Section 1. Introduction and Program Overview

1.1. Introduction

Lakes and reservoirs are integral features of the North Carolina landscape, supplying water for personal, industrial and municipal users. Lakes provide recreational opportunities and aesthetic enjoyment for the public, and support rich communities of aquatic plants and animals. Public use of the state's lakes is high, and lake-related recreation provides significant revenues. The North Carolina Environmental Management Commission and Division of Water Quality are committed to protecting these valuable resources for public use.

Recognizing the importance of North Carolina's waters, the Legislature adopted the 2005 Drinking Water Reservoir Protection Act (SB981). Under Section 2(a) of this Act, the Environmental Management Commission is charged with studying the state's drinking water reservoirs, determining which reservoirs are not meeting surface water quality standards using available data, and reporting their findings and recommendations to the Environmental Review Commission.

This report was prepared to meet that requirement and to provide some additional information on the Division of Water Quality's (DWQ) Ambient Lakes Monitoring Program. An overview of the Ambient Lakes Monitoring Program (ALMP) is presented as well as an explanation of water supply classifications, standards and rules. Other programs that assist with protection of water supplies are discussed briefly. Following those sections there is a review of the data collected over the past 24 years, basin by basin discussion of lakes with exceedances of the standards and recommendations.

1.2. Division of Water Quality Ambient Lakes Monitoring Program

Assessment of water quality is necessary to determine the health of a reservoir and its suitability for public use. Reservoirs in North Carolina have been monitored for several decades; however, current electronic data only goes back to 1981 when the DWQ received federal Clean Water Act funding to classify the trophic (or nutrient enrichment) status of North Carolina's publicly owned freshwater lakes/reservoirs[1], and to prioritize them for restoration. This report looks at the most recent ten years of data as it provides a better picture of current conditions in the reservoirs.

EPA has continued to provide limited funding for monitoring lakes under Section 314 and recently 319 of the Federal Clean Water Act. The emphasis continues to be on eutrophication, where eutrophication is defined as human-induced increases in nutrient loading above natural levels in a lake. This has driven DWQ's program

[1] The terms lake and reservoir are used interchangeably throughout this report. Technically, lake refers to a natural waterbody. North Carolina has only a few natural lakes in the sandhills and coastal plain. All other "lakes" are reservoirs created by man.

to focus its monitoring toward the summer months when eutrophication impacts are most prevalent.

A total of 160 publicly owned lakes have been sampled as part of the ALMP. Those lakes are sampled once every five years per the DWQ's Basinwide Assessment Program's schedule. Data are used to prioritize lakes for restoration efforts and, starting in 2004, resources are being reorganized to provide sufficient data to determine if water quality standards are being met and to support special studies and development of lake total maximum daily loads (TMDL). A TMDL is a calculation of the maximum amount of a pollutant that a water body can receive and still meet water quality standards and it includes the allocation of that loading between the various sources that contribute the pollutant to the water body. These calculations are required under Section 303 of the Federal Clean Water Act for any water body determined not to be attaining its uses (water supply, recreation, aquatic life).

Recent special studies include Falls of the Neuse Reservoir, Jordan Lake (B. Everett Jordan Reservoir) and High Rock Lake. The data collected will be used for analysis of water quality trends and model development/calibration (TMDLs). Other lakes have been monitored intensively to evaluate lake restoration attempts. Merchants Millpond, Big Lake, and Lake Wheeler have been monitored to assess the effects of aquatic weed control measures. Belews, Hyco and Mayo continue to be monitored because of selenium contamination. Lake Wylie was intensively monitored in 1989 and 1990 in response to problems associated with eutrophication and the results were used to implement a nutrient management strategy in the watershed.

Of the 160 reservoirs routinely sampled, 95 lakes classified Water Supply (WS) are reviewed in this report (Figure 1.1 and Table 1.1). While this report discusses only 95 water supply reservoirs, there are 101 reservoirs classified as WS that have been sampled by DWQ over the years. Some lakes classified as WS were not sampled during the 1995-2005 review period due to resource constraints.

Figure 1.1. Water Supply Reservoirs Sampled by DWQ as Part of the Ambient Lakes Monitoring Program.

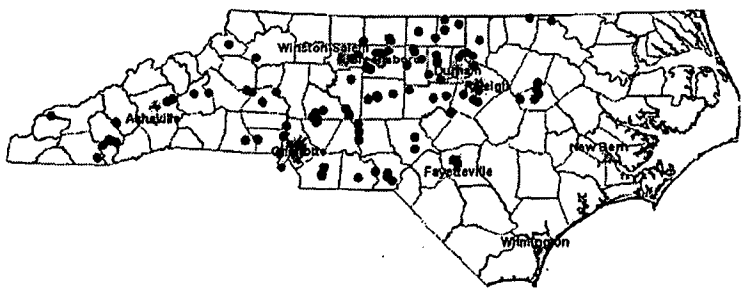

Figure 1.1 presents the distribution of the 95 lakes, while Table 1.1 provides data on characteristics, classification, and sampling history for each lake. Eighty-five of these water supplies are located in the piedmont with ten located in mountain basins. None of these surface water supplies are located in the coastal area.

Sampling for the ALMP has normally occurred in June through August targeting the critical time of year for algal activity in most lakes. Typically, 30 to 35 lakes are sampled monthly in the summer.

The number of stations per lake varies based on the morphology of the lake. Sampling may be more frequent if a special study for permitting or TMDL development is occurring.

Table 1.2 lists the parameters routinely sampled as part of the ALMP. There are 59 parameters that have numeric standards in freshwater, 29 of those parameters have standards specific to water supplies and only five WS specific parameters are regularly monitored due to resource constraints (Table 1.3).

Table 1.1. Water Supply Reservoirs Sampled by DWQ (Jan. 1995 – May 2005)

Basin/ Water body	Classification	Mean Depth (feet)	Volume ($10^6 m^3$)	Watershed Area (mi^2)	Sampling Dates* (month/year)	Number of Times Sampled

* *Sampling was normally conducted during June, July, and August.*

Table 1.2. Parameters Routinely Sampled by DWQ at Water Supply Reservoirs

Physical Measurements (at 1 meter increments from the surface to the bottom of the lake)		
Dissolved Oxygen	Secchi depth	pH
Water Temperature	Conductivity	
Metals (collected at the surface)		
Cadmium	Copper	Calcium *
Iron	Manganese	Zinc
Chromium, Total	Lead	Magnesium *
Nickel		
Water Chemistry (collected from Photic Zone (from surface to 2 times the Secchi depth)		
Turbidity	Total Residue	Total Suspended Solids
Total Dissolved Solids		
Nutrients (Photic Zone composite samples and Bottom grab samples)		
Ammonia	Total Kjeldahl Nitrogen	Total Phosphorus
Nitrate/Nitrite		
Biological		
Chlorophyll *a* (Photic Zone)	Phytoplankton (Photic Zone)	
Fecal Coliform Bacteria (Surface Grab) (colonies/100 ml) only in lakes classified B		

* *Calcium and Magnesium are used to calculate Total Hardness (mg/L)*

The ALMP is conducted by the Intensive Survey Unit with a staff of seven people (including supervisor); only two are dedicated to sampling lakes. The Intensive Survey Unit also conducts a variety of physical and chemical sampling to support permitting, compliance, modeling, TMDL development, emergency response, reclassifications and regional investigations in lakes, rivers, streams and estuaries. At times, the Winston-Salem Regional Office assists with lakes monitoring.

Table 1.3. Parameters with Water Supply Standards

(Bold indicates parameters routinely sampled as part of Ambient Lakes monitoring)

1,1,2,2-Tetrachlorethane	Chlorinated Benzenes	PAH
2,4-D	DDT	PCB
Aldrin	Dieldrin	Phenolic Compounds
Arsenic	Dioxin	Silvex
Barium	**Hardness**	Sulfates
Benzene	Hexachlorobutadiene	Tetrachloroethylene
Beryllium	Manganese	**Total dissolved solids**
Carbon Tetrachloride	Methylene Blue Active Substances	Trichloroethylene
Chlordane	**Nickel**	Vinyl chloride
Chloride	**Nitrate (nitrate/nitrite)**	

1.3. Water Supply Classifications & Standards

Surface water classifications are designations applied to streams, rivers and lakes, and are intended to define the best uses to be protected within these waters (for example swimming, recreation, drinking water supply, etc.). The surface water standards are designed to protect the water quality based on the classifications for a variety of ecological and human health reasons.

For surface waters used as water supplies, there are five classifications: WS-I, WS-II, WS-III, WS-IV, and WS-V. All water supply classifications except WS-V carry additional restrictions on treated wastewater discharges and land use activities based on development in the watershed (Table 1.4). Note that some portions of the WS watersheds carry additional restrictions due to their proximity to the water intakes. Those areas are designated by CA, which stands for "critical area".

Twenty-eight of the WS lakes are also classified B, which recognizes that they have organized swimming occurring on a regular basis in areas of those lakes. Management strategies associated with these waters include discouraging wastewater discharges and storm drains.

Some WS lakes are supplementally classified as nutrient sensitive waters (NSW). These lakes are in watersheds that the EMC has determined to be experiencing nutrient over-enrichment and that need additional management to protect and restore water quality.

Table 1.4. Land Use and Discharge Requirements Associated with WS Classifications[1].

	WS-I	WS-II	WS-II	WS-III	WS-III	WS - IV	WS - IV	WS - V
Watershed Characteristics	Natural or undeveloped watersheds	Lightly developed	Lightly developed	Low or moderately developed	Low or moderately developed	Moderate to high development	Moderate to high development	Upstream and draining to Class WS-IV waters
Number of Lakes Sampled in this Class	3	24	2	23	6	27	8	4
Area Affected	Entire Watershed	1/2 Mile Critical Area (CA)	Rest of Watershed	1/2 Mile CA	Rest of Watershed	1/2 Mile CA	Rest of Watershed	River Segment
Wastewater Discharge Allowed	None Allowed	General Permits			Domestic & Non-Process Industrial			
Permit Limits	Not Applicable	Per HQW Rules		Standard Rules				
Low Density Option (du = dwelling unit; ac = acre)	None ---- Underdeveloped	1 du/2 ac or 6 percent Built Upon Area	1 du/2 ac or 12 percent Built Upon Area		1 du/2 ac or 24 percent Built Upon Area			No Restrictions
High Density Option	None ---- Underdeveloped	6 - 24 percent Built Upon Area	12 - 30 percent Built Upon Area		24 - 50 percent Built Upon Area		24 - 70 percent Built Upon Area	No Restrictions
Stream Setbacks for Impervious Surfaces	Not Applicable	Low Density – 30' High Density - 100'						None Required
Erosion & Sedimentation Controls	More Stringent Rules Apply			Standard Rules				
Agriculture BMPs Mandated	Yes							
Forestry BMPs Mandated	Yes							
Transportation BMPs Mandated	Stricter NC Div. Of Land Resources Erosion Controls Apply			Yes				Applied As Practical
Landfills Allowed	None Allowed	No New Landfills	No New Discharging Landfills	No New Landfills	No New Discharging Landfills	No New Landfills	Yes	No Specific Restrictions

[1] Water Supply Classification Rules are found in the 15A NCAC 2B .0100s and .0200s. Additional information is available at http://h2o.enr.state.nc.us/csu/index.html

Fourteen of the WS reservoirs sampled in the Cape Fear River Basin are regulated under the NSW rules for the Haw River and Jordan Reservoir drainage areas (Table 1.5). All of the Neuse (17) and Tar-Pamlico (2) Water Supply reservoirs sampled by DWQ are NSW. An outline of the management strategies and rules governing these waters is presented in Table 1.6. They include permit limits and stream buffer requirements.

Other supplemental classifications that impact management and regulations related to water supplies and their watersheds include High Quality Waters (HQW) and Trout (Tr). All WS-I and WS-II are classified as HQW (n=29) and that classification is reflected in the management strategies presented in Table 1.4. The Trout classification is reserved for waters that are home to naturally propagating trout and stocked trout. Trout flourish in colder waters and are more sensitive to some pollutants than most other fish species. Therefore, water quality standards for dissolved oxygen, temperature, turbidity, chlorophyll-a, cadmium, and toluene are more stringent.

Table 1.5. Water Supply Lakes Currently Classified as NSW by River Basin

Cape Fear River Basin	
Burlington Reservoir	Cane Creek Reservoir
Graham-Mebane Reservoir	B.E. Jordan Reservoir
Lake Brandt	Lake Burlington
Lake Higgins	Lake Hunt
Lake Mackintosh	Lake Townsend
Pittsboro Lake	Reidsville Lake
Richland Lake	University Lake
Neuse River Basin	
Apex Reservoir	Beaverdam Reservoir
Buckhorn Reservoir	Corporation Lake
Falls of the Neuse Reservoir	Lake Ben Johnson
Lake Benson	Lake Butner
Lake Michie	Lake Orange
Lake Rogers	Lake Wheeler
Lake Wilson	Little River Reservoir
Toisnot Reservoir	West Fork Eno River Reservoir
Wiggins Mill Reservoir	
Tar-Pamlico River Basin	
Lake Devin	Tar River Reservoir

1.4. Impaired Waters Designation

Section 303(d) of the Clean Water Act (CWA) requires states to develop a list of waters not meeting water quality standards or which have impaired uses. Listed waters must be prioritized, and a management strategy or total maximum daily load (TMDL) must subsequently be developed for all listed waters. Uses that are evaluated for development of this list include water supply, aquatic life, and recreation. This list must be submitted to EPA every 2 years for their approval. More information on this program is available at http://h2o.enr.state.nc.us/tmdl/.

Table 1.6. NSW Requirements Related to Discharges and Land Use in the Neuse, Tar-Pamlico and Cape Fear River Basins.

	Neuse River Basin	Tar-Pamlico River Basin	Cape Fear River Basin
Area Affected	Entire watershed	Entire watershed	Haw River & Jordan Reservoir Drainage
Wastewater Discharge Allowed	Per WS Classification		
Permit Limits	Yes [1]	Yes [2]	Yes [3]
Low Density Option	Per WS Classification		
High Density Option (includes additional stormwater controls)	Per WS Classification		
Stream Setbacks for Impervious Surfaces	Riparian Buffer Protection Rules 50' wide riparian buffer adjacent directly adjacent to surface waters		Per WS Classification
Erosion & Sedimentation Controls	Standard Rules		
Agriculture Best Management Practices Mandated	Required either as standard BMPs or as part of Collective Local Strategy	Required to collectively limit nutrient loading to the estuary to achieve target reductions	Standard Rules
Forestry Best Management Practices Mandated	Per Forest Practices Guidelines		
Transportation Best Management Practices Mandated	Per WS Classification		
Landfills Allowed	Per WS Classification		

1. NEUSE RIVER BASIN:

Nitrogen Limits: Originally effective August 1, 1998, the nitrogen discharge limit reduces the nitrogen from point sources by 30 percent compared to 1995 levels. The overall nitrogen discharge limit is 2.8 million pounds per year. Limits in terms of pounds per year are called "mass-based limits." The overall nitrogen discharge limit is divided among three different groups of dischargers as follows:

- Dischargers with permitted flows greater than or equal to 500,000 gallons per day or 0.5 million gallons per day (MGD) downstream of Falls Lake dam have a combined limit of 2.45 million pounds per year.
- Dischargers with permitted flows greater than or equal to 0.5 MGD upstream of the dam have a combined limit of 444,000 pounds per year.
- Dischargers with permitted flows less than 0.5 MGD have a combined limit of 280,000 pounds per year.

Phosphorus Limits: 2.0 mg/L concentration limit on phosphorus throughout basin

2. TAR-PAMLICO RIVER BASIN

Tar-Pamlico Basin Association Members - As a coalition, the goal is to decrease total nitrogen load to the estuary by 30 percent from 1991 levels along with no increases in phosphorus loads. Nutrient exceedances follow the offset payment approach with offset rates adjusted based on basin-specific agricultural BMP cost-effectiveness data. Non-Tar-Pamlico Basin Association Members are placed on restrictions; all discharges >0.5 MGD must meet 6 mg/L TN and 1 mg/L TP limits within 5 years. Any new loading from new or expanding facilities are mitigated using the offset payment method established for the Tar-Pamlico Association Members.

3. CAPE FEAR RIVER BASIN

Limits of 5.5 mg/L TN and 2.0 mg/L TP for qualifying facilities discharging >0.5MGD into the Jordan Reservoir/Haw River watershed (Clean Water Responsibility Act of 1997). Most of the facilities were granted an extension by the EMC (Senate Bill 1366) and were required to develop a calibrated nutrient response model. That model has been developed and rules are being developed to implement the limits indicated by the model.

There are ten water supply lakes listed for impaired aquatic life use support (Table 1.7). Six of the lakes are listed for impaired biological integrity due to impairments in the streams feeding them. Several have been recently delisted due to improvements in water quality. Hyco Lake has been removed due to the rescinding of the fish consumption advisory for selenium. Pittsboro and Roanoke Rapids Lakes are listed for aquatic weeds and as aquatic weeds are not considered a pollutant, no TMDL is required.

Table 1.7. Water Supply Lakes Listed as Impaired on the 2004 Impaired Waters List.

Basin/Water Supplies	Year Listed	Reason Listed	TMDL Status
Cape Fear			
Bonnie Doone Lake	1998	Impaired biological integrity	Included in impaired stream segment (Little Cross Creek). Not scheduled.
B.E. Jordan Reservoir – New Hope & Morgan Cr Arms	2002	Chlorophyll a	Draft TMDL completed
Glenville Lake	2000	Impaired biological integrity	Included in impaired stream segment (Little Cross Creek). Not scheduled.
Kornbow Lake	1998	Impaired biological integrity	Included in impaired stream segment (Little Cross Creek). Not scheduled.
Mintz Pond	1998	Impaired biological integrity	Included in impaired stream segment (Little Cross Creek). Not scheduled.
Pittsboro Lake	1998	Aquatic Weeds	To be shifted to Category 4c (Impairment not caused by a pollutant) –does not require a TMDL
Neuse			
Buckhorn Reservoir	1998	Impaired biological integrity	Included in impaired stream segment (Contentnea Creek). Not scheduled.
Roanoke			
Hyco Lake	1998	Fish Advisory – Selenium	Delisted 2004 - Fish Advisory rescinded in 2001.
Roanoke Rapids Lake	1998	Aquatic Weeds	To be shifted to Category 4c (Impairment not caused by a pollutant) –does not require a TMDL
Yadkin-Pee Dee			
High Rock Lake	2004	Turbidity & Chlorophyll a	In Scoping Phase prior to TMDL development

B.E. Jordan Reservoir was listed for chlorophyll-a violations in 2002 and a draft TMDL was completed in 2005. Development of an implementation strategy is currently underway. High Rock Lake is also listed for chlorophyll a, as well as, turbidity. DWQ is currently doing additional monitoring and working with the High Rock Lake Technical Advisory Committee composed of

agency staff and other stakeholders to develop the monitoring and modeling strategy for TMDL development. It is expected that TMDL modeling will begin in 2009 or 2010.

There are no lakes currently listed as not supporting water supply uses. Water supply use support is assessed using information from the seven Division of Environmental Health regional water treatment plant (WTP) consultants. Each January, the WTP consultants are asked to submit a spreadsheet listing closures and water intake switch-overs for all water treatment plants in their region. This spreadsheet describes the length and time of the event, contact information for the WTP, and the reason for the switch-overs and closures. When the closures/switches are due to water quality, then they are considered in determining if the uses of the lake (recreation, water supply, aquatic life) are being protected.

1.5. Water Supply Protection Program

The EMC and DWQ have administered a Water Supply Protection Program since 1986. Under the Water Supply Protection Rules, all water supply watersheds are to have ordinances, maps and a management plan in place to protect the water supplies. DWQ is conducting a review of the program and preparing for another audit of all water supplies covered under the rules.

1.6. Division of Environmental Health Surface Water Assessment Program

The 1996 Federal Safe Drinking Water Act (SDWA) Amendments required that all states establish Source Water Assessment Programs in order to determine the susceptibility of public water supply sources to contamination. This new focus in the SDWA promotes the prevention of drinking water contamination as a cost-effective means to provide reliable, long-term, and safe drinking water sources for public water supply systems. Specifically, Section 1453 of the SDWA Amendments required that states develop and implement a Source Water Assessment Program (SWAP) to delineate source water assessment areas, inventory potential contaminants in these areas, and determine the susceptibility of each public water supply to contamination.

The Public Water Supply (PWS) Section of the Division of Environmental Health in DENR is responsible for SWAP in North Carolina. The PWS Section received EPA approval for their SWAP Plan in November 1999. The SWAP Plan, entitled "North Carolina's Source Water Assessment Program Plan," fully describes the methods and procedures used to delineate and assess the susceptibility of more than 9,000 wells and approximately 207 surface water intakes. The SWAP Plan is available at: http://www.deh.enr.state.nc.us/pws/swap.

In April 2004, the PWS Section completed source water assessments for all drinking water sources and generated reports for the public water supply systems using these sources. In April 2005, a second round of assessments were completed. The ratings are available at the above-mentioned web site, either through the interactive mapping tool or compiled in a written report for each public water supply system.

Section 2. Methodology

For the purposes of this report, DWQ ambient lakes data from January 1995 through May 2005 were reviewed. Over that time period, DWQ sampled 97 lakes with the water supply classifications (WS-I, WS-II, WS-III, WS-IV, and WS-V). West Fork Eno Reservoir was only recently filled and was only sampled once in May 2005. Beaverdam Lake has been included in the analysis of Falls of the Neuse Reservoir. Therefore, only 95 lakes are discussed in this report.

As noted earlier, lakes are sampled once every five years unless a special study is conducted. As the 2005 Drinking Water Reservoir Protection Act is focused on eutrophication in water supplies, this analysis is of those standards related to eutrophication: chlorophyll a, dissolved oxygen, pH, and turbidity. The discussions for individual lakes found in Appendix 2 may include discussion of water quality problems associated with parameters that have no standards such as aquatic weeds.

Eutrophication-related standards for WS waters are presented in Table 2.1.

Table 2.1. Surface Water Quality Standards Related to Eutrophication

Parameter	Standard for Non-Trout Waters	Standard for Trout Waters
Chlorophyll a	Not greater than 40 ug/L	Not greater than 15 ug/L
Dissolved oxygen	Not less than 4 mg/L	Not less than 6 mg/L
pH	Between 6 and 9 except in Swamp Waters then 4.3 Standard Units (SU)	Between 6 and 9 SU
Turbidity	25 Nephelometric Units (NTU)	10 NTU

North Carolina does not have standards for nutrients (phosphorus and nitrogen) that result in eutrophication as there are a variety of factors that control a water body's response to nutrients including, but not limited to: size, depth, flow, shape of the lake, and light penetration. When the chlorophyll-a standard was adopted it was based on the determination that an indicator of eutrophication would provide more certainty in determining impacts than nitrogen and phosphorus standards.

Dissolved oxygen (DO), pH and turbidity are also indicators of the potential for eutrophication. During photosynthesis and respiration, DO and pH can increase and decrease due to the chemical reactions taking place. During the normal sampling times for the Ambient Lakes Monitoring Program (usually between 10 AM and 3 PM), peak photosynthesis is occurring resulting in increased oxygen releases by the alga and an increase in pH due to carbon dioxide uptake related to photosynthesis. When DO reaches levels above 10-12 mg/L at summer temperatures, the water becomes supersaturated and fish may experience gas bubble disease if they are unable to escape the supersaturated waters. Gas bubble disease may be fatal or the fish may eventually recover.

Turbidity refers to water clarity. The greater the amount of suspended solids in the water, including algae, the murkier it appears and the higher the turbidity measured. Turbidity measures the scatter of light by the suspended solids as opposed to measuring solids.

Therefore, anything that results in light scattering will increased the turbidity reading. That is why turbidity is considered to be related to eutrophication, the more phytoplankton in the water column, the higher the turbidity reading. Therefore, the major source of turbidity in the open water zone of most lakes is typically phytoplankton. Closer to the shore, clays and silts from shoreline erosion, resuspended bottom sediments and organic detritus from stream and/or discharges not only are usually the major source of turbidity but they actually act to shade the phytoplankton, reducing phytoplankton growth. Dredging operations, channelization, increased flow rates, floods, or even too many bottom-feeding fish (such as carp) may stir up bottom sediments and increase the cloudiness of the water.

In addition to carrying nutrients, high concentrations of particulate matter can modify light penetration, cause shallow lakes and bays to fill in faster, and smother bottom habitats impacting both organisms and eggs. As particles of silt, clay, and other organic materials settle to the bottom, they can suffocate newly hatched larvae and fill in spaces between rocks which could have been used by aquatic organisms as habitat. Fine particulate material also can clog or damage sensitive gill structures, decrease their resistance to disease, prevent proper egg and larval development, and potentially interfere with particle feeding activities. If light penetration is reduced significantly, macrophyte growth may be decreased which would in turn impact the organisms dependent upon them for food and cover. Reduced photosynthesis can also result in a lower daytime release of oxygen into the water. Effects on phytoplankton growth are complex depending on too many factors to generalize.

For the purposes of this review, standards were deemed to be exceeded (not met) when the sample size was 10 or more and more than 10 percent of the samples failed to meet the standard.

Section 3. Findings and Recommendations

3.1. Findings

3.1.1. Eutrophication Related Standards

Using DWQ's Ambient Lakes Monitoring data and some information from the water supply users (Appendix 1), 13 lakes (14 percent) are currently not meeting eutrophication-related water quality standards: Graham-Mebane Reservoir, High Point Lake, Jordan Lake, Stoney Creek Reservoir, Lake Mackintosh, Pittsboro Lake, Lake Rhodhiss, Cedar Cliff Lake, Lake Sequoyah, Falls of the Neuse Reservoir, High Rock Lake, Lake Lee, and Lake Twitty (Table 3.1).

Table 3.1. Water Supply Reservoirs Sampled by DWQ Not Meeting All Eutrophication-Related Standards (Jan 1995-May 2005) with Current Management Strategies

Lake	Standard Not Met in >10% of Samples	Current Actions
Cape Fear River Basin		
Graham-Mebane Reservoir	Chlorophyll-a	NSW
High Point Lake	Chlorophyll-a	Adding to Impaired Waters List
Jordan Lake	Chlorophyll-a	NSW, TMDL
Lake Mackintosh	Chlorophyll-a	NSW
Pittsboro Lake	Turbidity	NSW, TMDL (aquatic plants)
Stoney Creek Reservoir	Turbidity	NSW
Catawba River Basin		
Lake Rhodhiss	pH	Adding to Impaired Waters List
Little Tennessee River Basin		
Cedar Cliff Lake	pH	Additional sampling was conducted that did not find similar pH problems. No further action has been planned.
Lake Sequoyah	pH	Local Efforts Underway
Neuse River Basin		
Falls of the Neuse Reservoir	Turbidity	NSW, Special study underway
Yadkin River Basin		
High Rock Lake	Chlorophyll-a, pH, turbidity	TMDL
Lake Lee	pH	Additional sampling is planned during 2006
Lake Twitty (Lake Stewart)	pH	Additional sampling is planned during 2006

Table 3.1 indicates activities currently underway, which are intended to reduce nutrient inputs. Most of the Cape Fear River basin lakes and Falls of the Neuse Reservoir in the Neuse River basin are classified as NSW. The NSW classification carries with it management strategies designed to reduce nutrient inputs based on site-specific requirements. These management strategies are revisited periodically through the basinwide process to determine if the strategy is working and allow for adjustments.

Those lakes that are listed on the Impaired Waters List may require the development of TMDLs that identify the allowable nutrient concentrations as well as how much reduction is required of each source. TMDLs are used to develop permit limits and to target nonpoint source control activities. They may also result in the development of rules to provide additional controls of point and nonpoint sources.

Additional sampling was conducted on Cedar Cliff Lake during 1999 to determine if the low pH values were indicative of on-going impairment. Subsequent sampling indicates pH within the standards and no additional management is recommended at this time. Lakes Lee and Twitty are targeted during the 2006 sampling period for additional sampling to provide additional data for determining causes and sources of impairment.

In the case of some water supply lakes (High Point Lake, Oak Hollow Lake, Lakes Lucas, Twitty, Hickory and Rhodhiss), algal bloom related problems have been significant enough to require additional treatment either at the treatment facility (addition of carbon filters for example) or in the lake (destratification systems). The destratification systems used in Oak Hollow, Lucas and Twitty prevent algae from remaining within the photic zone and multiplying while maintaining dissolved oxygen and pH at normal levels, therefore chlorophyll-a, dissolved oxygen and pH values met the standards even though nutrient concentrations are sufficient to cause blooms.

The sources of the nutrients fueling the algal blooms include point and nonpoint sources. Due to the protected nature of most water supply watersheds, nonpoint sources of rural origin appear to be the largest source of threat. The Basinwide process continues to work with local stakeholders to address these issues.

Additional information on the lakes with exceedances is provided in Appendix 2.

3.1.2. Other Water Quality Concerns

In the process of preparing this document, information on all the water supply lakes was reviewed and it appears that, in addition to nutrient over-enrichment (algal blooms), aquatic weeds and sediment are also major problems for water supply reservoirs (Table 3.2 and Appendix 2). Sedimentation is a major problem in some of the watersheds, although it is not always indicated by in-lake turbidity. While turbidity gives some idea of sediment, it does not provide a good measure of the amount of sediment coming into a system and being deposited. Therefore, DWQ's results include field observations and are probably an underestimation of the true impact of sedimentation within North Carolina's lakes. This is especially true in the Yadkin-Pee Dee River Basin where highly erodable soils and heavy development pressures result in the Yadkin River flowing muddy most of the time.

A few lakes had other documented problems, such as Bonnie Doone Lake in the Cape Fear Basin where the City of Fayetteville is addressing pesticides in stormwater runoff after finding them in the lake. Some lakes need to be reclassified to recognize the swamp water influences that result in pH below the standard.

Table 3.2. Potential Causes of Water Quality Concerns in Water Supply Reservoirs Based on DWQ Ambient Lakes Monitoring Results.

(Shading indicates that those causes have been identified as problems in each basin.)

Basin	Cause		
	Aquatic Weeds	Sediment	Algal Blooms-Nutrients
Broad			
Cape Fear			
Catawba			
French Broad			
Little Tennessee			
Neuse			
New			
Roanoke			
Tar-Pamlico			
Yadkin-Pee Dee			

Aquatic weeds, such as Hydrilla and Parrotfeather, are hardy, fast growing and have caused problems for water supply intakes, boating, swimming and aquatic life throughout the state. These aquatic weeds can take over a water supply within a couple of years, increasing maintenance costs for facilities and ruining the public's experience of their waters. Fourteen WS lakes sampled by DWQ are currently infested with aquatic weeds at levels that require some treatment.

3.2. Recommendations

As is evident from the data review, DWQ's current program does not have sufficient data in most cases to determine with confidence that a water supply is or is not meeting standards. The Ambient Lakes Monitoring program was designed to allow targeting of water bodies for additional sampling based on the limited resources available to support the program. It is possible to conduct large-scale assessments of eutrophication in multiple reservoirs; however, it will require significant additional resources including staff, equipment and laboratory support.

Appendix 1. Percentage of Samples Not Meeting Eutrophication-Related Water Quality Standards in Water Supply Reservoirs Sampled by DWQ

Basin & Lake Name	Years Included in Analyses	# of Chl-a Samples	# of DO, ph & Turbidity Samples	Percentage of Samples Not Meeting Each Standard During January 1995 through May 2005

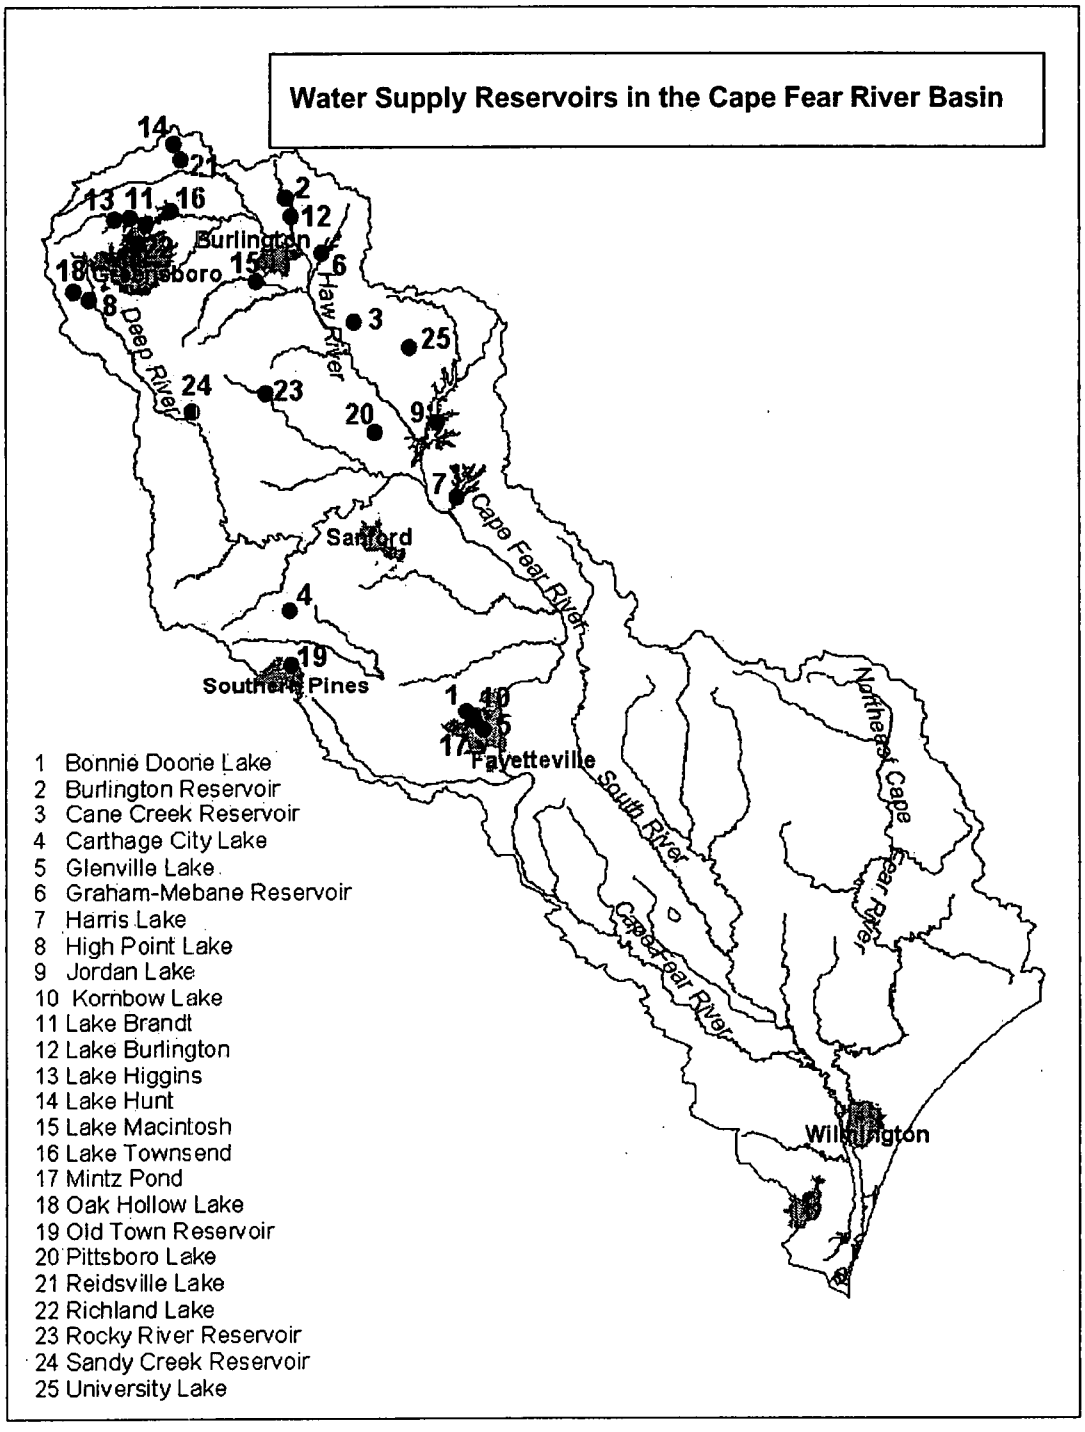
Appendix 2. Water Supply Reservoir Water Quality For Selected Water Supplies By Basin

These discussions include water supply reservoirs that have water quality concerns but that may not be exceeding any standards more than 10 percent of the time.

Broad River Basin

Basin Overview



The Broad River Basin encompasses a 1,506 square mile watershed drained by 1,452 miles of streams. The three major tributaries to the Broad River are the Green, Second Broad and First Broad Rivers. Flowing from the Blue Ridge Mountains, the Broad River moves through the foothills before entering the piedmont southeast and east of Lake Lure. From there, the Broad flows through Rutherford and Cleveland counties then into South Carolina. The basin encompasses most of Cleveland, Polk and Rutherford counties and portions of Buncombe, Henderson, Lincoln and Gaston counties. Larger municipalities include Forest City, Kings Mountain, Lake Lure, Rutherfordton, Shelby and Spindale.

Kings Mountain Reservoir

Only one of the lakes sampled by DWQ in the Broad River Basin is classified as WS. That is Kings Mountain Reservoir. Kings Mountain Reservoir (also known as Moss Lake) is a water supply for the Cities of Kings Mountain and Grover. The reservoir was constructed in 1963. Major tributaries to the lake include Buffalo Creek and Whiteoak Creek. The drainage area is characterized by rolling hills and rural areas. Access to the lake is strictly controlled to allow recreational use while protecting water quality.

Two samples taken in 1992 exceeded the pH standard. Both samples were 9.2 standard units (SU). All the other 64 samples taken between 1989 and 2005 met the standards.

Cape Fear River Basin

Basin Overview

The Cape Fear River Basin is the largest river basin in the state, covering 9,149 square miles in 24 counties. There are an estimated 6,300 miles of streams and rivers in the basin confined to the Piedmont and Coastal Plain. These areas are further subdivided into Southern Outer Piedmont, Northern Inner and Outer Piedmont, Carolina Slate Belt, and Triassic Basin in the Piedmont. The Coastal Plain contains the Sand Hills, Rolling Coastal Plain, Carolina Flatwoods, and the Southeast and Mid-Atlantic Floodplains and Low Terraces subecoregions. The Cape Fear River is formed by the confluence of the Deep and Haw Rivers at the Chatham/Lee County line. B. Everett Jordan Reservoir is the largest impoundment in the basin. Several large tributaries join the river as it flows towards the Atlantic Ocean near Southport: Upper and (Lower) Little Rivers, Rockfish Creek, Black River, South River and the Northeast Cape Fear River.

Highly urban and industrialized areas around the cities of Greensboro, High Point, Burlington, Chapel Hill, and Durham in the upper part of the watershed and around Fayetteville and Wilmington in the middle and lower part characterize the basin. Fort Bragg Military Reservation occupies a large area in the middle of the basin.

The Division of Water Quality sampled 24 lakes classified as WS between 1981 and May 2005. Of these 4 exceeded water quality standards in more than 10 percent of the samples taken: Graham-Mebane Reservoir, High Point Lake, Jordan Lake, and Lake Mackintosh.

Pittsboro Lake is not discussed below, as it does not have a water supply intake; however, it is on the Impaired Waters list due to aquatic weeds and has some exceedances of the chlorophyll a, pH, turbidity and manganese standards.

Old Town Reservoir, which is no longer used as a water supply, is also not discussed below. The 13 samples that did not meet the pH standard were all below 6.0 SU and were due to natural inflows. Mill Creek, a black water creek with excellent water quality, feeds into Old Town Reservoir and reduces pH readings in the upper end of the reservoir.

Lakes with Water Quality Concerns

Graham-Mebane Reservoir

This reservoir serves the water supply needs for the Towns of Graham, Mebane, Green Level and Haw River. The reservoir is 11 years old and is an impoundment of Quaker and Back Creeks, encompassing the old Quaker Creek Reservoir. The immediate shoreline is primarily forested except for a few houses, a school, and some farmland.

The reservoir was most recently sampled in 2003. As had been observed in previous years, Secchi depths in 2003 were consistently less than one meter and the turbidity standard was exceeded twice. The turbidity standard was also exceeded once in 1998. The water was brown from suspended sediments. Nitrogen concentrations (nitrate/nitrite) were approximately three times those previously measured and generally ranged from moderate to elevated (0.62 to 0.79 mg/L). Total phosphorus concentrations were slightly elevated (0.04 to 0.05 mg/L).

These nutrients may have supported an increase in algal growth as indicated by chlorophyll-a concentrations. In July and August, chlorophyll-a concentrations exceeded the water quality standard of 40 µg/L five times (48 to 67 ug/L). These elevated concentrations were attributed to algal blooms consisting of *Gonyostomum* sp. This taxon is indicative of eutrophic conditions and can form nuisance blooms in the summer[1].

The increase in chlorophyll-a and turbidity is a concern in this water supply and warrants additional attention. Additional sampling is planned for this lake as resources allow.

[1] Wehr, J. D. and R. G. Sheath (eds.). 2003. Freshwater algae of North America: ecology and classification. Academic Press, San Diego, CA.

High Point Lake

High Point Lake (also known as City Lake) is used for water supply and recreation. Urban/residential areas and pasture/row crop farms dominate the watershed. The two arms of the lake are fed by the East Fork Deep River and the West Fork Deep River.

DWQ sampling found four exceedances of the chlorophyll-a standard and three exceedances of the manganese standard. However, the City of High Point has a more extensive monitoring program and has documented numerous complaints regarding taste and odor related back to algal blooms in High Point Lake. They also have documented elevated pesticides.

To reduce this problem, the water treatment plant currently treats the raw water to reduce algae-related taste and odor problems. They have also installed a forced air destratification system in the lake to increase mixing and address dissolved oxygen concerns. In addition to summer algal blooms, the City documented a winter bloom that it attributed to the use of fertilizer as a deicer during a winter ice storm.

Water clarity has decreased since 1984. This reduction in clarity has been associated with algal blooms and two highway construction projects (one for I-40 and the other for Hwy 73/74 Bypass). *Lyngbya wollei*, a filamentous blue green alga that forms thick mats, which clog water intakes and foul boat motors, has been the dominant species in this lake.

In the 2005 Cape Fear River Basinwide Water Quality Report, High Point Lake was declared Impaired for aquatic life because 3 out of 12 chlorophyll-a samples exceeded the water quality standard during 2003. That report recommends that High Point and Greensboro use their respective stormwater programs to address water quality problems, including reductions in the nutrient loading that is driving the algal blooms in High Point Lake.

High Point Lake will be added to the 303(d) list.

B.E. Jordan Reservoir

B. Everett Jordan Reservoir (Jordan Lake) is located in Chatham County in the eastern piedmont of North Carolina. The United States Army Corps of Engineers created the lake for various purposes including flood control, fish and wildlife habitat, recreation, and water supply. The dam was completed in 1974; however, initial filling of the lake did not occur until late 1981 as a result of legal and construction problems.

Major inflows into Jordan Lake are the Haw River and New Hope and Morgan Creeks. The Haw River has an average hydraulic retention time of five days and accounts for 70-90 percent of the annual flow through Jordan Lake. The New Hope arm of the lake has an average hydraulic retention time of 418 days. The Jordan Lake watershed encompasses 1,686 square miles and includes parts of Alamance, Caswell, Chatham, Durham, Forsyth, Guilford, Orange, Randolph, Rockingham and Wake counties. It includes all or portions of the urban areas of Durham, Chapel Hill, Cary, Burlington, Greensboro and several other small municipalities.

In 1983, Jordan Lake was classified as NSW based on water quality sampling showing increasing nutrient loading and documenting algal blooms and other biological impacts. As a result of the classification, a plan to reduce nutrient inputs was developed that required total phosphorus limits of 2.0 mg/L for NPDES permitted wastewater facilities with permitted flows greater than 0.005 MGD[2]. Due to special concerns for the Upper New Hope Arm of the reservoir, NPDES facilities received TP limits of 0.5 mg/L during the months of April to October (algal growing season).

Algal blooms have been documented by DWQ from August 1982 through May 2005 with 311 exceedances of the chlorophyll-a standard out of 1015 samples (31 percent). During 2003 in June, July and August, 38 percent of the chlorophyll-a samples taken by DWQ were above 40 ug/L. During 2005 between January and mid-April, 44 percent of the samples were above 40 ug/L.

Blooms of blue-green algae associated with taste and odor problems in drinking water

[2] DENR. 2005. 2005 Cape Fear River Basinwide Water Quality Plan. http://h2o.enr.state.nc.us/basinwide/index.htm

were observed in July 2003. As part of special monitoring in 2005, algal samples were analyzed monthly. Jordan experienced moderate to severe algal blooms (densities between 20,000 to 49,500 units/ml) during January and throughout the summer. Chlorophyll-a concentrations in January exceeded the standard twice (43 & 46 ug/L). The dominant species by density during January was a filamentous blue green alga (*Planktothrix sp.*). Chlorophyll-a concentrations also exceeded the standard during February, March and April.

Measurements of pH (another indicator of algal activity) were elevated at times with 64 samples above the pH standard of 9.0 SU. Other parameters that exceeded water quality standards included dissolved oxygen, turbidity and manganese.

Jordan Lake was listed as Impaired in 2002 for chlorophyll-a and a draft TMDL has been developed for EPA approval. That process involved a formal stakeholder process, which included a total of 21 stakeholder meetings between May 2003 and December 2004. An implementation plan is being developed with the Jordan Stakeholders' participation[3].

DWQ and the EMC will continue to work with the stakeholders to develop an implementation plan. Additional monitoring is planned for Jordan Lake over the next 4 years to assist in developing a baseline to compare with water quality after control actions are in place.

Lake Mackintosh

Lake Mackintosh, an impoundment of Big Alamance Creek, is a 10-year-old water supply reservoir for the City of Burlington. The lake is used for secondary recreation – only electric trolling motors are allowed or paddle boats, no swimming. The surrounding land is comprised of pastures and farmland with a few houses. The reservoir has been sampled 12 times by DWQ.

This lake has experienced algal blooms since its creation and the dominant algal species has been blue-green alga associated with taste and odor problems. In addition to regular ambient lakes monitoring, DWQ has done additional sampling at the request of the City of Burlington due to taste and odor problems at the Water Treatment Plant. The dominant species at those times was a small filamentous blue green alga, *Aphanizomena flos-aquae*. No reports of taste and odor problems have been received since 1997 even though algal populations were elevated in 2003 as shown by chlorophyll-a and biovolume estimates. Chlorophyll-a concentrations ranged from 12 to 65 ug/L and biovolume in samples analyzed by DWQ ranged from 4,000 to 31,000 units/ml. DWQ considers a bloom to be present if concentrations are above 10,000 units/ml. The species present in 2003 was *Lyngbya sp.*, a common planktonic blue green that can be found in reservoirs throughout North Carolina. This species has also been known to cause taste and odor problems.

Algal blooms are to be expected in the first years of a reservoir's life as the organic materials that were there during filling decay and release nutrients. According to Stephen Shoaf, City of Burlington Director of Utilities, the reservoir has settled down and the City continues to monitor alga in the reservoir. DWQ data indicate that highest nutrients are found in the Big and Little Alamance Creek Arms of the lake.

In addition to elevated algal populations, the lake has about two acres of creeping waterprimrose, a nuisance aquatic weed whose scientific name is *Lugwigia hexapetala*. The lake was treated in 2004 and 2005 by herbicides to address the problem.

Bonnie Doone Lake

Bonnie Doone Lake is located in close proximity to Fort Bragg Military Base. Firebreaks located on the base and the sandy soil contribute large amounts of sediment into the lakes through stormwater runoff. The surrounding shoreline of Bonnie Doone is forested; however, development is increasing in the watershed. The western side of the lake beyond the forested buffer is urbanized. The City of Fayetteville controls access to this water supply and monitors the

[3] More information on that process is available at http://h2o.enr.state.nc.us/tmdl/.

lake on a regular basis. Their monitoring program is more comprehensive than DWQ's, sampling more frequently and analyzing for more parameters. They are proactive in identifying sources and instituting controls.

All three samples in 2003 had low pH values. The City of Fayetteville has also noted low pHs and believes that they may be attributed to the soft water interfering with pH and conductivity readings[4]. This region has sandy soils and tannic streams. All other standards were met. Programs such as the City of Fayetteville's are to be encouraged and supported as they provide more frequent assessments of water quality and quicker response to problems.

Lake Cammack

Lake Cammack, also called Burlington Reservoir, is a water supply storage reservoir for the City of Burlington located upstream of Stoney Creek Reservoir, the City's primary water supply source. Lake Cammack is located at the confluence of Stoney and Toms Creeks in Alamance County. The immediate watershed area consists primarily of forested and agricultural land, although there is some development beginning in the watershed.

The reservoir was most recently monitored in 2003. In response to the availability of nutrients, algae growth increased as evidenced by elevated chlorophyll-a concentrations. Chlorophyll-a concentrations in the upper end of the lake during June and August (45 and 52 µg/L, respectively) were greater than the water quality standard of 40 µg/L. *Chrysochromulina* sp. dominated the June algal bloom. In August, the bloom was of the filamentous blue green *Anabaenopsis raciborskii*. These taxa are known to cause taste and odor problems in drinking water supplies.

There were the only two chlorophyll-a samples out of 14 (7 percent) above the standard. The City of Burlington has treated Lake Cammack to control *Lyngbya wollei*, a filamentous blue green that forms wooly mats[5].

Manganese concentrations exceeded the WS standard in one sample out of 14 samples taken between 1981 and 2005. No instances of taste and odor problems have been reported to DWQ.

Stoney Creek Reservoir

Stoney Creek Reservoir, an impoundment of Stony Creek downstream of Lake Cammack, is the primary water supply reservoir for the City of Burlington. This reservoir is also known as Lake Burlington. The immediate watershed is characterized by rolling hills and agriculture is the most common land use.

The reservoir was most recently monitored in 2003. The water was brown from suspended sediments and exceeded the turbidity standard twice. Total phosphorus concentrations in July and August 2003 were greater than those previously observed. During the summer, nitrogen concentrations were also greater than those values previously observed. Despite the availability of these nutrients, 2003 chlorophyll-a concentrations were not greater than the water quality standard of 40 µg/L (probably due to shading from the suspended sediments). However, chlorophyll-a concentrations were above the standard in July 1990 at both stations.

There are no NPDES permitted facilities in these watersheds; agricultural nonpoint sources of pollution and habitat degradation (severe bank erosion and sandy, embedded substrate) are currently the main concerns. The 2005 Cape Fear River Basinwide Water Quality Plan[6] noted problems in the watershed related to drought conditions and habitat degradation from land disturbing activities.

---

[6] DENR. 2005. 2005 Cape Fear River Basinwide Water Quality Plan. http://h2o.enr.state.nc.us/basinwide/index.htm

Mintz Pond

The immediate shoreline of Mintz Pond is forested but the lake is surrounded by urban development. The impoundment is shallow with a maximum depth of only five feet at the dam.

In 2003, large areas of water lilies (*Nymphaea odorata*) were observed along the shoreline and upper end of the lake. Water lilies have been observed along the lake shoreline since 1998 but are not at nuisance levels. Smaller beds of watershield, *Brasenia schreberi,* were also observed. Variable-leaf watermilfoil is found throughout the lake. The macroscopic alga, *Nitella* sp., grows on the lake's bottom; it is an indicator of clear water.

The single exceedance of the turbidity standard was from the 1993 sampling period. Since then turbidities have ranged from 3.1 to 15 mg/L, well below the lake turbidity standard for 25 mg/L.

As with Bonnie Doone, pH measurements were below the standard. The City of Fayetteville attributes this to the softness of the water and continues to do additional research to determine how best to sample these waters. Tannic inflows may contribute to the low pH measurements found in this lake.

The City's monitoring program measures water quality more frequently and monitors for more parameters than DWQ. They actively pursue source identification and control.

Cane Creek Reservoir

Cane Creek Reservoir was built in 1989 by Orange Water and Sewer Authority (OWASA) to serve as a water supply reservoir for the Town of Chapel Hill. A majority of the 20,262-acre watershed is forested with some agriculture. Since 1997, OWASA has been acquiring acreage in the watershed to help protect the watershed. As of 2003 they had received approximately $1.75 million to purchase 1,559 acres plus 467 acres in conservation easements. The Haw River Assembly has also received a mini-grant of $25,000 to purchase six tracts along Cane Creek and the Haw River.

DWQ has sampled the reservoir 11 times since 1990. In 2003 concentrations of nutrients ranged from moderate to elevated and chlorophyll-a concentrations were elevated during summer sampling. Blue green algal blooms also occurred throughout the summer. Chlorophyll-a concentrations were measured up to 170 ug/L, which is over four times the water quality standard of 40 ug/L. The pH measurements exceeded the standard in 1996 and may have been indicative of algal blooms.

The 2005 Cape Fear River Basinwide Water Quality Report recommends working with the Division of Soil and Water Conservation (DSWC) to address agricultural nutrient sources and to add additional sampling as part of the Ambient Lakes Program. OWASA is continuing to work on local awareness and controls.

Lake Brandt

Lake Brandt is one of three primary water supplies for Greensboro, the third largest city in North Carolina. The lake covers approximately 410 acres and has a drainage area of approximately 40.2 square miles. The shoreline of Lake Brandt is forested and the watershed contains of a mix of residential developments, pastures, row crop fields and scattered small businesses.

Of the samples taken since 1981, three out of 30 chlorophyll-a samples were above 40 ug/L. Those samples were taken in 1982 and 1993. None of the nine samples taken in 2003 were above the standard.

Other parameters that were above state standards were pH in 1981, turbidity (1 sample in 2003) and manganese (1 sample in 1988).

The turbidity sample of 2003 was not associated with any elevated chlorophyll-a but was from the shallowest station (4 feet) and could represent bottom disturbance.

Lake Hunt

Lake Hunt has been sampled by DWQ since 1981. The lake is now used for recreational purposes, but served as the Town of Reidsville's primary water supply until 1979, when Reidsville Lake was built. Lake Hunt is on an unnamed tributary to Troublesome

Creek. The boat launch area is privately owned and public access is restricted. Land use was primarily agricultural although residential development is occurring upstream.

