plan is to generate qualified "leads," or prospects that have an interest in starting, expanding or relocating a business to or within our region. Based on our comprehensive inventory of available buildings and sites, compiled in conjunction with the NC Department of Commerce, we market a broad range of individual business locations based on the clients' stated needs and expectations. Once a lead is qualified and has expressed interest in a specific set of potential business locations, local economic developers and the NC Department of Commerce can provide targeted incentives to help close the deal. AdvantageWest stays involved through the recruiting process by offering our own grant funding, as well as providing professional grant writing services in cases where additional funding is needed. At the end of the process, AdvantageWest stands with local and state leaders to welcome new industry and new jobs to communities across western North Carolina.

Western North Carolina is home to North Carolina's Blue Ridge Region, one of the most captivatingly beautiful, culturally rich and ecologically diverse places on earth.

Our 23-county region comprises 9,629 sq. miles, larger than eight states and roughly the size of Maryland. With a population of approximately 1 million, we have room to grow and yet still enjoy natural landmarks, such as the Great Smoky Mountains National Park, the U.S. Park Service's most visited attraction. And, we're anything but isolated; our region is served by Interstates 40 and 26, as well as the scenic Blue Ridge Parkway. Our central eastern U.S. location puts us three hours or less from Atlanta, Charlotte, Raleigh, Greenville-Spartanburg, Knoxville and Johnson City, and less than a day's drive from half of the U.S. population.

Our economy and workforce

Manufacturing firms:

1,200

in western North Carolina.

Strength in Numbers

There are many things that make North Carolina's Blue Ridge Region special: scenery, climate, heritage, music, crafts and more. But nothing defines a region more than its people. It's the collective strength of our region's people, their vision and their commitment, that make western North Carolina's economy and workforce truly special.

Our region is home to 1,200 manufacturing firms, and manufacturing-related jobs comprise more than 30 percent of the workforce. AdvantageWest values all of these incumbent companies and has been directly involved in helping to retain 3,000 manufaturing jobs. As traditional manufacturing declines across our state and nation, western North Carolina's economy continues to diversify. Today, our region is home to more than 300 IT-related businesses, and serves as a health care, retirement and tourism hub. More than 25% of our region's workforce is engaged in the services sector, and 25,000 workers have tourism-related jobs, generating $1.6 billion in annual revenues.

Our region is home to a significant film industry; more than 45 major motion pictures have been made in our Blue Ridge Mountains, generating a more than $37 million economic impact since 1995.

As homegrown, entrepreneurial businesses play an increasingly important role in our national economy, western North Carolina is ahead of the curve. 17.5% of the workforce is engaged in entrepreneurial businesses, higher than state and national averages. From 1997-2002, our region has seen more than 20,000 new jobs created and more than 1.8 billion in new manufacturing investments.

New Programs and Initiatives: Creating Opportunities through Innovation

Nurturing and growing our local entrepreneurial economy becomes an increasing priority for local leaders aiming to develop a sustainable economy.

Blue Ridge Entrepreneurial Council & Blue Ridge Angel Investors Network

More than

72%

of North Carolina's workforce is employed by small businesses

Strength in Numbers

A recent study conducted by the North Carolina Rural Center concluded that more than 72% of North Carolina's workforce is employed by small businesses. And, as we've seen local operations of global companies leave our region for lower operating costs in Asia and elsewhere, nurturing and growing our local entrepreneurial economy becomes an increasing priority for local leaders aiming to develop a sustainable economy.

BRAIN
Blue Ridge Angel Investors Network

BREC
Blue Ridge Entrepreneurial Council

AdvantageWest, with funding support from the Appalachian Regional Commission and private sector partners such as Womble, Carlyle, Sandridge & Rice, Office Environments and McGuire, Wood & Bissette, operate the Blue Ridge Entrepreneurial Council to help local entrepreneurs succeed. Last year, the Council held monthly meetings with speakers such as Red Hat Software CEO Matthew Szulik and covered topics ranging from funding to landing local clients. Quarterly investment meetings, in conjunction with the Blue Ridge Angel Investors Network, provide qualified entrepreneurs with an opportunity to present business plans and seek capital from qualified investors. So far, one entrepreneurial business has received significant investments following a presentation to the group, and a second business received significant outside investment after getting involved with the entrepreneurial network. These businesses, and the leadership behind them, may one day provide a solid backbone for the economy of the Blue Ridge Mountains. Visit the BREC website for more details at: www.ncmtns.biz.

RE: 2003 North Carolina Million Acre Initiative Annual Report

Pursuant to G.S. 113A-241, I am transmitting a report on the million acre initiative. This report covers the preceding year's progress in land conservation through acquisition or perpetual conservation easements in our effort to add one million acres of farmland, open space and conservation lands in the State through permanent protection by December 31, 2009.

The report was prepared by DENR's Office of Conservation and Community Affairs. If you have any questions or would like additional information, please contact Richard Rogers at (919) 715-4152.

1601 Mail Service Center, Raleigh, North Carolina 27699-1601
Phone: 919-733-4984 \ FAX: 919-715-3060 \ Internet: www.enr.state.nc.us/ENR/

One NorthCarolina Naturally

An Equal Opportunity / Affirmative Action Employer - 50 % Recycled \ 10 % Post Consumer Paper

2003 Annual Report
NC Million Acre Initiative

Presented to the Governor and the Environmental Review Commission
of the North Carolina General Assembly

October 1, 2003

By the North Carolina Department of Environment and Natural Resources
Office of Conservation and Community Affairs

The Latest Numbers

At the end of the fourth full year of the North Carolina Million Acre Initiative (January 1, 1999 - December 31, 2002), private and public land protection partners across the state have permanently protected an additional **225,892** "Million Acre" acres. These partners reported adding **47,610** of those acres during the 2002 calendar year. This past year's activities represent a decrease in the rate of land protection in North Carolina from the previous year.

The table at the end of this report describes in detail the number of acres protected by sector (state government, local government, etc), by program, and by time period. Footnotes at the bottom of the page note special circumstances in some of the calculations. The end result is a conservative presentation of the totals. It is likely that the numbers presented here could be adjusted upward between 10,000 to 30,000 acres. To avoid confusion in the future, only official reports of new acquisitions (from surveys, interviews, and questionnaires) make it into the final total. Estimations for non-respondents are not included.

It should be noted that, while our rate of land protection is encouraging, we have not yet reached an annual rate that will allow us to meet the goal of permanently protecting an additional million acres by December 31, 2009 (G.S. 113A-240 and 241). The primary barrier is the availability of public and private funding for new protection projects. If we intend to meet the Million Acre Goal by the end of 2009, more money for land protection must be found.

The Program

In addition to increasing the rate at which we are protecting land in North Carolina, the Million Acre Initiative continues to work towards making information about land protection tools and techniques more broadly available, and to encourage conservation planning. Because there are so many shared goals, the Million Acre Initiative has joined the One North Carolina Naturally effort, and much of the latter part of 2002 was spent facilitating the One North Carolina

Naturally regional meetings. The Million Acre Initiative, in conjunction with One North Carolina Naturally and other partners, continues to slowly, but steadily increase awareness among North Carolinians about the desperate condition of our land resources. In addition, hundreds of surveys, filled out across the State during the series of regional meetings in the Fall of 2002, make it clear that more technical assistance to local governments, non-profits, and community groups is still needed. This includes education and awareness building for local elected officials and the general population. As tens of thousands of acres a year are permanently altered from their existing natural condition for new development, increased awareness about the importance of setting aside our critical and unique lands is essential, and providing information and conservation tools is part of our job.

Looking Ahead

Calendar year 2003 looks to be a good year for new land protection projects. Final reports regarding how many acres were protected from January 2003 – December 2003 will not be available until the Spring of 2004, but estimates suggest that approximately 80,000 acres will have been protected – due in large part to the land transfer from The Nature Conservancy moving forward with state funding. Also, conversations with a number of partners indicate that land purchases that have been under negotiation for years are closing in 2003.

The upcoming year offers us an opportunity to initiate new regional-scale projects for identifying networks of important resources, and an opportunity to finalize similar projects that are already underway. By teaming with the One North Carolina Naturally effort to foster the completion of regional open space plans for every part of the State, it will be possible to see how individual greenspaces and working landscapes across North Carolina fit together into a network of essential green infrastructure. Understanding the interrelationships among those areas will help us target our protection efforts so that we maximize the cost effectiveness and the natural protection value of our investment.

*Local governments include LWCF projects closed, PARTF projects funded, and counties that responded to information requests.

**25 local land trusts that regularly partner with the Conservation Trust for North Carolina

***The Nature Conservancy closed on 45,591.42 total acres in 2002. However, counting these acres for 2002 would be double-counting, as TNC is holding this acreage (e.g. Angola Bay, Hickorynut Gorge) until it can be transferred to state ownership. Transfer began in 2003 with easement at Bear Garden.

****NC Coastal Federation and Ducks Unlimited had not been counted prior to 2002. Previous numbers have been added to correct the table.

The Honorable Marc Basnight
North Carolina Senate
Room 2007
Legislative Building
Raleigh, North Carolina 27601-2808

Dear Senator Basnight:

As chair of the Parks and Recreation Authority, I am pleased to submit the Parks and Recreation Trust Fund (PARTF) Progress Report for fiscal year 2003-2004.

Through PARTF, the state continues to address the tremendous needs in North Carolina's state parks system. This report shows allocations for land acquisitions, capital improvements, renovation projects, emergency repairs, trails and maintenance in state parks.

Thanks to PARTF, the Division of Coastal Management is able to give greater assistance to the 20 coastal communities in their endeavors to provide the public's access to the state's beaches and waterways.

The PARTF grants program for local governments for 2003-04 is underway. Eighty communities have submitted applications seeking over $14 million in PARTF assistance. The Authority is scheduled to select grant recipients in May and July.

If you have questions or comments about the report, please call me at (919)962-1558.

Sincerely,

Jonathan B. Howes

Parks and Recreation Trust Fund (PARTF)
Progress Report
March 1, 2004

This progress report for the Parks and Recreation Trust Fund (PARTF) shows activities of and allocations from the Trust Fund for July 1 to December 31, 2003. The report is being submitted as required by North Carolina General Statute §113-44.15(c).

Parks and Recreation Trust Fund
General Program Description

The North Carolina Parks and Recreation Trust Fund (PARTF) was established by the North Carolina General Assembly on July 16, 1994. The General Assembly gave an initial appropriation of $1 million to PARTF for projects in state parks and for a matching grants program for local governments. In 1996, 75% percent of the funds from the excise stamp tax on deed transfers were dedicated to the trust fund. The Parks and Recreation Authority, an eleven-member board, was also created to allocate funds from PARTF to the state parks system and to the grants programs for local governments.

Pursuant to G.S. 113-44.15, the Parks and Recreation Trust Fund is to be allocated as follows:

(1) Sixty-five percent (65%) for the State Parks System for capital projects, repairs and renovations of parks facilities, and land acquisition.

(2) Thirty percent (30%) to provide matching funds to local governmental units on a dollar-for-dollar basis for local park and recreation purposes.

(3) Five percent (5%) to the Division of Coastal Management for the Coastal and Estuarine Water Beach Access Program.

(4) No more than three percent (3%) for operating expenses associated with managing capital improvements projects, acquiring land, and administering the local grants program.

Progress Report - July 1, 2003 to December 31, 2003

Mr. Jonathan B. Howes serves as the chairperson of the North Carolina Parks and Recreation Authority, the governing board of the North Carolina Parks and Recreation Trust Fund (PARTF). North Carolina General Statue §143B-313.1 requires the Authority to meet at least quarterly. The Authority held meetings on July 17, 2003 and October 24, 2003. In 2004, the group is scheduled to meet on March 19-20, May 21-22, July 23-24 and October 22-23.

Table 1, on page 3, shows the distribution of PARTF revenues as of December 31, 2003 and a projection of anticipated funds for fiscal year 2003-2004.

Division of Parks and Recreation
Parks and Recreation Trust Fund (PARTF)
Progress Report
March 1, 2004

State Parks Capital Improvements

Through December 31, 2003, the Parks and Recreation Authority approved $12,475,000 for capital improvements in the state's park system. Contracts will be awarded only as funds become available. Table 2 is a list of the capital improvement projects approved by the Authority.

State Parks Land Acquisition

Through December 31, 2003, the Parks and Recreation Authority approved $5,270,000 for land acquisition projects at Haw River, Jockey's Ridge, Mayo River, Stone Mountain and William B. Umstead state parks and at Weymouth Woods State Natural Area. In 2003, the N.C. General Assembly established the Haw River and Mayo River state parks. Table 3 gives a description and the cost for each of these projects.

Coastal and Estuarine Water Beach Access Program

The Parks and Recreation Authority transferred $1,038,246, five percent of PARTF revenues, to the Division of Coastal Management. The Division of Coastal Management distributes these funds to grant recipients according to criteria approved by the Coastal Resources Commission. Grants are awarded for the Coastal and Estuarine Water Beach Access Program.

Local Government Grants Program

Thirty percent of PARTF revenues are to provide matching funds to local governments on a dollar-for-dollar basis for park and recreational purposes. Letters describing the funding schedule and application process were mailed to all eligible applicants in September 2003. A PARTF application workshop was conducted on October 1, 2003 at seven UNC video conference sites across the state. Completed applications were due by 5:00 p.m. on February 2, 2004. Eighty local governments have submitted applications requesting more than $14 million in assistance from PARTF. The Division's staffs are currently evaluating each completed application. The Parks and Recreation Authority is scheduled to meet on May 21, 2004 to select grant recipients from PARTF revenues deposited for the first three quarters of the fiscal year. The board will meet again on July 23, 2004 to select grant recipients using revenues from the fourth quarter of the fiscal year. The Authority will review project evaluations and other relevant data prepared by the applicant and by Division staff before selecting grant recipients.

Program Administrative Expenditures

As established in N.C.G.S. §113-44.5, up to 3% of PARTF money may be used by the Department of Environment and Natural Resources for operating expenses associated with managing capital improvements projects, acquiring land, and administering the grants program for local governments. The actual administrative costs will be shown in the PARTF Annual Report for fiscal year 2003-2004. During the past seven fiscal years, administrative costs have been held to approximately 2% of the available funds.

N.C. Parks and Recreation Trust Fund Revenues Received July 2003-December 2003 Projections January 2004-June 2004			
	July 2003 – December 2003	**January 2004 – June 2004**	**Annual Total**
	Revenue	**Projected**	**Projected**
Public Beach and Coastal Waterfront Access Program (5%)	$1,038,246	$750,000	$1,788,246
Matching Grants Program for Local Governments (30%)	$6,042,591	$4,365,000	$1,040,7591
State Parks Capital Improvements and Land Acquisition (65%)	$13,092,281	$9,457,500	$22,549,781
Administrative Expenses (Up to 3%)	$591,800	$427,500	$1,019,300
Total	$20,764,918	$15,000,000	$35,764,918

* The Department of Revenue changed the schedule for collecting and reporting PARTF revenues from a quarterly basis to monthly basis as of July 2003. PARTF will receive some additional revenue in FY2003-04 because of this change in the reporting schedule.

** The revenue for January 2004 through June 2004 (6 months) is projected at $2,500,000 per month.

1.0 Introduction

The North Carolina General Assembly established the North Carolina Parks and Recreation Trust Fund (PARTF) on July 16, 1994. The General Assembly gave an initial appropriation of $1 million to PARTF to fund improvements in state parks, to fund grants for local governments and to increase public access to the state's beaches. In 1995, the General Assembly dedicated funds from the excise stamp tax to the trust fund starting in FY 1996-97. The Parks and Recreation Authority, an eleven-member board, was also created to allocate funds from PARTF to projects in state parks and to grants for local governments.

The excise tax is the primary funding source for PARTF. The tax is levied on each "deed, instrument, or writing by which interest in real property is conveyed to another person." The tax is levied at the rate of one dollar on each $500 of the interest or property conveyed. Each county remits one-half of the proceeds, less the county's allowance for administrative expenses, to the state. Effective July 1996, the General Assembly (G.S. 105-228.30) stipulated that part of the state's share would be allocated to PARTF. Of the funds remitted, the Department of Revenue credits 75% to the Parks and Recreation Trust Fund and 25% to the Natural Heritage Trust Fund.

Pursuant to G.S. 113-44.15, the money from the Parks and Recreation Trust Fund are to be allocated as follows:

(1) Sixty-five percent (65%) for the State Parks System for capital projects, repairs and renovations of facilities and to land acquire land.

(2) Thirty percent (30%) to provide grants to local governments on a dollar-for-dollar basis to create or improve parks and recreational projects.

(3) Five percent (5%) for the Coastal and Estuarine Water Beach Access Program.

(4) No more than three percent (3%) may be used by the Department of Environment and Natural Resources (DENR) for the operating expenses associated with managing capital improvements projects, acquiring land, and administering the grants program for local governments.

2.0 North Carolina Parks and Recreation Authority

The North Carolina Parks and Recreation Authority, an 11-member board that oversees the Parks and Recreation Trust Fund, was created by the General Assembly with the Authority's powers and duties becoming effective July 1, 1996. The Governor appoints three members, including the chairperson. The General Assembly appoints four members upon the recommendation of the President Pro Tempore of the Senate. The General Assembly appoints four members upon the recommendation of the Speaker of the House.

The Authority is charged with six powers and duties: to receive public and private donations and funds for deposit into the trust fund; to allocate funds for land acquisition; to allocate funds for capital projects; to solicit financial and material support; to develop effective support for parks and recreation; and to advise the Secretary of DENR on any matter he may refer to the body.

Members are appointed for three-year terms and may serve no more than two consecutive three-year terms. After serving two consecutive three-year terms, a member is not eligible for appointment to the Authority for at least one year after the expiration of the member's last term. The Parks and Recreation Authority held four meetings during fiscal year 2002-2003.

The 2002-2003 Parks and Recreation Authority members were:

Jonathan Howes
Chapel Hill

Roy Alexander
Charlotte

Wendell Begley
Black Mountain

Harriet L. Farrior
Wallace

Eddie Holbrook
Shelby

Walt Israel
Belmont

Ron Kincaid
Mount Gilead

Russell Robinson III
Greensboro

Dr. Kenneth M. Sadler
Lewisville

Todd Tilley
Hertford

One seat is vacant. Ms. Leslie Anderson of Asheville resigned in December 2002.

3.0 Parks and Recreation Trust Fund Summary

Table 3-1 shows the revenues received into the Parks and Recreation Trust Fund and the allocation of revenues by program for fiscal year 2002-2003.

Table 3-1
Parks and Recreation Trust Fund (PARTF)

Contract with NCSU Recreation Resources Service	$151,163
Division of Parks & Recreation staff and Authority members	$332,731
2002-2003 PARTF Revenues	**$28,484,354**

4.0 Grants Program for Local Governments

4.1 Program Description

The Parks and Recreation Trust Fund (PARTF) program provides dollar-for-dollar grants to local governments. All counties, incorporated municipalities and public authorities (as defined in N.C.G.S. 159-7) are eligible for funding. Two or more local governments may apply jointly. Recipients can acquire land to use for public recreation or to protect the natural or scenic resources of the property. Recipients can also use a grant to build or renovate recreational and support facilities. All facilities must serve the general public.

In September, the Division of Parks and Recreation (DPR) mails a description of the PARTF program and a schedule to local governmental officials and parks and recreation directors. A local government can request a maximum grant amount of $250,000 in PARTF assistance with its grant application. The approved value of land that is donated to a local governmental unit or public authority may be applied to the 50% matching requirement.

The DPR provides assistance to local governments in several ways. In October, the PARTF staff conducts a workshop where local governments can learn about the program and how to complete an application. The workshop is presented simultaneously at University of North Carolina video conference sites. The DPR has a contract with Recreation Resources Service (RRS) at North Carolina State University. The staff of RRS can provide technical assistance to local governments who request help in planning projects and preparing grant applications. RRS has six consultants in regional offices across the state.

The members of the Parks and Recreation Authority select which applicants will receive a grant. The factors considered by the Authority as it selects recipients include, but are not limited to, the criteria contained in the PARTF scoring system, the population of the applicant, the geographic distribution of projects across the state, the presence or absence of other funding sources and compliance with prior grant agreements.

Applications are due January 31. The Parks and Recreation Authority meets in May to select recipients from PARTF revenues received for the first three-quarters of the fiscal year. The Authority meets in early July to select grant recipients from PARTF revenues received during the fourth quarter of the fiscal year.

4.2 Description of Applications and Grants

Fifty-seven local governments submitted applications for consideration in fiscal year 2002-2003. The Parks and Recreation Authority reviewed all of the applications and awarded 49 grants for a total of $8,328,953. There is a balance of $63,545 from the PARTF administrative expenses that will be awarded to local governments in the near future. Table 4-1 on the following page is a list of the projects approved for fiscal year 2002-2003. The table is organized alphabetically by recipient.

4.3 Geographic Distribution of Grants

The members of the Parks and Recreation Authority consider the geographic distribution of funds across the state as one of the factors used in selecting grant recipients. After eight funding cycles, the Authority has awarded $48.4 million in PARTF grants to 317 projects in 96 counties across North Carolina.

Figure 4-1 (page 7) is a map showing the distribution of PARTF grants by county across North Carolina from 1995-2003.

Park	Acres	Description	Cost
Bushy Lake State Natural Area	1,000	Tracts along the sand rim of Bushy Lake Bay and tracts in Big White Bay from willing sellers.	$650,000
Crowders Mountain State Park	4	Inholding home site on the north end of the park currently for sale. Structure of no value; to be removed.	$50,000
Elk Knob State Park	1,104 100	*Funding for the initial acquisitions at the state natural area. The project includes property at Pottertown Gap for better access and control; includes a residence. Other funds from Natural Heritage Trust Fund. *Tracts from a willing seller on the south side of Elk Knob that has access from the secondary road.	$2,200,000 $350,000
Eno River State Park	47	Poplar Ridge natural area project. Additional funds from Ecosystem Enhancement Program and the Natural Heritage Trust Fund.	$600,000
Goose Creek State Park	2	Property for sale on northeast side of the park with a house that may be used as a residence.	$70,000
Gorges State Park	80	Property along the Toxaway River for water quality and scenic resource protection.	$375,000
Jones Lake State Park	35	Property to protect the park's resources and to bring the park boundary to a secondary road.	$75,000
Lake James State Park	1	Inholding with access through the park which is for sale. Structure is a small cabin.	$50,000
Raven Rock State Park	90	One tract on the north side and two tracts on the south side of park from willing sellers.	$275,000
South Mountains State Park	127	Tracts on the east side of the park. Will provide water quality protection. One tract contains a house that may be used as a residence.	$537,816
Stone Mountain State Park	2	Inholding lot that overlooks tent and trailer campground which is currently for sale.	$155,000
Total	2,592		$5,387,816

5.0 State Parks Program

5.1 Land Acquisition (continued)

In early October 2002, Weyerhaeuser Corporation approached the Division of Parks and Recreation with an offer to sell property adjacent to Raven Rock State Park. The cost of the project was approximately $2 million. On December 10th, the Executive Committee reallocated $1,173,954 from existing land acquisition projects to the Raven Rock State Park project. The Weyerhaeuser transaction was closed December 20th and added 714 acres to the park.

Lists of land acquisitions from previous fiscal years have been revised to reflect changes to projects made by the Executive Committee in December 2002 in order to accommodate the purchase from Weyerhaeuser. The lists are in Attachment A.

5.2 Construction and Renovation

During fiscal year 2002-2003, the Parks and Recreation Authority approved state park construction and renovation projects totaling $12,571,570 (Table 5-2).

Table 5-2
N.C. Parks and Recreation Trust Fund
Capital Improvement Projects Approved in Fiscal Year 2002-2003

Park	Project	Amount
Dismal Swamp State Park	Construct a visitor's center.	$2,700,000
Merchants Millpond State Park	To study the impact of the increasing sedimentation in the millpond and ways to delay the process.	$50,000
New River State Park	Initial construction of a visitor's center, maintenance facilities, residence for ranger, picnic shelter for groups of visitors.	$3,500,000
Pilot Mountain State Park	The funds will complete the renovation of most of the major trails in the park.	$420,200
South Mountains State Park	Construct a visitor's center.	$2,400,000
Stone Mountain State Park	Additional funds to construct a campground including adding sites, a contact station, access roads, extend utilities and bury a power line.	$1,000,000
William B. Umstead State Park	For the Reedy Creek side of the park, renovate the existing picnic shelter and build a new shelter to include exhibits, tables, benches, and public telephone.	$334,800
Systemwide General Maintenance Funds	Funds for items such as such as replacing and repairing roofs, water lines, pumps, wells.	$1,181,570
Systemwide Trail Maintenance Funds	Funds for the routine maintenance of existing trails such as resurfacing and replacing erosion control devices.	$400,000
Systemwide Exhibits Repair Funds	Funds for the general maintenance of exhibits in each park. Funds are used to repair or replace exhibits that are broken or worn from use by visitors to the parks.	$50,000
	Construction Reserve	$535,000
	Total	$12,571,570

6.0 Public Beach and Coastal Waterfront Access Program

The Public Beach and Coastal Waterfront Access Program was established by the General Assembly in 1981. Beginning in fiscal year 1996-97, the program began receiving 5% of the revenues from the Parks and Recreation Trust Fund. The public beach and coastal waterfront access program's enabling legislation (GS 113A-134.1) states that public purposes would be served by providing increased access to ocean beaches, public parking facilities, or other related public uses.

The program provides matching grants to local governments for low-cost capital projects designed to improve pedestrian access to the state's beaches and waterways. The program, administered by the Division of Coastal Management (DCM), offers matching grant funds to local governments throughout the 20 coastal counties. Since 1981, over 288 public access sites have been constructed at a cost of $19.6 million ($11.6 million state/federal and $8 million local funds). Local governments are responsible for construction, operation and long-term maintenance of the facilities. While most of the early projects were located along the oceanfront, more and more projects are now designed to improve access to estuarine shorelines, coastal rivers, and urban waterfronts.

The Division of Coastal Management sends requests for proposals to local governments in the 20 coastal counties in March of each year. The division uses criteria developed by the Coastal Resources Commission to select grant recipients. Local governments are required to match at least 25% of the project costs. Recipients are selected in July and contracts are awarded in August or October. Grant recipients have one year to complete their projects.

Communities can apply for five different types of water access sites: local, neighborhood, regional, multi-regional and urban waterfront redevelopment projects.

- Local access sites include public access points which offer minimal or no facilities. They are primarily used by pedestrians who reside within a few hundred yards of the site. Generally, these accessways are a minimum of ten feet in width and provide only a dune crossover or pier, if needed, litter receptacles and public access signs. Vehicle parking is generally not available at these access sites. However, bicycle racks may be provided.

6.0 Public Beach and Coastal Waterfront Program

- Neighborhood access sites are public access areas offering parking, usually for five to twenty-five vehicles, a dune crossover or pier, litter receptacles and public access signs. Such accessways are typically 40 to 60 feet in width and are primarily used by individuals within the immediate subdivision or vicinity of the site. Restroom facilities may be installed.

- Regional access sites serve the public from throughout an island or community including day visitors. These sites normally provide parking for 25 to 80 vehicles, restrooms, a dune crossover, pier, foot showers, litter receptacles and public access signs. Where possible one-half acre of open space in addition to all required setback areas should be provided for buffering, day use, nature study or similar purposes.

- Multi-regional access sites are generally larger than regional accessways but smaller than state parks. Multi-regional accessways provide parking for a minimum of 80 and a maximum of 200 cars, restrooms with indoor showers and changing rooms, and concession.

- Urban waterfront redevelopment projects improve public access to utilized urban waterfronts. Such projects include the establishment or rehabilitation of boardwalk areas, shoreline stabilization measures such as the installation or rehabilitation of bulkheads, and the placement or removal of pilings for the purpose of public safety and/or increased access and use of the urban waterfront.

The Division of Coastal Management received $1,569,915 in PARTF revenues from the last quarter of 2001-02, the first three quarters of 2002-03 and reserve ($175,054) from canceled projects. The Division distributed $1,496,000 to local governments (Table 6-1). The remaining $73,915 will be reserved for grant awards in 2003-2004.

The Division of Coastal Management (DCM) received 52 pre-applications from 30 local governments requesting $4,256,034. DCM received 23 final applications from 19 local governments requesting $1,496,000. These 19 local governments received public beach and coastal water front access grants funded by PARTF in 2002-2003 (Table 6-2).

6.0 Public Beach and Coastal Waterfront Access Program

Table 6-1 Division of Coastal Management Distribution of PARTF Revenues For Fiscal Year 2002-2003	
Item	Amount
PARTF revenues received in first three quarters of fiscal year 2002-2003	$1,119,726
Reserve from fiscal year 2001-2002 (4th quarter revenues) and Reserve from canceled projects	$275,135 $175,054 $450,189
Total available for fiscal year 2002-2003 grants	$1,569,915
Grants awarded for fiscal year 2002-2003	$1,496,000
Reserve for grants to be awarded in fiscal year 2003-04*	$73,915

*DCM's annual funding cycle is based on PARTF revenues for the first three quarters of fiscal year 2002-2003 and any reserve from the previous fiscal year including the fourth quarter revenues. The balance of $73,915 will be added to upcoming PARTF revenues and used to fund projects in the fiscal year 2003-04 grants cycle.

Table 6-2 Public Beach and Coastal Waterfront Access Program PARTF Grants Awarded in Fiscal Year 2002-2003					
Local Government	**Project Description**	**Grant**	**Cash Match**	**In-kind Match**	**Total Cost**
Ahoskie	Ahoskie Creek Access. Construct parking, restrooms and benches along Ahoskie Creek.	$45,000	$7,500	$7,500	$60,000
Bridgeton	Neuse River Park. Construct 120' boardwalk, fishing pier, benches and 12 parking spaces along Neuse River.	30,945	10,315	0	41,260
Caswell Beach	Oak Island Lighthouse Access. Acquisition of 5.36 acre oceanfront site, construct 5-10 parking spaces and handicapped boardwalk.	15,500	4,500	500	20,500
Emerald Isle	Louise Ave Phase IV. Addition of 95 parking spaces to existing ocean access and construction of stormwater retention area.	26,250	11,250	0	37,500
Hertford, Town of	Raccoon St Access. Construction of a 450' boardwalk, covered shelter, gravel drive, canoe launch and picnic tables along Raccoon Creek.	41,250	13,750	0	55,000
Holden Beach	Halstead St Fishing Pier. Construct handicap walkway, pier, gazebo and 5 parking spaces.	18,949	6,316	0	25,265
Holden Beach	Dune crossover Replacements Jordan St, 357 & 1017 Ocean Blvd.	15,412	5,138	0	20,550
Indian Beach	Ocean Club Neighborhood Access. Construct 700' dune crossover and parking for 10 vehicles.	67,500	22,500	0	90,000
Indian Beach	Indian Beach West Neighborhood Access. Acquisition of oceanfront lot and construction of 15-space parking lot.	168,750	56,250	0	225,000
Kure Beach	Improvements to access sites at Avenues E, K, L, N, and 1342 Ft. Fisher Blvd. ADA compliant crossovers and upgraded parking.	37,796	6,067	6,267	50,130

Attachment A

N.C. Parks and Recreation Trust Fund State Parks Land Acquisition Projects Approved in Fiscal Year 1997-98 Revised December 2002		
Park	**Acres/Cost**	**Description**
Cliffs of the Neuse State Park	73 $100,000	Property from a willing seller that will provide water quality protection and buffer park facilities.
Eno River State Park	30 $220,000	Land along Buckquarter Creek to protect the creek and the associated high quality natural communities. Land was identified in the natural area inventory of Orange County.
Eno River State Park	20 $141,966	Multiple tracts Durham and Orange counties to protect the river corridor, provide land for planned park facilities and to protect water quality.
Hanging Rock State Park	9 $220,000	Continuation of acquisition project at Moore's Wall for resource protection.
Jockey's Ridge State Park	1 $52,500	Tracts on Soundside Road from willing sellers and acquisition of outstanding partial interest in property along Roanoke Sound.
Lumber River State Park	1,500 $1,200,000	Tracts within the Princess Ann Swamp/Big Sandy Ridge natural area complex and across from the Pea Ridge Access Area. Partial funding from the NHT Fund and the CWMT Fund.
Pilot Mountain State Park	200 $400,000	Property at the Yadkin River Section of the park. Property contains frontage along the Yadkin River and remnants of an old mill.
Mount Mitchell State Park	150 $750,000	Protection of views from Mount Mitchell south and west of the park.
Raven Rock State Park	21 $52,500	Funds for Weyerhaeuser tracts on the north and side of the river.
Stone Mountain State Park	125 $420,000	Parcel on the Blue Ridge escarpment for visual and water quality protection. Part of this property will be exchanged for Blue Ridge Parkway property to straighten the boundary.
William B. Umstead State Park	16 $425,000	Property near Richland Creek that has parkland on three sides. Inclusion in the park will improve management of the park and buffer horse trail.
Total	**2,145** **3,981,966**	

N.C. Parks and Recreation Trust Fund State Parks Land Acquisition Projects Approved in Fiscal Year 1998-99 Revised December 2002		
Park	**Acres/Cost**	**Description**
Crowders Mountain State Park	430 $1,286,000	Partial funding for the Kings Mountain range connector to provide recreational and wildlife corridor to Kings Mountain State Park in SC.
Gorges State Park	20 $200,000	Land to improve boundaries and/or provide staff housing.
Gorges State Park	up to $40,000	The initial acquisition is funded by an appropriation, a NHTrust Fund grant and a private donation. These are funds to pay property taxes.
Jockey's Ridge State Park	3 $122,000	An undeveloped tract on the north end of the park that contains good quality natural communities.
New River State Park	200 $500,000	Multiple tracts in the designated section of the New River to protect water quality and scenic resources.
Raven Rock State Park	181 $338,000	Tracts on north and south side of the park for water quality protection and additional land for trails.
South Mountains State Park	600 $850,000	Land in the Jacobs Fork watershed needed for trail connections and improved park management. These trail connections are needed to allow for loop trails from the new horse camp facility.
Stone Mountain State Park	300 $849,000	Parcel on the Blue Ridge escarpment for visual and water quality protection. Part of this property has state park on three sides.
Donation Expenses	$15,000	Donations have associated costs such as title opinions, attorney fees, surveys and filing fees.
Total	**2,134** **$4,688,718**	

N.C. Parks and Recreation Trust Fund State Parks Land Acquisition Projects Approved in Fiscal Year 1999-2000 Revised December 2002		
Park	**Acres/Cost**	**Description**
Cliffs of the Neuse State Park	200 $400,000	Property to protect water quality and/or provide additional buffer to existing park facilities.
Crowders Mountain State Park	150 $600,000	Partial funding for the Kings Mountain range connector to provide recreational and wildlife corridor to Kings Mountain State Park in SC.
Eno River State Park	75 $400,000	Land along the Eno River for water quality protection and additional land base for trails.
Gorges State Park	20 $200,000	Land to protect resources of the park and/or water quality.
Jockey's Ridge State Park	1 $140,000	A tract along Soundside Road from a willing seller which has a structure.
Kerr Lake State Recreation Area	8 $250,000	Land for improved control and access to multiple sites at Kerr Lake.
Lake Waccamaw State Park	3 $300,000	Tract at dam to provide public access and to improve management of the site.
Mount Jefferson State Natural Area	160 $654,563	Tracts on the lower slopes of Mount Jefferson for the protection of the natural resources.
New River State Park	15 $300,000	Multiple tracts in the designated section of the New River to protect water quality and scenic resources.
Pettigrew State Park	120 $200,000	Brumsey Woods area and lots of the eastern shore of Lake Phelps.
Raven Rock State Park	524 $1,110,000	Tracts on the north and south sides of the river for water quality protection and additional land for trails. Includes the Weyerhaeuser tracts.
Weymouth Woods State Natural Area	1 $175,000	Residence near maintenance area to provide additional security to the site.
Survey Expenses	$250,000	Surveys of existing park boundaries for management purposes.
Total	**1,277** **$4,879,563**	

N.C. Parks and Recreation Trust Fund State Parks Land Acquisition Projects Approved in Fiscal Year 2000-01 Revised December 2002		
Park	**Acres/Cost**	**Description**
Crowders Mountain State Park	600 $1,648,000	Partial funding for the Kings Mountain range connector to provide recreational and wildlife corridor to Kings Mountain State Park in SC.
Goose Creek State Park	91 $255,000	Water quality protection on tributaries to Mallard Creek and boundary management on the east side of the park.
Hammocks Beach State Park	20 $10,000	Lease of dredge State Parkoil island for maintenance dredging of Cow Channel. Cow Channel is the main access to Bear Island from the Intra-coastal waterway, and the route used by the park's ferries.
Hanging Rock State Park	180 $815,000	Resource protection at Cooks Wall, Wolf Rock, and Flat Shoals Mountain along the south side of the park. Boundary management on the north side of the park.
Lake Norman State Park	8 $110,000	Land to improve boundary management on the west side of the park.
Morrow Mountain State Park	50 $260,000	Protection of a portion of the ridgeline on the northwest side of the park. Property is currently on the market.
Raven Rock State Park	53 $133,454	Funds to acquire Weyerhaeuser tracts on the north and south side of the park to protect water quality and provide additional land for trails.
Stone Mountain State Park	98 $211,000	Protection of Big Sandy Creek which flows over Stone Mountain falls within the park. Tract is on the escarpment and the northeast side of the park.
William B. Umstead State Park	55 $1,000,000	Protection of the Reedy Creek entrance to the park. This is a $6 million project with other funds from the NC Department of TranState Parkortation, the Town of Cary and the sale of property surplus to the park along US 70.
Total	**78** **$465,435**	

N.C. Parks and Recreation Trust Fund
State Parks Land Acquisition Projects Approved in Fiscal Year 2001-02
Revised in December 2002

Park	Acres/Cost	Description
Dismal Swamp State Natural Area	15 $25,000	Funds to cover cost of acquiring access to the State Natural Area from the south for construction and management access to the site.
Eno River State Park	161 $500,000	River corridor protection upstream of the Cabelands section of the park. Additional funds will be requested from the Natural Heritage Trust and Clean Water Management Trust funds for this project.
Eno River State Park *	825 $1,207,808	The Eno Wilderness project. PARTF allocation will be used as the match for the LWCF request. Additional funds will be requested from the Natural Heritage Trust and Clean Water Management Trust funds for this project.
Lake Norman State Park	75 $450,000	Land to improve boundary management on the north side of the park and to protect water quality of Norwood Creek, the main stream, into the park lake. Additional funds may be requested from Clean Water Management Trust Fund for this project.
Lumber River State Park	80 $100,000	River corridor tracts across from the Pea Ridge Access of the park. Landowners want to sell to the state for the park.
Merchants Millpond State Park	200 $200,000	Entrance protection across from the picnic area and property on the north side of the park.
Raven Rock State Park	280 $700,000	Funds to acquire Weyerhaeuser tracts on the north and south side of the park to protect water quality and provide additional land for trails.
South Mountains State Park	460 $920,000	Additional funds for tracts in the Henry Fork and Jacob Fork watersheds. Additional funds will be requested from Clean Water Management Trust and Natural Heritage Trust Funds for these projects.

NATURAL HERITAGE TRUST FUND

AWARD REPORT

Calendar Year 2003

A Report to the Governor and General Assembly

William G. Ross, Jr, Secretary
Department of Environment
and Natural Resources

Dewey W.Wells, Chairman
Robert Gordon, Chairman
Board of Trustees
NC Natural Heritage Trust Fund

NORTH CAROLINA
NATURAL HERITAGE TRUST FUND
AWARD REPORT
Calendar Year 2003

Origins and Mission

The North Carolina Natural Heritage Trust Fund was established by the 1987 General Assembly (G.S. 113-77, effective July 1, 1987) as a supplemental funding source for state agencies to acquire lands and to pay for the inventory of natural areas by the North Carolina Natural Heritage Program. A twelve-member board of trustees administers the Trust Fund.

Funding Sources

Since 1987, and as of December 31, 2003, the Natural Heritage Trust Fund has received $115 million including an initial appropriation of $275,000. The Trust Fund acquired a continuing source of funding in 1989 when a part of the receipts from the sale of personalized license plates was designated as income. The General Assembly in 1991 increased the state's deed stamp tax to $2 per $1000 value and set aside 15% of the state's share of this additional money as income for the Trust Fund. The 1995 General Assembly increased the Trust Fund's portion of the deed stamp tax from 15% to 25% effective July, 1996. Moneys not expended remain in the interest-accumulating Natural Heritage Trust Fund account and do not revert to the General Fund.

Board of Trustees

The North Carolina Natural Heritage Trust Fund is delegated the authority to grant funds to eligible state agencies pursuant to applications which meet statutory criteria and board guidelines. The governing authority for the Trust Fund is a 12 member Board of Trustees. This number was increased from nine members during the 2001 legislative session. Four members are appointed by the Governor who also designates the chairman. Eight members are appointed by the General Assembly with four recommended by the President Pro-Tempore of the Senate and four recommended by the Speaker of the House. Appointments are made effective January 1 and are for staggered six year terms. Persons appointed are to be knowledgeable in the acquisition and management of natural areas. The 2003 trustees are as follows:

Governor Appointees	Senate Appointees	House Appointees
Charles E. Clement Watauga County	J. Robert Gordon, Chairman* Scotland County	Alan D. Briggs Wake County
Thomas D. "Bud" Hunter Henderson County	George Richards Wake County	William Joslin Wake County
R. Michael Leonard Forsyth County	Jim Sponenberg Caldwell County	Henry L. Kitchen Richmond County
Elizabeth D. Taft, PhD Pitt County	Dewey W. Wells, Chairman* Avery County	Thomas W. Reese Catawba County

*In the calendar year 2003, Dewey Wells was Chairman of the board from December 2003 till August 2003. Robert Gordon became Chairman in August 2003.

Calendar Year 2003 Projects and Agencies

Grants are awarded for the purposes of acquiring lands that represent the state's ecological diversity to ensure their preservation and conservation for recreational, scientific, educational, cultural, and aesthetic purposes; for additions to the system of parks, state trails, aesthetic forests, wild and scenic rivers, fish and wildlife management areas; to develop a balanced State program of historic properties; and for other beneficial use and enjoyment of the public. Funds are also allocated to the Natural Heritage Program for natural area inventories and conservation and protection planning of natural areas. State agencies authorized to apply for grant awards are the Department of Environment and Natural Resources, the Wildlife Resources Commission, the Department of Cultural Resources, and the Department of Agriculture and Consumer Services. Priority consideration is given to protection of land having outstanding natural or cultural heritage values. Land with outstanding natural heritage values is land that is identified by the N.C. Natural Heritage Program as having state or national significance. Land with outstanding cultural heritage values is land that is identified, inventoried or evaluated by the Department of Cultural Resources.

During calendar year 2003, the Natural Heritage Trust Fund awarded 25 grants totaling $13,422,487 which contributed to the protection of 26,837 acres.

Spring 2004
Natural Heritage Trust Fund Grant Award Summary

AGENCY	GRANT NAME	COUNTY	REQUEST	ACRES	DESCRIPTION
WRC	East Gum Swamp Tract	Beaufort	$204,600	261	Tract will be incorporated into the Goose Creek Game Land. Protects wetlands and watersheds that contribute to water quality in the lower Pamlico River Estuary.
WRC	Lone Mountain Tract	Rutherford and McDowell	$565,750	1,265	Adjacent to South Mountains Game Land. Will be managed as part of the Game Land Program and will help insure ecosystem integrity of this area.
WRC	Bolin Knob	Burke and McDowell	$356,000	468	Tract borders South Mountains Game Land and is part of the total management project being carried out in this area.
WRC	Angola Bay Phase III Tract	Pender	$500,000	1,307	Contributes toward linking Angola Bay Game Land to Holly Shelter Game Land, contains extensive pocosin and pond pine woodland and longleaf communities.
Agriculture	Hog Branch Ponds, An Addition to Boiling Spring Lakes Preserve	Brunswick	$1,100,000	516	Addition to the Boiling Spring Lakes Wetland Complex. Tract contains ten large and small lime sinks, which are a rare landform. Acquisition will allow for safe and effective fire management.
Agriculture	Melrose Mountain	Polk	$316,000	318	Protection of five large populations of the federally endangered White Irisette and other rare species.
Agriculture	Long Mountain, Barnes Creek/Poison Fork Preserve	Montgomery	$125,000	78	Addition to the Barnes Creek/Poison Fork Preserve which borders the Uwharrie National Forest. Acquisition will restore upland habitat for rare plant species and will preserve riparian buffer for rare acquatic species.
Cultural Resources	Bentonville Preservation Project	Johnston	$473,000	100	Protects historically significant land associated with the 1865 Battle of Bentonville.
Cultural Resour	Carl Sandburg Home National Historic Site Buffer (Glassy Mountain Tract)	Henderson	$400,000	22	Tract adjoins and forms much of the scenic backdrop to the Carl Sandburg National Historic Home Site. Tract also contains a globally rare granite dome plant community.
DENR-Natural Heritage	Inventory of Aquatic Significant Natural Areas	N/A	$138,000	N/A	Identification, inventory and documentation of Aquatic Significant Natural Heritage Areas.
DENR-Forest Resources	Land Acquisition at Mountain Island Educational State Forest	Lincoln	$531,000	103	Land adjacent to Mountain Island Educational State Forest. Expansion of environmental educational outreach
DENR Forest Resources	Balsam Gap Blue Ridge Parkway Buffer	Jackson and Haywood	$1,000,000	285	Protection of scenic water sources, watershed, and fish and wildlife habitat. Adjacent to 10 miles of the Blue Ridge Parkway.
DENR-Parks & Recreation	Gorges State Park Land Acquisition-Phase II (Collins Tract)	Transylvania	$295,000	80	Addition to Gorges State Park. Acquisition would aid in preserving two identified Significant Natural Heritage Areas and a rare temperate rainforest ecosystem.
DENR-Parks & Recreation	Pettigrew State Park - Scuppernong River Land Acquisition	Washington and Tyrell	$550,000	570	Addition to Pettigrew State Park. The tracts will help connect existing tracts already in conservation ownership. Tract contains Peatland Atlantic White Cedar and Riverine Swamp Forest natural communitites.
DENR-Coastal Management	Buxton Woods Coastal Reserve-Ann Jennette Tract II	Dare County	$51,050	3	Tract will be incorporated into Buxton Woods, the largest maritime forest in the state.
	Total Awards		**$6,605,400.00**	**5,376**	
	Amount requested		**$13,333,460.00**	**15,048**	

CONSERVATION EASEMENT PROGRAM
ANNUAL REPORT
2003

Pursuant to NC G.S. 113A-235(c), the Department of Environment and Natural Resources reports to the Environmental Review Commission each year on the implementation of Article 16, the Conservation Easement Program. This Article, 113A-230 through 113A-235, also includes enabling legislation for a program for conservation tax credit promotion/education, and enabling legislation for a conservation grant fund. The following reports on these programs.

Conservation Easement Program 113A-230. Having been established in 1997, this program is administered as part of the NC Conservation Tax Credit Program (NCCTC). The Conservation Easement (CE) program is intended to use promotion and education to increase the use of conservation easements as a tool to accomplish conservation goals, such as the Million Acre Initiative. A graph (Attachment A) of NCCTC Program Statistics shows the increasing use of conservation easements through this program, due primarily to the growing acceptance of CEs within the farming and forestry communities. Also an inventory (Attachment B) of the conservation easements held by the Department shows use of this conservation tool by programs such as State Parks, Wetlands Restoration, Conservation Reserve Enhancement, Coastal Reserves, Forest Legacy, and Clean Water.

To accomplish optimum use of conservation easements and their related economic advantages, the program needs to provide more than superficial information and guidance. While a more substantial and in-depth outreach program could greatly increase the use of conservation easements, it will also require more attention to the complexities of conservation easement drafting and stewardship. By combining the CE Program with the NCCTC Program, the Department has maintained a limited CE Program in the absence of staff or line item operating budget.

Conservation Tax Credit Program 113A-231. The State's Conservation Tax Credit was established in 1983 and this Department's role was passive, to respond to donor's applications for certification of their gifts of interests in real property for conservation purposes. In 1997 the Department received the authorization to begin a non-regulatory program of education/promotion to increase the use of conservation tax credits. Last year NCCTC/CE presentations were made at three workshops organized by other groups for landowners and land related professionals, and the NCCTC display and brochures were sent to three other workshops or conferences.

Graphs (Attachments C,D,E,F) of the NCCTC Program Statistics show the acreage and value of donations over the duration of the program. Cumulatively, more than 109,000 acres valued in excess of $305 million has been donated.

Over the duration of Conservation Tax Credit use, it has leveraged the donation of $87.7 million of excess value that was above the amount that could be used to create the maximum credit allowed (Attachments G, H, I, J).

Further, when used in conjunction with bargain sales, the conservation Tax Credit (Attachments K, L) can yield substantial savings for conservation trust funds, local governments, and nonprofit organizations purchasing land. For example, in 1998 & 1999 alone, the gift portion of bargain sales to the State that qualified for the Conservation Tax Credit allowed the acquisition of conservation lands by the state at a price $23 million below appraised market value. Over the duration of the program, all grantees have saved more than 48.1 million through bargain sales facilitated by the tax credit incentive.

The increasing benefits from the Conservation Tax Credit Program have been derived mostly from increases in the maximum tax credit allowed. A more substantial and in depth outreach program could greatly increase donations of real property for conservation purposes from the use of conservation tax credits. To date the Department has provided minimum support for this function while the Conservation Tax Credit Program has operated in a limited fashion in the absence of permanent, full time staff or line item operating budget.

Conservation Grant Fund 113A-232. Established in 1997, it was intended to stimulate the use of conservation easements, to improve the capacity of private nonprofit land trusts and agencies to successfully accomplish conservation projects, to better equip real estate related professionals to pursue opportunities for conservation, to increase private landowner participation in land and water conservation, and to provide an opportunity to leverage private or other public monies for the stewardship of conservation easements. To date the Department has not received an appropriation to actualize the Conservation Grant Fund.

Results from 2003 Legislative Session. HB 887, An Act To Expand The Income Tax Credit For Real Property Donations For Conservation Purposes And To Provide For More Detailed Reporting By The Department of Revenue Regarding The Credit, was introduced and carried over to the Short Session. It incorporates the following two recommendations from last year's report to the ERC, and its ratification will further enhance the incentives for the conservation of interest in real property in North Carolina.

(1) **Index Credit Cap.** Since its establishment in 1983, the maximum credit allowed (credit cap) for the NCCTC has been raised three times (1989, 1997, and 1999). Further requests for increases are inevitable as increasing property values decrease the incentive provided by the NCCTC. These dynamics can be addressed by indexing the credit cap. The incentive to donate would then be stabilized relative to land value, and repetitive legislated increases would be

avoided. As proposed, an increase equal to 75% of the Consumer Price Index (CPI) would be calculated from the last year of credit cap increase, with the cap increasing incrementally in the year following a cumulative increase of $25,000 for individuals and $50,000 for corporations. If enacted, it should be several years before an indexed increase would occur.

(2) **NCCTC Refundability.** The NCCTC was created as an incentive for landowners to donate interests in real property for conservation purposes. While the concept has been very successful and has been emulated in other states, there is still a category of landowner that finds little incentive in the program. "Land-rich and cash-poor" landowners receive disproportionately low response from their conservation donation for a tax credit. Several states with more recent conservation tax credit programs have addressed this issue by authorizing "transferability" for their tax credits, but this involves a considerable administrative workload. The issue could be addressed more simply through "refundability". As proposed, a 50% refund would be authorized of any credit amount remaining unclaimed after the second year of carry forward (third year including the year of donation). In this way, land-rich and cash-poor landowners would have more incentive to donate interests in real property for conservation purposes. If enacted, it would be three years before any refunds were paid.

Recommendations for Substantive Legislation. Generally speaking, activities under Article 16 are being carried out as well as can be expected, given the limited resource commitment to these programs. The principal constraint on the promotional and educational opportunities envisioned by Article 16 is the absence of staff and operating budgets. Nevertheless, there are items that may be considered for substantive legislation to improve existing programs.

(1) **NCCTC For Partnerships (Pass Through Entities).** A recent 2001 amendment to Department of Revenue (DOR) statutes, governing the way all pass through entities may claim tax credits, deferred its effect on the NCCTC until 1/1/2005. At that time, partnerships and other pass through entities will be limited to a maximum allowed credit of $250,000 for donations under the NCCTC, regardless of the value of the donated interests in real property. This has the potential to be a significant disincentive on the scale of donations and gift portion of bargain sales. In response to this pending change, DENR has coordinated with the DOR to seek an approach to meeting mutual public needs. An amendment to NCCTC statutes to allow pass through entities to claim the same NCCTC ($500,000) as other corporations, with each pass through recipient limited too the maximum individual NCCTC ($250,000) or portion thereof, would address the pending loss of incentive to the NCCTC. The effective date of such amendment should be 1/1/2005.

(2) **Charitable Purpose Flexibility.** To be eligible for a NCCTC, the donated land must yield one or more of the required public conservation purposes. Nevertheless, minor parts of donated tracts may not contribute to the conservation purpose and may not be allowed to be converted to another purpose without conflict with the tax credit statues. While it would be inappropriate to allow wholesale or unsupervised conversion of conservation properties to other

uses, there may be justification to consider allowing small parts that do not contribution to conservation purposes to be converted to another charitable purpose under a specific process of checks and balances administered by the NCCTC Program.

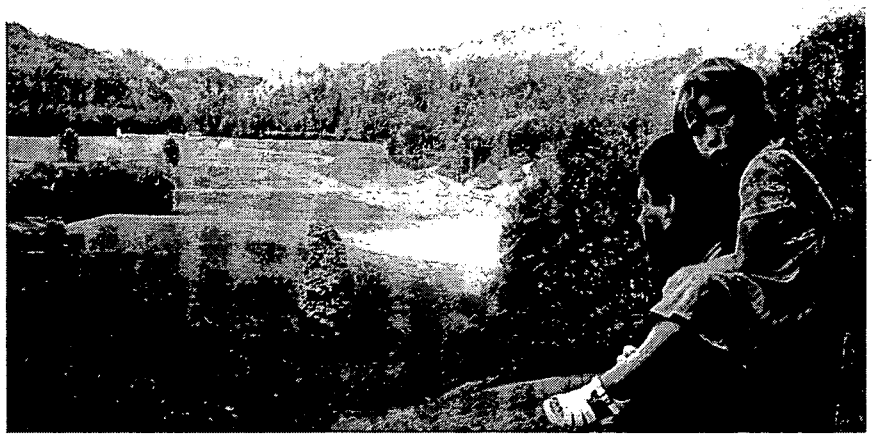
Need for Farmland Preservation

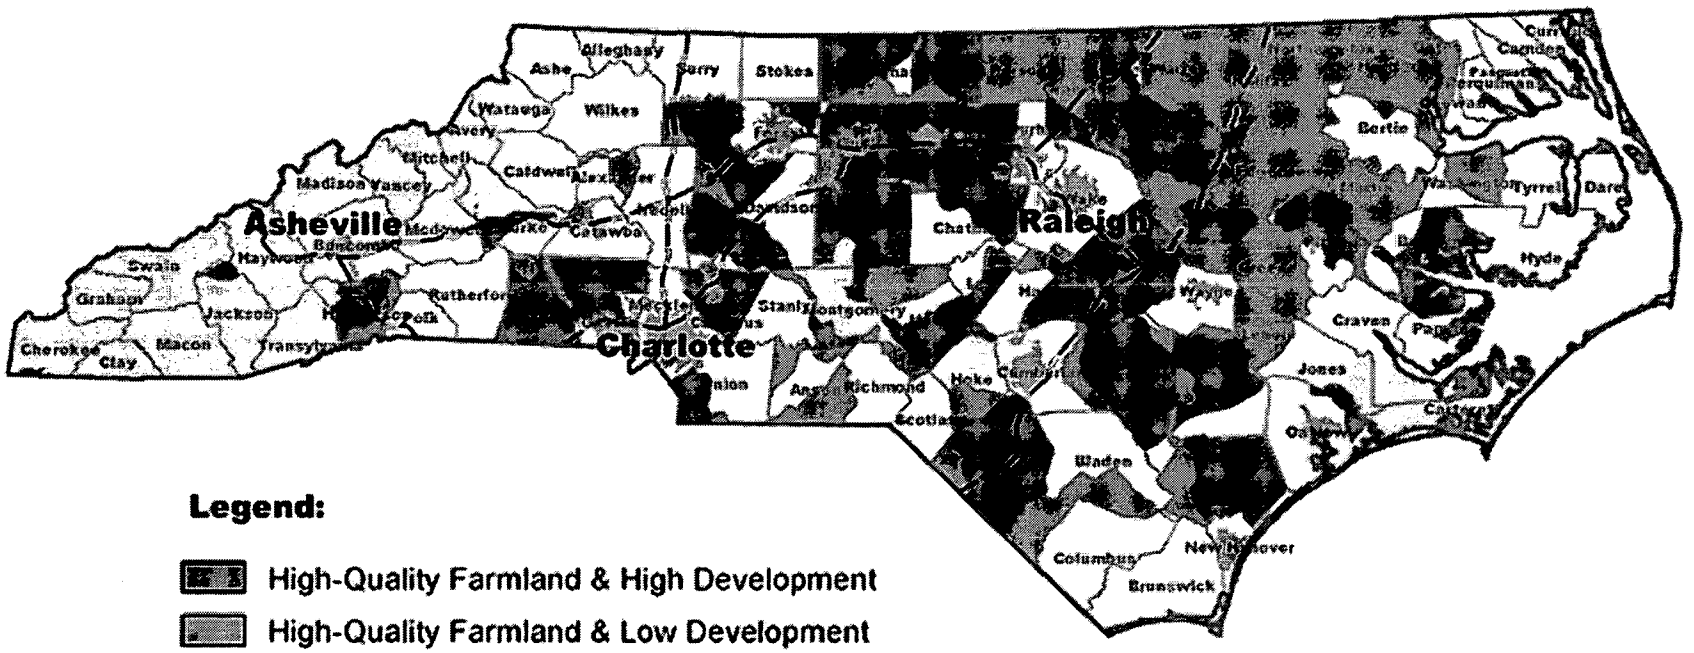


- 2.8 M acres of cropland and forest between 1982-2002
- = 383 acres/day
- 4th Highest Rate of Farmland Loss
- Agriculture Still #1 Industry – $62B/yr

FARMING ON THE EDGE

Sprawling Development Threatens America's Best Farmland

North Carolina



American Farmland Trust
www.farmland.org

Benefits of Farmland Preservation Trust Fund

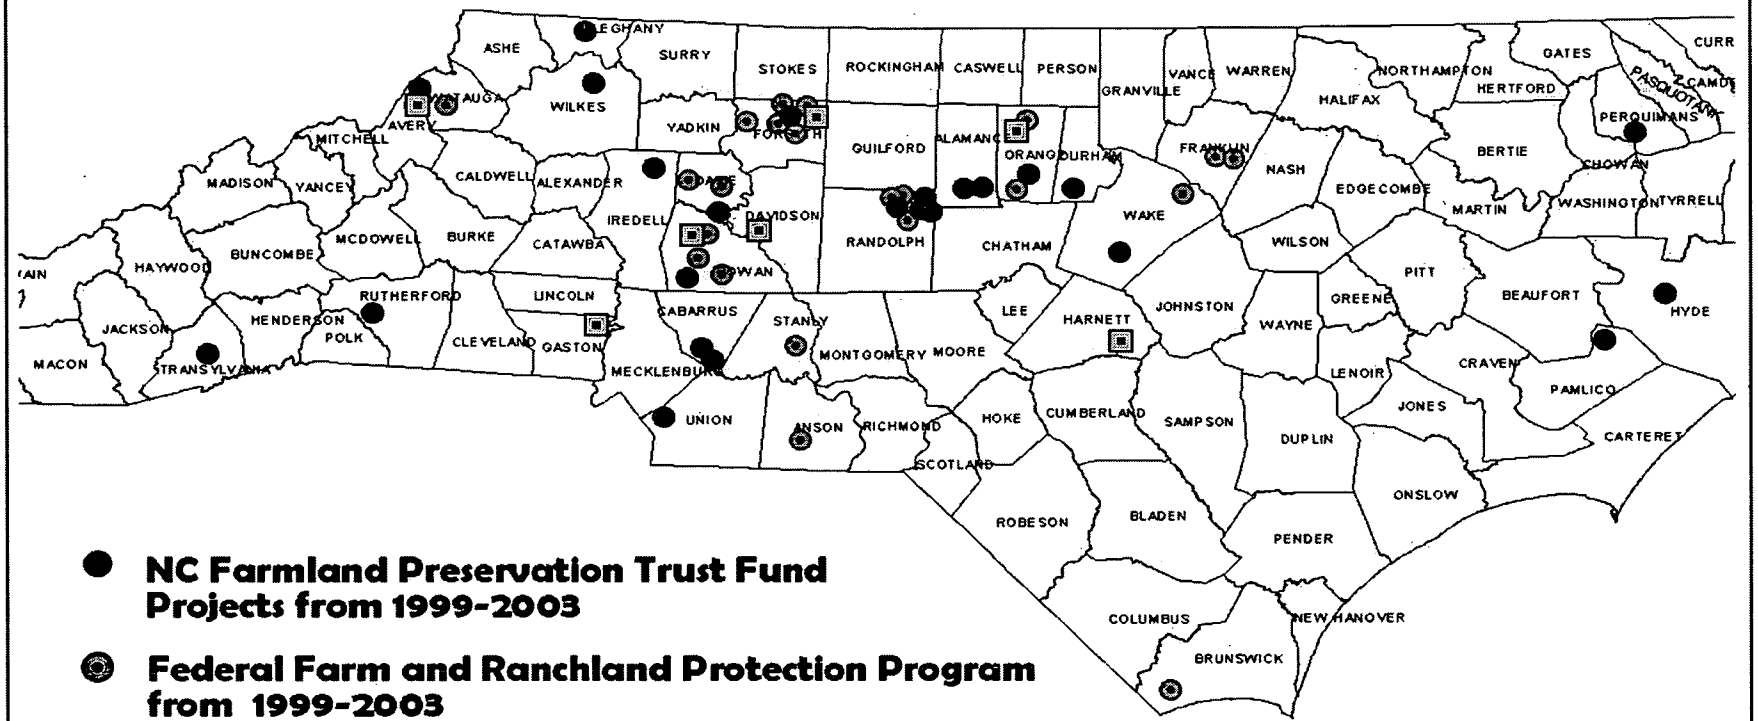
- Offers a viable alternative to selling land for development
- Provides financial resources to farmers through purchase of development rights
- Preserves prime agricultural lands & farming opportunities
- Protects water quality and wildlife habitat
- Saves local government resources
- Provides source of funding for matching dollars - $26 M leveraged

Farmland Preservation Program Statistics

- NC Farmland Preservation Trust Fund (FPTF)
  - $2.6 M appropriated since 1998
  - 4,412 acres protected on 33 farms ($589/acre)
  - $0 appropriated in FY 04-05 budget

- USDA Farm and Ranchland Protection Program (FRPP)
  - $ 5,235,300 received since 1998
  - 8,618 acres protected on 30 farms($607/acre)
  - $ 2,293,600 allocated to NC for FY '04
  - Lack of state matching funds hurting NC's allocation

State and Federally Funded Farmland Projects 1999-2003



- **NC Farmland Preservation Trust Fund Projects from 1999-2003**
- **Federal Farm and Ranchland Protection Program from 1999-2003**
- **Both State and Federal Farmland Funded Projects**

Interstates

Cities and Towns

N

2002-2003 FPTF Projects

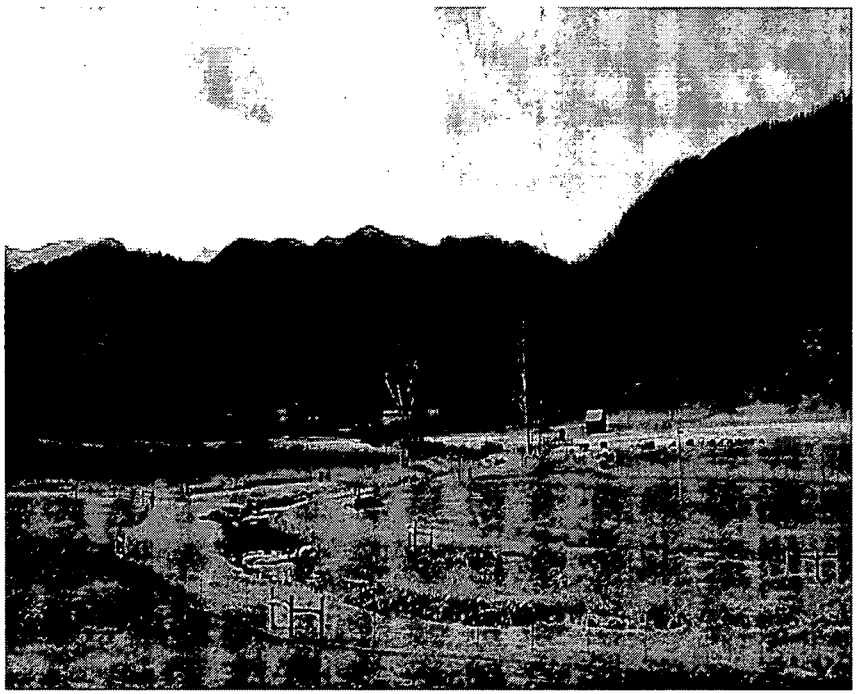
- $200,000 appropriated in '02 Short-Session

- Three Projects Funded
  - Graham Farm-Davidson County
  - Taylor Farm-Watauga County
  - Shelton Farm-Randolph County

Graham Farm – LandTrust for Central North Carolina

- Working Dairy Farm in Davidson Co.
- 124 acres under easement
- $125 K from FPTF
- $250 K from FRPP
- 25% donated value

Taylor Farm – High Country Conservancy



- Legacy Farm in Watauga Co.
- $22 K FY '02 FPTF
- $10 K FY '03 FPTF
- $125 K in FRPP
- 43 acres under easement
- Greater than 50% of value donated

Local Farmland Preservation Initiatives

- NC Land Trusts
  - Hold easements on more than 14,000 acres of farmland
  - Value of Easement on 50% of acres donated by landowner
- NC County Farmland Protection Initiatives
  - Orange County - $1.5 M
  - Currituck County - $250,000
  - Rowan County - $140,000
  - 39 Voluntary Agricultural Districts (VAD)

Related Farmland Initiatives

- Summit on Working Lands Conservation
  - NC Association of Soil and Water Conservation Districts
  - Focus on Conservation Options for Private Working Lands/Nontraditional Partnerships
- NC Farm Transition Network
  - Housed at NC Farm Bureau
  - Multiple Organizations Involved
  - Focus on Working Farms and Farm Transition Issues
- Land for Tomorrow Coalition

CTNC Recommendations

- Appropriate adequate resources to match federal allocation ($2.3)
- Reauthorize use of Clean Water Management Trust Fund money to match federal, state and local resources
- Develop a Statewide Farmland Protection Plan
- Expand Incentives for VADs
- Encourage Communication/Coordination Between Interested Parties
- Make NC Conservation Tax Credit Refundable (H887)

Conservation Trust For NC Fact Sheet – April 2004
Farmland Preservation Programs Help Save Working Farms

Agriculture is North Carolina's number one industry, contributing $62 billion annually to the state's economy and 20 percent of its jobs. In addition to the challenges posed by the globalization of agricultural markets, North Carolina's agricultural heritage is threatened by the loss of farmland. North Carolina is losing prime agricultural land to development at the fourth highest rate in the nation.

- During the past 20 years, North Carolina lost more than 2.8 million acres of cropland and forest, at the rate of 383 acres a day.
- In 1950, there were more than 300,000 farms in the state. Today, there are less than 50,000.

Farmland preservation programs that purchase development rights (conservation easements) on working agricultural lands prevent development of farmland and allow farmers to retain ownership and continue farming. Such programs must be an integral part of a comprehensive strategy to save family farms in North Carolina. Protecting working family farms through the purchase of agricultural conservation easements (PACE):

- provides farmers financial resources to reinvest in new technologies or equipment, expand into new markets, pay off debt or capitalize retirement programs.
- preserves prime agricultural lands for future generations and farm-related economic opportunities.
- protects water quality and wildlife from sedimentation and loss of habitat.
- saves local government resources by limiting residential developments that cost communities more to provide services than farmland and forests.
- continues to generate property and payroll taxes for local and state governments.

The Farmland Preservation Trust Fund, using $2.6 million appropriated by the General Assembly since 1998, has protected more than 4,400 acres on 33 working farms. These projects have leveraged more than $26 million in federal, local and private funds and the value of donated easements. To expand the state's farmland preservation efforts, the General Assembly should:

- Appropriate at least $2 million per year to the Farmland Preservation Trust Fund to provide resources for PACE programs and to leverage funds from the federal Farmland and Ranchland Protection Program.
- Reauthorize the use of up to $4 million in Clean Water Management Trust Fund money to match federal, state, local and private farmland preservation resources.
- Recommend the development of a statewide farm protection plan to identify priority farmland protection areas, resources to protect working farms, and agriculture-based economic development programs.
- Expand incentives for state/county-authorized Voluntary Agricultural Districts.
- Encourage further coordination and communication among the Department of Agriculture and Consumer Services, Department of Environment and Natural Resources, Clean Water Management Trust Fund, Soil and Water Conservation Districts and private conservation and agricultural organizations on the use of conservation easements to protect working farms and forests.

The views and recommendations contained in this report are those of the Conservation Trust for North Carolina and do not necessarily reflect the positions of the North Carolina Department of Agriculture and Consumer Services.

Summary of NC Farmland Preservation Program

The North Carolina General Assembly established the Farmland Preservation Trust Fund in 1986. Funding to create the NC Farmland Preservation Program was not provided until 1998, when the North Carolina General Assembly appropriated $250,000 to the Farmland Preservation Trust Fund for acquisition of agricultural conservation easements. The Conservation Trust for North Carolina (CTNC), a private, non-profit statewide land trust has been contracted by the Department of Agriculture and Consumer Services to oversee the program since funding was first provided. Public funds cover the purchase of easements, transaction, monitoring costs, program administration and may be used as matching funds for federal programs enabling the purchase of development rights such as the Farm and Ranchland Protection Program.

Following the success of the first year pilot project, the legislature doubled funding for the second year. The program grew and built momentum throughout the state, and the General Assembly increased funding for the grant program for fiscal year 2000-2001 to $1.5 million. However, due to State budget constraints in fiscal year 2001-2002, the NC Farmland Preservation Trust Fund received only $200,000 from the General Assembly, and 4% of that was retained by the Governor to help balance the State's budget, leaving only $192,000 for projects in 2002. The lingering State budget crisis once again limited funding for the NC Farmland Preservation Program to $200,000 in fiscal year 2002-2003. Still, 4,412 acres of working farms have been protected through this valuable program.

The pilot Farmland Preservation Program successfully protected six farms in 1999. Substantial parts of seven farms were protected the following year. The steady increase in funding each year produced significant results, and nine farm sites totaling 957 acres were protected in 2001. Although funding was dramatically reduced in 2002, CTNC and the statewide network of land conservation organizations were still able to protect land on nine farms and another 1,352 acres. Adequate funding for the NC Farmland Preservation Trust Fund was again limited in 2003, yet three grants were awarded for the purchase of agricultural easements totaling 275 acres of farmland, now permanently protected from development.

The goal of this program is the permanent protection of critical farmlands that provide important economic and ecological functions, while protecting the cultural heritage and scenic quality of North Carolina's rural landscape, particularly in areas of rapid urban development, and in ecologically sensitive areas and watersheds. The protection of farmland ensures our state's ability to produce food, fiber and other agricultural products. According to the NC Department of Agriculture & Consumer Services, there are currently about 57,000 farms in the North Carolina, covering nearly 9,200,000 acres of our state's 31,000,000 acres. Agriculture is North Carolina's number one industry, generating more than $62 billion each year. In addition to the economic impacts, benefits of farmland conservation also include the protection of water quality and other natural resources, diversification of the economy, alternatives to urban sprawl, and improvement of the overall quality of life.

While the progress of farmland protection in NC is impressive, it is disappointing that the program received no funding in the State's 2003-2004 budget. CTNC hopes this important program can be revived and even expanded in the 2004-2005 budget cycle. A firm commitment to the program through the restoration and expansion of significant funding for the Farmland Preservation Trust Fund is essential to the success of this valuable program and our ability to continue drawing federal farmland protection funding into NC to preserve our state's agricultural economy and heritage.

Background

The Conservation Trust for North Carolina is a private, not-for-profit 501(c)(3) organization dedicated to expanding the protection of North Carolina's land and water resources. CTNC provides works with the statewide network of locally-based land trusts, as well as provides direct assistance to local communities, private landowners, and public agencies. CTNC has effectively managed the NC Farmland Preservation Program for the NC Department of Agriculture & Consumer Services by working with county agencies, utilizing this state's network of 22 locally-based land trusts, and establishing close relations with national conservation organizations and agencies to identify and work with willing farmers interested in voluntarily protecting their land.

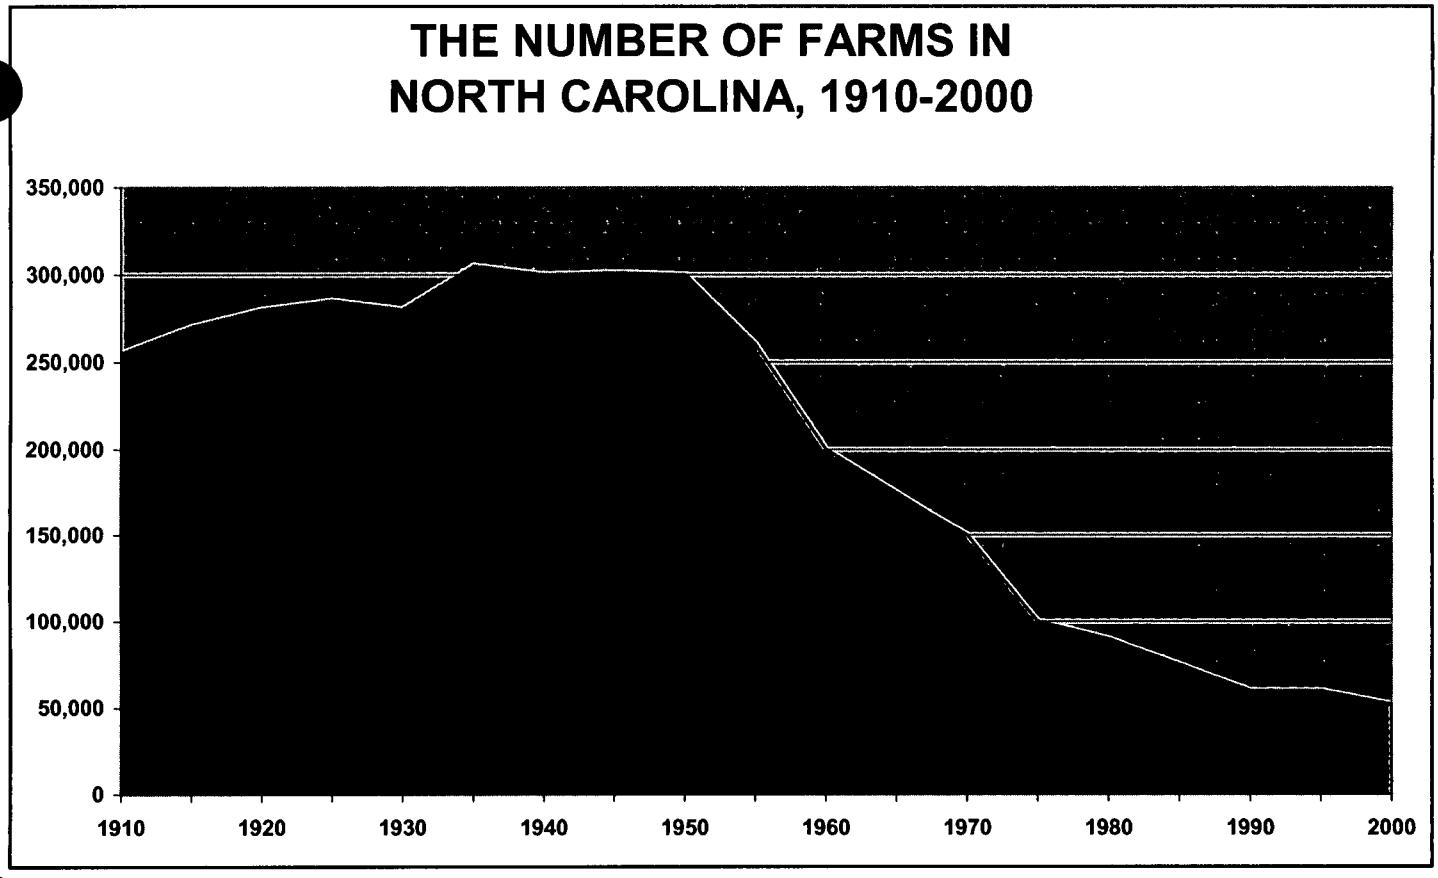
The NC Farmland Preservation Program (funded through the Farmland Preservation Trust Fund) utilizes agricultural conservation easements to achieve voluntary, permanent farmland protection. Conservation easements are legal agreements between a landowner and a government agency or non-profit conservation organization. Conservation easements limit the use of the subject property based on the wishes of the landowner and requirements of the easement holder. They are intended to protect the conservation values of a property that provide public benefit, while allowing continued agricultural use of the property. Some of these conservation values may include, drinking water supply sources, aquatic habitat, historic or scenic areas, open space, and wildlife habitat.

By selling or donating an agricultural conservation easement agreement, the landowner gives up certain development rights while retaining agricultural use and ownership of the land. The donation or bargain sale of development rights can result in substantial estate tax reductions for the landowner, as well as eligibility for the NC conservation tax credit and a federal tax deduction while keeping the property on the county's tax ledgers. The flexibility of conservation easements allows some portions of the property to be set aside for landowners to maintain limited development rights in those areas. Conservation easements remain on the land in perpetuity, even if ownership changes, and compliance is monitored at least annually by the holder of the easement.

Open space protection and farmland preservation is becoming more and more important as urban areas grow and spread into the countryside. Every year in America, nearly 1 million acres of farmland are lost to suburban sprawl and land development. Loss of farmland has lasting economic and environmental impacts on the community. Cost of Community Services studies are often used to determine the costs of a community's public services versus revenues generated by current land use in that community. In a summary of 83 such studies in 19 states, the American Farmland Trust found that the median cost of community services per dollar of revenue raised for farm and forest land is $0.36, while the cost of residential land is $1.15 per dollar of revenue raised (American Farmland Trust's Cost of Community Services Studies: Making a Case for Conservation, by Julia Freedgood, 2002). This shows that protecting farmland in our state will not only save our state's rural, historic, ecological and economic resources, but will also save counties and municipalities money, as they struggle to deal with the increasing demands and burdens of urbanization.

The following page contains facts and figures illustrating the need for farmland preservation in North Carolina. The NC Department of Agriculture & Consumer Services is working with the Conservation Trust for North Carolina, a network of land trusts, and Soil & Water Conservation Districts across the state to protect what is left of North Carolina's agricultural resources.

The Need for Farmland Preservation in North Carolina



North Carolina lost more than 100,000 acres per year to development from 1992 to 1997, the fifth highest rate in the United States. USDA Natural Resource Conservation Service, Natural Resources Inventory. (Source: http:www.nhq.nrcs.usda.gov/CCS?NRIrlse.html).

North Carolina has lost more than 37% of its land in farm use since 1964 - from 14.4 million acres to 9.1 million acres in 1997. (Source: Census of Agriculture, 1997).

Much of North Carolina's farmland lost to development (31%) contained *prime* and *unique* farmland soils as defined by the USDA. (Source: NC Rural Economic Development Center, February 2000).

Agriculture is North Carolina's biggest industry, contributing an estimated $62.6 billion to the state's economy each year from farm sales, jobs, and farm-related industries. This accounts for 22% of the State's economy. (NC Department of Agriculture website: http://www.ncagr.com/stats/cashrcpt/commrank.htm).

NC is the leading producer of tobacco products, exporting over $1.6 billion in 2000, yet the state is still third in the United States in agricultural diversity. (Source: Larry Wooten, President of NC Farm Bureau Federation, Editorial in the Raleigh *News & Observer*, Aug. 22, 2001, "A good quota buyout could help").

NC farm commodity receipts totaled nearly $7 billion in 2001.
(Source: NC Dept. of Agriculture website: http://www.agr.state.nc.us/).

North Carolina contains some of the most endangered farming areas of the U.S. This area includes 54 of North Carolina's 100 counties as determined by the American Farmland Trust. (http://www.farmland.org).

See **Appendix A** for additional information on prime agricultural soils in danger of conversion to development in North Carolina.

Complimentary Programs and Sources of Matching Funds

Given the funding constraints that have limited the NC Farmland Preservation Program since its inception, the Conservation Trust for North Carolina and participating land trusts and counties have been forced to be very creative and proactive in seeking additional sources of funding for farmland protection in North Carolina. The generous donation of easement values by participating landowners is one reason the State's limited investment in this program has been so effective. Counties and local land trusts have also donated funding and staff time towards individual projects and worked to secure matching and supplemental funds to ensure their completion.

One of the most frequently used programs providing matching funds for State farmland preservation efforts is the federal Farm and Ranchland Protection Program, authorized under the 2002 Farm Bill. This program supplies up to 50% of the funding for purchase of agricultural conservation easements on working farms, but requires at least 50% matching funds from state or private sources. This is where the NC Farmland Preservation Program has been so successful and so important in helping bring federal conservation funding to North Carolina.

The federal Farm and Ranchland Protection Program is administered through the USDA's Natural Resources Conservation Service (NRCS) offices in each participating state. North Carolina's NRCS staff have been impressed and influenced by the enthusiasm and effectiveness of farmland protection efforts across our state. In the past few years they have been heavily involved in helping land trusts and counties draw additional federal funds to North Carolina for farmland protection. The federal program has been used to protect 8,618 acres on 30 farms in North Carolina with a total of $5,235,300 in federal funds to date. The 2004 allocation to North Carolina will bring in an additional $2,293,600 for farmland protection. North Carolina needs a strong and viable state program to leverage as much of the federal farmland protection dollars as possible for farmers in North Carolina.

In 2003, members of the North Carolina land trust community and Conservation Trust for North Carolina worked with the NRCS Assistant State Conservationist and others at NRCS to organize a field tour of protected and prospective farmland in North Carolina for the director and legal council who oversee the Farm and Ranchland Protection Program. Staff from the NRCS, CTNC and participating land trusts helped bring two key federal administrators to North Carolina for three days in April. This tour raised awareness and interest in the farmland protection efforts in North Carolina among those in charge of the federal program, and we expect increasing amounts of federal funding to be available to North Carolina farmers, if state matching funds are available through the NC Farmland Preservation Trust Fund.

North Carolina Farmland Preservation Program
Grants Awarded From 1998 Through 2003

The NC Farmland Preservation Trust Fund has received five successive annual appropriations from the NC General Assembly to the NC Department of Agriculture and Consumer Services, beginning in late 1998 under the Farmland Preservation enabling statute of 1986 (NCGS 106-735 to 744).
Appropriations to the program by the General Assembly have been:
$250,000 for FY 1998-99;
$500,000 for FY 1999-2000;
$1,500,000 for FY 2000-01;
$200,000 (later cut to $192,000) for FY 2001-2002; and
$200,000 for FY 2002-2003
The appropriations were used to make grants for qualified local governments and non-profit land trusts to cover transactional costs of acquiring agricultural conservation easements, acquisition of the easements, and annual easement monitoring costs. **These grants have leveraged over $26 million in local funds and equivalent values of donated development rights (i.e., a grant ratio of $1 state: $10 local or federal funds and donated value).** All expenditures have satisfied legislative intent to demonstrate protection of critical farmlands located in urban fringe growth areas and in sensitive watersheds or other important environmental resource areas. The Department of Agriculture's contractual relationship with the Conservation Trust for North Carolina has proven a cost-effective and successful model for implementation of the NC Farmland Preservation Program.

Program Results to Date
Total Grants Awarded: $2,384,500.00 in five annual grant cycles.
Farms Protected: 33* **Acres Protected: 4,412*** **Average: $540.46 per acre**

Other Program Activities: promotion of farmland protection opportunities through publications, news media articles, public presentations, forums and workshops; provision of guidelines for forming county farmland protection programs and establishing voluntary agricultural preservation districts; representation of farmland preservation interests to legislative study commissions and other task forces; exploration of other potential sources of funding for farmland preservation in N.C.; and collaboration with federal Farm & Ranchland Protection Program to leverage more federal conservation funding for farmland protection in North Carolina.

Farmland Preservation Trust Fund Awards in Fiscal Year 2002-2003 [$200,000 State appropriation]

Grantee	Grant	Farm	County	Easement Size
High Country Conservancy	$10,000 b/m	Taylor Farm	Watauga	43 acres
The LandTrust for Central NC	$125,000 m	Graham Farm	Davidson	124 ac.
Piedmont Land Conservancy	$50,000	Shelton Farm	Randolph	67 ac.
3 Land Trusts	**$185,000**	**3 Farms**	**3 Counties**	**234 acres**

*The Taylor Farm received grants in 2002 and 2003, but it is only counted once in the Program Results to Date.

b = Bargain sale of non-farm development rights. The purchase price for the permanent conservation easement was substantially less than half of the appraised development rights values.
m= Matching funds were raised for the purchase of non-farm development rights on land designated by a county as high priority for farmland protection.

Farmland Preservation Trust Fund Awards in Fiscal Year 2001-2002 [$200,000 State appropriation*]

Grantee	Grant	Farm	County	Easement Size
Blue Ridge Rural Land Trust	$23,500 d	Ward Farm	Watauga	230 acres
High Country Conservancy	$22,000 b/m	Taylor Farm	Watauga	43 ac.
Catawba Lands Conservancy	$24,000 m	Rhyne Farm	Gaston	179 ac.

+ Soil and Water Conservation District

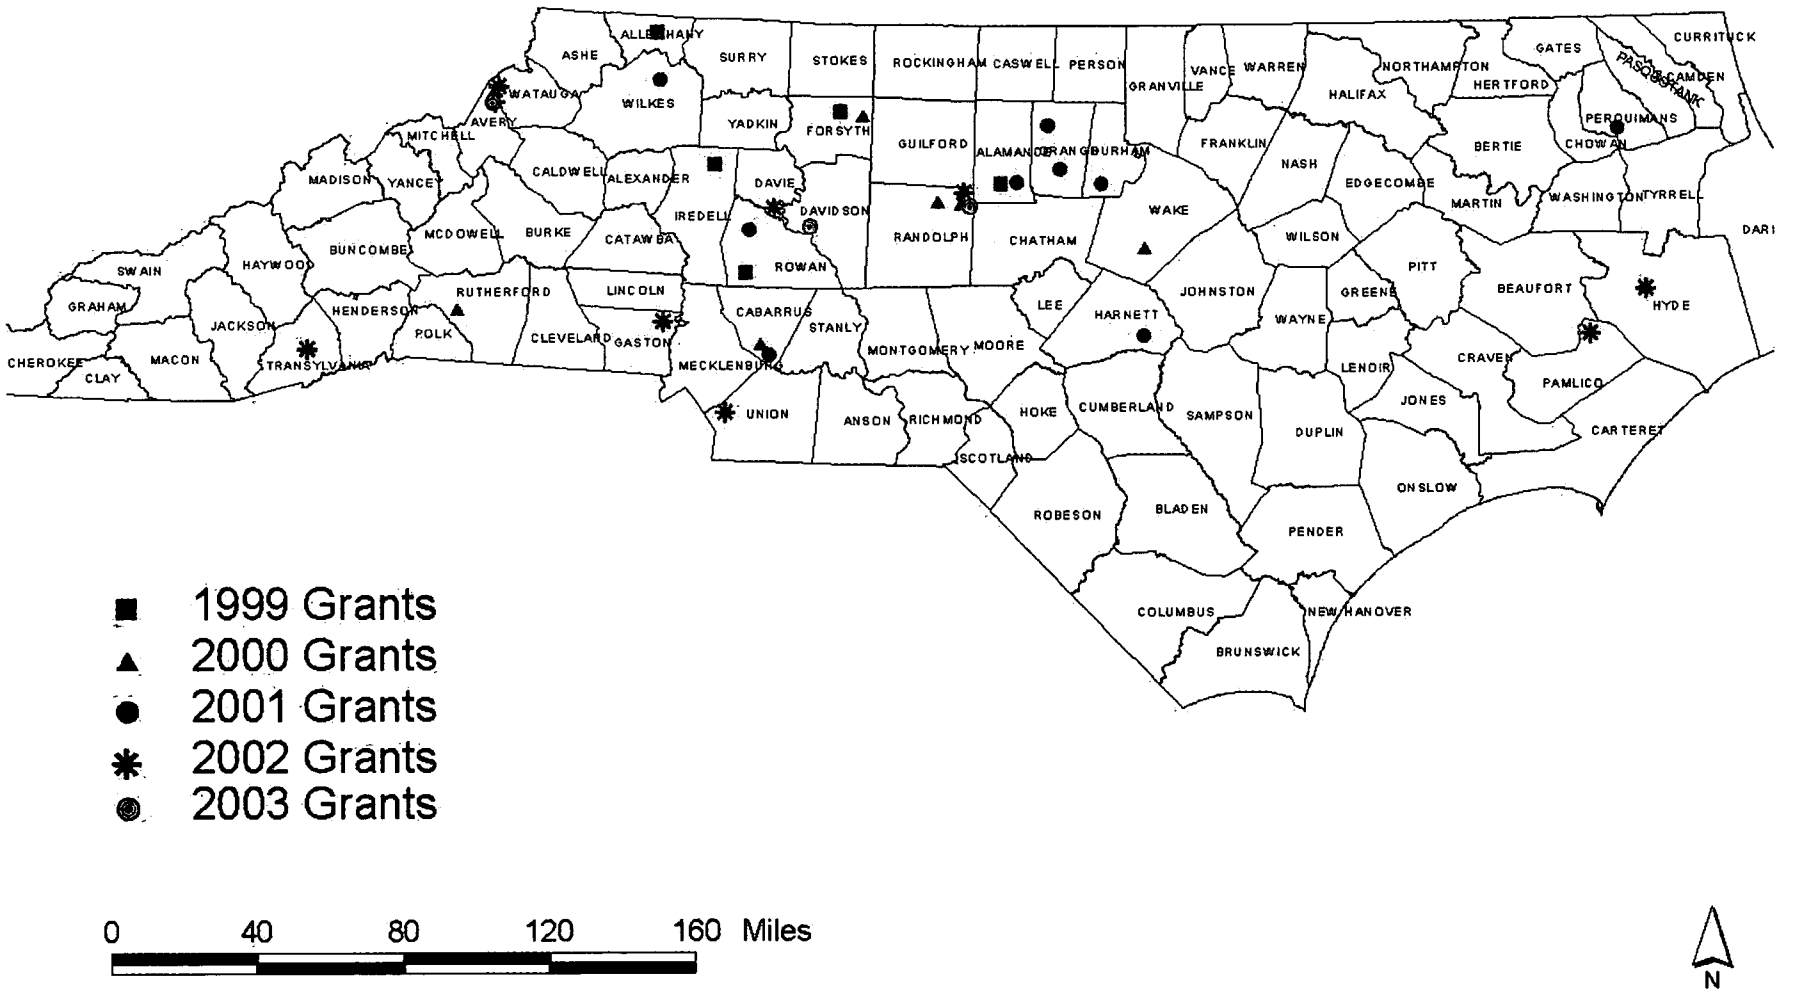
d = Donated development rights, this grant reimbursed transactional costs for establishing permanent conservation easement.
b = Bargain sale of non-farm development rights. The purchase price for the permanent conservation easement was substantially less than half of the appraised development rights values.
m= Matching funds were raised for the purchase of non-farm development rights on land designated by a county as high priority for farmland protection.

NC Farmland Preservation Trust Fund

1999-2003 Farms Protected

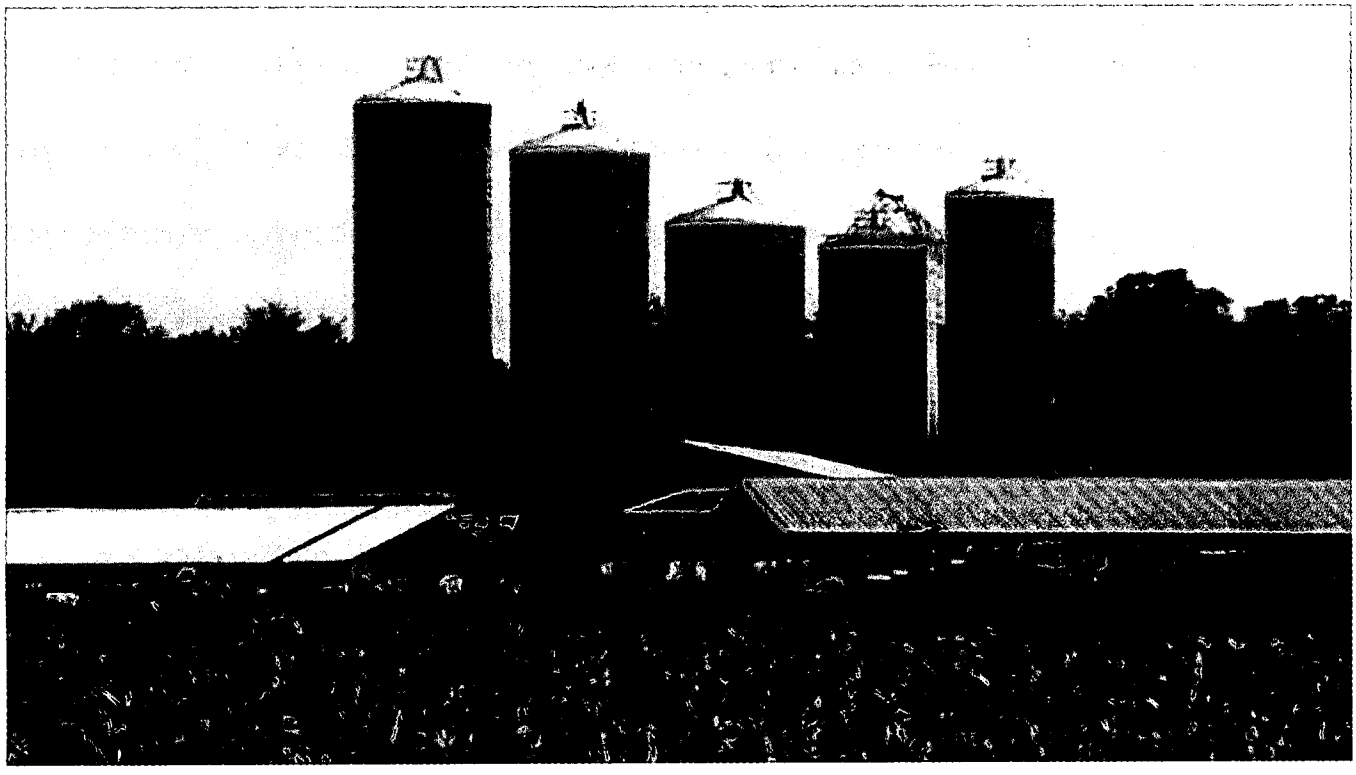


2003 Farmland Preservation Trust Fund Award Recipients

Graham Farm protected by The LandTrust for Central North Carolina. The 124-acre Graham Farm is located in southern Davidson County along the Interstate-85 corridor. Despite tremendous development pressures created by the transportation infrastructure, it remains a hub of agricultural activities, consisting of thousands of acres of working farmland. The Graham Farm has remained in the same family since the original land grant in 1762, and is subject to best management practices including "never-till" crop production. We are proud to announce that the conservation easement on the Graham Farm was signed and recorded on December 15, 2003 so this farm is now protected for agricultural use in perpetuity.

Preservation of the Graham Farm was made possible by a combination of funding from the U.S. Department of Agriculture's Farm and Ranchland Protection Program (under the federal Farm Bill) and the NC Farmland Preservation Program, as well as a donation of funds and staff time by The LandTrust for Central North Carolina. The North Carolina Farmland Preservation Program contribution to the preservation of this farm constitutes roughly 33% of the value of the easement, once again illustrating the power of this State program to leverage federal and private dollars for conservation projects in North Carolina.

Efforts to protect the Graham Farm have spurred other farmland preservation interest on adjacent farms and The LandTrust for Central North Carolina expects to have as many as an additional 500 acres protected in 2004 on nearby farms. A 'Day on the Land Celebration' will be held April 3, 2004 on this property to promote farmland preservation and introduce people to life on a working farm in North Carolina. Members of the NC General Assembly and NC Department of Agriculture staff are encouraged to attend that event.



Above: Grain silos and cattle barns on the Graham Farm, now protected by a conservation easement thanks to a partnership between the NC Farmland Preservation Program, the USDA Farm and Ranchland Protection Program and The LandTrust for Central North Carolina, based in Salisbury, NC.

Shelton Farm, protected by the Piedmont Land Conservancy. This farm consists of 67 acres in Randolph County, and is now owned by the eight heirs of Wade T. Shelton. Thanks to the work of the Piedmont Land Conservancy, this farm will not be subdivided and sold for development, as is the fate of so many farms transitioning from one generation to the next.

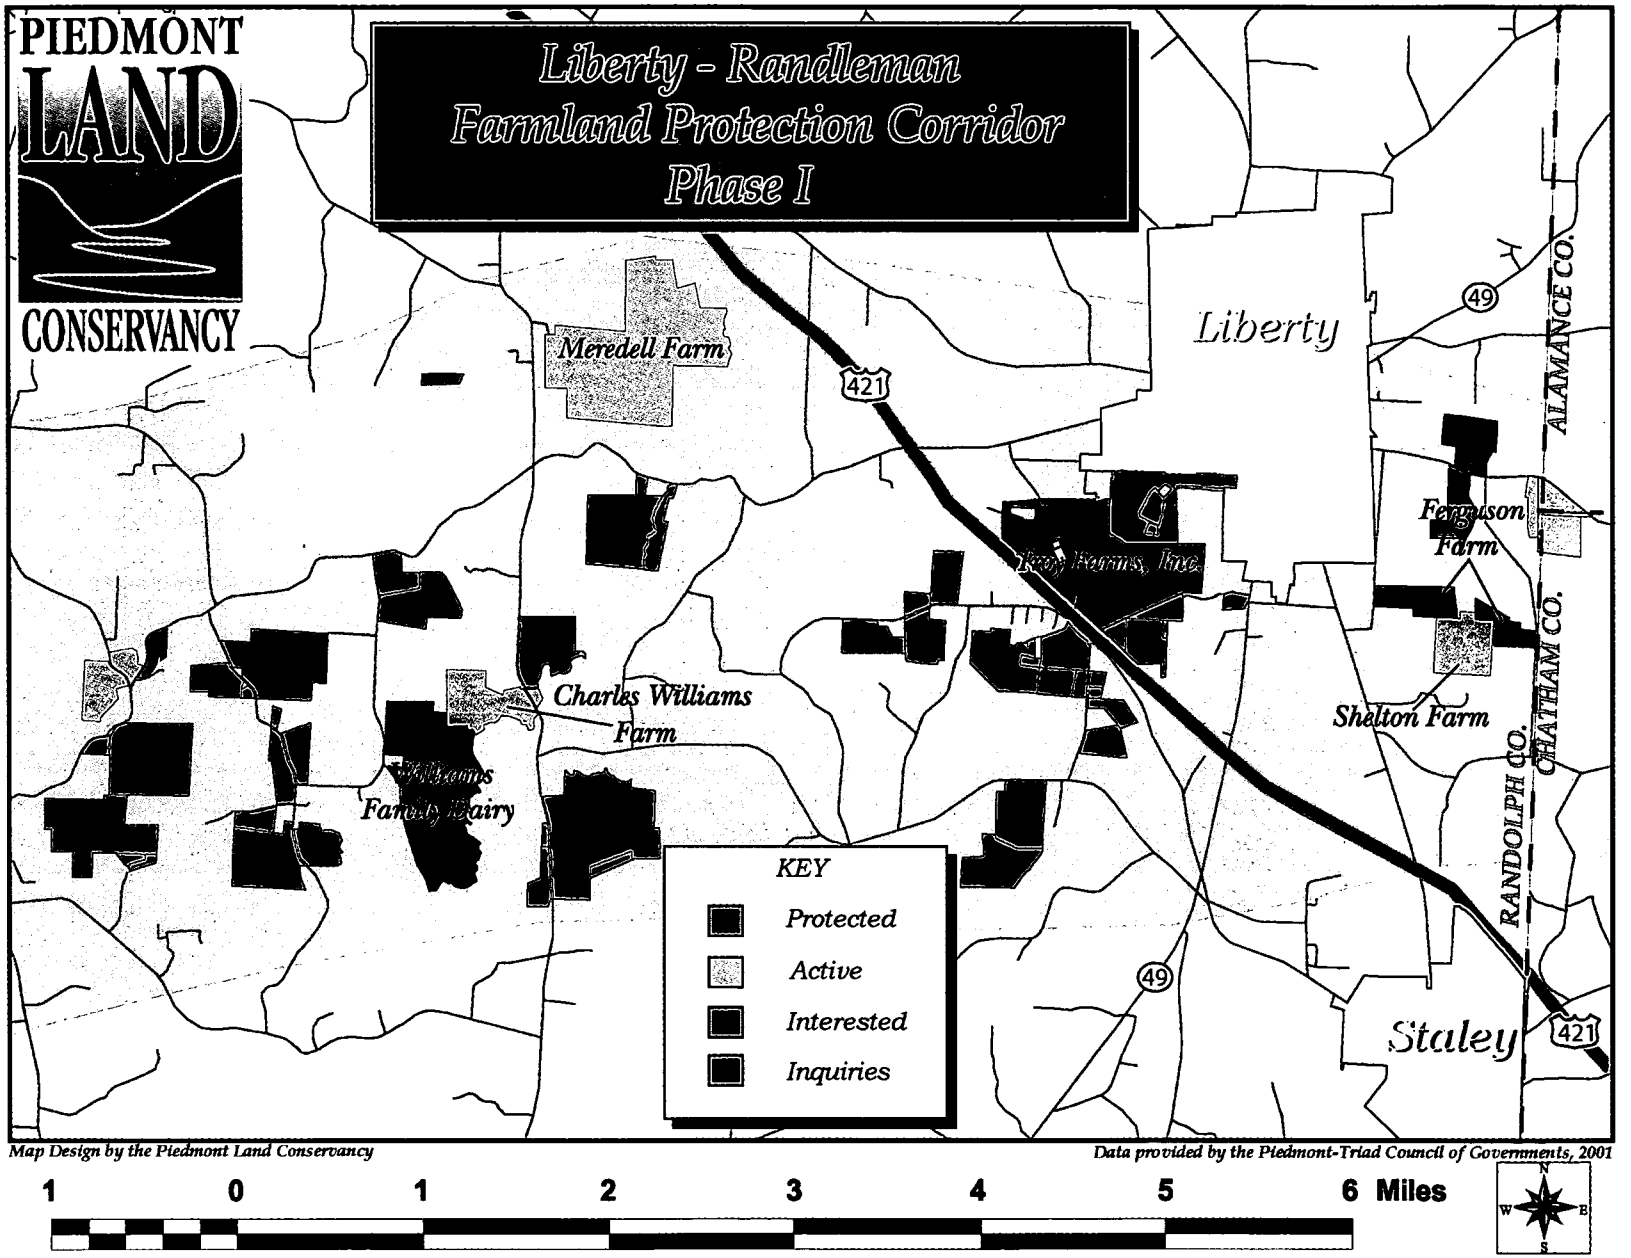
The Wade T. Shelton Farm is located on the eastern edge of the Piedmont Land Conservancy's Liberty-Randleman Farmland Protection Corridor. This corridor is a community-based land protection concept that grew out of a grassroots effort of farmers and landowners who were concerned about the rapid development of farmland along Old Liberty Road. To date, five farms comprising about 649 acres within this corridor have been permanently protected by agricultural easements. Currently, there are four additional farmers in the Corridor who have expressed their intent to the Piedmont Land Conservancy to permanently protect their land, which encompasses an additional 675 acres.

The Shelton Farm's 67 acres are comprised of 99% prime agricultural soils. Since the land is located on the eastern edge of Liberty, and the soils are well-drained, and the topography is relatively flat, this property was a prime location for development. In addition to this high degree of threat, the farm is adjacent to the 70-acre Ferguson Farm, a beef cattle farm, protected in 2000 through a donated conservation easement with funding support for transactional costs from the North Carolina Farmland Preservation Program. These projects demonstrate the foresight and proactive conservation efforts of one of North Carolina's leaders in farmland protection. The Piedmont Land Conservancy's Liberty - Randleman Farmland Protection Corridor is piecing together hundreds of acres in a concentrated area of prime agricultural soils and ensuring their protection as viable working farms.

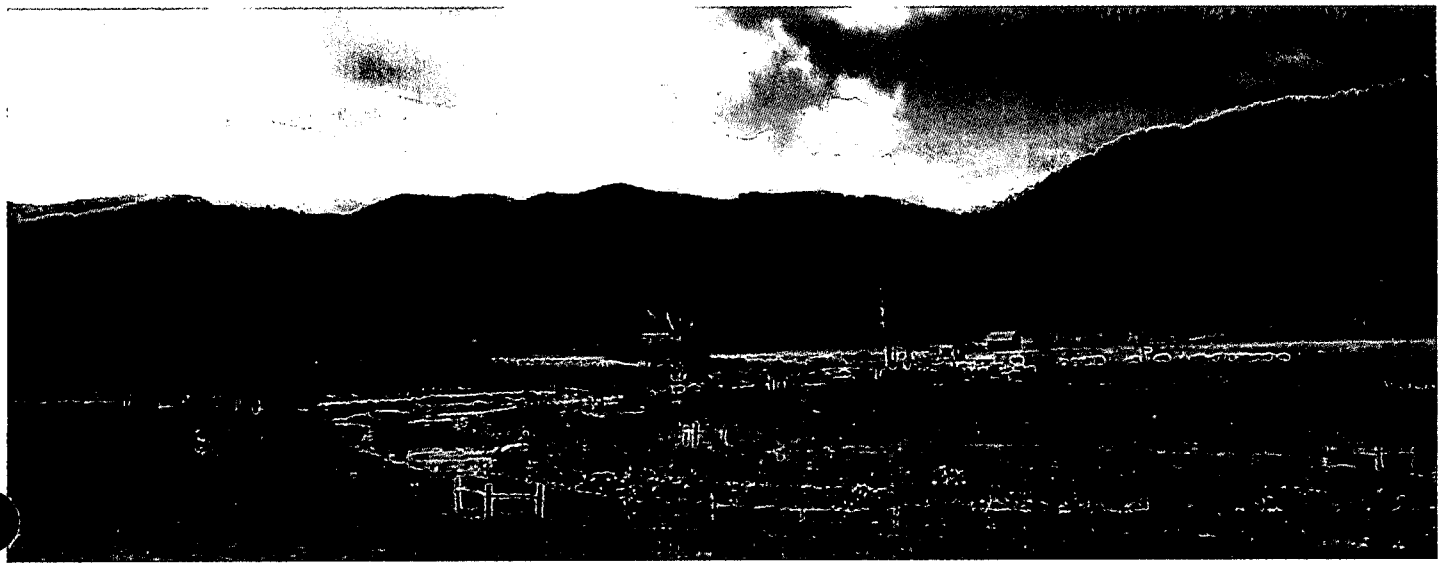
Through an innovative conservation buyers network, Piedmont Land Conservancy is seeking a farmer willing to buy this farm subject to an agricultural easement. The buyers will be able to purchase this land with the agricultural easement in place, enabling a farmer or someone hoping to get into farming, to purchase the farm below the price of a farm valued at full development potential.

Above: Cattle grazing on the pastures of the Shelton Family Farm, now protected by an agricultural conservation easement purchased by the Piedmont Land Conservancy through the NC Farmland Preservation Program.

Shelton Farm & Surrounding Area Map



Taylor Family Farm protected by High Country Conservancy: The Taylor Farm is a "legacy farm", designated as such because it is in its 6th generation of continuous farm use by the Taylor family, pre-dating the Civil War. This farm is the first to receive funding from the NC Farmland Preservation Program two years in a row. The initial award in 2002 allowed High Country Conservancy to initiate protection of this farm as the first agricultural parcel in the Valle Crucis Historic District. This year's award allowed The Conservancy to repay a low-interest loan it secured to ensure protection of the farm. The popularity of this area for second-home development threatens the scenic, agrarian landscapes which make it so attractive. High Country Conservancy hopes the Taylor Family Farm will serve as the cornerstone of their conservation efforts in the Valle Crucis area and along Scenic Byway 194. This NC Scenic Byway, NC Route 194, has been identified as one of America's 10 most endangered scenic byways by Scenic America (see http://www.scenic.org).



The Taylor Farm easement was signed on December 20, 2002 and provides considerable water quality benefits, as it contains the confluence of three creeks, which actually form the cross shape for which the valley is named (Valle Crucis is Spanish for "Valley of the Cross"). The farm is adjacent to the Valle Crucis Episcopal Conference Center, which is in the process of negotiating a conservation easement on its 450 acres. Permanent protection of these two properties will provide a sizeable area of protected views and wildlife habitat in this scenic and historic area of Watauga County.

Conclusion

Despite limited funding, fiscal year 2002-2003 was another successful year for the North Carolina Farmland Preservation Program, permanently protecting another 234 acres on three farms. The North Carolina Department of Agriculture & Consumer Services and the Conservation Trust for North Carolina again, successfully partnered to maintain a viable farmland conservation program with minimal funding allocated to the state Farmland Preservation Trust Fund. By utilizing the experience of the Conservation Trust and the network of local land trusts across the state, limited funding was used to leverage other sources of funding and private donations to maximize the investment made by the North Carolina General Assembly. Productive farmland is one of this state's most valuable economic resources, and is deserving of the state's long-term investment in the protection of working farms. In addition to protecting the greatest economic engine of the State of North Carolina, farmland preservation provides additional public benefits including water quality protection, protection to farmers from encroachment issues and nuisance lawsuits, protection of scenic views, cultural and historic resources, and recreation and tourism opportunities.

As previously noted, the NC General Assembly did not provide funding for the State's Farmland Preservation Trust Fund in fiscal year 2003-2004. The lack of funding for the NC Farmland Preservation Trust Fund creates several challenges to protecting farmland in North Carolina, including:

- The loss of federal Farm and Ranchland Protection Program funds to North Carolina due to the lack of state matching funds.
- The loss of opportunities to acquire easements on endangered farmlands though voluntary measures.
- The inability to compensate farmers for the value of conservation easements, relying on them to donate the value of the agricultural conservation easement.
- The continued loss of prime farmlands and working family farms across North Carolina.

The Conservation Trust for North Carolina recommends:

- Adequate resources be dedicated to the NC Farmland Preservation Trust Fund to match the 2004-2005 fiscal year allocation of $2.3 million and future allocations from the federal Farm and Ranchland Protection Program. This will enable us to maximize the amount of federal farmland protection funding available to North Carolina in future years.
- This funding be available to compensate farmers for the value of permanent conservation easements placed on farmland.
- Expanded discussions among government agencies and the agricultural and conservation interests about the use of conservation easements on working farms and forests.
- Development of a statewide farmland protection plan, which identifies priority farmland protection areas and the resources necessary to protect these areas.
- Expanded incentives for farmers in state/county-authorized Voluntary Agricultural Districts.

As the rate of loss of farmland and family farms accelerates across North Carolina, it is imperative that our state address these issues as part of a comprehensive effort to protect our state's economy and agricultural heritage.

FARMING ON THE EDGE

Sprawling Development Threatens America's Best Farmland

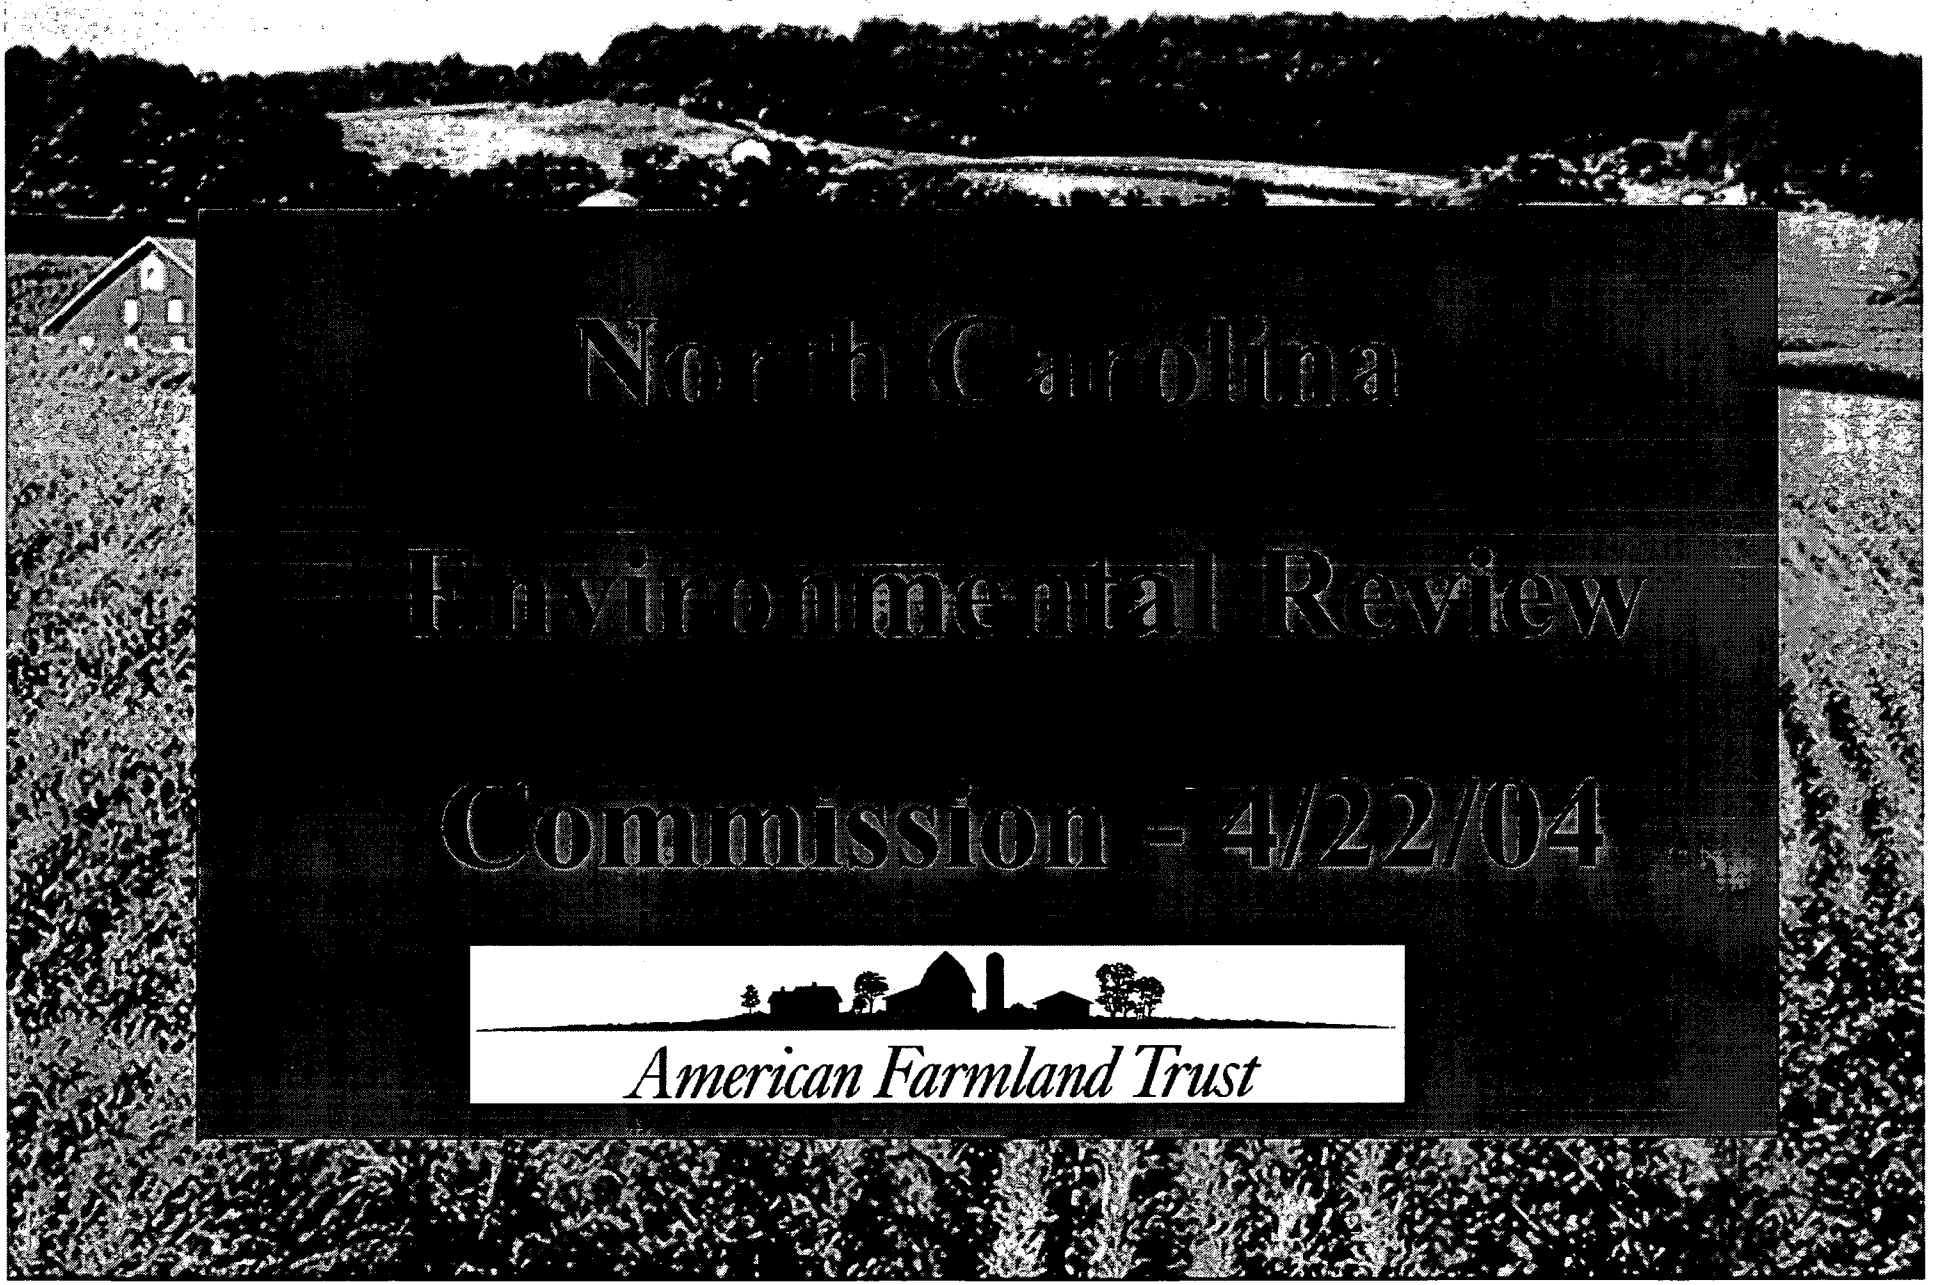
EXHIBIT J



American Farmland Trust

- Founded in 1980, stop the loss of productive farmland.
- Only national organization dedicated to maintaining our productive agricultural resources by protecting the best land, planning for an agricultural future, and promoting economically and environmentally sustainable farming practices.
- 11 offices across the country, partnering with local orgs, sharing success stories, and providing technical assistance to landowners and policy makers.
- Visit our website at farmland.org, and come to our next national conference in Lexington, KY in November.

American Farmland Trust

What Is Farmland Protection?

- New frontier of conservation: private working lands. Most cost effective means of achieving conservation objectives.
- Using tools and knowledge to help landowners and the local community achieve a range of financial, natural resource, economic, and open space goals to improve the quality of life for farm families and other citizens, for now and for future generations
- Times are tough in NC farm country: tobacco, peanuts, commodity prices, animal biosecurity concerns. Need to provide a sense of hope and stability for the future.

American Farmland Trust

Toolbox: What Can We Do?

- Community Planning
  - Incentives for agricultural profitability
- Landowner Options
  - Incentives to protect from future development

American Farmland Trust

Planning for Agriculture

- Land use policies: Ag Districts

- Agricultural Economic Development

American Farmland Trust

Agricultural Districts – North Carolina

- 39 of 100 counties have passed ordinances (tripled in past 4 years), stating that agriculture is an important part of their future
- Farmers voluntarily limit development for 10 years
- Benefits authorized by state, but chosen by individual county – notification, assessments, planning, public hearing
- Administered by local board appointed by county commissioners
- Giving farmers a sense of pride and a stable investment climate for ag profitability
- Can the state authorize additional incentives for the counties to offer to landowners willing to restrict development for a longer period?

American Farmland Trust

Agricultural Economic Development

- Diversification financial assistance: Golden Leaf and Tobacco Trust Fund
- Orange: Hired agricultural economic development coordinator
- Planning for agricultural viability: Henderson first countywide plan
- Recruitment of input and output businesses: Alamance working with new seed company to fill empty textile plant

Agricultural Economic Development (continued)

- Creating alternative markets: farmers markets, connecting directly with consumers in changing demographic climate
- Agri-tourism/local promotion: Extension and NCDA
- Farm Transition Network: assistance in passing management of the farm business and assets to the next generation
- Purchase of Agricultural Conservation Easements: a business management tool for farmers with great public benefits to the citizens of the state. Partnership between the public and private landowners. Our Missing Link!

American Farmland Trust

PACE: Our Great Missing Link!

- Kentucky: 25 million dollars of T settlement money, through their Ag Development Board.
- Federal Farm Bill: 1 billion authorized over 10 years…and we see an increasing trend towards awarding farmers for their stewardship and conservation for future farm bills.
- 4 counties in NC have stepped forward and provided their own funding. CWMTF and DOT funding have been used in some cases.
- Most successful programs are those which link federal, state, and local programs and incentives.
- We need a steady and significant state fund to do our part in these partnerships.

American Farmland Trust

From the Field: Vermont PDR Study

- More than 70% of farmers used the proceeds to improve or expand their farms.
- 79% felt the changes made were important to the profitability of the operation.
- 84% cited the program as an important reason they could make these management and operational changes.
- 73% of farmers surveyed feel that the program has positively affected their ability to stay in farming.
- 67% of participants feel the program will enable them to pass the farm to the next generation in the family.

FACT SHEET

STATUS OF STATE PACE PROGRAMS

DESCRIPTION

As of July 2002, at least 24 states had authorized state-level Purchase of Agricultural Conservation Easement (PACE) programs. This table displays the status and summarizes important information about farm and ranch land protection programs in 19 states that had acquired funding and easements as of January 2002.

EXPLANATION OF COLUMN HEADINGS

Year of Inception/Year of First Acquisition

"Year of Inception" is the year the law creating the PACE program was approved. "Year of First Acquisition" is the year the program acquired its first easement.

Easements/Restrictions Acquired

Number of agricultural conservation easements or conservation restrictions acquired through the state program. This number does not necessarily reflect the total number of farms/ranches protected, as some programs acquire a property in stages and may hold multiple easements on the same farm/ranch. Some state programs do not hold easements but instead provide funds for easement purchase to local governments or land trusts.

Acres Protected

Number of acres protected by the program to date.

Program Funds Spent to Date

Dollars spent by each program to acquire easements on farms/ranches. Amounts may include unspent funds that are encumbered for installment payments on completed projects. Unless otherwise noted, this figure does not include either incidental land acquisition costs, such as appraisals, insurance and recording fees, or the administrative cost of running the program. These figures may not reflect the total cost of acquiring easements, as some state PACE programs receive matching funds from local governments, as well as contributions from local land trusts and donations from landowners.

Local Contributions to Date

Funds contributed by local governments (e.g., counties) toward state program acquisitions.

Funds Spent Per Capita

The amount spent on farmland protection per person based on state population figures for 2001 from the U.S. Bureau of the Census.

Funds Available

Program funds available for the current fiscal year to acquire easements on agricultural land.

Funds Available Per Capita

Program funds available per person based on state population figures for 2001 from the U.S. Bureau of the Census.

Outstanding Applications

Backlog of applications reported by program administrators.

Funding Sources

Sources of funding for each program. This list does not include contributions from local governments and land trusts or donations from landowners. "Transportation funding" refers to federal money disbursed under the Intermodal Surface Transportation Efficiency Act of 1991 and the Transportation Equity Act for the 21st Century (ISTEA and TEA-21). ISTEA provided funding for a broad range of highway and transit programs, including "transportation enhancements."Easement acquisitions that protect scenic views and historic sites along transportation routes are eligible for this program. TEA-21 was adopted in May of 1998, re-authorizing federal transportation spending through fiscal 2003. "FPP" is the federal Farmland Protection Program established in 1996 and re-authorized in the 2002 Farm Bill to provide matching funds to state, local, tribal and land trust agricultural easement acquisition programs. In addition to these sources of funding, several state programs reported financial contributions from private individuals or foundations.

STATUS OF STATE PACE PROGRAMS

NOTES

❖ The Montana Agricultural Heritage program is scheduled to sunset in 2003. The New Hampshire Land Conservation Investment Program was terminated in 1993.

~ Figures are from 2001 or earlier data.

^ "Program Funds Spent to Date" includes incidental land acquisition costs and/or personnel costs. North Carolina program spending only covers transaction costs and future monitoring costs, net landowner compensation.

** "Local Contributions to Date" includes contributions from land trusts and private citizens.

For a summary of local activity refer to the "Status of Local PACE Programs" fact sheet.

December 29, 2003

MEMORANDUM

To: The Honorable Marc Basnight, Co-Chairman

The Honorable Jim Black, Co-Chairman

The Honorable Richard Morgan, Co-Chairman

Joint Legislative Commission on Government Operations

The Honorable Charlie Albertson, Co-Chairman

The Honorable Dan Clodfelter, Co-Chairman

The Honorable Pryor Gibson, Co-Chairman

The Honorable Danny McComas, Co-Chairman

Environmental Review Commission

The Honorable David Weinstein, Co-Chairman

The Honorable Stan Fox, Co-Chairman

The Honorable Roger West, Co-Chairman

Joint Appropriations Subcommittee on Appropriations for Natural and Economic Resources

Mr. Jim Johnson, Director, Fiscal Research Division

Ms. Jennifer Haygood, Fiscal Research Division

From: Robert Howard, Chairman, Board of Trustees

Bill Holman, Executive Director

Re: Clean Water Management Trust Fund's 2003 Annual Report

Introduction

We are writing on behalf of the Board of Trustees and staff of the Clean Water Management Trust Fund (CWMTF) to thank the members of the General Assembly of North Carolina for your continuing strong support for investments in clean water and to make our annual report to the General Assembly and the public pursuant to GS 113-145.6A.

GS 143-15(a) requires that the General Assembly appropriate a minimum of $100,000,000 to CWMTF each year. The 2003 General Assembly made many difficult budget decisions and cut many programs, including CWMTF.

HB 397, Current Operations and Capital Improvements Act of 2003, appropriated $62,000,000 to CWMTF in each year of the biennium. This is a cut of $38,000,000 or 38% from CWMTF. Thanks to the appropriation of $62,000,000 from the General Assembly to CWMTF in fiscal year 2003-2004 North Carolina continued to make progress in protecting and restoring water quality in calendar year 2003. As we face another challenging budget in 2004, the future of our state's environmental and economic health depends on your continued support and interest.

Background

The General Assembly for many years has advocated non-regulatory, incentive-based programs to complement North Carolina's environmental regulatory and educational programs and to ensure both a strong economy and healthy environment.

The 1996 General Assembly created the Clean Water Management Trust Fund (CWMTF) (GS 113-145) "to clean up pollution in the state's surface waters and to protect and conserve those waters that are not yet polluted." The CWMTF "shall be used to help finance projects that specifically address water pollution problems and focus on upgrading surface waters, eliminating pollution, and protecting and conserving unpolluted surface waters, including urban drinking water supplies" and "to build a network of riparian buffers and greenways for environmental, educational, and recreational benefit.

The CWMTF is an independent agency housed for administrative purposes in the Department of Environment and Natural Resources (DENR.) A twenty-one-member board of trustees establishes criteria, allocates funds, reviews applications, approves grants, and hires the executive director. Seven members are appointed by the Governor; seven, by the General Assembly upon the recommendation of the President Pro Tempore of the Senate; and seven, by the General Assembly upon the recommendation of the Speaker of the House. An advisory council composed of the Commissioner of Agriculture, Chair of the Wildlife Resources Commission, Secretary of DENR, and Secretary of Commerce or their designees advises the board of trustees.

Local governments or other political subdivision of the state, state agencies, and nonprofit conservation organizations, such as land trusts, may apply for grants. Deadlines for applications are June 1 and December 1 of each year.

The board of trustees typically meets 10 times per year - six times across the state and four times in Raleigh. In 2003, the board met in Greenville, Gastonia, Fayetteville, Cullowhee, Eden, Jacksonville, and Raleigh. In 2004, the board plans to meet in Moore County, Currituck County, Caldwell County, Morganton, Kinston, Greensboro, and Raleigh.

Moneys from CWMTF may be used to acquire conservation easements or land in fee simple to preserve riparian buffers, wetlands, floodplains, and greenways; to restore riparian buffers, streams, and wetlands; to repair failing wastewater collection and treatment systems; to eliminate failing septic tanks and straight pipes; to collect and treat stormwater pollution; to plan water quality projects; and for administration and staff. The board works through three principal committees: acquisitions, infrastructure/wastewater, and restoration/stormwater.

CWMTF applications forms for grants, grant evaluation guidelines, enabling legislation, lists of the board of trustees, staff directory, news releases, and other reports and documents are available at www.cwmtf.net.

The executive director, deputy director, senior scientist, administrative officer, public information officer, and executive assistant are based in the central office in Raleigh. Five field representatives cover the coast, piedmont and mountain regions of the state. A part-time water quality advisor is home based.

Progress & Challenges

The extreme drought and **water quantity** were the water issues of 2002. Heavy rain and Hurricane Isabel in 2003 made flooding, stormwater pollution, and **water quality** the water issues of 2003.

In its North Carolina 20/20 report, the state's Progress Board laid out a series of performance targets to improve environmental quality by the year 2020. Those

targets included increasing the percentage of water bodies fully supporting their uses, ensuring that 100 percent of all North Carolinians have access to clean and safe drinking water, protecting and permanently preserving one million acres by 2010, and improving water quality to ensure the continued viability of the state's fisheries.

In its biennial 303(d) report to the US Environmental Protection Agency the DENR/Division of Water Quality estimates that 3485 miles of streams in North Carolina are impaired, not meeting their designated uses, or are polluted.

In almost all the areas cited by the North Carolina 20/20 report, CWMTF grants are playing a role in reaching those performance targets. Here are some examples:

- The CWMTF and its partners have helped protect 2,908 miles of riparian buffers and preserve 237,366 acres of land, thereby ensuring streams, rivers and lakes can continue or will be able to support their uses.
- CWMTF is helping the State achieve its goal of preserving a million acres of open space, as set out in GS 113A-240, and is helping Governor Easley implement his One North Carolina Naturally initiative.
- CWMTF grants have been used to develop watershed protection plans and to purchase buffers surrounding drinking water supplies.
- The CWMTF has funded 79 riparian buffer, stream and wetland restoration projects totaling over $48.2 million to help maintain and preserve these important water quality filtering systems.
- CWMTF acquisition and restoration grants have been used to protect shellfishing waters, to help restore waters in areas closed to shellfishing, to restore oyster reefs and other fisheries habitat, and to provide public access to public waters.
- The CWMTF has assisted local governments with 99 wastewater improvement projects, investing over $77.2 million to reduce discharges and more effectively treat wastewater so that fewer nutrients and other pollutants enter our rivers.
- CWMTF grants have funded 36 stormwater management projects totaling $29.8 million to reduce pollution from urban runoff and decrease flooding.

Since 1996 the board of trustees has approved 512 grants for a total of $405.1 million. CWMTF grants have leveraged at least $643.3 million or 61% in private and other public funds.

The CWMTF continues to be an important tool in helping local governments protect their water resources. Since 1996, $168.9 million – over forty percent of the $405.1 million in CWMTF grants has gone to cities, counties and other local government agencies to finance local solutions to water quality problems.

All of these efforts are just as important to North Carolina's economic well-being as they are to the health and safety of its citizens and the environment. They enhance both the recreational and commercial fishing industries, strengthen North Carolina's travel and tourism industry, and help maintain North Carolina's high quality of life.

As the Progress Board asserts in its report, "...states can and do have strong economies and simultaneously protect the environment. In fact, the states with the strongest environmental records also claim the distinction of having the best job opportunities and climate for long term economic development."

2003 Highlights

The CWMTF Board of Trustees and staff reviewed 70 applications requesting over $103 million in the spring of 2003 (2002B Cycle) and 101 applications requesting over $174 million in the fall of 2003 (2003A Cycle) for a total of 171 applications requesting over $277 million in 2003.

Thanks to appropriations from the General Assembly and to the closing out of old grants the Board of Trustees of CWMTF approved 88 water quality grants totaling $72,133,700 and 17 mini-grants totaling $385,400 or a grand total of 105 grants for $72,519,100 in calendar year 2003. The total invested in CWMTF-funded water quality projects, including CWMTF and other public and private funds was $220,766,370 in calendar year 2003. A list of the projects is attached to this report.

Protection of the 4468-acre **Needmore tract on the Little Tennessee River in Swain and Macon Counties** has been a high priority of the NC Wildlife Resources Commission and The Nature Conservancy for many years. CWMTF provided $6.6 million to assist in the purchase. The Ecosystem Enhancement Program, Natural Heritage Trust Fund, US Fish and Wildlife Service, and private funds provided the balance of the funds needed. Protecting Needmore will conserve 26 miles of the Little Tennessee River and 37 miles of tributary streams. It also helps conserve 57 species of fish, dozens of Cherokee and historic sites, and the largest cluster of mountain floodplain forests remaining the Southern Appalachians.

CWMTF, Natural Heritage Trust Fund, The Nature Conservancy, Wildlife Resources Commission and US Navy partnered to acquire **the 2500-acre Beck tract in Onslow County** for the state's gamelands program. CWMTF provided $2,146,000. Acquisition of the Beck tract protects Stones Creek and the New River. It will also prevent encroachment on Camp Lejeune.

CWMTF continues to work with municipalities and counties on a variety of projects to protect and restore water quality. The **Town of Troy** replaced chlorination of its wastewater with ultraviolet radiation treatment in 2003 with help from CWMTF. Troy and CWMTF are working to prevent and reduce pollution of Densons Creek by improving wastewater treatment and by acquiring riparian buffers and greenways along the creek. CWMTF has funded four phases of greenway acquisition. The Ecosystem Enhancement Program (EEP) may fund Phase 5 in 2004.

The **City of Greensboro** with assistance from CWMTF acquired a key property for its stormwater treatment project on South Buffalo Creek. CWMTF has provided $1,370,000 to Greensboro to acquire property and to construct its stormwater project.

Mecklenburg County and CWMTF continue our efforts to clean up Sugar Creek and other streams in Charlotte. Mecklenburg County dedicated a constructed wetland at the Bruns Avenue School on April 25, 2003. CWMTF has provided $3.9 million to help Mecklenburg County and Charlotte restore urban streams.

Bessemer City has decommissioned its wastewater treatment plant, connected to Gastonia's wastewater system, and reduced infiltration and inflow in its sewer system with $2,000,000 million grant from CWMTF. Regional wastewater systems generally collect and treat pollution to higher standards at lower costs.

Working with the Southern Appalachian Highlands Conservancy CWMTF acquired a conservation easement on the **Town of Canton's pristine 870-acre Rough Creek Watershed** with a $689,000 grant. SAHC raised $429,000 in private funds. Canton reinvested the funds to improve its drinking water system and its parks system.

The NC Coastal Land Trust (NCCCLT) acquired 911 acres from International Paper (IP) in November to continue its efforts to protect **Town Creek in Brunswick County**. CWMTF provided $2 million. NCCLT will transfer the property to Brunswick County for a local park. NCCLT, IP, and CWMTF have protected more than 10,000 acres along Town Creek since 1997.

Working with The Conservation Fund CWMTF, EEP, NHTF provided funding to acquire part of the **headwaters of the Yadkin River**, the 5621-acre Mingo tract in Caldwell and Wilkes Counties. The Wildlife Resources Commission will manage the property as gamelands.

Conservation Reserve Enhancement Program (CREP)

CWMTF has provided state funds to match over $200 million in US Department of Agriculture funds for the Conservation Reserve Enhancement Program (CREP). CWMTF provided a grant of $5.4 million to the DENR/Division of Soil and Water Conservation (DSWC) in 1998 for the first phase of CREP. CWMTF provided a second grant of $4.2 million to DSWC in 2003 for Phase 2 of CREP.

CWMTF and DSWC have worked together to increase the incentives offered to farmers who sign up for permanent conservation easements. CWMTF has approved expansion of CREP into the Pasquotank, Roanoke, White Oak, and lower Cape Fear Rivers. The Chowan, Tar-Pamlico, Neuse, and upper Cape Fear Rivers were already covered.

The Soil and Water Conservation Commission will have to amend its rules in 2004 to incorporate the new incentives for farmers.

CWMTF has urged DSWC to increase processing of conservation easements and to reduce the backlog of enrollments in 2004. DSWC will report to the Board of CWMTF in April 2004 on its progress. DSWC will probably request additional funding from CWMTF in June 2004. CWMTF supports providing the state matching funds to continue CREP in NC – if DSWC improves administration of the program. If DSWC does not improve administration, CWMTF may not provide Phase 3 funding for CREP.

CWMTF is working with DSWC, local soil and water conservation districts, the US Natural Resources Conservation Service, and others to leverage other federal Farm Bill conservation programs, such as the wetlands reserve program (WRP) and the environmental quality incentives program (EQIP).

Ecosystem Enhancement Program (EEP)

The NC Departments of Environment and Natural Resources and Transportation and the US Army Corps of Engineers established the Ecosystem Enhancement Program (EEP) in 2002 to improve coordination and the quality of stream and wetland mitigation projects.

CWMTF and EEP coordinate their efforts. CWMTF refers all acquisition and restoration applications to EEP for review and potential funding. As of December 1, 2003 the Board of Transportation had approved full or partial funding of at least 12 CWMTF projects valued at over $37 million.

CWMTF will share its expertise and experience in working with local governments and land trusts on contracts and conservation easements with EEP. CWMTF believes that CWMTF, EEP, and the public will benefit from consistent policies on contracts and conservation easements.

DuPont State Forest Settlement

In 2000 CWMTF provided $12.5 million to DENR/Division of Forest Resources (CWMTF Project #1999A-005) to acquire a critical 2,200-acre inholding in DuPont State Forest in Transylvania and Henderson Counties. Unfortunately the State could not reach an agreement with the property owner, and the Council of State authorized condemnation of the property in October 2000.

The property owner and the State settled on the value of the property in August 2003. The Office of State Budget and Management (OSBM) transferred $12.0 million from CWMTF to pay for the settlement. The Board of Trustees of CWMTF did not approve the transfer. OSBM committed to try to reimburse CWMTF $8.0 million with $4.0 million coming from DENR and $4.0 million coming from Department of Transportation wetland and stream mitigation funds. As of December 29, 2003 CWMTF had not received any reimbursement for the DuPont State Forest settlement.

Base Realignment and Closure (BRAC)

The US Department of Defense will consider realignment and closure of military bases in 2005. The Department of Defense, the State of North Carolina, and many local governments are working together to prevent and reduce encroachment on military bases by acquiring conservation easements and land in fee simple and by regulating land uses.

In 2003 CWMTF, Natural Heritage Trust Fund, The Nature Conservancy, and the US Navy worked with the Wildlife Resources Commission to acquire the Beck tract (CWMTF Project # 2001B-036) in Onslow County to help protect Camp Lejeune.

The Wildlife Resources Commission applied to CWMTF for additional funds to protect water quality and Camp Lejeune in December. Goldsboro and Wayne County also applied to CWMTF for funds to acquire floodplain and converted wetlands near Seymour Johnson Air Force Base. With assistance from CWMTF the Sandhills Area Land Trust is conducting a riparian corridor conservation study on the Little River – the northern boundary of Fort Bragg.

CWMTF and the other conservation trust funds can assist the State and the military in protecting both the environment and the training mission of our bases.

Stormwater Problems and Phase II Rules

CWMTF is one of the few sources of funds local governments can seek to reduce stormwater pollution and flooding and to comply with EPA and state Phase II stormwater rules. Thirty-three counties and 123 municipalites are covered by EPA and State Phase I and Phase II Stormwater rules. CWMTF has funded 36 local stormwater projects totaling $28.9 million.

2003 Legislative Action

The 2003 General Assembly demonstrated that protecting and restoring water quality remains a high priority of the State. HB 397, Current Operations and Capital Improvements Act of 2003, appropriated $62,000,000 to CWMTF in fiscal year 2002-2003 and $62,000,000 to CWMTF in fiscal year 2004-2005. The Office of State Budget and Management is withholding 2.0% of CWMTF's 2003-2004 appropriation or $1,240,000.

Section 11.7 of HB 387 directed the Property Tax Subcommittee of the Revenue Laws Study Committee to study the positive and negative impacts of conservation land acquisition on local government ad valorem tax revenues. The subcommittee had not considered this issue as of December 1, 2003.

Section 11.8(b) of HB 397 authorized CWMTF for fiscal year 2003-2004 to spend up to $4,100,000 to match federal, State, local, and private farmland preservation and forestland preservation funds and to acquire permanent conservation easements on working farms and forests. CWMTF has participated in some federal farmland preservation and forest legacy projects in calendar year 2003.

Section 6.8 of HB 397 directed the NC Department of Administration, in consultation with other agencies, to develop and implement a State-owned surplus real property disposal system. CWMTF recommends that surplus properties with high conservation values be allocated to conservation agencies such as the Division of Parks & Recreation and Wildlife Resources Commission. CWMTF also recommends that the State place permanent conservation easements on 100-year floodplains, riparian buffers, and wetlands before selling surplus properties.

Section 6.21 of HB 397 strengthened reporting requirements for non-state entities that receive state funds. CWMTF has amended its contracts to require non-state entities to comply with GS 143-6.1.

Section 6.23(a) of HB 397 authorized the Office of State Budget and Management to transfer up to twenty percent of the balance of any special fund other than CWMTF, NHTF, and PARTF to the Reserve for Special Funds Transfer. If OSBM determines that transfers from other special funds are insufficient, then it may transfer funds from CWMTF, NHTF, and PARTF. As of December 19, 2003 OSBM had not transferred any funds from CWMTF for this purpose.

The 2003 General Assembly also continued its strong support for CWMTF partners, the Parks and Recreation Trust Fund (PARTF) and Natural Heritage Trust Fund (NHTF). HB 855, Special (Vehicle) Registration Plates, by Representative Martha Alexander and others, increased the fee for personalized license plates by $10 and dedicated half of the increase to the Parks and Recreation Trust Fund and half of the Natural Heritage Trust Fund. The General Assembly established the new Mayo River State Park (HB 1078) in Rockingham County and Haw River State Park (HB 1025) in Guilford and Rockingham Counties. The Division of Parks & Recreation will probably apply to CWMTF in the future to help acquire land for these two new state parks.

The CWMTF Board of Trustees supported SB 831, Stagger CWMTF Appointments, by Senator Charlie Albertson, to restructure the terms of board members to increase continuity in the decision-making process. Under the existing law the terms of two-thirds of the board expired on December 31, 2002. SB 831 also added three appointments to the board. Governor Easley signed SB 831 on August 14, 2003.

HB 738, Expand CWMTF Purpose, by Representative Paul Miller and others, and SB 551, Expand CWMTF Purpose, by Senator Jeanne Lucas and others, were referred to the House Committee on Environment and the Senate Committee on Appropriations/Base Budget, respectively, and were not acted upon.

The Year Ahead

The CWMTF board and staff will review 83 applications requesting $151.8 million this spring (2004A Cycle). CWMTF will also receive applications on June 1, 2004 and review them in the fall (2004B Cycle). Specific grant requests submitted on December 1, 2003 for the spring 2004 cycle include:

- A request for $1.7 million from the City of Goldsboro and Wayne County to help protect Stoney Creek, a tributary of the Neuse River, and to prevent encroachment on Seymour Johnson Air Force Base;
- A request for $891,150 from DENR/Division of Forest Resources to help protect Mountain Island Lake and to expand the Mountain Island Lake Educational State Forest in Gaston and Lincoln Counties;
- A request for $3.2 million from the Southern Appalachian Highlands Conservancy to help protect water quality in Reems Creek, a tributary of the French Broad River in Buncombe County;
- A request for $7.6 million from the Town of Spring Lake in Cumberland County to eliminate failing septic tanks and reduce pollution of the Little River, a major tributary of the Cape Fear River; and
- A request for $7.7 million from DENR/Division of Soil & Water Conservation to implement phase three of the swine lagoon buyout program in the 100-year floodplain.

CWMTF may centralize water quality monitoring of its restoration and stormwater projects to improve quality and reduce costs in 2004. CWMTF is reviewing its policies regarding stewardship and long-term management of properties that are acquired with CWMTF funds. CWMTF is also reviewing the criteria by which it evaluates projects.

CWMTF hopes to develop consistent contracts, conservation easements, monitoring requirements, and stewardship policies with EEP.

Planning, design, permitting, bidding, and construction of wastewater, stormwater, and restoration projects take many years. CWMTF in 2003 began to start funding the design and permitting phase of projects to ensure that water quality objectives are being met, to develop more accurate estimates of cost, and to manage its cash balance. CMWTF has also reduced the average time to implement acquisition projects from 36 months to 12-18 months. CWMTF will continue to work to manage its cash balance in 2004.

2004 Legislative Issues

State law requires an appropriation of $100 million to CWMTF in 2005-2006 and future years. CWMTF will work with the General Assembly this year to secure appropriations to continue North Carolina's progress in protecting and restoring water quality.

CWMTF supports the work of its partners: the Conservation Income Tax Program, Natural Heritage Trust Fund, Parks and Recreation Trust Fund, Farmland Preservation Trust Fund, and the new Ecosystem Enhancement Program.

The 2003 General Assembly considered SB 683, State Capital Facilities Financing, by Senators John Kerr and David Hoyle, and HB 1227, Finance Parks and Natural Heritage, by Representative Gordon Allen and others. Many provisions of SB 683 and HB 1227 were incorporated into the budget bill, HB 397. CWMTF is interested in certificates of participation financing for natural heritage, parks, clean water, and other purposes.

Tier I and Tier II counties are concerned that acquisition of land in fee simple by the Wildlife Resources Commission, Division of Parks & Recreation, and other agencies for conservation purposes is reducing their property tax base. CWMTF has encouraged the sellers and buyers of conservation properties in Tier I and Tier II counties where thirty percent or more of the land is in fee simple conservation ownership to provide a one-time payment worth ten times the ad valorem taxes of the property to the county. CWMTF respectfully recommends that the 2004 General Assembly consider legislation to enable CWMTF to provide some Tier I and Tier II counties with a one-time payment to compensate them for the loss of property tax revenues.

The 2002 General Assembly enacted SB 1161, Present Use Taxation Amendments, by Senator Fletcher Hartsell. SB 1161 clarified that farm or forestland taxed at present use would remain taxed at present use after a conservation easement was donated or acquired. CWMTF funds acquisition of many conservation easements. SB 1161 also directed that the Property Tax Subcommittee of the Revenue Laws Study Committee address other issues associated with property taxes and conservation easements. As of December 29, 2003 the Property Tax Subcommittee had not considered these issues.

CWMTF is available to assist the Governor and General Assembly in their efforts to prevent inappropriate development in floodplains and to mitigate flood hazards.

CWMTF is available to provide technical assistance to members of the General Assembly in the development of an incentive-based air quality program such as the Clean Air Trust Fund, proposed in SB 981 by Senators Steve Metcalf and Joe Sam Queen and HB 866 by Representative Phil Haire and others.

Please contact me if you need more information.

Listing of CWMTF Projects Funded During Calendar Year 2003
(Listed by Cycle and In Alphabetical Order)

2002B Projects Funded by Board Action, July, 2003 (received Dec 1, 2002)

Project Number	Application Name	Amount Requested	Board Funded	Total Project Cost
2002B-001	Blue Ridge Rural Land Trust - Acq./Brushy Mts., Moravian Cr	$276,000	$276,000	$2,976,000
2002B-003	Blue Ridge Rural Land Trust - Acq./French Broad Tracts	$127,200	$100,000	$1,507,200
2002A-001	Bryson City, Town of - Acq/ Lands Creek	$1,232,166	$1,531,000	$1,964,066
2002B-401	Buncombe SWC District - Restoration/Newfound Cr.	$450,000	$415,000	$616,200
2002B-004	Catawba Lands Conservancy - Acq./Anderholt Tract, S. Fork Catawba R.	$346,000	$343,000	$350,000
2002B-005	Catawba Lands Conservancy - Acq./Wilson Farm, S. Fork Catawba R.	$247,700	$245,000	$972,300
2002B-006	Charlotte, City of - Acq./Mt. Island Lake, Gar Cr.	$500,000	$250,000	$1,000,000
2002B-603	Dover, Town of - Wastewater Regionalization/Mosely Cr	$333,000	$333,000	$3,338,000
2002B-007	Foothills Conservancy - Acq./Adams Tract, Left Prong Catawba R.	$719,500	$821,000	$1,581,500
2002B-008	Granite Falls, Town of - Acq./Lake Rhodhiss	$889,555	$890,000	$1,805,000
2002B-501	Greater Badin Water & Sewer District - Sewer System Rehabilitation/Little Mt. Cr.	$1,958,000	$1,677,000	$1,786,438
2002B-604	LaGrange, Town of - Septic Systems/Mosely Cr.	$400,000	$400,000	$452,000
2002B-703	Mecklenburg Co. - Stormwater/Little Sugar Cr., Belmont Branch	$1,450,000	$1,200,000	$3,262,000
2002B-402	Mecklenburg County - Restoration/Little Sugar Cr. Greenway Trail	$400,000	$400,000	$2,000,000
2002B-403	Middle Fork Greenway Assoc. - Restoration/S. Fork New R. Greenway	$60,560	$61,000	$3,911,060
2002A-707	Mount Airy - Stormwater/ Lovills Creek	$440,000	$81,000	$857,500
2002B-009	National Committee for the New River - Acq./Blackburn Tract, Todd S. Fork Greenway	$152,350	$147,700	$173,250
2002B-011	NC Coastal Federation - Acq./Stump Sound	$971,540	$972,000	$1,011,540
2002B-012	NC Coastal Land trust - Acq./IP Realty, Town Cr.	$2,094,700	$2,095,000	$2,869,050
2002B-013	NC Coastal Land Trust - Acq./Pettiford Cr II	$2,779,000	$603,000	$4,685,000
2001B-028	NC Coastal Land Trust-Weyerhaeuser Tracts	$1,375,358	$1,376,000	$3,324,150
2002B-015	NC Parks and Recreation - Acq./Eno R. State Park	$2,318,400	$47,000	$7,025,607
2002B-405	NC Parks and Recreation - Restoration/Stone Mt. State Park, Big Sandy Cr.	$425,000	$290,000	$1,239,800
2002B-016	NC Wildlife Resources Commission - Acq./Needmore Tract	$13,338,456	$6,660,000	$17,550,600
2002B-017	NC Wildlife Resources Commission - Acq./Risky Business, Roanoke Sound	$375,000	$375,000	$375,000

2001B-033	NC Wildlife Resources Commission - Chowan River Tracts	$3,308,000	$3,000,000	$3,933,000
2002A-026	Piedmont Land Conservancy - Acq/ Upper Mitchell R. Winebarger Tract	$3,397,221	$1,408,000	$3,438,098
2002B-803	Piedmont Land Conservancy - Planning/Upper Dan R.	$173,235	$160,000	$211,735
2002B-804	Pilot View RC&D - Planning/Upper Yadkin Sediment	$294,800	$295,000	$422,500
2002B-406	Pilot View RC&D - Restoration/Tom's Cr.	$191,250	$192,000	$689,250
2002B-407	Pilot View RC&D - Restoration/Yadkin Farmland Project	$961,000	$314,000	$1,796,600
2002A-404	Pilot View RC&D. - Stream Restoration & Stormwater/ Koerner Place Cr.	$238,000	$175,000	$313,000
2002B-018	Pitt SWC District - Acq./Little Contentnea	$25,000	$25,000	$67,750
2002B-606	Powellsville, Town of - Waste Treatment Facility Construction/Ahoskie Cr.	$474,800	$475,000	$3,479,800
2002A-708	Raeford, City of - Stormwater Wetland/ Peddler's Branch Construction	$390,885	$296,000	$390,885
2002B-021	Troy, Town of - Acq./Denson's Cr. Phase IV	$271,500	$272,000	$271,500
2002B-608	Tyrell Co. Water & Sewer District 1 - Septic Systems/Scuppernong II	$1,096,626	$979,000	$3,204,472
2002B-609	Tyrell Co. Water & Sewer District 2 - Septic Systems/Scuppernong II	$274,717	$225,000	$2,747,169
2002B-704	UNC Ashville - Stormwater/French Broad R.	$69,200	$70,000	$112,370
2002A-406	Wake Forest - Stream Restoration/ Richlands Cr. Restoration & Greenway	$2,734,739	$240,000	$1,865,798
2002B-408	Watauga SWC District - Restoration/Agricultural BMPs	$37,500	$38,000	$50,000
2002B-805	Westerm Carolina University - Planning/Stream Restoration BMP Evaluation	$166,430	$167,000	$220,960
	2002B Totals	**$47,764,388**	**$29,919,700**	**$89,848,148**

2003A Projects Funded by Board Action, November 18, 2003 (received June 1, 2003)

Project Number	Application Name	Amount Requested	Board Funded	Total Project Cost
2003A-601	Bay River Metropolitan Sewer District- Septic Tanks/ Reelsboro, Goose & Broad creeks	$3,000,000	$136,000	$3,010,725
2002B-601	Beaufort Co. Water District V - Septic Systems/Pantego Cr.	$350,000	$350,000	$3,350,000
2003A-801	Biscoe, Town of- Plan./ Regional Wastewater Feasability, Cedar Cr.	$36,000	$36,000	$40,000
2003A-502	Bridgeton, Town of- Wastewater/ Neuse Non-discharge	$773,475	$116,000	$874,905
2003A-701	Carteret Community College- Storm./ Bogue Sound Constructed Wetland	$420,000	$420,000	$785,364
2003A-008	Catwaba Lands Conservancy- Acq./ Rollins & Banker Tracts, South Fork River	$359,975	$286,000	$374,000
2003A-503	Clarkton, Town of- Wastewater/ Brown Marsh Swamp	$3,000,000	$185,000	$3,000,000
2002A-005	Conservation Fund - Acq/ Scott Creek	$4,057,000	$4,057,000	$7,699,000

2003A-010	Conservation Fund- Acq./ Goshen Swamp & Grove Creek	$98,400	$55,000	$188,900
2003A-804	Conservation Trust for NC- Plan./ Riparian Corridors, Multi-Basin	$595,000	$625,000	$620,000
2003A-506	Farmville, Town of- Wastewater/ Little Contentnea Creek	$1,963,500	$119,000	$2,310,000
2002B-702	Fayetteville, City of - Stormwater/Little Cross Cr.	$2,102,578	$766,000	$3,051,275
2003A-012	Foothills Conservancy of NC- Acq./ Blue Ridge Parkway, Linville River	$327,800	$328,000	$428,800
2003A-015	High Country Conservancy- Acq./ Valle Crucis, Craborchard Creek	$705,740	$706,000	$1,213,990
2003A-703	Kinston, City of- Storm./Country Club, Catfish Branch	$249,645	$25,000	$249,645
2003A-510	Maxton, Town of- Wastewater/ Shoe Heel Creek	$2,349,700	$154,000	$2,349,700
2003A-705	Mecklenburg County- Storm/ Mt. Island Lake, McDowell Creek	$1,500,000	$200,000	$3,000,000
2003A-706	Mecklenburg Soil & Water Conservation District- Storm./ Briar Creek	$30,000	$30,000	$60,000
2003A-017	National Committee for the New River- Acq./ Wagner Tract,Todd South Fork Greenway	$81,050	$82,000	$87,050
2003A-019	Nature Conservancy, The- Acq./ Corbett Tract, NE Cape Fear	$670,177	$671,000	$670,177
2003A-023	NC Coastal Land Trust- Acq./ Humphrey Tract, Shaken Creek	$365,445	$366,000	$650,045
2003A-024	NC Coastal Land Trust- Acq./ McKeithan Tract, NE Cape Fear	$991,820	$992,000	$2,105,820
2003A-026	NC Coastal Land Trust- Acq./ Weyerhaeuser Tract, Nevill's Creek	$1,066,700	$489,000	$489,000
2003A-807	NC Coastal Management- Plan./ Pivers Island Stormwater Management	$45,500	$40,000	$80,769
2002B-404	NC Cooperative Extension Service - Restoration/Buffalo Cr.	$396,900	$71,000	$793,800
2003A-027	NC Forest Resources- Acq./ Clemmons Forest, Strickland Creek	$1,771,285	$1,772,000	$3,542,570
2003A-403	NC Marine Fisheries- Rest./ Oyster Sanctuaries, Pamlico Sound	$699,375	$140,000	$773,260
2003A-029	NC Parks & Recreation- Acq./ Pettigrew State Park, Scuppernong River	$889,500	$890,000	$1,224,500
2002A-305	NC Soil & Water Conservation - CREP	$5,338,027	$4,200,000	$29,221,100
2003A-604	NC State University- Septic Tanks/ Sertoma 4-H Center, Vade Mecum Creek	$231,465	$232,000	$316,555
2003A-031	NC Wildlife Commission- Acq./ Davis Tract, Alligator River	$373,500	$374,000	$373,500
2003A-030	NC Wildlife Resources Commission- Acq./ Bolin Knob Tract, Silver Creek	$235,422	$236,000	$948,022
2003A-035	NC Wildlife Resources Commission- Acq./ Mingo Tribal Tract, Joes Creek	$13,401,300	$13,500,000	$22,000,000
2003A-511	Pembroke, Town of- Wastewater/ Lumber River	$2,130,000	$114,000	$2,150,000

2003A-404	Pilot View RC&D, Inc.- Rest./ Upper Linville River	$1,882,500	$257,000	$2,132,500
2003A-512	Ramseur, Town of- Wastewater/ Deep River Collection Rehabilitation	$399,750	$278,000	$479,750
2003A-808	Resource Institute, Inc.- Plan./ Hitchcock Creek	$214,102	$215,000	$647,756
2003A-038	Sandyfield, Town of- Acq./ Beaverdam Creek Wetlands	$308,500	$161,000	$308,500
2003A-708	Smithfield, Town of- Storm./ Spring Branch Constructed Wetland	$660,000	$660,000	$906,360
2003A-039	Southern Appalachians Highlands Conservancy- Acq./ Flat Creek Watershed	$3,927,800	$3,928,000	$7,737,800
2003A-405	Southwestern NC RC&D, Inc.- Rest./ Pigeon River	$666,865	$207,000	$806,205
2003A-040	Trangle Land Conservancy- Acq./ Regional Park, Marks Creek	$1,775,335	$1,776,000	$3,550,670
2003A-606	Trent Woods, Town of- Septic Tanks/ Trent River	$3,200,000	$524,000	$7,690,000
2003A-513	Troy, Town of- Wastewater/ Densons Creek Reuse	$1,242,000	$55,000	$1,340,000
2003A-514	Tuckaseigee Water & Sewer Authority- Wastewater/ Dix Gap Creek Collection	$348,795	$353,000	$497,747
2003A-515	Wallace, Town of- Wastewater/ Rock Fish Creek Regionalization	$1,036,870	$1,037,000	$6,154,720
	2003A Totals	**$66,268,796**	**$42,214,000**	**$130,284,480**

Standard Minigrants Funded During Calendar Year 2003

Project Number	Application Name	Amount Requested	Board Funded	Total Project Cost
2002M-005	Blue Ridge Rural Land Trust Mini-Grant/ Waterfall Creek	$25,000	$25,000	$25,000
2003M-007	Foothills Conservancy of NC Minigrant - Catawba R	$25,000	$25,000	$25,000
2002M-007	Foothills Conservancy of North Carolina Mini-Grant/Catawba River (Withdrawn)	$25,000	$25,000	$25,000
2003M-004	Haw River Assembly - Minigrant: Alston Qtr., Saxapahaw	$25,000	$25,000	$25,000
2002M-006	New Hanover Soil & Water Conservation District Mini-Grant/Eagle Island	$25,000	$25,000	$25,000
2003M-003	Piedmont Land Conservancy Mini-Grant - Len's Knob	$25,000	$25,000	$25,000
2002M-004	Pitt County Comm. Schools and Rec Mini-Grant/ Swift Creek	$25,000	$25,000	$25,000
2003M-002	Sandhills Area Land Trust - Methodist College River Tract	$25,000	$25,000	$25,000
2003M-006	Town of Atlantic Beach Minigrant - Money Island	$25,000	$25,000	$25,000
	Standard Minigrant Total	**$225,000**	**$225,000**	**$225,000**

Donated Conservation Easement Minigrants Funded During Calendar Year 2003

Project Number	Application Name	Amount Requested	Board Funded	Total Project Cost
2003D-004	Blue Ridge Rural Land Trust - Donated Minigrant, Johnston Tract/ Cales and Bussels Creeks	$25,000	$25,000	$25,000
2003D-003	Blue Ridge Rural Land Trust - Donated Minigrant, Tate Farm/ Ripchin Creek	$25,000	$25,000	$25,000
2003D-002	Blue Ridge Rural Land Trust-Donated Minigrant, Ketchum Tract/ Piney Fork Creek	$25,000	$25,000	$25,000
2003D-001	Carolina Mountain Land Conservancy- Donated Minigrant, Linneman Tract/ Green River	$21,500	$22,000	$271,500
2003D-006	Catawba Lands Conservancy - Donated Minigrant, Colt Thornburg tract/ South Fork Catawba River and Coley Creek	$9,866	$10,000	$9,866
2003D-007	Catawba Lands Conservancy - Donated Minigrant, Friday Farm tract/ Hoyle Creek	$15,333	$16,000	$15,333
2003D-008	Catawba Lands Conservancy - Donated Minigrant, Oakwood Farm tract/ South Fork Catawba River	$24,643	$25,000	$24,643
2003D-005	Tar River Land Conservancy - Donation Minigrant, Brittain Tract/ Lynch Creek	$12,400	$12,400	$12,400
	Donated Conservation Easement Minigrant Total	**$158,742**	**$160,400**	**$408,742**

2003 Year Totals	Amount Requested	Board Funded	Total Project Cost
2002B	$47,764,388	$29,919,700	$89,848,148
2003A	$66,268,796	$42,214,000	$130,284,480
Subtotal Water Quality Projects	$114,033,184	$72,133,700	$220,132,628
Minigrants	$383,742	$385,400	$633,742
Grand Total for 2003	**$114,416,926**	**$72,519,100**	**$220,766,370**

Introdu

2003 provided a sharp contrast to the water resources issues that gripped North Carolina the year before. Heavy rains and Hurricane Isabel brought an end to the extreme drought that was the water issue of 2002. In its wake, the end of the drought left the state grappling once again with flooding, stormwater pollution and water quality as opposed to quantity in 2003.

North Carolina continued to feel the effects of a sluggish post 9/11 economy. The 2003 General Assembly was faced with once again making many difficult budget decisions and as in recent years, many state programs saw their funding cut, including the Clean Water Managment Trust Fund.

At the same time, local governments, along with state agencies and non-profit conservation groups turned to CWMTF as a much needed resource and partner in their efforts to deal with the water quality issues before them. CWMTF recorded a record grant cycle in 2003; on June 1, the agency received the largest number of applications in its seven year history requesting a record number of grant funds. Including deferred projects, CWMTF trustees reviewed a total of 101 grants requesting $174 million in the 2003A cycle.

Recognizing the importance of water quality to the health of the state's residents and its economy, the General Assembly through HB 397, Current Operations and Capital Improvements Act of 2003, appropriated $62,000,000 to CWMTF in each year of the biennium. As a result North Carolina continued to make progress in protecting and restoring water quality in calendar year 2003. As we face another challenging budget in 2004, the future of our state's environmental and economic health depends on continued support and interest.

Background

For many years, the North Carolina General Assembly has advocated non-regulatory, incentive-based programs to complement North Carolina's environmental regulatory and educational programs and to ensure both a strong economy and healthy environment.

In 1996, the General Assembly created the Clean Water Management Trust Fund (CWMTF) (GS 113-145) "to clean up pollution in the state's surface waters and to protect and conserve those waters that are not yet polluted."

The CWMTF "shall be used to help finance projects that specifically address water pollution problems and focus on upgrading surface waters, eliminating pollution, and protecting and conserving unpolluted surface waters, including urban drinking water supplies" and "to build a network of riparian buffers and greenways for environmental, educational, and recreational benefit."

The CWMTF is an independent agency housed for administrative purposes in the Department of Environment and Natural Resources (DENR.) A 21-member board of trustees establishes criteria, allocates funds, reviews applications, approves grants, and hires the executive director. Seven members are appointed by the Governor; seven by the General Assembly upon the recommendation of the President Pro Tempore of the Senate; and seven by the General Assembly upon the recommendation of the Speaker of the House. An advisory council composed of the Commissioner of Agriculture, Chair of the Wildlife Resources Commission, Secretary of DENR, and Secretary of Commerce or their designees advises the board of trustees.

Local governments or other political subdivisions of the state, state agencies, and nonprofit conservation organizations, such as land trusts, may apply for grants. Deadlines for applications are June 1 and December 1 of each year.

The board of trustees typically meets 10 times per year - six times across the state and four times in Raleigh. In 2003, the board met in Greenville, Gastonia, Fayetteville, Cullowhee, Eden, Jacksonville, and Raleigh. In 2004, the board plans to meet in Moore County, Currituck County, Caldwell County, Morganton, Kinston, Greensboro, and Raleigh.

Monies from CWMTF may be used to acquire conservation easements or land in fee simple to preserve riparian buffers, wetlands, floodplains, and greenways; to restore riparian buffers, streams, and wetlands; to repair failing wastewater collection and treatment systems; to eliminate failing septic tanks and straight pipes; to collect and treat stormwater pollution; to plan water quality projects; and for administration and staff. The board works through three principal committees: acquisitions, infrastructure/wastewater, and restoration/stormwater.

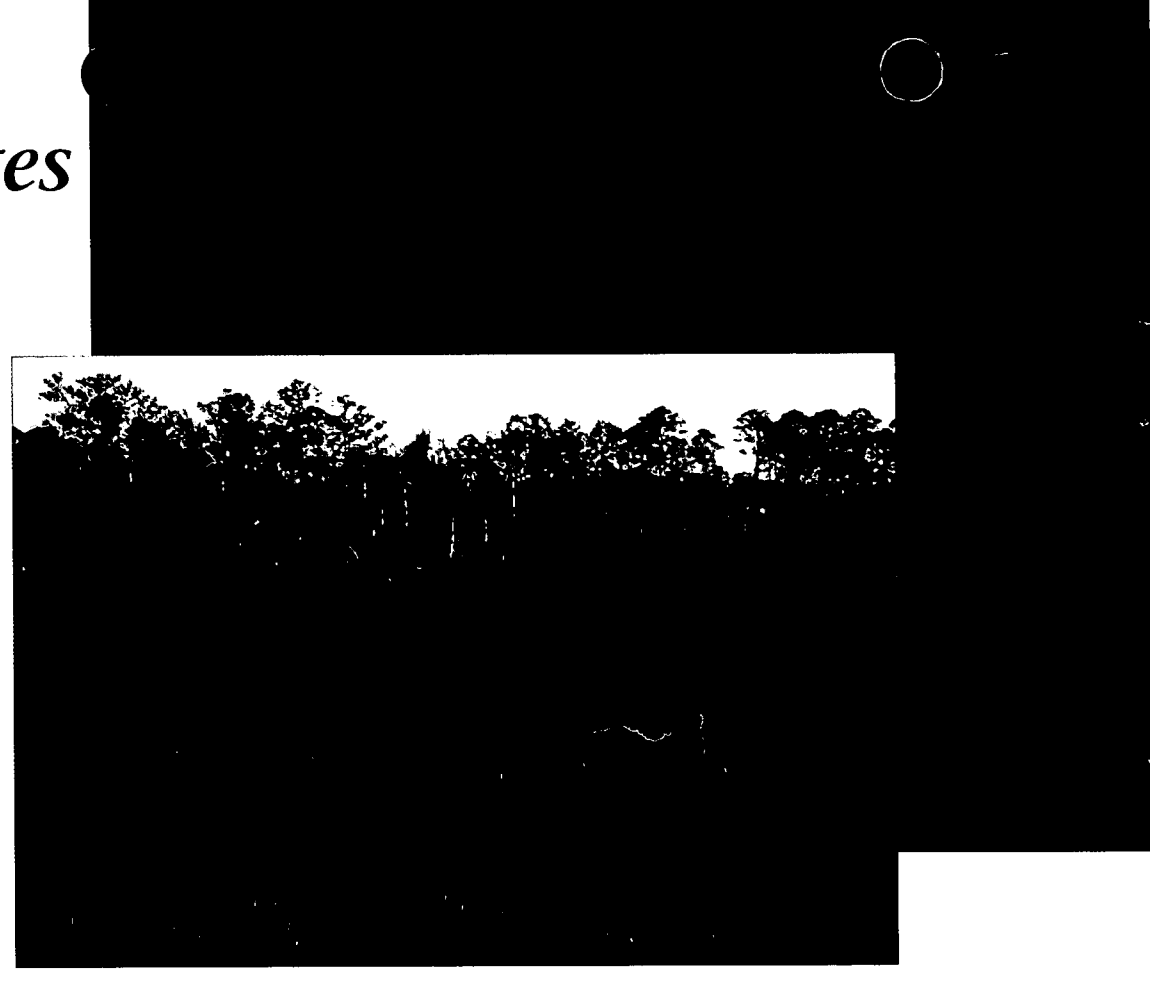
CWMTF application forms for grants, grant evaluation guidelines, enabling legislation, lists of the board of trustees, staff directory, news releases, and other reports and documents are available at www.cwmtf.net.

The executive director, deputy director, senior scientist, administrative officer, public information officer, and executive assistant are based in the central office in Raleigh. Five field representatives cover the coast, piedmont and mountain regions of the state. A part-time water quality advisor is home based.

Progress and Challenges

In 2003 the CWMTF continued to make strides in reaching performance targets outlined in the state's Progress Board report entitled **North Carolina 20/20.** Designed to significantly improve water quality throughout the state by the year 2020, the targets included increasing the percentage of water bodies fully supporting their uses, ensuring that 100 percent of all North Carolinians have access to clean and safe drinking water, protecting and permanently preserving one million acres by 2010, and improving water quality to ensure the continued viability of the state's fisheries.[1]

In addition, CWMTF is helping the state achieve its goal of preserving a million acres of open space, as set out in GS 113A-240, and is helping Governor Easley implement his One North Carolina Naturally initiative.



The Numbers

In almost all the areas cited by the North Carolina 20/20 report, CWMTF grants are playing a role in reaching those performance targets. Here are some examples:

- The CWMTF and its partners have helped protect 2,908 miles of riparian buffers and preserve 237,366 acres of land, thereby ensuring streams, rivers and lakes can continue or will be able to support their uses, CWMTF grants have been used for watershed planning projects and to purchase buffers surrounding drinking water supplies.
- The CWMTF has funded 79 riparian buffer, stream and wetland restoration projects totaling over $48.2 million to help maintain and preserve these important ecosystems.

[1] North Carolina 20/20: A Report About the Future of North Carolina; N.C. Progress Board, December 2001

- ◇ CWMTF acquisition and restoration grants have been used to protect shellfishing waters, to help restore waters in areas closed to shellfishing, to restore oyster reefs and other fisheries habitats, and to provide access to public waters.

- ◇ The CWMTF has assisted local governments with 99 wastewater improvement projects, investing over $77.2 million to reduce discharges and more effectively treat wastewater so that fewer nutrients and other pollutants enter our rivers.

- ◇ CWMTF grants have funded 36 stormwater management projects totaling $29.8 million to reduce pollution from urban runoff and decrease flooding.

All of these efforts are just as important to North Carolina's economic well-being as they are to the health and safety of its citizens and the environment. They enhance both the recreational and commercial fishing industries, strengthen North Carolina's travel and tourism industry, and help maintain North Carolina's high quality of life.

As the Progress Board asserts in its report, "...states can and do have strong economies and simultaneously protect the environment. In fact, the states with the strongest environmental records also claim the distinction of having the best job opportunities and climate for long term economic development."

2003 Totals

Since 1996 the board of trustees has approved 512 grants for a total of $405.1 million. CWMTF grants have leveraged at least $643.3 million or 61% in private and other public funds.[2]

The CWMTF Board of Trustees and staff reviewed 70 applications requesting over $103 million in the spring of 2003 (2002B Cycle) and 101 applications requesting over $174 million in the fall of 2003 (2003A Cycle) for a total of 171 applications requesting over $277 million in 2003.

Thanks to appropriations from the General Assembly and to the closing out of old grants CWMTF approved 90 water quality grants totaling $80,471,700 in calendar year 2003.[3]

[2] See Appendix A: Summary of Funded Projects 1997-2003

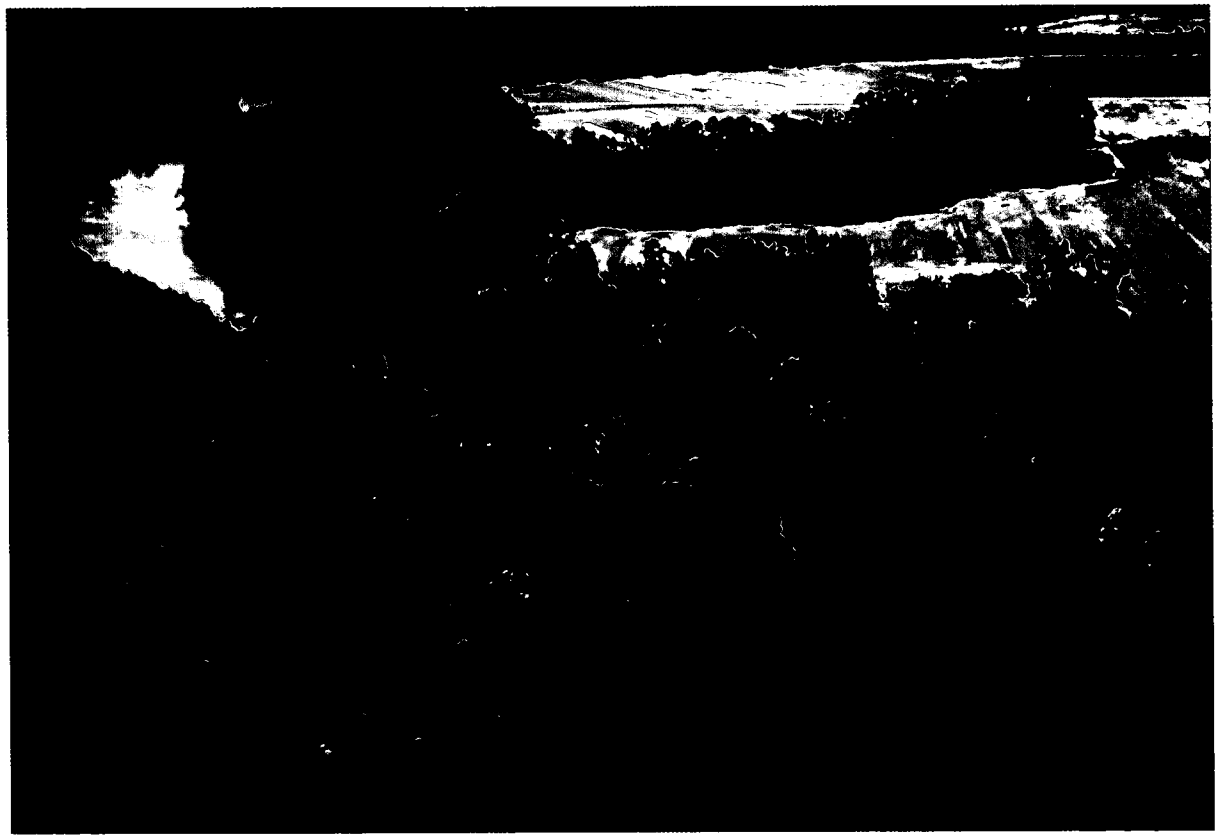
[3] See Appendix B: CWMTF Projects Approved in Calendar Year 2003 (Project List)

2003 Legislative Action

The 2003 General Assembly demonstrated that protecting and restoring water quality remains a high priority for North Carolina through several key legislative actions. The legislature showed its support for water quality by appropriating $62 million to CWMTF in fiscal year 2002-2003 and $62,000,000 to CWMTF in fiscal year 2004-2005.

In addition, the 2003 General Assembly also continued its strong support for CWMTF partners, the Parks and Recreation Trust Fund (PARTF) and Natural Heritage Trust Fund (NHTF). HB 855, Special (Vehicle) Registration Plates, increased the fee for personalized license plates by $10 and dedicated half of the increase to the Parks and Recreation Trust Fund and half of the Natural Heritage Trust Fund. The General Assembly established the new Mayo River State Park (HB 1078) in Rockingham County and Haw River State Park (HB 1025) in Guilford and Rockingham Counties.

The CWMTF Board of Trustees supported SB 831, Stagger CWMTF Appointments, by Senator Charlie Albertson, to restructure the terms of board members to increase continuity in the decision-making process. Under the existing law the terms of two-thirds of the board expired on December 31, 2002. SB 831 also added three appointments to the board. Governor Easley signed SB 831 on August 14, 2003.



HB 738, Expand CWMTF Purpose, by Representative Paul Miller and others, and SB 551, Expand CWMTF Purpose, by Senator Jeanne Lucas and others, were referred to the House Committee on Environment and the Senate Committee on Appropriations/Base Budget, respectively, and were not acted upon.

The Year Ahead

The CWMTF board and staff will review 83 applications requesting $151.2 million this spring (2004A Cycle). CWMTF will also receive applications on June 1, 2004 and review them in the fall (2004B Cycle). Specific grant requests submitted on December 1, 2003 for the spring 2004 cycle include:

- A request for $1.7 million from the City of Goldsboro and Wayne County to help protect Stoney Creek, a tributary of the Neuse River, and to prevent encroachment on Seymour Johnson Air Force Base;
- A request for $891,150 from DENR/Division of Forest Resources to help protect Mountain Island Lake and to expand the Mountain Island Lake Educational State Forest in Gaston and Lincoln Counties;
- A request for $3.2 million from the Southern Appalachian Highlands Conservancy to help protect Woodfin's Watershed and the Blue Ridge Parkway, in Buncombe County.
- A request for $7.6 million from the Town of Spring Lake in Cumberland County to eliminate failing septic tanks and reduce pollution of the Little River, a major tributary of the Cape Fear River; and
- A request for $7.7 million from DENR/Division of Soil & Water Conservation to implement phase three of the swine lagoon buyout program in the 100-year floodplain.

CWMTF may centralize water quality monitoring of its restoration and stormwater projects to improve quality and reduce costs. CWMTF is reviewing its policies regarding stewardship and long-term management of properties that are acquired with CWMTF funds. CWMTF is also reviewing the criteria by which it evaluates projects.

CWMTF hopes to develop consistent contracts, conservation easements, monitoring requirements, and stewardship policies with the N.C. Department of Environment and Natural Resources and Department of Transportation's new Ecosystem Enhancement Program.

Planning, design, permitting, bidding, and construction of wastewater, stormwater, and restoration projects take many years. CWMTF in 2003 began to start funding the design and permitting phase of projects to ensure that water quality objectives are being met, to develop more accurate estimates of cost, and to more efficiently manage its cash balance. CMWTF has also reduced the average time to implement acquisition projects from 36 months to 12-18 months. CWMTF will continue to work on these issues in 2004.

The Clean Water Management Trust Fund and Local Governments:

A Continuing Partnership

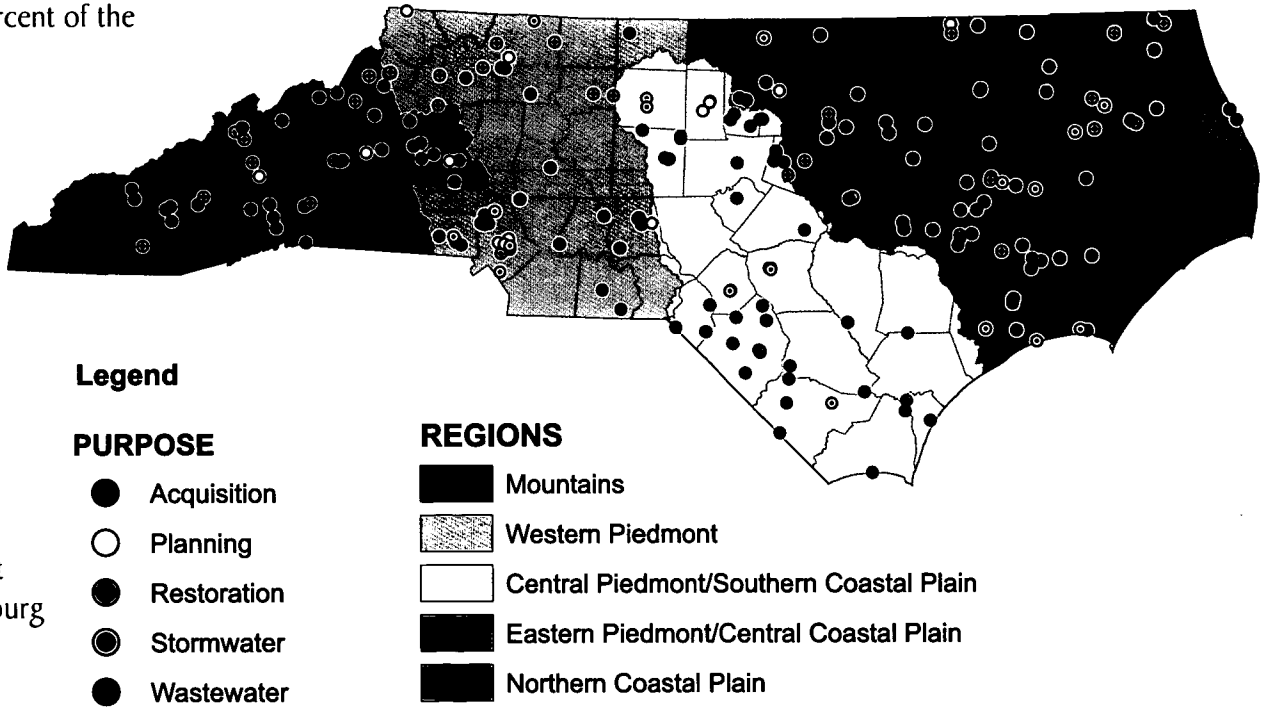
The CWMTF continues to be an important tool in helping local governments protect their water resources. Since 1996, $168.9 million – over 40 percent of the $405.1 million in CWMTF grants has gone to cities, counties and other local government agencies to finance local solutions to water quality problems.

Numbers of Grants Made to Local Government:

(Municipalities, Counties, Other Local Government Agencies)

- 238 grants totaling $168.9 million – over 40 percent of the $405.1 million of the CWMTF grants awarded.
- The CWMTF has assisted 99 local governments with wastewater improvements and invested over $77.2 million to reduce spills from leaky sewers and to more effectively treat wastewater.
- As local governments comply with national Phase I and Phase II stormwater regulations, CWMTF has funded 36 stormwater treatment projects for a total of $29.8 million.
- CWMTF has invested over $8.9 million to assist Charlotte, Gastonia, Mount Holly and Mecklenburg County in protecting Mountain Island Lake, the state's largest public drinking water supply.

CWMTF Grants to Local Government



Highlight:

The Town of Troy/Protection of Denson's Creek

One of the most successful CWMTF/local government partnerships has been with the Town of Troy in Montgomery County for the protection of Denson's Creek.

Denson's Creek starts in Uwhharrie National Forest and Game Lands where it is rated as High Quality Water (HQW). Below the town's wastewater treatment plant, the N.C. Division of Water Quality has rated the creek 's waters as good or fair. The creek is the focal point of Troy's comprehensive efforts for long-range water quality protection, resource conservation, recreation and environmental education.

The Denson's Creek initiative began as an effort to prevent encroaching development along the creek that would have significantly affected water quality in the area. Working with CWMTF, the town crafted a way to purchase the property and place a permanent conservation easement onto it. The town decided to continue with the preservation effort, developing what has become a five-phase project to purchase buffers along more than five miles of the creek.

With the help of CWMTF funds, more than 500 acres along the creek –including 4,500 feet of Hughes Creek Reservoir shoreline -- have been placed into permanent conservation, thus protecting water quality from development, preserving wildlife habitat and creating recreational and education opportunities for residents. The effort also includes creation of an environmental education center and extensive greenway system.

In addition, two of the six CWMTF grants to Troy will be used for improvements to the town's wastewater treatment facilities in order to reclassify the creek as High Quality Waters. $200,000 in CWMTF grant funds were used to install an ultraviolet disinfecting process to remove chlorine residue from the plant's discharge. The treatment went on line in June 2003.

In 2003, CWMTF trustees approved $55,000 to help the town create a wastewater reuse system. The reuse project will significantly reduce the amount of discharge flowing into Denson's Creek from its wastewater treatment plant by using treated wastewater to irrigate the local golf course.

CWMTF commends the Town of Troy and its proactive strategy for ensuring that Denson's Creek remains a viable water resource for Montgomery County.

- ◇ Six projects funded by CWMTF totaling $2.89 million
- ◇ Four acquisitions along Denson's Creek, Little River
- ◇ Two wastewater projects: reuse and rehabilitation

To date, CWMTF has invested $43.1 million in the Yadkin River Basin.

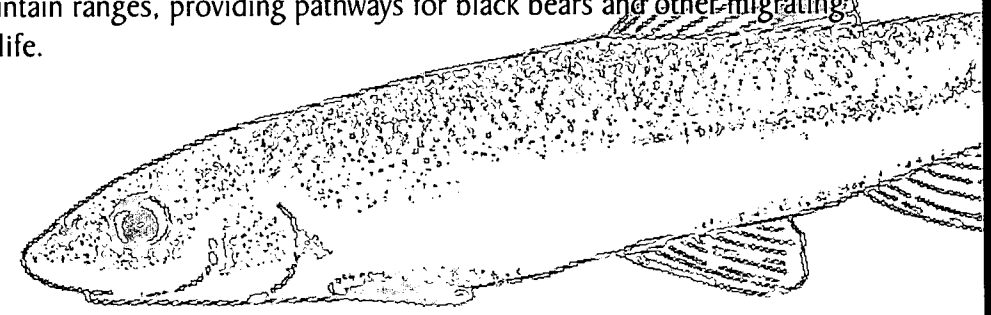
CWMTF 2003 Successes:

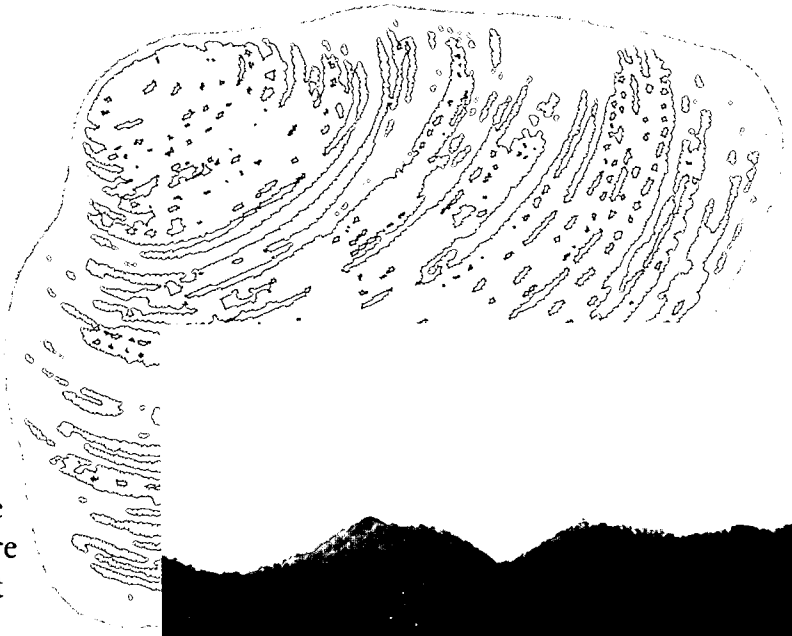
Acquisitions:

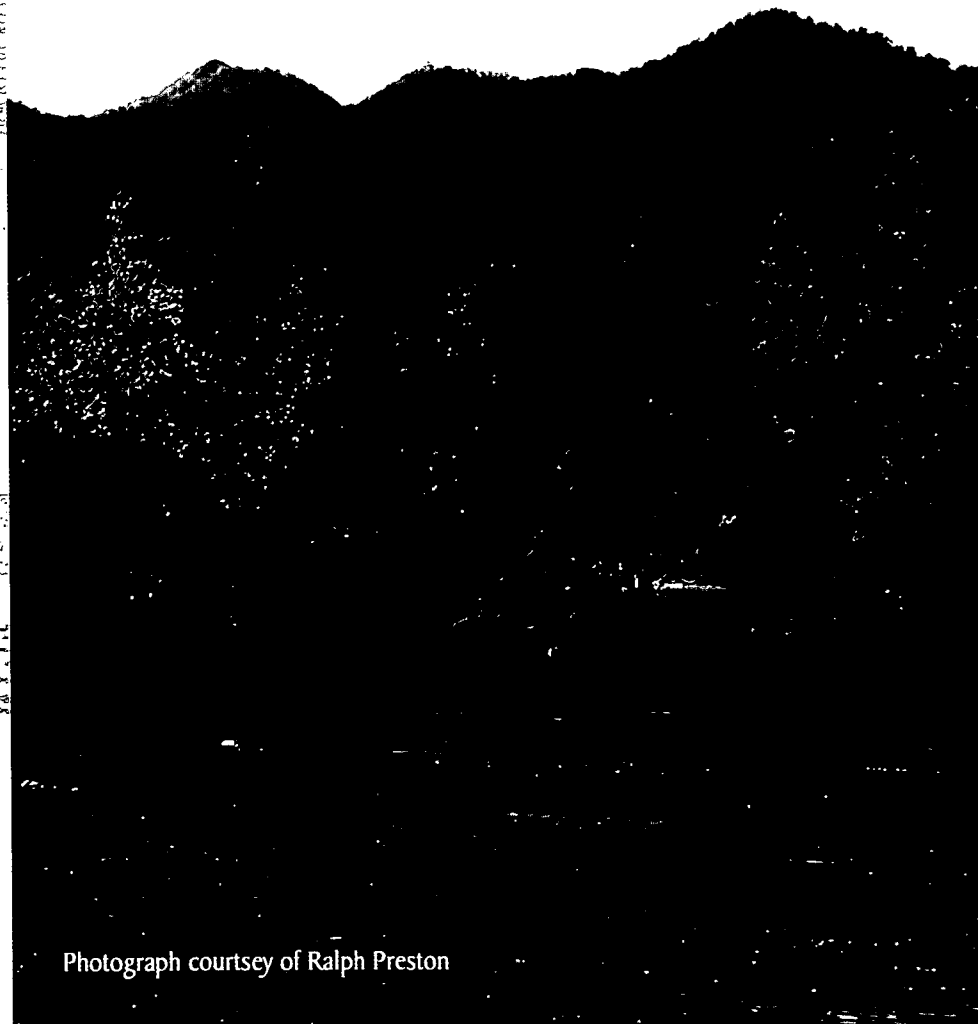
The Needmore Tract, Little Tennessee River Basin

In July 2003, the CWMTF Board of Trustees approved $6.6 million to assist with the purchase of the 4,400-acre Needmore tract on the Little Tennessee River in Swain and Macon counties. As one of the N.C. Wildlife Resources' top acquisition priorities, several agencies joined with CWMTF in its efforts to protect the property and one of the state's most pristine waterways. Other contributors included The Nature Conservancy, the Natural Heritage Trust Fund, Ecosystem Enhancement Program, and the U.S. Fish and Wildlife Service.

The Needmore tract, which also includes 21 tributaries to the Little Tennessee River, contains Natural Heritage Program Areas of significance and is home to many endangered and protected species. Wildlife biologists believe it will be a very important source for replenishing species lost or threatened in other waterways all across the southeast. Also, the site is the keystone to the forested corridor connecting the Nantahala and Cowee Mountain ranges, providing pathways for black bears and other migrating wildlife.







Photograph courtsey of Ralph Preston

Highlight:

Needmore Project

The Needmore project will conserve:

- ◇ 26 miles of Little Tennessee River frontage - over half of the river between Franklin and Lake Fontana;
- ◇ 37 miles of tributary streams, some of which are outstanding trout streams;
- ◇ Four federally-listed and twelve state-listed threatened and endangered species, including the spotfin chub;
- ◇ 57 fish species, half of all the freshwater species native to NC;
- ◇ The greatest abundance of freshwater mussels in the state, including several threatened or endangered species;
- ◇ Critical wildlife habitat in the wetlands and forests surrounding the river;
- ◇ A keystone of an unfragmented forested corridor connecting the Nantahala and Cowee Mountains, providing pathways for black bears and other wildlife;
- ◇ The most intact archeological landscape of the Cherokee people remaining in the nation;
- ◇ Dozens of historic sites, including portions of the largest National Register historic district in western North Carolina, the Cowee/West's Mill community;
- ◇ The largest cluster of mountain floodplain forests and the most species-rich forest type in the Southern mountains;
- ◇ The greatest concentration of river islands in the Southern Blue Ridge. These islands have unique botanical value.

To date, the CWMTF has invested $20.5 million in the Little Tennessee River Basin

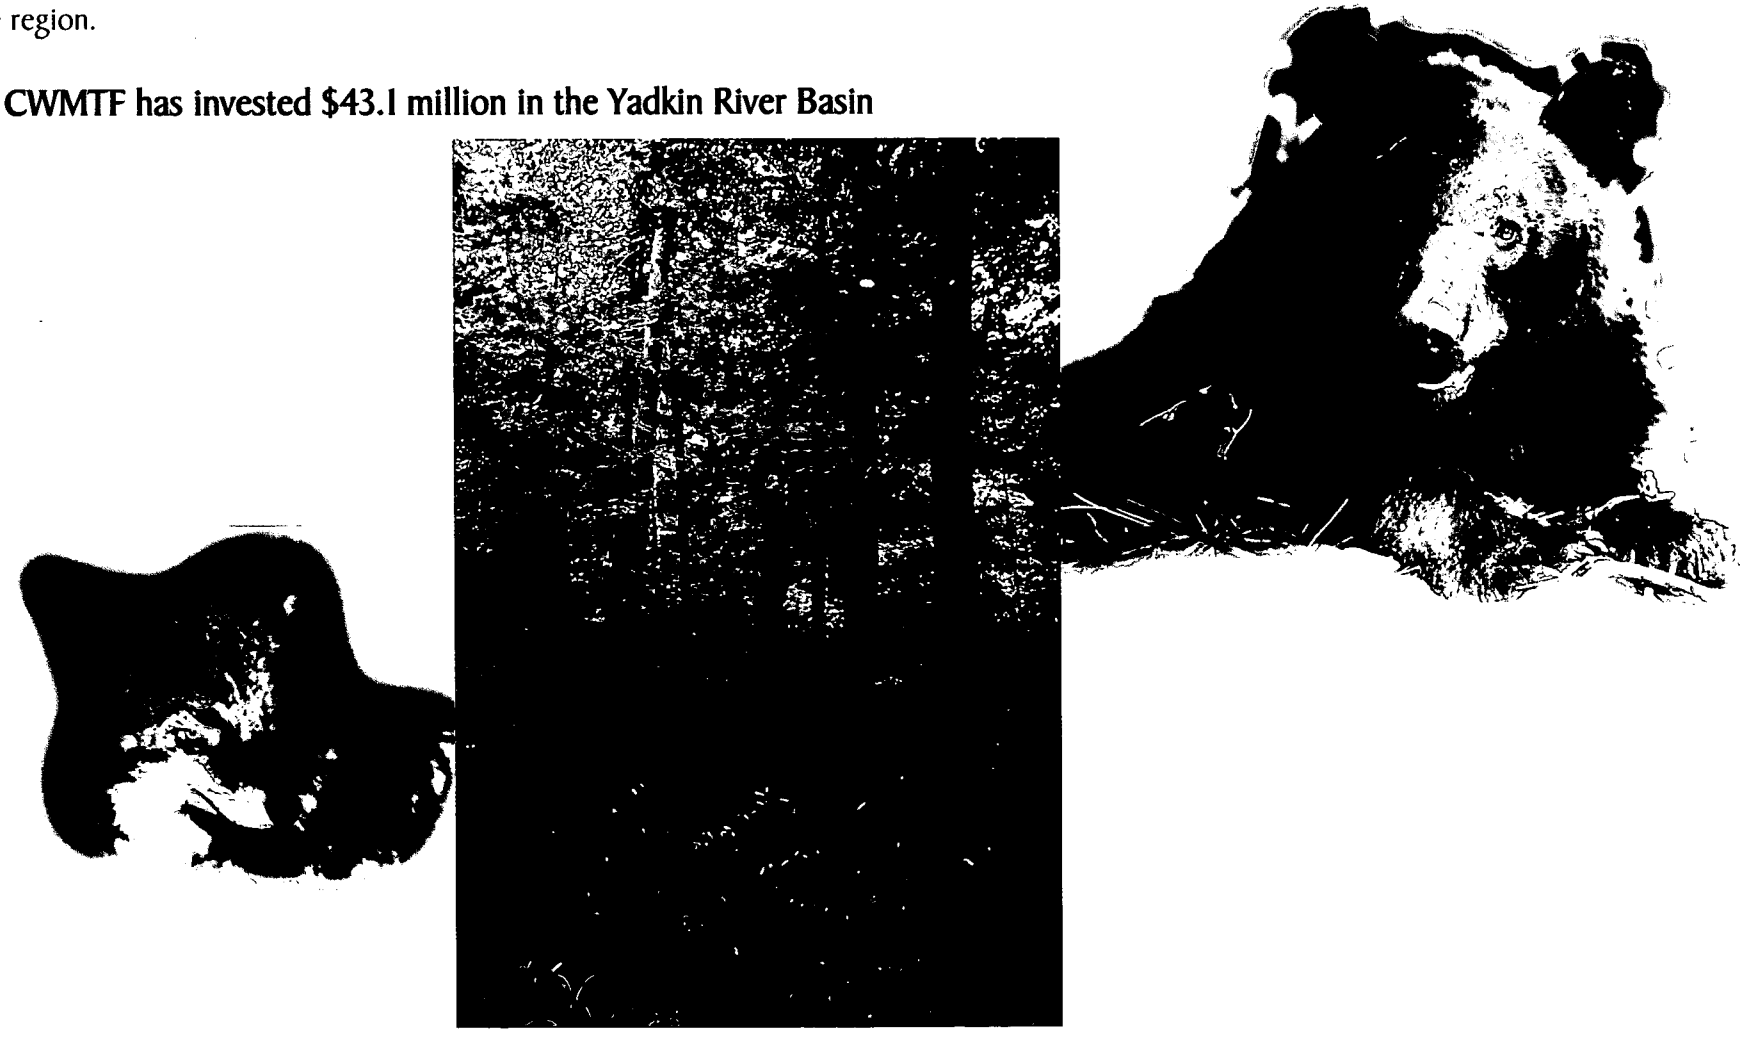
The Mingo Tract, Yadin River Basin

Working with The Conservation Fund, CWMTF, the Ecosystem Enhancement Program, and the Natural Heritage Trust Fund provided funding to acquire the 5,621-acre Mingo tract in Caldwell and Wilkes counties. One of the last undeveloped large tracts of land in the area, the Mingo tract also contains a portion of the headwaters of the Yadkin River.

The $13.5 million CWMTF grant to the N.C. Wildlife Resources Commission will help preserve several streams on the property, which flow into the Yadkin River. The project will also protect water quality at Kerr Reservoir, which would have been affected if the site had been developed.

The rugged property on the eastern edge of the Blue Ridge escarpment is habitat for numerous plant and animal species, including bear and coyote. The property, one of the highest acquisition priorities for the N.C. Wildlife Resources Commission, will help create continuity for the agency's gamelands program in the region.

To date, the CWMTF has invested $43.1 million in the Yadkin River Basin



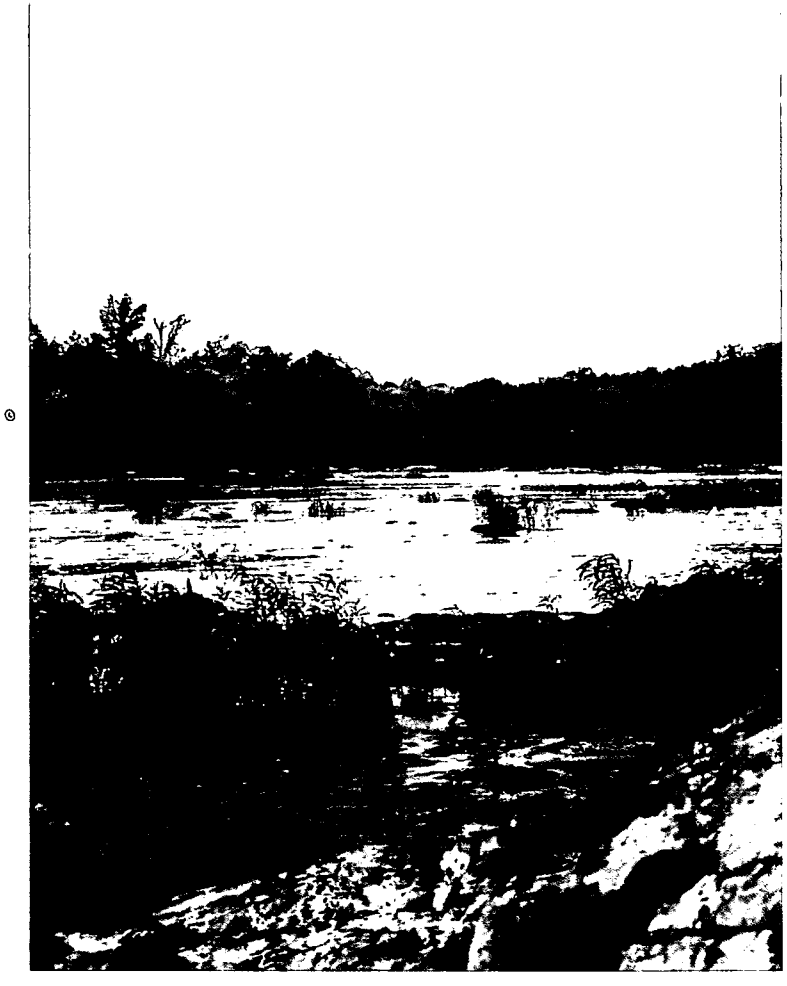
Other Acquisition Updates:

The Justice Tract, Cape Fear River Basin

In August 2003, the Triangle Land Conservancy completed the largest land transaction in its history, the purchase of the Justice tract in Chatham County.

With the help of a $1.8 million CWMTF grant, the 760-acre parcel on the Deep River near Moncure was placed in permanent protection, with the possibility of one day becoming part of the N.C. Division of Parks and Recreation system.

The Justice tract lies at the point where the Deep River comes closest to Jordan Lake, an important regional water supply. Conservation of the land is key to protecting water quality in both these water bodies, especially as development moves into the area from the Triangle. In addition to protecting the important water resources in the area, the CWMTF grant for the Justice tract will help maintain a critical wildlife corridor. Among the important species found on the Justice tract is the endangered Cape Fear shiner.
The Justice tract also will provide outstanding recreational opportunities in the form of hiking, kayaking and nature study – only 20 minutes from downtown Cary!



To date, the CWMTF has invested $55.3 million in the Cape Fear River Basin

The Beck Tract and Our Military Bases

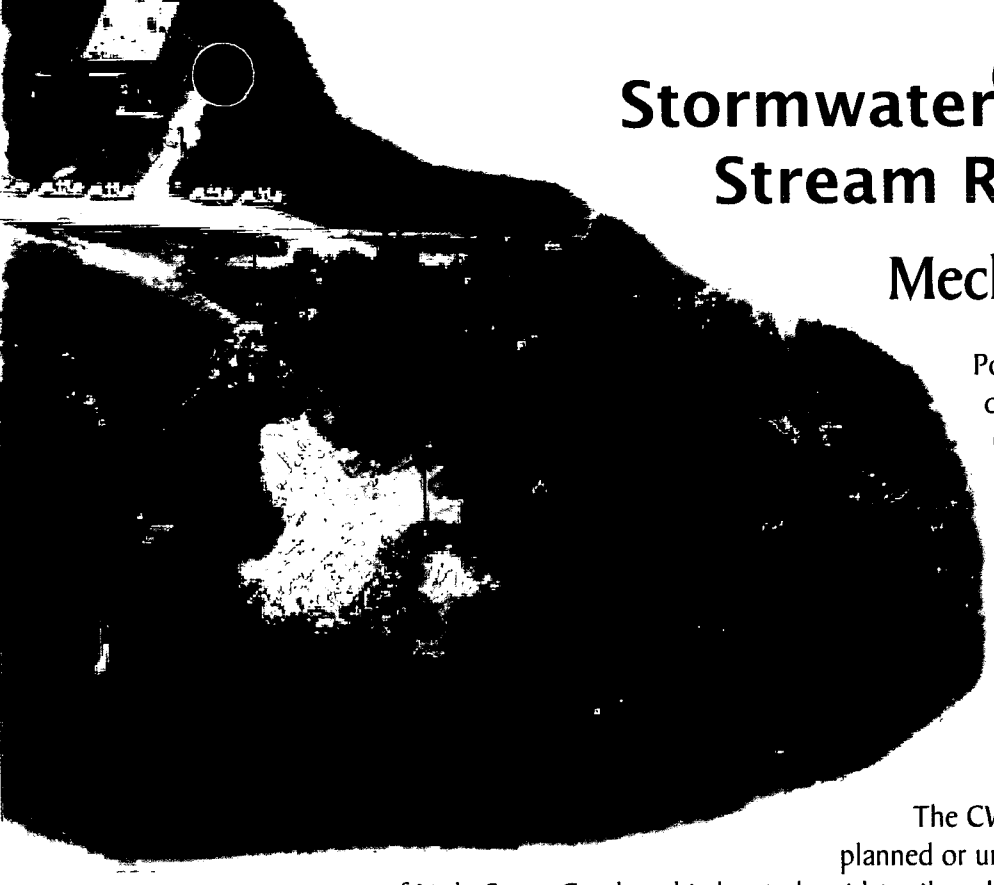
The U.S. Department of Defense, (DOD) will consider realignment and closure of military bases in 2005. The DOD, the State of North Carolina, and many local governments are working together to prevent and reduce encroachment on military bases by acquiring conservation easements and land in fee simple and by regulating land uses.

In 2003, CWMTF, Natural Heritage Trust Fund, The Nature Conservancy, and the U.S. Navy worked with the Wildlife Resources Commission to acquire the 2,500-acre Beck tract in Onslow County to help protect Camp Lejeune.

The project will protect the headwaters of Stone's Creek, a tributary of the New River. The tract had been slated for development, with preliminary plans calling for two golf courses and 3,000 homes with individual septic systems. Such a large-scale development would have dramatically degraded water quality in the creek and the river and would have severely affected shellfishing in Stone's Bay and other sections of the New. Preservation of the property will also protect the area's long leaf pine and hardwood bottom habitats, which provide homes to red cockaded woodpeckers, migrant waterfowl, neo-tropical birds and a wide variety of mammals, including deer and fox.

Goldsboro and Wayne County also applied to CWMTF for funds to acquire floodplain and converted wetlands near Seymour Johnson Air Force Base. With assistance from CWMTF the Sandhills Area Land Trust is conducting a riparian corridor conservation study on the Little River – the northern boundary of Fort Bragg.

CWMTF and the other conservation trust funds can assist the state and the military in protecting both the environment and the training mission of our bases.



Stormwater Management and Stream Restoration:

Mecklenburg County, Catawba River Basin

Pollution from stormwater run-off remains North Carolina's most pressing water quality concern as the state's urban areas grow. In North Carolina's largest urban area, CWMTF has been able to make significant strides in managing stormwater.

Charlotte/Mecklenburg County's biggest challenge is to restore water quality in its urbanized creeks that are most negatively affected by this non-point source pollution. Mecklenburg County and CWMTF continue to work together to clean up and restore Sugar Creek and its tributaries. In June 2003 the CWMTF Board of Trustees approved $1.2 million for Phase 4 of the Little Sugar Creek Environmental Restoration Initiative – part of a renewed regional effort to manage stormwater and restore water quality in the Catawba River Basin.

The CWMTF grant will fund the proposed Belmont Branch improvements–one of seven projects planned or underway to address water quality in Little Sugar Creek. Belmont Branch is the headwater of Little Sugar Creek and is located amidst rail yards, several auto salvage yards, a major interstate highway and other industrial operations. Pollutants from stormwater run-off draining into the creek include phosphorus, metals and petroleum, and fecal coliform. Phase 4 of the initiative will significantly reduce the amount of these pollutants flowing into the creek through the construction of wetlands, a retention basin, buffer plantings along the streambank, and the re-routing of drainage and sanitary sewer lines.

CWMTF has provided more than $4.7 million to help Mecklenburg County and Charlotte manage stormwater and restore urban streams. The unprecedented three-county regional effort underway seeks to improve water quality overall by purchasing and protecting undeveloped property along the stream corridor, installing Best Management Practices for stormwater management on both vacant and undeveloped lands and the construction of a 20-mile greenway - from downtown Charlotte to the Catawba River in South Carolina - to provide both recreational opportunities along the waterways and increase public awareness of water quality issues. The Belmont Branch project will be the cornerstone of the greenway corridor.

In June 2003, CWMTF trustees approved a $400,000 grant to go toward $2 million for the Phase 3 stream restoration component of the Little Sugar Creek initiative – the Westfield Road Trail and Boardwalk. Here, Mecklenburg County will return this segment of the creek back to a more natural stream pattern and improve water quality of the waterway through disconnection and filtering of storm drain inlets. The stream restoration will be done in conjunction with the greenway plan and because of its closeness to Charlotte's urban center, will be an important node along the 20-mile trail system. The project will actually extend nearby Freedom Park, Charlotte's "Central Park" and will provide excellent opportunities to educate the public about the importance of protecting water quality. Long-term participation in an environmental stewardship program by two nearby schools also is expected. Completion of the phase is scheduled for Spring 2004.

Local support is building for Mecklenburg County's water quality efforts and substantial local contributions have been made to match CWMTF funding. Grants from CWMTF have allowed the county to leverage its limited resources to maximize benefits. In addition to improved water quality, residents will notice other benefits from the initiative as well, including reductions in flood damage, increased property values and improved quality of life.

Other CWMTF funded projects in the overall effort are coming on line. On April 25, 2003, such a site was dedicated at the Bruns Avenue School. Adjacent to an urban elementary school, CWMTF funds assisted in the construction of a wetlands area to help manage stormwater run-off and provide environmental education opportunities for both students and neighborhood residents alike.

To date, the CWMTF has invested $31.4 million in the Catawba River Basin

Wastewater:

Bridgeton, Neuse River Basin

Nowhere in the state are North Carolina's water quality problems more evident than in the Neuse River Basin. All the waters within the basin are classified as impaired, the result of so-called "nutrient loading" from agricultural run-off, sedimentation and stormwater run-off from increased development, and wastewater discharge.

Many communities along the river are now taking active and aggressive actions to reverse the effects of nutrient loading on the river, including Kinston, Goldsboro and LaGrange. With a $116,000 grant from the CWMTF, the small community of Bridgeton in Craven County has joined the effort.

The CWMTF funds will be used for design, permitting and land acquisition costs associated with the town's plans to eliminate its wastewater discharge to the river. The project includes purchase of 500 acres for land application of treated wastewater, construction of a storage lagoon, holding pond and an innovative irrigation system. A permanent conservation easement will be placed on the 500 acres.

This conversion of Bridgeton's wastewater treatment plant to a non-discharge facility will eliminate 6.26 pounds of BOD (biochemical oxygen demand or the amount of oxygen required to neutralize organic wastes) from entering the river per day. In addition, it will eliminate 18.8 pounds of suspended solids, 2.5 pounds of ammonia and 1.25 pounds of phosphorus per day from being discharged into the river.

The town of Bridgeton has made a commitment to protecting its water resources, including the Neuse River, and intends to use this CWMTF-funded project as the basis for a future regional wastewater system.

To date, the CWMTF has invested $47.9 million in the Neuse River Basin

Appendix A: Summary of Funded Projects 19[illegible]-2003 (1997A-2003A Cycles)

Note: As of December 1, 2003, there were 21 projects funded for a total of $10,957,202 that were subsequently withdrawn. These projects are included in these tables in the funded amounts, but noted as "Withdrawn" in their project name.

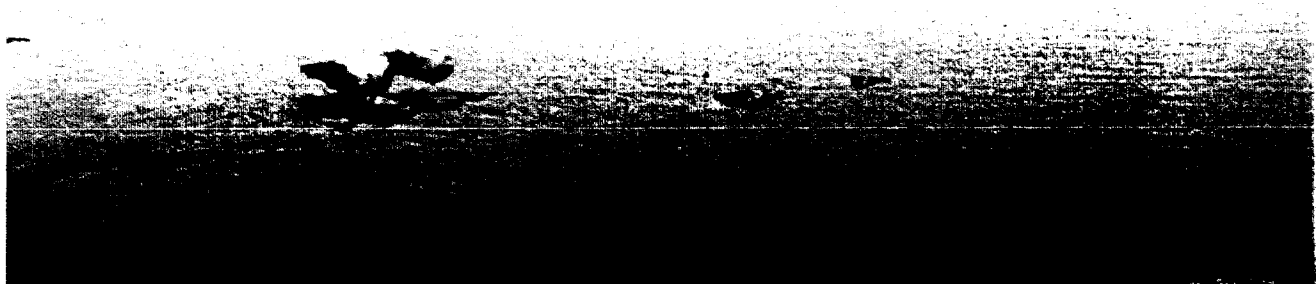
MANAGEMENT TRUST FUND



Land Conservation

Preserving our environment
Strengthening our economy
Protecting NC's heritage for those who come after us

Land for Tomorrow Coalition
American Farmland Trust
Conservation Trust for North Carolina
NC Public Interest Research Group
NC Recreation and Park Society
The Nature Conservancy
The Trust for Public Land

Presentation Objectives

- What is the *Land for Tomorrow Coalition?*
- Why is land conservation so important to North Carolina?
- What have we learned from our research to date?
- What are our recommendations for this year?
- Next steps

What is the *Land for Tomorrow Coalition*?

- Goals
  - Help North Carolina find creative ways to increase funding for land conservation
  - Build public awareness of the need
- Founding coalition members
  - American Farmland Trust
  - Conservation Trust for NC
  - The Nature Conservancy
  - NC Public Interest Research Group (NCPIRG)
  - NC Recreation and Park Society
  - Trust for Public Land

First Phase of Project

Fall 2003 to Winter 2004

- $120,000 start-up funding from Z Smith Reynolds and Cemala Foundations
- Coordinating with *One NC Naturally*
- Phase 1 of Project: Research and Planning

Current Phase of Project

Spring 2004 to Summer 2005

- Recommend **short-term funding** to strengthen programs in FY 2004-05
- Assess the statewide **need** for open space and parks and the funding required to preserve that land
- Educate the **public** about the importance of open space protection
- Assess the full range of funding mechanisms and recommend **long-term, sustained funding** programs to the NC Legislature

Why is land conservation so important to North Carolina?

Natural land helps protect water quality and trees and shrubs purify the air.

Natural areas provide habitat for native species.

Open space is critical to our economic well-being -- it is the basis for North Carolina's tourism industry.

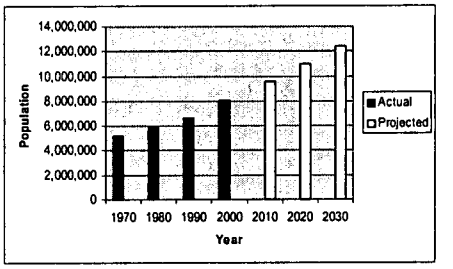
And to the agricultural and timber industries.

Open space makes North Carolina a great place to live and helps attract new workers and industry.

Land is central to the quality of life we experience as North Carolinians and to the legacy we hope to leave our children.

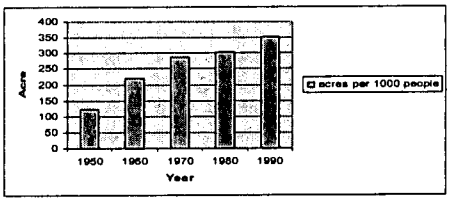
But open space is disappearing in North Carolina.

North Carolina's population is burgeoning.



We are developing more land per person than ever before.

For example, in the Triangle, the number of acres developed for every 1000 people increased from 122 to 353 between 1950 and 1990.



The state is losing 277 acres of open space/day to development or more than 100,000 acres/year.*

*One NC Naturally website: www.enr.state.nc.us/ofl/lean/conservation/pages/impactfacts.html

In addition, North Carolina's land ownership patterns are changing rapidly.

- Power and timber companies are selling vast tracts of land.
- Farmers are selling out because of the weak agricultural economy and the demise of tobacco.

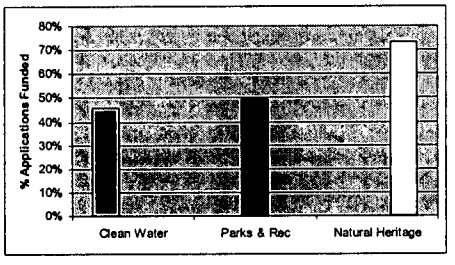
Incompatible development around military bases makes training and operations difficult. DOD is asking states to preserve land around its bases.

All across North Carolina communities and nonprofit land trusts are responding by creating visions for parks, greenways, wildlife areas, stream buffers, and farmland protection.

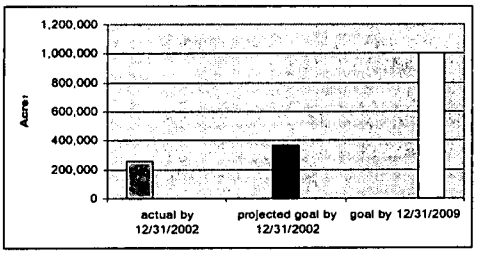
One NC *Naturally* is also creating a state-wide vision.

But sufficient funding is not available to bring these visions to life.

The state's trust funds receive many more applications than they can fund.



We're falling behind the Legislature's goal of saving one million acres by December 2009.



$256 million per year are needed to meet one million acre goal by 2009*

*Sutherland, Ron and Richard Whisnant (2003) NC State Agency Conservation Funding Needs Assessment Environmental Finance Center, UNC-Chapel Hill, p. 5.

Funding for land protection comes from a variety of sources

State Funding

- Presently have approximately $50 million per year for land protection in the state's four trust funds
  - Clean Water Management Trust Fund
  - Natural Heritage Trust Fund
  - Parks and Recreation Trust Fund
  - Farmland Preservation Trust Fund
- Ecosystem Enhancement Project (EEP) has increased preservation dollars at least temporarily
- Conservation Tax Credit Program

Federal Funding

- Federal funds totaled $27 million in 2002
  - Farm and Ranch Land Protection Program
  - Forest Legacy
  - Land and Water Conservation Fund
  - Conservation Reserve Enhancement (CREP)
  - Clean Water State Revolving Fund
  - Transportation Efficiency Act (TEA)

Local Funding

- Provided $180 million for open space protection since 1998
- Since 1998, 15 bond referendums in 14 towns/counties
- Thirteen referenda (86%) passed by wide margins (average 69%)

Private Funding

Nonprofit land trusts and conservancies

- work with landowners and partner with governments to save land
- accept donations of land and easements
- accept donations of cash and other assets to support land conservation

A funding gap of more than $100 million still exists despite current funding programs at federal, state, and local levels.

What has the *Land for Tomorrow Coalition* learned from its research to date?

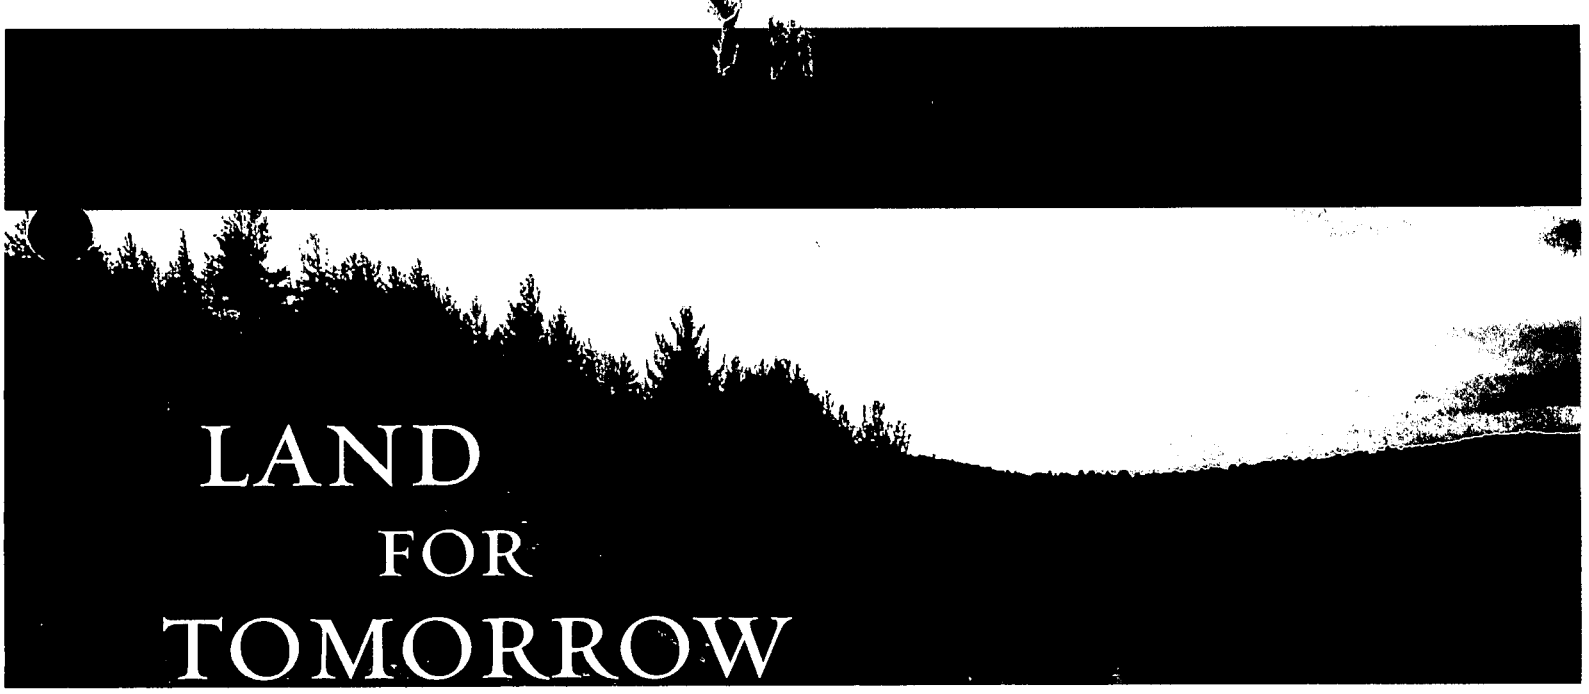
Research and Planning

- 50 Leadership interviews
- Focus groups (in Asheville, Raleigh and Wilmington)
- Financing study (by TPL)
- Economic study (by NC PIRG)
- Poll of 400 farmers
- Poll of 787 frequent voters
- Four forums in different areas of the state for leaders in the conservation, parks, and environmental communities

Results of the Public Poll

A significant shift in attitudes toward growth has occurred in the last two and a half years.

In June 2002, 31% said they thought growth and development of land was occurring too rapidly and steps needed to be taken to discourage more growth. That number increased to 43% in March 2004 survey.



LAND FOR TOMORROW

From the Great Smoky Mountains to the Outer Banks, North Carolina's peaceful farms, crashing waves, shady streams, formidable mountains and deep forests enrich our lives and attract thousands of visitors to the state. Our natural heritage is in danger of being lost, however, without proper planning and action to save the best land now.

Almost two million more people live in North Carolina than in 1990, and the population is expected to grow by another four million by 2030. Our population isn't the only thing that's growing - so is our consumption of land. For example, in the 1950s 122 acres were developed for every 1,000 residents in the Triangle area. Now that figure is 353 acres per 1,000 residents.

As a result, the state lost an average of 156,000 acres of open space per year between 1992 and 1997. That development boom has brought many great things to the state, but it also threatens our quality of life. Our air and water have become increasingly polluted. Traffic jams are commonplace. Once-productive farms are now suburban developments. Native wildlife is disappearing. We risk losing the many things that make North Carolina such a great place to live and work unless we act now.

Fortunately, all across North Carolina citizens have big visions for new parks, greenways, wildlife areas, stream buffers and protected farmland. Local and state governments and nonprofit land conservancies are working hard to save land now.

In 1999, the State Legislature also responded by establishing a goal to save one million acres in ten years. Those million acres will be a critical investment in the state's future - a green infrastructure that is as important to our future quality of life as other infrastructure, like roads and sewer.

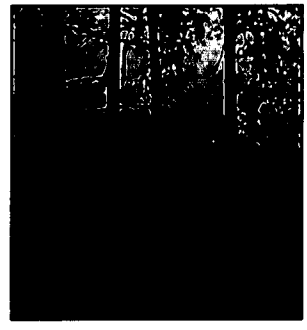
Four years after the legislature's visionary vote, however, we are only saving land at two-thirds the needed rate because of limited funding. University researchers estimate that we need $256 million per year to reach the million-acre goal by 2009. Even with all funding from state, federal and local governments and from private sources, we are still more than $100 million the amount needed to reach our goal.

Because of the urgent need to act now, six conservation organizations came together in 2003 to raise public awareness and help find solutions to the funding shortfall. American Farmland Trust, Conservation Trust for North Carolina, NC Public Interest Research Group, NC Recreation and Park Society, The Nature Conservancy, and Trust for Public Land founded the Land for Tomorrow Coalition, a partnership that we hope will grow to include hundreds of leaders and organizations throughout the state.

A PROJECT TO INCREASE PUBLIC FUNDING FOR LAND CONSERVATION

With start-up funding from the Z. Smith Reynolds and Cemala foundations, the Land for Tomorrow Coalition spent the fall and winter of 2003-2004 learning more about public and leadership opinion and about funding options that have worked in other states.

We have now completed personal interviews with more than 50 state leaders and focus groups and polls of more than 1,000 randomly-selected citizens. We have also published the *North Carolina Land Conservation Financing Study* that describes successful land conservation programs in other states and recommends steps that can be taken here to increase funding and effectiveness.



We found that state leaders and citizens alike feel very positively about land conservation, but few understand the urgent need to act now before more opportunities are lost to protect the most sensitive natural land and productive agricultural and timber land.

After learning more about the issue, 59% of those polled agreed that we are losing land so fast in North Carolina that we must find a way to preserve open space, farmland and areas that are important to protect our water supply. Eighty-six percent said they would support a program to protect rivers like the Catawba, French Broad and Neuse, and 83% would support a program to protect small family farms and farmland.

Our *Financing Study* reveals that strong land protection programs depend on reliable, dedicated funding sources at the state level and additional authority for dedicated funding at the local level. It also reveals that North Carolina could consider a statewide bond referendum to allow it to borrow up-front money now when land costs and interest rates are low. North Carolina's debt ratios compare favorably to those of other states with strong credit ratings.

The Land for Tomorrow Coalition is now embarking upon a statewide education and awareness effort in 2004 and 2005 to broaden public understanding of the extent and urgency of the need and also to develop strategies for increasing funding. The campaign will focus on opinion leaders and decision makers as well as on concerned citizens in general, and will seek to increase understanding and build consensus about sources of funding and about how land conservation programs would be managed to assure accountability.

We will reach out to opinion leaders and decision makers with the help of a campaign committee of statewide leaders in a broad variety of fields including business (with particular emphasis on the tourism, home building and agricultural industries), local and state government, the conservation and environmental communities, education, health and sportsmen. We will reach concerned citizens through a variety of vehicles including earned media and a targeted speakers bureau but also through direct mail and paid advertising.

Our goal is a secure and substantial increase in state and local funding for land conservation by July 2006. But while a secure source of funding is the goal of the Land for Tomorrow Coalition, this project is ultimately about so much more than money; it is about creating parks in which to play baseball, to fish, and to picnic; about buffering rivers that supply our drinking water and feed vast wetland ecosystems; about shielding mountains that rise from the Blue Ridge Parkway and from the American consciousness; about preserving farmlands that put food on our tables and sustain a way of life.

EXECUTIVE SUMMARY
Statewide Poll of North Carolina Farmland Owners

Prepared
By
The Kitchens Group
for
Land for Tomorrow Coalition

November 2003

Methodology

The Nature Conservancy, on behalf of the North Carolina *Land for Tomorrow Coalition*, commissioned a public opinion survey of four hundred farmland owners in statewide North Carolina. These farm owners were interviewed in a random sample on November 19-22, 2003. Respondents were screened for owning farm land in North Carolina. The sample was balanced according to all known demographic factors. All interviews were conducted by telephone. The margin of error for this survey is +/-4.9%, with a 95% confidence level. The poll was conducted by The Kitchens Group of Maitland, Florida.

Conclusions

- **Farm owner profile.** A majority of those we polled farm between 40 and 250 acres. Eighty-one percent live on the land that they farm. Sixty-one percent receive half or less of their income from farming. Eighty-four percent were 50 or older, and the sample was evenly split between men and women.
- **Thirty-seven percent of farm owners rent their land to someone else to farm.** Fifty-three percent lease out at least some of their land to someone else.
- **Farm owners express serious doubts about the future of farming in the state.** Nearly half (48%) say their children will not farm the land they own in the future. Seventy-one percent expressed the opinion that no one is buying land for farming, and 56% say the only people who will buy the land are developers.
- **Conservation techniques are generally acceptable.** Seventy-five percent support buffer zones along rivers and streams, and 61% support programs to restore wetlands.
- **Purchase of Development Rights (PDR) programs are little known but viewed positively when explained to farmland owners.** Only 39% were familiar with the state's Farmland Preservation Trust Fund and only 24% with the federal Farm and Ranchland Protection Program. However, when given a brief explanation of PDR, 64% thought that it sounded like a good idea.
- **Farmers are open to a range of land protection options.** Of those whose counties had Voluntary Agricultural District programs, 49% were enrolled in this 10-year protection agreement. Fifty-four percent would be willing to restrict development longer for additional benefits. Sixty-five percent think that business planning assistance and grants in exchange for short-term land protection would be helpful for North Carolina agriculture.

North Carolina Land Conservation Financing Study

Executive Summary

Over the past decade (1990 – 2000), North Carolina was among the fastest growing states in the country, with the sixth highest numeric population change. The state added 1.4 million new residents (21 percent) during that time period. The state's population is expected to increase by 35 percent from 2000 to 2020 to nearly 11 million. The current rate of growth and housing development is consuming approximately 427 acres of open space a day, mostly in the state's seven largest metropolitan areas.

In January 2000, the North Carolina General Assembly voted overwhelmingly in support of a mandate to preserve one million acres by December 31, 2009. The Million Acre Plan would increase the percentage of preserved land from 8.8 percent to 12 percent, however no additional money was attached to the plan beyond existing funding. Governor Mike Easley directed the state Department of Environment and Natural Resources to undertake a planning process for protecting the state's land and water resources, called One North Carolina Naturally. A draft strategic plan was released in the spring of 2003.

To meet the land conservation objectives outlined in these plans, the Environmental Finance Center (EFC) at the University of North Carolina, Chapel Hill, estimates that approximately $1.85 billion is needed, or $256 million a year in new acquisition and management funds over the next seven years.[1] Currently, the state funds land conservation through four separate conservation trust funds. According to EFC data, the trust funds spent approximately $50 million on conservation land acquisition in Fiscal Year 2002. While the current funding is significant, it is not sufficient to meet the state's land conservation goals. Furthermore, the sources of these funds are not permanently dedicated and therefore could be diverted to other programs in tight economic times.

North Carolina also has a good policy framework in place to support land conservation. The state's conservation tax credit program – one of the first established in the country – has become a model for many other states. North Carolina also participates in a wide array of federal land conservation programs, accessing significant funds and matching grants for land protection throughout the state. There are, however, a number of policy changes that could go a long way toward strengthening the state's framework and bringing additional funds to the table. Specifically, TPL recommends:

- In 2004
  - **Enabling certificates of participation.** State legislators should consider authorizing the issuance of certificates of participation (COPs) for land conservation. COPs authority would enable the conservation trust funds to issue debt in order to acquire and protect additional lands in the near-term while it is available and less expensive than in the future.
  - **Leverage State Revolving Loan Funds.** By using a portion of its Clean Water and Drinking Water state revolving loan funds (SRFs) as collateral for revenue bonds, the state could produce additional monies for low-interest loans for open space land acquisition.

[1] North Carolina State Agency Conservation Funding Needs Assessment, Environmental Finance Center at University of North Carolina, 4/16/2003.

- In 2004 - 2005
  - **Strengthening local participation.** North Carolina counties and municipalities should be strong partners for the state, but they are currently not committing local funds for land conservation to any great extent. The state should enact enabling legislation authorizing additional local funding sources and provide greater incentives.

  - Model programs from several other states including New Jersey, Florida and Massachusetts provide guidance for developing a framework that will create state incentives for local participation in land conservation funding. For example, in New Jersey a 1989 constitutional amendment allocates (for 30 years) $98 million in annual sales tax revenues to open space. The state also authorized counties and municipalities to raise local funds by establishing voter-approved open space trust funds supported by dedicated property taxes. State incentives, in the form of 50 percent matching grants, are provided to local governments that adopt an open space tax. As of November 2003, all 21 counties and more than 200 municipalities in New Jersey have a dedicated open space tax in place, generating more than $200 million in annual local funding.

  - TPL presents a scenario whereby the 10 fastest-growing counties could generate between $200 and $300 million in local funds over ten years with a dedicated tax or issuance of general obligation bonds.

  - **Increasing the state's funding commitment.** Recent budget shortfalls and rising indebtedness present significant challenges to pursuing additional state funds for land conservation. However, the state does have some additional debt capacity, and there exist a few other potential revenue sources that should be explored further.

  - **Securing the state's funding investment.** Stable state funding fosters program development and long-term vision, and establishes the program as a reliable partner for federal and local conservation efforts. A portion of the state's current investment in land conservation is secured by a dedicated revenue stream, but other funds are subject to annual appropriation. In order to defend land conservation programs against potential budget cuts, the state should consider dedicating revenue to this purpose through a constitutional amendment. Since 1992, seven states have adopted constitutional amendments to secure funding for parks and land conservation.

  - **Leveraging federal funds.** North Carolina should intensify its efforts to obtain a range of federal conservation dollars, including funding from the Farm and Ranch Land Protection Program, Forest Legacy, Land and Water Conservation Fund, and the North American Wetlands Conservation Act..

EXECUTIVE SUMMARY
Statewide North Carolina Public Poll

Prepared
by
The Kitchens Group
for
Land for Tomorrow Coalition

March 2004

Methodology

The Nature Conservancy, on behalf of the North Carolina *Land for Tomorrow Coalition,* commissioned a public opinion survey of seven hundred and eighty-seven likely voters in North Carolina. These voters were interviewed in a random sample conducted March 1-5, 2004. Respondents were screened for voter registration, and the sample was balanced according to all known demographic factors. All interviews were conducted by telephone. The margin of error for this survey is +/-3.5%, with a 95% confidence level. A 95% confidence level is acceptable in social science research. This refers to the fact that 95 times out of 100 these results will fall within this margin of error. The poll was conducted by The Kitchens Group of Maitland, Florida.

The Kitchens Group has conducted three statewide surveys in North Carolina between April 2000 and March 2004. A comparison of the demographics in each survey reveals the samples are comparable enough to track certain questions.

Most Important Issue Facing North Carolina

In each of the three polls since April 2000, respondents were first asked to name the issue they think is the most important for the Governor and Legislature to address. In 2000, the economy barely made the radar screens of these voters. Education dominated as the leading concern in April 2000 (29%). While education continues to be a concern (19%), it does not merit the same level of preoccupation as the economy (40%). No other single issue was mentioned by more than 7% of those polled.

Growth and Development Issues

Some of the most interesting findings, in the survey, focused upon growth and development. A significant shift in attitudes about growth has occurred within the last two and a half years. In June 2002, only 31% said they thought growth and development of land in their area of the state was occurring too rapidly and steps needed to be taken to discourage more growth. That number has increased to 43% in the current survey.

Environmental Concerns

More than 70% of respondents saw the following environmental issues as very or somewhat serious in North Carolina:

84% pollution of rivers and streams
75% loss of wildlife habitat
74% air pollution
73% loss of farmland

Competing Needs

Another significant finding in this survey is that 59% of North Carolina voters say, even though the state has a budget crisis and other competing needs like education and health care, open space and farmland must be preserved before it is lost to development. Although voters see the economy and education as primary issues facing North Carolina, a strong majority say part of the budget should be allocated for the preservation of open space.

Popular Features of a Land Protection Program

More than 60% said the following features of a state level land protection program would make them more likely to support the program:

86% protection of rivers like the Catawba, French Broad and Neuse
82% protection of small family farms and farmland
80% protection of drinking water
78% provision of matching funds to help local governments preserve land
78% preservation of historic sites like battlefields, historic homes and churches
77% preservation of forests
76% preservation of scenic views
68% provision of more public access to beaches and coastal areas
65% protection of habitat for animals like the black bear and red cockaded woodpecker
63% creation of more local parks close to home
61% preservation of areas that would be open to the public for hunting and fishing
57% provision of more hiking and biking trails and areas for canoeing and kayaking

Sources of Funding

Respondents were asked about a variety of ways of paying for an open space protection program. One proposal is to issue bonds. Almost 65% said they would be more likely to support bonds if the bonds cost the average family only $27 per year or less than $3 per month.

Public Education Campaign

The data from this survey points to the necessity of conducting a campaign to inform voters about key conservation issues. The poll indicates how strongly they respond to specifics about issues, such as the disappearance of 2.5 million acres of wetlands, the loss of coastal wetlands, farmland, and forest areas, and the expected increase in population. The statistics, coupled with information about what types of land a conservation program would protect, are very compelling information to voters.

Pipe store robbed for third time

By DARREN MILLER
Staff writer

An investigation by the Haywood County Sheriff's Office of a major theft on March 21 from Peter Pipers Pipes on Jonathan Creek Road in Waynesville led to the arrest of three suspects about a week later.

The investigation is continuing, as law enforcement officials attempt to recover more of the stolen property, including glass pipes, bongs and other store merchandise estimated at $28,500.

The three suspects — Hector Luis Rivera, 27, of Waynesville, Christopher Martin, 19, of Clyde, and Ryan Martin, 21, of Clyde — were arrested in separate incidents March 27. Christopher Martin is a former store employee.

Each suspect was charged with felony breaking and entering, felony conspiracy, felony larceny and felony possession of stolen property.

They are all in custody in the Haywood County Detention Center under $25,000 secured bonds.

The larceny warrants allege that Rivera and the Martin brothers stole more than $10,000 in store merchandise, most of which were glass pipes and bongs.

A bong is a pipe commonly used for smoking marijuana, but can be legally sold because it also could be used to smoke tobacco.

Turning wood waste into rustic flooring

By VICKI HYATT
Editor

A Jonathan Creek business owner has found a new way to recycle discarded pallet pieces by creating rustic flooring — a business venture that is already gaining national attention.

Joe Pryor, owner of Oaks Unlimited on Jonathan Creek, has received a state business recycling development grant to purchase equipment for the new process.

When he first read about a research project to find uses for discarded pallets — the portable platforms used for storing and handling of warehoused goods, his interest was piqued.

Pryor operates a third-generation family business producing and selling high-end hardwood lumber for furniture, cabinets, moldings and millwork.

The product is sold wholesale and shipped internationally.

The family has had a long-standing history with recycling. Sawdust and wood shavings have been recycled for use as boiler fuel, animal bedding and composting at the family's South Carolina facility since 1979. Pryor said he frequently keeps up with trends in wood product recycling and saw an item in a recycling newsletter about using pallet pieces for rustic flooring that caught his eye. The product seemed like something that would fit into his existing business.

Pryor contacted Waste Reduction Partners, the nonprofit organization comprised of retired business engineers and scientists spearheading the project through the Land-of-Sky

Jail bonds get the nod

By JEFF SCHMERKER
Staff writer

The Haywood County Board of Commissioners approved a resolution issuing $12 million in general obligation bonds for the jail/law enforcement center project on Monday.

Adoption of the resolution was necessary before the scheduled bond sale, said Julie Davis, the county's finance director. The document provides details on the issuance of the bonds.

The new jail, to be built using precast modular nodes, is slated to rise on land now occupied by the old jail and popular recycling convenience center in west Waynesville.

The bonds are payable in annual installments of $600,000 beginning on June 1 of 2006, and running until 2025.

In other business, board members learned:

• The county is spending $38,895 at the

Regional Council in Asheville.

At that point, he met David Lowles, a retired engineer assigned to the project.

"We try to help in three areas — energy reduction, water and sewer reduction and recycling of solid waste," Lowles said.

Although his background was in semiconductor equipment, Lowles said a lot of the project was business strategy, research and investigation.

The first step was to understand the concept of grinding pallets into mulch or fuel, which was the standard use for used pallets, he said. Lowles concluded there was no economic incentive to grind up the pallets because the end product would sell for no more than the actual cost of the grinding and handling.

He studied the pallet-to-flooring research being done, looking at the pros and cons.

"The people at the National Forest Service in Virginia had the technology and experience. The wood lab in Raleigh had smarts and studied the labor costs for the first set of experiments," he said. "We applied for and received an Environmental Protection Agency grant and began to work together to make the project economically viable."

Joining forces with Oaks Unlimited brought the project one step further along.

"Having Joe on board is the exciting part," said Lowles. "We were at the point where we had validated the market, cost-reduced the process and worked many of the bugs out, but we needed somebody to invest in the machinery and to run the business operationally. Joe said, 'I can do that.' It turned out Joe knew the professor we were working with so they had pre-established confidence in one another."

Lowles said he spent about 18 months trying to find a use for the broken wood pallet pieces that used to end up as garbage.

There are pallet recycling companies that repair the broken slats so the pallets can be reused, but at some point, the pallet is beyond repair. This creates wood waste that can't be landfilled under the solid waste disposal rules, he said. The accepted disposal method was grinding the pallets up to be sold or landfilled.

Creating flooring, more jobs

Upon reading about the project, Pryor said his initial interest was to work through subcontractors who already had the necessary equipment to produce the flooring.

But with the help of Lowles and Waste Reduction Partners, he applied for and received a state Department of Environment and Natural Resources grant for equipment. That changed his outlook.

While the grant won't cover all the cost of the equipment, it will allow Oaks Unlimited to increase staff locally to make the product. The company currently has 25 employees, 15 of whom are located at the Jonathan Creek operation. Pryor said he will add one to two people initially and more as the market grows.

Benjamin Hicks | staff photographer

Joe Pryor demonstrates the use of a nail press that removed the rusty nails from pallet pieces. Oaks Unlimited will receive a state recycling grant to purchase equipment needed to turn pallet pieces into a rustic-looking wood flooring.

He estimates it will take about three months to reach full production.

"We're still working on patterns, finishes and the equipment," he said.

The company has completed a trial run, which included securing the broken pallet pieces, removing the nails, kiln-drying and finishing the material, and applying the finish.

"The flooring definitely has a unique look," he said. "There's natural variations in the wood and you have nail holes in the board. It's a very rustic look, which is very popular right now. The story behind the flooring — that it is 100-percent recycled — is its strongest appeal."

Recycling is the underlying goal for each step of the process, even to the point to saving the nails that are normally taken to a junk yard.

"Part of grant application was that we would totally recycle and reuse everything," Pryor said.

The equipment will initially be at the Oaks Unlimited Jonathan Creek site, but if the product takes off, Pryor said he is prepared to move the flooring aspect of the business elsewhere in the county.

"We would certainly like to see it expand to the point of needing to do that," he said. "But for now, we have a lot to learn, so we better keep it right here and find out if it's a viable business."

If phone calls he has fielded so far are any indication, it appears the idea is a winner.

Pryor said he has spoken with architects as far away as Washington, D.C., and Boston who read about the project and are interested in the flooring.

He has already met with a distributor in Asheville who will initially concentrate on marketing the project locally.

Lowles said another immediate need is for used pallets, especially those within a 100-mile radius of Haywood County.

Pryor has operated the Haywood County business for the past 18 years. He and his wife, Karen, have two children, an 11-year-old son, Tripp, and a 14-year-old daughter, Taylor.

NOTICE OF MEETINGS

Land-of-Sky Regional Council

7/1/02 – 6/30/03
Achievements

WASTE REDUCTION PARTNERS
2003 HIGHLIGHTS

PROGRAM HIGHLIGHTS

Solid Waste Reduction	1
Waste Markets	2
Water Eff / Drought	2
Energy Efficiency	3
Utility Savings Initiative	3
Alternative Fuels	4
Environmental Management Systems	5
Notable WRP Projects	5
Services / Funding	6

Special Accomplishments
7/1/02 – 6/30/03

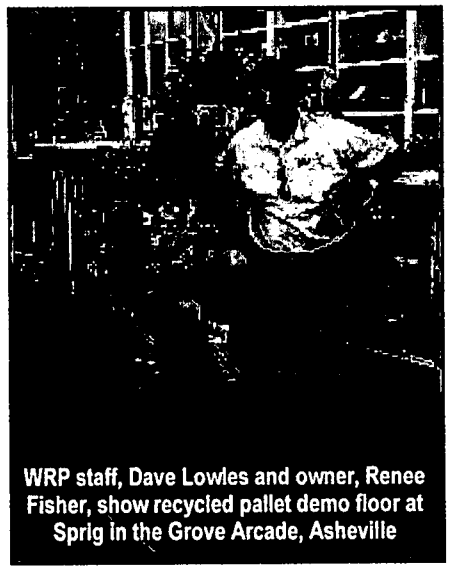
- Saved clients $1.4 million
- 13,447 tons of solid waste diverted from landfills
- 2.4 million kWh/year of electricity savings recommendation
- 15.2 million gallons/yr of water saving recommendations
- Coordinated Southeastern Alternative Fuels Workshop
- Supported Green Building efforts
- Performed 77 waste/energy reduction assessments with business and public clients
- Working in 14 WNC counties
- Provided 11,100 hours of technical assistance

VOLUNTEER PROFESSIONALS HELP WNC BUSINESSES CUT UTILITY COSTS BY $1.3M

In the WNC region, Waste Reduction Partners' (WRP) team of volunteer and retired engineers and scientists have identified nearly 300,000 tons of industrial by-products needing recycling markets, value-added processing, source reduction technologies, and creative entrepreneurial energy and financing. In fiscal year 2003, WRP staff has helped Western North Carolina (WNC) companies move 13,500 tons of waste materials into markets–saving clients over $1.3 million in disposal avoidance cost and revenues. (13 WNC Counties)

New Flooring from Old Pallets

With a grant from EPA, WRP Project Manager, Dave Lowles, is leading a public/private partnership to demonstrate and commercialize a process to make wood flooring from waste pallets that cannot be recycled. A 750 square foot demonstration floor has been installed at Sprig, a flower accessory shop in the Grove Arcade public market in Asheville. The flooring product is attractive and shows great market and economic potential. In December 2002, a Focus Group of area flooring stakeholders was convened to collect marketing information and feedback on 13 different samples of pallet flooring products. Mr. Lowles has multiple business partners collaborating on the project, including American Floor Finishing Co., Kings Kountry Pallets, WNC Pallet, Pallet Express, Oaks Unlimited, Vintage Hardwood Flooring and others. Technical assistance partners include NCSU's Wood Products Extension and the US Forest Service. The project has a goal of producing 50,000 sq. ft in the first two years. In NC, over 300,000 tons of pallet waste is landfilled annually. (Buncombe, Jackson, Henderson, and Haywood Counties.)



WRP staff, Dave Lowles and owner, Renee Fisher, show recycled pallet demo floor at Sprig in the Grove Arcade, Asheville

Beneficial Reuse of Coal Combustion Byproducts

In joint collaboration with the NCSU Mineral Research Lab (MRL), WRP scientists, Tom McCullough and Elaine Martin, are working to develop multiple uses for coal ash by-products from industrial and utility boilers. The reuse strategies include short-term use of ash as a structural fill and reclamation of bottom ash for use in cement blocks. Near-term solutions include wet separation of carbon to produce two marketable by-products, a low LOI ash for cement kiln markets and a high carbon product for the steel industry. The MRL has led a third initiative to develop a light-weight aggregate using industrial biosolids and fly ash. For three years a consortium of public and private partners have been investigating products and production feasibility. A high-performance lightweight aggregate has been produced. The consortium team is currently developing a business plan to attract interested production companies. If the process can be commercially developed, up to 130,000 tons of by-product ash and sludge could be diverted annually from industrial landfills. (Buncombe, Henderson and Transylvania Counties.)

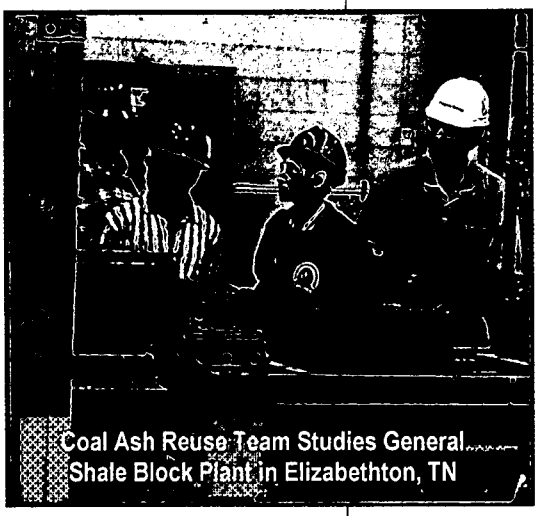
WRP Assists Cleveland Vocational Industries

Waste Reduction Partners' assessor, Richard Burke, worked with Cleveland Vocational Industries to address significant solid waste problem. Cleveland Vocational employs mentally challenged individuals to recycle textile dye tubes provided by area manufacturers. While Cleveland Vocational reclaims the plastic tubes for recycling, they also were disposing of 650,000 pounds/year of contaminated yarn that was still left on the tubes. Mr. Burke was able to determine a cleaner way of removing the yarn using a specialized saw blade. The once contaminated waste yarn is now being sold for $0.03/pound. The net savings for this non-profit is $40,000 per year.

Moving Waste to Markets

Mecklenburg County Waste Reduction Assistance

In a service contract with Mecklenburg County, WRP staff, Ray Guerrein, conducted waste reduction assessments at 23 Charlotte businesses and industries in 2002 and 2003. Through client follow-up, Mr. Guerrein documented that these businesses have expanded recycling markets by 1,525 tons/year and are saving an estimated $172,000 annually. (Mecklenburg County)



Coal Ash Reuse Team Studies General Shale Block Plant in Elizabethton, TN

Green Building Hotline

In joint collaboration with the WNC Green Building Council, WRP and the NC Division of Pollution Prevention launched a WNC Green Building Hotline in August 2002. WRP volunteer, Matt Seigel, staffs this hotline on a half-time basis. For the year, Mr. Seigel addressed 123 questions and provided referrals on alternative energy, water efficiency, low toxic and recycled materials, and solar power. Mr. Seigel also led a number of outreach efforts to area schools and developers in the residential, commercial and affordable housing sectors. Contact the Hotline at (828) 232-5080 or e-mail info@wncgbc.org with any green building question. (11 WNC Counties)

Carbon Waste Recycling

Over two years ago WRP Assessor, Tom McCullough, began working with a carbon processor in Burke County that wanted to dispose of a large stock pile of carbon waste materials through the county's waste transfer facility. Mr. McCullough worked to find a crushing operation that was able to grind the waste into an acceptable form for use in the steel processing industry. The company has been crushing 600 tons per month and will ultimately process over 25,000 tons of waste carbon into a resalable product. The waste stockpile area will be redeveloped into soccer fields. The net economic benefit of these efforts for the client business is over $80 per ton. (Burke County)

Supporting Commercial Recycling Infrastructure

WRP staff is working with two progressive recycling companies to site operations in Buncombe County. WRP assisted McGill Environmental Systems in reviewing potential sites and markets for an industrial composting operation. McGill has partnered with Buncombe County to locate a new facility at the Buncombe County Landfill. WRP also worked with Materials Reclamation, a reputable construction and demolition recycling company to also negotiate with the County to site at their landfills. While County commissioners have vetoed a commercial waste franchising agreement as the first step in these negotiations, the issues will be readdressed later in the year. Both companies would accept waste from the greater WNC area.

"A WRP water audit provided to the Billy Graham Center resulted in annual savings of $11,800 and over 2 million gallons of water savings. The Center implemented 4 of the 7 efficiency measures recommended."

WRP Provides Drought Assistance With Demand-Side Management

Waste Reduction Partners assisted western municipalities with demand-site water reduction support during the severe drought in 2002. WRP worked with Statesville, Shelby, Bessemer City, Forrest City, Gastonia, Huntersville, and Cherryville to provide mailings and resource information to largest water using customers at these municipalities. On-site water efficiency audits were offered and seven assessments were conducted in Statesville and various other locations. A special water training program was presented to Hotel/motel managers in Statesville to discuss water-use restriction and share immediate conservation opportunities at their facilities. In September 2002, WRP provided training on "Establishing a Commercial Water Conservation Program" for the City of Monroe. Program management and auditing expertise was shared with the City's engineering and utility staff.

Regional Water Authority—Industrial Audits Program

In fiscal year 2003, WRP conducted 17 commercial and industrial water efficiency assessments for the Regional Water Authority of Asheville, Buncombe and Henderson. WRP Assessors recommended measures to reduce water consumption by 15.2 million gallons per year. These strategies represent a potential cost saving of $209,200/year for clients.

Hendersonville H.S. Students Audit Water Use

WRP water assessors, Don Hollister and Roger Ambrose, shared experiences with two 10th grade science classes on water efficiency. After lessons on water conservation, the student conducted their own assessment of the High School's water consumption. Students measured water flow from domestic water fixtures, performed calculations, and made suggestions for water efficiency improvements.

Energy Efficiency Assistance
Enhances Profits & Air Quality

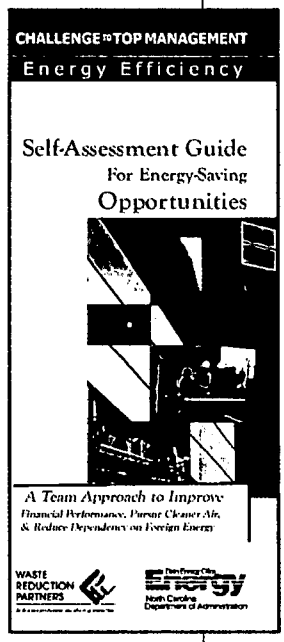
Supported by a grant for the State Energy Office, WRP Energy Assessors completed 25 energy efficiency assessments in fiscal year 2003. WRP auditor, Russ Jordan, coordinated this assistance for a number of public and private business and governmental entities, including schools, vocational centers, and local government buildings.

Assessments in nine WNC counties have addressed a broad range of improvements to energy management issues, including billing rate schedules, HVAC, chillers, hot water, waste heat reclamation, fuel selection, and boiler efficiency.

For work completed in fiscal year 2003, WRP staff recommended efficiency and management improvements to reduce electricity consumption by 2.4 million kWh/year. These recommendations equate to a potential client savings of $185,000 per year. Projected air pollution reductions from WRP energy efficiency recommendations are equivalent to removing 308 vehicles from the highways.

Self-Assessment Guide for Top Managers

WRP team, Wayne Rumble, Sara Boyd and other internal and external reviewers, developed an energy efficiency self-assessment guide designed to inspire top managers to strive for more efficient use of energy resources and improved financial performance. The guide includes check-lists, best management practices, and saving potentials and paybacks for typical energy upgrade projects.



Public Facilities Follow-up

WRP auditors conducted a review of technical assistance provided to public facilities between October 2001 and May 2003. Of 39 energy audits provided, these public clients have implemented measures that are saving nearly 1 million kWh/yr and over $75,000 in annual operation costs. On average, these public facilities have implemented 37 percent of the opportunities presented in written audit reports. WRP management continued to explore ways to help clients increase implementation rates.

"Projected air pollution reductions from WRP energy efficiency work are equivalent to removing 308 vehicles from the highways."

Reducing Costs for State Agencies
Utility Savings Initiative (USI)

Utility costs for over 12,000 state-owned or leased structures exceeds $225 million per year. WRP Special Projects Manager, Wayne Rumble, worked with the State Energy Office on an initiative to reduce state agencies' utility bills by $7.5 million per year.

In a Memorandum of Understanding, WRP conducted operation and maintenance (O&M) surveys at 23 state owned or leased facilities. The survey at each site consisted of observing the conditions, behavioral use and maintenance of building envelopes, lighting systems, HVAC system, domestic hot water, compressed air, electric motors, and miscellaneous items in appropriate building. Opportunities to improve efficiency and upgrade systems were also reviewed.

As part of the surveys, WRP developed and distributed energy saving awareness posters and light switch stickers.

Ten Waste Reduction Partner volunteers participated in the surveys. Overall, WRP members surveyed 3,028,000 square feet of state facilities.

Based on these O&M surveys, WRP assessors have also provided additional in-depth energy audits on specific areas such as lighting and water use. More follow-up assistance is planned at these facilities in the fall of 2003.

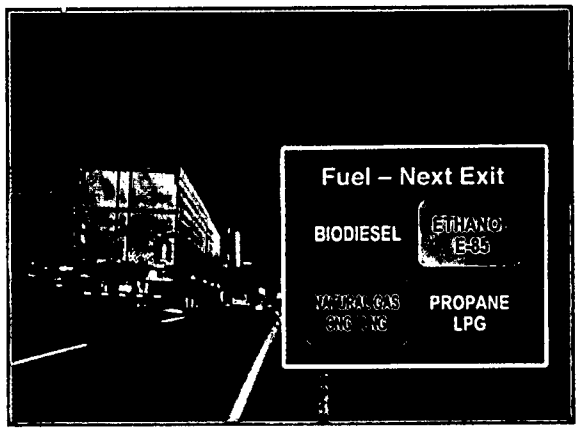
In August, 2003, the State Energy Office recently received an award for the USI effort from the National Association of State Chief Administrators.

ALTERNATIVE FUEL VEHICLES

"Over 135 public and private sector participants from 4 southeastern states attended *Building Alternative Fuel Networks in the Southeast.*"

SEO's Alternative Fuels Workshop - A Regional Success

The Land-of-Sky Regional Council was the lead workshop contractor for two-day workshop/working session entitled, "*Building Alternative Fuel Networks in the Southeast,*" on November 6 & 7, 2002 in Asheville, NC. USDOE's Clean Cities Program, and the State Energy Office sponsored the event. Over 135 public and private sector participants from the states of Georgia, North Carolina, South Carolina, Tennessee and others attended. The workshop had a dual purpose: alternative fuels education and outcome-focused breakout sessions, which addressed the challenges of advancing alternative fuel use and corridor development in the Southeast. Twenty-six national speakers provided educational sessions on air quality, alternative fuels (AF), and alternative fuel vehicles (AFV), and AF success stories. Facilitators led breakout discussions about cooperative actions and prioritized solutions to advancing alternative fuel use through regional strategies. Breakout sessions focused on advancing use of biodiesel, ethanol, natural gas, and propane fuels. Participants were also able to view five AFV's and eight educational exhibits, as well as attending a networking reception.



As a next step, the states of Georgia, North Carolina, South Carolina, and Tennessee have assembled a group of stakeholders to serve on an Alternative Fuels Work Group to address regional issues pertinent to the advancement of alternative fuels. One of the work group's first action items will be the development of a white paper, which will overview the current status of alternative fuels in the four states and provide future goals and action items. If you are interested in participating or contributing to this Alternative Fuels Work Group, please contact Linda Tidwell, Special Projects Coordinator, with the TDEC Policy Office, phone 615-532-0742 or Email: Linda.Tidwell@state.tn.us

SUPPORTING– SMALL BUSINESSES ENVIRONMENTAL OPPOURTUNITIES

Closing-the-Loop

WRP scientist, Eric Wellisch, worked with a small plastic molding manufacturer to reduce and recycle its industrial wastewater. The company does not have access to an industrial sewer system and must have all wastewater hauled off-site at a costly fee. WRP staff recommended several pollution prevention ideas to reduce the volume of wastewater generated and provided an option for the installation of an evaporation system that would save the facility $13,000 in wastewater hauling costs.

Eric Wellisch consults with client on-site.

WRP Assists EZ Block Business Development

WRP staff worked with Jerome Chambliss in developing his new business to manufacture a lightweight cellular block. The block has numerous superior qualities, including improved moisture resistance, fire resistance, thermal efficiency, acoustic properties and ease of construction. The block also uses recycled fly ash, perlite, and fiberglass in its manufacture.

Environmental Management Systems

Blue Ridge Parkway

In April 2003 the Blue Ridge Parkway completed the first environmental management system (EMS) of a National Park in the Southeast. WRP consultant Margie Meares provided numerous hours of on-site assistance and guidance on the initiative. The parkway used EMS models from both the pubic and provide sectors to customize a system to best meet their needs.

Warren Wilson College

Margie Meares also began working with Warren Wilson College to implement an EMS that will follow the ISO 14001 model. Warren Wilson hopes to be the first college in North Carolina to have a registered EMS in place.

Implementation Training

In November 2002 Waste Reduction Partners coordinated and sponsor a two-day ISO14001 implementation course in Asheville. Fifteen participants from areas business and colleges attended the training course led by Jack Rockstad and Margie Meares.

Supporting NC Environmental Stewardship Initiative

WRP management helped NCDENR promote and review candidates for new environmental recognition program called the Environmental Stewardship Initiative. Any NC company with an outstanding environmental program is encouraged to apply at: www.p2pays.org/esi/

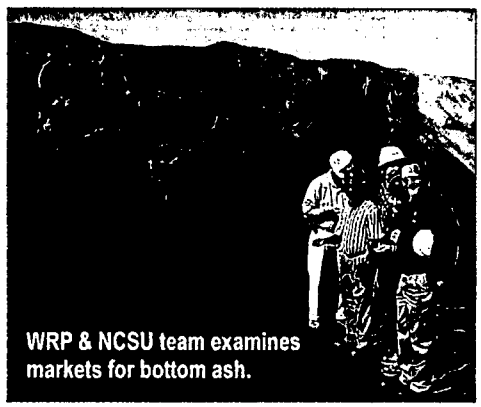
Notable WRP Projects

Ash to Asphalt

WRP scientist Elaine Marten has been experimenting with various formulations of asphalt that includes up to 50 percent fly ash in their makeup. Elaine had partnered with Reuse Technologies to develop a product that could be used in private asphalt paving applications.

New WRP Web Site

WRP Intern, Sara Boyd, recreated the Waste Reduction Partners website, making it easier to read and navigate. Sara also greatly expanded self-assessment guide resources and other web links.



WRP & NCSU team examines markets for bottom ash.

UNC-A Lab Chemical Management Assistance

WRP Scientists, Elaine Martin, Gordon Moore, and Al Glatz, provided UNC-A assistance in sorting through and inventorying surplus and out-date chemicals at student laboratories. A hazardous waste management firm packaged all these chemical for proper treatment, disposal and recycling.

WRP Assists Small Business with Safety Plan

WRP Assessor Gordon Moore worked with a small minerals reclamation company interested in locating a facility in Buncombe County. Gordon assisted the company in developing a site-specific safety plan that would meet the employer's expectations. The minerals reclamation could move 30,000 tons/year of by-products to new markets.

Marketing Efforts

WRP Marketing Manager, Orville McKinney continued marketing WRP services in area counties and keeping close contact with area chambers of commerce. Orville gained media coverage for several WRP achievements, including front page recognition on the Asheville Citizen Times.

Mechanically Inclined

Mechanical engineers, Keith Wood and Paul Sikes, helped a vocational workshop evaluate the potential to refurbish used video cassette tapes. Keith and Paul examined a disassemble/reassembly process.

Volunteers Assist with Chamber's Ind. Awards

Three WRP volunteers helped the Asheville Chamber review finalists for its annual Manufacturing Leadership Awards. Volunteers conducted on-site visits and analyzed evaluation criteria.

WRP Quarterly Meetings—Open to Stakeholders

Interested stakeholders in the community are invited to WRP's quarterly meetings. This year WRP had presentations from Southface Institute on green building construction techniques, the State Energy Office on the Utility Savings Initiative, SafetyKleen on chemical recycling, and WCI on hazardous waste management and minimization.

"WRP Scientist, Gordon Moore, helped a small recycling business develop a site specific safety manual to procure work in Buncombe County. The recycler hopes to move 30,000 tons per year into construction markets."

What is WRP?

Waste Reduction Partners, a team of highly experienced volunteer and retired engineers, architects and scientists, provides WNC businesses and industries with waste and energy reduction assessments and technical assistance.

WASTE REDUCTION PARTNERS

dedicated professionals sharing expertise

Specialty Services:

Water Efficiency / Demand Side Management , Solid Waste Reduction; Multimedia On-site Assessments, Energy Efficiency , Lighting Efficiency , ISO14001 Assistance, Indoor Air Quality Assessments, and Special Environmental Projects.

Service Area:

Waste Reduction Partners serves any business or public entity located in the westernmost 26 counties west of Interstate 77 in North Carolina.

The WRP Mission:

To work for a sustainable economy, healthy environment, and a better quality of life by helping WNC businesses, industries, institutions, and government entities reduce waste and utilize natural resources efficiently.

Partners:

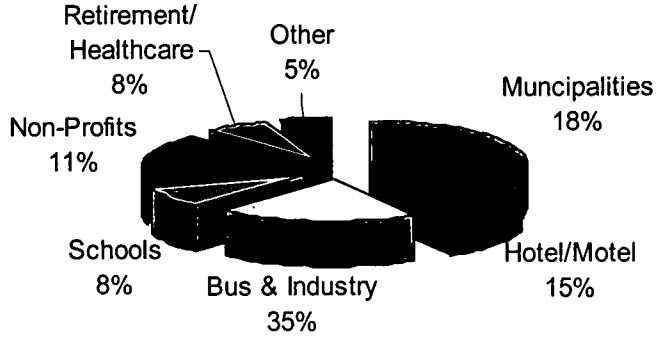
Waste Reduction Partners is a program of the **Land-of-Sky Regional Council** and works in special partnership with the North Carolina Division of Pollution Prevention and Environmental Assistance. Other partners include the State Energy Office of North Carolina; the Regional Water Authority of Asheville, Buncombe and Henderson; the Environmental Protection Agency; the USDA Rural Utility Services; and private contributors.

Confidential, No-Cost Services In Waste Reduction and Energy Management

WRP Funding/Service Recipients

WNC Community Sectors Receiving Assistance

FY2003 Budget $175,172



"This year WRP has provided 11,100 technical assistance hours to improve operations of WNC businesses and public facilities."

POLLUTION PREVENTION PAY$

Waste Reduction Partners works in special partnership with the NC Division of Pollution Prevention and Environmental Assistance (NCDPPEA)

DRAFT

MINUTES
ENVIRONMENTAL REVIEW COMMISSION
May 5, 2004

The Environmental Review Commission (ERC) met on Wednesday 5 May 2004 at 9:30 a.m. in Room 643 of the Legislative Office Building.

Representative Daniel McComas presided over the 5 May 2004 meeting. The following members were present: Senators Albertson, Dorsett, Forrester, Kinnaird, Swindell and Weinstein, and Representatives Fox, Gibson, LaRoque, McComas, Weiss and Williams. Mr. George Givens, Commission Counsel, Jeffrey Hudson, Assistant Commission Counsel, Susan Iddings, Assistant Commission Counsel, Jennifer McGinnis, Assistant Commission Counsel, Tim Dodge, Research Assistant, and Mary Watson, Commission Clerk were also present.

On 27 April 2004, notice was sent to members and interested parties via e-mail and regular mail. A copy of the notice is included in the attachments to these minutes as **Exhibit A**. A copy of the visitor registration and the agenda for the meeting are included in the attachments as **Exhibits B and C**.

Representative McComas called the meeting to order and called on co-chairs for their remarks.

George Givens, Commission Counsel, was asked to explain the agenda.

Mr. Givens said that he had distributed to each member, copies of read only reports that are required by law to be made to the Commission. These reports, Water Quality Accountability for the Agriculture Cost Share Program Fiscal Year 2003, a list of Federally Threatened and Endangered Species in North Carolina and a copy of the Secretary's Scientific Advisory Board on Toxic Air Pollutants provided by DHHS are listed as **Exhibit D**.

Mr. Givens said a status report that lists all of the reports due to the ERC, will be provided to members at the next meeting.

Mr. Givens said that the last meeting of the ERC is scheduled for 11 May 2004 at 2:30 p.m. to approve legislation for the 2004 Short Session. A packet of bills will be distributed to members on 10 May 2004 for review.

Mr. Givens asked members to sign the visitor registration forms and asked members to sign and send forward their reimbursement forms.

Senator Katie G. Dorsett was asked to give a report on the Thursday 22 April 2004 site visit to Gorges State Park and the Friday 23 April 2004 site visit to DuPont State Forest.

Senator Dorsett said that Senators Clodfelter, Albertson and Representatives Gibson and Williams were in attendance for the site visits as well as Representatives Rapp and Walend.

Senator Dorsett said that the State made a very good investment in protecting the environment and the future and conserving our soil, water and air and in protecting the unique species in both the Gorges States Park and the Dupont State Forest. She passed around maps of both parks for members to see.

Senator Dorsett encouraged members to visit both parks whenever they were in the area.

Representative Gibson said that one of the smartest investments our state has ever made was to get involved in Dupont Forest and applauded DENR for their part in making it what it is today.

Mr. Carl L. Wilkins, Program Manager, NC GreenPower, Advanced Energy, gave a report on the NC GreenPower program. A copy of Mr. Wilkins slide presentation is listed as **Exhibit E**.

Mr. Wilkins said that GreenPower is energy that is generated from renewable sources that is constantly replenished. Traditionally it is cleaner to produce than fossil fuels and thereby gets its name GreenPower.

Mr. Wilkins said that we have abundant resources in North Carolina. The State Energy Office has conducted studies on wind power and report there is much wind power yet to be harnessed.

Mr. Wilkins said that renewable energy would improve the air and water quality in our region and creates jobs for our state and improves our economy.

Mr. Wilkins said that North Carolina is the 32nd state to have a GreenPower program. North Carolina is the first program in the country that involves all of the utilities.

Mr. Wilkins said that the GreenPower program is voluntary for all of the utilities and customers and is tax deductible.

Senator Kinnaird asked Mr. Wilkins if the block of energy she bought is tax deductible.

Mr. Wilkins answered in the affirmative. He said that any contribution made to the program is tax deductible.

Mr. Wilkins said that the four objectives of the GreenPower program are 1) improve quality of the environment and public health, 2) increase the amount of generation from renewables, 3) maximize the investment in renewable generation inside the state, and 4) maximize the number of participants in the program.

Mr. Wilkins said that NC GreenPower offers two options: one for residential/small business and the other large business/industry. The major differences are cost and make-up of the resources.

Mr. Wilkins said that the cost for residential and small business is $4 per block of 100kWh. This is about 10 percent of the average consumers usage in the state.

Senator Kinnaird asked Mr. Wilkins if 1,000KWh hour's usage was per day or per month.

Mr. Wilkins said that it was per month.

Mr. Wilkins said that 15 out of 27 electric co-ops have joined the GreenPower program.

Senator Kinnaird asked if any of the electricities turned down an opportunity to join the GreenPower program or are they just deliberating at this point.

Mr. Wilkins said that he would categorize their actions as deliberating the idea.

Representative Weiss asked if information on the program was inserted in the power bills each month or just periodically.

Mr. Wilkins said that power bill inserts are sent out twice a year.

Senator Albertson asked what would be the reason for coops or electricities not to be eager to participate in the program.

Mr. Wilkins said that he could not speak for them at this time but he did say that the cost, with no financial benefits, might be the reason. Some of them may not have the infrastructure to participate.

Senator Kinnaird asked if Home Depot had been approached with the idea of using green lumber.

Mr. Wilkins said that Home Depot had been approached.

Representative McComas asked if Wal Mart had been approached.

Mr. Wilkins said that Wal Mart does not do much outside of selling their products at a competitive price.

Senator Clodfelter asked Mr. Wilkins how long it would take to reach a sales total of a half million blocks.

Mr. Wilkins said that was a good observation; however, he did not have an answer for the question. Based on the marketing plan, they have

dedicated more resources for larger businesses to buy larger blocks of energy.

Mr. Wilkins said that the national average for GreenPower participants is one percent of consumers.

Senator Clodfelter asked Mr. Wilkins if we had one percent of participants in North Carolina, how many blocks would it translate to.

Mr. Wilkins said that it would equate to 40,000 customers and the number of blocks would depend on how many blocks each participant bought.

Senator Albertson asked Mr. Wilkins if there is anything the legislature can do to speed this process along and if so, what.

Mr. Wilkins said that each member could participate as well as encourage business and industry in your district to participate. However, legislatively, he did not have a good answer.

Representative Weiss asked Mr. Wilkins if GreenPower had displays at public festivals across the state.

Mr. Wilkins said that on Earth Day, they were represented in six companies.

Senator Dorsett asked Mr. Wilkins what the goal was with respect to the total number of residential and small business blocks and what determines the number of blocks a residence would use in deciding how many blocks to purchase.

Mr. Wilkins said that their goal is to exceed or meet the national average of one percent of the households, which would be 40,000 homes with one and one half blocks sold to each home.

Mr. Wilkins encouraged members to visit the GreenPower website where a lot of good information is located.

Senator Kinnaird suggested that all members participate in the program and to get the word out to their family and friends.

Ms. Edythe McKinney, Director, Customer Service Center, DENR, gave a report on the One Stop Permitting Program and Express Review Pilot Program and whether the Pilot Program should be continued or expanded. A copy of her report is listed as **Exhibit F**.

Ms. McKinney said that as part of her responsibility with DENR, she works with the coordination program, which is a pilot program from the 2001 legislation, and the new one-stop permitting process program, which is a pilot program from legislation during the 2003 session.

Ms. McKinney said the one-stop permitting program is totally optional. There has been a big demand for it and coastal stormwater is their biggest client. More applications are being received each month and processing time has been reduced significantly from ten days to two days.

Ms. McKinney said that the program included $500,000 for the pilot program. To date, they have received over $200,000 over a three month period.

Ms. McKinney said that the feedback on the program has been positive.

Representative McComas said that from personal experience, the program has worked far beyond his expectations.

Senator Albertson asked Ms. McKinney how many repeat customers would they have from the permitting program.

Ms. McKinney said that people in the wetlands area were repeat customers as well as others.

Senator Albertson said it appeared that more people were beginning to learn about the process and the program was a success.

Representative LaRoque asked Ms. McKinney if the regular process has sped up as a result of the pilot program.

Ms. McKinney said she wishes she could say yes, but she does not have hard data to support that.

Representative LaRoque asked Ms. McKinney if the program was supposed to pay for itself by 2008 if it continues.

Ms. McKinney said that the intent was for that it would pay for itself; however, she did not know of a timeline.

Senator Kinnaird asked if applicants need the most help with the permitting process.

Ms. McKinney said that the more front end involvement with the customers, the better the results.

Senator Kinnaird asked Ms. McKinney if any developers disadvantaged by the higher fees.

Ms. McKinney said that many times, even with small business, time is money and when they borrow money to develop a property, their time frame is even shorter. In theory, when you have the same number of permits and some people are willing and able to pay, other customers should be able to be served quicker.

Senator Kinnaird asked Ms. McKinney how many extra staff members did they have to hire for the program.

Ms. McKinney said that at this time, they have seven additional staff hired. Five are in Wilmington and two in Raleigh.

Senator Kinnaird said she would be interested in seeing the correlation between how many jobs were lost that we have now paid for in a different way.

Senator Clodfelter said that he believes if you could reallocate existing staff or you could hire additional staff with the additional fee resources.

Mr. Givens asked Ms. McKinney if you could just extrapolate what you would have to charge in fees or make up for in appropriations, so that good service could be provided for everyone and everyone's permit would go through quickly.

Ms. McKinney said that this was an ultimate goal.

Representative McComas asked Ms. McKinney to share some of her experiences with the application process.

Ms. McKinney said that some folks are not as experienced in filling out the applications and this does delay the permitting process.

Representative Fox asked Ms. McKinney if the customer has to come through her office before they put in the application, for either information or forms.

Ms. McKinney said that this is one of the requirements of the pilot program.

Mr. Brock M. Nicholson, Deputy Director, Division of Air Quality, DENR, gave an update on the status of designation of nonattainment areas to comply with the revised national ambient air standard (NAAQS) for ozone (the 8-hour standard). A copy of three handouts: North Carolina's Ground Level Ozone Designations, EPA's Boundary Designations for 8-Hour Ozone Standards for North Carolina, and North Carolina's Recommendation on 8-hour Ozone Nonattainment Boundaries is listed as **Exhibit G**.

Mr. Nicholson reviewed the handouts and then answered questions.

Representative McComas asked if the Buncombe Amendment has been made to the map that was handed out. The map was amended in February 2004 to remove Buncombe County.

Representative McComas asked why Cumberland County, which is recommended by DENR, is not reflected on the EPA map.

Mr. Nicholson said that Cumberland County is included both in DENR and EPA's recommendations.

Senator Forrester asked Mr. Nicholson if any of the counties had complained about the placement of monitors.

Mr. Nicholson said that there have been concerns about the placement of monitors. Meetings have been held with a number of officials about monitor placement, particular the PM, the particulate matter monitors. Special studies are being done to try to find out what is influencing the monitors at the water tower sites in Hickory and Lexington. Those are only two sites in which the fine particle standard is still being violated. Those designations are expected by December of 2004 from EPA.

Representative Gibson asked Mr. Nicholson if any group is favor of the EPA groupings versus DENR's groupings.

Mr. Nicholson said that DENR has had some correspondence from the Southern Environmental Law Center on behalf of several organizations that favored the EPA designations.

Mr. Tom Bean, lobbyist for the North Chapter of the Environmental Defense.

Mr. Bean said that both Environmental Defense and the Southern Environmental Law Center support the full county designation methodology that EPA has followed in setting these boundaries.

Mr. Bean also said that as a general rule, in counties where the state proposed a partial designation, one would expect that development would lead to non-attainment beyond those areas where non-attainment now exists.

Representative Gibson said that he would like for someone to bring to him the information that differentiates the EPA eight hour versus DENR's eight-hour rules.

Representative Gibson said that it was his opinion that EPA has taken advantage to do something that looks good on paper but in fact, DENR has a better plan. He urged DENR to appeal this and to look to the legislature for any remedy it could provide.

Senator Swindell asked Mr. Nicholson if there will be ongoing monitoring located other than in Leggett and how will we know in six months from now if we are improving and in three years is there a magic time when all of that data will be looked at and we will be released from this mandate.

Mr. Nicholson said that the data is a three-year running average and whenever we factor in the 2004 air quality monitoring data, we then have a three-year average. Then we can request a re-designation. The State will then have to reapply.

Mr. Nicholson said that for good sound science reasons, we have a much broader monitoring network than other states our size and population.

Mr. Nicholson said that if we had not had these monitors in the downwind rural counties, perhaps they would not have been designated. DENR will take a strong look at what the monitoring network is.

Senator Swindell said that an inquiring mind would look at what the State and EPA have recommended and question the positioning of the monitoring sites.

Mr. Givens asked Mr. Nicholson who would decide to appeal or not.

Mr. Nicholson said that this decision would be a joint decision from DENR and either the Governor's office or the Attorney General's office.

Mr. Givens asked Mr. Nicholson when this would be decided.

Mr. Nicholson said they have 60 days to appeal from the date of publication.

Senator Kinnaird asked Mr. Nicholson what the difference is between a one-hour measure and an eight-hour measure.

Mr. Nicholson said the one-hour ozone standard was set, as was the eight-hour, based on the federal EPA's understanding of the effects of ozone on human health. Studies that came after the time that the one-hour standards were set suggested that exposure over a longer period of time may be more important in terms of health protection than the one-hour standard.

Mr. Nicholson said that the state is still measuring ozone the way we have always measured it but we take eight, one-hour averages, and take a running tally of those averages to get an eight-hour value. The one-hour standard is much less stringent than the eight-hour standard. It is essentially 120 parts per billion (ppb) one hour versus 80 ppb for the eight-hour average.

Senator Kinnaird asked if the readings are different when taken at different times of the day or night.

Mr. Nicholson said that it is measured continuously, 24 hours a day from April 1 to October 31.

Senator Kinnaird asked how the eight hours is picked.

Mr. Nicholson said that the average is picked during each day.

Senator Kinnaird asked if we are making any progress with the federal government on requiring trucks to be inspected. There are more stringent requirements for automobiles while trucks are not regulated.

Mr. Nicholson said that EPA has standards in effect for heavy-duty diesel trucks. There are more stringent requirements in the 2005-06 model years and even more in the 2007 and beyond model years.

Mr. Nicholson said they should begin to see 90 percent reduction in emissions in 2007 with these trucks.

Mr. Nicholson said that we might soon see an onboard diagnostics program used for diesels because they are going from the old mechanical injection systems to the electronically controlled systems.

Representative McComas said that as a fleet owner, the engines you buy today are already electronically controlled. If the diesel is not working according to the specs, it will not operate at all.

Senator Forrester asked what effect does this new ozone rule have on new businesses coming into our area.

Mr. Nicholson said that if a new source of business coming in is a major source for volatile organic compounds, they could exceed this number. Or, if they have boilers or combustion sources that have NOx emissions, they will have to put on lowest achievable emission rate controls.

Ms. Miriam Perry, Director, Public Transportation Division, Department of Transportation, gave a report on a Statewide Transportation Demand Management Program (TDM). A copy of Ms. Perry's report is listed as **Exhibit H**.

Ms. Perry said that Senate Bill 953 required the Departments of Transportation, DENR, and Office of State Personnel to develop a plan that would address reducing the number of vehicle miles traveled for both private and public sector employees and NOx emissions by the year 2009.

Ms. Perry said that Governor Easley appointed a panel of 16 representatives in January 2003, representing local transportation demand management programs, local elected officials, major employers and developers in the state, marketing professionals, and federal and state environmental agencies to guide the development of a statewide transportation demand management (TDM) plan.

Ms. Perry said that Secretary of Transportation, Lyndo Tippett, announced the recommendations of the plan last month.

Ms. Perry said that plan panel developed a three-year action plan, including the establishment of an Office of Commuter Assistance within DOT that would focus on demand management techniques and TDM initiatives for North Carolina.

Ms. Perry said that North Carolina is the first state to develop a statewide program, US EPA and US DOT program, that recognizes employer that provide commuter benefits to their employees. These benefits could

include subsidized transit passes, preferential parking for employees that ride share or van pool, a telecommute program, providing bike rack on buses and at the employment site and providing showers for those who choose to bike to work. This would keep that single occupant vehicle off of the road.

Ms. Perry said that an additional recommendation of the plan was the development of trip reduction ordinances or programs and a reduced parking ordinance in major urban areas. Durham County has a trip reduction ordinance and similar ordinances are planned for Wilmington, Asheville and RTP.

Ms. Perry said that other activities recommended in the plan include the creation of a transportation management association in downtown Raleigh and Charlotte for state and private sector employees to reduce the single occupancy vehicle use.

Ms. Perry said that short-term improvements are already being taken in performance and accountability of the existing ride-share and vanpool programs in the RTP, the Piedmont Triad and Charlotte.

Ms. Perry said that the State has also implemented a show your ID and ride for free transit plan program in Raleigh for any state employee showing their ID. The program initiated in September 2003 and riders ship has gone from 6,200 passengers to over 10,000 in 2004.

Ms. Perry said that better use of limited parking options are being discussed in downtown Raleigh and Charlotte.

Senator Kinnaird asked Ms. Perry if DOT was working with the Clean Cities Coalition.

Ms. Perry said that DOT was working with the Clean Cities Coalition through the Division of Energy.

Senator Kinnaird asked Ms. Perry why DOT doesn't have TTA service from Chapel Hill to Raleigh.

Ms. Perry said that a study was initiated in the Triangle in 2003 that supported the feasibility of consolidating the transit systems that operate in Durham, Raleigh, Chapel Hill, Cary, and Triangle Transit Authority as well as the University systems transportation provided by NC State and Duke Universities.

Ms. Perry said that at this point, the City of Raleigh, City of Durham, TTA's Board of Trustees and the Town of Cary Town Council, authorize the transportation directors from each of those organizations to move forward with developing a memorandum of understanding and a cost allocation plan that would allocate revenues and expenses for a consolidate system.

Ms. Perry said that a meeting is planned this week for a consultant team to present the recommendations for the allocation of cost for a consolidated system.

Ms. Heather Hildebrandt, Environmental Engineer, Technical Services Section, division of Air Quality, DENR, gave a presentation on retrofitting diesel engines (transit and public school buses). A copy of Emission Control Strategies for Diesel Engines is listed as **Exhibit I**.

Senator Forrester asked Ms. Hildebrandt what percentage of our current fleet of school buses is diesel powered.

Ms. Hildebrandt said that with the exception of some buses in Mecklenburg County that run on natural gas, the majority of the fleet is diesel powered.

Senator Kinnaird asked Ms. Hildebrandt about the additional NOx emissions from bio-diesel.

Ms. Hildebrandt said that there is some thought into looking into other technologies that work in reducing the emissions in bio-diesel.

Senator Kinnaird asked Representative McComas how we are going to justify the costs for these new emission control options for the individual truck owners.

Representative McComas said that the increased rates for industry would cover this expense.

Senator Swindell asked Ms. Hildebrandt if anyone at DENR was working in conjunction with DPI or DOA with regard to bids on purchasing of our buses.

Ms. Hildebrandt said there was a member on the Committee of the Mobile Source Emissions Reduction Grant program, from DPI, who helped work with DAQ on emission control strategy.

Ms. Hildebrandt said she was scheduled to meet in June with the bus people to let them know about the program and about the technologies available.

Senator Swindell asked Ms. Hildebrandt if that person was Ben Matthews.

Ms. Hildebrandt said it was Derrick Graham.

Representative Weiss asked Ms. Hildebrandt if the catalysts installed on buses were in the areas with the greatest pollution air quality problems.

Ms. Hildebrandt said that in many areas this was true. The five area schools funded this year were Greensboro County, Wake County, Mecklenburg County, Iredell/Statesville, and Braggline Schools.

Ms. Hildebrandt said there because it is a grant program, they are limited to who can submit applications for this program.

Representative Weiss asked Ms. Hildebrandt if they were also looking as asthma rates when they are making these grants.

Ms. Hildebrandt said that during the selection process, which includes someone from the American Lung Association, they are made aware of this.

Representative Weiss said that she recognizes we have an old bus fleet, so is there a way that when we retire buses that have been converted over, could we reuse the catalyst on the newer buses.

Ms. Hildebrandt said that it would probably be possible reuse these catalysts, but this hasn't been an issue at this point and she couldn't speak to this point.

Representative McComas told Representative Weiss that when the bus is retired, there should be new technology that would do away with the need for a catalyst.

Mr. Givens added that with regard to alternative fuel vehicles, in the 1999 Clean Air Act, there was a directive for DPI, DOT and DENR to prepare a plan for the use of alternative fuel vehicles for public school buses and transit buses. The plan was presented to the ERC in 2000; however, he does not believe anything has ever been implemented.

Mr. Grover Nicholson, Chief, Underground Storage Tank Section, Division of Waste Management, DENR, gave an annual report on the status of leaking petroleum underground storage tanks, the State cleanup funds, and the Groundwater Protection Loan Fund. A copy of the annual report and a fact sheet on the Pay-For-Performance Initiative is listed as **Exhibit J**.

Mr. Nicholson reviewed the Pay-For-Performance Initiatives handout and cited backup information in the Annual Report.

Representative LaRoque asked Mr. Nicholson if the UST Program was funded by the gasoline tax.

Mr. Nicholson said it was funded by the gasoline tax, the tax on kerosene and motor fuels and also by tank fees.

Representative LaRoque asked Mr. Nicholson if he had any suggestions as to how we could get these small business owners a decent cash flow so that they would not have to wait a year to get payment on the services they are providing.

Representative McComas told Representative LaRoque that his question would be addressed with the next presentation on the agenda.

Representative Weiss asked Mr. Nicholson about the changes in inspections, would they be able to do more frequent inspections with the current staff or do they need additional people to handle this.

Mr. Nicholson said they do need additional people, and eight inspectors would be needed to handle the twice a year inspection goal.

Senator Kinnaird asked Mr. Nicholson if they were going to personnel and try to reclassify these positions.

Mr. Nicholson said that was correct.

Representative Gibson asked Mr. Nicholson what the status is of the Attorney General's suit on the people that might have been taking advantage of the UST program.

Mr. Nicholson said that the Attorney General brought charges against eight consultants for price fixing. When they developed a reasonable rate document, it was based on a competitive bidding process. They found it very difficult to canvas consultants and get rates they were comfortable with, so they used the competitive bidding process. Six companies have settled their suit and court cases are continuing against the other two companies.

Representative Gibson asked Mr. Nicholson where are we headed with the UST Program.

Mr. Givens said that more money could be put into the program or less could be spent. To put more money in the program, you either have to raise the tank fees or raise the gas tax or reallocate some general fund money. The industry folks will accept a tank fee increase if it is coupled with additional tax money somewhere else.

Mr. Givens said that what we are really funding here is an under funded insurance program. It is important to recognize that with exception to this program and the dry cleaning program, everybody else who has a spill or leak pays for it out of their pocket or it becomes an orphaned site and the state pays for it.

Mr. Givens said that this is a program that gets a site cleaned up and takes some of the burden off the responsible party.

Mr. Givens said that if we spend less money on the program, we do less work and leave the contamination in place, use the money more efficiently, or end the program.

Representative Gibson asked Mr. Nicholson if there was any insurance company that would underwrite these folks currently.

Mr. Nicholson said that this has been investigated quite a bit and there are companies out there writing $1.5 million coverage, now. The deductible is $20,000 for remediation and $100,000 for lawsuits.

Mr. Nicholson said that he does not have the staff to look after every penny of the fund and needs help from the responsible parties. That kind of help would come if people were required to get insurance.

Mr. Givens said that whether or not there are companies writing policies now does not determine if they will continue to do so on a regular basis.

Representative Gibson said that if we don't develop legislation for a ½ cent gas tax before session starts, it would be next year before anyone pays attention to this. And, with the numbers he has seen, we have a disaster here. The tank people and the gas folks are at the table and are being more than cooperative. They want this resolved.

Representative Gibson asked Mr. Nicholson if anyone has looked at the standards issue and where are we in limits.

Mr. Nicholson said that the standards issue is being reviewed and the rule is being looked at right now. Last year they realized that some of their analytical procedures didn't need to apply to every sample. It is taking them longer than they thought but they are running the rule.

Representative Gibson asked if there is a way that gradation can be given to tank owners that might easier delineate the level to which the cleanup is, so that we don't put the burden on the tank owners.

Mr. Nicholson said that the working group is doing well and all of the options are being explored. No matter what they do, they will save some money but the program is still under funded. It is a matter of rate, how fast do we want to clean this up.

Representative McComas told Representative Gibson that he would be glad to have a meeting, after session convenes, between the ERC co-chairs, Mr. Nicholson and the Department of Insurance to find a solution to this problem.

Senator Albertson asked Mr. Nicholson if any tests had been done to tell us when the greatest damage might occur from one of these UST's.

Mr. Nicholson said that he did not have the answer to this question but would check with his staff and obtain this information for Sen. Albertson.

Senator Albertson asked if it was possible that some of the tanks that have been in the ground for over 30 years don't do any damage and don't need cleanup.

Mr. Nicholson said that if a tank system is not leaking, it is not doing any damage. Certainly, an unprotected tank corrodes and it is difficult to know when the leak would occur. He told Sen. Albertson said that he would look into this and gather data to report to him.

Senator Albertson said that the most frustrating thing to him and those involved in the testing and consulting is lack of closure on the sites.

Representative LaRoque said that he sees the residential UST's as being the next windfall for the plaintiff attorneys. So, we need to make sure that the State is trying to get these UST's cleaned up.

Mr. Nicholson said they continue to do things to try to hold costs down through the fact that reimbursement is done only to reasonable and necessary remediation.

Representative McComas said that the 250,000 residential tanks listed in his handout seems to be a little on the low side. Are these the ones identified as leaking and how many does he estimate are out there that we do not know about.

Mr. Nicholson said that since those tanks are unregulated, they do not have a good idea of how many of those tanks are out there. The 250,000 numbers was based on the amount of heating fuel sold in the state with some correction for those that were above ground versus below ground.

Mr. Lindsay Trittipoe, Principal, Commonwealth Acceptance, LLC, Richmond, VA, gave a report on the Virginia Resources Authority's (VRA) accelerated claim payment program for underground storage tank fund claims and the development of a national accelerated claim payment program (NATLUST). A copy of Mr. Trittipoe's presentation is listed as **Exhibit K**.

Mr. Trittipoe said that the VRA was established in 2002 with a lot of similarities between North Carolina's UST fund program and Virginia's. Both state's funds are functionally insolvent in that they cannot process claims as they are approved in a timely manner.

Mr. Trittipoe said that NATLUST program is one that can be participated in by all states to provide a permanent solution to the periodic bounce of LUST fund insolvency. Operationally, NATLUST will function much like the VRA program where it will provide liquidity by purchasing approved claims from residual payments. Participation will be voluntary and on a claim-by-claim basis.

Mr. Trittipoe said that NATLUST will receive its funding through a Virginia governmental entity that would sell municipal bonds as required by down streaming the money into NATLUST to purchase the claims. The financing should be available in any state where political leaders, regulatory agencies and stakeholders can agree that this type of financing should be an option.

Mr. Trittipoe said that an independent Board of Directors would govern NATLUST. Participating states would be invited to appoint a representative to the Board.

Mr. Trittipoe said that this program has been a success in Virginia and encouraged members to consider this program for North Carolina.

Senator Kinnaird asked how the interest rates are set for the borrowed money.

Mr. Trittipoe said that short term floating rate debt is used for determine the interest rates. The rates would fluctuate.

Representative Gibson asked what our State Treasurer's offices say about the NATLUST program.

Mr. Trittipoe said that investment bankers spoke with our Attorney General's office about this determined this is not a debt to DENR, the State or the taxpayers of North Carolina.

Representative Gibson asked if this same feeling is shared by our bond counsel in our State Treasurer's office as to the liability of the residual payee.

Mr. Trittipoe said that he is quite confident that the folks at the AG's office understand that this has zero effect on North Carolina's bonded indebtedness.

Representative asked Mr. Trittipoe if there was no assumption of any liability on any office or branch of North Carolina.

Mr. Trittipoe said there absolutely no liability.

Mr. Givens said that he is not recommending anything, yet. He just wanted to make sure that it was determined that participation in this program would not be an increased debt to our State.

Representative Gibson asked if DENR thinks this is a good program.

Mr. Givens said that DENR thinks this is a viable way to go.

Senator Clodfelter said that his questions about the program would not be legal at all but rather questions to find out if there was a less expensive way to go about it.

Representative Gibson asked Mr. Givens if it would be appropriate to have legislation available for short session in the event that this comes up or do we need to make any placeholder available between now and the start of session.

Mr. Givens said that he expects there will be some type of placeholder available or he would need to identify a vehicle that could be used.

Representative Gibson said that at the appropriate time, he would like to make a motion as to when legislation is voted on, we provide an appropriately titled bill that could be used for this.

Senator Clodfelter told Representative Gibson that we will have some kind of place holder available by the convening of session.

Mr. Dempsey E. Benton, Chief Deputy Secretary, DENR, gave a report on implementation of the Wetlands Restoration Program and use of the Wetlands Restoration Fund. A copy of Mr. Benton's comments, a copy of the 2003 Annual Report, and a copy of a condensed report are all listed as **Exhibit L.**

Mr. Benton referred to Table 3 in the condensed report (see Exhibit L) which show the Annual expenditures and encumbered monies in the Wetlands Trust Fund account and to Table 4 that showed the amount of dollars encumbered in design/construction management contracts.

Senator Kinnaird asked Mr. Benton what the accountability is for the private firms to make sure they are competitively bidding and not overcharging the state.

Mr. Benton said that his staff is putting proposals out which identify the type of work that is required. When those proposals are received, it is a two-step process to make a decision. First step is a thorough review of the sites proposed by the prospective vendors to make sure they meet the expectations of wetlands mitigation at which time bids are opened and selection made based on competitive nature of the bids.

Mr. Benton said that second step is extensive monitoring of the project itself so that the work is done according to the specifications. There is a required five-year monitoring by the vendors so that they make sure it meets objectives.

Mr. Benton said that the WRP accounting mechanism is a high level of accountability. They are working with the Corp of Engineers on providing some degree of flexibility on transitioning some of the areas that are a major problem.

Mr. Benton said that one of the challenges for 2004 is balancing out the workload on a multi-year schedule so that the private contractors can understand their timing. They want to achieve 100 percent of mitigation delivery targets identified.

Representative Gibson asked Mr. Benton who is in charge of the WRP at this time.

Mr. Benton said that Bill Gilmore is the director of the newly constituted program.

Representative Gibson asked Mr. Benton was DOT happy with the WRP at this time.

Mr. Benton said that this was a work in progress. What they presented to DOT today was a first effort to take DOT's improvement plan and translate that into mitigation needs. This would be a work plan for them to use for the next two years to assure them that when they need those permits for their projects, they would be at work getting the mitigation in place.

Representative Gibson asked Mr. Benton to explain in layman's term what are we obligating ourselves for in a cost per acre and cost per foot for 2004.

Mr. Benton said this information was included the 2003 Annual Report (see Exhibit L). He said the trend line for future years would be going down. He believes that one of the results of merging the state's mitigation into a specialized business team is to get bigger projects, which would allow the cost to go down.

Representative Gibson asked if $68 million is the amount obligated for full delivery.

Mr. Benton said that is WRP's estimate for the projected value.

Representative Gibson asked what the $68 million translates into with regard to acres and feet.

Mr. Benton said it was not broken down by acre but he would get this information to Representative Gibson.

Representative LaRoque asked what are we going to do for the poor counties that land is being taken away from for wetland mitigation.

Mr. Benton said that he did not have a specific answer to the question, but in this program, he believed that some of the projects would take them out of the poorer counties.

Ms. Beverly O. Hall, Chief, Radiation Protection Section, Division of Environmental Health, DENR, gave a report on the management of low-level radioactive waste in North Carolina. A copy of Ms. Hall's report is listed as **Exhibit M**.

Ms. Hall's comments are included in full in the report (see Exhibit M).

Mr. John F. Maddrey, Special Deputy Attorney General, North Carolina Department of Justice, gave a report on the pending litigation: State of Alabama, State of Florida, State of Tennessee, Commonwealth of Virginia, and The Southeast Interstate Low-Level Radioactive Waste Management Commission v. State of North Carolina.

Mr. Maddrey said that the case listed above is U. S. Supreme Court, No 132, Original.

Mr. Maddrey said that North Carolina withdrew from the Southeastern Compact in July 1999. In December 1999, the Southeastern Compact Commission entered a sanctioned order against North Carolina based on its failure to cite, license, and operate a regional disposal facility for low-level radioactive waste. Sanctions were assessed at $80 million of restitution, monies that the Compact Commission had provided in furtherance of North Carolina's citing procedure as well as the ordered repayment of $80 million plus interest, plus $10 million based on lost income projected over the 20 year of life of the facility, plus attorneys' fees.

Mr. Maddrey said the State of North Carolina has resisted liability for this amount and as a result, there was action filed in June 2001 by the Compact Commission asking that the U.S. Supreme Court accept the case.

Mr. Maddrey said the U. S. Supreme Court denied the case and in June 2002, the current action was filed. It as the same as the prior, rejected action with one significant difference, the plaintiffs included the states of Alabama, Florida, Tennessee and Virginia, together with the Compact Commission, against the State of North Carolina. The relief being sought was the enforcement of the sanctions orders entered by the Compact Commission.

Mr. Maddrey said that in June 2003, the U. S. Supreme Court, granted the motion for leave to file that bill of complaint and accepted the case. Following North Carolina's answer to the bill of complaint, in November 2003, the Court referred the case to a special master, or an officer of the Court to receive evidence, make a recommendation as to rulings, and pass them on to the Court.

Mr. Maddrey said that the special master assigned to this case was a law professor at George Washington University School of Law in Washington, D.C., Bradford Clark. The special master has convened a variety of case management conferences and has issued a procedural order as to how the case will progress.

Mr. Maddrey said that in March 2004, the State of North Carolina filed a motion to dismiss the bill of complaint on the legal grounds that the Compact Commission had no jurisdiction over the State, as the State had withdrawn from the Compact Commission prior to the beginning of the sanctioned procedure; therefore, any sanctions issued were of no consequence.

Mr. Maddrey said that the plaintiff states and the Compact Commission have filed a motion for summary judgment, seeking a ruling from the special master and the Supreme Court that the sanctions imposed by the Compact Commission should be enforced on their face.

Mr. Maddrey said that the Attorney General's office in the process of replying to those cross motions. There will be a brief due in ten days and the final round of briefs is due to the special master in mid June. They anticipate a hearing in July or August before the special master on those motions at which time the special master will enter a report or recommended decision to the U. S. Supreme Court.

Mr. Maddrey said they could have a resolution by the U.S. Supreme Court at the preliminary stage or it could be determined that the matter has to go to a full blown trial before the Special Master at which time discovery and depositions would have to be made. This trial would not occur until summer of 2005 or beyond.

Mr. Maddrey said that the total dollar amount that the plaintiff states and the Compact Commission are seeking from North Carolina is in the ballpark of $100 million.

Senator Kinnaird asked Mr. Maddrey if we are 132 in the pipeline or if 131 cases have already been heard.

Mr. Maddrey said that this case is number 132 in the history of the Supreme Court.

Senator Kinnaird asked how many cases are in front of us.

Mr. Maddrey said that in terms of original jurisdiction cases, he is aware of maybe two or three others that are ongoing. Most of these cases concern boundary disputes. This is the first case he is aware of that regard radioactive waste sites.

Senator Kinnaird asked Mr. Maddrey how many compacts still exist.

Mr. Maddrey said that there are numerous other compacts still in existence. Most of them are dormant and he knows of only one other active compact involving Nebraska and the Central States that formed that compact.

Mr. Givens said there are seven other compacts approved by Congress, which are still in existence. Congress has consented to two or three additional compacts.

Senator Kinnaird asked Mr. Maddrey who wrote our answer to the complaint.

Mr. Maddrey said the attorneys from the Attorney General's office wrote the complaint with the permission and cooperation of the Governor's Office and Washington, D.C. counsel to assist them.

Senator Kinnaird asked if they also helped on the motion to dismiss.

Mr. Maddrey said this was correct.

Senator Clodfelter announced that the ERC would meet sometime next week and to watch for an e-mail announcing the meeting.

The meeting was adjourned at 2:00 p.m.

Representative Daniel McComas
Presiding Co-Chair

Mary R. Watson
Commission Clerk

TO: Environmental Review Commission – Members and Interested Parties

FROM: George F. Givens, Commission Counsel
Mary R. Watson, Commission Clerk

RE: **Notice of Meetings - 5 May and 11 May 2004**

COMMISSION MEETING – 5 May 2004:

The Environmental Review Commission will meet at 9:30 a.m. on Wednesday 5 May 2004 in Room 643 of the Legislative Office Building in Raleigh.

At this meeting, the Commission will hear reports from State agencies, consider studies for which the Commission is responsible, discuss topics to be considered at future meetings, and attend to other matters. Listed below are potential agenda topics for this meeting.

1) Information item on the NC GreenPower Program

2) Status report on the One-Stop Permit Assistance and Coordination Program. (S.L. 2001-424, Sec. 19.6)

3) Report on the Express Review Pilot Program and whether the Pilot Program be continued or expanded (S.L. 2003-284, Sec. 11.4A(e))

4) Information item on the Transportation Demand Management Program

5) Update on the status of designation of nonattainment areas to comply with the revised national ambient air quality standard (NAAQS) for ozone (the 8-hour standard)

6) Annual report on implementation of S.L. 2002-4 (Clean Smokestacks Act) (S.L. 2002-4, Sec. 14)

7) Report on issues related to the Leaking Petroleum Underground Storage Tank Cleanup Program (S.L. 2003-352, Sec. 12.(a))

8) Annual report on the status of leaking petroleum underground storage tanks, the State cleanup funds, and the Groundwater Protection Loan Fund (G.S. 143-215.94M)

9) Information item on the Virginia Resources Authority's accelerated claim payment program for underground storage tank fund claims and the development of a national accelerated claim payment program (NATLUST)

10) Annual report on implementation of the Wetlands Restoration Program and use of the Wetlands Restoration Fund (G.S. 143-214.13)

11) Annual report on the effectiveness of projects funded under the Agricultural Cost Share Program for Nonpoint Source Pollution Control (G.S. 143-215.74(e))

12) Update on issues related to the Phase II stormwater rules

13) Report on the management of low-level radioactive waste in North Carolina (G.S. 120-70.33(7))

14) Consideration of legislative proposals for recommendation to the 2004 Regular Session of the General Assembly

15) Other matters related to the Commission's powers and duties under G.S. 120-10.43

COMMISSION MEETING – 11 May 2004:

The 2004 Regular Session is scheduled to begin at 12:00 noon on Monday 10 May. The Commission normally meets shortly after the beginning of the session to complete work on legislative proposals prior to the commission/ committee bill request deadline, which in 2004 is 4:00 p.m. Wednesday 12 May. **A Commission meeting at 2:30 p.m. on Tuesday 11 May in Room 643 of the Legislative Office Building is tentatively scheduled for this purpose.** The agenda for the meeting may also include any unfinished agenda items from the 5 May meeting of the Commission and any other matters related to the Commission's powers and duties under G.S. 120-10.43.

FUTURE MEETINGS:

The Commission may meet at other times while the General Assembly is in session (G.S. 120-70.44). If the Commission meets while the General Assembly is in session, written notice will not be mailed to persons on the mailing list. Rather, notice will be given at a session of the Senate and House of Representatives as provided by G.S. 143-318 (b). The Commission will resume a schedule of regular monthly meetings following adjournment of the 2003 Session of the General Assembly. Mailed notices of Commission meetings will resume at that time.

OTHER MEETINGS:

The Commission Counsel will hold meetings of interested parties on specific topics as indicated below.

Phase II Stormwater Management Working Group
2:00 p.m. Tuesday 27 April 2004– 605 Legislative Office Building

Leaking Petroleum Underground Storage Tank Working Group
10:00 a.m. Tuesday 4 May 2004– 605 Legislative Office Building

ADDITIONAL INFORMATION:

If you have questions related to the Commission, please feel free to contact the Commission Counsel at (919) 733-2578.

AGENDA
9:30 a.m. Wednesday 5 May 2004
Room 643 Legislative Office Building

1. Call to order
   Representative Daniel F. McComas, Presiding

2. Introductory remarks by Cochairs
   Representative Daniel F. McComas
   Representative Pryor A. Gibson
   Senator Charles W. Albertson
   Senator Daniel G. Clodfelter

3. Report to the Commission and explanation of agenda items
   George F. Givens, Commission Counsel

4. Report on the Thursday 22 April 2004 site visit to Gorges State Park and the Friday 23 April 2004 site visit to DuPont State Forest
   Senator Katie G. Dorsett

5. Information item on the NC GreenPower program
   Carl L. Wilkins, Program Manager
   NC GreenPower, Advanced Energy

6. Report on the Express Review Pilot Program and whether the Pilot Program should be continued or expanded (S.L. 2003-284, Sec. 11.4A(e)); Report on the One-Stop Permit Assistance and Coordination Program (S.L. 2001-424, Sec. 19.6)
   Edythe McKinney, Director
   Customer Service Center, DENR

7. Information item on the Transportation Demand Management Program
   Miriam Perry, Director
   Public Transportation Division, Department of Transportation

8. Update on the status of designation of nonattainment areas to comply with the revised national ambient air standard (NAAQS) for ozone (the 8-hour standard)
   Brock M. Nicholson, Deputy Director
   Division of Air Quality, DENR

9. Information item on retrofitting diesel engines (transit and public school buses)
   Heather Hildebrandt, Environmental Engineer
   Technical Services Section, Division of Air Quality, DENR

10. Annual report on the status of leaking petroleum underground storage tanks, the State cleanup funds, and the Groundwater Protection Loan Fund (G.S. 143-215.94M)
    Grover Nicholson, Chief
    Underground Storage Tank Section, Division of Waste Management, DENR

11. Information item on the Virginia Resources Authority's accelerated claim payment program for underground storage tank fund claims and the development of a national accelerated claim payment program (NATLUST)
    Lindsay Trittipoe, Principal
    Commonwealth Acceptance, LLC, Richmond, VA

LUNCH BREAK – Estimated for 12:30 p.m. to 1:15 p.m.