Data collected in 2003 indicated elevated dissolved oxygen and chlorophyll-a concentrations. Nutrient concentrations ranged from moderate to elevated. These characteristics indicated increased algal productivity and resulted in the lake being classified as eutrophic (over-enriched with nutrients). In previous years, the lake had been classified as mesotrophic or oligotrophic (moderate and low nutrient enriched).

Elevated pH measurements (above standard of 9.0 SU) were recorded in 1981. No other elevated pHs have been reported since that year.

The 2005 Cape Fear River Basinwide Water Quality Report notes that there are water quality issues in the Troublesome Creek watershed and states that DWQ will work with the Division of Soil and Water Conservation staff to further implement best management practices (BMPs) to reduce the impacts of agriculture in the watershed. In addition, acquisition of 500 acres along the Haw River and Troublesome Creek by the Piedmont Land Conservancy may provide additional protection to this portion of the watershed.

Lake Reidsville

Lake Reidsville (also called Reidsville Lake) is a water supply reservoir located on Troublesome Creek just outside of, and owned by, the City of Reidsville. The topography of the immediate watershed is characterized by rolling hills and land use is mainly row crop and pastures along with residential and commercial development. Rockingham County limits activities in the watershed with strict zoning laws; the reservoir has a 100-foot buffer with a 50-foot buffer on all tributary streams. A city park with a boat launch area is located off of SR 2435.

Chlorophyll-a concentrations exceeded the standard in four out of six samples in 2003 and were more than twice the concentrations recorded in 1988 and 1993. One turbidity sample taken in 2003 was above the lake standard of 25 NTU (34 NTU).

Hydrilla *(Hydrilla verticillata)*, an invasive non-native aquatic weed, is present in Lake Reidsville and, in 2004, the City of Reidsville planned to treat 400 acres of the lake by stocking it with 6,000 grass carp with matching funding from the Division of Water Resources. This treatment did not occur and, per Mr. Steve Routh, the City of Reidsville is considering other control options[7]. The City is considering cold weather drawdown to freeze the Hydrilla out and is in discussion with the City of Greensboro to utilize their equipment and expertise for chemical control.

Mr. Routh noted that water quality in Lake Reidsville was very good and that they had not seen any blooms. Based on this information, it is recommended that no action be taken regarding use support determinations until additional sampling can be conducted to verify the 2003 data. DWQ staff will also work with DSWC staff to implement additional BMPs in the watershed.

Oak Hollow Lake

This reservoir, an impoundment of the West Fork Deep River, is commonly used for recreational activities. It has a maximum depth of 36 feet. The watershed is characterized by urban, residential, and some agricultural land uses; two 18-hole golf courses are along the shoreline. The reservoir has been sampled 23 times by DWQ since 1981.

Only turbidity and manganese measurements exceeded state standards. One turbidity sample of 26 NTU was recorded in July of 1997 and two manganese samples of 210 and 250 ug/L were recorded in August 2003 and July 2000.

Due to problems with anoxia (dissolved oxygen concentrations near or at 0 mg/L) in the water column, the City of High Point installed a destratification system. No

[7] Steve Routh, City of Reidsville Public Works; personal communication December 29, 2005

surface dissolved oxygen measurements were below standards in DWQ sampling; however, during stratification the lake did exhibit low dissolved oxygen up to around 9 feet (maximum depth is approximately 30 feet).

West Fork Deep River is rated as Impaired for Aquatic Life use support in the Draft 2005 Cape Fear River Basinwide Water Quality Report due to exceedances of the fecal coliform bacteria and turbidity standards. Actions taken to address these problems will also provide protection for Oak Hollow and should provide some nutrient loading reductions as a by-product.

Additional sampling will be conducted at the reservoir to allow a full use support assessment as resources become available.

Pittsboro Lake

Pittsboro Lake is a small impoundment of Robeson Creek (Figure 32). The reservoir was originally a system of two separate ponds connected by a canal. Hurricane Floyd in September 1999 destroyed the canal, resulting in the formation of a single, shallow waterbody. The maximum depth is seven feet. The drainage area is composed of forested, urban, and agricultural areas. This lake has been sampled seven times by DWQ.

The reservoir was most recently monitored in 2003. It was classified as eutrophic throughout the period. Mild to severe algal blooms occurred throughout the summer sampling period. The blooms were dominated by *Chrysochromulina* sp., an indicator of eutrophic conditions and which can cause taste and odor problems in drinking water supplies (Wehr and Sheath 2003). No blooms occurred at the other station due to the large amounts of aquatic macrophytes and less open water found at the site.

Parrot feather, *Myriophyllum aquaticum*, has been found in the reservoir. The submerged macrophyte is highly invasive and forms dense growths providing excellent habitat for mosquitoes. It is difficult to eradicate and is inedible to Grass carp. Excessive macrophyte growths were also noted in 1998. This reservoir is on the 303(d) list of impaired surface waters because of the excessive growths of aquatic weeds.

In 2000, the Town of Pittsboro (owners of the dam) had considered breaching the dam and restoring Robeson Creek and its riparian buffer back to their natural conditions. This restoration project has been delayed pending improvement of the local economy.

Rocky River Reservoir

The Rocky River Reservoir, a water supply reservoir for Siler City, is an impoundment of the Rocky River high in its watershed. The reservoir was most recently sampled in 2003. This reservoir demonstrated excessive nutrient enrichment and very high levels of biological productivity.

Frequent rainfall events during the summer of 2003 may have increased the amount of nonpoint source runoff from the rural watershed to the reservoir and increased the nutrient loading. The watershed is primarily agricultural with some pasture immediately adjacent to the lake. Cattle and horses have direct access to the upper end of this reservoir. Pastureland for these animals slopes downhill to the water's edge. This provides one source of nonpoint nutrient contributions to the reservoir.

Water clarity was consistently poor throughout 2003, and water quality standards were exceeded for chlorophyll-a. During a special study in 2002, nutrients and conductivity values were found to be elevated upstream of the reservoir in the Rocky River and the North Prong Rocky River as well.[8]

This reservoir, an impoundment of the Rocky River, serves as a water supply for Siler City. The impoundment was expanded in 1988 to raise the existing storage capacity from 60 million gallons to 424 million gallons. The expansion raised the water level by approximately 10 feet. Another expansion is planned for 2006.

In order to expand the reservoir a portion of the Rocky River below the current dam had to be reclassified to WS-III CA. Additional

[8] DWQ. 2002. Internal Data Review.

monitoring and watershed controls were required as part of the reclassification and 401 Water Quality Certification & Isolated Wetland Permit process. These requirements include addressing problems related to agriculture in the watershed. Siler City is currently participating with DWQ and other stakeholders in developing monitoring strategies for the lower river and is planning to assist with a workshop on determining current activities related to water quality in the entire Rocky River watershed.

DWQ intends to continue working with the local stakeholders on addressing nutrient loading to the watershed.

Lake Ramseur

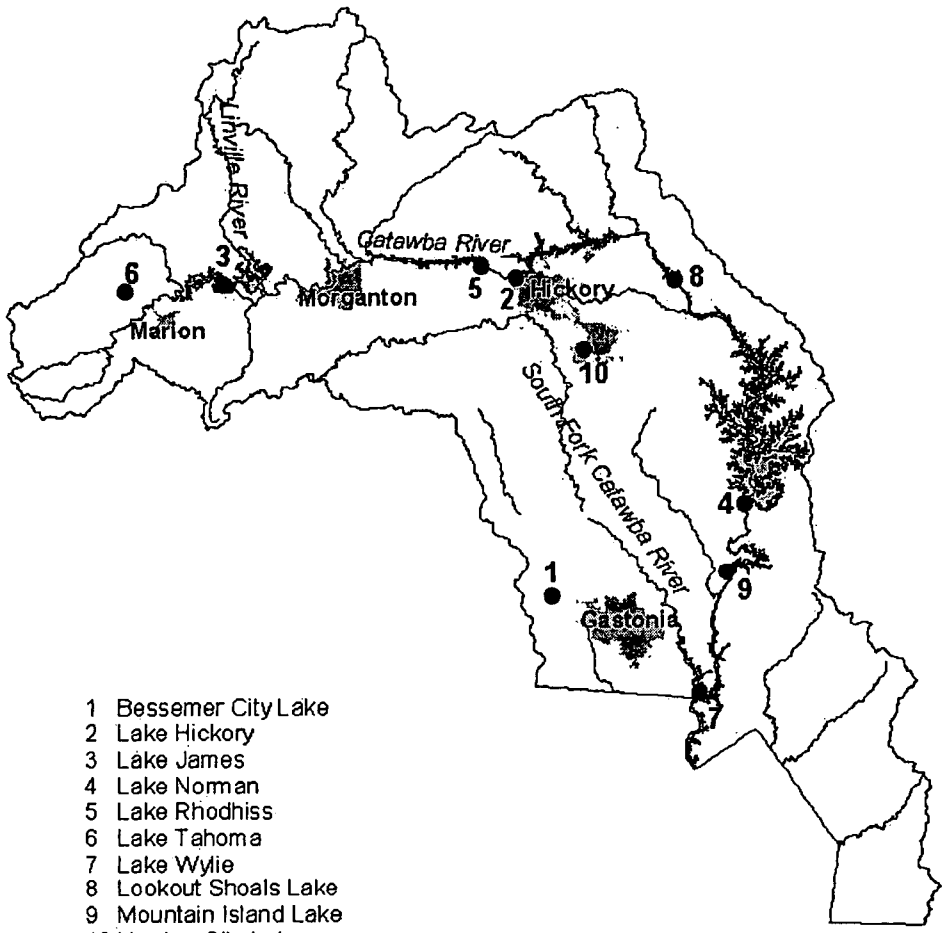
Lake Ramseur, a raw source of water for the Town of Ramseur, is located northwest of the city in Kermit Pell Park on Sandy Creek. Also known as Sandy Creek Reservoir, the lake covers 125 acres. The lake is formed by the impoundment of Big Sandy and Little Sandy Creeks. The maximum depth is 48 feet. The immediate watershed is moderately developed. Major land uses are forestry and agriculture. The reservoir has been sampled eight times by DWQ since 1992.

The reservoir was most recently sampled in 2003. Nutrient concentrations were elevated and supported increased algal productivity as indicated by the elevated chlorophyll-a concentrations. During the summer chlorophyll-a concentrations were greater than the water quality standard of 40 µg/L. Algal blooms, composed primarily of diatoms and blue greens, occurred throughout the summer. The blooms were most prevalent near the dam. The algal species found are associated with taste and odor problems in drinking water supplies. DWQ has not received any complaints regarding taste and odor in the lake.

In 1997, the Piedmont Land Conservancy received a $134,000 Clean Water Management Trust Fund (CWMTF) grant to acquire 144 acres of permanent easements in this watershed.

University Lake

University Lake was built in 1932 by UNC Chapel Hill. University Lake holds 450 million gallons of water. Its tributaries include Morgan Creek, Phils Creek, Neville Creek, Price Creek and Pritchards Mill Creek. The lake has a 213-acre surface area. Carrboro and Chapel Hill use University Lake as a drinking water source.



The reservoir was most recently sampled in 2003. Nutrient concentrations were elevated and supported increased algal productivity as indicated by the elevated chlorophyll-a concentrations. During the summer five chlorophyll-a concentrations (58, 99, 160, 73, & 62 ug/L) were greater than the water quality standard of 40 µg/L. Algal blooms, composed primarily of diatoms and blue greens, also occurred throughout the summer. The blooms were most prevalent near the dam. *Chrysochromulina breviturrita*, *Lyngbya* sp. and *Aphanizomenon flos-aquae*, blue-green algae, were the dominant summer species and are known to cause taste and odor problems in drinking water supplies.

In August 2005, public complaints were received regarding the water in University Lake being red in color and an investigation found that a *Euglena* bloom was occurring. The species present turned bright red in the sunlight and covered much of the lake's surface (Ed Holland, Orange Water and Sewer Authority (OWASA); email August 25, 2005). Rainfall early the next morning dispersed the bloom. Euglenids are known for being very mobile and dispersing quickly. No taste and odor problems nor treatment issues were noted by OWASA. The only water quality parameter that was elevated at this time period was ammonia in the lower water column. This potentially could be the trigger as Euglenids thrive on elevated ammonia concentrations.

The city has done much to protect the University Lake watershed and continues to identify and eliminate pollution sources. It is recommended that such proactive management continue.

Catawba River Basin

Water Supplies Reservoirs Sampled by DWQ in the Catawba River Basin

1 Bessemer City Lake
2 Lake Hickory
3 Lake James
4 Lake Norman
5 Lake Rhodhiss
6 Lake Tahoma
7 Lake Wylie
8 Lookout Shoals Lake
9 Mountain Island Lake
10 Newton City Lake

Basin Overview

The Catawba River basin, along with the Broad River basin, forms the headwaters of the Santee-Cooper River system, which flows through South Carolina to the Atlantic Ocean. The basin is the eighth largest river basin in the state covering 3,279 square

miles in the south central portion of western North Carolina. The Catawba River has its source on the eastern slopes of the Blue Ridge Mountains near the Town of Old Fort in McDowell County, and flows eastward, then southward, to the state line near Charlotte. The basin encompasses all or part of 12 counties: Alexander, Avery, Burke, Caldwell, Catawba, Gaston, Iredell, Lincoln, McDowell, Mecklenburg, Union, and Watauga. Large urban areas include Belmont, Charlotte, Conover, Gastonia, Hickory, Lenoir, Lincolnton, Mooresville, Morganton, Mt. Holly, and Newton.

Once out of the mountains, the flow of the Catawba River is regulated by a series of hydroelectric dams. These dams form the Catawba Chain Lakes: Lake James, Lake Rhodhiss, Lake Hickory, Lookout Shoals, Lake Norman, Mountain Island Lake and Lake Wylie. All of these lakes are classified as WS-IV in all or portions of their waters. In addition to the chain lakes, Lake Tahoma, Newton City Lake and Bessemer City Lake carry WS classifications and were reviewed for water quality standard exceedances.

Lakes in the Catawba River Basin that met water quality standards were: Lake James, Mountain Island Lake, Newton City Lake, Lake Norman and Bessemer City Lake. Lake Tahoma, although it carries the WS-II classification, is not currently used for water supply and had only one pH value that was below the standard.

One of the largest problems facing water users in this basin is nuisance growths of aquatic weeds. All of the chain lakes have some species of noxious weed that requires control. Hydrilla has been found in Mountain Island Lake, Lake James and Lake Norman. Parrotfeather, *Myriphyllum aquaticum,* has infested the upper ends of Lake Hickory and Lookout Shoals Lake. This situation is becoming more prevalent and the Division of Water Resources is working to assist citizens throughout the state in controlling noxious weeds.

Water quality in the other lakes is discussed in the following paragraphs. This discussion is organized such that Lake Rhodhiss, Lake Hickory and Lookout Shoals are reviewed first due to their interdependence. That review is followed by a discussion of Lake Wylie.

Lakes with Water Quality Concerns

Lake Rhodhiss

Lake Rhodhiss, which is owned by Duke Energy, is located between Lake James and Lake Hickory on the Catawba River. This is a run-of-the-river reservoir was built in 1925. It has 90 miles of shoreline, a surface area of approximately 3,060 acres and a mean hydraulic retention time of 21 days. Under the right temperature, light, and nutrient conditions, the longer retention times give algal populations an opportunity to bloom. The lake has been rated as eutrophic since the division began sampling it in 1981.

Beside hydroelectric power production the reservoir is used as a water supply and for public recreation. Granite Falls, Lenoir, Morganton and Valdese get their raw drinking water from Lake Rhodhiss.

Drought conditions that increased retention times and nuisance algae (especially blue-greens) blooms were recorded in 2001 and 2002. Public complaints of taste and odor problems in processed lake water resulted in a special study to investigate the extent and nature of the algal blooms. The study determined the existence of 15 well-established algal communities; five of which are known to cause taste and odor problems in processed drinking water.

During 2002, two out of 23 chlorophyll-a samples were above the state standard. It is not surprising that there were not more exceedances of the chlorophyll-a standard given the nature of the algal species present during that summer. Filamentous blue-green algae that have been linked with taste and odor problems were among the dominant species. These algae can regulate their location in the water column, tending to prefer the surface and as a result standard water column sampling may result in underestimation of their populations. These species also have smaller stores of chlorophyll-a than some of the other algal species and therefore must be in extremely high concentrations to exceed the chlorophyll-a standard. There were sufficient populations of these taste and odor producing algae to make it necessary for the water treatment plants to add

activated charcoal to their treatment process.

In 2005 Lake Rhodhiss and Lake Hickory again experienced blue-green algal blooms and the Water Treatment Facilities received complaints of bad taste and odor.

Due to the proximity of the chain lakes, water quality in Lake Rhodhiss has a direct impact on Lake Hickory and, in turn, Lake Hickory impacts water quality in Lookout Shoals Lake. A synopsis of the recommendations for addressing Lake Rhodhiss eutrophication problems is provided following the review of water quality in Lake Hickory and Lookout Shoals.

Lake Hickory

Lake Hickory is a run-of-the-river impoundment located between Lake Rhodhiss and Lookout Shoals Lake on the Catawba River. The lake is owned by Duke Energy and is used to generate hydroelectric power, for public water supply and recreational purposes. Hickory and Longview use Lake Hickory as a source of raw drinking water. The lake covers almost 4,223 acres with 105 miles of shoreline.

The water quality in Lake Hickory is driven by a variety of stressors including runoff from rural and urban areas, NPDES discharges, and perhaps most notably, the discharge from Lake Rhodhiss.

Lake Hickory has been sampled 22 by DWQ since 1984. This reservoir was consistently evaluated as eutrophic based on summer samples from 1984 to 1992. Since then, however, the reservoir has been more frequently evaluated as mesotrophic. High productivity was indicated in August 2002, but no visible algal blooms were observed.

In 2001, Duke Energy staff discovered Parrotfeather, *Myriophyllum aquaticum*, an invasive aquatic macrophyte, in the reservoir. Since 2001, the original 10-acre infestation has spread to 84 acres near the NC 321 bridge. Two drinking water intakes are located nearby and have the potential of becoming clogged by this plant. Businesses that rely on water-based recreation are also concerned because the infestation makes boating and swimming impossible where it is thickest. Duke Energy along with stakeholders and DWQ are working to develop and implement a Parrotfeather management program for the reservoir.

The Town of Hickory experienced taste and odor problems in their drinking water in 2002. Algal samples in May 2002 indicated the presence of filamentous blue-green algae (known taste and odor contributors) in Lake Hickory and Lake Rhodhiss. These problems persisted until algal populations died back in Lake Rhodhiss.

Lookout Shoals Lake

Lookout Shoals Lake, situated directly below Lake Hickory and about 9 miles above Lake Norman, is one of the smaller Catawba River Chain Lakes. The watershed draining to the impoundment is relatively small, its largest tributary being the Lower Little River. The Lower Little River drains a predominately forest and agriculture area and carries a significant sediment load. Duke Energy owns the lake. Uses of Lookout Shoals include: generation of hydroelectric power, recreation, and public water supply. The lake's water quality is more reflective of releases from upstream impoundments (Lakes Hickory, Rhodhiss, and James) than conditions in the immediate watershed due to the short retention time.

Lookout Shoals Lake's main issue has been Parrotfeather. This noxious aquatic weed has taken over the entire lake and raises concerns that turbines at the hydro plants might be clogged if large mats break off. In 2002 the entire lake was drawn down in order to kill the Parrotfeather; however, rains prevented the draw down from being fully effective.

Currently, Duke Power is supporting an aquatic plant management research project in Lookout Shoals Reservoir in cooperation with NC State University, the NC Wildlife Resources Commission and the NC Wildlife Habitat Foundation[1]. This master's degree study is designed to determine the management impact of stocking sterile

[1] Kenneth L. Manuel, Aquatic Plan Management and Mosquito Control Program Leader, Duke Power Company. Personal communication January 23, 2006.

Asian grass carp in Lookout Shoals Reservoir for the control of Parrotfeather. A major component of the study assesses the impact of the grass carp stocking on the sport-fishery of the reservoir. The study includes the stocking of 9200 sterile grass carp lake-wide and the placing of eight "exclosures" to exclude the grass carp from selected Parrotfeather beds. Sterile Asian Grass Carp were stocked in Lookout Shoals Reservoir on May 25 and June 7, 2005. A total of 9200 grass carp were stocked in support of the project. Preliminary results should be available in late 2006 or early 2007.

Management Recommendations for Lake Rhodhiss, Lake Hickory & Lookout Shoals

The close relationship between Lake Rhodhiss, Lake Hickory and Lookout Shoals Lake has led DWQ to conclude that a regional watershed management plan, encompassing both drainage areas, must be developed to address the water quality concerns in these reservoirs[2]. This planning effort must include cooperation and input from all stakeholders from the local to federal levels. Community-based efforts are already underway by Caldwell County, Burke County and others. For more information on these efforts see the Catawba River Basinwide Water Quality Plan[1]. DWQ plans to support and encourage these efforts, but recognizes that funding from a variety of sources must be made available to ensure long-term success of any planning and implementation.

Lake Rhodhiss is being added to the Impaired Waters List.

Lake Wylie

Lake Wylie is the most downstream reservoir in the chain lakes. The reservoir was formed by the impoundment of the Catawba River in 1904 by a hydroelectric dam located near Fort Mills, SC. Duke Energy owns the lake. There are more than 327 miles of shoreline with the majority of the reservoir in South Carolina.

The immediate watershed of Lake Wylie is being converted from forested and agricultural areas to more urban land uses. This reservoir was eutrophic in 2001 and 2002. However, as a result of the City of Gastonia decommissioning its Catawba Creek WWTP and redirecting this effluent to the improved Long Creek WWTP, the Crowders Creek arm has shown an overall decrease in total phosphorus and total nitrogen. The City of Gastonia is the largest urbanized area located within the Crowders Creek watershed.

The reservoir was most recently monitored in 2001 and 2002. During both years, the reservoir was classified as eutrophic. The sampling site in the Crowders Creek Arm consistently had elevated surface dissolved oxygen and pH values in 2002. Crowders Creek is on the 303(d) list for biological impairment due to urban runoff and storm sewer contributions.

Lake Wylie and several of its major tributaries have experienced eutrophic conditions for decades. A joint study by DWQ and South Carolina Department of Environmental Control from April 1989 to September 1990 resulted in nutrient limitations for dischargers in an effort to reduce nutrient loading. Initially, minimum requirements were for a 5-day biochemical oxygen demand (BOD_5) of 15.0 mg/L, ammonia (NH_3) at 4.0 mg/L, and dissolved oxygen at 5.0 mg/L. Additional recommendations were made in 1995:

- Any new or expanding facility with a permitted design flow greater than or equal to 1.0 MGD must meet monthly average limits of 1.0 mg/L total phosphorus and 6.0 mg/L summer total nitrogen.
- For facilities with a permitted design flow of less than 1.0 MGD but greater than 0.05 MGD, a total phosphorus limit of 2.0 mg/L was recommended;
- Dischargers into Catawba Creek with a permitted design flow $\geq$ 0.05 MGD would have to meet a limit of

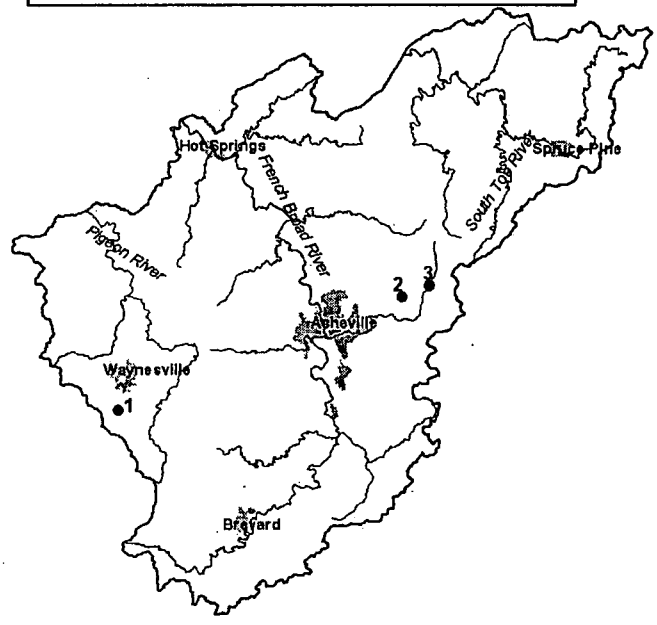
[2] DENR 2002. 2002 Catawba River Basinwide Water Quality Plan. http://h2o.enr.state.nc.us/basinwide/index.htm

0.5 mg/L total phosphorus and total nitrogen limits in the summer of 4.0 mg/L and 8.0 mg/L in the winter by January 1, 2006;

- Dischargers to Crowders Creek with a permitted discharge design of ≥ 1.0 MGD would have to reach a nutrient limit of 1.0 mg/L total phosphorus and 6.0 mg/L for total nitrogen in the summer by January 1, 2000.

The elevated percent dissolved oxygen saturation values in the reservoir coupled with elevated nutrient concentrations indicated that the best uses of Lake Wylie might be threatened by increasing biological productivity. Although 2001 and 2002 were drought years which limited nonpoint source runoff, the eutrophic conditions observed suggested that the lake may have sufficient nutrients coming into the lake from point sources as well as from internal cycling to maintain elevated biological productivity. Increasing urbanization of the watershed also threaten the best uses of this lake.

Since the 1995 recommendations, the City of Gastonia has decommissioned the Catawba Creek WWTP and redirected wastewater to the improved Long Creek WWTP. The Crowders Creek WWTP currently meets or is below the limits recommended in 1995



Lake Wylie is experiencing localized sedimentation problems in the Crowders Creek and Catawba Creek arms of the lake. DWQ, working with the local governments and South Carolina, continues to monitor progress in the lake and implementation of the management strategy.

French Broad River Basin

Basin Overview

The French Broad River basin covers 2,842 square miles with 4,113 miles of streams and is the ninth largest river basin in the state. It is located in the Blue Ridge Mountains and includes part or all of Transylvania, Buncombe, Henderson, Madison, Haywood, Yancey, Mitchell and Avery counties. All waters from the basin drain to the Gulf of Mexico *via* the Tennessee, Ohio, and Mississippi Rivers. Much of the basin lies within the 1.2 million acre Pisgah National Forest or Pisgah Game Lands. The northwest corner of Haywood County is in the Great Smoky Mountains National Park. Over one-half of the basin is forested. Steep slopes limit the area suitable for development and crop production. The basin is composed of three major drainages, the French Broad, Pigeon, and Nolichucky Rivers, which individually flow north into Tennessee.

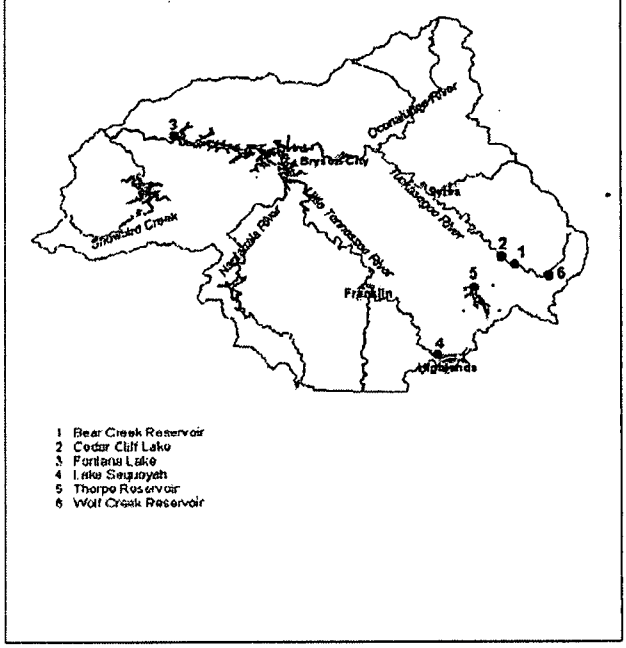
Water Supply Reservoirs Sampled by DWQ in the French Broad River Basin

1 Allen Creek Reservoir
2 Beetree Reservoir
3 Burnett Reservoir

Allen Creek Reservoir and Burnett Reservoir were sampled in the French Broad River basin. Beetree Reservoir has not been sampled since 1997. No exceedances of any standard were recorded in these waters. These reservoirs are located in protected catchments and are strongly oligotrophic (low in nutrients) as are most mountain reservoirs. All three lakes are classified as WS-I and as such are also HQW.

The main threat to lakes in the mountains as in most of North Carolina is population growth and its associated development. The need for properly installed BMPs and setbacks is even more important in the steep graded mountains to reduce the nutrients and sediments reaching the waters. Fortunately these WS catchments are protected.

Little Tennessee River Basin



Basin Overview

The Little Tennessee River basin is located within the Blue Ridge Province of the Appalachian Mountains of western North Carolina. It encompasses about 1,800 square miles in Swain, Macon, Clay, Graham, Cherokee, and Jackson counties. Much of the land within the basin is federally owned (49 percent) and in the U.S. Forest Service's Nantahala National Forest (including the Joyce Kilmer/Slick Rock Wilderness Area) or the Great Smoky Mountains National Park. The basin also includes the Cherokee Indian Reservation.

The North Carolina section of the Little Tennessee River is typical of many other mountain rivers. The gradient is relatively steep in most reaches of the river and the substrate is dominated by riffle habitats. The headwater reaches of the Little Tennessee River are located in Georgia. The water quality of the streams and rivers in the Little Tennessee River Basin is generally high. The basin drains mainly undeveloped mountain areas and contains many white water rivers and trout streams. Sediment carried by nonpoint source runoff is the dominant water quality problem in this basin. Sources of nonpoint impacts to water quality include agriculture, mining operations, silviculture, and urban runoff. Additionally, flow regulation through reservoir releases affects most of the major tributaries in the basin.

Six water supply reservoirs have been sampled in the Little Tennessee River basin: Bear Creek Reservoir, Cedar Cliff Lake, Fontana Lake, Lake Sequoyah, Thorpe Reservoir, and Wolf Creek Reservoir. Of those, only Lake Sequoyah had any exceedances of water quality standards and these are discussed below.

Water Supply Reservoirs Sampled by DWQ in the Little Tennessee River

Lakes with Water Quality Concerns

Cedar Cliff Lake

Cedar Cliff Lake is immediately below Bear Creek Reservoir on the Tuckasegee River. It is owned by Nantahala Power & Light Company (NP&L), which created the reservoir in 1952. The reservoir's watershed is within the Nantahala National Forest. The watershed and shoreline consists primarily of forests with some scattered residences.

Cedar Cliff Lake was monitored by DWQ in June, July and August of 2004. Nutrient concentrations in this reservoir were lower in 2004 than in previous sampling years possibly due to frequent rain events that increased the water level in the lake and decreased residence time. As a result, chlorophyll *a* concentrations, an indicator of algal productivity, were also low.

Despite frequent rainfall within the watershed in 2004, the clarity of Cedar Cliff remained similar to what has been observed by DWQ staff on previous sampling trips. In August, a Secchi depth of 8.1 meters at the sampling site near the dam was recorded, and was the greatest Secchi depth observed at this lake since 1988.

The biological productivity as indicated by the NCTSI score remained low (oligotrophic) in 2004. These scores were similar to the scores from previous sampling trips.

Two pH values were below the standard during the August 1996 sampling run. These values do not seem to be indicative of pH problems in the lake and may have been related to construction work that was happening in the watershed during sampling. Values for pH since that date have all been above the standard,

Lake Sequoyah

Lake Sequoyah, an impoundment of the upper Cullasaja River, is located near the Town of Highlands. The lake's shoreline consists of residential homes and commercial businesses. The Highlands Country Club, which consists of a golf course and private homes, is also located in the watershed. However, much of the watershed is undeveloped and lies within the Nantahala National Forest. In addition to being used as a water supply, Lake Sequoyah is also classified as trout water (Tr) based on the classifications of its tributaries. The Town of Highlands withdraws water from the upper end of the Big Creek arm of the lake.

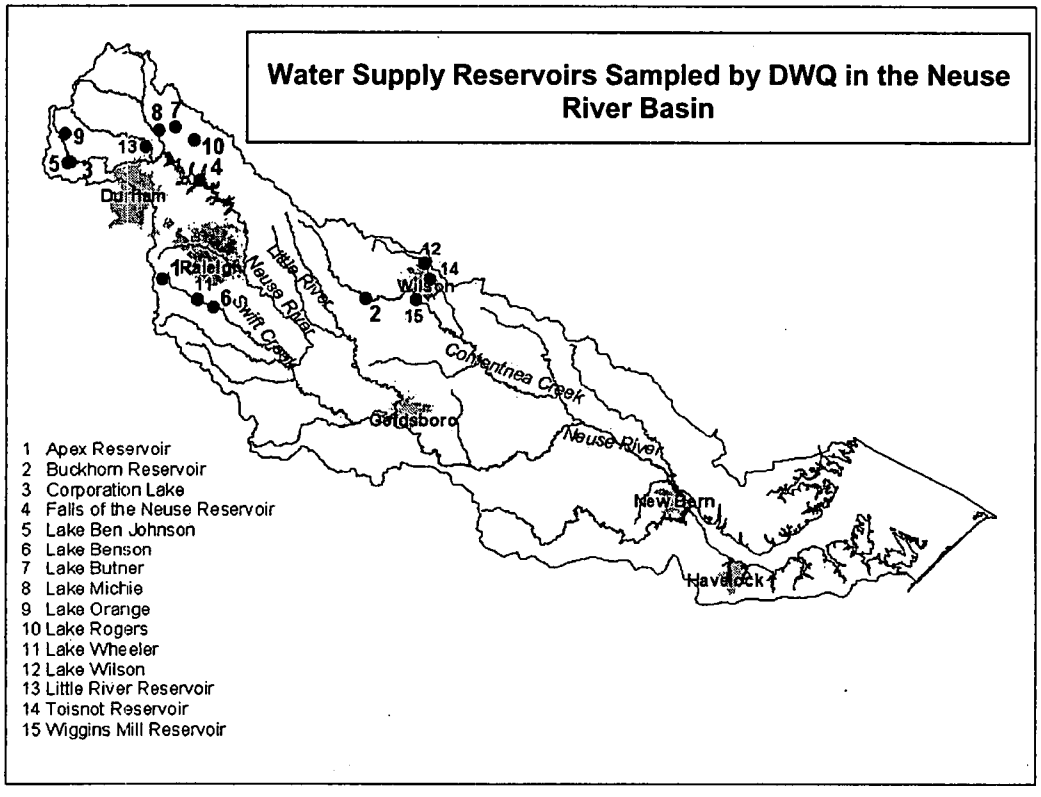
Lake Sequoyah was monitored by DWQ in 2004. This lake was described as appearing muddy on the June 1st sampling trip. Low dissolved oxygen values suggested an increase in oxygen consumption via biological activity spurred by elevated concentrations of total phosphorus. However, chlorophyll-a values were low until November when a concentration of 19 ug/L was recorded, which is above the chlorophyll-a standard for Tr lakes of 15 ug/L. Frequent rainfall events within the lake's watershed during the summer of 2004 may have contributed to the increase in nonpoint source runoff, decreased water clarity and total phosphorus in comparison with levels observed in 1999, which was a drier year.

All of the chlorophyll-a concentrations were greater than 15 ug/L in 1988 at 19, 20, and 23 ug/L during July. Phytoplankton samples reflected mesotrophic to eutrophic lake conditions. Seven algal species found in the samples are known to contribute to taste and odor problems in drinking water.

There have been no complaints of taste or odor problems from processed raw water taken from Big Creek near the point where the creek widens into the arm of Lake Sequoyah[1]. There have also been no recently reported problems with low dissolved oxygen, nuisance aquatic macrophytes, or algal blooms in the lake.

A water quality study of the lake was conducted from early May through late October 1997. The study was commissioned by the Town of Highlands to characterize the existing water quality. The town currently withdraws water from Big Creek, a tributary of Lake Sequoyah. Demand for drinking water exceeds what the creek can deliver, resulting in concerns that more water is being taken from the lake proper than from Big Creek alone. For this reason, the Town of Highlands has a strong interest in having Lake Sequoyah used as a public water supply source. Currently, the lake is designated WS-III because of its location relative to the water intake in Big Creek.

No apparent water quality problems that would preclude the lake's use as a water supply for the town were found during the 1997 study period. No algal blooms were observed; the phytoplankton communities contained few taxa and nuisance algae species were not abundant.



While Lake Sequoyah supported all of its designated uses in 2004, the potential for nonpoint source nutrient and sediment contributions to this small reservoir during

[1] Wade Wilson, Superintendent of the Town of Highlands Water Treatment Facility. Personal communication 2004.

rainfall events may warrant a need to add (or improve existing) best management practices within the watershed. The Town of Highlands has taken measures to address problems related to sedimentation and runoff including adoption of an erosion and sediment control ordinance in 1992 and a watershed buffer plan and ordinance in 1994. The Upper Cullasaja Watershed Association has also successfully initiated a wide range of water resource quantity and quality projects starting in 1999. The Division continues to support efforts by the local governments and citizen-based watershed organizations. More information regarding local efforts in the Little Tennessee River basin is available in the Little Tennessee River Basinwide Planning document[2].

[2] DWQ 2002 Little Tennessee River Basinwide Water Quality Plan. http://h2o.enr.state.nc.us/basinwide/Little_Tennessee/2002/2002_plan.htm

Neuse River Basin

Basin Overview

The Neuse River Basin covers 16,000 square kilometers in the lower piedmont and coastal plain of North Carolina. It is the third largest basin in the state. The upper boundary of the basin begins northeast of Durham and drains the region that includes the tributaries of Falls of the Neuse Reservoir. The basin follows the Neuse River down to Kinston and includes the tributaries to the Neuse in this region. Below Kinston, the Neuse River becomes estuarine. The basin continues to the coast and includes portions of Pamlico and Carteret Counties.

In December 1983, the EMC designated the portion of the Neuse River basin upstream of the Falls of the Neuse Reservoir dam as NSW. Severe nutrient enrichment observed in the headwaters of the reservoir appeared to be aggravated by ongoing, rapid urban growth in the watershed. The lower section of the Neuse River basin water was subsequently classified as NSW in January 1988 due to nuisance algal growth, sporadic blooms of undesirable blue-green algae, and fish kills.

There are 15 lakes classified as WS that DWQ samples in the Neuse River Basin. Beaverdam Reservoir is included in the analysis of Falls of the Neuse Reservoir due to their close proximity. Falls of the Neuse Reservoir was the only lake reviewed with more than 10 percent exceedances of the eutrophication-related standards.

Corporation Lake, Lake Ben Johnson, Lake Benson, Lake Wheeler and Toisnot Reservoir did have exceedances of the manganese WS standard with highest concentrations associated with higher turbidities. Toisnot Reservoir will be discussed below due to sedimentation and "brown tap water". Little River Reservoir had two low dissolved oxygen readings in 1997; however, based on all other data these seem to be outliers and not indicative of water quality problems. Corporation Lake had one turbidity sample in 2000 that exceeded the standard. All other water quality samples from Corporation Lake were below the standards.

Lakes with Water Quality Concerns

Buckhorn Reservoir

Buckhorn Reservoir is one of four water supply reservoirs used by the City of Wilson for raw water supplies. The reservoir is located on Contentnea Creek just downstream of the confluence of Moccasin and Turkey Creeks. Land use is mostly agricultural. The reservoir was expanded from 750 acres to approximately 2,300 acres in 1999 and was filled to this new capacity by Hurricane Floyd in September 1999.

Sampling has not been conducted on Buckhorn Reservoir since 1995. At that time all surface water quality standards were being met. Prior to 1995, DWQ had conducted a special study of the reservoir during 1991 to assess nutrient enrichment and to determine the relative contribution of nutrients from point and nonpoint sources. That study determined that Buckhorn was responding to enrichment as demonstrated by elevated chlorophyll-a concentrations and high algal density estimates. Nutrient budgets for Buckhorn indicated that agricultural run-off was the largest contributor of nutrients in the watershed.

Contentnea Creek including Buckhorn Reservoir was listed as impaired in 1998 due to degradation of biological integrity and low dissolved oxygen. These impairments were attributed to agricultural inputs. Based on these water quality impacts and the increased development in the watershed, DWQ is working with discharges to minimize their impacts on the creek and reservoir[1].

Falls of the Neuse Reservoir

Falls of the Neuse Reservoir is a multi-purpose impoundment of the Neuse River located in the Upper Neuse River basin. The reservoir is the primary water supply source for the City of Raleigh and surrounding towns in Wake County. The various uses authorized for the reservoir include: water supply, flood control, recreation, wildlife enhancement, and augmentation of low flows for purposes of pollution abatement and water quality control in the Neuse River basin.

The Falls of the Neuse Reservoir dam was constructed and filled by 1983 and is currently operated by the United States Army Corps of Engineers (USACOE). The reservoir extends 28 miles up the Neuse River to just above the confluence of the Eno and Flat Rivers. At normal pool elevation, the lake has a surface area of 11,310 acres. It drains a watershed area of 494,600 acres or approximately 770 square miles including parts or all of 6 counties (Person, Orange, Franklin, Durham, Wake and Granville). About 12 percent of the watershed is protected open space, 16 percent is in agriculture and 17 percent is urban and suburban development. The entire Triangle area of North Carolina is experiencing tremendous growth and the Falls of the Neuse watershed is experiencing more urbanization.

DWQ has been sampling Falls of the Neuse Reservoir since April 1983 and has continually documented higher upstream nutrient and turbidity concentrations. In 1995, The Cadmus Group, Inc. prepared a report for DWQ on the Falls watershed and reviewed existing data. The report noted problems related to eutrophication and the cumulative impacts from multiple sources.

The Public Utilities Department of the City of Raleigh has been collecting water quality data on the reservoir including algal toxin

[1] DENR. 2002. 2002 Neuse River Basinwide Water Quality Plan. http://h2o.enr.state.nc.us/basinwide/index.htm

measurements. Toxins have been found in the water in amounts below those the World Health Organization considers dangerous for human consumption. North Carolina does not have a standard for algal toxins at this time, nor do most of the other states in the US.

Local governments in the upper Neuse River watershed have come together and developed the Upper Neuse River Basin Association (UNRBA). This group has developed a management plan for the Falls of the Neuse Reservoir watershed and is working together to protect and improve water quality in the upper basin.[2]. There are 8 municipalities, 6 counties, and local Soil and Water Conservation Districts in the Association. They are currently developing an implementation plan to put the recommendations from the management plan into place.

Concerns over potential increases of nitrogen into Knap of Reeds Creek due to increases at the Butner WWTP have resulted in DWQ conducting additional sampling and working with a group of stakeholders to develop monitoring and modeling strategies for the entire lake. This effort began in 2005 and is currently scheduled to continue through December 2006. The same legislative bill (SB981) that required the development of this document is driving the timeline for this work.

Lake Michie

Lake Michie serves as water supply for the City of Durham. It was built by the city in 1926. The watershed is largely undeveloped with forest covering around 50 percent of the area. Agriculture is the next highest land use (26 percent) and there is some residential development (<4 percent)[3]. Three counties are located in the watershed: Durham, Orange and Person.

One chlorophyll-a concentration exceeded the state standard in 1988. All samples taken since then have been below 11 ug/L. During 2001 and 2005, drought conditions forced the closing of Lake Michie to recreational users and resulted in conservation measures being enacted by the City of Durham.

A recent study prepared for the UNRBA[4], recommends that the Counties and Durham and Roxboro Cities "cooperatively protect critical lands in the watershed and negotiate a set of performance standards, limiting pollutant levels in the watershed." The association is currently developing an implementation plan to put the recommendations from their Upper Neuse Watershed Management Plan to work.

Lake Rogers

Lake Rogers is located on Ledge Creek in Granville County and serves as the water supply for the City of Creedmoor. It is very shallow due to sedimentation and has been stocked with grass carp to control aquatic weeds, including Hydrilla. The watershed consists of forested areas as well as some residential, agricultural, and wetland areas.

Sampling by DWQ has indicated elevated nutrient concentrations and exceedance of the chlorophyll a, manganese and total dissolved solids standards for WS waters. Leaking septic tanks have been identified as one potential source of the elevated nutrients and plans are being developed by the City to address that source[5]. Agricultural operations, deforestation and erosive soils have contributed to the sedimentation problems.

Due to problems with sedimentation and aquatic weeds, the City as developed a restoration plan for the lake that includes dredging. Funding has been obtained

A report prepared for the Upper Neuse River Basin Association and Jurisdictions in the Upper Neuse River Basin. http://www.unrba.org/

[5] City of Creedmoor – Board of Commissioners. 2005. Minutes of August 23, 2005 Regular Meeting and Public Hearing. www.cityofcreedmoor.org

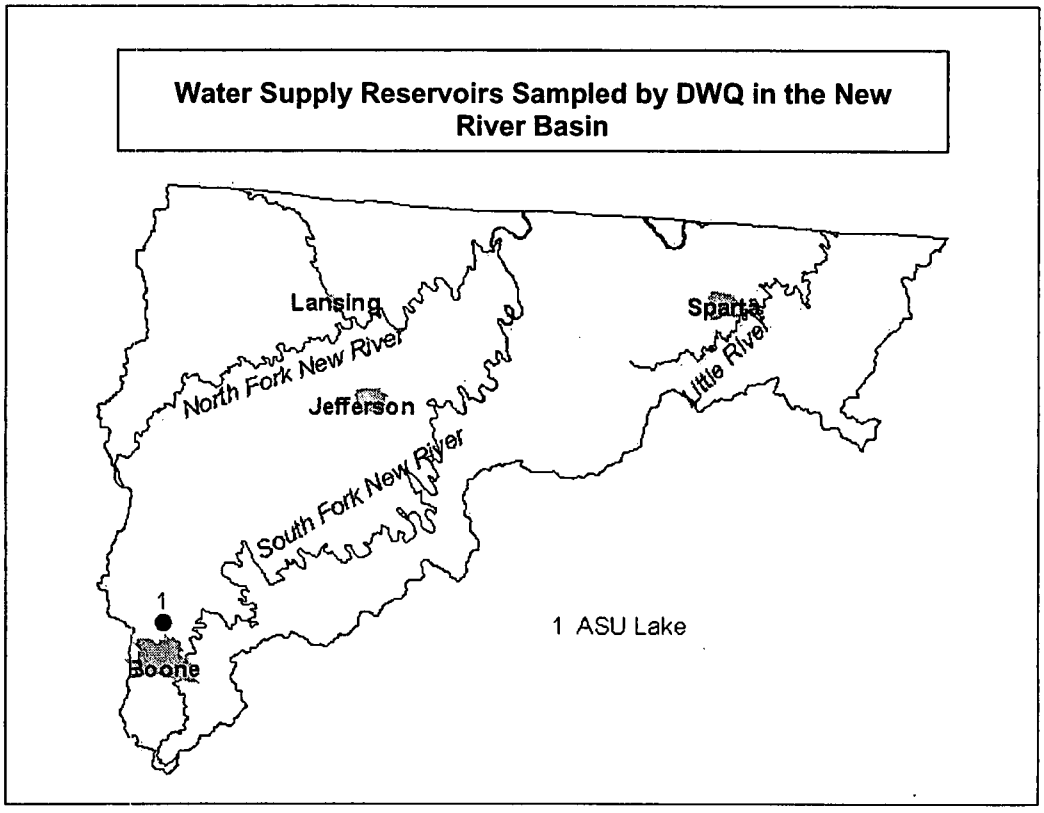
through the Divison of Water Resources (DWR) and Army Corp of Engineers (ACOE). Restoration is expected to cost around $1.5 million and is scheduled to begin in 2006. The City also has a CWMTF grant to acquire buffers on Lake Rogers and the Environmental Enhancement Program (EEP)has targeted this local watershed for restoration and development of a Local Watershed Plan.

Another step to improve water quality on the lake was taken by the City in 2005 when they banned the use of gas-powered motorboats.

Toisnot Reservoir

Toisnot Reservoir is a water supply source for the City of Wilson and surrounded by a municipal park. A pedestrian bridge crosses the mid-section of the lake and provides access to both sides of the park. The drainage area is swampy and flat, resulting in tannin-stained water and naturally lower dissolved oxygen and pH. This lake has experienced problems with sedimentation and nutrients due to nonpoint source inputs. Only 10 acres in surface area, the reservoir holds approximately 37 million gallons of water. The reservoir is very shallow and has been dredged in the past by the City of Wilson to control aquatic weeds and sedimentation problems. There have also been problems with brown drinking water probably due to higher inflows of swamp water from Toisnot Swamp.

Field notes from DWQ's last sampling of this reservoir in 2000 documented muddy islands with established grasses in the upper end. This was during a drought so the reservoir was not at normal pool level. Also noted were numerous domestic ducks as well as a large flock of Canada geese (over 30 birds). The primary parameters that were not within standards based on the lake's current classification were dissolved oxygen and manganese. As the reservoir is part of Toisnot Swamp, the lower dissolved oxygen and tannin-stained water is to be expected; however, the current water quality classification does not reflect the influences of the swamp. There are numerous areas in the coastal portion of North Carolina that were not properly classified swamp during the early years of classification. As resources become available DWQ is planning on conducting the sampling necessary to delineate these waters and reclassify them as appropriate.

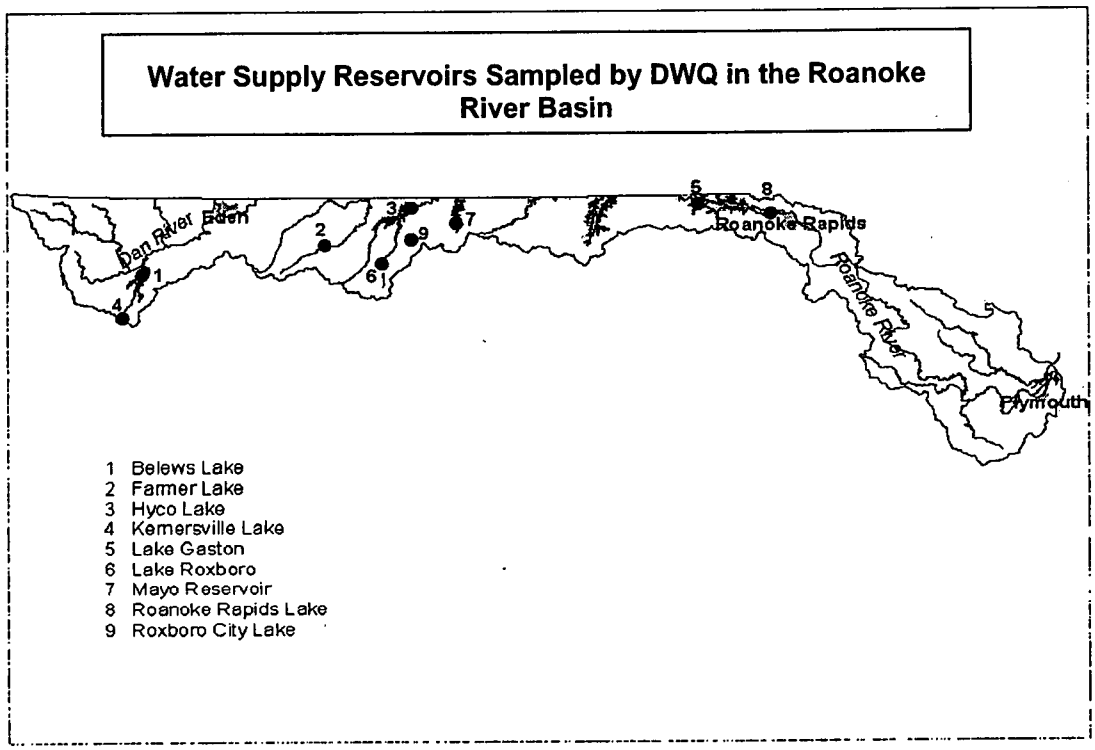


Wiggins Mill Reservoir

Contentnea Creek was impounded in 1915 to form Wiggins Mill Reservoir. Wiggins Mill Reservoir is located downstream of Buckhorn Reservoir. The City of Wilson owns Wiggins Mills Reservoir and uses it as a water supply and for recreational purposes. Land use in the watershed is dominated by agriculture with some forest, swamp and residential development.

Sampling 1988 and 1991 found exceedances of the chlorophyll-a standard. A review of potential nutrient sources in 1993 found that agricultural run-off was the largest contributor at that time. Water quality since 1991 seems to have improved with no exceedances of any parameters. In 1995, the pH at the mid-lake station was 5.8; however, this is within the calibration limits of the meter and is an outlier when compared to the rest of the data.

Based on the impairment of Contentnea Creek, EEP has named the Contentnea Creek near Wilson watershed (including Wiggins Mill Reservoir) a targeted local watershed as noted in the discussion of Buckhorn Reservoir.



New River Basin

The New River originates at the confluence of the North Fork and South Fork New Rivers in Ashe County, North Carolina. It flows north-northeast into Virginia and West Virginia where it joins with the Gualey River to form the Kanawha River, eventually entering the Gulf of Mexico via the Ohio and Mississippi Rivers. This mountainous basin is located in the Blue Ridge Province of the Appalachian Mountains. Three counties (Alleghany, Ashe and Watauga) are entirely or partially contained with the basin.

Only one WS lake was sampled by DWQ in this basin, ASU Lake. This small water supply impoundment serves as the water supply for Appalachian State University. It is located in the headwaters of Norris Branch and has a maximum depth of 112 feet near the dam. The shoreline is forested; however, the watershed upstream of the lake is a mix of forested land, residential and commercial development. No exceedances of the surface water quality standards have been documented by DWQ in ASU Lake.

Roanoke River Basin

Basin Overview

The Roanoke River basin extends from its source in the Blue Ridge Mountains of Virginia to the Albemarle Sound in North Carolina, encompassing mountainous, piedmont and coastal topography as it flows generally east-southeastward. Its drainage area is 3,503 square miles and includes approximately 2,389 miles of rivers and streams in North Carolina. There are fifteen counties and 42 municipalities in the basin.

The basin is divided into two main areas within North Carolina: the Dan River and Roanoke River drainage areas. The Dan River originates in the western mountains of Virginia and meanders across the North Carolina/Virginia state line several times as it travels eastward. The Roanoke River also flows from Virginia into North Carolina and, together with the Dan River, forms the headwaters of John H. Kerr Reservoir. Kerr Reservoir drains into Lake Gaston, which in turn drains into Roanoke Rapids Lake. From there the Roanoke River travels southeastward to the Albemarle Sound.