12. Annual report on implementation of the Wetlands Restoration Program and use of the Wetlands Restoration Fund (G.S. 143-214.13)
    Dempsey E. Benton, Chief Deputy Secretary
    DENR

13. Report on the management of low-level radioactive waste in North Carolina (G.S. 120-70.33(7))
    Beverly O. Hall, Chief
    Radiation Protection Section, Division of Environmental Health, DENR

14. Information item on pending litigation: *State of Alabama, State of Florida, State of Tennessee, Commonwealth of Virginia, and The Southeast Interstate Low-Level Radioactive Waste Management Commission v. State of North Carolina.* [U.S. Supreme Court, No. 132, Original]
    John F. Maddrey, Special Deputy Attorney General
    North Carolina Department of Justice

15. Commission discussion and announcements

16. Adjourn

SCHEDULE OF FUTURE MEETINGS:

Tuesday 11 May 2004 -- Regular Business Meeting
Time: 2:30 p.m. (tentative)
Location: 544 Legislative Office Building

The Commission may meet at other times while the General Assembly is in session (G.S. 120-70.44). If the Commission meets while the General Assembly is in session, written notice will not be mailed to persons on the mailing list. Rather, notice will be given at a session of the Senate and House of Representatives as provided by G.S. 143-318.12(b). The Commission will resume a schedule of regular monthly meetings following adjournment of the 2004 Session of the General Assembly. Mailed notices of Commission meetings will resume at that time.

OTHER MEETINGS:

The Commission Counsel will hold meetings of interested parties on specific topics as indicated below:

Phase II Stormwater Working Group
10:00 a.m. Friday 7 May 2004 – 605 Legislative Office Building

May 5, 2004 ERC Meeting
EXHIBIT D

REPORT TO THE ENVIRONMENTAL REVIEW COMMISSION AND FISCAL RESEARCH DIVISION OF THE NORTH CAROLINA GENERAL ASSEMBLY ON WATER QUALITY ACCOUNTABILITY FOR THE AGRICULTURE COST SHARE PROGRAM FISCAL YEAR 2003

INTRODUCTION

In 1983 the North Carolina Agriculture Cost Share Program (ACSP) was authorized by the General Assembly to improve water quality associated with agriculture in three nutrient sensitive areas of the state covering 16 counties. It was expanded in 1990 to include all 96 Soil and Water Conservation Districts covering all 100 counties.

While the Soil and Water Conservation Commission (Commission) has the statutory responsibility to create, implement and supervise the Cost Share program, it is delivered at the local level by 492 elected and appointed soil and water conservation district supervisors who are assisted by their staff and partners in natural resource conservation. These partners include technical and professional employees of the U.S. Department of Agriculture's Natural Resources Conservation Service (NRCS), the District or county, the Division of Soil and Water Conservation (Division), the Cooperative Extension Service, and the North Carolina Department of Agriculture and Consumer Services.

In this very popular program, participating farmers receive up to 75 percent of the average cost of an installed best management practice (BMP) with the remaining 25 percent paid by the farmer directly or through in-kind contributions (e.g., labor). When complete cost information is not available, the farmer is required to submit invoices and is paid at 75 percent of actual cost rather than average cost. Cost Share payments cannot exceed $75,000 per year per applicant.

The Commission continues to adapt the program to respond to changing needs and technology. For Program Year 2003, there were 46 approved BMPs grouped under 32 definitions in the ACSP. BMPs include both short-term and

long-term practices. The definitions of approved BMPs for the Cost Share program are provided in the Detailed Implementation Plan (Attachment A).

For a BMP to be approved by the Commission for the ACSP, there must be 1) an NRCS technical standard addressing that BMP, and 2) sufficient cost information to determine the appropriate cost share amount. Occasionally, BMPs are approved on a limited scale for evaluation purposes (District BMPs).

For most practices, the amount provided in cost share is based on 75% of a predetermined average cost for the practice. However, some practices are cost shared on 75% of actual cost due to the variable nature of the practice. (In the 2003-04 Budget Bill, the General Assembly approved a special budget provision that modified N.C.G.S 143-215.74(b) to allow beginning farmers and limited resource farmers to receive up to 90% cost share beginning in the 2004 program year.) The Commission conducts a wholesale review of its cost rates every three years, but it can make necessary mid-course corrections when presented with information that one of its predetermined costs is inaccurate.

Districts spot check a minimum of 5% of randomly selected active contracts each year to ensure that practices are being maintained properly. Further Division and NRCS also spot check contracts as part of regular reviews of district office implementation of the ACSP. Spot checks have shown excellent compliance with maintenance requirements by participating farmers. When practices are discovered to need additional maintenance, the district is usually able to assist the cooperator to restore the practice.

PROGRAM ACCOMPLISHMENTS

Since the first Cost Share contracts were issued in 1984, there have been 34,208 contracts for installing BMPs (through the end of program year 2003, which ended on June 30, 2003). Most BMPs have a life expectancy of ten years, which is how long participating farmers must agree to maintain the practices.

Early in the program, the major factor used for determining success was tons of soil saved because the program funded predominantly sediment and erosion control practices. It is estimated that an average of 6.07 million tons of soil have been saved annually during the life of the program. Since the mid-1990s, while continuing its attention on minimizing soil loss and erosion, the program has increased its attention on reducing and managing nutrients from cropland and livestock production. Part of the impetus for this new attention was the promulgation of the 15A NCAC 2H.0200 animal waste management rules and the nutrient sensitive waters strategies for the Neuse and Tar-Pamlico River Basins.

Highlights of additional accomplishments include the following:

- Nearly 110,000 acres of marginal or environmentally sensitive cropland have been converted to trees, grass, or wildlife habitat
- 2,103 waste management structures have been constructed to properly store and manage dry and wet animal waste
- 3,670 water control structures have been installed improving water management on and reducing nutrient loss from approximately 292,500 acres
- Over 870 miles of fencing have been erected, in combination with other practices (e.g., watering sources) to exclude livestock from streams
- Over 579,000 acres of cropland acres have been converted to no-till or conservation tillage to reduce sediment loss associated with traditional practices
- Over 170 miles of forested riparian buffer have been established to reduce nutrient loss from approximately 13,000 acres of cropland
- 81 structures have been built for the proper handling and storage of agricultural chemicals (pesticides and fertilizers)

REPORTING REQUIREMENTS

Projects Receiving State Funds

Participating farmers have up to three years to complete the work included in ACSP contracts. Therefore, cost share payments made each year may be for contracts written in the current fiscal year or in the two previous fiscal years. For this reason the fund balance for the program will always exceed the amount appropriated in a given year.

Each contract is considered a "project." Each project may include only one BMP or a system of practices that include several BMPs. Cost share payments are made only when installation of the BMP is completed and certified to be in accordance with current NRCS or Commission standards.

Cost Share payments were applied to **2,128** projects statewide between July 1, 2002 and June 30, 2003. These contracts received total payments of **$9,701,033**. A list of individual contracts to which Cost Share funds were applied in Program Year 2003 is available upon request.

New Contracts for Fiscal Year 2003

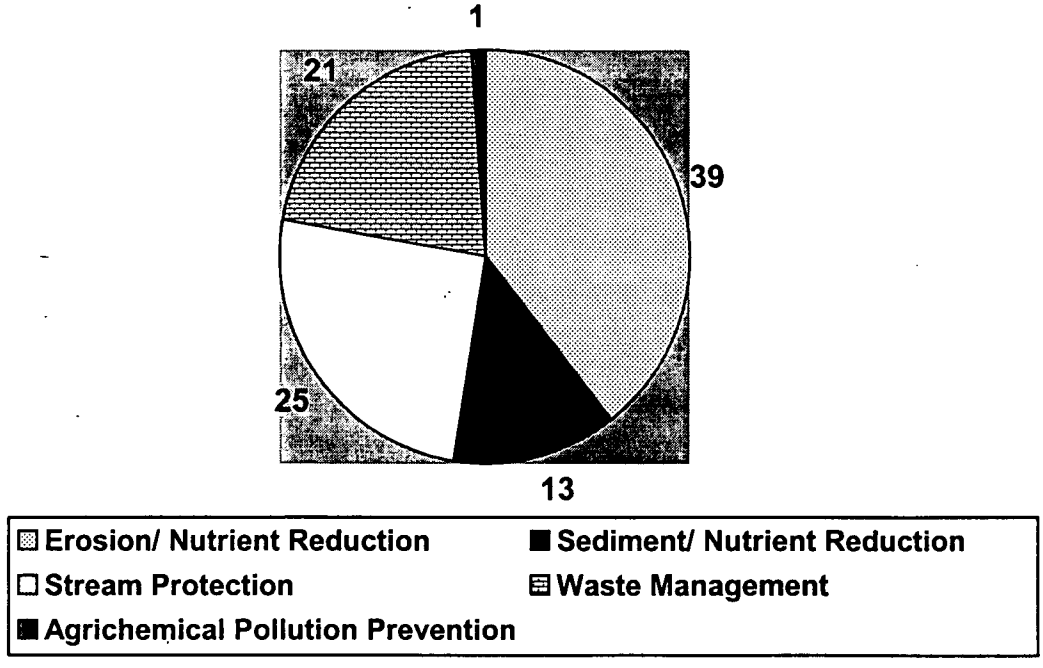
The General Assembly appropriated **$5,269,897** in recurring general funds for BMP installation. For Fiscal Year 2003 soil and water conservation districts requested **$23,760,798** to address identified water quality needs. Current appropriations do not enable districts to meet demand for financial assistance for installing BMPs to protect water quality in North Carolina.

For Fiscal Year 2003, the Commission allocated $9,825,833 to districts. In addition to the 2003 appropriation, the Commission also had available for allocation: 1) funds allocated to districts in 2002 which districts were unable to execute contracts with farmers prior to the end of the fiscal year, and 2) funds recovered from completed and expired contracts from Program Years 2000 through 2002. Despite the Commission's actions to improve efficiency of the cost share program (discussed on pp. 7-8), districts still must turn away three out of every five farmers requesting cost share assistance.

In Fiscal Year 2003 districts obligated **$9,190,555** to **1,819** new contracts with farmers.

As shown in Figure 1, 39% of the 2003 funds were directed toward erosion and nutrient-reducing BMPs (e.g., conservation tillage, cropland conversion to grass or trees), 25% were directed toward stream protection systems (e.g., livestock exclusion from streams), 13% were directed toward sediment and nutrient-reducing BMPs (e.g., riparian buffers, field borders, grassed waterways), 21% were directed toward animal operations for waste management BMPs (e.g., poultry litter storage structures, closure of inactive lagoons, livestock feeding/waste storage structures), and 1% were directed toward agrichemical pollution prevention practices (e.g., agrichemical handling facilities).

Figure 1: Breakdown of 2003 ACSP Contracts by BMP Type



Attachment B is a chart displaying a summary of contracts initiated during the 2003 program year (July 1, 2002 - June 30, 2003). This chart shows the planned as well as installed BMPs. The most-used single BMP from a financial and acres affected standpoint (over $1.7 million affecting over 19,000 acres) was the 3-year conservation tillage incentive. Attachment C presents the number and value of 2003 contracts by soil and water conservation district and each district's allocation of cost share funds for 2004.

Estimated Water Quality Benefits of ACSP Contracts Initiated in 2003

N.C.G.S 143-215.74(b)(7) requires that each project's benefits to water quality be estimated before funding is awarded. To meet this requirement, the Commission chose three indicators of water quality benefits: tons of soil saved, pounds of nitrogen saved or managed, and pounds of phosphorus saved or managed. Soil savings estimates have been required on all Cost Share contracts since the beginning of the program. Beginning with the 1997 program year, estimates of nitrogen and phosphorus savings were required to be reported. The Division continues to work with the Division of Water Quality, NRCS, and North Carolina State University to improve and refine our method to estimate and account for nutrient reductions.

These estimates have been very useful to help track progress by agriculture relative to the nutrient reduction requirements in the Neuse and Tar-Pamlico Nutrient Reduction Rules for agriculture. The ACSP is playing a key role in helping farmers achieve the 30% nutrient reduction required in these rules.

Local soil and water conservation districts determine which projects are eligible for funding in their districts according to a required priority ranking process, tailored to each district's water quality concerns. The water quality evaluations on each project are carried out at the district level, and the water quality benefit estimates are provided to the Division on each contract form. The data are entered from the contract form into the Division's cost share database and tracked by Division staff. The estimated sediment and nutrient reduction benefits for program years 2001-2003 are summarized in Table 1.

Some BMPs standing alone will not directly result in sediment or erosion reductions or nitrogen or phosphorus savings, but are used in conjunction with other practices. These BMPs are called "facilitating practices" and are necessary to facilitate and ensure that other practices in the BMP system are effective at reducing nutrient or sediment loading to a water resource. Therefore, their reduction credit is linked to the facilitated practice. An example of a facilitating practice is a water tank, which must be installed for livestock drinking water purposes before fencing can be put up to keep livestock out of a stream.

Table 1: Sediment and Nutrient Reduction Benefits for Program Years 2001 through 2003.

	2001	2002	2003
Number of Contracts	2,060	1,937	1819
Acres Affected	97,171 acres	79,602 acres	89,436 acres
Soil Saved	344,627 tons	258,853 tons	290,065 tons
Nitrogen Saved	1,911,610 pounds	1,716,024 pounds	1,359,918 pounds
Phosphorus Saved	216,021 pounds	397,875 pounds	741,691 pounds
Waste Nitrogen Managed	4,714,328 pounds	4,481,779 pounds	4,406,982 pounds
Waste Phosphorus Managed	4,945,421 pounds	3,743,366 pounds	4,572,177 pounds

Effectiveness of Each Project to Accomplish Its Primary Purpose

The statutory purpose of the program and each project is to reduce the input of agricultural non-point source pollution into the water courses of the state, which is for water quality improvement. Each BMP approved for the Cost Share program is designed for one of five major purposes to protect the water resources of the state:

1) sediment/nutrient delivery reduction through reduction of applied nutrients, reduction of soil loss, or interception of nutrients from fields;
2) erosion reduction/nutrient loss reduction in fields through reduction of applied nutrients or prevention of soil detachment;
3) prevention of agricultural chemical pollution of ground or surface water from improper handling or accidents;
4) reduction of nutrient loading through proper management of animal waste; and
5) stream protection measures to reduce the delivery of sediment and nutrients by animals and stabilize streambanks to minimize further erosion and sediment contribution.

Attachment D is a chart showing the approved BMPs in these categories and their relationship to water quality improvement.

Staff of the Division, soil and water conservation districts, and NRCS has verified every project for which program year 2003 funds have been expended to have been installed in accordance with program standards and to be accomplishing its primary purpose.

TARGETING ACSP FUNDS TO WATERSHEDS OF IMPAIRED WATERS

The Commission continues to exercise leadership in allocating ACSP resources to local districts containing impaired waters and in encouraging district supervisors to use ACSP funds to address impaired waters. This is best illustrated by the fact that the Commission targeted $582,451 of funds available in 2003 for the specific purpose of installing erosion- and sediment-reducing best management practices into watersheds of waters listed on the State's 303(d) list of waters as impaired due to sediment from sources including agriculture in twenty counties.

Historically, about 30% of ACSP funds have been used to implement BMPs in watersheds of impaired waters. Considering that only 3% of North Carolina's stream miles are attributed to being impaired by agricultural sources, this demonstrates that the ACSP funds are being significantly targeted toward improving streams that do not fully meet their uses.

Over 30% of funds contracted in Program Year 2003 were contracted with farmers in the Neuse and Tar-Pamlico River Basins to help them achieve the required 30 percent reduction in agricultural nitrogen losses. Districts in the Neuse and Tar-Pamlico Basins will continue to use ACSP to sustain the reductions already achieved and to attain further voluntary reductions in these nutrient sensitive watersheds. ACSP funds are also being used to reduce phosphorus losses from agriculture to help achieve the goal of no net increase in phosphorus loading to the Tar-Pamlico Basin.

In 2003 the Commission approved the revised NRCS nutrient management standard, which requires participating farmers to assess phosphorus losses using the Phosphorus Loss Assessment Tool (PLAT). In response, districts are using ACSP funds to assist farmers to implement phosphorus-reducing BMPs, where needed.

The Commission also targeted $318,220 of Program Year 2003 funds to 24 districts to assist with implementation of riparian buffers in nutrient sensitive watersheds under the Conservation Reserve Enhancement Program.

NEW PROGRAM ENHANCEMENTS TO IMPROVE EFFICIENCY AND PROGRAM DELIVERY

Because of the need to continually improve the program's cost effectiveness, and because of recurring budget reductions in the program's appropriation, the Commission made several enhancements that took effect for the 2003 program year. These enhancements were designed to improve the efficiency by which program funds are used by agricultural cooperators to install best management

practices and to improve the responsiveness of the program to state and local water quality priorities.

One efficiency improvement was to initiate a pilot project in selected districts to delegate final approval authority for most cost share contracts to the local Soil and Water Conservation District Board of Supervisors. This enhancement eliminates advance case-by-case approval by the Division of Soil and Water Conservation for most cost share contracts. In exchange, for delegated pilot districts, the Division will increase the frequency of its program review oversight of ACSP delivery at the district level. Sixteen districts across the state were selected to participate in the delegation pilot project based on their track record of high-level performance in implementing the ACSP. The Division of Soil and Water Conservation conducted a program review of each selected district prior to delegation. This enhancement will reduce the likelihood that a participating farmer will miss an opportunity to implement a BMP that is highly dependent on season and weather while he or she is awaiting final approval for an ACSP contract.

The Commission also began to see the benefits of another efficiency improvement it initiated in 2002 that was designed to accelerate installation of BMPs. This improvement targets program funds toward cooperators who are prepared to implement best management practices within 12 months of contract approval. If a cooperator fails to complete at least 1/3 of the work included in the cost share contract within 12 months of the contract approval date, then the contract will terminate. Because cooperators sometimes encounter circumstances beyond their control, local soil and water conservation districts can grant an extension of up to 6-months to complete at least 1/3 of the work. This improvement was added to establish a better incentive for cooperators to begin work early during the contract period. This will result in fewer contracts terminating after lengthy contract periods, and more efficient use of program funds as cooperators and districts become accustomed to this higher standard. Of course, every attempt is being made to be fair and to work with cooperators who voluntarily participate in the cost share program to get practices installed.

COST-EFFECTIVENESS CONSIDERATIONS

The ACSP is an extremely cost-effective program from both a state expenditure perspective and the farmer's perspective. This program has been credited with helping the state to achieve considerable success in protecting and improving water quality. Many farmers could not afford to implement BMPs (many of which are required by regulations) without cost share assistance. Because a farmer must invest at least 25% of the cost for BMPs, the farmer has ownership in the practice and is more likely to maintain it. The education value of local farmers participating the program is substantial in helping to change local practices.

Use of ACSP to Leverage Additional BMP Implementation Funds From Other Sources

The Commission's 2003 allocation to districts included $582,451 for the intended purpose of installing BMPs in watersheds of streams on the state list of impaired waters due to sediment from agricultural sources. Because of this targeted allocation the Division of Soil and Water Conservation and districts were able to obtain $1,400,000 in grant funds from the Clean Water Management Trust Fund and 667,580 from the US Environmental Protection Agency 319 (EPA-319) program to implement sediment-reducing BMPs in these watersheds. The Division has also entered into a cooperative agreement with the United States Geological Survey who will provide an additional $150,000 of water quality monitoring services to document reduction in sediment loading.

ACSP funds are an essential part of the state match for the Conservation Reserve Enhancement Program (CREP), a federal/state partnership. ACSP and other state programs (CWMTF, NC Wetlands Restoration Program) are providing a total of $54 million over eight years to match $221 million in federal payments to North Carolina landowners participating in CREP.

ACSP funds for BMP implementation and technical assistance also provide the required state match for three EPA-319 grants for accelerating BMP implementation in the Neuse and Tar-Pamlico river basins. The total of the three grants is $1,191,700.

Whenever possible, the districts use the ACSP in conjunction with other programs, such as the federal Environmental Quality Initiative Program and the Conservation Reserve Enhancement Program, to stretch scarce resources as far as possible, and partner to meet the needs of cooperating producers and landowners.

Leveraging of Local and Federal Resources for Technical Assistance and Local Delivery

This program is delivered locally by 492 elected and appointed volunteer Soil and Water Conservation District Supervisors and by over 400 local staff of districts and NRCS. District supervisors receive no state salary, yet are responsible for seeing that state funds are spent where they are most needed to improve water quality. District supervisors are required to develop a prioritization ranking system for administering the ACSP in their respective district to maximize the water quality benefits of the program. Applications to each district are evaluated and prioritized according to this system. District supervisors also must inspect at least five percent of all cost share contracts in their district every year to ensure the BMPs are properly maintained.

The ACSP is heavily dependent on the technical resources of the local soil and water conservation districts and the NRCS. District and federal employees develop conservation plans, design BMPs, and provide engineering assistance for water quality improvements at no cost to the farmers whose applications are accepted for cost share assistance. These staff also assist farmers and other landowners in implementing water quality projects using other funding sources such as the USDA's Environmental Quality Incentives Program and Conservation Reserve Enhancement Program, the U.S. Environmental Protection Agency's Section 319 Non-Point Source Program, and North Carolina's Clean Water Management Trust Fund.

A critical portion of the General Assembly's appropriation for ACSP provides a state match for salaries for many of these district technical employees and for their operating expenses to carry out the cost share program. For 2003, the General Assembly appropriated $1,875,000 in recurring funds for cost sharing technical assistance positions in local districts and directed DENR to continue to transfer $240,000 from BMP assistance to support technical assistance. County commissions provide 50% match for salaries and operating expenses, including office space and administrative support for these technical assistance positions. In program year 2003 the cost share technical assistance program cost shared on 123 technical positions (115.77 FTEs) in 90 counties to assist farmers in designing and installing BMPs. These state technical assistance cost share funds maintain a local conservation infrastructure and are critical to sustain local county support and funding for local delivery of the program.

NRCS engineers and conservation specialists are also available to each district. These federal employees carry out a portion of the cost share work support without cost to the state, and they provide additional technical resources and expertise to ensure that cost-shared practices are properly installed and maintained for the expected life of the practice.

In addition, NRCS allows district staff to use federal vehicles for use on state cost share work. NRCS also provides computers and sophisticated natural resources materials and computer software in all 100 county field offices, and develops the technical standards for most of the BMPs used in the cost share program. This state program leverages a much greater amount of federal funding for water quality improvements in North Carolina.

PROGRAM MANAGEMENT

Attachment E is an overview of the funding and compliance process used for implementing the Agriculture Cost Share Program.

A Division program staff of four FTEs reviews approximately 2,000 contracts annually and processes about 2,500 requests for payment each year. The

Division also maintains the ACSP Manual, trains local personnel, provides daily technical assistance to the districts, and conducts oversight through district program reviews to ensure proper record keeping and BMP maintenance for continued water quality protection.

Because the state specifies that the purpose of the program is to assist agricultural operations in addressing an existing water quality problem, the program does not assist new operations to go into business. It is the policy of the Commission that new producers or companies constructing new agricultural operations should be aware of the existing environmental requirements and technical standards and should be prepared to meet them without state funding assistance. This is especially important when existing operations are struggling to comply with new requirements that were not in place when they began operating. Therefore, the Commission has restricted eligibility for Cost Share funds to those operations in existence as of May 1992 that need help to meet new regulations (i.e., 15A NCAC 2H.0200) designed to protect ground and surface water. Operations that were not in existence as of May 1992 may still be eligible for cost-share if changes in environmental statutes or regulations (e.g., SB 1217 in June 1996) create new requirements that could, without assistance, make the facility out of compliance. These exceptions require Commission approval.

IMPACT OF BUDGET REDUCTIONS IN 2001, 2002, AND 2003

For Fiscal Year 2001 the Department was directed to transfer $240,000 appropriated for BMP assistance to overcome a projected shortfall of funds for cost sharing for essential technical assistance staff in local soil and water conservation districts. This transfer represented a 3.4 percent reduction in the funding available for assisting farmers with costs to install best management practices for Fiscal Year 2002.

The 2002 budget bill made the transfer for technical assistance permanent. Further, for 2002 the recurring appropriation for the Agriculture Cost Share Program was reduced by another $1,000,000. In 2003, the recurring appropriation for ACSP funding was further reduced by $400,000. The net effect of the reduction and diversion is that for Fiscal Year 2003 the funding available for assisting farmers to install best management practices was reduced by $1,640,000 (23.7%) relative to the Fiscal Year 2000 funding level.

This recurring loss of funds for the ACSP has had several negative consequences. These include:

- Reducing the number of agricultural producers assisted, turning away an estimated 250-300 additional producers per year.

- Diminishing the local impact of the ACSP to the point that it may weaken local governments' support (match) for soil and water conservation district technicians who provide technical assistance (BMP design and installation oversight) to agricultural producers. The Soil and Water Conservation Commission has worked diligently over a number of years to build local support for district technical assistance. A reduction of local support would jeopardize the state's ability to maintain technical support for conservation programs.
- Further threatening the state's ability to provide the required 20% match for the $221 million in federal funds for the Conservation Reserve Enhancement Program (CREP). The non-federal match for CREP relies on $8.84 million of ACSP funds over 5 years used to establish riparian buffers on agricultural land enrolled in CREP. DENR may be forced to seek additional legislative appropriations or other non-federal revenue sources (e.g., Tobacco Trust Fund Commission) or risk termination of the State's CREP agreement by USDA. In FY-2003, the Commission allocated over $318,220 to be used toward the match for CREP.
- Further restricting funding available to allow soil and water conservation districts to provide additional cost share to new farmers and limited resource farmers in response to the statutory revision enacted in the 2003 Legislative Session.
- Reducing the financial assistance available to assist livestock and poultry producers to respond to new phosphorus management requirements resulting from modification to the NRCS Nutrient Management Standard and NPDES and state permitting requirements. These changes have created enormous new demands on ACSP.
- Further reducing funding available for installing conservation practices on private working lands, a major provision of the <u>One North Carolina Naturally Initiative</u>.
- Significantly diminishing the financial assistance available to assist agricultural producers in the Neuse and Tar-Pamlico river basins to implement BMPs and achieve and maintain 30% nutrient reduction requirements.
- Reducing funds available for installing BMPs in watersheds of streams impaired by sediment from agricultural sources. The Agricultural Sediment Initiative is a priority for the Soil and Water Conservation Commission and the Sediment Control Commission. The Commission allocated $582,451 for this purpose in FY-2003.
- Reducing available funding for installing riparian buffers and protecting streams from impacts from livestock and cropland. DENR wants to rely on voluntary approaches to protect buffers, and ACSP is a valuable tool for this purpose.

CONCLUSION

Based on the above considerations, the Commission believes the ACSP is being administered very cost-effectively and that considerable water quality benefits are being realized for the investment made with state funds. The program aids agricultural operations in making essential water quality improvements, the cost of which cannot be passed on to the consumer in the price of the food or fiber product, and thereby contributes both to water quality and to sustaining a strong state agricultural economy. The Commission continues to emphasize prioritizing, targeting, accountability, leveraging, and adaptability in managing these public funds to further improve the water quality benefits intended by the General Assembly.

The Commission believes that budget reductions have impacted the program's effectiveness and local support to a serious degree. The Commission has taken actions to improve program efficiencies that have helped to partly offset these impacts in the short-term. The ACSP continues to play a vital role in assisting farmers and ranchers with voluntary water quality protection and with compliance with state and federal regulatory requirements. The program is our state's cornerstone in efforts to support private working lands stewardship for the benefit of water quality and all the citizens of North Carolina.

###

Attachment A
DETAILED IMPLEMENTATION PLAN
July 2002 (Revised)

Definition of Practices

(1) An agrichemical handling facility means a permanent structure that provides an environmentally safe means of storing and mixing agrichemicals and filling tanks with agrichemicals. Benefits may include prevention of accidental degradation of surface and ground water.

(2) A chemigation backflow prevention system means a system for preventing backflow of pesticides or chemicals from contaminating water sources in chemigation applications. It can include retrofitting or installing injection equipment, check valves, gauges, drains, and vacuum breakers. It does not include items unrelated to backflow prevention (e.g., tanks, mixers, or filters).

(3) A Christmas Tree Conservation Cover practice means to establish and maintain a conservation cover of grass, legumes, or other approved plantings on fields previously with no groundcover established, to reduce soil erosion and improve water quality. Other benefits may include reduced offsite sedimentation and pollution from dissolved and sediment-attached substances.

(4) A conservation tillage system means any tillage and planting system in which at least (60) sixty percent of the soil surface is covered by plant residue to improve water quality. Benefits may include reduction of soil erosion, sedimentation and pollution from dissolved and sediment-attached substances.

A. An annual conservation tillage for small grain system means a one year tillage and planting system using a small grain crop.

B. A three-year conservation tillage system means a tillage and planting system using the same fields for three consecutive years. The three-year conservation tillage incentive is broken down into two categories depending on the crop(s) to be grown:
   a. Grain crops and cotton
   b. Vegetables, Tobacco, Peanuts, and Sweet Corn

(5) A critical area planting means an area of highly erodible land that cannot be stabilized by ordinary conservation treatment on which permanent perennial vegetative cover is established and protected to improve water quality. Benefits may include reduced soil erosion and sedimentation.

(6) A cropland conversion practice means to establish and maintain a conservation cover of grasses, trees, or wildlife plantings on fields previously used for crop production to improve water quality. Benefits may include reduced soil erosion, sedimentation and pollution from dissolved and sediment-attached substances.

(7) A diversion means a channel constructed across a slope with a supporting ridge on the lower side to control drainage by diverting excess water from an area to improve water quality. Benefits may include reduced soil erosion, sedimentation and pollution from dissolved and sediment-attached substances.

(8) A fertigation backflow prevention system means a system for preventing backflow of nutrients from contaminating water sources in fertigation applications. It can include retrofitting or installing injection equipment, check valves, gauges, drains, and vacuum breakers. It does not include items unrelated to backflow prevention (e.g., tanks, mixers, or filters).

(9) A field border means a strip of perennial vegetation established at the edge of the field that provides a stabilized outlet for row water to improve water quality. Benefits may include reduced soil erosion, sedimentation and pollution from dissolved and sediment-attached substances.

(10) A filter strip means an area of permanent perennial vegetation for removing sediment, organic matter, and other pollutants from runoff and waste water to improve water quality. Benefits may include reduced soil erosion, sedimentation, pathogen contamination and pollution from dissolved, particulate, and sediment-attached substances.

(11) A grade stabilization structure means a structure (earth embankment, mechanical spillway, detention-type, etc.) used to control the grade and head cutting in natural or artificial channels to improve water quality. Benefits may include reduced soil erosion and sedimentation.

(12) A grassed waterway means a natural or constructed channel that is shaped or graded to required dimensions and established in suitable vegetation for the stable conveyance of runoff to improve water quality. Benefits may include reduced soil erosion, sedimentation and pollution from dissolved and sediment-attached substances.

(13) A heavy use area protection means an area used frequently and intensively by animals, which must be stabilized by surfacing with suitable materials to improve water quality. Benefits may include reduced soil erosion, sedimentation and pollution from dissolved, particulate, and sediment-attached substances.

(14) A livestock exclusion system means a system of permanent fencing (board or barbed, high tensile or electric wire) installed to exclude livestock from streams and critical areas not intended for grazing to improve water quality. Benefits may include reduced soil erosion, sedimentation, pathogen contamination and pollution from dissolved, particulate, and sediment-attached substances.

(15) A long term no-till practice means planting all crops for five consecutive years with at least 80 percent plant residue from preceding crops to improve water quality. Benefits may include reduced soil erosion, sedimentation and pollution from dissolved and sediment-attached substances.

(16) A pastureland conversion practice means establishing trees or perennial wildlife plantings on excessively eroding land with a visible sediment delivery problem to the waters of the state used for pasture that is too steep to mow or maintain with conventional equipment to improve water quality. Benefits may include reduced soil erosion and sedimentation.

(17) A nutrient management practice means a definitive plan to manage the amount, form, placement, and timing of applications of nutrients to minimize entry of nutrients to surface and groundwater and improve water quality.

(18) A rock-lined outlet means a waterway having an erosion-resistant lining of concrete, stone or other permanent material where an unlined or grassed waterway would be inadequate to improve water quality. Benefits may include safe disposal of runoff, reduced erosion and sedimentation.

(19) A sediment basin means a basin constructed to trap and store waterborne sediment where physical conditions or land ownership preclude treatment of a sediment source by the installation of other erosion control measures to improve water quality.

(20) A sod-based rotation practice means an adapted sequence of crops, grasses and legumes or a mixture thereof established and maintained for a definite number of years as part of a conservation cropping system which is designed to provide adequate organic residue for maintenance or improvement of soil tilth to improve water quality. Benefits may include reduced soil erosion, sedimentation and pollution from dissolved and sediment-attached substances.

(21) A stock trail or walkway means to provide a stable area used frequently and intensively for livestock movement by surfacing with suitable material to improve water quality. Benefits may include reduced soil erosion, sedimentation and pollution from dissolved, particulate, and sediment-attached substances.

(22) A stream protection system means a planned system for protecting streams and stream banks that eliminates the need for livestock to be in streams by providing an alternative-watering source for livestock to improve water quality. Benefits may include reduced soil erosion, sedimentation, pathogen contamination, and pollution from dissolved, particulate and sediment-attached substances. System components may include:

(A) A spring development means improving springs and seeps by excavating, cleaning, capping or providing collection and storage facilities.

(B) A trough or tank means devices installed to provide drinking water for livestock at a stabilized location.

(C) A well means constructing a drilled, driven or dug well to supply water from an underground source.

(D) A windmill means erecting or constructing a mill operated by the wind's rotation of large vanes and is used as a source of power for pumping water.

(E) A stream crossing means a trail constructed across a stream to allow livestock to cross without disturbing the bottom or causing soil erosion on the banks.

(23) A stripcropping practice means to grow crops and sod in a systematic arrangement of alternating strips or bands on the contour to improve water quality. Benefits may include reduced soil erosion, sedimentation and pollution from dissolved and sediment-attached substances. The crops are arranged so that a strip of grass or close-growing crop is alternated with a strip of clean-tilled crop, fallow, or no-till crop, or a strip of grass is alternated with a close-growing crop.

(24) A terrace means an earth embankment, a channel, or a combination ridge and channel constructed across the slope to improve water quality. Benefits may include reduced soil erosion, sedimentation and pollution from dissolved and sediment-attached substances.

(25) A waste management system means a planned system in which all necessary components are installed for managing liquid and solid waste to prevent or minimize degradation of soil and ground and surface water resources. System components may include:

(A) A waste storage pond means an impoundment made by excavation or earthfill for temporary storage of animal waste, waste water and polluted runoff.

(B) A drystack means a fabricated structure for temporary storage of animal waste.

(C) A livestock mortality management system means a facility for managing livestock mortalities such as to minimize water quality impacts or to produce a material that can be recycled as a soil amendment and fertilizer substitute. Cost sharable mortality management system components include: composter, mortality freezer, and mortality incinerator.

(D) A waste treatment lagoon means an impoundment made by excavation or earthfill for biological treatment and storage of animal waste.

(E) A waste application system means an environmentally safe system (such as solid set, dry hydrant, mobile irrigation equipment, etc.) for the conveyance and distribution of animal wastes from waste treatment and storage structures to agricultural fields as part of an irrigation and waste utilization plan.

(F) A constructed wetlands for land application practice means an artificial wetland area into which liquid animal waste from a waste storage pond or lagoon is dispersed over time to lower the nutrient content of the liquid animal waste.

(G) A controlled livestock lounging area means a planned, stabilized and vegetated area in which livestock are kept for a short duration.

(H) A closure of abandoned waste treatment lagoons and waste storage ponds means the safe removal of existing waste and waste water and the application of this waste on land in an environmentally safe manner.

(I) A storm water management system means a system of collection and diversion practices (guttering, collection boxes, diversions, etc.) to prevent unpolluted storm water from flowing across concentrated waste areas on animal operations.

(J) An offsite or an alternative poultry dry litter waste utilization means applying, processing and/or transporting poultry dry litter such that it is properly utilized to reduce nutrient impacts.

(K) A feed/waste storage structure means a fabricated structure for the temporary storage of animal waste.

(26) A water control structure means a permanent structure placed in farm canals and ditches which provides control of surface and subsurface drainage to improve water quality. The primary benefit is to reduce nutrient pollution. Other benefits may include reduced pollution from other dissolved and sediment-attached substances, reduced sedimentation and reduced stormwater surges of fresh water into estuarine areas.

(27) An insect control system means a practice or combination of practices (planting windbreaks, pre-charging structures, incorporation of waste into soil, etc.) which manages or controls insects from confined animal operations, waste treatment and storage structures, and waste applied to agricultural land.

(28) A riparian buffer means an area adjacent to solid blue line streams as shown on 7.5 minute USGS maps where a permanent, long-lived vegetative cover (sod, shrubs, trees, or a combination of vegetation types) is established to improve water quality. Benefits may include reduced soil erosion, sedimentation, pathogen contamination and pollution from dissolved, particulate and sediment-attached substances.

(29) An odor control management system means a practice or combination of practices (planting windbreaks, pre-charging structures, incorporation of waste into soil, etc.) which manages or controls odors from confined animal operations, waste treatment and storage structures and waste applied to agricultural land.

(30) A streambank stabilization system means the use of bio-engineering practices, native material revetments, channel stability structures, and/or the restoration or management of riparian corridors in order to protect upland BMPs, restore the natural function of the stream corridor and improve water quality by reducing sedimentation to streams from streambank erosion and decreasing the delivery of nitrogen, phosphorous and other pollutants to the stream from adjacent pasture or cropland.

(31) A wetland restoration system means a system of practices designed to restore the natural hydrology of an area that had been drained and cropped.

(32) A land smoothing practice means reshaping the surface of agricultural land to planned grades for the purpose of improving water quality.

*To be used in conjunction with the most recent version of the APA Rules for the North Carolina Agriculture Cost Share Program for Nonpoint Source Pollution Control and the NC-ACSP Manual.

BEST MANAGEMENT PRACTICES ELIGIBLE FOR COST SHARE PAYMENTS

(1) Best Management Practices eligible for cost sharing include the practices listed in Table 1 and any approved District BMPs. District BMPs shall be reviewed by the Division for technical merit in achieving the goals of this program. Upon approval by the Division, the District BMPs will be eligible to receive cost share funding.

Table 1

Practice	Minimum Life Expectancy (years)
Agrichemical Handling Facility	10
Chemigation Backflow Prevention System	10
Christmas Tree Conservation Cover	6
Conservation Tillage System :	
Annual for small grain	1
Three year	3
Critical Area Planting	10

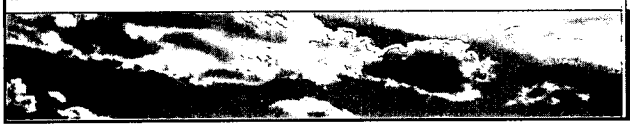
What Is Green Power or Renewable Energy?

- Energy generated from natural sources that are constantly replenished
- Cleaner to produce and use than traditional fuels
- Sources for power exist everywhere and are easily accessible
- Abundant sources mean abundant energy supplies for years to come!

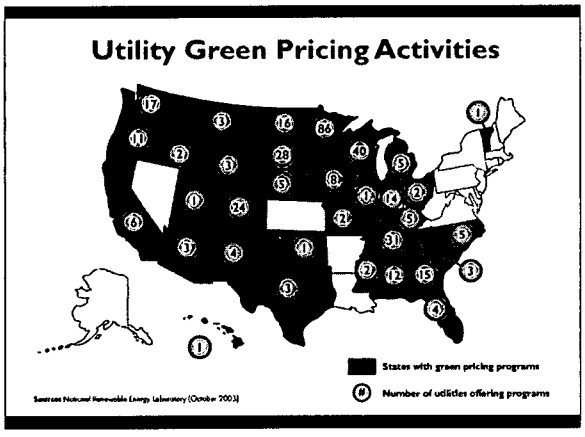


Why Use Renewable Energy?

- Improve regional air and water quality
- Renewable energy is naturally reoccurring.
- Provides local jobs and economic benefits.
- Reduces dependence on fuel sources from other states and countries.
- It's the right thing to do!!!

NC GreenPower
The power to choose. The power to change.

Green Power Across the Nation



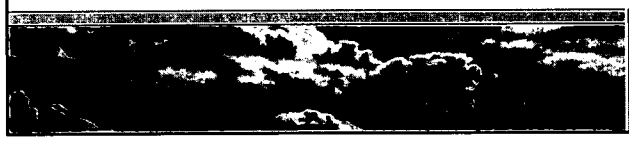
Renewable Energy in NC

Activities include multiple renewable energy producers, partnered with investor owned utilities, electric membership cooperatives and municipalities across North Carolina.

NC GreenPower
The power to choose. The power to change.

NC GreenPower Program

- Involves investor-owned, municipal and rural electric cooperative utilities in North Carolina
- Voluntary and tax-deductible
- Electricity generated from renewable sources by independent power producers
- Produced in North Carolina for North Carolinians



NC GreenPower
The power to choose. The power to change.

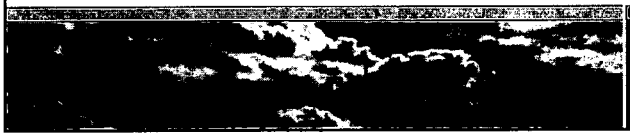
One Common Goal

Protecting the environment by encouraging the development of renewable energy resources through consumers' voluntary participation in the purchase of green power.

NC GreenPower
The power to choose. The power to change.

Objectives

- Improve quality of environment and public health.
- Increase amount of generation from renewables
- Maximize investment in renewable generation
- Maximize number of participants



NC GreenPower
The power to choose. The power to change.

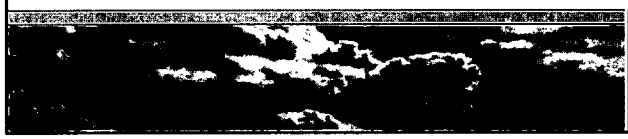
NC GreenPower Options

- Residential / Small Business
  - Designed for residential customers and small businesses
  - $4 per block of 100 kWh
  - Minimum = One block or $4 per month
  - Average = 1.6 blocks
- Large Business/Industry
  - Designed for large industrial and commercial customers
  - $2.50 per block of 100 kWh
  - Minimum: 100 blocks or $250 per month
  - Approx. 60,000 blocks sold

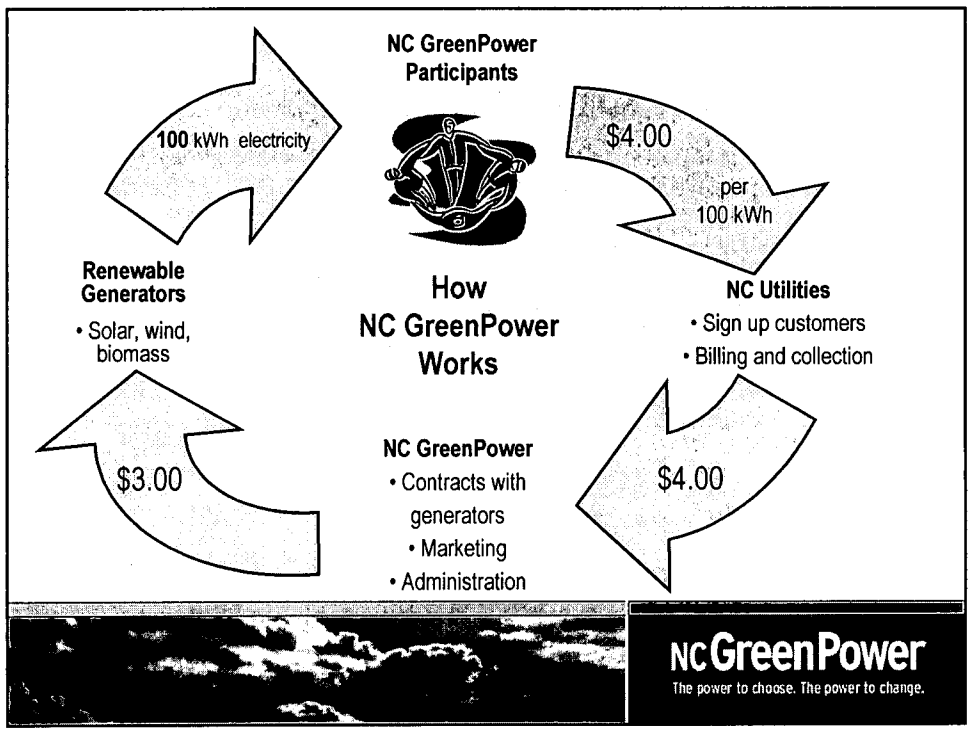
NC GreenPower
The power to choose. The power to change.

Product Offering

- Mass Market
  - Solar
  - Wind
  - Methane
- Large Volume Market
  - Solar
  - Wind
  - Methane
  - Small hydro
  - Biomass
    - Agriculture waste
    - Animal waste
    - Clean wood waste



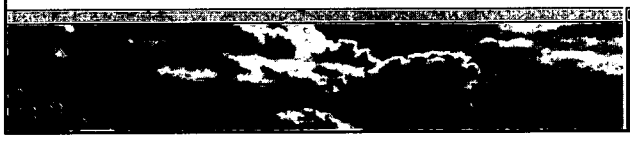
NC GreenPower
The power to choose. The power to change.



NC GreenPower
The power to choose. The power to change.

Program Status

- Public launch on October 1, 2003
- Utilities have placed billing inserts
- Board of Directors appointed by NCUC
- Public awareness campaign is underway
  - Selected advertising on public radio
  - Advertising in Our State magazine
  - Speakers Bureau

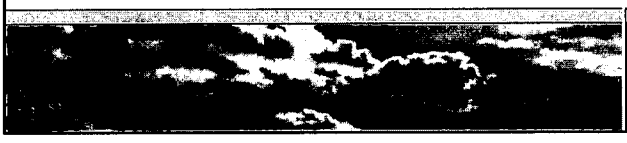


NC GreenPower
The power to choose. The power to change.

Participation Status

- All investor-owned utilities participating
- 15 out of 27 EMC's participating
- 10 out of 70 ElectriCities participating
- As of Feb. 2004

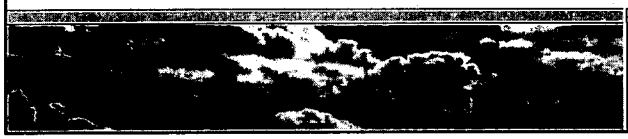
• Mass Market	Large Volume
– 4,300 participants	- 5 participants
– 6,800 blocks	- 58,000 blocks



NC GreenPower
The power to choose. The power to change.

Green Resources Status

- Request for Proposal for new green resources
- RFP submitted in October 2003
  - 49 sites representing over 608 million kWh
  - 135 million kWh was new generation
  - 15 of 49 sites requested contract guarantees
- Resources will be selected and recommended to Board in April 2004



NC GreenPower
The power to choose. The power to change.

Challenges

- Statewide marketing and awareness campaign
- Having adequate solar and wind resources
- External issues with possible impact on NCGP:
  - Utility Interconnection
  - Energy Bill (production tax credits)
- Contract guarantees for resources

NC GreenPower
The power to choose. The power to change.

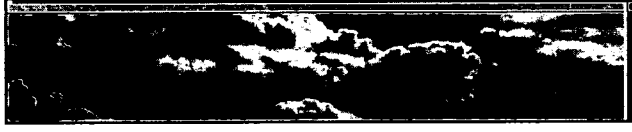
Recognition of Our Business Leaders

- We value business contributions!

Founding sponsors:

Advanced Energy · Dominion · Duke Power, A Duke Energy Company · EPA United States Environmental Protection Agency · Lowe's

North Carolina's electric cooperatives · Touchstone Energy · Progress Energy · Public Power · Smithfield · State Energy Office ENERGY



NC GreenPower
The power to choose. The power to change.

Presentation to Environmental Review Commission-May 5, 2004
One-Stop Express Permitting Program
Edythe McKinney, Director of Customer Service
Department of Environment and Natural Resources

I am pleased to provide you with a progress report on the one-stop permit coordination and express permitting programs now operating within the Department of Environment and Natural Resources. These legislatively directed pilot programs provide more front-end assistance to customers seeking environmental permits and reduce environmental permit processing time.

Last year, the North Carolina General Assembly authorized $500,000 to fund a pilot program to provide express permit and certification reviews for some environmental programs within the Department of Environment and Natural Resources. Participation in the program is voluntary, and higher fees are charged for express permitting review.

The first phase of implementation was in the Wilmington Regional Office, since it allowed us to test a wide range of development related permits/certifications. Programs which are part of the one-stop express program are: coastal stormwater permits; water quality wetland certifications; stream origin determinations; erosion and sedimentation control plans; and permits required by the Coastal Area Management Act. The Wilmington Regional Office, which serves seven southeastern counties, has been fully staffed and operational since January.

The 401 Wetland Certification staff in Raleigh is now providing express permitting review on wetland and stream determination projects for Wake County and the surrounding areas. The department expanded this pilot to test the concept on wastewater non-discharge permits. In the Non-Discharge Program, applicants from different regions of the state have participated in the express permit process.

Combining the express permitting and the one-stop permit coordination programs allows customers to get:

- Quicker permit decisions and certifications;
- Pre-application consultation to identify necessary environmental requirements;
- A more predictable project timeline;
- Concurrent review of applications, if multiple permits are required; and
- Coordination throughout the permitting process.

A project applicant can choose to participate in the express permitting program or may apply through the normal permitting channels. If one opts to participate in the express permitting program, property owners, developers and engineers are required to be actively involved in meetings and discussions related to permit review. The involvement by all parties is critical to ensure good communication and high-quality applications.

There have been some positive signs during the first few months of operation for the express permit program, and I want to highlight some of them.

- Customers seem to be willing to pay for quicker turnaround time. The costs of the project depend on the size and number of permits required. The fees for erosion and sedimentation plans range from $250 to $2000, in addition to the normal $50 an acre charge. Coastal stormwater fees are $2000 to $4000. A maximum of $5,500 is charged if a project needs multiple permits. While these fees are substantially higher than those under the regular DENR permitting programs, there have been little or no complaintsabout the higher fees for the services rendered.

- About 100 permits and certifications have applied for the express permitting process. The greatest demand is for coastal stormwater permits. Requests for 401 wetlands and stream certifications are growing. Thirteen of the projects applied for more than one permit. Applicants have included residential housing communities, corporate clients and other commercial properties such as restaurants and retailers.

- The types of projects vary. For example, one project involved a new restaurant in an existing commercial development in a coastal county. An initial meeting was held with the engineering firm and the express staff from all participating programs. At the meeting it was determined that no coastal management or water quality 401 certifications would be required for this project because of its location and site specification. Materials and supporting information needed for a stormwater permit and erosion and sedimentation control plan were provided to the applicant. When the complete applications were submitted in late March, reviews were immediate and the stormwater permit and sedimentation and erosion control plan approvals were issued the next day.

- Permit processing time has been reduced without relaxing the environmental requirements for the project. Increased staff communication with project designers is helping to ensure that the necessary documentation is provided in the initial application, so that review can take place immediately. Additional staff for this program allows pre-application meetings, site visits, and permit review meetings to occur in a timely manner. Let me share a few figures:

  The average turnaround time for Erosion and Sedimentation Control Plans is two days, compared to 20 days under the normal review process. Stormwater permits have typically been issued within two days after all information is received, compared to 40 days under the regular program. The time saved is actually greater than these figures show since the backlog and delays associated with obtaining all of the permit documentation can take several months.

Coastal permits that meet all the requirements for the Army Corps of Engineers and outside agencies are issued within 30 days, which is the shortest possible time due to public comment periods required by regulation. Processing time for stream determination requests by the wetland staff has declined from an average of 32 days to nine days.

- The number of applicants accepted into the express permitting program is increasing as word about the program spreads. In March, the number of permits issued by the Wilmington Regional Office was triple the number issued in January. This upward trend is expected to continue. Printed information on the program is being distributed, visits to economic development groups are increasing, and articles are being published in trade associations and government newsletters. Equally important, satisfied customers are sharing their experience.

- Despite some improvements, there are delays and additional costs to customers because many applicants are still not submitting quality applications. Meeting with customers on the front end has helped, but there still needs to be more education and communication about permit requirements and documentation. This is best illustrated by looking at the non-discharge applications. Only two have not required substantial additional information. Of the average 41 days needed for express permit review, only 16 days involved permit review. This additional delay occurred because the necessary design and engineering information were not provided the first time.

- One of the legislative expectations was that the program would become self sufficient through the higher fee receipts. How are we doing in this area? About $200,000 in receipts has been collected from the express permitting programs through mid-April. This is encouraging since the fees represent a little more than three months of operation. Because of start-up delays, this program may not pay for itself the first year, but we expect receipts to meet the appropriation the following year.

Overall, we think the One-Stop Express Permitting Program is working. The limited time of operation has shown some positive results. The number of permits being sought under one-stop express permitting is increasing, and customer feedback has been encouraging. We still need more time to fully assess its demand and to evaluate permit programs that are the most appropriate for one-stop express permitting. As we gain information, we look forward to working with the Legislature, permit applicants and others to improve environmental permitting in North Carolina.

Statewide Transportation Demand Management Program

Frequently Asked Questions

What is Transportation Demand Management (TDM)?
TDM is a phrase applied to a number of strategies intended to encourage the use of alternatives to driving alone -- increasing the efficiency of the transportation system by focusing on travel demand instead of supply. Most TDM strategies deal with the modification of travel behaviors, maximizing the people-moving capability of the transportation system and usually focusing on trip-making, time of travel or the accommodation of people through fewer trips.

Why is North Carolina interested in TDM?
The Ambient Air Quality Improvement Act of 1999, Senate Bill 953 (S.B. 953), addresses growing concerns over ground level ozone pollution from motor vehicles and the need to address the increasing vehicle miles traveled (VMT) and nitrogen oxide (Ox) emissions. TDM is one way to address these issues and reduce congestion on the state's highways.

What are the state goals of S.B. 953?
It is the goal of the state to reduce emissions of NOx from all sources and reduce the growth of VMTs in the state by at least 25 percent by July 1, 2009.

What does S.B. 953 specifically require of the Departments of Transportation, Administration, Environment and Natural Resources and Commerce?
Sections 4.6 and 4.7 require the above departments to jointly develop and periodically update a plan to reduce VMTs by both state and private sector employees and vehicle emissions resulting from job-related travel, including commuting to and from work. The sections call for the plan to consider the use of carpooling, vanpooling, public transportation, incentives and other appropriate strategies.

Who prepared the Statewide TDM Plan?
The plan was prepared by the Parsons Brinkerhoff consulting firm, with the assistance of the Institute for Transportation Research and Education (ITRE) at North Carolina State University. To initiate an analysis of the key problems and which TDM strategies might be taken to address them, NCDOT asked a cross-section of leaders from across the state to join a working group, called the TDM Panel, to guide the statewide TDM study. Panel members were appointed by Gov. Easley. They include: former NCDOT Chief Deputy Secretary Gene Conti; John Phelps, Corning, Inc. (Wilmington); Jim Palermo, Bank of America; Kennon Bordern, Borden Real Estate; Crystal Bunch, former Coordinator for Smart Commute @RTP; Lawless Bean, Wilmington Regional TDM Program Coordinator; Nancy Dunn, N.C. Board of Transportation member; Marion A. Cowell, Jr., N.C. Board of Transportation member; Ellen Reckow, Vice-Chairman Durham County Board of Commissioners; Charles Worley, Mayor of Asheville; Bill Laxton, U.S. EPA; Dempsey Benton, Chief Deputy Secretary, DENR; Judith Bell, Office of State Personnel; Nina Slozburg, N.C. Board of Transportation member; and Elaine Lyerly of Lyerly Marketing in Charlotte.

What were the reasons for choosing TDM as the mobility management tool for North Carolina at this time?

There were a number of reasons, including:

- Congestion has continued to mount, especially in the urban areas/regions and travel-related delays are increasing. Comparable national figures indicate that we are driving twice as many miles each year compared to 10 years ago.
- Rising NOx, through its relationship to ozone, is directly responsible for the rising levels of asthma and other respiratory diseases nationally. Closer to home, nearly 30 percent of North Carolina 6th graders suffer from asthma or other respiratory ailments, which are exacerbated by ozone. Auto emissions remain the largest source of NOx in the atmosphere.
- Other mobility trends of concern relate to hours of delay, again associated with increased congestion. According to the 2022 Urban Mobility Report from Texas Transportation Institute, the average annual delay per peak road traveler climbed from 16 hours in 1982 to 62 hours in 2000 and delay in the same period quadrupled in areas with less than one million people.
- The three largest urban areas in North Carolina (Charlotte, Raleigh/Durham/Chapel Hill, and Greensboro/Winston-Salem), continue to face commuter-related delays adding to congested-related delays and aggravating air quality. Significant increases in commuting time during the last decade occurred primarily as a result of the growth in vehicle miles traveled.
- Road improvements cannot keep pace with growing traffic volumes and travel time statistics continue to indicate increases in commute times. Nationally, travel time grew at about one-fourth to one-third as fast in areas where traffic volumes grew when roads were added. In other words, we cannot continue to rely on building our way out of congestion and expecting those solutions to "solve" mobility or air quality problems.

What are some of the recommendations of the Statewide TDM Plan?

The plan includes a wide-range of strategies to improve mobility for commuters and improve air quality. Because commuters often make their travel decisions -- choosing times, routes and modes based on what works for them -- NCDOT and local TDM programs will focus on improving commuter choices, benefits and incentives.

Highlights of the plan include:

- Establishment of an Office of Commuter Assistance within the NCDOT— A Commuter Assistance Program, located within the Public Transportation Division, will be established to focus on demand management techniques and TDM initiatives for North Carolina. Working with the transit and environmental committees of the N.C. Board of Transportation, specific congestion, air quality and commuter issues will be addressed. New air quality and VMT goals will be established for each existing and new urban area ridesharing program.
- Implementation of a statewide TDM project that would benefit the state and overall TDM effort—Development of a North Carolina Best Workplace for Commuters (BWC) Program, a USEPA and DOT public-private partnership program aimed at improving the way people commute to and from work. The BWC program publicly recognizes employers whose commuter benefits reach a national standard of excellence. The program builds on the efforts of many top employers to help get employees to work safely, on time and free of commute-related stress. It will provide the tools, guidance and promotion necessary to help employers of any size incorporate commuter benefits, such as a monthly transit/vanpool subsidy;

preferred parking for carpools and vanpools, compressed work schedules, ridesharing services or lockers and showers for bikers; an Emergency Ride Home for participating employees; and a central point of contact for employees on employer benefits provided. North Carolina will be the first to launch this initiative on a statewide basis.

- Development of additional trip reduction ordinances or programs, and a reduced parking ordinance in major urban areas—Using the Durham County Trip Reduction Model, NCDOT will assist select areas, such as Asheville, Wilmington and Research Triangle Park, in the development of additional trip reduction ordinances/programs. It has been shown that TDM and transit can work together to address growth and development issues, producing significant improvements. Parking requirements based on TDM measures should be introduced in other major urban areas, working with local planners, NCDOT, DENR and local business communities/chambers to develop local ordinances.

The plan also includes activities that will broaden efforts of existing TDM programs across the state.

When will the TDM plan be implemented?
The plan includes a three-year action plan for implementation of the recommended strategies. NCDOT began efforts to incorporate recommendations to strengthen existing programs last summer through emphasizing measurable program outcomes and coordination of US EPA sponsored training opportunities. The Triangle Best Workplace for Commuters campaign was launched on April 20 to sign up more employers to be designated as Best Workplaces for Commuters. This will be used as a model for statewide implementation. In addition, the Commuter Assistance Program should be staffed within three months. The program manager will partner with the DENR and others to implement the plan's recommendations.

Which state agency(s) will take the lead in implementing the recommendations in the TDM plan?
S.B. 953 placed the NCDOT squarely in a leadership role for improving TDM efforts in North Carolina. In partnership with the Departments of Administration and Environment and Natural Resources, NCDOT is seeking ways to address TDM and effectively reduce NOx and VMT.

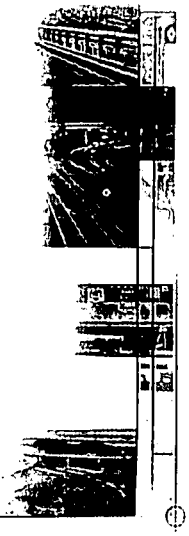
INSTITUTE FOR TRANSPORTATION RESEARCH & EDUCATION

April 2004

Statewide Transportation Demand Management (TDM) Plan



PARSONS BRINCKERHOFF QUADE & DOUGLAS, INC.

FOREWORD BY SECRETARY LYNDO TIPPETT

We in North Carolina are not surprised that our state consistently ranks high nationwide for its livability. In fact, thousands of families are drawn to North Carolina each year as a result of the excellent business climate—not to mention our rich history, diverse culture and natural beauty. Our urban areas in particular continue to experience unprecedented growth as more and more people discover North Carolina's unique appeal.

While this growth brings many benefits, the increasing number of vehicles on our highways is threatening the quality of life in many regions. For many North Carolinians, driving to work is becoming increasingly difficult. Traffic congestion is also impacting our environment and the quality of the air we breathe. These concerns were the impetus behind the Ambient Air Quality Improvement Act, passed by the General Assembly in 1999. The legislation requires the state to develop a plan to reduce vehicle emissions resulting from job-related travel.

To jumpstart this plan and to ensure that we sustain our high quality of life, Gov. Easley set an ambitious goal in January 2003 to reduce job-related travel statewide by 25 percent by 2009. To lead this endeavor, he appointed a panel to focus on developing a statewide travel demand management (TDM) plan to increase commuting options for workers in both the private sector and public sectors. The panel, under the leadership of the N.C. Department of Transportation, took this charge to heart and developed a comprehensive TDM program for North Carolina and a three-year proposed action plan to incorporate TDM strategies throughout the state.

This report details the panel's findings and recommended strategies -- which range from working with the EPA to establish a 'Best Workplaces for Commuters' program to the creation of a statewide Office of Commuter Assistance. Such strategies represent a new approach to improving mobility for commuters. Gov. Easley and I thank the panel members for their efforts—and for leading the way for improved mobility, less congestion and cleaner air in North Carolina.

The recommendations of this panel offer citizens a range of choices and provide a way for us all to become actively involved in shaping our communities. I ask for your support of this plan, and to help us spread the momentum by developing TDM programs at the local level. In doing so, we will ensure that our rural and urban areas remain vibrant and attractive places where industry grows and families thrive. With your cooperation, TDM will be an important part of the future of our state and Gov. Easley's vision of *One North Carolina.*

TDM Mission Statement

To provide citizens of North Carolina specific opportunities and strategies for improving sustainable economic growth and quality of life through reduced transportation congestion, expanded mobility options, improved air quality and more efficient use of scarce resources.

- Adopted by the TDM panel on January 2003

1.0 STUDY OVERVIEW

The North Carolina Department of Transportation and Parsons Brinckerhoff completed a statewide Transportation Demand Management Plan and program of work in the spring of 2003 and suggested improvements to the existing state program efforts during the following summer. Parsons Brinckerhoff, NCDOT and the TDM Panel that assisted in the study, saw this less as another "shelf document" and more as an opportunity for the development of a series of guiding principles. The NCDOT and its partners, DENR and others would have the opportunity to move the state toward programmatic change with an effective process and results to address many of the requirements of Senate Bill 953, the Ambient Air Quality Improvement Act of 1999.

The study team wanted a plan and program that would include leadership and improved program management, reinvigorated ridesharing/TDM programs, a more results-oriented program of work and a marketing framework that incorporated what was learned throughout the study process.

Parsons Brinckerhoff recommended a study process focused on the goals and expectations defined in Senate Bill 953 and encouraged the formation of an internal leadership team spearheaded by NCDOT and supported by a Panel composed of political, technical, development, marketing and government representatives across the state. The Panel would support NCDOT and the consultant team, providing guidance, leadership, dialogue and direction. Specific input would be provided on items such as program mission, work planning, implementation, guiding principles and marketing strategies.

The initial phase of work involved a fact-finding effort, completed in partnership with ITRE, to create a baseline of data and similar information about each of the ridesharing/TDM programs. This was an opportunity to inventory statewide efforts and in some cases "compare and contrast" program efforts currently underway. The product was a summary of results and complete notebook featuring the highlights of each program's efforts.

In addition, the program managers defined in their own words, critical components, accomplishments, major successes and other key information concerning their programs. This information was very important as the consultant team also examined other TDM programs across the country, compared the North Carolina programs various efforts and evaluated individual program efforts such as financials, staff size, organizational structure and program accomplishments.

Upon completion of these initial interviews, preliminary ideas for the SWOT interviews and analysis were developed. A framework for the approach was developed to include a cross-section of representation beyond existing markets. Because the SWOT represented such an important piece of "field" data and information for the study, it was critical to select a cross-section of stakeholders representing clients, board members, political representation and others.

As the acronym "SWOT" suggests, the SWOT analysis would offer feedback concerning existing TDM/ridesharing programs and the characteristics as described by their various

audiences. These sessions were also opportunities to discuss NCDOT's program expectations and through the study, discuss TDM's progress statewide, its performance and the results of various program efforts. Key stakeholders, policy representatives, decision-makers and of course, the program representatives themselves, had an opportunity to learn more about their programs, their effectiveness and any steps for improvement.

In combination, the ITRE baseline information and SWOT interviews and analysis results formed a solid foundation for assessing the progress of ridesharing/TDM programs. After addressing issues related to their strengths, weaknesses and improved program opportunities, including a look at potential projects in Asheville and Hickory, the consultants provided an overall assessment of steps necessary to improve existing TDM programs, including those focused specifically on the reduction of VMT and NOx as specified in Senate Bill 953.

Based on an overall assessment of each local program and an evaluation of comparable program efforts in locations such as California, Washington, Maryland, Florida, Connecticut and Iowa, a series of "Guidelines" were developed for NCDOT.

The "Guidelines" addressed NCDOT's leadership, the need for basic program improvement, "tools" such as mission statement, program goals and objectives, the need for demonstrating the value of TDM in order to encourage participation and political support, measuring performance and other key issues. With specific "how to" information and examples referenced in the Appendices of the report, a menu of choices was provided for how to improve the existing TDM efforts. Armed with this information, it would be possible to prioritize next steps for implementation.

The consultant, NCDOT and Panel were able to further refine the "Guidelines" so that realistic choices for implementation could be coupled with changes to timetables for funding and marketing. The earliest look at marketing included an overall marketing framework, the development of a broader marketing program and a summary marketing orientation from the SWOT analysis.

The final piece of work included a three-year proposed TDM Action Plan, which summarized the most critical pieces of work from the "Guidelines" document and prioritized the efforts. This would formulate the work plan for NCDOT and its Office of Commuter Assistance in the upcoming three years.

2.0 WHY TRANSPORTATION DEMAND MANAGEMENT? A PERSPECTIVE

Transportation demand management (TDM) is a phrase applied to a number of strategies intended to encourage the use of alternatives to driving alone, increasing the efficiency of the transportation system by focusing on travel demand instead of supply. Most TDM strategies deal with the modification of travel behaviors, maximizing the people-moving capability of the transportation system and usually focusing on trip-making, time of travel or the accommodation of people through fewer trips.

Transportation Demand Management strategies, when packaged effectively, can address a variety of transportation problems and provide a variety of economic, social and environmental benefits. The earliest TDM successes were accomplished through carpooling beginning during World War II.

Todd Litman, of the Victoria Transportation Institute, has written dozens and dozens of articles and essays about TDM and its effectiveness. What makes Litman's work and his position about TDM so compelling is his passion for successful implementation. Litman truly believes that TDM is the "next big thing" in transportation.

To Litman, the next major breakthrough in transportation will be one that effectively manages existing resources, resulting in the more efficient use of services and infrastructure already in place. TDM offers that capability.

In more and more communities across the country, TDM is becoming the mechanism by which businesses and community leadership, government and citizens, partner to develop effective transportation solutions. Sometimes, these solutions are in response to overwhelming congestion. Sometimes, environmental issues, such as air quality, have been the motivating factor. But in nearly all cases, the desire for increased mobility has produced new interest in TDM.

2.1 North Carolina Interests in TDM

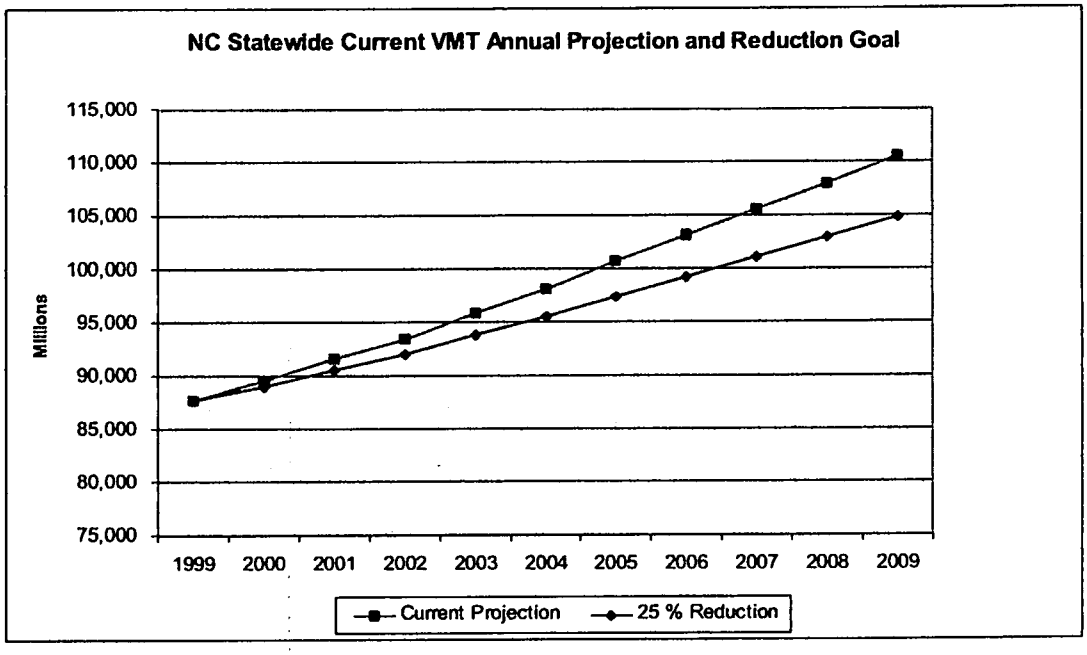
In North Carolina, the NCDOT and its Public Transportation Division, were motivated by the provisions of the Ambient Air Quality Improvement Act of 1999, Senate Bill 953, to address growing concerns over ground level ozone pollution from motor vehicles and the need to deal with increasing vehicle miles traveled (VMT) and NOx. The copy of the Senate Bill 953 is included in **Appendix A**. The NCDOT believed that TDM was one way to deal with the requirements of the Senate Bill. **Figure 1** shows that North Carolina has a statewide goal of reducing VMT by 25 percent (5.7 Billion VMT) by 2009.

While communities across the state had been practicing TDM and ridesharing for some number of years, little progress had been made at significantly reducing vehicle miles traveled, and air pollution-related problems were continuing to mount, especially in the urban areas and surrounding regions.

To initiate an analysis of the key problems and an effective means of what TDM-steps might be taken to address them, NCDOT asked a cross-section of leaders from across

the state to join a working group, called a TDM Panel, to guide a statewide TDM study. The Panel membership was created by NCDOT under the direction of the Governor.

Figure 1: Statewide VMT Reduction Goal of 25% By 2009

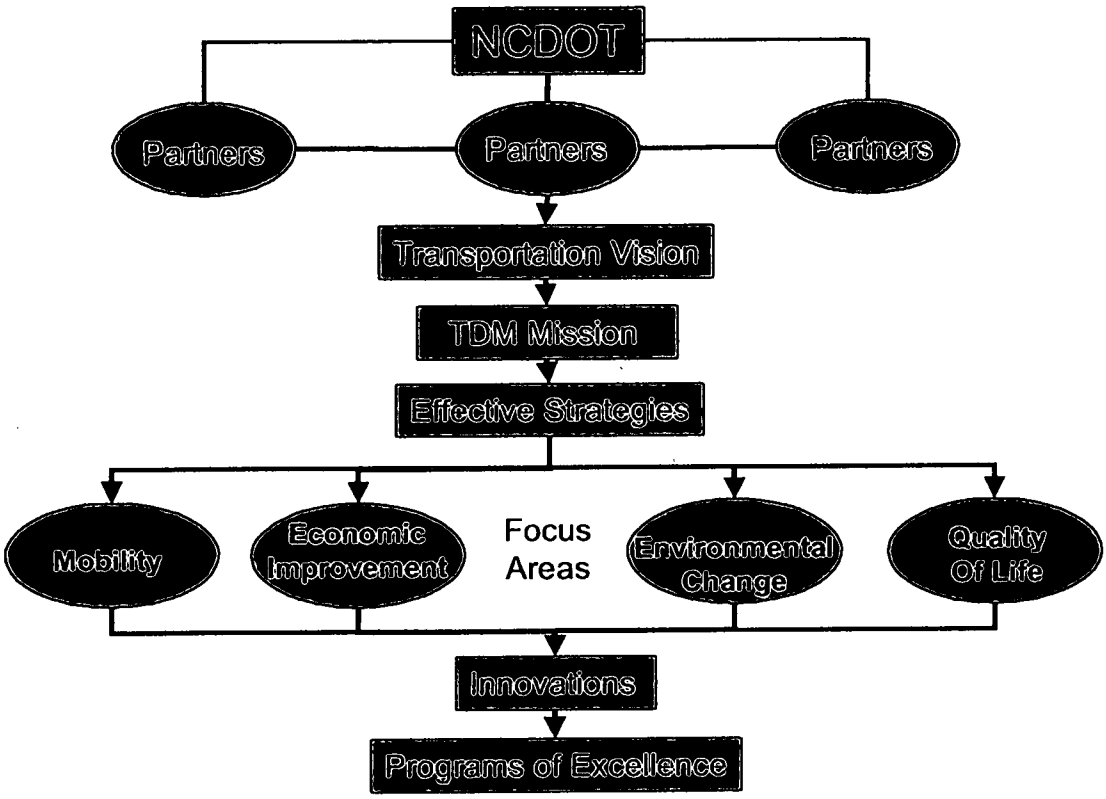


2.2 Leadership with a Purpose

The most successful TDM programs across the country are those with strong, defined leadership and enthusiastic, energetic champions at the helm. A visionary and innovative leader can arrange, facilitate, develop and informally coerce the necessary players into development of effective plans and programs. In addition, policies and programs can be created to support a well-defined TDM vision.

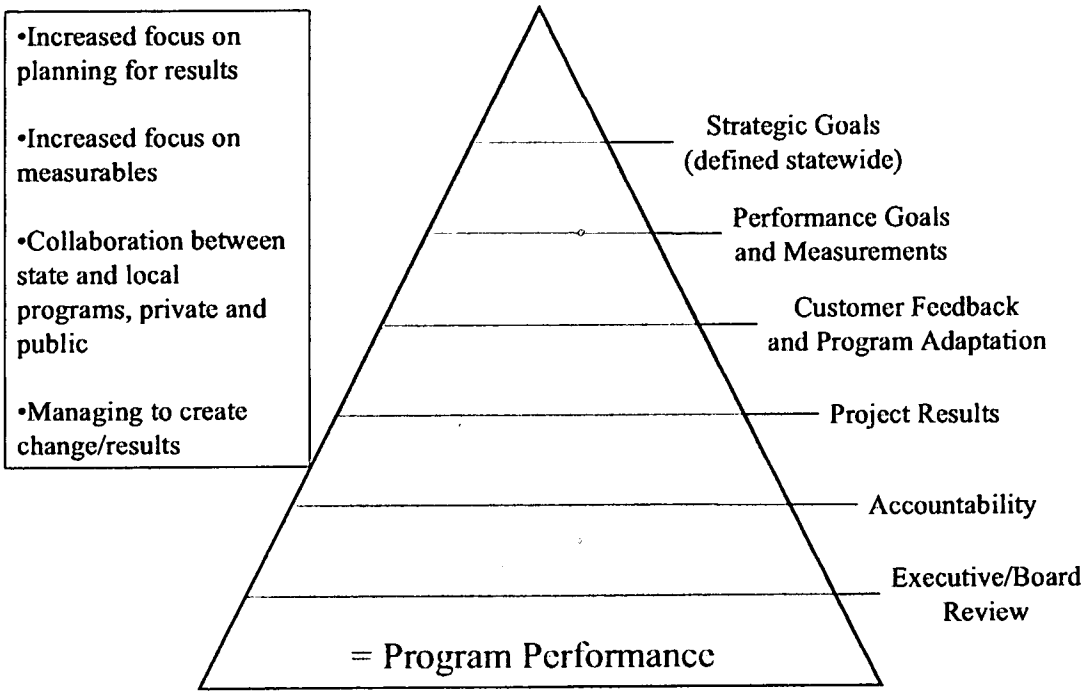
In the case of the NCDOT Statewide TDM Plan, it was important to create the leadership team (both champion and Panel) and then develop ideas for a mission and vision. New, overall program guidance, established first through a mission statement would (1) help establish an overall program direction (for a future Office of Commuter Assistance), (2) lend formality and direction to a statewide effort, (3) give a sense of purpose and defined need to the program, and (4) aid NCDOT in its assessment of future program outcomes. In addition, NCDOT could begin to link individual TDM/ridesharing program missions to its own, adjusting various program purposes and monitoring goals and objectives. This would be especially important as program performance goals were developed and funding decisions were formally linked to performance. The multi-dimensional plan was described as follows:

Figure 2: NCDOT/ TDM Program Structure



To begin to define and document the new program direction, a draft mission statement was prepared for NCDOT. The vision for the program, was introduced to the Panel and NCDOT staff, describing new roles, relationships and focus areas for the program (see **Figure 2**). These tools began to give definition to the program and added a strategic purpose for TDM. In addition, a Paradigm for Commuter Trip Management (see **Figure 3**) was developed which clearly illustrated steps required for development of a successful statewide program. Strategic goals, performance-based programming, customer feedback, project results, accountability, and an environment for continuous review were combined to produce a model for improved program results.

Figure 3: The Paradigm for Commuter Trip Management - Steps for a Successful Statewide TDM Program



2.3 Acting Now

Senate Bill 953 placed NCDOT squarely in a leadership role for improving Transportation Demand Management efforts in North Carolina. In partnership with the Departments of Administration and Environmental and Natural Resources, the Department was seeking ways to address TDM and effectively reduce NOx and VMT (vehicle miles traveled). The 25% reduction goal specified in Senate Bill 953 was aggressive, and to address this goal, a number of ideas needed to be considered to accelerate the planning and advocacy already underway.

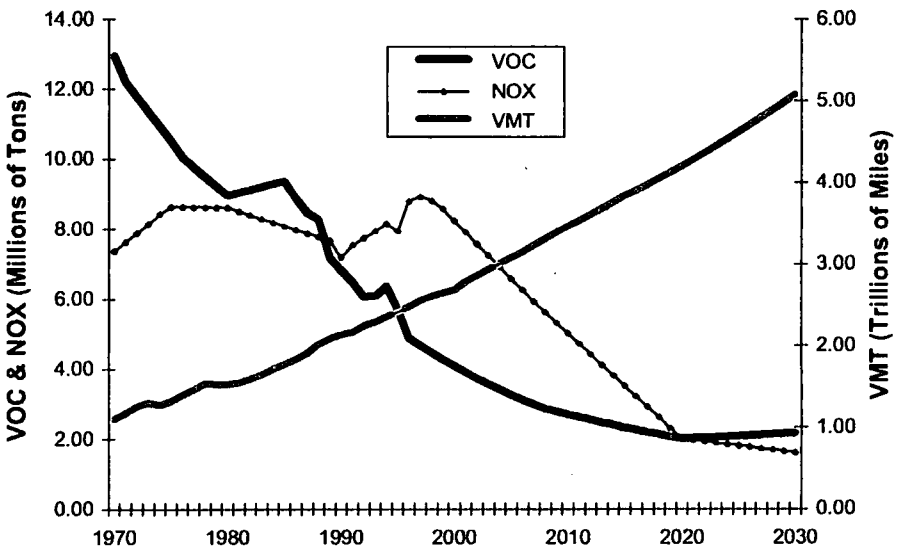
To begin, NCDOT wanted to focus on a series of congestion-reducing initiatives. Re-examination of the existing programs across the state, determination of levels of effectiveness, looking at the need to meet broader state goals and re-invigorating an older state government program for state employee TDM/ridesharing could produce a number of immediate results. Looking at innovation, incentives and more employer-focused programs was another way of strengthening program efforts and increasing impacts.

There were a number of reasons for choosing TDM as the mobility management tool for North Carolina at the current time.

1. Congestion has continued to mount, especially in the urban areas/regions and travel-related delays are increasing. **Figure 4** shows comparable national figures that indicate that we are driving twice as many miles each year compared to10 years ago.

   Since 1970, aggregate emissions traditionally associated with vehicles have significantly decreased (with the exception of NOx) even as vehicle miles traveled have increased by approximately 149%. NOx emissions increased between 1970 and 1999 by 16%, due mainly to emissions from light-duty trucks and heavy-duty vehicles. However, as future trends show, vehicle travel is having a smaller and smaller impact on emissions as a result of stricter engine and fuel standards, even with additional growth in VMT.

Figure 4: National Vehicle Miles Traveled (VMT) vs. Vehicle Emissions



Source: Statement of Senator Bob Smith, Environment & Public Works Committee Hearing on Transportation & Air Quality, July 30, 2002

2. Rising NOx, through its relationship to ozone, is directly responsible for the rising levels of asthma and other respiratory diseases nationally. Closer to home, nearly 30% of our North Carolina 6th graders suffer from asthma or other respiratory ailments, which are exacerbated by ozone.

Asheville youth has asthma

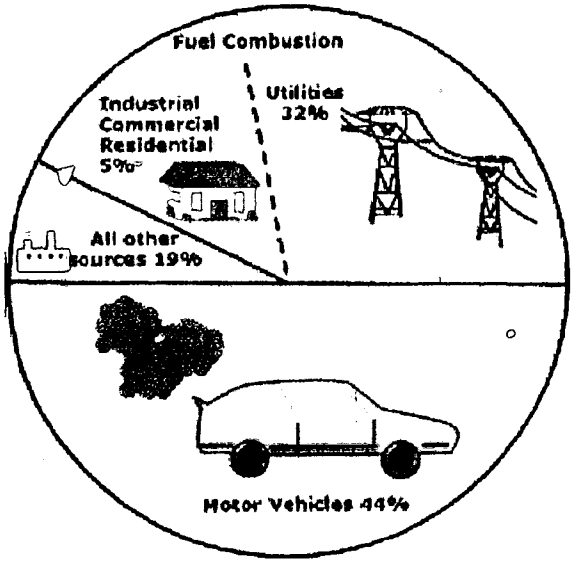
On days when air pollution clouds the view from his home in Murphy, Jeffrey can't play outside. Hear his mother Ronda Robberson explain how dirty air makes it harder for Jeffrey to breathe...

Degraded air quality makes it impossible for Jeffrey Robberson to play basketball.

Source: http://www.ibiblio.org/ncair/

High ozone levels in our air are now a documentable health hazard; **Figure 5** illustrates that auto emissions remain the largest source of NOx in the atmosphere.

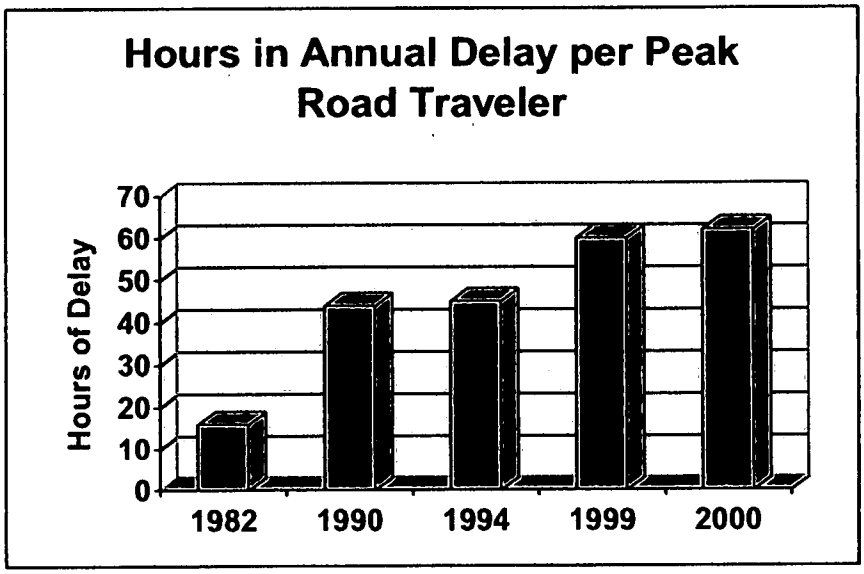
Figure 5: Sources of NOx



Source: http://www.ibiblio.org/ncair/index.php?page=ozone

3. Other mobility trends of concern relate to hours of delay, again associated with increased congestion. **Figure 6** shows that according to the 2002 Urban Mobility report from TTI, the average annual delay per peak road traveler climbed from 16 hours in 1982 to 62 hours in 2000 and delay in the same period quadrupled in areas with less than one million people.

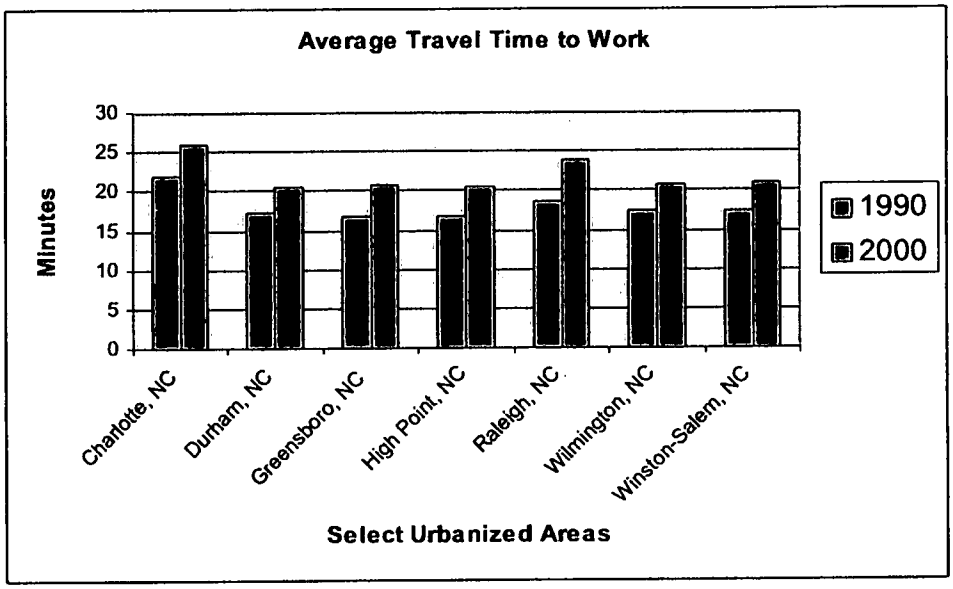
Figure 6: Hours of Delay



Source: ITT 2002 Urban Mobility Study

4. **Figure 7** shows that the three largest urban areas in North Carolina continue to face increases in commute-related delays adding to congested related delays and aggravating air quality. Significant increases in commuting times during the last decade occurred primarily as a result of the growth in vehicle miles traveled (VMT).

Figure 7: Average Travel Time to Work



Source: US Census

5. While road improvements have impacted congestion and curbed some air quality issues by allowing traffic to move along, travel time statistics continue to indicate increases. Nationally, travel time grew at about one-fourth to one-third as fast in areas where traffic volumes grew when roads were added. In other words, we cannot continue to rely only on building our way out of congestion and expecting those solutions to "solve" mobility or air quality problems.

3.0 SWOT ANALYSIS FOR STATEWIDE TDM PROGRAMS

During January 2003, a series of interviews were held with key stakeholders, representing clients, board members and others from the various ridesharing and TDM programs across the state. The interviews provided information in addition to that already provided by the TDM coordinators themselves who were interviewed in the Fall of 2002 by ITRE as part of the initial evaluation of each existing program.

The results of this evaluation are summarized in this section of the report. A list of programs reviewed is provided below. The actual questionnaires from the interviews are in **Appendix B** and the list of participants is shown in **Appendix C** of this report.

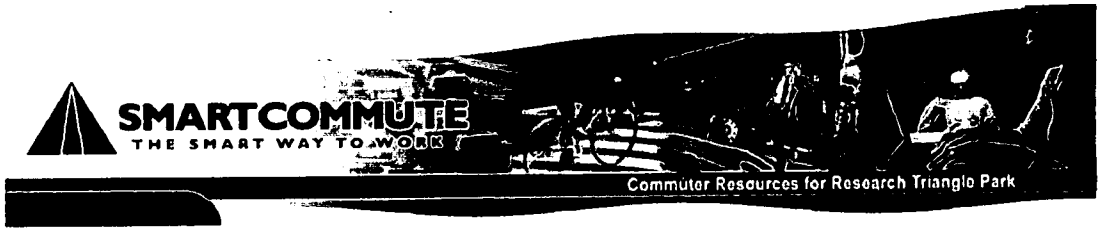
3.1 Existing Programs

3.1.1 SMARTCOMMUTE @ RTP



System Name	SmartCommute@RTP
Contact Information	Ms. Crystal S. Bunch Travel Demand Management Coordinator SmartCommute@RTP Research Triangle Foundation 2 Hanes Drive PO Box 12255 Research Triangle Park, NC 27709 Phone: 919.549.8181; Fax: 919.549.2846 Email: bunch@rtp.org
Year Formed and Brief History	Started in February 1999; hired ½ time person in fiscal year 2001 and full time person in fiscal year 2002
Geographic Service Area	Major employers within and adjacent to the Research Triangle Park
Services Delivered	Employer based programs; service provider enhancements; preferred parking; emergency ride home; transit subsidy; on site transit sales; telecommuting; vanpooling through Triangle Transit Authority
Annual Budget	Fiscal Year 2003 $80,500 funded by Durham and Wake County Research and Production Service District
Successes	2002 SmartCommute Awards Luncheon on October 4, 2002; development of website; completion of phases 1 and 2 initiatives and beginning work on phase 3; annual survey of employees;
Website	www.smartcommute.org
Mission	Provide information, coordinate support and resources to enhance and promote alternative commuting practices to proactively confront travel demand and environmental issues facing companies within Research Triangle Park.

The SMARTCOMMUTE program received "high marks" from the stakeholders who participated in the interviews. In general, the program was perceived as extremely proactive, and it is described as the appropriate forum for meeting the needs of the companies it represents.

The full-time TDM Coordinator is viewed as the biggest resource of the current effort. Staff is energetic and dedicated and credited with the success of current marketing efforts. All stakeholders viewed the brand name of "SMARTCOMMUTE" as an asset to the successful marketing of the TDM initiative.

When asked to describe three major accomplishments, those were summarized as (1) the first annual SMART COMMUTE awards program for companies, (2) generalized marketing activities, and (3) the increased participation of RTP companies in the program.

Strengths

- In general, those interviewed believe that the SMARTCOMMUTE program capitalizes on the Triangle's interest in commuting, and perhaps the previous problems with I-40 and other congestion-related locations. While they could not cite exact evidence of how this was accomplished, they believed that it was done through marketing.

- The telecommuting program is viewed as a major success, with 7% of the RTP employees participating. This is one of the strongest elements of the SMARTCOMMUTE program.

- The SMARTCOMMUTE program facilitates information-sharing between companies. Through regular meetings and direct working sessions and problem-solving efforts, the TMA meets the needs of its participating companies.

- The Durham County Trip Reduction Ordinance is viewed as a valuable, but under-utilized tool. The Ordinance needs to be more effectively marketed, more effectively used. Emissions results need to be marketed as well. The "natural" results between RTP companies and teleworking and environmental linkages need to be marketed.

Weaknesses

- There is limited transit service to the RTP, and existing services are not convenient enough to attract the choice rider that the Park employees represent. Travel time savings are not competitive to driving; services are not oriented to the needs or schedules of Park employees.

- Companies need to share their "lessons learned" and devise a TDM agenda and/or priorities plan for immediate implementation (with NCDOT and or others involved).

- There are conflicting goals between organizations representing the Park's transportation agenda. Who speaks for the Park when it comes to "congestion management"?

- There is an interest in having this program be more results-oriented, beginning with emissions information. Other sorts of statistics should also be monitored.

- The interest in the Commute Trip Reduction Ordinance also raises issues related to transportation and land use. Should the Park look for mechanisms that have more "teeth"?

Opportunities

- The Program is beginning to track new statistics and is interested in working with its employers to do so.
- From a marketing perspective, the Park never envisioned itself in any sort of "savior" role relative to air quality or congestion, but it is certainly willing to play a management role.
- Employers feel sense of responsibility and success with program efforts to date.

Threats

- Reductions in force have reduced what was once a major emphasis in TDM strategies and programs.
- Elected officials may also be somewhat indifferent to the air quality requirements, not yet realizing the "implications" or realizing the "realities" associated with Senate Bill 953. There needs to be some other way to orient key decision-makers.
- The RTP development pattern is one of lower density and plentiful parking. This may need to be revisited to make TDM-based decisions work (EPA example).
- Streets have not been conducive to the use of alternatives such as bicycles.
- There is worsening air quality and increasing congestion—particularly in locations such as I-40.
- Other issues that the stakeholders wanted to be sure were communicated included the (1) need for an expanded version of "best practices" that could be used beyond the RTP. There was the suggestion for adoption of the (2) Wake County version of the Commute Trip Reduction Ordinance and the (3) consolidation of the CAMPO and DCHC organizations for a "single voice" in regional transportation.

3.1.2 Triangle Transit Authority

Triangle Transit Authority
PO Box 13787
Research Triangle Park, NC 27709
(919) 549-9999
Fax: (919) 485-7441

System Name	Triangle Transit Authority
Contact Information	Mr. John Tallmadge Commuter Resources Interim Manager Triangle Transit Authority PO Box 13787 *Research Triangle Park, NC 27709* Phone: 919.485.7430, Fax: 919.485.7441 Email: jtallmadge@ridetta.org
Year Formed and Brief History	*1980 was formed as part of the National Ridesharing Demonstration Project as the Triangle area program located in the Triangle J Council of Government; Vanpool Program started in 1985; TTA was chartered on December 1, 1989 and ridesharing / vanpooling was the first service offered in 1991;*
Geographic Service Area	Cities: Raleigh, Cary, Durham, Chapel Hill *Counties: Wake, Durham, Orange and surrounding counties*
Services Delivered	Vanpool Matching and Vehicles (employers subsidizing) Guaranteed Ride Home Preferential Parking Employer based Commuter Benefits Bike racks on buses in region Telecommuting Compressed work week / staggered work hours UPass program with NC State University *Transit Information*
Annual Budget	Administrative Budget: $484,751 FY 03 ($242,375 from NCDOT PTD)
Successes	*Staff and manage Commute Trip Reduction program for Durham County; 47 vanpools operating in June 2002; integrated with transit services and provides marketing for all modes of transportation; lead in the procurement / implementation of a regional web-based trip planning application and web-based rideshare matching application*
Website	www.ridetta.org
Mission	To plan, facilitate, and promote, for the Greater Triangle Community, an affordable, customer-oriented public transportation network which provides mobility, promotes economic opportunities, and protects the environment.

The Triangle Transit Authority Program was characterized by those interviewed as providing vanpool information and related services and working with major employers throughout the region. The staff also markets transit services to companies and provides "lunch and learn" sessions to employers and employees. Significant staff time is devoted to the administration/review of the Durham County Trip Reduction plans submitted by those employers in Durham County.

In providing descriptions of major accomplishments of the TTA program, those interviewed described the administration of the Durham Ordinance and the employer assistance provided by the TTA staff in meeting the Ordinance requirements. The completion of the regional rail study (EIS) and the I-40 HOV Feasibility Study were also cited as major accomplishments.

In discussing ways that the program receives political attention or recognition, those interviewed stated that the TTA Board is composed of a number of elected officials and that they convey TTA's various activities and priorities to other elected officials. The ridesharing/TDM work was not specifically mentioned.

There seems to be a good relationship with local traffic reporter Mark Roberts who was described as frequently mentioning TTA and the commute alternatives sponsored by their various programs.

Strengths

- The provision of vanpool and ridematching services have been important service priorities for TTA. There is a planned implementation of an on-line matching service in the near future.

- There is good staff leadership and strong staff/Board relationships at this organization, although the relationships do not reflect specifically on the ridesharing and TDM programs.

- Broader regional cooperation has been illustrated through the work of TTA on its regional rail project and through such projects as the Mayors Transportation Alliance.

Weaknesses

- The dominant work activity for the program has been the planning for the regional rail project.

- The existing transit services are not convenient enough to attract the choice rider, especially those from the Research Triangle Park. Travel time savings for alternatives as they currently exist are not competitive to the single occupant driving public.

- There are confusing connections between the TTA local transit operations that further discourage transit usage in the region.

- TTA does not operate services in the Research Triangle Park.

Opportunities

- There is interest in some sort of merger or integration of transit services in the Triangle Region.
- Wake County has an interest in a Trip Reduction Ordinance.
- There is a growing interest in the relationship between land use and transportation. The region is facing continued growth and problems with a number of related issues and "transportation solutions" could be the meaningful answers.

Threats

- There are increasing costs associated with the provision of public transportation services in the (region) (state).
- Potential funding crises at all levels of government have a negative impact on TDM and transit initiatives.
- Indifference on the part of elected officials and citizens in meeting the air quality and related goals may negatively impact the Triangle's quality of life and economic "position".
- There is a lack of unified leadership for the region concerning this subject (TDM amd related matters). Who speaks for TDM?
- Continuing on a path of predominantly highway construction only reduces the need for and opportunity for TDM's success.
- There is plentiful parking within the Research Triangle Park.
- Streets within the Triangle have not been designed in such a way as to be conducive to bicycle commuting.
- In addition to these issues, there are the parallel issues of worsening air quality and increasing congestion in the region. I-40's traffic has been particularly problematic.
- The stakeholders involved in this discussion and these interviews suggested more aggressive employer/employee education concerning the benefits of TDM measures and better information describing what is really important to commuters in selecting their travel choices.

3.1.3 State Government Public Transportation Division Ridesharing Program

STATE OF NORTH CAROLINA
DEPARTMENT OF TRANSPORTATION

System Name	Public Transportation Division Ridesharing Program
Contact Information	Ms. Tamra Shaw Transportation Planner Public Transportation Division NC Department of Transportation 1550 Mail Service Center Raleigh, NC 27699-1550 Phone: 919.733.4713 x 238, Fax: 919.733.1391 Email: tshaw@dot.state.nc.us
Year Formed and Brief History	Late 1970s received an FHWA National Ridesharing Demonstration Project Grant and began programs in the three major metropolitan areas of the state (one program in the Triangle (TJCOG), one program in Charlotte (CDOT) and three in the Triad (Greensboro, High Point, Winston-Salem); Currently, NCDOT–PTD supports two types of TDM programs: administrative (pays 50% of administrative support for the programs in Charlotte, Triad and Triangle regions) and start up (Wilmington);
Geographic Service Area	State of North Carolina, primarily focused on major metropolitan regions
Services Delivered	Funding Technical Support Planning
Annual Budget	FY03 $995,826 (state funds $497,913)
Successes	One of the first programs in the country; Technology funding for web based applications;
Website	http://www.ncdot.org/transit/transitnet/
Mission	It is the mission of the Public Transportation Division, in partnership with other public and private entities to support and promote the availability of high-quality public transportation services and partnerships throughout the state by delivering funding, technical assistance and leadership.

NCDOT's role in ridesharing and TDM activities is currently focused primarily on administration and management of the programs that exist locally. Technical assistance has been provided through direct support and consultant contracts.

The Triangle Transit Authority provides vans for vanpooling to the NCDOT offices, and NCDOT has an extensive flextime program, but flexible scheduling is not broadly promoted nor is it encouraged by all offices of state government.

NCDOT's TeleDOT (teleworking) program is being used by employees, but primarily on a part-time basis. Preferential parking is provided for those employees who carpool, but the program is promoted on a limited basis.

The Office of State Personnel/Department of Adminstration's pilot program for teleworking included more than 250 employees from several state agencies. There were several components of this program that could prove to be workable and expandable for a larger effort.

Overall, the public transportation services and TDM initiatives within state government continue to be a difficult product to sell and market to the senior management and higher ranking officials within Raleigh. Marketing TDM and commute benefits totally on the basis of convenience will continue to be a "difficult sale".

The major accomplishments of the state government program include (1) assisting with the development of the SMARTCOMMUTE Program, (2) assisting in the development of the Durham County Trip Reduction Ordinance, and (3) establishing the UNC-Chapel Hill TDM Program.

NCDOT has begun to think more strategically about the need for political and public support of its TDM efforts. Through its (1) support of the Department of Administration and State Personnel Teleworking program, and by examining the (2) need for Trip Reduction programs throughout the state, NCDOT is broadening its potential role in TDM. NCDOT is also encouraging the inclusion of TDM strategies in the Urban Area Long Range Plans.

Strengths

- The TDM initiative assists in the maximization of highway capacity during peak periods with a focus on moving people rather than moving vehicles.
- The NCDOT employees enjoy the teleworking program because of the convenience and time-saving aspects.
- NCDOT employees enjoy flextime because of the scheduling flexibility that results. The opportunity for a 4-day workweek reduces time spent commuting by 20%.
- There are estimated savings for state government in reduced office space requirements, equipment and associated costs, if the telework program can be successful, and then expanded. In 1996-97, the cost estimate was $21M if 1% of state employees began to telework.

- TDM programs have documentable health benefits and improvements to recruitment and retention goals. These are qualities that state government should "advertise".

Weaknesses

- Many state managers do not support teleworking, flextime and other TDM initiatives, so only a limited number of state employees are participating.
- There is a poor understanding among state leadership of the benefits of TDM and public transportation.
- TDM strategies are not being incorporated into state policies, long range plans and similar initiatives.
- System upgrades may be needed to accomplish a telecommuting program.
- The provision of employee parking in downtown Raleigh that is so inexpensive and so readily available is a deterrent to employee participation in commuting alternatives.

Opportunities

- Expanding/resurrecting TDM programs to encourage interested employees and embrace others will begin to establish NCDOT and other departments of state government in a leadership role.
- There will be benefits to recruitment and retention and positive morale for state government as an employer, through this unique transportation program.
- There is an opportunity to partner for successful program efforts with TTA, SMART COMMUTE and the companies in the Research Triangle Park.

Threats

- Increasing parking costs for state employees could be negatively received unless the TDM "package" includes a number of convenient TDM alternatives.
- To make any initiative involving state employees successful, there will likely be a need to focus on multiple actions: the amount of time devoted to commuting, the resources "used" by traffic congestion (and therefore saved by the improvements), and the resulting savings that various departments will produce by participating in various programs such as teleworking, etc.

3.1.4 City of Wilmington

City of Wilmington

System Name	City of Wilmington
Contact Information	Ms. Lawless Bean Transportation Demand Management Coordinator Development Services / Transportation City of Wilmington PO Box 1810 305 Chestnut Street Wilmington, NC 28402-1810 Phone: 910.341.3258; Fax: 910.341.7801 Email: lawless.bean@ci.wilmington.nc.us
Year Formed	Program started in 2001 and a coordinator hired in early 2002
Geographic Service Area	City: Wilmington Counties: New Hanover and surrounding counties
Services Delivered	Input from an employer group and advisory board; working to define roles and the services to be delivered; interfacing with the rural jobs access initiative in New Hanover County; vanpools will be provided by the third party contractor already working in Wilmington;
Annual Budget	First Year $60,000
Successes	Planned and started operation of transit services for the UNC-Wilmington community and a shuttle service for Corning employees that was open to the public; produced a TDM video; developed an employer services brochure; created work priorities with the employer group; currently surveying 14,000 employees to ascertain services needed;
Website	
Mission	Establishing an on-going employer-based coalition that will define and implement TDM initiatives which will enhance and / or maintain the high quality of life for their employees and the community at large.

The Wilmington TDM program is employer-based. Its major success story with TDM began with the Corning shuttle, demonstrating a public/private partnership for transportation service involving the City, NCDOT, Corning and Wilmington Transit.

Currently, the employer transportation group is focusing on a park and ride project involving express bus service from Monkey Junction.

There is growing awareness within the community of the issues surrounding the land use and transportation "connection". New ordinances will require the provision of sidewalks with new construction, and there is possible interest in a Trip Reduction Ordinance similar to Durham County's.

In terms of accomplishments, the hiring of a full-time coordinator was viewed as important to all stakeholders interviewed. The coordinator has been as integral part of the Program's continued progress. The other items cited as accomplishments included the (1) activation of the Corning shuttle, (2) the operation of the Downtown Trolley, the (3) geocoding of the employee surveys, the planning for the Monkey Junction park and ride service, and (4) the expansion of the TDM employer group to iinclude additional employers.

To achieve political or public recognition, the program obtains media coverage of its special activities through activities like the launching of the Corning shuttle. The TDM coordinator periodically attends the WTA Board meetings, and there has been a video prepared produced for marketing the TDM program, but it has not yet been distributed/released.

Strengths

- The establishment of the full-time TDM coordinator position based on NCDOT funding, has helped focus program efforts and bring employer-based activities together with a defined purpose. As a result, there is a better understanding among the TDM employer committee members about their direction and what needs to be accomplished with their program.
- There is good cooperation between the WTA staff and the TDM Coordinator.
- There is an excellent GIS system that can be used for geo-coding and establishing employee trip origins/destinations.
- There is the possibility of purchasing ridematching software to assist in car and vanpool matching and the provision of transit services.

Weaknesses

- There is inadequate funding for both the transit and TDM programs, making it difficult to serve the needs identified by the employer groups and the community.
- Existing transit services are not convenient enough for the choice riders, resulting in the perception that the system is for the lower income citizens in the community.
- There is limited communication and marketing of the TDM effort.

- There has been poor cooperation between Wilmington and New Hanover County, complicating matters like the regional transportation initiative that could result in more services and more efficient services for the community.

Opportunities

- Consolidation of city and county transportation/transit services is under consideration and service improvements could be an outcome.
- There is increasing public concern over worsening traffic congestion and the possible impacts on Wilmington's quality of life.
- There are opportunities to coordinate with Brunswick and Pembroke Counties and to provide regional connections through improved services.
- There are opportunities to expand TDM and transit marketing in conjunction with WTA's adoption of a new logo and purchase of new buses.
- More employers are being added to the working group representing a broader group within which to "sell" TDM.

Threats

- The local government in Wilmington faces financial constraints that could impact TDM *and* transit funding.
- The loss of state funding could impact the TDM program.
- Turf-related issues could break-down the cooperation in several areas.
- There could be declining interest in TDM among the major employers for any number of reasons (economic changes, as an example).
- The shuttle service demonstration or the express bus service demonstration could fail.
- In addition to these items, Wilmington has several congestion "hot spots" that need to be monitored but no specific plans for addressing these locations or monitoring their problems has been planned. Castle Hayne Road is one of those problem areas.
- The ability to monitor the performance of the TDM program is also of concern. There should be "quantifiable" information for the program that can be reported to elected officials, employers and other key community stakeholders.

3.1.5 Rural Job Access

STATE OF NORTH CAROLINA
DEPARTMENT OF TRANSPORTATION

System Name	Public Transportation Division Rural Jobs Access Program
Contact Information	Mr. Charles Glover Assistant Director for CommunityTransportation Public Transportation Division NC Department of Transportation 1550 Mail Service Center Raleigh, NC 27699-1550 Phone: 919.733.4713 x 277, Fax: 919.733.1391 Email: cglover@dot.state.nc.us
Year Formed and Brief History	In April 1999, awarded a Job Access & Reverse Commute Grant from the Federal Transit Administration; focus is to support a statewide rural vanpool program and a subscription commuter service program;
Geographic Service Area	State of North Carolina, primarily focused on getting people in rural areas to work
Services Delivered	Vanpool Matching and Vehicles (employer subsidies) Guaranteed Ride Home Preferential Parking Employer based Commuter Benefits
Biannual Budget	$495,000 Job Access & Reverse Commute Grant from the Federal Transit Administration – matched with $495,000 from NCDOT Work First Employment Transportation Demonstration funds
Successes	9 vanpools in operation in Oct 2002; contract with 3rd party vanpool provider for vehicles and administration;
Website	http://www.ncdot.org/transit/transitnet/
Mission	It is the mission of the Public Transportation Division, in partnership with other public and private entities to support and promote the availability of high-quality public transportation services and partnerships throughout the state by delivering funding, technical assistance and leadership.

The focus of the Rural Job Access program is the provision of vans for vanpool services within areas of the state where traditional public transportation services do not currently exist, or in areas where the vanpool services can augment those services being provided by a traditional public transportation services provider. The program works alongside health and human service agencies and others to meet the needs of employers and their employees in counties with significant unemployment.

The Rural Job Access Program has been beneficial to the Soffe plants in Maxton and Lumberton. The program has also provided vans for the Tyco plant near Rocky Mount and Harnett County.

This program presents a good option for persons commuting long distances to rural employment sites. The vanpools generally serve work shifts more efficiently than rural transit (employees often arrive to work earlier and stay at work later than the bus schedule allows).

The major accomplishment of the program includes the (1) contracting with 2Plus for the provision of vans so that vehicles for pooling can be provided quickly to those employers/employees desiring to participate in vanpooling. 2Plus also provides the management, oversight, maintenance and operation of these vehicles.

By working locally with the Departments of Social Services, Employment Security Commissions and others, the program works to develop improved partnerships for the provision of transportation services in rural areas.

Strengths

- This program reduces the number of single occupant vehicles traveling to and from job sites, helping to control emissions and manage parking-related problems.
- The program provides an affordable transportation option for lower-income persons and those without cars or valid driver's licenses so that they can get to and from work.
- The program improves communications between agencies seeking jobs and those employers needing workers. The transportation "broker" provides a much-needed service.
- The 2Plus contract provides "peace of mind" for companies and agencies interested in the alternatives to driving and for those with employees who have no automobiles.
- The vanpooling alternative represents a dependable option for long-distance commuters, improving on-time performance and overall productivity.
- Vanpooling has been proven to be a stress-reducing, employee-favored benefit. With experience, the program can grow.

Weaknesses

- It is sometimes difficult to find the vanpool drivers with the required/acceptable driving record.

- Using drivers with poorer driving records raises insurance costs, which increases the vanpool program operation costs (to users and to NCDOT).

- Inadequate marketing materials (brochures, explanatory information) and inappropriately decaled vehicles may hamper the programs effectiveness and the total understanding of the program by those currently involved and those that could become involved.

- Poor communication of the program problems/successes within NCDOT, the Department of Health and Human Services and others involved limit the understanding of how the program works. Similarly, there may be a need to make adjustments to the program and all players need to assess the effort routinely.

Opportunities

- Improved awareness of the program by employers and agencies could increase the vanpool program use. There does not appear to be a strong marketing program.

- Use of existing vanpool participants in a peer-to-peer marketing approach would be another way to spread the word about success and market within the rural jobs community.

- The Rural Jobs Access Program should be linked to marketing initiatives in every city and town and every department where an active program "lives"...through the DSS's, through the transit systems. Perhaps a demonstration could begin in Wilmington, linking vanpooling to rural jobs access and WTA.

Threats

- The economic downturn has created fewer and fewer employment opportunities so the "natural" linkages for the jobs access may be limited. How can the "broker" (2Plus) be guaranteed a link to jobs and to the provider of jobs in each community?

- The loss of federal and state funding for Rural Jobs Access and related activities (TANF, TEA 21) may threaten the overall welfare-to-work emphasis/interest at the local levels.

- There is a continuing lack of DSS cooperation within many counties, and NCDOT cannot force agency participation. Without this support, the program loses its original intent and purpose.

3.1.6 Piedmont Authority for Regional Transportation (PART)

System Name	Piedmont Authority for Regional Transportation
Contact Information	David Morris Operations Manager Piedmont Authority for Regional Transportation 100 West 5th Street Winston-Salem, NC 27101 Phone: 336.727.2003, Fax: 336.748.3072 Email: davidm@partnc.org
Year Formed And Brief History	1980 was formed as part of the National Ridesharing Demonstration Project as one of three programs in the Triad. In 1982, the High Point and Greensboro programs were merged. Vanpool Program started in 1984. In January 1995, the Greensboro and Winston-Salem programs merged. With the formation of PART in 1998, the ridesharing vanpool program was the first service to be offered by PART in June 2000.
Geographic Service Area	Cities: Greensboro, High Point, Winston-Salem Counties: Guilford, Forsyth, Alamance, Rockingham, Davidson, Randolph and their surrounding counties
Services Delivered	Vanpool Matching and Vehicles Guaranteed Ride Home Preferential Parking / Free Vanpool Parking Employer based Commuter Benefits Bike racks on buses in region Shuttle service for construction sites Transit Information
Annual Budget	Administrative Budget: $305,704 FY 03 ($152,852 from NCDOT PTD)
Successes	Oldest vanpool program in NC; won 1985 Federal Highway Administrator's Award for Ridesharing; 58 vanpools operating in October 2002; integrated with transit services and provides marketing for all modes of transportation; first 511 implementation in NC (fall 2003);
Website	www.partnc.org
Mission	To enhance the quality of all forms of transportation for each of our citizens through efficient use and protection of our natural, economic and human resources.

PART is involved in the comprehensive provision of ridesharing and vanpooling and markets services throughout the region. Their vanpools are visible throughout the region and, the PART Express service to the Airport represents the first regional service of its kind in the area.

Vanpooling continues to be an integral part of the ridesharing program, although the number of vans in active operation as gone up and down over the last few years.

The major accomplishments of the PART program have focused on the (1) start up of the PART Express, (2) the new PART Connections (out-of-county medical trips) and, (3) the construction of a new regional passenger station at NC 68 and I-40. Completion of the high speed, intercity rail and Major Investment Studies for the region were also significant activities. Pursuit of the rental car surcharge to support PART was a critical activity, and there was continued progress in the coordination of planning performed by the local MPO's.

PART receives political and public recognition through the work of its Board. It is well represented by elected officials and member jurisdictions. Board members convey PART activities to other elected officials through peer-to-peer communications.

Media coverage of special events is good, such as the PART Express kick-off.

Strengths

- The political composition of the PART Board facilitates the buy-in and support of member jurisdictions.
- There is good leadership and a good working relationship with the staff and Board.
- Regional cooperation continues to increase.
- The rental car tax, as a funding source for transportation initiatives, is working with minimal political implications.

Weaknesses

- No transit services exist in the suburban areas.
- Existing transit services are not convenient enough to attract the choice riders.
- Vanpool services have received mixed reviews from the marketplace, resulting in up and down formation rates. The economy has not helped this situation.

Opportunities

- There is a growing awareness of the relationship between transportation and land use.

- PART has an increasing role in regional transportation planning and travel demand modeling.

- There is increased public awareness of worsening air quality and highway congestion in the region.

Threats

- There is a lack of public support for TDM/transit based on overall use/understanding of the program and key issues.

- Funding needs to be more permanent, and it will have to be greater to support major transit initiatives.

- There has been limited media coverage of PART's efforts and a stronger marketing and media program is needed to build the overall program.

- There has been a breakdown of regional cooperation resulting from "turf protection", and for the PART program to succeed, this turf-related battling needs to be resolved.

- In addition to the information described above, those interviewed described the need to have more qualitative information about TDM and the PART program. Only the vanpool program statistics seemed to be in the memory of most, and that information was not easily remembered by many of those interviewed.

- Savings from the various transportation initiatives would be an important fact to be known by local elected officials and PART Board members.

- Steps being taken by PART to remedy congestion should be specifically identified.

- It is important to continue the TDM program advocacy, but the program may need to be re-identified and it may need more support from elected officials.

3.2 Programs under consideration

3.2.1 City of Asheville

Prior to participation in this statewide TDM Plan effort, Asheville had not paid too much attention to TDM or the need to look at the VMT and air quality "numbers" as they relate to growth strategies and NOx. They had related most of their air quality and vehicle trip reduction strategies to their Smart Growth Planning, incorporating some important changes to recent zoning ordinance modifications and plans for mixed use developments.

At the current time, Asheville is using their "urban village" zoning classification and their neighborhood corridor district as mechanisms for dealing with the need to infill and "refill" select locations, encouraging certain kinds of development. Higher density, mixed use developments offer opportunities to reduce dependence on the automobile.

While there is no formally adopted air quality assessment, or policy to deal with air quality, several steps have been taken to assure a positive impact on traffic. Fewer

vehicle miles traveled is a goal. Improving the transit system is a goal. Transit and land use integration as described in the 2025 Plan should become a major goal for further public action.

The I-26 Connector project is going to present an opportunity for the community to "test" its ability to move traffic under a variety of conditions. TDM and public support for alternatives could be a part of this effort.

In the downtown area, there is business interest in the "traffic-related" issues. The scarcity of parking and parking management are important. How to deal with the issues that are important to the University and the Hospital, as major employers (and as businesses), would be important to next steps in transportation. If TDM could present strategies that would address these issues, this would be appealing to the community.

Asheville Transit System could do a number of things to address the priorities identified in Senate Bill 953. Steps might include (1) broadening coverage of the system, (2) maximizing service into select areas, and (3) improving/expanding services regionally. There is an interest in focusing on a variety of tools and services, but new funding would be required.

There is the belief that the public recognition of the transportation "predicament", including the air quality situation, is well understood in Asheville. An understanding of the solutions may not be so clearly understood. Possible solutions, including TDM programs, will need to be well defined in order to be well received by the community.

Innovative approaches are likely to be successful in Asheville. There was discussion of a fare-free transit system like in Chapel Hill, along with other measures to improve transportation system performance. Incentives were discussed along with their importance to TDM's success.

3.2.2 City of Hickory

The opportunities for program development in the Hickory area clearly lie with air quality and ozone reduction-related goals. TDM strategies could be part of the long-range planning currently being done by the Western Piedmont Council of Governments and by Catawba County, and the Early Action Compact would be an excellent "place" to begin to define TDM as a solution for air quality problems in the 4-county region.

Problems hampering Hickory's TDM program development in the past have included limited traffic congestion and limited peak hour problems that would serve as motivators for employer interest or motivators for community participation, a lack of large employers with parking, access or circulation problems, and a failed "first attempt" to launch vanpooling in the area.

Since air quality remains an issue, Hickory is willing to take another look at TDM programs, perhaps looking at incentives and ways to link TDM to development and "smart growth". There is an interest in linking the program to ridesharing services through their existing transportation program at the City. The City is interested in looking at a number of models for lowering VMT, especially where transit services can be improved through better planning. Alternative fuels, the use of school buses and improved signal timing are just a few possible improvements that the City is interested in exploring as part of TDM planning.

3.3 SWOT SUMMARY CONCLUSIONS

SMARTCOMMUTE @ RTP

- Employers Want TDM to Succeed
- CEO Participation has Disappeared
- Energetic Staff
- Accomplishments are Marketing-Related
- Increased Telecommuting is Greatest Behavior Change
- Limited Transit Services Hamper Choice Ridership
- Program Needs to Focus More on Results
- Durham Ordinance is Valuable but Underutilized
- RTP Development Pattern is "Anti-TDM"
- No Clear Transportation "Spokesperson" in RTP

Triangle Transit Authority (TTA)

- Transit Marketing to Employers is Significant Activity
- Vanpool & Ridematching are Traditional Strengths
- Little Growth in Vanpool Numbers
- Administration of Durham Ordinance is Major Effort
- TTA Board/Political Relationships are Strong
- Growing Awareness of Land Use/Transportation Linkages
- Lack of Public Understanding of TDM
- Continuing Preference for More Highways
- Little Focus in Meeting Air Quality Goals

Piedmont Authority for Regional Transportation (PART)

- Markets Vanpooling & Ridesharing in Triad Region
- Number of Vanpools has Fluctuated
- TDM Should be Elevated to Board Level
- Limited Transit Services Hamper Choice Ridership
- Growing Awareness of Land Use/Transportation Linkages
- Lack of Public Understanding of TDM
- Need to Quantify TDM Program Results

City of Wilmington

- Employer-Based Program with Some Successes
- Full-time TDM Coordinator has Focused Efforts
- Current Initiative is Express Bus/Park & Ride
- Limited Transit Services Hamper Choice Ridership
- Growing Awareness of Land Use/Transportation Linkages
- Limited TDM Communications/Marketing
- City/County Relations Threaten TDM Initiatives
- WTA's "New" Look Could Help TDM Program

City of Asheville

- Trip Reduction Strategies Tied to "Smart Growth"
- Growing Awareness of Land Use/Transportation Linkages
- Potential for Linking TDM to Zoning
- TDM Potential in Downtown and I-26 Connector
- Funding Needed to Expand Bus/TDM Services

City of Hickory

- TDM Strategies are in Long-Range Plan
- Potential for TDM as Part of Air Quality Actions
- TDM Strategies Could Appeal to Hospitals
- Lack of Employer Interest in TDM
- Growing Awareness of Land Use/Transportation Linkages

State Government

- Teleworking is Limited but has Appeal to Employees
- Flextime is Not Widely Promoted
- TDM Is a "Tough Sale" to State Employees
- Partnership Opportunities with TTA and RTP
- NCDOT Should Promote TDM Benefits to Leadership

Rural Job Access Program

- Serves Long-distance Commutes in Rural Areas
- Benefits Counties with High Unemployment
- Third-Party Operator Facilitates Vanpool Creation
- Integrates Employment & Transportation Objectives
- Need to Create Program Identity
- Need to Improve Marketing Efforts
- Need to Quantify Program Results

Overall SWOT Themes

- Limited Transit Services Hamper Choice Ridership
- Growing Awareness of Land Use/Transportation Linkages
- Lack of Understanding of TDM Benefits
- Need to Quantify TDM Program Results
- NC Program Focus is Support of Alternative Modes

4.0 GUIDELINES FOR DEVELOPING A TRANSPORTATION DEMAND MANAGEMENT (TDM) PROGRAM FOR NORTH CAROLINA

The SWOT analysis and stakeholder interviews provided information and feedback concerning the existing ridesharing programs in North Carolina. It was clear that more could be done to strengthen these programs and improve stakeholder understanding of TDM and various program efforts.

The North Carolina Department of Transportation (NCDOT) has an opportunity to build upon current ridesharing programs, broadening their efforts to include more than just planning and advocacy. Improving current programs will require more leadership and training and improvements that yield meaningful impacts to congestion and mobility across the state. The State will need to partner with DENR and others on programs that will positively impact air quality and vehicle trip reduction goals. To achieve significant results, there will need to be a new focus on program performance and accountability. Changes to marketing and specific program elements, such as vanpooling, can be expected.

Because commuters often make their travel decisions, choosing times, routes and modes based on what works for them, NCDOT and its ridesharing/TDM programs need to focus on improving commuter choices, benefits and incentives. The following "Guidelines" have been developed to illustrate a mix of actions that could be undertaken by NCDOT and the local programs in several areas to improve TDM statewide.

4.1 Establishing a Case for TDM: Goals, Objectives, and a Clear Mission

1. *NCDOT needs to develop a clear compelling body of evidence for the value of applying and carrying out TDM strategies.*

- The evidence is clear that commuters use carpooling, vanpooling, transit, alternate work hours, and other TDM strategies when these options meet their needs, usually measurable in terms of travel time and cost but also in terms of availability of travel modes.

- There are clear reasons for North Carolina commuters to use TDM strategies today. With rising gas prices and compelling air quality conditions in a number of communities, motivations are stronger than they were 30 years ago.

- Some commuters will use transit because it is their best choice; some use carpools because they gain convenience; and some use vanpools to save money.

- More such reasons to use TDM strategies can be created through development of high occupancy vehicle (HOV) lanes, increased transit service, land use planning that integrates transportation considerations, increased TDM services, and a wide range of strategies. When commuters believe they will be better off by using modes other than single occupant vehicles, they act accordingly.

- When employers conclude that it is in their self-interest to provide commute alternatives, they act accordingly. A number of best practices references are available nationally, but North Carolina needs to create its own reference guide for this sort of information.

- It will be essential for NCDOT and its partners to demonstrate the value of TDM and to create benefits for commuters.

2. *TDM needs a distinct identity tied to specific and prominent statewide goals and objectives.*

- To begin this effort, NCDOT worked with its TDM Panel to develop the mission statement for a TDM initiative, but this needs further refinement and the entire program needs an easily recognizable name. During the marketing portion of this study, the mission statement and name will be examined further, but NCDOT should consider an extensive plan for marketing all congestion-mitigating forms of transportation, promoting the programs and the achievements across the state.

- NCDOT should work to elevate the TDM initiative internally and externally, specifically integrating the program into all of its long-range planning and key program efforts.

3. NCDOT should develop a clear statement of the goals for commuter transportation (and for other trip purposes) that provide the framework within which TDM must operate.

- These goals need to consider mobility, air quality, energy, and related topics. The State's program should define outcomes that accomplish results that best meet the various needs.

- The three urban area programs, the rural program, and, perhaps other programs, should be covered by this broader framework. Targets should be established that each program can work toward, developing results that are in the State's interest. This should lead to new operating plans and budgets (work programs) for each involved organization.

- By having a clearer statewide set of objectives, the funding for each regional or local program can be sized appropriately to the investment needed.

4.2 Improved Management, New Initiatives and Targeted Activities

4. *NCDOT needs to develop an Office of Commuter Assistance, focusing on demand management techniques and TDM initiatives for North Carolina.*

- A Committee of the North Carolina Board of Transportation, similar to the Transit, Rail and Ferry Committee, needs to be established to look specifically at congestion, air quality and commuter issues.

- New air quality and VMT goals should be established for each urban area/ridesharing program in North Carolina. These goals should be developed through the local offices but coordinated with NCDOT, its new Office of Commuter Assistance and DENR. The new goals should be promoted and monitored by local policy-makers and decision-makers.

- Cooperatively, NCDOT and DENR should work with this Board Committee and the local ridesharing/TDM programs to make sure that new goals are met in conjunction with Senate Bill 953.

5. *A new position should be created to oversee the development of TDM initiatives statewide and to manage existing ridesharing/TDM programs funded by NCDOT, but more importantly to foster innovation and creativity in the areas of TDM and ridesharing across North Carolina. This position/person must be highly visible and able to work across senior leadership lines.*

- NCDOT should partner with DENR and other appropriate state departments to develop a leadership-based position that can meet the needs of DOT and provide leadership for existing local programs. (A comparable Washington State Transportation Demand Management program is described in **Appendix D** of this report.)

- This position should be entrepreneurial, focusing on training and creative solutions for the needs of the state and local programs. The goal should be creativity and innovation, not only administration.

- ITRE and/or consultants should work in conjunction with NCDOT to provide a pool of information to the State about TDM, developing the tools that will benefit each local program, moving them away from only "activities" and into innovation and solutions, encouraging more employer and developer action. Larger scale, best practices-type projects should be developed.

- NCDOT can work collaboratively through its lead staff to disseminate information about various programs and TDM tools on a routine basis. The existing quarterly TDM coordinator sessions should be continued and expanded to include the "partners" from DENR and other key state agencies. The development of TDM projects featuring new and improved TDM tools should be a goal of this effort.

- A Statewide TDM Awards Program (described in **Appendix E** of this Guidelines report) should be developed as a result of enhanced coordination and improved project management efforts. Increased visibility for the local projects/programs

should also be a goal for NCDOT. Annual awards will be given to the TDM program that (1) achieve the highest reduction in NOx, (2) achieve the highest reduction in vehicle miles traveled, (3) create the most innovation/solutions to congestion and related problems associated with mobility. DENR should be an active participant in the development of this effort.

- NCDOT should conduct market research to identify on-going programs and tools that will be most supported by potential users. In other words, what mechanisms for changing commuter behaviors are working and which ones are not? Citizen and policy-maker awareness of TDM programs needs to be tracked and discussed routinely with the various boards of the local programs.

- TDM programs should be established in Asheville, Hickory, and Fayetteville with the organization and management structure that is appropriate for each community to be determined at a later date. (A TMA structure has been proposed for Asheville.)

- The focus of new program efforts will be quantifiable results and information with an emphasis on the targets necessary to achieve reductions in NOx and VMT goals as described in Senate Bill 953.

4.3 Organization and Program Management

6. To develop effective changes to commute behaviors and to produce the sorts of results that North Carolina is looking for in Senate Bill 953, a comprehensive program of "commuter management" is suggested. A program designed around Florida's Commuter Assistance Program might be pursued as soon as the NCDOT staff person is hired to develop such an initiative. (This program is described in **Appendix F** section of this report.)

   In the meantime, the kinds of individual program information that will help create a more performance-based effort at the local level while also giving the state valuable information for comparative purposes and illustrate progress are:

- number and types of commuters requesting assistance on a monthly basis
- number of commuters contacted and an indication of how they are contacted
- number of commuters changing from their single occupant vehicle to their ridesharing mode or their TDM-related mode
- number of agency vans in service and additional vans participating in any regional initiative in place (Rural Jobs Access)
- number of vehicle trips eliminated for all commuters
- number of vehicle miles (traveled) eliminated
- number of employers contacted and resulting employee participants,
- including mechanism for contact (meetings, direct, Board involvement, etc.)
- description of major accomplishments from each contact, specifying quantifiable information that led to a result or outcome
- number of parking spaces reduced or saved in the service area
- NCDOT and the TDM Coordinators should work together to define additional parameters for measurable objectives, which will lead to results-oriented information.

- This list of "measurables" can be expanded and modified based on actual program experience.

7. *The establishment of TMA's in areas where there are both clear commute-related problems and opportunities for cooperative action should be considered as an effective means of facilitating select demand management activities in specific geographic areas. To begin, organizing a TMA for State Government and one in Asheville will focus demand management efforts on specific geographies and specific organizations to produce effective results.*

   The TMA in Asheville would focus on incorporation of TDM as part of existing "smart growth" and air quality goals, using the Broadway Corridor as a first priority. Improved transit services should also be part of the new TDM package along with expanded vanpool services including a Rural Jobs Access-type initiative.

   A second TMA is recommended for State Government. State Government employees are a unique group with specific needs. Their transportation activities should be united under a TMA. Necessary leadership, oversight and overall program management would be provided by NCDOT, DENR and DOA, with assistance and technical support provided by SMARTCOMMUTE and TTA.

   The immediate focus for the State Government TMA would be the resurrection of the state's earlier teleworking program, but to assure success, a partnership should be formed with NORTEL. NORTEL has an excellent teleworking program, and it is recommended that NCDOT seek a loaned executive or similar position from NORTEL to work directly with the three Secretaries of DOT, DENR and DOA to develop this TMA and execute the teleworking project as the first priority for 2004.

   In addition, the TMA should implement an expanded version of the existing preferential parking program for car and vanpooling. A formal flexible work-hours program should be established and promoted for State Government employees. A subsidized transit pass program specifically for State Government employees, with a strategically dedicated "sales outlet" should be established, and a parking cash-out plan should also be developed.

   A formal study of the state employee parking program, including current parking policies, parking pricing and allocation strategies should be part of this first round of studies and implementation plans. Because there is clearly a relationship between the availability of parking, its configuration/location and commuter's willingness to explore alternatives, NCDOT and DNER should illustrate their leadership in several areas by examining current policies and possible changes as a means of encouraging employee participation in TDM/ridesharing.

- TMA's are recommended for State Government and Asheville to bring focus and recognition to two organizational efforts in varying parts of the state. The TMA's can take advantage of the leadership currently offered by the NCDOT and by the membership and participation of those supporting the TDM Panel from Asheville and from the various offices of State Government.

- Transportation Management Associations (TMA's) are typically non-profit organizations of businesses and developers, but they can also represent local jurisdictions, transit organizations and state governments.

- Specific geographic areas are defined and represented, with the TMA's delivering specific services and responding to specialized needs defined by those within the service area. As the name reflects, management of the transportation problems and issues are at the forefront of the effort.

- TMA's, like the SMARTCOMMUTE@RTP, offer their constituents a combination of services, concentrating on (1) advocacy, for the improvement of services, (2) education and marketing to compel commuters to use alternative services, the (3) facilitation of certain activities that promote TDM such as "guaranteed ride home" programs and ridematching, and (4) the provision of assistance to members in understanding regulations and other guidelines (such as air quality or local transportation regulations).

8. *Where possible, NCDOT should expand/integrate the Rural Jobs Access project into existing ridesharing programs, and improve the marketing and outreach efforts of 2Plus. There should be a focus on performance and specific incentives for advancing this project.*

- This program could benefit from further integration into the ridesharing/TDM marketplace. In Wilmington as an example, there is the possibility of linking the vanpooling program to existing transit services to broaden the overall regional service capability. There may be other opportunities for this type of integration, and NCDOT should explore all possibilities.

- An examination of the existing Rural Job Access program through the SWOT interviews found that there was a need to (1) significantly improve marketing materials, (2) apply program funds more directly to the benefit of the users in the form of incentives and services, (3) develop a consistent name and logo for the program and vans in service, and (4) develop some sort of peer-to-peer communication between participating companies and contacts so that they can better know, understand and translate the benefits of the program but also communicate the availability of van seats, route information, etc. within their companies and within their communities. The current cost-benefit/cost-effectiveness of the program needs to be reassessed.

9. *Reductions in single occupant vehicle travel can only be expected if commuters have a range of convenient travel options and a series of reliable support services and if they gain advantages (e.g., convenience, time, and/or money) through participation. In addition to the more traditional "menu" of TDM services currently provided by most of the local programs across the state, a number of alternative mode "support services" are recommended for development. While some may be considered as innovative, others are natural "partners" to the more traditional program elements. (This is a partial list of the programs and services most likely to generate results, recognizing that some face public acceptance challenges.)*

    - HOV facilities

- Carsharing
- Monetary incentives (e.g., parking cash- out and employee transportation allowance)
- Transit subsidies
- Alternative work schedules
- Guaranteed ride home programs
- Parking management programs (including preferential parking)
- Facilities amenities (on-site conveniences)
- Select development strategies/regulations
- Transit-oriented, pedestrian-oriented development plans
- Access/priority restrictions
- Trip reduction ordinances
- Modified zoning and subdivision control ordinances
- Road/congestion pricing
- VMT tax

These program elements should be considered in all locations where TDM programs currently exist. Other strategies and innovations should be explored with NCDOT. (A complete list of TDM strategies and the implementation-related responsibilities by agency appears in **Appendix G** of this report.)

4.4 Legislative, Zoning, and Planning Tools

10. *Additional Trip Reduction Ordinances or Programs should be developed in select locations. Using the Durham Model, additional Ordinances should be developed in Wilmington, Asheville and the Research Triangle Park. (The Durham County Trip Reduction Program appears in **Appendix H** of this report.)*

- Each of these communities has its own motivations for interest in a model ordinance. In Asheville, there are already strong "Smart Growth" initiatives underway, and these efforts can be translated into components of a TDM ordinance if a support mechanism for this effort can be found. With the air quality problems facing the Asheville area, TDM and transit could work together to address their growth and development issues, producing significant improvements in several categories.

- Wilmington is concerned about its overall quality of life and is looking at TDM as a possible tool to use in conjunction with future development strategies. Former Mayor

Peterson had expressed an interest in an ordinance as a means of dealing with traffic *and* development.

- Because the Research Triangle Park has the ability to control its own development plans and can provide direct input to tenants and employees concerning parking and transportation options, the Park would make a very good laboratory for development of another model ordinance. While the Park is currently covered by the provisions of the Durham County ordinance, this concept would allow the Park the opportunity to focus specifically on the needs and issues within its own boundaries. Evaluation of parking, the need for shuttle and transit services and the impact of the I-40 corridor would be part of the assessment of this effort.

11. *In the major urban areas such as Charlotte, Raleigh and Greensboro, a Model Ordinance for Reduced Parking Requirements based on TDM measures should be introduced.*

- An examination of the parking requirements in each city will be necessary, but NCDOT should begin working with the planning staff, local DOT's, DENR and the business communities/chambers to develop an ordinance or a subset of local ordinances to deal with TDM measures.

- Examination of the parking minimums and maximums would be a good beginning point. Developer education sessions and leadership sessions with the financial community will also need to be part of this effort.

- Using model results from Durham and "best practices" from around the state and the country, NCDOT can create a practical approach to use of various TDM measures in the urban areas.

12. *A Model Ordinance for sidewalk construction associated with new development should be considered. This could be applied to urban, small urban and other locations.*

- Encouragement for pedestrian-friendly development and any opportunity for leaving the automobile at home are being proposed.

- Developers and builders should be encouraged to participate in this part of the TDM initiative. This is an opportunity to integrate transit and planning principles together.

13. *NCDOT and the local TDM coordinators should work with local offices of planning and zoning to develop a "TDM review process" so that TDM strategies and improvements become a part of the local land use, land development and planning processes.*

- Transportation planning at both the state and local levels needs to focus on a wide range of mobility, environmental, and other key factors. Rather than focusing on "alternative transportation planning," the State and its partners should clarify that shared-ride travel modes, factors that influence commuter behavior, and traditional mode and facility planning need to be considered as part of integrated strategies. This approach needs to be "elevated" at the state and local levels, but changing this

planning process will take time. Identifying TDM as an important part of the planning process will be an important first step.

- TDM coordinators need to become more visible in all aspects of their local planning efforts. The "TDM agenda" needs to be prominently and permanently displayed on Planning, Transit, Council and Commission agenda.

- The TDM coordinators should participate in updates to the Long-Range Transportation Plan (LRTP) to insure that TDM strategies are included in this and similar efforts.

4.5 Innovation and Creativity

14. The focus of all ridesharing and TDM programs should become innovation and creativity and not merely administration and operations. There is an opportunity to focus on a number of "best practices" from across the state and to begin to create additional ones. This sort of effort will be necessary to achieve the goals set forth in Senate Bill 953 and to begin to elevate TDM into a more prominent role.

As a beginning, the following projects should be "documented" for their results and effectiveness, and NCDOT should work with the respective program/sponsor to publicize the TDM story and determine the applicability of the tool to other locations.

- NORTEL Teleworking Program, Research Triangle Park

- Fare-Free Transit Service, UNC-CH and Town of Chapel Hill

- SMARTCOMMUTE@RTP, Research Triangle Park, TMA and Teleworking

- Meadowmont/Southern Village, pedestrian and transit-friendly development, Chapel Hill

- Model Trip Reduction Ordinance, Durham County

- EPA's model/decision to build less parking, Research Triangle Park

- The Charlotte Area Commuter Register, a free ridesharing publication

- Blue Cross/Blue Shield of North Carolina, employer programs and support, including vanpooling

15. NCDOT and DENR should embrace the advances in hybrid technologies (gasoline and electric) and other alternative fuels, and develop the necessary programs and policies to advance these efforts.

- Initially, state tax incentives should be developed for automobiles purchased with hybrid engines and similar incentives should be developed for vehicles used for vanpooling as the van technology is introduced.

- Perhaps the more powerful step would be to allow hybrids access to the planned HOV lanes in North Carolina. This should be supported at the federal level and at the state level.

The result would be the dual incentive of boosting interest in the energy-saving vehicles and boosting the interest in HOV at a time when North Carolina and at least two communities (Charlotte and the Triangle) are looking seriously at HOV. Arizona already exempts hybrid owners from HOV restrictions.

(An article detailing these technologies and the HOV related issues is included in **Appendix I** of this report.)

16. *As performance goals are developed, the new more goal-oriented programs should be defined and promoted. The state should support a new set of TDM programs described as "PROGRAMS OF EXCELLENCE" (or some other name). The idea is to recognize the achievers in the state, those meeting the goals set forth in the Senate Bill, and those identified by the Governor or Mayors, or other state/local leadership for meeting transportation, air quality, and environmental goals.*

- Programs should be set up to illustrate the achievements coming from the work of the programs organizing under the new initiative. Those programs achieving specific goals in various categories determined by the state would be recognized through awards and through increased funding.

- Examples of several TDM programs from across the country, along with their particular innovation and the results are included in **Appendix J**.

- Those programs achieving specific goals, especially those aimed toward VMT and air quality as specified in Senate Bill 953 and other similar state documented efforts, would be recognized through awards and increased funding.

17. *Working in cooperation with the Commuter Choice Leadership Initiative (Innovation Transportation Programs & Partnerships), NCDOT and DNER should look for ways to implement a statewide TDM project that would benefit the state and the overall TDM effort. (This overall effort is described in **Appendix K** of this report.)*

- A number of ideas should be explored to make this partnership work, focusing on innovation, the work of the business community, and the role of NCDOT and DENR. A possible demonstration project that would focus on the goals of Senate Bill 953 and the other similar statewide goals should be pursued.

- While a dialogue with this group has just begun, NCDOT should continue to explore all options and opportunities, developing a role for Robin Snyder and her group.

- How can North Carolina become the best workplace for commuters? www.commuterchoice.gov

4.6 Evaluation and Performance Standards

18. *NCDOT needs to develop a more strategic and comparative mechanism for evaluating its existing ridesharing and TDM programs' performance. Currently, all*

programs receive funding on basically a "pass through" basis. It is recommended that funding decisions for this program be changed to a performance-based initiative. Funding should be based on the results needed. Over time, funding and program adjustments could be made to consider performance, innovations, and other factors.

- NCDOT needs to create new standards by which the existing ridesharing programs would be funded. These standards would be based on a number of goals tied to the state's air quality and VMT reduction strategies outlined in Senate Bill 953.

- Programs should be required to demonstrate progress in reducing emissions and VMT in their respective service areas, perhaps on the basis of the indicators introduced in the previously suggested information in #6. NCDOT should work with each program to develop performance goals tied specifically to the program's mission and to the state's overall TDM initiative.

As the TDM management position and Office of Commuter Assistance are established, performance goals can be refined.

4.7 TDM Toolbox Improvements

19. *Some time ago, NCDOT and the ridesharing programs considered a number of TDM "toolbox" elements that were considered necessary to make the state and local programs function more effectively. These elements should be developed and implemented as soon as possible.*

- Ridesharing software for use for carpool and vanpool matching for all programs in urbanized areas; ability to link rural and regional programs

- Website development capabilities for those programs that do not currently have a website; NCDOT "links" to all programs

- Commuter Register capabilities or comparable commuter information systems and outreach

- Establishment of a statewide telephone information system (511) for commuter information

4.8 Vanpooling

20. *North Carolina's vanpooling programs need to be revamped. Comparable programs in the state of Washington indicate nearly 1500 vanpools in operation, and Connecticut has nearly 400. While North Carolina's program has been in operation for nearly 30 years, a quick look at the current vanpool census seems to indicate a number of operational issues. While problems may be related to the overall downturn in the economy in the state, there has been little attempt to document "the issues" impacting demand. The vanpooling project effort needs to be re-assessed and rejuvenated.*

- It is recommended that a "Vanpool SWAT Team" be formed to assist NCDOT in the assessment of how to better utilize existing resources. A number of options should be explored.

- The SWAT Team would be composed of representatives from each of the existing programs that own/operate vans and the 2Plus, Inc., the contract operator of the State's Rural Job Access vanpool program. There would also be a representative from one or more state programs currently operating successful statewide initiatives in other locations. Washington and Connecticut would be recommended.

- An exploration of how to better manage the existing vanpool programs, including possible consolidation of existing pools into a state-managed effort, should be explored.

- The vanpool fleet, once determined, would need a long-term management and operations plan. This could be under the new Office of Commuter Assistance, in a Vanpool Service Center.

- A Statewide Insurance Agreement needs to be developed. This insurance plan would benefit the vanpool fleet and any vanpools that continue to operate independently.

- The provision of maintenance and customer services, and improvements to overall vanpool operations, need to be explored as part of this SWAT Team effort.

- Elevating the role that vanpooling plays in the state's TDM "toolbox" is something that NCDOT and this SWAT Team should focus on as part of their efforts and recommendations. Creating new program goals and objectives, including performance-based goals for the program, would be the first initiative for this program.

5.0 THREE-YEAR PROPOSED ACTION PLAN: TDM STRATEGIES

5.1 Year One

STRATEGY:

1. Establish the "case" for TDM by building a foundation of information and program documentation, illustrating success on multiple levels

   Define TDM program for North Carolina, promoting the mission along with clearly defined local program efforts and measurable program goals and objectives assessed through routine evaluation

   Develop a clear, compelling "body of evidence" describing the value of TDM, based on quantitative results in the various markets statewide, illustrating the status of air quality and environmental issues and particularly to reductions in VMT and NOx as specified by Senate Bill 953. (This should include setting annual reduction goals for VMT and NOx and selection of projects that will move the programs out of their planning and advocacy-only roles as described in the TDM Strategies Matrix.)

   Using the information/feedback provided in the SWOT analysis, develop an expanded program of success which includes broader political support for TDM; increase statewide support in locations such as Asheville and Hickory, use TDM ordinances in more locations such as Wilmington and Asheville, formally link TDM initiatives impacting land use and transportation via policy, and develop specialized programs such as HOV in Charlotte and the Research Triangle Park.

   Demonstrate the value of TDM by documenting benefits and the ability of various efforts to produce measurable results; examples include improved travel time savings, cost savings, vehicle miles traveled, but also air quality and environmental improvements needed to satisfy Senate Bill 953

   Evaluate existing ridesharing/TDM programs and institute new program accountability, encouraging improved performance (Reviewing studies of TDM programs in Washington and Maryland, with their emphasis on performance, will help North Carolina move in this direction.)

   Develop and then document a series of "best practices" from which existing programs can modify their efforts, grow and learn; these will be developed to increase the number of alternatives to single-occupant commuting, focus on the land use/transportation link, examine various commuting innovations, etc.

(Examples of North Carolina programs to model were included in the Guiding Principles document, but others can be developed and used to publicize TDM. The purpose is to improve program effectiveness, enhance the quality of existing efforts and improve the appeal of program options to commuters.)

ANTICIPATED RESULTS:

Establish program credibility, increase program accountability by improving performance/results, elevate role of TDM and ridesharing based on quantifiable results, market and validate benefits of TDM, establishing linkages to other transportation initiatives

STRATEGY:

2. Develop the Office of Commuter Assistance, focusing specifically on improving demand management techniques and increasing innovation, improving program performance and producing a series of new initiatives that will help NCDOT meet trip reduction and air quality goals defined in Senate Bill 953

   Using the mission, goals and objectives from the "case building" in #1, this Office will establish and maintain a clear program identity and the overall direction for TDM and related mobility management, statewide

   Create the new position within NCDOT to staff and manage the Office of Commuter Assistance (This will be a highly visible, senior position designed to oversee all mobility and congestion related issues within in the state. Air quality and environmental planning will be related because of the requirements associated with Senate Bill 953. A comparable organization and program has been referenced for Washington in the Guiding Principles document.)

   Develop a Committee of the Board of Transportation to support the Office of Commuter Assistance, promoting TDM and lobbying/advocating on behalf of mobility-related solutions statewide

   As new air quality, VMT and NOx goals are established, promote TDM as one of the primary mechanisms for solving the problem, in partnership with DENR and others

   Develop tools and training to benefit local programs and enhance their performance; encourage partnering with other TDM programs, states and DOT's to assist in the marketing and management of current TDM programs

   Develop annual awards, a "Program of Excellence" to enhance current program performance at the local level, incentives and necessary market research to increase commuter awareness of TDM and improve stakeholder, political awareness/response to existing programs

ANTICIPATED RESULTS:

Clear direction, focus for statewide efforts and program with effective leadership and management; effective management of local programs with training and monitoring of

performance-based programs; more efficient use of state funding for ridesharing and TDM; new focus on innovation; improved awareness at local level concerning benefit of TDM/ridesharing

STRATEGY:

3. Revamp the existing vanpool program to increase results in several areas: improving number of vans in full operation, enhancing overall management and marketing, elevating the role that vanpooling plays in the state's TDM "toolbox"

   Create new program goals and objectives and a program evaluation plan using an external "SWAT" Team as defined in the Guiding Principles

   Develop a revised management plan for existing vans and evaluate specific program elements including insurance, variable size vehicles, central clearinghouse and multiple state programs

   Evaluate local and statewide marketing options to improve commuter responses to the program; evaluate impact

ANTICIPATED RESULTS:

Centralized vanpool operations, central clearinghouse for insurance (on a statewide basis), multiple options for vehicles, improved placement and tenure of vans, resurrection of such tools as state vanpool census and tools to track performance, increased vans in operation statewide.

STRATEGY:

4. Establish a TMA (Transportation Management Association) for State Government/Employees
   (This recommendation includes the resurrection of an earlier proposal for a teleworking program and a proposed partnership with NORTEL for a "loaned executive" to work directly with the three Secretaries of NCDOT, DENR and DOA to develop the project.)

   Create/implement the program with 3 key elements, (1) preferential parking for car and vanpooling, (2) a flexible work hours program, and (3) subsidized transit pass program with a central sales outlet and parking "cash out"; the teleworking program would be a separate, critical element

   To assure the success of these programs, launch a formal study of state employee parking and pricing. NCDOT, DENR and the new TMA should lead this effort along with SMARTCOMMUTE and TTA

ANTICIPATED RESULTS:

Reductions in VMT, improved air quality, reduction in parking demand, increases in employees teleworking; increased employee parking pricing; specifics will be based on the outcome of the TMA

STRATEGY:

5. Establish a second TMA (Transportation Management Association) in Asheville, focused primarily on "smart growth" and air quality goals

Using a select corridor, such as the Broadway or Biltmore Corridor, TDM measures would be incorporated into existing plans for "smart growth", effective management of transportation resources and improved land planning; improved transit services and vanpooling might also be part of a package of related service improvements

ANTICIPATED RESULTS:

Employer and community-based participation, reductions in VMT, improved air quality, reductions in parking demand; specifics will be based on the outcome of the plans for the TMA

STRATEGY:

6. Working in cooperation with US EPA, create a statewide model for implementation of "Best Work Places for Commuters"

Working with EPA, NCDOT should develop a statewide partnership designed to increase the number of employer-based transportation programs targeted at VMT, NOx reduction; program focus should be on innovative solutions to transportation and mobility problems statewide

ANTICIPATED RESULTS:

Model program statewide with performance-based goals and objectives and employer leadership and participation; increased employer participation in transportation management and ridesharing programs

5.2 Year Two

STRATEGY:

1. Under the new Office of Commuter Assistance, and in conjunction with the new statewide TDM program, develop a more effective program of commuter management; use of evaluative tools and information, measuring results in several categories.

   (These are to be designed around Florida's Commuter Assistance Program and will include quantitative indicators such as the number and type of commuters requesting assistance each month, the number and type of commuters contacted and how, the number of commuters changing mode, etc.)

   Using quantitative information about each program, improve program management and begin to standardize elements tied to performance; establish expectations for program results

(If commuters are not responding to certain types of programs, especially after a number of years, then modify programs and use client feedback to adjust programs and services.)

ANTICIPATED RESULTS:

Improved program management at the state level; improved performance at the local level; modification of programs, creating more meaningful results

STRATEGY:

2. Expand/integrate Rural Job Access project into existing ridesharing/TDM programs, improving overall marketing and outreach of the existing 2Plus vanpool program

   Develop effective linkages to ridesharing/TDM programs in locations such as Wilmington where there can be an integration of markets and services

   Improve the basic tools and materials specifically identified in the Guidelines document, but including such things as client marketing materials, identification of the vans with logo and contact information and developing some sort of peer-to-peer communication network among participating companies so that the translation of program benefits becomes well known; the application of program funds needs to be designed to benefit the users of the program

   Assess the program from a cost/benefit perspective and determine an effective way to market the program

ANTICIPATED RESULTS:

Improve results and cost/benefit position of the Rural Job Access vanpool initiative, integrating it into the TDM and ridesharing programs statewide

STRATEGY:

3. In conjunction with local programs and through the Office of Commuter Assistance, develop a series of support services to be marketed as the "menu of TDM services"; these services should be evaluated within each market, based on customer feedback and market research and "built and developed" based on experience and consumer response

   (A sample list was developed for the Guidelines document and the TDM Strategies Matrix.)

   Evaluate effectiveness of menu of services through client feedback and program performance on an annual basis (NCDOT should help local programs develop the menu as needed)

Share results of evaluation with stakeholders in annual review of program funding and review of services effectiveness

Consider expanded "toolbox" elements to be developed at state level and used to improve local programs: ridesharing software, websites with NCDOT links to all programs, Commuter Register or comparable information system, 511 statewide telephone information system

ANTICIPATED RESULTS:

More consumer-based programs, more evaluations of program efforts, routine review of program effectiveness, routine review of the TDM menu and "toolbox", (designed to increase participation in all programs); over time, improve results in key categories such as VMT, travel time savings, commuter cost savings, air quality indicators

STRATEGY:

4. Establish a series of "model" ordinances and planning tools to positively impact growth and development and minimize congestion in several areas. While each community continues to address air quality, "smart growth" and traffic in specific corridors in their own way, TDM offers effective strategies to be used in conjunction with proposed local actions

   Develop additional Trip Reduction Ordinances (Commute Trip Reduction) in Asheville and Wilmington; consider introducing parking code changes as part of the urban design guidelines/review process in the urban areas (Charlotte, Raleigh, Durham, Chapel Hill and Greensboro), and encourage changes to the sidewalk ordinance to encourage pedestrian-oriented development in all locations

ANTICIPATED RESULTS:

Formally introduce TDM to planning processes at varying levels in communities across the state; accelerate recognition of TDM in urban design/planning relationship statewide, positively impact trip reduction and parking requirements in comprehensive manner

5.3 Year Three

STRATEGY:

1 Establish a TDM review process, introducing TDM strategies and improvements into the local land use, land development and urban design/planning process

Elevate TDM within state and local planning processes by prominently and permanently inserting it into the "planning agenda"

Assure that TDM is a recognized part of the land use/transportation decision-making process on state and local levels

Use local TDM coordinators and long-range planning process to determine continuously effective role for TDM programs and TDM efforts

ANTICIPATED RESULTS:

More trip reduction programs, transit-oriented development and TDM-friendly improvements added to local land use practices; TDM ordinances with mandatory VMT reduction and air quality goals instituted as part of development and planning processes

STRATEGY:

2. Develop a program for advancing new technologies and alternative fuels or other similar innovations along with policies to support these efforts

   Develop state tax incentives for automobiles with hybrid engines; similar incentives should be developed for vans used for pooling as the vans are introduced

   Develop a plan to allow hybrids access to HOV lanes in North Carolina; this will require an examination of policy at the federal and state levels

ANTICIPATED RESULTS:

Increased participation in alternative technologies programs; increase in vanpooling option; increase in HOV participation/support

6.0 MARKETING FRAMEWORK

Marketing Orientation/ From SWOT Analysis

STRENGTHS

- General support for TDM statewide
- Energetic staff, desire to improve performance
- Have basic tools such as TDM Ordinance and other parameters to improve/strengthen program efforts
- There is a growing awareness of land use/transportation linkage

WEAKNESSES

- Leadership/corporate support for TDM has disappeared
- Lack of choice riders on resulting services
- No clear spokesperson for leadership and technical direction
- Little focus for air quality problems/collaboration with partner agencies

OPPORTUNITIES

- NCDOT poised to act on TDM (with state and local partners)
- State government ready to reactivate earlier initiatives with NCDOT support
- Partnership opportunities available with TTA, RTP, Charlotte-Mecklenburg, Wilmington, Rural Job Access and others

THREATS

- Programs lack identity, including NCDOT
- There is no clear performance base, tied to marketing base from which to profit and grow
- All programs need quantifiable results
- There is limited understanding of TDM, its benefits

6.1 Marketing Planning for TDM

Marketing can improve the effectiveness of most individual TDM programs and a number of the individual strategies designed to positively impact commute behavior. The most effective marketing programs are often those developed in cooperation with customers, major stakeholders and policymakers and those that will benefit from the implementation of TDM, including commuters, employers and business organizations such as Chambers and TMA's.

Marketing programs should be built around a program's central mission and should reflect a clear and consistent message about what the program intends to accomplish. Various work elements should be tied back to the central mission and supported by on-going market research and evaluation. Client feedback, integrated into the research, will reflect the appropriateness of program goals, work plans, products and services.

An effective marketing plan can anchor other organizational efforts and contribute to the effective development and success of products and services. Because today's TDM programs have to be strongly appealing in order to lure commuters from their automobiles, TDM marketing plans have to include a mix of strategies to address various markets, changing stakeholders and a broad menu of services.

Ridesharing and TDM programs in North Carolina have focused on the development of a variety of strategies to encourage commuters to change their travel behaviors. The majority of these strategies fall into the planning, advocacy and encouragement category, which are common to many ridesharing and TDM organizations.

The SWOT analysis found that there was a limited understanding of TDM among key stakeholders, employers and other "customers" interviewed as part of the TDM study process. In general, there was a limited understanding of the overall benefits of TDM and the specific results to be achieved through various efforts. Several stakeholders could not "quantify" the effectiveness of the programs. Some could not translate the importance of TDM or the meaning of the work as it related to reductions in congestion or improvements in air quality.

To build a stronger case for the importance and relevance of TDM, and to improve customer and key stakeholder awareness of program benefits, a marketing framework was proposed. The marketing framework would use the findings of the SWOT analysis and the Guidelines document and then, focus on the primary elements of the Three-Year Action Plan.

Key considerations for the marketing framework included the following:

(It should be noted that additional market research and evaluation would be necessary to support these activities. Much of this would need to be accomplished at various stages of implementation.)

6.1.1 Goals of the Overall Marketing Framework

- Introduce the concept of TDM as defined by NCDOT through its program mission, reinforcing its importance/value through various improvements and savings (VMT, NOx as examples)
- Identify and promote the new Office of Commuter Assistance and support local TDM/ridesharing program efforts
- Provide specific information about TDM-related efforts, producing impacts locally and statewide; "feature" models and successes
- Announce "new and improved" products, services, benefits and innovations, including awards

6.1.2 Target Markets

The major target market will be those groups that need a broader understanding of TDM, those that will need to see transportation alternatives as more relevant and appealing. The customer base will include political representation, commuters, key state government officials, other TDM program representatives and those in a position of marketing and supporting transportation policies and programs.

Specific targets, which may be the focus of marketing information as it is developed, may include:

- General Public (targeted in corridors where special promotions may be triggered as a result of "building the case" and enhancing an existing program effort)
- Employers (special case information tied to "Best Place" initiative or model programs, also to help "build the case")
- Elected Officials (all levels, needed for advocacy and understanding)
- Targeted Agency Officials (such as the Board of Transportation, for select advocacy)
- Media (specialized campaigns at the state and local levels)

6.1.3 Broader Benefit

Focused public and political attention on transportation with special emphasis on mobility and congestion-related issues, air quality; the mission is to include the education of various publics about the benefits of TDM for the express purpose of changing attitudes and commute behavior

6.1.4 Strategy Development

1. ESTABLISHING "THE CASE" FOR TDM	
Target Market	Statewide, with appropriate links to local programs
Program Impact/ Improvement	NCDOT, through mission, goals and objectives Companion programs and materials (local)
Results	• Evidence, case-building for pooling and transit, support for alternatives to SOV commuting, measurable improvements, cost-savings and other results. • Illustrate impact: reduce auto use, vehicle miles of travel, travel shifts by mode, environmental/air quality impacts • Illustrate transit ridership increases, HOV-supporting characteristics • Illustrate changes in land use and transit-oriented development models
2. DEVELOP/ENHANCE PROGRAM IDENTITY	
Target Market	Statewide with links to existing NCDOT programs
Program Impact/ Improvement	• Enhanced awareness at state level, local programs • Improved customer and stakeholder understanding of TDM
Results	• Education, outreach designed to support new program and policy • Explanatory information and materials with focus on purpose and need • Encourage support and participation
3. CREATE SPECIFIC OFFICE FOR MANAGEMENT AND PROMOTION	
Target Market	Statewide with links to existing local programs
Program Impact/ Improvement	• Opportunities for improved leadership and improved • program management • Improved customer and stakeholder awareness on multiple levels
4. VANPOOL PROGRAM	
Target Market	• Commuters • Employers, employees • Existing vanpoolers
Program Impact/ Improvement	• Enhanced awareness statewide • Increases in vanpool formation and use • "New and improved" messages/look • Incentives package via new management
Results	• Education, improved program designed around new program and policies • New products and services

	• More vans in operation (improved "indicators")
5. TMA FORMATION - The TMA represents a major opportunity to specifically focus on the provision of service, making various elements of TDM accessible to the communities and consumers they serve. TMA's function as multi modal sales and promotional agents to employers and others, representing a unique brand of outreach and promotion of TDM products, services, information and technical assistance.	
Target Market	• Commuters (in specific markets) • Employers and their employees • Key leaders in each market (State Government and Asheville)
Program Impact/ Improvement	• Enhanced awareness of options to SOV • Increased participation in alternatives to driving alone • Increases in employer participation/support for TDM • Improved key indicators (parking, VMT, air quality, etc.)
Results	• Education and awareness focused on specific programs • Employer-based program with specialized tools and services • Unique focus and scale of activities, often with corporate support for programs
6. DEVELOP "BEST PLACE WORK PLACE" MODEL - This program, if enacted on a statewide basis, can integrate congestion and air quality goals shared by NCDOT and EPA and focus on enlisting the support of employers for achieving those goals. Specific marketing and outreach goals need to be developed based on the prior program experience and success of this program in other parts of the country. NCDOT and EPA may modify employer programs and various initiatives based on products and services that motivate employer involvement and result in "savings" in a number of areas.	
Target Market	• Statewide, with focus on strong market areas as defined by "Work Place" • Criteria Specifically developed list of employers
Program Impact/ Improvement	• More employers participating based on air quality and • other motivators • Benefit from national model and experience • Developing models for improved results
Results	• Expansion of employer efforts • Broadened interest in programs and TDM • Partnering and innovation

		Focus on policy-level decision-makers and constant information flow				

7.0 CONCLUDING STATEMENTS

Everyone has a stake in the fight against bad air and congestion. The desire for improved mobility is a national objective. For the most part, the protection of our public health, the quality of our communities and the strength of our transportation system has become a basic arithmetic problem– requiring improvement means that more people need to drive less.

Most people today understand the concepts associated with the more sophisticated definition of "TDM". Shifting the traffic in any one location away from the peak and looking for alternatives that produce a reduction in vehicle miles traveled (VMT) is common in many communities. Through Senate Bill 953, North Carolina has elevated the role of TDM and has formalized the reduction plan for both VMT and emissions of nitrogen oxides (NOx) from all sources by at least 25% by July of 2009. These goals will require attention to the arithmetic.

For some years now, NCDOT and its local ridesharing and TDM programs have focused on the elements of their programs that could be labeled as "planning and advocacy". So-called "carrots" often allowed easier "sales", program participation, and program experience to grow based on community, employer, employee and commuter response. There seemed to be no need for other more stringent "sticks" or regulation, no additional efforts beyond heavy encouragement. Some programs would explain that they are not "there" yet. Many of our programs and some of our "best practices" have probably encouraged people to actually drive *more*...meaning that if you look around the state, you see a lot of anti-TDM development patterns including suburban office parks, houses on ½ acre lots (and more), the preference for cul de sac neighborhoods, suburban outer loop shopping centers that draw development beyond transit's capabilities and non-pedestrian and non-TDM friendly neighborhoods.

But now NCDOT has completed its look at TDM and a number of alternative strategies designed to ignite TDM activities across the state. Agreeing to accept the role of leader is one of the most important first steps in this process. Asking its partners such as DENR and others to assist in implementing viable state programs that will impact state employees is also a very important first step in announcing that this is truly an important initiative.

NCDOT has an opportunity to initiate several changes within the ridesharing/TDM programs that it funds, asking them to become more accountable and making them "performers" as either "programs of excellence" or "national programs of excellence" through a joint initiative with US EPA. Either way, the goal is to make a difference in commuting patterns, pollution and development. Asking employers to move from "planning to do" into "doing" and placing measurable results at the top of the NCDOT importance list should make both the locals and the state proud of the accomplishments while making a recognizable difference in the communities which are served.

Integrating "softer" ridesharing programs into more accountable TDM programs may take time, but this begins with the kind of dialogue identified and established with the SWOT analysis. The need for a routine communication of the purposeful efforts conducted by the TDM programs and led with NCDOT's assistance, will be invaluable to the on-going success of this overall initiative. Leadership again... giving and taking on both sides, building and fortifying these programs so that they can be equipped to make a difference.

NCDOT will be well positioned to take a new, more pivotal role in promoting TDM in both the urban and rural areas of North Carolina if it proceeds with the proposed staff and organizational changes to the TDM initiatives described as a result of this study. Strategies that are measurable can be jointly monitored for progress, publicized and nurtured by NCDOT and its partners (DENR and EPA, as examples).

On an annual basis, NCDOT should encourage each of its existing programs (and its own state government employee-based effort) to develop and pursue at least one TDM innovation. This can be developed with NCDOT's help, with the help of others already involved with TDM (again such as EPA), etc. It is an opportunity to focus on employer and business needs and new ideas; not just re-inventing what has already been tried.

These are exciting times for the program and for NCDOT. If NCDOT can act now on a number of the strategies and recommendations discussed by its leadership and the TDM Panel, they are poised to make a difference. The requirements of Senate Bill 953 are one concern. The health and well being of North Carolina's citizen's are the other.

GOV. EASLEY NAMES PANEL TO IMPROVE AIR QUALITY

Diverse Group of Government and Business Leaders to Focus on Increasing Commuting Options Reduce Vehicle Emissions

RALEIGH - Gov. Mike Easley has named a panel to improve air quality in North Carolina by reducing vehicle emissions resulting from job-related travel by 25 percent by 2009. The panel will focus on developing a statewide travel demand management (TDM) plan to increase commuting options for workers in both the private and public sectors.

TDM stands for a wide range of options for using existing transportation infrastructure in a more efficient manner - from carpooling, telecommuting, public transit and flexible work hours - all of which aim to reduce the number of cars on the road during the rush hour commute.

"Reducing job-related travel by 25 percent by 2009 is an ambitious goal, but the stakes could not be higher in this effort," said Easley. "As the number of cars on our highways increases, so does the level of ozone pollution, which carries serious consequences for the respiratory health of our citizens. Reducing the number of cars on the highway will also strengthen economic development and improve business efficiency by reducing time lost for commuters. I am confident that this panel will provide the vision and leadership necessary to meet our goal and improve air quality across the state."

The statewide TDM plan will include regional plans at the local level across the state to ensure that the emissions goal is achieved. In addition, the 16-member panel has been tasked to develop strategies to enhance existing TDM programs, foster development of new programs and promote TDM strategies in both rural and metropolitan areas for the public and private sector.

The panel, which held its first meeting on Jan. 6, is made up of representatives of federal, state and local government and business leaders from across the state with support from NCDOT staff and a consultant team. The panel was created in response to recent legislation that calls for a 25 percent reduction of both the nitrogen oxide emission levels and number of vehicle miles traveled in the state, and charges the departments of Transportation, Administration and Environment and Natural Resources to oversee the effort to meet these goals. The plan is scheduled to be complete by August.

FAX (919) 733-5166

North Carolina had three of the top 25 metropolitan areas in the country for ozone pollution, as rated by the American Lung Association. The annual national study by The Road Information Program (TRIP) lists those same areas in the top 10 in percentage increase in commuting time from 1990 to 2000. In addition, a large number of counties, both urban and rural, are expected to be identified this year by the U.S. Environmental Protection Agency as being in non-attainment of national air quality standards.

Panel Members

Gene Conti, Chief Deputy Secretary of Transportation, Chair (State Government)
John Phelps, Manager of Facilities and Security for Corning, Inc. in Wilmington (Business)
Jim Palermo, Executive Vice President of Bank of America in Charlotte (Business)
Kennon Borden, Partner with Borden Real Estate in Durham (Developer)
Crystal Bunch, Coordinator of Smart Commute @RTP in the Research Triangle Park (Technical)
Lawless Bean, Coordinator of the Wilmington Regional TDM Program (Technical)
Beau Mills, Director of Intergovernmental Relations for the N.C. Metropolitan Coalition League of Municipalities in Raleigh (Technical)
Nancy Dunn, N.C. Board of Transportation member from Winston-Salem (Transportation)
Marion Cowell, N.C. Board of Transportation member from Charlotte (Transportation)
Ellen Reckhow, Chair of the Durham County Board of Commissioners (Local Government)
Charles Worley, Mayor of Asheville (Local Government)
Bill Laxton, Director of the U.S. Environmental Protection Agency, Office of Administration and Resources Management in RTP (Federal Government)
Dempsey Benton, Chief Deputy Secretary of the N.C. Department of Environment and Natural Resources (State Government)
Judith Bell, Human Resources Partner for the Office of State Personnel (State Government)
Nina Slozburg, Napro Communications in Raleigh (Marketing)
Elaine Lyerly, President of Lyerly Marketing in Charlotte (Marketing)

###

GENERAL ASSEMBLY OF North Carolina
SESSION 1999

SESSION LAW 1999-328
SENATE BILL 953

AN ACT TO ENACT THE AMBIENT AIR QUALITY IMPROVEMENT ACT OF 1999.

Whereas, the Constitution of North Carolina declares that the policy of this State is to conserve and protect State lands and waters for the benefit of all North Carolina citizens and to control and limit air pollution within the State; and

Whereas, the State has enacted comprehensive statutory and regulatory protections for reducing air pollution from stationary sources; and

Whereas, ozone air pollution adversely affects the health and welfare of the citizens of North Carolina through the impairment of lung function and exacerbation of asthma and other diseases of the lung; and

Whereas, visibility at some of the State's places of beauty, such as the Great Smoky Mountains National Park and the Blue Ridge Mountain range, has been impaired by ozone air pollution that is created by the reaction of nitrogen oxides (NOx) and other chemicals in sunlight; and

Whereas, the decentralized system of inspection stations effectively uses a public-private partnership to enforce motor vehicle pollution controls; and

Whereas, gains in motor vehicle pollution control technology have been offset by increased vehicle use, resulting in greater emissions of nitrogen oxides (NOx) and greater ozone air pollution; and

Whereas, the sulfur contained in gasoline impedes the effectiveness of catalytic converters, the devices that reduce the amount of pollution emitted from vehicle tailpipes, thereby degrading the emission control systems of vehicles; and

Whereas, new motor vehicle pollution control technology is more sensitive to the sulfur content of fuels and will require new emissions inspection methods; and

Whereas, reducing emissions of nitrogen oxides (NOx) from motor vehicles by twenty-five percent (25%) within the next 10 years will complement the State's stationary source control strategy; and

Whereas, reducing the growth of vehicle miles traveled in the State by twenty-five percent (25%) within the next 10 years will complement the State's controls of nitrogen oxide (NOx) emissions from stationary sources; and

Whereas, leaking underground storage tanks and tanker trucks release quantities of volatile organic compounds into the air, which mix with nitrogen oxides (NOx) to form ground level ozone; and

Whereas, clean burning fuels, alternative fueled vehicles, and low emission vehicle usage should be encouraged statewide; and

Whereas, the State must lead the way in combating ground level ozone pollution from motor vehicles through its own purchases and policies; Now, therefore,

The General Assembly of North Carolina enacts:

PART I. STATEWIDE GOALS

Section 1.1. It shall be the goal of the State to reduce emissions of nitrogen oxides (NOx) from all sources by at least twenty-five percent (25%) by 1 July 2009. It shall be the goal of the State to reduce the growth of vehicle miles traveled in the State by at least twenty-five percent (25%) of that growth that would otherwise occur by 1 July 2009. The Department of Transportation shall evaluate progress toward achieving these goals in each fiscal year and shall report their findings and recommendations as to any measures that may be needed to achieve these goals to the Environmental Review Commission on or before 1 October of each year beginning 1 October 2000.

PART II. SULFUR CONTENT OF MOTOR FUELS

Section 2.1. Article 3 of Chapter 119 of the General Statutes is amended by adding a new section to read:

"**§ 119-26.2. Sulfur content standards.**

(a) No person shall manufacture, sell, or offer for sale gasoline that contains a concentration of sulfur greater than 30 parts per million except that a person may manufacture, sell, or offer for sale gasoline that contains a concentration of sulfur of not more than 80 parts per million if the average concentration of sulfur in the gasoline manufactured, sold, or offered for sale by that person is 30 parts per million or less. The average concentration of sulfur contained in gasoline shall be determined on the basis of a one-year period established by rule.

(b) The Gasoline and Oil Inspection Board shall adopt

rules to implement this section."

Section 2.2. Section 2.1 of this act becomes effective as provided in this section. No later than 1 July 2000, the Governor shall determine whether the United States Environmental Protection Agency has adopted, pursuant to the Notice of Proposed Rulemaking published on 13 May 1999 in the Federal Register, Volume 64, Number 92, Page 26003 et seq., regulations applicable to gasoline manufactured, sold, and offered for sale in this State that limit the sulfur content of gasoline to a concentration equal to or less than the concentration set out in Section 2.1 of this act. If the Governor so determines, the Governor shall issue an Executive Order setting out the date on which Section 2.1 of this act becomes effective, which shall be the date on which the federal regulation becomes effective in this State. Otherwise, Section 2.1 of this act becomes effective 1 January 2004. If the United States Environmental Protection Agency promulgates a regulation that imposes a limit on the concentration of sulfur in gasoline other than that set out in G.S. 119-26.2, as enacted by Section 2.1 of this act, it is the intention of the General Assembly to review the limit established in G.S. 119-26.2. In that event, the Environmental Review Commission shall review the limit on the concentration of sulfur in gasoline and report its findings and recommendations, if any, to the General Assembly.

Section 2.3. G.S. 119-26.1 reads as rewritten:

"§ 119-26.1. ~~Oxygen content standards~~ Content of motor fuels and reformulated gasoline.

(a) Rules adopted pursuant to G.S. 143-215.107(a)(9) to regulate the ~~oxygen~~ content of ~~gasoline~~ motor fuels or to require the use of reformulated gasoline shall be implemented by the Department of Agriculture and Consumer Services and the Gasoline and Oil Inspection Board. Such rules shall be implemented within any area specified by the Environmental Management Commission when the Commission certifies to the Commissioner of Agriculture that implementation:

(1) Will improve the ambient air quality within the specified county or counties;

(2) Is necessary to achieve attainment or preclude violations of the National Ambient Air Quality Standards; or

(3) Is otherwise necessary to meet federal requirements.

(b) The Department of Agriculture and Consumer Services and the Gasoline and Oil Inspection Board may adopt rules to implement this section. Rules shall be consistent with the implementation schedule and rules adopted by the Environmental Management Commission.

(c) The Commissioner of Agriculture may assess and collect civil penalties for violations of rules adopted under G.S. 143-215.107(a)(9) or this section in accordance with G.S. 143-215.114A. The Commissioner of Agriculture may institute a civil action for injunctive relief to restrain, abate, or prevent a violation or threatened violation of rules adopted under G.S. 143-215.107(a)(9) or this section in accordance with G.S. 143-215.114C. The assessment of a civil penalty under this section and G.S. 143-215.114A or institution of a civil action under G.S. 143-215.114C and this section shall not relieve any person from any other penalty or remedy authorized under this Article.

(c1) The clear proceeds of civil penalties assessed pursuant to this subsection shall be remitted to the Civil Penalty and Forfeiture Fund in accordance with G.S. 115C-457.2.

(d) The Commissioner of Agriculture may delegate his powers and duties under this subsection to the Director of the Standards Division of the Department of Agriculture and Consumer Services."

PART III. MOTOR VEHICLE EMISSIONS INSPECTION AND MAINTENANCE

Section 3.1. Article 21B of Chapter 143 of the General Statutes is amended by adding a new section to read:

"ß 143-215.107A. Motor vehicle emissions testing and maintenance program.

(a) General Provisions. --

(1) G.S. 143-215.107(a)(6) shall be implemented as provided in this section.

(2) Motor vehicle emissions inspections shall be performed by a person who holds an emissions inspection mechanic license issued as provided in G.S. 20-183.4A(c) at a station that holds an emissions inspection station license issued under G.S. 20-183.4A(a) or at a place of business that holds an emissions self-inspector license issued as provided in G.S. 20-183.4A(d). Motor vehicle emissions inspections may be performed by a decentralized network of test-and-repair stations as described in 40 Code of Federal Regulations ß 51.353 (1 July 1998 Edition). The Commission may not require that motor vehicle emissions inspections be performed by a network of centralized or decentralized test-only stations.

(b) Type of Test Required. -- Motor vehicle emissions inspections shall be performed using the two-mode Acceleration Simulation Mode (ASM) test described in Federal Register, Volume 57, Number 215, (5 November 1992), Pages 52955 to 52996.

(c) Counties Covered. -- Motor vehicle emissions inspections shall be performed only in the following counties:

Cabarrus, Durham, Forsyth, Gaston, Guilford, Mecklenburg, Orange, Union, and Wake.

(d) Additional Counties. -- The Commission may require that motor vehicle emissions inspections be performed in counties in addition to those set out in subsection (c) of this section. In determining whether to require that motor vehicle emissions inspections be performed in a county, the Commission may consider the population of, and distribution of population in, the county; the projected change in population of, and distribution of population in, the county; the number of vehicles registered in the county; the projected change in the number of vehicles registered in the county; vehicle miles traveled in the county; the projected change in vehicle miles traveled in the county; current and projected commuting patterns in the county; and the current and projected impact of these factors on attainment of air quality standards in the county and in areas outside the county. The Commission may not require that motor vehicle emissions testing be performed in any county with a population of less than 40,000 based on the most recent population estimates prepared by the State Planning Officer. The Commission may not require that motor vehicle emissions testing be performed in any county in which the number of vehicle miles traveled per day is less than 900,000, based on the most recent estimates prepared by the Department of Transportation. In order to disapprove a rule that requires that motor vehicle emissions inspections be performed in one or more additional counties, a bill introduced pursuant to G.S. 150B-21.3(b) must amend subsection (c) of this section to add one or more other counties in which the total population and vehicle miles traveled per day equal or exceed the total population and vehicle miles traveled in the county or counties listed in the rule that the bill would disapprove."

Section 3.2. The Environmental Management Commission shall adopt rules to implement G.S. 143-215.107A(b), as enacted by Section 3.1 of this act. These rules shall become effective on 1 July 2002. The Environmental Management Commission shall not require that motor vehicle emissions inspections be performed in any county pursuant to G.S. 143-215.107A(d), as enacted by Section 3.1 of this act, prior to 1 July 2006. The Environmental Management Commission shall not require motor vehicle emissions inspections for diesel powered vehicles prior to 1 July 2001.

Section 3.3. Effective 1 July 2003, G.S. 143-215.7A(c), as enacted by Section 3.1 of this act, reads as rewritten:

"(c) Motor vehicle emissions inspections shall be performed ~~only~~ in the following counties: Cabarrus,

Catawba, Cumberland, Davidson, Durham, Forsyth, Gaston, Guilford, Iredell, Johnston, Mecklenburg, Orange, Rowan, Union, and Wake."

Section 3.4. Effective 1 January 2004, G.S. 143-215.7A(c), as enacted by Section 3.1 of this act and amended by Section 3.3 of this act, reads as rewritten:

"(c) Motor vehicle emissions inspections shall be performed in the following counties: Alamance, Cabarrus, Catawba, Chatham, Cumberland, Davidson, Durham, Forsyth, Franklin, Gaston, Guilford, Iredell, Johnston, Lee, Lincoln, Mecklenburg, Moore, Orange, Randolph,
Rowan, Stanly, Union, and Wake."

Section 3.5. Effective 1 July 2004, G.S. 143-215.7A(c), as enacted by Section 3.1 of this act and amended by Sections 3.3 and 3.4 of this act, reads as rewritten:

"(c) Motor vehicle emissions inspections shall be performed in the following counties: Alamance, Buncombe, Cabarrus, Catawba, Chatham, Cleveland, Cumberland, Davidson, Durham, Forsyth, Franklin, Gaston, Granville, Guilford, Harnett, Iredell, Johnston, Lee, Lincoln, Mecklenburg, Moore, Orange, Randolph, Rockingham, Rowan, Stanly, Union, and Wake."

Section 3.6. Effective 1 January 2005, G.S. 143-215.7A(c), as enacted by Section 3.1 of this act and amended by Sections 3.3 through 3.5 of this act, reads as rewritten:

"(c) Motor vehicle emissions inspections shall be performed in the following counties: Alamance, Buncombe, Cabarrus, Catawba, Chatham, Cleveland, Cumberland, Davidson, Durham, Edgecombe, Forsyth, Franklin, Gaston, Granville, Guilford, Harnett, Iredell, Johnston, Lee, Lenoir, Lincoln, Mecklenburg, Moore, Nash, Orange, Pitt, Randolph, Robeson, Rockingham, Rowan, Stanly, Union, ~~and Wake~~. Wake, Wayne, and Wilson."

Section 3.7. Effective 1 July 2005, G.S. 143-215.7A(c), as enacted by Section 3.1 of this act and amended by Sections 3.3 through 3.6 of this act, reads as rewritten:

"(c) Motor vehicle emissions inspections shall be performed in the following counties: Alamance, Buncombe, Burke, Cabarrus, Caldwell, Catawba, Chatham, Cleveland, Cumberland, Davidson, Durham, Edgecombe, Forsyth, Franklin, Gaston, Granville, Guilford, Harnett, Haywood, Henderson, Iredell, Johnston, Lee, Lenoir, Lincoln, Mecklenburg, Moore, Nash, Orange, Pitt, Randolph, Robeson, Rockingham, Rowan, Rutherford, Stanly, Stokes, Surry, Union, Wake, Wayne, Wilkes, and Wilson."

Section 3.8. Effective 1 January 2006, G.S. 143-215.7A(c), as enacted by Section 3.1 of this act and amended by Sections 3.3 through 3.7 of this act, reads as rewritten:

"(c) Motor vehicle emissions inspections shall be performed in the following counties: Alamance, Brunswick, Buncombe, Burke,

Cabarrus, Caldwell, Carteret, Catawba, Chatham, Cleveland, Craven, Cumberland, Davidson, Durham, Edgecombe, Forsyth, Franklin, Gaston, Granville, Guilford, Harnett, Haywood, Henderson, Iredell, Johnston, Lee, Lenoir, Lincoln, Mecklenburg, Moore, Nash, New Hanover, Onslow, Orange, Pitt, Randolph, Robeson, Rockingham, Rowan, Rutherford, Stanly, Stokes, Surry, Union, Wake, Wayne, Wilkes, and Wilson."

Section 3.9. Sections 3.3 through 3.8 of this act become effective only if G.S. 20-183.7 is amended to increase the fee for motor vehicle emissions inspections no later than 31 December 2000. G.S. 143-215.107A(b), as enacted by Section 3.1 of this act, and Section 3.2 of this act are repealed effective 1 January 2001 unless, prior to 1 January 2001, G.S. 20-183.7 has been amended to increase the fee for motor vehicle emissions inspection.

Section 3.10. The Department of Environment and Natural Resources, with the assistance of the Division of Motor Vehicles of the Department of Transportation and the affected parties, shall study issues related to costs associated with the motor vehicle emissions inspection and maintenance program. The Department shall determine what constitutes a reasonable fee for motor vehicle emissions inspections under the current program and under the enhanced program to be implemented pursuant to G.S. 143-215.107A(b), as enacted by Section 3.1 of this act. In determining what constitutes a reasonable fee, the Department shall consider the cost of emissions inspection equipment, the useful life of the equipment, the average period of time during which a purchaser of this equipment is able to amortize this cost, telephone charges incurred in connection with the registration denial program, whether a fee should be charged to reinspect a vehicle that fails an emissions test after repairs to the vehicle have been made, and whether the State should purchase emissions inspection equipment purchased prior to 10 June 1999 for use in the current program but that will be rendered obsolete by the enhanced program. The Department shall report its findings and recommendations to the Environmental Review Commission on or before 1 February 2000. The Environmental Review Commission, with the assistance of the Fiscal Research Division of the Legislative Services Office, shall evaluate these recommendations. The Environmental Review Commission shall recommend legislation to amend G.S. 20-183.7 to increase the Fee for motor vehicle emissions inspections to the 2000 Regular Session of the 1999 General Assembly.

Section 3.11. G.S. 20-183.2 reads as rewritten:

"ß 20-183.2. Description of vehicles subject to safety or emissions inspection; definitions.

(a) Safety. -- A motor vehicle is subject to a safety inspection in accordance with this Part if it meets all of the following requirements:

(1) It is subject to registration with the Division under Article 3 of this Chapter.

(2) It is not subject to inspection under 49 C.F.R. Part 396, the federal Motor Carrier Safety Regulations.

(3) It is not a trailer whose gross weight is less than 4,000 pounds or a house trailer.

(b) Emissions. -- A motor vehicle is subject to an emissions inspection in accordance with this Part if it meets all of the following requirements:

(1) It is subject to registration with the Division under Article 3 of this Chapter.

(2) It is not a trailer whose gross weight is less than 4,000 pounds, a house trailer, or a motorcycle.

(3) It is a 1975 or later model.

~~(4) It is powered or designed so that it could be powered by gasoline.~~

(5) It meets any of the following descriptions:

a. It is required to be registered in an emissions county.

b. It is part of a fleet that is operated primarily in an emissions county.

c. It is offered for rent in an emissions county.

d. It is a used vehicle offered for sale by a dealer in an emissions county.

e. It is operated on a federal installation located in an emissions county and it is not a tactical military vehicle. Vehicles operated on a federal installation include those that are owned or leased by employees of the installation and are used to commute to the installation and those owned or operated by the federal agency that conducts business at the installation.

f. It is otherwise required by 40 C.F.R. Part 51 to be subject to an emissions inspection.

(c) Definitions. -- The following definitions apply in this Part:

(1) Emissions county. -- A county ~~in which the State either is required by federal law to conduct emissions testing or has agreed in its State Implementation Plan submitted to the federal Environmental Protection Agency to conduct emissions testing. The State~~ listed in G.S. 143-215.107A(c) or designated by the Environmental Management Commission ~~establishes the emissions counties pursuant to rules adopted under G.S. 143-215.107(a)(6).~~ pursuant to

G.S. 143-215.107A(d) and certified to the Commissioner of Motor Vehicles as a county in which the implementation of a motor vehicle emissions inspection program will improve ambient air quality.

(2) Federal installation. -- An installation that is owned by, leased to, or otherwise regularly used as the place of business of a federal agency."

Section 3.12. G.S. 143-215.107 reads as rewritten:

"ß 143-215.107. Air quality standards and classifications.

(a) Duty to Adopt Plans, Standards, etc. - The Commission is hereby directed and empowered, as rapidly as possible within the limits of funds and facilities available to it, and subject to the procedural requirements of this Article and Article 21:

(1) To prepare and develop, after proper study, a comprehensive plan or plans for the prevention, abatement and control of air pollution in the State or in any designated area of the State.

(2) To determine by means of field sampling and other studies, including the examination of available data collected by any local, State or federal agency or any person, the degree of air contamination and air pollution in the State and the several areas of the State.

(3) To develop and adopt, after proper study, air quality standards applicable to the State as a whole or to any designated area of the State as the Commission deems proper in order to promote the policies and purposes of this Article and Article 21 most effectively.

(4) To collect information or to require reporting from classes of sources which, in the judgment of the Environmental Management Commission, may cause or contribute to air pollution. Any person operating or responsible for the operation of air contaminant sources of any class for which the Commission requires reporting shall make reports containing such information as may be required by the Commission concerning location, size, and height of contaminant outlets, processes employed, fuels used, and the nature and time periods or duration of emissions, and such other information as is relevant to air pollution and available or reasonably capable of being assembled.

(5) To develop and adopt emission control standards as in the judgment of the Commission may be necessary to prohibit, abate, or control air pollution commensurate with established air quality standards. ~~The standards may be applied uniformly to the State as a whole or to any area of the State designated by the Commission.~~ This subdivision does not apply to that portion of the

National Emission Standards for Hazardous Air Pollutants for asbestos that governs demolition and renovation as set out in 40 C.F.R. ß 61.141, 61.145, 61.150, and 61.154 (1 July 1993 edition).

(6) To ~~adopt, when necessary and practicable, a program for testing emissions from motor vehicles and to adopt motor vehicle emission standards in compliance with applicable federal regulations.~~ adopt motor vehicle emissions standards; to adopt, when necessary and practicable, a motor vehicle emissions inspection and maintenance program to improve ambient air quality; to require that motor vehicle emissions be monitored while the vehicle is in operation by means of onboard diagnostic equipment (OBD) installed by the vehicle manufacturer; to require manufacturers of motor vehicles to furnish to the Equipment and Tool Institute and, upon request and at a reasonable charge, to any person who maintains or repairs a motor vehicle, all information necessary to fully make use of the onboard diagnostic equipment and the data compiled by that equipment; to certify to the Commissioner of Motor Vehicles that ambient air quality will be improved by the implementation of a motor vehicle emissions inspection and maintenance program in a county. The Commission shall implement this subdivision as provided in G.S. 143-215.107A.

(7) To develop and adopt standards and plans necessary to implement programs for the prevention of significant deterioration and for the attainment of air quality standards in nonattainment areas.

(8) To develop and adopt standards and plans necessary to implement programs to control acid deposition and to regulate the use of sulfur dioxide allowances and nitrogen oxides (NOx) emissions in accordance with Title IV and implementing regulations adopted by the United States Environmental Protection Agency.

(9) To regulate the ~~oxygen~~ content of ~~gasoline,~~ motor fuels, as defined in G.S. 119-16, to require use of reformulated gasoline as the Commission determines necessary, to implement the requirements of Title II and implementing regulations adopted by the United States Environmental Protection Agency, and to develop standards and plans to implement This subdivision. ~~Rules adopted under this subdivision may specify standards for a particular area of the State that differ from standards specified for other areas as may be necessary to improve ambient air quality within a particular area, achieve attainment or preclude violations of the National Ambient~~

~~Air Quality Standards, or to meet other federal requirements.~~ Rules may authorize the use of marketable oxygen credits for gasoline as provided in federal requirements.

(10) To develop and adopt standards and plans necessary to implement requirements of the federal Clean Air Act and implementing regulations adopted by the United States Environmental Protection Agency.

(11) To develop and adopt economically feasible standards and plans necessary to implement programs to control the emission of odors from animal operations, as defined in G.S. 143-215.10B.

(12) To develop and adopt a program of incentives to promote voluntary reductions of emissions of air contaminants, including, but not limited to, emissions banking and trading and credit for voluntary early reduction of emissions.

(13) To develop and adopt rules governing the certification of persons who inspect vehicle mounted tanks used to transport motor fuel and to require that inspection of these tanks be performed only by certified personnel.

(14) To develop and adopt rules governing the sale and service of mobile source exhaust emissions analyzers and to require that vendors of these analyzers provide adequate surety to purchasers for the performance of the vendor's contractual or other obligations related to the sale and service of analyzers.

(b) Criteria for Standards. -- In developing air quality and emission control standards, motor vehicle emissions standards, motor vehicle emissions inspection and maintenance requirements, rules governing the content of motor fuels or requiring the use of reformulated gasoline, and other standards and plans to improve ambient air quality, the Commission shall ~~recognize~~ consider varying local conditions and requirements and may prescribe uniform standards and plans throughout the State or different standards and plans for different counties or areas as may be necessary and appropriate to ~~facilitate accomplishment of the stated~~ improve ambient air quality in the State or within a particular county or area, achieve attainment or preclude violations of state or national ambient air quality standards, meet other federal requirements, or achieve the purposes of this Article and Article 21.

(c) Chapter 150B of the General Statutes governs the adoption and publication of rules under this Article."

Section 3.13. G.S. 20-183.8F reads as rewritten:

"ß 20-183.8F. Requirements for giving ~~certain emissions~~ license holders notice of violations and for taking summary action.

(a) Finding of Violation. -- When an auditor of the Division finds that ~~an emissions~~ a violation has occurred that could result in the suspension or revocation of an ~~emissions~~ inspection station license, ~~an emissions~~ a self-inspector license, or ~~an emissions~~ a mechanic license, the auditor must give the affected license holder written notice of the finding. The notice must be given within five business days after the violation occurred. The notice must state the period of suspension or revocation that could apply to the violation and any monetary penalty that could apply to the violation. The notice must also inform the license holder of the right to a hearing if the Division charges the license holder with the violation.

(b) Notice of Charges. -- When the Division decides to charge an ~~emissions~~ inspection station, ~~an emissions~~ a self-inspector, or ~~an emissions~~ a mechanic with a violation that could result in the suspension or revocation of the person's ~~emissions~~ license, an auditor of the Division must deliver a written statement of the charges to the affected license holder. The statement of charges must inform the license holder of this right, instruct the person on how to obtain a hearing, and inform the license holder of the effect of not requesting a hearing. The license holder has the right to a hearing before the license is suspended or revoked. G.S. 20-183.8E sets out the procedure for obtaining a hearing.

(c) Exception for Summary Action. -- The right granted by subsection (b) of this section to have a hearing before ~~an emissions~~ a license is suspended or revoked does not apply if the Division summarily suspends or revokes the license after a judge has reviewed and authorized the proposed action. A license issued to an ~~emissions~~ inspection station, ~~an emissions~~ a self-inspector, or ~~an emissions~~ a mechanic is a substantial property interest that cannot be summarily suspended or revoked without judicial review."

Section 13.14. G.S. 20-183.8G reads as rewritten:

"§ 20-183.8G. Administrative and judicial review.

(a) Right to Hearing. -- A person who applies for a license or registration under this Part or who has a license or registration issued under this Part has the right to a hearing when any of the following occurs:

(1) The Division denies the person's application for a license or registration.

(2) The Division delivers to the person a written statement of charges of ~~an emissions~~ a violation that could result in the suspension or revocation of the person's ~~emissions~~ license.

(3) The Division summarily suspends or revokes the person's license following review and authorization of the proposed adverse action by a judge.

(4) The Division assesses a civil penalty against the person.

(5) The Division issues a warning letter to the person.

(6) The Division cancels the person's registration.

(b) Hearing After Statement of Charges. -- When ~~an emissions~~ a license holder receives a statement of charges of ~~an emissions~~ a violation that could result in the suspension or revocation of the person's license, the person can obtain a hearing by making a request for a hearing. The person must make the request to the Division within 10 days after receiving the statement of the charges. A person who does not request a hearing within this time limit waives the right to a hearing. The Division must hold a hearing requested under this subsection within three business days after receiving the request unless the person requesting the hearing asks for additional time to prepare for the hearing. A person may ask for no more than seven additional business days to prepare. If the additional time requested is within this limit, the Division must grant a person the additional time requested. The hearing must be held at the location designated by the Division. Suspension or revocation of the license is stayed until a decision is made following the hearing.

If a person does not request a hearing within the time allowed for making the request, the proposed suspension or revocation becomes effective the day after the time for making the request ends. If a person requests a hearing but does not attend the hearing, the proposed suspension or revocation becomes effective the day after the date set for the hearing.

(c) Hearing After Summary Action. -- When the Division summarily suspends a license issued under this Part after judicial review and authorization of the proposed action, the person whose license was suspended or revoked may obtain a hearing by filing with the Division a written request for a hearing. The request must be filed within 10 days after the person was notified of the summary action. The Division must hold a hearing requested under this subsection within 14 days after receiving the request.

(d) All Other Hearings. -- When this section gives a person the right to a hearing and subsection (b) or (c) of this section does not apply to the hearing, the person may obtain a hearing by filing with the Division a written request for a hearing. The request must be filed within 10 days after the person receives written notice of the action for which a hearing

is requested. The Division must hold a hearing within 90 days after the Division receives the request.

(e) Review by Commissioner. -- The Commissioner may conduct a hearing required under this section or may designate a person to conduct the hearing. When a person designated by the Commissioner holds a hearing and makes a decision, the person who requested the hearing has the right to request the Commissioner to review the decision. The procedure set by the Division governs the review by the Commissioner of a decision made by a person designated by the Commissioner.

(f) Decision. -- A decision made after a hearing on the imposition of a monetary penalty against a motorist for an emissions violation or on a Type I, II, or III emissions violation by an emissions license holder must uphold any monetary penalty, license suspension, license revocation, or warning required by G.S. 20-183.8A or G.S. 20-183.8B, respectively, if the decision contains a finding that the motorist or license holder committed the act for which the monetary penalty, license suspension, license revocation, or warning was imposed. A decision made after a hearing on any other action may uphold or modify the action.

(g) Judicial Review. -- Article 4 of Chapter 150B of the General Statutes governs judicial review of an administrative decision made under this section."

PART IV. STATE AGENCY GOALS, PLANS, DUTIES, AND REPORTS; OTHER PROVISIONS

Section 4.1. As used in this Part, alternative-fueled vehicle means a motor vehicle capable of operating on electricity; natural gas; propane; hydrogen; reformulated gasoline; ethanol; other alcohol fuels, separately or in mixtures of eighty-five percent (85%) or more of alcohol by volume; or fuels, other than alcohol, derived from biological materials. For purposes of this Part, a vehicle that has been converted to operate on a fuel other than the fuel for which it was originally designed is not a new or replacement vehicle.

Section 4.2. It shall be the goal of the State that on and after 1 January 2004 at least seventy-five percent (75%) of the new or replacement light duty cars and trucks purchased by the State will be alternative-fueled vehicles or low emission vehicles. The Department of Administration, the Department of Transportation, and the Department of Environment and Natural Resources shall jointly develop a plan to achieve this goal and to fuel and maintain these vehicles. The Department of Administration shall report on progress in developing and implementing this plan and achieving this goal to the

Environmental Review Commission on 1 September of each year beginning 1 September 2000. For purposes of this section, a light duty car or truck is one that is rated at 8,500 pounds or less Gross Vehicle Weight Rating (GVWR).

Section 4.3. The Department of Public Instruction, the Department of Transportation, and the Department of Environment and Natural Resources shall jointly develop a draft plan for the purchase of school buses under which, beginning 1 January 2004, at least fifty percent (50%) of the new and replacement public school buses purchased for use in counties with a population of at least 100,000, based on the most recent population estimates prepared by the Office of State Planning, will be alternative-fueled or low emission vehicles. These departments shall invite interested parties to participate in the development of the draft plan. The draft plan will consider the infrastructure requirements that would be needed to fuel and maintain these buses and the costs and benefits of implementation of the plan, including the impact on ambient air quality. The Department of Public Instruction shall submit the draft plan to the Environmental Review Commission on or before 1 September 2000.

Section 4.4. The Department of Transportation and the Department of Environment and Natural Resources shall jointly develop a draft plan for the purchase of buses under which, beginning 1 January 2004, at least fifty percent (50%) of the new and replacement buses purchased to provide public transportation in counties in which motor vehicle emissions inspections are required to be performed under subsection (c) or (d) of G.S. 143-215.107A will be alternative-fueled or low emission vehicles. These departments shall invite interested parties to participate in the development of the draft plan. The draft plan will consider the infrastructure requirements that would be needed to fuel and maintain these buses and the costs and benefits of implementation of the plan, including the impact on ambient air quality. The Department of Transportation shall submit the draft plan to the Environmental Review Commission on or before 1 September 2000.

Section 4.5. The Department of Transportation, the Department of Commerce, and the Department of Environment and Natural Resources shall jointly develop recommendations for incentives to increase the use of alternative-fueled and low emission light duty cars and trucks in privately owned fleets. The Department of Environment and Natural Resources shall submit these recommendations to the Environmental Review Commission on or before 1 February 2000. The Department of Environment and Natural Resources shall report on progress in increasing the use of alternative-fueled and low emission light duty cars and trucks in privately owned fleets to the Environmental Review

Commission on or before 1 October of each year beginning 1 October 2001.

Section 4.6. The Department of Administration, the Office of State Personnel, the Department of Transportation, and the Department of Environment and Natural Resources shall jointly develop and periodically update a plan to reduce vehicle miles traveled by State employees and vehicle emissions resulting from job-related travel, including commuting to and from work. The plan shall consider the use of carpooling, vanpooling, public transportation, incentives, and other appropriate strategies. The Office of State Personnel shall report on the development and implementation of the plan to the Joint Legislative Transportation Oversight Committee and the Environmental Review Commission on or before 1 October of each year beginning 1 October 2000.

Section 4.7. The Department of Transportation, the Department of Commerce, and the Department of Environment and Natural Resources shall jointly develop and periodically update a plan to reduce vehicle miles traveled by private sector employees and vehicle emissions resulting from job-related travel, including commuting to and from work. The plan shall consider the use of incentives for both private sector employees and employers, carpooling, vanpooling, public transportation, and other appropriate strategies. The Department of Transportation shall report on the development and implementation of the plan to the Joint Legislative Transportation Oversight Committee and the Environmental Review Commission on or before 1 October of Each year beginning 1 October 2000.

Section 4.8. The Office of State Personnel shall implement a policy that promotes telework/telecommuting for State employees as recommended by the report of the State Auditor entitled "Establishing a Formal Telework/Telecommuting Program for State Employees" and dated October 1997. It shall be the goal of the State to reduce State employee vehicle miles traveled in commuting by twenty percent (20%) without reducing total work hours or productivity. The Office of State Personnel Shall report on progress in implementing this section to The Environmental Review Commission on or before 1 October of each year beginning 1 October 2000.

Section 4.9. The Environmental Management Commission shall initiate rule making to regulate the emissions of nitrogen oxides (NOx) from complex sources pursuant to G.S. 143-215.109 no later than 1 October 1999. The Environmental Management Commission shall report on the progress of this rule making as a part of each quarterly report the Commission makes to the Environmental Review Commission pursuant to G.S. 143B-282(b).

Section 4.10. Chapter 136 of the General Statutes Is amended by adding a new Article to read:

"ARTICLE 16.

"Planning.

"ß 136-200. Definitions.

As used in this Article:

(1) `Conformity' means the extent to which transportation plans, programs, and projects conform to federal air quality requirements as specified in 40 Code of Federal Regulations, Part 93, Subpart A (1 July 1998 Edition).

(2) `Department' means the Department of Transportation.

(3) `Interface' means a relationship between streams of traffic that efficiently and safely maximizes the mobility of people and goods within and through urbanized areas and minimizes transportation related fuel consumption and air pollution.

(4) `Metropolitan Planning Organization' or `MPO' means an agency that is designated as a Metropolitan Planning Organization in accordance with 23 U.S.C. ß 134.

(5) `Regionally significant project' has the same meaning as under 40 Code of Federal Regulations 93.101 (1 July 1998 Edition).

(6) `Regional travel demand model' means a model of a region, defined in the model, that is approved by the Department and each Metropolitan Planning Organization whose boundaries include any part of the region and that uses socioeconomic data and projections to predict demands on a transportation network.

"ß 136-201. Plan for intermodal interface.

When planning a regionally significant transportation project, the Department shall consider design alternatives that will facilitate the cost-effective interface of the project with other existing or planned transportation projects, including highway, airport, rail, bus, bicycle, and pedestrian facilities. The Department of Transportation shall record its consideration of these design alternatives in the planning documents for the project.

"ß 136-202. Metropolitan planning organizations.

(a) Each Metropolitan Planning Organization shall base all transportation plans, metropolitan transportation improvement programs, and conformity determinations on the most recently completed regional travel demand model.

(b) Each Metropolitan Planning Organization shall update its transportation plans in accordance with the scheduling requirements stated in 23 Code of Federal Regulations 450.322 (1 April 1999 Edition).

(c) The Department, the metropolitan planning organizations, and the Department of Environment and Natural

Resources shall jointly evaluate and adjust the regions defined in each regional travel demand model at least once every five years and no later than 1 October of the year following each decennial federal census. The evaluation and adjustment shall be based on decennial census data and the most recent populations estimates certified by the State Planning Officer. The adjustment of these boundaries shall reflect current and projected patterns of population, employment, travel, congestion, commuting, and public transportation use and the effects of these patterns on air quality.

(d) The Department shall report on the evaluation and adjustment of the boundaries of the area served by each Metropolitan Planning Organization to the Joint Legislative Transportation Oversight Committee and the Environmental Review Commission no later than 1 November of each year in which the regions are evaluated and adjusted.

"ß 136-203. Joint study groups.

The Department and the Department of Environment and Natural Resources shall convene a joint study group to examine options to maximize the positive impacts and minimize the adverse impacts on air quality of transportation investments. A joint study group shall be convened for each major travel corridor in which there has been air quality violations within the previous fiscal year or that affects an area in which there has been air quality violations within the previous fiscal year. Each joint study group shall include at least 10 members, half of whom shall be appointed by the Secretary of Transportation and half of whom shall be appointed by the Secretary of Environment and Natural Resources. Each group shall include representatives from the Department and the Department of Environment and Natural Resources, affected units of local government, private businesses, and nonprofit public interest organizations. The Department and the Department of Environment and Natural Resources shall jointly report on the work, findings, and recommendations of each joint study group to the Joint Legislative Transportation Oversight Committee and the Environmental Review Commission on or before 1 October of each year."

Section 4.11. The Department of Transportation and the Department of Environment and Natural Resources shall make the first joint report required by G.S. 136-203, as enacted by Section 4.10 of this act, on or before 1 October 2000.

Section 4.12. G.S. 143-215.94T(a) is amended by adding
a new subdivision to read:

"(12) Tank tightness testing procedures and certification of persons who conduct tank tightness tests."

Section 4.13. G.S. 143B-282(a)(2)h. reads as rewritten:

"h. Governing underground tanks used for the storage of oil or hazardous substances ~~or oil~~ pursuant to ~~Article 21 or Article 21A~~ Articles 21, 21A, or 21B of Chapter 143 of the General ~~Statutes.~~ Statutes, including inspection and testing of these tanks and certification of persons who inspect and test tanks."

PART V. MISCELLANEOUS PROVISIONS

Section 5.1. This act shall not be construed to obligate the General Assembly to appropriate any funds to implement the provisions of this act. Every State agency to which this act applies shall implement the provisions of this act from funds otherwise appropriated or available to that agency.

Section 5.2. The headings to the Parts of this act are intended as a convenience to the reader and are for reference only. The headings do not expand, limit, or define the text of this act.

Section 5.3. If any section or provision of this act is declared unconstitutional or invalid by the courts, the unconstitutional or invalid section or provision does not affect the validity of this act as a whole or any part of this act other than the part declared to be unconstitutional or invalid.

Section 5.4. Except as otherwise provided in this act, this act is effective when it becomes law.

In the General Assembly read three times and ratified this the 20th day of July, 1999.

s/ Dennis A. Wicker
President of the Senate

s/ James B. Black
Speaker of the House of Representatives

s/ James B. Hunt, Jr.
Governor

Transportation Demand Management
Program Information and Background

Program Name: _____

Contact Person: _____

Street Address: _____

Mailing Address: _____

Phone: _____

Fax: _____

Email: _____ Website: _____

Information is being requested of you to provide background information to the project team that will visit you to learn more about your program. The following is a list of information we would like to have ready by: _____ so the project team can arrive for an interview and analysis of people in and around your organization. The focus is on current policy and practice (those developed in the last five years), although additional information will be useful as background.

1. Please provide copies of the following:
    a. Organization Chart
    b. Mission Statement of definition or purpose of work
    c. Goals and objectives by year for the last five years
    d. Budget for the last five years (make sure different funding levels and funding sources are shown)
    e. Measurements of effectiveness reported for the last five years as well as any type of program evaluation – accountability that is built into the programs
2. Please provide program history: when it started, what were the services / focus areas, champions (individuals and organizations), expected changes for the next few years. In addition, please answer the following
    a. Are you a (a) Commuter Assistance Program operating within a public transportation authority or city department, (b) Transportation Management Association, (c) Statewide Service – please circle those that apply and give background on them (ordinances, …). In addition, if there is a TMA, please complete the employer information separately from the organization.
    b. Please provide a matrix and supporting information of your program activities (check the activity and complete the information)

☐ Carpool Matching / Formation

- Product (s) used to assist with this activity: _____
- Measure of Success: _____

☐ Vanpool Matching

- Organization owned: how many are in operation _____
- Owner operated: how many are in operation _____
- Employer owned: how many are in operation _____
- 3rd Party Vanpools: how many are in operation _____

☐ Supporting Activities:

☐ Guaranteed Ride Home

☐ Preferential Parking

☐ Commuter Benefits (please circle: employer, employee)

☐ Flex – time

☐ Staggered work hours

☐ Telecommuting

☐ Bicycle / Pedestrian

☐ Compressed work week

☐ Transit Program: (please describe)

☐ Upass _____

☐ Shuttle Services _____

☐ Pass programs _____

c. Describe your employer activities – Please create a matrix of the following for employers participating in your program:

   i. Employer Name

ii. Contact Name, Title, Phone Number, email

iii. Address

iv. Number of Employees at this site

v. What are their successes and why?

d. Describe your general public activities – Please create a matrix of the following for employers participating in your program:

i. What are their successes and why?

3. Do you have a Board

a. If yes,

i. What is their function? Do they adopt a work plan and budget each year?

ii. Do you have by laws adopted for them?

iii. What information do you report to them?

iv. How often do they meet? How active / supportive are they? (Give examples)

b. If no,

i. Who approves your workplan?

ii. What is your relationship to them?

iii. What information do you report to them?

4. What are the products / programs marketed by your organization for the last five years (by year)? Please provide productivity factors as they relate to these efforts. For example, number of vehicles owned, number of vanpools in operation, number of passengers carried, number of carpool matches provided and so forth.

5. If you operate vanpools, please describe your maintenance and emergency procedures.

6. What market research have you done in the last five years? What were the changes in your program delivery based on this research?

7. Year end activities

a. Who and how do you report them? (please provide copies of the last five years)

Appendix C

Interview Schedule and Participants

	Name	Interview Date	Other Information
NCDOT	David King	January 3, 2003	NCDOT Deputy Secretary
Smart Commute	Ruth McCullers	January 6, 2003	External Affairs Manager, CISCO
Smart Commute	Susan Clarke	January 6, 2003	Chair, Smart Commute, IBM
Smart Commute	Jamie Nunnelly	January 6, 2003	Director of Communications, Research Triangle Foundation
Smart Commute	Valerie Broadwell	January 6, 2003	US EPA
Smart Commute	Jill Miller Denning	January 6, 2003	Staff Comm., Research Triangle Institute
Smart Commute	Dick Sloane	January 6, 2003	Resource Recovery Specialist, NIEHS
Smart Commute	Joe Milazzo	January 6, 2003	Executive Director, Regional Transportation Alliance

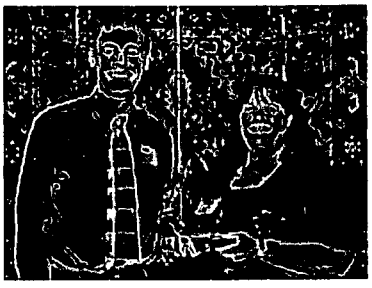
EarthLink, Inc.,
Bellevue

- CTR Program CEO*:
  Garry Betty, Chief Executive Officer
- CTR Program PM*:
  Lori Waters, Facilities Services Manager
  Seattle
- CTR Program ETC*:
  Dorian Yeager, Security Coordinator Seattle

Listen to one of the radio spots featuring this winner!

Local site is model for others nationwide

For some employers with multiple worksites throughout the United States, it might be difficult to get company management to buy into the idea of a commute trip reduction program. For the EarthLink, Inc. work site of Bellevue, not only has management bought into the idea, the Bellevue worksite has become the standard to which other EarthLink worksites aspire. That is why EarthLink has earned a 2002 Commuter Challenge Diamond Award for ridesharing.



Jan. 22, 2003 Awards Ceremony

Accepting EarthLink's Diamond Award for Ridesharing are Employee Transportation Coordinator Dorian Yeager and Facilities Services Manager Lori Waters.

EarthLink has worked to ensure its commute trip reduction program provides a variety of commute options for employees. In fact, 47% of those employees affected by the CTR law now use ridesharing to get to work rather than driving alone. FlexPasses are provided to all full-time employees for free. Vanpool costs are also covered at 100%, and riders can receive an additional incentive of $25 per month for riding in a vanpool with seven or more people. Carpoolers can enjoy free car washes and a $25 per month incentive if they are in a carpool with four or more riders.

Even those employees who bicycle, walk or rollerblade to work are eligible for incentives. EarthLink will give employees up to $150 to purchase a new bike, $100 to purchase new rollerblades, or even a new pair of walking shoes if they use one of these non-motorized commute options.

All new hires are introduced to the program during their orientation process and can get help to find ridesharing partners or determine the transit routes that work best for them. "The CTR program has certainly reduced the amount of employee turnover among users of the program," said Employee Transportation Coordinator Dorian Yeager. "People that use the program elements are much less likely to leave EarthLink." Employees are continually kept up to date on the latest ridesharing information through informational emails, flyers, an internal web site and benefits fairs.

EarthLink has shown its commitment to commute trip reduction efforts through the significant financial investments it has made in ensuring the program continues to grow and thrive. EarthLink created the Rideshare Coordinator position to do just that. With a CTR program tailored to the needs of its employees, Yeager has been able to show corporate management that the vanpool program at the Bellevue site is more cost efficient than independently run programs at other EarthLink worksites throughout the United States.

Commute Program

- Transit and vanpool subsidy
- Showers
- Reserved vanpool parking
- Guaranteed Ride Home
- Internal ridematching
- Flextime and telework

***Some definitions:** An "ETC" is the staff-level employee transportation coordinator responsible for the daily administration of the transportation program; "PM" is the transportation program manager; and "CEO" refers to the top management-level person at the worksite. "SOV" stands for single-occupant vehicle, and "CTR" for commute trip reduction.*

Kenworth Truck Company–Headquarters, Kirkland

- CTR Program CEO*:
  Robert Christensen, General Manager, Kenworth Truck Company and Vice President, PACCAR Inc.
- CTR Program PM*:
  Rennie Wilson, Human Resources Manager
- CTR Program ETC*:
  Michele Wheeler, Senior Human Resources Specialist

Listen to one of the radio spots featuring this winner!

Jan. 22, 2003 Awards Ceremony

Accepting Kenworth Truck Company's Diamond Award for Ridesharing is Human Resources Director Jim Walker.

50% use commute options despite abundant parking and limited transit

Kenworth Truck Company, a division of PACCAR Inc, is a leading manufacturer of heavy and medium duty trucks. With a progressive focus on fuel efficiency and aerodynamics, it should come as no surprise that the company also places a focus on reducing congestion on our roads through an employee commute trip reduction program. Kenworth's commitment has earned it a 2002 Commuter Challenge Diamond Award for ridesharing.

More than 50% of Kenworth employees at the company's Kirkland headquarters have received FlexPasses. More than 22% of the employees regularly use an alternative commute mode instead of driving alone. This percentage is very encouraging given the site's abundance of free parking and lack of easily accessible transit routes. Kenworth provides employees with a variety of subsidy options to meet their specific commuting needs. FlexPasses are offered to employees at no charge, as well as a 60% ferry subsidy. Walkers, bicyclists and carpoolers also are eligible for a monthly subsidy for their use of HOV and non-motorized commute options.

In addition to the subsidies, carpool and vanpool riders also receive free reserved covered parking. Since there is limited covered parking, the fact that HOV users get priority usage and do not have to pay for it, is a significant benefit.

Kenworth's management team has shown their support through their ongoing willingness to finance the program even in a down economy. Aside from being a good corporate citizen, Kenworth benefits from its CTR program because it helps recruit and retain good employees. The company also has made an effort to seek out and work with public agencies to ensure they are able to continue providing their employees with this outstanding benefit.

Commute Program

- Transit and vanpool subsidy
- Reserved HOV parking
- Guaranteed Ride Home
- Internal ridematching
- Flextime

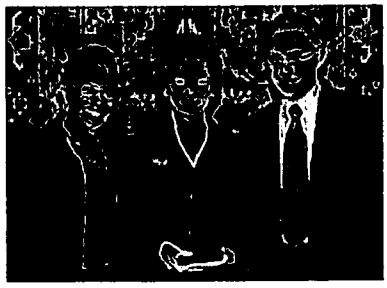
World Vision, Inc.,
Federal Way

- CTR Program CEO*:
  Desmond Capper, Senior Division Director of Corporate Services
- CTR Program PM*:
  Vicki Hulse, Administrative Coordinator to the Senior Division Director
- CTR Program ETC*:
  Cynthia Cronkhite, Administrative Assistant II

Listen to one of the radio spots featuring this winner!

Beating the odds in suburbia

Many employers in suburban locations throughout King County find it difficult to promote ridesharing because of plentiful free parking and little or no easily accessible transit routes nearby. World Vision in Federal Way is one such organization that has beaten the odds and earned a 2002 Commuter Challenge Diamond Award for ridesharing.



Jan. 22, 2003 Awards Ceremony

Accepting World Vision's Diamond Award for Ridesharing are Employee Transportation Coordinator Cynthia Cronkhite, CTR Program Manager Vicki Hulse, and Senior Division Director of Corporate Services Desmond Capper.

World Vision's commute trip reduction program is a good example of what can be done with vanpools and carpools in a suburban setting with very little transit service. Some employees have wanted to ride the bus in the past but were unable to because there were no stops within walking distance. The organization found that carpooling was a good solution, allowing employees to use an alternative commute mode when transit was not an option.

The organization provides a 50% subsidy to employees who vanpool or ride the bus. Showers and lockers are available to those who bicycle or walk to work, and all employees who use alternative commute modes have access to the Guaranteed Ride Home program so they can quickly and easily get home in case of an emergency. Monthly drawings for Commuter Bonus Plus Vouchers are also held to further reward those employees who rideshare, bicycle or walk to work.

A commuter center located in the lunchroom keeps employees informed of all their commute options. Employees also have access to information on the rideshare program through World Vision's intranet site which includes a transportation page. Forms to sign up for carpools and drawings are available here as well as links to RideshareOnline.com and other transit agencies. The transportation coordinator also provides zip code matching each month for those employees looking for carpool partners.

New employees are provided with a complete packet of information explaining the ridesharing programs available at World Vision as well as an application to sign up as a carpooler. "People are told about our program from the time they are first hired. Many are glad the rideshare options are offered and take advantage of them soon after they start working," said Employee Transportation Coordinator Cynthia Cronkhite. "The employees are glad to receive subsidies for their bus and vanpool costs, and it is always exciting to them to be chosen as a winner in the monthly drawings."

The management of World Vision understands the importance of alternative commute options. The rideshare program not only provides important benefits to employees, it also gives the organization an opportunity to show their environmental stewardship. Management further supports the program by participating with other employers in networking events all with the intent to further develop World Vision's commute trip reduction program.

Commute Program

- Transit and vanpool subsidy
- Showers and lockers

King County employers recognized at Governor's CommuteSmart Awards

Six King County employers were recently among the 15 winners statewide at the Governor's CommuteSmart Awards in Olympia. In addition, four other area employers were also nominated for the awards.The winners were chosen by the Governor's Commute Trip Reduction Task Force and the Washington State Department of Transportation, as state leaders in reducing single occupancy vehicles on our roadways, reducing pollution and fossil fuel consumption, as well as improving the quality of life. Congratulations to all the nominees and recipients of the 2002 Governor's CommuteSmart Awards.

2003 CommuteSmart news release

2003 Winners and 2003 Nominees

2002 Winners

2001 Winners

2000 Winners

1999 Winners

1998 Winners

On Wednesday, June 11th, the Washington State Department of Transportation announced the winners of the 2003 Governor's CommuteSmart Awards at a ceremony at the Evergreen State College in Olympia. The awards recognize the Washington State employers with the most successful programs encouraging the use of buses, carpools, vanpools, bicycling, walking, working from home, and compressed work weeks.

By promoting alternatives to driving alone, funding subsidies and incentives and providing on-site services, each of the nominated and winning organizations serve as role models for Commute Trip Reduction efforts.

Washington State's Commute Trip Reduction Law was adopted during the 1991 legislative session and incorporated into the Washington Clean Air Act. The goals of the program are to reduce traffic congestion, air pollution and petroleum consumption through employer-based programs that decrease the number of drive-alone commute trips.

Over 1,100 worksites currently participate in the Commute Trip Reduction program in Washington, affecting almost 500,000 employees.

For more information about starting a Commute Trip Reduction program at your worksite, call the Department of Transportation's Transportation Demand Management Office at 360-705-7846.

Appendix F
Florida's Commuter Assistance Program

Approved:

Effective: September 24, 2002
Office: Transit
Topic No.: 725-030-008-g

Thomas F. Barry, Jr., P.E.
Secretary

COMMUTER ASSISTANCE PROGRAM

PURPOSE:

To establish procedures and guidelines to the implementation of the Department's Commuter Assistance Program, identify effective employer-based transportation demand management (TDM) strategies, foster development of public/private partnerships, and fund appropriate eligible recipients to carry out commuter assistance program projects.

AUTHORITY:

Chapters 187 and 341, Florida Statutes (F.S.)

SCOPE:

The requirements or processes related to this procedure affect the State Public Transportation Office, District Offices and recipients of funds administered as part of the commuter assistance program.

DEFINITIONS:

Agency Annual Work Plan - An annual written plan submitted by agencies requesting state participation in local ridesharing projects or Transportation Management Associations (TMAs) and/or Transportation Management Organizations (TMOs). This plan identifies project goals, objectives and related project information, and serves in evaluating a project's progress and success.

Annual Summary Report and Survey - An annual summary report and survey administered by regional or local commuter assistance services. The summary report analyzes the success of the agency efforts for the year. The survey is used to verify monitoring and reporting data. The survey is to be done annually or biannually at the discretion of the District, and with the agreement of the Central Office.

Central Office - For the purposes of this procedure, it means the Department of Transportation, Public Transit Office.

District Office - For the purposes of this procedure, it means the Department of Transportation, District Public Transportation Office.

District Work Plan - An annual written plan identifying District program goals and direction. This serves as a guide for the Districts and grantees in developing individual project work plans. Service to Enterprise Zones should be considered.

Eligible Project Recipients - Local governments or their designees including: Metropolitan Planning Organizations, Regional Planning Councils, Transportation Authorities, or Community Transportation Coordinators designated pursuant to ***Chapter 427, F.S.***, are eligible recipients of matching grants. Private for-profit and private-not-for-profit corporations that have been selected pursuant to Chapter 287, Florida Statutes, may receive funds to operate Regional Commuter Services projects. Transportation Management Associations and/or Transportation Management Organizations created pursuant to ***Chapter 617, F.S.***, may also receive grants.

Enterprise Zone - Areas that chronically display extreme and unacceptable levels of unemployment, physical deterioration, and economic disinvestments, pursuant to ***Chapter 290, F.S.***.

Local Commuter Services - Public or private agencies providing commuter assistance services to a defined local area, usually serving one municipality or county. The local commuter service organization will provide ridematching, marketing, survey, Transportation Management Association and/or Transportation Management Organization support and/or other needed coordination.

Memorandum of Understanding - This is a written agreement between the Regional Commuter Service or the Local Commuter Service office and each existing Transportation Management Association and/or Transportation Management Organization. The agreement outlines the responsibilities of each agency in achieving the goals of the Commuter Assistance Program. The District shall approve the Memorandum of Understanding. This document should be reviewed and updated on a three-year cycle.

Regional Commuter Services - Multi-county agencies, that can be private-not-for-profit corporations, funded by the state, and established to provide the basic support for a network of smaller, localized Transportation Management Association/Transportation Management Organization within a specified region of the state. To the extent feasible, these programs should be placed at an existing regional entity (i.e., regional planning council, metropolitan planning organization, transit agency, or other private agency). This does not preclude other arrangements better suiting community needs. These projects are developed cooperatively between the Central Office and the District and/or Districts involved. Regional Commuter Services will provide ridematching, marketing, survey and other support as determined by the Districts and this procedure.

Statewide Commuter Assistance Annual Report - A report compiled by the Central Office detailing Commuter Assistance activities statewide. This report will include all the data and monitoring compliance figures provided by the projects to the District offices. This report will cover the preceding calendar year.

Telecommuting - A work arrangement, by which selected employees are allowed to do the normal duties and responsibilities of their positions with computers or telecommunications, at home or an alternative worksite other than the employees' usual place of work.

Transportation Demand Management (TDM) Strategies - A set of measures designed to reduce the number of trips made by single occupant vehicles and enhance the regional mobility of all citizens. These strategies can include but are not limited to: traditional ridesharing (carpooling & vanpooling); public transportation, alternative work hours (flextime, compressed work week, etc.), non-motorized transportation (bicycle and pedestrian modes); development and implementation of shuttle services; priority/preferential parking for ridesharers; promotion and distribution of discounted transit passes; and fostering telecommuting programs.

TDM Clearinghouse - Is a service of the Department, currently operated by the Center for Urban Transportation Research, which provides technical support for the Department, local governments and emerging Transportation Management Association and/or Transportation Management Organizations. Services include but are not limited to: strategic planning assistance, evaluations and survey assistance, training, TDM Resource Center and periodic newsletters. The Central Office has monitoring and fiscal responsibilities for the clearinghouse. Major requests need to be coordinated between the District and Central offices before approval to proceed.

Transportation Management Associations / Transportation Management Organizations - The terms Transportation Management Associations or Transportation Management Organizations have been used interchangeably. For the purposes of this procedure the acronym TMA will be used. TMAs are public/private partnerships formed so that employers, developers, building owners, central business districts, downtown merchant associations, and government entities can work collectively to establish policies, programs and services to address local transportation problems. TMAs realize their potential in addressing traffic congestion, air quality, and occasionally, employment issues through TDM strategies. TMAs are established within a limited geographical area to address the transportation management needs of their members. TMAs are expected to obtain private sector financing in addition to public funding.

Transportation Management Initiatives (TMIs) - These are hybrid entities that are the first step in a process in which employers and other interested parties consider collective actions for improving the means to carry people and/or goods. TMIs are usually not legally constituted and may be projects or field offices of larger organizations with broader missions. TMIs are frequently led by an advisory committee of the private sector in partnership with the public sector to solve transportation problems.

GENERAL

Coordinated use of existing transportation resources can provide a responsive, low cost alternative for alleviating urban highway congestion, improving air quality and by that reducing the need for costly highway improvements. The commuter assistance program focuses on the single occupant commuter trip that is the greatest cause of peak hour highway congestion. A coordinated effort to provide alternatives to these commuters, using existing or low cost resources, can be beneficial to the development of public transit statewide and the Department's priority efforts to relieve traffic congestion, improve air quality and to assure energy conservation. The State's Commuter Assistance Program encourages a public/private partnership to provide brokerage services to employers and individuals for: carpools, vanpools, buspools, express bus service, subscription transit service, group taxi services, heavy and light rail and other systems designed to increase vehicle occupancy.

The program encourages the use of transportation demand management strategies including: employee trip reduction planning, Transportation Management Associations, alternative work hour programs, telecommuting, parking management, and bicycle and pedestrian programs.

PROGRAM MANAGEMENT AND IMPLEMENTATION

(1) CENTRAL OFFICE responsibilities shall include:

(a) Maintain continuing communication with the District Offices on matters regarding the Commuter Assistance Program.
(b) Develop and maintain program policies and procedures.
(c) Monitor compliance with established procedures.
(d) Provide training and technical support to Districts and local programs as required, through contracts like the TDM Clearinghouse.
(e) Stay current on national and international methods for promotion of commuter alternatives and transportation demand management, and providing this information to the Districts.
(f) Provide any necessary support for demonstration projects that are statewide or regional in scope or require staffing in excess of district capabilities.
(g) Assure the coordination and implementation of support programs (Transit Corridor and Park and Ride).
(h) Compile data provided by the District into Annual Report.
(i) Provide the latest transit trends and performance measurements.

(2) DISTRICT OFFICE responsibilities shall include:

(a) Maintain communication with the Central Office on program status and implementation.

(b) Establish and maintain communications with local public and private organizations to advise them of the availability of Department financial and technical assistance programs for commuter assistance and transportation demand management.
(c) Establish specific and achievable program objectives for the District, based upon information from local and regional programs. Develop the Annual District Work Plan including project-funding needs for the next two years and assuring that the commitment of Department funds is consistent with the established production schedule. The District Work Plan provides the framework and direction for the commuter assistance activities funded by the District.
(d) Assure the provision of technical assistance in the development of commuter assistance services.
(e) Provide and manage grants to local agencies and the private sector for the implementation of Commuter Assistance Projects. This includes ensuring that grantees or contractors comply with Joint Participation Agreement or contract requirements, and that requirements of this procedure are included in the Joint Participation Agreement or contract.
(f) Ensure that appropriate application of commuter alternatives further the development of public transportation projects in the Districts and the inclusion of private transportation providers.
(g) Perform annual reviews of each agency's progress to determine the effective implementation of the Agency Annual Work Plan. Modifications to the Agency Annual Work Plan will be documented.
(h) Prepare a District Annual Local or Regional Commuter Assistance Service Report summarizing each agency's progress in the implementation of the Agency Annual Work Plans. The report will include the written reports submitted by the agencies detailing successes, mandatory reporting measures, problems and plans. These reports are due in the Central Office by March 1st of each year and will cover the preceding calendar year. This information is necessary for the maintenance of data for the Statewide Commuter Assistance Annual Report. Reports from established TMAs (more than three years old) may be submitted annually and will also be included in those District reports.
(i) Participate, as appropriate, on the Boards of Directors of private-not-for-profit TMAs and Regional Commuter Services Corporations.

(3) Issues not specifically mentioned in this procedure, nor with statewide implications, are left to the discretion of the individual District.

(4) The Districts shall program Commuter Assistance Projects in coordination with the Central Office, the appropriate metropolitan planning organization, local agencies and the private sector to ensure statewide programming to optimize available funding sources.

1. ELIGIBLE PROJECT COSTS

(a) Program administration and operational costs including: salaries, marketing materials, advertising, computerized matching, reporting, purchase of promotional

items as part of public information and education campaigns for the promotion of alternatives to single-occupant vehicle travel (promotional items must first be cleared through the FDOT Comptroller) and other project related costs.
(b) Computer hardware and software necessary to establish trip-matching services, where not redundant or sharing could be a more efficient use of equipment.
(c) Specialized demonstration projects of statewide or regional impact designed to show innovative approaches to commuter assistance.
(d) Other capital purchases for the accomplishment of program objectives.
(e) Other operating expenses for the accomplishment of program objectives, such as a Guaranteed Ride Home Project or vanpool administration.

2. ELIGIBLE GRANT RECIPIENTS

Local governments or their designees including Metropolitan Planning Organizations, Regional Planning Councils, Transportation Authorities, or Community Transportation Coordinators designated pursuant to ***Chapter 427, F.S.***, are eligible recipients of matching grants.

Although funds may be used to administer these projects within local government, recipients should be encouraged to consider subcontracting services to the private sector. Grants may be made to private organizations pursuant to ***Chapter 617, F.S.***

3. FUND PARTICIPATION

(a) Funding for this program will be allocated to the Districts based on a statewide assessment of Commuter Assistance Program need. Allocation requests identified in the Annual District Work Plan will be given first priority.
(b) The Department is authorized to fund up to 100 percent of the eligible costs of commuter assistance projects determined by the District to be regional in scope and application or statewide in nature.
(c) The Department's participation in a local project cannot exceed the amount of local participation.
(d) State funding participation in Federal Transit Administration funded projects shall be at the level defined in ***Chapter 341, F.S.***
(e) The Department's participation in Federal Highway Administration funded projects shall be at the levels required for the particular highway system fund involved according to ***Section 339.08(2), F.S.***
(f) Specific match rates are identified in the Work Program Instructions.

4. WORK PLANS

Each District shall develop an annual work plan for its District Commuter Assistance Program. This plan will detail program goals and objectives for the period October 1

through September 30. The district work plan shall identify annual program goals and emphasis areas, targets for regional and local commuter assistance services, and targets for TMAs. Plans shall be submitted to the Central Office by October 1 of each year and will be used in the development of the Department's Work Program.

5. PROJECT TYPES

5.1 Regional or Local Commuter Services operated by government agencies, transit operators or private contractors under contract to the Department shall be administered in the following manner:

5.1.1 Each agency shall submit an annual work plan consistent with Department and regional goals. The work plan will be incorporated as a "Special Consideration of the Department" in all Joint Participation Agreements, and shall include, at a minimum:

(a) An organization chart identifying all personnel funded by this project
(b) Measurable program goals and objectives with milestones to determine progress in stated emphasis areas consistent with District work plans
(c) A marketing plan identifying market penetration and client service targets
(d) An annual project budget identifying expenses and revenues by source

5.1.2 All commuter assistance service agencies receiving state funding will be required to monitor and report to the District office the following data on an annual basis or as the Joint Participation Agreement may stipulate:

(a) Number of commuters requesting assistance
(b) Number of commuters switching from single occupant vehicles
(c) Number of agency vans in service, and other coordinating agency vans that are participating in the rideshare-matching program (where applicable)
(d) Number of vehicle trips eliminated for all commuters participating in the commuter assistance program
(e) Number of vehicle miles eliminated for all commuters participating in the commuter assistance program
(f) Number of employer contacts and employers participating
(g) Description of major accomplishments
(h) Number of parking spots saved / parking needs reduced
(i) Amount of commuter costs saved

Definitions for each reporting category are provided in ***Attachment A.***

5.1.3 Regional and local commuter assistance service programs shall administer an annual survey to collect and verify data for reporting requirements. This requirement may be waived by the District if the agency can show statistically accurate follow-up compiled in a monthly or quarterly manner. Requests to waive this requirement will be reviewed by the Central Office. Surveys may be accomplished in-house or contracted

out and must not have a sample error greater than 5% and a confidence interval no less than 95%. Refer to survey guidelines in ***Attachment A***.

5.1.4 All projects shall be programmed according to the latest Work Program Instructions and according to the provisions of ***Chapter 341, F.S.***, as follows:

(a) If the local eligible recipient has taken action to secure or designate federal funds as a funding source for a project, in which case the appropriate federal match ratio applies.
(b) If the Central Office has indicated on a project-by-project basis that other funds (e.g., Transit Corridor) can be reasonably anticipated for the project, the appropriate match ratio associated with such funds shall apply.
(c) If the project is regional in scope and no regional financing mechanism exists, the project is eligible to be programmed up to 100% state participation.

5.2 Transportation Management Associations operated as public/private partnerships:

5.2.1 Funding may be provided to TMAs organized as private-not-for-profit corporations, in cooperation with local government, that are established according to local comprehensive plans, other locally adopted plans or regional commuter assistance program goals.

5.2.2 State funds may be granted in the following ratio:

TMAs will be eligible for continued funding at the lesser of $75,000 or 50% of their total budget, provided they are meeting the performance criteria outlined in their existing Joint Participation Agreement. Board member in- kind contributions may count toward local match requirements. However, in-kind contributions must have the prior approval of the District Office. Districts may use ***49 CFR 18.24 (Title 49, Code of Federal Regulation, Part 18.24, "Uniform Administration Requirements for Grants and Cooperative Agreements to State and Local Governments"*** deals with matching and cost sharing. This Federal regulation can be accessed at www.access.gpo.gov/nara/cfr as guidance in determining allowable in-kind contributions. Funding may exceed the $75,000 limit, if the District can justify the need and verify that any commuter assistance program within the District will not be adversely affected. Variation from these levels is permitted with prior consultation with the Central Office.

5.2.3 Grants supporting TMAs may be made directly to the incorporated organization or to the appropriate local governmental agency for pass-through to the TMA following the current Joint Participation Agreement procedure. TMAs receiving these grants shall include the Department as an ex officio member of its Board of Directors during the grant period.

5.2.4 To be eligible for state funding a TMA must send the Department a detailed Agency Annual Work Plan, articles of incorporation as a private not for profit body,

bylaws, geographical boundaries, trip management goals, a financing plan, an institutional structure, and potential membership estimates. Future year work plans will be required. A TMA shall use the Department's TMA Self Evaluation program annually. The District will coordinate with the TMA in the selection of criteria to be used in the Self Evaluation. Results of the evaluation will be reported to the District office annually. Records of services received from regional commuter assistance programs should be maintained. A summary of these activities shall be included with the invoice progress reports provided to the District office pursuant to the requirements outlined in the Joint Participation Agreement.

5.2.5 No TMA will be funded unless the District office has determined that its Agency Annual Work Plan is consistent with regional commuter assistance program plans, metropolitan planning organization transportation plans, local comprehensive plans and regional strategic policy plans.

5.2.6 Funds granted to TMAs under this program are for administrative, planning, marketing and operational purposes only. The Department will not participate in the acquisition of computerized ride matching capabilities unless this service is not available through a regional or local commuter assistance program.

5.2.7 Special projects and operations (shuttles, vanpools, guaranteed ride home programs, transit discounts, etc.) may be funded on a 50% state ratio to established TMAs (more than three years old).

6. PROJECT FILES

The District shall maintain the official project files, which at a minimum, shall include or have readily accessible:

(a) All Joint Participation Agreements and/or Contracts and a copy of any amendments or supplements thereto.
(b) A copy of each invoice and accompanying progress report presented for payment by the grant/contract recipient
(c) Documentation of any official on-site visits and annual evaluations scheduled by the District.
(d) An inventory of all capital acquisitions including description, state participation, current location, and cost when acquired.
(e) All pertinent correspondence regarding the project.
(f) A copy of the agency annual audit (report) performed according to the ***Public Transportation Joint Participation Agreement Procedure***, No. 725-000-005, *and* ***Recipient/Subrecipient Single Audit Procedure***, No. 450-021-001.

7. TRAINING

The basic TDM training is mandatory for all Department Commuter Assistance Program managers and Commuter Assistance Program agency directors. Additionally, the State

Commuter Assistance Office periodically offers training classes that provide the most recent technical assistance and program information available.

8. FORM ACCESS

There are no required forms associated with this procedure.

ATTACHMENT A

1. EVALUATION MEASURE DEFINITIONS

Number of Commuters Requesting Assistance: This is the number of people that request assistance of some sort including:

Carpool match list, Vanpool match list or formation assistance, Transit route and/or schedule information, Telecommuting information, Bicycle route and/or locker/rack information

Number of Commuters Switching Modes: This is the number of people that actually use the information you provide to change their current Single Occupant Vehicle mode to carpooling, vanpooling, transit use, telecommuting, walking and/or bicycling.

This information can be gathered by doing sample survey of commuters assisted on a monthly basis by either phone or mail. Every month contact a random sample of the commuters assisted the previous month to see how many actually used the information you provided. Extrapolate survey results to estimate total. It is recommended that actual data be used where available.

Number of Vans In Service: Report the number of commuter vans on the road and/or the number of vanpoolers. These are vans that are operated either by the CAP agency or any other coordinating agency that participates in the commuter rideshare-matching program operated by the CAP.

Number of Vehicle Trips Eliminated: Using the follow-up survey data or actual data multiply the frequency of alternative mode use by the estimated number of commuters using a shared mode or telecommuting.

Number of Vehicle Miles Eliminated: Using the follow-up survey data take the average trip length times the frequency of use times the number of formations.

Employer Contacts: When reporting include the number of employees at each site. Report number of employer contacts and provide a brief summary of methods of contact used.

Major Accomplishments: When reporting consider the following categories: new transit services initiated and/or improved; education programs initiated; transportation planning initiatives; guaranteed ride home projects initiated; or other implementation activities.

Parking Spots Saved / Parking Needs Reduced: Determined by the number of people using alternative modes at each employment site.

Commuter Costs Saved: Multiply vehicle mile eliminated by the average cost per mile. The American Automobile Association is a good source for the average cost per mile.

2. DISTRICT OPTIONAL EVALUATION MEASURE DEFINITIONS

Gasoline Saved: Multiply the vehicle miles eliminated by the average miles per gallon figure from the American Automobile Association.

Emissions Reduction: Multiply the vehicle miles eliminated by the emission factors for your area. Emission factors are available from the Department of Environmental Protection.

Information Materials Distributed: Categories may include but are not limited to:

Brochures, Information packets, Posters, Surveys

Special Events: Categories may include but are not limited to:

Transportation Fairs. Commuter Fairs, Special Promotions

Media / Community Relations: Categories may include but are not limited to:

Number of Public Service Announcements shown, Number of newspaper articles, Number of news stories, Number of magazine articles

3. SURVEY GUIDELINES

This is meant to be a guide for agencies choosing to administer an internal annual survey.

Probability Samples: Probability samples are those in which everyone has an equal chance or probability of being chosen. The assumption is that the people who are selected are believed to be just like those who are not selected. Types of techniques associated with probability sampling include: simple random sampling, stratified random sampling, and simple random cluster sampling.

Sample Size: Once the sampling methodology has been decided upon, a sample size may be determined. Three issues must be addressed when determining sample size:

sampling error (the degree of precision desire), stratification (the examination of sub segments of the population), and confidence levels (the degree of certainty with which the sample is representative of the population).

Sampling Error: The degree of precision in a survey sample can be determined by calculating the standard error. Specifically, as the sample size increases, the standard error associated with that sample decreases. The issue of precision with a survey sample is an important one.

Stratification: In a stratified sampling, the surveyor draws a sample with a pattern of important characteristics that is the same as the population's. If 80 percent of employees in the target area drive alone to work while 10 percent carpool, then the sample should have the same distribution of modes.

Confidence Levels: The confidence level indicates the degree to which the researcher is confident that the sample is representative. Frequently, the 95 percent confidence level is chosen, meaning that there is a 95 percent chance that the sample and the population will look alike, and a 5 percent chance that it will not.

Example: The following example illustrates the process of determining sample size. Suppose a new Transportation Management Area (TMA) wants to determine mode split for employees in its area. Census data for the region suggests that the carpool rate is 15 percent. The confidence level was chosen to be 95 percent and the standard error 2.5 percent. The following equation is used:

$N = (p)(1-p) / (te/z)^2$
N = unadjusted sample size
p = estimated proportion or incidence of cases
te = tolerable error
z = the standard score of a given confidence level

A new statistic used in this calculation is a tolerable error (te), which is defined as the standard error times the t- statistic (1.96 for a 95 percent confidence interval). Given that p = 0.15, z = 1.96, and the standard error = 0.025, te = 0.05. Thus:

$N = (0.15)(1 -).15) / (0.05 / 1.96)^2$
N = 196

To adjust for the population, the following equation is used:

$N' = N / (1 + (N / P))$
N'= adjusted sample size
N= initial sample size (calculated above)
P= target population

For this scenario, if the target population in the study area is 5,000, then:

N'= 196 / (1 = (196 / 5,000))
N'= 188

Finally, the sample size is determined by accounting for anticipated sample size. Many researchers report results with a 30 percent response rate. Therefore, this example will also anticipate the same.

N = N' / X
n = final sample size
N'= adjusted sample size
X = anticipated response rate

Given this equation, the final sample size for this example is:

n = 188 / 0.30
n = 629

Therefore, in order to determine mode split for its area, the new TMA must distribute 629 surveys to employees of its members. If the TMA is using the simple random sampling technique it would randomly choose 629 names from its database. However, if the TMA wants to use the stratified random sampling technique, the above process should be repeated for each organization. This will allow the TMA to construct a profile of each employer in its area that is statistically significant, and will ensure a statistically significant sample for the entire region as well.

4. EVALUATION MEASURE REPORTING GUIDANCE

This is an example of how an agency could go about compiling the data needed for the reports they are required to submit to the Department. **This is meant to be an example, not a prescribed format.** However, calculations must be based on known real data and mathematically correct. In our example the agency will be called ICAP (Imaginary Commuter Assistance Program).

Number of Commuters Requesting Assistance

ICAP reports the following for Month X:
100 carpool match lists processed
5 new vanpool clients

Number of Commuters Switching Modes

ICAP sends mail back cards to all 100 clients requesting carpool match lists. All the information needed from the vanpoolers is available in their fare payment and registration records.

25 mail back cards are returned by carpoolers with 5 clients reporting that they are carpooling.
5: 100 = 5%

Phone calls are made to the remaining 75 carpool clients. Of those ICAP reaches 30 and finds out 5 more clients are carpooling.

5 + 5: 100 = 10%

Number of Vans in Service

ICAP has 20 vans currently in service. There are additional 45 vans that in service and available for rideshare-matching recommendations. These vans are located in the local transit agency, which has 10 vans in service, and two private van-leasing companies, which have 35 vans in service.

Number of Vehicle Trips Eliminated

The average frequency of carpooling reported on the mail back cards was 3 days a week. The frequency of the vanpoolers is 5 days a week.

10 x 3 x 2 = 60 trips eliminated by carpoolers / week
5 x 5 x 2 = 50 trips eliminated by vanpoolers / week

Vehicle Miles Eliminated

The average carpool trip distance is 10 miles one way. The average vanpool distance is 35 miles one way.

10 x 60 = 600 miles eliminated / week
35 x 50 = 1,750 miles eliminated / week

To get the total number eliminated for the report, multiply by the number of weeks in the report.

Employer Contacts

ICAP reports the following contacts:

13 employers contacted by letter
10 employers contacted by phone
5 employers visited in person

Major Accomplishments

ICAP expanded the guaranteed ride home program to include 3 new employers.

Parking Spaces Saved / Parking Needs Reduced

15 parking spaces saved this period.

Commuter Costs Saved

The American Automobile Association estimates that the average cost per mile for ICAP=s service region is $.40.

$.40 x 600 = $240 saved / week by carpoolers
$.40 x 1,750 = $700 saved / week by vanpoolers.

Appendix G
TDM Characteristics and Strategies

Characteristics of TDM Strategies

Appendix H
Durham's Trip Reduction Program, Durham, NC

COMMUTE TRIP REDUCTION PROGRAM

WHEREAS, traffic congestion in Durham County has created, and will continue to create highways that are overcrowded and present a dancer to the health, safety, and welfare of citizens; and

WHEREAS, ozone levels in Durham County have reached increasingly unhealthy levels, especially during the summer months, leading to the probable violation of federal air quality standards; and

WHEREAS, Session Law 1999-328 sets a goal for the State of North Carolina to reduce emissions of nitrogen oxides from all sources by at least 25% by July 1, 2009 and to reduce the growth of vehicle miles traveled in the State of North Carolina by at least 25% of that growth that would otherwise occur by July 1, 2009; and

WHEREAS, pursuant to N.C.G.S. §§ 153A-121 and 153A-134, the Board of Commissioners has the authority to regulate businesses and employers located in the County of Durham; and

WHEREAS, the Board of Commissioners has determined that it is necessary to mitigate the impact of traffic by regulating businesses which produce significant levels of traffic and congestion due to the number of employees working for the businesses; and

WHEREAS, in order to provide for an orderly process, and due to limited resources to operate the program, it is necessary for the implementation of this program to cover more than one fiscal year.

NOW, THEREFORE, THE BOARD OF COMMISSIONERS FOR THE COUNTY OF DURHAM DOTH ORDAIN:

1) That the Durham County Code of Ordinances is hereby amended by adding, an article, to be numbered Article V. of Chapter 24, which article reads as follows:

Article V. Commute Trip Reduction Program

Sec. 24-116. Creation of Commute Trip Reduction Program.

1. There is hereby created a program to address the issue of traffic congestion in Durham County. In implementing this program, the County may contract with another governmental or quasi-governmental agency to provide for the efficient and effective provision of services and reviews as set out hereafter.

2. The purpose of the program shall be to provide education and consultative services to businesses, industries, and the general public on alternatives to the use of single occupied vehicles to commute to and from work; to provide information on travel demand reduction strategies, which are designed to reduce congestion on the roadways of Durham County; to gather statistical data on transportation usage; to set goals on reduction of peak period

single occupancy vehicle use and average commute trip reduction in vehicle miles traveled; and to provide, to the extent practicable, a program of incentives, including yearly recognition, for businesses and industries which excel in reducing traffic congestion by implementing exceptional travel demand management programs.

Sec. 24-117. Community Goals.

It is recognized that the reduction of single occupancy vehicle use, especially during peak hours, is an important goal for the entire Durham County community in order to reduce congestion on the highways, and to reduce the levels of ozone in the air. The following community-wide goals are therefore adopted:

Year	Percent of Alternate Mode or Non-Peak Commute Trips	Average Commute Trip VMT Reduction (%)
2001	3	2
2002	6	4
2003	9	6
2004	12	8
2005	15	10
2010	20	15

Sec. 24-118. Requirements for Major Employers.

In each year, each Major Employer shall:

1. Provide each full time, part-time, contract, or other employee with information on Alternate Mode options and required travel reduction measures and related incentives. This may include, but is not limited to: any bus routes and schedules, information on any ride share programs, and any bicycle routes. This information shall also be provided to new employees, as described above, at the time of hiring.

2. Participate in a survey and reporting effort, as directed and scheduled by the Lead Agency staff. All surveys or other reporting efforts as approved by the Lead Agency shall represent at least 65% of the total number of employees of the Major Employer. The results of the survey or other reporting efforts which are accurate, verifiable and comparable to a survey for determining single occupancy vehicle use during peak periods and vehicle miles traveled, and as approved by the Lead Agency, shall be used to determine if the traffic congestion and reduction targets have been achieved. Employee participation and trip reduction shall be based on the total number of employees. If a 65% response rate is achieved in the employee survey, then the employer may extrapolate survey results to represent the non-responders.

3. Prepare and submit a travel reduction plan to Lead Agency staff. The Lead Agency staff will assist in preparing the required plans when requested to do so by the employer. Major Employers shall submit plans according to a schedule set by the Lead Agency. If not notified earlier by the Lead Agency, Major Employers shall submit plans by December 31 of each year. One plan may be submitted for each Major Employer, which

l. Establishment of a work-at-home program, including telecommuting, for employees.

m. Establishment of a program of adjustable work hours, which may include compressed workweeks and employee selected starting and stopping, hours. Work hour adjustments should not interfere with or discourage use of ridesharing, and transit.

n. Establishment of a program of parking incentives and disincentives; Such as a fee for parking and/or a "rebate" for employees who do not use the parking, facility.

o. Implementation of other measures designed to reduce Commute Trips such as provision of day-care facilities, restaurant, or emergency ride home services.

D. A Travel Reduction Plan shall meet all the following criteria:

1. The plan shall designate a Transportation Coordinator.

2. The plan shall describe a mechanism for routine distribution of Alternate Mode transportation information to employees.

3. The plan shall accurately and completely describe current and planned travel reduction measures.

4. The plan shall state the travel reduction goals adopted by the Major Employer, including both Alternate Mode or Non-Peak Commute Trips and Average Commute Trip VMT Reduction.

Sec. 24-119. Approval Process.

1. After the Major Employer's proposed travel reduction plan is received, the lead agency shall have 60 days to object to any component of the plan, otherwise the plan is automatically approved. Any such objection shall be based solely on a failure to include a required component in the plan or an obvious mistake in the plan. If the lead agency objects, the plan is not approved and shall be returned to the employer with appropriate comments for review and revision. The employer will then have fifteen work days to resubmit the required plan. Any Major Employer who fails to submit a travel reduction plan, or pay the processing fee, shall be referred to the County Manager by the Lead Agency for possible enforcement action.

2. A processing fee in the amount of two hundred dollars ($200) shall be submitted annually with the travel reduction plan.

Sec. 24-120. Multi-jurisdictional Advisory Board.

A. There is hereby created a Multi-jurisdictional Advisory Board. The Board shall be composed of up to twenty members, one-half of whom shall be representatives of Major Employers, which shall be appointed by the Board of County Commissioners and by each of the City or Town Councils which have allowed this ordinance to be enforced in its jurisdiction or enacted a substantially similar ordinance and have entered into an inter-local government cooperation agreement with the County of Durham, other approving jurisdictions, and the Lead Agency for the administration of this or a substantially similar ordinance. The Board of Commissioners shall appoint the initial four members of the Advisory Board with each additional municipality or political subdivision appointing four members each. Each member shall serve a three-year term with two of the four members from each appointing body serving an initial two-year term in order to provide for staggered terms.

B. The Multi-jurisdictional Advisory Board shall provide guidance to the Lead Agency in implementing and managing the Congestion Management Program. The Advisory Board shall further provide information on congestion management to the County Manager and the Board of County Commissioners, and shall make recommendations to the Board of County Commissioners as to the performance of the Lead Agency.

C. The Multi-jurisdictional Advisory Board shall make an annual report to the Board of County Commissioners and to each of the City or Town Councils which have allowed this ordinance to be enforced in its jurisdiction or enacted a substantially similar ordinance and have entered into an inter-local government cooperation agreement with the County of Durham for the administration of this or a substantially similar ordinance.

Sec. 24-121. Civil penalties.

Any Major Employer who fails to conduct the survey, or other reports as approved by the Lead Agency, of employees as provided herein or who fails to submit a Travel Reduction Plan, as provided herein, shall be subject to a civil penalty in the amount of one hundred dollars ($1 00.00) per week for each week in which the Major Employer fails to comply with this provision, up to a maximum of one thousand dollars ($1,000.00). The County Manager or his designee shall have authority to assess the civil penalty as provided herein. If the Major Employer fails to pay the civil penalty within a reasonable time as determined by the County Manager or his designee, the County Attorney shall have authority to file a suit for the collection of the civil penalty.

Sec. 24-122. Review of Effectiveness of Ordinance.

The Multi-jurisdictional Advisory Board after consultation with the Lead Agency, if other than the County, shall report to the Board of Commissioners, the Durham City Council and Chapel Hill Town Council, if the two municipalities have allowed this ordinance to be enforced in their jurisdictions or enacted a substantially similar ordinance and have entered into an inter-local government cooperation agreement with the County of Durham for the administration of

this or a substantially similar ordinance, and to other jurisdictions which have enacted a substantially similar ordinance and have entered into an inter-local government cooperation agreement as set forth in Sec. 24-120, by December 31, 2002 on the effectiveness of this Ordinance, and shall, as part of this report, make recommendations for changes in the Ordinance or implementing program as deemed appropriate.

Sec. 24-123. Definitions.

1. "Alternate Mode" means any mode of commute and transportation other than the single occupancy motor vehicle, including telecommuting.

2. " Travel Reduction Plan" means a plan submitted by a Major Employer that meets the requirements as set forth in this article.

3. "Carpool" or "Vanpool" means two or more persons traveling in a light duty vehicle (car, truck, or van) to or from work.

4. "Peak Commute Trip" means a trip taken by an employee to or from work during peak hours.

5. "Commute Trip" means a trip taken by an employee to or from work.

6. "Commuter Matching Service" means any system, whether it uses computer or manual methods, which assists in matching employees for the purpose of sharing rides to reduce drive alone travel.

7. "Employer" means a sole proprietor, partnership, corporation, unincorporated association, cooperative, joint venture, agency, department, district, or other individual or entity, either public or private, that employs workers. However, the term "employer" shall not include the State of North Carolina, the United States of America, or any agency thereof.

S. "Full-time equivalent (FTE) employees" means the number of employees the employer would have if the employers work needs were satisfied by employees working 40 hours per work week. The number of full-time equivalent employees for any employer is calculated by dividing the total number of annual work hours paid by the employer, including work hours paid to contract or other workers whether or not considered employees of the major employer, by 2080 work hours in a year.

9. "Lead Agency" means a governmental or quasi-governmental agency shall evaluate Major Employer's travel reduction plans and the results achieved by the Major Employers due to the implementation of the plans, and shall provide consultative and educational programs for businesses, industries, and the general public.

10. "Major Employer" means an employer who employs, during, a 24 hour period, 100 or more full-time equivalent employees with at least 50 employees at a work site for at least six months during the year. Not included in this calculation shall be any employee who is required

by the nature of his work to daily use a personal owned vehicle in his work or is required to commute using, a vehicle owned by the employer.

1 1. "Mode" means the type of conveyance used in transportation including, single occupancy motor vehicle, ride share vehicle (Carpool or Vanpool), transit, bicycle, and walking.

12. "Non-Peak Commute Trip" means a trip taken by an employee to or from work during hours which are not Peak Hours.

13. "Motor Vehicle" means every device in, upon or by which any property is or may be transported or drawn upon a highway by mechanical means including car, van, bus, motorcycle, and all other motorized vehicles.

14. "Peak Hours" mean the hours between 7:00 AM and 9:00 AM or 4:30 PM and 6:30 PM.

15. "'Ridesharing 'means transportation of more than one person for commute purposes, in a motor vehicle, with or without the assistance of a commuter matching service.

16. "Transit" means a bus or other public conveyance system.

17. "Transportation Coordinator" means a person designated by employer as the lead person in developing and implementing a travel -reduction plan. The Transportation Coordinator shall act as the agent for the Major Employer for purposes of this ordinance.

18. "Travel Reduction Plan" means a written report outlining, travel reduction measures, which will be submitted annually by each Major Employer.

19. "Travel Reduction Program" means a program, implementing a travel reduction plan by an employer designed to achieve predetermined reductions in commute trips and vehicle miles traveled through various incentives and disincentives.

20. "Vehicle Occupancy" means the number of occupants in a motor vehicle including the driver.

21. "Vehicle Miles Traveled"(VMT) means the average (mean) number of miles traveled by a motor vehicle for commute trips.

22. "Work Site" means a building or any grouping, of buildings located within Durham County, which are physically contiguous parcels of land or on parcels separated solely by private or public roadways or rights-of-way, and which are owned or operated by the same employer.

2) The provisions of this ordinance are severable, and should any section or part hereof be declared unconstitutional or void, the rest and remainder of the ordinance shall remain in full force and effect.

3) The effective date of this ordinance shall be July 1, 2000, except for Sec. 24-118, which shall be effective only as to Major Employers with 400 or more employees on
July 1, 2000, shall be effective as to Major Employers with 200 or more employees on July 1, 2001, and shall be effective as to the remaining Major Employers on July 1, 2002.

This the 28' day of February, 2000.

INTERLOCAL COOPERATION AGREEMENT
COMMUTE TRIP REDUCTION PROGRAM

This is an Interlocal Cooperation Agreement (hereafter "Agreement") between the City of Durham, North Carolina, (hereafter the "City") a municipal corporation, and the County of Durham, (hereafter the "County") a political subdivision of the State of North Carolina. This Agreement is made pursuant to Chapter 160A, Article 20 of the North Carolina General Statutes. The date this Agreement commences is July 1, 2000.

The City and County agree as follows:

Section I. Purpose:

The purpose of the agreement is to establish an interlocal agreement which addresses county-wide administration of the Commute Trip Reduction Program and ordinance (hereafter "the CTRP program"). The County adopted the CTRP program on February 28, 2000, and the City authorized such program to be effective within the entire City by resolution adopted under the authority of GS 153A-122, passed on April 17, 2000.

Section II. Administration :

The County shall provide for the administration and enforcement of the CTRP program within the County, including all of the City of Durham. This shall include providing any necessary personnel and, in addition, contracting with an outside entity agreeable to the City and to the County (hereafter "outside entity") to provide services and administer the program. On behalf of the City, the City Manager shall have the authority to approve/disapprove the choice of such entity. The City determination regarding such entity shall be indicated through a written letter signed by the City Manager or an Assistant City Manager. The City's assent regarding the outside entity shall be considered continuing unless revoked in writing by the City Manager pursuant to the "Termination; Amendment" section herein. The City acknowledges and consents to the selection of the Research Triangle Regional Public Transportation Authority as the initial entity to provide services and administer the program herein referenced. The County shall provide the City's Transportation Manager advance notice of, and the opportunity to be represented at, all negotiations between the County and the outside entity regarding services, contract amounts, or the implementation and/or administration of the CTRP program. The County shall provide the City's Transportation Manager with copies of all contracts, evaluations, and correspondence regarding performance between the County and the outside entity, and any other relevant information regarding the administration of the CTRP program.

Section III. Duration; Extension :

The term of this Agreement shall be three years, commencing on July 1, 2000 and ending on June 30, 2003, which term may be extended as provided herein. The Agreement may be extended year to year for a total of two additional years without further action by the respective governing bodies of the City and the County, by written agreement signed by the City Manager and the County Manager. Two such extensions shall be possible, which shall make the total duration of this Agreement five years, including extensions.

Section IV. Method of Funding:

1. The County shall fund the CTRP program, reimbursed in part by the City, as provided herein. The yearly amount paid by the County to the outside entity for administration of the CTRP program in Durham County, including the City, is denominated the "Durham contract amount." The County Manager and the City Manager shall meet to consider and make recommendations regarding an annual budget to support the Durham contract amount. The recommendations of the respective Managers shall be submitted to the Board of Commissioners of Durham County and the City Council of the City of Durham. The respective Boards shall each consider such budget recommendations and take such action as they deem appropriate. If the Boards do not agree on the annual budget as submitted by the Managers, the Managers shall meet again to reconsider and submit a modified budget proposal to the Boards. The failure of the respective Boards to agree upon an annual budget after a second attempt shall be grounds for terminating this Agreement.

2. The City shall pay the County a proportionate share of the Durham contract amount. The proportion paid by the City shall be the Durham contract amount divided equally between the City and the County.

3. If the Durham contract amount is not a predetermined yearly amount, but varies month to month, then the County shall bill the City twice a year, each bill representing a six month period, for the City's proportionate costs, starting on or after December 30, 2000. If the Durham contract amount is a predetermined yearly amount, or if the variable monthly amount may be estimated on a yearly basis with reasonable certainty, the County may bill the City at the beginning of each yearly contract period. The City shall pay any bills received within 30 days of receipt.

4. At the end of each fiscal year, the Finance Director of the City and the Finance Director of the County, or their designees, shall conduct a review and reconciliation of amounts paid and payable under this Agreement to ensure that the City and County has each contributed in accordance with its obligations under this Agreement. Such adjustments, refunds, or additional payments as may be necessary to effectuate the reconciliation agreed upon by the respective finance directors shall be promptly made.

Section V. Termination; Amendment:

1. This Agreement may be terminated by either party, with 30 days written notice, for noncompliance with the provisions of this Agreement. In the event of such termination, the parties shall be obligated to pay only for services received as of 30 days from receipt of the termination notice.

2. This Agreement may be amended by action of the governing bodies of the City and the County, or as otherwise provided in this Agreement.

3. Either party may also terminate this Agreement for the upcoming fiscal year for any reason if notice of such termination is received by the other party on or before May 15th prior to the beginning of the July 1 fiscal year.

4. The City may, in addition, terminate this Agreement by written notice effective upon receipt if the County's choice of an outside entity is not acceptable to the City, if the parties are unable to agree on a contract amount as provided in Section IV, or if the services provided for administration of the CTRP program are unacceptable. The City shall notify the County of termination for reasons 1 or 2 above within 45 days of the City's receipt of written notice from the County concerning the identity of the outside entity or the amount of the contract. The City shall notify the County of termination for reasons of unacceptable administration 60 days prior to the date of termination, and shall give the County an opportunity to cure the problems in the outside entity's performance during such time period.

Section VI. General Provisions:

1. This Agreement shall be recorded both in the Office of the Clerk of the City and the Office of the Clerk of the County.

2. The City Manager shall designate persons to carry out the City's obligations under this contract. The County Manager shall designate persons to carry out the County's obligations under this contract.

3. This contract is intended for the benefit of the City and the County and not any other person. No third party rights are created by this contract, and this contract shall be enforceable solely be the parties hereto.

IN WITNESS WHEREOF, the City and County have authorized this Agreement to be executed and attested by their undersigned officers, to be effective from and after July 1, 2000.

RESOLUTION #8647

RESOLUTION TO PERMIT A COUNTY ORDINANCE REQUIRING COMMUTE TRIP REDUCTIONTO BE ENFORCED WITHIN THE JURISDICTION OF THE CITY OF DURHAM AND TO ADOPT SUCH ORDINANCE IN SUCH PORTIONS OF THE CITY WHERE THE COUNTY ORDINANCE MAY NOT BE ENFORCED

WHEREAS, peak hour traffic congestion and air quality have been identified as critical concerns in Durham; and

WHEREAS, single occupant vehicle use is a major contributor to peak hour traffic congestion; and

WHEREAS, vehicle emissions are a major contributor to air quality concerns in the area; and

WHEREAS, Transportation Demand Management is an effective strategy intended to shift single occupant vehicle use from the peak hours and to reduce vehicle miles of travel; and

WHEREAS, it is in the public interest to reduce peak hour single occupant use and the average commute trip length and associated vehicle miles of travel; and

WHEREAS, a Commute Trip Reduction Program has been developed which would reduce single occupant vehicle use in the peak hours and reduce average commute trip vehicle miles traveled; and

WHEREAS, the Durham Board of County Commissioners approved a Commute Trip Reduction Program for employers of more than 100 employees on February 28, 2000; and

WHEREAS, many of the employers of more than 100 employees in Durham County are located within the City of Durham; and

WHEREAS, it would be more effective and efficient to have one uniform ordinance enforced county-wide.

NOW, THEREFORE BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF DURHAM

Section 1

That the City Council, under the authority of NCGS 153A-122, hereby allows the attached ordinance adopted by Durham County on February 28, 2000 entitled Commute Trip Reduction Program to be enforced within the boundaries of the City of Durham;

Section 2

That to the extent permitted by law, changes in such ordinance that are passed by the County shall also be enforceable within the City of Durham;

Section 3

That if such ordinance is deemed to be unenforceable by the County in such areas of the City that are not located within the County, then the City hereby adopts the ordinance directly for such areas as an ordinance of the City;

Section 4

That this resolution, and the adoption of such ordinance, if necessary, shall be effective from the date of passage of the resolution.

This the 17th day of April, 2000.

APPROVED BY
CITY COUNCIL

APR 17 2000

B. Ann Gray

CITY CLERK

NORTH CAROLINA
DURHAM COUNTY

AGREEMENT TO EXTEND

THIS AGREEMENT TO EXTEND is made and entered into by and between the COUNTY of DURHAM, a political subdivision of the State of North Carolina, (hereinafter "COUNTY"), and the CITY OF DURHAM, a municipal corporation, (hereinafter "CITY"). The date this Agreement commences is July 1, 2003.

WITNESSETH:

WHEREAS, the City and County entered into an Interlocal Cooperation Agreement for the Commute Trip Reduction Program (hereinafter "Interlocal Agreement") dated July 1, 2000; and

WHEREAS, pursuant to Section III of said Agreement, entitled "Duration; Extension', the term of the Agreement was three year, ending June 30, 2003, which term may be extended year to year for 2 additional years without further action by the respective governing bodies of the City and County, by written agreement signed by the City Manger and County Manager.

NOWTHEREFORE, the City and County, through their respective Managers, hereby agree as follows:

1. By this written Agreement to Extend pursuant to Section III of the Interlocal Agreement the parties agree to extend the term for one year from July 1, 2003 to June 30, 2004.

2. The Interlocal Agreement shall remain in full force and effect to the extent not inconsistent with this Agreement to Extend.

IN TESTIMONY WHEREOF, the County of Durham has caused these presents to be signed in its name by its County Manager, and the City of Durham, has caused these presents to be signed in its name by its City Manager, the day and year first written above.

CHARLOTTE OBSERVER SUNDAY, MARCH 2, 2003

Steering hybrid cars into the mainstream

Boosting their appeal to families with kids could be the key

BY BRAD Foss, Associated Press

VIENNA, Va. — Francine Rosenberger is not a tree hugger. The 35-year-old securities lawyer does not empathize with rants against gas-guzzling vehicles and, truth be told, has no moral opposition to parking a second SUV in her driveway.

Yet there she was at her local Toyota dealership recently peeking under the hood of a Prius, sizing up the gas-electric car designed for high fuel efficiency and low emissions.

What prompted Rosenberger to shop around for an eco-friendly car? A state law that permits hybrid owners to drive Solo in high-occupancy lanes during rush hour. "That saves me time, which is worth more than anything," said the Arlington, Va., mother of two infants, whose eight-mile com mute can take 45 minutes. "The gas mileage is just a bonus."

Toyota Prius owner Lyle Brown of Spotsylvania County, Va., a commander in the Naval reserves, says breezing past rush-hour traffic jams in the restricted commuter lane makes a hybrid vehicle a worthwhile investment.

ROBERT A. MARTIN - ASSOCIATED PRESS PHOTO

Salesmen at the dealership, Koons Toyota, and crosstown rival Rosenthal Honda say pragmatism often trumps idealism among buyers of gas-electric cars, and they should know:

Koons and Rosenthal lead the nation in hybrid sales to consumers. As automakers try to figure out how to give hybrids mainstream appeal, marketing gurus suggest paying more attention to the needs of people like Rosenberger, the soccer moms of tomorrow.

As one marketing executive put it, hybrid technology will either flourish like cell phones or languish like e-books.

Hybrids are powered by a gasoline engine and an electric motor attached to a battery. The electric motor kicks in at low speeds in the Prius and during acceleration in Honda's Civic Hybrid. The battery recharges when the engine is running and when the driver steps on

the brakes. Both cars cost a few thousand dollars more than comparable conventional models, but they get more than 45 miles per gallon.

Prius salesman Dan Scanlan says gas-electric vehicles represent "the beginning of the end for OPEC," an allusion to the argument that hybrids help reduce the country's dependence on foreign oil. But the former radio reporter's sales pitch is otherwise devoid of political or environmental commentary, focused instead on gee-whiz features, such as how the gas-powered engine shuts down when the car stops.

Scanlan also tries to portray hybrid owners as just like everyone else. One moment he's checking the oil of an electric green Prius as Rosenberger looks on, the next he's telling her about a hybrid owner who enjoys an extra hour of sleep now that he uses the HOV lane.

If hybrids are to gain wider acceptance - they made up less than 1 percent of all car sales last year automakers will need "to make these cars practical for families with kids," said Jon Berry, senior research director at New York based market research firm Roper ASW and co-author of "The Influentials," a book about trend-setting consumers.

That means putting gas-electric engines into larger vehicles, bringing down the cost and improving the somewhat sluggish performance - goals the major automakers are working on. Honda learned some of these lessons last year when it introduced the four door Civic Hybrid, which quickly outsold its original hybrid, the two-door Insight, even though the Insight runs about 20 miles; farther on each gallon of gas.

If Virginia consumers are any barometer, a bill in Congress that seeks to give passenger-less hybrids access to HOV lanes nation wide could boost interest around major metropolitan areas. (Arizona already exempts hybrid owners from HOV restrictions.)

Construction has begun on Charlotte's first HOV lanes. They will be on Interstate 77, from just north of uptown to the future Interstate 485 in north Mecklenburg. The lanes should open in fall 2004.

For now, hybrids are on the fringe, a transportation alternative popular with environmentalists, technology buffs and movie stars. About a third of all hybrids are bought in California.

Last year, domestic hybrid sales grew 77 percent to more than 36,000 vehicles. Executives at Honda and Toyota expect combined U.S. sales to reach nearly 40,000 in 2003.

Prius owner Lyle Brown of Spotsylvania County, Va., a 43-year-old Naval reserves commander, says practicality isn't the only reason to own a hybrid.

He told about driving through a hip neighborhood in the nation's capital, when another Prius pull ed up beside him at a red light In side that car were a guy in his 20s and. a pretty woman about the same age. Brown, wearing his khaki-colored Navy uniform, wasn't feeling particularly cool.

That changed, he said, as "the long-haired guy kind of looks down at his car, then he looks down at my car and he nods"

Appendix J

Programs of Excellence

Samples of TDM initiatives from around the country featuring their accomplishments and quantifiable achievements of their significant program efforts.

Measures, Markers and Mileposts, Washington State Department of Transportation, May 31, 2003

There also needs to be a focus on performance-based management efforts. Sample information is included along with the Washington State's "Gray Notebook" as referenced above.

Travel Demand Management (TDM) – Success Stories

Seattle Way-To-Go Household Car Reduction Program (www.cityofseattle.net/waytogo)
Way to Go, Seattle is a new initiative to show people they can save money and make their communities more livable by making more conscious transportation choices, just as they do now with recycling and water conservation. Below is an article and news release about two of the program's trail projects.

"Program to Get Seattleites Out of Second Cars Successful"
Seattle Times, Saturday, March 10, 2001

They rode bicycles or car-pooled or took the bus. They saved up errands and ran them in one trip. They walked to the grocery store or to the kids' soccer match. And, ultimately, they saved themselves hundreds of dollars and avoided dumping 3 tons of greenhouse gas into the atmosphere.

What those 22 Seattle families did not do was use their second cars.

"I didn't think I could do it, says Sharon Griggins-Davis, a Queen Anne resident. "We'd got into some very bad habits of relying on that car."

Hers was one of the families that volunteered to give up their second cars for six weeks as part of a city-sponsored experiment.

As volunteers for "Way to Go, Seattle, the families agreed to take $85 a week from City Hall in exchange for promising to get by with one automobile. Just to be sure, the city recorded their odometer readings.

Participants also agreed to keep journals of how they got around.

Based on city calculations, taking 22 cars off the roads for six weeks saved each family an average of more than $70 per week - even allowing for bus and taxi fares - officials said. It also led to 1,700 fewer car trips through local neighborhoods, 8,100 fewer car-miles and prevented 6,500 pounds of carbon-dioxide emissions - the gas that causes global warming.

"This was not a scientific survey, said Mayor Paul Schell. "It was an educational experiment into how we can do better with what we have."

Some of the families found the task too difficult and reverted to their second cars when the program ended, city officials said. But most said they learned how easy it is to get along with one car. One family has sold its second car and others plan to.

"With two cars, there is always the temptation to use a car when you really don't need it, said Malva Slachowitz, a Ballard participant. "But we learned some things. When we made a shopping list, it was a serious list. When we went on a family outing, we would stop and do an errand."

The experiment appears to have been successful enough to justify another one, Schell said.

Way to Go Seattle! Families Park Their "Extra" Car; All Save Money, Some Give Up Car For Good
News Release, Mayor Paul Schell, September 22, 2001

23 Seattle families completed a City of Seattle pilot program to see if people could get along without their extra car for six weeks. The results are impressive. At least four families liked it so much that they're selling the car. Some families didn't need to participate in the program to be convinced. By determining the cost of owning their car on the City's website, they sold their extra car without even participating in the program!

"We can all take small steps to improve our transportation system," said Mayor Paul Schell. "These families have proven that we can make choices about how to get around and enjoy spending less time in our cars."

All the families in the study saved money, and most saved about $64 per week. The all found they could get around on transit, walking, bicycling and taking taxis when needed for about $21 a week, far less than the $85 per week cost of an average second car. Most families tell us they will continue to take the bus or ride their bike, and think about whether they need to drive to where they want to go.

"We hope more people will see they don't need that extra car," said Jamae Hoffman, project manager. "Families making smart decisions about transportation can cut down on vehicle trips, congestion, gasoline use and, of course, air pollution."

The best experience for Richard Kielbowitz and Linda Lawson of the Hawthorne Hills neighborhood was "watching the price of gas rise for other people". "When we heard reports of traffic jams, we counted our blessings that we were not caught up in them," they said. After participating in the program, Kielbowitz and Lawson sold their second car.

"Before I would have driven north for movies and shopping. Now, I head downtown on the bus," said Lori Goodwin of the Queen Anne neighborhood. "It was a fun experience. Same movies, same shopping, but it was wonderful not to have to deal with a huge parking lot."

Seattle's Strategic Planning Office paid the participating families $85 per week for keeping a daily dairy of their transportation activities and expenses during the six weeks they did not use their extra cars. Families were able to use the $85, the national average cost of owning and operating a second car, for bus fares, joining a Carsharing service, or taxi when needed. Most families spent only about $21 getting around without a car, saving an average of $49 per week. As a result the 23 families made nearly 200 fewer car weekly trips totaling 1,260 miles of travel avoided.

What comes next? Seattle's Strategic Planning Office plans to use these results to encourage others to think about how much it costs them to own and operate their cars, and decide if they, like other families, would rather have the money. The goal of this project is to demonstrate ways to ease neighborhood traffic and vehicle pollution.

Walking, Biking Surpass Driving in Vancouver (www.gvrd.bc.ca)
More people are now moving about by foot and bike than by car in Vancouver, British Columbia, according to a survey by the Greater Vancouver Regional District. Auto trips have actually dropped five percent, the report says. Vancouver City Councilor Gordon Price says, "Though some may find it difficult to believe, there are actually places on the peninsula with less vehicle

congestion than five years ago." Vancouver is famous for its commitment to planning, and every City Council since the early 1990s has stated that the city's transportation priorities would be walking and cycling, followed by transit, goods movement, and cars. "A new way of living is happening in Vancouver as we become the city we said we wanted," Price says. "Great cities are first of all places where most people can walk - and Vancouver is on its way to becoming one of those places."

Hasselt, Belgium Reduces Automobile Travel With Free Transit

(CNN, 2000) 68,000 people live in the Belgium town of Hasselt; another 200,000 people commute in and out every day. Faced with rising debt and traffic congestion, the mayor decided to abandon plans to build a third ring road around the town. Instead, he closed one of the two existing ring roads, planted trees in its place, laid more pedestrian walkways and cycle tracks, increased the frequency and quality of the bus service, and announced that public transport would be free of charge.

A year later the use of public transport has increased by a staggering 800%. The merchants are happy because business has increased; there are fewer accidents, fewer road casualties and there has been an increase in social activity. The same day that the town made the buses free, they also slashed local taxes – the habitants of Hasselt are now paying less than they were 10 years ago. More people are attracted to Hasselt because it is easier to get there, and the extra income has reduced the local taxes. One of the reasons the measure was adopted was a shortage of funds - the city did not have enough money to expand its roads. Free buses were a cheaper alternative, and it worked. The city had been slowly losing population, but since the new measures were adopted, the population has been rising 25 times faster than it was shrinking. Hasselt has been showered with international awards and prizes for the innovative way it has tackled congestion and pollution.

Commute Trip Reduction Programs

Pioneer Pacific Property Management (www.bctransit.com/traveloptions)
Pioneer Pacific Property Management's Station Tower, located at a SkyTrain station in Surrey (a suburb of Vancouver, British Columbia) is home to more than 700 employees of 30 different organizations. By working together, Station Tower has created an extremely effective program. Nearly 50 percent of Station Tower's employees use transportation alternatives.

Known as TravelChoices, the program was commissioned by Intrawest Corporation, the developer of the complex. Each organization in the building has a TravelChoices representative who provides time to administer the program. The trip reduction program enabled Intrawest to reduce the number of parking spaces required by 50 spots. At about $11,000 per spot, that meant $500,000 in savings. The program includes the following features:

- Showers and secure bike lockers are provided for cyclists.
- TravelChoices members have free access to the Gateway fitness facilities, including exercise equipment, showers and lockers.
- A ride-matching service links potential carpool partners within the complex.
- Reserved, preferential parking is available for carpools and vanpools.
- TravelChoices members get guaranteed ride home insurance.
- The TravelBucks incentive program gives its members one TravelBuck for each day they use alternative transportation to and from work.
- Prizes include free coffee, transit FareSaver Tickets, ski passes and rental car certificates.

"Working a trip reduction program into the planning stages of a development is a strategy more property developers should use. It saves money, it's environmentally friendly and it presents potential tenants with another reason to choose your site." Glenda Onstad, Senior Property Manager, Pioneer Pacific Property Management

Alameda County Congestion Management Program (www.accma.ca.gov)
The Alameda County (East San Francisco Bay area, including suburban and rural areas) Congestion Management Program enlisted four employers to provide financial incentives to encourage reduced driving. The table below summarizes the results at the four worksites. The program managers conclude that financial incentives alone typically reduce automobile commute trips by 16-20%, and significantly more if combined with other TDM strategies.

Table 2 **Alameda County Commute Incentive Program**

	Alameda	Albany	Oakland	Pleasanton
Incentive offered	$1.50/day	$2.50/day	$40/mo transit pass	$2.00/day

Ernst & Young (www.wageworks.com)
The accounting and management firm Ernst & Young offers a pre-tax commuter transportation and parking benefits to its employees in partnership with WageWorks, starting in 2001. This is projected to save employees 40% of their commuting and work-related parking costs, and reduce the firm's payroll expenses.

"Adding commuter benefits to our innovative benefits offerings is just one more reflection of Ernst & Young's commitment to make the firm a great place to work," says vice chairman of human resources, James L. Freer. "When we surveyed a group of employees regarding what benefits they value, a pre-tax commuter program was the most frequent enhancement by far, with 62% of the respondents asking for it. We are pleased to offer such a program that will make our people's commute to work a bit easier."

CH2M Hill
Upon moving into new offices in the Seattle suburb of Bellevue, WA, the 430 employees of the engineering firm of CH2M Hill were offered $40 per month if they walked, bicycled, carpooled or took transit to work; or free parking if they drove alone. The firm's drive-alone rate declined from 89% to 54%, and stayed there, while the percentage biking or walking increased from 1% to 17% (see table below). With parking demand down by 39%, the firm's problem of 'too many parkers for too few spaces' disappeared. This approach reduced costs to the company, reduced traffic and pollution, while increasing tax revenue.

	Before	After
Drive Alone	89%	54%
Carpool	9%	12%
Bus	1%	17%
Bike, Walk	1%	17%

Car Free Planning

Bogota Car Free Day (www.sinmicarroenbogota.com and in English www.alcaldiabogota.gov.co/sinmicarroenbogota/sinmicarroeng.htm)
The city of Bogota, Columbia first established an official Car Free Day on February 24th, 2000, organized by Mayor Enrique Peñalosa and The Commons, an international environmental organization. This was one of the first Car Free days organized in a developing country. The event was successful and highly popular, and as a result the organizers won the prestigious Stockholm Challenge Award (www.challenge.stockholm.se). Below is the mayor's summary:

> "It was a formidable achievement of Bogata's citizens. A city of seven million inhabitants functioned well without cars. This exercise allowed us to catch a glimpse of what must be the transportation system of the city in ten or fifteen years: an excellent public transportation system and rush hours without cars.
>
> Most important of all, was the sense of community that was present that day. We fortified our confidence in our capacity of making great collective efforts to build a more sustainable and happier city. Surveys revealed that 87% of the citizens were in agreement with the Car Free Day; 89% did not have any difficulty with the transportation system used; 92% said there was no absenteeism at their office, school or university; and 88% said they would like to have another Car Free Day.
>
> Now we want to bring a referendum to our voters, proposing a goal for the year 2015: Between 6:00 a.m. and 9:00 a.m. and between 4:30 p.m. and 7:30 p.m., all cars must be off the streets. Therefore the city should move exclusively in public transport and bicycles.

Campus Transport Management

Stanford University (www.stanford.edu)

Stanford University in Palo Alto, California plans to expand capacity by 25%, adding more than 2.3 million square feet of research and teaching buildings, public facilities and housing without increasing peak period vehicle traffic. By 2000, 1.7 million square feet of new buildings had been developed while automobile commute trips were reduced by 500 per day. To accomplish this the campus transportation management plan includes:

- A 1.5 mile transit mall.
- Free transit system with timed transfers to regional rail.
- Bicycle network.
- Staff parking "cash-out".
- Ridesharing program.
- Other transportation demand management elements.

By using this approach the campus was able to add $500 million in new projects with minimal planning or environmental review required for individual projects. The campus also avoided significant parking and roadway costs. Planners calculate that the University saves nearly $2,000 annually for every commuter shifted out of a car and into another mode. This also reduced regional agency traffic planning costs.

Public benefits included decreased congestion and improved safety on surrounding roadways and the regional traffic system, reduced air, noise and water pollution, and improved local transit options. All of Stanford's transportation services are available to students, employees and the general public.

Hacienda is a mixed-use planned unit development (PUD) of distinction and quality. At 875 acres, Hacienda is the largest such development in Northern California and has been selected as one of the world's top 10 mixed-use business parks by Site Selection magazine.

Located near the junction of two Interstate freeways (I-580 and I-680), Hacienda is about halfway between San Francisco to the northwest and Silicon Valley to the southwest. Hacienda's central location makes for easy access to all the Bay Area's commercial centers and the region's largest labor pool.

As currently zoned, the park will contain approximately 11 million square feet of office, R&D, commercial and residential space. Construction of the park's infrastructure began in 1982, and the first office building was completed in August 1983.

All infrastructure improvements for Hacienda are complete, and over seven million square feet of space has been developed to date. Land uses allowed by the PUD include 4 & 5-story mid-rise office; 2 & 3-story garden office; 1 & 2-story "office/flex", 16 units/acre residential development and retail/commercial development.

Hacienda is a high-quality, mixed-use, master planned development situated near the intersection of two Interstate freeways in Pleasanton, California. Hacienda is conveniently located between San Francisco and Silicon Valley. With its instant access to two neighboring Interstate freeways and its advantageous "reverse-commute," companies at Hacienda can easily serve all their Bay Area clients, as well as draw from the Bay Area's largest labor pool and most affordable and rapidly growing housing market.

At 875 gross acres (730 net acres), Hacienda is the largest development of its kind in Northern California. 10,085,279 square feet of existing, mixed-use space is occupied by some 413 companies that locally employ approximately 22,474 people. Under the current PUD, at Hacienda's build-out, the park is expected to contain roughly 11.2 million square feet of mixed-use space and be the work location for 28,000 people.

Because of the innovative approach to planning, traffic mitigation, services and aesthetics taken by The Prudential Realty Group, Hacienda's principal developer, Hacienda retains overwhelming support from local voting residents and elected officials. Hacienda's unique programs and success have been featured in The Wall Street Journal, The San Francisco Chronicle/Examiner, The San Jose Mercury-News, as well as many other local, regional and national publications. Virtually all of the Bay Area's television stations have featured Hacienda. So well regarded are Hacienda's accomplishments, that in December 1988, Site Selection Magazine named Hacienda one of "the ten best business parks in the world."

2003 BEST WORKPLACES for COMMUTERS™ Hacienda Business Park

Hacienda knows our employees and residents need solutions for their commute. In response, Hacienda has created a nationally recognized comprehensive program to address commuting needs. This program meets all the required conditions to attain the national standard of excellence in commuting programs.

Hacienda is presently home to approximately 20,000 employees and residents, many of whom commute into the park from surrounding cities. Because of the high volume of commuters, a variety of transportation links with outlying areas have been developed to connect park users with destinations at or near their place of business. The following is an overview of the park's current program contained within a review of the various transportation alternatives available to Hacienda users.

In 1984, the developers of Hacienda entered into cooperative discussions with the City of Pleasanton to develop a plan that would control traffic congestion in the newly developed 854 acre park. These discussions resulted in an ordinance aimed at reducing traffic congestion. Under this ordinance, Hacienda was required to oversee park tenant participation to make sure that they were in compliance with the new traffic reduction requirements. The development also coordinated park-wide programs that would aid companies in meeting ordinance goals. Compliance assistance strategies consisted of a free commuter shuttle, carpool and vanpool coordination, development of on-site amenities to assist in the promotion of transportation alternatives and various information campaigns.

In 1994, amendments were made to the city ordinance to allow the City of Pleasanton the ability to receive delegation of the Bay Area Air Quality Management District's Regulation 13-1 and to meet requirements imposed by the Alameda County Congestion Management Agency. The amended ordinance required businesses with 50 or more employees, who begin work between the hours of 6:00 - 10:00 a.m., to meet both congestion management and vehicle reduction goals. Specifically, businesses were asked to achieve an average vehicle ridership of 1.35 persons per car by 1998 and reduce peak hour traffic by 45%.

As noted, Hacienda developed TSM measures that would aid park businesses in meeting city's congestions management objectives. Hacienda's Covenants, Conditions and Restrictions authorize the park to administer, coordinate and enforce transportation requirements. To do this, a comprehensive transportation program was initiated on Hacienda. Since 1985, the Association has continuously provided services to park users to help them realize their individual goals and thus help the city to achieve its goals. The services provided have changed with time to both meet the changing needs of the park population and to insure the highest cost benefit.

In 1995, with passage of the Lewis Bill, mandatory Transportation Management requirements could no longer be

required of employers by government agencies. Because of Hacienda's longstanding commitment to the goals of transportation management, incentive programs to encourage the use of transportation alternatives have continued voluntarily employing the same successful and award-winning approach utilized under the mandatory program.

Measures, Markers and Mileposts
The Gray Notebook for the quarter ending March 31, 2003

9th Edition
Published May 21, 2003

"What gets measured, gets managed."

This periodic report is prepared by WSDOT staff to track a variety of performance and accountability measures for routine review by the Transportation Commission and others. The content and format of this report is expected to develop as time passes. Information is reported on a preliminary basis as appropriate and available for internal management use and is subject to correction and clarification.

Measures, Markers and Mileposts
The Gray Notebook for the quarter ending March 31, 2003

9th Edition
Published May 21, 2003

Contents

Worker Safety: Quarterly Update 1
Injury rates for WSDOT's highway engineering, highway maintenance, and ferry vessel workers.

Workforce Levels and Employee Training: Quarterly Update 2
The size of WSDOT's permanent, full-time workforce and employee training needs.

Highway Construction Program: Quarterly Update 3
Construction program delivery, cash flow, deferred projects, and the Tacoma Narrows Bridge project status report.

Highway Safety: Quarterly Update 5
Delivery of safety improvement projects, intersection collisions, bicyclist fatalities, traffic safety near schools, and federal benchmarking of bicycle and pedestrian programs.

Highway Maintenance: Quarterly Update

Safety Rest Areas 8
Locations and amenities, usage, and feedback from the public.

Snow Removal 9
Winter severity and snow and ice operations costs, snowfall and overtime hours, pass closure hours, and increased anti-icer use and roadway conditions.

Measuring Congestion: Annual Update 10
Typical freeway traffic volumes from 1993 to 2002, three-year average of weekday traffic volumes in March at seven locations, traffic volumes and speeds in 2000 and 2003 on State Route 520, distribution of traffic between freeways and arterials, traffic accidents on Interstate 405 in 2000 and 2002, reduction in congestion due to highway improvements, annual update of travel time measures, and a new dynamic 95 percent reliable travel time service.

Incident Response: Quarterly Update 14
Number and types of responses, average clearance times, incidents with clearance times over 90 minutes, and service actions taken.

A Note from Doug MacDonald

The ninth quarterly Gray Notebook *includes a couple of noteworthy new features.*

First, three sections (pages 32 to 36) provide annual reporting on transportation system benchmarks specifically requested and directed by the legislature in January 2002. These requirements are now set forth in RCW 47.01.012. We are pleased that these topics are now added to the variety of performance measures and reports that have already found their way into the Gray Notebook *on WSDOT's own initiative.*

Second, the section on Measuring Congestion (pages 10 to 13) shows the efforts WSDOT is now making to quantify and describe the important issues of highway performance in the areas of travel times, congestion and delay. Explanatory notes accompanying those sections describe our aims, what we have achieved to date, and what we must continue to do. It is probably true that, to a greater extent than any other Gray Notebook *section, this material is on the cutting edge of transportation system performance measurement. There is much, however, to be done, as you will see.*

We hope you find the Gray Notebook *interesting and useful. For other aspects of WSDOT's accountability efforts, see* www.wsdot.wa.gov/accountability. *And much more will be forthcoming, as we work to meet the accountability and reporting expectations that the legislature has incorporated in the recent 2003 Transportation Funding Package.*

Contents continued on next page

Contents (continued)

Environmental Programs

Management System 16
Tracking violations and non-compliance events, compliance assurance procedures.

Environmental Impact Statement (EIS) Tracking 19
National median and WSDOT actual processing times for EISs, WSDOT active and completed EISs.

Protecting Streams from Construction Site Erosion and Runoff 20
Compliance assessment of 29 moderate and high-risk construction projects.

Replacement Wetlands 21
Acreage and type of WSDOT wetland projects, wetland sites meeting 2002 standards, success rate of wetlands with monitoring completed, case study of Blaine replacement wetland.

Traveler Information: Quarterly Update 24
Number of calls to 1-800-695-ROAD, web site use, and web site feedback.

Commute Trip Reduction: Quarterly Update 25
Puget Sound vanpool use, Eastgate park and ride expansion, and park and ride lot occupancy trends.

Washington State Ferries: Quarterly Update 27
Customer comments, on-time performance, trip reliability, ridership, farebox revenues, and construction program delivery.

State-Supported Amtrak *Cascades* Service: Quarterly Update 30
Ridership, on-time performance, customer satisfaction index, and Amtrak's future.

Washington Grain Train Update 31
The number of carloads carried.

Benchmarks

Administrative Efficiency 32
National administrative cost comparison, progress toward first quartile target, internal administrative allocation.

Transit Efficiency 33
Operating cost per total hour, boardings per revenue hour, operating cost per passenger mile, operating cost per boarding.

Vehicle Miles Traveled Per Capita 36
VMT per capita trend in Washington and national comparison.

Special Features

Hot Mix Asphalt (HMA) Pavement Delivery Update 37
Forecasted and awarded tons of HMA (formerly called asphalt concrete pavement).

Innovative and Cost-Effective Maintenance Practices 37
Living snow fence planted on State Route 25.

Highlights of Program Activities 38
A snapshot of WSDOT's activities during the quarter, including started or completed projects, legal matters, savings and efficiencies, innovations and awards, new WSDOT information sources, grants received and grants awarded, and special events.

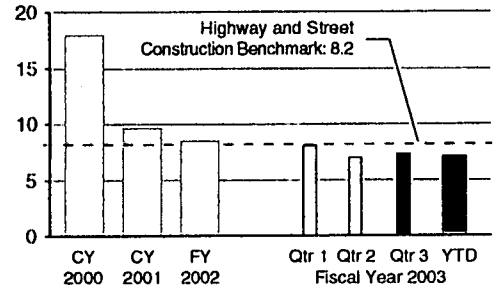
***Gray Notebook* Subject Index** 40
Where to find every performance measure ever published in the *Gray Notebook*, via electronic access.

Worker Safety: Quarterly Update

Continuing updates on *Gray Notebook* safety topics – data is shown for calendar years (CY) 2000 and 2001, fiscal year (FY) 2002, and FY 2003 by quarter and by Year-to-Date (YTD).

WSDOT Highway Maintenance Workers

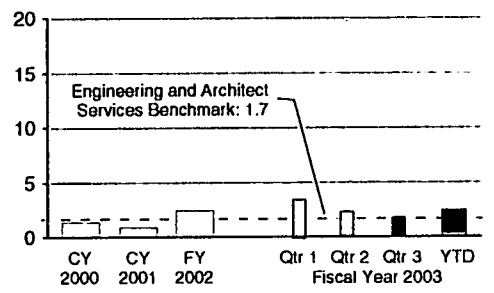
Recordable Injuries per 100 Workers per Fiscal Year



The third quarter recordable injury rate for maintenance was 7.23 injuries per 100 maintenance workers. There were 26 recordable injuries during the third quarter of which 13 were lost workday cases. These lost workday cases accounted for 169 lost workdays during the quarter. This averages 56 lost workdays per lost workday case and a lost workday incident rate of 47 days per 100 maintenance workers per fiscal year. Through three quarters of FY 03, there have been 27 (30%) back injuries. Back injuries continue to be the most frequently injured part of body. Strains accounted for 45% of the total injuries.

WSDOT Highway Engineer Workers

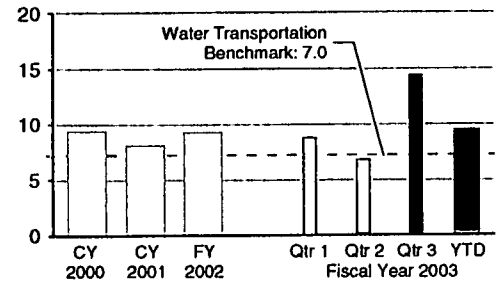
Recordable Injuries per 100 Workers per Fiscal Year



The third quarter recordable injury rate for engineer workers was 1.43 recordable injuries per 100 engineer workers, of which only three injuries resulted in lost workdays. These three lost workday injuries resulted in a total of 25 lost workdays. The average is 8.3 lost workdays per lost workday case and a lost workday incident rate of 5.1 lost workdays per 100 engineering workers per fiscal year. In FY 03, there were nine (23%) back injuries. The second most frequent claim filed was hearing loss. Sprains/strains (33%) were the most frequent nature of injury followed by occupational illness, e.g., Carpel Tunnel Syndrome.

WSDOT Ferry Vessel Workers

Recordable Injuries per 100 Workers per Fiscal Year



The third quarter recordable injury rate for WSF vessel workers was 14.2 recordable injuries per 100 vessel workers. Several injuries reported during the third quarter occurred in previous quarters, increasing the rate for this update. Twenty-nine of the 34 recordable injuries reported during the quarter were lost workday cases. These lost workday cases resulted in 215 lost workdays for an average of 7.4 lost workdays per lost workday case. This is a lost workday incident rate of 89.6 lost workdays per 100 vessel workers per fiscal year. A total of 74 recordable injuries for 1,290 lost workdays have accumulated through three quarters of FY 03. Strains/sprains were the most frequent nature of injury (74%) of all vessel worker injuries through three quarters of FY 03. Back injuries were the most frequent part of body injured (28%).

Source for all charts: WSDOT Safety Office

Accident Prevention Activities

Third Quarter FY 2003

- WSF began safety awareness seminars with all deck crews.
- The Southwest Region's "Special Safety Buddy" system has significantly reduced the region's injuries.
- The WSF conducted ergonomic reviews to identify workstation configuration and tasks, which could result in an injury or occupational illness. Safety inspections were also conducted at random.
- Awarded contract on high visibility clothing to enhance highway and WSF worker visibility.
- WSDOT has begun an agency-wide campaign to educate workers on West Nile Virus (WNV) and how to protect themselves from the virus. Maintenance personnel in all regions are implementing WNV surveillance and control activities in support of the state Department of Health.

Reading the Charts

"Recordable injuries and illnesses" is a standard measure that includes all work related deaths and work related illnesses and injuries, which result in loss of consciousness, restriction of work or motion, transfer to another job, or require medical treatment beyond first aid.

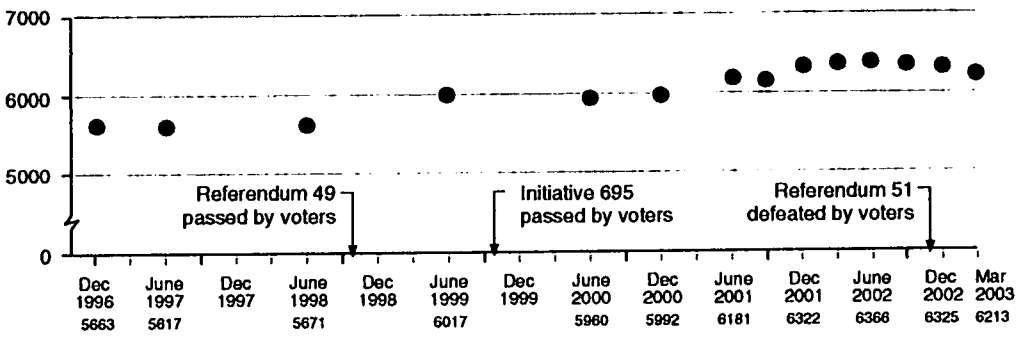
The U.S. Bureau of Labor Statistics provides the selected 2000 national average benchmarks. After discussion with the National Bureau of Labor Statistics, the following benchmarks were selected to provide a more relevant and consistent benchmark.

Maintenance: "Highway and Street Construction" Standard Industry Classification (SIC) 161 (rate 8.2)
Engineering: "Engineering and Architect Services" SIC 871 (rate 1.7)
Ferry vessel workers: "Water Transportation" SIC 44 (rate 7.0)
One worker equals 2,000 hours per year.

WSDOT Workforce Levels

One indicator of the agency's workforce size is the current number of permanent full-time employees on staff. The accompanying chart shows that number at various points since the end of 1996. (The number of "FTEs" [full-time equivalents] will generally exceed the number of full-time employees, since seasonal and part-time work force must also be funded from "FTE" allotments.)

Number of Permanent Full-Time Employees at WSDOT



Source: WSDOT Office of Human Resources.

WSDOT Employee Training Requirements

Maintenance and Safety Training Required by Law

Progress toward achieving training goals for maintenance employees is reported below. The number of required courses and the number of individuals required to complete a given course change periodically. This table shows the status of training completed for eleven of the 24 courses required this quarter.

	Maintenance Workers Requiring Training Mar 03	Total Current Maintenance Workers Trained to Date Mar 03	Maintenance Workers Trained 2nd Quarter FY03	Maintenance Workers Trained 3rd Quarter FY03	Compliance to Date: Target = 90%	Change Since Last Quarter
Safety Courses						
Blood Borne Pathogens	1221	1011	67	43	83%	+4%
First Aid	1456	1397	23	14	96%	+3%
*Hearing Conservation	1340	1211	15	0	90%	-1%
Personal Protective Equipment	1312	561	81	85	43%	+8%
Fall Protection	745	367	60	13	49%	+3%
Flagging & Traffic Control	1121	1085	10	4	97%	+2%
Maintenance Courses						
Drug Free Workplace	353	282	11	45	80%	+13%
Forklift	1183	988	33	12	84%	+1%
*Hazardous Materials Awareness	1022	465	133	1	45%	-2%
Manlift Operations	574	313	99	11	55%	+4%
Excavation, Trenching & Shoring	393	144	8	24	37%	+4%

** The number of workers requiring all training courses increased this quarter, causing the percent completion in these two courses to fall.*

Training for All WSDOT Employees

The following table reflects continued progress on five important workforce courses that are now receiving special emphasis.

	Number Requiring Training**	Number of Employees Trained	Number Trained 2nd Quarter FY03	Number Trained 3rd Quarter FY03	Compliance to Date: Target = 90%	Change Since Last Quarter
Training Courses						
Disability Awareness	7063	2186	199	191	31%	+4%
Ethical Standards	7063	6898	40	58	98%	+2%
Sexual Harassment/Discrimination	7063	3456	397	560	49%	+9%
Valuing Diversity	7063	2731	389	384	39%	+7%
Violence that Affects the Workplace	7063	5410	577	20	77%	+2%

***Courses shown are mandatory for all permanent full-time, part-time, and temporary employees. Diversity training previously offered and completed by 63% of our workforce (1992 to 2002) has been revised and replaced with three separate courses, Valuing Diversity, Sexual Harassment, & Disability Awareness. The new courses are offered as refresher training and first time training. The goal is to have 90% of our workforce trained as resources and time allow.*

Source: WSDOT Office of Human Resources.

Highway Construction Program: Quarterly Update

Meeting WSDOT's Scheduled Advertisement Dates

For the biennium to date, WSDOT has advertised 376 improvement and preservation projects. This represents a 92% delivery rate based on the revised plan of 407 projects. WSDOT's project delivery schedule, according to the Capital Improvement and Preservation Program (CIPP) is shown on the adjacent chart for the quarter ending March 31, 2003. The chart also shows the revision to the planned line, with 429 projects originally scheduled to be advertised to date. This is the result of the $76 million Current Law Budget reduction to the CIPP, from the 2002 Supplemental Budget*.

In quarter seven, 30 projects were not advertised as planned. This can be attributed to the following factors:

- Projects deferrals caused by including insufficient time for design work and delayed scoping and preliminary engineering of projects. This accounted for 11 of the deferrals and one deletion this quarter. Two examples:

  Prosser's I-82 pavement project in a slide area. Additional subsurface testing indicated a more complicated and costly solution would be required to repair the slide area. The project was deleted until an appropriate solution is developed and additional funding is approved

  SR 20, Sidney St. Vicinity to Scenic Heights, south of Oak Harbor. This project would provide better sight distance by modifying the highway alignment and removing trees and utility poles. Further analysis determined the addition of left turn lanes at two locations was needed, which increased right of way acquisition time. Also, additional environmental effort is needed as a result of including Federal funds in this project. The Ad date was delayed two years.

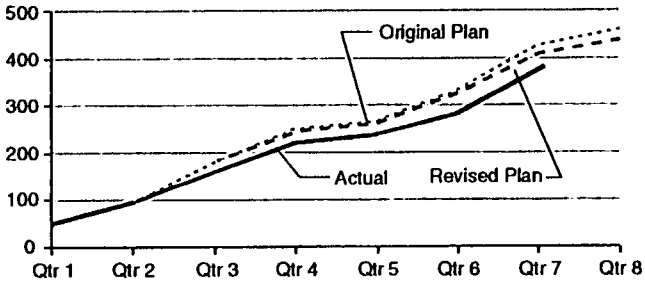
- Projects deferrals as a result of coordination with partner agencies. This accounted for nine of the deferrals this quarter. Two examples:

  Bothell's SR 527 pavement project consists of 2.5 miles of asphalt paving. The City of Bothell requested changes to the project resulting in a two-month delay.

  Waitsburg's SR 12 pavement project, including safety improvements. Delayed three months to address citizen's opposition to project.

Highway Construction Program Delivery

Planned vs. Actual Number of Projects Advertised
2001-2003 Biennium, Quarter 7 Ending March 31, 2003



- Project deferrals as a result of changing project priorities, to eliminate possible conflicts with adjoining projects and adjusting work to available funding. These accounted for nine of the deferrals this quarter. Two examples:

  SR 16, Tacoma Narrows Bridge Electrical. This project makes major electrical repairs to the existing bridge. Because of likely conflict with new second Narrows Bridge this project is deferred to 2005-07 biennium.

  SR 112, Jim Creek Culvert Repair, 30 miles west of Port Angeles. This project repairs a failing culvert, while removing a fish barrier. The Makah Tribe got BIA funds to advertise a paving project in this locale, conflicting with this project. Deferred to the 2003-05 biennium.

These projects will continue to receive focused management attention to ensure project delivery during the remainder of the biennium.

***Adjustments to Original Plan**

Projects deferred or deleted as a result of the Current Law Budget reduction account for nine deferred and one deleted project this quarter. Two examples:

SR 7 Elbe Safety Interchange Facility. *40 miles south of Tacoma. The project constructs a rest area facility. Although the project has Federal earmark available, there is no future I3 subprogram allocation. No new Ad date is proposed.*

SR 3/305 Interchange Vicinity, near Poulsbo. *The project installs signals and adjusts alignment to the interchange. This WSDOT contribution to a developer project was deleted with the program reduction. The developer has since funded the entire project and it is currently under construction.*

Highway Construction Program Cash Flow

Expenditures through the quarter ending March 31, 2002, are slightly above plan, achieving over 97% of budgeted cash flow. Historically, WSDOT's cash flow for this program is 92% to 95%. The chart reflects the revised plan due to the budget reduction explained above. The expenditure rate reflects the high delivery rate of projects to advertisement in the highway improvement program. This expenditure rate also reflects:

- A Highway Construction Program that included a large number of new construction starts in spring 2001. While these projects were actually started in the last quarter of the 1999-2001 biennium, this work has driven expenditure levels in the current biennium.
- The emphasis in getting projects to advertisement. This has been an important management focus and has been reported throughout the year in the *Gray Notebook*.
- Activity in the regions, often with direct encouragement and support of customer communities, in moving projects "to ad" given the prospects for project deferrals or cancellation in a period of expected budgetary stringency.
- Favorable construction weather, encouraging contractors to speed their work.

Highway Construction Program Cash Flow

Planned vs. Actual Expenditures
2001-2003 Biennium, Quarter 7 Ending March 31, 2003
Dollars in Billions

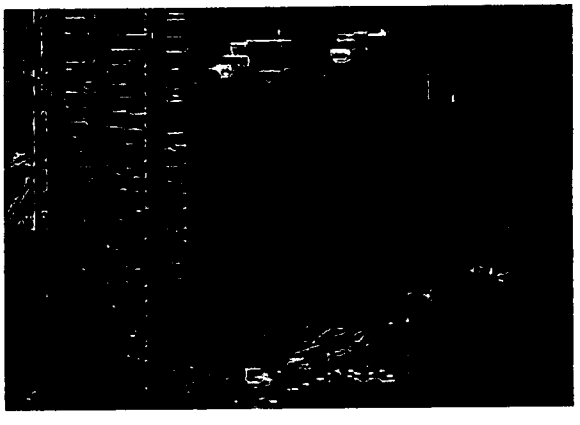
Tacoma Narrows Bridge Project Update

As of March 31, 2003, design/builders Tacoma Narrows Constructors (TNC) have completed 5.2% of the physical construction activity for the new State Route 16 Tacoma Narrows Bridge. Todd Pacific Shipyards Corporation, TNC's subcontractor recently launched two completed giant steel "cutting edges" that will form the bottom of two caissons (bridge foundations) on which the bridge towers will be built. Each cutting edge measures 131 feet long, 81 feet wide and 18 feet high, and weighs about 750 tons. After launch in Seattle, each cutting edge was towed to the Port of Tacoma for caisson wall construction — building up the sides of the cutting edges with reinforced concrete. When the caissons reach 40 feet in height, they will be towed to the new bridge site in June and late July. Once at the site, the construction will continue on the caissons until they are properly embedded into the Narrows seabed. Crews will then begin constructing the bridge towers. In the meantime, dredging, trenching and riprap placement are being done in the Narrows seabed to prepare the caisson landing area.

This complete caisson "cutting edge" slid gracefully into Elliott Bay during a recent launch. It was later towed to the Port of Tacoma for caisson construction. Later this summer it will be moved to the bridge site for further construction.

Other work on the overall project is also continuing. Construction is underway at 24th Street NW in Gig Harbor (seen at right) where crews are building a new overpass and half-diamond interchange. Work is also occurring in the 36th Street NW and 22nd Avenue NW vicinities as crews relocate utilities and do other preparation work to realign local roads, widen and improve intersections, create bicycle facilities, and widen State Route 16 to accommodate future HOV lanes. Concurrent design work also continues. For more information, visit *www.wsdot.wa.gov/projects/sr16narrowsbridge/.*



24th Street Bridge north pier is shown in this recent photo. Bridge girders will be placed on top of the wall.

Highway Safety: Quarterly Update

The highway safety projects tracked on this page are a portion of the construction projects that were described on page three. Of the 56 safety improvement projects originally planned to be advertised by the 7th quarter of the 01-03 biennium, eight projects have been removed due to the Supplemental Budget reductions, for a revised plan of 48 project advertisements. Through the 7th quarter, 33 projects have been advertised. In the 7th quarter, 15 projects were scheduled for Ad under the revised plan. A total of eight projects went to Ad during that period: five originally scheduled projects, one previously delayed project, one project advanced from the 03-05 biennium, and one addition to the program to construct safety improvements with a new federal grant.

From the revised plan of scheduled projects for advertisement in the 7th quarter, 10 were deferred:

- Seven projects were deferred due to design, scoping, right-of-way or environmental issues.

  SR 20, Sidney St. Vicinity to Scenic Heights, south of Oak Harbor. This project would provide better sight distance by modifying the highway alignment and removing trees and utility poles. Further analysis determined the addition of left turn lanes at two locations was needed, which increased right of way acquisition time. Also, additional environmental effort is needed as a result of including Federal funds in this project. The Ad date was delayed two years.

  SR 539, King Tut Road and Bartlett Road, south of Lynden. This project would construct a northbound left turn lane at the King Tut Road intersection. At the Bartlett Road intersection, the project would construct a northbound left turn lane, a northbound right turn pocket, and a southbound left turn lane. Project is delayed to minimize construction impacts to the Guide Meridian Water Association. Right of way acquisition is in process with a project Ad date of February 2004.

  SR 532, at 102nd Ave. NW, in Stanwood. This project would install traffic signals and improve existing sidewalks. During the design phase of the project, it was discovered that county right-of-way plans were not consistent with field conditions and local property owners had encroached on state right of way. Project is delayed one year to update existing right-of-way plan.

  SR 202, near Riverside Park, in Fall City. This project would construct two roundabouts. The portion of the project enhancing pedestrian safety by replacing and installing sidewalks is to be completed as part of another project. The main project will be delayed until 2005-2007 biennium pending acquisition of additional right-of-way when funding is available.