Around 60 percent of the land in the basin is forested and 22 percent is in cultivated cropland. Only around six percent of the land falls into the urban/built-up category. Despite the large amount of cultivated cropland and the relatively small amount of urban area, the basin has seen a significant decrease (-105,300 acres) in cultivated cropland and increase (+77,700 acres) in built-up areas between 1984 and 1999[1]. Water quality in the basin has been impacted by hydromodification, agriculture and minor non-municipal discharges.

[1] DENR 2001 Roanoke River Basinwide Water Quality Plan. http://h2o.enr.state.nc.us/basinwide/roanoke/2001/2001_Roanoke_wq_management_plan.htm

Roanoke Rapids Lake is on the 303(d) list for impaired aquatic life due to aquatic weeds (*Hydrilla*, *Egeria*, and *Myriophyllum spicatum*) and a management strategy has been sent to EPA for approval[2].

None of the lakes in the Roanoke River basin exceeded the eutrophication-related standards in more than 10 percent of the samples. Lake Gaston is discussed in more detail as it is on the 303(d) list for impaired aquatic life and for earlier problems related to low dissolved oxygen caused by discharges from John H. Kerr Reservoir. John H. Kerr Reservoir is not classified as WS. Kernersville Lake and Roxboro City Lake met all WS standards except manganese. No reports of taste and odor in the treated drinking water were received by DWQ and concentrations were close to the standard for WS of 200 ug/L.

Lakes with Water Quality Concerns

Farmer Lake

Farmer Lake is a 365-acre lake owned by Caswell County and used for water supply, fishing and waterfowl hunting. The City of Yanceyville draws water from Farmer Lake under an agreement with Caswell County. It was built in 1983 and is located on an unnamed tributary of Country Line Creek in Caswell County. This lake has a volume of 1.8 billion gallons with a 48 square mile watershed.

Chlorophyll-a concentrations exceeded the standard once in 2002, turbidity readings have been elevated over the years and manganese was above the standard in samples taken during 2000 through 2005. The 2005 assessment of this lake[3] indicated that additional sampling is warranted to determine if there is a trend in increasing turbidity and nutrients in the lake. This will be undertaken as resources become available.

Lake Gaston

Lake Gaston is located on the North Carolina-Virginia border just downstream from the John H. Kerr Reservoir dam on the Roanoke River. The lake was built in 1962 by the Virginia Electric and Power Company (now Dominion Power) for hydroelectric power generation. The lake is used extensively for recreation with residential development, campgrounds, golf courses, marinas, and beaches located along the shoreline. Virginia Beach currently gets water from Lake Gaston for drinking water.

In 1996, Lake Gaston was partially supporting designated uses due to an infestation of aquatic plants. The lake was described as having "prolific growths of aquatic macrophytes", especially *Hydrilla*, that hindered activities such as boating and water skiing on a large portion of the lake. Since then, the Lake Gaston Weed Control Council, in cooperation with the NC Division of Water Resources, began controlling the weeds through applications of aquatic herbicides and the introduction of grass carp[4]. These efforts are on-going and the Lake remains on the 303(d) list for impaired aquatic life due to aquatic weeds.

Prior to 2000, sampling indicated dissolved oxygen at and below the instantaneous dissolved oxygen standard of 4 mg/L at the upper end of Lake Gaston. These low concentrations were due to releases of water from deep within Kerr Reservoir (directly upstream of Lake Gaston). In 1999, the first of seven new turbines were modified at the Kerr Dam to increase downstream dissolved oxygen. Improvements were seen in the 2004 sampling.

Lake Gaston has a strong citizens' group in the Lake Gaston Association looking after their and the lake's best interest. This group developed the Lake Gaston Weed Control Council and continues to develop programs to support water quality in the lake. Associations such as these are to be commended.

Tar-Pamlico River Basin

Water Supply Reservoirs Sampled by DWQ in the Tar Pamlico River Basin

Basin Overview

The Tar-Pamlico River basin encompasses a 5,440 square mile watershed drained by 2,355 miles of streams and with 634,400 acres classified as salt waters. It is the fourth largest river basin in the state and is contained entirely within the state. From its headwaters within the eastern piedmont the Tar River flows 180 miles southeast towards the coastal plain and Pamlico Sound.

The river is called the Tar River from its source in Person County to US 17 in the Town of Washington, a distance of about 140 miles. From Washington to Pamlico Sound it is called the Pamlico River. The Pamlico River is entirely estuarine, while the Tar River is primarily freshwater. Major tributaries include Fishing, Swift and Tranters Creeks, Cokey Swamp, and the Pungo River.

Part or all of 16 counties are found within the basin: Beaufort, Dare, Edgecombe, Franklin, Granville, Halifax, Hyde, Martin, Nash, Pamlico, Person, Pitt, Vance, Warren, Washington, and Wilson. The larger urban areas are Greenville, Henderson, Oxford, Rocky Mount, Tarboro, and Washington. Recent land cover data indicated that most of the basin is in forested and wetland areas, followed by cultivated cropland, open water area, pasture and other managed herbaceous areas, and urban areas.

The entire basin was designated as Nutrient Sensitive Waters (NSW) in 1989 in response to the problems associated with nutrient loading and the resulting eutrophication. Only two lakes are classified as WS were sampled within this basin: Lake Devin and Tar River Reservoir. Both had exceedances of eutrophication-related water quality standards.

Lakes with Water Quality Concerns

Lake Devin

Lake Devin, a very small impoundment on Hatchers Run, was the water supply reservoir for the Town of Oxford from 1953 until 1993. The drainage area is mostly forested with some agriculture. There are limited recreational opportunities on the lake.

Chlorophyll-a measurements in 1989 exceeded the state standard; however, no further exceedances were documented in 1997 and 2002. Blue-green algae dominated the phytoplankton community at times in 1997 and 2002. *Lyngbya wollei*, a problematic filamentous blue-green algae in southeastern reservoirs, was found in the lake in 1997 but was not found in the 2002 samples.

In the 2004 Tar-Pamlico River Basinwide Water Quality Plan, DWQ recommended that the water quality in Hatchers Run be protected during land development activities and that BMPs be implemented on all land activities to reduce nutrient inputs.

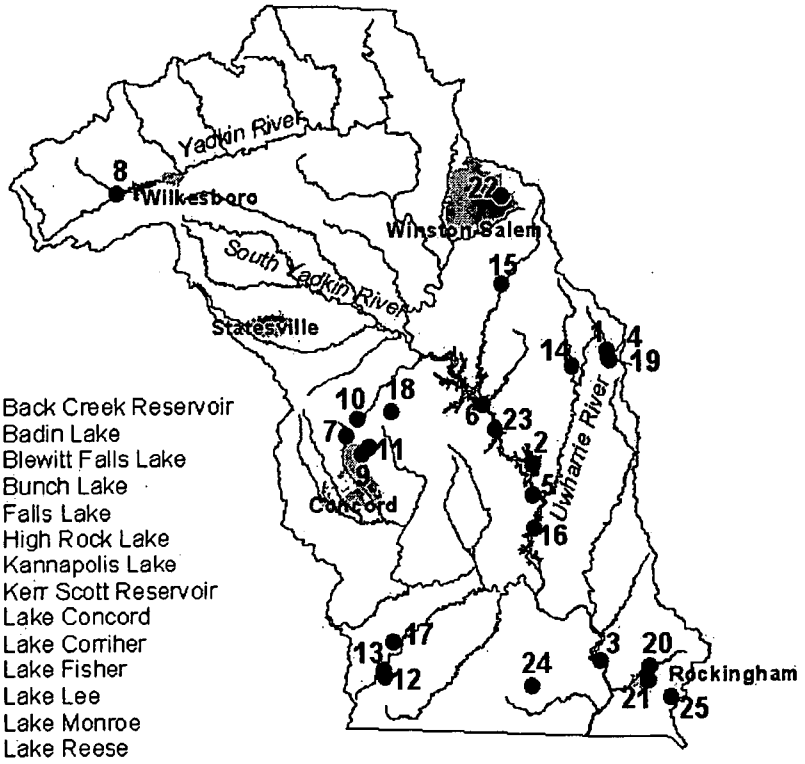
Tar River Reservoir

In 1971, the City of Rocky Mount impounded the Tar River to form Tar River Reservoir. In addition to owning the property on which the reservoir lies, the City has a 3 to 5 foot elevation buffer around the shoreline. The volume of the lake is 4.3 billion gallons with a maximum depth of 12 meters. The reservoir is primarily used as a source of drinking water for the Rocky Mount and for public recreation. The only major tributary is Sapony Creek, which forms a large arm near the dam. The reservoir has been sampled eight times by DWQ since 1989.

In 2002, Secchi depths were less than one meter and nutrient concentrations increased from June to August. This increase coincided with a decrease in the lake level as a result of the prolonged statewide drought. By August the water level had decreased another four feet and the water appeared muddy. Chlorophyll-a values ranged from moderate to elevated with the highest concentrations observed in August. Only one concentration (46 ug/L) was greater than the state water quality standard of 40 µg/L. The reservoir was consistently eutrophic in 2002.

The reservoir was previously monitored in 1997. Secchi depths were generally less than one meter. Values for total phosphorus, turbidity, and total solids in 1997 were less than values measured in 2002.

Turbidity exceeded the lake standard of 25 NTU twice during 2002 (17 percent).



Based on the potential water problems noted above and the fact that the Reservoir is a public water supply, the EEP has identified it as one of 27 local watersheds in the basin with the greatest need and opportunity for stream and wetland restoration efforts. This watershed will be given higher priority than nontarget watersheds for implementation of EEP restoration projects.

Elevated manganese concentrations in the summer have been a major problem for the Water Treatment Plant; however, algal populations have never caused taste or odor problems. In addition to treating for manganese, the City has also had to budget money for treatment of Hydrilla in the Sapony Creek arm of the reservoir[1]. That treatment is scheduled for 2007.

25 Water Lake

Basin Overview

From its headwaters in northwestern North Carolina and southern Virginia, the Yadkin River flows southeast across North Carolina's densely populated midsection. Three of the state's five interstate highways cross the upper half of the basin. The Yadkin River basin is the second largest basin in North Carolina, covering 7,213 square miles within twenty-one counties. Ninety-three municipalities are located within this river basin. From the eastern slopes of the Blue Ridge Mountains in Caldwell and Wilkes counties, the Yadkin River flows northeasterly for about 100 miles, and then flows to the southeast until it joins the Uwharrie River to form the Pee Dee River. The Pee Dee River continues flowing southeasterly to the North Carolina-South Carolina state line and then through South Carolina to Winyah Bay.

The river is impounded several times as it travels through North Carolina forming the Yadkin Chain Lakes. These reservoirs include W. Kerr Scott Reservoir, High Rock Lake, Tuckertown Reservoir, Badin Lake, Falls Lake, Lake Tillery and Blewett Falls Lake. The Yadkin drainage encompasses much of the Piedmont Triad area including the cities of Winston-Salem, High Point, Thomasville and Lexington. Land use is mixed with forests, agriculture, and urban development.

Twenty-five lakes classified as WS were sampled within the Yadkin-Pee Dee River basin. High Rock Lake exceeded chlorophyll-a, pH, and turbidity standards in more than 10 percent of the samples taken.

Lakes with Water Quality Concerns

High Rock Lake

Located on the mainstem of the Yadkin River in Rowan and Davidson counties, High Rock Lake is the largest and most upstream of the Yadkin-Pee Dee chain lakes. Completed in 1929, the reservoir was constructed to provide hydroelectric power and is owned and operated by Yadkin Division of APGI. With a 3,850 square mile watershed, the lake has a volume of approximately 83 billion gallons and a surface area of approximately 15,750 acres. No drinking water is drawn directly from the lake, although Salisbury's water supply intake is located just upstream of the reservoir and the Town of Denton draws water just below the dam. Due to numerous discharges (155 individual NPDES permitted dischargers) and potential sources of contamination in the watershed, High Rock Lake has a Higher Susceptibility Rating under the SWAP. This rating indicates that there are many potential sources of pollution in the watershed that could adversely impact High Rock Lake's water quality.

Eutrophic conditions in High Rock Lake have been documented by DWQ since 1974[1]. In the 1998 basinwide plan, several recommendations were made to address over-enrichment in portions of the lake. Phosphorus limits were recommended and subsequently implemented in the Abbotts Creek arm of the lake in the NPDES permits for Lexington, Thomasville, and High Point WWTPs. The Town of Spencer removed their discharge from Grants Creek, a major tributary of High Rock Lake, and connected to the City of Salisbury's WWTP. The City of Salisbury eliminated its discharges to Grants Creek and Town Creek by constructing a new WWTP that discharges to the Yadkin River in the upper reaches of High Rock Lake.

Water quality data over the past 24 years indicates 44 exceedances (n=156) of the chlorophyll-a standard, 19 of those recorded since June 2002. Values for pH have exceeded the standard 14 times, usually co-occurring with the elevated chlorophyll-a concentrations. Turbidity has been exceeded 23 times with some measurements over 10 times the standard. Most of the turbidity exceedances occurred at the upper stations reflecting the amount of sediment that is coming into High Rock Lake from its upper watershed.

Mild to severe blooms were recorded throughout 2005. The mild blooms recorded in May were dominated by green algae. The

[1] DENR 2003. Basinwide Assessment Report Yadkin-Pee Dee River. http://www.esb.enr.state.nc.us/Basinwide/

assemblages then shifted to blue greens, which formed moderate to severe blooms in June, July and September. These blooms consisted of multiple filamentous, blue-green taxa, such as *Planktolyngbya* and *Anabaena*. Excessive sediment and detrital matter was frequently noted during the analysis of samples from upper most station. This was the only station that did not have blooms recorded during 2005. It was also noted that the samples at this location contained many benthic diatoms indicating a riparian more than lacustrine system.

In the 2003 basinwide plan, DWQ committed to work more closely with other agencies to assist in reducing nonpoint source pollution to the lake. DWQ also continues to work on relicensing of the hydropower projects in the Yadkin-Pee Dee basin in order to provide greater protection of water quality.

In 2004, High Rock Lake was added to the Impaired Waters list due to turbidity and chlorophyll-a problems. A scoping study was begun in 2005 to support development of a TMDL for High Rock Lake. This study is continuing into 2006 and the final TMDL is scheduled for completion in 2008 or 2009.

Badin Lake

Badin Lake (also called Narrows Reservoir) is one of the chain lakes on the Yadkin River, located downstream from Tuckertown Reservoir, High Rock Lake and W. Kerr Scott Reservoir. The lake was filled in 1917 and is owned by the Yadkin Division of APGI Hydropower. It has a maximum depth of 53 meters and a surface area of 5,350 acres. The City of Albemarle draws water from Badin Lake. The watershed is forested with some agriculture; however, population growth in the area raises concerns regarding protection and improvement of water quality. DWQ has sampled Badin Lake 18 times since 1981.

Over the past few years, summer fish kills have become a concern. These fish kills are currently under investigation by researchers at NCSU and preliminary results indicate that the stocked striped bass are at the edge of their temperature tolerance zone causing them to be easily stressed[2]. As the lake warms up, the fish look for adequate dissolved oxygen and low water temperatures. At times they get caught in pockets of low dissolved oxygen and higher temperature and die.

A few samples did not meet the standards for chlorophyll a, dissolved oxygen, pH and turbidity. These samples were from throughout the sampling period and did not seem to indicate any decrease in water quality. Mild blooms were recorded in early and mid summer 2002. These blooms were dominated by *Chrysochromulina* sp. (a golden flagellate) and *Psuedoanabaena* (filamentous blue-green). During late summer 2002, moderate algal blooms of *Psuedoanabaena* and *Cylindrospermopsis* (filamentous blue-green) were documented. Similar assemblages were identified in 1987 and 1990.

Relicensing is underway for the hydropower projects on the Yadkin and the Division is working with the Yadkin Division of APGI to provide/ensure water quality improvements through that process[3].

Lake Lee

Lake Lee was built in 1927 and serves as an emergency water source for the City of Monroe. The lake is fairly shallow with a maximum depth of approximately 10 feet. Water from Lake Monroe feeds into Lake Lee and water from Lake Lee is pumped into a tributary of Lake Twitty during periods of low flow.

Sampling in 1989 found chlorophyll-a concentrations above the standard and then in 2000, two pH readings were above the standard. These readings were accompanied by elevated dissolved oxygen indicating potential algal bloom activity. Surface algal mats and green-colored water were observed at Lake Lee in 2000. An analysis of phytoplankton samples

---

[2] Bryn Tracy, Fisheries Biologist DWQ Environmental Sciences Section. Personal communication January 12, 2006.

[3] DENR 2003. Basinwide Assessment Report Yadkin-Pee Dee River. http://www.esb.enr.state.nc.us/Basinwide

confirmed the presence of algal blooms during each sampling event. Samples collected in June were dominated by green algae while samples collected in July and August were dominated by filamentous blue-green algae (*Anabaena* sp. and *Anabaenopsis* sp.) commonly associated with taste and odor problems in drinking water.

As with many other lakes in the basin, manganese concentrations were above the applicable surface water quality standard in one sample. No reports of taste and odor problems were received by DWQ.

Lake Monroe

Lake Monroe is a secondary (backup) water supply for the City of Monroe in Union County and is also used for recreation. The reservoir was built in 1955 and has a volume of 480 million gallons. The drainage area is mostly forested.

This lake was most recently sampled in 2000. While Lake Monroe was rated eutrophic in 1995, surface dissolved oxygen and pH values were even higher in 2000. Total phosphorus and total organic nitrogen were elevated in both years and the 2000 phytoplankton sample analysis confirmed the presence of algal blooms in June, July and August. Phytoplankton samples from July and August were dominated by filamentous blue-green algae (*Anabaena* sp. and *Anabaenopsis* sp.) commonly implicated in taste and odor problems in drinking water.

Lake Thom-A-Lex

Lake Thom-A-Lex is a water supply reservoir for the cities of Thomasville and Lexington. Its major tributary is Abbotts Creek.

This lake was monitored in 1999, 2000 and 2001. Sampling was previously conducted in 1994 at which time the lake was determined to be eutrophic. This lake has been consistently eutrophic since it was first monitored in 1981.

Secchi depths in 1999 through 2001 were typical of a piedmont reservoir with readings usually less than one meter. In general, nutrient concentrations were elevated in 1999 through 2001. The availability of nutrients supported increased algae productivity in all years. In 2001, chlorophyll-a values ranged from 24 to 31 µg/L. The exceedances of the chlorophyll-a standard occurred in 1982 and 1989.

As has been seen in other piedmont lakes, the state water quality standard for manganese was exceeded once in the 1999 - 2001 period.

Salem Lake

Salem Lake is a water supply reservoir providing drinking water for the City of Winston-Salem and Forsyth County. This lake has a maximum depth of 36 feet (11 meters), well-defined north and south arms and 14 miles of shoreline. The watershed includes portions of the Towns of Kernersville and Walkertown. Land use is mainly urban with some agriculture. Sedimentation and agricultural runoff have presented problems in the lake.

Salem Lake has been monitored since 1994, with the most recent samples taken in 2000 and 2001. Overall, the lake is showing some signs of nutrient over-enrichment, based on nutrient concentrations.

Surface dissolved oxygen at Station YAD077B on June 12, 2000 was 3.4 mg/L, which was less than the state water quality standard of 4.0 mg/L for an instantaneous reading. A review of the data indicated that the sample was taken at 9:15 AM and that previous samples taken at the station that early also exhibited low dissolved oxygen compared to the other stations.

In keeping with the moderate to elevated nutrient concentrations found over the years, chlorophyll-a values for 2001 were in the moderate range (12 - 20 µg/L). Phytoplankton samples collected in 1999 indicated that the lake contained a diverse assemblage of algae ranging from blue-green and green algae in the Kerners Mill Creek arm to diatoms near the dam. Exceedances of the chlorophyll-a standard occurred in 1989 due to the presence of a small golden alga, *Chrysochromulina breviturrita*. This alga contains a large amount of chlorophyll-a relative to its size. Chlorophyll-a standards were also exceeded

in 1982. No phytoplankton information is available for that time period.

In September 2000, the US Environmental Protection Agency investigated lead contaminated soil at a battery manufacturing plant in Walkertown and at an unnamed tributary to Lowery Creek, which is one of the major tributaries to Salem Lake. Lead levels of 320 µg/L were found in the creek. The NC DWQ's sampling during 2000 and 2001 found lead levels less than the water quality laboratory detection level of 10 µg/L in the lake.

All other parameters were below state standards with the exception of manganese in 2000 at one station in July 2000. Manganese concentrations above the state water quality standard of 200 µg/L for water supply sources are common in the state due to background manganese concentrations.

Lake Twitty

Lake Twitty (also called Lake Stewart) is owned by the City of Monroe and operated as a water supply reservoir and for recreation. The lake's volume is approximately 2 billion gallons with a maximum depth of 15 meters. Stewart Creek and Chinkapin Creek are the main tributaries to Lake Twitty. Land in the mainly flat drainage area is forested and agriculture.

Lake Twitty was most recently monitored in 2000. The lake was strongly stratified near the dam with hypoxic conditions present at a depth of three meters from the surface (depth to bottom in June was 12 meters). Secchi depths were less than one meter at each of the sampling sites, indicating poor light availability within the water column. Surface dissolved oxygen and pH values were elevated. Elevated dissolved oxygen and pH values are symptoms of increased algal photosynthetic activity in the lake. Field notes indicated that the water was green in color in 2000.

Nutrient concentrations were elevated. Analysis of phytoplankton samples confirmed the presence of algal blooms in June, July and August. Samples collected in June were dominated by green algae while samples collected in July and August were dominated by filamentous blue-green algae. The blue-green algae observed in the July and August samples (*Anabaena* sp., *Oscillatoria* sp., and *Anabaenopsis* sp.) are commonly associated with taste and odor problems in drinking water.

Surface metals were within applicable state water quality standards with the exception of copper. Values in June, July and August (15.0, 9.8, and 76.0 µg/L, respectively) were greater than the state water quality action level of 7.0 µg/L. A conversation with Mr. Allan Kilogh, Water Treatment Plant Supervisor for the Town of Monroe revealed that Lake Stewart was treated with a copper based algaecide twice during the summer. One of these treatment occurred the first week of August. The product used remains in suspension, which explains the elevated copper values. Treatment was done using appropriate application and an algaecide approved for use in water supplies. All precautions were taken to protect the treated drinking water.

In May of 2001, the City of Monroe installed a diffused air hypolimnic system to decrease stratification and increase dissolved oxygen levels throughout the lakes profile to improve the drinking water quality[4].

Rockingham City Lake

Rockingham City Lake is a secondary water supply reservoir for the City of Rockingham. It is located on Falling Creek.

Rockingham City Lake was most recently monitored in 2000. This lake is dystrophic (tannic water, acidic) with numerous aquatic macrophytes present. Plant samples collected from the lake consisted of spikerush (*Eleocharis* sp.), bog moss (*Mayaca fluviatilis*), variable-leaf watermilfoil (*Myriophyllum heterophyllum*), and fragrant or white water lily (*Nymphaea odorata*).

Due to the naturally dark colored water, Secchi depths were less than a meter. Surface dissolved oxygen concentrations (3.9 mg/L in June and 3.2 mg/L in August) were less than the state water quality standard of 4.0 mg/L for an instantaneous

[4] Russell Colbath, Water Resources Director for the City of Monroe. Personal communication January 18, 2006.

reading. This low dissolved oxygen reading is not considered unusual in the presence of such thick stands of macrophytes. Nutrient concentrations ranged from low to moderate.

This lake has been listed as impaired due to the excessive growth of aquatic macrophytes.

DRY-CLEANING SOLVENT CLEANUP ACT ANNUAL REPORT

Executive Summary

As required by the Dry-Cleaning Solvent Cleanup Act (DSCA) of 1997 and amendments (G.S. 143-215.104A *et seq.*), this report provides an annual update on activities conducted in the DSCA Program in 2005. The DSCA of 1997 and its amendments created a fund for assessment and cleanup of dry-cleaning solvent environmental contamination at dry-cleaning and wholesale distribution facilities.

Significant progress has been made in all aspects of program implementation. Areas of program development showing the most progress are risk-based rule development, Assessment and Remediation Agreements, work authorizations, prioritization and comprehensive assessments, priority ranking, contracting, imminent hazard abatement and emergency response, assessment guidance and database development, operating facility compliance with minimum management practices and outreach.

The Department of Environment and Natural Resources (DENR) has identified 196 operating or abandoned dry-cleaning facilities with environmental contamination by dry-cleaning solvent. Of these, 128 have voluntarily petitioned for acceptance, and 119 have been certified into the DSCA Program. Assessment and Remediation Agreements have been executed for 66 sites and 56 sites have been prioritized.

The majority of claims against the Fund to date have been for "past costs." The DSCA Program is authorized to reimburse petitioners for reasonable, necessary and documented costs incurred between October 1997 and June 2001 in certain situations. Petitioners have submitted past cost reimbursement claims for 13 sites totaling $2,612,290. Of that total, $1,517,518 has been approved for reimbursement. A total of $1,090,815 was paid to petitioners in FY 2004-05.

With the infusion of the sales tax monies, which began in July 2003, DSCA now appears to have sufficient financial resources to assess and clean up the contaminated dry-cleaning facilities identified to date by DENR. New discoveries will continue to be reported, largely due to property transactions. However, with 27 new sites reported in 2005, if the rate of discovery remains steady, the addition of new sites to the program should not overwhelm the DSCA Fund.

The program is currently developing risk-based rules as required by DSCA for the assessment and cleanup of contaminated dry-cleaning sites. A contractor who specializes in the development of risk-based programs for state regulatory agencies was hired in 2005 to assist in the rulemaking process. It is anticipated that these rules will be completed by December 2006.

Fund expenditures for site work will increase significantly when additional contracts with environmental engineering firms are executed and the risk-based rules are completed. Expenditures are projected to increase by approximately 230 percent beginning in FY 2006-07.

Program Status

DENR has made significant progress in implementing DSCA. DENR has solicited input from members of the DSCA Stakeholders Working Group (DSCA Stakeholders) and other interested parties to develop new policies and procedures. Participants in the DSCA Stakeholders include the following:

- DENR representatives and Department of Justice attorneys assigned to DENR,
- Dry cleaners from leadership of the North Carolina Association of Launderers and Cleaners,
- Environmental consultants,
- Representatives from environmental advocacy organizations,
- Dry cleaners using alternative dry-cleaning technologies,
- North Carolina State University's School of Textiles faculty, and
- Private attorneys representing dry cleaners and shopping centers.

A summary of DSCA Program site status is provided in Table 1.

Table 1. DSCA Program Site Status

Step 1. The dry cleaner or property owner petitions DENR for certification.	To date, 128 sites have petitioned for entry into the Program. The main motivating factors for petitioning have been real estate transactions and redevelopment.
Step 2. DENR certifies the site and checks for imminent threats.	Of the 128 sites that have petitioned, 119 sites have been certified into the Program. Two sites have been denied certification due to failure to meet the requirements for certification as mandated by DSCA. The remaining six sites that have not yet been certified are currently under review. Each petition is reviewed for imminent threats to human health and the environment. Drinking water sources have been identified in proximity to several sites. Evaluation of potential imminent threats has been expedited for these sites.
Step 3. The dry cleaner signs an Assessment and Remediation Agreement with DENR.	The Assessment and Remediation Agreement (ARA) is a legally binding agreement between DENR and the petitioner that covers all phases of work at a site including the prioritization assessment. All work done under these agreements is performed by independent environmental contractors hired by DENR. A total of 66 ARAs have been executed between DENR and petitioners.

Step 4. DENR assigns the site to one of its independent contractors for a prioritization assessment.	In August 2004, DENR executed contracts with four state-lead environmental contractors to perform site assessment and remediation. These four firms have been granted three-year contracts totaling $2.4 million. In June 2005, DENR received approval from the North Carolina State Building Commission to award three additional contracts totaling $9 million over three years. These contracts are anticipated to be executed in October 2005. Following execution of the ARA, DENR assigns the site to one of its contractors, who performs a prioritization assessment and determines if an imminent hazard exists at the site. Petitioners will be billed by DSCA to cover site deductibles after the expenses have been incurred.
Step 5. DENR ranks the site and checks again for imminent threats.	Information collected during the priority assessment is used by DSCA to rank each site in terms of risk to human health and the environment. The DSCA Prioritization Ranking System and supporting database application were developed to efficiently assign priority ranking scores to sites. To date, 56 sites have been prioritized.
Step 6. DENR approves its contractors to proceed with imminent hazard response, comprehensive assessment and remediation (where necessary) with funds obligated to higher priority sites first.	Five sites have been identified where drinking water wells have been impacted by dry-cleaning solvents. DSCA is responding to these threats by connecting residences and businesses to municipal water lines and installing point-of-entry filtration systems to remove contaminants. Comprehensive assessments and groundwater monitoring have been initiated at 29 sites.

Program Development

The primary objective of DSCA in 2005 was to continue working toward full implementation of the program. To attain this goal, DSCA staff directed significant energy towards the development of supporting policies, procedures, and guidance. To reduce resource consumption and optimize customer service, DSCA uses its web site (www.ncdsca.org) and e-mail as the primary means to deliver program documents to its customers. As in the previous year, DSCA staff continued reviewing petitions, determining site eligibility, executing assessment and remediation agreements, screening sites for imminent hazards, supply well sampling and prioritizing sites. New activities performed in 2005 include comprehensive site assessments to delineate extent of contamination, groundwater monitoring and providing users of impacted water supply wells with clean water.

Specifically, progress was achieved in the following areas:

- Risk-Based Rule Development
- Past-Cost Reimbursement
- State-Lead Contracts
- Assessment and Remediation Agreement
- Prioritization Assessments
- Prioritization of Sites

- Database Application
- Facility Compliance and Outreach

Risk-Based Rule Development

DENR has been delegated the task of developing rules that establish a risk-based approach to assessing, prioritizing, and cleaning up dry-cleaning solvent contamination that resulted from releases at certified facilities or abandoned sites. During the past year, the DSCA Program hired an independent contractor, the RAM Group of Houston, Texas, a firm that specializes in helping states develop risk-based rules and implementation guidance. The RAM Group is currently developing a draft document with risk procedures as well as standardized reporting forms and customized spreadsheets that perform the risk calculations necessary to determine site-specific, risk-based cleanup levels. Once the draft risk document is completed, review and discussion of its content will be performed within DENR and input will be sought from a review group composed of DSCA Stakeholders. Draft rules will then be developed and advanced through the rulemaking process. It is anticipated that these rules will be completed by December 2006.

Past-Cost Reimbursement

The majority of claims against the Fund to date have been for "past costs." The DSCA Program is authorized to reimburse petitioners for appropriately documented and reasonably necessary costs incurred between October 1997 and June 2001 in certain situations pursuant to Section 2.(a) of House Bill 1062 (Session Law 2001-265). Petitioners have submitted past cost reimbursement claims for 13 sites totaling $2,612,290.79. After reviewing the claims to determine eligible costs and subtracting the required $50,000 deductible for each site, the DSCA Program determined that a total of $1,517,518.21 could be reimbursed to petitioners for 10 of the 13 sites.

Previously, the DSCA Program could only reimburse up to 10 percent of the previous fiscal year's revenue credited toward the Fund. In FY 2002-03, $1.08 million was credited toward the Fund. Pursuant to House Bill 1062, the total amount that could be reimbursed during FY 2003-04 was $108,000 (ten percent of the previous year's revenue). This amount was reimbursed to the highest prioritized site in May 2004.

On July 1, 2004, Senate Bill 1219 was signed into law by Governor Easley. This bill increased the percentage that could be used for past cost claims from 10 percent to 25 percent. This bill also allowed the DSCA Program to reimburse up to $200,000 per site during FY 2004-05 for all eligible costs from past cost claims. Eligible costs above $200,000 per site will be reimbursed during FY 2005-06 ($260,410.97) and FY 2006-07 ($58,689.75). During FY 2004-05, the DSCA Program reimbursed a total of $1,090,815.49 to petitioners.

State-Lead Contracts

In July 2004, DENR executed contracts with four environmental engineering firms to perform state-lead assessment and remediation at DSCA sites. The contracts total $2.4 million with a term of three years. During FY 04-05, these contractors have performed prioritization

assessments, comprehensive assessments and imminent hazard response activities, including the removal of contaminated soil and provision of clean drinking water to residences with contaminated water supply wells. In June 2005, the State Building Commission awarded three additional contracts totaling $9 million to three environmental engineering firms. The DSCA Program anticipates these contracts will be executed in October 2005.

Assessment and Remediation Agreement

An Assessment and Remediation Agreement (ARA) that is executed by the DSCA Program and petitioners for certified sites was developed for use beginning in September 2004. This agreement encompasses all phases of site work (prioritization and comprehensive assessments and remedial action) and allows DSCA to direct all work using its state-lead contractors. Petitioners must sign this agreement in order to obtain the liability protection afforded by DSCA and to allow DSCA's contractors to assess and remediate certified sites. Sixty-six ARAs have been executed to date. Prior to September 2004, Prioritization Assessment Agreements (PAAs) between DSCA and petitioners were used to prioritize sites. However, the PAA has been phased out and all future work will be performed under the ARA.

Prioritization Assessments

Unless site assessment information obtained during an earlier pre-DSCA investigation is available, a prioritization assessment must be performed at DSCA sites following certification into the program. Work performed during this phase consists of limited soil and groundwater sampling to determine the severity of contamination. This sampling is conducted in conjunction with a survey of the area surrounding the site to locate all potential receptors (public and private drinking water wells, surface water bodies, sensitive ecological environments) that may be threatened by the contamination.

DSCA project managers instruct the program's state-lead contractors to submit work plans that follow procedures outlined in a prioritization assessment guidance document that details the necessary scope for this work phase. Following authorization by the DSCA Program, the contractor performs the assessment and submits a prioritization assessment report that enables the program to determine the priority ranking of the site. Pursuant to the requirements of the DSCA statute, money from the fund must be obligated to higher priority sites first.

Following completion of the prioritization assessment and receipt of the contractor's invoice, the DSCA project manager would prepare and mail an invoice to the site's petitioner(s) for an amount up to the site's applicable deductible. Once the deductible has been met, the DSCA fund covers all costs until total site costs reach $200,000, at which point the petitioner(s) become responsible for one to three percent of incurred costs.

Prioritization of Sites

A total of 56 sites have been prioritized to date. In October 2004 the DSCA Program implemented a new priority scoring system that was based on the threat of contamination to nearby receptors such as supply wells and surface water. The new scoring system assigns a score that corresponds to the specific receptor that is being threatened. For example, a score of

"1.2" indicates that "an active domestic drinking water supply well is impacted or immediately threatened by the release and that the user has no access to another public or private water supply." DSCA staff can immediately know what actual or potential hazard exists at a site based simply on its score. If multiple sites are assigned the same score, then DSCA staff can evaluate other factors such as magnitude of contamination in determining priority order. All 56 prioritized sites have been re-evaluated using the new prioritization system and the sites have been ordered in terms of priority.

Database and Geographic Information System (GIS) Application

The DSCA Program has invested significant time and effort to develop and refine its database and GIS applications. Rapid application development techniques have been used to ensure its ability to manage data is flexible and can grow with the program. Technical and financial information has been entered into the database. The programmatic tracking and reporting applications are frequently revised to respond to changing information management needs.

Major improvements in 2005 focused on refining the database so that it could track project financial details. Reporting capabilities include project status, current site actions, site deductibles, costs applied toward the deductible, past-cost reimbursements, invoices, payments, work authorized on a per cost basis and change orders.

In July 2005 DENR purchased GIS software that the DSCA Program will use to view site information utilizing digital mapping. This technology will enhance project managers' ability to quickly evaluate site conditions regarding contamination, thereby assisting in site assessment and remediation.

Facility Compliance and Outreach

DENR has been authorized under DSCA to develop rules that operating dry-cleaning facilities must follow to prevent environmental contamination by dry-cleaning solvents. These rules, or Minimum Management Practices (MMPs), were implemented in 2001 as temporary rules and were approved as permanent rules in 2002. In 2005 the DSCA Program created and filled a new position that will coordinate compliance assistance visits and formal inspections of facilities and also serve as the lead for enforcement actions where necessary. This individual is currently developing inspection checklists, guidance documents and a facility database. Two additional positions are being created for inspectors who will be assigned to perform compliance assistance and facility inspections throughout the state. It is anticipated that both of these positions will be filled in FY 2005-06.

The DSCA Program is currently working to develop a memorandum-of-agreement with the Division of Air Quality that would enable the program to perform compliance inspections for air quality regulations that are applicable to dry-cleaning facilities. The program is also planning to inspect facilities for compliance with Resource Conservation and Recovery Act (RCRA) regulations, which currently are administered by the Division of Waste Management's Hazardous Waste Section. Such multimedia inspections will enable one program within DENR to ensure compliance with all environmental regulatory requirements and will give dry cleaners and the public a single DENR point-of-contact for compliance questions or concerns.

From September 2004 through May 2005, Mr. YongJim served as an intern to the DSCA Program to improve educational outreach to the Korean dry cleaners in the state. Mr. Kim was a graduate student in Duke University's International Development Policy Program who had worked for the past 20 years with the Korean Ministry of Environment. Mr. Kim met with Korean dry cleaner associations and gave a presentation on the DSCA cleanup and compliance programs to Korean dry cleaners at a training conference in Kernersville, North Carolina. Mr. Kim also translated into Korean the 2005 Dry Cleaners Air and Waste Compliance Calendar prepared by the North Carolina Small Business Assistance Program.

The DSCA Program has continued its association with dry-cleaning programs in other states through its participation in the State Coalition for the Remediation of Drycleaners (SCRD). This work group is sponsored by the EPA's Technology Innovation Office. DSCA has benefited greatly from this organization by learning from the experiences of other states. In May 2005 the North Carolina DSCA Program served as the host for SCRD's annual meeting in Raleigh.

Annual Report Elements Required by G.S. 143-215.104U

(1) DRY-CLEANING SOLVENT CONTAMINATION REPORTED TO THE DEPARTMENT OF ENVIRONMENT AND NATURAL RESOURCES

DSCA maintains files and a database inventory of 196 sites that are contaminated by dry-cleaning solvent. This number represents all dry-cleaning solvent releases known to DENR, assuming other agencies have forwarded notices of release to DSCA. However, it has been estimated that over 900 contaminated current or former dry-cleaning sites exist in North Carolina. Table 2 provides a list, by county, of all known sites contaminated with dry cleaning solvent. A total of 27 new dry-cleaning solvent releases were reported to DSCA in 2005. Many of these contaminated sites were identified as a result of real estate transactions and redevelopment projects.

(2) SITES CERTIFIED BY THE COMMISSION

DSCA must review a petition and the site file to determine if the site and the petitioner meet the statutory criteria for certification into the Program. Of the 128 sites that have petitioned for Program entry, 119 have been certified into the Program. Two sites have been denied certification due to failure to meet the requirements for certification as mandated by DSCA. The seven remaining sites that have not yet been certified are newly received petitions that are currently under review. The certified sites are shown in Table 3 along with current site status.

Data from these petitions have been compiled to evaluate general site characteristics. A summary is presented in Table 4. The majority of the petitioners are property owners (108), as opposed to drycleaner business owners/operators (61). Of the sites that applied, 58 percent are abandoned sites.

(3) COST ESTIMATE FOR ASSESSMENT AND REMEDIATION OF CERTIFIED SITES

Actual costs to assess and remediate DSCA sites are anticipated to vary widely from site to site. Factors influencing costs include site geology, age of release, the chemical nature of the solvents released and the threats posed to potential receptors. However, an annual spending cap of $200,000 per site is applied by statute unless contamination at a site poses an imminent threat to public health. In these cases, annual expenditures are capped at $400,000 per site.

Based on costs figures provided by other states, DSCA can calculate an approximate total cleanup cost for those sites that have been certified into the program. Using an average total cleanup cost of $250,000 per site, the total projected cost to remediate the 119 presently certified sites is approximately $30 million. Based on figures from the North Carolina Department of Labor, there are at least 2,000 active and abandoned dry-cleaning facilities in the state. Investigations performed across the nation indicate that contamination is present in about 75 percent of all dry-cleaning operations. Applying this percentage to the number of current and former facilities in North Carolina, a total of 1,500 contaminated sites may be present. If only 50 percent of these contaminated sites are accepted into the DSCA Program, the projected total cleanup cost would be approximately $188 million.

[1] Assessment and Remediation Agreements
[2] Reflects multiple petitioners for some sites

The DSCA Program controls site costs by reviewing and pre-approving all work plans submitted by its state-lead contractors prior to the start of field activities. All plans are required to provide sufficient detail (e.g., unit costs, subcontractor bids) to allow for an effective pre-approval review. DSCA's contracts include set unit rates that the contractors must follow for all assigned work.

(4) RECEIPTS AND DISBURSEMENTS FOR THE FUND

The primary funding sources for the dry-cleaning solvent cleanup fund are a tax on dry-cleaning solvents and, beginning in July 2003, the state portion of the current sales tax on dry-cleaning. The DSCA Fund's finances through FY 2004-05 (ending June 30, 2005) are summarized below:

Collections FY 97-98	$ 474,717.47
Collections FY 98-99	$ 927,004.50
Collections FY 99-00	$ 968,993.09
Collections FY 00-01	$ 863,772.16
Collections FY 01-02	$1,061,298.70
Collections FY 02-03	$1,076,826.57
Collections FY 03-04	$9,487,233.94 *
Collections FY 04-05	$9,660,612.84
Solvent Tax Revenue (all years)	$6,612,247.74
Sales Tax on Dry-cleaning Revenue	$16,618,958.95
Deductible/Co-Pay Payments from Petitioners	$ 8,488.50
Interest	$ 1,280,764.08
Total Collections	**$24,520,459.27**
Dept. of Revenue Expenses	$ 30,764.42 **
Cleanup Expenses	
Reimbursements to Petitioners	$ 1,373,689.96
Payments to State-lead Contractors	$ 125,202.32
DENR Administrative Expenses	$ 1,589,114.16
Total Expenditures	**$ 3,118,770.86**
Fund Balance	**$21,401,688.41**
Funds Encumbered in Contracts	$11,409,797.68

* The significant increase in collections during FY 03-04 compared to previous years is due to the addition of the sales tax on dry-cleaning revenue.

** This represents the actual amount charged by the Department of Revenue for its expenses. The Department of Revenue is authorized by DSCA to charge no more than $125,000 per year.

Fund expenditures for site work will increase significantly when additional contracts with environmental engineering firms are executed and the risk-based rules are completed. The DSCA Program up to this time has been assessing the extent of contamination at certified sites and performing remediation to address imminent hazard situations such as treatment and replacement of contaminated drinking water and excavation of hazardous soil. Once developed and implemented, the risk-based rules will enable the Program to determine site-specific cleanup levels at all sites. Remediation, the most expensive phase of site work, can then commence at those sites where the risks posed by the contamination are unacceptable as defined by the rules. Expenditures are projected to increase by approximately 230 percent beginning in FY 2006-07.

(5) CLAIMS AGAINST THE FUND

There are two types of claims against the DSCA Fund. The majority of claims come from petitioners that incurred past investigative/remedial costs in response to an order or notice of violation from DENR prior to DSCA implementation. Past-cost claims that meet the requirements of Section 2.(a) of House Bill 1062 (Session Law 2001-265) were described previously in the section on "Past-Cost Reimbursement". Of those eligible past costs totaling $1,517,518.21, a total of $1,198,417.49 has been reimbursed and the remaining $319,100.72 will be reimbursed in FY 2005-06 and FY 2006-07.

The second type of claim against the DSCA Fund is for approved costs for site work which exceed the site's deductible that was performed by an environmental contractor hired by the petitioner. Beginning in September 2004, the DSCA Program began assigning all site work to its state-lead contractors. However, some claims will be submitted for prioritization assessments conducted by contractors hired by petitioners prior to that time. After subtracting the deductible amount for each of these sites, approximately $150,000.00 will be reimbursed to these petitioners.

(6) RECOMMENDATIONS TO ASSURE THE SOLVENCY OF THE FUND

DENR has no recommendations regarding fund solvency at this time. Prior to passage of statutory amendments to DSCA in 2000 (S.L. 2000-19), it was clear that the fund balance was inadequate to address all of the dry-cleaning sites in the state. However, with the passage of the DSCA Amendments that established a second funding mechanism, the General Assembly took the most important step necessary to assure future fund solvency. With the infusion of the sales tax monies, which began in July 2003, DSCA now appears to have sufficient financial resources to assess and remediate the contaminated dry-cleaning facilities on a priority basis.

The Fiscal Note on the DSCA Amendments (S.L. 2000-19) anticipated that the funding mechanisms would provide the fund with $8 million to $10 million annually. As noted above, total collections for FY 2004-05 were approximately $9.7 million. Therefore, the DSCA Program is solvent.

The Honorable Charles W. Albertson, Co-Chair
The Honorable Daniel G. Clodfelter, Co-Chair
The Honorable Pryor A. Gibson, III, Co-Chair
Environmental Review Commission

Subject: Emissions Reductions Beyond the Clean Smokestacks Act

Dear Senator Albertson, Senator Clodfelter, Representative Gibson:

SL2002-4 Section 11 (attached) requires the Environmental Management Commission to study the desirability of requiring and the feasibility of obtaining reductions in emissions of oxides of nitrogen (NO_x) and sulfur dioxide (SO_2) beyond those required by the Clean Smokestacks Act. It also requires the EMC report its findings and recommendations to the General Assembly and the Environmental Review Commission annually.

Since the Clean Smokestacks Act was passed in June 2002, significant Federal regulatory changes have occurred. Specifically, the Clean Air Interstate Rule (CAIR) requires North Carolina's neighboring states to achieve major reductions in NO_x and SO_2 -- reductions that require installation of state-of-the-art control equipment. Although there may be questions about the timing and emissions reductions of CAIR, the Division of Air Quality (DAQ) believes CAIR will ultimately provide major benefits to North Carolina's air quality.

The Clean Smokestacks Act already requires that state of the art control equipment be installed on many units in North Carolina. CAIR annual NO_x and SO_2 emissions budgets are even lower than those set by the Clean Smokestacks Act and this could result in even more units in North Carolina having state of the art control equipment applied.

Given the recent action by the Federal government regarding power plant emissions, it is recommended that the study as to whether or not further State action is required be deferred until an evaluation is made of the progress of North Carolina and her neighbors in complying with CAIR. The EMC would propose that the reporting begin on December 1, 2013. This will give

the specified electric generation facilities in North Carolina time to implement their control strategies and will also give the DAQ time to quantify the air quality impacts. Requiring reporting prior to the complete implementation of these control technologies will provide little new or beneficial information. Furthermore, the evolution of new control technologies is fairly long term and it is recommended that the frequency of the reporting thereafter be on a three-year basis.

Sincerely,

David Moreau, PhD.
Chair, EMC

GENERAL ASSEMBLY OF NORTH CAROLINA

SESSION 2001

SESSION LAW 2002-4
SENATE BILL 1078

AN ACT TO IMPROVE AIR QUALITY IN THE STATE BY IMPOSING LIMITS ON THE EMISSION OF CERTAIN POLLUTANTS FROM CERTAIN FACILITIES THAT BURN COAL TO GENERATE ELECTRICITY AND TO PROVIDE FOR RECOVERY BY ELECTRIC UTILITIES OF THE COSTS OF ACHIEVING COMPLIANCE WITH THOSE LIMITS.

The General Assembly of North Carolina enacts: ...

SECTION 11. The Environmental Management Commission shall study the desirability of requiring and the feasibility of obtaining reductions in emissions of oxides of nitrogen (NOx) and sulfur dioxide (SO2) beyond those required by G.S. 143-215.107D, as enacted by Section 1 of this act. The Environmental Management Commission shall consider the availability of emissions reduction technologies, increased cost to consumers of electric power, reliability of electric power supply, actions to reduce emissions of oxides of nitrogen (NOx) and sulfur dioxide (SO2) taken by states and other entities whose emissions negatively impact air quality in North Carolina or whose failure to achieve comparable reductions would place the economy of North Carolina at a competitive disadvantage, and the effects that these reductions would have on public health, the environment, and natural resources, including visibility. In its conduct of this study, the Environmental Management Commission may consult with the Utilities Commission and the Public Staff. The Environmental Management Commission shall report its findings and recommendations to the General Assembly and the Environmental Review Commission annually beginning 1 September 2005. ...

In the General Assembly read three times and ratified this the 19th day of June 2002.

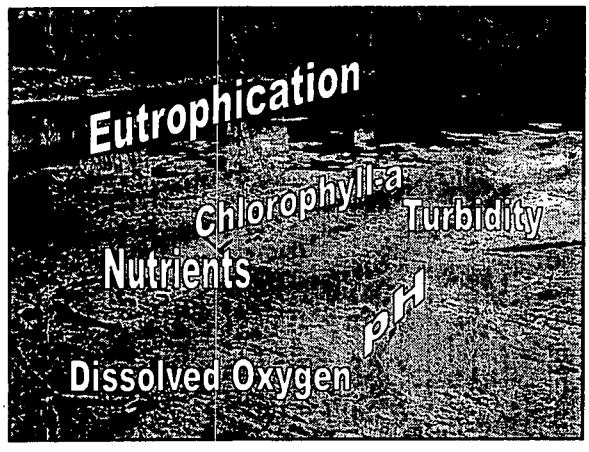
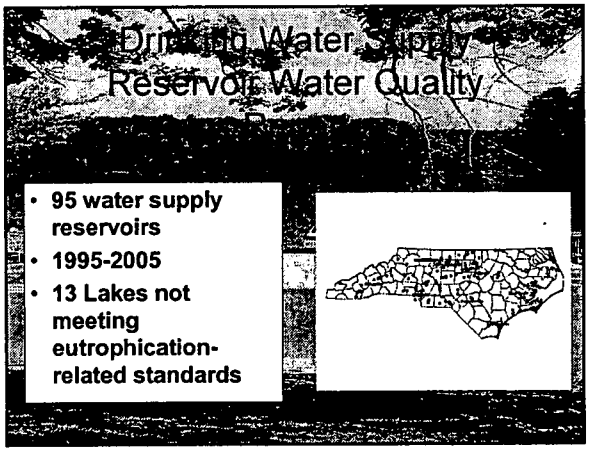
RE: REPORTS IN ACCORDANCE WITH SESSION LAW 2005-190 (Senate Bill 981)



Session Law 2005-190 requires the Environmental Management Commission to report to the Environmental Review Commission. Section 2(a) of Session Law 2005-190 requires a report to the ERC by 1 May 2006. This report is enclosed, entitled: *Report to the Environmental Review Commission on the Status of Water Quality in Water Supply Reservoirs Sampled by the Division of Water Quality.*



Section 2(b), Section 3 and Section 4 of Session Law 2005-190 requires reports to the ERC by April 1, 2006 and as part of the EMC's quarterly reports to the ERC. These requirements are covered in the report enclosed, entitled: *Report to the Environmental Review Commission on the Status of Nutrient Management Strategies for Drinking Water Reservoirs Session Lay 2005-190.*

GENERAL ASSEMBLY OF NORTH CAROLINA
SESSION 2005

SESSION LAW 2005-190
SENATE BILL 981

AN ACT TO DIRECT THE ENVIRONMENTAL MANAGEMENT COMMISSION: (1) TO STUDY WATER QUALITY IN DRINKING WATER SUPPLY RESERVOIRS IN THE STATE, (2) TO ADOPT NUTRIENT CONTROL CRITERIA FOR DRINKING WATER SUPPLY RESERVOIRS, (3) TO DEVELOP AND IMPLEMENT A NUTRIENT MANAGEMENT STRATEGY FOR CERTAIN DRINKING WATER SUPPLY RESERVOIRS THAT ARE IMPAIRED OR THAT MAY BECOME IMPAIRED WITHIN FIVE YEARS, (4) NOT TO MAKE ANY NEW OR INCREASED NUTRIENT LOADING ALLOCATION TO ANY IMPAIRED DRINKING WATER SUPPLY RESERVOIR UNTIL RULES TO IMPLEMENT A NUTRIENT MANAGEMENT STRATEGY FOR THAT RESERVOIR BECOME EFFECTIVE, AND (5) TO REPORT TO THE ENVIRONMENTAL REVIEW COMMISSION ON PROGRESS IN DEVELOPING AND IMPLEMENTING NUTRIENT MANAGEMENT STRATEGIES FOR DRINKING WATER SUPPLY RESERVOIRS WITH IMPAIRED WATER QUALITY.

The General Assembly of North Carolina enacts:

SECTION 1. Legislative findings. – The General Assembly finds that:

(1) Drinking water supply reservoirs are an essential source of water needed to meet municipal, industrial, and agricultural needs.

(2) Drinking water supply reservoirs provide recreational opportunities and wildlife habitat and, if properly managed, improve water quality.

(3) Management and protection of the quality and quantity of water in drinking water supply reservoirs are essential to the economic vitality of North Carolina.

(4) Excessive nutrients are a major source of impairment of water quality in drinking water supply reservoirs.

(5) It would be beneficial for the State to study the condition of drinking water supply reservoirs and to develop nutrient control criteria to prevent drinking water supply reservoirs from becoming impaired.

(6) It would be beneficial for the State to develop calibrated nutrient response models and nutrient management strategies to ensure that drinking water supply reservoirs that are showing evidence of impairment are protected, as envisioned by Part 1 of Article 21 of Chapter 143 of the General Statutes and S.L. 1997-458, the Clean Water Responsibility and Environmentally Sound Policy Act.

SECTION 2.(a) Study of drinking water supply reservoirs. – The Environmental Management Commission shall study the water quality in the drinking water supply reservoirs in the State to determine whether the reservoirs meet current water quality standards. The Commission shall analyze existing data and report its findings and recommendations to the Environmental Review Commission by 1 May 2006.

SECTION 2.(b) Nutrient control criteria. – Based on the results of the study of drinking water supply reservoirs and an evaluation of current water quality standards, the Environmental Management Commission shall identify any nutrient

control criteria necessary to prevent excess nutrient loading in each drinking water supply reservoir in order to protect public health and other designated uses by 1 January 2009. The Commission shall adopt final nutrient control criteria for each drinking water supply reservoir by 1 May 2010. If the Commission finds that the nutrient control criteria for any drinking water supply reservoir are not being achieved, the Commission shall develop and implement a plan for enhanced water quality monitoring in that drinking water supply reservoir within one year of the determination. The Commission shall report its progress in implementing this section, including its findings and recommendations, to the Environmental Review Commission as a part of each quarterly report it makes pursuant to G.S. 143B-282(b).