  SR 20, Oak Harbor NCL to Frostad Road, north of Oak Harbor. This project would add a two-way left turn lane from the vicinity of NE Narrows Avenue to Oak Harbor north city limits, add left turn lanes and illumination at Cemetery Road/NE 16th Avenue, Sleeper Road, and Frostad Road, and add passing lanes in the westbound direction. To reduce cost for wetland mitigation, the needs of four projects were designed into one site. The additional time needed to compile environmental documentation and obtain permits for the four projects delayed the Ad date nine months.

  SR 20, near Frostad Road, north of Oak Harbor. This project would add guardrail where needed throughout the project area. Project delayed nine months over issues concerning the wetland mitigation site.

  SR 542, Scenic Viewpoint to Excelsior Trail, on the Mount Baker Highway. This project would install guardrail as needed throughout the project area. Project delayed five months to complete environmental documentation for a biological assessment not previously scoped.

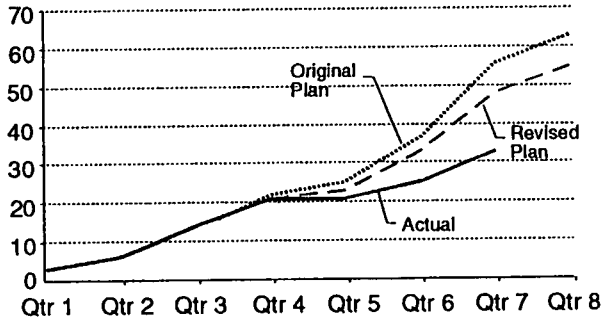
- Three projects were deferred for additional partnership coordination needs.

  I-5, Northbound Ramps at SR 532, east of Stanwood. The original project would have provided a one-lane roundabout at the intersection of the northbound I-5 ramps and SR 532. To accommodate design suggestions from the public and elected officials, the project was delayed. The northbound ramps roundabout is now included in a new revenue project that will also make improvements at the intersection of old SR 99 and SR 532. The expanded project Ad date is Spring 2006

  SR 531, in front of Lakewood High School, west of Arlington. This project would provide a sidewalk in front of Lakewood High School. The delay allowed the school district to deed right of way to the state and locate sidewalks away from the highway. Ad date will be in 2003.

  SR 522, 83rd Place NE, west of Bothell. This project would signalize the intersection at 83rd Place NE and provide an eastbound left turn lane at this intersection. Project delayed to 2005-2007 biennium to enable it to be packaged with other lane-widening projects in the corridor to minimize rework and traffic disruption.

Safety Improvement Program Delivery
Planned vs. Actual Number of Projects Advertised
2001-2003 Biennium, Quarter 7 Ending March 31,2003



Reducing Bicyclist Fatalities

Washington ranked 16th lowest in bicyclist fatality rates in 2001, compared to other states. Eight bicyclists were killed on Washington state highways in 2001. In addition, there were more than 200 reported accidents involving bicyclists, including disabling injury accidents. This may be the tip of the iceberg: a recent FHWA study of hospital emergency department data indicates that between 40 and 60 percent of all bicycle accidents are not captured in highway reporting data.

Consistent with accident trends for pedestrians (see the *Gray Notebook* for the quarter ending December 31, 2002), State Route 99 appears to be the corridor with the largest concentration of bicycle-related accidents from 1995 to 2001. Some of the risk factors at work on SR 99 include vehicle traffic volumes, vehicle speeds, shoulder configurations and illumination conditions.

Traffic Safety Near Schools

In 1999, WSDOT began administering a grant program called Traffic Safety Near Schools. This program has now funded more than 70 projects statewide designed to improve bicyclist and pedestrian safety near schools. However, the program has not been able to fund nearly 90 additional project proposals. The legislature's new transportation budget provides an additional $1.5 million to fund 10 to 12 more projects, leaving about 80 unfunded.

Some of these grants have already had significant impacts on safety. For example, the 155th Street crossing in Kenmore was defined as a high accident area. Since receiving the Traffic Safety Near Schools grant in 2000 to improve sidewalk and pedestrian safety, Kenmore has not had an accident at this location.

Federal Benchmarking Progress

The Federal Highway Administration (FHWA) recently completed a benchmarking study of all states and their bicycle and pedestrian programs. Washington met all pedestrian benchmarking standards and all but one bicycle benchmark, ranking Washington second nationally.

Scoring on Eight Performance Benchmarks

- ☑ Bike/Ped Plan exists
- ☐ Bicycle Plan meets FHWA guidance
- ☑ Accomodates bicycles in highway projects
- ☑ Includes sidewalk in new urban highway projects
- ☑ Includes sidewalks in re-construction projects
- ☑ Sidewalks are generally included in urban projects
- ☑ Statewide Safe Routes Program
- ☑ Other Statewide programs

Highway Maintenance: Quarterly Update
Safety Rest Areas

Roadside Havens for Weary Travelers

When you need to take a break after slurping down your 32 ounce soft drink and driving another 100 miles on the highway ... when your kids are asking "are we there yet?" when you still have miles to go ... These might be good times to pull into one of Washington's 43 Safety Rest Areas.

Nearly 39 million visitors (more than six visits for every state resident, on average) each year take advantage of these rest areas to use the restroom, take a nap, walk their canine companions, stretch their legs, or unpack their own picnic lunch.

For example, on a typical summer day, the Indian John Hill Safety Rest Area, west of Ellensburg, serves approximately 10,000 visitors, equivalent to twice the student population of Central Washington University in Ellensburg.

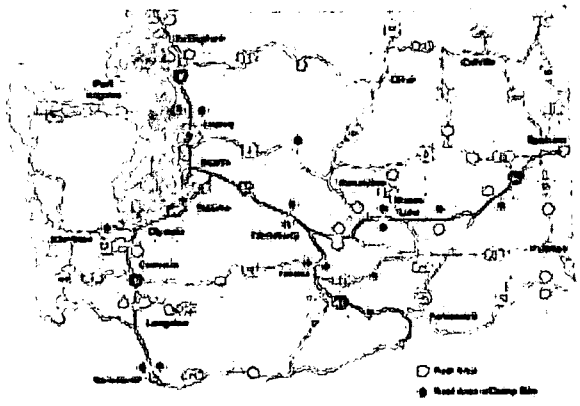
How Are We Doing/Public Feedback

Periodically we ask the public "how are we doing?" In 1997, 6,700 questionnaire forms were returned from our rest areas survey. Ninety-one percent of the respondents rated WSDOT's facilities "good" or "excellent." WSDOT learned that travelers spend on average thirty minutes or less at our facilities, with the heaviest use between 9 am and noon and 2 pm and 6 pm. Restroom cleanliness is most important to customers. Most rest area users are traveling for vacation or pleasure, and more visitors stop at rest areas in the summer months.

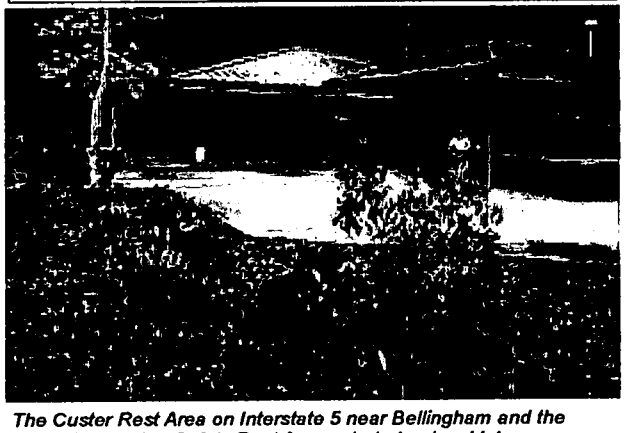
A 2000 telephone survey of 600 citizens concluded that most rest area customers were "satisfied" to "extremely satisfied."

WSDOT will conduct another Safety Rest Area customer survey during the summer and fall of 2003. It will provide valuable customer feedback to ensure that we are focusing on and responding to our customers' needs.

Safety Rest Area Locations and Amenities



WSDOT owns and operates 43 safety rest area facilities. Most facilities provide restrooms, picnic tables, drinking water, telephones, pet areas, motorist information and snack machines. Free coffee is available at some rest areas. For more information on rest area locations and amenities go to www.wsdot.wa.gov/biz/restareas/restareamap.htm.



The Custer Rest Area on Interstate 5 near Bellingham and the Canadian border. Safety Rest Areas started out as highway beautification projects and over time the emphasis has switched to highway safety.

Safety Rest Area Maintenance

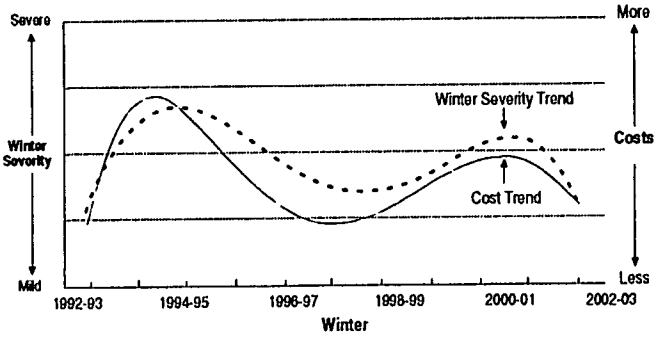
Once a rest area is located and built, WSDOT is responsible for facility and landscape maintenance, garbage disposal, cleaning, and provision of electric, water and sewage treatment utilities. Water and sewer service at remote rest areas can be difficult. In some cases, WSDOT maintains water wells, pumps, delivery systems and water quality monitoring to keep a rest area open to the public. Sewage disposal systems may involve pump stations, surface lagoons, infiltration designs, and/or several-mile-long pipelines connected to offsite treatment facilities.

Highway Maintenance: Quarterly Update
Snow Removal

A Mild Winter Resulted in Lower Snow and Ice Removal Costs

The statewide winter severity and snow and ice operations chart documents the correlation between winter weather conditions and winter maintenance expenditures over time. Maintenance crews, equipment and materials were ready to do winter storm battle, but overall, it was a mild winter without major incidents and costs were down.

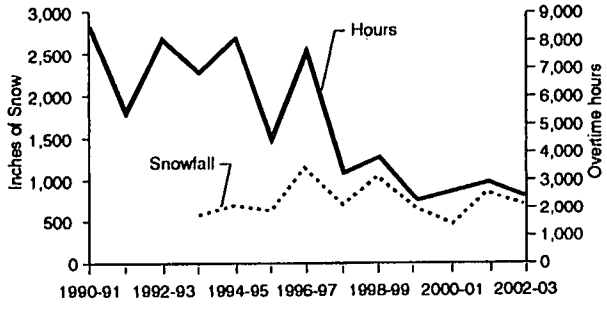
Statewide Winter Severity and Snow and Ice Operations Costs



Wenatchee Maintenance Area Measures Overtime Hours and Snowfall

The Wenatchee maintenance area is tracking the trend of significant reduction in winter overtime hour levels made possible by advances in technology, work shift efficiencies, and the effective application of anti-ice chemicals.

Snow and Ice Control
Overtime Hours per Snowfall Amount
North Central Region, Wenatchee Maintenance Area
Winter Seasons, 1990 to 2003

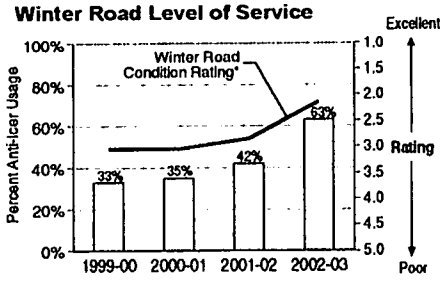


**Accumulated snowfall measured at six shed locations in the Wenatchee Maintenance Area.*

Winter Roadway Condition Level of Service and Anti-Icer Chemicals

WSDOT tracks winter roadway conditions from November 1 to March 31 every year. Maintenance areas assess road conditions during this period every week at 160 different locations throughout the state. Highways are rated for bare pavement and other factors that enhance safe winter driving conditions. This chart shows a correlation between increased anti-icer use and better roadway conditions.

Statewide Anti-icer Use and Winter Road Level of Service



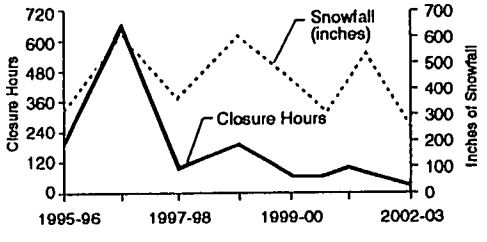
**Performance rating from WSDOT's Maintenance Accountability Process (MAP)*

Keeping Mountain Pass Highway Closures to a Minimum

Interstate 90 Snoqualmie Pass Winter Closure Hours and Snowfall

This chart shows that pass closure hours have decreased while snowfall levels have followed a steady trend. This winter Snoqualmie Pass received 255 inches of snowfall and was closed a total of 11 hours, 31 minutes (8 hours, 59 minutes eastbound; 2 hours, 32 minutes westbound). Snoqualmie Pass normally receives 442 inches of snow a year (based on the 53-year average) and is typically closed for winter snow and ice removal operations 66 hours eastbound and 55 hours westbound (based on the 10-year average).

Snoqualmie Pass Winter Closure Hours
Accumulated Annual Hours and Inches of Snowfall
Interstate 90 Winter Seasons, 1995 to 2003



Footnote: WSDOT is analyzing field data from this winter's salt pilot project and will report findings in a future Gray Notebook. *See September 30, 2002 for other* Gray Notebook *winter measures.*

Measuring Congestion: Annual Update

As many highway users have correctly suspected, the drop in regional employment is linked with a lessening of traffic congestion on many Central Puget Sound highways. The trend lines for employment and for average weekday traffic volumes are generally very similar. They each showed rapid growth during the 1990s that has tailed off in the last couple of years. The traffic volume pattern does vary somewhat from location to location. For example, a significant reduction since 2000 has occurred on the highways crossing Lake Washington, while the number of commuters on SR 167 in King County has actually increased during the same period. Other interesting stories in the data:

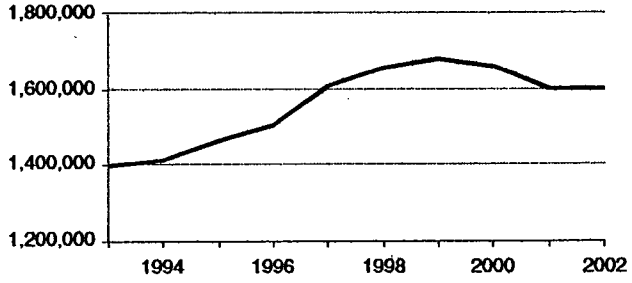
- The recent trends have affected all modes. HOV lane volumes are generally down. Transit ridership is down. Ferry ridership is down. (Details of this data have not been included in this Gray Notebook but are separately available from WSDOT.)
- The number of accidents have decreased significantly, accompanying the slackened traffic volumes. We don't know the extent to which congestion has been lessened because of fewer accidents, or how much the drop in accidents has resulted from reduced congestion. Each tendency clearly reinforces the other.
- Examples of recently completed highway projects are clearly shown to have benefited traffic conditions.

Peak period congestion is still prevalent in many corridors, especially in the peak direction. The freeway system in the Puget Sound region has little if any surplus capacity around the peak periods. An economic rebound will likely result in a resumption of the trends toward increased congestion experienced through much of the 1990s. This is why *now* is when improvements must be taken in hand to deal with future conditions.

Traffic and Employment

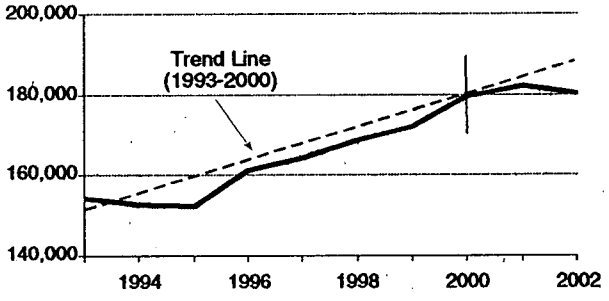
It should not come as a surprise that the levels of Puget Sound region traffic have been affected by the trends in regional employment. The graph to the right shows that employment in the Puget Sound region grew at a brisk pace during the latter part of the 1990s, peaking in 1999. Since then, employment has fallen by nearly 80,000. Fewer individuals are now traveling to work on the region's highways during peak periods.

Total Employment - Puget Sound Region



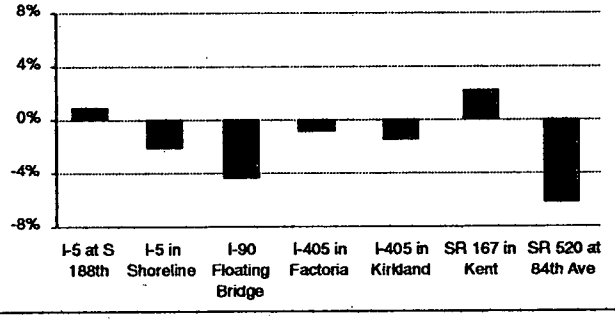
WSDOT analyzed several years of traffic volumes from the month of March for several locations in King, Pierce and Snohomish Counties. Traffic volumes on Puget Sound regional highways generally peaked in 2000 or 2001 following nearly a decade of rapid growth. Since then, the traffic volumes have remained relatively flat or have slightly decreased as shown on the typical graph depicting traffic volume on I-5 at Fife. This diminished growth of volume is found on a number of corridors; some corridors, in fact, have experienced actual decreases.

March Average Weekday Traffic Volumes
I-5 at HWY 99 in Fife



A snapshot of the weekday volumes for the month of March, comparing 2000 with 2003 for seven locations in King, Pierce and Snohomish Counties indicates a reduction in volumes on all but two of the seven locations (see the graph to the right).

March Average Weekday Volumes
Percent change: 2000 to 2003

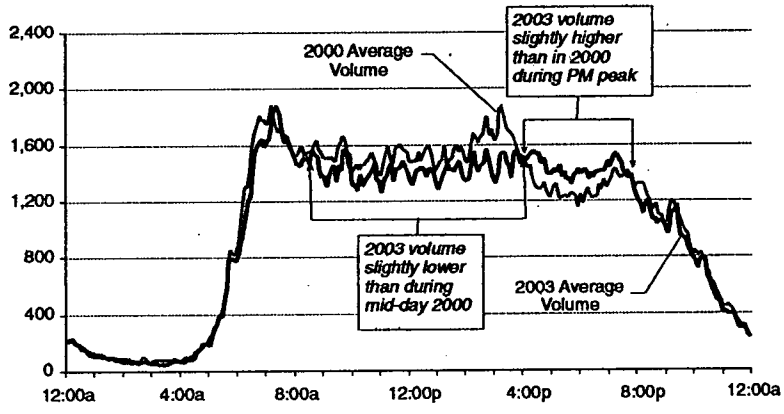


Traffic Volumes and Speed on SR 520: Comparing March 2003

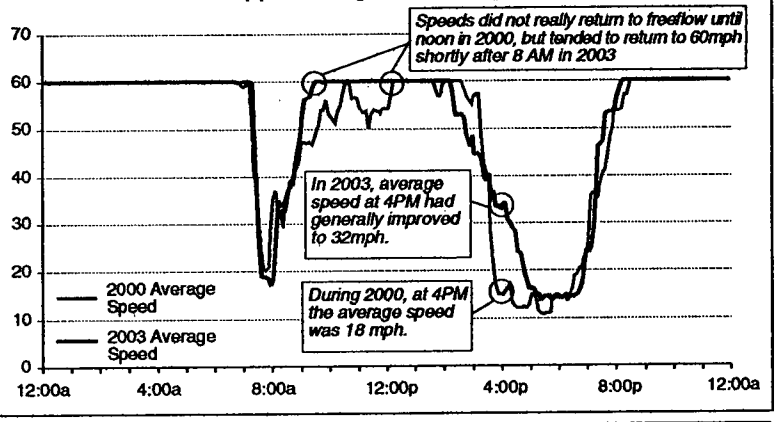
The two graphs to the right display data for SR 520 in the vicinity of the high rises, to use the traffic reporter's venacular. The top graph charts average traffic volumes across 24 hours for 2000 and 2003. The bottom graph, in turn, charts the speed of traffic. On westbound SR 520 travel speeds have increased throughout much of the day. This facility is still congested, but the duration of afternoon peak is shorter. Increased travel speeds allow more vehicle throughput, which results in higher traffic volumes as evident during the PM Peak in the volume graph to the above right.

Travel speeds have improved in many corridors, with mid-day slowdowns reduced or eliminated, and peak periods are shorter and less severe.

Average Weekday Travel Volumes
SR 520 Westbound Approaching the Floating Bridge



Average Weekday Travel Speeds
SR 520 Westbound Approaching the Floating Bridge



Traffic Accidents on I-405: Comparing 2002 to 2001

Between 2001 and 2002 WSDOT determined that there has been a reduction in traffic accidents on I-405. Higher traffic congestion generally leads to a greater frequency of accidents. The greater the number of accidents, the worse congestion becomes. Were accidents down because congestion was down? Or was congestion down because accidents were down? The adjacent table shows that the total number of accidents in both directions, except northbound during the AM peak period, on I-405 between Bellevue and Tukwila decreased significantly from 2001 to 2002.

Accident Comparison
I-405 (Tukwila to Bellevue)

Northbound	2001	2002	% Change
AM Peak Period (Tu,W,Th)	90	90	0%
PM Peak Period (Tu,W,Th)	73	49	-33%
All Day (Tu,W,Th)	278	203	-27%

Southbound	2001	2002	% Change
AM Peak Period (Tu,W,Th)	45	32	-29%
PM Peak Period (Tu,W,Th)	105	71	-32%
All Day (Tu,W,Th)	232	180	-22%

Distribution of Traffic Between Freeways and Arterials 1999-2003

Traffic trends between 1999 – 2003 at the following locations show that volumes on other highways and major arterials has generally held steady since 1999, similar to trends found throughout the Puget Sound region. This suggests that travel demand around the region has moderated rather than shifting from freeways to arterials or vice versa.

Location	1999	2000	2001	2002	2003
Rucker Ave. 42nd St in Everett	33,504	32,213	–	35,190	–
Hwy 99 at Raye St in Seattle	–	82,283	84,114	82,253	82,247
148th Ave in Bellevue	35,200	36,600	33,900	35,700	–

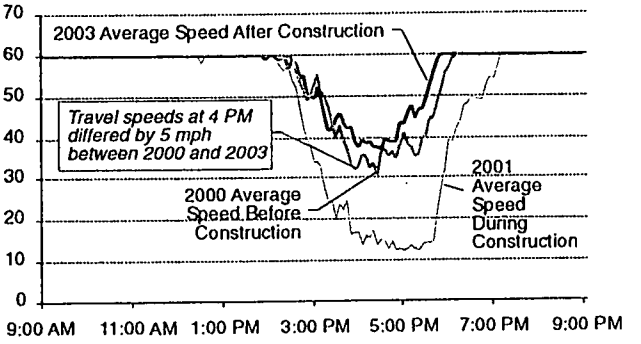
Highway Improvements Have Reduced Congestion

Two examples of how traffic conditions change as a result of highway improvement projects can be seen from the new HOV lane on southbound I-5 from the vicinity of Southcenter to Federal Way, completed in late 2002, and the new off ramp from southbound I-405 to southbound SR 167, completed in April 2003. Unfortunately, construction itself often slows traffic, as plainly demonstrated in this section of I-5 in 2001.

I-5 Southbound HOV Lane

The project added a HOV lane to I-5. The graph to the right shows that in the year 2000 before construction travel speeds at 4 pm averaged 33 mph. In the following year 2001 during construction travel speeds at 4 pm averaged 17 mph. The travel speeds at 4 pm after project completion have increased to approximately 38 mph.

Average Weekday Travel Speeds
I-5 SB near SeaTac



I-405 – SR 167 Ramp Separation

The new off ramp from southbound I-405 to southbound SR 167 opened to traffic Sunday, April 6. Three weeks after opening to traffic, the conditions on southbound I-405 had generally improved during the morning peak. Highway speeds on I-405 increased and back-ups decreased. Vehicle throughput on the ramp has increased by about 13% and on the mainline by about 8%.

Average Weekday Congestion

Travel Time Measures: Annual Update

In May 2002, WSDOT launched its first dynamic, real travel time information website for eleven commute routes in the Puget Sound region (find at *www.wsdot.wa.gov/pugetsoundtraffic/traveltimes/*). This popular service has since been widely used by commuters and TV and radio news programs. The averages of real travel time data has been compiled for 2002 and compared against travel time data archived from 2001.

Improved Travel Times

Small but significant decreases in average peak travel times in 2002 as compared to 2001 occurred on four of the most heavily traveled routes. These changes have been summarized in the table below. Another noticeable improvement on these four routes was in the measure of 95% Reliable Travel Time. This is probably the most important measure for everyday commuters. It uses data from days throughout the year to compute a good approximation of "worst case" travel. Ninety-five percent of the days, travel time equals or betters this marker. If commuters allow for their trip to equal the 95% reliable travel time, they can expect to travel the route on time, on 95 percent of their trips, or 19 working days out of 20.

On these particular routes, traffic volumes during commute hours remained almost unchanged in the two comparison years. Why then, did travel times improve? One possible explanation, although not easy to prove with the existing data resources, is the expansion of WSDOT's Incident Response Program on these routes (see the September 30, 2002 *Gray Notebook*). Among other things, the Incident Response Program has helped to speed the clearance of disabled vehicles – about half of all incidents affecting the roadways. These and other incidents are what cause "Non-Recurrent Congestion" (the back-ups resulting from factors other than the inherent roadway capacity limitations - which, by contrast, is regarded as "Recurrent Congestion"). WSDOT has postulated that roadways are very likely operating under the influence of incidents or other causes of Non-Recurrent Congestion (severe bad weather, for example) when travel times exceed twice the free flow travel time. On these routes, the 2001 to 2002 comparison shows significant decreases in the daily peak commute times when the roadway is experiencing two times free flow congestion status. Smarter, more attentive highway management – *like the Incident Response Program and the Joint Operations Policy Statement (national-model operating agreement between WSDOT and the Washington State Patrol) – are almost surely contributing benefits to travelers in reduced delay.*

2001 & 2002 Peak Travel Times – Highlighted Improvements

			Average Peak Travel Time			Number of Days When Peak Travel Times Exceeded 2 X Freeflow			*95% Reliable Travel Time		
Route	Route Description	Miles	2001	2002	Change	2001	2002	Change	2001	2002	Change
I-5	SeaTac to Seattle (AM)	13	24 min.	23 min.	-1 min.	84	44	-16%	31 min.	28 min.	-3 min.
I-405	Tukwila to Bellevue (AM	13.5	31 min.	30 min.	-1 min.	198	178	-10%	43 min.	41 min.	-2 min.
I-405	Bothell to Bellevue (AM)	9.7	20 min.	19 min.	-1 min.	142	127	-7%	27 min.	26 min.	-1 min.
SR-167	Renton to Auburn (PM)	9.8	22 min.	19 min.	-3 min.	133	92	-18%	39 min.	37 min.	-2 min.

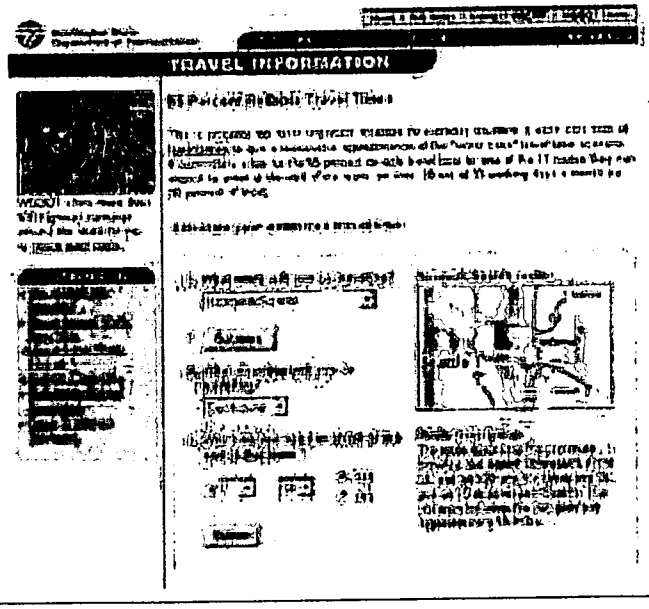
**95% Reliable Travel Times: You can expect to be on time for work 19 out of 20 working days a month (or 95% of your trips,) if you allow for the 95% Reliable Travel Time.*

The travel times in the above table are the highest recorded travel times measured during the AM or PM peak period. These travel times represent the worst case congested condition.

New Dynamic 95 Percent Reliable Travel Time Service – Now Available On-line

Over the past year, WSDOT has continued to refine and enhance real time commuter information and has developed a new web page that provides a specific 95% Reliable Travel Time. It allows the commuter to pick one of 11 Puget Sound commute routes, the direction of travel and the time they need to arrive. The result will be the suggested time needed to begin the commute in order to arrive on time 95% of the time. The 95% Reliable Travel Times are available in 5-minute intervals (from 6 am to 7 pm). The commuter will need to add the time necessary to travel to the chosen commute route from their point of origin, and again for when they leave the commute route to their destination.

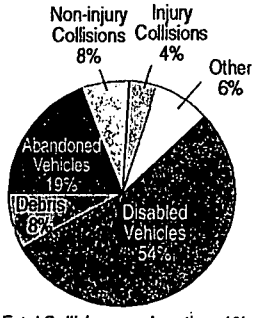
To calculate the 95% Reliable Travel Time for your commute, visit: www.wsdot.wa.gov/pugetsoundtraffic/traveltimes/reliability.



Incident Response: Quarterly Update

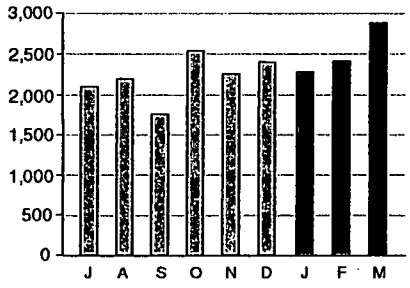
Program Totals

The Incident Response (IR) Program Totals graph shows the first quarter of 2003 compared to the baseline that began in July 2002, with the rollout of the expanded Incident Response program. The IR Program Totals includes all types of responses and incident durations.



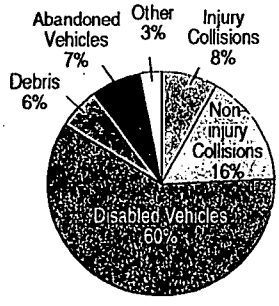
Fatal Collisions are less than 1%

Total Number of Responses by Month
July 2002 to March 2003

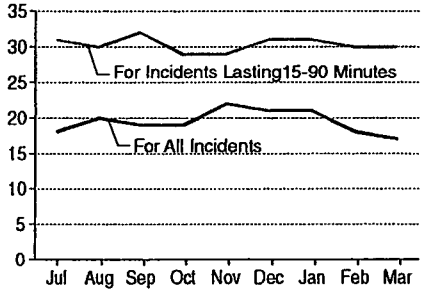


Incidents Lasting 15 to 90 Minutes

Incidents that last more than 15 minutes typically have multiple responders and/or other jurisdictions (e.g., WSP, Registered Tow Truck Operators, etc.) working collaboratively to clear the scene. WSDOT is taking a closer look at these types of incidents in order to find ways to further reduce the time it takes to clear these incidents.

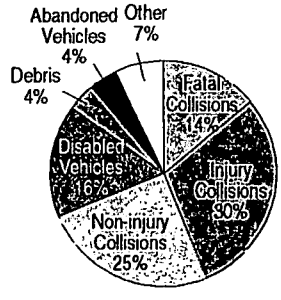


Incident Response: Average Clearance Time (Minutes)
July 2002 to March 2003

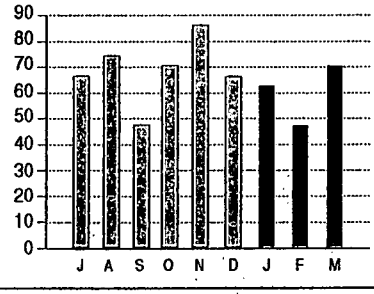


Clearing Incidents Within 90 Minutes

Incidents that last 90 minutes and longer are the most severe and often involve collisions. These incidents are being monitored as required in the Joint Operations Policy Statement between WSDOT and the WSP in order to find ways to further reduce the time it takes to clear these incidents.



Number of Over 90-Minute Incidents
July 2002 to March 2003



Examples of Incidents Over 90 Minutes

- January 6 – A semi traveling east on SR 14 near Forest Hill ran into the ditch causing the truck and trailer to come apart. It took 12 hours and 22 minutes to clear the scene.
- January 18 – A vehicle traveling west on SR 164 (Enumclaw Rd. near Auburn) collided with a power pole, closing lanes in both directions. The pole was damaged enough to need replacement. A WSDOT Incident Response unit performed traffic control until the power company flaggers arrived. It took 7 hours and 37 minutes for WSDOT to clear the scene.
- January 30 – A vehicle northbound on SR 7 near 224th St. sideswiped 2 vehicles and collided with a third, ran over the signal controller, blacking out the intersection, and came to rest after hitting the gas pumps at the Shell station. Injured driver indicated there was a bomb in the vehicle. WSDOT evacuated the area and closed the highway until the WSP bomb squad arrived and cleared the vehicle. It took 8 hours to clear the scene. No bomb was found.
- March 3 – A semi hauling a low boy trailer with an oversized load traveling north-bound on I-5 just South of Chehalis broke loose and high-centered on the left side of the off ramp. WSDOT was not notified for almost 10 hours that the incident had occurred. Total clearance time was 18 hours and 30 minutes.
- March 9 – A vehicle lost control traveling southbound on I-5 near Chehalis hit the median barrier displacing it into the northbound lanes. A semi traveling northbound collided with it and rolled. Numerous vehicles hit the resulting debris. It took 12 hours and 21 minutes to clear the scene.

Non-Collision Responses

Stopped vehicles on freeways and major highways – in a travel lane or even on a shoulder – distract approaching drivers, delay traffic, cause back-ups, and pose safety hazards for approaching traffic and for the occupants of the stopped vehicles. Problems on the roadway that lead to stopped vehicles range from major pile-ups to minor stalls. Incident response is a continual task that WSDOT provides with the Washington State Patrol, local fire departments, and others. Every incident response helps limit delay and increase safety. "Helping drivers, clearing roads," the motto of incident response, is a cost-effective highway management strategy – and WSDOT's routine efforts also free up WSP resources for the enforcement activities uniquely in its competence.

Snapshot of Service Actions for Non-Collision Responses

January to March 2003

Total Incident Responses = 7,527

- 929 Collisions
- 6,598 Non-Collisions

Service Actions Taken for Non-Collision Responses

January to March 2003

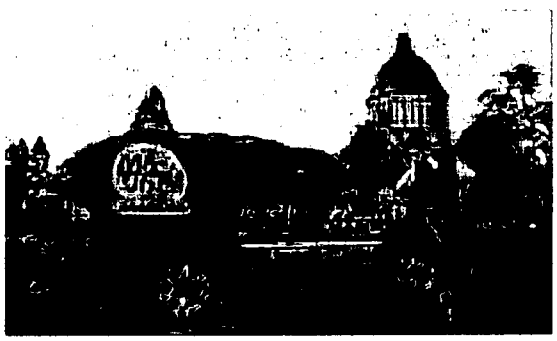
	Jan	Feb	Mar
Traffic Control	539	435	478
Provided Fuel	200	247	241
Changed Flat Tire	179	167	185
Minor Repair	81	111	102
Pushed Vehicle	121	120	152
Towed Vehicle	58	33	56
Cleared Debris	204	237	306

New Service Patrol and Motorist Assistance Van Contracts Awarded

The Registered Tow Truck Operators (RTTO) Service Patrols rolled into action on March 24, 2003 with a new contract that replaced the Service Patrol Pilot Project contract that began in July 2000. The new contract creates a partnership between WSDOT and the private tow industry in order to augment the roving Incident Response Teams during peak traffic periods.

The Mixx 96.1 Motorist Assistance Van (MAV) also rolled into action in Olympia under a new service contract for the MAV Pilot Program, which also began on March 24, 2003. The Mixx 96.1 MAV will obtain and report traffic flow information to WSDOT and will provide media coverage for WSDOT's Incident Response program.

Hansen's Towing deploys two trucks in the Seattle area and Bill's Towing deploys one truck in the Tacoma area.



Jack Archer and his Mixx 96.1 Freeway Hero MAV.

Separately, WSDOT also contracts with the Washington State Patrol to deploy two Cadet Service Patrol units in the Seattle area and one in the Tacoma area, both during peak traffic periods.

WSP Cadets and RTTO Service Patrols responded to more than 4,000 Incidents during the 2002 phase of the pilot program.

Incident Management Assessment Identifies Areas for Improvement

The Federal Highways Administration (FHWA) recently initiated a national "self-assessment" of multi-agency programs, which manage traffic incidents. The Traffic Incident Management Self-assessments were conducted in the 75 most congested metropolitan areas throughout the country – the Seattle / Tacoma region being number 13 on the national list. WSDOT led local agencies in a regional self-assessment in March 2003.

The purpose of the self-assessment tool is to identify areas for improvement; to identify areas for which FHWA can provide training, guidance or funding, and to give FHWA a baseline for future re-measurement. The local assessment overall program score was 63.2 percent, which is very good compared with many other states, but shows that there is room for improvement.

Environmental Programs: Management System

A formal Environmental Management System (EMS) is a tool used by enterprises across the country and around the world to improve environmental performance and compliance. An EMS generally is made up of seven building blocks specifically focused on a particular line of business or activity. These seven building blocks are:

- Written procedures
- Training
- Monitoring
- Corrective Action
- Record Keeping
- Performance Measurement
- Auditing

In the EMS now being constructed at WSDOT, current focus is on assembling the seven fundamental blocks in relation to construction, maintenance and operations, the materials lab and modal programs such as Washington State Ferries, aviation, and rail.

Environmental Compliance Assurance: Tracking Violations and Corrective Actions

As an important step in developing a full-scale EMS, WSDOT in September 2002 began an agency-wide effort to consolidate information on environmental violations and compliance activities. This will supplement prior practice where this information was maintained within regional or program offices, which allowed little opportunity to note trends and develop performance measures to strengthen the agency's overall environmental compliance and performance.

The effort that began in 2002 included data collection for a 2001 and 2002 agency baseline, and relied on localized record-keeping and personal interviews with managers around the agency. The resulting baseline information is shown on the next page.

Violations and Compliance: Whence the Rules?

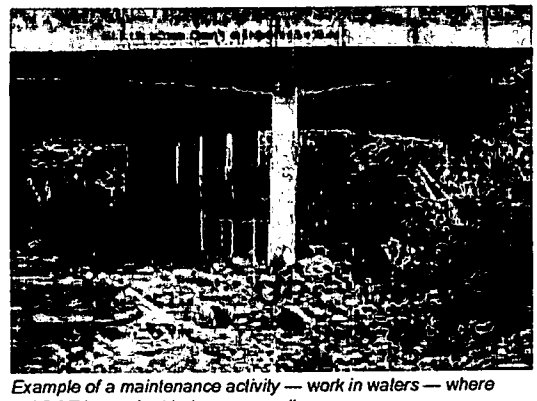
Laws

Many laws establish (either through statute or administrative regulation) prescriptive requirements and prohibitions to protect the environment. When they apply to WSDOT, they generally apply to everyone else, too. It is, for example, a violation of the Clean Water Act for any person (including the Washington State Ferries) to allow hydraulic oil or diesel fuel to be spilled into the navigable waters of the United States. The law is violated when such an event occurs; serious legal consequences can follow.

Example of an activity — operating ferry terminal ramps — where WSDOT is not required to have an environmental permit, but is required to comply with environmental regulations to protect water quality.

Permits

WSDOT does not require a permit to load fuel on the ferries. But it does require a permit for the routine discharge of stormwater into streams or other water bodies from a highway drainage conduit. State and federal permit requirements cover everything from maintenance activities in streams and wetlands to the cutting of trees for highway construction and the management of stormwater runoff from highways. Many permits are issued with specific terms and conditions (for example, stream protection conditions for placing of rip rap around a bridge abutment). Some permit conditions are "boilerplate;" others are intensively negotiated on a situation-by-situation basis. In any event, the permit condition is violated if WSDOT fails to meet the requirement. Again, serious legal consequences can follow.



Example of a maintenance activity — work in waters — where WSDOT is required to have a permit.

Environmental Compliance Assurance: Tracking Violations

WSDOT self-monitors for "non-compliance events," whether or not such matters are actually taken up as formal "violations" by regulatory agencies or officials.

In 2001, WSDOT had 17 non-compliance events, with 15 of those events resulting in a formal violation. In 2002, WSDOT had 29 non-compliance events, although only 14 of those events resulted in a formal violation. This data includes reporting from construction, maintenance, and the ferry service.

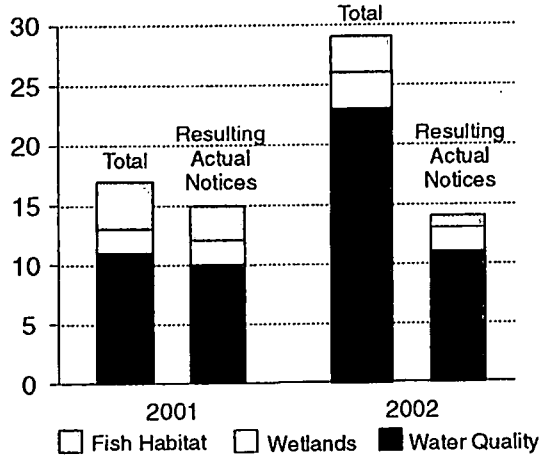
Most of the non-compliance events involved water quality regulations (11 in 2001 and 23 in 2002). Wetland regulations were associated with two of the non-compliance events in 2001 and three of the events in 2002. The balance of non-compliance events was related to regulations protecting fish habitat (four in 2001 and three in 2002).

The 2002 data shows a significant increase in total non-compliance events over those reported in 2001. Most of the increase is related to water quality violations associated with road construction projects, including both accidental spills and violation of water quality standards. The number of non-compliance events at Washington State Ferries dropped slightly from 2001 to 2002.

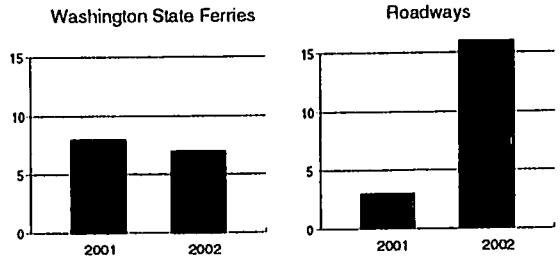
Non-compliance events related to wetlands and fish habitat remained relatively stable from 2001 to 2002.

Data for 2001 and 2002 were obtained through an interview process initiated in September 2002. Since these data represent project managers' "best memory" of the occurrence of a particular event, the increase in reported events in 2002 could be related, in part, to people's ability to recall more recent events.

Non-Compliance Events
2001-2002



State Water Quality Standards and Clean Water Act Non-Compliance Events



Source: WSDOT Environmental Affairs Office

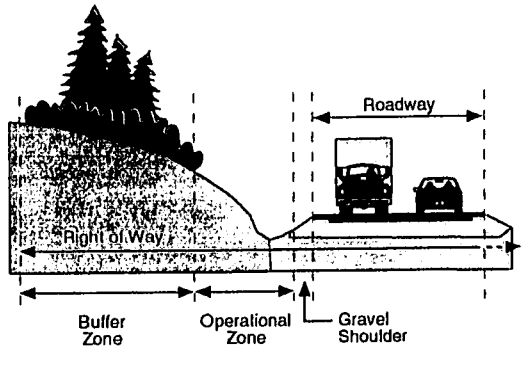
Integrated Vegetation Management

In addition to the compliance measures described above, WSDOT also tracks compliance with herbicide and pesticide application laws covering the products and procedures used to maintain roadsides and wetland mitigation sites. Over the last two years there were nine non-compliance events (all formal notices), three of which were overspray violations affecting upland vegetation. The remaining non-compliance events were failures that did not impact the environment (inaccurate record keeping, failure to use gloves during application, failure to post correct phone numbers on equipment). WSDOT believes that none of the non-compliance events directly affected wetlands, fish habitat, or water quality.

In 2002, the number of violations dropped by one from 2001, although as shown in the table below, the number of herbicide applications actually increased.

All of these matters are under close review as WSDOT intensifies its Integrated Vegetation Management program for 2003 with the intention, among other things, of relying on no greater quantities of herbicide than necessary for vegetation management purposes.

	2001	2002
Non-Compliance Events	5	4
# Product Applications	2,271	3,399



Gravel Shoulder – Vegetation Free Area
Maintained with herbicides where necessary to allow surface water drainage off the pavement and into the ditch.

Operational Zone – Grass or Small Trees and Shrubs
Herbicides are used very selectively for control of noxious weeds, and sometimes for brush control.

Buffer Zone – Natural/Native Vegetation
The IVM approach encourages stable self-sustaining vegetation with limited use of mowing, herbicides, tree removal and other methods as necessary.

EMS Compliance Assurance Procedures

Four components of the EMS approach have received special attention as WSDOT has worked toward EMS implementation in recent months.

Written Procedures

In March 2003, Environmental Compliance Assurance Procedures were issued for construction, maintenance, and Washington State Ferries. These procedures provide guidance to help employees recognize, avoid and correct non-compliance events. The procedures outline for everyone, from field staff to executive management, a clear, consistent process for reporting and managing non-compliance events.

Unauthorized placement of fill below the ordinary high water mark of Issaquah Creek (right side of photo) under the Sunset Interchange.

Training

Training in the new compliance assurance procedures will be incorporated into 21 courses offered to different levels of staff throughout the agency and to our liaisons at the resource agencies. Ten of the 21 courses are already being offered, and five additional courses are in development. Six more needed courses have been identified; they will be developed soon. Since issuance of the compliance procedures, 850 of approximately 1,200 regional engineering and environmental staff have received instruction on the procedures.

Record Keeping (Tracking)

Paper tracking of compliance events will be replaced by an interim, on-line database in May 2003. This interim database is expected to be upgraded in October to an Environmental Permit Compliance System (EPCS), which will enable WSDOT to track environmental permit features (such as time required to obtain permits, monitoring and condition requirements, etc.) and correlate permit conditions and requirements with non-compliance events.

Auditing

WSDOT is working with the resource agencies to develop an auditing procedure that would include an annual audit of both open and recently closed WSDOT construction sites, and an annual evaluation and comparison of non-compliance event data recorded by WSDOT and the resource agencies.

See Protecting Streams from Construction Site Erosion and Runoff, *page 20, for an update on the inspection of 29 WSDOT construction sites.*

Environmental Programs: Environmental Impact Statement (EIS) Tracking

WSDOT and others analyze impacts of proposed transportation projects under the National Environmental Policy Act (NEPA), and its state counterpart, the State Environmental Policy Act (SEPA). Particularly over the last decade, NEPA processes have presented many challenges: what should be their scope and level of detail? how much should they cost? how long should they take?

While projects sometimes can be processed under NEPA by an "Environmental Assessment" or categorical exclusion, projects that may result in significant adverse impacts to the environment trigger preparation of a NEPA *Environmental Impact Statement* (EIS). The essentials of a project – including measures to avoid impacts and the major environmental as well as transportation features – are defined in the EIS documents. The process covers potential environmental impacts (not only on water and air quality or on endangered species, but also on cultural resources and on low income or minority communities,) and how those impacts might be avoided, minimized or mitigated. Resource and regulatory agencies, tribes, other governmental entities and the public at large are all involved in developing EISs.

Important Step in Project Delivery

Before finalizing a project's design, environmental assessment and documentation including an EIS if required, must be completed. Delays in completing these documents stall other activities required to deliver the project. This is evident in FHWA's findings in a national study of experience around the country that it takes nine to 19 years to plan, gain approval for, and build a new federally-funded project with significant environmental impacts ("Timely Completion of Highway Construction Projects," GAO-02-1067T, 2002).

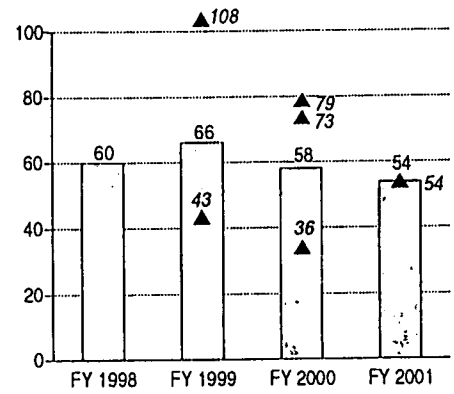
In Washington, EIS processing times are longer than the national medians compiled by FHWA. This, however is a common experience among the other western states (FHWA, Berger Baseline Studies, 2003). Endangered species issues also complicated project delivery in this state.

Next Steps

WSDOT is working to implement a tracking system for environmental documents under development. To improve EIS completion times, WSDOT's next step is to negotiate timelines with the key resource and regulatory agencies.

National Median Processing Times for Environmental Impact Statements

Number of Months



▲ *WSDOT Actuals for completed EISs each year*

Source: FHWA 2002 Milepost Report

By 2007, FHWA hopes to achieve two performance goals demonstrating improved timeliness of environmental process:

- Decreasing the median EIS completion times from 54 to 36 months.
- Negotiating and meeting 90% of EIS production schedules.

FHWA Analysis

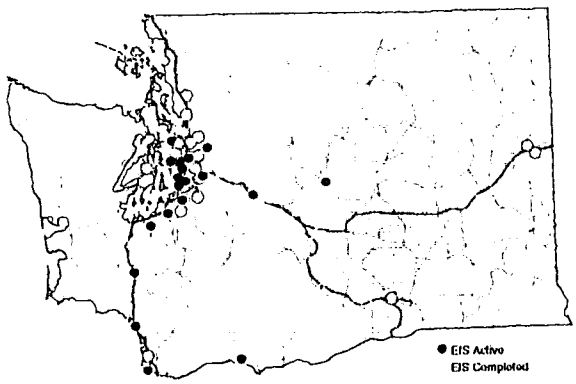
NEPA-Related Factors Contributing to Delay of Transportation Projects:

- Lack of funding for EIS, or low priority;
- Local controversy;
- Complex project, no specific reason.

Other delay factors included: Resource agency reviews and tribal consultation, wetlands, environmental justice issues, changes in project scope, and poor consultant work.

Source: September 2000 FHWA review of 89 EIS Projects in progress 5 years or more without a Record of Decision (ROD)

WSDOT Active and Completed EISs



Since 1989, WSDOT has completed 24 NEPA EISs. In addition, 19 EISs are in development (or active status) at this time.

Environmental Programs: Protecting Streams from Construction Site Erosion and Runoff

Erosion control at construction sites is an important WSDOT responsibility for stream protection. Previous editions of the *Gray Notebook* have included information on assessing construction site erosion control efforts and monitoring stormwater runoff. In the fall of 2002, all 29 moderate and high-risk construction sites were visited and assessed for the thoroughness of erosion plans, plan implementation, and effectiveness of protection measures.

Compliance

The following table shows compliance with minimum requirements that the Department of Ecology requires WSDOT to include in its erosion control plans, plus internal performance measures* from WSDOT's erosion control program.

Erosion and Sediment Control Requirements	Percent of 29 projects that are in compliance
* Contractor trained in proper use of erosion/sediment control measures	100%
Clearing limits/sensitive area boundaries identified and respected by contractor	100%
Utility trenches excavated in a manner to reduce erosion risk	100%
Water removal processes minimize erosion and sedimentation risks	100%
Construction access routes stabilized to prevent tracking of mud onto streets	98%
Effectiveness of sediment trapping measures	96%
Effectiveness of erosion control measures	91%
Sediment trapping measures installed prior to soil disturbing activities	90%
Stormwater conveyance channels stabilized	90%
Flow controlled to minimize offsite erosion	87%
* Would runoff meet water quality standards if storm occurred (no last-minute changes needed)	86%
Would adjacent property and water bodies be protected if storm occurred (no last-minute changes needed)	83%
Erosion and sediment control measures removed when no longer needed	81%
Protect storm drains from sediment	74%
Erosion and sediment control measures properly maintained	70%
Protect cut & fill slopes from concentrated stormwater runoff	67%
* Amount of disturbed soil actually covered with erosion control measures	65%
* Erosion control plans are on site and up to date	56%

Assessment Results

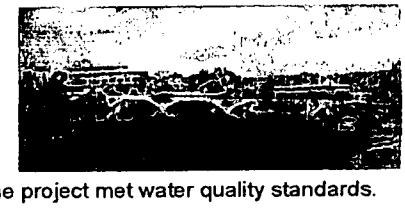
Of the 29 projects assessed, 23 successfully prevented erosion. Four had minor problems that were corrected without regulatory agency involvement or significant repair costs. Two had major problems triggering regulatory agency involvement.

There is room for improvement. With a baseline established, WSDOT is focusing training, planning, and contract enforcement on issues most needing improvement. Future results will be compared to this baseline. WSDOT will also use water quality monitoring data (see the *Gray Notebook* from December 31, 2001, page 21) to verify that the assessment program accurately reflects the effectiveness of plans in protecting water quality.

Example Sites

This steep slope near Mukilteo is typical of sites that can cause minor erosion problems. Erosion blankets made of plant fibers and grass seeding can prevent problems. The rock channel conveys water away preventing further erosion.

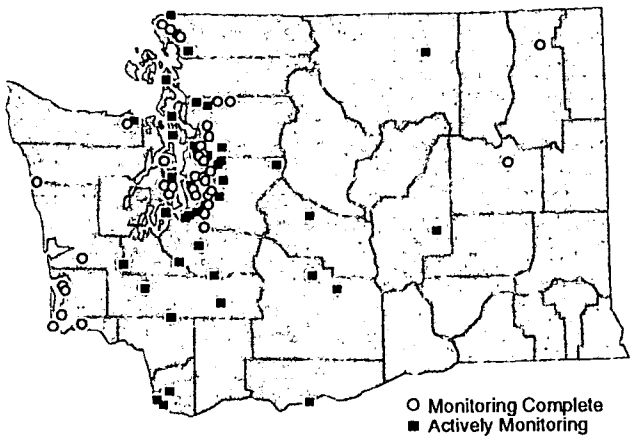
WSDOT experienced major challenges removing this bridge over the Spokane River. Pier removal activities noticeably muddied the water and heightened concern among regulators. Water quality monitoring data (like that shown in the December 31, 2001 *Gray Notebook*), however, showed that the project met water quality standards.



Environmental Programs: Replacement Wetlands

WSDOT has been mitigating for unavoidable wetland loss with replacement wetlands for more than a decade. The state's Executive Order 89-10 mandates that the actions of state agencies result in no net loss of wetlands. During the permitting process for replacement wetland sites, *success standards* are developed and the *monitoring period* is determined. After construction, data is collected and analyzed to determine if success standards are being met. If regulatory requirements are met at the end of the monitoring period, the replacement wetland is considered successful, and *monitoring is complete*. Monitoring and reporting on the status of replacement wetlands is critical to the success of the program as seen by both the public and the resource protection agencies.

WSDOT Replacement Wetlands
1988 - 2002



Types of Mitigation

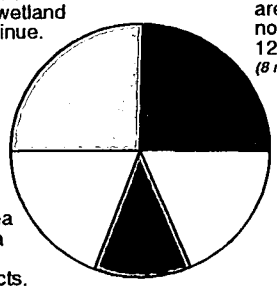
When impacts to wetlands are unavoidable, wetlands are enhanced, restored, created, or preserved to achieve the no net loss policy. In this effort, WSDOT uses a variety of strategies including mitigation banking and advance mitigation. Mitigation banking compensates for many small impacts in one mitigation site in advance of a transportation project. Advance mitigation is building replacement wetlands before unavoidable impacts take place.

Since 2001, monitoring has begun on 5 recently constructed replacement wetlands comprising 16 acres in total. For additional detail on monitoring replacement wetlands and pictures of the different types of projects, see *The Gray Notebook* for the quarter ending March 31, 2002, page 14.

WSDOT Replacement Wetlands: 1988-2002
Total Acreage of Wetland Projects
101 Sites, 476 Acres

Preservation
Protecting wetlands from future development insures that valuable wetland functions continue.
117 Acres
(same as March 2001)

Creation
The establishment of wetland area and functions, where none previously existed.
122 Acres
(8 more acres since March 2001)



Buffer
An upland area that protects a wetland from adverse impacts.
91 Acres
(3 more acres since March 2001)

Enhancement
Improvements to an existing degraded wetland to increase or augment wetland function.
89 Acres
(4 more acres since March 2001)

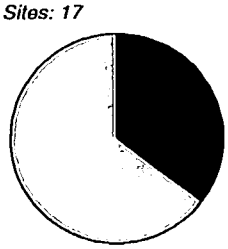
Restoration
Reestablishes a wetland area and/or function, where wetlands previously existed but were no longer present.
57 Acres
(1 more acre since March 2001)

Meeting Standards in 2002

In 2002, biologists monitored a total of 46 *active* replacement sites, ranging from one to seven years in age. Of these, 17 sites had a total of 56 individual success standards to be met in 2002. See the next page for the success rate of sites that have *completed monitoring*.

Replacement Wetlands: 2002 Standards
Number of Sites: 17

11 Sites Met Some Standards
31.02 Acres



6 Sites Met All Standards
15.22 Acres

WSDOT reported to regulators the results of sites with standards to be met in 2002 on a site by site basis in the 2002 Annual Monitoring reports. Visit www.wsdot.wa.gov/environment/eao/welmon/#2002%20Sites for more information about the 2002 results.

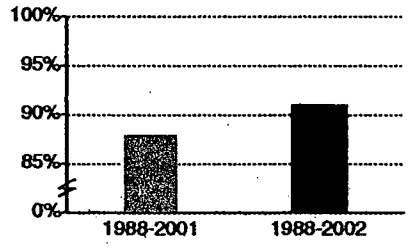
Measuring the Success of Replacement Wetlands

In 2002, WSDOT completed five years of monitoring the highly successful State Route (SR) 18 Pumpkin Patch replacement wetland constructed in 1997 to compensate for improvements to SR 18. The goal was to restore 0.8 acres of wetland that had been converted to agricultural use. Improvement actions included excavating a better connection to an existing wetland associated with the Green River and planting native shrubs and trees. All of the final success standards were met or exceeded during the five-year monitoring period. The chart at right shows WSDOT's overall success rate for sites that have completed monitoring.

Developing success standards for replacement wetlands is an integral part of the wetlands permitting process between WSDOT, the Department of Ecology (DOE), the Department of Fish and Wildlife, the U.S. Army Corps of Engineers (USACE), tribes, cities, and counties. Historically, the most common standards have included water presence and saturated soil, vegetation characteristics (especially for native plant species), and wildlife habitat diversity. Meeting *success standards* is one goal, but achieving planned wetland *functions* is another, as shown in the example on the next page. WSDOT continues to work closely with DOE, USACE and others to develop reliable and ecologically meaningful functions-based success standards.

Replacement Wetlands*: Monitoring Complete

Success Rate



** Includes acreage not yet designated for mitigation credit.*

Source: WSDOT Environmental Affairs Office.

Successful sites have met their regulatory requirements. For unsuccessful sites, it is unlikely that all success standards will ever be met.

From 1988 through 2001, monitoring was completed for 34 sites, of which 30 sites (222 acres) met regulatory requirements and are considered successful.

Four sites (5 acres) had hydrology problems and only met some success standards. There are no practical solutions to "fix" the hydrology at these sites. Hydrology is the most difficult factor of a replacement wetland to predict. For example, one site near Patterson Creek in King County was constructed, and then its source of water was reduced. Another nearby site has experienced more water than expected, and planted woody vegetation has been unable to survive.

In 2002, monitoring was completed on 13 additional sites (23 acres). These sites met their regulatory requirements, bringing the success rate to 43 of 47 sites from 1988 to 2002.

New Directions in Wetland Mitigation

The U.S. Army Corps of Engineers (USACE) recently released new guidance for compensatory mitigation projects, and in conjunction with the Environmental Protection Agency, crafted the National Wetlands Mitigation Action Plan. Both can be viewed at *www.usace.army.mil/inet/functions/cw/hot_topics/corps_epa.htm.*

The action plan's purpose is to improve the performance and results of replacement wetlands. One area of emphasis is increased reliance on functions assessment. Fortunately, WSDOT has anticipated this progression of wetland mitigation science and is already largely in step with the new criteria for measuring and monitoring performance. Examples include:

- WSDOT's *Wetland Functions Characterization Tool for Linear Projects*, developed in 2000, has been recommended for use by resource agencies and the Society of Wetland Scientists to determine the functions of impacted wetlands and replacement wetlands.
- An interdisciplinary team, including federal, state, and local agencies and private consultants, contributed to the widely recognized WSDOT document, *Success Standards for Wetland Mitigation Projects – A Guideline.*
- WSDOT participates in technical committees, such as the recent effort to update the Washington State Wetland Rating System, and the development of the Wetland Functional Assessment Methods, Vol. 1 and 2.

Case Study: Blaine Replacement Wetland

The Blaine replacement wetland illustrates the need for WSDOT and the Wetland Mitigation Technical Group to continue development of functions-based success standards. In 2001 the WSDOT Blaine replacement wetland achieved its planned functions, but did not meet two of its success standards.

The table shows the 2001 success standards for the Blaine site. One success standard required 75 percent cover by native vegetation in the forested and scrub-shrub zones on the site by the fifth year, but the site achieved only 57 percent woody cover. On average, by the fifth year, such WSDOT replacement wetlands sites achieve about 50 percent woody cover. So this site, while not yet meeting the high standard set for it, is still above average. A recent WSDOT study found that most sites do not achieve 75 percent woody cover until the eighth year. The full report, *Benchmarks for Stand Development of Forested and Scrub-Shrub Plant Communities*, can be found at *www.wsdot.wa.gov/eesc/design/roadside/default.htm#sos*. The Blaine replacement wetland should achieve 75 percent woody cover within a few years.

Blaine Replacement Wetland Success

Fifth Year Success Standards	2001 Results
Less than 10% cover of reed canarygrass	Not met (21%)
75% native vegetation cover in forested and scrub-shrub zones	Not met (57%)
80% native vegetation cover in emergent zone	Nearly met (79%)
Provide storm water storage capacity	Standard met
Ponding or saturation to the surface in the spring	Standard met
80% cover by wetland species in emergent zone	Standard met (93%)
50% aerial cover by woody species in forested and scrub-shrub zones	Standard met (57%)
Differences in height between forested and scrub-shrub zones	Standard met

Success standards need to be measurable, achievable and meaningful. Complex natural processes determine how replacement wetlands develop. A decade of experience shows that some standards are not feasible, even for very promising sites. WSDOT continues to work with regulatory agencies to refine approaches for replacement wetlands and has conducted research on older mitigation sites to provide a scientific basis for determining appropriate success standards.

Another success standard required that the site show less than 10 percent cover by reed canarygrass, a widespread invasive grass. The control of tenacious invasive plants is important in replacement wetlands, especially during the period of plant establishment. Despite aggressive weed control efforts, the site in the fifth year had 21 percent cover of reed canary-grass. Where the tree and shrub canopy is developing dense shade, the reed canarygrass is very thin and is not competing successfully with the woody vegetation. This trend is expected to continue. While this success standard was not met, reed canarygrass nevertheless can make a substantial contribution to water-quality enhancement functions in a wetland.

Despite not achieving all of its standards, wetland functions that have been successfully created at the Blaine site include:

- Depressions to hold stormwater runoff, which can lessen downstream flooding.
- General suitability for wildlife habitat, especially for invertebrates, amphibians and wetland dependent birds.
- The potential to improve water quality by removing sediment, nutrients, and toxicants.

For more information about the Blaine replacement wetland, see the WSDOT 2001 Rail Report at *www.wsdot.wa.gov/environment/eao/wetmon/default.htm#2001%20Sites*.

Blaine Replacement Wetland Costs

The costs to build and maintain a replacement wetland can vary greatly, depending on several factors. One variable is the price of land purchased to build a new site. Land is more expensive in Renton than in Skykomish, for example.

Site terrain also makes a difference. When excavation is needed to create wetland in an upland area, the construction cost is greater. The costs of the completed Blaine replacement wetland are shown as an example.

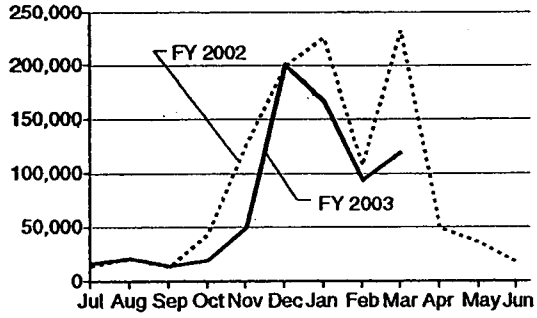
Cost Detail: Blaine Replacement Wetland

Activity	Cost
Land purchase	$80,000
Construction and plant establishment	$338,000
Site management and monitoring	$30,500
Total	$448,500

Traveler Information

WSDOT supplies traveler information in several formats, including on the Web, via changeable message signboards, highway advisory short-wave radio, and over the phone at 1-800-695-ROAD. Nearly all the traveler information on television and radio news statewide is based on WSDOT information. For an overview, see the September 30, 2002 edition of the *Gray Notebook.*

Number of Calls to 1-800-695-ROAD
Fiscal Years 2002 and 2003

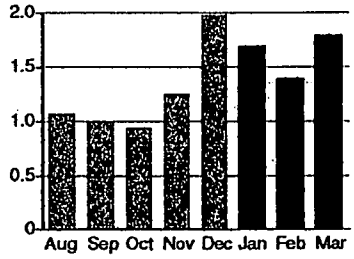


The volume of calls to 1-800-695-ROAD spikes in winter months.

On the Web

WSDOT continues to monitor and establish a baseline of customer usage of WSDOT's traveler information on the Internet. As expected, usage increased with winter storms.

Traveler Website Daily Usage
Average Daily Page Views, in Millions



Milder mountain weather in February meant less use than in the other two months this quarter. The highest number of daily page views (5.4 million) for the quarter came on March 7. The highest number of page views on a Sunday recorded to date happened on January 12 with 2.2 million page views. The camera at Snoqualmie Pass West Summit had more than three times the normal use for a Sunday. Usage was highest from 6 to 11 a.m. in the morning. A possible contributing factor may have been Washington State University students returning to school in Pullman to begin classes the next day.

Source for all charts: WSDOT Communications Office.

Advanced Traveler Information System Case Study

A 1999 case study in the Washington, DC metropolitan area found that travelers using an Internet-based Advanced Traveler Information Service (ATIS) improved their on-time reliability by 5% to 16% compared to travelers not using the service. The study simulated the experience of commuters with a need to be on time using a prospective pre-trip traveler information system. Results from the case study include:

- Peak-period commuters who did not use ATIS were three to six times more likely to arrive late than counterparts who used ATIS.
- Peak-period commuters who used ATIS were more frequently on time than nonusers who scheduled conservatively.
- Late shock, the surprise of arriving late, was reduced by 81% through ATIS use.

More information on this case study is available at www.itsdocs.fhwa.dot.gov//JPODOCS/REPTS_TE/index.html#Table2.7.1.

WSDOT Web Site Feedback

Below is a sample of recent traveler website feedback:

January 4, 2003
I need to thank you for your excellent web pages! So much information! Easy to get around! VERY WELL DONE!!!!!

January 8, 2003
This site is great, it's clear, easy to navigate and has all the info I need. I go from Wenatchee to Seattle every week for business and need pass info in the winter. This site has made getting this info quickly. Thanks for getting it right.

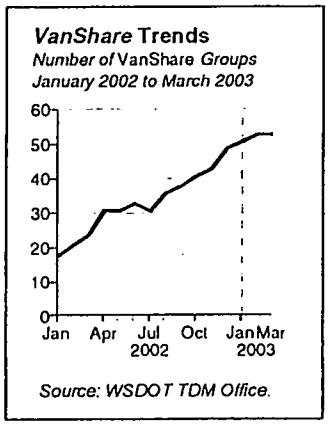
January 12, 2003
Today was the first time I had to send my son back to WSU in the winter and found your website very helpful to know what condition Snoqualmie Pass was in.

January 20, 2003
Just wanted to say the information provided and format is proving to be an excellent tool for a traveler deciding whether to assault the mountain pass roadways or not. This is one of the most useful websites I've ever seen. Thanks.

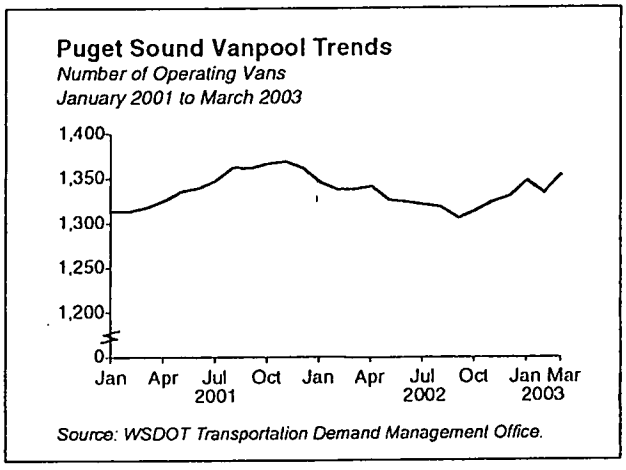
Commute Trip Reduction: Quarterly Update

Vanpools in the Puget Sound Region

The number of public vanpools on the road in the Puget Sound Region has increased 3.7 percent since September 2002. In the first quarter of 2003, the King County Metro *VanShare* program continued its upward trend from 2002, while Kitsap Transit added its first *VanShare* group.



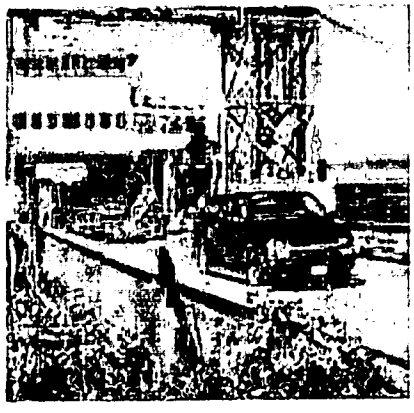
Source: WSDOT TDM Office.



Source: WSDOT Transportation Demand Management Office.

Quarterly Regional Vanpool Highlights

- WSDOT maintains a fleet of 42 vans intended to help vanpool systems meet short- and long-term needs. At the end of the quarter, 95% of the vans were in use: 20 eight-passenger and 20 15-passenger vehicles were under contract.
- King County Rideshare Operations completed a 12-month Duwamish Rideshare Plus project at the end of March, sponsored by the Manufacturing Industrial Council. Rideshare Plus staff provided personalized ridematching services and promotional incentives to Duwamish commuters and formed one Vanpool group, 7 *VanShare* groups and 23 carpools.
- At the end of the quarter, 213 of Pierce Transit's 216 vans were in operation (98.6 percent use). PT anticipates 100 percent of the vans will be in operation in April and will use reserve fleet vehicles for vanpooling in May while it awaits the arrival of 20 new vans.
- Community Transit finished its vanpool promotion "1.2.3 Free" in March. Fourteen new vanpool groups are on the road and 36 new riders were added to existing vans.



CTR Data Collection Aids Local Jurisdictions and Private Utilities

- Avista Utilities receives a special operating order allowing them to run a thermal energy generating plant beyond the permitted hours. The special order required Avista to develop and implement an environmental project to offset the emissions produced during the additional operating time. As part of this effort, Avista provided funding to Spokane County to expand its CTR program.
- Local governments have made use of the CTR performance measurement to assess the impacts of growth on transportation facilities. The City of Bellevue, for example, calculates that it saves between $40,000 and $50,000 annually because of the data it receives from employers implementing CTR. Without CTR data and the program's collection tools, the City would need to create and manage a different mechanism to monitor its transportation concurrency program required under the Growth Management Act.

Eastgate Park and Ride Expansion

Park and ride lots on the Interstate 90 corridor at Issaquah, Eastgate, South Bellevue, and Mercer Island are frequently full; lack of additional park and ride capacity deters many commuters from making greater use of transit service in the corridor. In 2000, WSDOT partnered with transit agencies in Snohomish, King, Pierce, and Kitsap Counties to determine current and future park and ride needs. The *Puget Sound Park and Ride System Update* projected that the I-90 corridor had the biggest deficit, with demand exceeding supply by more than 1,200 stalls. King County Metro has since revised that number to 2,000 based on current ridership trends and growing demand.

In April 2003, King County Metro began construction of a five-story park and ride garage located at the WSDOT-owned Eastgate facility. WSDOT was also part of the original design team. The surface lot contained 724 parking spaces prior to construction. When the new garage is completed in June 2004, there will be nearly 1,700 spaces on the site – 350 surface stalls plus 1,321 stalls in the new five-story structure. Access, safety, and security features will reflect the suggestions made by users from local communities. Some parking will remain open at the permanent Eastgate lot throughout construction.

Favorable economic conditions for public works projects have already made their mark on the project. Metro budgeted $33 million, including the costs of environmental analysis, site redesign, construction, and other parts of the project. Construction was estimated at $18 million. The winning low bid contractor's bid price for construction was only $13.2 million. The project is expected to take one year.

For more information visit www.metrokc.gov/kcdot/alts/eastgate/easthome.htm.

Construction began as scheduled on April 14, 2003. After erecting construction fencing, the crew from contractor Baugh-Skanska removed old paving from the majority of the site. Much of the pavement will be crushed and reused.

The interim parking lot is being fully utilized.

Park and Ride Lot Occupancy at WSDOT-Owned Sites in King County

During the fourth quarter of calendar year 2002, occupancy of the 8,500 parking spaces in the 32 WSDOT lots in King County averaged 77%, marking a slight upswing in usage after several quarters of decline. About 59% of WSDOT's park and ride lots in King County surpassed the target of 70% occupancy during the quarter, up from 53% last quarter. Parked cars regularly exceeded maximum capacity at six lots.

**Data availability has a lag of three months to allow the transit systems to collect and analyze the data. Data for the first quarter of 2003 will be available in the next* Gray Notebook.

Washington State Ferries: Quarterly Update

Customer Feedback

WSF collects customer complaints, compliments, comments, and suggestions. This information is recorded in the Automated Operating Support System (AOSS) database for measurement and action, based on date base cross tabulation and analysis.

The charts show trends in the data for the last four fiscal years and the first three quarters of fiscal year 2003 (July 1 – March 31, 2003).

Customer complaints were down for the second consecutive quarter and down 19 percent from the preceding quarter.

Complaints were down in nearly every category. Bicycle issues were down 70 percent, food service complaints down 68 percent, and facilities / vessel issues were down 74 percent from the preceding quarter. Numbers of ticket-related complaints were very similar to last quarter.

In one category not shown below, complaints regarding smoking issues were up 139 percent over the preceding quarter. A total of 13 smoking issue complaints were received in this quarter.

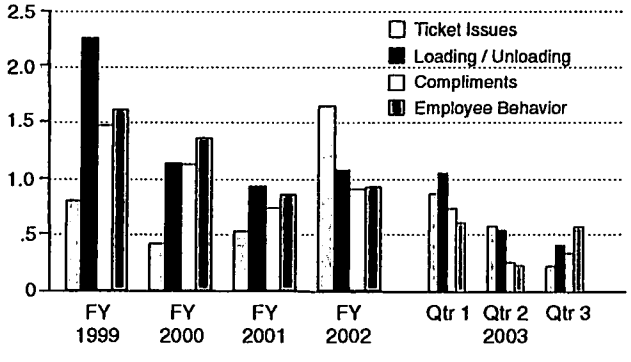
Top Four Comment Types per 100,000 Customers



On-Time Performance

The table below compares WSF on-time performance for the third quarters of fiscal years 2002 and 2003. Overall performance improved over last year for two major reasons. On-time performance, the most important factor influencing customer satisfaction, has been increasingly emphasized since 2000. Also, a drop in the number of ferried vehicles reduced loading times.

The almost two-minute improvement on the international run is due to reduced processing time for Canadian Customs and U.S. Immigrations in Sidney, B.C. resulting from recent security improvements. Improvement on the Point Defiance-Tahlequah run is due to the *Quinault* (10 knot vessel) replacing the *Rhododendron* (8 knot vessel) for 30 days while the slower vessel was in maintenance.

On-Time Performance Delivery

	Third Quarter Fiscal Year 2002			Third Quarter Fiscal Year 2003		
Route	Number of Trips	Percent of Trips Within 10 Minutes of Schedule	All Trips Average Delay From Scheduled Sailing Time	Number of Trips	Percent of Trips Within 10 Minutes of Schedule	All Trips Average Delay From Scheduled Sailing Time
San Juan Domestic	6,443	94%	2.7 minutes	5,057	90%	2.5 minutes
International Route	176	84%	3.7 minutes	59	93%	1.9 minutes
Edmonds/Kingston	4,564	94%	3.1 minutes	4,384	97%	2.5 minutes
Passenger-Only: Seattle/Bremerton	1,564	95%	2.8 minutes	1,634	97%	2.5 minutes
Passenger-Only: Seattle/Vashon	1,041	94%	2.4 minutes	982	98%	1.9 minutes
Fauntleroy/Vashon/Southworth	9,534	91%	4.3 minutes	10,197	94%	3.2 minutes
Keystone/Port Townsend	1,852	96%	2.4 minutes	1,701	96%	2.4 minutes

Point Defiance/Tahlequah	2,708	93%	4.0 minutes	2,702	95%	3.2 minutes
Seattle/Bainbridge Island	4,031	96%	2.8 minutes	3,806	97%	2.7 minutes
Seattle/Bremerton	2,563	98%	2.7 minutes	2,449	98%	2.2 minutes
Total	40,654	94%	3.0 minutes	38,421	95%	2.6 minutes

A trip is considered to be on time if it departs within ten minutes of the published scheduled sailing time. Missed trips are not reported in this measure. They are included in the following measure (Trip Reliability).

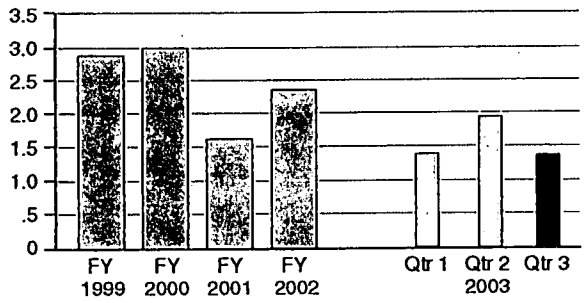
Trip Reliability

WSF scheduled 42,627 trips during the third quarter of fiscal year 2003. Of these trips, 161 were cancelled.

The chart below shows a system-wide average reliability index. Assuming that a commuter worked 200 days per year and made 400 trips on WSF, the statistical likelihood is that 1.5 ferry trips would be cancelled. This rating represents a 22% higher reliability rating than the preceding quarter. Additionally, this rating represents a 43% increase in reliability over the same period in fiscal year 2002. The increase in trip reliability is directly related to high vessel reliability. There have only been 2 other FY quarters in the last 17 quarters with fewer trips cancelled due to vessel failures.

Trip Reliability Index

Missed Trips per 400 Sailings

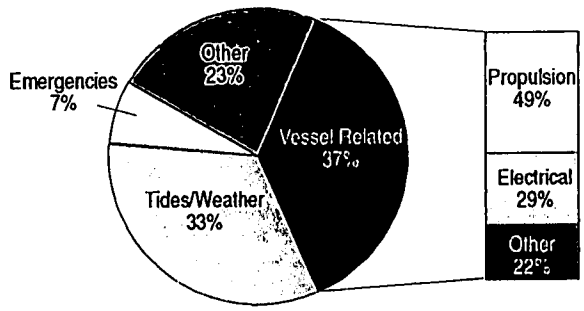


Trip Reliability Index Number = $\frac{\text{Cancelled Trips}}{\text{Total Scheduled Trips}}$ X 400 (Average Annual Number of Commute Trips)

Source: WSDOT / Washington State Ferries.

Most Common Trip Cancellation Causes

Third Quarter, Fiscal Year 2003



Total cancellations were down 52% compared to the same period last year. Two Evergreen state class vessels serving the busy Fauntleroy – Vashon – Southworth routes accounted for approximately one half of all electrical related trip cancellations. Electrical problems on the Tillikum (Jan 11) and the Evergreen State (Jan 24) were repaired quickly, but due to the trip volumes on this route resulted in a total of 16 missed trips. This triangular route annually accounts for ¼ of all trips system wide.

Ridership and Revenues

The Legislature's Joint Task Force on Ferries (JTFF), comprised of legislators, citizens, ferry management, and ferry workers was formed in 2000. The Task Force reviewed the workings of the WSF system and made recommendations including tariff increases designed to raise the farebox recovery rate to 80 percent of operating costs over six years. The Transportation Commission instituted this recommendation and approved tariff increases of 20 percent in June 2001 and 12.5 percent in May 2002.

New tariffs were designed to recover higher total revenues even though the number of riders might fall slightly when the price of the trip went up. WSF anticipates ridership will fall from the previous year because of the fare increase and that the amount of total fares would go up.

Fiscal year to date, ridership has exceeded the plan by 4 percent or 737,000 riders. Revenues have exceeded the plan by 4.2 percent or $3.5 million (based on June, 2002 forecast).

Although actual ridership has exceeded the plan for the first nine months of fiscal year 2003, March 2003 was the first month in two years where the actuals were lower than the plan. Actual ridership was 3.6 percent lower than plan and nearly 10 percent lower than the same month last year. Contributing factors include weekend service disruptions at Mukilteo due to construction and the fact that Easter Sunday (a high volume weekend) occurred in April this year and March last year.

Ferries Ridership by Month

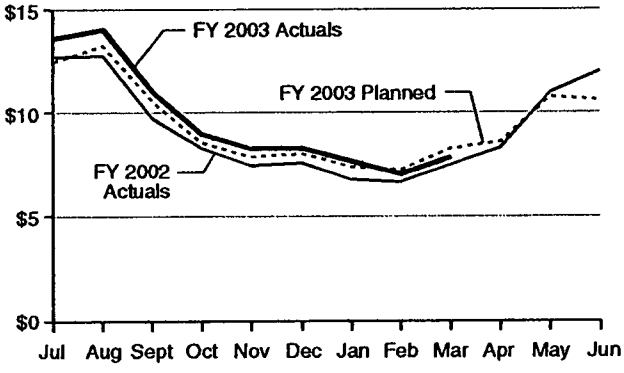
Ferries Farebox Revenues by Month

Dollars in Millions



Capital Expenditure Performance

WSDOT makes capital investments in the ferry system through the Washington State Ferries Construction Program. The program preserves existing and builds new ferry terminals and vessels. This infrastructure program supports the ferry system's delivery of responsible and reliable marine transportation services.

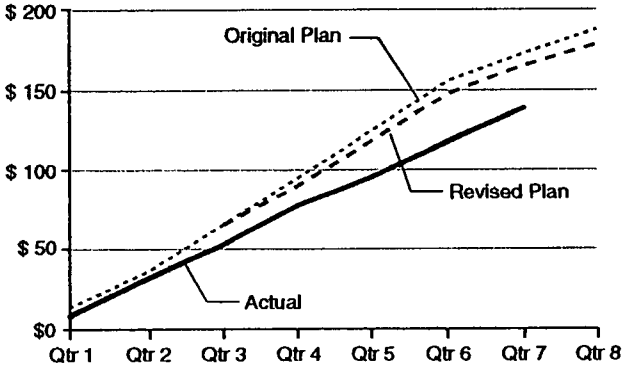
At the end of the 7th quarter of the 2001-2003 biennium, the program has spent $139.3 million (84%) of its planned biennial expenditures of $165.8 million. The program's projected under spending is due to the decision not to acquire a replacement vessel for the *MV Kalama* and *MV Skagit*, cancellation of the project to upgrade the *MV Chelan*, and deferral of the *MV Elwha* Propulsion Control Project to the 2003-2005 biennium.

"Original Funds Available" are based on the Capital Improvement and Preservation Program adopted by the Transportation Commission in October 2001.

"Planned Biennial Expenditures" reflect a $10 million appropriation reduction enacted by the 2002 Legislature.

WSF Construction Program Expenditures

2001-2003 Biennium, Quarter 7, ending March 31, 2003
Planned vs. Actual



Program expenditures are grouped into spending on terminal construction, vessel construction, and emergency repairs of terminals and vessels.

State-Supported Amtrak *Cascades* Service: Quarterly Update

Ridership

Ridership on state-supported Amtrak *Cascades* trains was 84,009 for the first three months of 2003. This is essentially no change from the same period in 2002. The steady ridership level occurred despite the region's ongoing economic recession and traveler concerns stemming from international events.

WSDOT's Schools on Trains program made a significant contribution to ridership. More than 2,500 students from 56 schools rode the Amtrak *Cascades* in January, February and March 2003.

Other actions taken to support ridership and market visibility for the Amtrak *Cascades* in the first three months of 2003 included cooperative promotions with Snohomish County Tourism, the Seattle King County Convention and Visitors Bureau, the Tacoma Rainiers, and the Washington State History Museum.

On-time Performance

On-time performance for state-supported Amtrak *Cascades* trains averaged 78.4 percent for the first three months of 2003. This represents an improvement over the first three months of the preceding year, when the on-time performance averaged 72.2 percent. The majority of the delays were caused by interference with freight trains and speed restrictions through areas where rail line repair and upgrade work was taking place.

Customer Satisfaction

Amtrak's Customer Satisfaction Index (CSI) is based on surveys of riders using the service. The scores represent three-month rolling averages. The CSI goal for the Amtrak *Cascades* is a score of 92 or better. In the most recent survey period, the average score for the Amtrak *Cascades* was 89, which was the same score for the preceding survey period and one of the highest scores in the nation. Customers expressed high degrees of satisfaction with the trains' smooth and comfortable ride, the friendliness and helpfulness of train conductors, and information provided on train services and safety. Areas needing improvement include the quality and variety of on-board food.

WSDOT also gathers information directly from Amtrak *Cascades* riders through on-board customer comment cards. Feedback taken from these comment cards during the first quarter of 2003 included

numerous requests for more service between major cities, better on-time performance, and smoother reservation and ticketing processes. WSDOT is working with Amtrak and others to address these issues.

The Future of Amtrak

WSDOT partners with Amtrak to operate Amtrak *Cascades* service between Portland, Seattle, Bellingham, and Vancouver, BC. Amtrak is also responsible for long-distance routes that serve Washington State, including the *Coast Starlight* and the *Empire Builder*. In February 2003, Congress and the Bush Administration approved $1.05 billion in funding for Amtrak through September 2003. As part of the funding agreement and the railroads' ongoing reform activities, Amtrak is required to provide extensive reports to Congress and the Administration, including detailed business plans.

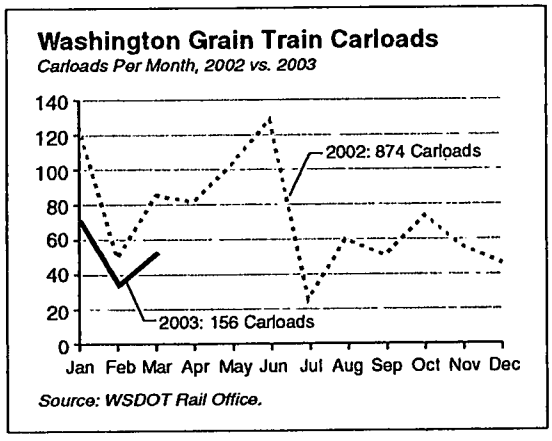
It is anticipated that improved information-sharing between the railroad and the federal government will help Congress and the Administration gain a better understanding of the nation's passenger rail network and the investments necessary to make it a more viable transportation option for the traveling public.

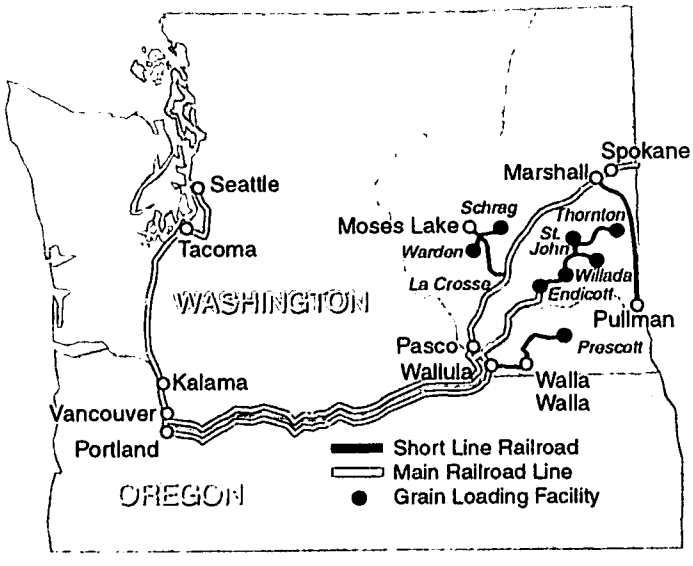
This same funding package approved by Congress and the Bush Administration included $31.8 billion for federal highways, $13.6 billion for aviation, and $7.2 billion for transit through September 2003.

Washington Grain Train Update

In the first three months of 2003, the Washington Grain Train carried 156 carloads of grain to Columbia River ports. This represents a 39.5 percent decline over the same period in 2002.

The decline in grain train car loadings was caused by the Union Pacific Railroad taking longer than usual to cycle full 25-car sets between eastern Washington and Columbia River deep water ports. Corrective measures have been implemented and grain train car loads are beginning to rebound. WSDOT continues to work with the Union Pacific Railroad to ensure that grain train cars are being fully optimized by shippers using the service.





In March, rail cars for the third Washington Grain Train began arriving in eastern Washington after being delivered free of charge by the Burlington Northern and Santa Fe Railway. The full 29-car set began service between Pullman and the main line connection at Marshall, southwest of Spokane, in April 2003.

The communities that will be served by the third Washington Grain Train are Plaza, Rosalia, Oakesdale, Palouse, and Fallon, Washington.

Benchmark: Administrative Efficiency

RCW 47.01.012 establishes a policy goal that WSDOT's administrative costs as a percentage of transportation spending should fall into the lowest 25 percent ("most efficient quartile") among all 50 states. The Transportation Commission has incorporated this suggested benchmark for national comparison and established an internal administrative cost benchmark for WSDOT.

WSDOT's Benchmark

WSDOT's *internal* administrative benchmark reflects the agency's administrative cost in relation to its total expenditures. For FY 2002, WSDOT's administrative allocation was 3.8 percent — $59,862,950 of the agency's total expenditures of $1,568,546,491.

National Comparisons

For national comparison, WSDOT uses the Federal Highway Administration's (FHWA) annual *Highway Statistics* report, which compiles expenditure and performance information from the states. To develop a benchmark, the Transportation Commission and WSDOT referred to FHWA's guidance and *Item A.4.a. General administration and miscellaneous expenditures.*

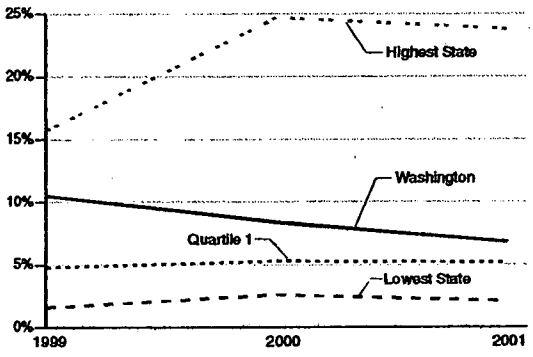
State DOTs use different methods to track and report data to FHWA and differ widely in structure and function. For example, some state transportation departments include driver licensing, which in Washington is part of the Department of Licensing (DOL). Some states report lower administrative costs than WSDOT by allocating certain expenses to specific projects and excluding miscellaneous non-DOT expenses from their administrative cost reports. Other states generally also include information from non-DOT transportation agencies in their FHWA reports, but the mix is inconsistent and may include law enforcement, safety, interest payments, and bond retirement.

WSDOT's national benchmark compares each state's reported *A.4.a.* administrative cost to the total of that state's capital outlay, maintenance, and operations expenditures (core functions of a state department of transportation.). The table at right shows that using this national comparison, Washington ranks as the 21st lowest state with 6.8 percent administrative costs for 2001.

In past years, WSDOT included administrative costs for other transportation agencies, such as the County Road Administration Board and DOL, in FHWA administrative cost reports. Following FHWA guidance, some of these non-WSDOT costs will be moved out of *A.4.a.* in WSDOT's FY 2002 report.

Washington Administrative Cost Target

Percent of Capital Outlay, Maintenance, and Operations Expenditures, 1999-2001



This chart shows Washington's nationally-reported administrative cost percentage for 1999, 2000, and 2001. Washington is showing progress toward meeting the first quartile target set by the Legislature in 2002. The agency has moved from the top of the last quartile for 1999 to the middle of the second quartile for the 2001 report, at 6.8%.

Source: WSDOT analysis of FHWA data.

A number of variables affect administrative costs from year to year. Increases or decreases in the size of the WSDOT construction program affects the percentage of administrative costs compared to total agency cost. In addition, the costs of services provided by other state agencies have been increasing in recent years. Most of these services are mandatory and beyond WSDOT's control. Self-insurance costs continue to increase dramatically.

Benchmark: Transit Efficiency

RCW 47.01.012 also requires the Washington State Transportation Commission to establish a cost efficiency benchmark for the state's public transit agencies.

To address this mandate, the Commission's Benchmark Committee worked with the Washington State Transit Association (WSTA). WSTA proposed the following four measures that address cost efficiency, cost effectiveness, and service effectiveness.

- Operating cost per total hour
- Operating cost per passenger mile
- Boardings per revenue hour
- Operating cost per boarding

Efficiency and effectiveness measures evaluate the ability of a transit agency to provide service and meet the demand for transit services given existing resources.

Distinguishing between different types of services and system sizes is essential for valid benchmarking. The four adopted benchmarks compile statewide averages for fixed-route (scheduled) service at urban, small urban, and rural transit agencies, and statewide averages for demand response (on-call paratransit) and vanpool services. The performance of individual systems can be compared to these benchmarks.

The results for six urban transit systems are used below to highlight the differences that exist between systems. The six systems are Community Transit (CT), Clark County (C-TRAN), King County's Metro Transit Division, Everett Transit, Pierce Transit, and Spokane Transit Authority.

For more information about transit in Washington, see WSDOT's Annual Summary of Public Transportation Systems. *The latest summary is available at* www.wsdot.wa.gov/transit/library/2001_summary/2001_summary.cfm.

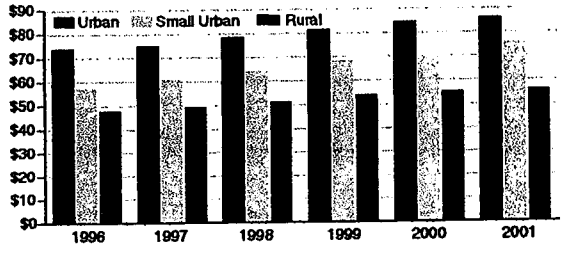
Operating Cost Per Total Hour: Cost Efficiency

Costs are related to the size of the transit system and the nature of the area served. Larger transit systems are more complex and incur costs for fixed facilities (transit centers, park and ride lots, etc.), security, and other costs that smaller systems do not have. They also operate larger equipment in metropolitan areas with higher wages.

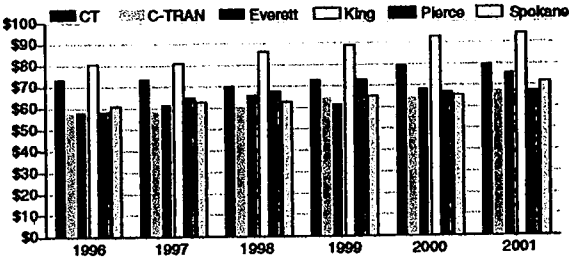
The average cost per hour for the rural and urban systems increased approximately 17% from 1996 to 2001, in line with inflation over this period. Average cost per hour for the small urban systems increased at a higher rate (31.9%). This appears to be due to significant service reductions by these systems in 2000 and 2001, resulting in fixed costs being spread over fewer service hours.

The highest costs in urban transit systems are experienced by King County Metro. Metro operates a fleet of articulated and electric trolley buses as well as the bus tunnel, park-and-ride lots, and numerous other fixed facilities.

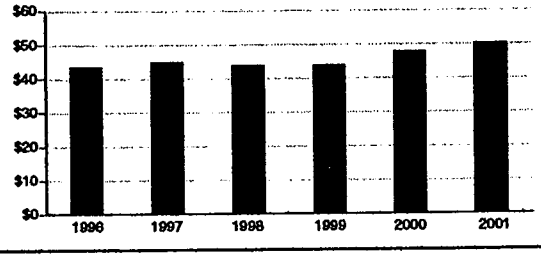
Average Fixed Route Cost per Total Hour
Washington State Average by Transit System Size, 1996-2001



Fixed Route Cost per Total Hour for Six Systems
Six Urban Transit Systems in Washington, 1996-2001



Demand Response Service: Average Cost per Total Hour
Washington State Average for All Transit Systems, 1996-2001



The statewide average cost for demand response service is significantly lower than the fixed-route average cost. This is primarily due to the lower wage rates of demand response drivers. First, this service is contracted out by many systems to private or private non-profit agencies, who often pay less in wages and benefits than the public systems. Second, some transit systems pay their demand response drivers a lower compensation than their fixed-route drivers.

Boardings Per Revenue Hour: Service Effectiveness

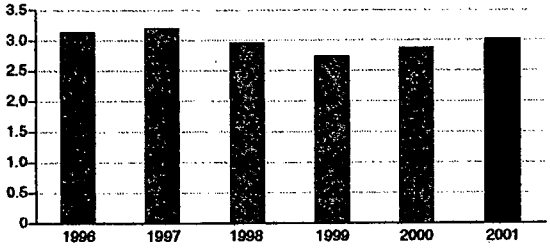
Boardings per revenue hour are the number of passenger boardings for every hour a transit vehicle is transporting passengers. This measure increases with population density and the type of service — urban local service, for example, shows higher boardings per revenue hour than express service.

Performance has been relatively constant for the urban and small urban systems but has dropped among rural systems. The loss of both sales tax equalization and Motor Vehicle Excise Tax funding and the general economic downturn in rural Washington has forced rural systems to reduce service levels and increase fares, resulting in fewer passengers while spreading fixed costs over fewer hours of service.

King County Metro, with more than 30 boardings per revenue hour, exceeds the other urban systems in this measure. C-TRAN has seen this measure decline as a function of the increase of express service in its service mix.

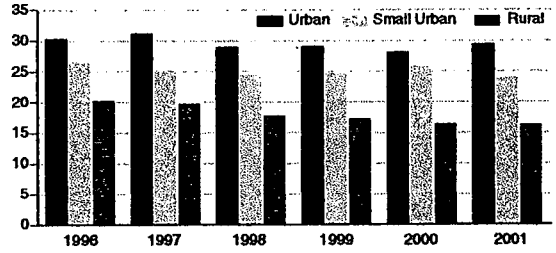
Demand Response Service: Average Boardings per Revenue Hour

Washington State Average for All Transit Systems, 1996-2001



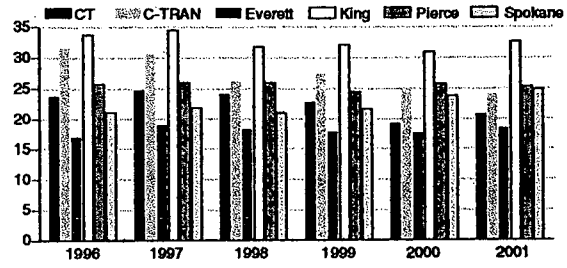
Average Fixed Route Boardings per Revenue Hour

Washington State Average by Transit System Size, 1996-2001



Fixed Route Boardings per Revenue Hour for Six Systems

Six Urban Transit Systems in Washington, 1996-2001



Increases in this measure for demand response service since 1999 are related to service area reductions and the elimination of the least productive services by some transit agencies. As these least productive services, usually serving low-density suburban or rural areas, are eliminated, the associated demand response service is also discontinued. Demand responsive trips in these areas tend to have long trip lengths and are difficult to group with other rides.

Operating Cost Per Passenger Mile: Cost Effectiveness

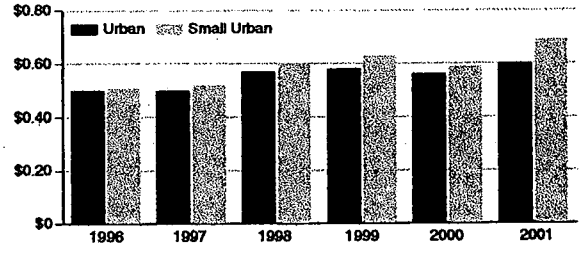
Passenger miles are the transit parallel to vehicle miles traveled. Passenger mile information is not collected for rural systems. Also, this measure does not apply to demand response service.

The trend for this measure generally reflects inflationary cost increases. The cost per passenger mile increased sharply for small urban systems from 2000 to 2001 due to significant service reductions and fare increases during 2000 by several systems in this category.

The chart illustrates the low cost per passenger mile rate of Community Transit — a system with a high level of express service — while Everett Transit, a system with little express service and short average trip length, has a higher cost per passenger-mile. Spokane's cost per passenger-mile reflects its lack of an extensive express route system such as those operated by the Puget Sound area systems.

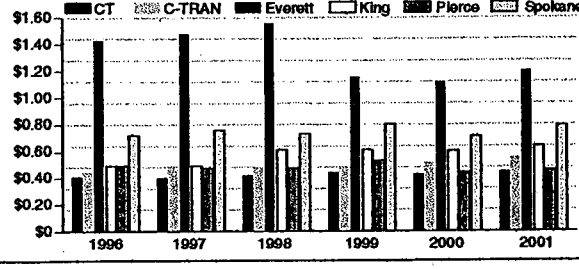
Average Fixed Route Cost per Passenger Mile

Washington State Average by Transit System Size, 1996-2001



Fixed Route Cost per Passenger Mile for Six Systems

Six Urban Transit Systems in Washington, 1996-2001



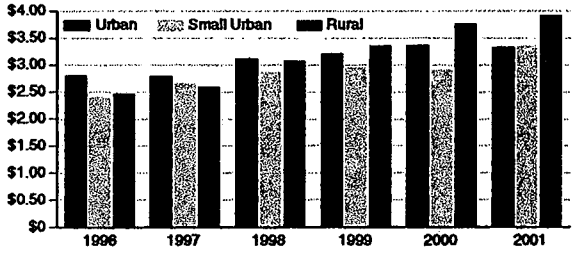
Operating Cost Per Boarding: Cost Effectiveness

Operating cost per boarding measures the cost of carrying one passenger on a single bus trip. An important consideration is that passenger trips can vary greatly in distance. On some systems the average trip length is three miles. On other systems the average trip length is 11 miles. It is reasonable to expect that the latter system would have a higher cost per boarding. Rural transit service will generally be more expensive on a per passenger basis than urban service, largely due to lower population densities and longer trip lengths.

The cost has increased per boarding at approximately the rate of inflation for urban systems, while rural and small urban systems have seen the cost per boarding increase at a much higher rate. Small urban systems saw a significant increase from 2000 to 2001 because service reductions increased the cost per hour of service; also, increased fares led to fewer passengers. Rural systems faced these issues as well, and their cost effectiveness in this measure was hit particularly hard by increased health care and other employee costs.

Average Fixed Route Cost per Boarding

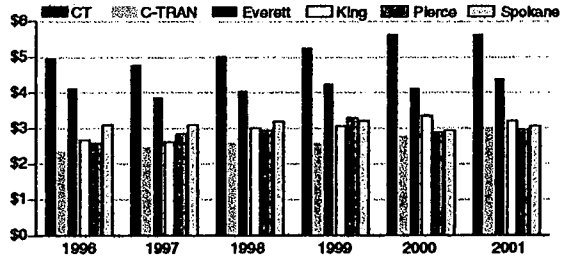
Washington State Average by Transit System Size, 1996-2001



This chart illustrates the effect of the type of service on cost per boarding and the limitations of using a single measure to determine the effectiveness of a transit system. Community Transit has a significantly higher cost per boarding than other systems due to the high level of express service it operates. Express service experiences fewer boardings per hour than local service but has much longer trip lengths. Despite the high cost per boarding, Community Transit has the lowest cost per passenger mile of any of the urban systems. The overall cost per boarding has been held relatively constant over this period among the large urban systems.

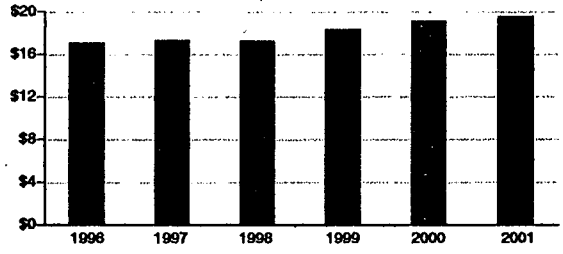
Fixed Route Cost per Boarding for Six Systems

Six Urban Transit Systems in Washington, 1996-2001



Demand Response Service: Average Cost per Boarding

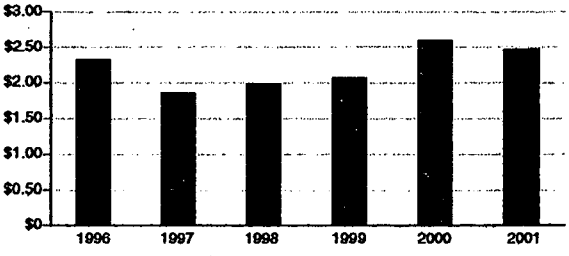
Washington State Average for All Transit Systems, 1996-2001



The cost per boarding for demand response service is approximately six times the cost per boarding for fixed-routes service. This measure was constant from 1996 to 1998 with costs increasing due to inflation and increased employee costs since 1999.

Vanpool Service: Average Cost per Boarding

Washington State Average for All Transit Systems, 1996-2001



Operating cost per boarding is the only statewide benchmark for vanpool service. The cost-effectiveness of the vanpool program is particularly impressive, considering average trip lengths and that vanpool passenger fares cover a substantial portion of the program's operating and capital costs in many systems. Some systems choose to subsidize vanpool fares to make the service as attractive as possible.

Benchmark: Vehicle Miles Traveled Per Capita

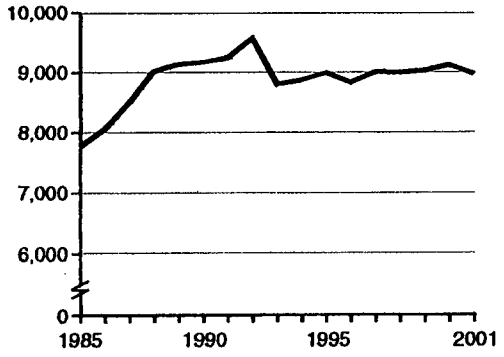
RCW 47.01.012 requires tracking the state's vehicle miles traveled (VMT) per capita, with a goal that it be maintained at 2000 levels. In 2000, the state's population traveled 9,133 vehicle miles per person on all roadways.

The chart shows that VMT per capita dipped below the 2000 level in 2001 to 8,982 miles per person — a decline of 1.7 percent. In the last twenty years, VMT has grown faster than the population (Washington's population has grown about 40 percent, while VMT has grown 60 percent). However, since the late 1980s, VMT per capita in Washington state has hovered very close to 9,000 miles per person per year (the apparent drop from 1992 to 1993 is actually due to a change in the way VMT is calculated)*. Statistics for 2002 will be available in July 2003.

Washington has less vehicle travel per capita than most other states, ranking 41st highest in 2001.

Washington State Travel Growth

*Annual Vehicle Miles Traveled per Capita, 1985 to 2001**



** Vehicle miles traveled for 1993 and later years reflects a change in VMT data calculation, accounting for the drop from 1992 to 1993.*

Source: WSDOT Transportation Data Office.

2001 VMT per Capita by State

Rank	State	VMT per Capita
1	Wyoming	17,445
2	Vermont	15,686
3	Georgia	12,870
4	Alabama	12,716
5	New Mexico	12,701
6	Mississippi	12,592
7	Oklahoma	12,580
8	Missouri	12,013
9	Tennessee	11,783
10	Indiana	11,713
29	Texas	10,139
30	Michigan	9,908
31	Oregon	9,905
32	New Hampshire	9,780
33	Colorado	9,723
34	Maryland	9,673
35	Arizona	9,583
36	Florida	9,494
37	Ohio	9,372
38	Louisiana	9,221
39	California	9,006
40	Connecticut	9,005
41	Washington	8,962
42	Nevada	8,693
43	Pennsylvania	8,383
44	Massachusetts	8,310
45	Illinois	8,255
46	New Jersey	8,100
47	Rhode Island	7,546
48	Alaska	7,436
49	Hawaii	7,101
50	New York	6,876

Note: The slight difference between the results for Washington by WSDOT's Transportation Data Office (at left) and this table reflect data adjustments by FHWA.

Source: Federal Highway Administration and the U.S. Department of Commerce.

***How VMT is Calculated**

Statewide VMT is based on sample data gathered and reported for the Highway Performance Monitoring System (HPMS).

VMT is estimated for the non-sampled mileage. In 1991, new federal legislation required a complete system inventory as the Federal Aid highway system changed and the National Highway System (NHS) was created. At the same time, HPMS data reporting increased to include all principal arterials and NHS routes. This additional data allowed actual calculations on mileage that had been estimated in previous years.

For 1993, the first reporting year for HPMS which reflected the system re-inventory and NHS, the VMT was more accurate than had been possible in the past. Current annual VMT calculations are based on more actual data than was available before 1993, since the calculations now include the total principal arterial mileage and NHS.

Special Features

Hot Mix Asphalt Pavement Delivery Update

In October of 2002, WSDOT forecasted that 1,417,126 tons of Hot Mix Asphalt (HMA) would be awarded to contractors from October 2002 through September 2003. During the first six months, October 2002 through March 2003, 63 projects were forecast to be awarded with a combined total of 1,104,753 tons of HMA.

Tons of HMA awarded has not kept up with the forecast. The actual tally at the end of March is 43 projects awarded with 587,182 tons of HMA. This trails the forecast by 517,571 tons. The reduction of awarded projects and consequently the reduction of tons of HMA awarded are in part related to highway construction program advertisement delays (see details on "Meeting WSDOT's Scheduled Advertisement Dates" on page 3 of this edition).

The gap between forecast and actual tons awarded is projected to catch up in the coming months. By the end of May the gap should be reduced by about two thirds as the number of tons awarded should be within approximately 150,000 tons of the forecast. The final October tally of tons awarded is anticipated to be very close to the forecast.

In previous editions of the Gray Notebook, *this item has been referred to as Asphalt Concrete Pavement Delivery. The name change brings WSDOT in line with terminology used by other state DOTs.*

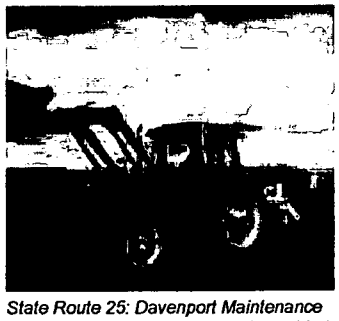
Innovative and Cost Effective Maintenance Practices: Living Snow Fence Planted on State Route 25

This spring the WSDOT Davenport Maintenance Area and the U.S. Department of Agriculture's Natural Resource Conservation Service joined forces to plant a "Living Snow Fence" adjacent to State Route (SR) 25 in Lincoln County. Blowing and drifting snow creates hazardous conditions and increases maintenance costs. Sometimes drifting snow even causes miles of roadways to be closed. Snow fences reduce these impacts. The living snow fence, made of plant materials such as grasses, shrubs and trees, effectively reduces snow drifts. The snow fence is 800 feet long and consists of twin staggered rows of Rocky Mountain juniper trees, growing through a fabric mulch material that will control weeds and keep moisture in the ground. More than 500 trees were planted. The live fence should be fully effective in 5 to 7 years. Another approach is a temporary (plastic) snow fence that was installed this year on SR 547 near Sumas. The Bellingham maintenance operations superintendent reported, tongue-in-cheek: "It did a great job of keeping snow off the road! It didn't snow."



State Route 25: Davenport Maintenance Superintendent Dale Luiten walks behind the equipment tamping down the soil around the little trees.

On the planting machine feeding the little trees into the mechanism is Maintenance Lead Tech Tom Page. Rocky Mountain juniper trees with good site preparation will grow one foot a year.

Highlights of Program Activities

Quarter Ending March 31, 2003

Project Starts, Completions, Updates

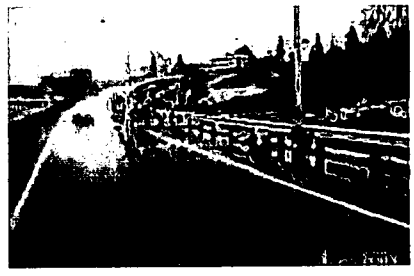
- The Puget Sound Regional Council of Governments contributed $1.2 million toward planning activities and environmental studies of the Alaska Way Viaduct and seawall in Seattle. These funds, along with $2 million secured by Sen. Patty Murray and $5 million committed by the City of Seattle, prevented a shut down of the project at the end of the year. The project needs at least $15 million more to finish the environmental analysis and select the best option for the project. Substantial additional funding is required for further design and construction. For more information, visit the project website at: *www.wsdot.wa.gov/projects/viaduct.*

- Crews began deck replacement for the 73-year old Lewis & Clark Bridge, on State Route (SR) 433 between Longview, Washington, and Rainier, Oregon. The contractor for the project, Max J. Kuney Company, submitted a bid $10.8 million below the engineer's estimates, a potential saving of $5.4 million each for Washington and Oregon taxpayers. The bridge will be closed some nights and weekends during construction. Project information is available on the Web at *www.wsdot.wa.gov/projects/lewisclarkbridge*. The project is scheduled for completion in December 2004.

Lewis and Clark Bridge

- The first half of the I-90 Sunset Way Interchange opened to traffic in January. Two new roadways and a new ramp from Sunset Way to westbound I-90 provide much needed access to the Sammamish Plateau, Issaquah Highlands, and the new Microsoft Campus. This is one of three separate, but interrelated projects being constructed. The full interchange is scheduled for completion in August 2003.

- A new ramp opened from Interstate 405 to SE 8th Street in Bellevue, two months ahead of schedule. The project is part of a series of projects, called Access Downtown, to improve access to Bellevue along the I-405 corridor. The new elevated-ramp will draw drivers away from other heavily used interchanges at NE 4th and NE 8th Streets. Project partners include the City of Bellevue, Sound Transit, Federal Highway Administration and WSDOT.



New ramp on I-405, Bellevue

- A project to reconstruct a section of Interstate 5 in Bellingham that was delayed a year due to higher than acceptable contractors' bids, was successfully re-advertised, with bids coming in nearly $1 million less than the lowest bid received a year ago. The $6.9 million project will improve I-5 between Samish Way and Sunset Drive (State Route 542). Work begins this spring.

- The U.S. 12 Wishkah Bridge in Aberdeen was reopened to traffic after a 35-day complete closure. A detour was in place while the steel grate bridge deck was removed and rebuilt. The pedestrian walkways, maintenance ladders, steps and platforms were also replaced, and the bridge has been strengthened for resistance to seismic forces.

- Workers will begin installing advance-warning beacons at three intersections on U.S. 2 and U.S. 97 between Cashmere and Leavenworth this spring with a goal of completing the project before the summer tourist season. The beacons increase safety by alerting motorists that they are approaching a signalized intersection. Locations of the beacon systems are at the Cotlets Street and Aplets Street intersections with U.S. 2 & 97 in Cashmere, and at the Main Street intersection with U.S. 2 at Peshastin.

- With limited ability to expand major corridors, making the most efficient use of existing pavement is critical. For this reason, the Transportation Commission changed a long-standing policy by implementing WSDOT recommendations to open some Central Puget Sound freeway high-occupancy-vehicle (HOV) lanes to all users from 7 p.m. to 5 a.m. as a two-year demonstration project, and to explore allowing single drivers to buy into under used HOV lanes during the day (known as HOT lanes). The goal is to improve the usage of these HOV lanes, while not harming transit or carpool travel times. The nighttime opening will be implemented by late summer, while a HOT lane proposal will be developed by fall 2003.

- The HOV Pilot Project in Vancouver was extended for another 24 months, following a careful review of four evaluation reports compiled between October 31, 2001 and October 31, 2002. The reports indicated that between July 2002 and October 2002 the number of people in the HOV lane jumped from 70 percent of those in the general-purpose lanes to 90 percent. WSDOT's decision took into consideration the recommendations of the Southwest Regional Transportation Council, C-Tran's Board, the Port of Vancouver, and a national HOV lane peer review panel.

Legal matters

- The U.S. Army Corps of Engineers fined WSDOT and its contractor, Kiewit Construction Company, for violations of the Federal Clean Water Act, stemming from work on the I-90 Sunset Interchange in Issaquah. A $25,000 civil penalty was assessed to each party for conducting unapproved work in sensitive waters within the work zone. WSDOT cooperated fully during the Corps investigation and was already implementing a new environmental compliance process to prevent similar occurrences in the future.

Savings and Efficiencies

- WSDOT's digital production of aerial photography images is more efficient since switching from Digital Linear Tape technology to Digital Video Disc (DVD). The old technology required considerable time to transfer images to tape, due to the large file size. As an example, a transfer of five images was a nearly two-hour process. With the DVD technology, the same data can now be transferred in 30 minutes. The result is lower production costs and faster delivery of products to WSDOT's clients.

Innovations and Awards

- Kim Willoughby, Pavement Structures Engineer for WSDOT's Materials Lab in Tumwater, was part of a multi-agency team honored with the K.B. Woods Award by the Transportation Research Board in Washington, D.C. The K.B. Woods award is given annually for the best research paper in the area of design and construction of transportation facilities. Willoughby's team demonstrated the feasibility of an online web database for monitoring the lifetime performance of hot-mix asphalts.
- WSDOT's Tacoma Project Office earned an honorable mention in the state's "Partnership for Excellence Contract Administration" award program for its work in administering the City of Tacoma's Museum of Glass Bridge project. The annual awards, sponsored by WSDOT and the Associated General Contractors of Washington, recognize achievements in Contractor-WSDOT partnerships that result in the delivery of transportation projects in a timely, professional and responsive manner.

New WSDOT Information Sources

- WSDOT introduced a new handbook, *Building Projects that Build Communities*, to help local agencies and WSDOT deliver successful transportation projects. The handbook implements the Context Sensitive Solutions initiative which encourages partnering to develop a transportation facility that fits its surroundings and preserves scenic, aesthetic, historic, and environmental resources and community values, while maintaining safety and mobility. *Building Projects that Build Communities* was distributed to all public transportation agencies in the state and is available on-line at *www.wsdot.wa.gov/biz/csd.*

Grants Received and Grants Awarded

- Federal and State transportation grants of over $1 million helped pay for safety improvements on Irondale Road, between SR 19 and SR 16 north of Port Hadlock in Jefferson County. The roadway shoulder was widened to improve sight distance for motorists and provide a safer area for bicyclists and pedestrians.

Special Events

- WSDOT's Aviation Division hosted the annual Aviation Hall of Fame Awards banquet during the 20th annual Northwest Aviation Conference and Trade Show in Puyallup. Aviation Director John Sibold presented a number of awards, including Airport of the Year, Airport Manager of the Year, and Airport Volunteer of the Year. The conference drew over 10,000 participants and provided an opportunity for pilots to register with the Aviation Division.
- Tribal Employment Rights Office (TERO) Conferences were held in Lakewood and Spokane, with contractors, tribal representatives, union representatives, and state and federal transportation officials attending. The meetings were to draw attention to tribal employment rights when construction contracts are within reservation lands.

San Francisco Bay Area's Best Workplaces for Commuters℠

EPA is partnering with employers, local and regional government agencies, and community and environmental groups to improve the quality of life in the Bay Area. Read below to find out how, or review some facts about traffic and air quality in the Bay Area to learn why.

Get on the list!

If you have not already applied for The Bay Area's Best Workplaces for Commuters℠ 2003 list, be sure to apply by September 12, 2003, to be recognized by Bay Area media in late October.

EPA Welcomes Best Workplaces for Commuters Districts

EPA is excited to announce California's first ever Best Workplaces for Commuters Districts: Bishop Ranch and Hacienda Business Parks. These districts offer comprehensive commuter benefits packages that meet the *National Standard of Excellence* to all employers and their employees located within the business parks.

Media Release (PDF - 223 KB)

The Bay Area's Best Workplaces for Commuters

On October 24, 2002, The Bay Area's Best Workplaces for Commuters Coalition recognized 84 employers for being placed on the first-ever list of The Bay Area's Best Workplaces for Commuters. The list spotlights Bay Area employers committed to improving quality of life for harried commuters while also reducing traffic and air pollution. San Francisco Bay Area Commuting Facts

The Bay Area's Best Workplaces for Commuters[SM]

- In 2002, more than 80 employers were recognized on the first annual Bay Area's Bay Area's Best Workplaces for Commuters[SM] list.
- The 150,000 commuters covered by last year's Bay Area's Best Workplaces for Commuters list will help reduce 105,000 metric tons of carbon dioxide per year, a reduction equivalent to planting 1.3 million trees each year.
- The list for 2003 is still being developed. Deadline for enrolling online is August 29, 2003. The final list will be announced to the media on October 23, 2003.

Local Commuting

- More than 3.3 million people commute each day in the Bay Area, and more than 70 percent of them drive to work alone. (Census 2000 Supplementary Survey)
- The average annual Bay Area traffic delay per capita for 2000 was 41 hours compared to 27 hours nationally. (Texas Transportation Institute)
- In total, congestion cost the Bay Area $3.2 million-$795 per person-in 2000. (Texas Transportation Institute)
- More than 11 percent of Bay Area workers commute two hours a day-one hour in each direction. (Census 2000 Supplementary Survey)
- Bay Area residents perceive traffic as the number one regional problem. (Bay Area Council's 2002 Quality of Life Survey)

Health

- Walking to work gives you a 20 percent less chance of getting breast cancer, a 30 percent less chance of getting heart disease, a 50 percent less chance of diabetes, and would help you live longer and healthier into old age. (Nurse's Health Study, Archives of Internal Medicine; New England Journal of Medicine)
- About 60 percent of Americans lead completely sedentary lifestyles, and 40 percent are clinically overweight. (1998 report of the American Medical Association)
- Research conducted in 1999 by the Centers for Disease Control found that "obesity and overweight are linked to the nation's number one killer--heart disease--as well as diabetes and other chronic conditions." The report also states that one reason for Americans' sedentary lifestyle is that "walking and cycling have been replaced by

automobile travel for all but the shortest distances." (October 27, 1999 issue of the JAMA)

Air Quality

- Almost 70 percent of the Bay Area's carbon monoxide comes from motor vehicles. (EPA Region 9; Bay Area Air Quality Management District Emissions Inventory)

- For 20 to 30 days per year, air pollution levels in the Bay Area violate state and federal health standards. (BAAQMD emissions inventory)

National Commuting

- The average annual delay per peak-road traveler in 75 urban areas climbed to 62 hours in 2000 from 16 hours in 1982. The total cost of congestion in 2000 came to $67.5 billion, which was the value of 3.6 billion hours of delay and 5.7 billion gallons of excess fuel consumed, not to mention lost worker productivity. (Texas Transportation Institute)

- Nearly 50 percent of workers describe their commutes as unsatisfying or stressful, and 36 percent say they would be willing to take a 10 percent pay cut or more for a shorter commute. (HR Magazine Survey, Oct. 2001)

- Employees with commuter benefits are 8 times more likely to use transit than those who don't have them. (2001 Xylo survey)

Emission Control Strategies for Diesel Engines

I. Introduction

Emissions from diesel engines contribute greatly to the nation's air quality problems. Diesel engines emit fine particulates and nitrogen oxides that contribute to the formation of ground level ozone. Particulate matter and ozone pose serious health problems to the public by causing lung damage and aggravating existing respiratory diseases such as asthma. In addition, diesel exhaust is thought to be a human carcinogen.

Collectively diesel powered vehicles contribute nearly half of the nitrogen oxides and more than two-thirds of all particulates from transportation in the United States. Even with the more stringent heavy-duty highway engine standards starting in 2004 and 2007, existing diesel vehicles will continue to emit large amounts of Nitrogen Oxides (NOx) and particulate matter (PM).

Fortunately there are options to help control pollution from the existing fleet, including oxidation catalysts, particulate filters, low sulfur diesel, bio-diesel, and emulsified diesel.

II. Emission Control Options

A **Diesel Oxidation Catalyst** (DOC) is a device that uses a chemical process to break down pollutants in the exhaust stream into less harmful components. They look like a muffler and act like the catalytic converter on a car. Diesel oxidation catalysts can reduce emissions of particulate (PM) by 20 % and hydrocarbons (HC) by 50 % and carbon monoxide (CO) by approximately 40 %. DOCs cost about $1,000 to $2,000 for buses. They can be installed on any new or used bus and run on regular diesel fuel. Field experience suggests it takes about 1 to 3 hours to install an oxidation catalyst. The use of ultra low sulfur diesel with the DOC will greatly enhance its ability to reduce harmful emissions.

Diesel Particulate Matter Filters are ceramic devices that collect particulate matter in the exhaust stream. The high temperature of the exhaust heats the ceramic structure and allows the particles inside to break down (or oxidize) into less harmful components. The regeneration process produces an ash on the filter that must be cleaned off about every 60,000 miles. They can be installed on new and used buses, but must be used in conjunction with ultra-low sulfur diesel (ULSD) with a sulfur content of less than 15 parts per million in order to be effective. The combination of PM filters and ULSD can reduce emissions of PM, HC, and CÓ by 60 to 90 percent. Diesel Particulate Matter Filters cost between $5,000 and $10,000 and take approximately 6 to 8 hours to install.

The use of **Ultra-Low Sulfur Diesel (ULSD)** by itself can reduce PM emission by 5 to 9 % depending on the level of sulfur in the fuel. The use of both ULSD and a diesel particulate matter filter can reduce emissions by 90 %. ULSD is currently available only

in parts of the country and can cost from 8 to 25 cents more per gal than regular diesel. In 2006 it should be available nation wide.

Bio-diesel is a renewable fuel that can be manufactured from new or used vegetable oils or animal fats and is biodegradable. The use of bio-diesel will reduce the particulate matter (PM), carbon monoxide (CO) and hydrocarbons (HC) but NOx emissions actually increase. The B20 blend, which is 20% bio-diesel and 80% diesel, can be used in existing engines without modifications and should reduce the PM emissions by about 10% but can add 15 to 30 cents per gallon over the cost of regular diesel. The use of B100 (pure bio-diesel) will require engine modifications and cost any where from $.75 to $1.25 over regular diesel, but could reduce PM emissions by 40%.

Emulsified Diesel is a blend of diesel fuel, water (introduced at the microscopic level), and other additives that reduces PM and NOx emissions but also reduces the energy content of the fuel. This fuel does not seem to work well in vehicles that have high pressure fuel systems (fuel injection) but seems to do ok in vehicles with low pressure fuel systems. A second concern is that if a unit is fueled with emulsified diesel and is allowed to stays idle for several months, the water can separate from the diesel and cause engine problems. The use of this fuel can help reduce NOx emissions by 5% to 30% and the PM emissions by 20% to 50% but at a cost of about $.20 per gallon over regular diesel.

III. Conclusions

The State of North Carolina has taken the first step towards addressing air pollution resulting from the use of diesel engines. The Division of Air Quality is committed to opt-in to California's 2007 Heavy Duty Diesel Engine Program to ensure that any delays to the federal program due to the trucking industry will not mean a delay in obtaining emission benefits in our State. North Carolina is also looking at anti-idling and will be installing truck stop electrification through a pilot program. In addition, through the Mobile Source Emissions Reduction Grant program, 5 bus fleets across North Carolina will receive funding for the purchase and installation of diesel oxidation catalysts on school buses. These grants totaling $350,000 will retrofit over 350 buses but this is just a fraction of the State's school bus fleet.

Retrofitting existing diesel engines is a cost effective method to help obtain cleaner air for North Carolina. Should you have any additional questions about the Mobile Source Emissions Reduction Grant program or diesel retrofits, please feel free to contact me at (919) 733-1498 or by e-mail at heather.hildebrandt@ncmail.net.

RE: Report on Underground Storage Tanks

Pursuant to G.S. 143-215.94M and S.L. 2003-340, Section 2, I am transmitting a report on underground storage tanks. This annual report describes the status of leaking petroleum underground storage tanks, the state cleanup funds, and the Groundwater Protection Loan Fund.

The report was prepared by DENR's Division of Waste Management. If you have any questions or would like additional information, please contact Grover Nicholson at 733-1300.

REPORT TO THE ENVIRONMENTAL REVIEW COMMISSION ON THE NORTH CAROLINA UNDERGROUND STORAGE TANK PROGRAM INCLUDING THE PAY-FOR-PERFORMANCE INITIATIVE

5 May 2004

A: The Universe of Underground Storage Tanks (as of 30 April 2004)

1. In North Carolina, there are 11,976 UST facilities which have 33,627 tanks.

2. These facilities are owned by 5,432 owners.

3. Of these 33,627 tanks, 31,000 are regulated and 2,627 are commercial heating oil tanks.

4. Of the 31,000 regulated USTs, 4970 (16%) were installed more than 30 years ago; 6705 (22%) were installed 20-29 years ago; 12660 (41%) were installed 19-10 years ago; and 637 (21%) were installed less than 10 years ago.

5. There are also an estimated 250,000 home heating oil tanks in the state. These are unregulated tanks.

B: The UST Program's Corrective Action Progress (as of 30 April 2004)

1. Since the programs inception, we have recorded 19,473 incidents of leaking tank systems.

2. We have closed 10,103 of these incidents.

3. Presently, we are dealing with 9,370 active incidents: 2,707 are High-Risk; 1,303 are Intermediate-Risk; 2,337 are Low-Risk; and 3,023 are Unconfirmed-Risk.

4. In 2003, about 67 new releases were reported each month. The majority of these new releases (about 68%) were from home heating oil tanks.

5. Default Low-Risk incidents were a special category of Unconfirmed-Risk incidents. We began evaluating them in June 2000, at which time, there were 2,840 such incidents. Evaluations of these incidents are now complete.

6. In addition, there have been 5,705 "clean closures" of tank systems. These were closures where there was no release of petroleum (and therefore no reported incident).

7. We have 36 incident managers in the seven regional offices. Together with the seven regional supervisors, we have 41.5 FTE working on UST release incidents. Since the bulk of the work is being done on High-Risk, Intermediate-Risk and Unconfirmed-Risk incidents, each incident manager works on about 169 incidents.

C: The UST Program's Compliance Progress

1. We have 11 inspectors to assure compliance of the 11,976 UST facilities, or an average of 1088 facilities per inspector.

2. Typically, each inspector can inspect up to 200 facilities per year, including file reviews, inspection set-ups, the on-site inspections, follow-up meetings with the facilities, data entry, reports, and enforcement (about 40% to 50% of inspections find violations). That means, at present, we can inspect each facility once every four years. Right now, our overall compliance rate is about 60%. Our goals are to increase our inspections to at least once every two years and to increase the compliance rate to 90%.

3. We are taking several steps to increase both the inspection rate and the compliance rate. We have adjusted the 11 regional areas to even out the inspector workload, and we have home-based the inspectors to reduce their travel time to facilities. We are focusing on faster up-front training for new inspectors and follow-up training to ensure consistency. We are working with facility owners, equipment contractors, and consultants to educate them about the requirements to prevent tank system releases. We are assisting some tank owners in the organization of their certifications and records so that inspection time is shortened.

4. Session Law 2003-352 authorized the EMC to develop rules requiring secondary containment for all non-tank portions of a UST system at the time of installation or replacement. We have begun the rulemaking process and intend to have the new rules in effect by 1 July 2005

D: The Commercial Fund

1. Since the inception of the Commercial Trust Fund in 1988, it has received about $347 million and disbursed about $324 million. 93% of that money has gone toward cleanup of releases from USTs and third-party claims. 7% of the money has been used to administer the UST program.

2. As of 23 April 2004, the balance of the Commercial Fund was $678,211. Claims pending against the Commercial Fund total $30,348,988.

3. In June 2002, in order to stabilize the Commercial Fund, we instituted a procedure to pay out of the Fund each month only an amount equal to the Fund receipts for the month. Claims against the Fund are paid in the order in which they are received. Right now, the time between a complete claim being submitted and being paid is approximately 347 days.

4. On average, 195 claims are made against the Commercial Fund each month. The average submitted claim amount is about $13,000.

E: The Non-Commercial Fund

1. Since the inception of the Non-Commercial Trust Fund in 1988, we have received about $73 million and disbursed about $64 million. About 87% of that money has gone toward cleanup of releases from USTs. 13% of the money has been used to administer the UST Program.

2. As of 23 April 2004, the balance of the Non-Commercial Fund was $1,286,290. Claims pending against the Non-Commercial Fund total $5,522,473.

3. On average, 85 claims are made against the Non-Commercial Fund each month. The average submitted claim amount is about $10,700.

4. Claims against the Fund are paid in the order in which they are received. Right now, the time between a complete claim being submitted and being paid is approximately 98 days.

F: Program Improvements to Increase Fund Viability

1. Without sacrificing protection of public health and the environment, adjust remediation policies to lower remediation costs. We have already done this by limiting some Low-Risk site excavations and by modifying the over-excavation policy and eliminating some site assessment steps. We are also engaged in a rulemaking process that will make analytical requirements less cumbersome and more site-specific. This same rulemaking process will also eliminate a non-vital assessment requirement for releases from regulated USTs.

2. Session Law 2003-352 strengthened the concept that the Funds will only reimburse the costs that are reasonable and necessary to conduct risk assessments

and to implement approved cost-effective cleanups. We have implemented, and continue to implement, this concept by providing guidance on reasonable and necessary costs to incident managers.

3. Session Law 2003-352 also directed the Department to consider the availability of funds in the Commercial Fund when determing a schedule for further assessment and cleanup. This portion of the law was implemented by notifying tank owners and operators that the Department would direct and reimburse higher risk incidents before directing and reimbursing those of lower risk, such as Intermediate Risk incidents without contaminated soil or significant free product.

4. Institute Pay-For-Performance.

Pay for Performance

On October 15, 2001, House Bill 1063 was enacted by the North Carolina General Assembly. This bill give the Division of Waste Management's Underground Storage Tank program the authority to allow performance-based cleanups of sites where petroleum has been discharged or released from underground storage tanks. Sites selected for the pilot program will be posted for competitive bidding in the North Carolina Interactive Purchasing System. A performance-based contract will be awarded to the qualified environmental services firm that submits the lowest, technically qualified bid for an acceptable remedial proposal for the advertised site. A series of milestones (generally percentage reductions in contaminate levels in the soil and groundwater) must be achieved before payments are made to the cleanup firm from the Commercial or Non-Commercial Fund.

On November 2, 2001, the Division of Waste Management convened a stakeholders workgroup consisting of representatives of the Professional Engineers of North Carolina, the Consulting Engineers Council of North Carolina, the North Carolina Board for the Licensing of Geologists and the North Carolina Petroleum Marketer's Association to develop a temporary rule. A follow-up meeting on November 9, 2001 resulted in the further refinement of the rule and the discussions of the contract and bidding procedures proposed for use with the rule.

The proposed temporary rule was presented to the Groundwater Committee of the Environmental Management Commission on December 12, 2001 and received a favorable vote to proceed to full commission review in February 2002. On February 14, 2002, the EMC voted to approve the publication of the temporary rule in the North Carolina Register. The temporary rule was published for public comment between March 15 and April 15, 2002 in Volume 16, Issue 18, p. 2019 of the NC Register. No comments were received. The Commission adopted the temporary rule on May 14, 2002. On July 11, 2002 the Commission voted to allow the Division of Waste Management to proceed with permanent rule making and to publish the permanent rule in the NC Register. The permanent rule is pending publication in the September 2004 Issue of the NC Register.

In July of 2003, House Bill 897 was passed that allowed $2.5 million from the Commercial Fund and $250,000 from the Non-Commercial Fund to be allocated for the Pay-for-Performance Program in each fiscal year. At this time, there are five sites, two Federal-Lead and three responsible party lead sites awaiting the finalization of the PFP contract language. Currently, the contract language is being reviewed by the Attorney General's Office. Pending approval, UST Staff will meet with representatives of the Purchase and Services Division and the Department of Administration to finalize the PFP contract submittal procedure. Once completed, the five sites will be sampled to provide an up to date analytical picture of the contamination levels remaining and then the contracts will be placed in the Interactive Purchasing System for awarding.

Appendix C - LUSTs closed out 7/1/88-6/30/03

EXECUTIVE SUMMARY

The Department of Environment and Natural Resources is required to prepare an annual report on the status of leaking petroleum underground storage tanks.

North Carolina's underground storage tank program is administered by the Division of Waste Management's UST Section in DENR. The UST Section enforces UST regulations and manages funds used to perform cleanups of petroleum UST discharges or releases. The program was initiated in 1988 in response to growing reports of USTs leaking petroleum into soil and drinking water supplies. Funding for the program has been provided by the Commercial and Noncommercial Trust Funds, the Groundwater Protection Loan Fund, the Federal UST Regulatory Grant and the Federal Leaking UST Fund.

This is the summary of the statistics described in this report for the period July 1, 2002 through June 30, 2003.

Commercial Fund Revenues	$27,055,759
Commercial Fund Total Expenditures	$28,829,373
Noncommercial Fund Revenues	$ 7,664,329
Noncommercial Fund Total Expenditures	$11,065,297
Petroleum UST Incidents - Reported	908
Petroleum UST Incidents - Closed Out	841

This is the summary of the statistics for the entire history of the UST program (7/1/88 -6/30/03).

Commercial Fund Revenues	$346,851,044
Commercial Fund Total Expenditures	$344,635,763
Noncommercial Fund Revenues	$ 73,349,575
Noncommercial Fund Total Expenditures	$ 70,775,263
Petroleum UST Incidents - Reported	18,170
Petroleum UST Incidents - Closed Out	8,948

As of June 30, 2003, the status of the Commercial and Noncommercial Funds was:

Commercial Fund Balance	$2,184,943
Commercial Fund Claims Pending	$30,704,618
Noncommercial Fund Balance	$2,576,307
Noncommercial Fund Claims Pending	$6,115,573

The initiation of expedited claim reviews beginning May 2001 has contributed to an increase in payments from the Commercial Fund. A significant backlog of pending claims was processed and, as a result, reimbursement costs nearly doubled during the six-month period between July 1, 2001 and December 31, 2001. Payment increases have continued since this time. An evaluation of the claims paid during the twelve month period from July 1, 2001 through June 30, 2002 indicate a significant increase in payments for costs associated with comprehensive site assessments and corrective action plans. This is partly due to re-examining low or undetermined risk sites and an increase of enforcement efforts. Beginning on June 17, 2002, reimbursements from the Commercial Fund have only been made, as funds are available. This has resulted in a delay of reimbursement of claims from the Commercial Fund. Transfers to the Noncommercial

Fund of $3,418,990 in accordance with NCGS 119-18(b) have placed an additional drain on the Commercial fund.

The Noncommercial Fund is not currently able to meet all obligations based on the current rate of claims submitted. Claims pending exceed the Noncommercial balance for the first time since the inception of the Fund.

FUNDING FOR THE UNDERGROUND STORAGE TANK PROGRAM

Program funding is provided by revenues from the Commercial and Noncommercial Trust Funds and the Groundwater Protection Loan Fund. The Federal UST Regulatory Grant and the Federal Leaking UST Fund are provided by the Environmental Protection Agency. Of the 99 staff positions assigned to the UST program, state revenue funds 68 positions and 31 are supported by federal grants.

Commercial and Noncommercial Trust Funds

The Leaking Petroleum Underground Storage Tank Cleanup Act of 1988* established two separate funds: the Commercial Trust Fund and the Noncommercial Trust Fund. Both may be used to reimburse eligible UST owners, operators and landowners for reasonable and necessary costs incurred as a result of environmental cleanup and third party liability claims. Additionally, both funds enable UST Section staff to:

- record and track UST release incidents;
- register and permit commercial USTs, manage a database and receive annual UST operating fee payments;
- identify responsible parties;
- provide technical assistance to tank owners and operators;
- inspect USTs to ensure compliance with UST regulations;
- monitor site cleanups;
- review site assessments and corrective action plans;
- evaluate innovative assessment and cleanup technologies;
- review reimbursement claim procedures;
- manage contracts for cleanups designated as "State Lead";
- inspect and monitor land applications of contaminated soil; and
- identify and evaluate abandoned petroleum USTs.

The UST Section has the authority to contract for the cleanup of petroleum UST incidents if the owner or operator cannot be identified or located, if the owner or operator is financially unable to perform cleanup, or if the owner or operator refuses to perform the required cleanup. In the latter case, the section is authorized by general statute to recover costs incurred during assessment and cleanup activities.

Sources of funding for the Commercial Trust Fund include:

- a motor fuel and kerosene inspection tax,
- an excise tax (0.297 cents per gallon) on motor fuel and kerosene sales,
- annual payment of UST operating fees,
- costs recovered from UST owners and operators for State Lead sites,
- loan collection and interest for the Groundwater Protection Loan Fund, and
- interest earned on the account.

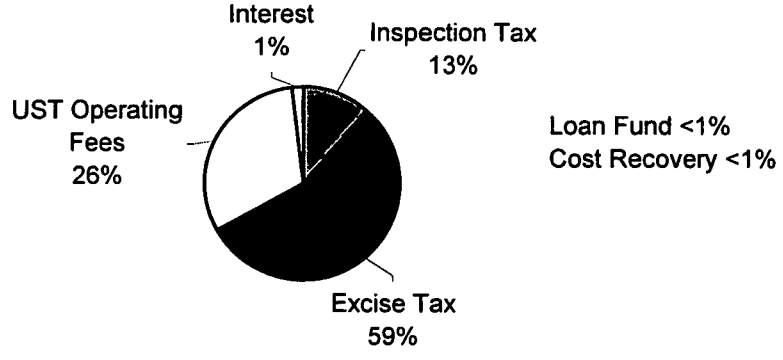
General Statute 143-215.94A et.seq.

Owners and operators are required to pay annual operating fees to receive operating permits and to be eligible for the Commercial Fund. Annual fees for commercial USTs began at a rate of $30 for tanks with a capacity equal to or less than 3,500 gallons (small tanks) and $60 for tanks with a capacity in excess of 3,500 gallons (large tanks). Tank fees increased annually from 1989 to 1993. From 1993 to 1997, fees were $150 for small tanks and $225 for large tanks. Beginning January 1, 1997, annual fees were increased to $200 for commercial USTs with a capacity equal to or less than 3,500 gallons and $300 for commercial USTs with capacity in excess of 3,500 gallons. Revenues received for the Commercial Fund for the twelve-month period from July 1, 2002 to June 30, 2003 were approximately $27 million (Table 1). The relative contributions to the Commercial Fund from each of the funding sources are illustrated in Figure 1.

Table 1 - Commercial Trust Fund Revenues
7/1/02 - 6/30/03

Motor Fuel & Kerosene Inspection Tax	$ 3,948,292
Motor Fuel & Kerosene Excise Tax	$ 18,052,511[1]
UST Operating Fees	$ 8,087,033
State Lead Cost Recovery	$ 23,224
Interest	$ 182,692
Loan Fund Collection and Interest	$ 60,995
Payback Settlements	$ 120,000
Transfers to Noncommercial	$ (3,418,990)
Total Commercial Revenues	**$ 27,055,757**

Figure 1 - Commercial Fund Revenue Sources



Funding for the Noncommercial Trust Fund is provided by a motor fuel and kerosene inspection tax and excise taxes (0.047 cents per gallon) on kerosene and motor fuel sales.[2] Owners and operators of noncommercial USTs are not required to pay annual operating fees. Revenues received for the Noncommercial Fund for FY 2002-03 were approximately $7,664,329 million (Table 2).

[1] Includes a $3,000,000 gasoline tax advance, transferred on 3-26-03
[2] House Bill # 681 of 1993

Table 2 - Noncommercial Trust Fund Revenues
7/1/02 - 6/30/03

Motor Fuel & Kerosene Inspection Tax	$ 2,378,180
Motor Fuel & Kerosene Excise Tax	$ 1,698,292
Interest	$ 168,867
Transfer from Commercial Fund	$ 3,418,990
Total Noncommercial Revenues	**$ 7,664,329**

Groundwater Protection Loan Fund

The Groundwater Protection Loan Fund Program was created in 1991.* It provided financial assistance to owners of commercial USTs who replaced or upgraded their tanks to meet the performance standards required for all USTs by December 22, 1998. Administrative rules implementing the program were adopted by DENR and became effective December 1, 1992. Revenues for the fund were generated through a 0.0025 cent (one quarter of one cent) per gallon motor fuel excise tax received from January 1, 1992 through December 31, 1994.

*Session Laws 1991, c. 538, s. 25 - G.S. 143-215.94P

Federal UST Regulatory Grant Program

This program promotes compliance with UST regulations. It provides the state's UST Section with $186,675 per year to fund three positions in the DWM central office. The positions provide technical assistance to the owners and operators of USTs, develop materials, conduct educational activities, train regional staff and conduct UST inspections.

Federal Leaking UST Fund

The Federal Leaking UST Trust Fund is used to clean up petroleum contamination from leaking USTs, provide potable water to affected third-parties, perform emergency activities, relocate residents affected by leaking USTs and conduct enforcement activities. This fund is limited to USTs regulated by federal agencies, primarily commercial tanks used for storing motor fuels. Tanks used for heating oil and those used for farm or residential uses (1,100 gallons capacity or less) are not covered by this fund.

Individuals (i.e., owners/operators) do not have access to the fund. Only the federal government and states with cooperative agreements with the EPA can draw on the fund. It may be used in situations when: (1) the responsible party cannot be identified; (2) the responsible party is financially unable to pay for the cleanup; or (3) the responsible party is unwilling and refuses to undertake assessment and/or cleanup actions.

Since the state's UST program began in 1988, the Federal Leaking UST Fund has made 18 awards totaling $36,849,569 to the state's UST Section. As of June 30, 2003, the state spent

$35,455,025 from these awards. Of this amount, $16,498,130 was spent for cleanup-related activities and $3,390,154 for enforcement actions. Administrative, operating, travel and equipment costs totaled $15,566,741.

The program is obligated to seek recovery of all costs incurred during state lead cleanups. As of June 30, 2003, the UST Section had recovered $1,545,763 in federal cleanup money through cost recovery actions. Of this amount, $748,487 came from the North Carolina Commercial Fund for sites determined eligible for Commercial Fund coverage after cleanup activities had begun. Cost recovery funds totaling $1,510,183 were returned to the Federal Trust Fund to be used for additional corrective action expenditures.

The EPA approved $2,033,793 for North Carolina from the Leaking UST Fund for FY 2002-2003.

PETROLEUM UST INCIDENTS

Discharges or releases from petroleum USTs are reported to DENR regional offices where they are added to an incident management database. Table 3 lists the number of incidents reported and closed out in each region during the twelve-month period from July 1, 2002 through June 30, 2003. It also shows the number of incidents reported and closed out since the UST program began in 1988.

Beginning January 2, 1998, the UST Section implemented risk-based corrective action rules for petroleum UST incidents. Discharges or releases under these rules receive a risk classification of "high," "intermediate," or "low" based on the potential threat to human health and the environment. Of the total number of UST incidents closed since 1988, 55 percent were closed following implementation of Risk-Based Corrective Action. The total number of open incidents has generally increased since 1988; however, recent data indicates the trend may be leveling off (see Figure 2, page 5).

Table 3 - Petroleum UST Incidents by Region[1]

REGION	7/1/02 - 6/30/03		7/1/88 - 6/30/03	
	Reported	Closed	Reported	Closed
Asheville	62	52	1,893	1,139
Fayetteville	54	42	1,305	533
Mooresville	162	155	3,802	2,061
Raleigh	211	179	3,606	1,544
Washington	155	117	2,285	1,092
Wilmington	65	77	1,349	528
Winston-Salem	199	219	3,930	2,051
TOTAL	**908**	**841**	**18,170**	**8,948**

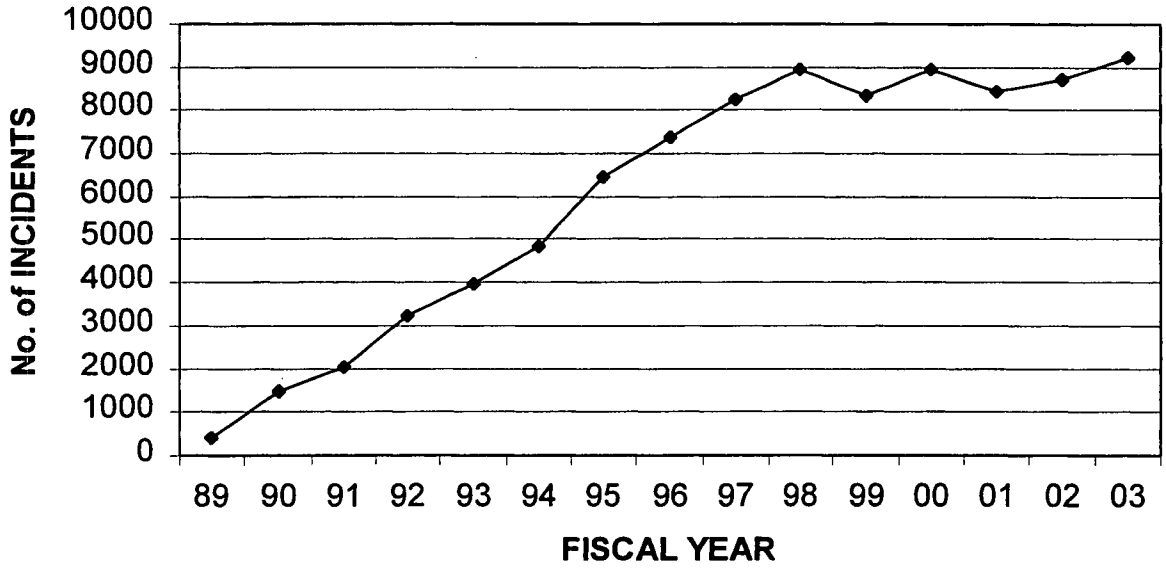
Total reported releases affecting groundwater that have been closed out:	2,741
Total reported releases closed out since implementation of RBCA[2]:	4,880
Total remaining open sites:	9,222
Estimated open commercial sites[3]:	7,562
Estimated open noncommercial sites[3]:	1,660

[1] Incident numbers vary slightly from last year's data due to a database conversion.

[2] Risk-based corrective action implemented 1/2/98.

[3] Based on an average of past data (84%) and the current twelve month period (55%) approximately 82 percent of the reported releases are from commercial sites, while the other 18 percent are from noncommercial sites.

Figure 2 - Open UST Incidents



RECEIPTS AND DISBURSEMENTS: COMMERCIAL AND NONCOMMERCIAL TRUST FUNDS AND GROUNDWATER PROTECTION LOAN FUND

Commercial and Noncommercial Funds

UST owners, operators and landowners may submit reimbursement claims for reasonable and necessary costs incurred during environmental assessment and cleanup activities. Claims may be submitted if the eligibility requirements for the trust funds are met. Deductibles that must be met before receiving reimbursement from the Commercial Fund range from $20,000 to $75,000. Noncommercial Fund deductibles are $0 for UST owners and operators, and $5,000 for landowners. Table 4 lists the receipts and disbursements by fiscal year for both funds for the period July 1, 1988 to June 30, 2003.

Table 4 - Receipts & Disbursements for Cleanups
7/1/88 - 6/30/03

FISCAL YEAR	RECEIPTS		DISBURSEMENTS[1]	
	Commercial	Noncommercial	Commercial	Noncommercial
FY 88-89	$ 2,337,685	$ 0	$ 14,768	$ 0
FY 89-90	5,773,632	2,905,035	79,080	0
FY 90-91	7,330,573	2,934,347	1,616,760	564,206
FY 91-92	13,484,008	3,018,344	4,409,229	2,143,155
FY 92-93	18,032,784	7,693,288	9,651,948	4,069,497
FY 93-94	24,438,966	3,404,086	22,904,802	2,012,312
FY 94-95	56,037,135[2]	5,194,725	37,405,510	2,900,368
FY 95-96	28,178,768	5,215,550	44,060,639	5,029,109
FY 96-97	28,564,034	5,587,781	44,163,273	5,924,799
FY 97-98	27,291,220	5,717,592	30,267,392	3,869,091
FY 98-99	26,783,344	5,945,461	16,104,152	2,776,105
FY 99-00	27,178,623	5,636,563	22,820,069[3]	5,028,505
FY 00-01	27,240,303	5,811,666	24,566,132[4]	7,890,618[5]
FY 01-02	27,124,210	6,620,808[6]	36,872,426	9,182,320
FY 02-03	27,055,759	7,664,329[7]	26,498,565	9,898,806
TOTAL	**$346,851,044**	**$ 73,349,575**	**$321,434,745**	**$ 61,288,891**

[1] Does not include administrative costs.
[2] Commercial receipts for FY 94-95 included $31,288,889 that was transferred from the Groundwater Protection Loan Fund.
[3] Adjustment due to a transfer from the Commercial Fund to the Federal Trust Fund of $288,117 as a cleanup expenditure rather than as an administrative cost.
[4] $33,866 transferred to Federal Trust Fund as a cleanup expenditure.
[5] $2 million transferred out of Noncommercial Fund to the state's General Fund.
[6] Includes transfer of $784,382 from Circle K Settlement Fund
[7] Includes transfer of $3,418,990 of motor fuel and kerosene tax from Commercial to Noncommercial due to balance below $5 million - General Statute 119-18(b).

The administrative budget for the state-funded portion of the UST program is derived from the Commercial and Noncommercial Funds. Table 5 lists past administrative expenditures since the beginning of the UST program.

Table 5 - Administrative Expenditures

FISCAL YEAR	COMMERCIAL	NONCOMMERCIAL
FY 89-90	$ 201,255	$ 201,254
FY 90-91	547,595	547,595
FY 91-92	517,221	517,221
FY 92-93	601,687	601,686
FY 93-94	694,424	694,423
FY 94-95	666,270	666,270
FY 95-96	2,322,632	783,684
FY 96-97	2,623,339	801,143
FY 97-98	2,530,036	667,724
FY 98-99	2,567,668	620,574
FY 99-00	2,579,540*	570,738
FY 00-01	2,730,236	733,811
FY 01-02	2,397,264	913,755
FY 02-03	2,221,851	1,166,494
TOTAL	**$ 23,201,018**	**$9,486,372**

Incorporating the administrative costs into receipts and cleanup disbursements yields these Commercial and Noncommercial Fund balances:

Commercial Fund Balance (as of June 30, 2003)	**$ 2,184,943**
Noncommercial Fund Balance (as of June 30, 2003)	**$ 2,576,307**

* Adjustment due to a transfer of $288,117 from the Commercial Fund to the Federal Trust Fund as a cleanup expenditure rather than an administrative cost.

Groundwater Protection Loan Fund

After the Groundwater Protection Loan Fund was created, 11 North Carolina banks agreed to administer the loan program. As of June 30, 1995, four loans totaling $1,228,350 had been closed. After this date, remaining funds of $31,288,889 were deposited into the Commercial Trust Fund. Loan repayments are also deposited into the Commercial Fund. During the twelve-month period ending June 30, 2003, $41,911 was repaid. Total receipts for the Loan Fund since its inception in January 1992 are $33,036,751.