SECTION 3.(a) Applicability of section to certain reservoirs. – This section applies only to drinking water supply reservoirs that meet all of the following criteria as of 1 July 2005:

(1) The reservoir serves a population greater than 300,000 persons.
(2) The Environmental Management Commission has classified all or any part of the water in the reservoir as a nutrient sensitive water (NSW).
(3) Water quality monitoring data indicates that water quality in the reservoir violates the chlorophyll A standard.
(4) The Division of Water Quality of the Department of Environment and Natural Resources has not prepared or updated a calibrated nutrient response model for the reservoir since 1 July 2002.

SECTION 3.(b) Temporary limitation on increased nutrient loading. – If the Environmental Management Commission determines either that water quality in all or in any part of a drinking water supply reservoir to which this section applies does not meet current water quality standards or that it is likely that water quality will not meet water quality standards at any time prior to 1 July 2010, the Commission shall not make any new or increased nutrient loading allocation to any person who is required to obtain a permit under G.S. 143-215 for an individual wastewater discharge directly or indirectly into that reservoir. This limitation on new or increased nutrient loading allocation shall not be construed to prohibit a person who holds a permit for a wastewater discharge into a drinking water supply reservoir from purchasing a nutrient loading allocation from another person who holds a permit for a wastewater discharge into the same drinking water supply reservoir. This subsection expires with respect to a drinking water supply reservoir when permanent rules adopted by the Commission to implement the nutrient management strategy for that reservoir become effective.

SECTION 3.(c) Nutrient management strategy. – The Environmental Management Commission shall develop a nutrient management strategy for drinking water supply reservoirs to which this section applies by 1 July 2008. The nutrient management strategy shall be based on a calibrated nutrient response model that meets the requirement of G.S. 143-215.1(c5). The nutrient management strategy shall include specific mandatory measures to achieve the reduction goals. The Commission shall consider the cost of the proposed measures in relation to the effectiveness of the measures. These measures could include, but are not limited to, buffers, erosion and sedimentation control requirements, post-construction stormwater management, agricultural nutrient reduction measures, the addition of nutrient removal treatment processes to point source permitted wastewater treatment plants, the removal of point source discharging wastewater treatments through regionalization and conversion to non-discharge treatment technologies, and any other measures that the Commission determines to be necessary to meet the nutrient reduction goals. To the extent that one or more other State programs already mandate any of these measures, the nutrient management strategy shall incorporate the mandated measures and any extension of those measures and any additional measures that may be necessary to achieve the nutrient reduction goals. In making a nutrient loading allocation to a permit holder, the Commission shall, to the extent allowed by federal and State law, give consideration to

all voluntary efforts taken by the permit holder to protect water quality prior to the development of the nutrient management strategy.

SECTION 3.(d) Eligibility under the Clean Water Revolving Loan and Grant Act. – The definitions set out in G.S. 159G-3 apply to this subsection. The operator of a wastewater treatment works that is owned by an agency of the State may apply for a loan or grant under Chapter 159G of the General Statutes on the same basis as any other applicant if the operator is a local government unit and if the local government unit operates the wastewater treatment works pursuant to a contract with the State agency that contemplates that the local government unit will eventually acquire ownership of the wastewater treatment works.

SECTION 3.(e) Implementation; rulemaking. – The Environmental Management Commission shall adopt permanent rules to implement the nutrient management strategies required by this section by 1 July 2008. The rules shall require that reductions in nutrient loading from all sources begin no later than five years after the rules become effective.

SECTION 3.(f) Reports. – The Environmental Management Commission shall report its progress in implementing this section to the Environmental Review Commission as a part of each quarterly report it makes pursuant to G.S. 143B-282(b).

SECTION 4. Other drinking water supply reservoirs. – The Environmental Management Commission shall not make any new or increased nutrient loading allocation to any person who is required to obtain a permit under G.S. 143-215 for an individual wastewater discharge directly or indirectly into any drinking water supply reservoir for which the Division of Water Quality of the Department of Environment and Natural Resources has prepared or updated a calibrated nutrient response model since 1 July 2002 until permanent rules adopted by the Commission to implement the nutrient management strategy for that reservoir become effective. The Commission shall report its progress in developing and implementing nutrient management strategies for reservoirs to which this section applies to the Environmental Review Commission by 1 April 2006.

SECTION 5. Effective date. – This act is effective when it becomes law.

In the General Assembly read three times and ratified this the 7th day of July, 2005.

Mercury Cleanup Cost

- Granville County: (2005) $3000 –$4000 / classroom (19)
- Triangle Area – April 3 or 4, 2006

K-8 School - < 1 tsp = 5 mL = 67.95 g = 2.4 oz

Principal called Emergency Response

Lumex Instrument needed to quantify mercury levels to determine if it was safe for children

Only 1 company in state has Lumex instrument

April 6, 2006 – Another Mercury Spill in NC

Pre-K – Middle School in Chapel Hill

Mercury in sink trap during maintenance

- Water and mercury spilled onto countertop and floor
- Most of mercury removed but tracked into carpet
- Certified mercury cleanup group, Hepaco, used

Gerome instrument to measure mercury (only tells if mercury is present). Luminex measures amount of mercury present

- Children allowed back into classroom 3 days
- School called Health Department over weekend

UNC-only Luminex available in state

- Mercury vapor levels as high as 10,000 ng/m^2
- EPA recommends maximum level 1,000 ng/m^2
- Cleanup planned this week; children not allowed to use classroom

Health Symptoms Within a Few Hours of Mercury Vapor Exposure

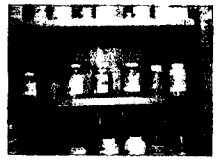
- GI – nausea, vomiting, abdominal pain, diarrhea
- Neurological – headaches, tremor, visual disturbances
- Respiratory – cough, shortness of breath, chest tightness

Health Symptoms Following Long-term Exposure (Weeks)

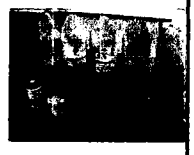
- Psychiatric effects including – depression, loss of self-confidence, shyness, anger, irritability, anxiety, insomnia, aggressiveness, nervousness and impatience

Science Safety Needs in North Carolina Schools

Science Safety Needs in North Carolina Schools



- Lack of PPE for teachers/students
- Need for updated facilities:
  - 40% are outdated buildings
- New facilities does not necessarily meet safety standards
- No chemical management (procurement, inventory, storage and disposal)
- Lack of equipment and materials to support instruction and meet safety regulations
- Poor air quality in labs
- Overcrowding in laboratories
- No ventilation in chemical storage rooms



Chemical Hazards in NC Schools

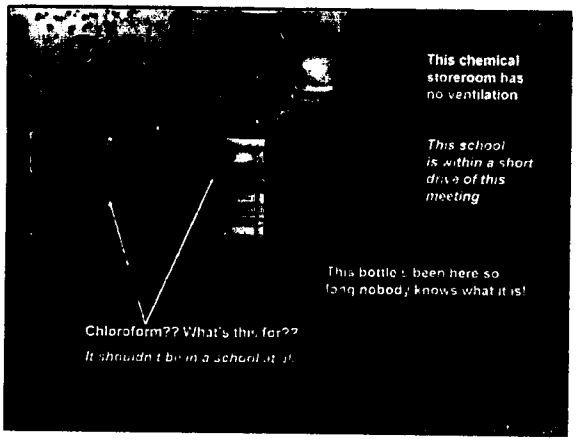
NCDPI-Insurance Section

The Correct Storage of Chemicals

The Way Most Store Rooms / Prep Rooms Look!



The Way Most Store Rooms / Prep Rooms Look!

Incompatible Storage and Excess Volumes

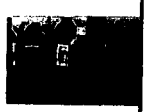
Nasty Chemicals in Schools

Forms Explosives
- Picric Acid
- Ethyl Ether
- Sodium azide

Carcinogens
- Benzene
- Formaldehyde
- Pyrogallic acid
- Asbestos wire mats
- Arsenic
- Chromium, lead compounds

Radioactive
- Uranium acetate – 7 lbs
- Strontium nitrate – 1 lb
- Cesium

Shock Sensitive
- Ammonium perchlorate
- Ammonium nitrate
- Mercury fulminate
- Nitroglycerin
- Nitrogen triiodide
- Fulminating gold
- Fulminating silver



Nasty Chemicals in Schools

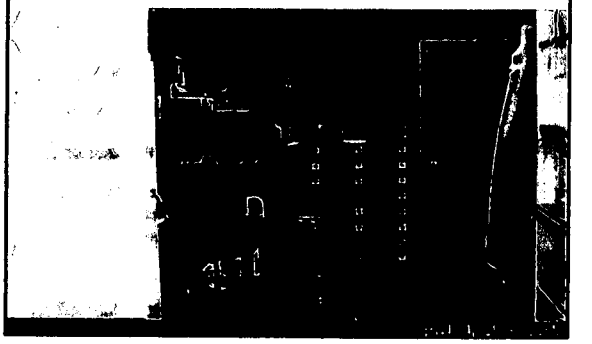
Ingredients to make
- 20 lbs gunpowder
- Nitroglycerine
- Crystal Meth

Costs of Chemical Clean-up

Arsenic	$3000
Ethyl ether	$5000
Uranium acetate	$4000
Strontium nitrate	$5000
Per School Clean out	$4-7000
LEA Clean out	$22000

Costs given by Professional Waste Disposal Companies

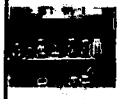
Mercury Cleanup Cost



- Broken thermometer: 1/2 gram $75 – $110 *Foster, B. JCE 2005*
- EPA: 12 schools: (2004) $1000 – $200,000
- Granville County: (2005) $3000 – $4000 classroom (19)
- Ballou High School, Washington DC: (2005) $1.5 million

Costs of Chemical Clean-up

- Arsenic - $3000
- Ethyl ether - $5000
- Uranium acetate - $4000
- Strontium nitrate - $5000
- LEA Clean out - $22,000
- $3.00 to dispose of a fluorescent light bulb that cost 90 cents



My Office

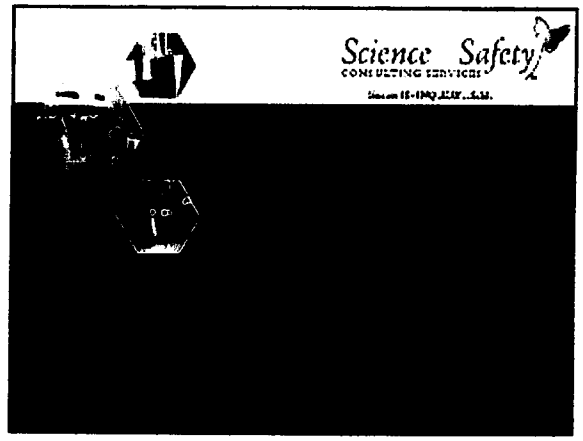
Recommendations

Recommendations

K-12 Schools

- Eliminate Hg, Hg compounds, Hg-containing instruments
- Eliminate hazardous / unwanted chemicals
- Require LEAs / schools to have a comprehensive chemical management system to prevent constant buildup of hazardous waste

Expand HB 1531 to Include



- Policy similar to: NC School Board Association Policy 7265: Occupational Exposure to Chemicals
- Require NCDPI and LEAs to follow State Board of Education Policy HSP-F-017
- Establish / fund School Safety Officer @ NCDPI to implement a 5-year plan to bring all LEAs into OSHA laboratory standards compliance.

Expand HB 1531 to include:

- **Policy similar to NC School Board Association Policy 7265: Occupational Exposure to Chemicals**
- **Require State Board of Education Policy HSP-F-017 to be followed by NCDPI and LEAs**
- **Establish/fund School Safety Director @ NCDPI to implement a 5-year plan to bring all LEAs into OSHA laboratory standards compliance. (Write grants for removal chemical waste from schools-Homeland Security and EPA)**

Expand HB 1531 to Include

- Establish compliance and accountability standards for laboratory safety
- Require Audit and Technical Assistance System by NCDPI to LEAs
- Implement Professional Development Program for personnel:
  29 CFR 1910.1200 Hazard Communication Plan
  29 CFR 1910.1450 Laboratory Standard
  29 CFR 1910.1030 Bloodborne Pathogen

EXHIBIT F-1

Chemicals Removed from North Carolina Schools by Private Waste Disposal Company
Examples of Hazardous Chemicals

Gases:
- Cyclopropane
- Dimethyl Ether
- Hydrogen
- Hydrogen Iodide
- Methane
- Nitric Oxide

Flammable Liquids/Solids:
- Ethanol
- Isopropanol
- Gasoline
- Metal Powders
- Phosphorous

Reactives:
- Aluminum Alkyls
- Calcium Hydride
- Iron Oxide
- Lithium
- Potassium Borohydride
- Sodium Sulfide

Oxidizers:
- Chlorates
- Nitrates
- Inorganic Peroxides
- Perchlorates
- Permanganates

Toxic:
- Chloroform
- Cyanides
- Heavy Metals
- Methylene Chloride
- Pesticides
- Phenol

Corrosive:
- Acetic Acid
- Ammonium Hydroxide
- Bromine
- Hydrochloric Acid
- Nitric Acid
- Sodium Hydroxide

Shock Sensitive Materials
Removed from NC Schools by Private Waste Disposal Company

The following materials are shock-sensitive, and may decompose violently if struck or heated. Solids are also prone to explosive decomposition if ground, for example with pestle and mortar. A few of the materials listed are not, of themselves, explosive, but mixtures of them with combustible material such as organic reagents, may be dangerous.

Acetaldehyde
Aluminum Ophorite
Amatol
Ammonal
Ammonium Nitrate
Ammonium Perchlorate
Ammonium Picrate
Benzoyl Peroxide
2-Butanol
Butyl Tetryl
Calcium Nitrate
Copper Acetylide
Cumene
Cyanuric Triazide
Cyanogen Bromide
Cyclohexane
Cyclotrimethylenetrinitramine
Dicylcopentadiene
Diethyl Ether
Dinitroresorcinol
Dinitroethyleneurea
Dinitroglycerine
Dinitrophenol
Dinitrophenolates
Dinitrophenyl Hydrazine
Dinitrotoluene
Dioxane
Dipicrylamine
Dipicryl Sulfone
Erythritol Tetranitrate
Ethylene Glycol Dimethyl Ether
Ethyl Ether
Ethyl Vinyl Ether
Fulminating Mercury
Fulminating Gold
Fulminating Platinum
Fulminating Silver

Vinyl Chloride
Vinylidene Chloride Acetylides

NORTH CAROLINA STATE BOARD OF EDUCATION
Policy Manual

Policy Identification
Priority: High Student Performance
Category: Standard Course of Study
Policy ID Number: HSP-F-017

Policy Title: Science Laboratory Safety

Current Policy Date: 08/04/2005

Other Historical Information:

Statutory Reference:

Administrative Procedures Act (APA) Reference Number and Category:

Responsibility-The superintendent of the Local Education Agency (LEA) has the ultimate responsibility for the Chemical Hygiene Plan (CHP) for the LEA and must, with other employees, see that it is implemented and provided with continuing support.

Purpose of the CHP-Standard operating procedures, applicable policies, state and federal laws, and professional standards, personal protective equipment and laboratory equipment are to detail required precautions intended to minimize employees of the LEA from health hazards associated with hazardous chemicals used in the science laboratories of the LEA. The CHP is a written program developed and implemented by the LEA.

Scope-Aspects of the CHP should address, include, but are not limited to:
1. identification of hazardous chemicals;
2. minimization of exposure to employees;
3. development of an outline of the responsibilities of the LEA, other administrators, Chemical Hygiene Officer, employees, other identified stakeholders;
4. discussion of safe procedures;
5. determination of lab facilities and equipment needed;
6. discussion of procedures for procurement, distribution, storage of chemicals;
7. actions to address chemical exposure problems;
8. implementation of a plan for monitoring safety equipment and storage areas;
9. establishment of a process for recording and retaining chemical hazard records;
10. establishment of a plan for posting chemical hazard signs and labels;
11. development of a written emergency plan to address accidents involving chemicals;

12. establishment of a science laboratory safety training program for stakeholders;
13. development of a chemical waste disposal program;
14. any additional guidelines for a science laboratory safety program necessary for compliance with laws, codes, and professional standards.

Local Availability of the CHP-The plan will be available to all employees for review and copies located in other areas within the LEA as deemed appropriate by the superintendent.

Local Review of the CHP-The plan will be minimally reviewed on an annual basis by a committee appointed by the superintendent and updated as necessary.

Accountability to the State Board of Education (SBE)-A copy of the updated CHP for each LEA must be submitted to the SBE office by January 31 of each school year.

Responsibilities of the SBE and DPI- DPI will monitor the submission and implementation of the LEA plans. Any LEA may request a DPI review of their CHP and the LEA's Comprehensive Science Safety Program. If compliance is validated, the LEA will be awarded with recognition of compliance by the State Board of Education. DPI will serve as a clearinghouse for dissemination of information necessary to conduct annual updates. Technical assistance to plan a comprehensive science laboratory safety program will be available to the LEAs by DPI staff or SBE endorsed professional development providers.

Professional Development-Recognizing the liability for incorrect information, providers of Science Laboratory Safety professional development in North Carolina Public Schools must apply for endorsement. The project manager of the Science Laboratory Safety Program for DPI will manage the endorsement process. Minimum criteria for the DPI endorsement to provide Science Laboratory Safety professional development in North Carolina Public Schools must include:

- a minimum of 10 years teaching science in North Carolina (preferably chemistry)
- a minimum of a Master's Degree in Science Education, Chemistry or related science
- a minimum of 40 hours safety training using the N.C. Total Science Safety System©
- a minimum of 40 hours NIOSH safety training for schools (not industry)
- demonstration of ability to lead a science laboratory safety training that is supervised either by DPI staff or a DPI endorsed provider. Training must also use DPI approved materials.
- completion of planning a comprehensive science laboratory safety program for an LEA that is supervised either by DPI staff or a DPI endorsed provider.

Science IS–INQUIRY...Safely

North Carolina School Board of Education Policy
NC G.S. § 115C-105.47
"Safe, Orderly & Caring Schools Assessment Inventory"

Requirements Checklist

At LEA / school level:

_____ Established policy and procedure to enable science teacher to advise the administration of conditions deemed unsafe and in need of correction

_____ Annual updates on safety regulations and / or when a procedure or chemical is deemed unsafe

_____ MSDS accessible to teachers for all chemicals used

_____ Prohibitions on the use of pathogens or procedures / materials in any lab above Biosafety Level 1

_____ Compliance with OSHA Right-to-Know legislation

_____ Compliance with Bloodborne Pathogen Regulations

_____ Compliance with Laboratory Standards—Chemical Hygiene Plan

_____ Compliance with safety rules and guidelines established by the profession

_____ Teachers who model and students that are taught to properly manipulate scientific equipment

_____ Teachers who model and students that are taught to care for and handle live organisms

Occupational Exposure to Hazardous Chemicals

NCSBA Policy Code 7265

It is the policy of the board to comply with federal regulations and state statutes regarding hazardous chemicals as set forth in the Federal Register, 29 CFR 1910.1450 and the North Carolina Administrative Code, 13 NCAC 7A.O606, by attempting to limit occupational exposure of employees to hazardous chemicals or other potentially hazardous materials that could cause injury or death.[1]

A. Universal Precautions

Universal precautions will be in force at all times. All chemicals and unknown substances will be handled as if hazardous. The program standards for the control of hazardous chemicals as outlined in the Occupational Safety and Health Act (OSHA) rule, "Occupational Exposure to Hazardous Chemicals in Laboratories" (standard 1910.1450), the North Carolina Administrative Code, and/or the most current standards available will be followed.

B. School District Requirements

The superintendent will ensure that:

1. All elements of a Chemical Hygiene Plan are met including, but not limited to, standard operating procedures for handling hazardous chemicals such as the use of personal protective equipment and hygiene practices, control measures to reduce employee exposure to hazardous chemicals, standards for laboratory protective equipment, identification of laboratory procedures and activities requiring prior approval, proper employee training, and the assignment of a Chemical Hygiene Officer;[2]

2. Labels on incoming containers of hazardous chemicals are not removed or defaced, all material safety data sheets received with incoming shipments are maintained and readily accessible to employees, and a current inventory of chemicals is in use and maintained;[3]

3. All employees are trained and apprised of the hazards of chemicals present in their work area and understand how to report unsafe conditions and how to perform proper cleanup.[4]

4. All employees have access to a copy of the Hazardous Chemicals Policy and Chemical Hygiene Plan;[5]

5. Science laboratories comply with the OSHA Right-to-Know legislation, bloodborne pathogens regulations (see policy 7260, Occupational Exposure to Bloodborne Pathogens), laboratory standards as provided by the Chemical Hygiene Plan and other safety rules and guidelines of the profession;[6]

6. Records are established and maintained of any measurements taken to monitor employee exposures and any medical consultations or examinations required; and

7. This policy is reviewed and updated annually.

D. Testing

Whenever an event takes place in the work area such as a spill, leak, explosion or other occurrence resulting in the likelihood of a hazardous exposure the employee exposed to the hazard may receive a medical examination at the school district's expense.[8]

Science IS–INQUIRY...Safely

Mercury Presents a Significant Hazard

Mercury, mercury compounds and mercury-containing instruments are hazardous substances that must not be in K-12 schools. Mercury spills require special mercury spill kits and / or HAZMAT Team clean up. Never vacuum mercury with a vacuum cleaner. Vacuuming mercury creates an even more hazardous situation because it becomes an aerosol. Such spills not only contaminate the spill area but more than likely will be transported into other areas of the school and even to homes of students.

Take heed. Get rid of all mercury, mercury compounds or mercury-containing instruments in K-12 schools by appropriate waste disposal methods. Call your LEA Science Consultant or LEA Facilities Director.

Get informed about the hazards of mercury. Visit these websites:
www.ilpi.com
www.epa.gov
www.arsdr.cdc.gov

MERCURY VAPOR INCIDENT
Granville County Schools, NC,
October 2005

The release of mercury vapors into classrooms on two wings of a 1250-student secondary school required closure of the school for an EPA-guided cleanup. Additionally, two students each took about 3 ounces of mercury home necessitating investigation and cleanup of their residences where vapors levels were found to be greater than 50,000 ng/m^3, exceeding the safe level. Buses were also checked but did not approach EPA action level.

Out of 75 school classrooms in the building, 19 had average mercury vapor areas equal to or greater than EPA action level for air (3,000 ng/m^3). However, the average mercury vapor level in the 19 impacted classrooms was 10 times below the levels reported to be associated with health effects. The EPA mercury school and home clean up level is 1000ng/m^3. This school level assumes 5-days-a-week, 8-hours-a-day exposure. Note: Normal ambient mercury vapor levels for the outside air, no impact classrooms, and classrooms at a nearby elementary school ranged from 80 – 150 ng/m^3.

Mercury is highly toxic and carries a Health Hazard Rating of 3. Adverse effects chiefly result from inhalation exposure to mercury or mercury vapor. Mercury is not well absorbed through the skin or gastrointestinal tract. Ingestion of mercury usually does not produce acute toxicity unless a GI fistula or other GI inflammatory disease is present, or the mercury is retained for a prolonged period in the GI tract. Handling of mercury can result in allergic dermatitis.

Symptoms which may appear within a few hours of mercury vapor exposure include weakness, chills, metallic taste, nausea, vomiting, abdominal pain, diarrhea, headache, tremor, visual disturbances, shortness of breath, cough, and chest tightness. Long-term exposure to mercury vapor can lead to more serious psychiatric effects including depression, loss of self confidence, shyness, anger, irritability, anxiety, insomnia, aggressiveness, nervousness, and / or impatience. Chronic vapor exposure can also lead to kidney failure.

Aggravation of Pre-existing Conditions:
Individuals with previous nervous disorders, impaired kidney function, respiratory function, allergy history or a known sensitization to mercury may be more susceptible to the effects of the substance.

While the mercury incident was a major disruption to instruction and operations, the good news—and the most overriding factor—is that no students or staff members reported health effects due to the release of mercury vapor at the school.

The cleanup process involved a team of EPA-dedicated contractors who monitored the mercury vapor levels throughout the 6-day time period (3 missed student days).

Linda M. Stroud, Ph.D. PO Box 31666 Raleigh, NC 27622-1666 919-881-0282 ph 919-789-4477 fax LMSTROUD@sciencesafetyconsulting.com www.sciencesafetyconsulting.com
©2006 Science & Safety Consulting Services, Inc.

Cleaning the school involved:

- Locating mercury product, proper removal of the product
- Providing heat and ventilation to speed evaporation
- Cleaning hard surfaces
- Removal of soft surfaces such as carpet and mops from impacted areas
- Estimated cost of clean up was $3000 - $4,000 per classroom

If a mercury spill occurs at school, EPA recommends:

- Evacuate students and allow no one to return to the classroom in order to eliminate exposure and prevent tracking of product into other rooms.
- Isolate the area.
- Lower the temperature.
- Turn off HVAC system for impacted classroom.
- Open windows.
- Put all contaminated material including clothing, shoes, and bookbags in a sealed plastic bag.
- Contact local emergency management (fire department and public health officials) for cleanup directives. Inform the emergency management team if students are believed to have carried any mercury to a home or any place outside of the impacted area.

Do Not...

- **Do not** use traditional cleaning procedures such as sweeping, mopping and vacuuming. These procedures increase the spread throughout any facility that has a common HVAC System.
- **Do not** pour mercury down a drain or bury it.
- **Do not** launder clothes and other materials contaminated with mercury.
- **Do not** walk around in shoes that are possibly contaminated with mercury.
- **Do not** attempt to clean spills greater than 1/2 gram of mercury (amount found in a mercury thermometer).

Mercury cleanup is expensive. It has been estimated that the cost to clean up one-half gram of mercury from a broken thermometer is $75-$110. (Foster, Barbara; JCE Vol 82 No. 2 February 2005). An increasing number of elemental mercury spills have been reported to EPA in recent years. In 2004, six EPA regional offices responded to mercury spills that included 12 emergency removals from schools. These spills create public health issues and generally necessitate costly cleanups. EPA cleanup costs for elemental mercury in 2004 ranged from $1,000 to $200,000 per site. That year, EPA also funded local government efforts to cleanup mercury spills at several schools. State and local governments and local school districts also contributed funds to the cleanups. A more costly site was Ballou High School in Washington, DC which amounted to $1,500,000.

Small amounts of mercury may be cleaned up with special mercury cleanup kits from scientific supply houses. Zinc powder may be used to amalgamate the mercury; however, a respirator is required for this method. The contaminated material will still require proper disposal. Two tablespoons of mercury weighs one pound.

EPA provides information for school administrators, faculty, staff, local health jurisdictions, and parent groups on how to reduce the hazards of mercury on children's health, avoid chemical liabilities, develop planning tools, and establish collection programs for mercury. Mercury is used in many items found in schools, such as thermometers, barometers, switches, thermostats, flowmeters, lamps, and laboratory reagents in chemistry and science labs. Two major causes of mercury spills at schools are improper storage and mishandling of these items. EPA encourages schools to prevent spills by removing all mercury compounds and mercury-containing equipment, and by discontinuing their use. Professional organizations such as National Science Teachers Association (NSTA) do not support the use of mercury, mercury compounds or mercury containing instruments in schools.

In the 2005 North Carolina Legislative Session, House Bill 1531 was introduced to remove mercury from North Carolina K-12 schools. It is expected that a new bill for removal of all mercury, mercury compounds and mercury-containing instruments will be introduced in the 2006 North Carolina Legislative Session.

Linda M. Stroud, Ph.D. PO Box 31666 Raleigh, NC 27622-1666 919-881-0282 ph 919-789-4477 fax LMSTROUD@sciencesafetyconsulting.com www.sciencesafetyconsulting.com
©2006 Science & Safety Consulting Services, Inc.

States that prohibit mercury, mercury compounds, and mercury containing instruments in schools are:

- Michigan
- Indiana
- Massachusetts
- Kansas
- Maryland
- Maine
- Wisconsin
- Minnesota
- Oregon
- Vermont
- Virginia

Some states stipulate that if no reasonably acceptable, mercury-free alternative exists for an instrument, the school may use the instrument that contains the lowest mercury content available on the market.

For more information on the Granville County incident, visit the Granville County Schools' website at: www.gcs.k12.nc.us.

For more information regarding these recommendations and health risks from exposure to mercury, call Dr. Luanne Williams with the North Carolina Department of Health and Human Services at 919-707-5912.

For more information on mercury in schools, visit: www.epa.gov

The EPA website was a source for some of the preceding information on the topic of mercury.

FISHER MERCURY EXCHANGE PROGRAM

Fisher Science Education, in conjunction with Ever Ready Thermometer Co., Inc. (ERTCO), is offering a program to help customers recycle their mercury thermometers. This program offers the opportunity to trade in a mercury thermometer or sling psychrometer each time a new non-mercury thermometer or sling psychrometer is purchased from Fisher Science Education. ERTCO will take your old mercury instruments and properly reclaim them free of charge.

1. Place an order for a Fisher Science Education Ever-Safe Thermometer or non-mercury sling psychrometer.
2. Call ERTCO at 1-800-453-7826 for a return authorization number. Then fax your Sales Invoice (for proof of purchase) to (973) 812-7250.
3. ERTCO will send you a "Customer Verification Statement" to be completed and returned with your mercury instrument for recycling.
4. ERTCO will accept an equal quantity of any mercury thermometer for each new Fisher non-mercury instrument purchased.
5. ERTCO will provide approved shipping tubes and customers are responsible for properly packaging mercury instruments designated for recycling. Any damaged or broken units will not be accepted and will be returned to the customer for appropriate handling. (The customer remains responsible for broken or damaged units). Please ensure that all packaging complies with federal and state regulations to minimize breakage of instruments. Customer compliance is mandatory.

DC HAZMAT responds to mercury contamination

Ballou High School, Washington, DC, 2003

On October 2, 2003, the Washington, DC, Fire Department HAZMAT Unit responded to an emergency call unlike any call Ballou High School had ever made. What the DC HAZMAT Unit found that afternoon proved to be the beginning of a long, exhausting search for, and clean up of, an elemental mercury spill. A student had obtained 250 milliliters of liquid elemental mercury from a science laboratory and had sold some of it to other students. Students had to be dismissed. By the time the DC HAZMAT Unit and the DC public health officials arrived, it was too late to contain all the spills; varying amounts of mercury were found in the classrooms, gymnasium, and cafeteria. EPA responded by establishing a mobile command post, measuring mercury air concentrations and noting visual contamination of the science laboratory, cafeteria, gym and administration areas.

Contamination did not stop at the school. Students unknowingly carried mercury on contaminated shoes and clothing through the streets, onto city and school buses, and into their homes. Eleven homes and one common area were found to be contaminated and about 16 families were displaced for a month. EPA assisted with screening of residences. As a result of the spill, Ballou High School was closed for 35 days and over 200 homes were tested for mercury contamination. Total cleanup costs were about $1,500,000.

Mercury spill clean up is expensive. Special disposal is required.

Look at the MSDS for the health hazards of mercury. Exposure can occur by skin, inhalation and ingestion. Some symptoms of methylmercury are as follows: impairment of the peripheral vision; disturbances in sensations ("pins and needles" feelings, usually in the hands, feet, and around the mouth); lack of coordination of movements; impairment of speech, hearing, walking; and muscle weakness. People concerned about their exposure to methylmercury should consult their physicians.

Linda M. Stroud, Ph.D. PO Box 31666 Raleigh, NC 27622-1666 919-881-0282 ph 919-789-4477 fax LMSTROUD@sciencesafetyconsulting.com www.sciencesafetyconsulting.com

FLINN SCIENTIFIC INC.

"Your Safer Source for Science Supplies"

Material Safety Data Sheet (MSDS)

MSDS #: 506.00
Revision Date: November 25, 2002

Section 1 — Chemical Product and Company Identification

Mercury

Flinn Scientific, Inc. P.O. Box 219 Batavia, IL 60510 (800) 452-1261
CHEMTREC Emergency Phone Number: (800) 424-9300

Section 2 — Composition, Information on Ingredients

Mercury
Synonym: quicksilver, hydragyrum
CAS#: 7439-97-6

Section 3 — Hazards Identification

Silvery, very heavy metallic liquid. Odorless.
Highly toxic by ingestion, skin absorption and inhalation of fume or vapor. Absorbed by respiratory and intestinal tract. Corrosive to skin, eyes and mucous membranes.

FLINN AT-A-GLANCE
Health-3
Flammability-0
Reactivity-1
Exposure-3
Storage-1

0 is low hazard, 3 is high hazard

Section 4 — First Aid Measures

Call a physician, seek medical attention for further treatment, observation and support after first aid.
Inhalation: Remove to fresh air at once. If breathing has stopped give artificial respiration immediately.
Eye: Immediately flush with fresh water for 15 minutes.
External: Wash continuously with fresh water for 15 minutes.
Internal: Rinse out mouth, give 1 to 2 cups of water or milk, induce vomiting. After vomiting, give mixture of 2 Tbs. of activated charcoal mixed with one cup of water. Call a physician or poison control at once.

Section 5 — Fire Fighting Measures

Non combustible liquid.
When heated to decomposition, emits toxic fumes of Hg.
Fire Fighting Instructions: Use triclass, dry chemical fire extinguisher. Firefighters should wear PPE and SCBA with full facepiece operated in positive pressure mode.

NFPA CODE
None Established

Section 6 — Accidental Release Measures

Spillage may be a toxic hazard because of proliferation of droplets. Cleanup requires special care. Clean up all droplets and transfer to a safe container. Use zinc dust to amalgamate the mercury into a solid. Ventilate and wash the area in which the spill occurs.

Section 7 — Handling and Storage

Flinn Suggested Chemical Storage Pattern: Inorganic #1. Store with metals and metal hydrides.
Dispense mercury in a plastic tray so that spillage can easily be recovered. Enclose the glass or plastic container with the mercury in a Flinn Chem-Saf bag. This will eliminate the mercury from easily escaping.

Section 8 — Exposure Controls , Personal Protection

Avoid contact with eyes, skin and clothing. Wear chemical splash goggles, chemical-resistant gloves and chemical-resistant apron. Use ventilation to keep airborne concentrations below exposure limits. Always wear a NIOSH-approved respirator with proper cartridges or a positive pressure, air-supplied respirator when handling this material in emergency situations (spill or fire).
Exposure guidelines: STEL 0.03d mg/m3; ceiling 0.1 mg/m3 (NIOSH, ACGIH)

© 2002 Flinn Scientific, Inc. All Rights Reserved.

Section 9 — Physical and Chemical Properties

Silvery, very heavy liquid, metal. Odorless.
Solubility: Soluble in liquids. Soluble in nitric acids.
Insoluble in water, alcohol, and ether.
Formula: Hg
Formula Weight: 200.59

Specific Gravity: 13.59
Melting Point: -38.85 C
Boiling Point: 3569 C

Section 10 — Stability and Reactivity

Avoid ammonia, aluminum, potassium, lithium, sodium, bromine, halogens, sulfuric acid, oxidizing agents, and nitric acid.
Shelf life: Good, if stored properly.

Section 11 — Toxicological Information

Acute effects: Highly toxic, corrosive
Chronic effects: N.A.
Target organs: Skin, respiratory system, CNS, kidneys, eyes

ORL-RAT LD50: N.A.
IHL-RAT LC50: N.A.
SKN-RBT LD50: N.A.

N.A. = Not available, not all health aspects of this substance have been fully investigated.

Section 12 — Ecological Information

Data not yet available.

Section 13 — Disposal Considerations

Please consult with state and local regulations.
Returning mercury to a mercury reprocessor is one option.

Section 14 — Transport Information

Shipping Name: Mercury
Hazard Class: 8, Corrosive
UN Number: UN2809

N/A = Not applicable

Section 15 — Regulatory Information

TSCA listed. EINECS-listed, RCRA U151.

Section 16 — Other Information

Consult your copy of the Flinn Scientific Catalog/Reference Manual for additional information about laboratory chemicals. This Material Safety Data Sheet (MSDS) is for guidance and is based upon information and tests believed to be reliable. Flinn Scientific Inc. makes no guarantee of the accuracy or completeness of the data and shall not be liable for any damages relating thereto. EXHIBIT G

Mercury Education and Awareness

April 11, 2006

Division of Pollution Prevention and Environmental Assistance (DPPEA)

For the Romans, Mercury was the deity of commerce and trade, and the patron deity of merchants. That's interesting trivia, especially because mercury is an element that is contained in many products we all purchase and use.

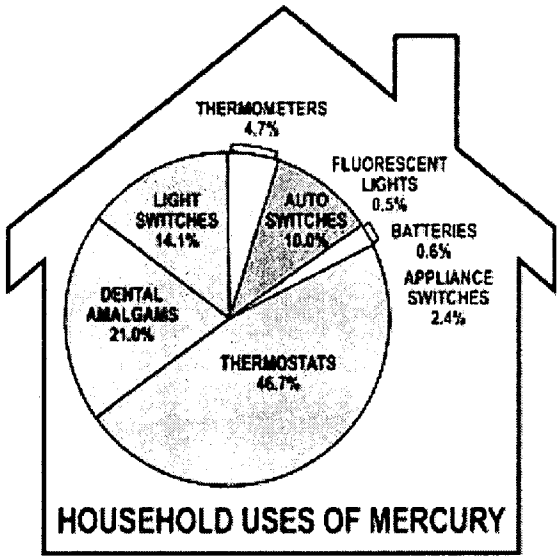

Table 5. Mercury in Common Household Products and Toiletries

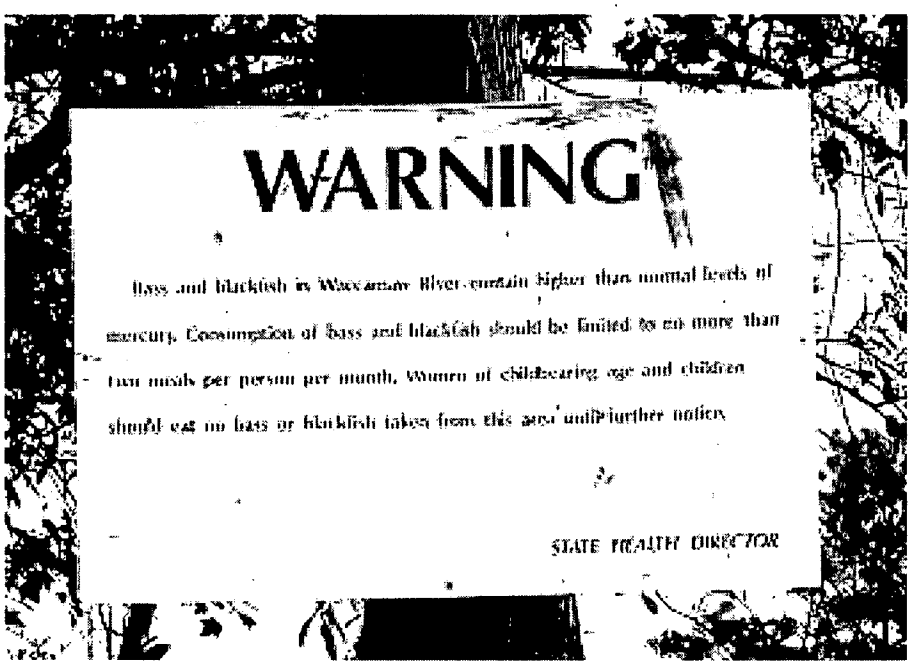
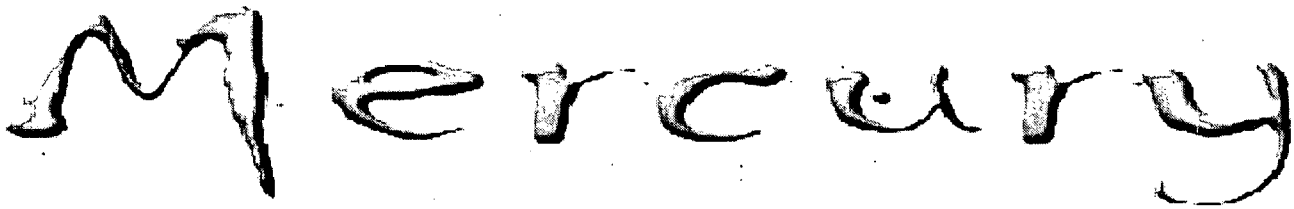
Product Type	Number Products Tested	Range of Concentration (ng/L)	
		Minimum	Maximum
Toothpaste	5	490	3,800
Shaving Cream	4	90	670
Deodorant/Antiperspirant	2	1,010	1,350
Soap/Shampoo	5	835	25,000
Toilet Tissue	3	220	1,510
Laundry Detergent	6	560	2,490
Bleach	2	<200	6,170
Dish/Dishwasher Detergent	4	560	1,320
Drain Cleaners	2	2,970	5,490
Soft Drinks/Drink Mixes[1]	3	25	6,070
Fruit Juices	3	789	3,560
Fruit/Vegetables[2]	4	116	874
Rice/Grains	2	26	<200
Processed Meats	6	<100	290
Beef/Chicken	2	29	<40
Condiments[3]	4	133	1,956
Food Coloring[4]	4	96	137,000



[1] With yellow or red dyes.
[2] Fresh, frozen and canned.
[3] Salt and sugar.

From: Association of Metropolitan Sewerage Agencies (AMSA) report, *Evaluation of Domestic Sources of Mercury*, published in August 2000.

NOTE: The Division of Water Quality has established a freshwater water quality limit for mercury at 12 ng/l (0.0120 ug/l).



Products containing mercury are thermostats, fluorescent lamps, barometers, switches, relays, and button batteries. Mercury containing solid waste, burned in a municipal solid waste or medical waste incinerator, releases mercury to the atmosphere. Landfilled wastes create mercury-containing leachate. Land-applied sludge and ash contain quantities of mercury that may runoff into receiving streams.

Mercury is a persistent and conservative material. Once altered into the form of methylmercury by biological activity, it is absorbed into the tissues of fish.

Source Reduction is part of solution. Education and awareness is how to start!

Division of Pollution Prevention's Mercury Webpage

Home | General Information | Health Effects | Household Tips | In the Schools | Government Projects

This Web site is designed to offer general information on mercury to the citizens of North Carolina. Included are links to documents and Web sites containing general mercury information, information on mercury found in the home (including how to clean up a mercury spill), information on mercury found in schools, information on the health effects of mercury, mercury emissions, how to perform a mercury audit, and mercury reduction options. Some of the information on each different page included in this Web site may overlap, so you may want to check more than one if you are searching for specific information.

Leave Feedback

The Division of Pollution assists the public, businesses, industries, and municipalities with mercury reduction. Our staff frequently responds to mercury related requests for information and technical assistance. Our mercury webpage is a portal for vital information needed to understand this complex issue and to deal with daily situations encountered by North Carolinians. We are not a scientific authority on mercury - we are practitioners in education and fostering a culture of source reduction know-how.

Examples of DPPEA Hg Assistance

- Site-specific alternatives to mercury-containing products.
- Community Business Assistance Section tracks recycling markets for mercury-containing items: thermostats, auto switches, medical devices, cathode ray tubes, fluorescent lights, dental amalgam waste, etc.
- DPPEA partners with the Waste Reduction Resource Center (WRRC) to provide information specific to the needs of particular core sectors:
  - Dental;
  - Healthcare;
  - Automotive;
  - Homeowners.
- Partnering with municipalities to reduce mercury. The City of Gastonia held a Mercury Collection Day and Thermometer Exchange resulting in removal of 894 mercury-containing items from the environment for recycling, plus four containers of liquid mercury. The Town of Tryon's Mercury Collection Day collected 175 pounds of mercury-containing materials.
- Working with partners in DENR's Environmental Stewardship Initiative on the issue of environmental sustainability by emphasizing energy efficiency and device retrofitting - Promoting the concept of LEED: Leadership in Energy and Environmental Design.

waste minimization FOCUS

Providing pollution prevention assistance to North Carolina industries since 1984

Mercury: The N.C. Connection

According to the N.C. Department of Health and Human Services, in all waters south and east of Interstate 85 , citizens are advised to limit consumption of certain species of fish to a few meals per month; pregnant women and children are cautioned to avoid eating some fish completely. The concern is mercury. While there are no postings in western North Carolina to date, and the fish there are safe to eat, mercury is a problem even in the mountains (For specific details on N.C. fish advisories please visit http://www.epi.state.nc.us/epi/fish).

Mercury, sometimes known as quicksilver, is a naturally occurring metal. It is released into the environment by volcanoes, forest fires and other natural sources. Human activities also emit significant quantities of mercury by burning coal, smelting ore and mining. Once released into the atmosphere, elemental mercury vapor is capable of long-range transport through the upper atmosphere over thousands of miles. It can then be "washed" out of the air by precipitation "scrubbing," or fall out in dry conditions through a process called dry depo-sition. This means that although a local mercury source may very well increase mercury levels in local rivers and lakes, the lack of a local source does not mean that mercury will be nonexistent in the water. See the above depiction of the mercury cycle from the air to the water to the fish population.

Work is underway in North Carolina to minimize mercury releases to our environment. Businesses, industries and citizens can go to DPPEA's Web site at http://www.p2pays.org/mercury for a wide selection of resources on mercury and its impacts in North Carolina. This issue provides the latest information from the Department of Environment and Natural Resources (DENR) and its multi-divisional efforts to identify and minimize the state's mercury sources.

Referred to:	Environment and Natural Resources.	

April 21, 2005

A BILL TO BE ENTITLED

AN ACT TO REDUCE THE QUANTITY OF MERCURY THAT IS RELEASED INTO THE ENVIRONMENT, THAT IMPACTS NATURAL RESOURCES, AND THAT HARMS THE PUBLIC HEALTH OF THE CITIZENS OF THE STATE.

The General Assembly of North Carolina enacts:

SECTION 1. Article 9 of Chapter 130A of the General Statutes is amended by adding a new Part to read:

"Part 6. Mercury Reduction and Education Act of 2005.

"**§ 130A-310.50. Short title.**

This Part may be cited as the Mercury Reduction and Education Act of 2005.

"**§ 130A-310.51. Definitions.**

(a) Definitions. – As used in this Part:

(1) "Automotive mercury switch" includes a convenience switch, such as a switch for a trunk or hood light, and a mercury switch in antilock brake systems.

(2) "Health care facility" includes a hospital, nursing home, extended care facility, long-term care facility, clinical or medical laboratory, State or private health or mental institution, clinic, physician's office, or health maintenance organization.

(3) "Manufacturer" includes any person, firm, association, partnership, corporation, governmental entity, organization, or joint venture that produces a mercury-added product or an importer or domestic distributor of a mercury-added product produced in a foreign country. In the case of a multicomponent product containing mercury, the manufacturer is the last manufacturer to produce or assemble the product. If the multicomponent product or mercury-added product is produced in a foreign country, the manufacturer is the first importer or domestic distributor.

(4) "Mercury-added button-cell battery" means a button-cell battery to which the manufacturer intentionally introduces mercury for the operation of the battery.

(5) "Mercury-added novelty" means a mercury-added product intended mainly for

personal or household enjoyment or adornment. Mercury-added novelties include, but are not limited to, items intended for use as practical jokes, figurines, adornments, toys, games, cards, ornaments, yard statues and figures, candles, jewelry, holiday decorations, items of apparel, and other similar products. Mercury-added novelty does not include games, toys, or products that require a button-cell or lithium battery, liquid crystal display screens, or a lamp that contains mercury.

(6) "Mercury-added product" means a product, commodity, or chemical, or a product with a component that contains mercury or a mercury compound intentionally added to the product, commodity, or chemical in order to provide a specific characteristic, appearance, or quality, or to perform a specific function, or for any other reason. Mercury-added products include, but are not limited to, mercury thermometers, mercury thermostats, and mercury switches in motor vehicles.

(7) "Mercury manometer" means a mercury-added product that is used for measuring blood pressure.

(8) "Mercury thermometer" means a mercury-added product that is used for measuring temperature.

(9) "Retailer" means a retailer of a mercury-added product.

(10) "Wholesaler" means a wholesaler of a mercury added product.

"**§ 130A-310.52. Purpose.**

The purpose of this Part is to reduce the quantity of mercury that is released into the environment, that impacts natural resources, and that harms the public health of the citizens of the State.

"**§ 130A-310.53. Scope.**

Nothing in this Part shall apply to any of the following:

(1) A crematory regulated under Article 13F of Chapter 90 of the General Statutes.

(2) The following items regulated by the United States Food and Drug Administration:

a. Prescription drugs regulated under the Federal Food, Drug, and Cosmetic Act (21 U.S.C. § 301, et seq.).

b. Any substance that may be lawfully sold over the counter without a prescription regulated under the Federal Food, Drug, and Cosmetic Act (21 U.S.C. § 301, et seq.).

c. Medical equipment or reagents used in medical or research tests regulated under the Federal Food, Drug, and Cosmetic Act (21 U.S.C. § 301, et seq.).

d. Biological products regulated under the Public Health Service Act (42 U.S.C. § 262, et seq.).

"**§ 130A-310.54. Prohibition on sale of certain mercury-added products.**

(a) No person may sell, offer for sale, or distribute for sale or use in this State a mercury-added novelty. A manufacturer of mercury-added novelties shall notify all retailers that sell the novelties about the provisions of this subsection and how to properly dispose of any remaining mercury-added inventory.

(b) No person may sell, offer for sale, or distribute for sale or use in this State a manometer used to measure blood pressure or a thermometer that contains mercury. A

manufacturer of thermometers that contain mercury shall notify all retailers that sell the product about the provisions of this subsection and how to properly dispose of any remaining thermometer inventory. This subsection does not apply to any of the following:

(1) An electric thermometer with a button-cell battery containing mercury.

(2) A thermometer that contains mercury and that is used for food research and development or food processing, including the processing of meat, dairy products, and pet food.

(3) A thermometer that contains mercury and that is a component of an animal agriculture climate control system or an industrial measurement system or for use in veterinary medicine.

(4) A thermometer or manometer that contains mercury that is used for calibration of other thermometers, manometers, apparatus, or equipment.

(5) A thermometer that is provided by prescription. A manufacturer of a mercury thermometer shall supply clear instructions on the careful handling of the thermometer to avoid breakage and proper cleanup should breakage occur.

(6) A manometer or thermometer sold or distributed to a hospital or a health care facility controlled by a hospital if the hospital has adopted a plan for mercury reduction that has been approved by the Department.

(c) No person may sell, install, or reinstall a commercial or residential thermostat that contains mercury unless the manufacturer of the thermostat conducts or participates in a thermostat recovery or recycling program designed to assist contractors in the proper disposal of thermostats that contain mercury in accordance with 42. U.S.C. § 6901, et seq.

(d) No person may sell, offer for sale, or distribute for sale or use in this State a motor vehicle of model year 2009 or later, if the motor vehicle contains an automotive mercury switch.

(e) Nothing in this section shall restrict the ability of a manufacturer, importer, or domestic distributor from transporting products through the State or storing products in the State for later distribution outside of the State.

"**§ 130A-310.55. Fluorescent lamp labelling.**

(a) A manufacturer, wholesaler, or retailer shall not knowingly sell at retail a fluorescent lamp if the fluorescent lamp contains mercury unless the fluorescent lamp is labeled in accordance with subsection (b) of this section.

(b) A fluorescent lamp is considered labeled for purposes of subsection (a) of this section if the lamp is labeled in compliance with the labelling requirements of another state or the lamp has a label that does all of the following:

(1) Displays the internationally recognized symbol for the element mercury.

(2) Informs the purchaser that mercury is present in the lamp.

(3) Explains that the lamp should be disposed of according to applicable federal, State, and local laws.

(4) Provides a tol -free telephone number and a uniform resources locator internet address to a Web site that contains information on applicable disposal laws.

(c) The requirements of this section do not apply to products containing mercury-added lamps.

"**§ 130A-310.56. Purchase of products by the Department of Administration.**

The Department of Administration shall give priority and preference to the purchase of equipment, supplies, and other products that contain no mercury-added compounds or components unless there is no economically feasible nonmercury-added alternative that performs a similar function, or the product containing mercury is designed to reduce electricity

consumption by at least forty percent (40%) and there is no nonmercury or lower-mercury alternative available that saves the same or a greater amount of electricity as the exempted product. In circumstances where a nonmercury-added product is not available, preference shall be given to the purchase of products that contain the least amount of mercury added to the product necessary for the required performance.

"**§ 130A-310.57. Prohibit mercury in primary and secondary education.**

(a) A school may not purchase bulk elemental mercury or mercury compounds for use in teaching in primary or secondary schools.

(b) All primary and secondary schools shall remove and properly dispose of all bulk elemental mercury and bulk mercury compounds used as teaching aids in science classrooms, not including barometers.

"**§ 130A-310.58. Mercury education and information.**

(a) The Department shall develop educational materials and an education plan for schools, local governments, businesses, and the public on the hazards caused by the release of mercury into the environment and on the proper disposal methods for mercury and mercury-added products.

(b) The Department is authorized to participate in regional or multistate clearinghouses to assist in carrying out the provisions of this Part. A clearinghouse may also be used to study notification and label requirements, to develop education and outreach activities, and to maintain a list of all mercury-added products."

SECTION 2.(a) There is appropriated from the General Fund to the Department of Environment and Natural Resources the sum of one hundred thousand dollars ($100,000) for the 2005-2006 fiscal year to implement G.S. 130A-310.58, as enacted by Section 1 of this act.

SECTION 2.(b) There is appropriated from the General Fund to the Department of Public Instruction the sum of two hundred thousand dollars ($200,000) for the 2005-2006 fiscal year and the sum of two hundred thousand dollars ($200,000) for the 2006-2007 fiscal year to implement G.S. 130A-310.57(b), as enacted by Section 1 of this act. It is the intent of the General Assembly that the appropriation made by this subsection be a continuing appropriation through the 2008-2009 fiscal year. It is the intent of the General Assembly that all bulk elemental mercury and bulk mercury compounds be removed from all primary and secondary schools and properly disposed of as provided in G.S. 130A-310.57(b) by July 1, 2009.

SECTION 3. Except as provided in this section, Section 1 of this act becomes effective January 1, 2006. G.S. 130A-310.56, as enacted by Section 1 of this act, becomes effective January 1, 2007. G.S. 130A-310.54, as enacted by Section 1 of this act, becomes effective January 1, 2008. Section 2 of this act becomes effective July 1, 2005. Section 3 of this act is effective when it becomes law.

(DRAFT) Seller's Ocean Hazards Disclosure Form

In accordance with N.C.G.S. § 39-51, the following are disclosures by the Seller to a prospective buyer about the Ocean Hazards that may exist on this property. This form is intended to make prospective buyers aware of the special risks and conditions associated with development in this area. The North Carolina Coastal Resources Commission has implemented rules for coastal development intended to minimize, but not eliminate, property loss from hazards.

Ocean Erodible Areas

Property on the oceanfront or adjacent to an inlet has a moving property line along the shore that is subject to the forces of nature. Short-term erosion associated with storms (*e.g.*, hurricanes, nor'easters, tropical depressions, etc.) is often severe because large quantities of sand can be moved quickly offshore from the beach and dunes, causing the shoreline to recede much further landward. As conditions calm, the shoreline may or may not return to its original profile.

The coastal shoreline is also subject to long-term erosion, caused by the daily forces of wind, waves, tides and a gradual rising sea level (approximately one foot per 100 years). Annual erosion rates along N.C.'s coast averaged over long-term periods of 50 years or more can range up to 20 feet per year. These average annual long-term erosion rates determine *erosion setbacks* for oceanfront construction. Erosion setbacks for a given project are based on the type and size of development activity. For most single-family homes, setbacks are determined by multiplying the long-term average annual erosion rate by 30, with a minimum setback of 60 feet.

The setback is measured landward from the primary dune, the frontal dune, or the first line of stable natural vegetation. If the beach adjacent to your property was part of a large-scale beach nourishment project, the line from which setbacks are measured is a line denoting where the vegetation existed or was located before the temporary benefits from the project occurred. A state or local Coastal Management representative determines setbacks on a case-by-case basis when development is proposed.

The *average annual long-term erosion rate setback* for this property is available on maps located in the County Clerk of Court's office. The most current erosion setback maps are also available on Coastal Management's web site at *http://dcm2.enr.state.nc.us/Maps/ER_1998/SB_Factor.htm.*

Erosion Control Measures

The state prohibits permanent shoreline stabilization devices on the oceanfront. Included in this ban are seawalls, groins and other hardened structures. Temporary erosion control structures (*sandbags*) may be allowed only to protect *imminently threatened* structures. A structure is classified as imminently threatened when it is located less than 20 feet from the erosion scarp. A particular piece of property may use sandbags only once, regardless of ownership.

Sandbags may remain in place for up to two years if the protected structure is 5,000 square feet or less, or for up to five years if the structure is larger than 5,000 square feet. After this time, sandbags may have to be removed at the landowner's expense. Sandbags require a permit from the Division of Coastal Management.

Any structure built after 1989 that becomes imminently threatened by erosion must be dismantled or relocated landward within two years of being threatened.

High Hazard Flood Areas

Properties along the oceanfront are subject to flooding, high waves and heavy water currents during major storms. These lands are identified as *coastal flood with velocity hazard*, or *V zones*, on flood insurance rate maps prepared by the Federal Insurance Administration. These maps are usually available at your local building inspector's office.

Inlet Hazard Areas

Lands next to ocean inlets are especially vulnerable to erosion and flooding and can shift suddenly and dramatically. For each inlet along the coast, the Division of Coastal Management prepares a hazard area map that is reviewed and approved by the Coastal Resources Commission. The size and type of permitted development is limited in these areas. To determine if this property is located in an inlet hazard area, you may consult the Coastal Management maps available in the County Clerk of Court's office or on the Division of Coastal Management's web site at *http://dcm2.enr.state.nc.us/Maps/ER_1998/SB_Factor.htm.*

Coastal Development Rules

The North Carolina Administrative Code contains rules governing coastal development. The rules are located in 15A NCAC Chapter 7, and can be accessed via the Division of Coastal Management's web site at *http://www.nccoastalmanagement.net/Rules/current.htm* or at the Office of Administrative Hearings web site at *http://www.oah.state.nc.us/rules/.*

Failure of the Seller to provide this form allows a Buyer those remedies found in G.S. § 47E-2

EXHIBIT I

GENERAL ASSEMBLY OF NORTH CAROLINA

SESSION 2005

H **1**

HOUSE BILL 1512

Short Title:	Coastal Hazards Disclosure.	(Public)
Sponsors:	Representative Harrison.	
Referred to:	Rules, Calendar, and Operations of the House.	

April 21, 2005

A BILL TO BE ENTITLED

AN ACT TO PROVIDE FOR DISCLOSURE OF COASTAL NATURAL HAZARDS TO PURCHASERS OF COASTAL PROPERTIES.

The General Assembly of North Carolina enacts:

SECTION 1. Article 9 of Chapter 39 of the General Statutes is amended by adding a new section to read:

"**§ 39-51. Disclosure of coastal natural hazards.**

(a) Legislative Findings. – The General Assembly finds that there are many properties along the Atlantic Ocean that are particularly susceptible to coastal natural hazards, including but not limited to erosion, flooding, storm damage, and inlet migration. The natural features of the beach system are highly dynamic and there is a high degree of potential loss of life and property in certain particularly hazardous areas. The nature and extent of these coastal natural hazards for particular parcels of land are not readily apparent to or known by potential purchasers of property. It is therefore in the public interest that the General Assembly establish a system whereby purchasers of coastal properties subject to certain natural hazards can receive reasonable notice of these hazards prior to acquisition of property. Public disclosure of these hazards is essential to fully apprise prospective purchasers of the coastal natural hazards involved with development and use of property, to prevent any misrepresentation as to the coastal natural hazards affecting the property, and to allow potential purchasers to have complete and accurate information regarding property that may be affected by coastal natural hazards.

(b) Scope. – The provisions of this section apply to all properties that have been designated as ocean hazard areas of environmental concern by the Coastal Resources Commission pursuant to G.S. 113A-113 and G.S. 113A-115.

(c) Description of Coastal Natural Hazards Filed With the Clerk of Court. – The Coastal Resources Commission shall file with the clerk of court in each county that includes property that has been designated as an ocean hazard area of environmental concern a detailed description of each area and the specific coastal natural hazards that affect the property, with appropriate supporting materials. The Coastal Resources Commission shall update the filing whenever a designation in a county is amended.

(d) Disclosure Form. – The Coastal Resources Commission shall prepare and make available at no charge a simple form on which a seller shall provide the disclosures required by subsection (e) of this section. The form shall include information relative to rules affecting potential development or redevelopment of the property. Any information that is required to complete the disclosure form shall be provided at no charge by the Coastal Resources Commission. The Coastal Resources Commission shall maintain current information on annual erosion rates, storm recession estimates, flood levels, inlet movement and other relevant data for all property subject to this section. The disclosure form shall include notice of the remedies available under subsection (h) of this section.

(e) Duties of Seller. – A seller of real property described in subsection (b) of this section shall provide every prospective purchaser of the real property with a written document that discloses the coastal natural hazards affecting the property. This disclosure shall be made upon a form provided by the Coastal Resources Commission and shall be made at least 72 hours prior to the time the purchaser signs a purchase contract or at least 72 hours prior to the receipt of any consideration by the seller, whichever occurs first. If the property is subject to Chapter 47E of the General Statutes, disclosure as provided in that Chapter satisfies the requirements of this section.

(f) Limitations on Construction of Section. – This section shall not be construed to relieve a seller of any other legal duty, obligation, or liability of disclosure. A disclosure under this section shall not be construed to constitute a warranty by the seller that the property may be developed or redeveloped or that the property is not subject to hazards in addition to those required to be disclosed under this section.

(g) Exemption. – The requirements of this section shall not apply to any gratuitous transfer of property, including, but not limited to those transfers made by gift, bequest, will, or other means in which the transferor receives no consideration either directly or indirectly from the recipient of the property.

(h) Remedies. – If a seller fails to make the disclosure required by subsection (e) of this section, the purchaser has the rights set out in G.S. 47E-5(b). These rights shall be in addition to any other remedies available under any other provision of law."

SECTION 2. G.S. 47E-4(b) reads as rewritten:

"(b) The North Carolina Real Estate Commission shall develop and require the use of a standard disclosure statement to comply with the requirements of this section. The disclosure statement shall specify that certain transfers of residential property are excluded from this requirement by G.S. 47E-2, including transfers of residential property made pursuant to a lease with an option to purchase where the lessee occupies or intends to occupy the dwelling, and shall include at least the following characteristics and conditions of the property:

(1) The water supply and sanitary sewage disposal ~~system;~~system.

(2) The roof, chimneys, floors, foundation, basement, and other structural components and any modifications of these structural ~~components;~~components.

(3) The plumbing, electrical, heating, cooling, and other mechanical ~~systems;~~systems.

(4) Present infestation of wood-destroying insects or organisms or past infestation the damage for which has not been ~~repaired;~~repaired.

(5) The zoning laws, restrictive covenants, building codes, and other land-use restrictions affecting the real property, any encroachment of the real property from or to adjacent real property, and notice from any governmental agency affecting this real ~~property; and~~property.

(6) Presence of lead-based paint, asbestos, radon gas, methane gas, underground storage tank, hazardous material or toxic material (whether buried or covered), and other environmental contamination.

(7) The existence of coastal natural hazards that are required to be disclosed under G.S. 39-51.

(b1) The disclosure statement shall provide the owner with the option to indicate whether the owner has actual knowledge of the specified characteristics or conditions, or the owner is making no representations as to any characteristic or condition. This subsection does not apply to subdivision (7) of subsection (b) of this section."

SECTION 3. This act becomes effective 1 July 2006 and applies to all property that is sold or offered for sale on or after that date. The Coastal Resources Commission shall complete the filings required by G.S. 39-51(c), as enacted by Section 1 of this act, and shall develop the disclosure form required by G.S. 39-51(d), as enacted by Section 1 of this act, no later than 1 January 2006.

August 22, 2005

Dear Representative:

We would like to request your support of the Coastal Hazards Disclosure bill (HB 1512). We anticipate this bill will be voted upon this week.

Properties along the Atlantic Ocean and its inlets experience significant long-term shoreline erosion, as well as short-term storm surge and flooding during hurricanes, nor'easters and tropical depressions. Last year 240 properties were imminently threatened due to severe erosion.

The bill requires sellers of properties on the Atlantic Ocean and its inlets to provide a Coastal Hazards Disclosure Statement to every prospective buyer. The Coastal Hazards Disclosure Statement provides prospective buyers with information on rules affecting future development or redevelopment of the property.

For instance, buyers who have lived in other states may not realize that North Carolina prohibits seawalls. The statement also provides information on annual erosion rates, vegetation lines, setbacks, 100-year storm recession estimates, high hazard flood areas, inlet hazard areas, and flood elevation levels.

The state Coastal Resources Commission will provide a standard form and all information needed to complete the form at no charge to the seller. The Coastal Hazards Disclosure Statement will be given to the potential buyer at the same time and manner as other disclosures forms already required by state law.

Citizens considering the purchase of property in high hazard areas need to know the facts in order to make an informed decision, with full knowledge of the risks and limitations involved with owning land and structures next to the ocean or inlets.

Please vote in favor of the Coastal Hazards Disclosure bill. Thank you.

RE: Proposed disposition of National Forest lands in North Carolina

Dear Mr. Rey:

The Environmental Review Commission (ERC) is a permanent, statutory commission of the General Assembly of North Carolina (N. C. Gen Stat. 120-70.41 et seq.). The ERC is responsible for providing legislative oversight and study of agencies, programs, issues, and proposals related to protection of the environment and conservation of the natural resources of the State.

At its 14 March 2006 meeting, the ERC heard information regarding a proposal by the United States Forest Service to dispose of National Forest lands in North Carolina to generate revenues to pay for reauthorization of the Secure Rural Schools and Communities Self-Determination Act of 2000 (P.L. 106-393). The U.S. Forest Service has identified nearly 10,000 acres of National Forest land in North Carolina for disposition including 3,835 acres on the Nantahala National Forest, 2,780 acres on the Pisgah National Forest, 2,317 acres on the Uwharrie National Forest, and 895 acres on the Croatan National Forest.

After discussion, the ERC unanimously adopted a motion in opposition to this proposal.

North Carolina values National Forest lands in North Carolina for recreation, wildlife habitat, watershed protection, and other uses. The General Assembly of North Carolina has endorsed efforts to increase public lands in North Carolina by one million acres by 2009 to respond to growing demands for outdoor recreation and to protect forests and other lands for future generations. Sale of National Forest lands would set back the State's on-going efforts to expand public lands for the use

and enjoyment of our citizens and visitors from other areas. While the Forest Service characterizes the lands proposed for disposition as isolated and difficult to manage, the ERC received testimony that refutes this assertion with respect to much of the land proposed for sale.

The proposed National Forest land sale also is only a short-term fix to the funding program for rural schools and communities. Funds generated by the sale of National Forest lands would be used to phase out this funding over five years. Moreover, the proposed disposition of National Forest land and distribution of revenues is fundamentally unfair to North Carolina. While the amount of National Forest land proposed for disposition in North Carolina and Oregon is nearly the same, Oregon would receive approximately $163 million under the proposal while North Carolina would receive only $1 million.

We strongly urge you to abandon the proposal to dispose of National Forest lands in North Carolina and find an appropriate source of revenue to fund the Secure Rural Schools program.

Sincerely,

Senator Charles W. Albertson

One-Stop Permit Assistance and Coordination

One-Stop Permit Coordination offers customers the option of working with a permit assistance coordinator to answer questions, address concerns, and help identify and solve potential problems related to permits. Permit coordinators provide front-end assistance and guide the applicant through the permitting process.

Services of the coordinator include:

- Identifying early in the process which environmental permits may be needed
- Coordinating activities among DENR permitting agencies
- Developing a project action plan, including timelines for projected permit decisions
- Arranging pre-application meetings
- Tracking permit review times
- Coordinating express permitting, when appropriate

EXPRESS
Permit Review

Express Permit Review

Express Permitting offers a more timely review of certain environmental permits than the traditional permit review process. It offers quicker permit decisions and certification as well as consultation to identify necessary environmental requirements. A pre-application meeting is required, and a well-documented application, along with supporting technical information, is necessary for thorough and swift review. Higher fees are charged to support additional staff for the express review. Multiple permits that may be required for a project can be concurrently reviewed.

The following permits and certifications are currently part of the express program:

- Coastal stormwater permits
- Water quality wetland certifications
- Stream origin determinations
- Erosion and sedimentation control plans
- Permits under the Coastal Area Management Act
- Water quality non-discharge permits

Express Permit Review Legislative Report
April 2006

This report fulfills the requirements of Session Law 2005-276, Section 12.2 (c) to report on the success of the Express Permit Review Program in the N.C.Department of Environment and Natural Resources. This program was authorized as a pilot in two regions in January 2004 and expanded statewide in January 2006. Coastal stormwater, water quality wetland certifications, erosion and sedimentation plans, coastal area management, and land application non-discharge permits are included in the express review process. Higher fees are charged for express review and used to support the program, including hiring of additional technical staff to review the permit applications.

Past reports, including the One-stop Permit Assistance Report presented to the committee in December 2005, provided a detailed review of types of permits and processing times under the express review program. This report is an update and addresses several program developments or modifications.

Program Developments and Results

- Over 1400 permits were issued through March 2006 (see Chart A for a breakdown by program).
- 43% of the express permits issued were for coastal stormwater projects.
- 32% of the express permits issued were for land quality erosion and sediment control plans. This segment has been steadily growing as the express program has expanded to inland regions.
- Processing times have been greatly reduced without relaxing environmental rules or standards; average processing time for stormwater permits reduced by 57% and for erosion and sediment control plans by 90%.
- To date, more than half of the express permits have been issued through the Wilmington Regional Office.

Advocate groups were concerned that the express review process might not provide adequate time to examine the potential impact of large coastal projects. To ensure sufficient time for review of environmentally sensitive areas, projects subject to the State Environmental Policy Act or National Environmental Policy Act were not included in the express review process. Early in the program it was modified to exclude certain types of projects from the Coastal Area Management Act express review. Exclusions included:

- new dredging projects;
- applications for piers/docks where the number of boat slips exceeded four (existing or proposed); and
- maintenance excavations, unless projects have already undertaken excavation work under a previously issued CAMA permits.

The express program has proven beneficial for a number of development projects. However, all permits are not appropriate for the express review process.

Incomplete applications are a major obstacle in the permit review process for both the regular and express permit programs. Improving the quality of permit applications is critical to meet the reduced processing times of express review. A number of steps have been taken through the express process to improve the quality of applications so that all necessary technical documentation is provided in the initial submission:

- pre-application and submittal meetings are required to make sure that requirements and expectations are clearly communicated;
- timelines are set to require prompt attention by the client to any deficiencies in an application;
- additional fees may be charged for subsequent reviews due to the insufficiency of the permit application.

These steps plus one-on-one meetings are resulting in better-documented applications.

Regional permit training programs have also been initiated. The first was held in the Washington Regional Office in February, one is planned in Wilmington in May and others will be scheduled in the future. These sessions focus on the express program and one-stop permit coordination services. About 25 consultants from the Washington region attended the first session. The primary goal of these sessions is to identify frequent permit application mistakes and to work with applicants to improve the permit applications.

Demand for the express program continues to grow. The recent statewide expansion provides additional experience to improve the program. The increased dialogue with permit applicants and property owners should lead to permit process improvement and enhanced environmental compliance.

William G. Ross, Jr., Secretary
Department of Environment & Natural Resources
1601 Mail Service Center
Archdale Building
Raleigh, NC 27699-1601

Dear Secretary Ross:

The North Carolina Marine Fisheries Commission discussed at its last meeting the Department's interest in expanding the "Division of Coastal Management (DCM) Express Permitting" process statewide before adequate review of the pilot trials in the southeast. We recognize the need and benefit of expediting routine permit applications that have little potential for adverse impacts on coastal fisheries habitat. However, before the program is expanded we would like to be assured that reducing the time required for permit review and evaluation does not jeopardize the protection of fisheries habitat.

The North Carolina Marine Fisheries Commission urges you to conduct a thorough review of the Express Permitting process that occurred in the Wilmington district over the past year. Evaluating the 250+ cases should help determine the effectiveness of the process in protecting coastal waters. We are particularly concerned about the time demands for resource agency evaluation and commenting on permits, and how they affect the quality of review and outcome of a specific project.

We look forward to your response.

Sincerely,

James A. Johnson, Jr.
Chairman, North Carolina Marine Fisheries Commission

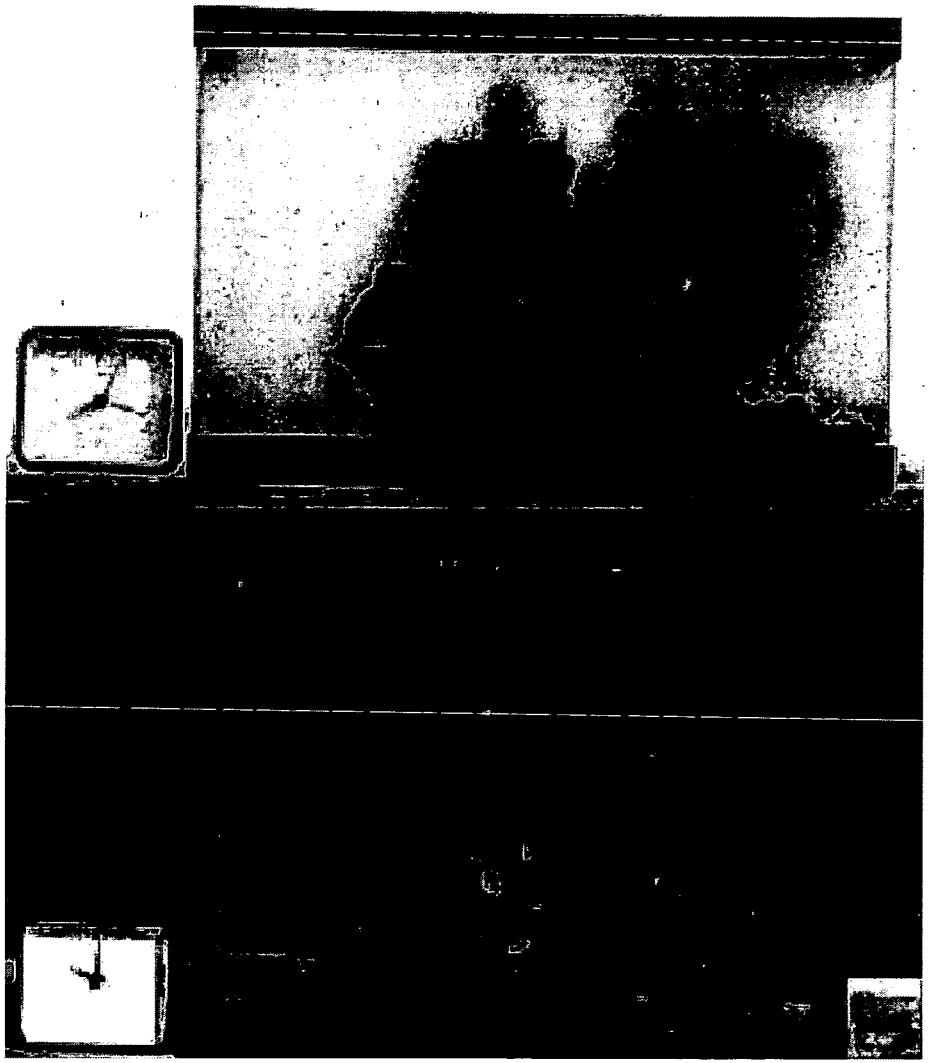
Shoreline Survey Program

DIVISION OF ENVIRONMENTAL HEALTH

Shellfish Sanitation & Recreational Water Quality Section

EXHIBIT N



DEH Shellfish Sanitation and Recreational Water Quality Section

- Morehead City, Wrightsville Bch, Nags Head, (Reidsville) , staff of 31.
- 1,300 + water sampling stations coast-wide. Sampled @least 6x/yr. Plus rainfall samples.
- 243 Recreational water quality stations. Post advisories.
- Certify and Inspect 200+ shellfish dealers, processors, 20 crustacea processing facilities statewide.
- Classify shellfish growing areas and make recommendations to DMF for openings and closures

- <u>Shoreline survey for pollution sources</u>
  - 5,000+ septic inspections/yr.

Why all the worry?

- Filter up to 50 gallons per day
- Concentrate pathogenic bacteria, toxins, viruses
- Often consumed raw or undercooked

Pathogens, viruses, and toxins that can be concentrated in molluscan shellfish

Viruses
- Hepatitis A
- Hepatitis E
- Rotavirus
- Norwalk (Noravirus)

Bacterial Pathogens
- Salmonella sp. (Typhoid, paratyphoid)
- C. botulinum (Low O_2)
- Listeria monocytogenes
- Vibrio vulnificus
- Vibrio parahaemolyticus

Natural Toxins
- PSP (Red Tides)
- NSP
- ASP

Other Problems
- Chemicals, Pesticides
- Radioactive

≈85% of seafood related illnesses in the US annually result of consumption of raw shellfish. (*US FDA, 1991)

Shoreline Survey Protocol (Evaluated by US FDA)

- Required under the NSSP Model Ordinance
- Conducted Triennially for each growing area

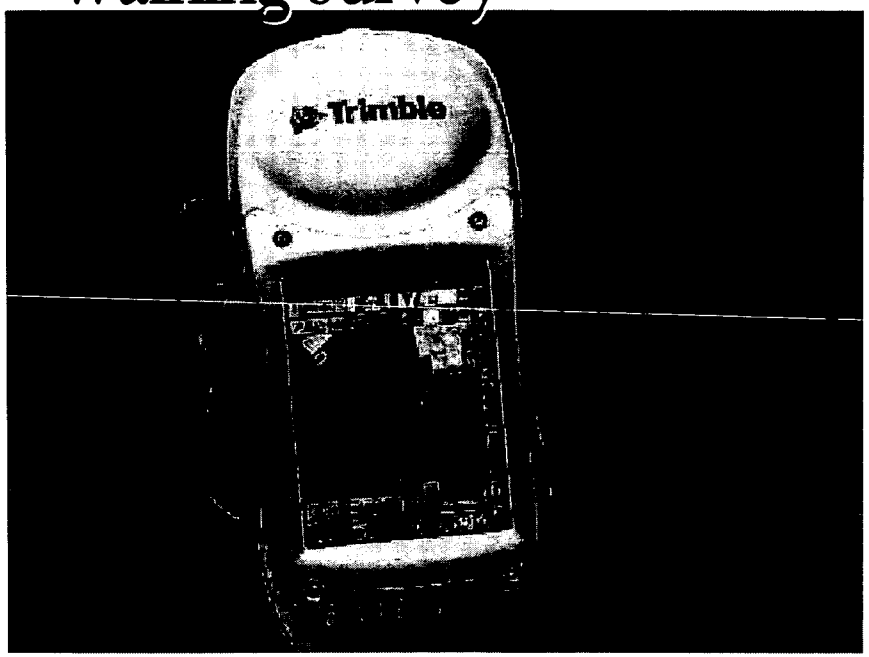
NSSP
Shoreline Survey Requirements

- "Identification & Evaluation of All Actual and Potential Pollution Sources"

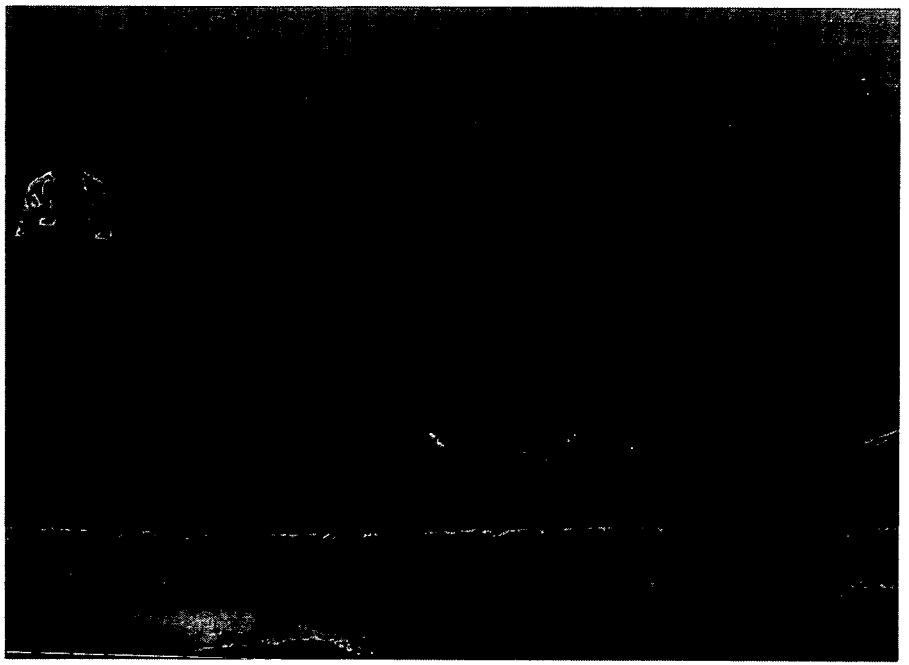
Shoreline Survey Requirements

- Map actual & potential pollution sources
- Written summary

EPA Wetlands Program Grant

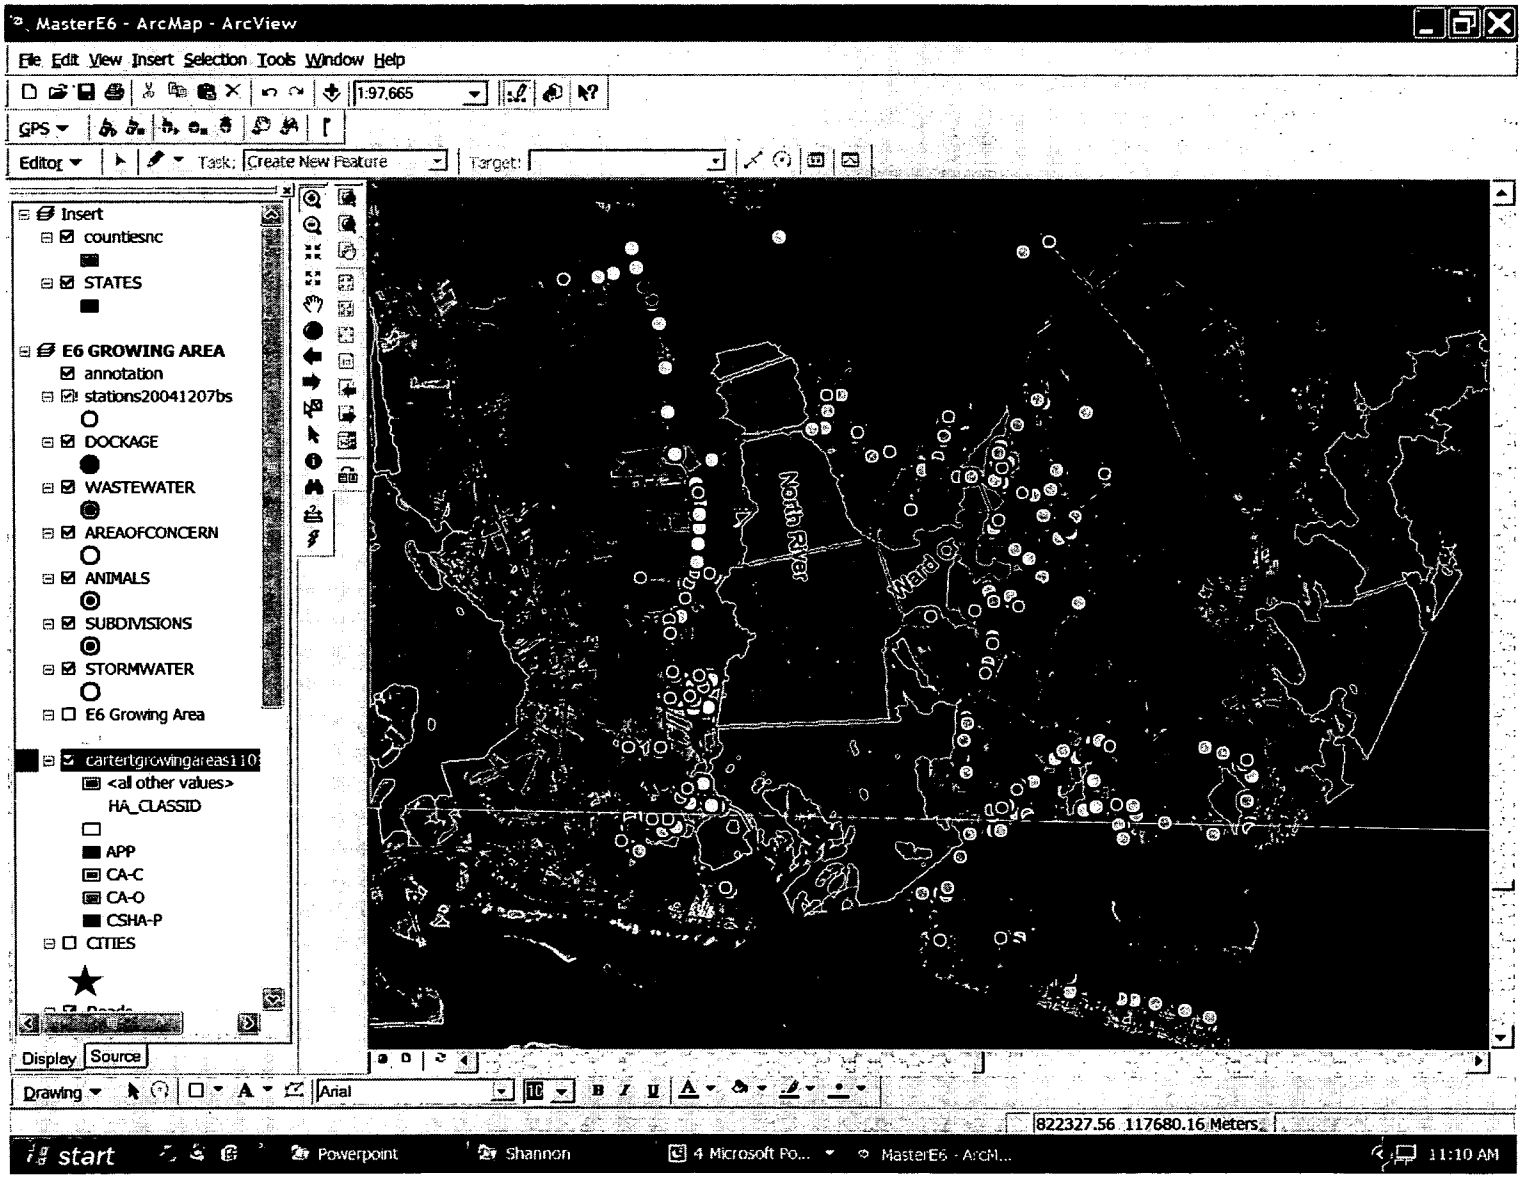


- Refine shoreline survey methodology
- Wetland Restoration & Monitoring at North River Farms
- Partnered with NCCF & Duke University Marine Lab
- Also working with NC DOT (stormwater)



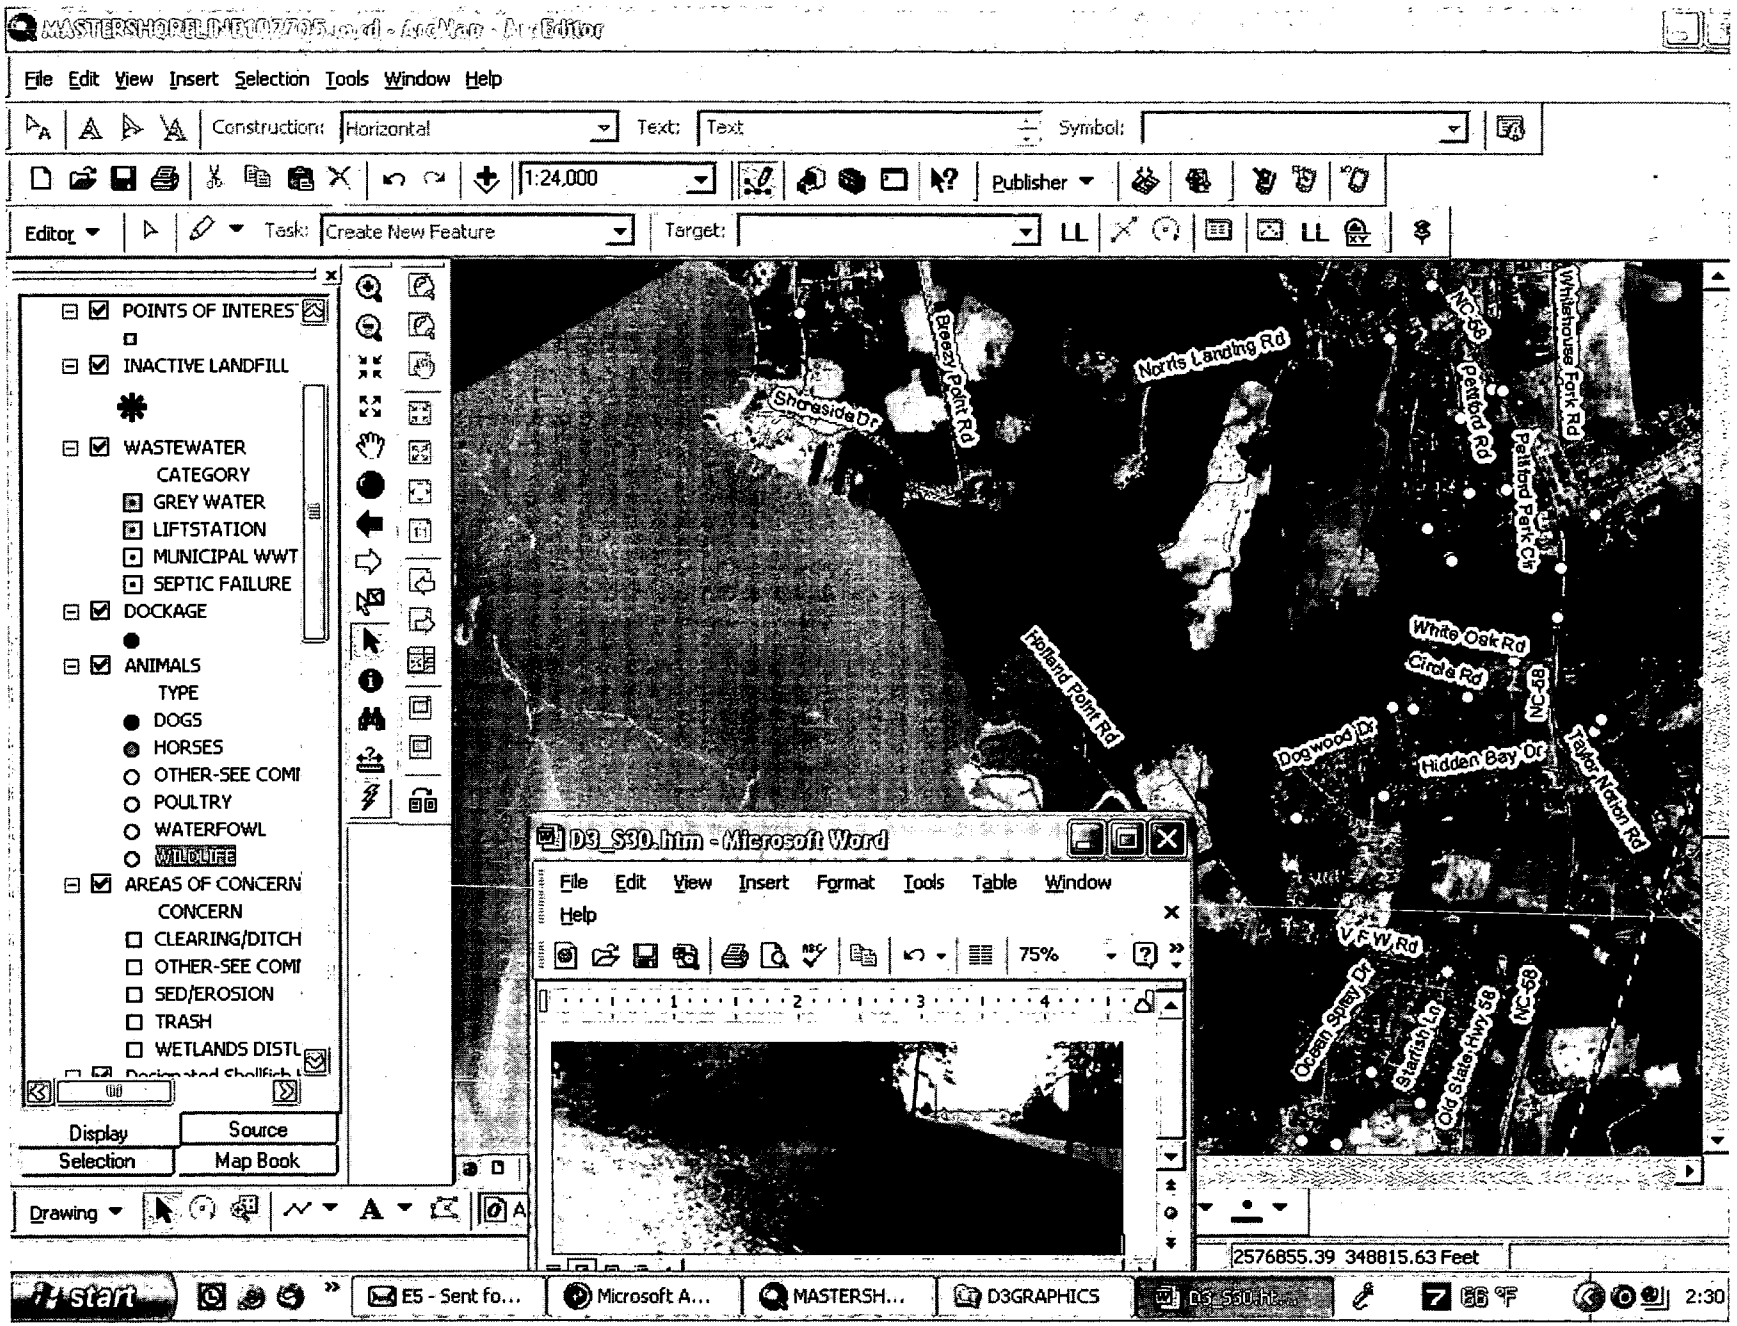
Survey Goals

- More accurately assess pollution threats to protect Public Health
- Develop a comprehensive Geographical Information System (GIS)
- Accessibility of Data (IBEAM, NC One Map)
- Improved cooperation and data sharing with other agencies to help protect and improve shellfish growing waters

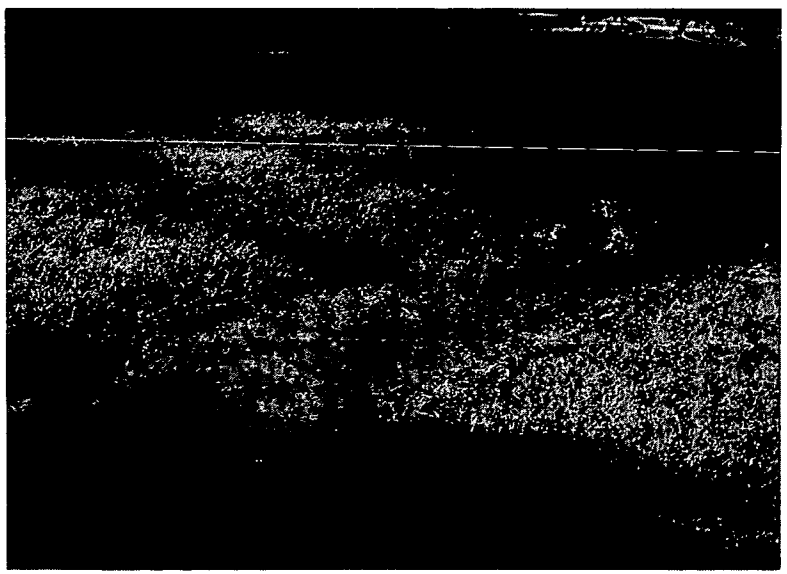


Shoreline Methodology

- GPS Data Logger, photos, attributes
- GIS Analyst data entry & analysis
- Walking survey



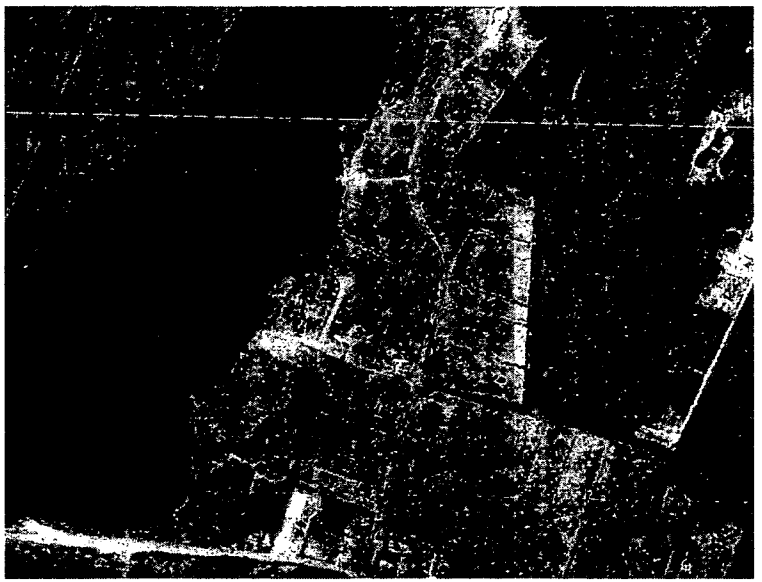
GIS (Geographic Information System)