CLAIMS AGAINST THE CLEANUP FUNDS

Claims against both the Commercial and Noncommercial Funds are processed on a "first-come, first-served" basis. The status of all claims requesting reimbursement from both funds that were received as of June 30, 2003 is presented in Table 6. These claims only include costs claimed to date, and do not represent the total costs for cleanups.

UST Section staff have supervised contract cleanups at 308 commercial and noncommercial sites (Table 6, 241 commercial and 67 noncommercial). Currently, DENR has four contracts with environmental engineering/geology firms that perform a range of assessment and cleanup actions. The term of these contracts is 18 months with an option to renew for an additional 18 months.

Table 6 - Claims Against the Cleanup Funds
7/1/88 - 6/30/03

	Commercial Fund		Noncommercial Fund	
	Number	Cost	Number	Cost
Claims Paid	19,674	$309,421,532	6,503	$ 55,038,729
Incidents Denied Totally [1]	33	$ 4,573,040	4	$ 59,845
Claims Denied Partially [2]	12,369	$ 61,701,870	3,280	$ 7,925,122
Total Deductibles Paid	-------	$ 63,625,153	-------	$ 330,366
Claims Pending	2,023	$ 30,704,618	646	$ 6,115,573
Contracted Cleanups [3]	241	$ 8,667,428	67	$ 2,136,456

[1] Ineligible
[2] Excessive or undocumented costs
[3] State Lead actions undertaken or completed

COMMERCIAL AND NONCOMMERCIAL FUND BALANCES AND PROJECTED NEEDS

Commercial Fund

As of June 30, 2003, the Commercial Fund balance was $2,184,943 with pending claims of $30,704,618 (see Figure 3, Page 9). Since January 1, 2002, the difference between the fund balance and the pending amount has continued to increase (see Figure 4, Page 9). During the six-month period from July 1, 2001 to December 2001, expedited reviews were initiated in an effort to reduce claim review time. While the claim review time has been reduced, the result has been a delay in issuance of the reimbursement checks, since the Commercial Fund can only pay out what has been received for the month. Claim amounts continue to increase as well as the backlog of claims awaiting payment. Revenues, however, remain steady.

Figure 3 - Commercial Fund Balance and Claims Pending

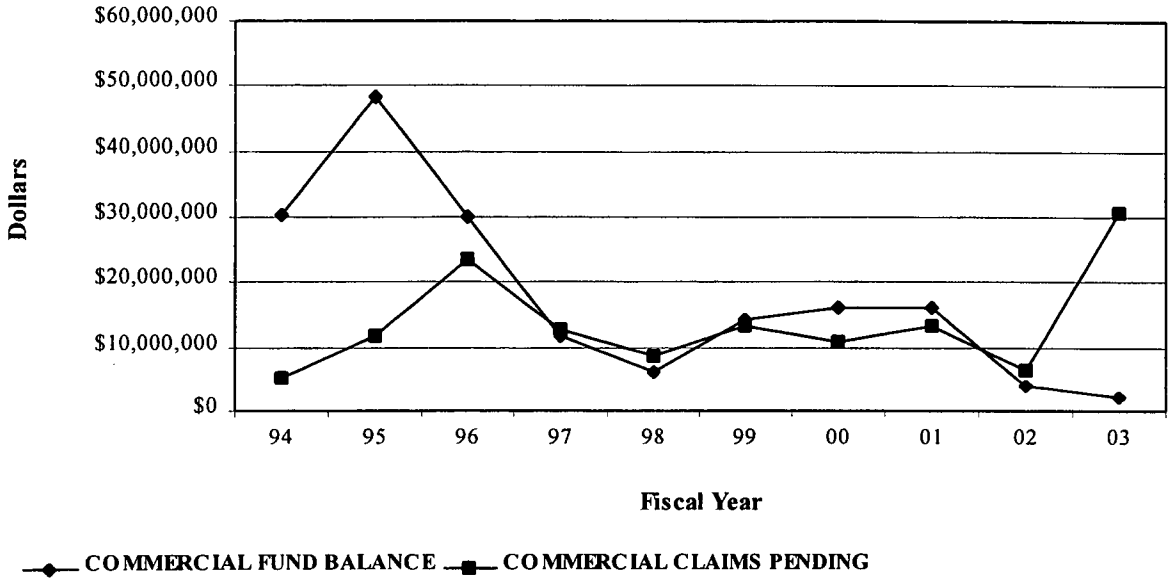


Figure 4 - Commercial Fund Balance Minus Claims Pending

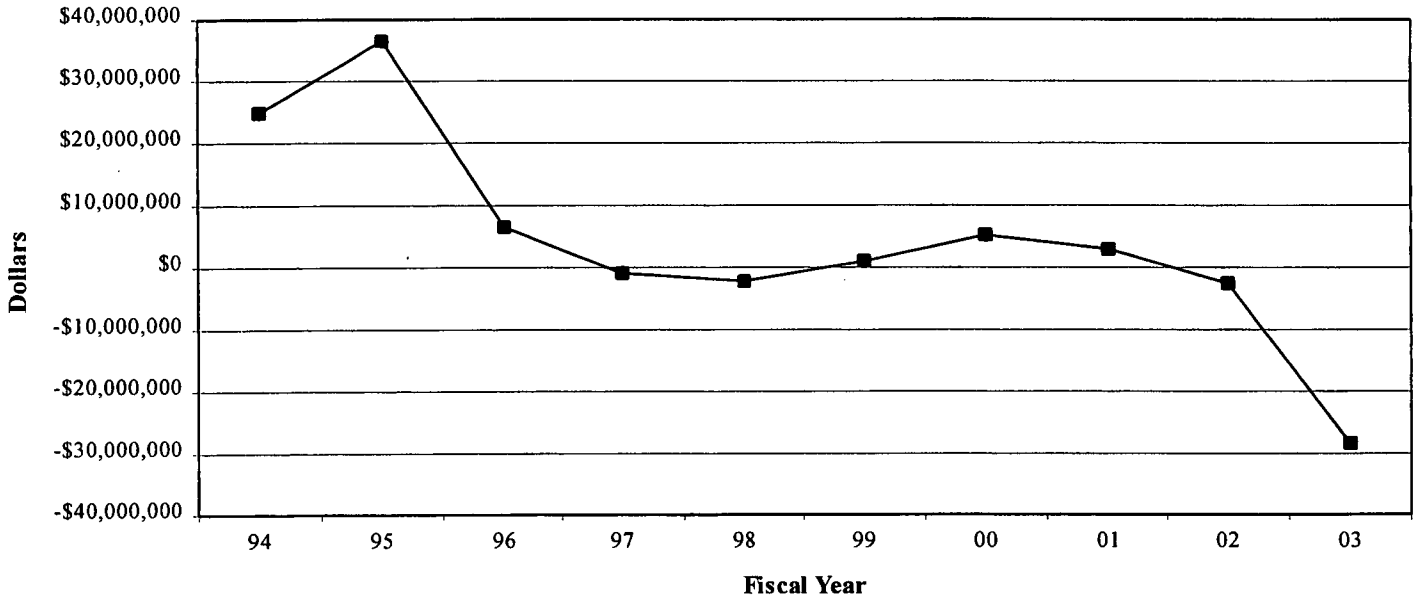

Table 7 - Total Commercial Fund Revenues and Expenditures
7/1/01 – 6/30/03

Total Commercial Revenues (see Table 1, page 2)	**$27,055,759**
Total Claims and Contracted Cleanups	$26,498,565
Administrative Costs	$ 2,221,851
Total Commercial Expenditures	**$28,720,416**

One initiative which may affect a future demand on the Commercial Fund is pay-for-performance based cleanups. On October 1, 2001, the General Assembly ratified House Bill 1063, which allows responsible parties to participate in the pay-for-performance program on a voluntary basis. Pay-for-performance is a reimbursement method that requires cleanup goals to be met before payments can be made to environmental consultants. This reimbursement method requires the Trust Fund to obligate the contracted cleanup costs. Pay-for-performance obligations may initially place a higher demand on the Trust Fund, but should greatly decrease the costs of cleanups and thus result in a lesser burden to the Trust Fund.

Another factor that may effect future demands on the Commercial Fund is third-party claims. There are currently several pending third-party claims under review which have the potential to place a burden of many hundreds of thousands of dollars on the Commercial Fund. Other third party claims may be planned that have not yet been submitted for review.

After UST operating fees were raised on January 1, 1997, revenue from this funding source declined through the end of FY 1998-99 (see Table 8). This decrease was likely due to the reduction in the number of registered USTs that occurred as a result of the federal 1998 upgrade regulations. The number of registered USTs continued to decrease during the period from July 1, 2002 to June 30, 2003. However, UST operating fees have remained stable.

Table 8 - Commercial UST Population and Operating Fee Revenue

Fiscal Year	No. of Commercial USTs Billed	Operating Fee Revenue
FY 1996-97	37,776	$ 10,839,975
FY 1997-98	36,563	$ 10,008,917
FY 1998-99	34,428	$ 8,697,468
FY 1999-00	33,558	$ 8,844,093
FY 2000-01	33,776	$ 8,464,019
FY 2001-02	32,839	$ 8,553,715
FY 2002-03	31,155	$ 8,087,033

At present, approximately 7,562 commercial incidents have yet to be closed out. With minor work performed in accordance with the risk based rules, many of these sites may receive "no further action" letters. However, some will require additional assessment and corrective action, that will subsequently result in additional demands on the Commercial Fund.

Data tracking improvements are being made to the UST incident management database. These changes will enable the UST Section to better predict the number of incident closures and project Commercial Fund expenditures.

UST systems pose a substantial threat to human health and the environment. On average, over 1,200 leaks are reported each year. Maintaining the quality of North Carolina's drinking water depends on preventing releases to the environment. Direct education and technical assistance for tank owners and operators is critical. Only education and assistance ensure responsible handling of petroleum products, including methyl tertiary-butyl ether, and early detection in the event of a leak.

North Carolina currently has about 31,155 active regulated USTs at 12,450 facilities. Of that number, we estimate 40 to 50 percent are located within 500 feet of both domestic and public drinking water supplies. Our inspection data show that over 30 percent of tank owners and operators do not comply with UST regulations. These regulations cover proper operation and maintenance, with an emphasis on leak detection. If we are to preserve the quality of North Carolina's drinking water, improving compliance must be a future priority.

Noncommercial Fund

As of June 30, 2002, the Noncommercial Fund balance was $2,576,307. The total for pending claims stood at $6,115,573. Based on the past 12 month period, it appears that demands on the Fund will increase. We anticipate this will result in delayed claim payments, just as the Commercial Fund was affected(see Figure 5).

Figure 5 - Noncommercial Fund Balance and Claims Pending

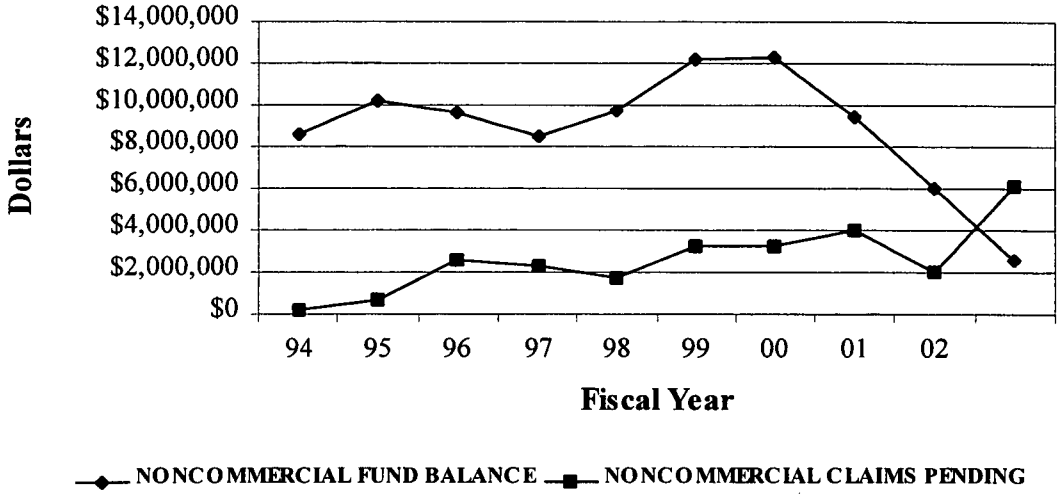

Figure 6 - Noncommercial Fund Balance Minus Claims Pending

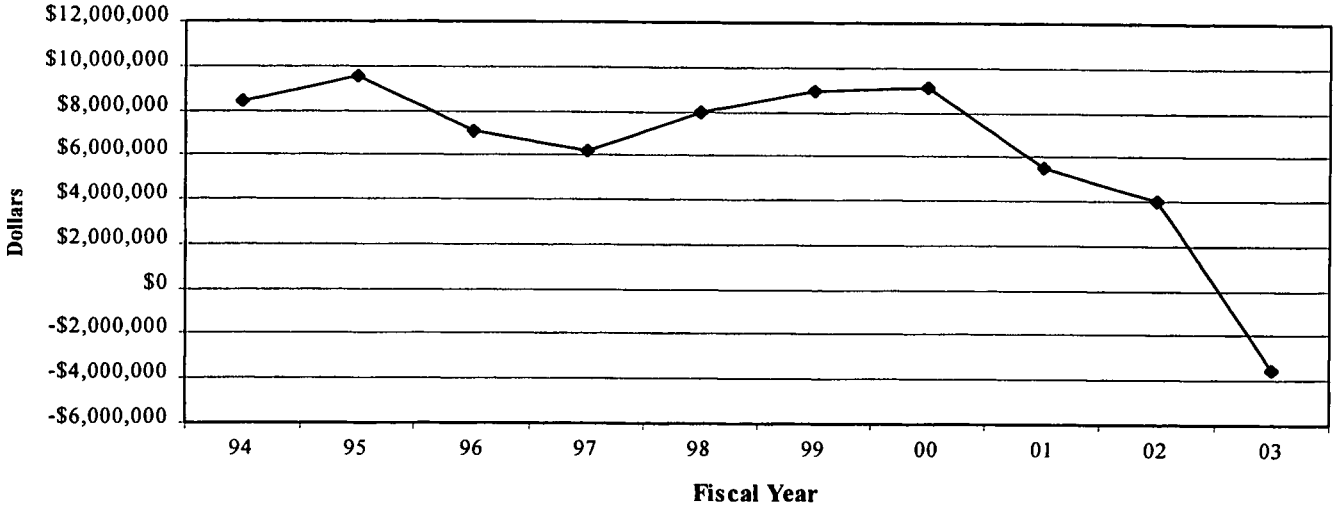

Table 9 - Total Noncommercial Fund Revenues and Expenditures
7/1/01-6/30/03

Total Noncommercial Revenues (see Table 2, page 3)	**$7,664,329**
Total Claims and Contracted Cleanups	$ 9,898,806
Administrative Costs	$ 1,166,494
Total Noncommercial Expenditures	**$11,065,300**

Table 10 shows the estimated cost to complete cleanups for noncommercial incidents reported from July 1, 2002 to June 30, 2003. It should be noted, however, that cleanups can easily extend over several years and costs may vary greatly.

Table 10 - Estimate of Cleanup Costs for Noncommercial Incidents
Reported July 1, 2002 - June 30, 2003

Region	Incidents*	Total Estimated Cleanup Cost**
Asheville	28	$ 1,750,000
Fayetteville	24	$ 1,500,000
Mooresville	73	$ 4,562,500
Raleigh	95	$ 5,937,500
Washington	70	$ 4,375,000
Wilmington	30	$ 1,875,000
Winston-Salem	90	$ 5,625,000
Total	**410**	**$25,625,000**

* Calculations of the last twelve-month period indicate that approximately 45 percent of reported new releases are from noncommercial sites.

** An average cost of $62,500 is used as an estimate of total cleanup costs for noncommercial sites.

PAY FOR PERFORMANCE

On October 15, 2001, House Bill 1063 was enacted by the North Carolina General Assembly. This bill give the Division of Waste Management's Underground Storage Tank program the authority to allow performance-based cleanups of sites where petroleum has been discharged or released from underground storage tanks. Sites selected for the pilot program will be posted for competitive bidding in the North Carolina Interactive Purchasing System. A performance-based contract will be awarded to the qualified environmental services firm that submits the lowest, technically qualified bid for an acceptable remedial proposal for the advertised site. A series of milestones (generally percentage reductions in contaminate levels in the soil and groundwater) must be achieved before payments are made to the cleanup firm from the Commercial or Non-Commercial Fund.

On November 2, 2001, the Division of Waste Management convened a stakeholders workgroup consisting of representatives of the Professional Engineers of North Carolina, the Consulting Engineers Council of North Carolina, the North Carolina Board for the Licensing of Geologists and the North Carolina Petroleum Marketer's Association to develop a temporary rule. A follow-up meeting on November 9, 2001 resulted in the further refinement of the rule and the discussions of the contract and bidding procedures proposed for use with the rule.

The proposed temporary rule was presented to the Groundwater Committee of the Environmental Management Commission on December 12, 2001 and received a favorable vote to proceed to full commission review in February 2002. On February 14, 2002, the EMC voted to approve the publication of the temporary rule in the North Carolina Register. The temporary rule was published for public comment between March 15 and April 15, 2002 in Volume 16, Issue 18, p. 2019 of the NC Register. No comments were received. The Commission adopted the temporary rule on May 14, 2002.

Unobligated funds were not available from the Commercial Fund during the FY 2002-03 to use for pay-for-performance. Unobligated funds were available from the Noncommercial Fund during FY 2002-03. Statements offering and describing pay-for-performance were placed in all eligibility letters for Noncommercial sites during this period. However, no noncommercial sites have been offered to the Trust Fund during this fiscal period.

RECOMMENDATIONS

Based on the results of this report, the UST Section makes the following recommendations for the Commercial and Noncommercial Trust Funds:

- Additional revenue should be made available for continued expedited payment of Commercial Fund claims and future expedited payment for the Noncommercial Fund claims.

- Responsible parties of UST releases should continue to be encouraged to consider pay-for-performance cleanups at their sites. Pay-for-performance is a reimbursement method that requires cleanup goals to be met before payments can be made to environmental consultants. PFP programs in other states have dramatically reduced the costs for cleanups. Costs are down 66 percent in Florida and 50 percent in South Carolina. PFP also accelerates the rate of cleanups. The Department of Environment and Natural Resources will monitor the obligated costs for pay-for-performance contracts and the potential cleanup cost savings of the PFP program.

Presentation to North Carolina Environmental Review Commission

Sen. Daniel Clodfelter,

May 5, 2004 ERC Meeting
EXHIBIT K

Virginia's Experience

•VA's petroleum fund has had at least two multi-year periods where the volume of claims exceeds revenue. Fund balance would be depleted & long payment queue would result

•Most recent incident began in 1998 and peaked in mid 2001. Backlog of approved claims in queue reached $24 million. Claimants were waiting > 1 year to receive reimbursement.

•Long payment delays created cash flow problems for RP's, which slowed the pace of clean ups. Delays in clean ups and other marketplace distortions drove up costs, thereby wasting taxpayer money

•No political support for tax increase. DEQ looked for other solutions. Commonwealth Acceptance worked with VA DEQ and **Virginia Resources Authority ("VRA") Accelerated Claim Payment Program.** Purpose is to provide liquidity to Virginia Petroleum fund claimants. Virginia's Governor Mark Warner announced the VRA Program in May 2002

•VRA Program is not "lending". Program works by tank owners assigning (selling) approved claims to VRA. VRA pays the RP or their environmental consultant, as directed.

•VRA Program has proved successful. Over 2,300 claims totaling more than $23,000,000 have participated. About 2/3 of all claims submitted for reimbursement are <u>voluntarily</u> participating

•Does not cost taxpayers any money. Not debt to the state, the fund or the RP's/consultants

•All stakeholders (state, fund, DEQ, taxpayers, RP's & consultants) are winners

•The Association of State LUST Fund Administrators presented Virginia with its 2003 "**Innovation and Policy**" award for creating VRA Program

What is NATLUST ?

•Virginia's VRA Program being morphed into a national claim financing program. Issue of LUST fund insolvency > $ 1 billion nationally

•Economies of scale with financing will drive down costs to all participants, including Virginia's stakeholders. Will be permanent solution to VA's periodic bouts of LUST fund insolvency

•NATLUST will function much like VRA Program, where it will provide liquidity by purchasing approved claims from RP's, effectively stepping into their shoes to wait in the queue for reimbursement. Participation by RP's is voluntary and on claim-by-claim basis

•By providing liquidity, NATLUST will help promote the fund's statutory goals, which typically include meeting EPA's financial responsibility regulations, as well as promoting a cleaner environment & improved public health through the timely removal of leaking tanks

•Legally, it is intended to be organized as a 501(c)(3) nonstock, nonprofit corporation and as an instrumentality of Virginia and each other state in which it does business

•The intention is to make NATLUST financing available in states where the appropriate state regulatory agency, political leaders and stakeholders consensually agree that such financing would be beneficial

•NATLUST will be governed by an independent board. Participating states will be invited to appoint a representative

•No "political" risk to NC's stakeholders from other participating states. Each state's claims will be held in separate trust

VRA/NATLUST – How It Works

•**Two-Step Payment**. NATLUST will provide liquidity by purchasing approved claims from NC's RP's using a "two-step" payment process.

•**Initial Payment.** Immediately upon DENR issuing a decision letter on a that has been assigned to NATLUST, NATLUST will issue an initial payment check equal to, say, 92% of the amount approved by DENR. At this point, NATLUST will step into the shoes of the RP and will wait for DENR to reimburse the claim

•**Residual Payment.** Immediately upon DENR reimbursing the claim, NATLUST will issue a second, residual payment check equal to the other 8%, less NATLUST's pro-rata carrying costs for that particular claim

•**Simple Structure = Low Costs**. Two-step payment method allows credit providers to focus on the fund's creditworthiness---not the RP; low administration costs; no guesswork as to carrying costs

•**What are Carrying Costs?** Just like the VRA Program, NATLUST's carrying costs are (a) the costs of its borrowed money, plus (b) the cost of managing the program, and (c) the amortization of legal/other organizational costs. NATLUST will allocate costs on a pro-rata basis based on the size of each claim and the number of days it takes until the claim is reimbursed. This is fair as all parties – big and small – are treated equally

Benefits To North Carolina

- Immediate liquidity eliminates financial pain caused by long payment delays
- NATLUST financing improves voluntary cooperation, thereby facilitating the identification & timely removal of LUST's, leading to a cleaner environment
- NATLUST financing is not debt to DENR, NC's taxpayers or the RP's/consultants
- NATLUST will be self-supporting-- the program's participants---and not NC's taxpayers or DENR---will bear the program's costs
- Saves taxpayer money by eliminating distortions & inefficiencies caused by payment delays
- NATLUST financing will help preserve NC's commercial LUST fund as a viable mechanism for meeting EPA's financial assurance regulations
- NATLUST does not prejudice NC legislature, administration or DENR's sovereign right to make changes to NC's LUST fund program
- NATLUST financing does not prejudice DENR's ability to seek cost recovery from RP's and/or consultants
- NATLUST has no involvement with how DENR conducts technical aspects of LUST clean ups. No involvement with the actual claim review/approval process
- Virginia's experience suggests that the "Direct Pay" (paying consultant) feature fosters better cooperation from consultants, which will have a financial incentive to follow DENR's rules
- Participation by RP's & consultants is voluntary. Those who do not participate are unharmed
- Virginia's DEQ found that the program reduces management work load

Specific Items NATLUST Needs to Provide Financing

Non legislative options to facilitate NATLUST implementation being considered; however, recent conference call between McGuire Woods and George Givens suggests that legislation may be warranted:

•To provide evidence that NATLUST is lessening the burdens of government in NC and that, for federal tax law purposes, NATLUST is an instrumentality NC, thereby allowing its stakeholders the ability to benefit from low interest rate tax-exempt bond financing (IRS technical requirements)

•To "signal" to NATLUST's credit providers ---without legally binding future legislatures and administrations ---that North Carolina's political leaders believe allowing its tank owners the option of obtaining low-cost liquidity is desirable from a public policy perspective. Such support will be instrumental in obtaining low-cost financing

•To clarify DENR's ability to make direct reimbursements to NATLUST (DENR is researching whether present administrative regulations prohibit or otherwise impede direct reimbursements)

•To make clear that NATLUST can rely on DENR's claim decisions when issued, without prejudicing DENR's right to seek cost recovery from RP. NATLUST must be able to rely on DENR's decisions with 100% confidence. If DENR discovers errors after approving a claim, DENR must recover from the RP and/or their consultant, not NATLUST (However, NATLUST, as an instrumentality of NC, will cooperate with DENR to protect NC's fund)

RE: 2003 Annual Report on the Wetlands Restoration Program

Attached is the 2003 Annual Report outlining the activities of the Wetlands Restoration Program during fiscal year 2002–03. This report was prepared for the Environmental Review Commission of the General Assembly as required by the enabling legislation for the Wetlands Restoration Program (G.S. 143-214.13). The report provides an overview of the progress made in implementing the Wetlands Restoration Program, current projects and initiatives, statewide wetland and stream impacts and compensatory mitigation requirements associated with Section 404 permits, and the use of the funds deposited into the Wetlands Restoration Fund.

If you have any questions concerning this report or the activities of the Wetlands Restoration Program, please contact Ron Ferrell at 919-733-5219.

1601 Mail Service Center, Raleigh, North Carolina 27699-1601

Status Report May 5, 2004
Wetlands Restoration Program / Ecosystem Enhancement Program
Provided as of March 31, 2004

- I will focus on issue areas raised in past presentations and discussions with the ERC.
  a) more implementation of restoration projects and not just watershed planning
  b) more significant engaging of the private sector in construction
  c) better coordination with DOT
- The WRP continues to be actively used as a process for meeting wetland mitigation requirements by those needing Federal & State Permits in NC. It is an option available to public and private entities, not a requirement. Other choices include owner initiated project, private providers.
  July 2003 – 03/31/04 – 107 permits (3 quarters)
  Since 1998 – 492 permits
  68% -- private sector
  20% --DOT
  12% -- other government agencies
- On a monetary level:
  71% -- DOT
  24% -- private
  5% -- other government
- Total Accepted – Table 1
  - 320,642 Lf Stream channels
  - 360 acres wetlands
  - 284 acres riparian buffers
- Target for 12/31/03 – the mitigation accepted through 12/31/02 – Col. 2
  - WRP – on a statewide level & river basin level
  - Projects underway exceed mitigation target, however, we are expected to provide mitigation in sub-watersheds where the Wetland loss occurred.
- In that context, The Program has achieved 90% of the target.
- Steps are being taken to get most of the remaining 10% by July 2004.

Financial Update

- Acct 2980 is the appropriation account from several years ago, that is being completed.
- 2981 – this is the compensatory, in lieu payment funds. Expenditures reflect the increased level of implementation through contracts.
- We have a number of private – full delivery contracts that are likely to be awarded by June or July of the year.
- 2982 – Riparian Buffer Fund
- A number of private full delivery contracts are likely to be awarded in June.

To the issued of moving beyond planning into implementation, look at the bar charts on Pages 3 through 5.

- Overall expenditures major step up in 2002 & then in 2003
- Major increase in 02 for design to get sites ready. In 03 – increase in construction.

- In 2000 – 5 projects in construction
- 2001 – 6 projects
- 2002 – 15 projects
- 2003 – 41 projects in construction

To the issue of engaging private sector over and about the standard design, bid, construction contract process;

- To full delivery by Private entities,
- This has been a high priority for the program

➢ Since summer of 02, proposal processes have been used to secure riparian buffers, wetland restoration, and stream channel restoration.

- $7,660,347 in full delivery contracts awarded, following a competitive process.
- We are in the middle of a major full delivery proposal process that has an overall estimated value of $68 million.
- Proposals are being reviewed and we expect awards in June – July 04. This includes mitigation for WRP and DOT.

Working with DOT

➢ During the past year, we have executed the organizational changes that have been described in the Ecosystem Enhancement Program outlined in 2003.

- 2 major agreements signed
  a) Tri-Party – DENR/DOT/Corp of Engineers
  b) Bi-Party – DENR/DOT

➢ The mitigation programs of DENR, WRP and DOT have been merged into the EEP.

➢ We will continue to manage the WRP Program as a separate accountability element within EEP. We will expect to achieve improvements in securing mitigation by looking at the combined needs of the programs.

➢ The $68 million full delivery is an example. Our experience is showing that as projects increase in size or area, the cost per acre decreases.

Challenges for 2004

- Balancing out workload on a multi-year schedule to allow private sector to better understand our timing for proposal / bid requests.
- Achieving 100% mitigation delivery for WRP – compensatory program
- Addressing those sub-watersheds where needs are great and options few – urban areas / Upper Cape Fear example.
- Improved decision making process and turn around time on RFPs.
- Continue to increase restoration construction level.

2003-2004

ENVIRONMENTAL REVIEW COMMISSION

MINUTES

STATUS REPORT
N.C. WETLANDS RESTORATION PROGRAM

To Environmental Review Commission
May 5, 2004

By Dempsey Benton
Chief Deputy Secretary, NCDENR

Table 1. Summary of Mitigation Requirements and Projects Implemented

Type	Total Mitigation	Total Mitigation	NCWRP Mitigation Projects			
	Accepted 12/31/03[1]	Due 12/31/03[2]	Constructed	Instituted[4]	2003 RFP[5]	Total
Streams (linear feet)	320,642	233,472	98,864	150,930	63,000	312,794
Total Wetlands (acres)	359	283	85	230	145	672
Riparian Wetlands (acres)	274	212	109	240	135	484
Non-riparian Wetlands (acres)	85	70	30	95	10	135
Buffer (acres)	284	169	161		150	311

[1]Total mitigation amount specified in 404/401.

[2]In accordance with 1998 MOU, all mitigation requirements assumed by 11/8/2001, were due by 11/8/2002. All mitigation requirements now due within 12 months of receipt of payment.

[3]This number reflects the amount of restoration projects implemented to meet compensatory mitigation requirements. The NCWRP has implemented additional projects to address the cumulative and historical loss of wetland and riparian area functions.

[4]Instituted, as defined in 1998 MOU, means that a site has been acquired and has designer assigned; will be constructed within 2 years.

[5]Represents the portion of the EEP Request for Proposals for Full Delivery Projects issued in December 2003 to meet WRP mitigation requirements

Program Overview

During fiscal year 2002-2003, the N.C. Wetlands Restoration Program (NCWRP) made significant progress in both planning and implementation. Highlights in the planning area include the integration of key NCWRP information regarding Targeted Local Watersheds into the N.C. Department of Environment and Natural Resources (DENR), Division of Water Quality's Basinwide Water Quality Management Plans. This increases programmatic visibility and also fosters efficiency among DENR divisions with overlapping tasks (e.g., public outreach, reporting).

Summaries of information in the basinwide plans are available on the NCWRP website. Watershed Restoration Plans for five river basins were completed this fiscal year.

Also, with regard to planning, the NCWRP continues to embark upon Local Watershed Planning to identify high quality compensatory mitigation projects in a watershed context to offset unavoidable impacts associated with transportation improvement projects and other development-related activities. Information on Local Watershed Planning is on the NCWRP website.

During this past fiscal year, efforts have resulted in a total of 37 stream and wetland restoration projects that are either completed or in construction, totaling 127,632 linear feet of streams and 466.9 acres of wetlands. An additional 35 projects are in the design phase and upon completion will result in the restoration of 91,480 linear feet of streams and 478.5 acres of wetlands. In addition, policies have been developed and implemented for improved riparian plantings as well as vegetation monitoring techniques.

Finally, the program is currently undergoing significant changes as it combines forces with the mitigation program of the N.C. Department of Transportation (NCDOT) to develop the Ecosystem Enhancement Program. This exciting new program is receiving national recognition in areas of organizational innovation and collaboration. Programmatic development is proceeding quickly and details on its progress will be available soon.

NCWRP Website -- http://h2o.enr.state.nc.us/wrp
Basinwide Water Quality Plans -- http://h2o.enr.state.nc.us/basinwide/
Local Watershed Plans -- http://h2o.enr.state.nc.us/wrp/plans/localplan.htm

The North Carolina Wetlands Restoration Program is an innovative, nonregulatory program established by the North Carolina General Assembly in 1996 to restore wetlands, streams and streamside (riparian) areas throughout the state.

This document has been approved by:

Ronald E. Ferrell, Program Manager
NC Wetlands Restoration Program

Date: November 24, 2003

This document has been prepared to fulfill the annual reporting requirements of the N.C. Wetlands Restoration Program as described in NCGS 143-214.13.

Section 1 — Accomplishments

The last fiscal year (FY) brought significant activity for the NCWRP. Planning activities, particularly related to Local Watershed Planning, have been accelerated, and the program has more projects underway than ever before. In addition, a new program that will combine the mitigation resources of the NCWRP and the NCDOT is being developed. These movements highlight the success of the program's basic premise, which is to improve the ecological effectiveness of compensatory mitigation projects {NCGS 143-214.9 (4)}.

Planning Initiatives

Watershed Restoration Plans

The 1996 legislation creating the NCWRP requires development of "basinwide plans for wetlands and riparian area restoration" for each of the state's 17 river basins in accordance with the basinwide schedule established by the N.C. Department of Environment and Natural Resources, Division of Water Quality (DWQ). The primary goals of the plans include water quality protection, flood prevention, restoration/protection of fisheries and wildlife habitat and enhanced recreational opportunities. The centerpiece of each plan is the identification of high-priority Targeted Local Watersheds (TLWs) within which there are documented needs and opportunities for stream, wetlands and riparian buffer restoration and preservation.

The NCWRP website contains an in-depth description of the methodology used to target these high-priority local watersheds. It is contained within the *Guide to the NCWRP's Watershed Restoration Planning Strategy (version 1),* which is online at http://h2o.enr.state.nc.us/wrp/pdf/restplans/Planning%20Guide.pdf.

The Planning Branch of NCWRP has been preparing and updating these plans since 1997, working closely with DWQ's Basinwide Planning staff in the context of its 5-year planning cycle (a staggered timeline for producing Basinwide Water Quality Management Plans for the 17 river basins in North Carolina). Originally called *Basinwide Wetlands and Riparian Restoration Plans*, these plan updates are now titled *Watershed Restoration Plans*, reflecting NCWRP's evolution towards a comprehensive watershed-scale approach to

Watershed Restoration Plans — FY 2003 Activities

During FY 2003, from July 2002 through June 2003, *Watershed Restoration Plans* for the following basins were produced by the NCWRP (in chronological order): Chowan; Pasquotank; Neuse; Broad; and Yadkin-Pee Dee. The development of these plans included a standard sequence of steps conducted by NCWRP in soliciting input from interested citizens, environmental groups, other DENR state agencies, and resource professionals living and working in the river basins. This sequence begins with NCWRP Planners making presentations at DWQ basinwide water quality planning workshops at strategically located venues in the basins, and includes the active solicitation of review comments by local resource agency professionals on draft Targeted Local Watersheds.

In addition to the completion of the five Watershed Restoration Plans noted above, NCWRP planners participated in DWQ's initial planning workshops for the Lumber and Tar-Pamlico basins (in the winter of 2002 and spring of 2003, respectively), marking the beginning of the plan preparation/update cycle for these two basins.

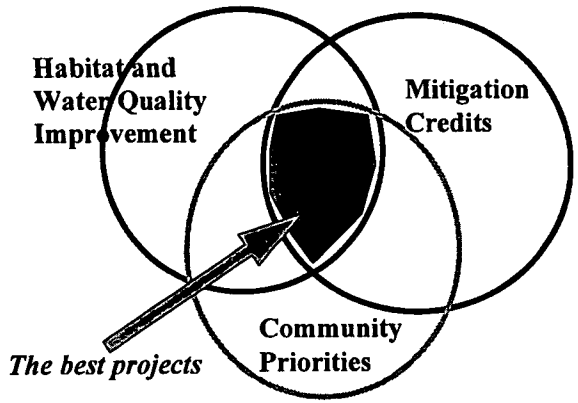
improve the ecological effectiveness of compensatory mitigation efforts.

Beginning with preparation of the Neuse River basin plan update (final DWQ Water Quality Plan completed July 2002), the NCWRP began integrating the Watershed Restoration Plan materials and information (e.g., maps and tables summarizing Targeted Local Watersheds, rationale for selection of specific TLWs, summary of NCWRP restoration projects) directly into the DWQ basinwide water quality plans, which are online: http://h2o.enr.state.nc.us/basinwide. Summaries of the Watershed Restoration Plan for each river basin are also available online at http://h2o.enr.state.nc.us/wrp/publications/pubs2.htm.

Local Watershed Plans

The NCWRP continues the development and implementation of Local Watershed Plans (LWP) throughout North Carolina. The primary purpose of the Local Watershed Plans is to identify the causes of watershed degradation and to develop strategies addressing these problems that are consistent with the objectives of local communities. This process ensures that compensatory mitigation projects are designed and located to replace those functions within each watershed that provide the maximum benefits in restoring and protecting our natural resources while addressing local priorities.

Figure 1-1 NCWRP Identification of High Quality Projects



The NCWRP uses watershed planning to identify projects that will generate the most environmental benefit while meeting community needs and satisfying compensatory mitigation requirements.

Projects that achieve these goals while addressing compensatory mitigation requirements realize multiple complementary objectives and are the kind of projects the NCWRP strives to implement through watershed planning (Figure 1-1). The 2000 Annual Report for NCWRP contains a detailed explanation of the Local Watershed Planning process.

During FY 02-03, work continued on three LWPs initiated in previous reporting periods, while eight additional efforts were begun. During this calendar year, several of the first plans developed by the NCWRP will be completed. A number of these are already yielding restoration projects that further community priorities and address demonstrated watershed needs.

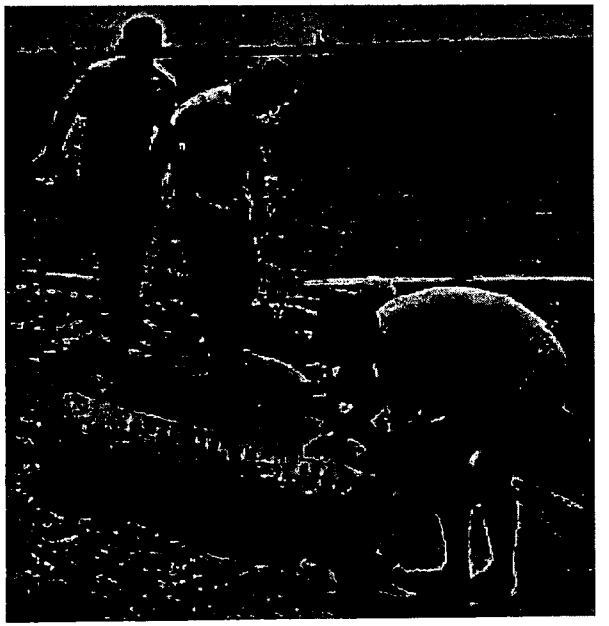
The first two plans completed by the program (New Hanover County in the Cape Fear River basin and Mud Creek in the French Broad River basin) are now available online (http://h2o.enr.state.nc.us/wrp/plans/localplan.htm). These plans demonstrate the ability of watershed planning to attract additional resources for project implementation beyond mitigation. New Hanover County received a $150,000 U.S. Environmental Protection Agency (EPA) Cooperative Agreement grant to implement best management practices (BMPs) to address priorities identified in the plan. In addition, North Carolina State University

secured an EPA 319 grant for $700,000 to implement additional BMPs consistent with the New Hanover County Local Watershed Plan. In Mud Creek, a watershed coordinator located in Henderson County has been funded for two years with EPA (104b3) grant dollars to pursue the implementation of the agreed-upon restoration plan. The concentration of a variety of complementary projects in small watersheds is one of the goals of NCWRP's Local Watershed Planning Initiative, and these types of additional funds and activities are a very positive step toward realizing that goal.

The number of projects implemented by the NCWRP that are a direct result of Local Watershed Planning activities is increasing dramatically. In nine LWP watersheds, there are over 20 projects underway that were identified based on documented watershed needs. These projects include stream restoration, wetland restoration, BMPs and preservation. The majority of these efforts are in cooperation with local entities such as local governments, land trusts and resource agencies. As planning projects continue to mature, this trend will continue to accelerate.

A summary of the location and status of each LWP is provided in Appendix B, Table B-2. Additional information is also available through the NCWRP website, http://h2o.enr.state.nc.us/wrp/index.htm.

Bogaboo Creek



Planting Marsh Grass, Hammocks Beach

Implementation Efforts

At the end of FY 02-03, 72 projects were at or beyond the initial design phase (Table 1-1). The phases of project implementation are described in the text box on page 7. Twenty-six projects were complete, resulting in the restoration, enhancement or preservation of 462.9 acres of wetlands, 66,832 linear feet of streams and 156.5 acres of riparian buffer. Another 11 projects were in construction by the end of FY 02-03 which will provide an additional restoration, enhancement or preservation of four acres of wetlands, 60,800 linear feet of stream and 91.7 acres of riparian buffer. The 37 projects will provide restoration, enhancement or preservation of 466.9 acres of wetlands, 127,632 linear feet of stream and 248.2 acres of riparian buffer. Collectively, these 72 projects will result in the restoration, enhancement or preservation of 945.4 acres of wetlands, 219,112 linear feet of stream and 354 acres of riparian buffer (Table 1-1).

These projects are located throughout North Carolina in 11 different river basins and 34 counties. Seventy-three percent of these projects are located with Targeted Local Watersheds that have been identified by the NCWRP planning process as watersheds in need of restoration activities.

The NCWRP continues to work with landowners, federal, state and local government agencies,

continued page 13

Phases of Implementation

1. Site Identification
The 'on-the-ground' assessment by NCWRP personnel and private consultants of potential project sites identified through the basinwide and local watershed planning processes.

2. Site Acquisition
The process by which landowners participate in the process by agreeing to the protection of viable project sites through donation or purchase of conservation easements, or through fee simple purchase.

3. Site Assessment
The preliminary step of project design that involves measurement and documentation of existing conditions and functions of viable project sites and the surrounding watershed. Project goals, targeted functions and a conceptual design are established at this stage.

4. Project Design
The production of a final design that provides specifications and drawings to be used for necessary permits, and to guide the construction of the restoration project.

5. Site Restoration
The construction phase of a project in which the physical structure of a site is modified to change the hydrological, geomorphology and biological components of a restoration site.

6. Post-Monitoring
The collection, evaluation and reporting of data following construction to determine if restored sites are meeting project goals. Post-monitoring can extend to five years after restoration activities and will involve the remediation of sites that are not meeting success criteria.

7. Long-Term Maintenance and Management
The periodic inspection of sites after the post-monitoring phase to ensure the protection of sites against unauthorized activities and to identify and implement maintenance.

Continued from page 6

non-profit conservation groups and others to identify and implement restoration projects. Twenty-six projects are in the land-acquisition phase and will result in the restoration, enhancement and preservation of 268 acres of wetlands, 85,950 linear feet of stream and 186.75 acres of riparian buffer (Table 1-2). Negotiations with landowners and/or property acquisition are underway for these projects with anticipated construction dates late in FY 03-04 or early FY 04-05.

To afford an opportunity for private mitigation providers to provide fully restored sites to the NCWRP, a Request for Proposals to restore 150 acres of riparian buffer in the Neuse River basin was issued in May 2002. Four contracts were awarded for a total of 151 acres of riparian buffer restoration. Requests for Proposals for wetland and stream restoration were issued in June 2002. Four contracts were awarded and will result in the restoration of 42 acres of wetlands, 12,950 linear feet of streams and 29.8 acres of riparian buffer once complete (Table 1-3).

Ecosystem Enhancement Program

A new program that will combine the mitigation resources of the NCWRP and the NCDOT is being implemented. Although the Ecosystem Enhancement Program (EEP) was formally established in July 2003, significant work on program development occurred during FY 03. While NCWRP will be greatly influenced by this new initiative, the main components of NCWRP, including watershed planning, the in-lieu fee program and high-quality restoration projects, will be maintained.

Within the DENR, the EEP will provide high-quality compensatory mitigation for the NCDOT as well as other development impacts statewide. These needs will be met in advance of impacts, will provide functional replacement of impacts and will be addressed through a watershed approach.

A Memorandum of Agreement (MOA) regarding EEP between the partnering agencies [NCDENR, NCDOT and the U.S. Army Corps of Engineers (COE)] was signed into effect on July 22, 2003. Key provisions of the MOA include:

- Executing the requirements placed on the DENR by the enabling legislation for NCWRP (NCGS 143-214.8, et seq.).

- Enhancing the natural resources of North Carolina by addressing watershed needs.

- Fully satisfying compensatory mitigation requirements for authorized impacts on a programmatic, watershed-level basis.

- Providing in-ground, functioning compensatory mitigation for authorized impacts in advance of the actual impacts.

- Satisfying the compensatory wetland, stream and buffer mitigation needs of the NCDOT transportation program.

- Providing a means for organizing, steering, funding and implementing ecosystem enhancement efforts in the state.

The Ecosystem Enhancement Program

Purpose

The purpose of the Ecosystem Enhancement Program (EEP) is to provide a comprehensive, natural resource enhancement program that identifies ecosystem needs at the local watershed level and preserves, enhances and restores ecological functions within the target watersheds while addressing impacts from anticipated N.C. Department of Transportation transportation projects and other development.

Mission

The EEP mission is to restore, enhance, preserve and protect the functions associated with wetlands, streams and riparian areas including, but not limited to, those necessary for the restoration, maintenance and protection of water quality and riparian habitats throughout North Carolina.

Section 2 — Compensatory Mitigation Requirements

One of the functions of the NCWRP is to provide a compensatory mitigation option to permit applicants throughout North Carolina (NCGS 143-214.9). The option to pay a fee to the NCWRP to satisfy compensatory mitigation requirements of Section 404 permits and 401 Water Quality Certifications has been available since November 1998. The NCWRP also accepts payments for riparian buffer mitigation requirements in the Neuse, Tar-Pamlico, Catawba and Cape Fear river basins and nitrogen offset payments in the Neuse River basin. This section summarizes the accepted payments and the progress made in implementing projects to meet these obligations. [Please refer to Appendix A of this report and the 1999 NCWRP Annual Report for additional information concerning the Memorandum of Agreement between the COE and the NCWRP.]

Section 404/401 Water Quality Certification Mitigation Requirements

The compensatory mitigation requirements for 65 permits allowed by Section 404 or 401 certifications were accepted during FY 02-03. The mitigation requirements of these permits/certifications total 18,968 linear feet of streams and 46.49 acres of wetlands (Table 2.1). Since 1998, the compensatory mitigation requirements of 308 Section 404 permits and 401 Water Quality Certifications have been accepted. The cumulative mitigation requirements accepted by the NCWRP total 238,005 linear feet of streams and 304.47 acres of wetlands in 13 of the state's 17 river basins.

Table 2-1 Compensatory Mitigation Requirements Accepted NCWRP by River Basin

River Basin	Mitigation Requirements Accepted Fiscal Year 2002-2003		Cumulative mitigation requirements accepted since November 1998	
	Stream mitigation (feet)	Wetlands Mitigation (acres)	Stream mitigation (feet)	Wetlands Mitigation (acres)
Broad	0	0	800	0
Cape Fear	2,223	13.85	63,272	123.76
Catawba	1,919	1.14	73,396	21.85

Totals	18,868	46.49	238,005	304.47

Riparian Buffer Mitigation

The NCWRP accepted 28 riparian buffer mitigation impacts for FY 02-03. These payments require the restoration of 103.22 acres of buffer in the Neuse River basin and 1.45 acres of buffer restoration in the Tar-Pamlico River basin, for a total of 104.67 acres. Since 1999 (effective date of the Riparian Area Buffer Rules for the Neuse River basin), the buffer mitigation requirements of 77 projects have been accepted by the NCWRP. Approximately 90 percent of these payments are for impacts within the Neuse River basin and 10 percent of the payments are for impacts within the Tar-Pamlico River basin. No payments have been received for buffer impacts in the Catawba River basin or the Randleman Water Supply Watershed. Cumulative riparian buffer mitigation requirements in the Neuse and Tar-Pamlico river basins are shown in Table 2-2.

Nitrogen Offset Payments in the Neuse River Basin

As required by *Nutrient Sensitive Waters Management Strategy: Basinwide Stormwater Requirements* (15A NCAC 2B .0235), designated local governments within the Neuse River basin are required to implement a model plan. The plan is to address nitrogen reductions for both existing and new development within their jurisdictions. Developers have the option of partially offsetting their nitrogen loads through payments to the NCWRP (15A NCAC 2B .0240).

A total of 236 nitrogen-offset payments were received during FY 02-03 (Appendix D, Table D-2). These payments require the implementation of projects that will provide 3,700 pounds of nitrogen reduction per year over a 30-year period within the Neuse River basin. Payments accepted during FY 00-01 required the removal of 66.77 pounds of nitrogen per year over a 30-year period. For payments accepted in FY 01-02, the required nitrogen removal per year over a 30-year period is 2,861.04 pounds. Cumulatively, the required nitrogen removal per year is 6,627.81 pounds. The NCWRP is presently working with the local governments affected by the rule to identify proposals for projects that will remove the required pounds of nitrogen. If the proposals are accepted by the NCWRP, the project will be funded from the payments received by the NCWRP. One project has been approved for funding by the NCWRP, and proposals for three projects are being prepared for approval. The goal of the NCWRP is to fund projects that cumulatively will remove 6,627.81 pounds of nitrogen per year in the Neuse River basin over a 30-year period.

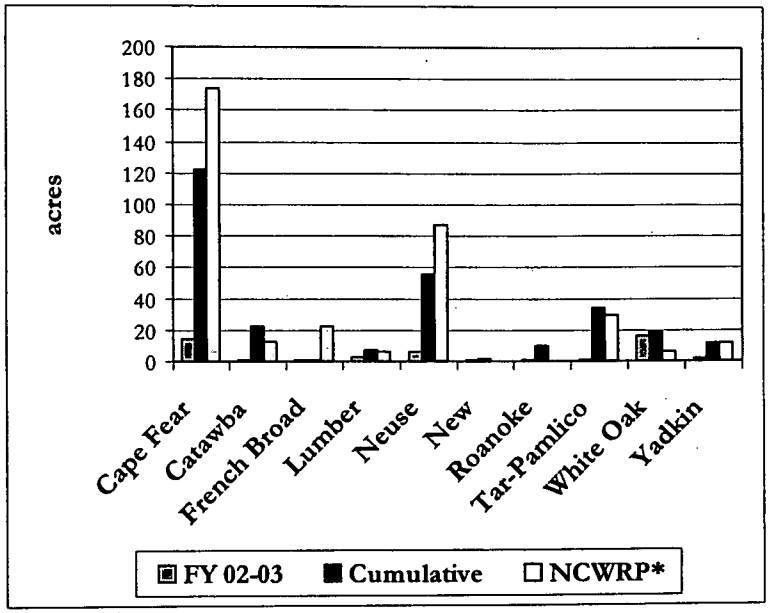
Table 2-2 Riparian Buffer Compensatory Mitigation Requirements Accepted by NCWRP

River Basin/ Watershed	Mitigation requirements accepted Fiscal Year 2002-2003 (acres)	Cumulative mitigation requirements accepted since June 1999 (acres)
Neuse	103.219	175.61
Tar-Pamlico	1.45	1.64
Catawba	0	0
Randleman Water Supply Watershed	0	0
Total	104.669	177.25

Progress in Meeting Compensatory Mitigation Requirements For Fiscal Year 02-03

The NCWRP accepted a total of 65 Section 404 permits and 401 Water Quality Certifications during FY 02-03. Eighty-nine percent of the total Section 404 permits and 401 Water Quality Certifications have projects where the property has been acquired (and protected in perpetuity), and the project is either in design, construction or a monitoring phase. There are 20 Section 404 permits and eight 401 Water Quality Certifications with mitigation due by June 30, 2003 that are not covered by the current list of NCWRP project assets. Permit compliance decreased by 1 percent for Section 404 permits and 2 percent for 401 Water Quality Certifications from the previous fiscal year. The primary reason for the slight decrease of compliance with the increased amount of projects was due to the schedule of when the mitigation accepted was due. Seventy-two percent of the total stream mitigation and 67 percent of the total wetland mitigation that the NCWRP had accepted since the program's inception came due in the first half of FY 02-03.

Figure 2-1 Progress in Meeting Compensatory Mitigation Requirements by River Basin for Wetlands



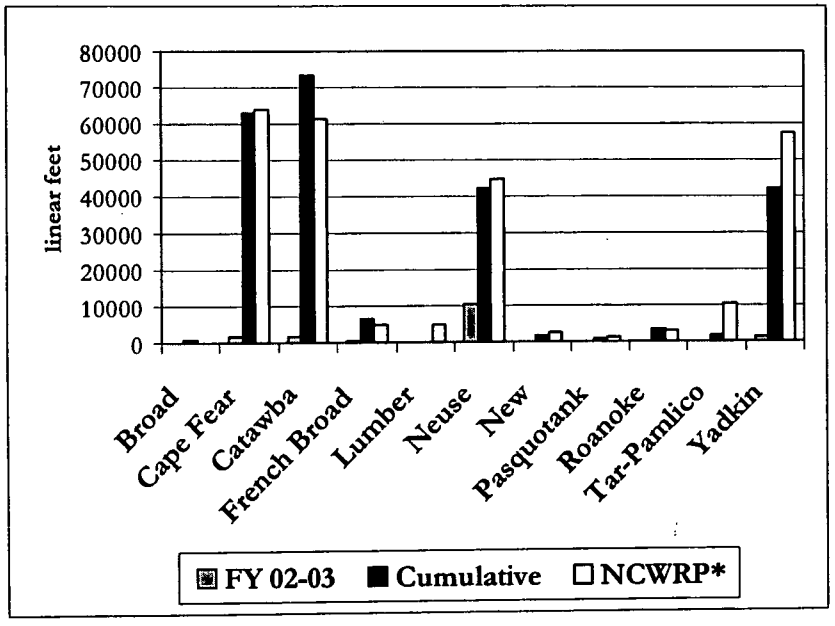
** NCWRP Project Assets*

Wetland Mitigation Requirements

The NCWRP has accepted wetland mitigation in 10 different river basins. On a statewide basis, the amount of NCWRP project assets for wetland restoration (304.9 acres) just exceeds the assumed mitigation requirements (304.47 acres). The NCWRP currently meets or exceeds the wetland mitigation accepted in five of those river basins (Figure 2-1). Twenty-three wetland restoration and enhancement projects have been initiated that will restore 304.9 acres of wetlands (Table 1-1). These projects will meet the compensatory mitigation requirements of 83 percent of the permits due for implementation by the NCWRP through the end of FY 02-03. Although the restoration acreage may exceed the mitigation required on a river basin scale, when examined on a river basin cataloging unit (CU) basis as required in the COE Memorandum of Understanding (Appendix A) the mitigation requirements in some CUs have not been totally met.

Additional projects that will restore 45.66 acres of wetlands are needed to meet the end of FY 02-03 outstanding mitigation needs. These impacts are located in the Cape Fear, Catawba, New, Roanoke, Tar Pamlico and Yadkin

Figure 2-2 Progress in Meeting Compensatory Mitigation Requirements by River Basin for Streams



** NCWRP Project Assets*

river basins. These projects are needed to meet the compensatory mitigation requirements of nineteen* 404 permits and four 401 Water Quality Certifications.

The permit needs by river basin for wetland mitigation requirements are:

- Cape Fear: four 404 permits (10.22 acres).
- Catawba: twelve 404 permits, one 401 certification (16.81 acres).
- New: one 404 permit (1.2 acres).
- Roanoke: two 404 permits (8.72 acres).
- Tar-Pamlico: one 401 certification (7.04 acres).
- Yadkin: two 401 certifications (1.67 acres).

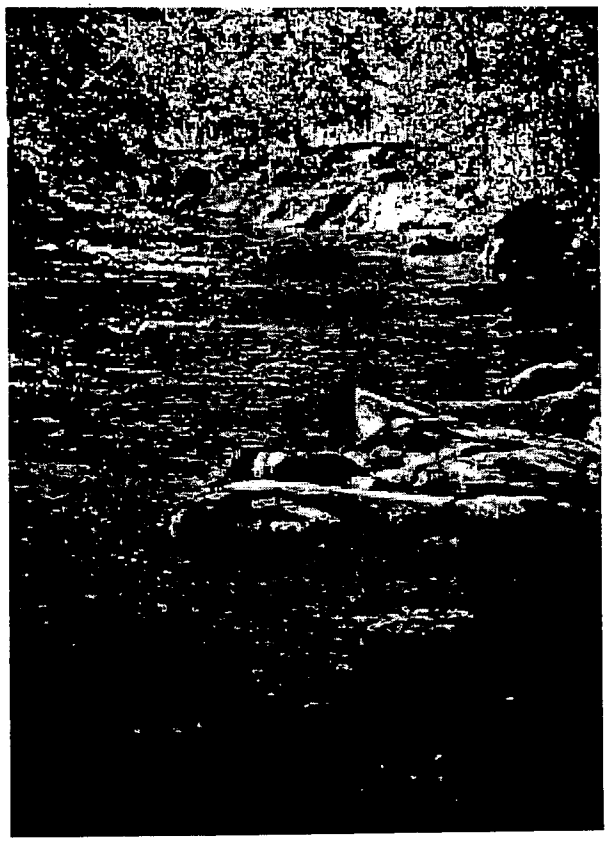
Stream Mitigation Requirements

The NCWRP has accepted stream mitigation impacts in 11 different river basins. NCWRP projects approximate or exceed the mitigation accepted for eight of those river basins (Figure 2-2). Fifty-eight projects have been implemented that will restore 219,112 linear feet of streams. These projects will meet the compensatory mitigation requirements of 88 percent of permits assumed by the NCWRP through the end of FY 02-03 (Table 1-1). Additional projects that will restore 34,603 linear feet of streams are needed in the Broad, Cape Fear, Catawba, Roanoke and Tar Pamlico river basins to meet specific permit requirements of five* 404 permits and four 401 Water Quality Certifications.

The permit needs by river basin for stream mitigation requirements are:

- Broad: one 401 certification (800 linear feet).
- Cape Fear: two 404 permits, one 401 certifications (14,080 linear feet).
- Catawba: two 404 permits (18,298 linear feet).
- Roanoke: one 404 permit (770 linear feet).
- Tar-Pamlico: two 401 certification (655 linear feet).

** Note: In the previous two sections, four 404 permits have both stream and wetland mitigation requirements.*



Stone Mountain

Permit compliance decreased by 5 percent for streams between FY 01-02 and FY 02-03. As stated earlier, the primary reason for the decrease in compliance was the schedule of when the mitigation accepted was due.

Riparian Buffer Mitigation Requirements

The NCWRP has accepted 77 impacts for buffer restoration since 1998. In FY 02-03, 29 buffer impacts were accepted. The acreage for the projects accepted is 103.75 acres, with 102.19 acres in the Neuse River basin and 1.56 acres in the Tar-Pamlico River basin. The NCWRP has six riparian buffer restoration sites as assets to date. Four of these sites are full delivery projects, and two are NCWRP projects.

The NCWRP currently has 177.7 acres of riparian buffer assets in the Neuse River basin. To date the Riparian Buffer Mitigation Fund has been paid for 175.61 acres of Neuse buffer mitigation. A total of 2.04 acres of Neuse buffer mitigation in Carteret, Craven and Pamlico counties have not been debited from the NCWRP buffer assets because these impacts are downstream of the NCWRP restoration project assets. The NCWRP will be requesting full delivery proposals in Craven and Pamlico counties.

Full delivery projects

A designer or consultant delivers a restored site (including property acquisition, design, construction and monitoring) and is paid based on a low-bid per acre or linear foot cost

The NCWRP has accepted eight riparian buffer impacts in the Tar Pamlico River basin. These riparian buffer mitigation requirements total 1.64 acres. The NCWRP has a buffer restoration project in design on Ocracoke Island that will have an asset of 0.75 acres. There is an option being considered in Beaufort County for an additional one acre of riparian buffer restoration.

Section 3 – Trust Funds

Wetlands Trust Fund

The Wetlands Trust Fund was established by the N.C. General Assembly as a repository for funds to restore, create, enhance and preserve wetlands and riparian areas throughout the state. Three accounts have been established within the Wetlands Trust Fund: Account 2980 – Wetland Restoration; Account 2981 – Compensatory Mitigation; and Account 2982 – Riparian Buffer.

Account 2980 is the repository for appropriations received from the General Assembly. This account is used to implement restoration projects to compensate for cumulative losses of wetlands and riparian areas associated with projects that are below the threshold that triggers the compensatory mitigation requirement.

Account 2981 is the repository for payments made to the NCWRP to satisfy the compensatory mitigation requirements of Section 404 permits, 401 Water Quality Certifications and nitrogen offset payments. Payments to this account and the interest earned are used to implement projects designed to meet the compensatory mitigation requirements of projects accepted by the NCWRP and to implement projects to reduce nitrogen loading within the Neuse River basin.

Account 2982 is the repository for payments to satisfy the buffer mitigation requirements for permitted impacts to riparian buffers in the Neuse, Tar-Pamlico and Catawba river basins. Payments to this account and the interest earned are used to implement riparian buffer restoration projects within these river basins.

During FY 02-03, the NCWRP received 79 payments for compensatory mitigation associated with Section 404/401 permits and permitted riparian buffer impacts. Fifty-six of the payments (71 percent) were received from the private sector, nine payments (11 percent) were received from NCDOT and 14 payments (18 percent) were received from other state, federal and local government agencies. NCWRP received 236 nitrogen offset payments.

Of the payments received, 24 percent were for stream restoration and 11 percent for wetland restoration associated with Section 404/401 permits. Riparian buffer payments comprised 50 percent, with the remaining 15 percent for nitrogen offset payments. Appendix D contains a complete listing of payments.

Income/Expenditures

Account 2980 – Wetlands Restoration Fund

The beginning balance of Account 2980 in FY 02-03 was $3,261,917. A total of $105,559 was deposited into this account during the fiscal year. Income received during the fiscal year was derived from the interest earned on this account.

Hammocks Beach Restoration Site

Total expenditures for FY 02-03 were $1,339,980. These funds were expended for activities associated with the restoration, enhancement or preservation of wetland, streams and riparian areas. Of the remaining balance, $1,966,001 is encumbered for activities associated with the restoration and enhancement of wetlands, streams and riparian areas. At the end of FY 02-03, the unencumbered balance of Account 2980 was $12,456 (Table 3-1).

Account 2981 – Compensatory Mitigation Fund

The beginning balance of Account 2981 in FY 02-03 was $42,595,995. A total of $8,399,744 was deposited into this account during the fiscal year. An additional payment of $2.5 million was received from NCDOT for local watershed planning initiatives. Compensatory mitigation deposits were 56 percent less than last year. The economic downturn probably contributed to the reduction in payments from both the private sector and government agencies. NCDOT payments were possibly reduced due to anticipation of alternative mitigation available through the Ecosystem Enhancement Program.

Income received during the fiscal year was derived from payments to satisfy the compensatory mitigation requirements of Section 404 permits and 401 Water Quality Certifications, nitrogen offset payments as required by 15A NCAC 2B .0242 and the interest earned on the funds within this account. Total expenditures for FY 02-03 were $11,381,930. These funds were expended for activities associated with the restoration, enhancement or preservation of wetland, streams and riparian areas. Of the remaining balance, $17,235,294 was encumbered. At the end of FY 02-03, the unencumbered balance of Account 2981 was $23,217,093 (Table 3-2).

The unencumbered balance is reserved for the implementation of projects to meet the compensatory mitigation requirements of Section 404 permits and 401 Water Quality Certifications accepted by the NCWRP, watershed assessments and nitrogen reduction projects. These projects will restore and enhance approximately 48,400 linear feet of streams, 55 acres of wetlands and 100 acres of riparian buffers. Approximately 6,700 pounds of nitrogen per year will be removed through the implementation of nitrogen reduction projects in the Neuse River basin at a cost of $2.2 million. Of the remaining unencumbered funds, $4.9 million is reserved for the development of Local Watershed Plans as required by the Memorandum of Agreement with the NCDOT. (Please refer to Section 2 and Appendix D for additional informa-

tion concerning compensatory mitigation requirements assumed by the NCWRP. Information concerning the Memorandum of Agreement with the NCDOT can be found in Appendix B.)

Account 2982– Riparian Buffer Fund

The beginning balance of Account 2982 in FY 02-03 was $3,309,390. During the fiscal year, $5,325,025 was deposited into this account. Income received during this fiscal year was derived from payments for the compensatory mitigation requirements associated with permitted impacts to buffers and the interest earned on the funds within the account. Four new contracts were encumbered, totaling $3,285,547. During FY 02-03, $2,282,248 was expended from this account for four full-delivery restoration projects. At the end of FY 02-03, the unencumbered balance of Account 2982 was $4,510,291. These funds are reserved for buffer restoration in the Neuse and Tar-Pamlico River basins (Table 3-3).

Summary

During FY 02 – 03, the pace of expenditures increased significantly (Figure 3-1). This increase is associated with expenditures for design and implementation of restoration projects and the initiation of several comprehensive Local Watershed Plans. Although the planning process resulted in some delay in the implementation of projects, the benefits associated with the implementation of high quality projects identified through the watershed planning process will be long-term. In addition to expenditures, as of June 30, 2003, more than $20 million remained encumbered in 102 active contracts in the Wetlands Trust Fund accounts (Table 3-4). Of this total, 63 new contractual agreements totaling $15,316,778 were encumbered during FY 02-03. These contracts will provide local watershed planning, site identification, design, construction, construction management and monitoring of the restored sites. The pace of expenditures will continue to increase as the planning process matures, and the NCWRP increases the efficiency of its implementation processes.

HDR Engineering	$244,160.62		

Section 4 — Analysis of Restoration Costs

The NCWRP evaluates the cost of restoration projects on an annual basis. It compares this cost to the Schedule of Fees (NCGS 143-214.13) and the cost of restoration projects implemented by the private mitigation banking industry. (Please refer to Section 5 of the 2001 NCWRP Annual Report for information on the methods used in this analysis.)

Stream Restoration Projects

The construction of 17 stream restoration projects was completed by the end of FY 02-03. Eight of these projects are located in urban areas and nine are in rural areas. These projects restored 64,101 linear feet of stream at an overall average cost per linear foot of $129.31. As shown on Tables 4.1 and 4.2, there is a significant difference in the costs of urban and rural projects. The average per linear foot cost of urban projects is $168.77 while the average per linear foot cost of rural projects is $113.53.

The higher costs of urban projects result from a number of factors. Most urban stream settings have numerous constraints that must be addressed during the design and construction of projects, including roads, sewer lines, water lines power lines, fiber optic cables and gas lines. These constraints must be avoided or relocated during a stream restoration project. They also influence the design and maintenance of the restoration project, further increasing project cost. Other common constraints in urban situations include numerous road crossings, protect-

Table 4-1 Stream Restoration Costs for Urban Projects

Urban Project	Hominy Swamp	Price Park	Smith/Austin	Kentwood Park	Chavis Park	Richland Creek	Clear Creek	Sandy Creek
Site identification	$2,450	$1,690	$4,750	$1,800	$2,250	$0	$1,080	$1,000

Project status	Monitoring	Monitoring	Monitoring	Monitoring	Monitoring	Monitoring	Monitoring	Monitoring

** Projected Cost for five-year period*

ing city park equipment and ensuring the compatibility of the project with surrounding buildings and structures.

The cost of restoration in urban areas is also increased significantly. Suitable stream reaches available for restoration tend to be shorter than those in rural areas due to higher density of land ownership and smaller parcel size. Shorter restoration projects decrease the "economies of scale" for urban projects since the initial mobilization of equipment is one of the larger costs in constructing stream restoration projects. The cost of construction staging and delivering equipment becomes more economical as project length increases.

Wetland Restoration Projects

Seven wetland restoration projects were constructed by the end of FY 02-03. Three involved the restoration of coastal wetlands; three involved the restoration/enhancement of riparian wetlands; and one project restored non-riparian wetlands. Six of these projects were located in the coastal plain physiographic region and one in the Piedmont region. They resulted in the restoration and enhancement of 364.6 acres of wetlands.

Table 4-2 Stream Restoration Costs for Rural Projects

Rural Project	Payne Dairy	Stone Mountain	Brush Creek	County Line Creek	Lyle Creek	Brown Branch	Beaver Creek	Bear Swamp	Suck Creek
Site identification	$3,700	$5,200	$2,200	$1,750	$1,150	$3,500	$2,200	$750	$1,825
Site acquisition	$86,965	$0	$864	$30,414	$35,166	$0	$2,300	$6,902	$2,738
Project design	$178,357	$242.78	$109,690	$97,663	$72,522	$104,164	$90,858	$44,300	$80,688

Riparian Wetlands

The construction of three riparian wetland restoration projects was complete by the end of FY 02-03, resulting in the restoration and enhancement of 107.6 acres of wetlands (Table 4.3). The Jumping Run Creek project, located in an urban setting in Carteret County, had an average cost per acre of $25,085. The Howell Woods project, located in a rural area of Johnston County, involved the restoration/ enhancement of riparian wetlands in the flood-plain of the Neuse River. Wetland hydrology and vegetation was restored and enhanced at an average cost per acre of $13,188. The Sandy Creek Wetland Restoration site, located on an abandoned wastewater treatment facility in Durham, resulted in an average cost per acre of $43,569.

Table 4-3 Costs of Riparian Wetland Restoration

Project	Jumping Run Creek	Howell Woods	Sandy Creek
Site identification	$4,050	$5,695	$500
Site acquisition	$0.00	$252,157	$17,282
Project design	$16,125	$66,916	$20,000

Project status	Monitoring	Monitoring	Monitoring

* *Estimated costs*

Coastal Wetlands

The construction of three coastal wetland restoration projects was complete by the end of FY 01-02 resulting in the restoration of and enhancement of 4.11 acres of wetlands at an average cost of $101,148 per acre. (Please refer to Section 5 of the 2001 NCWRP Annual Report for additional information on these projects.)

Non-riparian wetlands

The NCWRP completed the first phase of the North River wetland restoration project located in Carteret County. Phase I is 250 acres of non-riparian wetland restoration; Phase II will encompass another 165 acres of restoration. Total cost for Phase I of the project was $1,187,253 resulting in a per acre cost of $4,749.

Conclusions

Two conclusions can be made from examining riparian wetland costs. First, riparian wetland restoration costs are higher than non-riparian wetland restoration because the complexity of the hydrology of a riparian wetland leads to increased design and monitoring costs. Second, on any restoration project, economies of scale govern the overall costs. As the project size increases, cost per acre decreases. Therefore, comparing the three riparian projects results in the Howell Woods site having the lowest cost per acre because of its much larger size.

Cost Analysis of Private Mitigation Bank Restoration Projects

The enabling legislation for the NCWRP requires an annual cost comparison on a per acre basis between the restoration costs of NCWRP and private mitigation banks. To obtain the data necessary to accomplish this task, a survey requesting restoration cost information is annually sent to the sponsor of each approved bank (Table 4.4). There were no responses received from this year's Private Mitigation Bank Survey, which was sent in early August 2003. (Please refer to the 2002 NCWRP Annual Report survey data.) During FY 99-00, responses were received from two sponsors, Triangle Group and EcoBank, representing four separate mitigation banks. The average per acre cost for non-riparian wetlands for these four banks was $9,665 (page 41, 2000 NCWRP Annual Report). During FY 01-02, only EcoBank responded with a cost of $8,675 per acre of non-riparian wetland restoration (page 4-3, 2002 NCWRP Annual Report).

As noted, the NCWRP completed a non-riparian wetland restoration project at $4,749 per acre on the North River.

Comparison of Restoration Costs with Schedule of Fees

The NC Wetlands Restoration Program utilizes the cost of its projects and the costs reported by the mitigation banking industry to determine actual costs of restoration compared to the Schedule of Fees (found at 15A NCAC 2R .0402). This comparison ensures that the schedule accurately reflects the cost of restoration.

Based on the results of the analysis of restoration costs conducted two years ago, rulemaking was initiated during FY 01-02 to increase the fee for stream restoration. A public hearing on the proposed increase was held in July 2002. This rule was approved, increasing stream restoration fees to $200 per linear foot beginning April 1, 2003.

Although the overall average on completed projects is $129.31, the NCWRP is seeing a trend of increased cost for stream restoration projects. Long-term maintenance, management and monitoring are projected costs and as these costs are incurred, the NCWRP is finding the average per foot costs are rising. In the first few years of a stream project and before vegetation has had a chance to help provide stability of streambanks, these projects are vulnerable to storms. Maintenance issues can also lead to additional costs. Moreover, the NCWRP is initiating more urban stream projects and the per-foot costs are higher.

Based on the comparison of actual costs for riparian wetlands, non-riparian wetlands and coastal wetlands with the Schedule of Fees, no adjustment to the Schedule of Fees for these categories is recommended at this time.

Section 5 — Statewide Wetland and Stream Losses and Gains

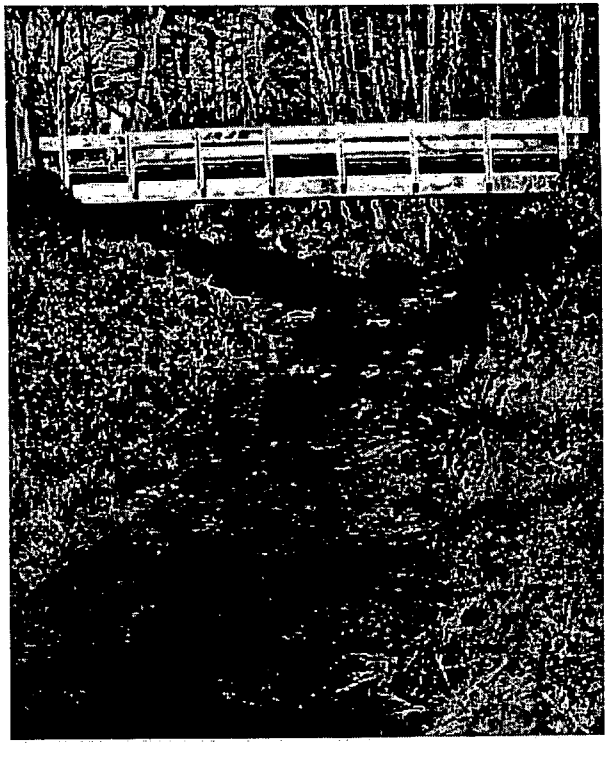
DENR is one of the agencies responsible for protecting and restoring the functions and values of and streams across the state. The N.C. Wildlife Resources Commission, EPA, COE, U.S. Fish and Wildlife Service, National Marine Fisheries Association, local governments and countless non-profit organizations are all working to maintain and add to North Carolina's remaining inventory of wetlands and streams. Despite the collaborative efforts of these groups, there is still an annual net loss of streams in North Carolina and a net loss of wetlands in some river basins.

The COE, DWQ and the Division of Land Resources within DENR regulate construction activities near streams and wetlands. The intent of these regulatory programs is to minimize the impact of construction projects to these valuable resources and to ensure that unavoidable impacts are addressed through mitigation projects. DENR also funds restoration projects to help offset stream and wetland impacts through the NCWRP, the 319 Program, Clean Water Management Trust Fund and Division of Water Resources Grant Program.

This section presents a summary of information gathered by the NCWRP concerning statewide wetland and stream losses and gains that occurred in the state during FY 02-03. This information represents the activities of the DWQ as well as other agencies and programs working to protect and restore wetlands and streams across the state. Wetland, stream and buffer losses and gains are tracked through the Wetland/401 Unit of the DWQ and are presented below under the heading Regulatory Losses and Gains. Information about other programs is presented later in this section under the heading Non-Regulatory Gains.

Regulatory Losses and Gains

The information in this section is based on the 401 Water Quality Certification database maintained by DWQ's Wetland/401 Unit. This database tracks wetland and stream losses that are authorized through the issuance of a 401 Water Quality Certification. The issuance of a 401 Water Quality Certification by the DWQ is required before the US Army Corps of Engineers can issue a Section 404 Permit authorizing the fill or alteration of wetlands and/or streams. Although in the majority of cases the impacts authorized by the 401 Water Quality Certification are consistent with the impacts authorized by the Section 404 Permit, it should be noted that the amount of impact authorized by the Section 404 Permit may be less than that authorized by the 401 Water Quality Certification and, in some cases, a Section 404 Permit may never be issued. In addition, the authorized impacts may not occur during the same fiscal year and in some cases may never occur. The DWQ is increasing its efforts to monitor and track the impacts that actually occur during each fiscal year. Questions regarding regulatory wetlands losses and gains should be directed to Mr. John Dorney with the DWQ Wetland/401 Unit at (919) 733-9646.



Middle Cape Fear

In addition to the wetland and stream impacts tracked in the database, an unknown amount of permanent wetland and stream losses occurs. First, projects that affect less than one-third of an acre of wetlands or less than 150 linear feet of stream are not required to receive written confirmation from DWQ and, therefore, might not be reported. Second, the magnitude of unauthorized impacts to wetlands and streams is still being assessed. DWQ is working to resolve this issue.

Permitted Wetlands Impacts

During FY 02-03, DWQ issued Water Quality Certifications authorizing 297.4 acres of wetland impact. Table 5-1 summarizes the permitted wetland impacts that occurred throughout the state by river basin. The majority of these impacts occur in river basins that flow through the coastal plain.

Permitted Stream Impacts

During the FY 02-03, Water Quality Certifications were issued authorizing 191,708

Table 5-1 Losses and Gains for North Carolina Wetlands During FY 2002 - 2003

TOTALS:	65.7	231.7	297.4	351.7	54.3	(+)

linear feet of permanent stream impact (Table 5-2). The majority of these impacts occur in the piedmont and mountain regions of the state and in urban areas. The State of North Carolina does not require mitigation for impacts to intermittent streams, but impacts to these streams are reported. The reported loss of 63,664 linear feet of stream is partially attributable to intermittent streams.

Permitted Riparian Buffer Impacts in the Catawba, Neuse and Tar-Pamlico River Basins

The Riparian Buffer Rules are currently in effect for the Catawba, Neuse and Tar-Pamlico river basins. These rules apply to 50-foot wide riparian buffers directly adjacent to surface waters including intermittent and perennial streams, lakes, ponds and estuaries. Activities within riparian buffers are categorized as exempt, allowable, allowable with mitigation or prohibited. The Wetland/401 Unit regulates activities in riparian buffers and maintains the database of riparian buffer losses that are permitted through the issuance of an Authorization Certificate. During FY 02-03, 54.18 acres of buffer impact in the Neuse River basin and 2.27 acres in the Tar Pamlico River basin were authorized. There was 0.02 acre of riparian buffer impact in the Catawba River basin during the FY 02-03 (Table 5-3).

Compensatory Mitigation

The purpose of compensatory mitigation is to replace wetland and stream functions that are lost through permitted impacts to stream and wetlands.

DWQ issued sixty-three 401 Water Quality Certifications during FY 02-03 that required wetland or stream mitigation. Of those, 53 certifications were satisfied through payment to the NCWRP. Compensatory mitigation requirements for three of the certifications were satisfied through payment to private mitigation banks. The applicants conducted mitigation for 17 of the certifications. Some 401 certification requirements had mitigation satisfied through a combination of NCWRP, private mitigation banks and the applicant.

Table 5-2 Losses and Gains for North Carolina Streams During FY 2002 - 2003

STREAMS

Watauga	244	210	454	0	-454
White Oak	420	3,811	4,231	3,210	-421
Yadkin-Pee Dee	6,856	22,164	29,020	22,807	-6,213
TOTALS:	41,409	150,299	191,708	127,444	-63,664

Wetlands

During FY 02-03, 351.7 acres of wetland restoration and creation was required as compensatory mitigation through the issuance of 401 Water Quality Certifications (Table 5-1). The statewide compensatory mitigation requirements for wetlands exceeded authorized impacts by 54.3 acres. Twenty two percent (65.7 acres) of this total wetland impact is attributed to projects that impact less than one acre of wetland and, therefore, do not require compensatory mitigation as a condition of the 401 Water Quality Certification.

Streams

The compensatory mitigation requirements of the 401 Water Quality Certifications issued during FY 02-03 totaled 127,444 linear feet of stream (Table 5-2). The authorized stream impacts exceeded the compensatory mitigation requirements for stream restoration in all but one river basin. The authorized impacts statewide exceeded the compensatory mitigation requirements by 63,664 feet. This substantial difference between permitted stream impacts and compensatory mitigation requirements is attributable to two factors. First, stream impacts must exceed the minimum threshold of 150 linear feet before compensatory mitigation is required. Second, mitigation is only required for impacts to perennial streams. No mitigation was required for the loss of intermittent streams which are included in the total impacts.

The purpose of compensatory mitigation is to replace wetland and stream functions that are lost through permitted impacts to stream and wetlands.

Non-Regulatory Gains

In addition to restoration projects associated with compensatory mitigation requirements, numerous state, federal and local government agencies as well as non-profit organizations are involved in restoration activities. In order to determine the magnitude of these efforts and to provide a mechanism to share information on restoration efforts, the NCWRP conducted a survey to collect information concerning the amount of wetlands and streams that were restored, created, enhanced and preserved during the FY 02-03 (Appendix C, Table C-1). Based on the results of this survey, 35 acres of wetland restoration and 1,800 linear feet of stream restoration were completed during the FY 02-03. A listing of these projects, the organizations that received the survey and a copy of the survey are provided in Appendix C.

Table 5-3 Losses and Gains for North Carolina Buffers During FY 2002 - 2003

BUFFERS						
Basin	Impacts < 1 ac	Impacts > 1 ac	Total Impacts	Mitigation	Gain or loss	
Catawba	0.02	0	0.02	0	-0.02	
Neuse	12.28	41.9	54.18	70.71	16.53	(+)
Tar-Pamlico	2.27	0	2.27	0.22	-2.05	
TOTALS:	14.57	41.9	56.47	70.93	14.46	(+)

The NCWRP is committed to tracking stream and wetland restoration efforts that are conducted outside of regulatory requirements. The data for wetland and stream restoration presented in this section should be evaluated with the following caveat: The distinction between restoration and enhancement is difficult to discern. Projects that are categorized by survey respondents as restoration projects may actually be enhancement projects.

The NCWRP makes every effort to notify appropriate organizations about the restoration project survey; however, it is likely that some restoration projects completed during FY 02-03 are not recorded in the NCWRP database. The NCWRP is continuing to improve methods of data collection to increase the accuracy this information.

Net Gains/Losses of Wetlands and Streams Including Regulatory and Non-Regulatory Gains in Wetlands and Streams

As depicted in Tables 5-4 through 5-6, when regulatory losses, compensatory mitigation requirements and non-mitigation projects are combined, there is a net gain of 61.5 acres of wetlands and a net loss of 61,864 linear feet of streams for the state during FY 02-03. Additional wetland, riparian and buffer preservation efforts were also reported (Appendix C, Table C-1). Preservation of 676 acres of wetlands, 41,801 of riparian buffer and 69,750 linear feet of streams were reported.

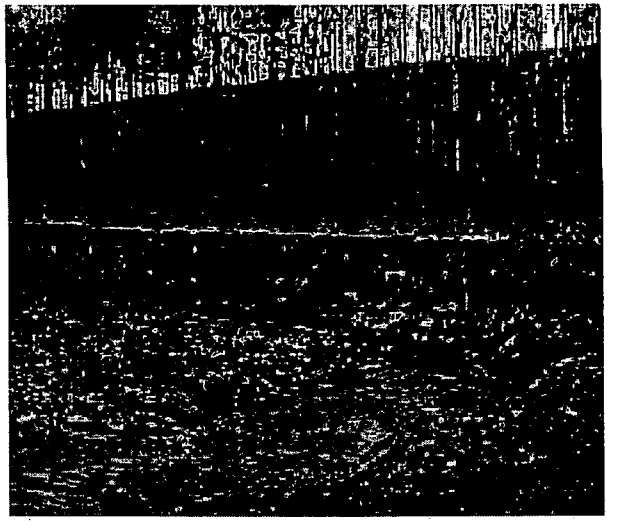
Appendix A – The N.C. Wetlands Restoration Program 2003 Annual Report to the U.S. Army Corps of Engineers

As required by paragraph VI of the Memorandum of Understanding (MOU) between the U.S. Army Corps of Engineers Wilmington District (COE)and NCWRP, a report documenting NCWRP's activities related to the MOU has been prepared and is submitted to the COE for review.

The majority of the information concerning the activities of the NCWRP is documented in the main body and appendices of this report that has been prepared for the Environmental Review Commission of the N.C. General Assembly as required by the enabling legislation for the NCWRP. The 2003 Annual Report, including this appendix, documents all activities of the NCWRP during FY 02-03 (July 1, 2002, through June 30, 2003). This appendix will address the specific reporting requirements found in Paragraphs V and VI of the MOU.

Memorandum of Understanding: Reporting Requirements

As specified in paragraphs V and VI of the MOU, the following information is presented in this report: the administrative costs associated with the MOU; a summary of monitoring results of projects that have been implemented; an accounting of the amount of restoration, creation, enhancement or preservation that has been conducted in each river basin by catalog unit; an accounting of the acres of mitigation required by Section 404 permits in each river basin by catalog unit; documentation concerning the implementation of projects in accordance with the time frame specified in the MOU; and an accounting of the funds that have been paid into the Wetlands Restoration Fund to satisfy the compensatory mitigation requirements of Section 404 permits.



Little Bagaboo Creek

Administrative Costs Associated with Implementation of the MOU

The salaries, travel and other operating expenses of eight positions are funded through the Compensatory Mitigation Fund (Account 2981). The cost of these positions during FY 02-03 was $487,056, the equivalent of 6.7 percent of the payments to Account 2981, an increase of 4 percent from last year. This is related to changes in both the administration costs and payments. Support for four NCWRP positions were permanently shifted from the operating budget to the receipt-supported Trust Fund during state government's budget crisis. Payments to the Wetlands Restoration Trust Funds were 57 percent less than last year. Administrative costs are incorporated within the fee structure and will not reduce the funding available for compensatory mitigation projects. Less than 4.3 percent of the expenditures were related to these administrative costs.

Summary of Monitoring Results of Projects

As required by Paragraph IV of the MOU, monitoring reports and as-built plans for each project will be submitted to the COE upon completion of each project. In addition, the appropriate COE Regulatory Field Office is notified during the planning and design phase of each project to provide an opportunity for input during the design phase of the project.

The NCWRP has constructed 21 projects and is monitoring these projects in accordance with the

MOU (Table A-1). The monitoring reports contain hydrological, fluvial geomorphological and vegetative monitoring data as appropriate for each project as well as project specific data necessary to ensure success of the restoration project. The first monitoring report for each constructed project is submitted to NCWRP during the fall after the first full growing season after the initial planting of vegetation. Monitoring continues for at least five full growing seasons after planting or until after all success criteria have been met. The full monitoring reports for all projects are submitted to the COE by January 1 of each year and are available for review at the NCWRP office located at 320 West Jones Street, Raleigh, North Carolina.

The second year of monitoring was complete for three projects (YD-101-WL-S-SM, Stone Mountain; CT-101-AX-S-PD, Payne Dairy; and WO-001-ON-W-SC1, Sturgeon City) during FY 02-03. Three projects completed the first year of monitoring during FY 02-03 (NU-203-WS-H-HSC, Hominy Swamp; CF-0020GU-S-PP, Price Park; and NW-001-AG-S-BC, Brush Creek). Following is a summary of the results of these reports. Eleven additional projects will complete the first year of monitoring during FY 03-04 (Table A-1).

Monitoring of Stream Restoration Projects

The monitoring of stream restoration projects involves the measurement of fluvial geomorphologic and vegetative parameters. Fluvial geomorphologic parameters include the measurement of channel dimension (cross-sections), pattern (sinuosity) and profile (channel slope). In addition, channel substrate is measured by performing pebble counts at identified pool and riffle cross-sections. Vegetative monitoring focuses on the survival, growth and diversity of vegetation within the riparian buffer of stream restoration projects.

Stream Restoration Success Criteria

The success criteria for stream restoration projects are based on the stability of the fluvial geomorphological parameters. Channel stability is primarily based on the measurement of dimension and slope. The success criteria has been met when there is no significant difference between the measurements for dimension and slope in the restored channel and the range for these parameters for the reference stream. A significant change is defined as a value that falls outside the specified range in the morphological table for the reference stream type.

Vegetative monitoring focuses on the survival, growth and diversity of planted species in the riparian area (30-50 feet on both sides of the stream). The vegetative success criterion is met by documenting the survival and growth of at least 320 trees per acre of the species selected for each site. In addition, the species composition of the riparian buffer must meet the species diversity criteria established for each project based on site-specific conditions.

Hominy Swamp Creek

Monitoring of Wetland Restoration Projects

The monitoring of wetland restoration/ enhancement projects involves the measurement of the hydrological and vegetative parameters. Hydrologic monitoring includes the measurement of groundwater hydrology, i.e., the depth from the surface to the groundwater table throughout the year. Vegetative monitoring focuses on the survival, growth and diversity of vegetation within the riparian buffer of stream restoration projects.

Project Type: S -- Stream; W -- Wetland; B -- Riparian Buffer

Wetland Restoration/Enhancement Success Criteria

Hydrological restoration is achieved when the restored site meets the hydrological success criteria based on site-specific conditions associated with landscape position and soil types. At a minimum and as the primary hydrological success criterion, monitoring must document that the groundwater table is within 12 inches of the ground surface from 5 to 12 percent of the growing season. As a second hydrological success criterion, the NCWRP monitors reference wetlands that are similar in type and landscape position. Data collected from reference sites are compared to similar information related to the restoration site. Success for this hydrological criterion is achieved when the hydroperiod of the restored site is within plus or minus 10 percent of the hydroperiod of the reference site.

Vegetative monitoring focuses on the survival, growth and diversity of planted species within the restored/enhanced wetland. The vegetative success criterion is met by documenting the survival and growth of at least 320 trees per acre of the species selected for each site. In addition, the species composition of the restored/enhanced wetland must meet the species diversity criteria established for each project based on site-specific conditions.

Summary of Monitoring Results

YD-101-WL-S-SM - Stone Mountain (Second Year Report)

A stream restoration project consisting of 7,000 linear feet of restoration and 2,590 of enhancement was performed on the East Prong of the Roaring River in Stone Mountain State Park in 2000. The primary goals of this project were to improve water quality and habitat by returning the river channel to a stable pattern, dimension and profile.

Fluvial Geomorphology

Stream cross-sections (dimension) exhibited little to no change from years 2000 to 2002. Minor changes in pool dimension (e.g., pool deepening and riffle dimensions or some instance of channel narrowing) indicate stability within the channel. Longitudinal profile surveys confirmed some pool deepening, little to no change in riffles slopes and proper functioning of grade control structures. The average channel slope of the project is very similar to the conditions following construction in the year 2000.

Stone Mountain

Vegetation

The average density of surviving planted trees is 840 trees per acre. With the exception of one location, all the monitoring plots have at least a density of 320 surviving trees per acre. Natural regeneration of several desirable species (e.g., sycamore, tulip poplar and river birch) was exhibited in monitoring plots and throughout the site. The diversity of species within each plot is within the range established for this project.

Remedial Actions

A large log cross vane was repaired in Reach 2 in the year 2001. In November 2002, two log cross vanes in Reach 2 and 4 were replaced with rock cross vanes.

To ensure adequate diversity and continued survival of a minimum of 320 stems per acre, additional planting (live stakes and bare root seedlings) was performed during winter 2002-03. While the monitoring reports maintain the vegetative success criteria has been met, NCWRP staff have walked the site with North Carolina State University (NCSU) plant

specialists and determined that more remedial action is warranted. Several large spaces in the riparian area lack the appropriate seedling density.

Deer browse continues to be a major problem. The NCWRP and NCSU staff determined that the first phase of remedial activity will begin with planting larger trees close to the stream bank for the winter of 2003-04. Phase II will include additional plantings of larger trees in the outer riparian area. The necessity to phase the planting is related to the availability of commercially grown trees that meet the projects specifications for height and root-collar diameter.

CT-101-AX-S-PD - Payne Dairy (Second Year Report)

A stream restoration project was performed on a 7,000 linear foot reach of Jumping Run Creek in Alexander County. Priority I restoration was performed on 5,180 feet of stream channel. The remainder of the project consisted of 470 linear feet of Enhancement I and 1,350 linear feet of Enhancement II. The entire 7,000 linear foot reach was fenced to remove cattle from the stream on an active dairy farm. The primary goals of this project were to improve water quality and habitat through the restoration of a stable channel and restore the vegetation in the adjacent riparian buffer.

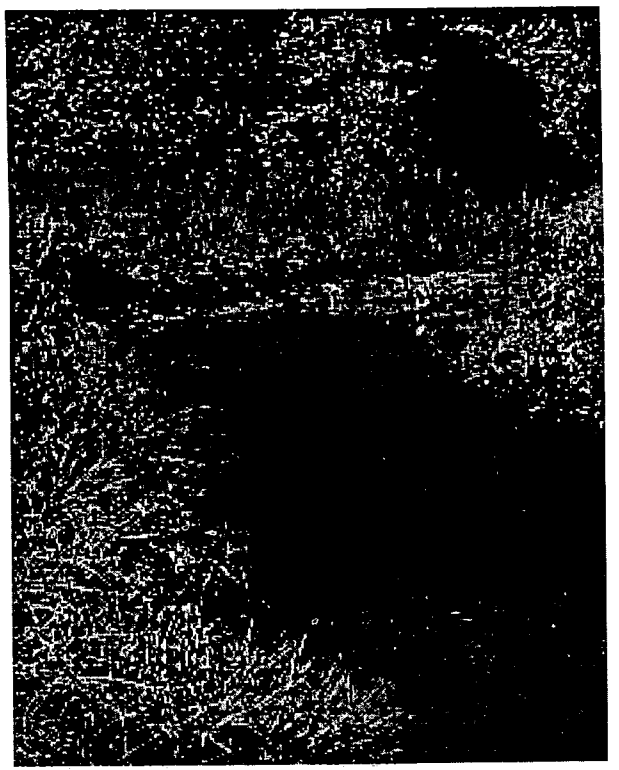
Fluvial Geomorphology

The second year of monitoring shows stable channel dimensions and profiles that match the conditions of the post-construction and first year topographical surveys. The majority of rock vanes were functioning properly with the exception of several structures that experienced some damage from past storm events. At these locations, the channel profile has adjusted resulting in localized degradation, i.e., head cutting. The majority of structures that experienced damage are located in the upper portions of the project where the average channel slope is highest. Lower sections of the project are not experiencing changes in dimension and profile.

The second year's topographical survey of the restored stream channel shows the horizontal alignment to be stable with little indication of bank erosion and no appearance of bank failures or shoot cut-offs.

Vegetation

The average density (i.e., survival) of the planted trees in the riparian buffer was less than 320 stems per acre; therefore, the success criteria for restoring vegetation was not met. The survival of live stakes within the bankfull channel exceeded the requirement of 320 stems per acre. In addition, the herbaceous vegetation on the floodplain and the streambanks provides 100 percent cover resulting in stabilization of the soil on the floodplain and the streambanks.



Payne Dairy

Remedial Actions

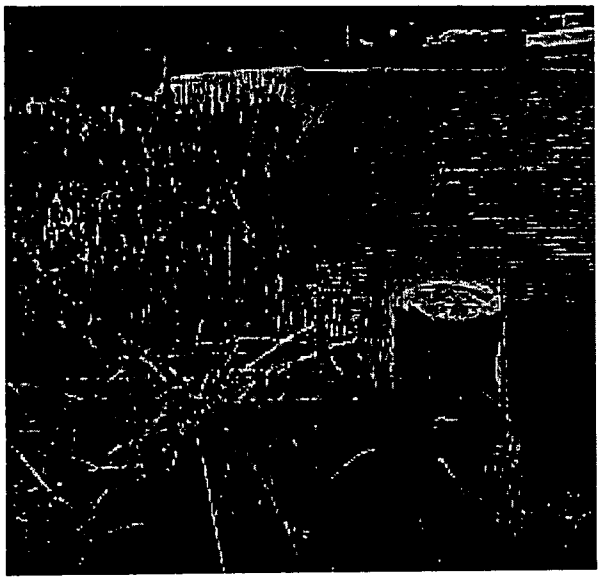
Damaged grade control structures will be repaired. The riparian buffer areas were replanted in the spring of 2002 but have yet to meet the success criteria for tree species density. Aggressive management of competitive and invasive species (e.g., *Festuca* sp. and *Ligustrum* sp.) will be undertaken to improve the survival and growth of planted species. Additional plantings are scheduled for late 2003.

WO-001-ON-W-SC1 - Sturgeon City

(Second Year Report)
Three acres of brackish coastal marsh and tidal creek were restored at the site of an abandoned wastewater treatment plant on Wilson Bay in Jacksonville, North Carolina. This project involved the removal of fill and debris that had been used to fill the marsh. The area was graded to the elevation of adjacent marshes and planted with giant cordgrass (*Spartina cynosuroides*) and other species. The goal of the project was to stabilize the shoreline with native vegetation and to improve water quality and habitat through the restoration of the marsh. This project is just one of the actions taken to improve the water quality of Wilson Bay and demonstrates how compensatory mitigation projects can be incorporated into watershed scale projects.

Vegetation and Hydrology
The hydrological restoration of this project is dependent on the constructed topography of the site which was based on the elevations of surrounding and adjacent marsh areas. As such, the survival of the reestablished marsh plant communities, which are sensitive to minor differences in hydroperiod, will be used as a proxy for hydrological restoration. All monitoring plots for vegetation exhibit high survival of planted species and exceed the success criterion of 25 percent cover. The species composition within the planted marsh community has not changed from the composition reported by the post-construction survey or the first year's monitoring report.

Remedial Actions
Invasive herbaceous plants (e.g., *Digitaria* sp.) observed in some plots will continue to be monitored with actions taken as necessary to ensure that these species do not impede the growth of desired species.



Sturgeon City

NU-203-WS-H-HSC – Hominy Swamp (First Year Report)
In the year 2001, 2,232 linear feet of stream restoration was performed in Wilson City Recreational Park in Wilson, North Carolina. The project's objectives were to stabilize severe stream bank erosion, minimize channel migration and improve the stream's aquatic habitat. A Priority 1 stream restoration methodology was implemented and a riparian plant community was planted in a 50-foot wide area leading away from both sides of the stream.

Fluvial Geomorphology
A comparison of the as-built and monitored conditions of June 2002 indicates that the stream geometry is consistent with the original design parameters, such as riffle cross-sectional area, width to depth ratios and average water surface slope.

All rock and log cross vanes appeared to have little damage and are functioning as designed. Where bank erosion has occurred, it has been minimal and associated with isolated areas that experience pedestrian traffic within the bankfull channel. The erosion is likely exacerbated by trampling of planted species, especially live stakes that would lend to bank stability.

Vegetation
Results from the monitoring of riparian vegetation after one full growing season show that survival of planted species is poor and does

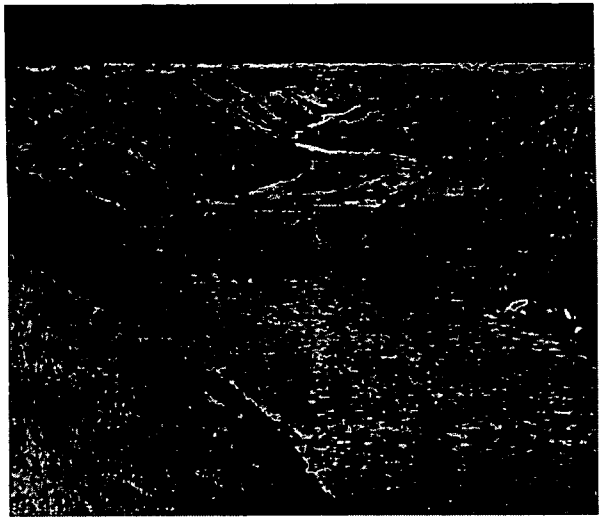
not meet the success criteria. Bare root seedling mortality after the initial planting was directly attributable to over 200 plants being pulled and left on the ground by park visitors. In addition, maintenance staff mowed many of the trees that were left; only the live stakes on the stream bank survived the first planting.

Remedial Actions
Riparian areas that exhibited poor survival were re-planted in 2002. Staff have met with park maintenance and emphasized the easement boundary. Mowings inside the easement area have halted and riparian boundary markers have since been installed.

CF-0020GU-S-PP, Price Park (First Year Report)

In the year 2001, approximately 1,775 feet of Priority 1 stream restoration was performed on an unnamed tributary to Horsepen Creek in Greensboro, North Carolina. The stream was previously a 1,400-foot long channel that had been straightened and widened in the 1930s to convey floodwater. A riparian plant community was planted in the winter of 2002.

Fluvial Geomorphology
The site is meeting the success criteria for maintaining a stable geomorphology. The stream's longitudinal profile that was surveyed during the first year of monitoring matches the profile surveyed shortly after construction and is maintaining the average channel slope set forth



Brush Creek

in the project's design parameters. There was a slight deepening of pool features that is considered a natural adjustment. The location and elevation of rock structures are nearly identical to the as-built conditions which supports the visual assessment that the structures are stable and functioning properly. Surveys of various cross-sections of the channel did not indicate a significant change in channel dimension. The pattern of the stream is unchanged from the as-built condition.

Vegetation
The survival of the planted riparian vegetation for the first year of monitoring was poor and does not currently meet the density needed to meet the success criteria for establishing vegetation. The high mortality of the bare root seedlings was due to the extreme drought conditions when the seedlings were planted and throughout the growing season for the first year.

Remedial Actions
The restoration site will be replanted in the winter of 2003-2004 with appropriate site preparation and maintenance.

NW-001-AG-S-BC, Brush Creek (First Year Report)

The Brush Creek stream restoration project was constructed in 2001. The project consists of approximately 2,300 feet of enhancement and stabilization on Brush Creek and approximately 950 feet of restoration on Little Pine Creek, a tributary to Brush Creek. Brush Creek and Little Pine Creek were previously exhibiting severe bank erosion and failure as well as a subsequent degradation of aquatic habitat. Both streams are classified for the protection of trout propagation and survival.

Fluvial Geomorphology
Surveys of cross-sections on both streams show that their dimensions have not changed significantly compared to the as-built dimensions. There is some visual evidence of channel adjustments in some areas, such as instances of localized bank erosion on Little Pine Creek. These areas can be addressed through additional toe protection and contouring of stream banks.

The survey of stream profile for the first year matches that of the restored conditions. With the exception of a local area of bank erosion, the surveys of the streams' dimension and profile match the conditions of the site shortly after construction.

Vegetation
A survey of the density of plantes reports that seedling survival was below the success criteria of 320 stems per acre. The herbaceous vegetation on both the streambank (and toe) and floodplain provides 100 percent coverage to stabilize the soil.

Remedial Actions
The areas of bank erosion on Little Pine Creek will be repaired in the year 2003. A supplementary planting plan is being developed, and the site will be replanted in the winter of 2003-2004.

Accounting of the Amount of Restoration, Creation, Enhancement or Preservation Conducted in Each River Basin by Catalog Unit

The NCWRP currently has 67 projects that meet the definition of "instituted" and will be used to meet the compensatory mitigation requirements of Section 404 permits (Table 1-1). These 67 projects will collectively restore, enhance and preserve approximately 539.9 acres of wetlands, 219,112 linear feet of stream channel and 335 acres of riparian buffer. As defined in the MOU, "instituted" means that a site has been identified, the property has been acquired and a contractor has been assigned to design the project. An additional 26 projects in the acquisition phase will result in the restoration, enhancement or preservation of 268 acres of wetlands, 85,950 linear feet of stream and 186.75 acres of riparian buffer (Table 1-2).

Instituted – A site has been identified, the property has been acquired and a contractor has been assigned to design the project

Accounting of the Compensatory Mitigation Required by Section 404 Permits Assumed by NCWRP in Each River Basin by Catalog Unit

During FY 02-03, the NCWRP assumed the compensatory mitigation requirements of 57 Section 404 permits. The compensatory mitigation requirements of these permits require the restoration of 16,646 linear feet of stream channel and 33.3008 acres of wetlands (Table A-2). Payments to fund mitigation projects associated with these impacts totaled $3,228,515 (Table A-3).

Since the effective date of the MOU (Nov. 4, 1998) the NCWRP has assumed the compensatory mitigation requirements of 174 Section 404 permits. The cumulative compensatory requirements of these permits require the restoration of 201,308 linear feet of stream channel and 236.732 acres of wetlands. The impacts accepted are distributed among 11 river basins and 23 catalog units (Table A-4).

Documentation Concerning the Implementation of Projects in Accordance with the Timeframe Specified in the MOU

As stipulated in paragraph IV of the MOU, the NCWRP has a specified amount of time from the date a payment for compensatory mitigation is received to implement projects that satisfy the compensatory mitigation requirement. The long-term goal of the NCWRP is to identify and implement projects that are incorporated into watershed restoration strategies in advance of permitted impacts. Although significant progress has been made in achieving this goal, the current emphasis of the NCWRP is compliance with the timeframes established by the MOU. This section will examine the progress NCWRP has made in meeting the compensatory mitigation requirements of Section 404 permits from the initiation of the MOU through the end of FY 02-03.

Continued from page 44

Since its inception, the NCWRP has accepted 238,005 linear feet of stream and 304.47 acres of wetland mitigation (401 and 404) in North Carolina. The NCWRP has restoration projects which will restore 304.9 acres of wetlands and 219,112 linear feet of stream. A summary of statewide wetland and stream mitigation status can be found in Section 2.

In accordance with the schedule established by the MOU, there were 174 Section 404 permits with compensatory mitigation requirements due by the end of FY 02-03 (Table A-4). The mitigation requirements of 89 percent of these permits were met by projects that were instituted by the end of FY 02-03. The mitigation for 78 percent of the permits was provided within the timeframe established in the MOU. The mitigation requirements met for FY 02-03 fell 3 percent over the previous fiscal year. The permits that met the timeframe established in the MOU fell 6 percent. The primary factor for the slight decrease in compliance was directly related to the amount of wetland and stream mitigation that came due last fiscal year. Of the total amount of wetland and stream mitigation due cumulatively for the program, 72 percent of the total stream linear footage and 67 percent of the total wetland acreage came due in FY 02-03.

Horsepen Creek Tributary, Price Park

The NCWRP has assumed the responsibility of Section 404 permits with compensatory mitigation requirements totaling 236.732 acres of wetlands and 201,308 linear feet of stream channel (Table A-4). The NCWRP has instituted projects that will result in the restoration, enhancement or preservation of 539.9 acres of wetlands and 219,112 linear feet of stream channel.

Although the total amount of restoration instituted by the NCWRP exceeds the total amount of required mitigation on a statewide basis, there are mitigation obligations that have not been met. Specifically, at the end of FY 02-03, there were 20 permits for which the mitigation requirements were not met. A number of actions have been initiated to address these outstanding requirements, including the allocation of additional staff resources to the watersheds of concern, the development of Local Watershed Plans in these areas to assist in the identification of appropriate projects and the issuance of Requests for Proposals for wetland and stream restoration.

Accounting of the Funds Paid into the Wetlands Restoration Fund to Satisfy the Compensatory Mitigation Requirements of Section 404 permits

As required by the MOU, the NCWRP has established a separate account – 2981: Compensatory Mitigation within the DENR Wetlands Trust Fund – as a repository for all payments made to the NCWRP to satisfy Section 404 compensatory mitigation requirements. As reflected in Section 3 of the 2001 NCWRP Annual Report, Compensatory Mitigation Account 2981 is a repository for payments that satisfy both Section 404 permit and 401 Water Quality Certification compensatory mitigation requirements. During FY 02-03, payments to Account 2981 to satisfy the compensatory mitigation requirements of Section 404 permits totaled $3,228,515. These payments fulfill the compensatory mitigation requirements of 57 permits (Table A-2 and A-3). Since the effective date of the MOU, Nov. 4, 1998, 165 payments associated with 230 Section 404 permits have been accepted totaling $30,774,985. These were made to Account 2981 to satisfy the compensatory mitigation requirements of Section 404 permits.

Section 5 of this report explains the use of the funds deposited into Account 2981 during FY 02-03.

Additional Actions Taken To Implement the Memorandum of Understanding

Development of Planting Specifications

The NCWRP developed planting specifications to improve the survivability of riparian plantings during FY 02-03. These new specifications will be used for all plantings beginning December 2003.

The NCWRP staff focused on several areas for improving past successes. First, the new specifications require that the construction contractor provide a qualified supervisor with planting experience. The supervisor must have at least one of several listed certifications or registrations (for example, registered forester or registered landscape contractor). Second, the plants themselves must meet minimum requirements. For example, bareroot seedlings must have four first-order lateral roots that exceed one millimeter in diameter. In addition, hardwood bareroot seedlings must have a minimum root collar diameter of 3/8 inch. These characteristics will ensure that larger, healthier specimens will be planted, and those not meeting the specifications will be culled. Finally, the specifications also cover the planting techniques.

Table A-3 Section 404 Compensatory Mitigation Payments

404 Permit Number	Payment Date	Stream (linear feet)	Non-Riparian Wetland Acres	Riparian Wetland Acres	Payment Amount
199402926	7/8/2002			5.93	$ 144,000
199700175	10/14/2002	582	2.52	2.26	$ 177,750
199801874	5/7/2003			1.6	$ 38,400

200120271, 200221123	2/27/2003	0		0.88	$ 44,750
200120974, 200220453	6/27/2002	302			$ 37,750
200220894, 200220895	7/26/2002		0.8		$ 12,000
200221320, 200221321, 200221322	12/9/2002	574			$ 35,875
200230878, 200230879	12/31/2002	255			$ 31,875
200231309, 200230752	1/13/2003	470		1.72	$ 100,750
SUMs STREAM, WETLANDS		8,632	0.95	7.50	$ 1,451,400

The planting techniques cover storage of seedlings, transport, handling and actual planting. The new specifications require all hardwood seedlings be planted with a shovel or an auger to ensure the proper depth and size of hole. Moreover, payment will be based on the percentage of seedlings planted correctly. NCWRP requires all designers to include these new planting specifications in bid documents.

Advisory Team Activities

The MOU between DENR and the COE (see Appendix B, 1998 Annual Report) requires the NCWRP to convene an Advisory Team to review the progress of the NCWRP in meeting compensatory mitigation requirements of Section 404 permits.

The NCWRP held four Advisory Team meetings during FY 02-03. The first meeting was held in Raleigh on Aug. 14, 2002, and the main topics were the Endangered Species process in NCWRP projects and the introduction of dam removals as mitigation options. The second meeting was held in Raleigh on Oct. 16, 2002, and the main topics were compliance with the MOU, Endangered Species and urban stream restoration issues. The third meeting was held in Charlotte on Jan. 16, 2003. The primary agenda items were urban stream restoration and stream monitoring issues. The group also went on-site to several potential projects to utilize the new COE quality of stream rating sheet. The fourth meeting was held in Asheville on April 23, 2003.

The primary topic was the introduction of the new planting specifications and monitoring protocol offered by NCWRP. In addition, bankfull verification and urban stream issues were discussed.

Quarterly Progress Reports

The NCWRP acknowledges the need to provide information to the COE and other interested parties concerning the progress it has made in meeting assumed compensatory mitigation requirements of Section 404 projects. Although the Annual Report meets the reporting requirements of the Memorandum of Understanding, the NCWRP started providing quarterly reports to COE in January 2003.

Appendix B — The N.C. Wetlands Restoration Program 2003 Annual Report to the N.C. Department of Transportation

Department of Environment and Natural Resources and Department of Transportation Memorandum of Understanding

On July 7, 1999, the N.C. Department of Environment and Natural Resources (DENR) and the N.C. Department of Transportation (NCDOT) signed a Memorandum of Understanding (MOU) designed to help address future NCDOT compensatory mitigation needs while protecting and improving water quality and habitat through the restoration of wetlands and streams as well as other activities that restore the biological, chemical and physical integrity of the waters of the state (refer to MOU copy within Appendix B of the 2000 WRP Annual Report). The agreement calls for the NCDOT to pay the DENR Wetlands Trust Fund $2.5 million annually for a period of seven years through 2006. These resources are allocated strictly for the development of Local Watershed Plans (LWP) within cataloging units (CU) where the NCDOT is anticipating compensatory mitigation needs. Pursuant to the 1999 MOU, the NCWRP completed or initiated a total of 15 planning efforts. (Refer to Table B-1 for a summary of related receipts and expenditures.)

Table B-1 Receipts and Expenditures Related to the Memorandum of Understanding with NCDOT

Local Watershed Plan	FY 00-01	FY 01-02	FY 02-03	Total

Total Expenditures	295,434	1,058,993	2,125,471	**3,479,898**
Total Receipts				10,000,000

NCWRP Progress in Development of Local Watershed Plans

Significant progress has been made with Local Watershed Planning initiatives this past fiscal year. From July 1, 2002, through June 30, 2003, the NCWRP completed two Local Watershed Planning efforts (New Hanover County in the Lower Cape Fear River basin and Mud Creek in the French Broad River basin) and continues Local Watershed Planning in 13 other local watersheds within nine CUs across the state. Six of these plans are scheduled for completion by December 2003 and three others are well under way with completion scheduled during 2004. A summary of the status of each Local Watershed Plan is provided in Table B-2.

During FY 01-02, an agreement between NCDOT and the NCWRP was developed describing the CU that each agency is responsible for mitigation within and when those responsibilities are effective. This agreement is included in the FY 01-02 NCWRP Annual Report in Appendix B, which is online at http://h2o.enr.state.nc.us/wrp/publications/2002_WRP_Annual_Report.htm. Since this agreement was established, the NCWRP has assumed responsibility of Cape Fear CU 03030007, effective January 2003, in addition to other CUs the NCWRP already had as its responsibility.

The implementation of LWPs across North Carolina to meet projected NCDOT mitigation needs has generated a number of important benefits at local, state and national levels. Highlights of these benefits include:

- At the ***local*** level, communities and local governments are working with the NCWRP to help identify watershed needs and feasible solutions to address them. Data generated during the planning process is being used to attain grant funds to implement solutions that cannot be implemented with mitigation funds. These efforts enhance and complement restoration projects implemented by the NCWRP to meet anticipated NCDOT mitigation needs. Additionally, the planning process is promoting education and awareness of water quality and habitat issues at a local scale. This is generating community support for project implementation as well as community involvement in watershed solutions.

- At the ***state*** level, Local Watershed Planning has laid the groundwork for the development of an innovative new program, the Ecosystem Enhancement Program (EEP), that will provide all of NCDOT's mitigation needs across the state beginning in January 2005. During this past fiscal year, significant progress on the development of this program was made. Part of this progress is directly related to work of the Watershed Needs Assessment Team which is charged with developing watershed assessment methods to be used by EEP. Their efforts have directly and significantly benefited from the NCWRP's Local Watershed Planning projects.

- ***Nationally***, the experiences generated through the Local Watershed Planning process are adding to a growing database of watershed planning and management examples. In late 2002, the federal government released a National Wetlands Mitigation Action Plan which is available online at: http://www.epa.gov/owow/wetlands/NWMAP122402signed.pdf that called for the integration of compensatory mitigation into a watershed context, among other things. North Carolina anticipates playing a critical role in satisfying this action item given the experience gained through Local Watershed Planning.

The implementation of Local Watershed Plans across North Carolina ... has generated a number of important benefits at local, state and national levels.

Status of Other Provisions Outlined in the Memorandum of Understanding

Beyond the development and implementation of LWPs, other provisions of the MOU include: development of a North Carolina Watershed Restoration Policy Committee, NCDOT involvement in LWP implementation and an NCDOT commitment to minimize impacts to certain types of wetland, stream and riparian habitats. The policy committee has not been established due to the implications of the development of EEP. The NCWRP continues to involve NCDOT in LWP activities.

Another component of the MOU is a commitment by the NCDOT to increase the avoidance and minimization of impacts to high quality resources. As part of the Permit Process Improvement Initiative involving NCDENR, NCDOT, COE and other regulatory agencies, the High Quality Resources Identification Team

Continued from page 60

has been initiated. This team will identify the types and locations of High Quality Resources throughout North Carolina. Their product is expected to be available by the end of 2003. In unison with the LWP approach, this team works to ensure that proactive planning to protect critical areas occurs in advance of road development impacts.

In accordance with the MOU, the NCWRP provides mitigation for NCDOT projects within 12 watersheds. During FY 02-03, nine projects were permitted with the NCWRP assuming the mitigation requirements (Table B-3). The NCWRP will assume responsibility for two additional watersheds during FY 03-04, Pasquotank CU 03010205 and Yadkin CU 03040105.

Appendix C — Statewide Restoration Survey

The N.C. Wetlands Restoration Program (NCWRP) mailed a survey to state, federal and local government agencies as well as non-profit organizations involved in restoration activities in an attempt to determine what restoration efforts were occurring across the state. The purpose of the survey was to collected details about restoration of wetlands and streams that were restored, created, enhanced or preserved during FY 02-03. Sixty organizations were canvassed and responses documented the restoration of 35 acres of wetlands and 1,800 linear feet of stream. The majority of activities reported by respondents were related to preservation.

This appendix lists the organizations who received the survey, a copy of the survey and the results.

Surveyed Organizations

The following organizations received the NCWRP survey on restoration efforts:

1) Wake County Soil and Water Conservation District
2) City of Raleigh Public Works
3) Wake County Cooperative Extension Service
4) The Conservation Fund
5) N.C. Division of Coastal Management
6) North Carolina State University, Water Quality Group
7) N.C. Division of Water Resources
8) The Nature Conservancy
9) N.C. Clean Water Management Trust Fund
10) N.C.Office of Conservation and Community Affairs
11) N.C. Division of Water Quality
12) The Conservation Trust forNorth Carolina
13) N.C.Division of Parks and Recreation
14) The North Carolina Coastal Federation
15) The Neuse River Foundation
16) The Pamlico-Tar River Foundation
17) North Carolina State University Water Resources Research Institute
18) Ducks Unlimited
19) N.C. Coastal Land Trust
20) N.C. Audubon Society
21) U.S. Fish and Wildlife Service
22) Piedmont Land Conservancy
23) U.S. Department of Agriculture
24) N.C. Division of Land Resources
25) Haw River Association
26) Eno River Association
27) RiverLink (French Broad)
28) Foothills Conservancy
29) N.C. Department of Forest Resources
30) Triangle Land Conservancy
31) Pigeon River Fund
32) Carolina Mountain Conservancy
33) Catawba Land Conservancy
34) Blue Ridge Rural Land Trust
35) Tar River Land Conservancy
36) High Country Conservancy
37) U.S. Environmental Protection Agency
38) The New River Foundation
39) The North Carolina Forestry Association
40) North Carolina Earthshare
41) Ellerbe Creek Watershed Association
42) Mecklenburg County Stormwater Services
43) Triangle Region Council of Governments
44) N.C. Fisheries Association
45) Triad Region Council of Governments
46) U.S. Army Corps of Engineers
47) Orange Water and Sewer Authority
48) N.C.Natural Resources and Conservation Service
49) N.C. Division of Soil and Water Conservation
50) Albemarle Resource Conservation and Development
51) N.C. State Cooperative Extension Service
52) N.C. Division of Marine Fisheries
53) N.C. Wildlife Resources Commission
54) N.C. League of Municipalities
55) North Carolina State University Forestry Extension Program
56) Lumber River Conservancy
57) Sandhills Area Land Trust
58) Carolina Power & Light
59) Duke Power
60) Progress Energy

North Carolina Wetland, Stream and Riparian Restoration, Creation, Enhancement and Preservation Survey for Fiscal Year 2002-2003

PROGRAM INFORMATION: *If your organization has more than one program conducting wetland or stream restoration, please fill out separate surveys for each program or make note of which projects are associated with different programs.*

1. **Program Title / Agency:**_____

2. **Program Representative and Contact Information:**

   Name_____

   Address_____

   Phone:_____ Fax:_____

   E-Mail:_____

PROJECT INFORMATION: *Please provide as much of the requested information as possible for each wetland/stream project.*

- Only include NON-COMPENSATORY MITIGATION projects initiated or completed between July 1, 2002 – June 30, 2003.
- List information for each project individually. You will need to make copies of the survey if you initiated or completed more than one project during the last fiscal year.
- Provide details on projects completed before fiscal year 2002 - 2003 by noting the appropriate fiscal year for each project on your survey.

1. **Project Name / Number:**_____
   (assigned by your program or organization)

2. **Purpose of the Project:** *general information about your project's purpose (i.e. to improve water quality, to reopen closed shellfish waters, improve fisheries and wildlife habitat, etc.).*

   _____

   _____

   _____

3. **Project Completion Date or Target Date of Completion:** *(Month/Year) Include the percentage of your project that was completed by June 30, 2003, if you provided a targeted project completion date.*

   Completion or Targeted Completion Date: _____

   % of Project Completed as of June 30, 2003: _____

4. **Project Funding Source(s) / Partners Involved:** *List any programs or granting entities that are funding your project and any other partners involved with your project.*

   _____

   _____

   _____

5. **Location Reference(s):** *The River basin, subbasin, county, 14-digit hydrologic unit – or whatever geographical unit your program uses for referencing projects.*

   River Basin:

____Broad	____Little Tennessee	____Savannah
____Cape Fear	____Lumber	____Tar-Pamlico
____Catawba	____Neuse	____Watauga
____Chowan	____New	____White Oak
____Hiwassee	____Roanoke	____Pasquotank
____French Broad	____Yadkin-Pee Dee	

   Subbasin (if known):

   Subbasin Number: _____

   USGS 14-Digit Hydrologic Unit: _____

   County:_____ Nearest Town:_____

6. **Type of legal instrument used to protect restored/protected project properties:** *If you are using conservation easements, please indicate the term length (i.e. 10, 15, 30 years or perpetuity).*

____Conservation Easement (number of years_____or permanent).

____Purchase Fee-Simple

____Contract (number of years_____)

7. **Project Activities:** *Review the definitions below, and then complete the table by placing a check next to the activities that apply to this project. Specify the number of acres / feet where appropriate.*

Wetland Restoration: Re-establish wetland hydrology and vegetation in an area where it previously existed.

Wetland Enhancement: Increase one or more of the functions of an existing wetland by manipulating vegetation or hydrology.

Wetland Creation: Establishing wetland hydrology, vegetation and soils in an area where wetlands did not exist in the recent past.

Stream Restoration: The process of converting an unstable, altered or degraded stream corridor, including adjacent riparian zone and floodprone areas to its natural or referenced, stable conditions considering recent and future watershed conditions. This process also includes restoring the geomorphic dimension, pattern, and profile as well as biological and chemical integrity, including transport of water and sediment produced by the stream's watershed in order to achieve dynamic equilibrium.

Stream Enhancement: Protecting and/or enhancing stream stability and functions by establishing vegetated buffers; increasing buffer width, and/or stabilizing streambanks using bioengineering techniques.

Wetlands and Stream Segment Preservation: Protecting wetlands and stream segments by purchasing, donating or conveying a conservation easement to an appropriate government or non-profit agency to manage.

Nonwetland Riparian Buffer Restoration: Establishing a vegetated buffer (minimum 25 ft. width) and maximizing sheet flow through buffer by receiving concentrated flow areas.

Nonwetland Riparian Buffer Enhancement: Increasing width of existing vegetated buffer and maximizing sheet flow through buffer by reducing concentrated flow amounts.

Nonwetland Riparian Buffer Preservation: Preserving existing forested buffers (minimum 25 ft. width).

Wetland

Please Check	Specify Acres
_____Restoration	_____Acres

Summary

The 1999 session of the General Assembly of North Carolina directed the North Carolina Radiation Protection Commission (Commission) to review and study the current and projected availability and adequacy of facilities for the management of low-level radioactive waste (LLRW) produced by North Carolina generators, and to formulate a recommended plan for complying with North Carolina's responsibilities under the Federal Low-Level Radioactive Waste Policy Act of 1980 and Low-Level Radioactive Waste Policy Amendments Act of 1985 (see Appendix B). The Commission was directed to report its findings and recommendations to the General Assembly on or before May 15, 2000. A "Plan for Low Level Radioactive Waste Management in North Carolina" was submitted by the Commission to the General Assembly on April 7, 2000. In its April 7, 2000 report, the Commission recommended that LLRW management in North Carolina be reviewed by the Commission every three years, or sooner if needed, with the results and recommendations reported to the General Assembly.

This report presents the results of the first review. The Commission concluded that the recommendations in its April 7, 2000 report remain valid. These recommendations are included in this report, and they are attached as Appendix A.

It was determined in this review that a disposal facility is currently available for all LLRW streams produced by North Carolina generators, except for certain mixed wastes. The volumes of these mixed wastes are small, and they can be safely stored on site. Hence, the Commission's conclusion remains that North Carolina does not need a central facility for storage or disposal of LLRW as long as North Carolina waste generators have access to existing out-of-state disposal and treatment facilities. The Commission recognizes that predicting the long-term future of LLRW management and problems is not possible, and the Commission recommends that LLRW management in North Carolina be reviewed by the Commission every three years, or sooner if needed, with the results and recommendations reported to the General Assembly.

The Commission emphasizes its recommendation that assistance by the Radiation Protection Section (RPS) of the Department of Environment and Natural Resources, in the form of information exchange, should be provided to all LLRW generators in North Carolina. It is the Commission's opinion that this technical assistance facilitates the safe management of LLRW in North Carolina, and that it helps to preclude the need for a central LLRW facility within the State.

Introduction

The 1999 session of the General Assembly of North Carolina directed the North Carolina Radiation Protection Commission (Commission) to review and study the current and projected availability and adequacy of facilities for the management of low-level radioactive waste (LLRW) produced by North Carolina generators and to formulate a recommended plan for complying with North Carolina's responsibilities under the Federal Low-Level Radioactive Waste Policy Act of 1980 and Low-Level Radioactive Waste Policy Amendments Act of 1985 (see Appendix B). The Commission was directed to report its findings and recommendations to the General Assembly on or before May 15, 2000. A "Plan for Low Level Radioactive Waste Management in North Carolina" was submitted by the Commission to the General Assembly on April 7, 2000. A summary of the findings and recommendations in the plan, as well as the process followed in developing the plan, is presented in the next section of this report. In its April 7, 2000 report, the Commission recommended that LLRW management in North Carolina be reviewed by the Commission every three years, or sooner if needed, with the results and recommendations reported to the General Assembly. This report presents the results of the first periodic review.

The Commission's Low-Level Radioactive Waste Management Committee (Committee) was assigned the task of reviewing the current status of LLRW management in North Carolina and for submitting a draft report of the results of the review to the Commission. The Committee met on March 20, 2002 to discuss the review process and a report outline. The Committee met again on May 22, 2002 to review the current status of LLRW management and to discuss findings and recommendations; on July 10, 2002 to review a draft report; and on January 29, 2003 to update the draft report and submit it to the Commission for approval at their February 2003 meeting. The Commission met on February 28, 2003 and approved the report for printing and submission to the North Carolina General Assembly.

The Committee and Commission solicited public comments at each of these meetings.

Plan for LLRW Management in North Carolina (April 7, 2000)

At its July 23, 1999 meeting, the Commission assigned to its Low-Level Radioactive Waste Management Committee (Committee) the task of reviewing and studying the current and projected availability and adequacy of facilities for the management of LLRW produced by North Carolina generators, and of formulating a recommended plan for LLRW management in North Carolina. The Committee was instructed to report back with a draft plan to the Commission at its February 25, 2000 meeting.

At its initial meeting in August 1999, the Committee developed a process for performing its assigned tasks that included extensive public involvement. The Committee established the goal of developing a LLRW management plan that would be supported by the public and by waste generators. Public meetings were held in September to obtain verbal comments on the management of North Carolina's LLRW, and written comments were also solicited. The Committee held a series of meetings, with active public participation, during the period of October through December 1999, to discuss comments received, define key issues, and work toward a consensus on recommendations for each issue.

The Committee met in January 2000, with public participation, to review and discuss its draft report. In February, the draft report was distributed to the full Commission and to the public for review and comment. Public meetings were held in February to discuss the draft report and to receive comments. The Committee met in March, again with public participation, to discuss and act on comments received regarding the draft report. The report was finalized in March and approved by the Commission on April 7, 2000. The Committee's process resulted in the development of a LLRW management plan for the State of North Carolina with broad support from the public and from waste generators, who actively participated in its development.

As a result of this process, the Commission concluded that the current Federal Low-Level Radioactive Waste Policy Act of 1980 and the Low-Level Radioactive Waste Policy Act Amendments of 1985 were not working. This conclusion was compatible with the findings of the U.S. General Accounting Office (GAO) in the 1999 study of the success of the compacting process advocated in these federal acts. Accordingly, the Commission recommended that North Carolina should advocate for repeal or revision of these federal acts in favor of opening the national disposal market for LLRW to private industry under the regulatory control of Agreement States and the U.S. Nuclear Regulatory Commission (NRC). This was one of the three options identified in the GAO report.

The Commission further concluded that North Carolina does not need a central facility for storage or disposal of LLRW as long as North Carolina waste generators have continued access to existing out-of-state disposal and treatment facilities. Since predicting the long-term future of LLRW management and problems is not possible, the Commission recommended that LLRW management in North Carolina be reviewed by the Commission every three years, or sooner if needed, with the results and recommendations reported to the General Assembly. The Commission noted that two North Carolina waste generators would eventually need access to a disposal facility for the higher concentration of radioactivity contained in their Class B and C waste. Two other generators were storing a small volume of Class A waste which was not acceptable for disposal at the existing facility in Utah. However, it was determined that these waste generators could safely store these wastes awaiting some future disposal option.

The Commission recommended that assistance by the then Division of Radiation Protection (DRP)[1], in the form of information exchange be provided to all LLRW generators in North Carolina. The Commission also recommended that coordination, education and assistance by DRP be provided to other government agencies. The Commission agreed that additional resources were needed by the DRP to support its ongoing efforts to assure that LLRW is managed safely.

The Commission identified several options for dealing with the generators' LLRW in the long term, including the possible siting of processing, treatment and disposal facilities in North Carolina. However, the Commission decided not to make a specific recommendation for the long-term because of the uncertain future of the national policy on LLRW and because, for the foreseeable future, North Carolina generators would be able to safely store waste for which there was no out-of-state disposal option. For the same reasons, the Commission recommended that the existing prohibition on licensing any LLRW facility that would accept LLRW from the public, or from another person for a fee [G.S. 104E-7 (b)], remain in effect until changes in the national policy on LLRW disposal or operational circumstances dictated differently. The Commission concluded that the current statutes and regulations were adequate to ensure public health and safety for the management of LLRW within North Carolina.

[1] DRP became RPS during a re-organization of the Department of Environment and Natural Resources in July 2002.

Current Status of LLRW Management

North Carolina LLRW generators have several options available for the management of their LLRW. Processing facilities throughout the United States are currently accepting LLRW and using a variety of management techniques for processing.

Chem Nuclear – Barnwell

Chem-Nuclear's Barnwell, South Carolina, waste management facility is the only commercial Low-Level Radioactive Waste (LLRW) disposal facility in America that has operated without regulatory interruption. The 235-acre facility occupies property owned by the State of South Carolina and leased to Chem-Nuclear Systems. The Barnwell Waste Management Facility operates under the authority of Radioactive Material License 097 issued by the South Carolina Department of Health and Environmental Control (DHEC). Since the disposal facility began operation in 1971, about 28 million cubic feet or 90% of the available disposal volume has been used. The Barnwell site accepts Class A, B and C wastes for disposal.

Under South Carolina law, the Barnwell facility will ramp-down the total annual volume received at the site through the six-fiscal-year period that ends June 30, 2008. After that, the facility will only receive waste from generators in South Carolina and the other two Atlantic Compact states. The maximum waste disposal volumes that Barnwell is allowed to receive are listed below:

160,000 cubic feet in fiscal year 2001	50,000 cubic feet in fiscal year 2005
80,000 cubic feet in fiscal year 2002	45,000 cubic feet in fiscal year 2006
70,000 cubic feet in fiscal year 2003	40,000 cubic feet in fiscal year 2007
60,000 cubic feet in fiscal year 2004	35,000 cubic feet in fiscal year 2008

The State of South Carolina would like to enter into agreements with interested generators to reserve specific volumes of waste each year through 2008. This will allow generators some stability in planning their disposal needs. It will provide the State of South Carolina with a better basis for projecting disposal costs and revenues. South Carolina would like to reserve a significant portion of the available volume each year beginning now through 2008 through agreements of this type. The remainder of the volume that is not reserved through such agreements and is not set aside for Atlantic Compact regional generators will be made available to generators without such agreements each year on a space-available basis.

Envirocare of Utah

The Envirocare facility in Clive, Utah is located in a remote arid climate naturally suited for disposal within the Tooele Hazardous Industry District. The site is more than 45 miles from the nearest population center, in an area of naturally poor-quality groundwater, over 20 miles from drinkable water, and it provides good conditions for containment due to approximately 7 inches annual precipitation, low-permeability clay soils, and a stable geology.

The Envirocare disposal facility can accept Class A waste and also uranium mill tailings for disposal. Envirocare can also accept some mixed waste with variable concentration limits.

In November 1999, Envirocare submitted a license application to the Utah Radiation Control Board to dispose of Class B and C LLRW. The Executive Secretary of the Utah Radiation Control Board issued a final decision in July 2001 to approve Envirocare's request for a license to accept and dispose of containerized Class B and C LLRW. Based on a review by the Utah Division of Radiation Control (DRC) and its contractor, URS Corporation, of Envirocare's application, supporting technical documents and public comments, it was determined that the proposed facility could be safely operated in accordance with state laws. The license was conditional on the approval of the Utah Legislature and Governor.

In July 2001, Envirocare determined that it would not seek legislative or gubernatorial approval to dispose of Class B and C LLRW at that time. This decision was likely influenced by public concerns about the proposal and by controversy over an unrelated proposal by the Goshute Tribe and Private Fuel Storage (PFS) to accept high-level spent fuel rods from nuclear power plants.

Status of North Carolina Generators

Currently, disposal is available for almost all LLRW produced by North Carolina generators at either the Barnwell site or the Envirocare facility. For the small amount of remaining LLRW, on-site storage is a safe alternative.

Commission Recommendations and Supporting Findings

Based on this review the Commission has concluded that the recommendations in its April 7, 2000 report remain valid. These recommendations are included in this report as Appendix A.

RPS has determined that a disposal option is currently available for all LLRW streams produced by North Carolina generators, except for certain mixed wastes. The volumes of these mixed wastes are small, and they can be safely stored on site. Hence, the Commission's conclusion remains that North Carolina does not need a central facility for storage or disposal of LLRW as long as North Carolina waste generators have access to existing out-of-state disposal and treatment facilities. The Commission recognizes that predicting the long-term future of LLRW management and problems is not possible, and the Commission recommends that LLRW management in North Carolina be reviewed by the Commission every three years, or sooner if needed, with the results and recommendations reported to the General Assembly.

The Commission emphasizes its recommendation that assistance by the Radiation Protection Section (RPS), in the form of information exchange, should be provided to all LLRW generators in North Carolina. It is the Commission's opinion that this technical assistance facilitates the safe management of LLRW in North Carolina, and that it helps to preclude the need for a central LLRW facility within the State.

Appendix A

April 7, 2000 Commission Recommendations and Supporting Findings

The Commission identified four key issues of concern for LLRW management in North Carolina. These issues were discussed at length at several Committee meetings, with extensive participation by both LLRW generators and the public. Recommendations and findings for each of these issues are provided in the remaining four subsections. The four issues are:

1. Failure of the LLRW Policy Act of 1980 and Amendments of 1985

Recommendation: The Commission recommends opening the national disposal market for LLRW to private industry under the regulatory control of North Carolina, the other Agreement States and the U.S. Nuclear Regulatory Commission. The Commission specifically recommends that the General Assembly be a strong voice through the North Carolina Congressional Delegation and the National Conference of State Legislatures in working for a change in national policy for the management of LLRW.

Findings: The Committee received comments from members of the general public and North Carolina LLRW generators concerning this issue. The consensus of the comments and the Committee's opinion was that the LLRW Policy Act has failed to provide a solution for the management of the nation's LLRW. Many different reasons were noted as to why the LLRW Policy Act failed: 1) Waste volumes have dramatically decreased since the inception of the LLRW Policy Act and the United States does not need 10 different disposal sites. 2) Extensive efforts of the State of North Carolina, the Southeast Compact and other compacts have been unsuccessful. 3) Better ways have been found to handle LLRW since the 1980s. Accordingly, the Committee concludes that the current Federal Low-Level Radioactive Waste Policy Act of 1980 and the Low-Level Radioactive Waste Policy Amendments Act of 1985 (LLRW Policy Act) are not working.

The Committee reviewed the GAO report dated September 17, 1999 entitled "Low-Level Radioactive Wastes: States Are Not Developing Disposal Facilities." This report outlines the obstacles states have encountered in their attempts to comply with the LLRW Policy Act. The GAO report states, "By the end of 1998, states, acting alone or in compacts, had collectively spent almost $600 million attempting to develop new disposal facilities. However, none of these efforts have been successful." In brief, the GAO reported three options for LLRW management: 1) Retain the present compact system and allow compacts and individual states to exercise control. 2) Abandon the compact approach in favor of opening the disposal market to private industry. 3) Abandon the compact approach and allow the DOE to provide sufficient disposal capacity for the commercial LLRW generated. The GAO report notes that the option of using an existing DOE facility would have to address the willingness – or unwillingness – of any state or states to serve as host for a disposal facility. The GAO report made no recommendation for a preferred option.

Both public comments and Committee discussions have reflected a desire that North Carolina maintain the ability to exercise regulatory oversight of LLRW for whatever option is recommended. The Commission does not support the present compact system and the continued spending of monies on a failed concept. The Commission agreed that the best option is for Congress to abandon the compact approach and open the disposal market to the private industry.

The Commission's recommendation is supported by the position statement of the national Health Physics Society, made up of specialists in radiation safety, which contains the conclusion that "the LLRW Policy Act should be amended or replaced to allow existing facilities and commercial development to provide access to existing and new waste disposal capacity." A similar view has also been expressed by one national LLRW industry executive.

2. Status of LLRW Management in North Carolina

Recommendation: The Commission recommends that North Carolina not establish a central facility for storage or disposal of LLRW at this time as long as North Carolina waste generators have continued access to the existing out-of-state disposal and treatment facilities. The Commission further recommends that LLRW management in North Carolina be reviewed every three years, or sooner if needed, with the results and recommendations reported to the General Assembly.

Findings: The Committee received comments from members of the general public and from generators concerning this issue. Most of these comments were that a central LLRW facility in North Carolina is not needed. Some comments from members of the public suggested that the LLRW for the entire State should be stored at nuclear power plant sites. In discussing the feasibility of utility storage for all of North Carolina's LLRW, a number of obstacles were noted:

1) The NRC licenses under which the utilities operate do not allow for the storage of LLRW from other generators;
2) The utilities are not prepared to handle all the different types of waste streams that are produced throughout North Carolina;
3) Several generators expressed opposition to utility storage because of the liability issue; and,
4) The utilities do not wish to get into the waste storage business.

Committee discussion turned to whether North Carolina needs a central LLRW facility. Most generators indicated that they were satisfied with the current disposal and treatment options available to them. The consensus of generators present at the Committee meetings was that a central LLRW facility is not needed, as long as they have access to the existing disposal and treatment facilities.

Three comments on the draft report, which was distributed for public review, stated that North Carolina should establish a LLRW disposal facility within the State. None of these comments was from a waste generator.

The DRP staff also conducted a survey of North Carolina generators to determine the current and projected availability and adequacy of facilities for the management of LLRW. North Carolina LLRW generators are managing their waste by a combination of processing and treatment options and disposal at an existing site in Utah. The results of this survey are included as Attachment D [in the April 7, 2000 Commission report]. After reviewing the results of this survey, the Committee concluded that North Carolina does not need a central LLRW facility at this time, if the generators continue to have access to existing disposal and treatment facilities.

Consideration was also given to the higher activity Class B and C waste that is primarily generated by the nuclear utilities. Currently, there is no disposal option available to North Carolina generators for Class B and C wastes. The nuclear utilities are currently storing their Class B and C waste at the nuclear power plants. Eventually, North Carolina LLRW generators will need access to a disposal facility for these wastes.

In summary, the Committee does not recommend that a disposal facility be established in the State at this time for the following reasons:

- There is no immediate need for a LLRW disposal facility in the State. As long as current out-of-state disposal and treatment facilities are available to North Carolina LLRW generators, LLRW generated in North Carolina can be safely managed. Other than Class B and C wastes, LLRW can be treated and disposed of at the currently available facilities. Class B and C wastes can be safely stored at the three nuclear power plant sites where they are generated.
- The current national LLRW policy is not working and the future policy is uncertain. It is the Committee's opinion that it is not prudent to spend additional money pursuing a LLRW disposal facility in North Carolina in view of the uncertain national policy and lack of current need for such a facility.
- The Committee recognizes that predicting the long-term future of LLRW management is not possible. Thus, the Committee recommends that LLRW management in North Carolina be reviewed by the Commission every three years, or sooner if the need arises, with results and recommendations reported to the General Assembly.

3. Need for Continued Assistance by DRP to North Carolina Generators in Managing LLRW

Recommendation: The Commission recommends that assistance be provided to both state and federally licensed generators to facilitate and strengthen LLRW management in North Carolina. This assistance should be in the form of information exchange with all LLRW generators, and coordination, education and assistance to other government agencies. The Commission further recommends that the DRP allocate sufficient staff resources to provide this assistance and expand its efforts to identify all options for commercial management and disposal of LLRW.

Findings: The Committee discussed the current assistance that the DRP is providing to North Carolina generators in managing LLRW. The DRP noted that many generators are still unsure about disposal options available to them. The Committee concluded that the assistance provided by DRP to waste generators on management options is an important factor in the ability to manage LLRW without a central LLRW facility.

The Committee discussed whether assistance should be provided to the federally licensed facilities or only to those generators that the DRP regulates. The federally licensed entities include nuclear power plants, nuclear fuel fabrication facilities, federal medical centers, federal research facilities and military installations. Comments were made by persons from federally licensed facilities that they would like to continue the ongoing relationship with the DRP.

The Committee concluded that there would be no confusion caused by the DRP offering assistance to a licensee because the assistance is provided through the administrative section of DRP that is not responsible for regulatory oversight of these facilities. Also, the DRP administrative section doesn't give technical direction, but rather facilitates a two-way information exchange between the DRP and generators throughout the State. This type of assistance creates a more proactive approach to the State's management of LLRW.

The Committee agreed that DRP staff should make on-site visits to processing, treatment and disposal facilities to become familiar with management options that are available to North Carolina generators. Such on-site visits would not be considered audits but efforts to obtain the latest

information on available waste management options in order to better educate North Carolina's generators.

The Committee discussed the need for more staff resources to provide assistance to the State's generators. The Committee agreed that this assistance should also encompass coordination, education and assistance to other government agencies with regard to LLRW. North Carolina is responsible for the management of its LLRW, and the State and waste generators need to work together to find the best management techniques available. The Committee concluded that additional staff resources to support this effort by the DRP are needed in its ongoing efforts to assure that LLRW is managed safely and that radiation exposures are kept as low as reasonably achievable. The DRP reported it would allocate sufficient staff resources to provide this assistance.

4. Adequacy of North Carolina LLRW Management Legislation and Regulations

Recommendation: The Commission recommends that the existing prohibition against licensing any LLRW facility which would accept LLRW from the public, or from another person for a fee [G.S. 104E-7 (b)], remain in effect until changes in the national policy on LLRW disposal or operational circumstances dictate differently.

Findings: The Committee considered the question of whether North Carolina's current statutes and regulations are adequate to ensure the safe management of LLRW by North Carolina waste generators. At the request of the Committee, the DRP reviewed the current Commission regulations with regard to health and safety. Based on the DRP's findings, the Committee concluded that the regulations are adequate to allow for the safe management of LLRW in North Carolina by State-licensed generators. The DRP review also noted that under Commission rules, the DRP could include special limiting conditions in specific licenses for circumstances that may arise in the future. The NRC regulates and controls the management of LLRW for federally licensed facilities under rules that are compatible with the Commission's rules.

There were lengthy Committee and public discussions concerning the possibility of a future LLRW facility within North Carolina. Session Law 1999-357 stipulates that the Department of Environment and Natural Resources shall not issue or consider any such license applications for the development of a LLRW facility prior to action by the General Assembly establishing a plan for future management of LLRW. G.S. 104-F currently stipulates that the state agency charged with siting, constructing and operating a LLRW facility is the North Carolina LLRW Management Authority. The Authority has been relieved of these responsibilities and is to complete its business by June 30, 2000 according to the enacted provisions of Session Law 1999-357.

As discussed more fully elsewhere in this report, the Committee has concluded that North Carolina does not need a central facility for storage or disposal of LLRW at this time, as long as North Carolina LLRW generators have continued access to the existing out-of-state disposal and treatment facilities. However, access to a disposal facility for LLRW Class B and C wastes will be needed eventually.

The Committee identified the following long-term options for LLRW management:

- No prohibition of any LLRW facility and allow private industry to operate under State regulation;
- Allow the State to develop a facility to be operated under contract by an organization not generating LLRW;

- Allow a consortium of generators to deal with their own waste;
- Prohibit disposal facilities within the State, but allow processing and treatment facilities;
- Prohibit any LLRW processing, treatment or disposal facility within the state; and
- Challenge the ban of North Carolina waste disposal at Barnwell, SC

It may be helpful in future legislation concerning LLRW facilities to create a distinction between disposal facilities and processing or treatment facilities. For example, disposal facilities could be prohibited, but processing and treatment facilities could be allowed. Consideration of this option would be important if North Carolina generators should, for any reason, lose access to existing processing and treatment facilities.

The Committee has no formal recommendations on which option would be the best for North Carolina in the long term. However, it does recommend that the existing prohibition against licensing any LLRW facility which would accept LLRW from the public, or from another person for a fee [G.S. 104E-7 (b)], remain in effect until changes in the national policy or operational circumstances dictate differently.

The Commission decided not to make a recommendation for the long-term because the national policy on LLRW disposal is uncertain and because North Carolina does not currently need a central LLRW facility.

Appendix B

1999 Session S.L. 1999-357

GENERAL ASSEMBLY OF NORTH CAROLINA
SESSION 1999

SESSION LAW 1999-357
SENATE BILL 247

AN ACT TO WITHDRAW NORTH CAROLINA FROM THE SOUTHEAST INTERSTATE LOW-LEVEL RADIOACTIVE WASTE MANAGEMENT COMPACT, TO LIMIT THE AUTHORITY OF THE LOW-LEVEL RADIOACTIVE WASTE MANAGEMENT AUTHORITY AND TO DIRECT THE RADIATION PROTECTION COMMISSION TO STUDY AND FORMULATE A PLAN FOR LOW-LEVEL RADIOACTIVE WASTE MANAGEMENT.

The General Assembly of North Carolina enacts:

Section 1. In accordance with the provisions of G.S. 104F-1, Article VII, Section (g) of the General Statutes, North Carolina hereby withdraws from membership as a party state in the Southeast Interstate Low-Level Radioactive Waste Management Compact.

Section 2. Chapter 104F of the General Statutes is repealed.

Section 3. Notwithstanding any provision of Chapter 104G of the General Statutes to the contrary, the sole function of the North Carolina Low-Level Radioactive Waste Management Authority shall be to take all necessary actions to complete the process of closure and restoration of the proposed Wake County low-level radioactive waste site, and to finalize all other responsibilities and business of the Authority relating to closure and restoration on or before June 30, 2000.

Section 4. Chapter 104G of the General Statutes is repealed effective July 1, 2000.

Section 5. The North Carolina Radiation Protection Commission is directed to review and study the current and projected availability and adequacy of facilities for the management of low-level radioactive waste produced by North Carolina generators, and to formulate a recommended plan for complying with North Carolina's responsibilities under the Low-Level Radioactive Waste Policy Act of 1980, Pub. L. No. 96-573, 94 Stat. 3347, and the Low-Level Radioactive Waste Policy Amendments Act of 1985, Pub. L. 99-240, 99 Stat. 1842, 42 U.S.C. 202 lb, et seq. The Commission shall report its findings and recommendations to the General Assembly on or before May 15, 2000. No license application for a low-level radioactive waste facility shall be issued or considered by the Department of Environment and Natural Resources prior to action by the General Assembly establishing a plan for future management of low-level radioactive waste.

Section 6. Sections 1, 2, 3, 5, and 6 of this act are effective when they become law. Section 4 of this act becomes effective July 1, 2000.

In the General Assembly read three times and ratified this the 20th day of July, 1999.

s/ Marc Basnight
President Pro Tempore of the Senate

s/ James B. Black
Speaker of the House of Representatives

s/ James B. Hunt, Jr.
Governor

Approved 10:15 a.m. this 26th day of July, 1999

February 2003

DRAFT

MINUTES
ENVIRONMENTAL REVIEW COMMISSION
May 11, 2004

The Environmental Review Commission (ERC) met on Tuesday 11 May 2004 at 1:30 p.m. in Room 643 of the Legislative Office Building.

Senator Daniel Clodfelter presided over the 11 May 2004 meeting. The following members were present: Senators Albertson, Dorsett, Swindell and Weinstein, and Representatives Fox, Gibson, LaRoque, Weiss and Williams. Mr. George Givens, Commission Counsel, Jeffrey Hudson, Assistant Commission Counsel, Susan Iddings, Assistant Commission Counsel, Jennifer McGinnis, Assistant Commission Counsel, Tim Dodge, Research Assistant, and Mary Watson, Commission Clerk were also present.

On 27 April 2004, notice was sent to members and interested parties via e-mail and regular mail. A copy of the notice is included in the attachments to these minutes as **Exhibit A**. A copy of the visitor registration and the agenda for the meeting are included in the attachments as **Exhibits B and C**.

Senator Clodfelter called the meeting to order and called on co-chairs for their remarks.

George Givens, Commission Counsel, was asked to explain the agenda.

Mr. Givens said that he had distributed to each member of packet of draft legislative proposals for consideration by the Environmental Review Commission for recommendation to the 2004 Regular Session of the 2003 General Assembly. A copy of this packet is listed as **Exhibit D**.

Senator Clodfelter said that the meeting was not designed to debate the merits of the packet of bills but to make them eligible for consideration.

Mr. Givens read the title of the first bill in the packet, State Natural and Historic Preserve Removals. Mr. Lewis Ledford, State Parks Division, said that the proposed legislation on State Natural and Historic Preserve Removals would include removal of a section of less than one-half acre on Kildaire Farm Road and reallocate a track of property, 104 acres, in Pilot Mountain to the Division of Historic Sites and Cultural Resources. Both remain in the State Property Administration.

Senator Weinstein made the motion that this bill be submitted as part of the package draft legislation.

The motion passed.

Mr. Givens listed Item 2 in the package, Lower Haw River State Natural Area, authorizes DENR to add Lower Haw River State Natural Area to the State Park's System.

Mr. Ledford said that this was a 900-acre track of land acquired from Duke University.

Senator Albertson made the motion that this bill be submitted as part of the package draft legislation.

The motion passed.

Mr. Givens listed Item 3 in the package, Tax Credit for Certain Real Property Donations.

Mr. Eddie Finch, Department of Revenue, explained that this legislation recodified the statute and combines the corporate and individual income statues in one place and increases the maximum credit involving certain pass through entities to make it consistent for corporations and pass through entities.

Senator Swindell made the motion that this bill be submitted as part of the package draft legislation.

The motion passed.

Mr. Givens listed the next two items in the packet, 4.1, Phase II Stormwater Management –1 and 4.2, Phase II Stormwater Management-2.

Senator Clodfelter said that the co-chairs met this morning and decided to let both versions go forward for debate in the two respective committees during the short session.

Mr. Givens said that this is a matter that is very contentious. Version 4.1 is supported by League of Municipalities, supported by DENR and acceptable to the County Commissioners and environmental groups. Version 4.2 only offers protection to cities from action by the EPA or third party law suits for failure to file permit applications on time.

Senator Weinstein made the motion that these two bills be submitted together as part of the package draft legislation.

Representative Williams said he was concerned about 4.1 and asked if we were committed to putting both versions forward.

Senator Clodfelter said that while the 605 process is underway, both drafts should be kept in play. If they do not reach resolution, the shorter form would probably go forward in the respective House and Senate committees.

Representative Williams said that he is much more in favor of version 4.2.

Mr. Givens said that in 4.1, sections 7 and 8, the text would be added and rules would be removed from cross-reference before the bill is submitted to committees.

The motion passed.

Mr. Givens listed Item 5, Dry-cleaning Solvent Cleanup Act Amendments. This legislation addresses reimbursement for claimants who began the cleanup process before the law went into effect. It raises the cap to 25 percent.

Senator Weinstein made the motion that this bill be submitted as part of the package draft legislation.

The motion passed.

Mr. Givens said that item 6, Phosphorous Nutrient Mgt./Animal Feedlots, is intended to allow DENR to meet the state permit requirements consistent with federal requirements as recommended by the Environmental Review Commission.

Representative Gibson asked if negotiations were still ongoing with regard to dry litter and poultry.

Mr. Steve Woodson, Poultry Association, said they have been working on this both at the federal and state level.

Senator Albertson said that it was his understanding that this bill is a work in progress.

Mr. Givens said that was his understanding as well.

Representative Gibson urged members to support this legislation and made the motion that this bill be submitted as part of the package draft legislation.

The motion passed.

Mr. Givens explained that item 7, Limit Liability for Environmental Cleanup, is an act to promote economic development by facilitating the reuse of contaminated real property by limiting the liability of purchasers of contaminated property in circumstances where the seller of the property or another party assumes responsibility for response, remediation, and natural resources restoration of the property. This legislation does not deal with risk base and does not involve paying a fee for damage to natural resources.

Mr. Givens said that Dexter Matthews, Division of Waste Management, DENR, Mr. Preston Howard of MCIC have both spoken to him about this bill and are optimistic that this bill can be worked out during the short session.

Senator Clodfelter said that he agreed that the legislation needs further work. He added that this legislation is a slight expansion of the Brownfields concept, which has been very successful.

Senator Weinstein made the motion that this bill be submitted as part of the package draft legislation.

The motion passed.

Mr. Givens explained that item 8, Water Conservation/Submeters, is an act to promote water conservation in multi-family residential properties by amending various state laws regarding the use of submeters in consecutive water systems in light of changes in policy related to water testing requirements and water conservation by the United States Environmental Protection Agency, as recommended by the ERC.

Mr. Givens said that EPA had reversed its policy and now favors submetering where there are reasonable assurances that water quality might be impaired. This bill reverses course to match the EPA's reversal of policy.

Senator Clodfelter said that the co-chairs have asked Mr. Givens to convene a working group to represent this legislation as well as representing apartment owners and tenant interests.

Representative Williams made the motion that this bill be submitted as part of the package draft legislation.

The motion passed.

Mr. Givens explained that items 9, Environmental Reports Amendments, an act to amend various environmental reporting requirements, as recommended by the Environmental Review Commission, and Item 10, Environmental Technical Corrections, an act to make clarifying, conforming, and technical amendments to various laws related to the Environment, Public Health, and natural resources, as recommended by the ERC are adjustments to reporting requirements under the Sedimentation Pollution Control Act.

Senator Clodfelter asked for permission to include both items 9 and 10 in the same motion.

Senator Albertson made the motion that both items 9 and 10 be submitted as part of the package draft legislation.

The motion passed.