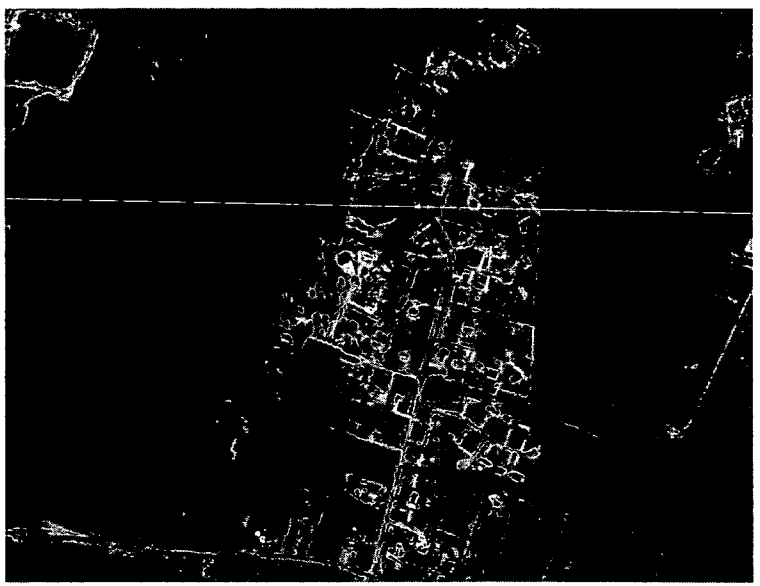


GIS Mapping and Database Attributes

Pollution Sources

- Septic Systems
- Animal Operations
- Chemical/Toxins

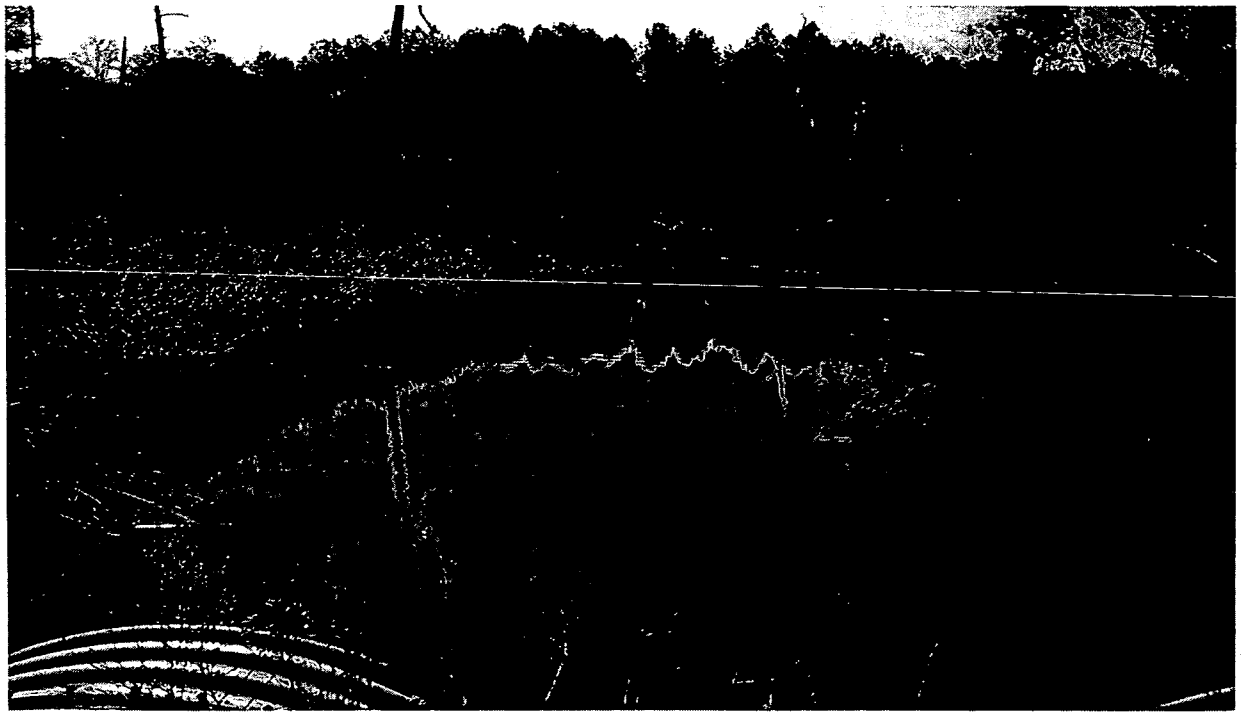




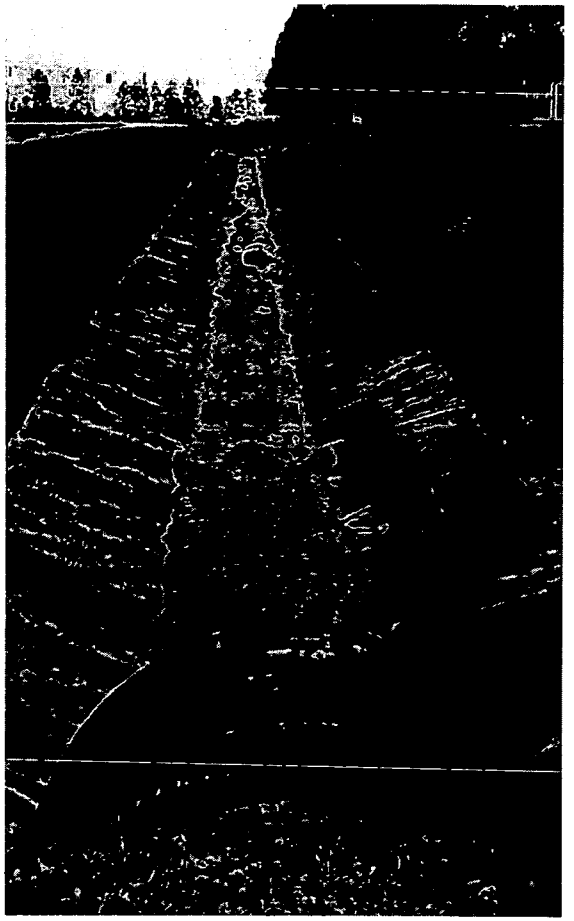
Pollution Sources

- Development Trends
- Marinas and Docking

1995

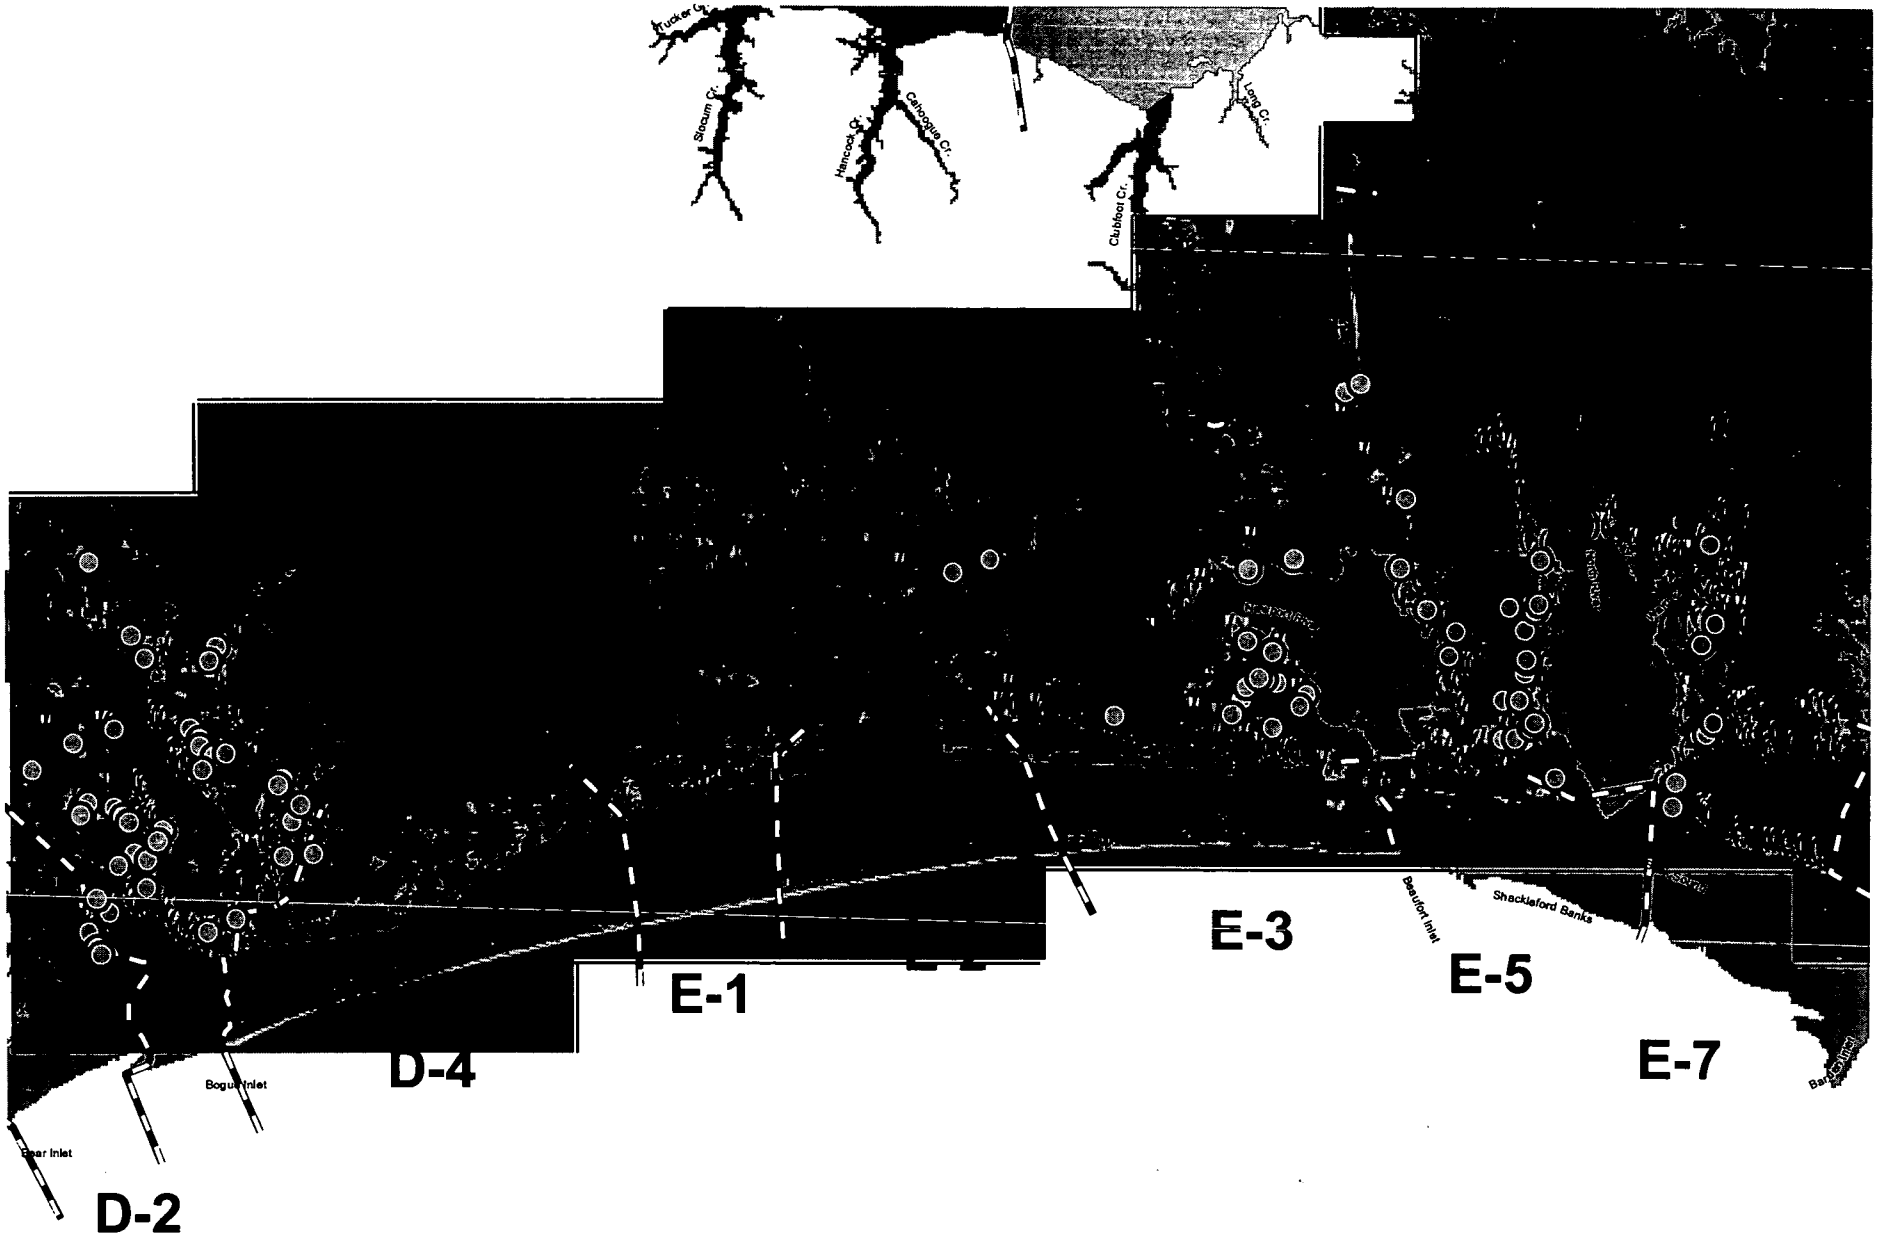


2004



Pollution Sources

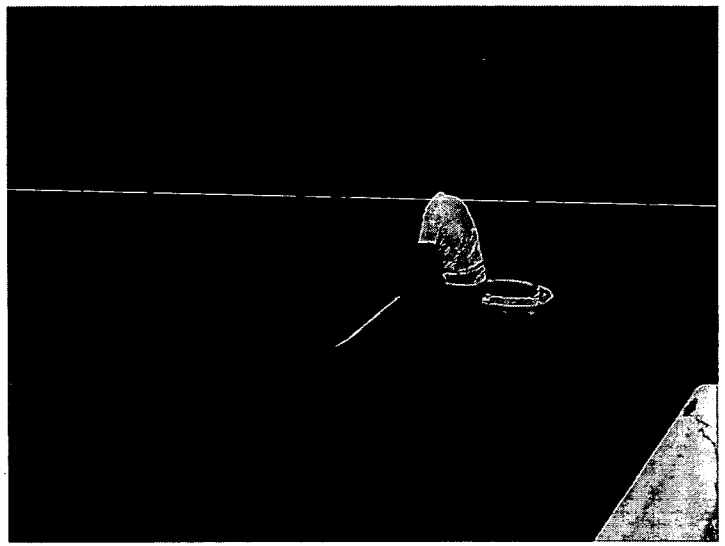
- Stormwater Runoff
- Pond discharges



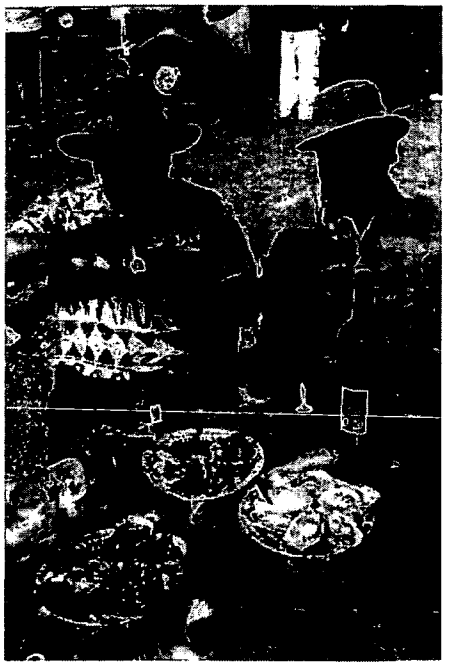
Agriculture/Aquaculture

Urban

Areas Completed using New Shoreline System



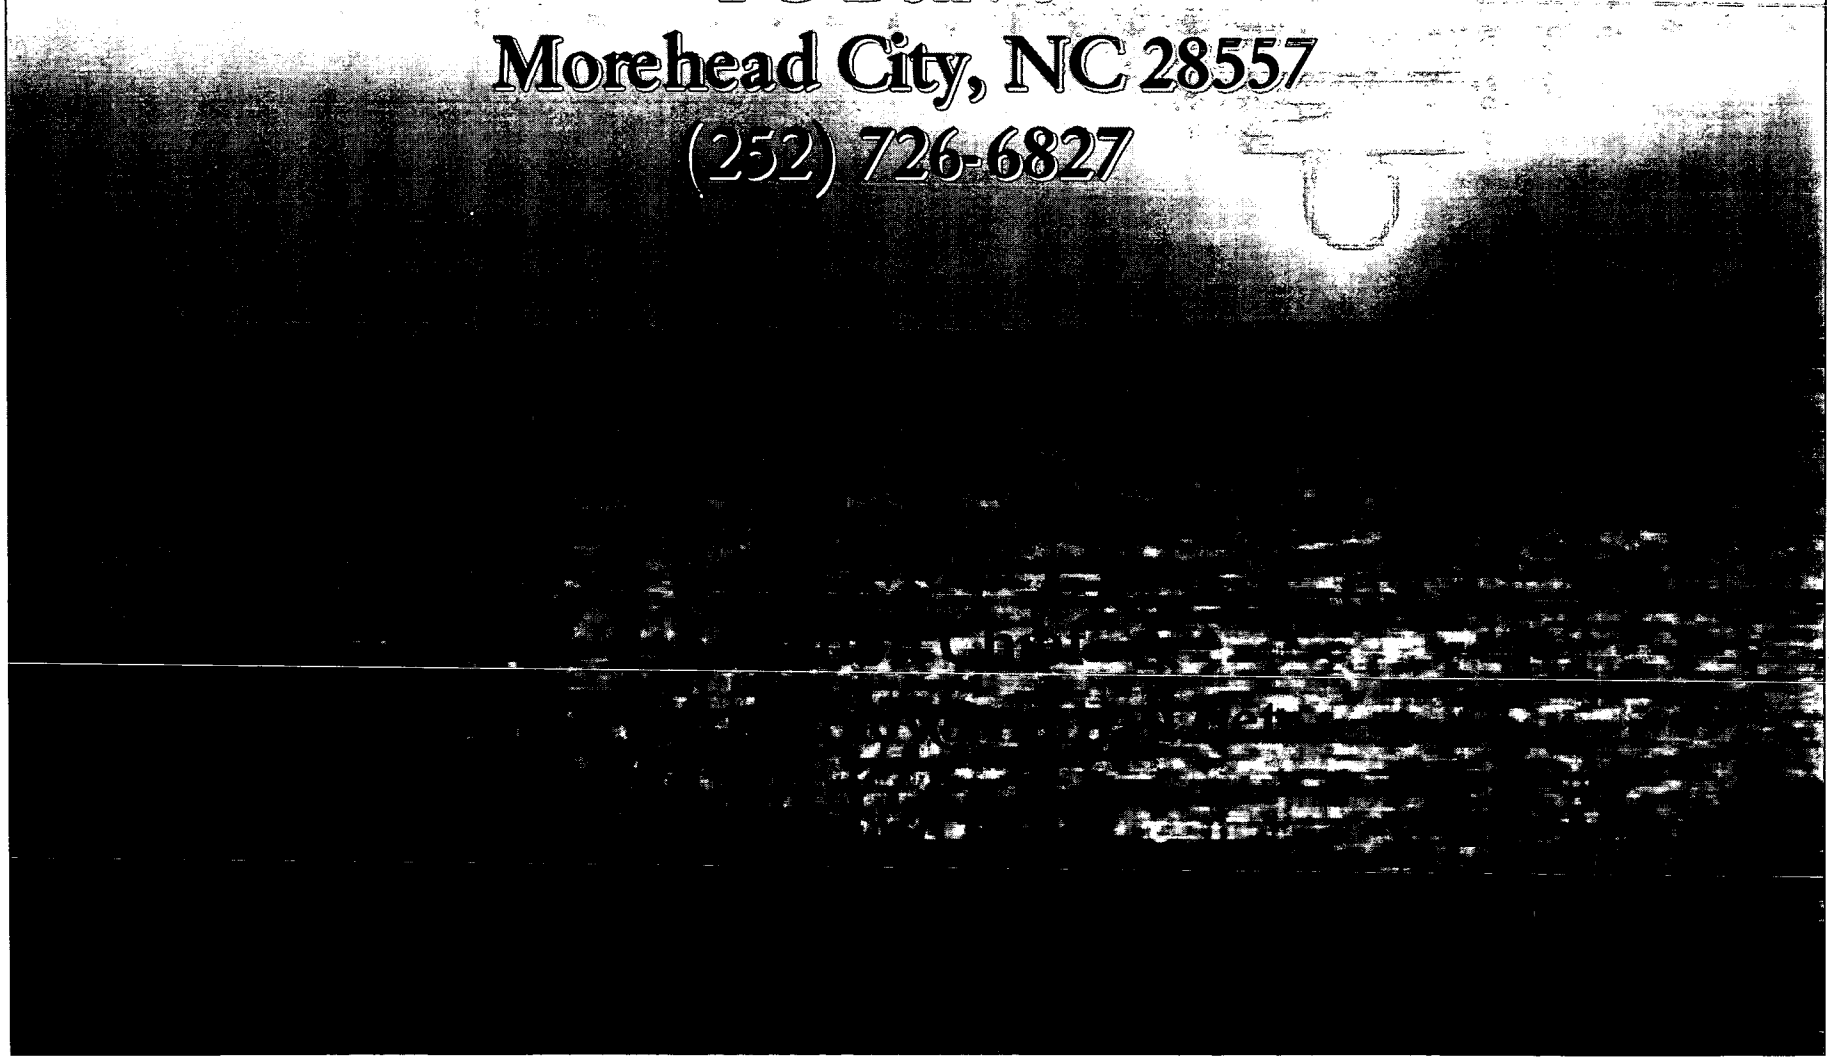
Inter-Agency Cooperation



- Interagency Scoping Meetings
- Cross-Training Completed with:
  - NC Division of Water Quality
  - NC Division of Coastal Management
  - NC Department of Transportation
  - NC Division of Land Resources
  - US Army Corps of Engineers
- Potential violations reported to:
  - County EHDs, DENR Agencies, USCG, USACE

Benefits

- Industry
- Recreation
- Environment
- Public Health



Limitations

- Grant funding ends this year
- GIS Analyst Needed to Continue New Method
- Only Three staff dedicated to shoreline survey

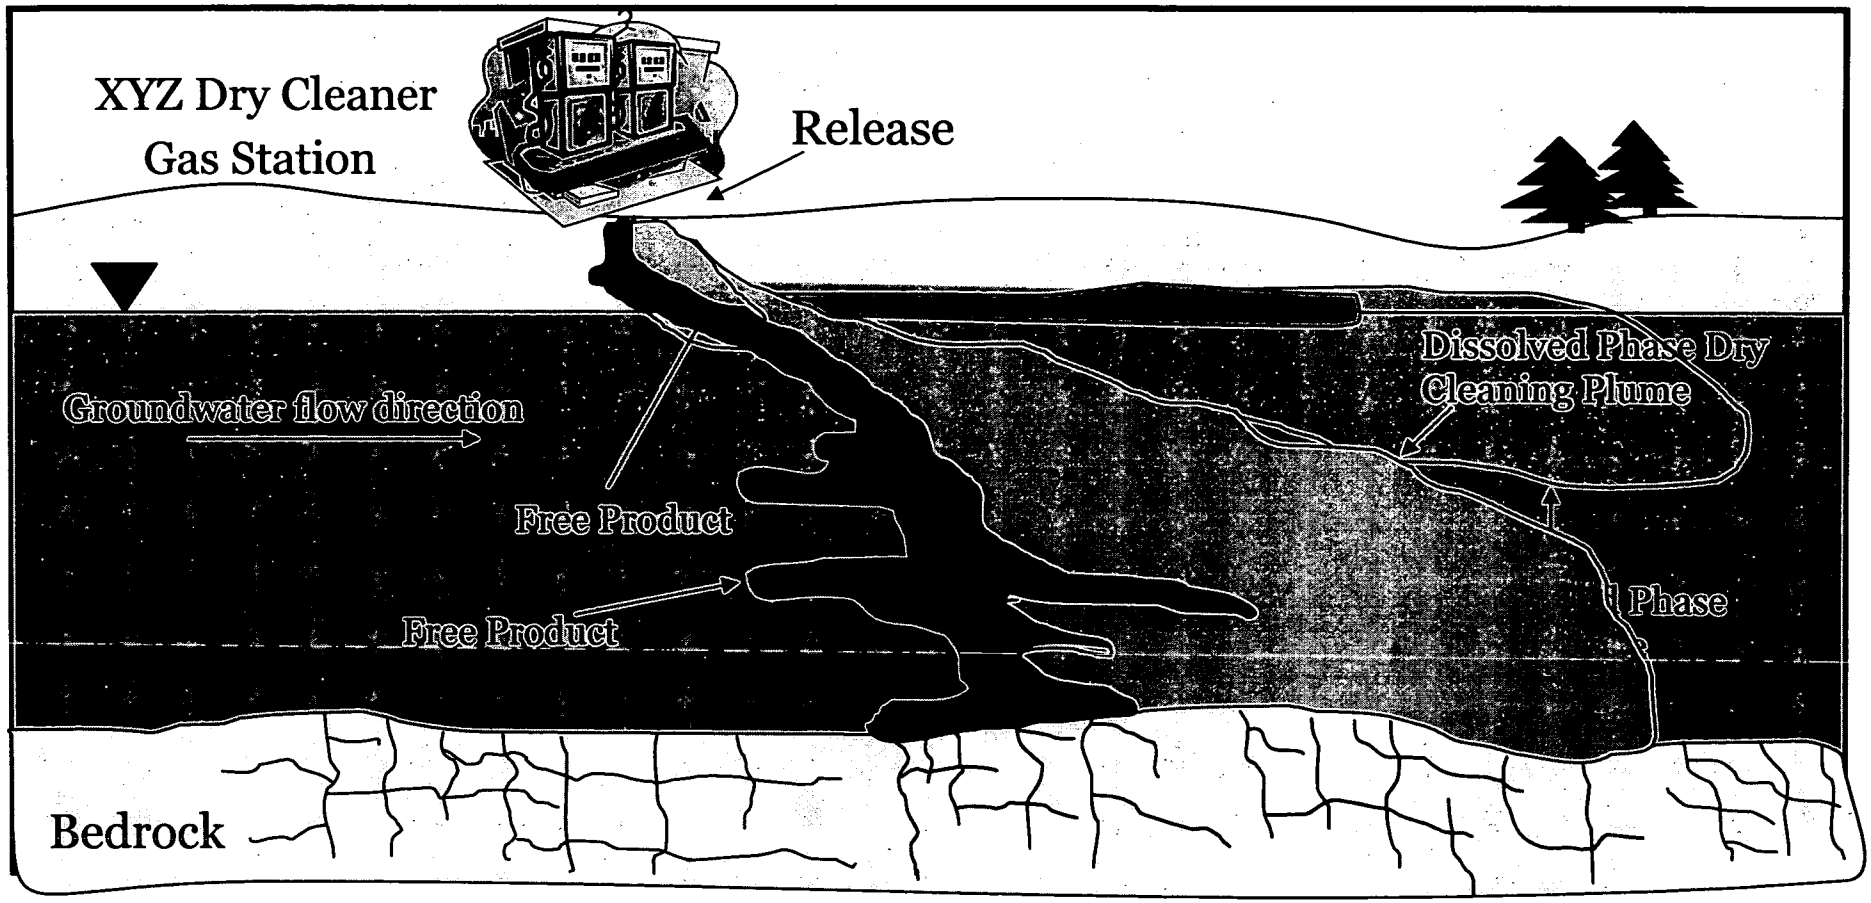
The Dry-Cleaning Solvent Cleanup Act (DSCA) Program

NORTH CAROLINA DEPARTMENT OF ENVIRONMENT AND NATURAL RESOURCES

Superfund Section
Division of Waste Management
www.wastenotnc.org
www.ncdsca.org

EXHIBIT O



Purpose of DSCA

- State-Funded, Voluntary Cleanup Program for Contaminated Dry-Cleaning and Wholesale Solvent Distribution Sites

- Compliance Program for Operating Facilities to Prevent Future Releases

Why is a cleanup program needed?

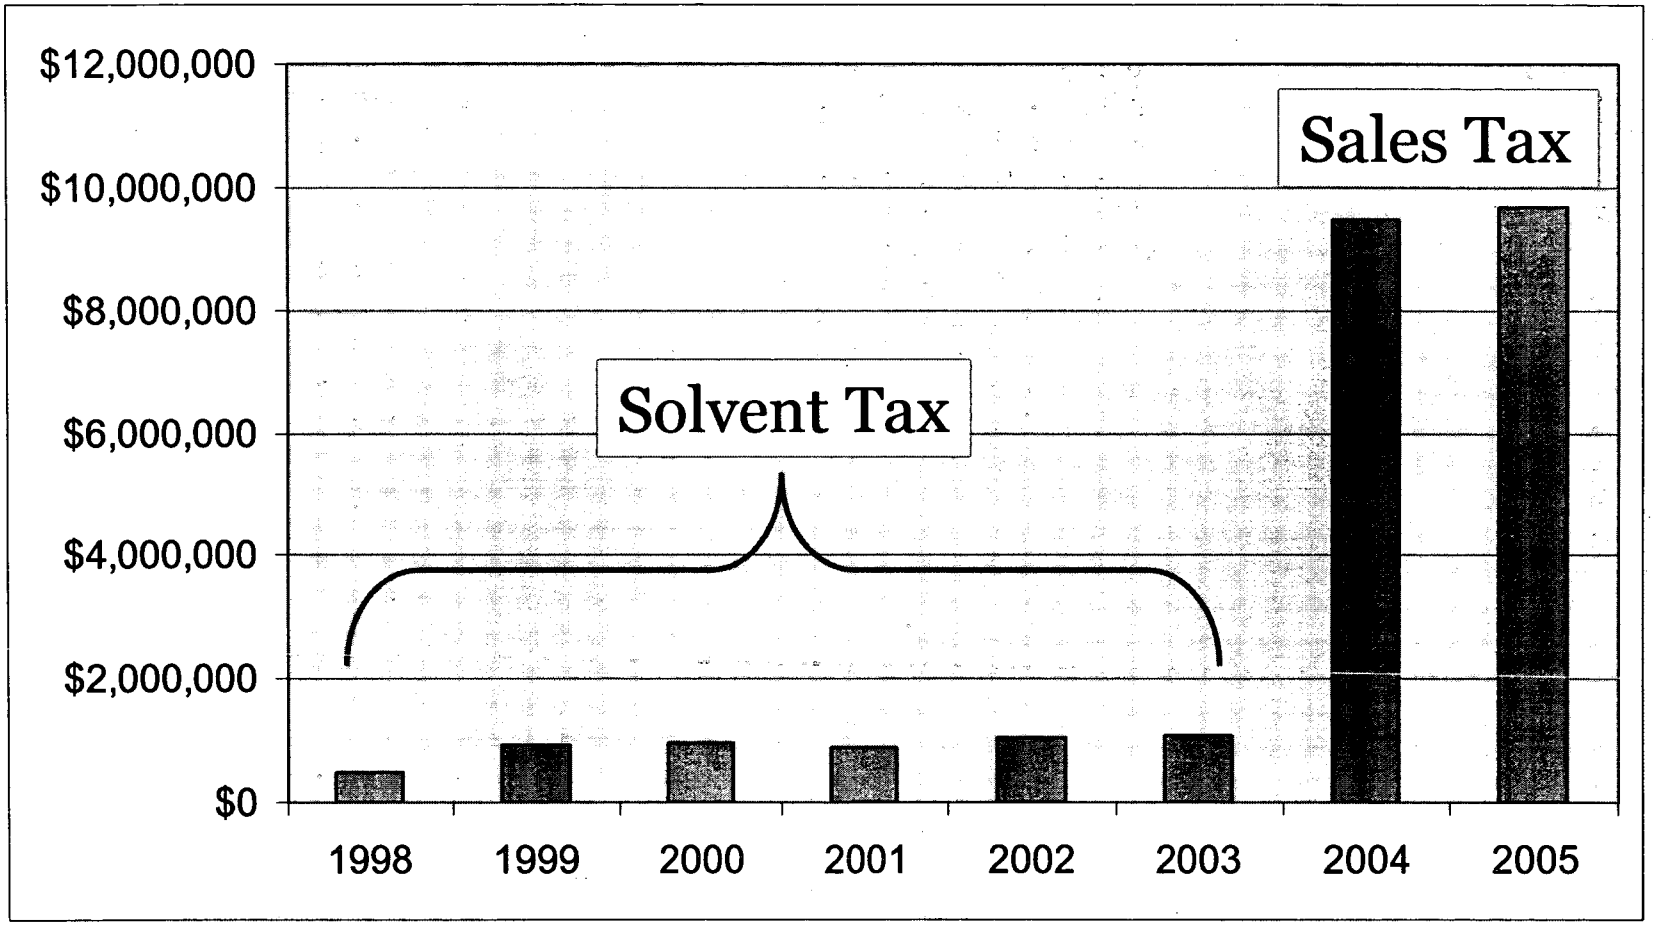
Contamination Below the Ground

Cleanup Process

- Dry Cleaner or Property Owner Petitions DSCA Program
- Petitioner Agrees to Abide by Dry-cleaning Minimum Management Practices
- DSCA Executes an Assessment & Remediation Agreement with Eligible Petitioner
- DSCA Assigns Site to Program's Independent Environmental Contractor

Cleanup Funding

- Petitioner Pays Deductible ($5,000-$25,000)
- Petitioner Pays 1%-3% Of Costs between $200,000 and $1 Million
- DSCA Fund Covers the Rest



Fund Pays For:

- Assessment and Remediation
- Treatment/Replacement of Contaminated Drinking Water
- Other Activities Reasonably Required to Protect Public Health and Environment

Sites in DSCA

- 214 Identified Contaminated Sites
- 134 Sites in Program
- 103 Sites Cleanup Has Commenced
  - Assessing Size of Contaminated Area
  - Excavating Hazardous Soil
  - Providing Clean Drinking Water to Affected Residences & Businesses

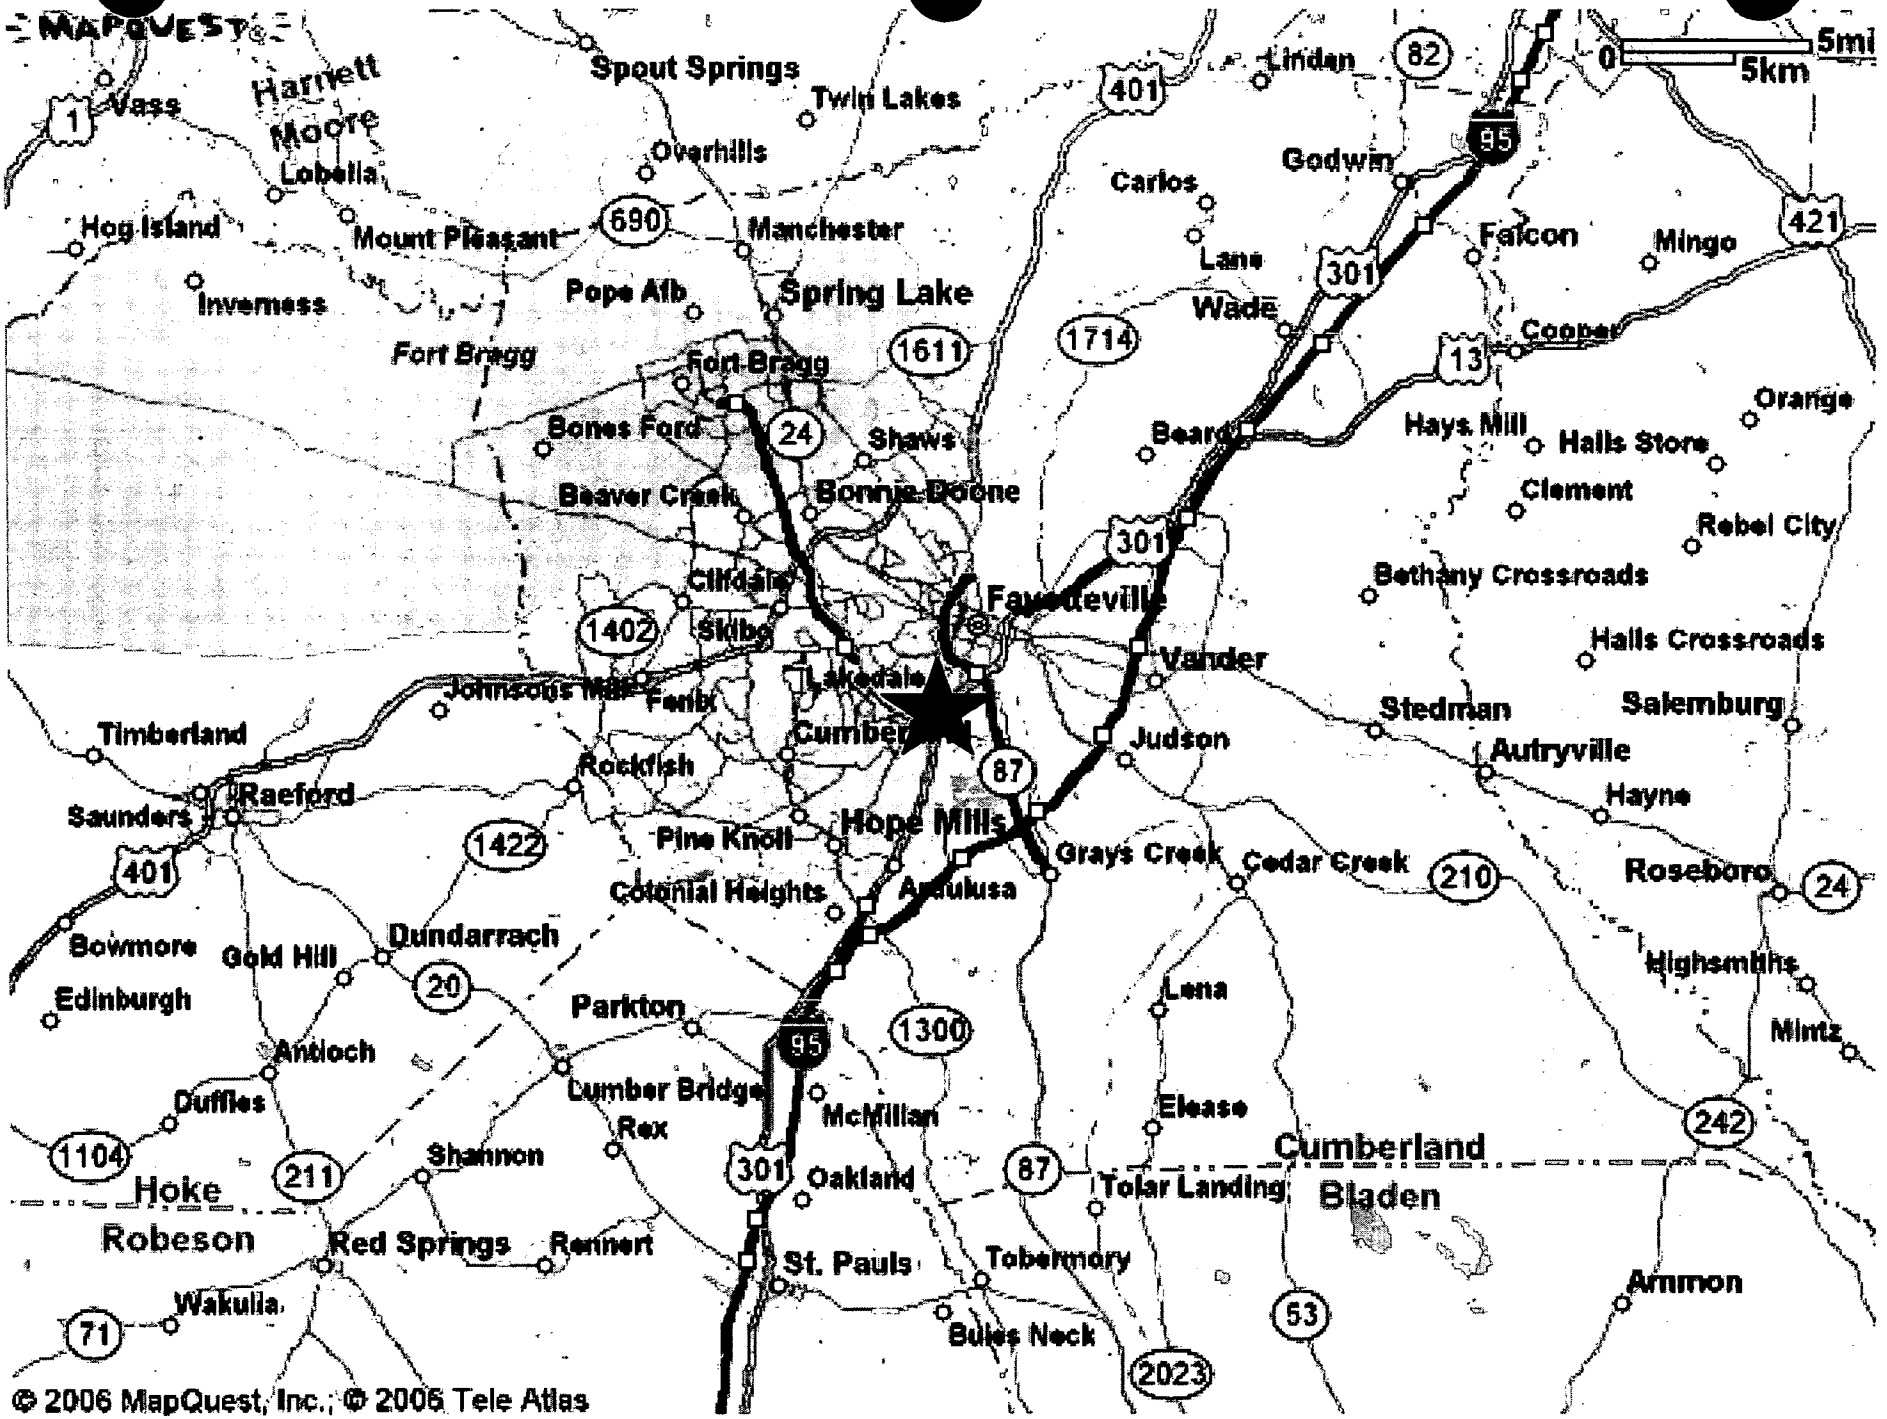
DSCA Fund History

Fund Statistics

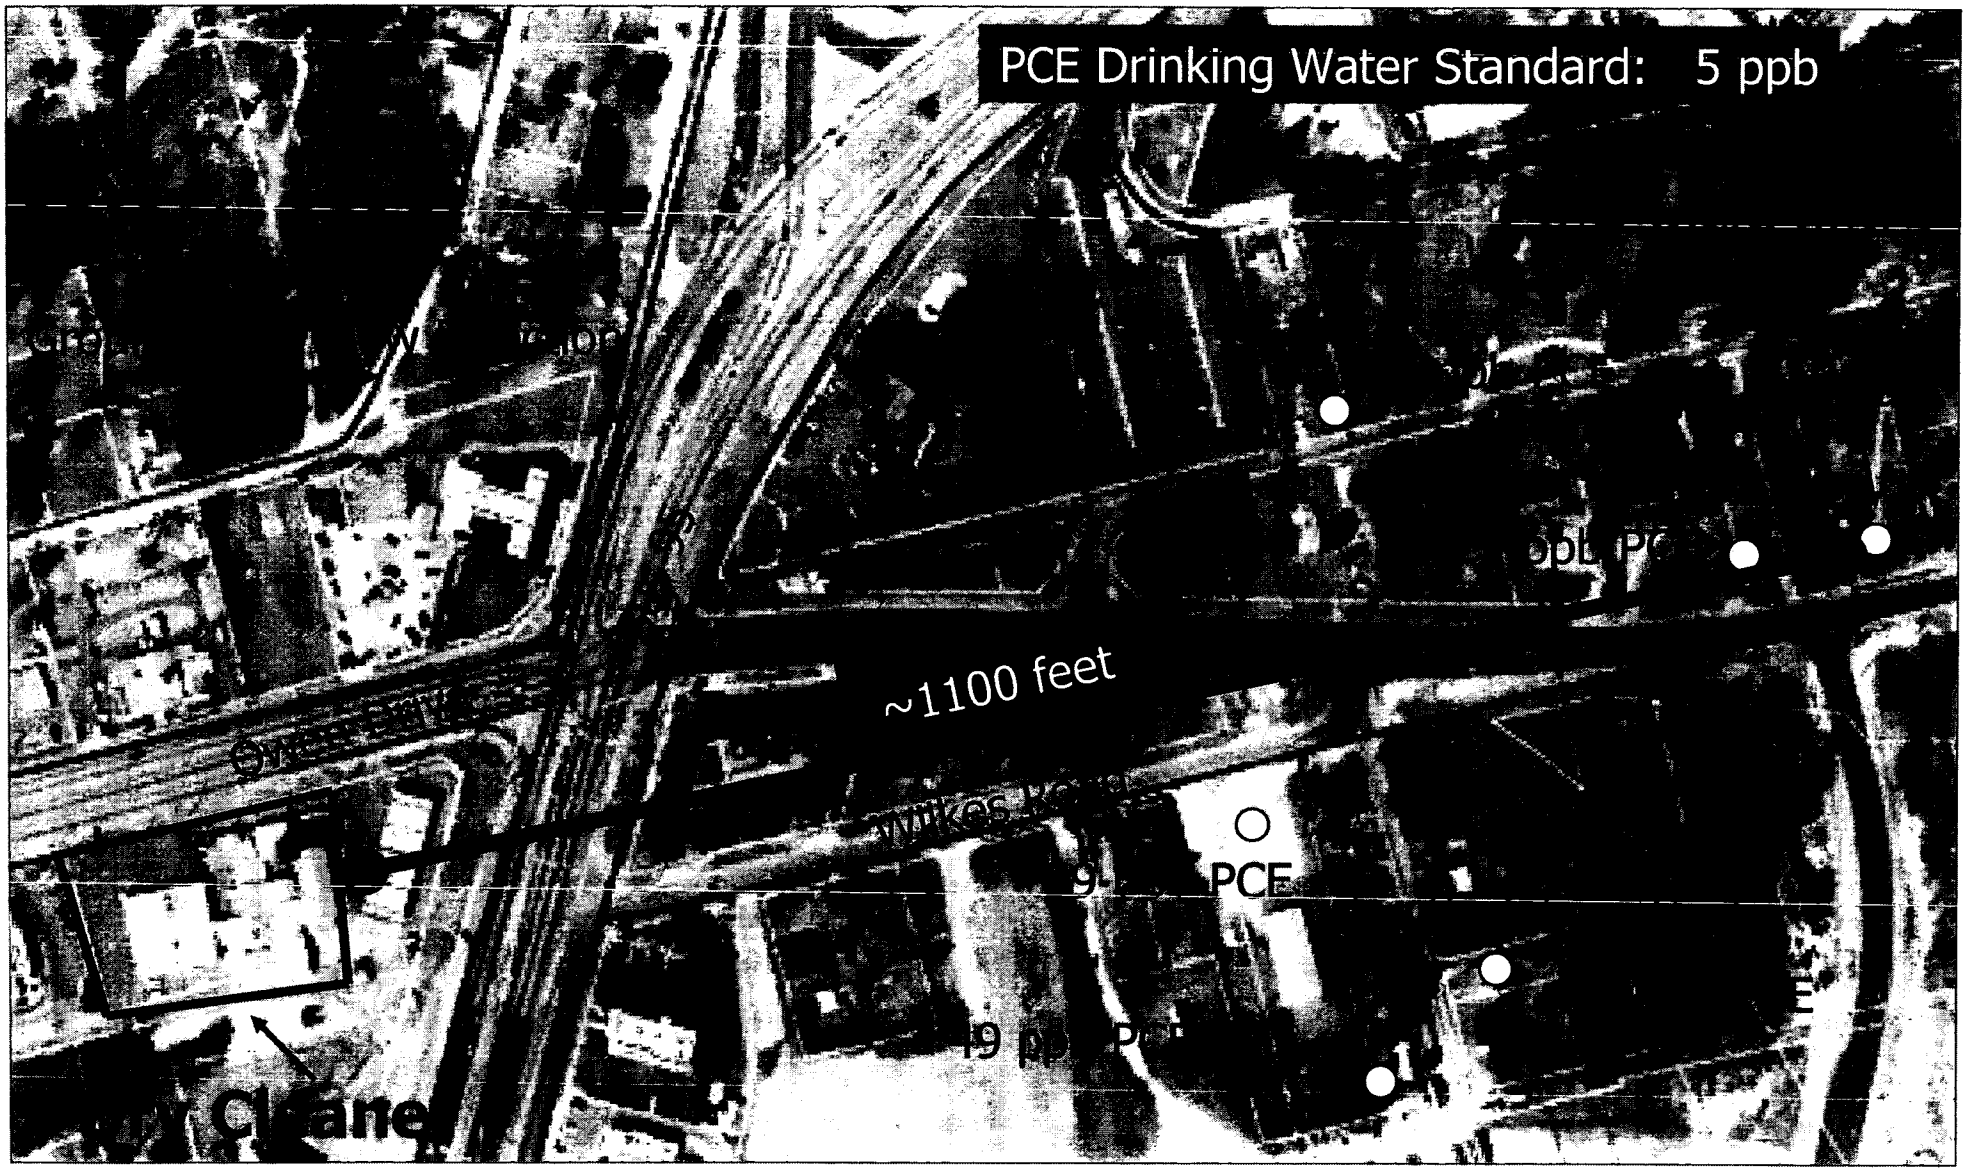
■ Revenue + Interest	$31.9 million
■ Cleanup Expenses	$ 2.5 million
■ Administrative Costs	$ 2.1 million
	$27.3 million
■ Funds Encumbered	$10.8 million
■ 5 New Contracts in 2006	$15 million

Projections

- Total Revenue + Interest (Through Jan. 2010) — $68 million
- Est. Contaminated Sites — 1,500
- Sites Coming into DSCA — 750
- Total Cleanup Costs ($250,000 per site) — $188 million



Cleanup Expenditures ↑



- Increased Soil Excavation & Remediation
- Remediation To Stop Contamination of Surface Water
- Treatment/Replacement of Contaminated Drinking Water
- Removing Vapors in Buildings
- Risk-Based Rules

Risk-Based Rules

- Expert in Risk Rule Development Hired
- Rules To EMC in July 2006
- Establish Site-Specific Cleanup Levels
- Once Cleanup Goals Calculated, Increased Remediation Resulting in Greater Expenditures from the Fund

DSCA Addressing Immediate Threats to Public Health

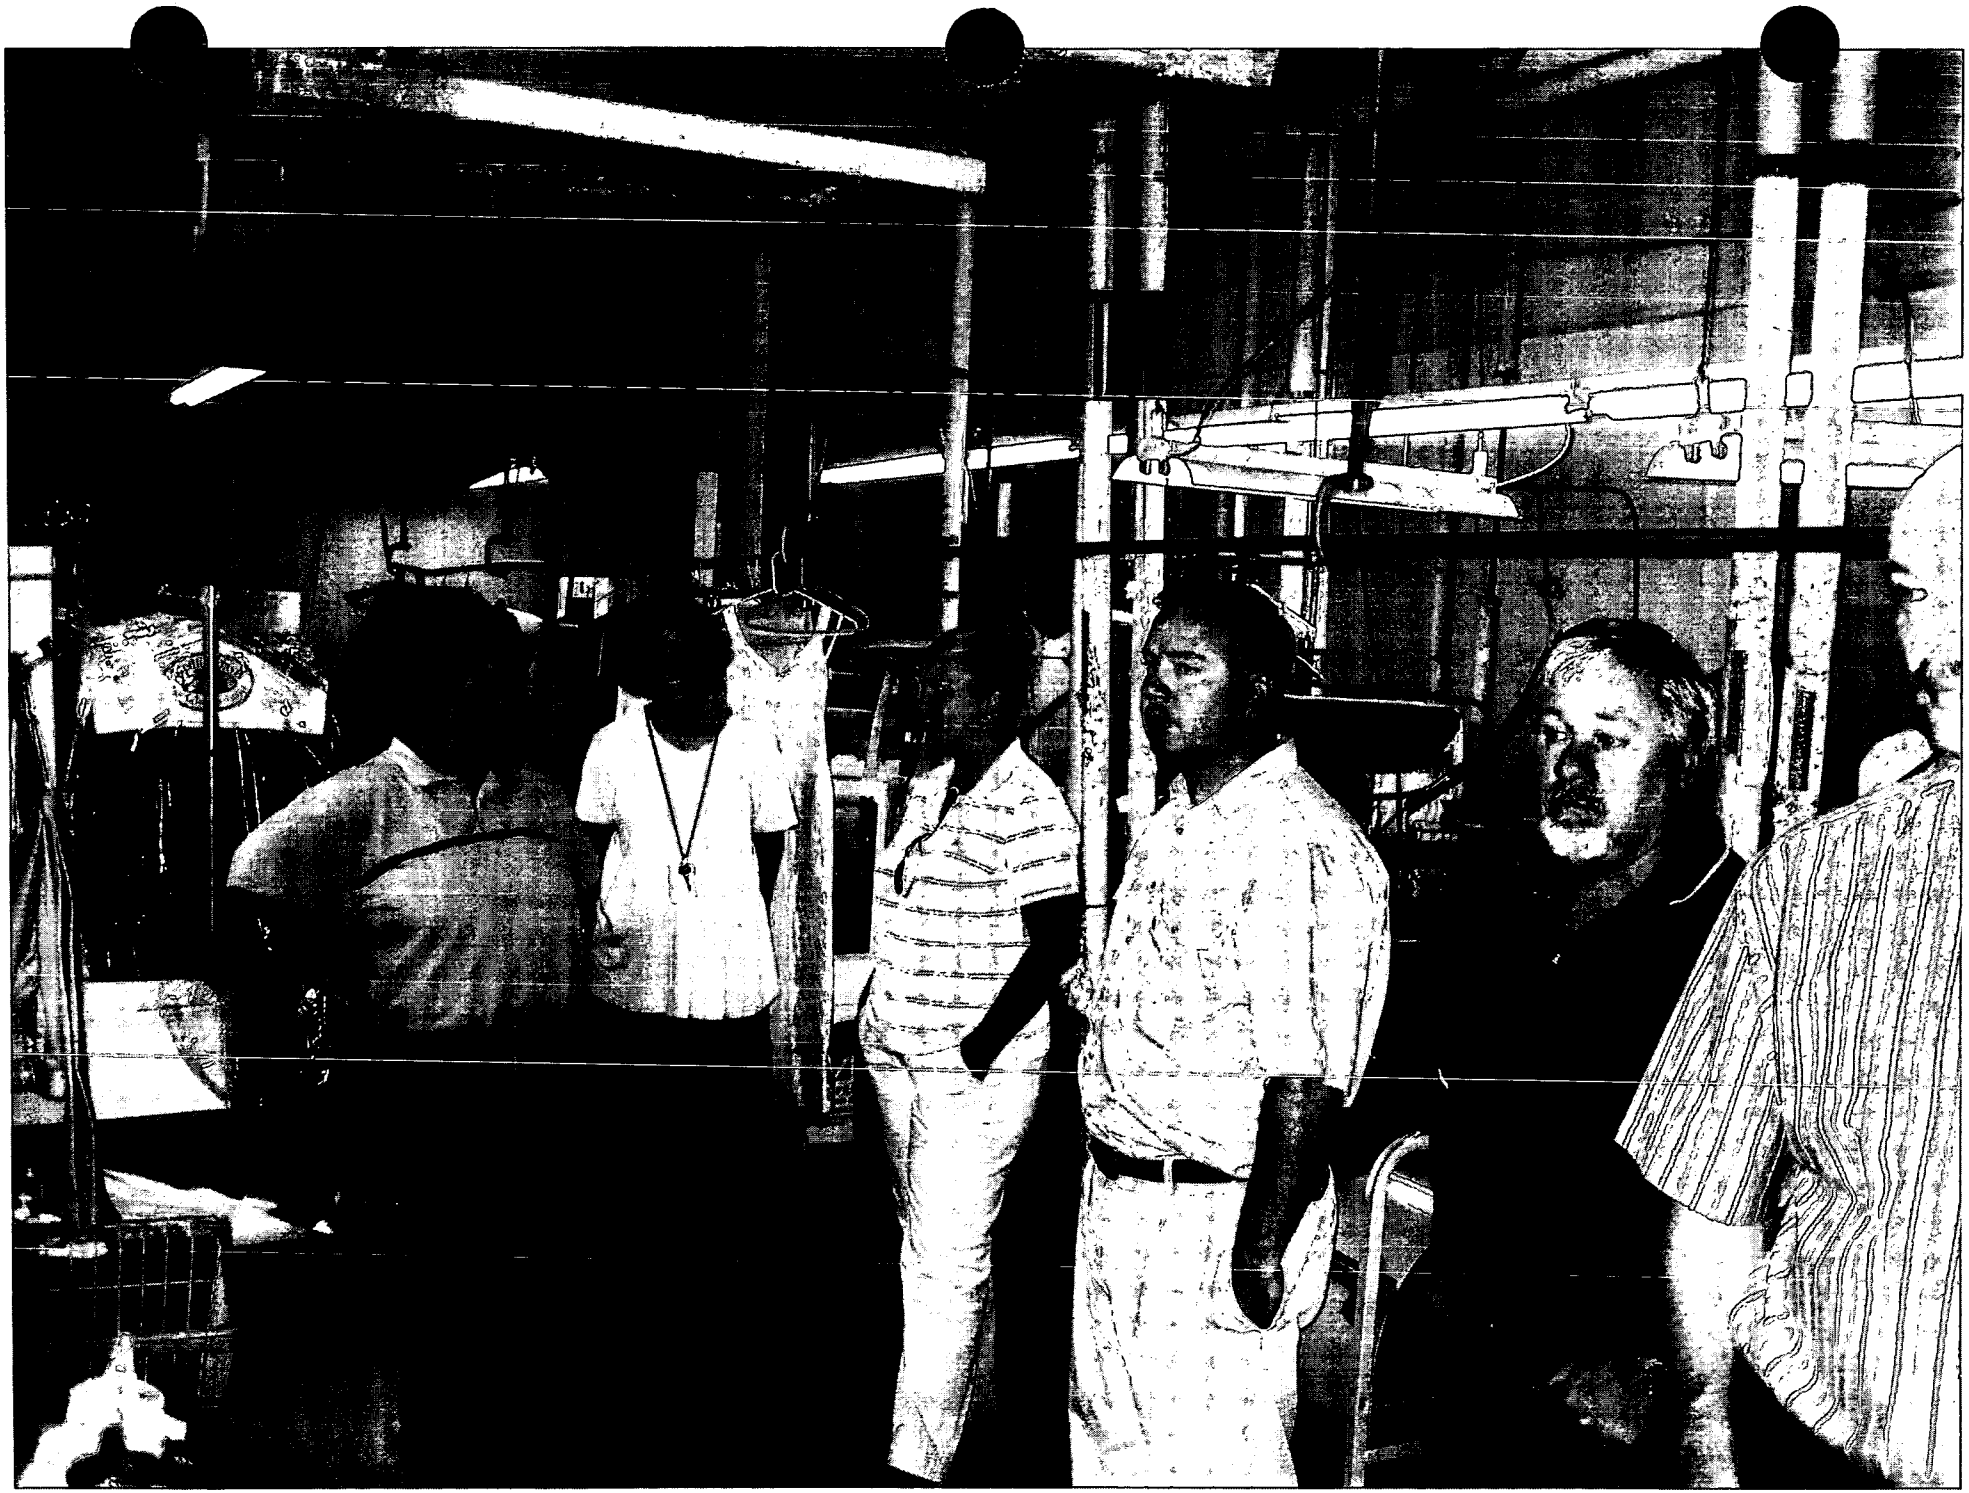
DSCA PROGRAM HIGHLIGHTS

Chris Edwards
Vice-President
North Carolina Association of Launderers
and Cleaners

EXHIBIT P

Key Success Factors



- Protect the environment for future generations.
  - Minimum Management Practices

Minimum Management Practices

- Proper handling of hazardous waste and records must be maintained.
- Spill containment under equipment and waste drums. Floor drains must be sealed off.
- All new equipment must meet minimum guidelines and federal NESHAP rules
- Closed container delivery of solvents required
- UST's cannot be used for solvents or waste

Key Success Factors

- Protect the environment for future generations.
  - Minimum Management Practices
  - Inspections and compliance assistance

Key Success Factors

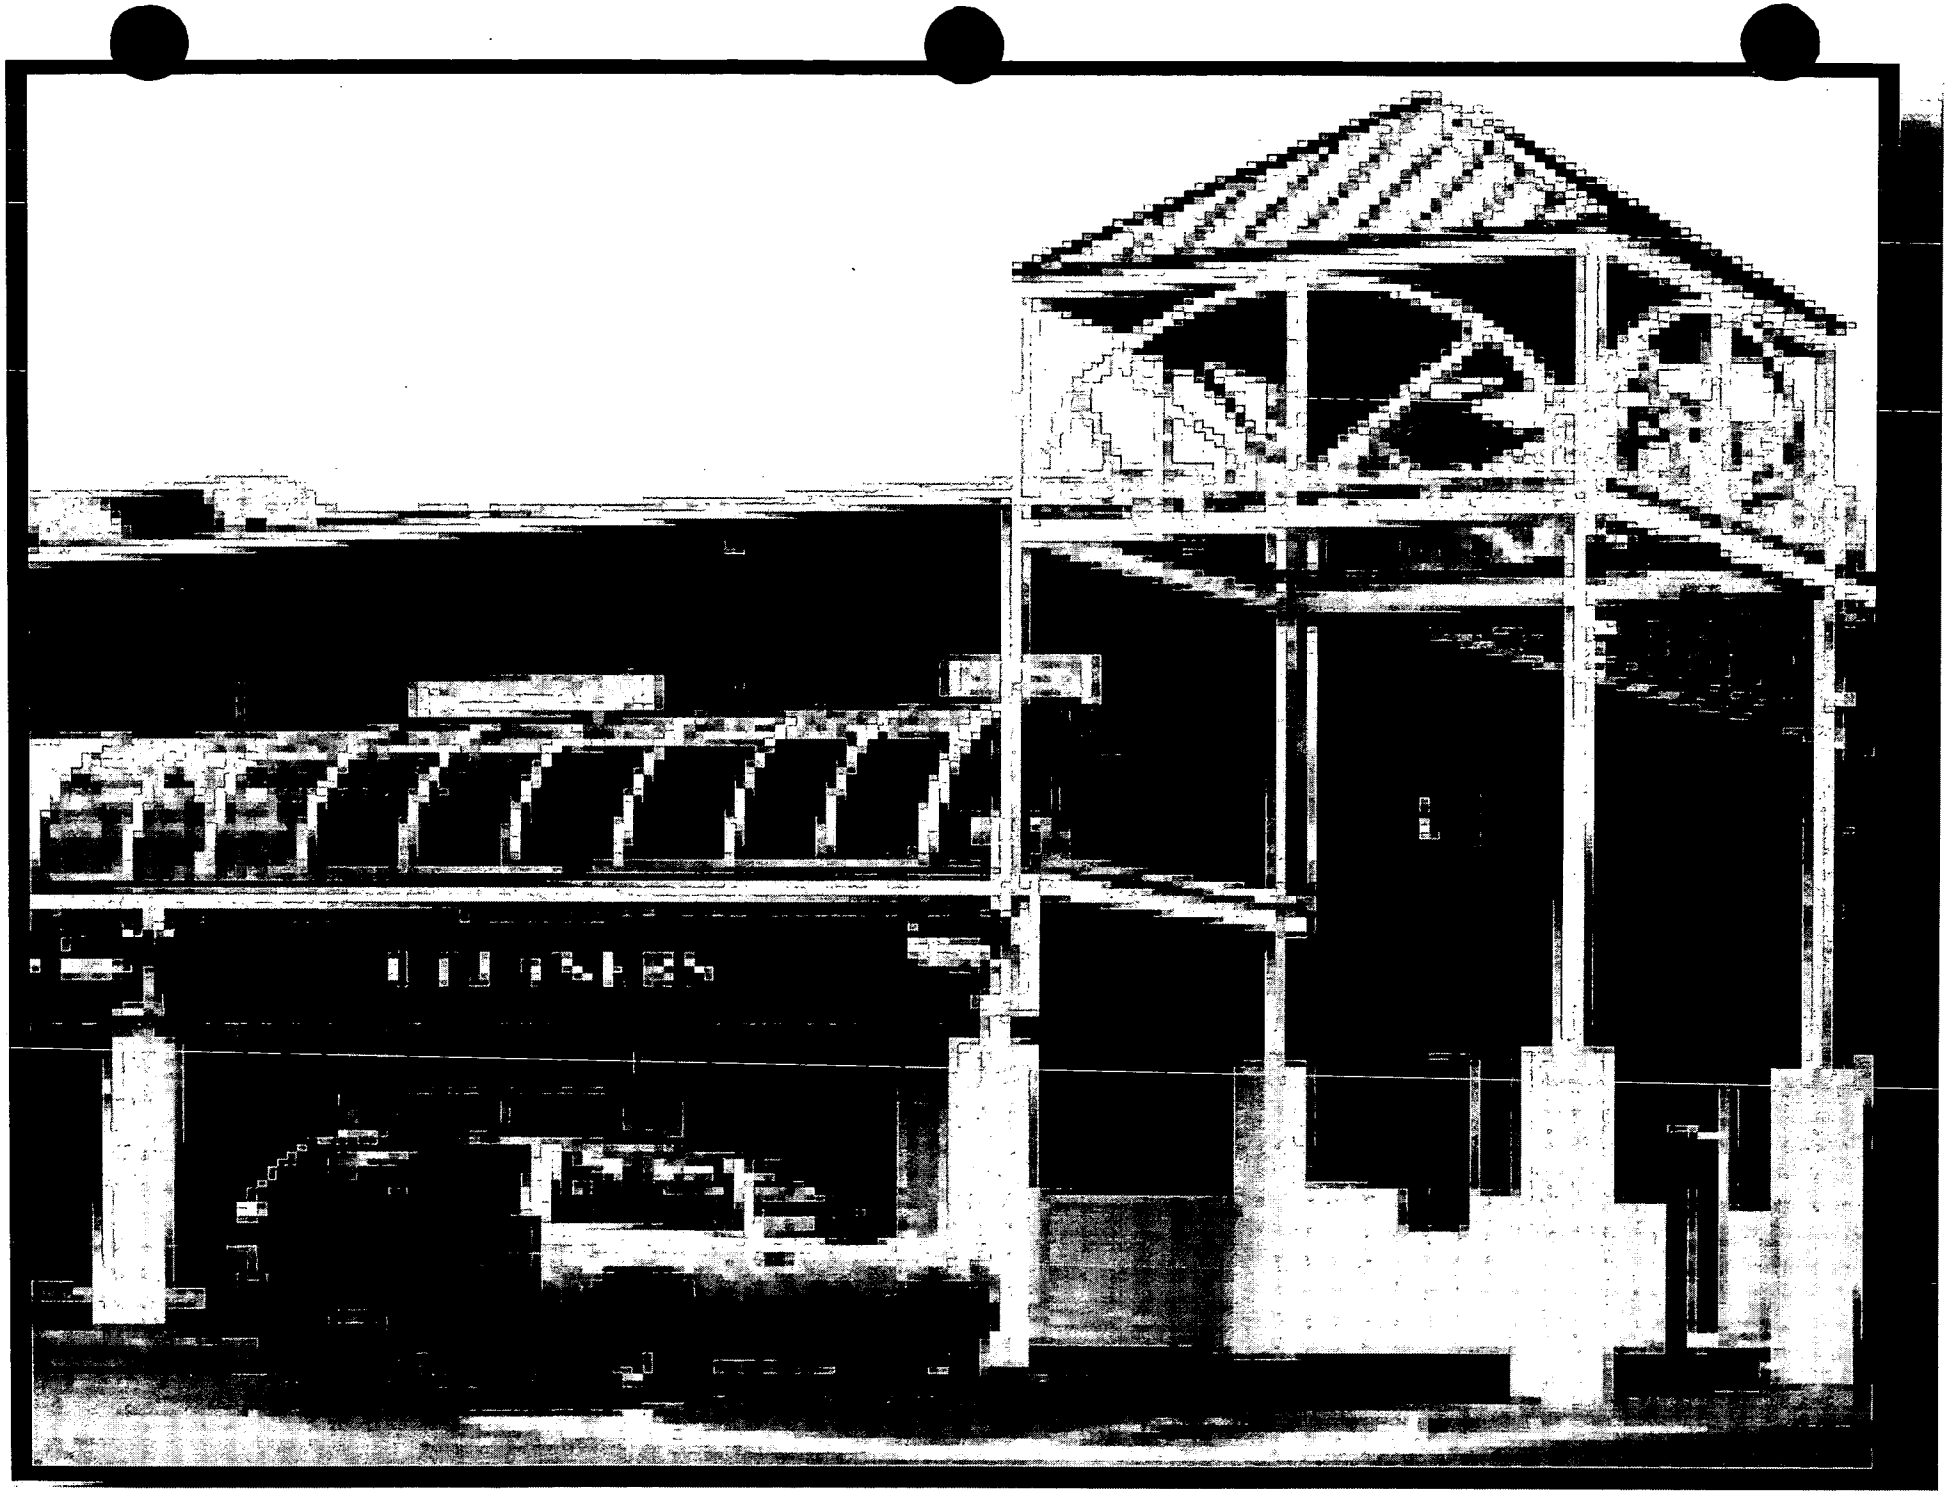
- Protect the environment for future generations.
  - Minimum Management Practices
  - Inspections and compliance assistance
- Clean up of contaminated sites
  - Exhibit A

Exhibit A

- $2,500,000 has been spent to begin the cleanup process on 103 sites. This has helped 126 property owners and 72 dry cleaners. Also benefiting from this program are neighbors, shopping center owners, banks and other lending institutions.