Mr. Givens explained that item 11, ABC Licensees to Recycle Beverage Containers, is an act to require holders of certain ABC permits to recycle all recyclable beverage containers, as recommended by the ERC.

Mr. Givens said that this legislation promotes licensing of groups in the State who hold on-site ABC licenses and says that if they serve alcohol, they will recycle their glass and aluminum beverage containers.

Representative Hackney said that this was a work in progress and also pertains to pallet and computers. Green jobs are increasing in North Carolina and it is important that we have a steady flow of recycled product.

Representative Hackney made the motion that item 11 be submitted as part of the package draft legislation.

The motion passed.

Mr. Givens said that item 12, Leaking UST Fund Liquidity, is an act to improve and accelerate processing of claims under the leaking petroleum underground storage tank cleanup program, as recommended by the ERC.

Mr. Givens said there is currently a $30 million deficit in the leaking UST fund and this bill addresses the possibility of North Carolina setting up a national entity in which North Carolina could participate to get consultants and other responsible parties, now experiencing delays, to get them paid quickly.

Senator Clodfelter said that this may be an item we need to work out in the 2005 long session, but he feels it is worth moving forward this in the short session.

Senator Swindell made the motion that item 12 be submitted as part of the package draft legislation.

The motion passed.

Mr. Givens said Sen. Soles and Representative Hill requested that item 13, Septic System Setbacks for Pre-1977 Lots, because of a situation in Brunswick County.

Mr. Givens explained that this legislation is an act to clarify that a septic tank system that is for a lot platted friar to July 1, 1977, and that is operated in soils that are in soil group 1, may be located ten feet or more from any other septic tank system, as recommended by the ERC.

Representative Williams made the motion that this bill be submitted as part of the package draft legislation.

Representative Hackney asked Mr. Givens how many times the General Assembly had killed this bill in the past.

Mr. Givens said that he did not know the answer to this question.

Representative Hackney asked if DENR supported the legislation.

Mr. Givens said that it was his understanding that DENR did support the legislation.

Representative Hackney asked Sen. Clodfelter if he thought ERC wanted to include this bill in the package legislation.

Representative Gibson encouraged members to support this legislation.

The motion passed.

Mr. Givens explained item 14, Hatteras Village/Temp. Unvegetated Beach Area, an act to designate as temporary unvegetated beach areas certain oceanfront areas on Hatteras Island where the vegetation line was destroyed by Hurricane Isabel and the remnants of the vegetation line were buried by the construction of an emergency berm, as recommended by the ERC.

Mr. Givens said that this legislation would allow the use of a DOT photograph that shows where the line was before the hurricane came along and the berm was built. It is his understanding that the Coastal Resources Commission voted to rule amendment in January that would do this; however, this would be a more expedited way of achieving that.

Senator Swindell made the motion that item 14 be submitted as part of the package draft legislation.

The motion passed.

Senator Clodfelter said that the co-chairs would discuss the sponsoring and filing of these bills. He told members that if anyone was interested in being the sponsor of one of these bills, to please let Mr. Givens know, by the end of this week.

The meeting was adjourned at 2:00 p.m.

RE: **Notice of Meetings - 5 May and 11 May 2004**

COMMISSION MEETING – 5 May 2004:

The Environmental Review Commission will meet at 9:30 a.m. on Wednesday 5 May 2004 in Room 643 of the Legislative Office Building in Raleigh.

At this meeting, the Commission will hear reports from State agencies, consider studies for which the Commission is responsible, discuss topics to be considered at future meetings, and attend to other matters. Listed below are potential agenda topics for this meeting.

1) Information item on the NC GreenPower Program

2) Status report on the One-Stop Permit Assistance and Coordination Program. (S.L. 2001-424, Sec. 19.6)

3) Report on the Express Review Pilot Program and whether the Pilot Program be continued or expanded (S.L. 2003-284, Sec. 11.4A(e))

4) Information item on the Transportation Demand Management Program

5) Update on the status of designation of nonattainment areas to comply with the revised national ambient air quality standard (NAAQS) for ozone (the 8-hour standard)

6) Annual report on implementation of S.L. 2002-4 (Clean Smokestacks Act) (S.L. 2002-4, Sec. 14)

7) Report on issues related to the Leaking Petroleum Underground Storage Tank Cleanup Program (S.L. 2003-352, Sec. 12.(a))

8) Annual report on the status of leaking petroleum underground storage tanks, the State cleanup funds, and the Groundwater Protection Loan Fund (G.S. 143-215.94M)

9) Information item on the Virginia Resources Authority's accelerated claim payment program for underground storage tank fund claims and the development of a national accelerated claim payment program (NATLUST)

10) Annual report on implementation of the Wetlands Restoration Program and use of the Wetlands Restoration Fund (G.S. 143-214.13)

11) Annual report on the effectiveness of projects funded under the Agricultural Cost Share Program for Nonpoint Source Pollution Control (G.S. 143-215.74(e))

12) Update on issues related to the Phase II stormwater rules

13) Report on the management of low-level radioactive waste in North Carolina (G.S. 120-70.33(7))

14) Consideration of legislative proposals for recommendation to the 2004 Regular Session of the General Assembly

15) Other matters related to the Commission's powers and duties under G.S. 120-10.43

COMMISSION MEETING – 11 May 2004:

The 2004 Regular Session is scheduled to begin at 12:00 noon on Monday 10 May. The Commission normally meets shortly after the beginning of the session to complete work on legislative proposals prior to the commission/ committee bill request deadline, which in 2004 is 4:00 p.m. Wednesday 12 May. **A Commission meeting at 2:30 p.m. on Tuesday 11 May in Room 643 of the Legislative Office Building is tentatively scheduled for this purpose.** The agenda for the meeting may also include any unfinished agenda items from the 5 May meeting of the Commission and any other matters related to the Commission's powers and duties under G.S. 120-10.43.

FUTURE MEETINGS:

The Commission may meet at other times while the General Assembly is in session (G.S. 120-70.44). If the Commission meets while the General Assembly is in session, written notice will not be mailed to persons on the mailing list. Rather, notice will be given at a session of the Senate and House of Representatives as provided by G.S. 143-318 (b). The Commission will resume a schedule of regular monthly meetings following adjournment of the 2003 Session of the General Assembly. Mailed notices of Commission meetings will resume at that time.

OTHER MEETINGS:

The Commission Counsel will hold meetings of interested parties on specific topics as indicated below.

Phase II Stormwater Management Working Group
2:00 p.m. Tuesday 27 April 2004– 605 Legislative Office Building

Leaking Petroleum Underground Storage Tank Working Group
10:00 a.m. Tuesday 4 May 2004– 605 Legislative Office Building

ADDITIONAL INFORMATION:

If you have questions related to the Commission, please feel free to contact the Commission Counsel at (919) 733-2578.

AGENDA
1:30 p.m. Tuesday 11 May 2004
Room 643 Legislative Office Building

1. Call to order
   Senator Daniel G. Clodfelter, Presiding

2. Introductory remarks by Cochairs
   Senator Daniel G. Clodfelter
   Senator Charles W. Albertson
   Representative Daniel F. McComas
   Representative Pryor A. Gibson

3. Consideration of legislative proposals for recommendation to the 2004 Regular Session of the General Assembly
   George F. Givens, Commission Counsel

4. Commission discussion and announcements

5. Adjourn

SCHEDULE OF FUTURE MEETINGS:

The Commission may meet at other times while the General Assembly is in session (G.S. 120-70.44). If the Commission meets while the General Assembly is in session, written notice will not be mailed to persons on the mailing list. Rather, notice will be given at a session of the Senate and House of Representatives as provided by G.S. 143-318.12(b) and by email when possible. The Commission will resume a schedule of regular monthly meetings following adjournment of the 2004 Session of the General Assembly. Mailed notices of Commission meetings for those who request them will resume at that time.

OTHER MEETINGS:

The Commission Counsel will hold meetings of interested parties on specific topics as indicated below:

Phase II Stormwater Management Working Group

A BILL TO BE ENTITLED

AN ACT TO REMOVE CERTAIN LANDS FROM THE STATE NATURE AND HISTORIC PRESERVE AND TO DELETE A PORTION OF A PARK FROM THE STATE PARKS SYSTEM, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

Whereas, Section 5 of Article XIV of the Constitution of North Carolina authorizes the dedication of State and local government properties as part of the State Nature and Historic Preserve upon acceptance by a law enacted by a three-fifths vote of the members of each house of the General Assembly and provides for removal of properties from the State Nature and Historic Preserve by a law enacted by a three-fifths vote of the members of each house of the General Assembly; and

Whereas, the General Assembly enacted the State Nature and Historic Preserve Dedication Act, Chapter 443 of the 1973 Session Laws, to prescribe the conditions and procedures under which properties may be specifically dedicated for the purposes set out in Section 5 of Article XIV of the Constitution of North Carolina; and

Whereas, G.S. 113-44.14 provides for additions to, and deletions from, the State Parks System upon authorization by the General Assembly; Now, therefore,

The General Assembly of North Carolina enacts:

SECTION 1. G.S. 143-260.10 reads as rewritten:

"**§ 143-260.10. Components of State Nature and Historic Preserve.**

The following are components of the State Nature and Historic Preserve accepted by the North Carolina General Assembly pursuant to G.S. 143-260.8:

(1) All lands and waters within the boundaries of the following units of the State Parks System as of 6 May 2003: Baldhead Island State Natural Area, Bay Tree Lake State Park, Beech Creek Bog State Natural Area, Bullhead Mountain State Natural Area, Bushy Lake State Natural Area, Carolina Beach State Park, Cliffs of the Neuse

State Park, Chowan Swamp State Natural Area, Dismal Swamp State Natural Area, Elk Knob State Natural Area, Fort Fisher State Recreation Area, Fort Macon State Park, Goose Creek State Park, Gorges State Park, Hammocks Beach State Park, ~~Hemlock Bluffs State Natural Area~~, Jones Lake State Park, Lake James State Park, Lake Norman State Park, Lake Waccamaw State Park, Lea Island State Natural Area, Lumber River State Park, Medoc Mountain State Park, Merchants Millpond State Park, Mitchells Millpond State Natural Area, Mount Mitchell State Park, Occoneechee Mountain State Natural Area, Pettigrew State Park, Pilot Mountain State Park, Raven Rock State Park, Run Hill State Natural Area, Singletary Lake State Park, Theodore Roosevelt State Natural Area, and Weymouth Woods-Sandhills Nature Preserve.

...

(18) All land and waters within the boundaries of Hemlock Bluffs State Natural Area as of May 6, 2003 with the exception of the following tracts: The portion of that certain tract or parcel of land at Hemlock Bluffs State Natural Area in Wake County, Swift Creek Township, described in Deed Book 2461, Page 037, containing 2,025 square feet and being the portion of this tract shown as proposed R/W on the drawing prepared by Titan Atlantic Group entitled "Right of Way Acquisition Map for Town of Cary Widening of Kildaire Farm Road (SR 1300) from Autumgate Drive to Palace Green" sheet 1 of 3 bearing the preparer's file name Town of Cary Case File No. TOC 01-37, dated 26 September 2003, and filed with the State Property Office; and the portion of those certain tracts or parcels of land at Hemlock Bluffs State Natural Area in Wake County, Swift Creek Township, described in Deed Book 4670, Page 420, containing 24,092 square feet and being the portion of these tracts shown as proposed R/W on the drawing prepared by Titan Atlantic Group entitled "Right of Way Acquisition Map for Town of Cary Widening of Kildaire Farm Road (SR 1300) from Autumgate Drive to Palace Green" sheet 3 of 3 bearing the preparer's file name Town of Cary Case File No. TOC 01-37, dated 26 September 2003, and filed with the State Property Office. The tracts excluded from the State Nature and Historic Preserve under this subdivision are deleted from the State Parks System pursuant to G.S. 113-44.14. The State of North Carolina may only exchange this land for other land for the expansion of Hemlock Bluffs State Natural Area or sell this land and use the proceeds for that purpose. The State may not otherwise sell or exchange this land."

DRAFT FOR REVIEW ONLY

SECTION 2. The following tracts of land are removed from the State Nature and Historic Preserve pursuant to Section 5 of Article XIV of the Constitution of North Carolina: The portion of that certain tract or parcel of land at Hemlock Bluffs State Natural Area in Wake County, Swift Creek Township, described in Deed Book 2461,

Page 037, containing 2,025 square feet and being the portion of this tract shown as proposed R/W on the drawing prepared by Titan Atlantic Group entitled "Right of Way Acquisition Map for Town of Cary Widening of Kildiare Farm Road (SR 1300) from Autumgate Drive to Palace Green" sheet 1 of 3 bearing the preparer's file name Town of Cary Case File No. TOC 01-37, dated 26 September 2003, and filed with the State Property Office; and the portion of those certain tracts or parcels of land at Hemlock Bluffs State Natural Area in Wake County, Swift Creek Township, described in Deed Book 4670, Page 420, containing 24,092 square feet and being the portion of these tracts shown as proposed R/W on the drawing prepared by Titan Atlantic Group entitled "Right of Way Acquisition Map for Town of Cary Widening of Kildiare Farm Road (SR 1300) from Autumgate Drive to Palace Green" sheet 3 of 3 bearing the preparer's file name Town of Cary Case File No. TOC 01-37, dated 26 September 2003, and filed with the State Property Office.

SECTION 3. The following tract is removed from the State Parks System pursuant to G.S. 113-44.14: The portion of that certain tract or parcel of land at Pilot Mountain State Park in Surry County, Shoals Township, described in Plat Book 21, Page 76, containing 104.280 acres, and shown as the "Horne Creek Living Historical Park" on the drawing prepared by Joe L. Cooke, bearing the preparer's file name Dwg. 3/330, dated 23 March 2004, and filed with the State Property Office. This property may be reallocated to the Department of Cultural Resources for its use of the property as the Horne Creek Farm State Historic Site. This property will remain in the State Nature and Historic Preserve.

SECTION 4. In accordance with G.S. 143-260.8(e), the Secretary of State is directed to forward a certified copy of this act to the register of deeds of each county in which any portion of the property removed by this act as part of the State Nature and Historic Preserve is located.

SECTION 5. This act is effective when it becomes law.

BILL DRAFT 2003-RIz-10 [v.3] (4/28)

#2

(THIS IS A DRAFT AND IS NOT READY FOR INTRODUCTION)
5/10/2004 9:44:32 AM

Short Title:	Lower Haw River State Natural Area.	(Public)
Sponsors:	Unknown.	
Referred to:		

A BILL TO BE ENTITLED

AN ACT TO AUTHORIZE THE ADDITION OF THE LOWER HAW RIVER STATE NATURAL AREA TO THE STATE PARKS SYSTEM, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

Whereas, Section 5 of Article XIV of the Constitution of North Carolina states that it shall be a proper function of the State of North Carolina to acquire and preserve park, recreational, and scenic areas, and in every other appropriate way to preserve as a part of the common heritage of this State, its open lands and places of beauty; and

Whereas, the 1987 General Assembly enacted the State Parks Act, which declares that the State of North Carolina offers unique archaeological, geologic, biological, scenic, and recreational resources, and that these resources are part of the heritage of the people of the State, which should be preserved and managed by the people for their use and for the use of their visitors and descendants; and

Whereas, the Lower Haw River in Chatham County is considered nationally significant for its biological resources including several rare species and possesses biological, scenic, and recreational resources of statewide significance; Now, therefore,

The General Assembly of North Carolina enacts:

SECTION 1. The General Assembly authorizes the Department of Environment and Natural Resources to add the Lower Haw River State Natural Area to the State Parks System as provided by G.S. 113-44.14(b).

SECTION 2. This act is effective when it becomes law.

BILL DRAFT 2003-RIz-11 [v.5] (5/7)

#3

(THIS IS A DRAFT AND IS NOT READY FOR INTRODUCTION)
5/11/2004 11:59:06 AM

Short Title: Tax Credit for Certain Real Prop. Donations. (Public)

Sponsors: .

Referred to:

A BILL TO BE ENTITLED

AN ACT TO RECODIFY THE CREDIT FOR CERTAIN REAL PROPERTY DONATIONS AND TO INCREASE THE CREDIT FOR CERTAIN PASS-THROUGH ENTITIES, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. Article 4 of Chapter 105 of the General Statutes is amended by adding a new Part to read:

" Part 6. Tax Credit for Certain Real Property Donations.

"**§ 105-163.021. Tax credit allowed.**

(a) Qualified donation. -- A person who makes a qualified donation of an interest in real property located in North Carolina during the taxable year that is useful for (i) public beach access or use, (ii) public access to public waters or trails, (iii) fish and wildlife conservation, or (iv) other similar land conservation purposes is allowed a credit against the tax imposed by Article 4 of this Chapter equal to twenty-five percent (25%) of the fair market value of the donated property interest. To be eligible for this credit, the interest in property must be donated in perpetuity to and accepted by the State, a local government, or a body that is both organized to receive and administer lands for conservation purposes and qualified to receive charitable contributions under the Code. Lands required to be dedicated pursuant to local governmental regulation or ordinance and dedications made to increase building density levels permitted under a regulation or ordinance are not eligible for this credit. To support the credit allowed by this section, the taxpayer must file with the income tax return for the taxable year in which the credit is claimed a certification by the Department of Environment and Natural Resources that the property donated is suitable for one or more of the valid public benefits set forth in this subsection. The certification for a qualified donation made by a pass-through entity must be filed by the pass-through entity.

(b) Corporations. – The aggregate amount of credit allowed to a corporation in a taxable year under this section for one or more qualified donations, whether made directly or indirectly as owner of a pass-through entity, may not exceed five hundred thousand dollars ($500,000). That portion of a qualifying donation that is the basis for a credit allowed under this section is not eligible for deduction as a charitable contribution under G.S. 105-130.9.

(b1) Individuals. – The aggregate amount of credit allowed to an individual in a taxable year under this section for one or more qualified donations, whether made directly or indirectly as owner of a pass-through entity, may not exceed two hundred fifty thousand dollars ($250,000). In the case of property owned by a married couple, if both spouses are required to file North Carolina income tax returns, the credit allowed by this section may be claimed only if the spouses file a joint return. If only one spouse is required to file a North Carolina income tax return, that spouse may claim the credit allowed by this section on a separate return.

(b2) Pass-through entities. – The aggregate amount of credit allowed to a pass-through entity in a taxable year under this section for one or more qualified donations, whether made directly or indirectly as owner of another pass-through entity, may not exceed five hundred thousand dollars ($500,000). Each individual who is an owner of a pass-through entity is allowed as a credit an amount equal to the owner's allocated share of the credit to which the pass-through entity is eligible under this subsection, not to exceed $250,000. Each corporation that is an owner of a pass-through entity is allowed as a credit an amount equal to the owner's allocated share of the credit to which the pass-through entity is eligible under this subsection, not to exceed $500,000.

(c) Cap; carryforward. – The credit allowed by this section may not exceed the amount of tax imposed by Article 4 of this Chapter for the taxable year reduced by the sum of all credits allowed, except payments of tax made by or on behalf of the taxpayer. Any unused portion of this credit may be carried forward for the next succeeding five years.

(d) Marshland. – In the case of marshland for which a claim has been filed pursuant to G.S. 113-205, the offer of donation must be made before December 31, 2003 to qualify for the credit allowed by this section."

SECTION 2. G.S. 105-130.34 is repealed.

SECTION 3. G.S. 105-151.12 is repealed.

SECTION 4. This act is effective for taxable years beginning on or after January 1, 2005.

#4.1

(THIS IS A DRAFT AND IS NOT READY FOR INTRODUCTION)
5/11/2004 11:45:40 AM

Short Title: Phase II Stormwater Management-1. (Public)

Sponsors: .

Referred to:

A BILL TO BE ENTITLED

AN ACT TO PROVIDE FOR THE IMPLEMENTATION OF FEDERAL PHASE II STORMWATER MANAGEMENT REQUIREMENTS, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. Phase II Stormwater Permit Application and Standards. – An application for a Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management submitted by a local government designated as an urbanized area under the 1990 or 2000 census by the Bureau of the Census shall be deemed timely received if the application was submitted to the Department of Environment and Natural Resources in accordance with the application schedule set out in Section 6 of the temporary rule adopted by the Environmental Management Commission on 10 October 2002. To obtain a Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management under this Section, an applicant shall develop, implement, and enforce a stormwater management plan approved by the Department that satisfies the six minimum control measures required by 40 Code of Federal Regulations § 122.34(b) (1 July 2003 Edition). The evaluation of the post-construction stormwater management measures required by 40 Code of Federal Regulations § 122.34(b)(5) (1 July 2003 Edition) shall be conducted as provided in Section 10 of the temporary rule adopted by the Environmental Management Commission on 10 October 2002. A municipality with a population of less than 1,000, including a municipality designated by the 1990 or 2000 census, is not required to obtain a Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management unless the municipality is shown to be contributing to an impairment of State waters, as determined under the requirements of § 33 U.S.C. 1313(d).

SECTION 2. New Development. – New development or redevelopment in any area designated as an urbanized area under the 1990 or 2000 census by the Bureau of the Census or under procedures established in Section 7 of this act, and located in a local jurisdiction that does not administer either a Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management or a local stormwater management program approved pursuant to Section 5 of this act shall comply with the standards set out in Section 10 of the temporary rule adopted by the Environmental Management Commission on 10 October 2002. The Department of Environment and Natural Resources shall administer and enforce these standards in these areas.

SECTION 3. Coordination of Phase II and other Stormwater Management Programs. – In any circumstance where any stormwater control requirement under a Phase II National Pollutant Discharge Elimination System (NPDES) stormwater management permit conflicts or overlaps with any stormwater control requirement under any other water quality program, the more stringent requirement shall apply. The Secretary of Environment and Natural Resources or the Secretary's designee shall resolve any dispute as to whether there is a conflict or overlap between or among stormwater management requirements and shall determine which requirement shall be deemed the most stringent.

SECTION 4. General Permit. – After the Department of Environment and Natural Resources has issued a Phase II National Pollutant Discharge Elimination System (NPDES) general permit for stormwater management, a local government that has applied for a permit under Section 1 of this act may submit a notice of intent to be covered under the general permit to the Department. The Department shall treat an application for a permit under Section 1 of this act as an application for an individual permit unless the applicant submits a notice of intent to be covered under a general permit under this Section.

SECTION 5. Voluntary Delegation to Local Governments. – A local government whose jurisdiction includes an area designated as an urbanized area under the 1990 or 2000 census by the Bureau of the Census or a local government designated pursuant to Section 7 of this act may submit to the Department of Environment and Natural Resources for its approval a stormwater management program for its jurisdiction, and to this end local governments are authorized to adopt ordinances and regulations necessary to establish and enforce stormwater management programs. Local governments are authorized to create or designate agencies or subdivisions of local government to administer and enforce the programs. An ordinance adopted by a local government shall at least meet and may exceed the minimum requirements of this act and the six minimum control measures required by 40 Code of Federal Regulations § 122.34(b) (1 July 2003 Edition). Two or more units of local government are authorized to establish a joint program and to enter into any agreements that are necessary for the proper administration and enforcement of the program. The resolutions establishing any joint program must be duly recorded in the minutes of the governing body of each unit of local government participating in the program, and a certified copy of each resolution must be filed with the Department. The Department shall review each program submitted and within 90 days of receipt thereof shall notify the local government

DRAFT

submitting the program that it has been approved, approved with modifications, or disapproved. The Department shall only approve a program upon determining that its standards equal or exceed those of this act and the six minimum control measures required by 40 Code of Federal Regulations § 122.34(b) (1 July 2003 Edition). If the Department determines that any local government is failing to administer or enforce an approved stormwater management program, it shall notify the local government in writing and shall specify the deficiencies of administration and enforcement. If the local government has not taken corrective action within 30 days of receipt of notification from the Department, the Department shall assume administration and enforcement of the program until such time as the local government indicates its willingness and ability to resume administration and enforcement of the program.

SECTION 6. Phase II Stormwater Implementation Deadlines. –

(1) For a permit application submitted by a local government that was designated as an urbanized area under the 1990 census by the Bureau of the Census, the Department of Environment and Natural Resources shall send a draft permit decision to public notice by 1 November 2004.

(2) For a permit application submitted by a local government that was designated as an urbanized area under the 2000 census by the Bureau of the Census, the Department of Environment and Natural Resources shall send a draft permit decision to public notice by 1 May 2005.

(3) A local government shall adopt post-construction stormwater management measures that become effective within 24 months after the date on which a permit is issued.

SECTION 7. Designation Process – The provisions of proposed 15A NCAC 2H .0151 (Public Entity Designations) as adopted by the Environmental Management Commission on 11 December 2003 shall govern the designation of local governments not designated as urbanized areas under the 1990 or 2000 census by the Bureau of the Census that must obtain a Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management.

SECTION 8. Petition Process – The provisions of proposed 15A NCAC 2H .0152 (Petitions) as adopted by the Environmental Management Commission on 11 December 2003 shall govern the process by which a petition may be submitted to the Department of Environment and Natural Resources to require a local government to obtain a Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management.

SECTION 9. Design Manual; Model Ordinance. – Consistent with G.S. 150B-2(8a)h., the Division of Water Quality, in consultation with the Division of Land Resources, Division of Soil and Water Conservation, and North Carolina State University, shall develop a design manual to assist local governments in determining which controls are best suited to the unique characteristics of the jurisdiction. Pursuant to G.S. 143-214.7(c), the Environmental Management Commission shall develop a model ordinance in cooperation with local governments that shall include both

structural and nonstructural best management practices adequate to meet the standards. The design manual and model ordinance shall be completed by 1 October 2005.

SECTION 10. Construction of Act. –

(1) Nothing in this act shall be construed to limit the authority of the Environmental Management Commission or any unit of local government to adopt stormwater management requirements that exceed the requirements of this act.

(2) This act shall not be construed to affect pending litigation.

SECTION 11. Section 2 of this act becomes effective 1 July 2006. All other sections of this act become effective when the act becomes law.

A BILL TO BE ENTITLED

AN ACT TO PROVIDE FOR THE IMPLEMENTATION OF FEDERAL PHASE II STORMWATER MANAGEMENT REQUIREMENTS, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. Phase II Stormwater Permit Application and Standards. – An application for a Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management submitted by a local government designated as an urbanized area under the 1990 or 2000 census by the Bureau of the Census shall be deemed timely received if the application was submitted to the Department of Environment and Natural Resources in accordance with the application schedule set out in Section 6 of the temporary rule adopted by the Environmental Management Commission on 10 October 2002. To obtain a Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management under this Section, an applicant shall develop, implement, and enforce a stormwater management plan approved by the Department that satisfies the six minimum control measures required by 40 Code of Federal Regulations § 122.34(b) (1 July 2003 Edition). The evaluation of the post-construction stormwater management measures required by 40 Code of Federal Regulations § 122.34(b)(5) (1 July 2003 Edition) shall be conducted as provided in Section 10 of the temporary rule adopted by the Environmental Management Commission on 10 October 2002. A municipality with a population of less than 1,000, including a municipality designated by the 1990 or 2000 census, is not required to obtain a Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management unless the municipality is shown to be contributing to an impairment of State waters, as determined under the requirements of § 33 U.S.C. 1313(d).

SECTION 2. Phase II Stormwater Implementation Deadlines. –

(1) For a permit application submitted by a local government that was designated as an urbanized area under the 1990 census by the Bureau of the Census, the Department of Environment and Natural Resources shall send a draft permit decision to public notice by 1 November 2004.

(2) For a permit application submitted by a local government that was designated as an urbanized area under the 2000 census by the Bureau of the Census, the Department of Environment and Natural Resources shall send a draft permit decision to public notice by 1 May 2005.

(3) A local government shall adopt post-construction stormwater management measures that become effective within 24 months after the date on which a permit is issued.

SECTION 3. This act is effective when it becomes law.

Short Title: Phosphorous Nutrient Mgt./Animal Feedlots. (Public)

Sponsors: .

Referred to:

A BILL TO BE ENTITLED

AN ACT TO IMPLEMENT REQUIREMENTS APPLICABLE TO NATIONAL POLLUTION DISCHARGE ELIMINATION SYSTEM (NPDES) PERMITS AND ANIMAL WASTE MANAGEMENT PLANS GOVERNING ANIMAL FEEDING OPERATIONS TO MAKE THE STATE PERMIT REQUIREMENTS CONSISTENT WITH FEDERAL REQUIREMENTS, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. G.S. 143-215.10B reads as rewritten:

"**§ 143-215.10B. Definitions.**

As used in this Part:

(1) "Animal operation" means any agricultural ~~farming~~ feedlot activity involving 250 or more swine, 100 or more confined cattle, 75 or more horses, 1,000 or more sheep, or 30,000 or more confined poultry with a liquid animal waste management ~~system.~~system, or any smaller agricultural feedlot activity with a liquid animal waste management system that discharges to the surface waters of the State. A public livestock market regulated under Article 35 of Chapter 106 of the General Statutes is an animal operation for purposes of this Part.

(2) "Animal waste" means livestock or poultry excreta or a mixture of excreta with feed, bedding, litter, or other materials from an animal operation.

(3) "Animal waste management system" means a combination of structures and nonstructural practices serving a feedlot that provide for the collection, treatment, storage, or land application of animal waste.

(4) "Division" means the Division of Water Quality of the Department.

(4a) "Dry litter poultry facility" means any agricultural feedlot activity involving poultry that does not utilize a liquid animal waste management system.

(5) "Feedlot" means a lot or building or combination of lots and buildings intended for the confined feeding, breeding, raising, or holding of animals and either specifically designed as a confinement area in which animal waste may accumulate or where the concentration of animals is such that an established vegetative cover cannot be maintained. A building or lot is not a feedlot unless animals are confined for 45 or more days, which may or may not be consecutive, in a 12-month period. Pastures shall not be considered feedlots for purposes of this Part.

(6) "Technical specialist" means an individual designated by the Soil and Water Conservation Commission, pursuant to rules adopted by that Commission, to certify animal waste management plans."

SECTION 2. G.S. 143-215.10C reads as rewritten:

"**§ 143-215.10C. Applications and permits.**

(a) No person shall construct or operate an animal waste management system for an animal operation or a dry litter poultry facility subject to federal discharge permit regulations without first obtaining an individual permit or a general permit under this ~~Article.~~section. The Commission shall develop a system of individual and general permits for animal operations and dry litter poultry facilities based on species, number of animals, and other relevant factors. It is the intent of the General Assembly that most animal waste management systems be permitted under a general permit. The Commission, in its discretion, may require that an animal waste management system be permitted under an individual permit if the Commission determines that an individual permit is necessary to protect water quality, public health, or the environment.

(b) An animal waste management system shall be designed, constructed, and operated so that the animal operation served by the animal waste management system does not cause pollution in the waters of the State except as may result because of rainfall from a storm event more severe than the 25-year, 24-hour ~~storm.~~storm of the 100-year, 24-hour storm if required by federal discharge permit regulations.

(c) The Commission shall act on a permit application as quickly as possible and may conduct any inquiry or investigation it considers necessary before acting on an application.

(d) All applications for permits or for renewal of an existing permit shall be in writing, and the Commission may prescribe the form of the applications. All applications shall include an animal waste management system plan approved by a technical specialist. The Commission may require an applicant to submit additional information the Commission considers necessary to evaluate the application. Permits and renewals issued pursuant to this section shall be effective until the date specified therein or until rescinded unless modified or revoked by the Commission.

(e) Animal waste management plans for animal operations shall include all of the following components:

DRAFT FOR REVIEW ONLY

(1) A checklist of potential odor sources and a choice of site-specific, cost-effective remedial best management practices to minimize those sources.

(2) A checklist of potential insect sources and a choice of site-specific, cost-effective best management practices to minimize insect problems.

(3) Provisions that set forth acceptable methods of disposing of mortalities.

(4) Provisions regarding best management practices for riparian buffers or equivalent controls, particularly along perennial streams.

(5) Provisions regarding the use of emergency spillways and site-specific emergency management plans that set forth operating procedures to follow during emergencies in order to minimize the risk of environmental damage.

(6) Provisions regarding periodic testing of waste products used as nutrient sources as close to the time of application as practical and at least within 60 days of the date of application and periodic testing, at least annually, of soils at crop sites where the waste products are applied. Nitrogen shall be the rate-determining ~~element.~~element, except that phosphorous provisions of the most current nutrient management standard approved by the Soil and Water Conservation Commission or the Natural Resources Conservation Service of the United States Department of Agriculture may also be a rate-determining factor for facilities subject to federal discharge permit regulations. Zinc and copper levels in the soils shall be monitored, and alternative crop sites shall be used when these metals approach excess levels.

(7) Provisions regarding waste utilization plans that assure a balance between nitrogen application rates and nitrogen crop requirements, that assure that lime is applied to maintain pH in the optimum range for crop production, and that include corrective action, including revisions to the waste utilization plan based on data of crop yields and crops analysis, that will be taken if this balance is not achieved as determined by testing conducted pursuant to subdivision (6) of this subsection.

(8) Provisions regarding the completion and maintenance of records on forms developed by the Department, which records shall include information addressed in subdivisions (6) and (7) of this subsection, including the dates and rates that waste products are applied to soils at crop sites, and shall be made available upon request by the Department.

(f) ~~Any operator of an animal operation with a dry litter animal waste management system~~Animal waste management plans for dry litter poultry facilities not subject to federal discharge permit requirements, but involving 30,000 or more birds shall develop an animal waste management plan that complies with the testing and

record-keeping requirements under subdivisions (6) through (8) of subsection (e) of this section. Any operator of this type of animal waste management system shall retain records required under this section and by the Department on-site for three years.

(f1) Animal waste management plans for dry litter poultry facilities subject to federal discharge permit regulations shall include the components listed in subsection (e) of this section.

(g) The Commission shall encourage the development of alternative and innovative animal waste management technologies. The Commission shall provide sufficient flexibility in the regulatory process to allow for the timely evaluation of alternative and innovative animal waste management technologies and shall encourage operators of animal waste management systems to participate in the evaluation of these technologies. The Commission shall provide sufficient flexibility in the regulatory process to allow for the prompt implementation of alternative and innovative animal waste management technologies that are demonstrated to provide improved protection to public health and the environment.

(h) The owner or operator of an animal waste management system shall:

(1) In the event of a discharge of 1,000 gallons or more of animal waste to the surface waters of the State, issue a press release to all print and electronic news media that provide general coverage in the county where the discharge occurred setting out the details of the discharge. The owner or operator shall issue the press release within 48 hours after the owner or operator has determined that the discharge has reached the surface waters of the State. The owner or operator shall retain a copy of the press release and a list of the news media to which it was distributed for at least one year after the discharge and shall provide a copy of the press release and the list of the news media to which it was distributed to any person upon request.

(2) In the event of a discharge of 15,000 gallons or more of animal waste to the surface waters of the State, publish a notice of the discharge in a newspaper having general circulation in the county in which the discharge occurs and in each county downstream from the point of discharge that is significantly affected by the discharge. The Secretary shall determine, at the Secretary's sole discretion, which counties are significantly affected by the discharge and shall approve the form and content of the notice and the newspapers in which the notice is to be published. The notice shall be captioned "NOTICE OF DISCHARGE OF ANIMAL WASTE". The owner or operator shall publish the notice within 10 days after the Secretary has determined the counties that are significantly affected by the discharge and approved the form and content of the notice and the newspapers in which the notice is to be published. The owner or operator shall file a copy of the notice and proof of publication with the Department within 30 days after the notice is published. Publication of a notice of discharge under this

subdivision is in addition to the requirement to issue a press release under subdivision (1) of this subsection.

(i) A person who obtains an individual permit under G.S. 143-215.1 for an animal waste management system that serves a public livestock market shall not be required to obtain a permit under this Part and is not subject to the requirements of this Part.

(j) New and expanding animal operations or dry litter poultry facilities subject to federal discharge permit regulations must apply for and receive coverage under a discharge permit and comply with the phosphorous provisions of the most current nutrient management standard before receiving a permit or stocking animals.

(k) Existing animal operations subject to federal discharge permit regulation shall comply with the phosphorous provisions of the most current nutrient management standard on or before 1 July 2007.

(l) Existing dry litter poultry facilities subject to federal discharge permit regulations or that have been notified by the Department that they are subject to federal discharge permit regulation because of an unpermitted discharge must apply for and receive coverage under a discharge permit by 13 April 2008."

DRAFT FOR REVIEW ONLY

SECTION 3. G.S. 143-215.10G(a) reads as rewritten:

"(a) Department shall charge an annual permit fee of all animal operations and dry litter poultry facilities that are subject to a permit under G.S. 143-215.10C for animal waste management systems according to the following schedule:

(1) For a system with a design capacity of 38,500 or more and less than 100,000 pounds steady state live weight, fifty dollars ($50.00).

(2) For a system with a design capacity of 100,000 or more and less than 800,000 pounds steady state live weight, one hundred fifty dollars ($150.00).

(3) For a system with a design capacity of 800,000 pounds or more steady state live weight, three hundred dollars ($300.00)."

SECTION 4. The Department of Environment and Natural Resources shall evaluate the application of phosphorous provisions of the most current nutrient management standard approved by the Soil and Water Conservation Commission or the Natural Resources Conservation Service of the United States Department of Agriculture to permitted animal operations and dry litter poultry facilities as provided in subsections (j), (k), and (l) of section 143-215.10C. In the course of the study required by this section, the Department shall also consider the application of the phosphorous provisions of the nutrient management standard to existing animal operations and dry litter poultry facilities not subject to the permit requirements of subsections (j), (k), and (l) of section 143-215.10C. The Department shall give emphasis to the proper role for non-regulatory programs and the development of innovative partnerships with producers and business interests in the livestock and poultry industry in its recommendations for these small and medium sized animal facilities. If the Department recommends that a regulatory process be implemented, the Department shall propose an implementation schedule for compliance with the phosphorous provisions of the

nutrient management standard. The Department shall report its findings and recommendations to the Environmental Review Commission on or before 1 April 2008.

SECTION 5. This act becomes effective 1 January 2005.

Short Title: Limit Liability for Environmental Cleanups. (Public)

Sponsors: .

Referred to:

A BILL TO BE ENTITLED

AN ACT TO PROMOTE ECONOMIC DEVELOPMENT BY FACILITATING THE REUSE OF CONTAMINATED REAL PROPERTY BY LIMITING THE LIABILITY OF PURCHASERS OF CONTAMINATED PROPERTY IN CIRCUMSTANCES WHERE THE SELLER OF THE PROPERTY OR ANOTHER PARTY ASSUMES RESPONSIBILITY FOR RESPONSE, REMEDIATION, AND NATURAL RESOURCES RESTORATION OF THE PROPERTY, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. G.S. 130A-310 is amended by adding a new subdivision to read:

"(1a) 'Contiguous property owner' means a person who owns real property that touches along a boundary or at a point real property that is contaminated by a release of a hazardous substance."

SECTION 2. G.S. 143-215.77 is amended by adding a new subdivision to read:

"(2a) 'Contiguous property owner' means a person who owns real property that touches along a boundary or at a point real property that is contaminated by a release of a hazardous substance."

SECTION 3. G.S. 130A-310.3 is amended by adding a new subsection to read:

"(b1) A responsible party who satisfies the Secretary that the responsible party has completed a remedial action for hazardous substances at an inactive hazardous substance or waste disposal site pursuant to this Part shall not be required to perform any remedial action for the same release pursuant to Article 21 or Article 21A of Chapter 143 of the General Statutes."

SECTION 4. G.S. 130A-310.7 reads as rewritten:

"§ 130A-310.7. Action for reimbursement; liability of responsible parties; notification of completed remedial action.

(a) ~~Notwithstanding any other provision or rule of law, and subject~~Subject only to the defenses set forth in this ~~subsection, any person who:~~section, a responsible party is a person who causes or contributes to the existence of an inactive hazardous substance or waste disposal site by any of the following:

(1) ~~Discharges or deposits; or~~Discharging, releasing, or depositing any hazardous substance.

(2) ~~Contracts or arranges for any discharge or deposit; or~~Contracting or arranging for a discharge, release, or deposit of any hazardous substance.

(3) ~~Accepts for discharge or deposit; or~~Accepting any hazardous substance.

(4) ~~Transports or arranges for transport for the purpose of discharge or deposit~~Transporting or arranging for the transport of any hazardous substance for the purpose of discharging, releasing, or depositing any hazardous substance.

(5) Owning or operating a site that contains any hazardous substance.

(6) Owning or operating a site at the time of discharge, release, or deposit of any hazardous substance.

~~any hazardous substance, the result of which discharge or deposit is the existence of an inactive hazardous substance or waste disposal site, shall be considered a responsible party.~~

(a1) Neither an innocent landowner who is a bona fide purchaser of ~~the~~ any real property comprising an inactive hazardous substance or waste disposal site without knowledge or without a reasonable basis for knowing that a hazardous substance or waste ~~disposal~~ discharge, release, deposit, or disposal had occurred nor a contiguous property owner shall not be considered a responsible party if the landowner or contiguous property owner establishes all of the following to the satisfaction of the Secretary:

(1) All of the discharge, release, deposit, or disposal of hazardous substances or waste at the site occurred before the owner acquired the site; or the disposal was solely the result of:

a. An act of God; or

b. An act of war; or

c. An intentional act or omission of a third party who is not an employee or agent of the owner or who does not have a contractual relationship with the owner.

(2) On or before the date of purchase, the owner made all appropriate inquiries into the previous ownership and uses of the property in accordance with generally accepted and customary commercial standards and practices. The Secretary shall take into account any specialized knowledge or experience on the part of the owner, the relationship of the purchase price to the value of the property if the

DRAFT

property were not contaminated, commonly known or reasonably ascertainable information about the property, and whether the contamination is detectable by appropriate inspection. In the case of property that is used for residential or similar purposes at the time of its purchase by an entity that is neither governmental nor commercial, a site inspection and title search that does not reveal information that would cause a reasonable person to make further investigation shall satisfy the requirements of this subdivision.

(3) The owner has provided all legally required notices with respect to the discovery of a discharge, release, deposit, or disposal of any hazardous substance or waste at the property.

(4) The owner has exercised appropriate care with respect to hazardous substances found at the property by taking reasonable steps to do all of the following:

a. Stopping any continuing discharge, release, deposit, or disposal.

b. Preventing any threatened future discharge, release, deposit, or disposal.

c. Conducting remedial measures approved by the Secretary that prevent or limit human, environmental, or natural resources exposure to any hazardous substance or waste discharged, released, deposited, or disposed of at the property and make the property safe for its intended use. Measures may include the application of institutional controls and other means of preventing exposure

(5) The owner has provided and continues to provide full cooperation, assistance, and access to persons who are authorized to conduct any response, remedial action, or natural resources restoration at the property, including any cooperation and access necessary to install, operate, maintain, or secure any completed or partial response, remedial action, or natural resources restoration at the property.

(6) The owner has complied and continues to comply with any land-use restrictions established or relied on in connection with the response, remedial action, or natural resources restoration at the property.

(7) The owner has not impeded and continues to not impede the effectiveness or integrity of any institutional control employed at the property in connection with a response, remedial action, or natural resources restoration.

(8) The owner has complied or has agreed to comply with any requirement to record any land-use restrictions that may be required by the Secretary.

(9) The owner has complied and continues to comply with any request for information or administrative subpoena issued by the Secretary.

(10) The owner is not liable, potentially liable, or affiliated with any other person who is liable or potentially liable for any cost associated with

DRAFT FOR REVIEW ONLY

the response, remedial action, or natural resources restoration at the property through any of the following:

a. Any direct or indirect familial relationship.

b. Any contractual, corporate, or financial relations, other than a contractual, corporate, or financial relationship that is created by an instrument through which title to the property is conveyed, an instrument through which sale or purchase of the property is financed, or by a contract for the sale of goods or services.

c. A reorganization in bankruptcy of a business entity that is liable or potentially liable.

(a2) A bona fide purchaser of any real property comprising an inactive hazardous substance or waste disposal site with knowledge or with a reasonable basis for knowing that a hazardous substance or waste discharge, release, deposit, or disposal had occurred shall not be considered a responsible party if the purchaser establishes all of the following to the satisfaction of the Secretary:

(1) All of the discharge, release, deposit, or disposal of hazardous substances or waste at the site occurred before the purchaser acquired the site; or the disposal was solely the result of:

a. An act of God; or

b. An act of war; or

c. An intentional act or omission of a third party who is not an employee or agent of the purchaser or who does not have a contractual relationship with the purchaser.

(2) On or before the date of purchase, the purchaser made all appropriate inquiries into the previous ownership and uses of the property in accordance with generally accepted and customary commercial standards and practices. The Secretary shall take into account any specialized knowledge or experience on the part of the purchaser, the relationship of the purchase price to the value of the property if the property were not contaminated, commonly known or reasonably ascertainable information about the property, and whether the contamination is detectable by appropriate inspection. In the case of property that is used for residential or similar purposes at the time of its purchase by an entity that is neither governmental nor commercial, a site inspection and title search that does not reveal information that would cause a reasonable person to make further investigation shall satisfy the requirements of this subdivision.

(3) The purchaser has provided all legally required notices with respect to the discovery of a discharge, release, deposit, or disposal of any hazardous substance or waste at the property.

(4) The purchaser has exercised appropriate care with respect to hazardous substances found at the property by taking reasonable steps to do all of the following:

DRAFT FOR REVIEW ONLY

a. Stopping any continuing discharge, release, deposit, or disposal.
b. Preventing any threatened future discharge, release, deposit, or disposal.
c. Conducting remedial measures approved by the Secretary that prevent or limit human, environmental, or natural resources exposure to any hazardous substance or waste discharged, released, deposited, or disposed of at the property and make the property safe for its intended use. Measures may include the application of institutional controls and other means of preventing exposure. Measures need not include soil or groundwater remediation by the purchaser other than those measures necessary to make the property safe for its intended use.

(5) The purchaser has demonstrated that the seller or another responsible party has provided financial assurance equivalent to the full cost of implementation of the response, remedial action, or natural resources restoration at the property to unrestricted use standards, as defined in G.S. 130A-310.31. Financial assurance mechanisms may include, under terms and conditions approved by the Secretary, letters of credit, insurance, surety bonds, and trust funds.

(6) The purchaser has provided and continues to provide full cooperation, assistance, and access to persons who are authorized to conduct any response, remedial action, or natural resources restoration at the property, including any cooperation and access necessary to install, operate, maintain, or secure any completed or partial response, remedial action, or natural resources restoration at the property. To the extent practical, response, remedial action, and natural resources restoration activities will be undertaken so as not to interference with use of the property and structures on the property. The purchaser shall not erect any new structure that would interfere with any required response, remedial action, or natural resources restoration activity until the activity has been completed.

(7) The purchaser has complied and continues to comply with any land-use restrictions established or relied on in connection with the response, remedial action, or natural resources restoration at the property.

(8) The purchaser has not impeded and continues to not impede the effectiveness or integrity of any institutional control employed at the property in connection with a response, remedial action, or natural resources restoration.

(9) The purchaser has complied or has agreed to comply with any requirement to record any land-use restrictions that may be required by the Secretary.

DRAFT FOR REVIEW ONLY

(10) The purchaser has complied and continues to comply with any request for information or administrative subpoena issued by the Secretary.

(11) The purchaser is not liable, potentially liable, or affiliated with any other person who is liable or potentially liable for any cost associated with the response, remedial action, or natural resources restoration at the property through any of the following:

a. Any direct or indirect familial relationship.

b. Any contractual, corporate, or financial relations, other than a contractual, corporate, or financial relationship that is created by an instrument through which title to the property is conveyed, an instrument through which sale or purchase of the property is financed, or by a contract for the sale of goods or services.

c. A reorganization in bankruptcy of a business entity that is liable or potentially liable.

(a3) A purchaser of any real property comprising an inactive hazardous substance or waste disposal site may submit a written request to the Secretary for a determination that the purchaser has met all the conditions set out in subsection (a2) of this section. A determination may be made subject to the purchaser meeting all the conditions in subsection (a2) of this section on or after closing that cannot reasonably be met prior to closing. A request for a determination that a purchaser has met all the conditions set out in subsection (a2) of this section must be accompanied by a fee of one thousand dollars ($1,000.00) to defray administrative costs of making the determination. The Secretary shall develop and implement procedures to provide expeditious review of requests for determinations so as to expedite real estate transactions involving contaminated properties.

(a4) A person whose interest or ownership in ~~the~~ real property comprising an inactive hazardous substance or waste disposal site is solely based on or derived from a security interest in the property shall not be considered a responsible party unless the person at any time manages, operates, or participates in the management or operation of, any facility located on the real property. A responsible party shall be directly liable to the State for any or all of the reasonably necessary expenses of developing and implementing a remedial action program for ~~such site.~~ the property. The Secretary shall bring an action for reimbursement of the Inactive Hazardous Sites Cleanup Fund in the name of the State in the superior court of Wake County, the county in which the site is ~~located~~ located, or in an appropriate federal court to recover such sum and the cost of bringing the action. The State must show that a danger to the public health or the environment existed and that the State complied with the provisions of this Part.

(b) ~~There shall be no liability under this section for a person who can establish by a preponderance of the evidence that the danger to the public health or the environment caused by the site was caused solely by:~~

~~(1) An act of God; or~~

~~(2) An act of war; or~~

DRAFT FOR REVIEW ONLY

~~(3) An intentional act or omission of a third party (but this defense shall not be available if the act or omission is that of an employee or agent of the defendant, or if the act or omission occurs in connection with a contractual relationship with the defendant); or~~

~~(4) Any combination of the above causes.~~

The State shall have a lien on any property with respect to which the State has unrecovered costs for a response, remedial action, or natural resources restoration. The amount of the lien shall be the amount of the unrecovered costs. A lien under this subsection shall be superior to all other liens on the property.

(c) The definitions set out in G.S. 130A-310.31(b) apply to this subsection. Any person may submit a written request to the Department for a determination that a site that is subject to this Part has been remediated to unrestricted use standards as provided in Part 5 of Article 9 of Chapter 130A of the General Statutes. A request for a determination that a site has been remediated to unrestricted use standards shall be accompanied by a fee required by G.S. 130A-310.39(a)(2). If the Department determines that the site has been remediated to unrestricted use standards, the Department shall issue a written notification that no further remediation will be required at the site. The notification shall state that no further remediation will be required at the site unless the Department later determines, based on new information or information not previously provided to the Department, that the site has not been remediated to unrestricted use standards or that the Department was provided with false or incomplete information. Under any of those circumstances, the Department may withdraw the notification and require responsible parties to remediate the site to unrestricted use standards."

SECTION 5. G.S. 143-215.3 is amended by adding a new subsection to read:

"(g) The provisions of subdivisions (a), (a1), (a2), (a3), (a4), and (b) of G.S. 130A-310.7 govern responsibility for a release, discharge, deposit, or disposal of oil, hazardous substances, waste, or other contaminants regulated under this Article or under Article 21A of this Chapter, including any release or discharge of petroleum from an underground storage tank or an above ground storage tank."

SECTION 6. G.S. 130A-310.31(b)(3) reads as rewritten:

"(3) 'Brownfields property' or 'brownfields site' means abandoned, idled, or underused property at which expansion or redevelopment is hindered by actual environmental contamination or the possibility of environmental contamination and that is or may be subject to remediation ~~under any~~ under:

a. Any State remedial ~~program other than Part 2A of Article 21A of Chapter 143 of the General Statutes or that is or may be subject to remediation under the~~ program or

b. The Comprehensive Environmental Response, Compensation and Liability Act of 1980, as ~~amended (42 U.S.C. § 9601 et seq.).~~amended, (42. U.S.C. § 9601 et seq.) except for property

DRAFT FOR REVIEW ONLY

listed on the National Priorities List pursuant to 42 U.S.C. § 9605."

SECTION 7. G.S. 130A-310.31(b)(10) reads as rewritten:

"(10) 'Prospective developer' means any person ~~who desires~~ with a bona fide, demonstrable desire to either buy or sell a brownfields property for the purpose of developing or redeveloping that brownfields property and who did not cause or contribute to the contamination at the brownfields property."

SECTION 8. G.S. 130A-310.34(b) reads as rewritten:

"(b) Publication of the approved summary of the Notice of Intent in the North Carolina Register and publication in a newspaper of general circulation shall begin a public comment period of at least ~~60~~ 30 days from the later date of publication. During the public comment period, members of the public, residents of the community in which the brownfields property is located, and local governments having jurisdiction over the brownfields property may submit comment on the proposed brownfields agreement, including methods and degree of remediation, future land uses, and impact on local employment."

SECTION 9. G.S. 130A-310.34(c) reads as rewritten:

"(c) Any person who desires a public meeting on a proposed brownfields agreement shall submit a written request for a public meeting to the Department within ~~30~~21 days after the public comment period begins. The Department shall consider all requests for a public meeting and shall hold a public meeting if the Department determines that there is significant public interest in the proposed brownfields agreement. If the Department decides to hold a public meeting, the Department shall, at least ~~30~~15 days prior to the public meeting, mail written notice of the public meeting to all persons who requested the public meeting and to any other person who had previously requested notice. The Department shall also direct the prospective developer to publish, at least ~~30~~15 days prior to the date of the public meeting, a notice of the public meeting at least one time in a newspaper having general circulation in such county where the brownfields property is located. In any county in which there is more than one newspaper having general circulation, the Department shall direct the prospective developer to publish a copy of the notice in as many newspapers having general circulation in the county as the Department in its discretion determines to be necessary to assure that the notice is generally available throughout the county. The Department shall prescribe the form and content of the notice to be published. The Department shall prescribe the procedures to be followed in the public meeting. The Department shall take detailed minutes of the meeting. The minutes shall include any written comments, exhibits, or documents presented at the meeting."

SECTION 10. G.S. 130A-310.37(c) reads as rewritten:

"(c) The Department shall not enter into a brownfields agreement for ~~a brownfields site that is identified by the United States Environmental Protection Agency as a federal Superfund site pursuant to 40 Code of Federal Regulations, Part 300 (1 July 1996 Edition).~~any site listed on the National Priorities List pursuant to CERCLA/SARA."

SECTION 11. G.S. 105-277.13(a) reads as rewritten:

DRAFT

"(a) Qualifying improvements on brownfields properties are designated a special class of property under Article V, Sec. 2(2) of the North Carolina Constitution and shall be appraised, assessed, and taxed in accordance with this section. ~~An~~ Except as provided in this subsection, an owner of land who is protected from liability for remediation pursuant to G.S. 130A-310.33(a) is entitled to the partial exclusion provided by this section for the first five taxable years beginning after completion of qualifying improvements made after the later of July 1, 2000, or the date of the brownfields agreement. If a person who caused or contributed to contamination at a brownfields property holds any ownership interest in the property, that person is not eligible for the partial exclusion. After property has qualified for the exclusion provided by this section, the assessor for the county in which the property is located shall annually appraise the improvements made to the property during the period of time that the owner is entitled to the exclusion."

SECTION 12: This act becomes effective 1 July 2004.

Short Title: Water Conservation/Submeters. (Public)

Sponsors: .

Referred to:

A BILL TO BE ENTITLED

AN ACT TO PROMOTE WATER CONSERVATION IN MULTI-FAMILY RESIDENTIAL PROPERTIES BY AMENDING VARIOUS STATE LAWS REGARDING THE USE OF SUBMETERS IN CONSECUTIVE WATER SYSTEMS IN LIGHT OF CHANGES IN POLICY RELATED TO WATER TESTING REQUIREMENTS AND WATER CONSERVATION BY THE UNITED STATES ENVIRONMENTAL PROTECTION AGENCY, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. G.S. 42-3 reads as rewritten:

"**§ 42-3. Term forfeited for nonpayment of rent.**

In all verbal or written leases of real property of any kind in which is fixed a definite time for the payment of the rent reserved therein, there shall be implied a forfeiture of the term upon failure to pay the rent within 10 days after a demand is made by the lessor or his agent on said lessee for all past-due rent, and the lessor may forthwith enter and dispossess the tenant without having declared such forfeiture or reserved the right of reentry in the lease. Where a written lease ~~establishes a monthly rent that includes~~authorizes allocation to the tenant of the cost of water and sewer services ~~under G.S. 62-110(g), the terms "rent" and "rental payment", as used in this Chapter, mean base rent only.~~ pursuant to G.S. 42-42.1, there shall be implied a forfeiture of the term upon failure by the tenant to pay for water and sewer services within 25 days after a bill is sent by the lessor or the lessor's agent to the lessee for the cost of water and sewer service."

SECTION 2. G.S. 42-26(b) is repealed.

SECTION 3. G.S. 43-33 reads as rewritten:

"**§ 42-33. Rent and costs tendered by tenant.**

DRAFT FOR REVIEW ONLY

If, in any action brought to recover the possession of demised premises upon a forfeiture for the nonpayment of ~~rent,~~rent or nonpayment of the cost of water and sewer services, the tenant, before judgment given in such action, pays or tenders the ~~rent due~~rent, the costs due for water and sewer services, and the costs of the action, all further proceedings in such action shall cease. If the plaintiff further prosecutes his action, and the defendant pays into court for the use of the plaintiff a sum equal to that which shall be found to be due, and the costs, to the time of such payment, or to the time of a tender and refusal, if one has occurred, the defendant shall recover from the plaintiff all subsequent costs; the plaintiff shall be allowed to receive the sum paid into court for his use, and the proceedings shall be stayed."

SECTION 4. Article 5 of Chapter 42 of the General Statutes is amended by adding a new section to read:

"**§ 42-42.1. Water Conservation.**

(a) For the purpose of encouraging water conservation, pursuant to a written rental agreement, a landlord may allocate the cost of providing water and sewer service to a tenant. The cost allocated to the tenant cannot exceed the actual price of the water and sewer service paid by the landlord, plus a reasonable administrative fee. The administrative fee cannot exceed $3.75 per month per tenant. Allocation of the cost for water and sewer service by the landlord to the tenant may be computed by using equipment that measures the tenant's actual use of hot water, cold water, or both, and calculates the tenant's usage as a percentage of the total water used on the premises.

(b) All equipment used to measure water usage must comply with guidelines promulgated by the American Water Works Association.

(c) The landlord shall maintain records for a minimum of twelve months that demonstrate how each tenant's allocated costs were calculated for water and sewer service. Upon advanced written notice to the landlord, a tenant may inspect these records during reasonable business hours and may obtain a copy of the records at a reasonable cost, not to exceed $.25 per page.

(d) Bills for water and sewer service sent by the landlord to the tenant shall contain all the following information:

(1) The amount of water and sewer services allocated to the tenant during the billing period.

(2) Beginning and ending dates for the billing period.

(3) The due date for payment of the bill.

(4) The past due date which is the first date that a late fee can be imposed.

(5) Any late fee that will be applied if the bill is not paid by the past due date.

(6) A telephone number and address that the tenant can use to obtain more information about the bill.

(e) The landlord may not disconnect or terminate the tenant's water and sewer services due to the tenant's nonpayment of the amount due for water and sewer services."

SECTION 5. G.S. 42-46(d) reads as rewritten:

"(d) ~~A lessor shall not charge a late fee to a lessee because of the lessee's failure to pay additional rent for water and sewer services provided pursuant to G.S. 62-110(g).~~ If agreed to in a written rental agreement, a landlord may charge a tenant a fee not to exceed $5.00 per month if payment has not been received by the landlord within 25 days of billing for costs allocated to the tenant for water and sewer service."

SECTION 6. G.S. 42-51 reads as rewritten:

"**§ 42-51. Permitted uses of the deposit.**

Security deposits for residential dwelling units shall be permitted only for the tenant's possible nonpayment of ~~base~~ rent and ~~additional rent~~costs for water and sewer ~~services provided pursuant to G.S. 62-110(g),~~services, damage to the premises, nonfulfillment of rental period, any unpaid bills ~~which~~ that become a lien against the demised property due to the tenant's occupancy, costs of re-renting the premises after breach by the tenant, costs of removal and storage of tenant's property after a summary ejectment proceeding or court costs in connection with terminating a tenancy. The security deposit shall not exceed an amount equal to two weeks' rent if a tenancy is week to week, one and one-half months' rent if a tenancy is month to month, and two months' rent for terms greater than month to month. These deposits must be fully accounted for by the landlord as set forth in G.S. 42-52."

SECTION 7. G.S. 62-110(g) reads as rewritten:

"(g) ~~For the purpose of encouraging water conservation, the Commission may, consistent with the public interest, adopt procedures that allow a lessor, pursuant to a written rental agreement, to allocate the costs for providing water and sewer service on a metered use basis to persons who occupy the same contiguous premises. A written rental agreement shall specify a monthly rent that shall be the sum of the base rent plus additional rent at a rate that does not exceed the actual purchase price of the water and sewer service to the provider plus a reasonable administrative fee. The Commission shall issue rules to define contiguous premises and to implement this subsection. In issuing the rule to define contiguous premises, the Commission shall consider contiguous premises where manufactured homes, as defined in G.S. 143-145(7), or spaces for manufactured homes are rented. Notwithstanding any other provision of this Chapter, the Commission shall determine the extent to which the services shall be regulated and, to the extent necessary to protect the public interest, regulate the terms, conditions, and rates that may be allocated for the services. Nothing in this subsection shall be construed to alter the rights, obligations, or remedies of persons providing water and sewer services and their customers under any other provision of law.~~ The Commission shall not have jurisdiction over the allocation of the costs of providing water and sewer service by landlords to tenants pursuant to G.S. 42-42.1."

SECTION 8. G.S. 130A-315(d) reads as rewritten:

"(d) When a person that receives water from a public water system is authorized ~~by the Utilities Commission, pursuant to G.S. 62-110(g), to install sub-meters and~~ to allocate the costs for providing water ~~service to persons who occupy the same contiguous premises,~~and sewer service pursuant to G.S. 42-42.1, that person shall be regulated as a consecutive water system. The monitoring, analysis, and record-keeping requirements applicable to consecutive water systems under this section shall be

satisfied by the monitoring, analysis, and record keeping performed by the supplying water system and submitted to the Department in compliance with this section. The supplying water system shall perform the same level of monitoring, analysis, and record keeping that the supplying system would perform if the person that receives the water had not been authorized to allocate the costs for providing water service under G.S. ~~62-110(g),~~42-42.1, but the supplying water system shall not be required to perform additional monitoring, analysis, and record keeping. A supplying water system is not responsible for operation, maintenance, or repair of the consecutive water system."

SECTION 9. This act becomes effective 1 July 2004.

Short Title: Environmental Reports Amendments. (Public)

Sponsors: .

Referred to:

A BILL TO BE ENTITLED

AN ACT TO AMEND VARIOUS ENVIRONMENTAL REPORTING REQUIREMENTS, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. Article 4 of Chapter 113A of the General Statutes is amended by adding a new section to read:

"**§ 113A-67. Annual report.**

The Department shall report to the Environmental Review Commission on the implementation of this Article on or before 1 October of each year. The Department shall include in the report an analysis of how well the implementation of the Sedimentation Pollution Control Act of 1973 is preventing the sedimentation of streams, rivers, lakes, and other waters of the State. The report shall also include a review of the effectiveness of local erosion and sedimentation control programs."

SECTION 2. G.S. 113A-235(c) reads as rewritten:

"(c) Report. – The Department shall report on the implementation of this Article to the Environmental Review Commission no later than 1 ~~November~~ October of each year. The Department shall maintain an inventory of all conservation easements held by the Department. The inventory shall be included in the report required by this subsection."

SECTION 3. G.S. 113A-241(c) reads as rewritten:

"(c) The Secretary of Environment and Natural Resources shall report to the Governor and the Environmental Review Commission on or before 1 ~~September~~ October of each year on the State's progress towards attaining the goal established in this section."

SECTION 4. G.S. 143-215.107C(b) reads as rewritten:

"(b) It shall be the goal of the State that on and after 1 January 2004 at least seventy-five percent (75%) of the new or replacement light duty cars and trucks purchased by the State will be alternative-fueled vehicles or low emission vehicles. The Department of Administration, the Department of Transportation, and the Department of Environment and Natural Resources shall jointly develop a plan to achieve this goal and to fuel and maintain these vehicles. ~~The Department of Administration shall report on progress in developing and implementing this plan and achieving this goal to the Environmental Review Commission on 1 September of each year beginning 1 September 2000.~~ For purposes of this section, a light duty car or truck is one that is rated at 8,500 pounds or less Gross Vehicle Weight Rating (GVWR)."

SECTION 5. G.S. 143-355.1 is amended by adding a new subsection to read:

"(g) The Council shall report on the implementation of this section to the Secretary, the Governor, and the Environmental Review Commission no later than 1 October of each year. The report shall include a review of drought advisories issued by the Council and any recommendations to improve coordination among local, State, and federal agencies; public water systems; and water users to improve the management and mitigation of the harmful effects of drought."

SECTION 6. The Department of Environment and Natural Resources shall submit the first report required by G.S. 113A-67, as enacted by Section 1 of this act, to the Environmental Review Commission on or before 1 October 2005. The Drought Management Advisory Council shall submit the first report required by G.S. 143-355.1 as enacted by Section 5 of this act, to the Secretary of Environment and Natural Resources, the Governor, and the Environmental Review Commission on or before 1 October 2005.

SECTION 7. This act is effective when it becomes law.

Referred to:

A BILL TO BE ENTITLED

AN ACT TO MAKE CLARIFYING, CONFORMING, AND TECHNICAL AMENDMENTS TO VARIOUS LAWS RELATED TO THE ENVIRONMENT, PUBLIC HEALTH, AND NATURAL RESOURCES, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. G.S. 113-301.1 reads as rewritten:

"**§ 113-301.1. Wildlife Resources Commission obligated to make efforts to notify members of the public who may be affected by operative provisions of statutes and ~~regulations.~~rules.**

(a) The Wildlife Resources Commission must prepare and distribute to license agents informational materials relating to hunting, fishing, trapping, and boating laws and ~~regulations~~ rules administered by the Wildlife Resources Commission. The materials furnished an agent should be appropriate to the types of licenses ~~he~~ the agent customarily handles, and in a quantity reasonably anticipated to be sufficient to meet the needs of licensees obtaining licenses from the agent.

(b) In issuing new licenses and permits from the Raleigh office ~~by mail~~by mail, the Wildlife Resources Commission must generally inform the licensee or permittee of governing provisions of law and ~~regulations~~ rules applicable to the type of license or permit secured. In issuing renewal licenses and permits by mail, the Wildlife Resources Commission must inform the licensee or permittee of any substantial changes in the law or ~~regulations which~~ rules that may affect the activities of the licensee or permittee.

(c) After adopting regulations ~~which~~ that impose new restrictions upon the activities of members of the public who do not normally hold licenses or permits to engage in the activity in question, the Wildlife Resources Commission must take appropriate steps to publicize the new restrictions. These steps may include press

releases to the media, informing local authorities, and other forms of communication that give promise of reaching the segment of the public affected.

(d) After adopting new restrictions on hunting, fishing, trapping, or boating at a time other than when usual annual changes in the ~~regulations~~ rules affecting those activities are adopted, the Wildlife Resources Commission must take appropriate steps to publicize the new restrictions in a manner designed to reach persons who may be affected.

(e) Repealed by Session Laws 1987, c. 827, s. 9."

SECTION 2. G.S. 113A-115.1(b) reads as rewritten:

"(b) No person shall construct a permanent erosion control structure in an ocean shoreline. The Commission shall not permit the construction of a temporary erosion control structure that consists of anything other than sandbags in an ocean shoreline. This section shall not apply to (i) any permanent erosion control structure that is approved pursuant to an exception set out in a rule adopted by the Commission prior to 1 July 2003 or (ii) any permanent erosion control structure that was originally constructed prior to 1 July 1974 and that has since been in continuous use to protect an inlet that is maintained for navigation. This section shall not be construed to limit the authority of the Commission to adopt rules to designate or protect areas of environmental concern, to govern the use of sandbags, or to govern the use of erosion ~~coastal~~ control structures in estuarine shorelines."

SECTION 3. G.S. 121-34 reads as rewritten:

"**§ 121-34. Short title.**

The title of this Article shall be known as the ~~"Historic~~'Conservation and Historic Preservation ~~and Conservation~~ Agreements Act.'"

SECTION 4. G.S. 121-42 reads as rewritten:

"**§ 121-42. Citation of Article.**

This Article shall be known and may be cited as ~~"Uniform Conservation~~the 'Conservation and Historic Preservation ~~Agreement~~ Agreements Act.'"

SECTION 5. This act is effective when it becomes law.

Referred to:

A BILL TO BE ENTITLED

AN ACT TO REQUIRE HOLDERS OF CERTAIN ABC PERMITS TO RECYCLE ALL RECYCLABLE BEVERAGE CONTAINERS, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. Article 10 of Chapter 18B of the General Statutes is amended by adding a new section to read:

"**§ 18B-1006.1. Additional requirement for certain permittees to recycle beverage containers.**

Holders of on-premises malt beverage permits, on-premises unfortified wine permits, on-premises fortified wine permits, and mixed beverages permits shall separate, store, and provide for the collection for recycling of all recyclable beverage containers of all beverages sold at retail on the premises. A permittee has satisfied the requirements of this section if it follows a recycling program that is based upon the model recycling program developed by the North Carolina Alcoholic Beverage Control Commission under G.S. 130A-309.14."

SECTION 2. G.S. 130A-309.14 is amended by adding a new subsection to read:

"(m) The North Carolina Alcoholic Beverage Control Commission, with assistance from the Department, shall develop a model recycling program for holders of on-premises malt beverage permits, on-premises unfortified wine permits, on-premises fortified wine permits, and mixed beverages permits under G.S. 18B-1001 that are required to recycle beverage containers under G.S. 18B-1006.1. The North Carolina Alcoholic Beverage Control Commission may adopt rules to comply with this section."

SECTION 3. This act becomes effective October 1, 2004.

Referred to:

A BILL TO BE ENTITLED

AN ACT IMPROVE AND ACCELERATE PROCESSING OF CLAIMS UNDER THE LEAKING PETROLEUM UNDERGROUND STORAGE TANK CLEANUP PROGRAM, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. Part 2A of Article 21A of Chapter 143 of the General Statutes is amended by adding a new section to read:

"**§ 143-215.94Q. Liquidity Program.**

(a) The General Assembly finds that the Department and the State have existing obligations under this Part, including the obligation under G.S. 143-215.94E to pay claims for reimbursement duly filed with the Department by owners, operators and landowners from the Commercial Fund and the Noncommercial Fund, which obligations impose substantial burdens on the State. The General Assembly has previously found under G.S. 143–215.94V that solvency of the Commercial Fund and the Noncommercial Fund is essential to the goals of the underground storage tank program. The General Assembly finds that:

(1) An appropriate means of managing and ensuring the solvency of the Funds is a liquidity program that will facilitate the sale of claims made against the Commercial Fund and the Noncommercial Fund by owners, operators and landowners who may require liquidity in anticipation of the ultimate payment of the claims by the Commercial Fund and the Noncommercial Fund.

(2) The most cost-effective means to provide a liquidity program is for the Department to arrange for and incur obligations to provide funding to be used to purchase claims or in lieu thereof to participate in the

establishment and operation of a non-profit organization that will incur the liquidity obligations and purchase the claims.

(3) Cost-efficiency may be improved if the non-profit organization operates in one or more states in addition to the State.

(b) The Department, acting by and through the Secretary, is hereby authorized to enter into discussions with the incorporator of a non-profit corporation to be formed to provide liquidity for owners, operators and landowners with claims against the Commercial Fund and the Noncommercial Fund and against similar funds in one or more other states and with officials of appropriate agencies or political subdivisions of such other states. If the Secretary makes a written determination that he reasonably expects that claimholders participating in the liquidity program will benefit from the State's participation in the liquidity program, the Department is authorized to enter into agreements with the non-profit corporation and other agencies or political subdivisions to establish a liquidity program.

(c) The State may be represented on the governing body of the non-profit corporation by one or more directors, as provided in the organizational documents of the non-profit corporation, each of whom shall be appointed by and serve at the pleasure of the Governor. The Office of Budget and Management may provide advice and guidance to any director appointed under this subsection on any financial matters relating to the non-profit corporation and its operation of the liquidity program, including its annual budget and financial statements.

(d) The Department may make payments with respect to any claim made by an owner, operator or landowner under G.S. 143-215.94E directly to the non-profit corporation, provided that the owner, operator or landowner shall have delivered to the Department a copy of an assignment showing the non-profit corporation as assignee of such claim. The Department shall develop and approve the claim assignment form.

(e) If the Secretary is unable to make the finding described in subsection (b) of this section with respect to the non-profit corporation, the Department is authorized to arrange for and incur liquidity obligations and use the proceeds thereof to provide liquidity either directly or through one or more non-profit organizations to owners, operators or landowners holding claims against the Commercial and Noncommercial Fund.

(f) Under no circumstances will the Department be authorized in any agreement relating to the liquidity program entered into with the non-profit corporation, any agency or political subdivision of any other state, any other for-profit or non-profit organization or provider of liquidity obligations to commit in any way to make payments in excess of the aggregate face amount of approved claims against the Commercial and Noncommercial Fund purchased under the liquidity program. No liquidity obligation shall constitute an obligation of the State, the Department or any other agency, department or political subdivision of the State, payable from other than the approved claims against the Commercial or Noncommercial Fun purchased with the proceeds thereof, and nothing in this section shall be deemed to amend G.S. 143-215.94J or otherwise change the limitation of the State's liability contained in that section.

(g) The Department is directed to implement this section expeditiously. The implementation of a Liquidity Program through the Department will provide a significant service to the State by reducing its administrative burden of maintaining the solvency of the Funds."

SECTION 2. This act is effective when it becomes law.

Referred to:

A BILL TO BE ENTITLED

AN ACT TO CLARIFY THAT A SEPTIC TANK SYSTEM THAT IS FOR A LOT PLATTED PRIOR TO JULY 1, 1977, AND THAT IS OPERATED IN SOILS THAT ARE IN SOIL GROUP 1 MAY BE LOCATED TEN FEET OR MORE FROM ANY OTHER SEPTIC TANK SYSTEM, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. G.S. 130A-335(e) reads as rewritten:

"(e) The rules of the Commission and the rules of the local board of health shall address at least the following: Wastewater characteristics; Design unit; Design capacity; Design volume; Criteria for the design, installation, operation, maintenance and performance of wastewater collection, treatment and disposal systems; Soil morphology and drainage; Topography and landscape position; Depth to seasonally high water table, rock and water impeding formations; Proximity to water supply wells, shellfish waters, estuaries, marshes, wetlands, areas subject to frequent flooding, streams, lakes, swamps and other bodies of surface or groundwaters; Density of wastewater collection, treatment and disposal systems in a geographical area; Requirements for issuance, suspension and revocation of permits; and Other factors which affect the effective operation and performance of wastewater collection, treatment and disposal systems. The rules regarding required design capacity and required design volume for wastewater systems shall provide that exceptions may be granted upon a showing that a system is adequate to meet actual daily water consumption. This subsection is subject to subsection (e1) of this section."

SECTION 2. G.S. 130A-335 is amended by adding a new subsection to read:

"(e1) A septic tank system that is for a lot that was platted prior to July 1, 1977 and that is operated in soils that are classified as Soil Group 1 may be located 10 feet or

more from any other septic tank system. Soils are classified as Soil Group 1 when the local health department evaluates the soil texture and characterizes the soils in accordance with Commission rules as sandy texture soils."

SECTION 3. This act is effective when it becomes law and applies to applications for permits made on or after that date.

AN ACT TO DESIGNATE AS TEMPORARY UNVEGETATED BEACH AREAS CERTAIN OCEANFRONT AREAS ON HATTERAS ISLAND WHERE THE VEGETATION LINE WAS DESTROYED BY HURRICANE ISABEL AND THE REMNANTS OF THE VEGETATION LINE WERE BURIED BY THE CONSTRUCTION OF AN EMERGENCY BERM, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. For purposes of implementing Article 7 of Chapter 113A of the General Statutes and rules adopted pursuant to that Article and notwithstanding any provision of that Article or those rules to the contrary, there are hereby designated as temporary unvegetated beach areas those oceanfront areas on Hatteras Island west of the new inlet breach in Dare County in which the vegetation line as shown on North Carolina Department of Transportation aerial photographs dated 2 June 2003, was destroyed as a result of Hurricane Isabel on 18 September 2003, and the remnants of which were subsequently buried by the construction of an emergency berm. This designation shall continue until stable, natural vegetation is reestablished or until the area is permanently designated as an unvegetated beach area pursuant to 15A NCAC 07H .0304(4)(a).

SECTION 2. This act is effective when it becomes law and expires when a permanent rule that makes the designation set out in Section 1 of this act becomes effective.

DRAFT

MINUTES
ENVIRONMENTAL REVIEW COMMISSION
October 21, 2004

The Environmental Review Commission (ERC) met on Thursday 21 October 2004 at 9:30 a.m. in Room 643 of the Legislative Office Building.

Representative Pryor Gibson presided over the 21 October 2004 meeting. The following members were present: Senators Albertson, Clodfelter, Dorsett, Horton, Kinnaird, and Weinstein, and Representatives Fox, Gibson, Hackney, McComas, Weiss and Williams. Mr. George Givens, Commission Counsel, Jeffrey Hudson, Assistant Commission Counsel, Tim Dodge, Research Assistant, and Mary Watson, Commission Clerk were also present.

On 7 October 2004, notice was sent to members and interested parties via e-mail and regular mail. A copy of the notice is included in the attachments to these minutes as **Exhibit A**. A copy of the visitor registration and the agenda for the meeting are included in the attachments as **Exhibits B and C**.

Representative Gibson called the meeting to order and welcomed members and visitors attending the meeting.

George Givens, Commission Counsel, was asked to explain the agenda. He asked members to sign their reimbursement forms and asked visitor to sign the attendance sheet.

Mr. Givens said that he had distributed to each member, copies of a packet of reports related to today's agenda, read-only reports, and reports held for future presentations. These reports are listed as **Exhibit D**.

Also reports were handed out that are required by law to be made to the Commission. These reports, entitled Review of Legislative Action on the Environment, are listed as **Exhibit E**.

Mr. Givens said that rather than having reports driven agenda, he was trying a new approach of having a program driven agenda based on reports of the divisions. Today we would hear from the Division of Water Quality and the Division of Waste Management.

Mr. Givens said that the next meeting of the ERC is scheduled for 19 November 2004. On 18 November 2004, the ERC will meet jointly with the Joint Legislative Commission on Seafood and Aquaculture at 11:00 a.m. in Room 643.

Dr. David H. Moreau, Chairman, Environmental Management Commission gave a quarterly report by the Environmental Management

Commission (EMC) as to its operations, activities, programs, and progress during 2004.

Dr. Moreau said that the most significant action addressed by EMC in the past quarter was the requirements for emission controls from heavy-duty diesel vehicles.

Dr. Moreau said that after the application of the federal regulations in the revisions to the Clean Air Act of 1990, after the revision to the state implementation plan and after the Clean Smokestacks Act, the largest single source remaining for nitrogen oxides is those from heavy-duty diesel vehicles. This constitutes about 25 percent of the total emissions of nitrogen oxides in North Carolina.

Dr. Moreau said that controlling these emissions is critical to achieving the ozone standards and avoiding federal sanctions on highway funds as a result.

Dr. Moreau said that EPA adopted a rule in 2001 that set the standards for the 2007 model year for the heavy-duty engines. They also adopted as a part of the clean air act, that the State of California as the only state that could set state specific standards. However, they did allow other states to adopt the California standards.

Dr. Moreau said that if everything goes on schedule, the rules would make any action by the State of North Carolina unnecessary.

Dr. Moreau said there had been concern that EPA would delay implementation of the 2007 model year regulations. Therefore, North Carolina has adopted to insure that we will stay on course to meet our compliance schedules for ozone.

Dr. Moreau said that a proposal was sent to public hearing to adopt the California standards. Those hearings were held and the action taken this month was to adopt those regulations. The hope is that the federal rules will come into play.

Dr. Moreau said that concern has been raised that we were taking action that would put us at a disadvantage to surrounding states. But, given the uncertainties about the implementation of the federal regulations, we will have to wait and see.

Senator Clodfelter asked Dr. Moreau how many other states had adopted the California standards.

Dr. Moreau said that between eight and thirteen states currently have the California standards under consideration. As to dates of adoption, he did not have an answer.

Mr. Givens said that there were about six states that have already adopted the California standards, all in the northeast.

Dr. Moreau said the other significant action taken by EMC addresses the coastal waters. For many years fecal coloform has been the indicator organism to identify the presence of pollution. It is the indicator of the presence of sewage.

Dr. Moreau said there has been increasing concern in the scientific community that the crudeness of that indicator required the adoption of a new standard indicating pollution in the coastal waters. There has been some delay by EPA in providing guidance for this standard. The deadline expired in April 2004 and EPA started to promulgate rules for all of the states that had not yet adopted this.

Dr. Moreau said that North Carolina's delay was in large part due to the fact that EPA had failed to provide sufficient guidance.

Dr. Moreau said that when these standards have been proposed and have gone to public hearing.

Dr. Moreau said that less significant actions by EMC are reclassification of a portion of Rocky River to permit construction of an enlargement of water supply reservoir for Siler City.

Dr. Moreau said that EMC has approved a final Catawba River Basin water quality plan and responded to objections from the Rules Review commission regarding a series of air quality rules.

Senator Clodfelter asked Dr. Moreau what percentage of vehicles account for heavy-duty diesel emissions.

Dr. Moreau said that he would provide this information to Sen. Clodfelter.

Representative Williams asked Dr. Moreau to what extent would adoption of the California standards limit or hurt our businesses in this state in competing with other states.

Dr. Moreau said that the rules apply to any engine that is sold or registered in North Carolina and applies only to model years 2008 and after. If the federal rule goes into effect all states would be covered and in the exact same situation. The California is exactly the same as the federal rule, at this time.

Representative Williams asked Dr. Moreau if we implement these California standards, the trucks registered in North Carolina would have to follow these rules and yet trucks operating from out of state would not be covered by this rule.

Representative Williams asked Dr. Moreau if this would make trucking companies based in North Carolina look at other bases for their operations that do not implement the California rule.

Dr. Moreau said that this is an argument being put forward.

Senator Clodfelter asked Dr. Moreau for a list of the states that have this issue under consideration.

Dr. Moreau said that he has this information and will provide it to Sen. Clodfelter.

Representative McComas asked that he be included in the packet of information and added that we need to be careful that we do not become another California.

Dr. Moreau emphasized the fact that the standards North Carolina adopted are the federal standards. By doing this, we are ensuring that those vehicles would come under federal regulation in model year 2008. The standards are not different; the concern is that EPA may slide.

Dr. Moreau said that we have no idea what EPA may comes up with. And, if EPA changes, we would have to take a look at what the nature of those changes is.

Representative McComas asked Dr. Moreau if he was aware of the new emission standards coming out in 2007.

Dr. Moreau said that he was aware of the new emission standards coming out in 2007; however, under North Carolina's regulations under EPA, we cannot get these rules into effect before model year 2008. Industry has to be given a two-year lead-time before the standards can actually be implemented.

Representative Hackney asked Dr. Moreau if the rule applied only to new trucks.

Dr. Moreau said that the rule applies to new trucks only and does not apply to used trucks.

Dr. Moreau added that the question had come up from Duke Power regarding new trucks that were bought and registered in South Carolina could be moved into North Carolina.

Dr. Moreau said that the answer was yes.

Mr. Givens said that the issue here was that there were basically two standards: a national standard and a California standard. Under the Clean Air Act, individual states can opt for one or the other, the California standard being higher.

Dr. Moreau said that it was his understanding that California adopted the federal standard, the only question here is whether or not EPA is going to

change its federal standard and then the California standard would remain unchanged.

Mr. Givens said that air quality is the major focus for the November meeting and clarification on this issue would be provided to members at that time.

Mr. Alan W. Klimek, Director, Division of Water Quality, Department of Environment and Natural Resources (DENR), gave a report on the programs, activities, and priorities of the Division of Water Quality. A copy of the Annual report on Progress in developing and implementing basinwide water quality management plans and the annual report on permitting and inspecting animal waste management systems/Animal Waste Compliance Report are both included in the Exhibit D packet of information. A copy of Mr. Klimek's slides is listed as **Exhibit F**.

Mr. Klimek spoke on several of the biggest sources: animal, wastewater and stormwater, and how these three are tied into management plans.

Mr. Klimek said that there are about 2500 farms, which have soil and water inspections once a year. During the dry years, discharges are low and in the wetter years are around 150. Freeboard violations are when the lagoons are too high and this is also correlated with wet weather events.

Mr. Klimek said that one of the encouraging things is that violations for over application have gone down from 200 to 100.

Mr. Givens asked Mr. Klimek if compliance was better and was that why we have had a good year.

Mr. Klimek said that we have had a good year. Even with all of the hurricanes and full lagoons, there were no violations.

Mr. Klimek said that a summary of discharges to surface water from wastewater treatment plants showed the number of facilities being regulated has gone down. One of the reasons is from plant closures and some facilities that have connected to larger sources.

Mr. Klimek said that most major facilities are inspected each year and two thirds of the minor facilities are inspected each year with a total of three quarter of a million to on million dollars in penalties. The majority of these violations are permitting limit violations.

Representative Williams asked Mr. Klimek if he had a number of the violations per year.

Mr. Klimek said it was around 700 violations.

Mr. Klimek said that the state is in the third cycle of basinwide management planning.

Mr. Klimek said that a plan is done on all 17 major river basins in the state every five year. The Tar Pamlico River Basin was done this year. It has a very significant management strategy.

Mr. Klimek said the Tar Pam showed a reduction from agriculture from 1992-2000 of 35 percent, which exceeds the 30 percent reduction goal.

Senator Horton asked if the 30 percent reduction goal was achieved in the Tar Pamlico River Basin.

Mr. Klimek answered in the affirmative.

Senator Clodfelter asked Mr. Klimek if based on the trend line, were they meeting their target. How does the 18 percent compare to the target.

Mr. Klimek said that 30 percent of what is coming in has translated to 18 percent in the river.

Mr. Klimek said that whole affluent toxicity tests were conducted in major facilities. Compliance has gone up from 85 percent compliance to 95 percent compliance.

Mr. Klimek said that with regard to stormwater, the urbanized areas that fall under the Phase II requirements are: education and outreach, public involvement, corrected illegal discharges, post construction site runoff controls and pollution prevention measures.

Mr. Klimek said that they have begun a lot with the outreach efforts. There is a grant with NCSU with twenty to thirty stormwater workshops with different communities.

Mr. Klimek said there are 123 municipalities that fall under the Phase II stormwater; permit applications have been received for 113. They are working with the Institute of Government to develop a model ordinance. A contractor has been hired to work with the design manual and the cities will be responsible within their jurisdiction.

Mr. Klimek said that of the total 40,000 miles of streams in North Carolina, only about 30 percent of them are rated. Of those, one-fourth is impaired.

Mr. Klimek said that the major cause of the impairment is biological integrity, mercury, low-dissolved oxygen, fecal coloform and sediment.

Representative Hackney asked Mr. Klimek where our emphasis should be to make the next major step in reducing that 25 percent of impaired streams.

Mr. Klimek said that it should be going with the Phase II and existing stormwater programs.

Representative Hackney said that these programs did not reach most of the streams.

Mr. Klimek asked Representative Hackney if he was referring to going back and fixing the streams that are impaired.

Representative Hackney said that he was talking about the 25 percent of the impaired streams and the applicability of the stormwater regulations.

Mr. Klimek said that Phase I addresses the new development and we will have to keep looking at the coast to make sure our stormwater requirements are adequate.

Mr. Klimek said that a whole new issue would be retrofitting. We have shifted from a point source focus to more of a nonpoint focus.

Representative said that most of the big developments in Chatham County are not in municipal areas but in the country.

Mr. Klimek said that this is a problem that needs to be addressed in the future.

Senator Kinnaird asked Mr. Klimek if we had adopted the rules turned down by the Rules Review Commission, would we address what Representative Hackney is talking about.

Mr. Klimek said that there would have been a wider coverage into some of those counties; however, the minimum federal requirements have been met.

Mr. Klimek concluded by showing a slide of the estuarine waters. One of the biggest causes of problems in these waters is Chlorophyll A or algaeblumes.

Senator Kinnaird asked Mr. Klimek how much economic loss comes from that fecal coloform.

Mr. Klimek said that there is an impact every time we close shellfish waters.

Mr. Klimek said that from 1990-2000, good improvements have been made in all three regions of the state, coastal, piedmont and mountains, with regard to fecal coloform and turbidity. With regard to dissolved oxygen, the problems are going up on the coast. This is being looked out to see if there is a trend that needs to be studied.

Representative Williams asked Mr. Klimek what the cause was of the dissolved oxygen increase at the coast.

Mr. Klimek said that the cause is unsure. It could be a cumulative load going down and settling in at the coast.

Mr. Klimek said that reorganization has been occurring in the Water Quality Division.

Senator Albertson asked if water quality was improved in the Neuse River basin.

Mr. Klimek answered in the affirmative.

Representative Weiss asked Mr. Klimek about an application in place that would greatly increase the load of nitrogen into the Neuse and would flow down to Raleigh's drinking water supply.

Mr. Klimek said this issue was currently out to public hearing.

Representative Weiss asked what the distance would be between where they are getting credit and where those credits would be used.

Mr. Klimek said that if you discharge at the top of the basin, only about ten percent would reach down here.

Representative Weiss asked about the trade downstream to upstream.

Mr. Klimek said that if there were no dam or Falls Lake, we would not have concern about nutrients.

Senator Albertson asked Mr. Klimek to address best management practices or BMP's.

Mr. Klimek said that BMP's being applied were using different nutrients on crops, field borders and water gates on the coast. About $100 million dollars of state cost share funds have been spent on these BMP's.

Representative Williams asked Mr. Klimek what the major cause was for closing shellfish waters.

Mr. Klimek said that the major cause was fecal coloform.

Representative Williams asked if any of this pollution was caused by cities on the coast and upstream that are dumping.

Mr. Klimek said that most of the municipalities were treating their waste properly and staying within their standards.

Representative Williams asked if the shopping center he showed in the slide was built with the erosion control and stormwater runoff measures that are currently in place. And, what was the cause of that stream having the problem with water if all of those measures were taken and were there not enough measures in place.

Mr. Klimek said that there were not requirements for stormwater controls at that shopping center at that time.

Representative Weiss asked Mr. Klimek what percentage of the streams was monitored in North Carolina.

Mr. Klimek said it was thirty percent.

Representative Weiss asked if monitoring of thirty percent of the streams was enough to be making good decision about water quality.

Mr. Klimek said that the program was very strong and they were measuring more problems.

Senator Dorsett asked Mr. Klimek about the reorganization and if they had been in the reorganization long enough to determine if this has happened and to what extent it has happened.

Mr. Klimek said that the express permitting program, which the General Assembly approved on a pilot project, has been extremely successful.

Mr. Givens asked Mr. Klimek if he would provide to the ERC a revised composite map showing all of the different stormwater management programs and composite areas.

Mr. Grover Nicholson, Chief, Underground Storage Tank Section, Division of Waste Management, DENR, gave a report on the status of leaking petroleum underground storage tanks, the State cleanup funds, and the Groundwater Protection Loan Fund. A copy of The Status Of Leaking Petroleum Underground Storage Tanks, The State Cleanup Funds, and The Groundwater Protection Loan Fund is listed as **Exhibit G**.

Mr. Givens said that the ERC and Joint Transportation Oversight Committees are jointly charged with studying the issue of solution arising from 2004 transfer of some million plus dollars from the Highway Trust Fund to the budget bill.

Senator Kinnaird asked if this money has to be paid back to the Highway Trust Fund.

Mr. Givens said that there was no provision that requires that it be paid back.

Mr. Nicholson said that a copy of the annual report was included in the packet listed as Exhibit D.

Mr. Nicholson said that as of June 30, 2004, the commercial fund pending balance is just over $30 million and the non-commercial balance is $5.6 million. Since that time, new legislation gave the funds an additional $32

million from the gasoline excise tax. A large lump sum of these funds was received in September 2004.

Mr. Nicholson said that the amount of claims pending in the commercial fund is slightly over $15 million and a little over $4 million in the non-commercial fund. That pending amount is no only claims that have been approved that are awaiting payment, but also claims that are in the systems that are presently being reviewed.

Mr. Nicholson said that another provision of the new legislation was that if reimbursement could not be made of approved claims within 90 days, they are not allowed to pre-approve further work. This is being tracked closely. Because of that influx of money, they are paying approved claims within 90 days at this point.

Representative Hackney asked Mr. Nicholson at what point was that 90-day provision going to start causing problems.

Mr. Nicholson said that what the 90 provision does is to make sure pending claims are paid before further work is approved with two exceptions: if the release would create an emergency situation, they can go ahead and pre-approve work regardless of the amount in the fund and the second is if the tank owner chooses to be reimbursed after everyone else is paid.

Representative Hackney asked Mr. Nicholson if any of the older claims will achieve closure soon or are the older ones are just accumulating more money and the newer ones are piling on top.

Mr. Nicholson said they have closed over 10,000 incidences since they began and that is over half of the 20,000 that have been reported.

Mr. Nicholson said that they are seeing a trend that the newly reported leases are slowing down.

Representative Hackney asked Mr. Nicholson was the main cause is for the new releases. New tanks in the ground should not be leaking.

Mr. Nicholson said they are getting anywhere from between 200 to 400 new releases each year. All of the new releases are either coming from upgraded systems or from systems that should be upgraded.

Representative Hackney asked Mr. Nicholson to explain what he means by upgraded systems.

Mr. Nicholson said that an upgraded system is one that is upgraded to the 1998 standards. By 1998, all UST systems had to have leak detection, financial responsibility, overfill and spill prevention and corrosion protection.

Representative Hackney asked if those new and upgraded systems were leaking or is it the transition to those systems that have discovered leaks.

Mr. Nicholson said that it was both upgraded systems leaking and they are finding leaks they didn't know existed until now from old systems.

Senator Kinnaird asked why new systems are leaking.

Mr. Nicholson said that he has EPA's leak autopsy report where they were asking the same questions. Primarily, systems are leaking because of mechanical failure in the piping and improper installation. Tanks are only causing about 16 percent of releases and piping is 31 percent. Tanks are leaking because of corrosion problems. Steel tanks are corroding. Thirty two percent of the leaks are coming from dispensers, 16 percent from spills and overfills and five percent from other sources.

Representative Gibson asked if these spills were substantially smaller than those in the past.

Mr. Nicholson said that he did not know the answer to that question.

Senator Kinnaird asked Mr. Nicholson if these tanks have double and triple linings and if so, why are they leaking.

Mr. Nicholson said that last year, as part of the legislation, they were able to get secondary containment, which is a combination of double wall and monitoring between the two walls, on the piping only. This rule will go into effect June 2005 for new installations.

Mr. Nicholson said that most of the 31,000 regulated tanks in North Carolina are single wall and mostly steel. In 1998, tanks were required to have corrosion protection. EPA's report shows that this protects these steel tanks from corrosion, but the primary cause of tank failure is still corrosion.

Senator Clodfelter asked Mr. Nicholson if the financial responsibility requirements associated with the new systems would mean that we would not have claims presented but have a financial mechanism in place that would deal with any problems with new systems.

Senator Clodfelter if we were getting any claims presented against the fund as a result of leaks from new systems.

Mr. Nicholson answered in the affirmative.

Senator Clodfelter asked Mr. Nicholson what is wrong with our financial responsibility requirements with the new standards.

Mr. Nicholson said that the financial responsibility requirements that the federal government set out in 1998 and that the state adopted have not changed. It is still essentially that tank owners must have $1 million in some sort of financial vehicle to pay for some type of remediation if there is a leak and pay for bodily injury and property damage to third parties.

Senator Clodfelter asked Mr. Nicholson if folks are complying with those requirements, why are we getting claims presented against the fund at all with respect to systems that meet the new standards.

Mr. Nicholson said that in North Carolina, the fund is the main financial vehicle. North Carolina is providing that $1 million coverage through the fund. Tank owners have to pay an initial $20,000 if they are in compliance with the 1998 upgrade and an initial $100,000 for third party claims.

Mr. Nicholson said that North Carolina actually provides $1.5 million for coverage per incident and the fund pays the difference.

Mr. Nicholson said that the purpose of the UST program is to prevent petroleum underground storage tanks from leaking. They also regulate hazardous substance UST's.

Mr. Nicholson said that the standards are set to prevent tanks from leaking as well as helping people clean up leaks when they do occur.

Mr. Nicholson said that of the 19,000 reported releases since the inception of the program, we have closed over 10,000 of them.

Mr. Nicholson said that this program has done a lot of good for the environment over the years.

Mr. Nicholson said that the tank fees are $200 for tanks holding less than 3500 gallons and $300 per year for tanks holding more than 3500.

Mr. Nicholson said that 28 percent of the tanks in the ground are over 20 years old. There is a distinct link between the age of the tank and the propensity of that tank to have a leak.

Mr. Nicholson said that the legislature directed risk classifications of high, medium, low and unconfirmed. A high risk is a release that has either impacted somebody's water supply or has a high propensity to do that. The risk classification tells what to do to clean up the tank and how quickly they need to have it cleaned up.

Mr. Nicholson said they are always worried about the high-risk releases. An intermediate risk release has not impacted anyone's water supply but could be impacting surface water. A low risk release is one that does not fall either into the high or intermediate risk categories.

Mr. Nicholson said that since the inception of the UST program in 1998, there has been a general increase in the number of reported releases. Part of this is caused by the increased environmental awareness of property owners, buyers and lending institutions. Part of this is due to a switch from heating oil to gas.

Mr. Nicholson said that when the balance in the commercial fund became very low, they have seen a lot of marketing done. The number of reported releases should remain flat or decrease.

Mr. Nicholson said that in the non-commercial arena they are sure they will see an increase in the number of releases due to property transfers.

Senator Horton asked Mr. Nicholson to define a release in terms of quantity.

Mr. Nicholson said that a release is a discharge of over 25 gallons.

Senator Horton asked Mr. Nicholson if anything less than 25 gallons is not considered a release.

Mr. Nicholson said that it is not if it is cleaned up immediately; however, there is a report that has to be made on the release.

Senator Horton asked Mr. Nicholson when the program would end.

Mr. Nicholson said that it would end when all of the releases are cleaned up. One of the problems with the program is that there is not enough control over the money.

Representative Gibson said that one day this program has to end.

Senator Clodfelter said that if the charts were right, the changes in standards over time would have some improvement in the commercial tank releases. At that point, when most of the tanks that are complying with the new standards, the private insurance market can then provide coverage for the releases that do occur. What kind of incentive are we providing in the non-commercial market to drive down the number of incidents so that the State can get out of being the insurer of those.

Mr. Nicholson said that now the driver for a non-commercial tank to not report a release is not there. There is a fund that will pay 100 percent of the cost of cleanup and third party claims.

Senator Clodfelter asked what incentive there is for a homeowner to clean up a home heating oil tank that leaks.

Mr. Nicholson said the homeowner has a free insurance policy. He agreed that there is a need for incentives for homeowners.

Senator Kinnaird asked Mr. Nicholson why we don't require better construction with the steel tanks. And, if we required better construction, who would be impacted and how would they react. Is the identification that there is a UST not on the deed. How do we shift the liability onto the owner and off of the taxpayer.

Mr. Nicholson said that the only thing that goes on the deed is a notice of residual petroleum. They are allowed to have a risk based claim cleanup.

Mr. Nicholson said that from the commercial point of view, a secondarily contained tank costs about twice as much as a single wall tank.

Senator Kinnaird asked if it was then a cost shifting.

Mr. Nicholson answered in the affirmative.

Senator Kinnaird if the homeowner would eventually say they could not take on this liability.

Mr. Nicholson said that a home heating oil tank is not regulated and does not get inspected. However, North Carolina does provide for cleanup in the case of a leak. It would help a homeowner to have a good, sound tank on his property.

Senator Clodfelter said that if someone put in a state of the art system with all of the property containment, they might pay us less than someone who is taking a risking.

Senator Albertson asked Mr. Nicholson how we could let the tanks sit on a site for years and not do anything if these sites pose a problem.

Mr. Nicholson said that one of the reasons for the risk-based system is because of what Senator Albertson expressed concern over. The State has money from EPA to provide alternative water for people with contaminated tanks. When the responsible party takes action, the risk of that site can be brought down.

Mr. Nicholson added that the law states that if there is a release, it has to be cleaned up. There has clearly been a disconnection between the Fund and the amount of work being done out there, which has been slowing the system down.

Mr. Nicholson said that they have been pushing the clean-ups, regardless of the amount of money in the Fund. The new legislation that went into effect on October 1, 2004 directs DENR to slow down the program. If he can't pay the claim within 90 days of approving it, no further work can be approved.

Representative Gibson asked Mr. Nicholson to let him know volume metrically when we are going to end this program.

Senator Kinnaird said it was up to us, as a public policy decision, to say we have to require better construction and change the liability.

Representative Weiss asked Mr. Nicholson if there are state of the art programs in other states where this is work. If it is true that we are cleaning up sites because of the way tanks are made and we are still allowing that

same design of tank to go into the ground, we are making a huge mistake and we will always be in this business.

Mr. Nicholson said that before 1998, there were no regulations. After 1998, the federal government and North Carolina adopted the federal law and rules that required leak detection, financial responsibility and sample. They are not going out and letting people put in the kind of tank they could put in before 1998.

Mr. Dexter R. Matthews, Director, gave a report on the programs, activities, and priorities of the Division of Waste Management (DWM).

Mr. Matthews said that the mission of the DWM is to prevent harmful release of waste to the environment and clean up existing contamination. DWM includes the solid waste section, the superfund section and the hazardous waste section.

Mr. Matthews said that DWM received $1 million for the national priority list (NPL) funded by EPA at 90 percent. The State is required to come with a 10 percent cost share.

Mr. Matthews said that they have been prioritizing sites into the dry cleaning program, which would allow a state-lead cleanup of dry cleaning sites across the State.

Mr. Matthews said they hope to be moving faster on the risk-based rules for the dry cleaning sites. They hope to have these rules implemented by next year.

Mr. Matthews said there is currently a balance of $15 million in the dry cleaning clean-up program and they certified 99 sites into that program.

Mr. Matthews in the UST program, every high-risk site was reclassified in order to control the rate of expenditure out of the Fund.

Mr. Matthews said that in the Solid Waste Program, North Carolina is a net exporter of solid waste. We export just under one million tons of waste per year and we important 100,000 tons.

Mr. Matthews named the Regal Ridge LLC Waste Management Proposal for a landfill in Brunswick County, which would include out of state waste. New Hanover County has a proposal for an industrial waste landfill

Mr. Matthews added that conversations have been had with State Ports to bring in barges of waste into Wilmington and transferring that waste to a facility in Sampson County.

Mr. Matthews said there is also a proposal for a waste industries landfill in Camden County, adjacent to the Great Dismal Swamp. There is also a proposal for a C&D recycling facility along the Intracoastal Waterway in Hyde County.

Mr. Matthews said that with all of these proposed facilities, we would then become a net importer instead of a net exporter of waste.

Senator Kinnaird asked if North Carolina really wants to import waste and whatever happened to recycling.

Mr. Matthews said that we have been going in the wrong direction with regard to waste reduction and we are nowhere near achieving a 40 percent reduction.

Senator Kinnaird asked Mr. Matthews why we aren't working toward making sure everyone recycles.

Representative McComas asked Mr. Matthews if laws are in place to induce out of state recyclers to come in and establish themselves.

Mr. Matthews said that are no laws on the books that he is aware of that would be a tax incentive for businesses to come into our State; however, there are tax breaks for recycling and resource recovery equipment at facilities.

Senator Albertson asked Mr. Matthews if there was no law that prohibits bringing waste into North Carolina.

Mr. Matthews said that there is protection under the U. S. Commerce Clause that would allow waste to come in from out of state.

Senator Albertson asked Mr. Matthews if we have any say so as to whether or not we allow waste to come into our state.

Mr. Matthews said that the closest we come to this is the approval from local governments. There have been several bills proposed in Congress that would give states authority in regulating out of state waste.

Representative Gibson asked Mr. Matthews if it was fair to say that every single solid waste facility in North Carolina, in its franchise agreement with the operator, is on top of what is allowed to come into the state.

Mr. Givens asked Mr. Matthews what the service area includes.

Mr. Matthews said it was everything east of the Mississippi River.

Representative Gibson added that for the some of the landfills, there is an economy of scale, i.e. what tonnage can make the landfill viable.

Senator Albertson asked Mr. Matthews if waste comes from out of state that shortens the lifespan of a facility and affect surrounding counties and their ability to dispose of waste.

Mr. Matthews said it would reduce the capacity.

Senator Albertson asked if the local government has the ability to make that decision.

Mr. Matthews said that that if the service area changes, it would have to go back through the local government for approval.

Senator Albertson said that he believes that importing waste into our state poses some long-range problems for us.

Mr. Matthews said that the Brownfield's Program has completed 50 agreements with 55 more agreements in progress. This program gives liability protection to a prospective developer of a site that otherwise would not be redeveloped.

Mr. Matthews said that the Brownfield's program has been very successful.

Mr. Matthews said that in the Hazardous Waste Program, some activities that have been a draw on staff resources and funds are some industries that have had financial difficulties.

Mr. Matthews said that in some cases, they had funds to work with these industries and in other cases they called EPA for help.

Representative McComas asked Mr. Matthews if, when a company went into bankruptcy, environmental clean up costs were non dischargeable.

Mr. Matthews said that is an issue in question. If you show that it is an ongoing continuing release at the site, they had more success than just having environmental contamination at the site and being able to get funding out of bankruptcy.

Representative McComas asked Mr. Matthews if the liability of contamination could be transferred to director and officers of the corporations.

Mr. Matthews said there has been some success with this.

Representative McComas asked what the status is for Holtercam.

Mr. Matthews said that sources are being removed at the site and is being paid for by EPA.

Senator Kinnaird asked if remediation is free because the taxpayers pick up the bill.

Mr. Matthews said that it has been taxpayer money used on a number of these sites.

Representative Hackney asked Mr. Matthews how much money is currently in the inactive sites fund.

Mr. Matthews said there is an orphan site contract that should complete this year and should deplete the fund.

Representative Hackney asked Mr. Matthews if we have any money coming into the fund.

Mr. Matthews said that there is no money coming into the fund.

Representative Hackney asked if there would be any money left for monitoring.

Mr. Matthews said there would be no money left for monitoring orphan sites.

Representative Hackney said that this was something that ERC needs to address. This is something that is going from bad to worse.

Mr. Matthews agreed with Representative Hackney.

Mr. Givens asked if Mr. Matthews if we think that we reducing the rate at which new ones are being created.

Mr. Matthews said that he is referring to the sites that do not have a viable responsible party.

Representative Gibson asked Mr. Matthews what he suggests that we do with regard to funding.

Mr. Matthews said that the inactive sites cleanup program needs a funding source.

Representative Gibson asked how much it would cost.

Mr. Matthews said that the projections are listed in the handout in Exhibit D. The Superfund Program at NPL sites is $2.8 million, currently available, including the $1 million he mentioned earlier. It is projected that three records of decision on sites for cleanup will be completed this year with estimates of $3 million needed.

Mr. Matthews said that EPA projects that two additional records of decision will be signed in FY 2006-07 that will produce about a $2.2 million need for state funds.

Mr. Matthews commented that the UST program looking at the potential of privatizing UST releases. Something they have been interested in the last several years is whether or not new releases from UST's could be privatized and owners and operators taken off of the Fund. This needs to be seriously looked at by the ERC and Transportation Oversight Committee as a possibility.

Mr. Matthews pointed out that we currently have 11 staff members who are doing inspections at 11,000 facilities across the State. This means they are inspected every four or five years. The UST program has a compliance rate of 55 percent, the lowest compliance rate for permitted facilities of any of the other environmental programs that are annually reported on by DENR.

Mr. Matthews concluded by saying that last session Representative McComas and Senator Clodfelter introduced bills that would expand the Brownfield's program by allowing them to issue Brownfield agreements to UST sites and provide liability protection for those who are interested in purchasing property that is a viable site.

Representative Hackney asked Mr. Matthews if his department is moving toward partial cleanups.

Mr. Matthews said that what the bill would do is to provide financial assurance for the full remediation of the site. The Department would gain financial assurance before remediation is done. Liability protection would be given to the purchaser of the site but not to the responsible party.

Representative Hackney asked if these were orphan sites.

Mr. Matthews said they would not be orphan sites but would be sites where a business is ongoing but the purchaser has concerns about moving or selling the site because of contamination.

Representative Gibson asked how we went from a struggle with one Brownfield's agreement to fifty.

Mr. Matthews said that this is a success story. One of the reasons is that the program started with only one person and after received an EPA grant to hire additional staff.

Representative Gibson asked if the program would survive when the EPA grant goes away.

Mr. Matthews said that he could not answer that question but there is plenty of opportunity with the orphan sites.

Representative Gibson asked if the commercial hazardous waste facilities going down in annual tonnage was due to generating less hazardous waste.

Mr. Matthews said that there has been a great deal of effort in reducing the amount of hazardous waste being generated by the staff and the staff of pollution prevention and environmental assistance. Also, moving from a large quantity generator to a small quantity generator has fewer fees involved.

Senator Kinnaird asked Mr. Matthews what it would take for this state to acquire and enforce waste reduction through recycling.

Mr. Matthews said that you could either pass requirements for recycling or you could charge for waste disposal.

Senator Kinnaird asked if the county commissioner association would be all over us if we required recycling.

Mr. Matthews said that every landfill in the state has tip fees and many local governments operate those sites off of tip fees for waste coming into the facility.

Mr. Givens said that prohibition put on unlined landfills, and lined landfills being more costly to build, and the landfill capacity of unlined landfills is running out. In 1989, SB 115 was to shift the solid waste business away from single counties and cities to consortium of counties and to private sectors. Recycling requires two things: a reliable supply of material and something to do with them when you throw them in the bin. The cost of all of this exceeds the cost of dumping in a landfill. Until you raise that cost, and one way to raise that cost is a tipping fee, nothing will change.

Mr. Givens said that there is any talk about increasing tipping fees at the state level; the local government folks would be down here in a flash.

Representative Gibson asked Mr. Matthews in the scoring of the new sites coming online, are we seeing a reduction in average of a lesser problem score than we have seen in the past.

Mr. Matthews answered Representative Gibson's question by saying that he couldn't say the risk of those sites, in general, is less than in the past. He could say that many of the worst sites on the NPL have been addressed.

Senator Kinnaird asked what an NPL is.

Mr. Matthews said that NPL is the national priority list.

Senator Kinnaird asked if the ERC was going to the coast.

Mr. Givens said that the co-chairs would be meeting to discuss what we would be doing. The current plan in November is to have a joint meeting with Seafood and Aquaculture in Raleigh.

Mr. Givens said that an optional field trip is being considered to the coast that would not be associated with a meeting.

The meeting was adjourned at 12:25 p.m.

Representative Pryor Gibson
Presiding Co-Chair

Mary R. Watson
Commission Clerk

Additional Information

COMMISSION MEETING:

The Environmental Review Commission (ERC) will meet at 9:30 a.m. Thursday 21 October 2004 in Room 643 of the Legislative Office Building in Raleigh.

At this meeting, the ERC will begin or continue studies for which the ERC is responsible, hear reports from State agencies, discuss topics to be considered at future meetings, and attend to other matters. Listed below are potential agenda topics for this meeting and for future meetings. More specific information regarding the agenda for the 21 October meeting of the ERC will be developed at the staff planning meeting discussed below.

STUDY TOPICS:

General:

1) Study the overall effectiveness of the State's efforts to protect the environment and conserve the natural resources of NC (S.L. 2004-161, sec. 19.2)

2) Study the development of a plan to share floodplain mapping information (S.L. 2004-161, Sec. 19.3)

3) Study issues related to the Fair Bargain Act and the revocation of contracts under certain circumstances (S.L. 2004-161, Sec. 19.7)

Air Quality:

4) Study whether the State should modify the current highway use tax so that all or a portion of the highway use tax paid on a private passenger vehicle is based on the fuel efficiency rating of the vehicle (S.L. 2004-161, Sec. 19.10(1))

5) Study whether the State should modify the current vehicle registration fee so that all or a portion of the annual vehicle registration renewal fee for a passenger vehicle is based on the vehicle miles traveled by the vehicle (S.L. 2004-161, Sec. 19.10(2))

6) Study establishment of a Clean Air Trust Fund (S.L. 2004-161, Sec. 19.6)

Water Quality:

7) Study various approaches to prevent and reduce stormwater pollution throughout the State (S.L. 2004-161, Sec. 19.11)

8) Study the feasibility of encouraging permeable surfaces as a deterrent to stormwater runoff (S.L. 2004-161, Sec. 19.8)

9) Study ways to protect a property owner whose land is adjacent to or downstream from a site on which alterations of the existing flow of stormwater will occur (S.L. 2004-161, sec. 19.9)

10) Study issues related to the Leaking Petroleum Underground Storage Tank (UST) Cleanup Program (S.L. 2003-352, Sec. 12)

11) Study the role of the State and DENR in implementing the Leaking UST Cleanup Program (S.L. 2004-124, Sec. 30.10.(f))

Water Quantity:

12) Study water restriction guidelines created by DENR and implemented by local governments, including an evaluation of economic impacts and recommendations for establishing consistency across the State with respect to classes of water use (S.L. 2004-161, Sec. 19.4)

13) Study the issue of the development and funding of regional water supply systems (S.L. 2004-161, Sec. 19.5)

REPORT TOPICS:

General:

14) Quarterly report on the activities of the Environmental Management Commission (G.S. 143B-282(b))

15) Annual report on the cost of implementing the Mining Act of 1971 (G.S. 74-54.1(c))

16) Semiannual report on agency litter enforcement, litter prevention, and litter removal efforts (G.S. 147-12(b))

17) Report on the One-Stop Permit Assistance and Coordination Program (S.L. 2004-124, Sec. 12.12)

18) Biennial report on the state of the environment (G.S. 143B-279.5)

19) Annual report on the cost of the State's environmental permitting programs contained within the Department of Environment and Natural Resources (DENR) (G.S. 143-215.3A(c))

Air Quality:

20) Annual report on implementation of S.L. 2002-4 (Clean Smokestacks Act) (S.L. 2002-4, Sec. 14)

21) Annual report on issues related to the development and implementation of standards and plans to implement programs to control emissions of mercury and carbon dioxide from coal-fired generating units and other stationary sources of air pollution (S.L. 2002-4, Sec. 12-13)

22) Annual report on increasing the use of alternative-fueled and low-emissions light-duty cars and trucks in privately owned fleets (G.S. 143-215.107C(c))

23) Annual report on development and implementation of a plan to reduce vehicle miles traveled by private sector employees and vehicle emissions resulting from job-related travel, including commuting to and from work (G.S. 143-215.107C(e))

24) Annual report on development and implementation of a plan to reduce vehicle miles traveled by State employees and vehicle emissions resulting from job-related travel, including commuting to and from work (S.L. 1999-328(4.6))

25) Annual report on promotion of telework/telecommuting for State employees and achieving the goal of reducing State employee vehicle miles traveled in commuting by 20% without reducing total work hours or productivity (S.L. 1999-328(4.8))

Hazardous Waste Management:

26) Annual report on the Inactive Hazardous Sites Program (G.S. 130A-310.10)

27) Annual report on implementation of the Resident Inspectors Program at commercial hazardous waste facilities (G.S. 130A-295.02(m))

28) Report of Superfund cost share fund expenditures for cleanup of sites on the National Priorities List (S.L. 1999-237(15.6)(b))

29) Annual report on the North Carolina Hazardous Waste Management Plan (G.S. 130A-294(i))

30) Annual report on the Effectiveness of the Brownfields Property Reuse Act (G.S. 130A-310.40)

Parks and Recreation / Land Conservation:

31) Parks and Recreation Trust Fund Annual Report, Fiscal Year 2003-2004 (G.S. 113-44.15(c))

32) North Carolina Natural Heritage Trust Fund Award Report, Fiscal Year 2003-2004 (G.S. 113-77.9(e))

33) Annual report on progress towards attaining the State's goal of protecting one million acres of farmland, open space, and conservation lands (G.S. 113A-241(c))

34) Annual report on implementation of the Conservation Easements Program and inventory of all conservation easements held by DENR (G.S. 113A-235(c))

Water Quality:

35) Annual report on permitting and inspecting animal waste management systems/Animal Waste Compliance Report (G.S. 143-215.10M)

36) Annual report on the compliance/ enforcement of water quality laws for facilities that discharge into surface waters (G.S. 143-215.9A)

37) Annual report on the Wastewater Discharge Elimination Program (S.L. 2001-452, Sec. 2.9)

38) Semiannual report on the effectiveness of the pilot program to inspect animal waste management systems by the Division of Soil and Water Conservation (S.L. 2002-176, Sec. 1.2)

39) Annual report on Basinwide Water Quality Management Plans (G.S. 143-215.8B)

40) Final report on the Neuse River Monitoring and Modeling Project (G.S. 143-215.8C)

41) Annual report on the Dry-Cleaning Solvent Cleanup Program (G.S. 143-215.104U)

42) Annual report on the status of leaking petroleum underground storage tanks, the State cleanup funds, and the Groundwater Protection Loan Fund (G.S. 143-215.94M)

Water Quantity:

43) Annual report on the progress of water supply planning (G.S. 143-355(n))

PLANNING MEETING:

To facilitate development of the agenda for the 21 October meeting of the ERC, to begin planning for subsequent meetings of the ERC, and to receive input from interested persons regarding the work of the ERC, the Commission Counsel will hold an informal planning meeting at **10:00 a.m. on Tuesday 12 October 2004 in Room 605 of the Legislative Office Building**. Persons who wish to participate in the development of the agenda for meetings of the ERC, or who are interested in any matter before the ERC, are invited to attend.

RESCHEDULING OF JOINT MEETING (ERC AND JLCSA) AND WRITTEN COMMENTS:

At this time, no specific dates have been selected for rescheduling the joint meeting of the ERC and the Joint Legislative Commission on Seafood and Aquaculture (JLCSA) that was cancelled due to Hurricane Jeanne. Once we have received input from the Co-Chairs and members of the ERC and JLCSA, we will distribute a meeting notice announcing the date and location of the rescheduled joint meeting. Due to scheduling constraints over the next month, however, this meeting will not occur until November or later.

The ERC and JLCSA are interested in receiving comment on issues related to the implementation of the coastal recreational fishing license and how those issues should be addressed. Persons who wish to submit written comment may do so at any time (preferably prior to 1 November 2004) by mailing written matter to ERC or JLCSA staff. Written statements should be on standard size paper (8 1/2" x 11") paper with sufficient margins to allow for binding. Please mail your comments to:

Cindy Davis, Commission Clerk
Joint Legislative Commission on Seafood and Aquaculture
525 Legislative Office Building
300 North Salisbury Street
Raleigh, North Carolina 27603

SCHEDULE OF FUTURE MEETINGS:

Below is a schedule of meetings of the Environmental Review Commission for October 2004 through January 2005. This schedule is tentative and subject to adjustment. For planning purposes, however, please reserve these dates.

Commission Meeting	Staff Planning Meeting
Thursday 21 October 2004	Tuesday 12 October 2004
Friday 19 November 2004	Tuesday 9 November 2004
Monday 22 November & Tuesday 23 November 2004	Tuesday 9 November 2004
Tuesday 30 November 2004	Tuesday 9 November 2004
Tuesday 7 December 2004	Wednesday 1 December 2004
Wednesday 12 January 2005	Wednesday 5 January 2005
Thursday 13 January 2005	Wednesday 5 January 2005
Thursday 20 January 2005	Wednesday 5 January 2005
Tuesday 25 January 2005	Wednesday 5 January 2005

MEETINGS OF INTERESTED PARTIES (605 WORKING GROUPS):

The Commission Counsel will hold meetings of interested parties on specific topics as indicated below:

Limit Liability for Environmental Cleanups Working Group (HB 1603/SB 1222)
2:00 p.m. Wednesday 27 October 2004 – 605 Legislative Office Building

ADDITIONAL INFORMATION:

If you have questions related to the Commission, please feel free to contact the Commission Counsel or other Commission staff at (919) 733-2578.

MEMORANDUM

To: Members of the Environmental Review Commission
From: Tim Dodge, Research Assistant for Environmental Issues
Re: Reports to the Commission

This memorandum lists reports that have been submitted to the Environmental Review Commission by State agencies, as required by law, since the last reports distribution in May 2004.

A. REPORTS RELATED TO TODAY'S AGENDA

The following reports are attached to this memorandum. These reports may be referenced during the course of the 21 October 2004 Commission meeting.

Environmental Management Commission (Agenda Item 4):

1) *Quarterly report by the Environmental Management Commission (EMC) as to its operations, activities, programs, and progress during 2004 (G.S. 143B-282(b)).* EMC. 1 July 2004. Statutory Authority: G.S. 143B-282(b).

2) *Quarterly report by the Environmental Management Commission (EMC) as to its operations, activities, programs, and progress during 2004 (G.S. 143B-282(b)).* EMC. 1 October 2004. Statutory Authority: G.S. 143B-282(b).

Water Quality (Agenda Item 5):

3) *Annual report on progress in developing and implementing basinwide water quality management plans.* Division of Water Quality, DENR. 20 October 2004. Statutory Authority: G.S. 143-215.8B(d). .

4) *Annual report on permitting and inspecting animal waste management systems/Animal Waste Compliance Report.* Division of Water Quality, DENR. 18 October 2004. Statutory Authority: G.S. 143-215.10M.

Hazardous Waste Management (Agenda Item 7):

5) *Annual report on the implementation of the North Carolina Hazardous Waste Management Plan.* Division of Waste Management, DENR. 1 October 2004. Statutory Authority: G.S. 130A-294(i).

6) *Annual report on implementation of the resident inspectors program at commercial hazardous waste facilities.* Division of Waste Management, DENR. 1 September 2004. Statutory Authority: G.S. 130A-295.02(m).

7) *Annual report on the Inactive Hazardous Sites Program.* Division of Waste Management, DENR. 20 October 2004. Statutory Authority: 130A-310.10.

8) *Annual report on the effectiveness of the Brownfields Property Reuse Act.* Division of Waste Management, DENR. 21 October 2004. Statutory Authority: 130A-310.40.

9) *Annual report on the Dry-Cleaning Solvent Cleanup Program.* Division of Waste Management, DENR. 16 September 2004. Statutory Authority: 143-215.104U.

10) *Report on Superfund cost share fund expenditures for cleanup of sites on the National Priorities List.* Division of Waste Management, DENR. 20 September 2004. Statutory Authority: S.L. 1999-237(15.6)(b).

B. READ-ONLY REPORTS

The following reports are attached to this memorandum. These reports are not scheduled for oral presentation.

General:

11) *One-Stop Permit Assistance and Coordination Program status report.* DENR. 12 October 2004. Statutory Authority: S.L. 2004-124, Sec. 12.12.

Land Resources:

12) *Annual report on the cost of implementing the Mining Act of 1971.* Division of Land Resources, DENR. 1 September 2004. Statutory Authority: G.S. 74-54.1(c).

C. REPORTS HELD FOR FUTURE PRESENTATIONS

The following reports are being held for distribution in conjunction with a potential agenda item a future meeting of the Commission.

Air Quality:

13) *Annual report on implementation of S.L. 2002-4 (Clean Smokestacks Act).* DENR and the North Carolina Utilities Commission. 1 June 2004. Statutory Authority: S.L. 2002-4, Sec. 14.

14) *Annual report on issues related to the development and implementation of standards and plans to implement programs to control emissions of mercury and carbon dioxide from coal-fired*

generating units and other stationary sources of air pollution. Division of Air Quality, DENR. 1 September 2004. Statutory Authority: S.L. 2002-4, Sec. 12-13.

Parks and Recreation / Land Conservation:

15) Parks and Recreation Trust Fund Annual Report, Fiscal Year 2002-2003. Division of Parks and Recreation, DENR. 1 October 2004. Statutory Authority: G.S. 113-44.15(c).

16) North Carolina Natural Heritage Trust Fund Award Report, Fiscal Year 2002-2003. Division of Parks and Recreation, DENR. 1 October 2004. Statutory Authority: G.S. 113-77.9(e).

17) Annual report on progress towards attaining the State's goal of protecting one million acres of farmland, open space, and conservation lands. DENR. 1 October 2004. Statutory Authority: G.S. 113A-241(c).

D. OTHER REPORTS

The following report has been distributed directly to members of the Environmental Review Commission by the reporting authority.

General:

18) Semiannual report on agency litter enforcement, litter prevention, and litter removal efforts. Office of the Governor. 1 September 2004. Statutory Authority: G.S. 147-12(b).

Please contact George Givens, Jeff Hudson, Jennifer McGinnis, or Tim Dodge at (919) 733-2578 if you have any questions or comments.

6) *Annual report on implementation of the resident inspectors program at commercial hazardous waste facilities.* Division of Waste Management, DENR. 1 September 2004. Statutory Authority: G.S. 130A-295.02(m).

7) *Annual report on the Inactive Hazardous Sites Program.* Division of Waste Management, DENR. 20 October 2004. Statutory Authority: 130A-310.10.

8) *Annual report on the effectiveness of the Brownfields Property Reuse Act.* Division of Waste Management, DENR. 21 October 2004. Statutory Authority: 130A-310.40.

9) *Annual report on the Dry-Cleaning Solvent Cleanup Program.* Division of Waste Management, DENR. 16 September 2004. Statutory Authority: 143-215.104U.

10) *Report on Superfund cost share fund expenditures for cleanup of sites on the National Priorities List.* Division of Waste Management, DENR. 20 September 2004. Statutory Authority: S.L. 1999-237(15.6)(b).

B. READ-ONLY REPORTS

The following reports are attached to this memorandum. These reports are not scheduled for oral presentation.

General:

11) *One-Stop Permit Assistance and Coordination Program status report.* DENR. 12 October 2004. Statutory Authority: S.L. 2004-124, Sec. 12.12.

Land Resources:

12) *Annual report on the cost of implementing the Mining Act of 1971.* Division of Land Resources, DENR. 1 September 2004. Statutory Authority: G.S. 74-54.1(c).

C. REPORTS HELD FOR FUTURE PRESENTATIONS

The following reports are being held for distribution in conjunction with a potential agenda item a future meeting of the Commission.

Air Quality:

13) *Annual report on implementation of S.L. 2002-4 (Clean Smokestacks Act).* DENR and the North Carolina Utilities Commission. 1 June 2004. Statutory Authority: S.L. 2002-4, Sec. 14.

14) *Annual report on issues related to the development and implementation of standards and plans to implement programs to control emissions of mercury and carbon dioxide from coal-fired*

generating units and other stationary sources of air pollution. Division of Air Quality, DENR. 1 September 2004. Statutory Authority: S.L. 2002-4, Sec. 12-13.

Parks and Recreation / Land Conservation:

15) *Parks and Recreation Trust Fund Annual Report, Fiscal Year 2002-2003.* Division of Parks and Recreation, DENR. 1 October 2004. Statutory Authority: G.S. 113-44.15(c).

16) *North Carolina Natural Heritage Trust Fund Award Report, Fiscal Year 2002-2003.* Division of Parks and Recreation, DENR. 1 October 2004. Statutory Authority: G.S. 113-77.9(e).

17) *Annual report on progress towards attaining the State's goal of protecting one million acres of farmland, open space, and conservation lands.* DENR. 1 October 2004. Statutory Authority: G.S. 113A-241(c).

D. OTHER REPORTS

The following report has been distributed directly to members of the Environmental Review Commission by the reporting authority.

General:

18) *Semiannual report on agency litter enforcement, litter prevention, and litter removal efforts.* Office of the Governor. 1 September 2004. Statutory Authority: G.S. 147-12(b).

Please contact George Givens, Jeff Hudson, Jennifer McGinnis, or Tim Dodge at (919) 733-2578 if you have any questions or comments.

QUARTERLY REPORT

ENVIRONMENTAL MANAGEMENT COMMISSION ACTIVITIES

July 2004

YEAR 2003 – 2004 FOURTH QUARTER REPORT TO ERC

I. Quarterly Report On **Air Quality** Activities

A. Major EMC Agenda Items During Quarter

B. Future EMC And Committee Agenda Items

II. Quarterly Report On **Ground Water Quality** Activities

A. Future EMC And Committee Agenda Items

III. Quarterly Report On **Surface Water Quality** Activities

A. Major EMC Agenda Items During Quarter

B. Future EMC And Committee Agenda Items

I. AIR QUALITY ACTIVITIES

Agenda Item : Response to an Objection by the Rules Review Commission on the Ethylene Oxide Emissions Rule

Explanation:

On February 12, 2004, the Environmental Management Commission adopted amendments to the control of ethylene oxide emission rule (15A NCAC 2D .0538). One amendment provides an alternative emission limit for ethylene oxide emission from all sterilizer unload and backdraft valve exhausts and degassing rooms. Another amendment allows a facility to model all plant ethylene oxide emissions to demonstrate compliance with the acceptable ambient level for ethylene oxide in lieu of complying with the emission standards in the rule.

At its meeting on March 18, 2004, the Rules Review Commission objected to this rule on the grounds of ambiguity. The rule contained a prepositional phrase that did not appear to modify anything. The language in question was previously adopted language and appears in Paragraph (b). The Rules Review Commission staff's recommendation for the objection, which the Rules Review Commission adopted is attached.

In response to the objection, the phrase "from the processes described in Paragraph (d) of this rule" is proposed to be removed. This phrase is redundant, and the rule does not loose any of its meaning without it. The revised rule is attached.

Recommendation:

The Director recommends that the Commission adopt the revised rule in response to the Rules Review Commission's objection.

EMC Action: EMC adopted amendments to ethylene oxide emission rule in response to RRC's objection.

Agenda Item:	Request to Proceed to Public Hearing on an Amendment to the Permit Exemption Rule
Explanation:	The Environmental Management Commission (EMC) is requested to approve one or more public hearings to consider the adoption of amendments to Rule 15A NCAC 2Q .0102, Activities Exempted From Permit Requirements. The proposed amendment clarifies the facility permit exemption. It adds a qualification such that the exemption would not apply if the facility had a source that could likely violate an applicable standard if not properly controlled and operated. This disqualification of sources that could violate an emission standard prevents owners or operators from using this exemption to avoid permitting. The amendment is a clarification and maintains the status quo.
Recommendation:	The Director recommends that the Commission authorize a public hearing(s) on these Rules and that the Chairman appoint a member(s) of the Commission to serve as hearing officer(s).

EMC Action: EMC approved taking proposed amendments to public hearing.

Two rules are proposed for amendment (2Q .0701 and .0709) to clarify when conditions in a permit should be changed when an acceptable ambient level of a toxic air pollutant changes.

An amendment is proposed to the rule that defines emission rates that require a permit (2Q .0711) to correct the calculation of 10 irritant toxic air pollutant emissions.

A new rule is proposed to exempt portable rock crushers.

RECOMMENDATION: The Director recommends that the Commission authorize a public hearing(s) on these items and that the Chairman appoint a member(s) of the Commission to serve as hearing officer(s).

EMC Action: EMC approved taking the proposed amendments and repeal to public hearing.

Agenda Item:	Request to Proceed to Public Hearing on Amendment to the Visible Emission Rule
Explanation:	The Environmental Management Commission (EMC) is requested to approve one or more public hearings to consider the adoption of an amendment to Rule 15A NCAC 2D .0521, Visible Emissions. The amendment defines, for facilities operating continuous opacity monitoring systems (COMS), the maximum number of times that the opacity standard may be exceeded daily before a violation occurs. It establishes a new compliance requirement for COM sources, changing "10" to "four" in the Rule phrase "No more than 10 six-minute periods shall exceed the opacity standard in any one day." The change follows the EPA recommendation to comply with Section 110 of the Clean Air Act (CAA). When amended, the Rule will become a part of the North Carolina State Implementation Plan (SIP).
Recommendation:	The Director recommends that the Commission authorize a public hearing(s) on this Rule and that the Chairman appoint a member(s) of the Commission to serve as hearing officer(s).

EMC Action: EMC approved taking proposed amendments to public hearing.

Agenda Item: Request to Proceed to Public Hearing on Amendments to the Prevention of Significant Deterioration Rule and Major New Source Review Rule for Nonattainment Areas

Explanation: The Environmental Management Commission (EMC) is requested to approve one or more public hearings to consider the adoption of amendments to Rule 15A NCAC 2D .0530, Prevention of Significant Deterioration and .0531, New Source Review.

Rules 15A NCAC 2D .0530 and .0531 are being amended to bring them in line with the federal rules by incorporating recent amendments to 40 CFR 51.165, Nonattainment New Source Review and 40 CFR 51.166, Prevention Of Significant Deterioration Of Air Quality. Along with incorporating the EPA revisions, several of the EPA definitions (*baseline actual emissions*, *pollution control projects*, and *projected actual emissions*) are proposed for modification and additional changes are being made to strengthen the requirements.

The proposed rules contain more stringent recordkeeping requirements and a requirement that projected actual emissions become a permit condition. Actual emissions may be increased by permit amendment after demonstrating that *all* additional emission increases are the direct result of product demand growth, and that the capacity to increase production was available *prior* to the modification.

Recommendation: The Director recommends that the Commission authorize a public hearing(s) on these Rules and that the Chairman appoint a member(s) of the Commission to serve as hearing officer(s).

EMC Action: EMC approved taking proposed amendments to public hearing.

AGENDA ITEM: Request to Proceed to Public Hearing on the Adoption of and Amendments to Various Rules.

EXPLANATION:

The Environmental Management Commission (EMC) is requested to approve one or more public hearings to consider the adoption of and amendments to various air quality rules.

The rule requiring control of nitrogen dioxides and nitrogen oxides (2D .0519) is proposed for amendment to correct a cross-reference.

Two rules that require source emission monitoring (2D .0606 and .0608) are proposed for amendment to allow alternative monitoring procedures for continuous emission monitors under certain circumstances.

Three rules are proposed for amendment (2D .0801 and 2Q .0603 and .0605) to clarify that transportation facility rules apply only to carbon monoxide. The highway project rule (2D .0803) is proposed to be repealed; it has been superceded by more recent rules.

The rule that regulates commercial and industrial solid waste incinerator units (2D .1210) is proposed to be amended to change performance test date and make a cross-reference correction. A cross-reference correction is being made to the rule covering other incinerators (2D .1208).

The rule describing recordkeeping and reporting of nitrogen oxide emissions (2D .1404) is proposed to be amended to allow an alternative procedure for satisfying missing monitoring data requirements.

The Rule that identifies activities exempted from permit requirements (2Q .0102) is proposed for amendment to add an exemption small combustion sources, to allow petroleum dry cleaners subject to new source performance standards to be exempted from permitting, and to modify the exemption for emergency generators.

AGENDA ITEM : Hearing Officers' Report on Amendments to the Air Toxic Rules on Hydrogen Sulfide, Permit Exemptions, and Modifications.

EXPLANATION:

On October 30, 2003 and November 5, 2003, Dr. Shaw, Dr. Blanks and Mr. Jenkins held public hearings on amendments to the air toxics rules on hydrogen sulfide, permit exemptions, and modifications.

The toxic air pollutant guideline (15A NCAC 2D .1104) for hydrogen sulfide is proposed to be revised. Five acceptable ambient level options have been proposed for comment. The rule for emission rates requiring a permit (15A NCAC 2Q .0711) is also proposed to be amended to revise the rate.for hydrogen sulfide to correspond to the revised guideline. The air toxic permit exemption rule (15A NCAC 2Q .0702) is also proposed to be amended to exempt wastewater treatment systems at pulp and paper mills. Two options, one of which exempts wastewater treatment systems at pulp and paper mills until February 1, 2007, at which time the exemption would expire and the other which permanently exempts such wastewater treatment systems, were proposed for comment. A new rule (15A NCAC 2Q .0714) is proposed to require testing of emissions from wastewater treatment systems at pulp and paper mills and evaluation of activated sludge systems for wastewater treatment. Two options regarding the nature and scope of the study were proposed for comment.

Over 1300 comments were received from a variety of individuals and organizations both within and outside North Carolina including members of the general public, residents near affected facilities, environmental organizations, public health officials, health professionals, county and local government officials, members of the General Assembly, industrial organizations and trade associations, affected facilities, employees of affected facilities, and commerce and economic development groups. Many commenters expressed concern regarding the health effects from continued exposure to hydrogen sulfide emissions. Many commenters expressed

concern regarding the ability of affected facilities to comply with a stringent standard and remain economically viable and the impact affected facility closures would have on the local, regional, and state economy and communities should they occur. Several commenters expressed concern about the potential for competitive disadvantage with other states and countries if North Carolina adopts a much stricter standard. Several commenters requested the Commission find balance between the health and environmental impacts and the economic impacts in making its decisions regarding the standard and establishing any exemptions. Several commenters expressed concern that many sources of hydrogen sulfide emissions are not included in the emissions inventory and would not be covered by the rule. Several commenters raised concerns about conservatism incorporated to account for uncertainty in the various phases of the program such as setting the AAL, estimating emissions, modeling, using meteorological data, and not allowing for exceedances. Some commenters said that there is a lack of evidence that adverse health effects are occurring around affected facilities. Some commenters expressed concern about the uncertainty surrounding quantification of emissions from wastewater treatment systems. Some commenters expressed concern about the ability of activated sludge systems to control hydrogen sulfide emissions to the required levels. Some commenters questioned appropriateness of use of the studies upon which some of the AAL recommendations were based.

Approximately half of the commenters supported the lowest AAL combination of 0.056 mg/m3 for a 1-hour average and 0.033 mg/m3 for a 24-hour average, Option 2, in combination with no exemption for wastewater treatment systems at pulp and paper mills. Approximately half of the commenters supported the highest value of 0.12 mg/m3 for the AAL, Option 4, in combination with a permanent exemption for pulp and paper mill wastewater treatment system emissions, Option B. A few commenters supported a temporary exemption for further study of pulp and paper mill

wastewater treatment emissions and control technology options.

The hearing record was sent to you earlier.

RECOMMENDATION: The hearing officers recommend that the Commission adopt the proposed amendments to the air quality regulations contained in Chapter II of the hearing record.

EMC Action: EMC adopted amendments to the air toxic rules and new rule requiring studying emissions from wastewater treatment systems at pulp and paper mills.

Agenda Item: Hearing Officers' Report on Amendments to and Adoption of Air Quality Rules on Open Burning

Explanation: On October 30 and November 5, 2003, Dr. Delilah Blanks, Dr. Frank S. Shaw, and Mr. Thomas K. Jenkins held public hearings on the adoption of and amendments to various air quality rules. Only four of the 18 proposed amended and new rules included in this hear record generated comments.

Several clarifications and other changes are proposed to be made to the open burning rule (Section 15A NCAC 2D .1900). Purpose, Scope, And Permissible Open Burning (15A NCAC 2D .1901) has been expanded. Several new definitions are proposed (15A NCAC 2D .1902). A prohibition of most types of open burning on days forecast to be code orange or above is also proposed (15A NCAC 2D .1903 and .1904). The new source performance standards for air curtain burners covered under these standards are added to the air curtain burner rule (15A NCAC 2D .1904). These requirements have already been adopted under the new source performance standard rule (they are added here for clarity). The need for temporary air curtain burners to have a certified visible emissions reader onsite is proposed to be removed. Delegation to county governments rule (15A NCAC 2D .1906) has been modified to preclude municipal governments from issuing permits to permanent sited air curtain burners.

One of the proposed changes to the permissible open burning rule (15A NCAC 2D .1903) changes as allowable opening burning, burning "acceptable to" the Department of Agriculture, Division of Forest Resources, or Wildlife Management Commission to burning "recommended by" the respective agency. Twenty people commented in opposition to this change. The commenters indicated that the amended Rule will require specific permission from State agencies to conduct agriculture or forest management open burning, that State agency anticipated visits to each site will cause unwarranted delays and lost time, and that

open burning may require an air quality permit. In addition, many commenters believe they will face an additional liability if they conduct open burning without first verifying that the open burning process is a recommended practice for their particular application.

In response to these comments, the rule has been changed. "Recommended by" has been replaced by "acceptable to," which is the original (current) language in the Rule.

A record of Hearing Three was sent to you earlier. The revised rules proposed for adoption is attached.

Recommendation: The Hearing Officers recommend that the proposed amendments to the Open Burning Section as presented in this agenda item be adopted by the Environmental Management Commission.

EMC Action: EMC adopted amendments to open burning rules.

Future EMC and Air Quality Committee Agenda Items

MONTH	AQC CONCEPTS	AQC DRAFT RULES	EMC ACTION
July 04	-Open Burning (419) -Update to Title V Permit Content Rule (420)	-Assuring Compliance with Heavy Duty Diesel Engine Standard for Model Year 2007 (418)	Hearing Request -Assuring Compliance with Heavy Duty Diesel Engine Standard for Model Year 2007 (418)

SURFACE WATER QUALITY ACTIVITIES

Agenda Item:

Presentation of the WQC's Recommendation on a Petition for Rulemaking to Reclassify the Catawba River's Bridgewater Dam Tailwater to Trout (Tr)

Explanation:

In April 2004 the Division received a Petition for Rulemaking package from the Southern Environmental Law Center (SELC). This package, which was submitted in accordance with 15A NCAC 2I. 0500, petitioned the EMC to initiate rulemakings proceedings to add the Trout (Tr) supplemental classification to a portion of the Catawba River from the Bridgewater (Linville) Dam to the City of Morganton water intake. In accordance with the requirements of 2I .0500 this petition for rulemaking was reviewed by the Water Quality Committee on July 7, 2004 and a recommendation regarding the disposition of the petition request was developed by the Committee. As mandated in 2I .0503, the WQC Chairman will now present the WQC's recommendation to the full Commission for its consideration.

Recommendation:

That the Commission approve the WQC's recommendation regarding the SELC's Petition for Rulemaking.

EMC ACTION:

The EMC concurred with the Water Quality Committee's recommendation for the resolution of this petition request. The EMC denied the petition to initiate rulemaking to add the supplemental Trout (Tr) classification to the subject waters. This denial was based on the fact that the waters that are the subject of the petition request are currently involved in the Federal Energy Regulatory Commission (FERC) relincensing process. However, the EMC did direct DWQ Staff to return to the WQC in May 2005 and the Fall of 2006 so that the WQC and EMC may revisit this issue as the relincensing process unfolds.

SURFACE WATER QUALITY WQC/EMC FUTURE AGENDAS

	WQC Agenda	EMC Agenda
July 2004	• Request to Approve Rulemaking for a Coastal Enterococci-Based Bacteriological Water Quality Standard • Request for Approval of the Coastal Habitat Protection Plan's Annual Report • Update on Benthic Criteria for Swamp Streams • Update on Development of Nutrient Allocation Scenarios for Phosphorous and Nitrogen Reduction to Jordan Lake	• Request to Proceed to Public Hearings with Rulemaking for a Coastal Enterococci-Based Bacteriological Water Quality Standard • Request for Approval of the Proposed Reclassification of a Section of Richland Creek to Class Trout (Tr) • Approval of a Local Permit Program for the City of Monroe in Accordance with NCGS 143-215.1(f)
Aug 2004	• No meeting scheduled.	• No meeting scheduled.
Sep 2004	• Request for Consideration of Delegation of the Neuse and Tar-Pamlico Rivers Riparian Area Protection Rules to Pitt County, NC • Request for Approval to take the Draft French Broad River Basin Plan to Public Meetings • Request for Approval of the Final Catawba River Basin Plan • Request for Approval of 11 Local Programs Implementing the Tar-Pamlico Stormwater Rule	• Request for Consideration of Delegation of the Neuse and Tar-Pamlico Rivers Riparian Area Protection Rules to Pitt County, NC • Request for Approval of the Final Catawba River Basin Plan • Request for Approval of the Proposed Reclassification of a Critical Area on the Rocky River for the New Siler City Dam.
Oct 2004	• Request for Approval of a Nutrient Management Strategy and Compliance Schedule for Jordan Lake	• Request for Approval of a Nutrient Management Strategy and Compliance Schedule for Jordan Lake
Nov 2004	• No meeting scheduled.	• No meeting scheduled.

MEMORANDUM

TO: NC General Assembly Members
Legislative Staff

FROM: George Hall

SUBJECT: Flu Shots

Flu shots will be offered at no charge to Legislative Members and Staff on Friday, October 1, 2004, from 11:30 am to 12:45 pm in Room 1228 State Legislative Building.

October 1 is the only date the shots will be given. Because they are being offered at no charge, the shots are for legislators and current staff only - no family members please. Please e-mail Beverly Adams if you plan to receive a flu shot so that adequate medical staff and vaccines will be available.

Attached is a form provided by MEDFIRST that should be completed and brought with you to Room 1228 to receive your vaccination. It will be helpful if you wear something that will allow easy access to the shoulder site for injection. The cut off time of 12:45 pm will be strictly adhered to because MEDFIRST staff have other State Government vaccine sites on the same date.

Supervisors, please make sure all current staff are aware of the shots. Thank you.

PATIENT INFORMED CONSENT FOR ONSITE FLU SHOTS

INFLUENZA - "The Flu": Influenza is a contagious viral infection that may cause fever, chills, headache, muscle aches, cough and sore throat. This disease usually lasts for several days to a week or more with complete recovery in usual cases. However, complications may lead to pneumonia or death in some people.

It is not possible to estimate the risk of an individual getting the flu this year. The elderly, people with diabetes, heart, lung or kidney disease can have serious complications from the flu.

THE VACCINE: An injection of the flu vaccine will NOT give you the flu because the vaccine is made from killed viruses. The vaccine is made from viruses selected by the US Public Health Service for Disease Control. In most cases the vaccine provides protection for a period of about nine months.

RISKS AND POSSIBLE SIDE EFFECTS: Side effects from the influenza vaccine are generally mild in adults and occur at low frequency. These reactions consist of tenderness at the injection site, fever, chills, headache, or muscle aches. These symptoms may last for about forty-eight hours, and can be treated with aspirin-free products such as acetaminophen ("Tylenol"). If concerning symptoms develop after receiving the vaccine, contact your physician.

SPECIAL PRECAUTIONS: Children under three years of age and pregnant women should consult with their personal physician before receiving the vaccine.

Persons who are allergic to eggs, chickens, chicken feathers, or chicken dander should not receive this vaccine until they have consulted their personal physician. Persons with a history of Guillian-Barre Syndrome (a neurologic disorder) should not receive the vaccine.

Persons with fever should not receive this vaccine until fever is resolved and they have been cleared by their personal physician. Persons who have received another type of vaccine within the past fourteen days should see their personal physician before receiving this vaccine.

If you have a reaction, contact your personal physician immediately. Lot # U1379AA

If you have any questions, please ask prior to receiving the vaccine. Exp. Date 6/30/05

.....

I have read the above information and have had an opportunity to ask questions. I understand the benefits and risks associated with the vaccine. I request to receive the vaccine and release from any liability MEDFIRST, INC. any associated staff member or employee of MEDFIRST and the company that may be providing for the vaccine, including but not limited to any illness, loss of time or other side effects which may result from administration of the vaccine.

Annual Report from the Basinwide Planning Program

For the Period of October 1, 2003 through September 30, 2004

I. Progress in Developing and Implementing Basinwide Water Quality Plans

A. Public Outreach/Involvement

The Basinwide Planning Program finalized the first cycle of basin plans in May 1998. The second cycle of plans was completed in March 2003. The third cycle of basinwide water quality plans has begun, with the finalization and Environmental Management Commission approval of the *Neuse (July 2002), Lumber (December 2003) and Tar-Pamlico (March 2004) River Basinwide Water Quality Plans*. Completion of the remaining third cycle of plans is well underway for the Catawba, French Broad, and Cape Fear river basins. Activities related to gathering formal public input on the basinwide plans during October 2003 through September 2004 are presented below.

River Basin	Plans Approved by Environmental Management Commission	Public Workshops	Public Meetings
Tar-Pamlico	March 2004		December 2003 (4)
Lumber	December 2003		
Catawba	September 2004	October 2003 (3)	July 2004 (3)
French Broad		November 2003 (4)	
New		April 2004 (1)	
Cape Fear		May 2004 (5)	
TOTAL	**3**	**13**	**7**

B. Coordination and Collaboration Activities Related to Basinwide Planning Implementation

Many additional activities have occurred over the past year that are not tied to a specific basin, but rather can be applied to the program as a whole. Some of the more significant activities are as follows.

- In an effort to ensure Basinwide Plan implementation and to increase coordination among Division of Water Quality staff and other agencies, meetings to discuss implementation needs are held every six months for each river basin. At least one meeting has been held with each regional office staff during this reporting period to discuss the Implementation Packet for each river basin covered by the regional office. Central office staff from various units either attend these meetings with Basinwide staff, or further coordination is conducted with central office staff as follow-up to the meetings. Additional meetings are conducted with other agency personnel and local watershed organizations as needed to discuss specific management strategies and to assess progress being made to implement these strategies. These meetings are also used as an opportunity to share more information and jointly develop appropriate management strategies to address specific problems.

- Basinwide staff coordinate with the Ecosystem Enhancement Program staff on prioritization of targeted watersheds, getting input from local resource professionals, and using information within the Phase I watershed scoping documents.
- Staff coordinate with state, federal and local agencies to obtain information pertinent to the basinwide plans, increasing the level of coordination and communication with these agencies and their participation in the development of basinwide plans. Discussions between the Basinwide Planning Program and the NC divisions of Soil and Water Conservation, Environmental Health, Coastal Management, Water Resources, and Marine Fisheries, as well as the Wildlife Resources Commission and US Fish and Wildlife have occurred as a means of improving communication, sharing information and ensuring appropriate information is presented in the basin plans.
- Basinwide information was provided to applicants for Clean Water Management Trust Fund and Section 319 and 205(j) grants. Basin planners also provide technical reviews of applications.
- Basinwide plans, notices of public input opportunities, a river quiz and other relevant information to the basinwide planning program are updated on the Web site to provide interested parties with more access to information (see http://h2o.enr.state.nc.us/basinwide/).
- Over 778 people have attended the twenty-three public workshops for the third cycle (includes the seven basins where third cycle planning has begun) and over 305 people attended the third cycle of public meetings (includes four basins where third cycle plans have been developed).
- Basinwide staff continues to coordinate with the Classifications & Standards Unit and other federal and state agencies to develop management strategies for threatened and endangered species per DWQ rule.
- Basinwide staff continues to work with US Geologic Survey, NC Department of Transportation (NCDOT) and the Center for Geographic Information and Analysis in development of 1:24,000 National Hydrography Data (NHD) for North Carolina. Methods continue to be developed and tested to incorporate water quality and NCDOT data onto the NHD. The NHD will be a necessary data layer for submittal of future 303(d) impaired waters lists to the Environmental Protection Agency.
- Basinwide staff continues to develop information and improve skills related to Geographic Information System procedures. The result of these efforts will increase proficiency in use support mapping and analysis.
- Basinwide staff continues to enhance procedures, methods and database implementation pertaining to use support decisions on water quality status.
- Solicitation for water quality information from outside sources for the Roanoke, White Oak, Savannah, Watauga, Hiwassee and Little Tennessee river basins was conducted in 2003. This activity entails mailing a flyer to all persons on the mailing list database for these basins, including NPDES dischargers.
- Staff conducted public input phase for developing draft basinwide water quality plans for the Tar-Pamlico, Catawba, French Broad, New and Cape Fear River basins. Over 614 people attended. This activity entails many presentations and meetings with other state and federal agency staff, local watershed groups, NPDES discharger coalitions, local governments, etc.
- Staff prepared draft plans for public review for the Tar-Pamlico and Catawba River basins. This activity entails conducting data analysis and making use support decisions based on all available information, obtaining public input as noted in above, preparing text and maps by subbasin identifying watershed level water quality problems and potential solutions.
- Staff conducted public review and comment phase on the Tar-Pamlico and Catawba River basins. Over 312 people attended. This activity entails mailing notices of the availability of the draft plan on-line or by hard copy, meeting with various interested parties as noted above,

editing the plan to reflect the comments as needed, and conducting final preparation of the plan for approval by the Environmental Management Commission.

- Staff continues to coordinate with river basin coalitions and watershed groups to identify high priority waters and issues of relevance to that group, and identify potential means to address the issues. This activity entails providing technical assistance and guidance on water quality initiatives developed and implemented at the local level.
- Staff continues to participate in FERC hydropower relicensing negotiation efforts for the Catawba and Yadkin-Pee Dee River basins. This activity entails ensuring that water quality conditions in the basin are maintained or improved as a result of relicensing activities.
- Staff have begun to review and provide comments to the Division of Coastal Management staff on land-use plans.

C. Some Plan Development and Implementation Activities Related to Specific River Basins

The following bullets, by basin, present some of the more significant activities and accomplishments over the past year to achieve the goals of the Basinwide Planning Program. The program had one of four basin planner positions vacant for much of this reporting period due to inability to fill the position.

Cape Fear River –

- Continued to work with the Basin Discharger Coalitions in development of projects and coordination with basinwide planning efforts.
- Participate in modeling and Total Maximum Daily Load (TMDL) meetings with stakeholders in lower Cape Fear, Haw River/Jordan Reservoir and Durham.
- Participated in Conservation Resource Enhancement Program meeting to discuss nutrient impacted waters.
- Conducted two sets of Implementation meetings with DWQ staff.
- Participated in Cape Fear River Assembly and Division of Water Resources hydrologic model update.

Catawba River –

- Participate in quarterly meetings of the Catawba River Bi-State Task Force, often providing a presentation on status of Catawba River Basinwide issues.
- Provide input to the Catawba River Bi-State Task Force by serving on the Executive Committee.
- Participating in monthly meetings with DENR agency staff and other stakeholders and Duke Power representatives to explore the potential for, and develop a process for, a Federal Energy Regulatory Commission (FERC) relicensing settlement agreement. Program supervisor, basin planner and regional office staff person participate in the State Relicensing Team or Local Advisory Group. Staff works with the agencies and Duke Power to develop study plans to assess the impacts of hydropower operations on water quality, wetlands and aquatic habitat. Studies are underway and expected to be completed in the coming year. Additional studies may be identified as needed next year. A 401 Certificate is required by DWQ and the FERC for renewing the expiring hydropower license. The new license will be a 30 or 40-year license.
- Completed and received EMC approval on the third cycle basinwide plan in September 2004.
- Began process to develop strategy to reverse impairment to Lake Rhodhiss. Parties involved include Western Piedmont COG, Carolina Land and Lakes RC&D, SWCD, DENR, etc.

Chowan and Pasquotank Rivers –

- Held one set of Implementation meetings with DWQ staff.
- Participated in Submerged Aquatic Vegetation (SAV) meetings with several state and federal agencies to develop a SAV monitoring plan. These efforts also include development of a Memorandum of Understanding for cooperative monitoring, restoration, and research concerning SAV habitat in coastal North Carolina.
- Reviewed and commented on county and municipal Coastal Area Management Act land use plans.
- Presented basin information to the Dare County Water Quality program staff.

Little Tennessee River –

- Coordinating Nonpoint Source Team of local, state and federal agencies and local watershed organizations to conduct education and demonstration projects in the basin.
- Worked with several professors at Western Carolina University to disseminate information and give presentations to students about water quality and state government jobs.
- Serving on the technical advisory board for the Little Tennessee Watershed Association.
- Working with the Wildlife Resources Commission and US Fish & Wildlife Service on strategies to improve and sustain water quality to protect federally-listed mussel and fish species in the basin.
- Work with Watershed Association of the Tuckasegee River to develop a community based restoration effort on Greens and Savannah creeks.
- Serve as a technical advisor to the newly formed Graham County Revitalization Economic Action Team.
- Assisting three volunteer watershed associations to develop local action plans.
- Conducted two sets of Implementation meetings with DWQ staff.