- $1,700,000 has been spent to reimburse petitioners for past costs incurred after our law was passed but before state lead clean-up rules were in place.

Key Success Factors



- Protect the environment for future generations.
  - Minimum Management Practices
  - Inspections and compliance assistance
- Clean up of contaminated sites
  - Exhibit A
- Allow property transactions and re-development of contaminated sites
  - Exhibit B

Key Success Factors

- Shopping Centers re-financed, sold, or redeveloped with dry cleaning contamination
  - North Hills Mall – Raleigh
  - Kidds Hill Shopping Center - Raleigh
  - MacGregor Shopping Center - Cary
  - NorthRidge Shopping Center - Raleigh
  - Pleasant Valley Shopping Center – Raleigh
  - Stanton Square Shopping Center - Greenville

Exhibit B

- Cameron Village Shopping Center Sale
  - Medlin-Davis Cleaners 57 years
  - Contamination was found during due diligence
  - Site was entered into program
  - New owners and banks were satisfied
  - Sale went thru

North Carolina General Statutes
ARTICLE 12D.

Environmental Review Commission.

§ 120-70.41. Commission established.

The Environmental Review Commission is hereby established.

§ 120-70.42. Membership; cochairs; vacancies; quorum.

(a) The Environmental Review Commission shall consist of six Senators appointed by the President Pro Tempore of the Senate, six Representatives appointed by the Speaker of the House of Representatives, who shall serve at the pleasure of their appointing officer, the Chair or a Cochair of the Senate Committee on Agriculture, Environment, and Natural Resources or the equivalent committee, the Chair or a Cochair of the House of Representatives Committee on Environment and Natural Resources or the equivalent committee, the Chair or a Cochair of the Senate Committee on Appropriations – Natural and Economic Resources or the equivalent committee, and the Chair or a Cochair of the House of Representatives Committee on Appropriations – Natural and Economic Resources or the equivalent committee.

(b) The President Pro Tempore of the Senate shall designate one Senator to serve as cochair and the Speaker of the House of Representatives shall designate one Representative to serve as cochair.

(c) Except as otherwise provided in this subsection, a member of the Commission shall continue to serve for so long as the member remains a member of the General Assembly and no successor has been appointed. A member of the Commission who does not seek reelection or is not reelected to the General Assembly may complete a term of service on the Commission until the day on which a new General Assembly convenes. A member of the Commission who resigns or is removed from service in the General Assembly shall be deemed to have resigned or been removed from service on the Commission. Any vacancy that occurs on the Environmental Review Commission shall be filled in the same manner as the original appointment.

(d) A quorum of the Environmental Review Commission shall consist of nine members.

§ 120-70.43. Powers and duties.

(a) The Environmental Review Commission shall have the following powers and duties:

(1) To evaluate actions of all boards, commissions, departments, and other agencies of the State and local governments as such actions relate to the environment or protection of the environment, including but not limited to an evaluation of:

a. Benefits of each program relative to costs;

b. Achievement of program goals;

c. Use of measures by which the success or failure of a program can be measured; and
d. Conformity with legislative intent;

(2) To study on a continuing basis the organization of State government as it relates to the environment or to the protection of public health and the environment, including but not limited to:
a. Improvements in administrative structure, practices, and procedures;
b. Increased integration and coordination of programs and functions;
c. Increased efficiency in budgeting and use of resources;
d. Efficient administration of licensing, permitting, and grant programs;
e. Prompt, effective response to environmental emergencies;
f. Opportunities for effective citizen participation; and
g. Broadening of career opportunities for professional staff;

(3) To make any recommendations it deems appropriate regarding the reorganization and consolidation of environmental regulatory agencies and the recodification of statutes relating to the environment, including but not limited to:
a. Ways in which agencies may operate more efficiently and economically;
b. Ways in which agencies can provide better services to the State and to the people; and
c. Instances in which functions of agencies are duplicative, overlapping, incomplete in scope or coverage, fail to accomplish legislative objectives, or for any other reason should be redefined or redistributed;

(4) To review and evaluate changes in federal law and regulations, relevant court decisions, and changes in technology affecting the environment or protection of the environment;

(5) To review existing and proposed State law and rules affecting the environment or protection of the environment and to determine whether any modification of law or rules is in the public interest;

(6) To make reports and recommendations, including draft legislation, to the General Assembly from time to time as to any matter relating to the powers and duties set out in this section; and

(7) To undertake such additional studies as it deems appropriate or as may from time to time be requested by the President Pro Tempore of the Senate, the Speaker of the House of Representatives, either house of the General Assembly, the Legislative Research Commission, the Joint Legislative Commission on Governmental Operations, the Joint Legislative Utility Review Committee, or the Joint Select Committee on

Low-Level Radioactive Waste and to make such reports and recommendations to the General Assembly regarding such studies as it deems appropriate; provided that the Environmental Review Commission shall not undertake any study which the General Assembly has assigned to another legislative commission or committee.

(b) The Environmental Review Commission may continue the study of environmental agency consolidation and reorganization. The study of environmental agency consolidation shall include, but is not limited to:

(1) Monitoring the implementation of Session Laws 1989, c. 727;

(2) Evaluation of the organization, programs, and operation of the Department of Environment and Natural Resources;

(3) Evaluation of the organization, functions, powers, and duties of the components of the Department of Environment and Natural Resources, including boards, commissions, councils, and regional offices; and

(4) Recodification of the General Statutes relating to the environment and environmental agencies.

(c) In addition to its general powers and duties, the Environmental Review Commission shall have the following powers and duties with respect to hazardous waste management:

(1) To study the current and projected need for hazardous waste treatment, storage, and disposal capacity in the State in light of anticipated generation of hazardous waste and alternatives for hazardous waste treatment and disposal;

(2) To evaluate the potential for the development of additional hazardous waste treatment, storage, and disposal capacity by the private sector;

(3) To study the necessity for and scope of hazardous waste treatment, storage, and disposal facilities which are sited, owned, or operated by the State;

(4) To review progress in securing a volunteer county to host a hazardous waste treatment facility;

(5) To study incentives and compensation for the community which hosts, either voluntarily or involuntarily, a hazardous waste treatment facility, including any additional incentives and compensation which may be needed, whether there should be differential compensation for a volunteer county, options for use of funds by local governments, distribution of compensation among local governments, and methods of providing flexibility in the development of an incentives and compensation package for a particular local community;

(6) To review progress in developing interstate agreements for the treatment, storage, and disposal of hazardous waste;

(7) To assist in the development of cooperative, comprehensive regional approach to hazardous waste treatment and disposal;

(8),(9) Repealed by Session Laws 2001-474, s. 12.

(10) To study the capacity assurance requirement under the Comprehensive Environmental Response, Compensation and Liability Act of 1980, Pub. L. No. 96-510, 94 Stat. 2767, 42 U.S.C. 9601 et seq., as amended, and the Superfund Amendments and Reauthorization Act of 1986, Pub. L. No. 99-499, 100 Stat. 1613, as amended as it relates to the continued eligibility of North Carolina for remedial actions under Superfund;

(11) To study alternatives available to the State for dealing with hazardous waste and the ramifications of those alternatives; and

(12) To receive and evaluate reports of every State agency, board, and commission which has any power or duty with respect to hazardous waste management.

§ 120-70.44. Additional powers.

The Environmental Review Commission, while in the discharge of official duties, may exercise all the powers provided for under the provisions of G.S. 120-19, and G.S. 120-19.1 through G.S. 120-19.4. The Environmental Review Commission may meet at any time upon the call of either cochairman, whether or not the General Assembly is in session. The Environmental Review Commission may meet in the Legislative Building or the Legislative Office Building upon the approval of the Legislative Services Commission.

Notwithstanding any rule or resolution to the contrary, proposed legislation to implement any recommendation of the Environmental Review Commission regarding any study the Environmental Review Commission is authorized to undertake or any report authorized or required to be made by or to the Environmental Review Commission may be introduced and considered during any session of the General Assembly.

§ 120-70.45. Compensation and expenses of members.

Members of the Environmental Review Commission shall receive subsistence and travel expenses at the rates set forth in G.S. 120-3.1.

§ 120-70.46. Staffing.

The Legislative Services Officer shall assign as staff to the Environmental Review Commission professional employees of the General Assembly, as approved by the Legislative Services Commission. Clerical staff shall be assigned to the Environmental Review Commission through the offices of the Supervisor of Clerks of the Senate and Supervisor of Clerks of the House of Representatives. The expenses of employment of clerical staff shall be borne by the Environmental Review Commission.

§ 120-70.47. Funding.

From funds available to the General Assembly, the Legislative Services Commission shall allocate monies to fund the work of the Environmental Review Commission.

MINUTES
ENVIRONMENTAL REVIEW COMMISSION
3 May 2006

The Environmental Review Commission (ERC) met on Wednesday 3 May 2006 at 9:30 a.m. in Room 544 of the Legislative Office Building. Senator Clodfelter presided.

The following members were present: Senators Bingham, Clodfelter, Dorsett, Kinnaird, and Weinstein; and Representatives Gibson, Hackney, Harrell, Harrison, Hunter, and McComas. Mr. George Givens, Commission Counsel; Mr. Jeffrey Hudson, Assistant Commission Counsel; Ms. Jennifer McGinnis, Assistant Commission Counsel; Mr. Tim Dodge, Commission Analyst; and Ms. Dot Waugaman, Commission Clerk, were also present.

On 25 April 2006, notice was sent to members and interested parties via e-mail and regular mail. A copy of the notice of the meeting is included in the attachments to these minutes as **Exhibit A**. Copies of the agenda for the meeting and visitor registration sheets are included in the attachments as **Exhibits B** and **C**.

Senator Clodfelter welcomed the members and audience and recognized Mr. Givens for his comments. Mr. Givens reported that the planning meeting for this meeting was held on Thursday 27 April. He referred to the scheduled working group meetings on the agenda and announced the next scheduled meeting of the ERC, Monday 8 May, has been postponed until some time in the afternoon of Monday 15 May. A notice will be sent when a time has been set.

Senator Clodfelter recognized Dr. David Moreau, Chair of the Environmental Management Commission (EMC), to present quarterly reports from the EMC as to its operations, activities, programs, and progress for the period October 2005 through April 2006 (see **Exhibit D** for an outline of the report). Dr. Moreau said most of the work of the EMC for the past six months has dealt with issues of air quality, particularly the Clean Air Interstate Rule (in regard to mercury) (see **Exhibit E** for a chart showing emission caps with the Clean Smokestack Act and the Clean Air Interstate Rule), and the best available retrofit technology for the Class I areas (national parks). The EMC reviewed a couple of basin-wide reports and sent them to public hearing for final approval. They also sent a universal stormwater regulation out for public hearing. The Clean Air Institute Rule supplements the Clean Smokestacks Act. The primary effect of the Interstate Rule is to reduce the SO2 emissions from about 137,000 to 50,000 tons per year. There is a two-year time delay in the two sets of requirements. There is very little effect on nitrogen oxides from the Clean Air Interstate Rule.

The mercury rule has caused the EMC some difficulty. They have tried for months to put together a rule that would not draw polarized comments. Since that process was not successful they decided to send it to public hearing, listen to the comments and then make a decision. It was sent to public hearing with a range of possibilities from the floor (established in the federal rule that would require a 70 percent reduction to 90 percent reduction). Another alternative is to apply best available control technology on a case-by-case basis which would allow considerable flexibility in the way the regulations would be applied to individual sources. The regulations have been approved to go to public hearing in May. It will probably be Fall before the EMC gets back to discussing the report of the hearing officers.

Senator Bingham asked for a brief explanation of SO2, including its negative impact on the environment and how the reduction has been accomplished. Dr. Moreau answered the reduction would occur with the addition of scrubbers to the major coal-fired power plants. The adverse effects of SO2 include the environmental effect on vegetation, and acid rain that contributes to the death of trees in North Carolina's mountains.

Senator Clodfelter asked when companies will have to switch from having to target one rule to the other. Dr. Moreau replied it would be up to the power companies to decide. Their construction schedule will have to be tailored to suit the needs to meet both rules. The Clean Air Interstate Rule does not

replace the Clean Smokestacks legislation, but it does lower the cap on sulfur dioxide. Nitrogen oxide is a little more complicated because there is a also a seasonal limit that applies.

Mr. Givens asked if in addition to the stormwater rules there are only two other rules, both related to air quality, that are subject to legislative review in the 2006 session. Ms. Robin Smith, Deputy Secretary of the Department of Environment and Natural Resources (DENR), replied that that is correct. Two of the rules received ten objection letters. Mr. Givens added that he understands that all ten objection letters on each rule came from one source. He said that he anticipates that whether or not a bill is introduced, the rules will ultimately go through.

Senator Clodfelter asked if the EMC has decided on a schedule for consideration of the inter-basin transfer applications from the Catawba River for Concord and Kannapolis. Dr. Moreau replied the hearings have already been held, but very few people participated. After it was reported in the newspaper that not much objection had been raised, the EMC has heard a lot of objections. The EMC is publishing an environmental impact statement, which will probably be released next week. Upon its release, there will be an opportunity for public comment on the statement. The review period has been extended and a number of people contacted to assure that everyone who has an interest will have an opportunity to voice their opinions.

Senator Clodfelter recognized Mr. George Kapetanakis, Litter Program Coordinator, Office of Beautification Programs, Department of Transportation (DOT), to give a semiannual report on agency litter enforcement, litter prevention, and litter removal efforts (see **Exhibit F** for the report). Mr. Kapetanakis had anti-litter bags with educational materials handed out to each member of the Commission (see **Exhibit G**). He ended his presentation with a plea for each member to educate their families and others on the fact that it is not all right to litter. He also said that it was important for people carrying loads of trash in trucks cover them so articles do not fall out of the trucks.

Senator Clodfelter recognized Ms. Elizabeth Cannon, Chief, Hazardous Waste Section, Division of Waste Management, DENR, to give the annual report on the mercury minimization plan prepared by DENR in response to legislation passed in 2005, which requires the removal and recycling of mercury containing light switches in automobiles; and to propose changes to the program. The switches are located in the trunk and under the hood of cars. The mercury switches have not been installed in new cars since 2003. Estimates are that approximately one in every two scrapped cars has a mercury-containing light switch in it. The purpose of the program is to pull the mercury switches out of the cars before they are scrapped, shredded, and recycled into new steel. If the mercury from the scrapped cars is not removed, it goes into the steel mills and up the smokestacks as mercury emissions.

Ms. Cannon said it is estimated that in the first four years of the program, approximately 1,350 pounds of mercury will be removed from the environment. The automobile recyclers and scrap metal dealers will receive $5 for each switch that they remove. The status of implementation at the moment is that staff has been assigned and staff members are visiting sites across the state that either dismantle or shred cars. DENR is preparing outreach and educational programs to inform those who dismantle or shred cars about the program. They met with a group of stakeholders on 10 April to talk about some of the provisions in the current law that they would like to see changed during the upcoming session.

Ms. Cannon said that some technical changes to the bill would make it easier to implement and to track progress on pulling the switches out of the automobiles. The first technical change asked for concerns clearly designating who is responsible for packaging, shipping and recycling the switches once they are removed from the car. The change would clarify that the vehicle and scrap metal recyclers are responsible for packaging, labeling and shipping the switches off-site for recycling. Progress is being made at the federal level between the automobile makers, recyclers, the steel industry, the United States Environmental Protection Agency, and the state environmental commissioners who will adopt a voluntary program assigning to the automobile makers the responsibility for paying for that part of the program. The North Carolina recyclers will receive the $5 per switch and the automobile makers will pay the shipping costs. DENR is requesting language to allow that process to occur without having to make amendments to the law in the future.

The second change would clarify and expand slightly the reporting and record keeping requirements on the actual switches so there will be good checks and balances on who gets reimbursed how much money. Current law calls for tracking the number of vehicles recycled. DENR would like to add to the tracking requirements the actual number of switches removed from the scrapped vehicles. They would like to reduce the cycle of reporting to annually instead of quarterly to reduce the burden on the recyclers and on the Department and still achieve the goals of the program. In addition, for the national program being negotiated on the federal level, the number of switches EPA receives will be reported from North Carolina scrap metal and automobile recyclers to DENR, another check and balance on the number of switches being pulled from scrapped cars.

The third change has to do with clarifying DENR's enforcement authority, to make it clear they have civil enforcement authority. The bill currently gives them criminal enforcement authority, which they would like to retain, but they would also like to have the authority to conduct inspections and issue civil fines for violations that do not rise to the level of a criminal violation. They would also like some rule-making authority to govern the flow of funds between the Department and the recyclers.

The final request has to do with the effective date and the sunset date. The current law goes into effect on 1 July 2006. They would like to recommend a start date of 1 January 2007 to allow the General Assembly to pass the amendments to the bill before the program goes into effect, and also to allow the developments at the federal level to be finalized. The law calls for a sunset date of the year 2026. DENR would like to correspond the sunset date to the national program, which will probably be 2017. That date could be extended if it was found to be necessary.

Senator Clodfelter recognized Mr. Brock Nicholson, Deputy Director, Division of Air Quality (DAQ), DENR, to discuss results of air quality modeling related to the potential implementation of a low emission vehicle program in North Carolina that would require motor vehicles sold in this state to meet the same motor vehicle emissions standards as required for motor vehicles sold in California (see **Exhibit H** for a copy of his PowerPoint presentation). Mr. Nicholson began by explaining that NOx + Volatile Organic Compounds (sometimes called hydrocarbons) + sunshine = ozone. The major emission of concern is NOx (nitrous oxide). With the existing Federal Tier 2 tailpipe program, NOx emissions are projected to decrease from 800 tons per day statewide in 2006 to a little over 200 tons per day in 2018. The question to be answered by the model is how much better the environment would be if the California LEV II Program were adopted. The Clean Smokestacks Act also contributes to the decrease in NOx emissions.

The air quality model shows an improvement between 2002 and 2009 of 6-12 or 9-12 ppb (parts per billion) due to fleet turnover and other measures going into effect. The difference between 2002 and 2018 is expected to be 15 ppb better. DAQ used the year 2002 as a baseline year because there was a lot of detailed emissions inventory work done that year due to EPA requirements. Mr. Nicholson said if the state could realize a 15 ppb benefit over the broad region shown on page 4 of his PowerPoint presentation Exhibit H), and take today's highest measured value in the state of about 92 ppb, there would be an improvement of 77 ppb. That would be even better than the ambient air quality standard for protection of public health of 85 ppb.

Looking at NOx emissions, the model showed there was an excess of 600 tons on a typical summer day in 2004. In 2010, the model shows the level decreasing to 400 tons per day, and in 2020, to approximately 150 tons per day, due primarily to fleet turnover to cleaner cars. If North Carolina were to begin the CA LEV II program in 2010, the results would be the same as if the state stayed with the Federal Tier 2 Program. There would be a slight benefit in emissions reductions with the CA LEV II program in 2020, and a 10 percent difference in 2030. The model probably shows the maximum benefit expected because it assumes no California-certified vehicles in North Carolina; however, at least some cars sold in North Carolina are California-certified. Because of that, the difference in the outer years will probably be even smaller.

Senator Bingham asked about the future of biofuels. Mr. Nicholson said there is a lot of interest in biofuels. He went on to say that biodiesel has lower particle emissions from a diesel engine than from standard petroleum diesel fuel. There are advantages to North Carolina's agricultural economy to produce biofuels. He added that it is his understanding that NOx emissions presently are the same or a little lower in biofuels. Biofuels do make sense, particularly from the point of view of the greenhouse gas emissions. Senator Bingham asked about sulfur. Mr. Nicholson said sulfur is an issue in diesel fuel for a number of reasons. Taking the sulfur out of diesel fuel significantly reduces emissions of fine particles from the fuel. It also produces corrosion in engines. In gasoline, sulfur prohibits the converter from acting efficiently to reduce NOx emissions. The year 2006 is the phase-in year for getting sulfur out of both gasoline and diesel fuel. The federal program has done a good job of addressing the issue.

The model chart on VOC emissions is similar to the one on NOx emissions. Mr. Nicholson commented that 10 percent is a healthy number in terms of difference. It is 10 percent of the emissions expected to be in 2030, so it is about 10 tons out of 100 tons rather than 10 tons out of 650 tons. The model is based on an assumption that the fleet will be similar in 2030 to what we have now, and it does not assume we will be using alternative fuels. If non-carbon fuels will be used in the future, there will be a quite different result.

Senator Clodfelter complimented Mr. Nicholson and his staff on the quick turn around and the thoroughness of the work done to prepare the report.

Representative Harrison asked if Mr. Nicholson knew what states with the clean car standard are doing about enforcement. Mr. Nicholson said he had spoken with his counterparts in Washington and Oregon about the issue. They are just getting started and did not know how they would follow-up on the fleet average information they collected. Representative Harrison asked if there is a problem with availability of cleaner cars in states with clean car standards. Mr. Nicholson replied having stricter standards might be an impetus for auto manufacturers to provide more of the cleaner cars to the state.

Senator Clodfelter recognized Mr. Greg Dana, Vice President of Environmental Affairs for the Alliance of Automobile Manufacturers, who said hybrids are available any where in the country where the demand exists. He said he has not seen any difference in availability in states that have the California standards. He added that he had looked into a question from an earlier meeting and found that almost every 2006 car sold in North Carolina is California-certified. Most cars now are 50-state certified. Senator Clodfelter asked him to put that in writing for distribution to the Commission. Mr. Dana added that that situation may change in later years if the lawsuit in California fails and the greenhouse gas regulations go into effect, because California-certified cars would be very different from current California-certified cars.

Mr. Givens asked if there is any evidence that it has been necessary to withhold certain types of vehicles from the market in order for states to meet the fleet average. Mr. Dana replied they cannot currently sell diesel-powered vehicles in California states, because of different emissions standards between the federal and California programs.

Senator Clodfelter asked Mr. Nicholson if his modeling assumed the application of a North Carolina fleet average, or was the assumption that every car sold in North Carolina would be California-certified. Mr. Nicholson said they did assume that every car sold would be California-certified, starting in 2010, and that the fleet average was enforced.

Senator Clodfelter recognized Mr. Michael Douglas, Regional Engineer, Public Water Supply Section, Raleigh Regional Office, DENR, to speak about the water quality testing requirements for public water supply systems (see **Exhibit I** for a copy of his remarks, and **Exhibit J** for a copy of a report from August 2005 showing the test results for various tests run at the R. M. Johnson Water Plant in Raleigh).

Representative Hackney asked if the testing is different depending on the knowledge that the water once was effluent. Mr. Douglas replied that the testing is set up based on the need and the final results to meet the safe drinking water standard on a daily basis. The tests are run to see if the water

quality has changed from day to day. He added that there is a book entitled *Rules Governing Public Water Supply*, which lists over 100 parameters that are tested for on a routine basis. Mr. Douglas asked Mr. Michael Hicks of the Raleigh Regional Office to answer some more specific questions. Mr. Hicks said systems are required to run "total organics" on a monthly basis from samples of the raw and treated water and compare them. He added that they look for various organisms based on need. The treatment plants are designed to provide multi-barriers: some for coagulation and sedimentation, and others to take out the organics such as pesticides that come from upstream. Tests are run annually on the finished water and if a problem is found, they go back to the source water to identify the pollutant. The facility is set up to take care of all the contaminants in a conventional system. There are 56 legally enforceable limits with organics. New rules look more at the raw water sources. Mr. Hicks said the normal treatment of the water through the barriers of disinfection take care of the known problems in the water supply. Water treatment plants are designed to handle anything that would make the water not safe for drinking.

Senator Clodfelter recognized Ms. Robin Smith, Assistant Secretary, DENR, to speak about issues related to the safety and quality of potable water delivered from private drinking wells in the State. The item was a follow-up to a presentation made in December of 2005 from the Division of Environmental Health on private drinking water wells. Public health professionals have identified a gap in drinking water protection in that there is no state-wide enforcement of well construction standards and water quality standards for private drinking water wells. The state does have well construction standards that have been adopted by the EMC, and DENR does enforce the standards for very large wells (ones that produce over 100,000 gallons a day), or those that are associated with public water systems, but there is no state enforcement of those standards for private well construction. Thirty-three counties have their own private well permitting programs. They do varying degrees of inspection. Of the 33 counties, 27 inspect the grouting on new wells, and 13 inspect the casings of new wells. Only one county requires any water quality testing before new wells are put into use. Most counties may offer, but do not require, water quality testing for new wells. Since the December 2005 meeting, the Department has worked on potential legislation to address the gap in the protection of public health and drinking water supplies. The legislation would create a state-wide permitting requirement for new construction of private water supply wells. It would be a means of enforcing existing well construction standards. DENR has been looking at how the program would be implemented, looking at a permitting system that is comparable to what is used for septic tanks systems for private residences. Local health departments issue permits for septic systems. Often the same residential development that requires a septic system will use a private water supply well.

Ms. Smith reported that stakeholders had met twice and have shared information by e-mail since December on the issue. The meetings included representatives from the Well Contractor's Association, the County Commissioners, the Homebuilders Association, various health and environment organizations in DENR, and the Department of Health and Human Services. They have discussed possible legislative proposals, but have not reached agreement. However, there was consensus that a need exists for consistent enforcement of the well construction standards. The area of disagreement was over the need for testing of new private wells and what type of testing would be beneficial. DENR is continuing to look at the best approach to address the issue. Local governments and county commissioners have concerns about their ability to deliver the program at the local level with the resources they have. They do have the ability to create fees to support the program, but there is concern that the fees might not be sufficient to cover their costs. The Department is looking at how resource concerns can be addressed. They are also discussing whether or not they need to test new wells for bacteria, and if so, how to do it in a way that does not create delays in the process of selling homes to new owners.

Senator Bingham asked about bacteria contamination in private wells. Ms. Smith replied that it usually happens in flooding conditions. DENR provides instructions to affected homeowners on how to disinfect their wells. She added that if there is a continuing source of bacterial contamination it might take more time and consideration to figure out how to solve the problem.

Representative Gibson asked if the Department has considered rule making if legislation passes. Ms. Smith said they have some good models for rule making because they have similar programs. Representative Gibson asked if there is a dollar figure for what implementation would cost. Ms. Smith

replied they are looking at working through existing local government programs to deliver the permitting and inspection services instead of delivering them from the state level. On the public health side, there are local public health departments. In the environmental programs, they typically deal with inspections departments. They do know local governments will need resources to add this program. Representative Gibson asked that whoever runs the program confer with local governments to determine how to provide the resources needed. He commented the legislature would need to have a lot of information about the incidence of problems. He expressed concern that the legislation might do more harm than good.

Mr. Givens observed that the proposed program falls between environment and health and brings up the problem once again of where environmental health belongs in the state organization. He raised the question about whether private drinking well enforcement should be a Commission for Health Services program or an Environmental Management Commission program.

Representative Harrison asked if information about wells would be disclosed to purchasers. Ms. Smith replied that results would have to be provided to the homeowner and the local health department. The basic approach would require some level of testing of all new wells, and testing of existing wells as ownership of the property is transferred.

Senator Clodfelter recognized Mr. Thomas Reeder, Chief, Wetlands and Stormwater Branch, Surface Water Quality Section, Division of Water Quality, DENR, to discuss recent amendments to the nutrient offset payment rule (see **Exhibit K** for a copy of his PowerPoint presentation). The members of the Joint Legislative Administrative Procedures Oversight Committee have determined there are no procedural issues involved under the Administrative Procedures Act, so it was decided to bring the substantive issues to the ERC.

After massive fish kills in the Neuse estuary in 1995, the Science Advisory Board determined that nitrogen was the cause. The General Assembly subsequently mandated a 30 percent reduction in the nitrogen load in the Neuse River. The mandate affected point source dischargers (wastewater treatment plants) and new development activities. The EMC set a stringent nitrogen limit on new development activities for a developer to receive a permit. If a developer had a problem meeting the limit, he could "buy down" to the limit. The money went into a pool managed by the Ecosystem Enhancement Program (EEP), and through a variety of contracting mechanisms, the money is pooled and a different site is mitigated to reach the mandated 30 percent reduction.

Representative Gibson asked if there were any complaints about the steep increase in price. Mr. Reeder replied that the only complaint they received during the public hearing process was from the Neuse River Compliance Association. However, after the rule went into effect, they heard many complaints.

Senator Dorsett asked if when the Tar-Pamlico river basin system wanted into the program, the fee was $57 a pound or $11 a pound. Mr. Reeder said the two issues (increase of fees and increase into the Tar-Pamlico river basin) were taken to public hearing at the same time. He reported that several members of the Tar-Pam community said they would be happy to pay $57 a pound to gain access to the program. Senator Dorsett said she would be interested to know if there are increases in the number of people who are volunteering for the program. Mr. Reeder said the EEP would have that information. He added that he believed with the increase in cost of buy downs, more people would find ways to mitigate the properties as they developed them.

Senator Clodfelter recognized Ms. Lisa Martin, Director of Regulatory Affairs, North Carolina Home Builders Association, to speak on the recent amendments to the nutrient offset payment rule. She introduced Mr. Tim Minton and Ms. Suzanne Harris with the Raleigh-Wake Home Builders Association who were in attendance with her.

Ms. Martin stated the Association's concerns about the fee. She said that SL 1995-572 gave broad latitude to EMC to reduce nitrogen, but did not specifically allow them to charge a fee. None of the enabling legislation authorizes the automatic multiplier that is now included in the fee. The fee will never

go thru rulemaking, but will increase automatically each year. Ms. Martin said she knows of no other state program in which the multiplier is in effect. The enabling legislation does not include administrative coasts, and those costs are in addition to the $57 fee.

The biggest issue the Home Builders have is the land cost per acre. The land cost includes the current property value in per acre of the property being developed based on the most recent county assessment. The Home Builders understand that DENR is using the land value plus the value of improvements, which would include infrastructure, buildings and other items already on the site. This way of determining the property value punishes redevelopment projects and increases the fee to the deal breaking point.

Senator Clodfelter commented that the program was set up to be a self-supporting voluntary program. If the fee cannot be set at a level to keep it self-supporting, there would have to be a request for an appropriation. Representative Gibson warned that if DENR set the cost too high, the benefits to the environment would be lost.

Senator Clodfelter suggested that redevelopment projects that do not increase the impervious area be treated differently. Mr. Reeder said that redevelopment is not held to the same standards as new development. The developers of redevelopment projects need to treat only the additional stormwater that was not treated under the original development. He also stated that the Department has sent out a notice to local governments that the land cost was to be based on unimproved land, and was not to include the cost of the improved infrastructure on the land.

Representative Gibson commented that the new fee is a 500 percent increase over the previous fee. He said many developers will decide to not do a project because it would be unprofitable. The state and local governments would lose out on property tax enhancements and on mitigation in an area where property could be encumbered for over 30 years. Ms. Martin said the EMC rule could impose the fee any where in the state that has a nutrient sensitive designation.

Senator Clodfelter recognized Ms. Mary Penny Thompson, General Counsel, Office of the Secretary, DENR, to speak about a potential legislative proposal on trout buffers for recommendation to the 2006 session. Ms. Thompson said a contested case before the Office of Administrative Hearings (OAH) in which the trout buffer provision of the Sedimentation Pollution Control Act was interpreted very narrowly. The provision that allows development to go forward in trout buffers was based on the standard of temporary and minimal. The interpretation made by the Administrative Law Judge has basically prohibited development or land disturbing activities in those trout buffers.

In response, DENR has held on to projects that have requested waivers of the trout buffer provision. It has highlighted the need to look back at the standard of temporary and minimal to see if it is working for the program by achieving the things they wanted it to do. Because trout streams are important to the environment, and provide several benefits, the Department recommends changing the standard to allow impacts in three categories: (1) when they are truly minimal, (2) when allowing for public infrastructure to go into place, and (3) when they are allowing for stream restoration. Under the truly minimal, it would be less than 10 percent of the entire disturbance of the buffer, so it would be less than 100 feet in 1000 linear feet. Public infrastructure would include development of roads, utilities, water and sewer. Additional restrictions would be placed to avoid, minimize, and restore impacts that would occur for the public infrastructure placement. In the third category, stream restorations would include those activities that enhance streams approved or funded by a public agency. The Department of Transportation and the Sedimentation Control Commission have approved the changes as outlined above.

Representative Hackney asked if there would be any trout left if they put the above legislation into place. Ms. Thompson replied that the temporary minimum has not stopped roads from going into place. The legislation would formalize the procedure whereby impacts would be avoided or minimized, and then restored. Senator Clodfelter commented that the proposal would not be temporary or minimal and it would take the protection out of the rule. Ms. Thompson said the legislation would allow only those

projects that provide public benefits. Strict prohibition of development in trout buffers would be a change in the standards but not a change in the status quo. Ms. Thompson said DENR has not talked with the Wildlife Resources Commission yet. Senator Clodfelter suggested the Wildlife Resources Commission discuss the proposal before the ERC does.

Senator Clodfelter recognized Mr. Givens for closing remarks. Mr. Givens said he has a list of 25 bills that will be subject to further adjustment before May 10 in consultation with the co-chairs. The list will be submitted to the Bill Drafting Division for bills to be drafted (in compliance with the request deadline), and the Research staff will prepare the bills for consideration at the next meeting on the afternoon of 15 May. ERC approval will be required for the bills to be considered during the short session.

Senator Clodfelter suggested any members who wanted legislation to be discussed and acted upon during the 15 May meeting speak to Mr. Givens.

The meeting adjourned at 12:35 p.m.

Senator Charlie Albertson, Co-Chair

Senator Daniel Clodfelter, Co-Chair
Presiding

Representative Pryor Gibson, Co-Chair

Dot Waugaman, Commission Assistant

Dot Waugaman, Commission Clerk

RE: **Notice of Commission Meeting**
Notice of Planning Meeting
Schedule of Future Meetings
Meetings of Interested Parties (605 Working Groups)
Additional Information

COMMISSION MEETINGS – 3 May and 8 May 2006:

The Environmental Review Commission (ERC) will meet at 9:30 a.m. Wednesday 3 May 2006 and at 9:30 a.m. Monday 8 May 2006 in Room 544 of the Legislative Office Building in Raleigh.

At the 3 May and 8 May meetings, the Commission will continue studies for which the Commission is responsible, hear reports from State agencies, discuss topics to be considered at future meetings, and attend to other matters. Listed below are potential agenda topics for the meetings. More specific information regarding the agendas for the 3 May and 8 May meetings of the Commission will be developed at the staff planning meeting discussed below.

POSSIBLE AGENDA TOPICS FOR 3 MAY AND 8 MAY 2006:

Air Quality:

1) Issues related to the implementation of a low emission vehicle program that would require motor vehicles sold in this State to meet the same motor vehicle emissions standards required for vehicles sold in California

Solid and Hazardous Waste Management:

2) Annual report on the mercury minimization plan prepared by DENR (G.S. 130A-310.57)

3) Semiannual report on agency litter enforcement, litter prevention, and litter removal efforts (G.S. 147-12(b))

Water Quality:

4) Annual report on the status of leaking petroleum underground storage tanks and the State cleanup funds (G.S. 143-215.94M)

5) Issues related to the safety and quality of potable water delivered from private drinking water wells in the State

6) Issues related to water, sewer, and stormwater infrastructure in the State and resources needed to maintain and upgrade the infrastructure systems

General/Miscellaneous:

7) Report on the operations, activities, programs, and progress of the Environmental Management Commission (G.S. 143B-282(b))

8) Issues related to actions available to governmental agencies to respond to violations and noncompliance by licensed environmental professionals and consultants

9) Consideration of legislative proposals for recommendation to the 2006 Regular Session of the General Assembly

10) Other matters related to the Commission's powers and duties under G.S. 120-10.43

PLANNING MEETING:

To facilitate development of the agenda for the 3 May and 8 May meetings of the Commission and to receive input from interested persons regarding the work of the Commission, the Commission Counsel will hold an informal planning meeting at **10:00 a.m. on Thursday 27 April 2006 in Room 605 of the Legislative Office Building**. Persons who wish to participate in the development of the agenda for meetings of the Commission, or who are interested in any matter before the Commission, are invited to attend.

SCHEDULE OF FUTURE MEETINGS:

The 2006 Regular Session is scheduled to begin at 12:00 noon on Tuesday 9 May 2006. The Commission may meet shortly after the beginning of the session to complete work and to consider any legislative proposals and recommendations.

The Commission may also meet at other times while the General Assembly is in session (G.S. 120-70.44). When the Commission meets while the General Assembly is in session, written notice will not be mailed to persons on the mailing list. Rather, notice will be given at a session of the Senate and House of Representatives as provided by G.S. 143-318.12(b) and will be distributed by email, if possible. The Commission will resume a schedule of regular monthly meetings following adjournment of the 2006 Session of the General Assembly.

MEETINGS OF INTERESTED PARTIES (605 WORKING GROUPS):

The Commission Counsel will hold meetings of interested parties on specific topics as indicated below:

Phase II Stormwater Management Working Group
10:00 a.m. Tuesday 2 May 2006 – 605 Legislative Office Building

Risk-Based/Limit Liability for Environmental Cleanups Working Group
2:00 p.m. Thursday 4 May 2006 – 605 Legislative Office Building

ADDITIONAL INFORMATION:

If you have questions related to the Commission, please feel free to contact the Commission Counsel or other Commission staff at (919) 733-2578.

AGENDA
9:30 a.m. Tuesday 3 May 2006
Room 544 Legislative Office Building
Raleigh, North Carolina

1. Call to order
   Senator Daniel G. Clodfelter, Presiding

2. Introductory remarks by Cochairs
   Senator Daniel G. Clodfelter
   Senator Charles W. Albertson
   Representative Pryor A. Gibson

3. Report to the Commission and explanation of agenda items
   George F. Givens, Commission Counsel

4. Quarterly reports by the Environmental Management Commission (EMC) as to its operations, activities, programs, and progress for the period of October 2005 through April 2006 (G.S. 143B-282(b))
   Dr. David H. Moreau, Chairman
   Environmental Management Commission

5. Semiannual report on agency litter enforcement, litter prevention, and litter removal efforts (G.S. 147-12(b))
   George J. Kapetanakis, Litter Programs Coordinator
   Office of Beautification Programs, Department of Transportation

6. Annual report on the mercury minimization plan prepared by the Department of Environment and Natural Resources (G.S. 130A-310.57); proposed changes to program
   Elizabeth W. Cannon, Chief
   Hazardous Waste Section, Division of Waste Management, Department of Environment and Natural Resources (DENR)

7. Discussion of the results of air quality modeling related to the potential implementation of a low emission vehicle program in North Carolina that would require motor vehicles sold in this State to meet the same motor vehicle emissions standards required for motor vehicles sold in California

   Brock M. Nicholson, Deputy Director
   Division of Air Quality, DENR

8. Discussion of the water quality testing requirements for public water supply systems

   Michael L. Douglas, Regional Engineer
   Public Water Supply Section, Raleigh Regional Office, DENR

9. Discussion of the issues related to the safety and quality of potable water delivered from private drinking water wells in the State

   Terry L. Pierce, Director
   Division of Environmental Health, DENR

10. Discussion of recent amendments to the nutrient offset payment rule (15A NCAC 02B .0240)

    Thomas A. Reeder, Chief
    Wetlands and Stormwater Branch, Surface Water Quality Section, Division of Water Quality, DENR

    Lisa D. Martin, Director of Regulatory Affairs
    North Carolina Home Builders Association

11. Discussion of the approval of plans for land-disturbing activity along waters that have been classified as trout waters by the EMC (G.S. 113A-57(1))

    Mary Penny Thompson, General Counsel
    Office of the Secretary, DENR

12. Overview of potential legislative proposals for consideration by the Environmental Review Commission for recommendation to the 2006 Regular Session of the 2005 General Assembly

    George F. Givens, Commission Counsel

13. Commission discussion and announcements

14. Adjourn

SCHEDULE OF FUTURE MEETINGS:

Please Note: The ERC will not meet on Monday 8 May 2006 as previously scheduled.

The ERC will tentatively meet in the late afternoon on Monday 15 May 2006 to consider legislative proposals for recommendation to the 2006 Regular Session of the General Assembly. Notice of the specific time and location of the meeting, or of an alternate meeting date if necessary, will distributed by email and as provided below.

The Commission may also meet at other times while the General Assembly is in session (G.S. 120-70.44). When the Commission meets while the General Assembly is in session, written notice will not be mailed to persons on the mailing list. Rather, notice will be given at a session of the Senate and House of Representatives as provided by G.S. 143-318.12(b) and will be distributed by email, if possible. The Commission will resume a schedule of regular monthly meetings following adjournment of the 2006 Session of the General Assembly.

OTHER MEETINGS:

The Commission Counsel will hold meetings of interested parties on specific topics as indicated below:

Phase II Stormwater Management Working Group
10:00 a.m. Monday 8 May 2006 – 605 Legislative Office Building

Risk-Based/Limit Liability for Environmental Cleanups Working Group
2:00 p.m. Monday 15 May 2006 – 605 Legislative Office Building

ADDITIONAL INFORMATION:

Persons having questions about the Commission meeting or other matters related to the Commission may contact Commission Counsel or other Commission staff at (919) 733-2578.

REPORT TO THE ENVIRONMENTAL REVIEW
COMMISSION ON ENVIRONMENTAL MANAGEMENT
COMMISSION ACTIVITIES

Second and Third Quarters 2005-2006

Agenda Item: Hearing Officer's Report on Banking and Trading of Emission Reduction Credits Rules and Air Toxic Rules

Agenda Item: Hearing Officer's Report on Various Air Quality Rules

Agenda Item: Request to Proceed to Public Hearing on Clean Air Interstate Rules

Nitrogen oxides

1. annual : 62,183 tons for 2009-2014 and 51,819 tons for 2015 and each year thereafter;
2. ozone season : 28,392 tons for 2009-2014 and 23,660 tons for 2015 and each year thereafter;
3. annual SO_2: 137,341 tons for 2010-2014 and 96,319 tons for 2015 and each year thereafter.

Agenda Item: 05-33 Request for Permission to take Draft Water Conservation Rules to Public Hearing

Agenda Item: Request for Approval of the Final Cape Fear River Basinwide Water Quality Plan

Agenda Item: Request for Approval of the Final New River Basinwide Water Quality Plan

Agenda Item: 05-38 Hearing Officer's Report on Amending Rule 15A NCAC 2L .0115(c), (n) and (o) (Risk-Based Assessment and Corrective Action for Petroleum Underground Storage Tanks).

Agenda Item: Request to Proceed to Public Hearing with the Proposed Reclassification of the Entire Watersheds of All Creeks that Drain to the North Shore of Fontana Lake Between Eagle and Forney Creeks (including Eagle and Forney Creeks) in Swain County (Little Tennessee River Basin) and Request for Waiver of the EMC's 30-day By-laws Rule

Agenda Item: Annual Progress Reports on the Tar-Pamlico and Neuse Agriculture Rules

Agenda Item : 05-45 Request to Proceed to Public Notice and Hearing with Proposed Rules for the Universal Stormwater Management Program (USMP)

Agenda Item: Request to Proceed to Public Hearing on Best Available Retrofit Technology Rule

Agenda item: Request to Proceed to Public Hearing on Amendments to Various Air Quality Rules

Agenda Item: Request to Proceed to Public Hearing on Clean Air Mercury Rules

Agenda Item: Request to Proceed to Public Hearing with the Proposed Reclassifications for the North Fork First Broad River in Rutherford County (Broad River Basin) to Class Outstanding Resource Waters (ORW), and Two Segments of the Broad River in Cleveland, Polk, and Rutherford Counties (Broad River Basin) to Class Water Supply IV (WS-IV) and WS-IV CA (Critical Area)

Agenda Item: City of High Point Special Order by Consent Hearing Officers Report and Recommendation

Agenda Item: Request for Approval of Reports to the Environmental Review Commission in Accordance with Senate Bill 981

Agenda Item : Request to Proceed to Public Hearing with Proposed Amendments to Surface Water Quality Standards in Accordance with the Clean Water Act 2004-2006 Triennial Review

Agenda Item:

Request to Proceed to Public Hearing with a Proposed Trout Reclassification of a Portion of the Catawba River in Burke County

Agenda Item: Request for an Interpretive Ruling to Clarify a Component of the Stormwater Rules and Session Law 2004-163

Litter Report 2005

This report is prepared pursuant to Session Law 2001-512, Sections 9 and 10[1] and provides information describing the outcome of North Carolina's 2005 anti-litter campaign.

The state's 2005-litter prevention campaign brings together three components:

- Litter cleanup
- Education/prevention
- Enforcement

Executive Summary

At the beginning of 2005, North Carolina had 78,844 road miles of which the North Carolina Department of Transportation maintained. That's an increase of 229 state maintained miles versus that of 78,615 miles in 2004. In 2005 as in previous years, the state experienced severe weather from Hurricane Ophelia, which negatively impacted litter cleanups in eastern counties of North Carolina, and Hurricane Katrina, which brought fuel shortages that limited government vehicle usage.

In 2005, more than 10.2 million pounds of roadway litter were removed from 171,345 shoulder miles. This amount does not include items such as automobile components, construction and other miscellaneous debris that are too large or too heavy to fit into the trash bags. The expenditures associated with roadside litter cleanup were more than $16.3 million.

The NCDOT, its Office of Beautification Programs and other state agencies collectively supported statewide anti-litter initiatives. The other agencies include the Departments of Correction, Crime Control and Public Safety, and Environmental and Natural Resources.

Anti-litter education/prevention activities continued. The Office of Beautification Programs promoted and supported litter prevention projects through various channels. These channels are enhancements to its Internet homepage, participation on various statewide organizational boards, promoting anti-litter information at conferences and the N.C. State Fair, and providing anti-litter promotional items to a multitude of local organizations. It also aired an anti-litter radio campaign through the North Carolina News Network during February and March of 2005.

The number of charges for littering violations increased from the previous year. A 2005 recap from the Administrative Office the Courts shows the number of charges and convictions by offense code, by county and by law enforcement agency. In addition, the Conference of the District Court Judges continued to provide an alternative to first time offenders charged with littering of less than 15 pounds. This alternative allows first time offenders a means of waiving a court appearance by paying a fine. This was adopted by the Conference of Chief District Court Judges on Sep. 29, 2004 and applied to any new offenses as of Dec. 1, 2004.

[1] See Attachment A - page 36

Statewide Roadside Litter Cleanup 2005

North Carolina Department of Transportation

The North Carolina Department of Transportation maintains 78,844 state roadway miles. It has built relationships with other agencies, local governments, citizen volunteers and other organizations/industries in order to provide safe, environmentally sound and aesthetically clean roadsides. Examples include the Adopt-A-Highway program volunteers, an alliance with the Department of Correction, participating on organizational boards such as N.C. Keep America Beautiful, Inc., N.C. Big Sweep and working with the N.C. Soft Drink Association.

NCDOT Adopt-A-Highway Program

The NCDOT through its Office of Beautification Programs continues to administer the AAH program. Citizens of North Carolina continued to support local roadside litter cleanup by adopting a two-mile stretch of roadside and volunteering their time to pick up litter. It's a partnership endeavor between community volunteers and the NCDOT. The volunteers are primarily made up of individuals and school, civic, business, professional, religious and social groups.

The AAH program is a fine example of state government working with citizens to improve the cleanliness of roadsides across North Carolina. To assist with the local AAH roadside adoption, the NCDOT has 58 AAH Coordinators who oversee the adoption process within their assigned counties. The program cost $280,045 in 2005 versus $351,875 in 2004. This cost includes items for administration, sign installation/removal, bag retrieval and other miscellaneous cleanup supplies, i.e. bags, gloves and safety vests. There were 6,921 man-hours charged to this program.

In 2005, the AAH program continued to have some 6,000 groups who had adopted approximately 12,000 roadside miles. The volunteer cleanup efforts of the AAH program saved the state's taxpayers more than $3.8 million dollars in cleanup costs in 2005, and over the last three years, the AAH program has provided cumulative savings of more than $11 million dollars in roadside litter removal costs.

Annual Comparison of AAH program Taxpayer Savings:

	Hours Worked	Cleanup Cost Savings
2005	362,080	$3.8 million
2004	388,064	$4.2 million
2003	326,776	$3.2 million

When it comes to the amount of litter collected, the actual pounds are higher than what was reported by AAH groups. As mentioned previously, some litter is not accounted for because it is too large or too heavy to fit into the bags.

Annual Comparison of the amount of litter collected through the AAH program:

Year	Total Pounds Collected Statewide by Adopt-A-Highway Groups
2005	3,677,440
2004	3,795,040
2003	3,649,360

Of the 3.7 million pounds collected, the AAH groups recycled 248,320 pounds as follows: 81,960 lbs. of metal, 81,760 lbs. of glass and 84,400 lbs. of plastic.