Hiwassee –

- Jointly produced two sediment and erosion control/permitting for developers workshops with Hiwassee River Watershed Coalition (HRWC) and Soil and Water Conservation District.
- Serve on technical advisory board for HRWC.
- Active member on the Hiwassee Interagency Team. The team is working to enhance communication and coordination between states, hydropower operations, and watershed associations.
- Conducted two sets of Implementation meetings with DWQ staff.

Lumber River –

- Finalized the third cycle basinwide plan in December 2003 and received EMC approval.
- Conducted two sets of Implementation meetings with DWQ staff.
- Coordinated with National Resource Conservation Service, Soil and Water Conservation District offices and the Conservation Resource Enhancement Program coordinator regarding priority areas in the basin.
- Coordinated with the Lumber River Council of Governments regarding raising public awareness and identifying appropriate groups and agencies to aid in this effort.

Neuse River –

- Participated in Upper Neuse River Basin Association technical advisory committee for stream mapping protocols and Watershed Evaluation Tool to be used by local governments.
- Conducted two sets of Implementation meetings with DWQ staff.

Roanoke River –

- Participating heavily in Army Corps of Engineers (ACE) Section 216 study for the John H. Kerr Reservoir. Responsibilities include representation on several technical task groups including team leadership at meetings with multiple state and federal agencies and interest groups. Tasks have also included development of a Scope of Work for the Water Quality Task Group for monitoring and modeling efforts. The Section 216 is a collaborative study with the states of North Carolina and Virginia and the ACE to conduct a comprehensive evaluation on impacts to the Roanoke River downstream from the Roanoke Rapids Dam. The study is composed of three phases. Phase One, the feasibility phase, is composed of several tasks such as gathering and evaluating existing relevant data, identifying gaps in the existing relevant data, and identifying and evaluating existing methods and tools for study of the subject. Phase One, scheduled for twelve months, is near completion. Phase Two, the design phase, will begin after the feasibility phase and is scheduled for 24-36 months. Phase Three, the construction phase, will begin after the design phase and is scheduled for 24 months.
- Representation on weekly communications with the ACE and relevant agencies regarding flood control releases and subsequent flow reductions from J.H. Kerr Reservoir as they pertain to dissolved oxygen levels on the Roanoke River.
- Conducted two sets of Implementation meetings with DWQ staff.

Tar-Pamlico River–

- Conducted two Implementation meetings with DWQ staff.
- Participated in Upper Tar River collaboration effort with the Division of Soil and Water Conservation, National Resources Conservation Service, Conservation REP, Division of Forest Resources, Wildlife Resources Commission and Tar River Land Conservancy to identify and coordinate water quality target project areas and resources.
- Advised Wildlife Resources Commission, Natural Heritage Program, and US Fish and Wildlife Service staff in development of endangered species management plans for watersheds in the upper portion of the basin and the lower Swift Creek Watershed.

White Oak River –

- Presented DWQ use support assessment methods for shellfish waters to NC Coastal Federation shellfish conference.
- Presented and participated in water quality restoration strategies with the New River Round Table, including the City of Jacksonville, Marine Corps Base Camp Lejeune, Division of Soil and Water Conservation, Natural Resource Conservation Service, Cooperative Extension Service, and UNC-Wilmington.
- Conducted two Implementation meetings with DWQ staff.

Yadkin-Pee Dee River –

- Participating in monthly meetings with DENR agency staff and other stakeholders, along with Progress Energy and Yadkin, Inc. (APGI) representatives to explore the potential for, and developing a process for, Federal Energy Regulatory Commission (FERC)) relicensing settlement agreements for both hydropower facilities.

QUARTERLY REPORT

TO THE

ENVIRONMENTAL REVIEW COMMISSION

ON

ENVIRONMENTAL MANAGEMENT COMMISSION ACTIVITIES

October 2004

YEAR 2004 – 2005 FIRST QUARTER REPORT TO ERC

I. Quarterly Report On **Air Quality** Activities

A. Major EMC Agenda Items During Quarter

B. Future EMC And Committee Agenda Items

II. Quarterly Report On **Ground Water Quality** Activities

A. Future EMC And Committee Agenda Items

III. Quarterly Report On **Surface Water Quality** Activities

A. Major EMC Agenda Items During Quarter

B. Future EMC And Committee Agenda Items

I. AIR QUALITY ACTIVITIES

Agenda Item: Response to Objections by the Rules Review Commission on Several Air Quality Rules

Explanation: At its May meeting, the Rules Review Commission (RRC) objected to four rules: 15A NCAC 2D .0902 and .1904 and 2Q .0706 and .0714.

On March 11, 2004, the Environmental Management Commission (EMC) adopted an amendment to the volatile organic compound applicability rule (15A NCAC 2D .0902). The amendment changed the laboratory exemption to make it consistent with the permit exemption for laboratories. The RRC objected to this rule on the grounds of ambiguity. The applicability statements in this rule appear to conflict with each other and with applicability statements in various rules in this section.

In response to the objection, a new paragraph is being added that states volatile organic compound rules apply only according to the provisions specifically set out in the applicability rule. A redundant paragraph, which seems to add more confusion than clarity, is being removed. Also, the exemptions are being moved from the last paragraph to the second paragraph.

On April 8, 2004, the EMC adopted amendments to the air curtain burner rule (15A NCAC 2D .1904). The amendments require operation of air curtain burners to cease when an ozone action day code orange status or above is forecast. The language requiring a prevention of significant deterioration review is modified. The necessity for temporary air curtain burners to have a certified visible emission reader on-site during operation is removed. The opacity limit is changed from 5 percent to 10 percent. Other clarifications and changes have also been made. The RRC objected to this rule on the grounds of ambiguity and legal authority. It is not clear who is to certify onsite visible emissions readers, and no authority is cited to set occupational requirements for such readers.

In response to this objection, the procedures in 40 CFR Part 60, Method 9 for certifying visible emissions readers are incorporated by reference. Also, the federal rule that requires certified visible emissions readers to be used to read visible emissions from air curtain burners is added to the statutory authority part of the history note.

On April 8, 2004, the EMC adopted amendments to the air toxics permit modifications rule (15A NCAC 2Q .0706) to treat insignificant activities the same way activities exempted from permitting are treated. The RRC objected to this rule on the basis of ambiguity. It is not clear what toxic air pollutants have been identified by the Director as significantly increasing the risk to

human health, or conversely, what standards are to be used by the Director to identify the pollutants.

In response to this objection, the phrase "significantly increase the risk to human health" is replaced by "cause an acceptable ambient level in 15A NCAC 2D .1104 to be exceeded." The phrase "increase of risk to human health" is replaced with "impacts on ambient levels for air toxics." The replacement language is similar to that used in 15A NCAC 2Q .0712, Calls by the Director. (This rule authorizes the Director to require an air toxic evaluation and permit for any source of air toxics regardless of any exemption or other provision of the air toxic rules if he finds unacceptable risk to human health based on the acceptable ambient levels.)

On April 8, 2004, the EMC adopted rule 15A NCAC 2Q .0714, Wastewater Treatment Systems at Pulp and Paper Mills. This rule requires pulp and paper mills to measure emissions and their ambient impacts for their wastewater treatment systems. The RRC objected to this rule on the basis of ambiguity. No standards are given for the Director to use in approving estimation methods or factors.

In response to this objection, criteria have been added for the Director to use in approving estimation methods or factors.

The Rules Review Commission staff's recommendations for the objections to these rules, which the Rules Review Commission adopted, are attached. Also, attached are revised rules responding to the objections.

Recommendation: The Director recommends that the Commission adopt the revised rules in response to the Rules Review Commission's objection.

EMC ACTION: EMC adopted revised rules.

Agenda Item: Request to Proceed to Public Hearing on the Adoption of Heavy-Duty Diesel Vehicle Requirements for Model Year 2008 and Beyond.

Explanation: One or more public hearings will be set to consider the adoption of heavy-duty diesel vehicle requirements for model year 2008 and beyond.

15A NCAC 2D .1009, Model Year 2008 and Subsequent Model Year Heavy-Duty and Medium-Duty Diesel Vehicle Requirements, is proposed to be adopted to ensure that benefits from the federal standards for 2007 and later model year heavy-duty diesel engines and vehicles will be realized. In 2001 the U.S. EPA promulgated a final rule to reduce emission standards for 2007 and subsequent model year heavy-duty engines and vehicles. The emission standards represent a 90% reduction of nitrogen oxides (NOx) emissions, 72% reduction of non-methane hydrocarbon (NMHC) emissions, and 90% reduction of particulate matter (PM) emissions compared to the federal 2004 emission standards. The effect of the regulation is comparable to that of the regulations that first required the use of catalytic converters on gasoline-fueled automobiles and light-duty trucks in the mid 1970's.

As a result of various lobbying pressures, there is concern that EPA may delay or weaken its 2007 model year standards and that without adopting these standards, maintenance of the ambient air standards will be problematic. In 2007 mobile sources contribute approximately 55% of the overall NOx emissions inventory on an average summer weekday and 57% of those NOx emissions result from heavy-duty diesel vehicles. Continuation of lower emission standards for these vehicles is an essential part of the State's strategy to maintain compliance with the ozone NAAQS in future years.

Under the Clean Air Act, California is the only state that may develop its own vehicle standards. However, through Section 177 of the Clean Air Act, other states may adopt California's vehicle standards. California adopted amendments to its.standards harmonizing its rule with the federal 2007 rule for heavy-duty vehicles. The requirements became effective in November of 2002.
Several states are pursuing adopting the California heavy-duty engine and vehicle standards for 2007 and later model years as a contingency in the event that EPA delays or weakens its 2007 model year standards. The rule is proposed for adoption at this time because under

the requirements of the CAA, manufacturers must be provided two years lead time in advance of the model year. EPA defines model year such that a model year 2007 vehicle or engine could be produced as early as January 2, 2006. In order to provide two years lead time as required by the Act, emission standards for model year 2007 vehicles would have to have been effective before January 2, 2004. Thus, to meet the two year lead time requirement, the earliest model year to which the North Carolina rule could apply at this time is model year 2008.

The proposed rule requires that model year 2008 and later model year heavy-duty diesel vehicles and medium-duty diesel vehicles or engines be certified by the California Air Resources Board (CARB) as meeting its model year 2007 and subsequent model year heavy-duty diesel emissions standards in order to be sold, leased, or registered in North Carolina. Because the model year 2007 standards for heavy-duty diesels are a crucial part of the State's plan to attain and maintain the ozone standard, their adoption via the California rule as a contingency is needed to ensure that their benefits remain in place.

Recommendation:

The Director recommends that the Commission authorize a public hearing(s) on these items and that the Chairman appoint a member(s) of the Commission to serve as hearing officer(s).

EMC ACTION: EMC approved proceeding to public hearing.

Future EMC and Air Quality Committee Agenda Items

MONTH	AQC CONCEPTS	AQC DRAFT RULES	EMC ACTION
Oct 04	-Revision of Portable Generator Permit Exemption (420) -Elimination of an Unnecessary Reporting Requirement (421) -Clarification of Storage Tank Permit Exemption for Ethanol-Based Fuels (422) -Clarification of Transportation Conformity Rules (423)		Adoption -Assuring Compliance with Heavy Duty Diesel Engine Standard for Model Year 2007 (418)

Agenda Item: Presentation of the WQC's Recommendation on a Petition for Rulemaking to Reclassify the Catawba River's Bridgewater Dam Tailwater to Trout (Tr)

Explanation: In April 2004 the Division received a Petition for Rulemaking package from the Southern Environmental Law Center (SELC). This package, which was submitted in accordance with 15A NCAC 2I. 0500, petitioned the EMC to initiate rulemakings proceedings to add the Trout (Tr) supplemental classification to a portion of the Catawba River from the Bridgewater (Linville) Dam to the City of Morganton water intake. In accordance with the requirements of 2I .0500 this petition for rulemaking was reviewed by the Water Quality Committee on July 7, 2004 and a recommendation regarding the disposition of the petition request was developed by the Committee. As mandated in 2I .0503, the WQC Chairman will now present the WQC's recommendation to the full Commission for its consideration.

Recommendation: That the Commission approve the WQC's recommendation regarding the SELC's Petition for Rulemaking.

EMC ACTION: **The EMC denied the petition to initiate rulemaking to add the supplemental Trout (Tr) classification to the subject waters. This denial was based on the fact that the waters are included in a larger watershed that is currently involved in the Federal Energy Regulatory Commission (FERC) relicensing process. However, the EMC did direct DWQ Staff to return to the WQC in May 2005 and the Fall of 2006 so that the WQC and EMC may revisit this issue as the relicensing process unfolds.**

Agenda Item: Request for Permission to Proceed to Public Hearing(s) with Proposed Water Quality Standards for Enterococcus for Coastal Waters as Required by the BEACH Act

Explanation: Revision to the State's water quality standard for bacteria in coastal waters is mandated by the federal Beaches Environmental Assessment and Coastal Health Act (BEACH Act). The BEACH Act requires North Carolina to implement a bacteriological water quality standard with enterococci as the indicator organism for its coastal recreational waters. North Carolina's existing bacteriological standard for coastal waters utilizes a fecal coliform indicator. The BEACH Act deadline for the implementation of a coastal enterococci standard was in April of this year. North Carolina, along with all the other Region 4 coastal states, did not meet this deadline primarily due to a lack of final implementation guidance from the EPA. Accordingly, EPA is commencing promulgation proceedings regarding the implementation of a coastal enterococci standard for all BEACH Act states, including North Carolina, that have not yet adopted this standard. If the standard proposed by Staff today becomes effective prior to the conclusion of the EPA promulgation procedures, EPA will cease its promulgation action. DWQ Staff is proposing the following bacteriological water quality standards for North Carolina's marine waters:

- For SB Waters: A geomean of 35 per 100 ml and a Single Sample Maximum of 104 per 100 ml (Apr 1 to Oct 31) and 500 per 100 ml (Nov 1 to Mar 31)
- For SC Waters: A geomean of 35 per 100 ml and a Single Sample Maximum of 500 per 100 ml year round.

The Division is proposing the use of enterococci for recreational use support in all of its SB and SC waters. The Division must retain the use of a fecal coliform indicator for Class SA waters due to applicable Food and Drug Administration criteria.

Recommendation: That the EMC approve the request to proceed to public hearing(s) with the proposed enterococcus water quality standard for water bodies classified SB and SC.

EMC ACTION: EMC voted to approve going to notice and public hearing to amend the standard according to the Federal requirements.

Agenda Item: Request for Approval of the Proposed Reclassification of a Section of Richland Creek (Haywood County, Little Tennessee River Basin) to Class Trout (Tr)

Explanation: The North Carolina Wildlife Resources Commission submitted a request to reclassify a portion of Richland Creek to Class Tr. The reason for the request was to protect the existing waters' trout populations. Subsequent water quality studies indicated that the proposed waters are eligible for reclassification to Tr.

In July and September 2002, the Water Quality Committee and the Commission, respectively, approved the request to proceed with rule-making for the proposed reclassification. A public hearing was held in April 2004 in Clyde, NC. Two verbal comments and two written comments were received that were in favor of the reclassification. The Hearing Officer's Report of Proceedings sent to the EMC includes further details.

Recommendation: The Hearing Officer recommends that the proposed reclassification be approved by the Commission. If reclassified as proposed, the effective date is estimated to be September 1, 2004.

EMC ACTION: The EMC voted to approve the reclassification of these surface waters to Class Trout (Tr).

Agenda Item: Approval of Local Permit Program for the City of Monroe in Accordance with NCGS 143-215.1(f) and NCAC 15A 2H .0218.

Explanation: The City of Monroe has requested approval to become a delegated authority to establish and administer a local permit program for the issuance of public gravity sewer extensions within their utility service area in lieu of these permits being issued by this Division. This will enable them to issue permits for the construction and operation of new gravity sewer lines, and modifications to proposed or existing gravity sewer lines within their service area that will be either developer donated to the City for ownership or constructed by the City themselves. The City has demonstrated that engineering, inspections staff and funding is available for the administration of this program. They have submitted their program documents that demonstrate compatibility with Division requirements. The ordinance has been approved by the Attorney General office staff as being in compliance with the statute. Quarterly reports will be submitted to the Division for review according to current policy.

All items submitted by the City of Monroe have met the requirements outlined for program delegation in NCGS 143-215.1(f) and NCAC 15A 2H .0218 and are in accordance with our most current policies for delegated programs.

Recommendation: It is the recommendation of the Division that the Commission approve the request from the City of Monroe for delegation of public gravity sewer extension permitting authority.

EMC ACTION: The EMC approved the request from the City of Monroe.

Agenda Item:

Request for Approval of the Proposed Reclassification of a Rocky River (Chatham County, Cape Fear River Basin) to Class Water Supply III (WS-III) Critical Area (CA)

Explanation:

The Town of Siler City submitted a request to reclassify a section of the Rocky River to WS-III CA. The reason for the reclassification is to allow a new dam structure to be placed below the existing dam. The new dam will significantly enlarge the existing small impoundment to an approximately 160-acre reservoir. The Town wishes to have the new dam constructed and the resulting reservoir created in order to meet water demands through 2030.

In May 2003, the Water Quality Committee and the Commission approved the request to proceed with rule-making for the proposed reclassification. Because a State 401 Water Quality Certification would be needed before the Town could be given a Federal 404 (Dredge and Fill) permit to build the new dam, a "duel purpose" hearing was held in November 2003 in Siler City. The hearing received comments on the water supply reclassification and on the 401 Certification. The report on the 401 Certification issue is being prepared by the Division of Water Quality staff and the Division Director will determine if a 401 Certification will be issued (anticipated by 9/9/04). That information will be passed on to the U.S. Army Corps of Engineers to use in their decision on whether to issue a 404 (Dredge and Fill) permit.

Of the 32 individuals who spoke, seven spoke in favor of the proposed reclassification, two spoke neither for nor against the reclassification, and 23 voiced sentiments against the proposed reclassification. Four hundred and twenty six letters were received during the comment period; nine letters were received in favor of the proposal and 417 letters were submitted against the proposal. Three hundred and sixty one of the 417 letters were signed copies of one of two templates. The template letters cited several reasons opposing the proposal, which DWQ staff subsequently thoroughly

investigated.

Recommendation: The Hearing Officers recommend that the proposed reclassification be approved by the Commission. This recommendation is contingent upon the Town of Siler City taking mitigative measures as well as the measures specified in the Commission's water supply watershed protection rules.

EMC ACTION: The EMC approved the Hearing Officers' recommendations for approval of the reclassification.

Agenda Item: Request for Approval of the Final Catawba River Basinwide Water Quality Plan

Explanation: The *Catawba River Basinwide Water Quality Plan* is in the third cycle of basinwide plans that the Division is preparing for all 17 of the state's major river basins.

The Water Quality Committee approved the draft Catawba River Basinwide Water Quality Plan in May 2004 to be taken to public meetings. Three public meetings were held throughout the basin in Dallas, Newton, and Marion in July/August 2004 with approximately 192 people in attendance. Revisions were made and some information was added to the draft plan based on comments. Copies of the revised plans were sent to EMC members in the EMC package.

This Basinwide Water Quality Plan is a planning document that will guide both the public's and the Division's management actions in this river basin over the next five years and beyond. The management actions are based on existing rules and policy. Therefore, approval and endorsement of this plan by the Commission would affirm that the management actions set forth in this plan are consistent with the rules adopted by the Commission and with the decision-making policies under which the Division has acted in the past.

Recommendation: It is recommended that the *Catawba River Basinwide Water Quality Plan* be approved and endorsed by the Commission as a guide to water quality program management and implementation by the Division of Water Quality as it carries out its Water Quality Program duties and responsibilities in this river basin.

EMC ACTION: The EMC approved the Catawba River Basinwide Water Quality Plan.

SURFACE WATER QUALITY WQC/EMC FUTURE AGENDAS*

	WQC Agenda	EMC Agenda
Oct 2004	• Request for Major Variance from Neuse Riparian Area for Novo Nordisk • Presentation of "In-Lieu" Fees Programs and Recommendations for Updates • Annual Agricultural Reports in Tar-Pamlico and Neuse River Basins • Update on Coastal Habitat Protection Plan	• Submittal of Annual Progress Reports on the Neuse and Tar-Pamlico Agricultural Rules
Nov 2004	• No meeting scheduled.	• No meeting scheduled.
Dec 2004	• Update on Rule Amendments to "Waste Not Discharged to Surface Waters" Rules (15A NCAC 2H .0200) • Request to Proceed to Public Hearing with Reclassifications: Dan River to a Water Supply; Deep Creek to Water Supply Critical Area; and, Uwharrie River to Class B • Request to Delegate the Riparian Buffer Program to Pitt County • Request for Approval to Send the Draft French Broad River Basin Plan to Public Meetings •	• Request to Delegate the Neuse and Tar-Pamlico Rivers Riparian Area Protection Rules to Pitt County, NC • Request for Approval and Adoption of the Coastal Habitat Protection Plan in conjunction with the Marine Fisheries Commission and the Coastal Resources Commission.
Jan 2005	• No meeting scheduled	• No meeting scheduled
Feb 2005	• Request for Approval to Send the Draft Cape Fear River Basin Plan to Public Meetings • Consideration of a Nutrient Management Strategy/Compliance Schedule for Jordan Lake.	• Consideration of a Nutrient Management Strategy/Compliance Schedule for Jordan Lake.

*Dates shown are projections. Actual schedules could vary 1-3 months either direction.

STATUS OF PERMITTING AND INSPECTING ANIMAL WASTE MANAGEMENT SYSTEMS

ANIMAL WASTE COMPLIANCE REPORT

JULY 1, 2003 – JUNE 30, 2004

REFERENCE:
G.S. 143-215.10M

Status of permitting and inspecting animal waste management systems/Animal Waste Compliance Report for Period Beginning July 1, 2003 and Ending June 30, 2004

SUMMARY

Pursuant to G.S. 143-215.10M, the Department of Environment and Natural Resources submits the subject annual report.

This report details the inspections and operational reviews completed in North Carolina during the fiscal year 2003 for both the Division of Water Quality and the Division of Soil and Water Conservation. The tables show the type of inspection and the number of inspections completed. The Pilot Project conducted by the Division of Soil and Water Conservation is still in effect for 2003.

The tables show the number of permits issued by region and statewide for the fiscal year 2003. The tables also show permits issued by type of operation: swine, cattle, and poultry.

The report details the number and type of violations identified during inspections. The tables show the number of facilities receiving a notice of deficiency or violation, and the number of enforcement actions initiated during fiscal year 2003. The violation data is broken down by region and by type of operation.

The enclosed tables list totals for each of the Department's Regional Offices as well as state totals. The Regional Offices are noted as follows: ARO – Asheville Regional Office, FRO – Fayetteville Regional Office, MRO – Mooresville Regional Office, RRO – Raleigh Regional Office, WARO – Washington Regional Office, WIRO – Wilmington Regional Office, and WSRO – Winston-Salem Regional Office.

If there is a need for any additional information or clarification, please do not hesitate to contact us.

For Period Beginning July 1, 2003 and Ending June 30, 2004*

*Year to date numbers are reported as of 6/30/04 and may vary from actual due to delays in data entry and continued refinements to database.

**Pilot Project. Compliance Inspections will normally only be conducted in Brunswick, Columbus, and Jones County by DSWC. Operation reviews are normally conducted in the Pilot Counties in the spring and compliance inspections in the fall. As of July 1, 1999, Brunswick County became part of the Pilot Project.

***Inspections and operation reviews may include facilities that are no longer in operation and/or multiple inspections or operation reviews at one facility.

****Other Agencies include Soil and Water Conservation Districts and NRCS.

For Period Beginning July 1, 2003 and Ending June 30, 2004*

Executive Summary

The State of North Carolina's Solid Waste Management law requires the Department of Environment and Natural Resources (DENR) to develop a hazardous waste management plan for the state and revise it on or before July 1 of even-numbered years. (N.C.G.S. 130A 294(i)). The first plan was published in July 1990 and has been revised at two-year intervals. The 2004 plan summarizes the activities of the North Carolina Hazardous Waste Section to ensure safe management of hazardous waste and to encourage waste minimization, reuse and recycling. Major activities include implementing and enforcing the hazardous waste regulatory program, conducting workshops and providing technical assistance in waste reduction and recycling, soliciting participants in the Environmental Protection Agency's National Waste Minimization Partnership Program, and continuing efforts to improve compliance and foster waste reduction by small businesses.

1.0 INTRODUCTION

The State of North Carolina's Solid Waste Management law requires the Department of Environment and Natural Resources (DENR) to develop a hazardous waste management plan for the state. The plan is revised on or before July 1 of even-numbered years. (N.C.G.S. 130A 294(i)). The first plan was published in July 1990. This 2004 plan summarizes the North Carolina Hazardous Waste Section's activities to ensure the safe management of hazardous waste and to encourage waste minimization, reuse and recycling.

2.0 NORTH CAROLINA HAZARDOUS WASTE SECTION

The Hazardous Waste Section (HWS) was authorized by the U.S. Environmental Protection Agency (EPA) in 1980 to implement the federal hazardous waste regulatory program under the Resource Conservation and Recovery Act. The HWS has a staff of 50 people working in three branches: Facility Management, Compliance and Programs. Collectively, the three branches undertake the following activities:

- Regulate the management of hazardous waste by generators, transporters, treaters, storers, recyclers and disposers;
- Educate the hazardous waste community by providing technical assistance through individual consultations and seminars that encourage waste reduction, sound recycling, safe management practices and proper disposal as a last resort;
- Issue permits specifying requirements that each hazardous waste treatment, storage, recycling or disposal facility must meet;
- Provide a continuing compliance presence at commercial hazardous waste management facilities through the HWS Resident Inspector Program;
- Conduct compliance inspections and, in coordination with the North Carolina Office of the Attorney General, take enforcement actions against violators;
- Require groundwater assessments, facility investigations and corrective measures at facilities where hazardous wastes have been released into the environment and
- Ensure section staff receive necessary training and professional development opportunities to continually improve their job performance.

Information on most of the activities above is captured in the national hazardous waste database, RCRAInfo. The database is managed by the EPA, but most of the data is entered by authorized state programs. RCRAInfo contains comprehensive information on all facilities that generate or manage hazardous waste within the state, as well as all HWS activities affecting those facilities. In 2004 and 2005 the HWS will continue to develop and implement the conversion of RCRAInfo to the Department's Internet-Based Enterprise Application Management (IBEAM) framework. IBEAM will increase efficiency and accuracy by eliminating the need for centralized, direct data entry into the RCRAInfo system. The IBEAM system will also upload information seamlessly into the Department's Facility Identification Template for States database (FITS) and the Departmental Decision Support System. All systems are currently under development.

To view RCRAInfo and regulatory information for specific hazardous waste sites, visit http://www.epa.gov/enviro/. For details about the Hazardous Waste Section and the Division of Waste Management visit http://www.wastenotnc.org/.

3.0 HAZARDOUS WASTE GENERATION AND MANAGEMENT

Hazardous waste is categorized as either "characteristic," "listed," or both. Both waste categories and their attendant subcategories are specifically described in the federal regulations at 40 CFR 261, incorporated by reference in 15A NCAC 13A .0106.

Characteristic waste refers to any solid waste that exhibits a characteristic of ignitability, corrosivity, reactivity and/or toxicity. (Wastes are considered to have the characteristic of toxicity if they contain any of 40 specified hazardous constituents in excess of federal standards.) The term "listed waste" refers to specific wastestreams the EPA identified as hazardous based on its investigations of particular industries as well as certain listed commercial chemical products that are disposed.

The tables below show summary information about North Carolina's top 10 hazardous waste generators and its top 10 treatment, storage and disposal facilities (TSDFs) in 2001. The source for this data is EPA's 2001 "Biennial Report of Hazardous Waste Generation." This is the most recent information available. The 2001 Biennial Report (BR), published on October 1, 2003, can be found at http://www.epa.gov/epaoswer/hazwaste/data/brs01/index.htm.

It is important to note that EPA revised its waste management reporting requirements in 1999 to exclude hazardous wastewaters managed in treatment systems regulated under the Clean Water Act. Wastewaters historically account for a significant proportion of reported hazardous waste tonnages. Misinterpretations of the wastewater reporting exclusion on the part of North Carolina facilities led to significant errors in the state's Biennial Report data for 1999. That data is not included in this document because any comparisons drawn between the two reporting periods would likely be inaccurate. Future reports will use 2001 data as a baseline to track North Carolina's waste generation and management trends.

In 2001, 501 North Carolina large quantity generators (LQGs) [1] reported generating 94,534 tons of hazardous waste. Of the 501 LQGs, the top 10 facilities generated 32,515 tons, or 34 percent, of the total quantity of hazardous waste generated by North Carolina's large quantity generators.

[1] Large Quantity Generators are defined as facilities that generate 1,000 kg (2,200 lbs.) or more of hazardous waste in a calendar month.

Table 3.1 - Ten largest hazardous waste generators and quantity generated

	Site Name	EPA ID No.	City	Tons
1	DSM Pharmaceuticals, Inc.	NCD047373766	Greenville	5,663
2	Ecoflo, Inc.	NCD980842132	Greensboro	5,170
3	Ameristeel Corporation	NCD093340487	Charlotte	4,758
4	Cogins Corporation	NCD062567623	Charlotte	3,430
5	Heritage Environmental Services	NCD121700777	Charlotte	3,109
6	DuPont	NCD047368642	Fayetteville	2,708
7	R. J. Reynolds Tobacco Co.	NCD067441394	Winston-Salem	2,499
8	General Electric Co.	NCD050409150	Wilmington	2,468
9	Onyx Environmental	NCD986166338	Creedmoor	1,360
10	BASF Corporation	NCD049997786	Morganton	1,350
	Total			**32,515**

In 2001, 66 North Carolina treatment, storage or disposal facilities (TSDFs) reported managing 39,274 tons of hazardous waste through treatment, storage or disposal. Of the 66 TSDFs, the top 10 facilities managed 27,441 tons, or 70 percent, of the total. Common hazardous waste management methods include solvent recovery, incineration, fuel blending, energy recovery, sludge treatment, stabilization and metals recovery.

Table 3.2 - Ten largest hazardous waste managers or TSDFs

	Site Name	EPA ID No.	City	Tons
1	DSM Pharmaceuticals, Inc.	NCD047373766	Greenville	5,590
2	Clean Harbors	NCD000648451	Reidsville	5,065
3	Ecoflo, Inc.	NCD 980842132	Greensboro	3,406
4	Ashland Distribution	NCD061263315	Charlotte	3,193
5	Mallinckrodt, Inc.	NCD042091975	Raleigh	2,079
6	Heritage Environmental Services	NCD121700777	Charlotte	1,973
7	Detrex Corporation	NCD049773245	Charlotte	1,956
8	General Electric Co.	NCD050409150	Wilmington	1,536
9	DuPont	NCD047368642	Fayetteville	1,515
10	Durable Wood Preservers Inc.	NCD003173358	Research Triangle	1,128
	Total			**27,441**

Although only LQGs and TSDFs are required to report their hazardous waste generation and management amounts, it is important to note that North Carolina also has 2,028 small

quantity generators and 3,991 conditionally exempt small quantity generators.[2] These facilities are not required to report the amounts of hazardous waste they generate because they are typically small businesses for whom periodic reporting could be overly burdensome. However, these facilities collectively generate a significant amount of hazardous waste that needs to be managed properly and in compliance with all applicable rules.

4.0 HAZARDOUS WASTE REDUCTION INITIATIVES

A. Commitment to Hazardous Waste Minimization

The HWS has recently joined forces with EPA's Region IV to solicit participants in the National Waste Minimization Partnership Program. This voluntary program fosters partnerships between EPA and industry to reduce hazardous waste -- especially waste containing 30 highly toxic chemicals. Partners who make significant progress in waste reduction receive national recognition for their achievements.

The North Carolina Hazardous Waste Section has also committed to the following steps:

- Incorporate pollution prevention training that is based on targeted priority chemical waste streams, into annual generator workshops, industry meetings and enforcement settlement negotiations;
- Review facility requests for alternative management practices for hazardous waste (use/reuse, substitution, reclassification and delisting), and
- Support intervention projects to reduce/eliminate priority chemicals via partnerships with other agencies.

B. Environmental Stewardship Initiative Award

DENR's Environmental Stewardship Initiative promotes and encourages superior environmental performance by North Carolina's regulated community. This voluntary program stimulates the development and implementation of programs that use pollution prevention and innovative approaches to meet and exceed regulatory requirements. There are three levels of participation. "Environmental Partners" is for organizations interested in developing a systematic approach to improving their environmental performance. The "Rising Steward" level was added this year and is designed for those organizations that have a mature environmental management program. The "Environmental Steward" level is for organizations that already display a commitment to exemplary environmental performance beyond what is required by law. All participants must set environmental performance goals that include pollution prevention and are required to report annually on progress towards these goals and net pollution reductions.

[2] Small Quantity Generators are defined as facilities that generate between 100 kg and 1,000 kg (220 lbs. to 2,200 lbs.) per calendar month. Conditional Exempt Small Quantity Generators generate less than 100 kg (220 lbs.) per calendar month.

This important program not only recognizes outstanding environmental performance at the "Steward" level, but provides encouragement and assistance to foster improved environmental performance by North Carolina organizations. Coaches (technical staff) are assigned to each participant to provide technical assistance on pollution prevention and develop an environmental management system. Networking opportunities allow participants to learn from each other and share success stories. This program seeks to reduce the impact on the environment beyond measures required by any permit or rule, producing a better environment, conserving natural resources and resulting in long-term economic benefits.

For more information about the program, visit http://www.p2pays.org/esi/.

C. Other Activities

The HWS will continue to support safe hazardous waste management in North Carolina by:

- Supporting annual generator workshops that help educate the largest generators on hazardous waste regulations and the expectations of hazardous waste inspectors as well as supporting opportunities for waste minimization and recycling;
- Continuing the HWS initiative to improve compliance in the vast SQG universe through a SQG self-certification survey;
- Seeking to establish a hazardous waste generator security deposit to fund the cleanup of abandoned generator sites that do not meet acceptable environmental standards;
- Continuing to seek EPA authorization to maintain HWS' authority to implement newly promulgated regulations and standards;
- Improving the quality of hazardous waste data for hazardous waste trend analysis and sound decision-making; and
- Participating in EPA rulemakings that affect regulatory status and management standards for recycling used industrial rags and wipes, spent materials that are reclaimed for reuse, and other regulatory proposals.

RESIDENT INSPECTOR PROGRAM
2004 ANNUAL REPORT

This annual report is presented to the Environmental Review Commission pursuant to Article 9, G.S.-130A 295.02(m). The report covers the activities of the Resident Inspector Program from July 1, 2003 through June 30, 2004.

I. OVERVIEW

The Resident Inspector Program has been operating for more than 13 years in the Division of Waste Management. This program monitors all aspects of the commercial hazardous waste facilities in North Carolina and ensures compliance with all laws and rules administered by the Department of Environment and Natural Resources. It may also enforce laws or rules administered by any other state agency through a memorandum of agreement.

The Resident Inspector Program was established "... to enhance the ability of the Department to protect the public health and the environment by providing the Department with the authority and resources necessary to maintain a rigorous inspection and enforcement program at commercial hazardous waste facilities" [G.S. 130A-295.02(f)].

II. PROGRAM STAFFING

For this fiscal year, the program was comprised of two resident inspectors assigned to regional duty stations, one administrative assistant and a program supervisor (See Attachment 1 for the Organization Chart). The Resident Inspector Program resides within the Hazardous Waste Section's Compliance Branch.

III. THE RESIDENT INSPECTOR

Most state agencies perform their compliance monitoring inspections as required from their specific respective regulations. The Resident Inspector Program, however, is unique in that its inspections utilize a multi-media approach. This approach covers all regulatory responsibilities for which DENR is authorized, such as hazardous waste management and treatment requirements, workplace safety, air emissions requirements, wastewater treatment and discharge requirements, etc.

There are inherent overlaps of DENR's regulatory requirements with regulations administered by other departments. Two examples include the Department of Labor's Occupational Safety & Health Act and the Department of Transportation's hazardous materials transportation regulations. Deviations from these various departments' regulations could adversely affect public health and the environment, as well as a facility's compliance with air, water or hazardous waste management regulations. As part of the Resident Inspector Program's comprehensive approach to monitoring commercial hazardous waste facilities, resident inspectors also evaluate these sites for potential violations in these other regulatory areas. When necessary, they make recommendations to the facilities and/or make referrals to the authorized agency or agencies. The mandated frequency of inspection at each facility gives resident inspectors the time needed to achieve this high degree of oversight.

To prepare resident inspectors for their multimedia approach to inspections, initial training typically consists of Hazardous Waste Operations and Emergency Response (24 or 40 hours), Environmental Surveillance, RCRA Hazardous Waste Training, Hazardous Materials Transportation and the care and use of Level B / Personal Protective Equipment.

Annual training for resident inspectors includes an 8-hour Health & Safety Basic Refresher, Level B Update and Environmental Surveillance Update. Depending upon the inspector's area of expertise and responsibility, other miscellaneous training may be received, including Hazardous Waste Incineration, Ambient Air Monitoring, Air Pollution Control Devices, Chemical Safety Audit, OSHA Inspector's Course, Hazardous Materials Management and various EPA regulatory workshops.

IV. SUBJECT FACILITIES

To be subject to oversight by the Resident Inspector Program, the facility must be a commercial hazardous waste facility. The term "commercial," as it relates to a hazardous waste facility, is defined as a "facility ... that accepts hazardous waste from the general public or another person for a fee" [G.S. 130A-290(a)(3)]. Currently, there are 12 permitted commercial hazardous waste treatment, storage, and disposal facilities in North Carolina under the jurisdiction of the Resident Inspector Program. The Giant Resource Recovery facility continues with its previously announced intention to close all hazardous waste operations at the Stanly County, North Carolina location. The Carolina Solite facility (owned by the Giant Resource Recovery) continues to operate the light weight aggregate kilns utilizing "used oil" as a fuel and continues to be monitored by the Division of Air Quality and periodically by the Resident Inspector Program. Heritage Environmental Services, (one of four commercial permitted treatment, storage and disposal facilities located in Mecklenburg County), has suspended normal operations during a corporate economic evaluation. Although not currently treating, storing or disposing of hazardous waste at the Charlotte facility, Heritage Environmental Services continues to provide disposal services for their North Carolina customers, utilizing this Charlotte facility as a transfer station. This facility continues to be monitored by the Resident Inspector Program.

V. FACILITY CATEGORY RANKINGS

Each commercial hazardous waste treatment, storage and disposal facility is ranked to determine its required inspection fees and minimum inspection frequency as required under 15A NCAC 13A .0116. The frequency of the inspections at each facility is dependent upon its qualification as a "special purpose" commercial hazardous waste facility and the category ranking assigned to it.
Currently, all existing commercial hazardous waste treatment, storage and disposal facilities in North Carolina qualify as "special purpose" facilities. (See Attachment 2 for current category rankings and primary waste treatment activities for these facilities.) The designated categories of 1, 2 or 3 correspond to a minimum inspection frequency of two, four or six times per month, respectively.

VI. FUNDING & EXPENSES

The Resident Inspector Program is funded by fees collected from the commercial hazardous waste facilities. These fees are based upon each facility's category ranking and volume (tons) of hazardous waste handled. The category ranking system is designed to be an indirect measure of the costs associated with the oversight at each commercial hazardous waste facility. The commercial hazardous waste facilities' tonnage throughput has increased marginally; consequently, the fees received from these facilities have increased slightly.

For FY 2003-2004, the budget was developed using anticipated revenues from Resident Inspector Program fees of approximately $275,000. The actual hazardous waste tonnage received by many of the commercial facilities increased slightly over the previous year due to general improvement in economic stability of industry. (A detailed list of the individual tonnages received by each of the commercial hazardous waste facilities in FY 2003-2004 can be found in Attachment 3.) The actual program receipts in FY 2003-2004 totaled $276,605, while Program expenses for the year were held to $242,123. Currently, it remains necessary for the Resident Inspector Program Supervisor to conduct a portion of the required inspections in order to meet all aspects of the Program's mandates.

VII. INSPECTION GOALS & ACHIEVEMENTS

During this past fiscal year, the program staff conducted a total of 557 inspections. Additional inspections, over the required minimum of 504 inspections, were performed to monitor closure activities at one facility, the temporary suspension of normal operation at another facility, and to assist in improving compliance performance by other facilities. (A detailed list of the inspections performed by program staff at the commercial hazardous waste facilities in FY 2003-2004 can be found in Attachment 4.)

VIII. ENFORCEMENT & COMPLIANCE

Enforcement Activities

In general, the commercial hazardous waste facilities continue to be cooperative and have rapidly responded with corrective action in most cases when deficiencies or violations were cited or recommendations made. When either of these actions do not result in timely and consistent compliance, a more severe enforcement action is taken, such as, a compliance order with administrative penalty.

During the past fiscal year, resident inspectors issued five notices of violation to commercial facilities (see Attachment 5 for current and historic enforcement tracking). These notices of violation, when compared to the actual number of inspections, translate to an overall compliance rate of 99.1 percent.

Compliance Assistance Activities

Compliance assistance activities offered under this program are conducted routinely during the inspectors' site visits. Since the inspectors visit these facilities at least semi-monthly, they have the opportunity to become very familiar with the operations of each facility and may offer compliance assistance in several ways. Inspectors identify past trouble areas and work with the facility toward a permanent solution. They also increase scrutiny of these areas during each visit to keep the facility's compliance awareness high. Inspectors communicate frequently with facility management and front-line workers to clarify the permit, current regulatory requirements, the reasons for the requirements, and the potential risks incurred for noncompliance. Inspectors continue to develop and schedule roundtable training workshops customized for each specific facility. These workshops cover the most frequent violations observed overall at commercial facilities, the most frequent violations observed at their particular facility, any potential areas of concern and positive facility operations.

If a facility repeats a violation, the primary inspector and program supervisor will set up an informal enforcement conference with the facility compliance manager, the plant manager, and, if applicable, the corporate compliance officers. They discuss the facility's current compliance issues and work with the facility to find a permanent solution, which may include formal enforcement.

IX. PUBLIC MEETINGS / HEARINGS & PERMIT RENEWALS

Resident Inspector Program staff continue to observe and assist/support public meetings/hearings that involve the operation of and proposed modifications to the commercial hazardous waste facilities in the state. A continuing program goal is for the staff to be fully aware of public concerns and to be conscious of these concerns during oversight efforts at these facilities. Program staff have provided assistance in facility compliance audits by off-site generators, consultants, other agencies and the public. Program staff work with area schools to provide information in the classroom about environmental responsibility and how the facilities help with that responsibility.

The Resident Inspector Program staff continue to work with the Facility Management Branch (the permitting arm of the Hazardous Waste Section) and each commercial hazardous waste facility during the permit renewal/application process and other compliance reviews, such as, closure of a permitted storage units. The purpose of this joint effort is to provide clarification, address areas of concern, and assist in ensuring the permit application accurately reflects the facility as it is operated. This also provides the facility with a unified, consistent means of communication with the section.

X. SUMMARY

At the conclusion of the program's 13th year, Resident Inspector staff continue to provide rigorous oversight of the commercial hazardous waste facilities in this state. This is reflected in the facilities' overall compliance rate of 99.1 percent. Staff constantly seek new approaches and initiatives to improve the department's ability to protect public health and the environment. Staff also work to ensure that new regulatory requirements are fully understood by the facilities so they can be implemented rapidly and correctly. Proactive approaches, such as workshops, program oversight and compliance assistance efforts, have clearly demonstrated a heightened level of awareness and continued compliance at the commercial hazardous waste facilities in North Carolina.

MEMORANDUM

TO: Environmental Review Commission

FROM: William G. Ross, Jr.

RE: Inactive Hazardous Sites Annual Report to the Legislature

In 1987 the North Carolina General Assembly enacted the Inactive Hazardous Sites Response Act (N.C.G.S. 130A-310) to address sites with non-permitted releases of hazardous substances. This legislation requires annual reporting to the Environmental Review Commission. The 2004 annual status report is enclosed.

Should you have any questions, please call Jack Butler, Chief, Superfund Section, Division of Waste Management at 733-2801, ext. 293.

Report to the North Carolina General Assembly on the Inactive Hazardous Sites Program

October 2004

Superfund Section
Division of Waste Management
North Carolina Department of Environment and Natural Resources

http://www.wastenotnc.org

EXECUTIVE SUMMARY

The Inactive Hazardous Sites Program was created by the North Carolina General Assembly to identify, control and correct properties contaminated with hazardous substances.

To date, 1,855 chemical spill or disposal sites and old, unlined dumps or landfills have been catalogued. Of this number, 1,434 still require work to address their hazards. The old, unlined landfills make up about one half of the sites still requiring action. In most cases, the locations of the landfills are still being determined. The Inactive Hazardous Sites Branch has received federal funding this year for one full-time equivalent position to locate these landfills, collect information on property use, determine the potential for exposure and work with owners for safe final solutions. The Branch previously had a contractor conducting some of this work. The contract funds were expended in 2003. Under this contract, location and use determinations were completed at about one-third of the cataloged sites. Of those inspected thus far, 72 percent have a residence, school, church, day care or drinking water source on or within 1,000 feet of the landfill. Based on observations at sites investigated by the USEPA and the North Carolina Division of Waste Management, most of North Carolina's unlined landfills can be expected to have groundwater contamination.

To increase the program's effectiveness, the General Assembly authorized the use of private environmental consulting firms to oversee voluntary cleanup actions. Registered Environmental Consultants (RECs) are providing supervision for cleanup work on 30 sites. State staff audit a portion of the REC's work activities. At present, 70 firms have received REC status. In addition, oversight of remedial actions at two sites is being provided by federally-funded staff and oversight of work at 35 former manufactured gas plant sites is being provided through an agreement with a consortium of utilities and municipalities that funds two staff members.

The following summarizes site cleanup activities over this past reporting year.

Sites Identified	
Chemical spill or disposal sites	1,100
Old unlined dumps and landfills	755
Total	**1,855**
Sites With All Work Complete	
Since last status report in 10/03	8
Total Site Completions	**421**

Ongoing Cleanup Actions

Ongoing REC-Supervised Site Cleanup Actions	30
Ongoing Priority Cleanup Actions Supervised by State Staff	69
Total	**99**

The Inactive Hazardous Sites Response Act requires annual reporting to the General Assembly. All of the reporting requirements specified under N.C.G.S. 130A-310.10 are met in this report. The status report on the Brownfields program, as required by N.C.G.S. 130A-310.40, is provided separately.

I. THE INACTIVE HAZARDOUS WASTE SITES PRIORITY LIST

The Inactive Hazardous Sites Branch is within the North Carolina Department of Environment and Natural Resources' Division of Waste Management. It implements the Inactive Hazardous Sites Response Act of 1987. This act requires DENR to maintain a catalog of inactive hazardous substance or waste disposal sites. Table 1, on the following page, provides a list of sites added to that inventory since the last program report in October 2003. Table 2, on page 3, provides a list of sites assigned "No Further Action" status. The entire inventory can be found in Appendix II. Figure 1, on page 4, shows how the inventory is distributed by category. Appendix I provides a description of each inventory category.

N.C.G.S. 130A-310.2 requires that sites catalogued in the Inactive Hazardous Sites Inventory be prioritized based on their threat to public health and the environment. After discovery, sites are first cataloged in the "Evaluations Pending" category of the Inactive Hazardous Sites Inventory until their rank is determined. Site rankings are determined using the rules found in 15A NCAC 13C .0200. Once ranked, sites are transferred to the Inactive Hazardous Waste Sites Priority List. This list is provided in Table 3, found on page 5.

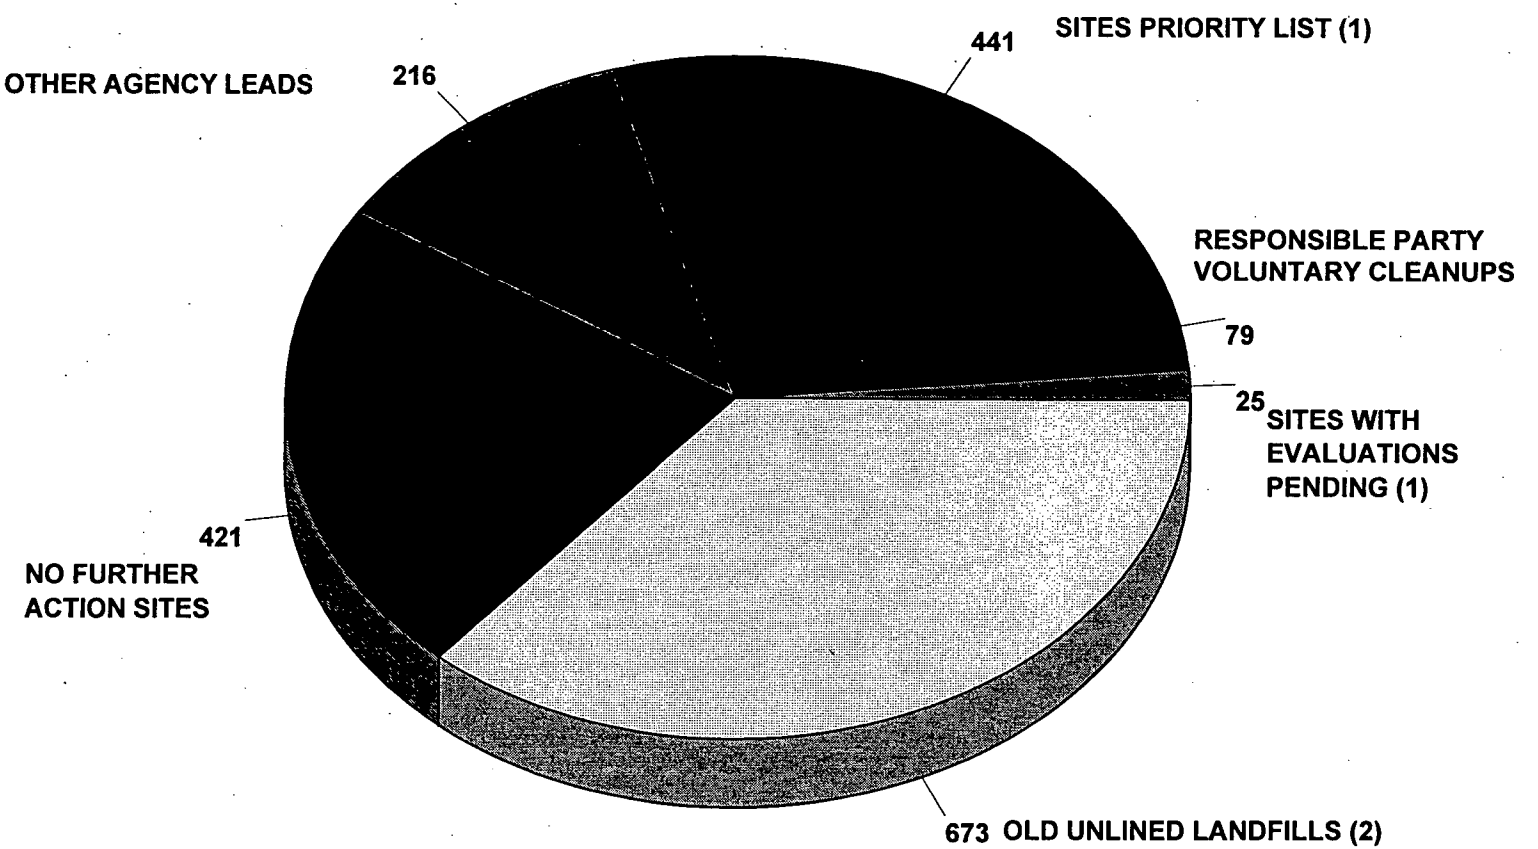
FIGURE 1. INACTIVE HAZARDOUS SITES
OCTOBER 2004 INVENTORY CATEGORICAL DISTRIBUTION
(1,855 Sites)



(1) Thirty eight sites in either the "evaluations pending" or "sites priority list" categories are also undergoing assessment and/or cleanup with program supervision (but not under an agreement).

(2) Inventory has 755 landfills. Of that number, 82 were already included in the inventory before the addition of the larger catalog of old, unlined landfills. As a result, they fall into other categories.

II. SITES THAT MAY OR ARE KNOWN TO REQUIRE USE OF THE INACTIVE HAZARDOUS SITES CLEANUP FUND

Purpose of the Fund

The Inactive Hazardous Sites Cleanup Fund is used to: (1) address imminent hazard sites; (2) pay for assessment and cleanup when responsible parties do not comply with orders to clean up sites; (3) pay for assessment and cleanup of sites that do not have financially-viable responsible parties (orphan sites); and (4) pay for state-contracted survey and legal assistance necessary to prepare notices of Inactive Hazardous Substance or Waste Disposal Sites where owners do not comply with orders to conduct such work. The state must attempt to recover its expenditures from responsible parties in the first, second and fourth cases.

The Inactive Hazardous Waste Sites Priority List helps determine priorities for cleanup. Responsible parties for top priority sites are encouraged to voluntarily clean up their sites. When a responsible party does not comply with a request and subsequent order to clean up a site, the State must perform the cleanup using the Inactive Hazardous Sites Cleanup Fund. The demand for state funds to conduct site cleanups depends on two factors: 1. how often responsible parties refuse to comply with orders to conduct cleanup; 2. the number of sites that lack financially-viable responsible parties. To date, the program has been successful in obtaining cleanup by responsible parties. Funds are mainly needed for orphan sites where the responsible party either cannot be located or has no financial resources.

The statute requires that the program report the list of sites known to require funds and the list of sites suspected to require funds for cleanup. Determining if responsible parties exist (and thus, if funds are needed) is often a complex and lengthy process. This information can become dated as owners and operators of the facilities change over time. To avoid the need to update the information several times, responsible party research is not done until a site is next in priority for action. For this reason, the total number of orphan sites on the SPL requiring state funds is not presently known.

Orphan Chemical Sites

The October 2003 report identified 39 orphaned chemical waste sites. Of these, 33 were noted to have attributes that made them a high priority. Since that report, two sites (Bone Farm Pesticide Site in Nashville and Cartrette Field in Chadbourn) have been cleaned up using the Inactive Hazardous Sites Fund. The Fund will pay to remove most of the waste from a third (Mary Circle Battery in Concord). An additional 11 sites are now in bankruptcy and thus orphaned. DENR hopes to obtain some funds for addressing these sites through bankruptcy claims, but the funds most likely will be insufficient to address all of the contamination. Thus a total of 48 orphaned sites will require funds for cleanup. The remaining money now in the Inactive Hazardous Sites Fund, not committed to addressing the Texfi, Inc. site described below, will be expended by the end of 2004 to conduct groundwater sampling in an area of threatened drinking water wells at the Gaither Transou site in Greensboro.

In addition to these orphan sites, the branch has been expending cleanup funds to address the serious threat to public health and the environment posed by the Texfi, Inc. site in Fayetteville, Cumberland County. Groundwater contaminated with hazardous substances has migrated from

Texfi to the adjoining City of Fayetteville's Hoffer Water Plant property. The contaminated groundwater is in contact with the city's primary finished drinking water holding tank. This tank sits, in part, below the groundwater table. The tank's construction and the nature of its water flow make it possible for contaminated groundwater to enter the tank. In addition, the city's drinking water intakes on the Cape Fear River, 450 feet downstream from the Texfi property, and a city park adjoining the Texfi property, are also concerns. Thus far, analyses indicate the drinking water has not been affected.

DENR used cleanup funds to construct a barrier wall in 2001 to prevent additional flow of contaminated water toward the tank. Extraction wells were installed to remove some of the contaminated water that had already passed on to the water plant property and around the tank. Groundwater contaminant concentrations in the area between the wall and the tank have declined since initiating this action. The construction of the barrier wall, the removal of contaminated groundwater from between the wall and the tank and monitoring of the city's drinking water are being conducted as immediate protective measures. These activities will not clean up the larger groundwater contaminant plume or its sources at the Texfi site. With $50,000 in additional funding from the legislature in the 04-05 budget year and reducing the frequency of sampling we are able to extend the monitoring of the clear well and the groundwater in that area to about September of 2006.

There is a risk that the barrier wall will fail overtime. Thus it is important to remove the source of the groundwater contamination on the Texfi property. The sources are solvents in the subsurface and contaminated soils.

Settlement of North Carolina's bankruptcy claim against the Texfi estate mandated that a portion of the proceeds from the estate's law suits and property sales are to be placed in a trust fund to conduct the removal of contaminant sources. We do not know how long it may take to generate sufficient funds or how much money will result. To date we have received $225,000. This is in no way sufficient to initiate source removal action effectively. As soon as sufficient monies accrue, work will promptly begin. After removing the sources contributing to groundwater contamination, it could take many years before significant reductions in groundwater contaminant concentrations occur.

Unlined Landfills

Hundreds of old unlined landfills have been cataloged in the state. Based on information from landfills across the country, most will likely have groundwater contaminated with hazardous substances. The branch had previously received funds to determine the location and current use of these sites. This work was completed in a total of 38 of the 100 counties. We continue to conduct location work in the other counties with some limited federal funding. To date, we have completed field surveys of 282 old landfills. Of the landfills inspected, 204 are considered priorities. This is due to a drinking water source, a residence, a school, a church, or a daycare on the property or within 1,000 feet of the landfill.

We can estimate the number of old, unlined landfills that pose the greatest hazard by using the following equation:

Number of landfills with exposure concerns (204) ÷ number of landfills surveyed thus far (282) X total number of landfills in inventory (750) = estimated 543 landfills with potential exposure concerns.

Almost without exception, these landfills were operated either by private individuals with limited financial resources or by counties and municipalities that operated in the public interest and did not make a profit. Thus, these sites may be considered to have no responsible parties available to pay for any corrective measures required.

Cleanup Funds Needed

There are a total of 798 orphan chemical sites and old unlined landfills that remain to be addressed. Of these, 235 are considered high priorities due to exposure concerns (the 31 remaining known priority chemical sites not cleaned up and the 204 old landfills that have been inspected and found to have exposure concerns). Based on the average cost expended per site for the recent orphan cleanups conducted, another $177,913 per site or $5,515,303 for 31 sites or $41,809,555 for 235 sites will be needed.

The Texfi, Inc. site has no other responsible parties. The federal government has already indicated the site is not a candidate for a cleanup under Superfund. Drinking water for the entire population of the City of Fayetteville is threatened. The legislature has provided $50,000 in the 04-05 budget to continue operation of the interim protective remedy (the operation of the groundwater extraction well system and sampling) while bankruptcy funds accrue to a level that can support a source area removal. It may be years before groundwater contaminant concentrations drop as a result of any removal. Funds are currently available to continue the operation of the interim remedy and sampling through September 2006.

As of July 1, 2004, the balance of the Inactive Hazardous Sites Cleanup Fund totaled $140,097.10. Of this, $100,321 is committed to continue the operation of the Texfi interim remedy through September of 2006. The remaining $39,776.10 will be expended by the end of calendar year 2004 to cleanup as much waste at possible at the third ongoing orphan cleanup (Mary Circle Battery in Concord) being conducted with fund monies and to conduct some groundwater sampling around threatened wells at the Gaither Transou site in Greensboro.

III. NATIONAL PRIORITIES LIST SITES REQUIRING A STATE COST SHARE

National Priorities List sites are those hazardous substance or waste disposal sites that are priorities for cleanup under the federal Comprehensive Environmental Response, Compensation and Liability Act, more commonly known as Superfund. North Carolina has 28 NPL sites.

The NPL includes both sites with financially-viable responsible parties and orphan sites. Cleanup costs are financed either by responsible parties or by a federal trust fund with a state cost share. When the federal trust fund is used, CERCLA requires North Carolina to pay 10 percent of the cleanup cost plus 100 percent of the cost to operate and maintain the remediation system.

Table 4, found on page 47, provides a list of the North Carolina NPL sites, their locations, investigation/cleanup status, estimated costs, and projected start dates for cleanup. Part I, found on page 47, includes those sites where the Federal Trust Fund/North Carolina cost share is required. A summary of North Carolina's cost share obligations is provided at the end of this part. Part II, found on page 49 includes the status of responsible party funded cleanups.

IV. RESPONSIBLE PARTY VOLUNTARY SITE REMEDIAL ACTION

When the Inactive Hazardous Sites Branch solicits the cooperation of responsible parties in taking action at a priority site, most parties agree to voluntarily conduct a cleanup with branch approval. In addition to these voluntary actions, responsible parties and owners often come forward on their own to initiate an approved assessment and/or remedial action. Due to the number of volunteers and very limited staff resources, the branch was authorized by the General Assembly to privatize its oversight role at lower priority, voluntary site remedial actions. Sites with more severe public health threats or concerns are still reviewed by state staff.

The privatized portion of the voluntary cleanup program is called the Registered Environmental Consultant, or REC Program. Under this program, a responsible party hires an REC to both conduct, and to certify the regulatory compliance of, a site's assessment and clean up. In order for a firm to qualify as an REC, it must demonstrate it meets certain regulatory qualifications criteria. The REC certification replaces state oversight. The state audits a portion of the REC projects to ensure the integrity of the program. The state sanctions RECs where necessary. A state staff auditor is funded through fees collected from the voluntary participants.

A current list of sites which have parties conducting assessments and cleanups in accordance with consent agreements with the state is provided in Table 5, on the following page. Table 6, found on page 54, is a list of additional, ongoing, Branch-directed priority actions not under consent agreements.

Note: There are 22 additional sites with active ongoing bankruptcy claims, new site screenings, "no further action" reviews or monitoring of perpetual land use restrictions.

V. IMMINENT HAZARD SITES

The N.C. Department of Environment and Natural Resources and the USEPA are committed to addressing imminent hazard sites when identified. Table 7 provides a list of sites where imminent hazards have been discovered, or where abatement activities have continued, in fiscal year 03-04. Their location, a site description, status and funding source are also provided.

TABLE 7. SUMMARY OF IMMINENT HAZARD SITES

Site	*City/ County*	*Site Description*	*Status*	*Funding Source*
Holtra Chem/Honeywell	Riegelwood/ Columbus	Tanks, lagoons, ponds, soils, materials and a building contaminated with mercury.	Work began in 2003. USEPA continuing to oversee work being conducted by owner.	Owner
Rhodera Drive Wells	Stallings/ Union	Buried drums in a residential area.	USEPA conducting drum and soil cleanup.	USEPA
Swiggett Road DOT Abandoned Drums	Greensboro/ Guilford	Abandoned drums containing various hazardous substances.	USEPA removed drums in 2003-2004.	USEPA
Texfi Industries	Fayetteville/ Cumberland	Chlorinated solvent groundwater contaminant plume has migrated from a former textile mill to the City of Fayetteville's water plant property. The city's finished drinking water holding tank sits in contact with contaminated groundwater. The city's drinking water intakes on the Cape Fear River are 450 feet downstream from the Texfi property line.	The State constructed a barrier wall to prevent further contaminant migration to the holding tank area and installed extraction wells to remove contamination presently near the tank. The State has funds to operate the extraction wells and monitor the groundwater until September 2006 when funds will be depleted. The State is waiting for funds through a bankruptcy settlement to conduct a source removal.	State

VI. SUMMARY OF THE INACTIVE HAZARDOUS SITES CLEANUP FUND AND NATIONAL PRIORITIES LIST COST SHARE FUND

Inactive Hazardous Sites Cleanup Fund
As of July 1, 2004

Deposits (03-04)		
Interest		$6,730
No further action review fees		$1,000
Transfer from NPL Cost Share Account for Texfi Monitoring/Assessment		$50,000
Total Deposits		**$57,730**
Withdrawals (03-04)		
Texfi Industries-Fayetteville emergency abatement contract	$91,462	
Orphan priority site sampling/removal contract	$537,035	
Total Withdrawals		**$628,497**
Current Balance		**$140,097**
Obligations		
Texfi emergency abatement contract		$100,321
Orphan priority site sampling/removal contract	$39,776	
Total Current Obligations	**$140,097**	
Effective Balance		**$0**
Orphan Cleanup Cost Requirements (see Chapter II for more details)		
Funds needed for 31 additional priority orphan sites	$5,515,303	
Funds needed to address 204 old landfills with exposure concerns	$36,294,252	
Priority Orphan Site Cleanup Costs		**$41,809,555**

National Priorities List Cost Share Fund
As of July 1, 2004

Estimated cost of federal trust fund/N.C. cost share cleanups	$90,492,598
N.C.'s 10 percent cost share for pending/ongoing cleanups	$9,049,260*
Fund disbursements for cost share payments	$5,423,173
Current balance	$5,125,107
Encumbered amount of the fund balance for cost share payments	$3,333,485
Effective Balance	**$1,791,622***

* Cleanup cost estimates are not yet available for all sites. The cost share figure will increase as cost estimates become available. Also, other sites may be added to the National Priorities List that will require a state cost share. This account will also be required to pay for the state's operation and maintenance obligations which, will begin in the next few years at some sites. Aside from interest, the fund has no continuing source of income.

APPENDIX I

INACTIVE HAZARDOUS SITES INVENTORY
Description of Categories

The Department of Environment and Natural Resources is required by North Carolina General Statute 130A-310.1(a) to maintain an inventory of inactive hazardous substance or waste disposal sites. The Inactive Hazardous Sites Inventory accounts for all of the sites in the EPA's Comprehensive Environmental Response, Compensation and Liability Act inventory of potential contaminated sites called CERCLIS. The intent is to address those sites determined not to be federal priorities. Many sites in the CERCLIS inventory, and therefore also the Inactive Hazardous Sites Inventory, are regulated by other state and federal laws. Thus, they are not priorities for the Inactive Hazardous Sites Branch. The Inactive Hazardous Sites Inventory (Appendix II) is organized in the categories described below. To avoid duplication of work, sites being addressed by other agencies are tracked in separate categories. Ten of the inventory sites appear in multiple other agency lead categories (4 through 10).

1. **Sites Priority List (pgs 60-70)**
   The SPL includes sites with confirmed contamination or known disposal of hazardous substances that have been ranked using the Prioritization System rules (15A NCAC Subchapter 13C .0200).

2. **Responsible Party Voluntary Remedial Action Sites (pgs 71-72)**
   In accordance with North Carolina General Statute 130A-310.9(b), voluntary cleanups or "remedial actions" conducted by responsible parties under agreements with the state must be listed in a separate category.

3. **Sites with Evaluations Pending (pg 73)**
   This category includes those sites that require evaluation before site priority can be determined. Each site with evidence of contamination will be ranked and transferred to the SPL. Those sites where no further action is required will also be transferred to that category.

4. **National Priorities List (pg 74)**
   The NPL consists of sites the federal government has determined to be the most serious, uncontrolled hazardous waste disposal sites in the nation. Either federal and state dollars or responsible parties will fund these cleanups. This list only includes North Carolina NPL sites.

5. **Non-NPL Federal Superfund Cleanups (pg 75)**
   NPL-caliber sites where the USEPA has entered into agreements with responsible parties to conduct remedial action are supervised by the USEPA. This list includes only the USEPA non-NPL remedial action sites located in North Carolina.

6. **RCRA Permitted or Interim Status Facilities* (pgs 76-77)**
Facilities that are permitted or have interim status under the Resource Conservation and Recovery Act are tracked in this category. These sites are exempt pursuant to G.S. 130A-310(3) and come under the jurisdiction of the North Carolina Hazardous Waste Section.

7. **RCRA Non-Permitted Corrective Action Sites* (pg 78)**
The inventory includes some non-permitted sites that are currently undergoing Resource Conservation and Recovery Act corrective action under the direction of the North Carolina Hazardous Waste Section.

8. **Sites Under the Jurisdiction of the Solid Waste Section* (pg 79)**
Permitted solid waste landfills being monitored and controlled by the North Carolina Solid Waste Section, including those subject to post-closure care requirements, are tracked in this category.

9. **Sites Under the Jurisdiction of the Division of Water Quality * (pgs 80-81)**
Sites in this category include those where the North Carolina Division of Water Quality has been specified as the lead agency to oversee assessment and/or cleanup.

10. **Sites Under the Jurisdiction of the Division of Environmental Health's Radiation Protection Section* (pg 82)**
Sites conducting assessment and cleanup under the direction of the North Carolina North Carolina Radiation Protection Section are tracked in this category.

11. **Old Unlined Landfills (pgs 83-99)**
This is a list of all the old unlined landfills catalogued by the branch. Some of the landfills were already included in the inventory before the addition of the larger catalog of old landfills. As a result, they also appear in other categories.

* **Additional sites, not included in the Inactive Hazardous Sites Inventory, may be managed by these regulatory agencies. A few sites have multiple agency jurisdiction.**

Brownfields Property Reuse Act
Annual Report to the General Assembly
October 2004

Executive Summary

This report to the General Assembly, required by the Brownfields Property Reuse Act (BPRA) of 1997 (G.S. 130-310.30 *et seq.*), describes the activities and status of the N.C. Brownfields Program in 2004. DENR is pleased to report continued success and growth in the state's efforts to revitalize and safely reuse brownfields properties through the N.C. Brownfields Program and its partnership with the U.S. Environmental Protection Agency. The program is a model of high return on public investment in that the relatively small sums of public funds spent leverage large sums of private investment in brownfields redevelopment. Furthermore, DENR receives no state-appropriated funds for the program. The public dollars spent are federal funds from a cooperative agreement with the U.S. EPA.

Previous years' reports have detailed the program's results on a calendar year basis. Therefore, this report will project out to year's end, based on the status of current projects and on prorated results in the first three quarters of this year. The program projects to complete 22 brownfields agreements in 2004 (there were 15 in 2003), bringing the total of completed agreements to 61. These 61 projects and others in the pipeline represent $1 billion in private investment committed to the redevelopment of environmentally impacted properties under the state's brownfields statute. Moreover, demand for program services continues to increase. DENR projects that a record 45 applications to the program (Letters of Intent) will have been received from prospective developers during 2004 (there were 34 in 2003).

Major activities accomplished in 2004 are summarized below:

- Implemented the first year work plan of the U.S. EPA 128(a) Brownfields Cooperative Agreement;
- Successfully followed its plan to coordinate with the Land-of-Sky Regional Council through a cooperative agreement with Land-of-Sky to station a Brownfields Program staffer at Land-of-Sky offices in Asheville;
- Hired three additional staff with the federal funds including a Hydrogeologist (stationed in Asheville), a Toxicologist, and an Applications Programmer;
- Held the education/outreach event attended by 170 people, *Brownfields Workshop for Developers and Local Governments in Raleigh* at the McKimmon Center at N.C. State University, April 1, 2004;
- In July the program achieved milestones that mark the 100th site in the program and the 50th completed brownfields agreement;
- Increased the total committed private investment in brownfields redevelopment in North Carolina from $550 million to $1 billion;
- Obtained a renewal of the U.S. EPA 128(a) Brownfields Cooperative Agreement for 2005 with funding of $968,572.

Background

Redeveloping brownfields properties has become increasingly popular as developers and cities realize these properties offer viable opportunities to bring economic growth, public health protection, jobs, and quality of life benefits to cities and rural areas. Brownfields are abandoned, idled or underutilized properties where environmental contamination hinders redevelopment due to concerns about environmental liability. The BPRA gives DENR the authority to enter into brownfields agreements with prospective developers who did not cause or contribute to site contamination. The BPRA modifies the environmental liability barrier for prospective developers and motivates them to bring these properties and their hindrances to DENR's attention. DENR partners with the prospective developer to evaluate the possible risks associated with site contamination, and negotiates a brownfields agreement that stipulates the steps necessary to make the site safe for a specific intended reuse. The result is a redevelopment project that works economically and also protects public health and the environment.

Because brownfields agreements afford prospective developers liability protection for as long as they make and maintain the site safe for its intended reuse, the specter of open-ended financial uncertainty is lifted. This economic shield allows prospective developers to obtain financing previously unavailable for these properties.

Thus, the BPRA provides guidelines for a new public policy that allows DENR to distinguish between prospective developers of brownfields properties and the properties' polluters. Instead of mandating the site be cleaned to current standards, the BPRA requires developers to make the site safe for reuse. The program must examine the risks to public health or environment posed by the site. Then, DENR determines what the prospective developer must do to ensure safe redevelopment. These actions can range from land-use restrictions to cleanup, or a mixture of both. In addition to holding prospective developers accountable to their agreements, DENR reserves the right to enforce against those parties responsible for the original contamination. The process is summarized in Table 1 below.

Table 1. Summary of the Brownfield Process

Step 1 – A prospective developer with a brownfield site that needs liability protection submits a letter of intent with basic site facts. DENR determines if the prospective developer and the property proposed for reuse are eligible under the BPRA statute.
Step 2 - DENR reviews existing site data to determine the risk posed by contamination at the site. If the data are insufficient to evaluate such risk, DENR advises the prospective developer on further site assessment to gather the necessary data.
Step 3 - DENR determines what actions are necessary to make the site safe for reuse and includes these actions in a draft brownfields agreement. The prospective developer pays statutory fee and negotiates/concurs with DENR on provisions in brownfields agreement.
Step 4 - The brownfields agreement is published with a 60-day public comment period.
Step 5 - The brownfields agreement is finalized after any public comments are considered and incorporated. The prospective developer uses the final brownfields agreement, which provides liability protection, to obtain financing for the project. Liability protection is contingent upon the completion of the actions required by the brownfields agreement. The brownfield agreement makes the site eligible for the brownfields property tax incentive.

The ancillary brownfields property tax incentive for prospective developers allows them to recoup funds spent on assessment and cleanup. The program motivates the market to recycle these sites to productive reuse, while preserving or reducing the use of pristine or undeveloped "greenfield" property. While the environmental benefits are obvious, most redevelopments also create a significant number of jobs and put properties back on the tax rolls. This dual economic-environmental gain benefits the state, local government, and the brownfields developer.

As these benefits become better known, the program's popularity increases. After four successive years of growth at the end of 2004, the program will have 61 completed brownfields agreements and approximately 60 others in the pipeline. Approximately $1 billion in private investment dollars have been committed to redevelop abandoned properties that blight urban and rural landscapes.

The overall result is a win-win scenario for both the environment and economic development. Risk reductions and cleanups are achieved at sites that could have harmed the public or the environment, and prospective developers redevelop abandoned properties that once had little hope for productive reuse. The public benefits of job creation, improved quality of life in the surrounding neighborhoods, local tax base expansion and contribution to the general fund are other positive impacts.

The program also supports smart growth, sustainability and the One North Carolina Naturally agenda. Every project that reuses property in urban centers reduces suburban sprawl and preserves green space. In a very real sense, for each brownfield redeveloped, a greenspace is saved. The properties that have received the 61 completed agreements are estimated to represent a minimum of 1,100 acres and the 60 more in the pipeline have an acreage of 1,050. This is, in effect, acreage that is being recycled.

Program Status

The program has long partnered with the U.S. EPA for funding. This year has been focused on the implementation of the first year of funding from the U.S. EPA 128(a) Brownfields Cooperative Agreement under the federal brownfields act. This increased funding from about $170,000 annually in previous years to $1,000,000 this year. This large infusion of funds required the program to develop goals and commitments to achieve under its work plan with the U.S. EPA, one of which involved creating and filling numerous program staff positions to expand the program enough to handle additional demand for brownfields agreements. By September 30, 2004, the end of the first year of this federal funding, all positions that were proposed to EPA in the work plan had been hired and were in place. These staff members are all fully engaged in processing brownfields agreements as the program continues to employ these federal funds to increase its capabilities, produce more agreements, and facilitate more brownfields redevelopment.

The number of projects seeking brownfields agreements has increased each year of the program despite mixed economic conditions in the development sector, and 2004 is no exception with 45 Letters of Intent projected for the year. We anticipate continued increases in demand as the program's expansion serves to better educate both the public and the development community

about the benefits of brownfields redevelopment. The federal grants for brownfields assessment and cleanup that were awarded by the U.S. EPA to local governments in 2003 and 2004 (Greensboro, Concord, Farmville, Raleigh, Laurinburg, and the Land-of-Sky Regional Council) will further increase demand as these communities begin local brownfields redevelopment efforts. North Carolina local governments received more EPA grant funding than any other southeastern state in EPA Region 4.

In September 2004, the U.S. EPA's Region 4 approved DENR's application for continued brownfield cooperative agreement funding and awarded DENR $968,572 under Section 128 of the federal Small Business Liability Relief and Brownfields Revitalization Act. The funds are authorized for use starting October 1, 2004 through September 30, 2005. A portion of these funds is used to support pre-regulatory landfill identification activities of the Inactive Hazardous Sites Program.

Technical positions in the Brownfields Program now include five program managers, a toxicologist, and an IT data programmer for database development.

Outreach and Education

The program is largely market driven in that prospective developers bring their sites to the program in order to break liability barriers for financing. One of the clear goals of the program is to educate the development community and local governments as to the program's existence and usefulness as a tool for both private and public redevelopment stakeholders. This increase in awareness about the program will in turn result in more redevelopment projects moving forward. This year the program focused its educational efforts on its statewide *Brownfields Workshop for Developers and Local Governments* held in Raleigh on April 1. The conference was co-sponsored by DENR, the U.S. EPA, the NC Division of Commerce, and the NC League of Municipalities. At the conference local government attendees learned how to compete for federal brownfields grants. Developers and lenders learned about how the Brownfields Program alleviates the uncertainty in liability so they can obtain or loan project financing. Response was overwhelming among the over 170 attendees. Since this workshop, the program has seen a noticeable jump in the number of project applications.

Cooperation with Local Government

The program has had close cooperation with local governments, especially since its cooperative agreement with the City of Charlotte that placed a DENR employee in Charlotte in May of 2002. This agreement maximized the effectiveness of the program by having a Brownfields Program staff person co-located with local government staff also working on brownfields redevelopment. This also provides direct face to face cooperation with the developers in that locality. This formula has enabled the completion of 23 brownfields agreements in the Charlotte area.

Seeking to duplicate this success, the program proposed to EPA a similar approach to coordination with local government in the Asheville area. Thus, one of the new positions funded by this cooperative agreement has been placed in the offices of the Land-of-Sky Regional Council. This project manager works with Land-of Sky in much the same way as our Charlotte staff member works with Charlotte, bringing their combined efforts to bear on encouraging

brownfields redevelopment. Several new projects are underway in the western part of the state as a result of this partnership.

Site Summaries

For brief descriptions of all brownfields projects in the program as of June 30, 2004, please see the Appendix. The table there is divided into three sections: active eligible projects, projects pending eligibility, and projects with finalized brownfields agreements.

Active eligible projects have been deemed eligible for a brownfields agreement under BPRA statutory criteria. These developers are working with DENR in some stage of data gathering, analysis or agreement negotiation. As of June 30, 2004 there were 52 active projects. Projects at this stage receive guidance from DENR as the developers gather the additional data needed to ensure protection of public health and environment. Once research is complete, DENR analyzes the data, then drafts and negotiates the terms of the brownfields agreement with the prospective developer. At most of these sites, DENR is waiting for additional data requested by the program.

Projects pending eligibility are in the initial stage of the brownfields process as they apply for entry into the program. Sites in this category have yet to meet the requirements under the statute for eligibility for a brownfields agreement. For the sites in this category, the program has requested clarification or additional information from prospective developers regarding a site. Normally developers respond to these requests for clarification, the sites are usually deemed eligible and are quickly moved into the active eligible category. As of June 30, 2004, there were eight sites in this category.

Projects with finalized brownfields agreements have completed the public notice phase of the brownfields process and either have a signed brownfields agreement or are waiting for the agreement to be executed. As of June 30, 2004, 47 projects had finalized agreements, and 14 more final agreements are anticipated by the end of the year.

Milestone Projects

Indicative of the progress made in the last several years, the program has reached significant milestones in 2004. In June 2004 the program admitted its 100th site and nearly simultaneously completed its 50th brownfields agreement in July. These particular projects, summarized to the right and below, and are illustrative of the range of projects that are utilizing the program.

The 100th Site to Enter the Program
Pillowtex Plant 1 Site
Kannapolis, Cabarrus County

When this textile operation closed in August 2003, it left 5,000 workers jobless, making this facility closure the single largest loss of jobs in state history. The City of Kannapolis as the prospective developer is seeking a brownfields agreement for an alternative use project for this facility. At present there is a developer interested in multiple industrial and commercial uses including turning a portion of the site into a state of the art commercial sports complex. The Brownfields Program is guiding the City in assessments to determine the contamination on the site, which includes petroleum and chlorinated solvents. It will then formulate plans to ensure the safety of the proposed redevelopment through a brownfields agreement.

The Pillowtex plant project is a very large industrial textile facility. The textile industry's recent economic troubles and plant closures are well documented, and fully one fourth of the projects entering the Brownfields Program have been textile related. The program is hopeful that a completed brownfields agreement will help to facilitate the site's safe redevelopment and replacement of lost jobs.

The 50th Completed Brownfield Agreement
The Rusak Property
Charlotte, Mecklenburg County

This former metal plating operation located in Charlotte is adjacent to the Marie Davis Middle School. This 1.2-acre parcel will be razed and incorporated into school renovation/expansion plans thereby protecting public health and removing an eyesore. The Brownfields Program is guiding the Mecklenburg County Board of Education in the assessment and cleanup efforts to make the site safe for the proposed reuse as a plaza entranceway for the school. The agreement came out of public comment period on July 30, 2004.

The Rusak Property project is a small industrial facility that would be difficult, if not impossible, to consider as a parcel for expansion without the liability protection afforded by a brownfields agreement. Interestingly, both of these projects are being redeveloped by local government entities, though most ongoing projects are private sector redevelopments.

Brownfields Project Demographics

Brownfields sites in heavily industrialized regions of the country tend to be weighted toward urban areas. However, North Carolina's tradition of rural manufacturing creates a significant number of rural brownfields opportunities. This fact continues to be reflected in the distribution of the program's inventory of projects. While only 4 of the of the 22 agreements projected for completion during 2004 are rural, 19 of the program's total of 61 completed agreements and approximately half of the program's pending and eligible projects are rural sites.

The additional staff hired in 2004 allowed the program to continue to raise the level of its education and outreach efforts in order to make rural communities more aware of the state's Brownfields Program. As a result of these efforts, the public benefits enjoyed by urban areas with brownfields projects will extend to rural regions of the state as well. DENR will continue to focus on the importance of rural brownfields to their surrounding communities.

To effectively define the brownfields universe in our state and increase effectiveness of outreach efforts, several questions need to be answered. What are the basic demographics of all of the brownfield sites in North Carolina? How many and where are these brownfields? What industries do they come from, and what are their general characteristics? To find out, a key element to the program's EPA funded work plan is a demographic survey of brownfields in the state. The program has opened discussions with the Institute of Government at UNC-Chapel Hill on developing this survey and hopes to implement it in 2005. The survey will be conducted with several local government entities and then statistically extrapolated to determine data on a statewide basis. The goal is to determine the number and geographic distribution of brownfield properties in the state.

Improving Effectiveness

Throughout its existence, the Brownfields Program has provided a high "bang" for the federal "bucks" it uses for operation funds. The program's 61 brownfields agreements and 60 other projects in the pipeline represent $1 billion in committed private redevelopment investment. The high ratio to which the federal funds have been successfully leveraged into private development dollars for brownfields redevelopment is just one measure of the effectiveness and efficiency of the BPRA.

By continuing to add needed staff in 2004 the program has significantly increased its volume capacity as the demand for brownfields agreements continues to increase. New internal technical protocols, more experienced project managers, and an improved project tracking system reduced process time, as did streamlining and standardizing various administrative elements. The program continues to upgrade and update its Web site, which helps disseminate essential and timely information to brownfields stakeholders. These efforts have allowed staff to spend less time conveying information and more time processing applications and advancing projects through the brownfields process. This increase in effectiveness and efficiency is largely responsible for the program's record of 22 projected agreements completed during 2004.

The program believes strongly that increased cooperation between DENR and local governments has yielded significant benefits and is a trend it wants to continue to strengthen. DENR has recognized the effectiveness of placing a staff person in the City of Charlotte offices and has duplicated that effort by placing a staffer in the offices of the Land-of-Sky Regional Council. Land-of-Sky has received two EPA brownfields grants this year and is viewed as a strong advocate for brownfields redevelopment in EPA Region 4.

The program will continue its educational outreach for local governments and encourage and facilitate their application for federal brownfields funds through these efforts. The program believes that a staff person serving as a local government outreach liaison would be of significant

benefit. Although it has no additional funds for such a position, DENR will explore this concept under future work plans with the U.S. EPA.

Lastly, the summary table below shows the progress during the program's history since the BPRA became effective in 1997. One turning point evident in the chart is that the program had a

	1997	1998	1999	2000	2001	2002	2003	2004
Site Applications (that year)	7	13	7	18	16	21	34	45
Finalized BFAs (that year)	0	2	1	3	8	11	14	22
Cumulative Total BFAs (all yrs.)	0	2	3	6	14	25	39	61

*Numbers for 2004 are projected on a prorated basis from 3rd quarter data.

noticeable upswing in completed agreements in 2000 when the program received sufficient EPA funds to hire its first full time staff person. Successive hires in years 2002 onward have lead to greater brownfields agreement processing capacity and outreach ability. Hence, the growth in applications into the program and completed agreements.

As for legislative efforts that could continue to increase BPRA's effectiveness, DENR recognizes that textile mills and furniture plants have been especially hard hit in the current economy and therefore supports the concepts contained in last session's legislative bill H1743/S1345. This bill provides additional tax incentives for brownfields redevelopment projects of these hard hit industries so as to encourage the reuse of their closed facilities. The demographic survey of North Carolina brownfields DENR is pursuing through the Institute of Government likely would be able to confirm or refute the notion that there are significant and increasing numbers of brownfields from the textile and furniture industries.

Fund Status

The Brownfields Property Reuse Act Implementation Account receives the $2,000 fee charged to prospective developers who enter the program and is to be used by DENR to defray the cost of the program. For fiscal year July 1, 2003 through June 30 2004, the Brownfields Property Reuse Act Implementation Account had a beginning balance of $48,674, receipts from fees and interest of $48,047, and expenditures of $2,076. This yields an ending balance in the fund of $96,645. The expenditures were for supplies and for expenses for the *Brownfields Workshop for Developers and Local Governments* held April 1, 2004. Plans for the use of this fund for the future include additional outreach, software, database development needs, and possibly staff for coordination and assistance for local governments in applying for and using their U.S. EPA brownfields grant funds effectively.

Further Information

For additional information on the Brownfields Program and how it works, please visit our Web site at **www.ncbrownfields.org.**

APPENDIX

Status Summary of Brownfield Projects as of June 30, 2004

Appendix

Status Summary of Brownfield Projects as of June 30, 2004

Project Inventory is divided into three segments as follows:

Active eligible projects have been deemed eligible for a brownfields agreement under BPRA statutory criteria. These developers are working with DENR in some stage of data gathering, analysis or agreement negotiation.

Projects pending eligibility are in the initial stage that sites are in as they enter the program. Sites in this category have yet to meet the requirements under the statute for eligibility for a brownfields agreement.

Projects with finalized brownfields agreements have completed the public notice phase of the brownfields process and either have a signed brownfields agreement or are waiting for the agreement to be executed.

ACTIVE ELIGIBLE PROJECTS (52)

PD = Prospective Developer; RP = Responsible Party

8th STREET LANDFILL West 8th Street Kannapolis, Rowan Co. PD: City of Kannapolis	Former landfill operated by Cannon Mills for the disposal of residential, commercial, and industrial waste from the early 1900s through 1972. Landfill contents may include hazardous and regulated compounds. PD intends to redevelop the site for public recreational and dedicated open space uses.
ABC ENGRAVERS 724 North I-85 Charlotte, Mecklenburg Co. PD: Holden Business Park, LLC	Former engraving and plating facility with known chromium and chlorinated solvent contamination in soil and groundwater. PD intends to redevelop the site as an office complex.
ALPHA MILLS 312 E. 12th St. Charlotte, Mecklenburg Co. PD: Crosland, Inc.	A 5.77-acre parcel that was historically a textile mill. Most recently the site was the former Consolidated Group Incorporated engraving facility. The site has known soil, groundwater, surface water, and sediment impacts from historical site operations. PD intends to redevelop the property for residential apartments with compatible commercial and retail development.
AIRPORT EXXON 3305 North Liberty St. Winston-Salem, Forsyth Co. PD: Mrs. Becky Flowers	Former automobile engine repair and maintenance facility with known soil and likely groundwater contamination involving petroleum and degreasing solvent constituents. Intended redevelopment is a gas station/convenience store to serve the Smith-Reynolds Airport users and employees.
ALAMAC AMERICAN 1885 Alamac Road Lumberton, Robeson Co. PD: Alamac American Knits, LLC	The former knit textile manufacturing facility has perchloroethylene contamination associated with former drycleaning operations. The PD is using the facility to also manufacture knit textiles but does not use perchloroethylene on the premises.

AMERICAN CYANAMID Donald Ross Road Charlotte, Mecklenburg Co. PD: DRR of the Carolinas, LLC	Former pesticide formulation facility with petroleum and chlorinated hydrocarbons and metals contamination in soil and groundwater. PD intends to initially redevelop the site as a gravel parking lot for car and trailer storage. Future use may include other light industrial or commercial uses.
FORMER AMP FACILITY 1126 Church Street Greensboro, Guilford Co. PD: Church Street Medical, LLC	Approximately 10-acre site is the former location of AMP Incorporated, a metal stamping, plating, and manufacturing facility. Closed since the mid-1980s, the site has known chlorinated solvent contamination in groundwater, which is being remediated under an approved Corrective Action Plan within the NC DWQ Groundwater Section. PD intends to redevelop the site as a medical office campus.
ANDREX INDUSTRIES 220 Deaverview Road Asheville, Buncombe Co. PD: Milkco, Inc.	A 9-acre light manufacturing site formerly used as a textile production facility that operated a knitting, weaving and cutting business along with dry cleaning, shrinking and packaging of fabrics. Tetrachloroethylene groundwater contamination from drycleaning operations being remediated by RP with pump-and-treat system. PD is adjacent property owner, a milk processing and distributing plant. Initial plan is to use part of property for truck and trailer parking. Within 3 years they plan to demolish Andrex buildings and expand the Milkco Plant to double capacity within 8 years.
BOULIGNY SITE 2320 N. Davidson St. Charlotte, Mecklenburg Co. PD: NODA Properties, LLC	Approximately 3.5-acre parcel that was the former R.H Boulingy facility. The site has known groundwater impacts from chlorinated solvents. PD intends to redevelop the property for mixed-use development with commercial, retail, industrial and residential.
PADGETTE LANE PROPERTY 105 Padgett Lane and Carrboro, Orange Co. PD: Main Street Properties of Chapel Hill LLC	This 1-acre site was used as a small motor and automobile repair facility and an auto salvage yard since about 1960. Suspected impacts to soil and/or groundwater include petroleum hydrocarbons and chlorinated solvents. Site will be redeveloped into high-density residential units serving students at UNC-CH.
CAMDEN ROAD 1600 Camden Road Charlotte, Mecklenburg Co. PD: Harris Murr & Vermillion, LLC	Approximately 0.25-acre parcel in Historic SouthEnd of Charlotte. The site has known groundwater impacts from historical site operations as a gas station, tire repair, plumbing repair, and other uses. PD intends to redevelop the property for commercial and retail purposes
CAROLINA LOG BUILDINGS Howard Gap Rd at US Hwy. 25 Fletcher, Henderson Co. PD: Town of Fletcher	Former wood treating facility with known pentachlorophenol contamination in soil and groundwater. PD intends to redevelop the 30-acre site as the new heart of the Town of Fletcher to include various office and retail uses.
CEDAR CREEK 3468 Cedar Creek Road Fayetteville, Cumberland Co. PD: DAK Resins, LLC	The property was formerly operated by Monsanto to produce herbicide and before that was used to produce nylon and polyester. DAK Resins, LLC plans to use the onsite utilities to produce steam and cooling water, use storage and distribution facility. Resin production may occur on the site in the future.
CHARLOTTE TANK TRUCK Border Drive Charlotte, Mecklenburg Co. PD: WR Deal Holdings LLC	Propane manufacturing company with soil and groundwater contamination from an adjacent property. PD intends to expand his current site operations.

CHATHAM PARK NC Hwy. 268 Elkin, Surry Co. PD: Town of Elkin	A 30-acre site containing solid waste disposal area used by former textile manufacturing facility. Known VOC and SVOC contamination exists in groundwater at the site. PD intends to redevelop the property for park and recreational uses in keeping with the current use of adjoining property as baseball fields.
CHESTER STREET PROPERTY North Chester Street (Hwy 321) Gastonia, Gaston County	Site contained former Carson Dry Cleaner located in the center city area of Gastonia. Property has known chlorinated solvents contamination in the soil and groundwater. PD intends to redevelop the site in commercial retail uses.
CSX RIVERFRONT 515 Nutt Street Wilmington, New Hanover County PD: Riverfront Developers, LLC	An 8.26-acre tract on the Cape Fear River in downtown Wilmington. Former CSX railroad property last used for offloading of diesel for rail distribution. Minor naphthalene contamination in the groundwater and some polynuclear aromatic hydrocarbons in soil. Intended use is multi-purpose development that could include a hotel, private residences, professional offices, retail stores, restaurants and private marina. Public waterfront amenities, with a 600' extension of Wilmington's historic riverfront.
EAST PARK – DOROTHY HALL 1423 & 1427 E. Fourth St Charlotte, Mecklenburg Co. PD: Torrence Street Partners	Approximately 0.8-acre parcel that is a portion of the East Park Development Project, with known chlorinated solvent and gasoline contamination. PD intends to redevelop the site as a pedestrian urban infill multiple use development with commercial, residential, recreational and common open space. The site is part of the City of Charlotte's East Park re-development zone.
EAST PARK – Craver 1601,1609,1615 Elizabeth Ave Charlotte, Mecklenburg Co. PD: Torrence Street Partners	Approximately 0.65-acre parcel that is a portion of the East Park Development Project, with known chlorinated solvent and gasoline contamination. PD intends to redevelop the site as a pedestrian urban infill multiple use development with commercial, residential, recreational and common open space. The site is part of the City of Charlotte's East Park re-development zone.
EASTWAY PHASE I 3014 Eastway Drive Charlotte, Mecklenburg Co. PD: Blaine Lake, LLC	Shopping Plaza in the City of Charlotte that has contamination from a dry cleaning operation and adjacent properties. The groundwater is contaminated. PD intends to redevelop the shopping plaza and maintain jobs in the area.
EASTWAY PHASE II 3124 Eastway Drive Charlotte, Mecklenburg Co. PD: Blaine Lake, LLC	Shopping Plaza in the City of Charlotte that has contamination from a dry cleaning operation and adjacent properties. The groundwater is contaminated. PD intends to redevelop the shopping plaza and maintain jobs in the area.
ECUSTA 1 Ecusta Road Pisgah Forest, Transylvania Co. PD: Ecusta Business Development Center, LLC	In its prime, this 540-acre site was the world's largest non-wood pulp and specialty paper manufacturing facility. Closed since late 2002, the site has known metals, caustic and solvent contamination. PD intends to re-start flax pulping operations and to market the pulp to paper manufacturers. PD may also undertake other uses of site buildings and facilities, including office space and possible use of excess wastewater treatment capacity by local municipalities.

ELK MOUNTAIN LANDFILL Elk Mountain Road Woodfin, Buncombe Co. PD: Town of Woodfin	Approximately 156-acre site contains a former municipal landfill which was operated under lease by the City of Asheville, and which has been closed since the late 1970s. PD has operated a 9-hole golf course on the site since 1990. PD will conduct assessment activities to determine if there is actual contamination at the site. PD intends to redevelop the site into an 18-hole golf course and approximately 250 condominiums in areas outside of the waste cells.
FISHBURNE EQUIPMENT Airport Road Arden, Buncombe Co. PD: R. & P. Van Praag	Former metal fabrication and tobacco press manufacturing facility with suspected VOC contamination in soil and groundwater, based on detection of these compounds on adjoining, downgradient property, the former Buncombe County landfill. PD intends to redevelop the site for light manufacturing/assembly, warehousing, and public storage uses.
GATEWAY AT OLD SALEM Multiple parcels (24, 30 and 408 Salem Avenue, 1007, 1016, 1019, and 1100 S. Marshall, 1100, 1122 and 1315 S. Main Street, 212 Stafford Street, 1198, 1405, and 1480 Broad Street.) Winston-Salem, Forsyth County PD: Southeast Gateway Ventures, LLC	Project size is approximately 51 acres. The property is planned for mixed-use redevelopment including offices, commercial/retail space, residences, a YWCA , a private school and parking. Contamination is from a former Duke Power Plant substation (PCBs, PAHs in soil) and groundwater contamination from a number of sources, mainly petroleum but with a few chlorinated solvents.
GENERAL WOOD 1901 Wood Treatment Road Leland, Brunswick County PD: Leland Land, LLC	A 120-acre pole treatment facility (creosote, chromated copper arsenate (CCA) and pentachlorophenol (PCP)) under Chapter 11 bankruptcy that is currently under RCRA jurisdiction. PD's intent is to be able to distinguish old from new contamination and then continue with pole treatment (CCA and PCP only). Groundwater contamination mainly associated with creosote and petroleum. Metal and PCP contamination in soil.
GLEN RAVEN MILLS 114 Raven Circle Kings Mountain, Cleveland Co. PD: Consortium for Progress	Former textile manufacturing facility with solvent contamination in groundwater. PD intends to redevelop the property as a residential/retirement center for senior citizens. Responsible party will continue assessment and/or cleanup activities under state Voluntary Cleanup Program.
GREY HOSIERY MILL Fourth & Laurel Streets Hendersonville, Henderson Co. PD: Old Mill Arts Committee	Former hosiery manufacturing facility located in downtown Hendersonville with low concentrations of chlorinated solvents in site groundwater. PD intends to renovate the building and redevelop the property as a performing arts center.
GUILFORD MILLS – W. Market Street 4925 W. Market Street Greensboro, Guilford County PD: Kim's Greensboro Real Estate, LLC	A 19.8-acre vacant textile facility with ancillary buildings. Minor groundwater contamination associated with former underground storage tanks. Other non-UST contamination has been documented but information has not yet been sent to us. PD plans to use the site for general commercial property.

HISTORIC COTTON MILL 191 Riverside Drive Asheville, Buncombe Co. PD: RiverLink, Inc.	A 2.63-acre site formerly occupied by a cotton mill that operated from the 1900s but has been abandoned for many years. PD will conduct environmental assessment to determine if the site has any contamination. PD intends to redevelop the site in mixed commercial/retail and residential uses. This project is part of the Asheville French Broad Riverfront Plan.
HOME INNOVATIONS SITE Hwy 52 S & Ratliff Gin Road Morven, Anson Co. PD: Dan River Inc.	Former textile manufacturing facility with petroleum hydrocarbon and VOC contamination in soil and groundwater. PD intends to redevelop the site as a modern textile manufacturing operation where present environmental contaminant compounds are not used. Project has significant job creation potential.
KIDD LANE BATTERY DISPOSAL 3607 Kidd Lane Charlotte, Mecklenburg Co. PD: Joshua's Farm	Abandon dairy farm with historical lead battery disposal operations. The approximately 1-acre parcel is adjacent to a 22-acre horse & animal farm area for the Joshua's Farm Operations. The site has a limited area with lead contamination in the surficial soils. PD intends to redevelop the area as a parking lot for the horse and animal farm operations.
MODEL LINEN PD: QUB Studios 120 West Lewis Street Greensboro, Guilford Co.	The site was used to manufacture wood stoves and has low levels of chlorinated solvents in the groundwater. The site will be redeveloped as a photographic studio and other commercial space.
NATIONAL TEXTILES Jamestown Road Morgantown, Burke Co. PD: National Textiles	Former textile manufacturing facility with chlorinated solvent contamination in soil and groundwater. The applicant PD intends to sell the site to an identified potential buyer for conversion and reuse as a furniture manufacturing facility.
NORTH HILLS MALL 4217 Six Forks Road Raleigh, Wake Co. PD: North Hills Mall Ownership Organization, LLC	This 31-acre site was originally developed in 1963, and was expanded into one of Raleigh's earliest enclosed malls. The site has known petroleum and chlorinated solvent contamination in soil and groundwater from auto gas and repair facilities and from an off-site drycleaner. DP intends to redevelop the site into a pedestrian friendly mixed-use retail, commercial and residential complex.
PADGETTE LANE PROPERTY 105 Padgette Lane Carrboro, Orange County PD: Downtown Urban Ventures, LLC	Less than 1-acre site with a 3,500 square foot former automobile repair shop. Contamination appears to be restricted to incidental housekeeping related releases from site activities. PD intends to redevelop the site for 55 residential condos and/or apartments for a total of 63,950 square feet with the intent to market students at UNC-Chapel Hill.
PARKER HANNIFIN 12415 Capitol Blvd. Wake Forest, Wake Co. PD: St. Ives 200 Commercial, LLC	A 33-acre former air control devices manufacturing facility with known trichloroethene contamination in soil and groundwater resulting from former wastewater treatment operations. PD intends to redevelop the site in mixed commercial, retail, and office space uses. Responsible party is currently undertaking assessment and remediation within RCRA and N.C. Hazardous Waste Section oversight.

PILLOWTEX PLANT 1 1 Lake Circle Drive Kannapolis, Rowan & Cabarrus Counties, NC PD: City of Kannapolis	A 158-acre site with 5.6 million square feet in 17 buildings. Closed/bankrupt textile manufacturing plant is available for purchase through bankruptcy court. The PD is working with SouthEast Developers to purchase and redevelop the property as a sports and entertainment complex, office space and other businesses. The City is working on submitting a bid to purchase the property through the bankruptcy court. Potential or known contamination at the site includes gas, diesel fuel, varsol, PAHs, acids, caustics, alcohols, maleic acid, formaldehyde, benzidine, naphthylamines, used oil, coal (PAHs, inorganics).
RADIATOR SPECIALTY 1900 Wilkinson Blvd. Charlotte, Mecklenburg Co. PD: Suttle Avenue, LLC	Idled automotive chemicals & hardware, and plumbing supplies manufacturing facility with volatile, semi-volatile, and metals contamination is site soil and groundwater. PD intends to redevelop the property into a major mixed-use office, retail, commercial, and multi-family residential development.
RESCO PRODUCTS 3514 West Wendover Avenue Greensboro, Guilford County PD: CarMax Auto Superstores, Inc.	1.943-acre tract that is currently on undeveloped portion of Resco Products. CarMax has adjacent property and intends to expand its operations by using this site as paved parking for its vehicles, allowing expansion of its rehabilitation activities on used cars on other portions of it's property (including cleaning, repairing and servicing used vehicles). This larger manufacturing operation will allow CarMax to expand its operations significantly in North Carolina creating 30-50 additional jobs at this site and allowing them to develop three to four new dealerships in the Triangle region of North Carolina, each employing approximately 125 people (total of 400-550 new jobs).
RUSAK PROPERTY 3004 Bank Street/ 3331 Griffith Street Charlotte, Mecklenburg Co. PD: Charlotte Mecklenburg Board of Education	A 1.21-acre parcel that is adjacent to the Marie G. Davis Middle School. The site is contaminated from historical operations as a metal plating facility. The PD intends to incorporate the adjacent parcels into the new middle school construction. The brownfields parcel will be the plaza entrance.
SALEM UNIFORM 4015 N. Cherry Street Winston-Salem, Forsyth County PD: Winston Weaver Co. Inc.	2.53-acre site that has been vacant for many years. Was leased out from 1967-83 to Salem Uniform and from 1983-86 to Cintus Corporation who purchased the assets for Salem Uniform. During a Limited Site Assessment for petroleum USTs, high levels of PCE were discovered, probably from dry cleaning solvents. PD is currently leasing space, but would like to improve it for use for fertilizer storage and other commercial usage.
FORMER SCHLAGE LOCK FACILITY 3551 North Wesleyan Blvd. Rocky Mount, Nash County PD: Community Resource Exchange	49.15 acre/196,000 square foot former manufacturing facility for lock/doorknob plating and assembly that used PCE as a degreasing solvent. Working with the Hazardous Waste Section as it site is a RCRA TSD post-closure facility with active voluntary GW remediation system (Ingersoll-Rand is RP). Chlorinated solvents (PCE, TCE, 1,2-DCE, toluene and acetone are main constituents of concern in both soil and groundwater. PD is non-profit organization who needs loan in order to make improvements to former manufacturing facility in order to provide tenant space for non-profit organizations such as the Red Cross, Habitat for Humanity, United way and the Division of Emergency Management. Also intend to develop outparcels for light industrial businesses and commercial/retail businesses.

SHELBY DYEING & FINISHING 1000 West Grover Street Shelby, Cleveland Co. PD: GMAC Commercial Credit, LLC	Former textile dyeing and finishing facility with solvent and metals contamination in soil and groundwater. Through its sale of the property to Environmental Fibers, PD intends to facilitate the redevelopment of the site as a cotton recycling facility, bringing the two site buildings back into productive use, and bringing jobs and tax base improvements to the community.
SHELBY WILLIAMS 401 Meacham Road Statesville, Iredell Co. PD: Lou Jay Associates, LLC	The 28-acre site is contains an idled furniture manufacturing facility with metals contamination in soil and groundwater from former plating operations conducted at the site. Applicant-PD intends to up-fit the facility for the production of high-end cabinetry and add an estimated 650 jobs in the next three years.
SOUTH BOULEVARD MGP Site 1424 South Boulevard Charlotte, Mecklenburg Co. PD: Summit Properties Partnership, L.P.	This former manufactured gas plant has limited residual PAH and BETX contamination. The PD intends to redevelop the site into a high-density, multi-family housing development or a mixed-use commercial and residential development.
SUTTON SHOPPING CENTER NW Corner of Walkup & Sutherland Ave Monroe, Union Co. PD: Whitley Commercial Properties	The site is an old run-down shopping strip center in the Monroe Area. The site has known soil and groundwater contamination from chlorinated solvents and gasoline constituents. PD intends to renovated the shopping center and expand the building area.
TAR HEEL LIFT 7055 Albert Pick Road Greensboro, Guilford Co. PD: Idlewild Grading Co., LLC	This 8-acre site contains a forklift sales, maintenance, and repair facility. The site has known environmental contamination from historic operations of the forklift facility. The site is currently underused, and PD intends to relocate and expand its grading business from Winston-Salem, NC to this brownfields property.
UNITY PLACE Multiple Parcels (~58) in and around Broad & Fourth Street Winston-Salem, Forsyth County PD: Unity Partners, LLC	A 15-acre property consists of former car dealership, gas station, printing business, dry cleaner, automotive repair shops, etc. Redevelopment plan is for a European-style town center that is mixed use, and will have include Krispy Kreme's headquarters, multi-screen and IMAX theatres, shops, town houses, office space and parking facilities. At this point known contamination consists of stoddard solvent/mineral spirits in groundwater and soil contaminated with hydraulic fluid.
V. F. Site 2831 Wilson Park Road Statesville, Iredell Co. PD: Statesville Partnership LLC	This former textile plant has chlorinated solvent contamination as a result of on site drycleaning operations. The PD plans to upgrade the property for light manufacturing or distribution facility.
WILSON LANDFILL 6700 Ward Boulevard Wilson, Wilson Co. PD: Dillon Properties, LLC	This underused 14-acre site was formerly occupied by a wastewater treatment facility owned and operated by the City of Wilson. The site has known metals contamination in groundwater. PD intends to redevelop in mixed commercial, warehousing, and residential uses.
YADKIN BRICK YARD 44052 Yadkin Brick Road New London, Stanly Co. PD: Numantec, LLC	Industrial sludges were stockpiled on the site, which led to soil and groundwater contamination, by petroleum products, VOCs and arsenic. The PD plans to reuse the facility to manufacture fertilizer from poultry litter.

PROJECTS PENDING ELIGIBILITY (8)

PD = Prospective Developer; RP = Responsible Party

ABBOTT LABORATORIES 16900 North U.S. Hwy 15/402 Bypass (Aberdeen Road) Laurinburg, Scotland Co. PD: Marketta LLC	50.75-acre site with three main structures totally approximate 300,000 square feet of space. Used by Abbott Laboratories from 1970-2002 for manufacture of medical devices (anesthesia kits, specialty intravenous injection sets). Trichloroethene and BTEX groundwater contamination. PD intends to use site for production and manufacture of skin care products, with anticipated creation of 250 new jobs. Currently awaiting additional information to determine eligibility.
ALLISON MANUFACTURING 930 Old Charlotte Road Albemarle, Stanly County PD: NCSC Properties, LLC	A18.93-acre parcel with a 120,000 square foot former manufacturing facility used in silk-screen production, fabric printing and knitting. PD needs loan in order to improve and repair facility and recruit additional tenants. Naphthalene, 1,1-DCD and PCE in soil; petroleum hydrocarbons and chlorinated solvents in groundwater.
CULTURAL ARTS CENTER 205 McDonald Street, and Old Braswell Library 344 Falls Road Rocky Mount, Nash County, NC PD: Imperial Centre Partners, LP	Former Imperial Tobacco Plant is 2.42 acres with140,000 square feet of floor space and Braswell Memorial Library is 4.93 acres with 16,000 square feet floor space. The PD owns the site and is working with City to finance and redevelop the site into the Rocky Mount Cultural Arts Center (RMCAC). The RMCAC will be the new home to the Children's Museum, the Arts Center and the Playhouse Theater, all of which were lost to major flood damage from the overflowing Tar River during Hurricane Floyd in September 1999. Contamination at the site includes gas, diesel, heating oil from USTs and #6 fuel oil from AST, lead, chlordane, asbestos.
FORMER DAYCO FACILITY Location: 2150 South Main Street Waynesville, Haywood County PD: Haywood Advancement Foundation	The site consists of 35.29 acres with existing buildings totaling 600,000 square feet plus a separate warehouse of 250,000 square feet. The facility was used for rubber hose manufacturing until it closed in 1997. The facility contained numerous ASTs and USTs, both soil and groundwater contamination exists on site. Contamination has been identified primarily as Toluene with some soil PAHs. Currently the ROR Group, a rubber manufacturer, occupies the Banbury building and the Haywood County Sheriff's office occupies a small office section. The majority of the facility is abandoned and in extremely poor condition. The Haywood Advancement Foundation is working with a potential developer to redevelop the property into a commercial property with retail stores.
GRIFFITH STREET PROPERTY 565 Griffith St. & 536 Jetton St. Davidson, Mecklenburg Co. PD: Five Six Five, LLC	Prior industrial operations resulted in soil and groundwater contamination by petroleum and VOCs. The PD plans to redevelop the facility as a charter school and as retail and commercial space.
MOSER-HALL Indian Trail, Union Co. PD: Moser-Hall, LLC	Property with petroleum hydrocarbon contamination in groundwater which has migrated onto the property. The source of the contamination was a release from a leaking underground storage tank system located on an adjoining parcel. PD intends to redevelop the site in commercial/retail use.

OLD WNC FAIRGROUNDS Location: Intersection of James Street and Mill Street East Flat Rock, Henderson County PD: Henderson County Public Schools	Project is former Western North Carolina Fairgrounds, it is currently vacant land, approximately 27 acres. The site was also used as training grounds for the Blue Ridge Fire Department. The training exercises led to soil contamination consisting of petroleum hydrocarbons in the training area. The PD intends to redevelop the property into an industrial park with the assistance of Henderson County Partnership for Economic Development.
PILLOWTEX WWTP West C Street & Glenn Ave. Kannapolis, Rowan PD: City of Kannapolis	A 118-acre abandoned Wastewater treatment facility for the Pillowtex Plant 1 property. It is owned by the bankrupt Pillowtex Corporation and is available for purchase. The Phase I ESA states that a pond on this property was used for alum sludge by the City of Kannapolis Water Treatment Plant. Thus, due to potential liability on part of PD, until a potential buyer is identified, there are no immediate plans for redevelopment of this property. PD is seeking viable buyers at this time.

FINALIZED BROWNFIELDS AGREEMENTS (47) EITHER IN FORCE OR PENDING SIGNATURE

PD = Prospective Developer; RP = Responsible Party

ALAMAC KNIT FABRIC Hamilton, Martin Co.	Former textile manufacturing facility with known soil and groundwater contamination involving chlorinated solvents. Site is undergoing active remediation under NC DWQ. Intended reuse is as a non-polluting school locker manufacturing facility that will employ some 350 workers.
ANCHOR MILL Huntersville, Mecklenburg Co.	Abandoned textile manufacturing facility with known metals contamination in soil, and lead, chlorinated solvent, and petroleum hydrocarbon contamination in groundwater. PD intends to redevelop the 32-acre site as a mixed-use transit village that reuses the old mill building and adds new office, retail, and residential components.
ARCHDALE MARKETPLACE Charlotte, Mecklenburg Co.	Approximately 13-acre parcel known as Archdale Marketplace Shopping Center. Groundwater is contaminated at the Property due to historical site operations by an A&P grocery store, Sno-White Cleaners, and K-mart auto service center. PD intends to redevelop the property for commercial and retail.
BALDOR ELECTRIC Charlotte, Mecklenburg Co.	Former electric motor and motor component assembly and manufacturing facility with solvent impacted soil and groundwater. PD intends to redevelop the property for use as industrial condominiums.
BROWN'S SOLVENT CO. Charlotte, Mecklenburg Co.	Former paint and solvent formulation facility with known solvent-impacted soil and groundwater. PD intends to initially renovate & reuse the existing structure for office/warehouse use, and ultimately raze the building and redevelop the site as a mixed office/retail complex in keeping with other redevelopment taking place in Charlotte's South End.

BURKHART CAROLINA Henderson, Vance Co.	Former pickle processing and packing facility with chloride impacted soil and groundwater and minor solvent contamination in groundwater. PD intends to redevelop the property for commercial retail use. Simultaneously, the responsible party will implement groundwater remediation at the site under separate action. The PD's development will provide an impervious cap on the site, further assisting remedial efforts.
BURLINGTON – JAMESTOWN Jamestown, Guilford Co.	A 22-acre site containing a abandoned chemical formulation facility operated in support of Burlington Industries textile manufacturing operations. Known chlorinated and petroleum hydrocarbon contamination exists in site soil and groundwater and is being addressed under a consent order with DENR. PD intends to redevelop the property as polyurethane and polyacrylate emulsions manufacturing facility.
BURLINGTON MILLS Mooresville, Iredell Co.	Abandoned textile manufacturing facility with known petroleum hydrocarbon contamination in soil and groundwater, and chlorinated solvent contamination in groundwater. PD intends to redevelop the site as an auto racing industry complex with office, flex, shop, and R&D space.
CAMDEN SQUARE Charlotte, Mecklenburg Co.	Abandoned Knitting and Printing Operations rebuilt into the "Design Center of the Carolinas". Development supported by the Wilmore Community as a vital redevelopment in an economically depressed area. Land Use restrictions for chlorinated solvents in groundwater.
CAMDEN SQUARE ADDITION Charlotte, Mecklenburg Co.	This project will add, by amendment, 4.5 acres to the first brownfields agreement completed in North Carolina, Camden Square, in Charlotte's South End redevelopment corridor. Contamination includes VOC- and SVOC-impacted soil and groundwater. Intended reuse is for mixed office and retail.
CAROLINA PRODUCTION FINISHING Asheville, Buncombe Co.	Former textile finishing facility with metals contamination in both soil and groundwater. PD intends to redevelop the site for warehousing and as a sewing operation. PD is in the process of reviewing DENR's draft brownfields agreement for this site.
CENTRAL PARK LANDFILL Winston-Salem, Forsyth Co.	Former municipal landfill for the City of Winston-Salem. Site is 7.23 acres in size, and has been used as a city park since the 1950s. Low levels of chlorinated solvents, with no surficial soil contamination. PD intends to redevelop the site for soccer and a softball field for the adjoining Salem Academy and College so their current fields can be used for additional building space. A passive methane collection system will be installed prior to installation of the recreational fields.
CHEROKEE OIL Charlotte, Mecklenburg Co.	Approximately 2-acre site was formerly a non-permitted hazardous waste storage facility and the site of an EPA removal action. Known arsenic, oil & grease, and solvent contamination exists in site soil and groundwater. PD intends to redevelop the property as a nightclub and parking facility.

CITY WEST COMMONS Charlotte, Mecklenburg Co.	Dilapidated shopping center seized in a drug raid by the U.S. Dept. of Justice that has been approved for transfer to the city of Charlotte. Site had VOC and chlorinated solvent contamination in soil and groundwater. The City intends transfer the property to a not-for-profit development corporation to redevelop the site as commercial retail shopping facility.
C.K. LAND DEVELOPMENT Charlotte, Mecklenburg Co.	A large mixed use development on a former industrial services firm adjacent to a manufactured gas plant. Ground floor retail and studio with Office and residential units above. Project is in vicinity of Camden Square and provides redevelopment to economically depressed area. Capping and land use restrictions regarding PAHs in soil and chlorinated solvents in soil and groundwater.
CUMBERLAND SHOPPING CENTER Greensboro, Guilford Co.	Site of former shopping center and dry cleaners with chlorinated solvent impacted soil and groundwater. PD is a not-for-profit community development corporation. The PD has performed soil remediation activities and intends to redevelop the site with affordable residential housing.
DYNATECH INDUSTRIES Charlotte, Mecklenburg Co.	Former plating facility with metals-impacted soil and groundwater. EPA conducted soil removal activities at the site and has classified it as NFRAP. PD intends to redevelop the property for use as mixed office/retail complex.
EAST GANNON PROPERTY Zebulon, Wake Co.	This property consists of four parcels of land totaling 1.75 acres with four exiting structures (former restaurant, current auto sales, auto service garage and hair salon). Site planned to be redeveloped into a stand-alone Eckerd Drug Store, with other surrounding complimentary retail tenants. Soil and groundwater are contaminated with petroleum constituents from above ground storage tanks used by previous gas station.
EAST PARK – BOYER 1607 & 1611 E. Fourth St. Charlotte, Mecklenburg Co. PD: Torrence Street Partners	Approximately 0.39-acre parcel that is a portion of the East Park Development Project, with known chlorinated solvent and gasoline contamination. PD intends to redevelop the site as a pedestrian urban infill multiple use development with commercial, residential, recreational and common open space. The site is part of the City of Charlotte's East Park re-development zone.
EAST PARK – JOAL REALTY Charlotte, Mecklenburg Co.	Part of the 24-acre site encompassing a six-block area with known chlorinated solvent contamination. PD intends to redevelop the site as a model for urban infill mixed use development with an emphasis on the needs of pedestrians in an urban setting. The site is part of the City of Charlotte's East Park re-development zone located between the CBD and the historic residential neighborhoods of Elizabeth and Myers Park.
EAST PARK – KOSSOVE Charlotte, Mecklenburg Co.	Part of the 24-acre site encompassing a six-block area with known chlorinated solvent contamination. PD intends to redevelop the site as a model for urban infill mixed use development with an emphasis on the needs of pedestrians in an urban setting. The site is part of the City of Charlotte's East Park re-development zone located between the CBD and the historic residential neighborhoods of Elizabeth and Myers Park.

ERWIN SQUARE Durham, Durham Co.	This approximately 6-acre property is a portion of a decommissioned former Burlington Industries site, other portions of which have already been redeveloped. There is known chlorinated solvent contamination in groundwater, and these impacts are being addressed under an approved Division of Water Quality corrective action plan. PD intends to redevelop the site in high-density residential use.
FLEMINGTON LANDFILL Wilmington, New Hanover Co.	Site of a closed (1979), privately operated domestic and industrial solid waste landfill with VOC-impacted soil and groundwater. Intended reuse is for a soccer complex. This is the first former landfill property proposed for redevelopment under the NC brownfields statute, and the project's feasibility and technical challenges are being carefully evaluated.
FOOD LION Winston-Salem, Forsyth Co.	A new large supermarket placed on the site of an abandoned grocery store in urban Winston-Salem. Project had strong community support as a quality of life issue as the community had no supermarket. Land use restrictions for chlorinated solvent contamination in groundwater. Brownfield Assessment determined the source to be nearby drycleaner.
GUILFORD MILLS Greensboro, Guilford Co.	A 55-acre site containing former textile manufacturing facility with known VOC contamination in soil and groundwater. PD intends to redevelop the property in mixed retail uses. Public benefits include the creation of an estimated 500 jobs and substantial tax roles increases.
HAMILTON PROPERTY Charlotte, Mecklenburg Co.	As small, dilapidated property bought for the expansion of Cost Effective Maintenance Inc., a small business in the South End area of Charlotte. Expansion into this property allowed CEM to stay in Charlotte instead of move to suburbs. Land use restrictions for chlorinated solvent contamination in groundwater.
HILLSBOROUGH VENTURES Raleigh, Wake Co.	Project involves redeveloping an area of parking lots and dilapidated, underused retail structures. Land use restrictions are in place for the petroleum hydrocarbon and chlorinated solvent contamination in soil and groundwater. PD intends to redevelop the property as mixed residential (private student dormitory for N.C. State University) and retail complex.
HILLSBOROUGH VENTURES ADDITION Raleigh, Wake Co.	Prospective developer added acreage to the footprint of original Hillsborough Ventures project, which involves redeveloping an area of parking lots and dilapidated, underused retail structures adjacent to N.C. State University for mixed residential (private student dormitory) and retail uses.
HOME DEPOT – South Blvd. Charlotte, Mecklenburg County	A 12-acre site currently occupied by a produce grocer and office rental store (1 acre), parking (7 acres), abandoned plant nursery (1 acre); the rest is undeveloped. Operations at adjacent Academy Steel Drum (ASD) from 1947-69 included the disposal of wastes and sludge from drums into pits/lagoons. The location of the lagoons and overflow drainage is suspected to have been partially on subject property. After ASD burned in 1969 the property was thoroughly re-graded with contaminated soil moved around. Elevated concentrations of lead, chromium, and PCBs in soil along with lead, 2-chlorophenol, and trichloroethene. PD plans to lease property to Home Depot for construction of a new Home Depot home improvement retail store.

LEWITH TEXTILE Charlotte, Mecklenburg Co.	Project involves the redevelopment of 50+ acres of abandoned and underused commercial and industrial property, including the former Lewith Textile facility. Contaminants include Petroleum hydrocarbon and chlorinated solvents in soil and groundwater. PD intends to redevelop the site as an industrial park for light manufacturing and warehousing/distribution.
LUCENT TECHNOLOGIES Greensboro, Guilford Co.	Former cotton mill and manufacturing facility with chlorinated solvent contamination in soil and groundwater. PD intends to redevelop the site in mixed commercial retail/office and residential.
MALLARD CREEK Charlotte, Mecklenburg Co.	A 21-acre site adjacent to former auto service station and chainsaw service center operations. Petroleum hydrocarbon and chlorinated solvent contamination in groundwater, sourced from underground and aboveground storage tanks releases on the adjacent site, has migrated onto the subject property. PD intends to redevelop the property as an apartment complex.
OXFORD PRINTING Oxford, Granville Co.	Former textile printing and finishing facility with VOC contamination in groundwater. PD has conducted remediation of floor drain contents. PD intends to redevelop the site for industrial/distribution use.
PILOT MILLS Raleigh, Wake Co.	Abandoned, condemned turn-of-the-century textile mill in Downtown Raleigh redeveloped into office space and preserved on the National Register of Historic Places. Land use restrictions for chlorinated solvent in groundwater and capping of mercury in soils.
QUALITY METAL PRODUCTS Gastonia, Gaston Co.	This 11- acre site contains an abandoned facility of 48,000 square feet formerly used as for metal fabrication. Parts cleaning activities resulted in solvent impacts to site soil and groundwater. PD intends to refurbish the facility for metal fabrication utilizing high-tech, non-contaminating methods.
REDMAN HOMES Mebane, Orange Co.	Former mobile home manufacturing facility with metals and solvent contamination in soil and groundwater. PD has performed drum removal and soil remediation activities. PD intends to redevelop the site as a manufacturing facility to produce windows and doors.
SANFORD WWTP Sanford, Lee Co.	Former municipal wastewater treatment plant site with petroleum impacted sewer sludge and metals impacts in site soils and low concentrations of volatile and semi-volatile compounds in groundwater. PD intends to redevelop the property in commercial use, including restaurant, retail space and a multi-screen movie theater.
SINGER COMPANY Chocowinity, Beaufort Co.	Abandoned rural manufacturing facility with lead and phthalate contamination in soil and groundwater. The brownfields agreement provides for partial site remediation. PD intends to redevelop the site with mixed retail and light industrial uses.
SMITH METAL & IRON Charlotte, Mecklenburg Co.	Former site of a scrap metal yard and of a waste cell created for the temporary disposal of impacted soil removed during the construction of the adjoining Carolina Panther's practice field. The waste in the cell has been removed, and minor chlorinated solvent impacts remain in site groundwater. PD intends to redevelop the site in high density residential with additional office, entertainment, and retail potential.

SMITH PROPERTY Shelby, Cleveland Co.	Project involves the redevelopment of an area occupied by seven underused and dilapidated residential homes with petroleum hydrocarbon and chlorinated solvent contamination in groundwater. PD has the support of local residents to reuse the site as a parking lot serving the Cleveland County Offices.
SOUTH TRYON STREET Charlotte, Mecklenburg Co.	A 2.88-acre parcel near historic SouthEnd. PD intends to redevelop the property for commercial purposes such as office and showroom condominiums. Groundwater is contaminated at the Property due to historical site operations as industrial/warehouse storage.
SOUTHERN MANUFACTURING Charlotte, Mecklenburg Co.	This 9-acre site located in inner Charlotte was a former asbestos tile manufacturing facility. Operations involving asbestos were discontinued in 1986, and the facility was closed in 1999. The site has known asbestos contamination in soils. Intended reuse of the site includes an outdoor amphitheater, a technical business park, or a mixed-use development with industrial, commercial, and residential components.
STATE FARM ROAD Boone, Watauga Co.	Project involves the redevelopment of property occupied by a rural residence with chlorinated solvent contamination in groundwater and in a spring from an off-site source. PD intends to redevelop the site as a medical office complex.
TARTAN MARINE Hamlet, Richmond Co.	Former boat manufacturing facility with lead contamination in soil. Additional site sampling conducted by the PD has shown previous soil removal actions have left no health-based lead problems. PD intends to redevelop the site as a chair and table base manufacturing facility.
TERRELL MACHINE Charlotte, Mecklenburg Co.	Site of former textile manufacturing and gear box machining operations, property in Charlotte's South End district is being redeveloped with ground floor retail and office/residential above. Remedial actions to eliminate hot spot contamination included soil removal and groundwater pump and treat. Land use restrictions are in place to address chlorinated solvent contamination remaining in groundwater.
VANIER GRAPHICS Eden, Rockingham Co.	Former printing facility with petroleum and chlorinated hydrocarbon contamination in the soil and solvent contamination in the groundwater. PD intends to redevelop the site as a furniture assembly and upholstering facility.
WEST MOREHEAD Charlotte, Mecklenburg Co.	Former automobile repair and maintenance facility with chlorinated solvent contamination in soil and groundwater. PD intends to redevelop the site, to include both facility renovation and new construction for use as commercial office/retail.

MEMORANDUM

TO: ERC Co-Chairs: Senators Albertson and Clodfelter
Representatives Gibson and McComas

FROM: William G. Ross, Jr.

SUBJECT: The Dry-Cleaning Solvent Cleanup Act Program – 2004 Annual Report

---

In 1997 the North Carolina General Assembly enacted the Dry-Cleaning Solvent Cleanup Act to address contamination at current and former dry-cleaning facilities and wholesale distribution facilities that store, distribute and sell dry-cleaning solvents. This legislation requires annual reporting to the Environmental Review Commission. Thirty-five copies of the 2004 annual status report are enclosed.

Should you have any questions, please feel free to call either myself or Jack Butler, Chief, Superfund Section, Division of Waste Management at 733-2801, ext. 293.

DRY-CLEANING SOLVENT CLEANUP ACT ANNUAL REPORT

Executive Summary

As required by the Dry-Cleaning Solvent Cleanup Act (DSCA) of 1997 and amendments (G.S. 143-215.104A *et seq.*), this report provides an annual update on activities conducted in the DSCA Program in 2004. The DSCA of 1997 and its amendments created a fund for assessment and cleanup of drycleaning solvent environmental contamination at dry-cleaning and wholesale distribution facilities.

Significant progress has been made in all aspects of program implementation. Areas of program development showing the most progress are Prioritization Assessment Agreements, Assessment and Remediation Agreements, work authorizations, Prioritization Assessments, priority ranking, contracting, guidance development, database development and outreach.

The Department of Environment and Natural Resources (DENR) has identified 169 operating or abandoned drycleaning facilities with environmental contamination by drycleaning solvent. Of these, 99 have voluntarily petitioned for acceptance, and 95 have been certified into the DSCA Program. Prioritization Assessment Agreements have been executed for 79 sites and 44 sites have been prioritized.

The majority of claims against the Fund to date have been for "past costs." The DSCA Program is authorized to reimburse petitioners for reasonable, necessary and documented costs incurred between October 1997 and June 2001 in certain situations. Petitioners have submitted past cost reimbursement claims for 13 sites totaling $2,612,290. Previously, the DSCA Program could only reimburse up to 10 percent of the previous fiscal year's revenue credited toward the Fund. However, on July 1, 2004 Senate Bill 1219 was signed into law by the Governor increasing the percentage that could be used for past cost claims from 10 percent to 25 percent. This also allows the DSCA Program to reimburse up to $200,000 per site during FY 2004-05 for all eligible costs from past cost claims. Eligible costs above $200,000 will be reimbursed during FY 2005-06. Reimbursement of these claims commenced during May 2004 beginning with sites of highest priority.

With the infusion of the sales tax monies, which began in July 2003, DSCA now appears to have sufficient financial resources to assess and clean up the contaminated drycleaning facilities identified to date by DENR. New discoveries will continue to be reported, largely due to property transactions. However, with 17 new sites reported in 2004, if the rate of discovery remains steady, the influx of new sites into the program should not overwhelm the DSCA Fund.

Program Status

The DENR has made significant progress in implementing the DSCA. DENR has solicited input from members of the DSCA Stakeholders Working Group (DSCA Stakeholders) and other interested parties to develop new policies and procedures. Participants in the DSCA Stakeholders include the following:

- DENR representatives and its attorneys from the Department of Justice,
- Drycleaners from leadership of the North Carolina Association of Launderers and Cleaners,
- Environmental consultants,
- Representatives from environmental advocacy organizations,
- Drycleaners using alternative dry-cleaning technologies,
- North Carolina State University's School of Textiles faculty, and
- Private attorneys representing drycleaners and shopping centers.

A summary of DSCA program site status is provided in Table 1. Specific areas of discussion include program development, risk-based rule development, reimbursement of past-cost claims, state-lead contracts, Assessment and Remediation Agreements, Prioritization Assessment Agreements, prioritization assessments, prioritization of sites, database development and outreach.

Table 1. DSCA Program Site Status

Step 1. The drycleaner or property owner petitions DENR for certification.	To date, 99 sites have petitioned for entry into the Program. The main motivating factors for petitioning have been real estate transactions and redevelopment.
Step 2. DENR certifies the site and checks for imminent threats.	Of the 99 sites that have petitioned, 95 sites have been certified into the Program. The four sites that have not yet been certified are currently under review. Each petition is reviewed for imminent threats to human health and the environment. Drinking water sources have been identified in proximity to several sites. Evaluation of potential imminent threats has been expedited for these sites.
Step 3. The drycleaner signs an assessment agreement with DENR.	The Prioritization Assessment Agreement (PAA) is a legally binding agreement between DENR and the petitioner that commits the Petitioner to conduct a prioritization assessment (PA) at the site. DSCA has executed 79 PAAs. Beginning in September 2004, the PAA will be replaced by an Assessment and Remediation Agreement that covers all phases of work at a site including the prioritization assessment. All work done under these agreements will be performed by environmental contractors hired by DENR.

Step 4. The drycleaner conducts a prioritization assessment.	Following execution of the PAA, petitioners have 30 days to submit a detailed PA work plan and corresponding cost proposal to DSCA for approval. To date, 73 PA proposals have been negotiated and approved. Beginning in September 2004, all new prioritization assessments will be performed by environmental contractors hired by DENR. Petitioners will be billed by DSCA for site deductible costs after the costs have been incurred.
Step 5. DENR ranks the site and checks again for imminent threats.	Information collected during the PA is used by DSCA to rank each site in terms of risk to human health and the environment. The DSCA Prioritization Ranking System and supporting database application were developed to efficiently assign priority ranking scores to sites. To date, 44 sites have been prioritized.
Step 6. DENR contracts for comprehensive assessment and cleanup.	In August 2004, DENR executed contracts with four state-lead environmental contractors to perform site assessment and remediation. These four firms have been granted three-year contracts totaling $2.4 million. Following execution of the Assessment and Remediation Agreements with the petitioners beginning in September 2004, all DSCA assessment and remediation work will be performed by these state-lead contractors.

Program Development

The primary objective of DSCA in 2004 was to continue working toward full implementation of the program. To attain this goal, DSCA staff directed significant energy towards the development of supporting policies, procedures, and guidance. To reduce resource consumption and optimize customer service, DSCA uses its web site (www.ncdsca.org) and e-mail as the primary means to deliver program documents to its customers. As in the previous year, DSCA staff continued reviewing petitions, determining site eligibility, executing prioritization assessment agreements, screening sites for imminent hazards, supply well sampling and prioritizing sites.

Specifically, progress was achieved in the following areas:

- Risk-Based Rule Development
- Past-Cost Reimbursement
- State-Lead Contracts
- Assessment and Remediation Agreement
- Prioritization Assessment Agreements
- Prioritization Assessments
- Prioritization of Sites
- Database Application
- Outreach

Risk-Based Rule Development

DENR has been delegated the task of developing rules that establish a risk-based approach to assess, prioritize and clean up dry-cleaning solvent contamination that resulted from releases at certified facilities or abandoned sites. During the past year, the DSCA Program has evaluated risk-based programs that have been established in other states. It was discovered that many states have hired independent consultants who specialize in risk analysis and training to help the states develop their rules and implementation guidance. These consultants also develop customized spreadsheets that perform the risk calculations necessary to determine site-specific, risk-based cleanup levels. By hiring a risk consultant to assist in rulemaking, the DSCA Program would benefit from the expertise and authority of experienced professionals who have performed this work for other regulatory agencies. The DSCA Program intends to solicit bids through DENR's Purchase and Services Section in October 2004 to hire a firm to assist in rulemaking and guidance development. Once a contract is executed (presumably in November 2004), development of draft rules will commence.

A small subgroup consisting of select members from the DSCA Stakeholder Working Group was formed to review and comment on draft rules and related documents as they are developed. Individuals selected for the subgroup represent a cross-section of interested parties (dry-cleaners, consultants, attorneys, property owners and university faculty).

Past-Cost Reimbursement

The majority of claims against the Fund to date have been for "past costs." The DSCA Program is authorized to reimburse petitioners for reasonable, necessary and documented costs incurred between October 1997 and June 2001 in certain situations. Petitioners have submitted past cost reimbursement claims for 13 sites totaling $2,612,290. After subtracting the required $50,000 deductible for each site, a total of $1.96 million could potentially be reimbursed for all necessary and reasonable costs pursuant to Section 2.(a) of House Bill 1062 (Session Law 2001-265).

Previously, the DSCA Program could only reimburse up to 10 percent of the previous fiscal year's revenue credited toward the Fund. In FY 2002-03, $1.08 million was credited toward the Fund. Pursuant to House Bill 1062, the total amount that could be reimbursed during FY 2003-04 was $108,000 (ten percent of the previous year's revenue). This amount was reimbursed to the highest prioritized site in May 2004.

On July 1, 2004, Senate Bill 1219 was signed into law by the Governor increasing the percentage that could be used for past cost claims from 10 percent to 25 percent. This bill also allows the DSCA Program to reimburse up to $200,000 per site during FY 2004-05 for all eligible costs from past cost claims. Eligible costs above $200,000 per site will be reimbursed during FY 2005-06. Reimbursement of these claims commenced during July 2004 beginning with sites of highest priority.

State-Lead Contracts

In July 2004, DENR executed contracts with four environmental engineering firms to perform state-lead assessment and remediation at DSCA sites. The contracts total $2.4 million with a term of three years. These contractors will begin performing prioritization assessments for new sites and comprehensive assessments for higher priority sites in September 2004.

Assessment and Remediation Agreement

An Assessment and Remediation Agreement that will be executed by the DSCA Program and petitioners for certified sites was developed during 2004 and is currently under final review. This agreement will encompass all phases of site work (prioritization and comprehensive assessments and remedial action) and will allow DSCA to direct all work using its state-lead contractors. These agreements will be issued to petitioners in September 2004.

Prioritization Assessment Agreements

As stated above, Prioritization Assessment Agreements (PAAs) will be phased out beginning in September 2004 and will be replaced by Assessment and Remediation Agreements. During the past year, eight PAAs were executed. Co-petitioner PAAs were also executed for sites that have more than one petitioner. The co-petitioners then receive the same liability protection as granted to the primary petitioner with respect to the assessment and remediation of the site.

Prioritization Assessments

Work plans are required by the DSCA Program from environmental contractors that propose to conduct work at certified dry-cleaning contamination sites. If the work is authorized by the DSCA project manager, the cost of the work is eligible for application toward the site deductible or for reimbursement from the Trust Fund if the deductible has been met.

The majority of work approved during 2004 was site prioritization assessments. This is the first phase of work performed following site certification. To date site prioritization has been the responsibility of the petitioner. The PAA requires that the petitioner contract an environmental consultant to perform a prioritization assessment within 30 days of executing this agreement. DSCA staff reviewed and approved proposals for work at 50 sites in 2004.

At this phase of program development, it is critical that the review process focuses on continuity and consistency in terms of work plan scope and work plan costing. This is being achieved using a multi-phased approach. Each DSCA project manager reviews work plans for cost effectiveness and technical soundness. The DSCA program manager

is then responsible for the final review and approval of each authorized work plan. This ensures consistency between project managers and individual projects.

As previously stated, beginning in September 2004 all work at DSCA sites will be assigned to the four state-lead contractors. For sites that had been issued a PAA prior to this date, DSCA will allow the petitioner to hire their own environmental contractor to perform the prioritization assessment. In order to accommodate the added prioritization work as well as comprehensive assessments, DSCA may solicit bids for additional state-lead contractors as early as October 2004.

A prioritization assessment guidance document that details the necessary scope for this work phase is currently under final review and should be released in September 2004. A standard reporting format for prioritization assessments is also under development and is anticipated to be released by November 2004.

Prioritization of Sites

Environmental contractors are required to report their prioritization assessment findings in a Prioritization Assessment Report (PAR) and also to complete a prioritization ranking form (PRF). DSCA uses the PRF to assign a numeric ranking score to each site. Currently, 44 sites have been ranked. The numeric ranking score assigned to each site allowed DSCA staff to categorize the site as either "higher" or "lower" priority. This prioritization is required by statute so that available funds are obligated to higher priority sites first.

After review of completed prioritization scores, DSCA staff concluded that these rankings did not in all cases accurately reflect the specific risk posed to potential receptors at the sites. As a result, DSCA developed a new priority scoring system that was based on the threat of contamination to nearby receptors such as supply wells and surface water. The new scoring system assigns a score that corresponds to the specific receptor that is being threatened. For example, a score of "1.2" indicates that "an active domestic drinking water supply well is impacted or immediately threatened by the release and that the user has no access to another public or private water supply." DSCA staff can immediately know what actual or potential hazard exists at a site based simply on its score. If multiple sites are assigned the same score, then DSCA staff evaluate other factors such as magnitude of contamination in determining priority order. All 44 prioritized sites have been re-evaluated using the new prioritization system and the sites have been ordered in terms of priority. The DSCA staff will present the results of the new prioritization system to the DSCA Stakeholders in September 2004.

Database Application

The DSCA Program has invested significant time and effort to develop and refine its database/GIS application. Rapid application development techniques have been used to ensure its ability to manage data is flexible and can grow with the program. Technical and financial information has been entered into the database. The programmatic tracking

and reporting applications are frequently revised to respond to changing information management needs.

Major improvements in 2004 focused on refining the database so that it could track project account details. Reporting capabilities include project status, planned site actions, site deductibles, costs applied toward the deductible, past cost reimbursements, invoices, payments, work authorized on a per cost basis and change orders.

Outreach

DENR continues its outreach efforts to educate drycleaners about the Minimum Management Practices Rules (15A NCAC 2S) and DSCA procedures and policies. DSCA staff have spoken at North Carolina Association of Launderers and Cleaners (NCALC) and local Korean drycleaners association meetings. DSCA has published several articles in the NCALC newsletters in an effort to reach all drycleaners in North Carolina. Outreach efforts have also been made to shopping mall owners, environmental service providers and the legal community.

To improve outreach to Korean drycleaners, in September 2004 DSCA will secure the services of a Korean graduate student from Duke University to serve as an intern for the DSCA Program. This intern, Mr. YongJin Kim, will be totally funded by the Korean Government though Duke's International Development Policy Program. Mr. Kim has been employed for the past 20 years with the Korean Ministry of Environment. Mr. Kim will work on developing guidance for both minimum management practices and the DSCA cleanup program for the Korean community. He is expected to start work on September 1, 2004. His internship will end on May 31, 2005.

DSCA also uses its web address, www.ncdsca.org, to provide programmatic information, guidance documents, applicable laws, rules and downloadable forms to assist the public and the regulated community.

Finally, DSCA has continued its association with dry-cleaning programs in other states through its participation in the State Coalition for the Remediation of Drycleaners. This work group is sponsored by the EPA's Technology Innovation Office. DSCA has benefited greatly from this organization by learning from the experiences of other states.

Annual Report Elements Required by G.S. 143-215.104U

(1) DRY-CLEANING SOLVENT CONTAMINATION REPORTED TO THE DEPARTMENT OF ENVIRONMENT AND NATURAL RESOURCES

DSCA maintains files and a database inventory of 169 sites that are contaminated by dry-cleaning solvent. This number represents all dry-cleaning solvent releases known to DENR, assuming other agencies have forwarded notices of release to DSCA. However, it has been estimated that over 900 contaminated current or former dry-cleaning sites exist in North Carolina. Table 2 provides a list, by county, of all sites contaminated with dry cleaning solvent. A total of 17 new dry-cleaning solvent releases were reported to DSCA in 2004. The new reports appear to have resulted from real estate transactions and redevelopment projects.

(2) SITES CERTIFIED BY THE COMMISSION

DSCA must review a petition and the site file to determine if the site and the petitioner meet the statutory criteria for certification into the Program. Of the 99 sites that have petitioned for Program entry, 95 have been certified into the Program. The four sites that have not yet been certified are newly received petitions that are currently under review. The certified sites, along with the dates of certification, are shown in Table 2.

Data from these petitions have been compiled to evaluate general site characteristics. A summary is presented in Table 3. The majority of the petitioners are property owners (79), as opposed to drycleaner business owners/operators (49). Of the sites that applied, 60 percent are abandoned sites.

(3) COST ESTIMATE FOR ASSESSMENT AND REMEDIATION OF CERTIFIED SITES

Actual costs to assess and remediate DSCA sites are anticipated to vary widely from site to site. Factors influencing costs include site geology, age of release, the chemical nature of the solvents released and the threats posed to potential receptors. However, an annual spending cap of $200,000 per site is applied by statute unless contamination at a site poses an imminent threat to public health. In these cases, annual expenditures are capped at $400,000 per site.

Based on costs figures provided by other states, DSCA can calculate an approximate total cleanup cost for those sites that have been certified into the program. The 95 certified sites can be divided into four groups based on priority with higher priority sites having higher cleanup costs. Based on these assumptions, the total projected cost to remediate these sites is approximately $25 million.

DSCA's efforts to control costs have been quite successful. Project cost control measures are applied at the beginning of site work in the prioritization assessment stage. Since every DSCA site must have a prioritization assessment to be ranked, it is important that these cost control measures be applied effectively. DSCA reviews, negotiates and pre-approves all proposals. Staff analyze proposed costs using their professional knowledge and experience. DSCA also refers to cost control policies developed by the Underground

[1] Reflects multiple petitioners for some sites.

Storage Tank Section for general guidance. All proposals are required to provide sufficient detail (e.g., unit costs, subcontractor bids) to allow for an effective pre-approval review. Beginning in September 2004, unit costs allowed for work performed by the state-lead contractors will be in accordance with the rates established in each firm's contract.

Thus far, the cost of a PA appears to average about $13,000. This figure falls within the $10,000 to $15,000 range DENR originally estimated for these initial assessments. This cost typically includes soil sampling, installation of three to four monitoring wells, a receptor survey, and preparation of the Prioritization Assessment Report and Prioritization Ranking Form.

(4) RECEIPTS AND DISBURSEMENTS FOR THE FUND

The primary funding sources for the dry-cleaning solvent cleanup fund are a tax on dry-cleaning solvents and, beginning in July 2003, the state portion of the current sales tax on dry-cleaning. The DSCA Fund's finances for FY 2003-04 (through June 30, 2004) are summarized below:

Collections FY 97-98	$ 474,717.47
Collections FY 98-99	$ 927,004.50
Collections FY 99-00	$ 968,993.09
Collections FY 00-01	$ 863,772.16
Collections FY 01-02	$1,061,298.70
Collections FY 02-03	$1,076,826.57
Collections FY 03-04	$9,487,233.94 *
Revenue (all years)	$13,706,545.94
Interest	$ 1,153,300.49
Total Collections	$14,859,846.43
Dept. of Revenue Expenses	$ 22,100.42 **
Cleanup Expenses	$ 149,136.58
DENR Administrative Expenses	$ 1,140,621.93
Fund Balance	$13,547,987.50

* The significant increase in collections during FY 03-04 compared to previous years is due to the addition of the sales tax on dry-cleaning revenue.

** This represents the actual amount charged by the Department of Revenue for its expenses. The Department of Revenue is authorized by DSCA to charge no more than $125,000 per year.

(5) CLAIMS AGAINST THE FUND

There are two types of claims against the DSCA Fund. The majority of claims come from petitioners that incurred past investigative/remedial costs in response to an order or notice of violation from DENR prior to DSCA implementation. Reasonable, necessary and documented costs in excess of $50,000, incurred from October 1, 1997 through June 30, 2001, are reimbursable. Thirteen petitioners submitted claims for reimbursement of

past cost expenditures totaling $2,612,290.79. As per DSCA, claims will be paid in order of site priority. Payout for past cost claims was originally limited by DSCA to 10 percent of the DSCA Fund's income in the previous year, however, Senate Bill 1219 increased this to 25 percent of the DSCA's Fund's previous year's revenue.

In addition, the law allows petitioners to apply past costs toward the site's deductible in some circumstances. Fifteen petitioners submitted claims for application toward their site's deductible totaling $336,948.99.

The second type of claim against the DSCA Fund is for approved costs for site work which exceed the site's deductible. To date, 73 sites have at least one authorized work plan for site work. The total amount authorized to date is $610,718.10. Of this total amount, approximately $235,000.00 will exceed the sites' deductibles and will be reimbursed to the petitioners.

(6) RECOMMENDATIONS TO ASSURE THE SOLVENCY OF THE FUND

The DENR has no recommendations regarding fund solvency at this time. Prior to passage of statutory amendments to the DSCA in 2000 (S.L.2000-19), it was clear that the fund balance was inadequate to address all of the dry-cleaning sites in the state. However, with the passage of the DSCA Amendments that established a second funding mechanism, the General Assembly took the most important step necessary to assure future fund solvency. With the infusion of the sales tax monies, which began July 2003, DSCA now appears to have sufficient financial resources to assess and remediate the contaminated drycleaning facilities on a priority basis.

The Fiscal Note on the DSCA Amendments (S.L. 2000-19) anticipated that the funding mechanisms would provide the fund with $8 million to $10 million annually. As noted above, total collections for FY 2003-04 were approximately $9.5 million. Therefore, the DSCA Program is solvent.

RE: Report of Superfund Cost Share Fund Expenditures for North Carolina's 10 Percent Share for Cleanup of Sites on the National Priorities List

Section 15.12 (a) of House Bill 352 (ratified August 28, 1997) authorizes the Department of Environment and Natural Resources, with the approval of the Office of State Budget and Management, to use available funds for the 10 percent cost share required for Superfund cleanups on the National Priorities List sites.

Section 15.12 (b) directs the DENR to report to the Environmental Review Commission and the Joint Legislative Commission on Governmental Operations as to "the amount and source of the funds used pursuant to subsection (a) of this section within 30 days of the expenditure of these funds." The attached report provides this information.

If you have any questions, please contact Mr. David Lown, Head, Federal Remediation Branch, Superfund Section at 733-2801 x.278.

REPORT TO THE ENVIRONMENTAL REVIEW COMMISSION ON EXPENDITURES FROM THE SUPERFUND COST SHARE FUND FOR NORTH CAROLINA'S 10 PERCENT SHARE OF CLEANUPS FOR SITES ON THE NATIONAL PRIORITIES LIST

At present, 29 hazardous waste sites in North Carolina are included on the NPL. Thirteen of the NPL sites are fund-financed sites, where no viable responsible parties have been identified. These sites are being cleaned up using a combination of federal and state public funds. The Hazardous Response Trust Fund (the Superfund) contributes 90 percent of the money for remedial actions at these sites and the state contributes the remaining 10 percent.

The state's 10 percent contribution comes from the Superfund Cost Share Fund (SCSF). As of March 31, 2004, the fund had accumulated $12,007,185 in appropriations, interest and other income. Of that total, $8,756,660 has been encumbered or disbursed to pay for the state's share of clean up costs at eight NPL sites with signed Superfund State Contracts (SSCs).

Other disbursements and reductions have removed $1,496,966 from the SCSF, leaving only $1,753,559 available for future cleanup actions. Available funding could be obligated for cleanups in the next few months. Remedial actions needed at five NPL sites have not begun. To date, no SSCs have been negotiated for these sites. In addition to the sites discussed above, other sites will be added to the NPL. Some of these sites will require a 10 percent state cost share for cleanup. In addition to the 10 percent cost share at these fund-financed NPL sites, the state is responsible for the operation and maintenance (O&M) costs as well. The funds to perform O&M also come from the Superfund Cost Share Fund.

The attached table, Fund-Financed NPL Sites, lists the eight fund-financed sites for which an SSC has been signed. The table also shows all encumbrances and disbursements that have occurred due to the state's 10 percent cost share requirement. Note that some sites are divided into Operable Units (OU). This is common practice in the cleanup of NPL sites, because it makes designing and executing the cleanups more structured and easier to control.

One disbursement totaling $126,091 was made the SCSF in March 2004. The payment was made for ABC Cleaners OU-1. This is the only disbursement since December 2003. The department is seeking additional resources for the SCSF.

NORTH CAROLINA DEPARTMENT OF ENVIRONMENT AND NATURAL RESOURCES
CUSTOMER SERVICE CENTER
ONE-STOP PERMIT ASSISTANCE AND COORDINATION LEGISLATIVE REPORT
OCTOBER 1, 2004

This report fulfills the requirements of S.L. 2004-124, Section 12.12.(a), to provide information on environmental permits that exceed the projected time line developed by the one-stop permit assistance coordinators. Since ratification of S.L. 2004-124 on July 20, 2004, no permits have exceeded the projected time line.

DENR would like to take this opportunity to provide an overview of the One-Stop Permit Assistance and Coordination Program, including an outline of the additional tracking procedures that will be used to implement the statewide expansion of this program. In addition, this report will briefly describe the Express Review Pilot Program. These permit improvement programs complement each other and, in regional offices where both programs exist, the One-Stop coordinator also serves as the Express Review coordinator.

ONE-STOP PERMIT ASSISTANCE AND COORDINATION

The One-Stop Permit Assistance and Coordination Program was authorized by S.L. 2000-67 to provide a single point of contact for businesses, citizens and local governments to obtain information about all of the state's environmental permits and requirements. This program was established as part of the Department of Environment and Natural Resources' Customer Service Center. As a pilot, permit assistance coordinators were located in DENR's Wilmington and Mooresville regional offices. The coordinators identify environmental permits and requirements that may apply to the proposed project; arrange pre-application meetings with appropriate agencies; identify timeframes for the permitting process; and help track the progress of the permits. The role of the coordinator functions largely to keep the lines of communication open between the client and permitting staff and resolve problems.

To date, the greatest demand has been for assistance in the early stage of project development. In many cases, clients contact the One-Stop program before they are ready to apply for permits -- often before they have even identified a specific site for the project. These clients need a knowledgeable contact who can identify the permits that may be needed for the project and guide them through the regulatory process. Since January 2004, the One-Stop coordinators have helped 100 clients identify the permits needed for their projects. Clients have included small businesses, existing companies looking to expand or relocate, and out-of-state consultants and business leaders.

For clients ready to submit permit applications, the One-Stop coordinator can develop a timeframe for permit decisions, advise of permit options (such as express review) and track permit progress. During the pilot effort, only a small number of clients asked the One-Stop program to track their individual permit applications. Most clients preferred to deal with the permitting program staff directly once the application was submitted. The pilot project has shown, however, that the One-Stop program's upfront work to identify necessary permits, arrange pre-application meetings or site visits, and address scheduling concerns led to a smoother and quicker permitting process even for permit applications the One Stop program did not track. Timelines have been developed and applications tracked for six projects this year through the One-Stop program. Permit decisions have not yet been made in all cases, but all of the decisions issued to date have been on schedule or ahead of schedule.

EXPRESS REVIEW PILOT PROGRAM

The Express Review Pilot Program was established by the N.C. General Assembly in 2003 to assist applicants seeking environmental permits. The goal of the express permitting program was to significantly reduce permit-processing times without compromising environmental protection. The program was particularly focused on time-sensitive development projects that required multiple permits. As a result, express permitting has been available for the following permits or authorizations: coastal stormwater permits; Section 401 water quality certifications for wetland and stream impacts (and associated stream determinations); erosion and sedimentation control plan approvals; Coastal Area Management Act permits; and water quality non-discharge permits. Applicants using the express permitting program pay higher permit fees for shorter turnaround time. The fees are used to hire additional permit engineers to do the express permit reviews.

The pilot program initially implemented express permitting in the Wilmington and Raleigh regional offices of DENR. During the first six months of 2004, 144 permits were issued through the program. Because of the lower ratio of permit applications to staff, permit review time was significantly reduced under the express program as compared to the normal permit review track. The legislature has directed DENR to expand the express permitting program to two additional regions in 2004-2005.

TRACKING IMPROVEMENTS

DENR is in the process of improving its permit information management system. The development of a comprehensive data-management framework will allow for better tracking of permits across programs. In future reports, DENR will be able to provide greater detail on permitting times and the reasons for permit reviews that exceed 90 days or go beyond projected time frames.

Timelines developed by the One-Stop program coordinator include an estimated decision date for each permit required. The state permits identified for these projects will be tracked in future reports. (In many cases, federal or local permits may also be required for the project.) The types of permits covered in the One-Stop report will depend on the projects that come through the program, since different permits are required for different types of projects. The most common permits or approvals needed for new facilities include: erosion and sedimentation control plan approvals; stormwater permits; Section 401 water quality certifications; air quality permits; wastewater treatment permits (such as discharge permits or permits for subsurface systems); water lines/water treatment system permits; and, in the coastal region, Coastal Area Management Act permits.

As the One-Stop Permit Assistance and Coordination Program is expanded to provide statewide coverage, it should be easier for developers, citizens, economic developers and small businesses to learn about environmental requirements and meet them in a timely manner.