The NCDOT also sponsored Litter Sweep, its biannual roadside litter cleanup. Litter Sweep is typically held the last two weeks of April and September. Volunteers on a statewide basis are asked to contribute their time for roadside litter removal. During Litter Sweep, the NCDOT provides volunteers safety vests, gloves and bags for roadside litter cleanups. It also provides additional manpower for litter cleanup as well as picking up filled bags for immediate disposal.

NCDOT and Department of Correction

As in previous years, the NCDOT alliance with the DOC is critical in keeping roadside litter to a minimum on many heavily traveled routes throughout the state. This alliance makes it possible to have 1,360 inmates performing litter pick up on a daily basis (weather permitting). Here is the breakdown and description of the inmate crews:

104 Medium Custody Eight-man Road Squads

- Armed DOC staff is required to supervise these inmates (two officers to eight inmates).
- NCDOT total cost of DOC for medium custody inmate labor was $10,000,000. Approximately 82% of all medium custody inmate labor were spent on litter pick-up.
- An additional $77,347 was expended for support cost related to working with DOC officers on work assignments.

66 Minimum Custody Highway Work Crews.

- Correctional officers supervised minimum custody inmates (one officer per eight inmates).
- Assigned primary responsibility for removing litter from major highways statewide.
- The labor cost for these crews is $1,300,000 that the NCDOT transfers to the DOC.

Minimum Custody Road Squads

- NCDOT staff, trained by the DOC, supervised minimum custody inmates.
- Inmate labor was billed at $1 per day per inmate for litter cleanup. In 2005 there were 17,082 man-days at a charge of $17,082.
- NCDOT spent and additional $220,140 for support - supervision and transportation costs.

117 Governor's Community Work Program (CWP) crews.

- Through this program, a correction officer supervises a crew of up to 10 minimum-custody inmates on short-term, manual labor projects for local governments and state agencies.
- These crews are dedicated to litter pick up during Litter Sweep.
- There is no charge for this labor.

During the 2005 spring and fall Litter Sweeps, the NCDOT picked up 691,065 pounds of litter versus 491,805 pounds in 2004, and expended approximately 26,105 man-days of its employees and inmates

for picking up litter on 19,065 highway miles. The amount of litter picked up during the 2005 spring and fall Litter Sweeps by the DOC inmates was 2,262,585 pounds versus 2,421,915 pounds in 2004. Fuel shortage prevented litter pickup after Hurricane Katrina for six weeks.

NCDOT and DOC Inmate Litter Sweep Roadside Cleanup Comparison:

Year	Pounds Collected
2005	2,953,650
2004	2,913,720
2003	2,579,091

Community Service Work Programs Litter Control Efforts, Calendar Year 2005

The Community Service Work Program was established as a grant funded initiative in the early 1980's. During 1983 it was established as a program through the Safe Roads Act. Effective January 2002, CSWP was transferred from the Department of Crime Control and Public Safety to the Division of Community Corrections through legislative action. CSWP is a separate program from the Division of Prisons inmate work crews. Offenders in CSWP are not incarcerated but are ordered to perform community service work hours as a condition of either supervised or unsupervised probation, depending on the criminal offense committed and history of the offender.

DCC community service coordinators place offenders at government or non-profit agencies within the local community to perform work needed by the agency. During 2005, there were 3,700 agencies statewide that maintained agreements with the community service staff to place offenders, and have their information entered into the new CSWP automated system for information and records. Many of the agencies focus on litter control or participate in the NCDOT Litter Sweep. Offenders perform a variety of work, including general labor, skilled labor, clerical, and professional level assignments.

For calendar year 2005, there were approximately 179,309 hours worked. There was 3,227,565 pounds of litter removed. Approximately 11% of the general labor work hours were focused on litter control efforts.

CSWP Annual Roadside Litter Cleanup Comparison:

Year	Pounds Collected
2005	3,227,565
2004	3,026,730
2003	3,222,675

The DOC inmate crews and the CSWP litter pickups are performed separately and independently of one another. The pounds of litter reported above represent the litter pick up efforts of each separately.

2005 Roadside Litter Pick Up Summary - NCDOT, AAH, DOC and CSWP

Roadside Litter Cleanup Recap and Comparison:

Departments and Other Groups	Pounds of Litter Picked Up by Year		
	2005	2004	2003
NCDOT *	691,065	491,805	455,490
DOC *	2,262,585	2,421,915	2,123,601
CSWP**	3,227,565	3,026,730	3,222,675
AAH**	3,677,440	3,795,040	3,649,360
Other volunteers *	365,280	400,620	382,590
Sum of Pounds	10,223,935	10,136,110	9,833,716

* Litter Sweep (only) litter pick up amount
**Annual litter pick up amount

NCDOT 2005 Disbursements:

NCDOT Disbursement Recap By Year			
	2005	2004	2003
NCDOT Employees	$4,457,575	$3,410,517	$3,328,699

Department Of Environmental and Natural Resources

Division of Parks and Recreation 2005 Litter Cleanup Summary

Summary Statement: During 2005, most of the state parks hosted some type of litter cleanup. More than 2,300 bags of trash along with large items such as tires and appliances were collected from roadsides, trails and waterways in or near state parks. Estimated weight of all litter collected in 2005 is more than 60 tons.

Merchants Millpond and New River State Parks received grants this period that provided funding to greatly expand their litter cleanups. As a result, 19 tons were removed from property surrounding Merchants Millpond and 13 tons from the banks of the New River and its tributaries.

Litter Cleanup Efforts – Total for the Year of 2005

Park Name	Dates of Litter Pickups	# of Volunteers and/or Staff	# of Bags, or # of Man-Hours	# of Pounds	Other
Carolina Beach	10-01-05 11-12-05 12-18-05 12-20-05 various other dates	11 volunteers 7 volunteers 1 staff 3 staff 8 CSWs	12 bags 7 bags 2 bags 9 bags 20 bags		
Cliffs of Neuse	Total for Jan-June Total for July-Dec.	volunteers and CSWs volunteers and CSWs	10 bags 12 bags		Gave 7 programs on litter/pollution
Crowders Mountain	Each weekend	2 seasonal staff; 2 CSWs; various park volunteers	415 bags of roadside litter for the period		Instituted new litter control program at trail heads
Dismal Swamp	No activity this period				
Elk Knob	July – Dec 2005	4 staff and volunteers	40 bags	4,720 lbs	
Eno River	10-01-05 (Clean Sweep) Various dates	23 volunteers 3 staff	9 bags; 80 hours ----------	---------- 2,000 lbs est.	
Falls Lake	Various Dates	One volunteer picked up trash all over the park and went to the dump on his own.		Estimated weight is 300 lbs for the period.	
Fort Fisher	Weekly litter pickups	CSWs and staff	110 bags for 2005		
Fort Macon	No activity reported				
Goose Creek	1-29-05 4-10-05 4-30-05 6-17-05 8-26-05 10-20-05 11-19-05	3 volunteers 6 volunteers 15 volunteers 41 volunteers 1 volunteer 2 volunteers 12 volunteers	1 bag 1 bag 32 bags 2 bags 1 bag 2 bags 29 bags; 1 tire	Not weighed	Gave 4 programs this period on recycling and pollution

Litter Cleanup Efforts – Total for the Year of 2005

Park Name	Dates of Litter Pickups	# of Volunteers and/or Staff	# of Bags, or # of Man-Hours	# of Pounds	Other
Gorges	Jan. 24-27, 2005 March 28 & 29, 2005 May 7 & 14	8 inmates 12 inmates CSWs	200 bags of trash for this period	+ furniture, appliances, construction trash, etc.	
Hammocks Beach	06-04-05 9-15 to 10-02-05	14 volunteers 10 staff; 4 seasons	56 man-hours 441 man-hours	Estimated 1,200 lbs 4 tons estim.	Huggins Island cleanup with NC Coastal Fed. Hurricane Ophelia cleanup
Hanging Rock	4-16-05 06-07-05 various dates July – Dec 2005	22 REI volunteers 15 students Junior Rangers, others Staff & 6 volunteers	20 bags 5 bags 10 bags 110 bags	+ 2,000 lbs and other larger items not weighed	
Jockey's Ridge	05-04-05 and various other dates during Hurricane season	5 staff and 14 inmates	35 bags total	+ 2,500 lbs of floating debris	Gave "Recycled Regatta" programs using the trash
Jones Lake	1-12-05 2-20-05 2-26-05 3-25-05 3-26-05 5-08-05 various dates July-Dec.	One CSW (community service worker) on each date Park staff	5 bags 3 bags 2 bags 9 bags 4 bags 4 bags 6 bags		
Jordan Lake	4-16-05 4-22-05 May 05 6-11-05 8-19-05 10-10-05 10-22-05 11-26-05 12-28-05	Park volunteers	15 bags; 4 tires 12 bags; 2 buoys 10 bags 27 bags 8 bags; 3 tires 5 bags; 1 tire 2 bags 6 bags & other 2 bags		Cleanups were held at Parkers Crk, New Hope, Seaforth, Ebenzer and Haw River
Kerr Lake	10-01-05 (Clean Swp)	67 volunteers	38 bags	760 lbs est.	Satterwhite Point & Bullocksville
Lake James	Total for period	BRIDGE and park staff	100 bags		Cleanup of newly acquired shoreline area
Lake Norman	Weekly pickups	CSWs and staff	100 bags; 50 man-hours	150 lbs estimated	

Litter Cleanup Efforts – Total for the Year of 2005

Park Name	Dates of Litter Pickups	# of Volunteers and/or Staff	# of Bags, or # of Man-Hours	# of Pounds	Other
Lake Waccamaw	2-19-05 3-29-05 4-23-05 weekly 8-26-05 10-01-05 10-15-05	UNCW volunteers CSW Boy Scout Project Staff 14 scouts 95 Clean Sweep vol. 12 UNC-W volunteers	15 bags 6 bags 5 bags 4 bags 16 bags 42 bags 15 bags		Gave 10 ed. programs on how litter affects water quality

The above information describes the Division of Parks and Recreation litter cleanup efforts in 2005. Estimated weight of all litter collected in 2005 is more than 60 tons. During 2004, approximately 200 litter cleanups were held across the state park system, beyond the normal daily maintenance carried out by staff, versus 120 litter cleanups in 2003. A total of 20,000 pounds of trash was collected in 2004 versus 17,500 pounds in 2003.

It should be noted that the category of Other Recycled is showing a large increase from last year. This is primarily due to the Cliffs of the Neuse State Park recycling of 15,020 pounds of scrap wood and 14,980 pounds of old wood fencing. The Cliffs of the Neuse State Park recycled a total of 35,406 pounds that includes the scrap wood and metal.

The Division of Parks and Recreation Recycling Recap:

Number of Pounds Recycled by Year			
Item	2005	2004	2003

Paper	11,006	9,250	5,350
Other	48,632	15,420	16,427
Totals	76,377	38,541	34,760

Other Statewide Litter Cleanups

North Carolina Big Sweep

North Carolina Big Sweep is a 501(c)(3) nonprofit organization whose mission is litter-free watersheds. Since its inception (19 years ago), it has recruited almost 220,000 Big Sweep volunteers who have retrieved more than 7.5 million pounds of debris from North Carolina's environment.

The 2005 fall cleanups posed a challenge with higher gas prices and travel restrictions. In addition, coastal counties that conducted their cleanups on the weekend after the statewide cleanup date had to deal with Hurricane Ophelia as it slowly trudged up North Carolina's coastline. In spite of these challenges, Big Sweep had more volunteers participate in 2005 than in the previous two years. Thirteen counties broke their all-time record for volunteer participation. These record-breaking counties were Columbus, Cumberland, Forsyth, Gaston, Greene, Henderson, Jackson, Nash, Orange, Pitt, Randolph, Rockingham, and Surry counties. Thirty-three other counties experienced an improvement in volunteer participation from the previous year. The results by county of the 2005 Big Sweep cleanups are shown below.

In addition to the cleanups in 2005, Big Sweep volunteers were out in their communities teaching children and adults about the harmful effects of littering. Some Big Sweep County Coordinators were able to have weekly columns in their local newspapers, which helped to keep the littering problems in the forefront of people's minds. Big Sweep educational exhibits were displayed at numerous festivals, conferences, and other events. A new bilingual *Splish Splash* teacher activity book about the harmful effects of marine debris was published and distributed statewide for teachers of kindergarten through third grades. More information can be found through its Web site at www.ncbigsweep.org.

North Carolina Keep America Beautiful

North Carolina Keep America Beautiful, Inc. is a nonprofit public education organization dedicated to enhancing the natural beauty of North Carolina communities, improving waste handling practices and empowering individuals to take greater responsibility for improving community environments. N.C. KAB is comprised of local, independent affiliates located in communities all across North Carolina.

The N.C. KAB Affiliates participated in the 2005 Great American Cleanup™. This annual cleanup runs from March to the end of May. The volunteers worked on a number of projects such as picking up litter, removing debris, used tires, abandoned mobile homes and junk cars, eliminating illegal dumps, restoring playgrounds and planting trees, flowers and bulbs. There were 42,905 volunteers that expended more than 92,593 hours in these various initiatives, and overall saved the state's taxpayers in equivalent labor costs through all their volunteer efforts. The reported amount of litter picked up during their N.C. Great American Cleanup was 1,033,574 pounds.

Volunteers by N.C. KAB Affiliate - All Projects:

Anti-Litter Education/Prevention – 2005

Department of Environmental and Natural Resources

Division of Pollution Prevention and Environmental Assistance

In the summer of 2005, DPPEA rolled out a new campaign called RE3 to increase recycling participation among those 18-34 years of age. The campaign had cinema ads airing in 22 counties. There is also a new slate of six commercials airing on TimeWarner, Cox and Charter cable throughout the state – these can be found on-line at RE3.org/flicks.htm.

Workshops were held throughout the state for local government and college recycling coordinators and environmental educators. All attendees received REact, a complete guide to social marketing and increasing recycling participation. REact can be found online at RE3.org/coordinators.htm along with campaign give-a-ways. Local governments across the state also received truck ads to display on their recycling trucks.

In addition to the workshops, the RE3 crew traveled around the state to festivals, setting up an RE3 booth to publicize the benefits of recycling. The RE3 campaign along with its sponsors TimeWarner, Sobe and Surfcamp solicited participants to enter a contest drawing, which brought attention to the importance of recycling. While registration occurred at the RE3 booth, contest partners used cinema ads, television commercials, and displays in Lowe's Foods to direct participants to register to win at RE3.org.

In addition, RE3 and a recycling message also appeared on 4.5 million Mountain Dew cans across the state in June. The sponsors selected three winning entrants. Two winners won a trip to the ESPN X-Games in LA and a third won a week at Surf Camp on the coast of North Carolina.

The commercials, cinema ads, posters, truck ads, REact resource book and other campaign items can be viewed on-line at www.RE3.org. This site also contains a public face dispelling myths and answering common questions such as, "What's in it for me?" RE3.org also has an entire section dedicated to recycling coordinators.

Division of Parks and Recreation

Litter Prevention: During 2005 there were 25 educational programs on litter, recycling and pollution were presented to students and the general public during this period. Crowders Mountain and New River State Parks also installed wayside exhibits to educate the public about litter. These park staffs reported that the exhibits were successful in encouraging visitors to pick up litter. Park trails were visibly cleaner as a result. Most of the state parks have recycling stations and encourage park visitors to recycle aluminum, paper, glass and plastic items rather than just toss them into the trashcans.

Division of Marine Fisheries – N.C. Marine Patrol

Marine Patrol officers actively pursued litter violations along the waterways and highways of North Carolina along with their normal patrol duties.

Officers cleaned up coastal waters during this period by removing abandoned fishing gear and abandoned crab pots. This year's cleanup was very successful and there was less debris to pick up unlike prior years.

N.C. Wildlife Resources Commission

The Division of Engineering Services maintains 196 boating access areas and 38 public fishing access areas across the state. Approximately 3,190 hours was spent policing and removing litter from these sites. "Littering is Illegal" signs are maintained on all sites.

The Division of Wildlife Management reports 171 hours of general litter pick-up on game lands across the state. The Division of Enforcement Officers participated in numerous public service announcements pertaining to the proper disposal of lawfully taken wildlife.

NCDOT - Office of Beautification Programs

During 2005 the Office of Beautification Programs continued to place emphasis on enhancing its Web site in promoting anti-litter education. Currently the Union County - Yes! Yes! We Can Stop Littering Campaign and the Gaston County 2005-2006 Beautification and Environmental Education Programs are provided in their entirety. The intent of this site is to be a resource for educators in need of classroom curriculum material. The information can be found at the Office of Beautification Programs homepage at www.ncdot.org/~beautification through the NCDOT Anti-Litter Efforts link. The curriculums can be downloaded for classroom usage.

In addition, the Office of Beautification Programs provided a variety of educational materials for schools, civic groups and others. This included anti-litter stickers, decals, pencils, car litterbags, temporary tattoos, leaflets and Swat-A-Litterbug cards. Other links/items available through its Web site include the litter law, Swat-A-Litterbug, Adopt-A-Highway, Litter Sweep, printable activity pages - *Litter Activity Book* with lessons and activities for second and third grades and information about NCDOT's fight against litter.

The Office of Beautification Programs also distributed car litterbags in the tens of thousands through rest areas, welcome centers, the N.C. State Fair, Earth Day and upon request to numerous groups.

Annual Litter Prevention Awards Contest: The NCDOT, along with the Office of the Governor and the N.C. Beverage Association, sponsors the Annual Litter Prevention Awards Contest. Eligible categories are as follows: Government Agencies, Schools/Youth Groups and Nonprofits. Each category offers first place prizes of $1,000 and second place prizes of $500. Winners are posted to the Office of Beautification Programs Web site within the Litter Prevention Contest link.

Yes! Yes! We Can Stop Littering Campaign: Is an alliance between the Union County Rotary Clubs, the Union County Public School System, county charter and private schools, local businesses and the NCDOT to prevent littering. The overall purpose is to cultivate a cultural change in Union County to stop littering during a five-year period. The program is in its fifth year. It is estimated that 5,600 students participated in 2005. In previous years, there were 6,600 in 2004 and approximately 6,000 in 2003.

The objectives are to promote awareness and change attitudes, through enhancing pride in a clean environment, and create a positive action by citizens to prevent littering and polluting the environment. The Union County Rotary Clubs are the major drivers of this initiative with other

sponsors providing various assists as the program moved forward. The NCDOT Office of Beautification Programs for example, provided items as litterbags, stickers and tattoos with anti-littering messages, promotional pencils and plaques to support the "Yes! Yes! We Can Stop Littering Campaign."

Bus Placard Campaign: Litter prevention signage specifically for placement within transit area buses was created as a pilot program. The Raleigh Capital Area Transit (CAT) was the first to place two placards inside each of their 60 buses in November of 2004. The message content seeks everyone to assist in the fight against litter, states that cigarette butts are litter and that a fine of up to $1,000 can be given upon conviction. Fayetteville was the next city to pilot the placards.

The intent of the pilot was to stimulate litter prevention and inform that even the smallest of items, such as improperly discarded cigarette butts, are litter and that littering is a fineable offense. The placards were in either 11" x 17" format or 8.5" x 11" in English and Spanish in the quantity required specifically for each pilot program. These can be viewed on the Office of Beautification Programs Web site at www.ncdot.org/~beautification within the NCDOT Anti Litter Efforts link. There was no charge for the placards and no fee was charged for the inside bus space displaying the placard.

Radio Campaign: From February through March of 2005, there was a continuance of the litter prevention ad campaign that began in 2004. Due to the changing number of affiliate stations of the N.C. News Network, the total number of ads based on the number of affiliates left a shortfall of 2,370 ads. To deliver the ads promised, NCNN aired 40 ads on their Prime Network during Feb. and Mar. of 2005. This totaled 3,000 ads, which brought the total number of ads for the campaign to 19,470 up from 18,720. This extended period brought the estimated number of listeners from 1,463,200 to 1,494,600. The network was comprised of 80 affiliate stations and four Spanish speaking stations.

N.C. State Fair Booth: A teacher materials window was incorporated into the Roadside Environmental Unit's booth. Teachers were able to request teacher kits. The teachers were able to solicit litter prevention materials, such as Swat-A-Litterbug stickers and cards, don't be a litterbug temporary tattoos, litter law fliers and car litterbags. The car litterbags had "Stop the Littering" printed on one side along with the message "it could cost you...up to a $2,000 fine, community service work and a point on one's driver license." There were 335 kits mailed to teachers statewide with enough materials for more than 10,000 students.

Swat-A-Litterbug Program: In 2005, approximately 7,500 Swat-A-Litterbug letters were mailed to those observed littering – in 2004 more than 6,600 letters and in 2003 there were 6,000 letters mailed. The Office of Beautification Programs continues to administer the Swat-A-Litterbug program. Those observed littering can be reported to Swat-A-Litterbug on-line through the Office of Beautification Programs Web site at www.ncdot.org/~beautification or through the mail or calling *HP (State Highway Patrol) or by calling the NCDOT Customer Service Office at 1-877-DOT-4YOU.

The information required in a Swat-A-Litterbug report is the vehicle license plate number, time, date, street, city, county, and a description of the littering offense.

Swat-A-Litterbug is viewed as an educational tool, which informs those observed violating the litter law via a letter. The letters, which are signed by the Colonel of the State Highway Patrol, inform recipients of their littering, that littering is illegal and the penalties they could receive if convicted. Those submitting the license plate numbers are anonymous. There are no citations or warnings issued from these reports. The program is totally anonymous and no record is kept regarding who receives a letter.

Litter License Plate: As of this report date, there have been 466 litter plates issued. This number is up from 444 in 2004. The General Assembly approved the Litter Prevention license plate during the 2000 session. The initial 300 plates were sold in 2001 and the plate became available through the tag agencies by the beginning of 2002. Ten dollars of each plate sold is diverted to a "Litter Prevention Fund" on a quarterly basis. The money is used to help support other statewide anti litter efforts.

Litter Enforcement – 2005 Summary

Department of Crime Control and Public Safety

In 2005, the State Highway Patrol issued 708 tickets for littering. The State Highway Patrol also partnered with N.C. Department of Transportation. This past year the State Highway Patrol participated in the NCDOT Litter Sweep (biannual event) by focusing on ticketing individuals that either littered or failed to properly secure or cover their loads. Troopers issued more than 300 citations during the spring and fall Litter Sweep.

State Highway Patrol Recap of Litter Charges G.S. 14-399 and local ordinances:

Year	Number of Charges
2005	708
2004	681
2003	683

The Division of Motor Vehicle Enforcement Officers were transferred from the NCDOT to the Department of Crime Control and Public Safety State Highway Patrol in January of 2003. In the table below, the tickets issued for G.S. 20-116(g) violations represent the combined tickets issued by the State Highway Patrol and the DMV enforcement officers.

State Highway Patrol Recap of Improper Loading/covering of Vehicle G.S. 20-116(g):

Year	Number of Charges
2005	1,384
2004	1,164
2003	1,161

Division of Parks and Recreation

State park rangers wrote a total of 60 litter citations during 2005 versus 32 citations in 2004.

Division of Marine Fisheries - Marine Patrol

In 2005 the Marine Patrol officers issued 17 citations and 8 warnings for a total of 25 cases attributing 83 hours to this effort. In 2004, the Marine Patrol Officers issued 6 littering citations expending 69.5 hours.

Marine Patrol Citation Recap:

Year	Citations	Warnings	Time Spent
2005	17	8	83 hours
2004	6	0	69.5 hours
2003	5	4	54 hours

The N.C. Marine Patrol is still pursuing the removal of a sunken barge on the north side of the Beaufort Drawbridge in Town Creek. This is the last of the active felony littering cases from the last period and all other felony cases have been processed through superior court.

N.C. Wildlife Resources Commission

The Division of Engineering Services maintains 196 boating access areas and 38 public fishing access areas across the state. Approximately 3,190 man-hours were spent policing and removing litter from these sites. "Littering is Illegal" signs are maintained on the access areas.

The Division of Wildlife Management reported 171 hours and approximately 1,958 miles driven for general litter pick-up on game lands across the state.

In regards to the past Wildlife Enforcement litter reports, the Administrative Office of the Courts provides citation information for G.S. 14-399, as well as 113-264(a) and 75A-10(c). These are commonly used by officers for violations on game lands, access areas and waters of this state.

Wildlife Resources Commission Litter Charges Recap G.S. 14-399 and local ordinances:

Year	Charges
2005 *	751
2004 *	744
2003	646

* Includes G.S. 14-399, 113-264 (a), local ordinances and 75A-10(c).

REPORT ON LITTERING CHARGES AND CONVICTIONS

Pursuant to Session Law 2001-512, Section 9

February 1, 2006

This report provides detailed information on littering offenses for calendar year 2005.

Data on charges and convictions by county, the number of charges disposed, and the manner of disposition are provided for the following twelve offenses:

Offense Code		
4425	Improper Loading/Covering of Vehicle	§ 20-116(g)
5370	Commercial Littering	§ 14-399(e)
5371	Littering Hazardous Waste	§ 14-399(e)
5372	Littering not more than 15 pounds	§ 14-399(c)
5373	Littering more than 15 but less than 500 pounds	§ 14-399(d)
5374	Littering more than 500 pounds	§ 14-399(e)
5375	Unintentional Littering not more than 15 Pounds	§ 14-399(c1)
5376	Unintentional Littering more than 15 but less than 500 Pounds	§ 14-399(d1)
5377	Unintentional Littering more than 500 Pounds	§ 14-399(e1)
6248	Litter Gameland/Access Area	§ 113-264(a)
8514	Littering Beer/Wine Container	local ordinance
****	Litter State Waters/Inland Lake Waters	§ 75A-10(c)

STATEWIDE LITTERING CHARGES AND CONVICTIONS

Calendar Year 2005

The following data are from the AOC's Automated Criminal/Infraction System for calendar year 2005. The number of charges, convictions, and dispositions represents totals from district and superior court. Some of the defendants have other charges in addition to a littering offense. It is possible for a defendant to be charged in one calendar year and convicted in the next. Thus, for any given calendar year, the defendants convicted are not necessarily the same defendants charged in that year. There is not an offense code for GS 75A-10(c); this offense is designated by four asterisks.

			CHARGES BY CHARGING AGENCY									METHOD OF DISPOSITION

LITTERING CHARGES BY COUNTY BY AGENCY

Calendar Year 2005

The following data are from the AOC's Automated Criminal/Infraction System for calendar year 2005. The number of charges and convictions represents totals from district and superior court. Some of the defendants have other charges in addition to a littering offense. It is possible for a defendant to be charged in one calendar year and convicted in the next. Thus, for any given calendar year, the defendants convicted are not necessarily the same defendants charged in that year.

The numbers in bold represent county totals. County data include only the codes for which there were any charges or convictions. There is not an offense code for littering under NCGS 75A-10(c); this code is designated by four asterisks.

ATTACHMENT A: Session Law 2001-512, Sections 9 and 10

SECTION 9. The text of G.S. 147-12 is designated as subsection (a) of that section, and G.S. 147-12 is further amended by adding a new subsection to read: "(b) The Department of Transportation, the Department of Correction, the Department of Crime Control and Public Safety, the State Highway Patrol, the Wildlife Resources Commission, the Division of Parks and Recreation in the Department of Environment and Natural Resources, and the Division of Marine Fisheries in the Department of Environment and Natural Resources shall deliver to the Governor by February 1 and August 1 of each year detailed information on the agency's litter enforcement, litter prevention, and litter removal efforts. The Administrative Office of the Courts shall deliver to the Governor by February 1 and August 1 of each year detailed information on the enforcement of the littering laws of the State, including the number of charges and convictions under the littering laws of the State. The Governor shall gather the information submitted by the respective agencies and deliver a consolidated semiannual report on or before March 1 and September 1 of each year to the Environmental Review Commission, the Joint Legislative Transportation Oversight Committee, and the House of Representatives and the Senate Appropriations Subcommittees on Natural and Economic Resources."

SECTION 10. The first reports required to be delivered by the Department of Transportation, the Department of Correction, the Department of Crime Control and Public Safety, the State Highway Patrol, the Wildlife Resources Commission, the Division of Parks and Recreation in the Department of Environment and Natural Resources, the Division of Marine Fisheries in the Department of Environment and Natural Resources, and the Administrative Office of the Courts to the Governor under G.S. 147-12(b), as enacted by Section 10 of this act, shall be due February 1, 2002. The first report required to be delivered by the Governor to the Environmental Review Commission, the Joint Legislative Transportation Oversight Committee, and the House of Representatives and the Senate Appropriations Subcommittees on Natural and Economic Resources under G.S. 147-12(b), as enacted by Section 10 of this act, shall be due March 1, 2002.

- Discretionary signs (1995) - 20 per Highway Division (a total of 280)
- Rest Areas & Welcome Centers - 58
- Total Signs - 1,827

In addition to the "Keep NC Clean & Green" signs there are approximately 1400 "Littering Is Illegal" signs posted across the state. These were issued at a rate of 100 per Highway Division.

NCDAQ Analysis of CA LEV-II Vehicle Emissions Standards

Presented to the Environmental Review Commission

May 3, 2006

Brock M. Nicholson, P.E.
Deputy Director, NCDAQ

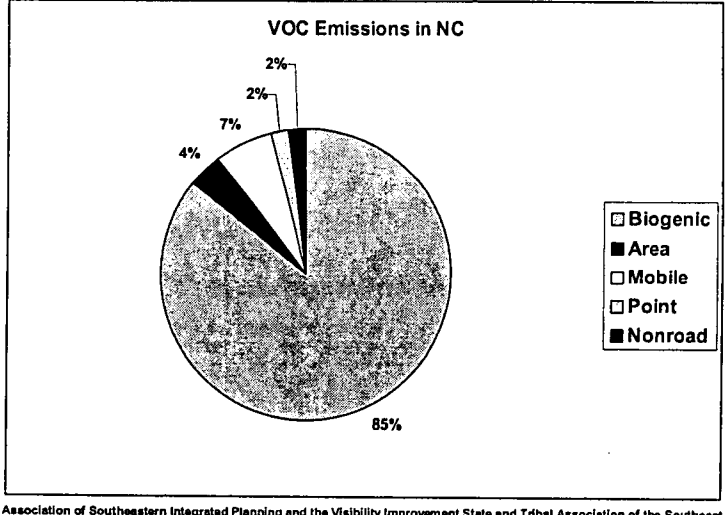
1

North Carolina Department of Environment and Natural Resources
Division of Air Quality

Outline

- Air Quality in North Carolina
- Review of Vehicle Standards
- CA LEV-II Project
- CA LEV-II vs. Federal Tier 2
  - NOx and VOC emissions benefits
  - Projected impacts on ambient air quality
- Fleet Averaging
  - Comparison of CA and NC fleets
- Resources
- Options/Next Steps

2



Air Quality - Ozone

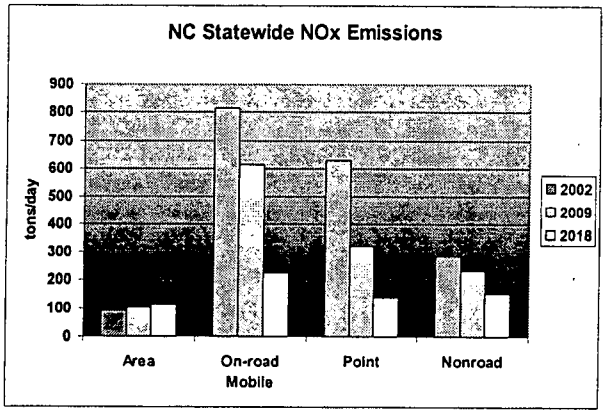
- All* areas of NC are attaining the 8-hr ozone standard except the Charlotte area
  *Triangle status pending USEPA approval
- Recall... NOx + VOC + sunlight = ozone
- NOx
  - precursor pollutant of concern in NC
  - majority of VOCs come from natural sources
- On-road mobile sources contribute significantly to the total NOx emissions in NC

3

VOC emissions

Typical Summer Weekday

Source: NCDAQ, Association of Southeastern Integrated Planning and the Visibility Improvement State and Tribal Association of the Southeast, Version BaseF4. 2009 estimates include all controls scheduled to be in place in 2009, including, but not limited to the NC Clean Smokestacks Act (point sources), Federal Tier 2 (on-road mobile sources) and the expanded NC Inspection and Maintenance Program (on-road mobile sources)



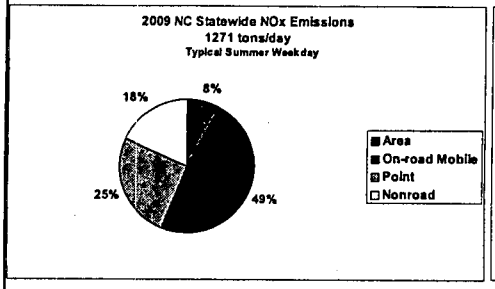
4

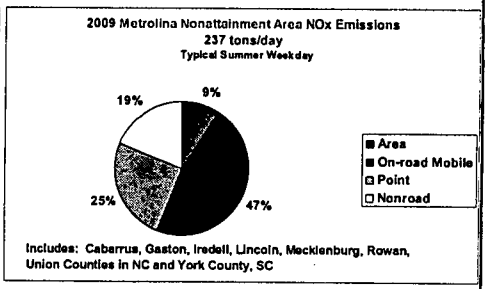
North Carolina Department of Environment and Natural Resources

Division of Air Quality

NOx emissions

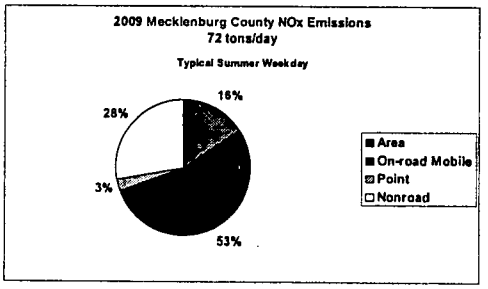
Typical Summer Weekday





Source: NCDAQ, Association of Southeastern Integrated Planning and the Visibility Improvement State and Tribal Association of the Southeast, Version BaseF4. 2009 estimates include all controls scheduled to be in place in 2009, including, but not limited to the NC Clean Smokestacks Act (point sources), Federal Tier 2 (on-road mobile sources) and the expanded NC Inspection and Maintenance Program (on-road mobile sources)

5



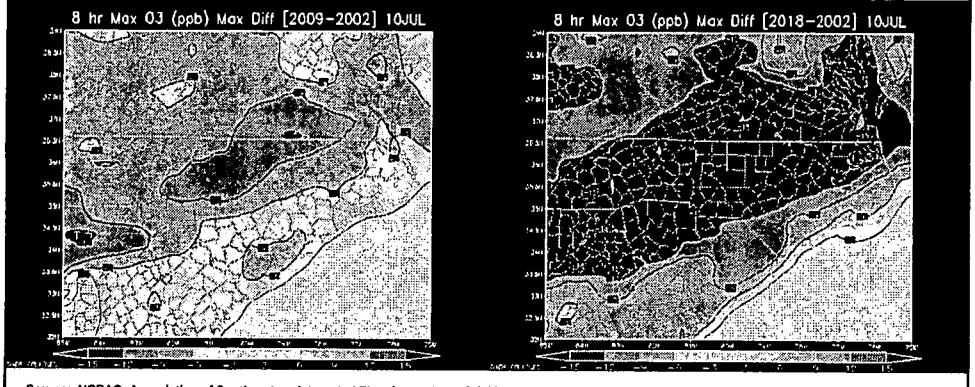
North Carolina Department of Environment and Natural Resources

Division of Air Quality

Includes: Cabarrus, Gaston, Iredell, Lincoln, Mecklenburg, Rowan, Union Counties in NC and York County, SC

Source: NCDAQ, Association of Southeastern Integrated Planning and the Visibility Improvement State and Tribal Association of the Southeast, Version BaseF4 2009 estimates include all controls scheduled to be in place in 2009, including, but not limited to the NC Clean Smokestacks Act (point sources), Federal Tier 2 (on-road mobile sources) and the expanded NC Inspection and Maintenance Program (on-road mobile sources)

6



North Carolina Department of Environment and Natural Resources
Division of Air Quality

Predicted Future Air Quality
Current Federal and State Rules

Example of expected ozone reductions between 2002 and 2009

Example of expected ozone reductions between 2002 and 2018

Scales are the same on both maps.
Purple indicates 8-hour ozone reductions greater than 15 ppb.

Source: NCDAQ, Association of Southeastern Integrated Planning and the Visibility Improvement State and Tribal Association of the Southeast, Version BaseF4

North Carolina Department of Environment and Natural Resources
Division of Air Quality

Vehicle Emissions Standards in the US

- Federal – Currently "Tier 2"
  - Adopted in 1999
  - Phased in 2004-2010
  - Fleet Average Requirement for NOx
  - Covers all States
  - Federal Clean Air Act (CAA) Section 209(a) "preempts" states from establishing separate standards
- California – Currently "CA LEV-II"
  - CAA Section 209(b) exempts California from the Sec 209(a) preemption
  - However, CA must obtain a waiver from USEPA for state standards to be effective
    - CA standards must be equal to or more stringent than the Federal standards
  - Fleet Average Requirement for VOC

8

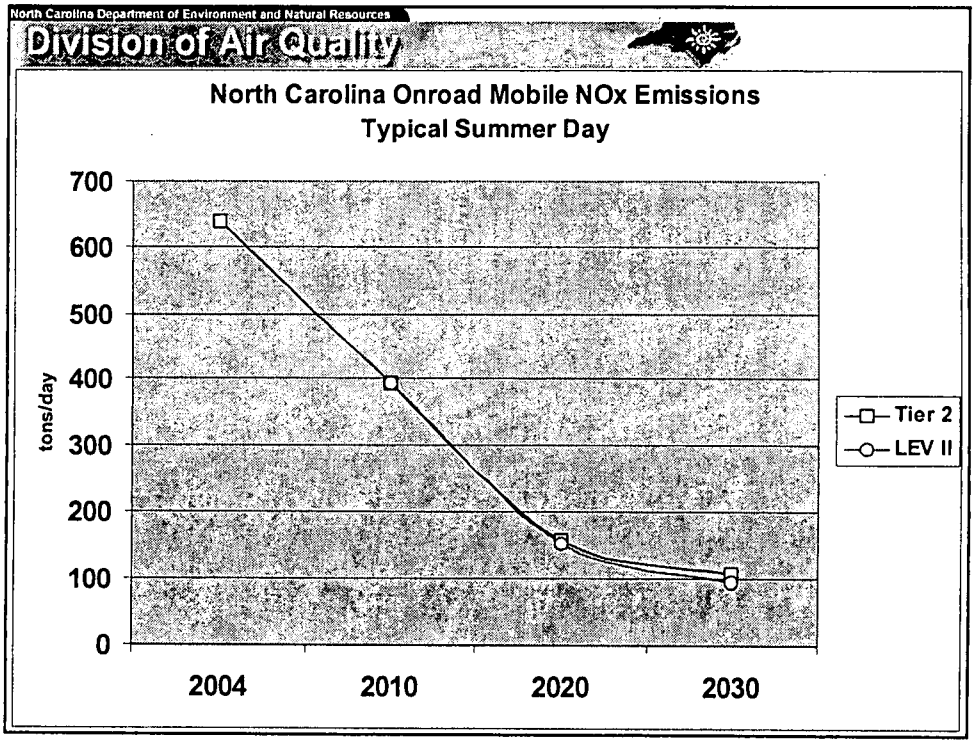
Objective of this Analysis

- Estimate the NOx and VOC emissions benefits of adopting California Vehicle Emission Standards (CA LEV-II) in NC
- Apply knowledge from recent 8-hour ozone modeling studies to estimate the impacts of adopting CA LEV-II
- Compare the NC and CA vehicle fleet and age distributions to assess the need for "fleet averaging"
- Estimate State staffing resources needed if NC adopts CA LEV-II

CA LEV-II vs. Federal Tier 2

- CA LEV-II program starts with model year 2010 vehicles
- CA LEV-II emissions estimates include:
  - Fleet averaging enforcement
  - Zero Emitting Vehicle (ZEV) component
  - Phase-in percentages by exhaust certification bin
    - Provided by USEPA in MOBILE6.2 ready format
      - Represents the California Air Resources Board (CARB) phase-in schedule
      - It represents an estimate of the mix of vehicles that manufacturers will distribute to meet the fleet average standard

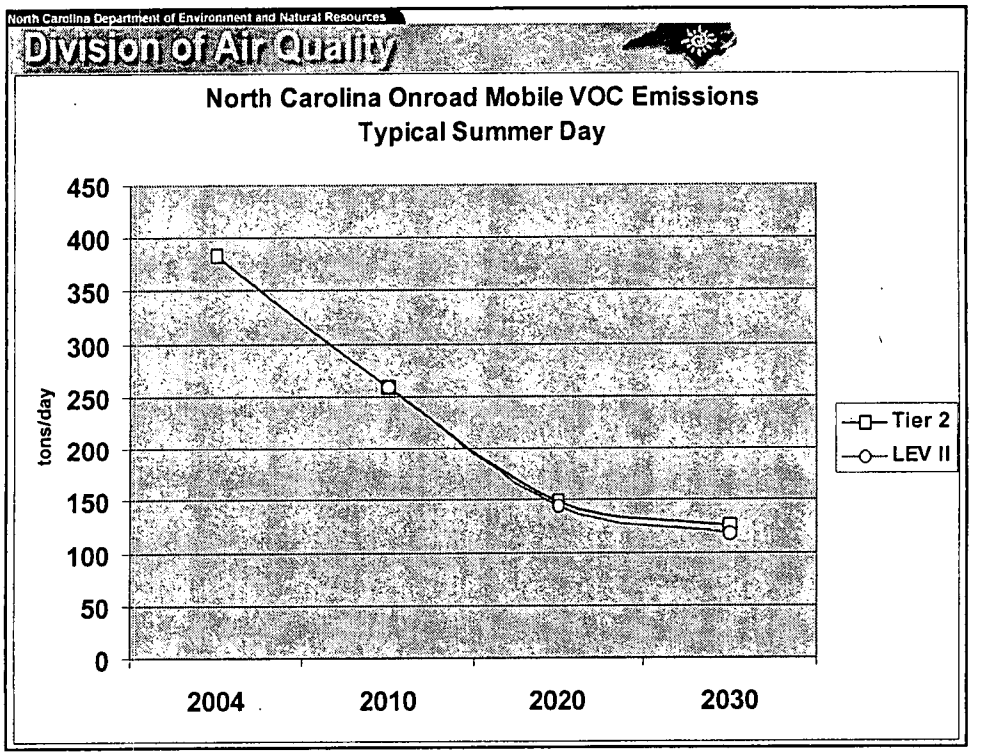
CA LEV-II vs. Federal Tier 2



Emission estimates were developed using:

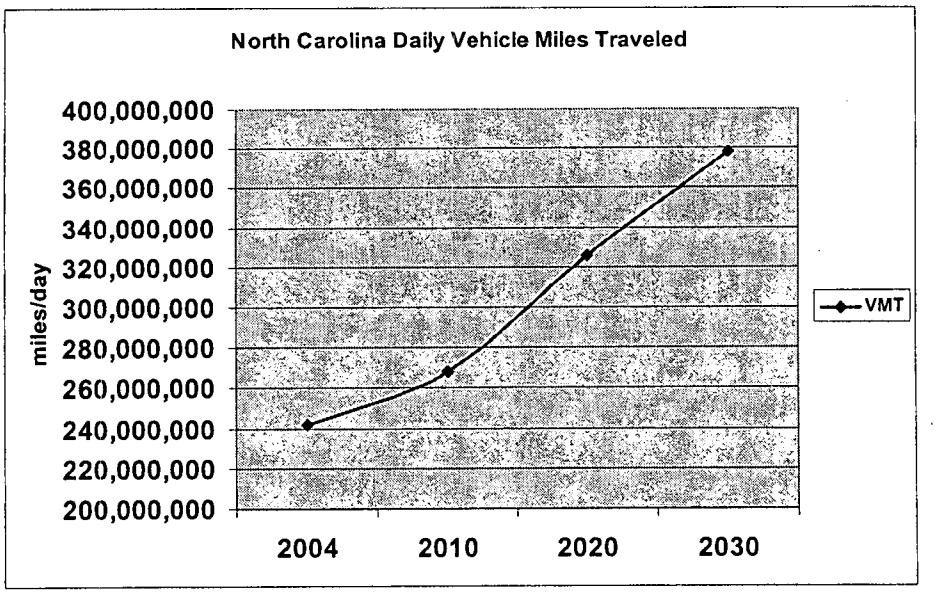
- USEPA motor vehicle emissions model (MOBILE6.2)
- USEPA mobile modeling guidance
- NC specific input data including:
  - Vehicle mix, vehicle age distribution, vehicle miles traveled (VMT), speeds, Inspection/Maintenance Programs (I/M), fuels, temperatures
- Federal Tier 2 estimates for 2004, 2010, 2020 and 2030
- CA LEV-II estimates for 2010, 2020 and 2030

11



Methods: USEPA Technical Guidance on the Use of MOBILE 6.2 for Emission Inventory Preparation, August 2004

North Carolina Department of Environment and Natural Resources
Division of Air Quality



North Carolina Department of Environment and Natural Resources

Division of Air Quality

North Carolina Department of Environment and Natural Resources

Division of Air Quality

14

CA LEV-II vs. Federal Tier 2

Emissions Reductions Summary

- On-road mobile sources only
- CA LEV-II Program in NC starting with model year 2010

	2010	2020	2030
NOx	0.1%	4%	10%
VOC	0.1%	3%	6%

15

North Carolina Department of Environment and Natural Resources
Division of Air Quality

Air Quality Modeling

- During NCDAQ's current SIP modeling...

  Air Quality modeling sensitivities were performed by NCDAQ to assess the impacts of *additional* future year NOx emissions reductions from on-road mobile sources

16

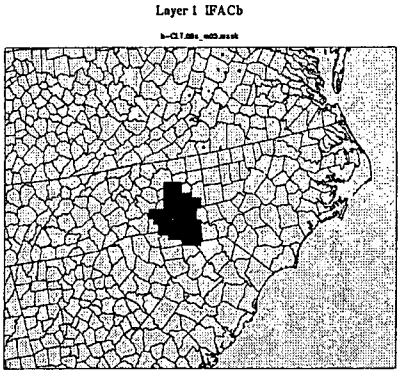
Air Quality Modeling

Future year (2009) NOx emissions from onroad mobile sources were reduced by 10% in the following counties:

Mecklenburg

Union

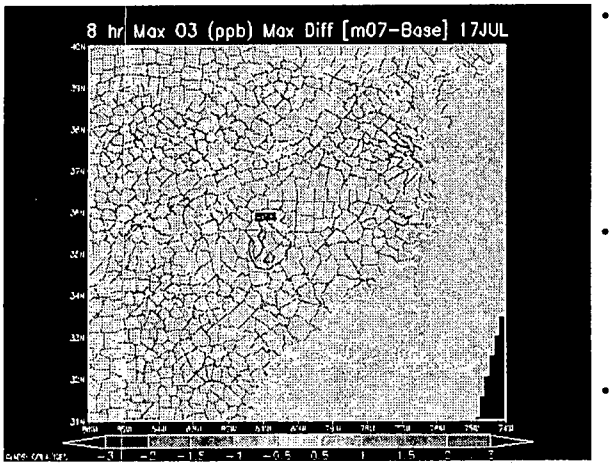
Gaston



Lincoln

Iredell

Cabarrus



Rowan

The 10% NOx reduction in 2009 is equivalent to ~10 tons/day in this region

17

Air Quality Modeling

- 10 tons/day onroad mobile NOx reduction across the Metrolina area resulted in lowering 8-hour ozone concentrations by 0.1 to 1.0 ppb in 2009
- Only 1 of the 7 modeled days resulted in changes as high as 1.0 ppb (shown)
- Only 2 of the 7 modeled days resulted in changes as high as 0.5 ppb

18

North Carolina Department of Environment and Natural Resources
Division of Air Quality

Air Quality Modeling

For the Metrolina area...

2009 on-road mobile NOx ~ 100 tons/day (w/ Tier 2)

2020 on-road mobile NOx ~ 25 tons/day (w/ Tier 2)

If...

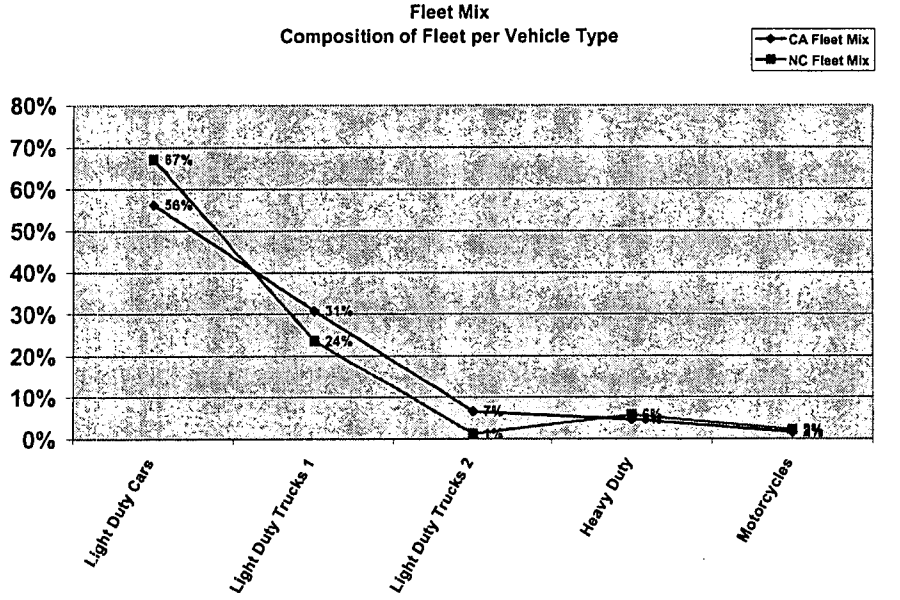
- 10% = 10 tons/day NOx in 2009 = 1 ppb max benefit

Then..

- 4 % = 1 ton/day NOx in 2020 = 0.1 ppb max benefit

19

North Carolina Department of Environment and Natural Resources
Division of Air Quality



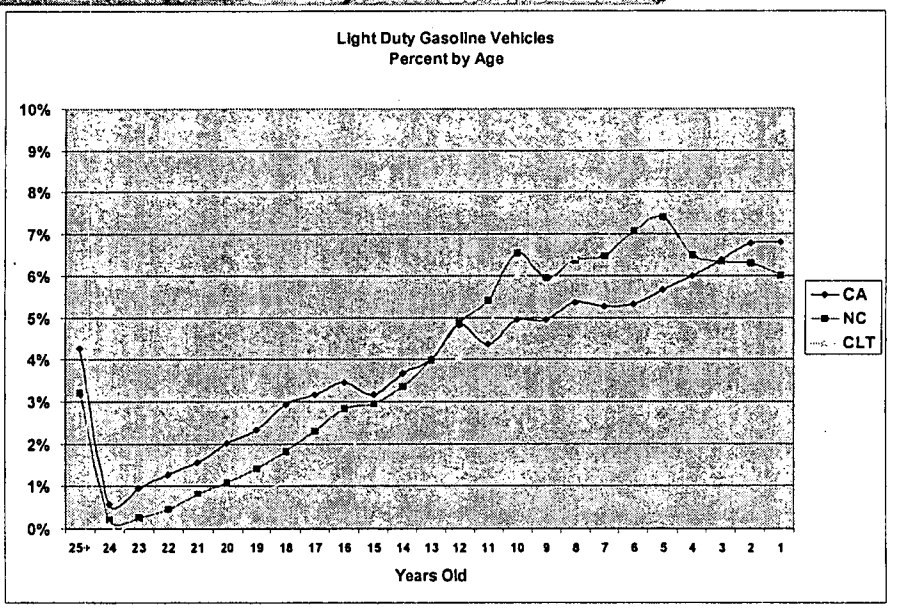
Fleet Characteristics

- Com parison of the NC and CA vehicle fleets
  - Composition
  - Age distributions
- A ssess the value of "fleet averaging" enforcement

20

North Carolina Department of Environment and Natural Resources

Division of Air Quality



21

22

Note: CLT includes Gaston and Mecklenburg Counties

VMT Mix
Percent of VMT per Vehicle Type

23

Sources: North Carolina Department of Transportation and California Air Resources Board
Methods: USEPA Technical Guidance on the Use of MOBILE 6.2 for Emission Inventory Preparation, August 2004

North Carolina Department of Environment and Natural Resources
Division of Air Quality

Staff Resources

- DAQ and DMV
  - DMV: Primary point of enforcement
  - DAQ: Audits, monitor performance of program, public outreach and troubleshoot registration issues
- Fleet average enforcement
  - *Potential* State staffing requirements with fleet average enforcement
    - Washington, 1.5 full time employees (FTEs)
    - New York, 2-3 people (not full time)
    - Massachusetts, 2-3 people (not full time)
  - Potential duties of DAQ Employees
    - Enforce compliance of fleet average requirement
    - Work with manufacturers / dealers and public on vehicle model availability issues

24

Source: NCDAQ, Washington State Department of Ecology-Air Quality Program

Staff Resource Impacts

- Existing Tasks:
  - Transportation conformity, SIP modeling and emissions inventories would require more time and resources due to more complicated mobile sources emissions estimation techniques
  - This would also impact Local Air Quality Agencies, Metropolitan Planning Organizations and Rural Planning Organizations involved in the transportation conformity process

25

Source: NCDAQ, Washington State Department of Ecology-Air Quality Program

Summary

- CA LEV-II benefits relative to Federal Tier II in future years:
  - NOx emissions would be reduced by 0.1%, 4% and 10% in 2010, 2020 and 2030, respectively
  - VOC emissions would be reduced by 0.1%, 3% and 6% in 2010, 2020 and 2030, respectively
  - Air Quality benefits: Less than 0.1 ppb ozone reduction in 2020

26

Summary - continued

- Air Quality: Ozone concentrations would change *less than* 0.1 ppb in 2020
- Vehicle fleet age: NC currently has a newer fleet of light duty vehicles (passenger cars) than California
- Vehicle population: NC has a greater number of light duty vehicles (passenger cars) and fewer light duty trucks (including SUVs) than California
- Implementation Resources: Other States suggest 1-2 employees needed for enforcement of fleet average requirements
- Implications for ongoing DAQ activities: More complicated emission estimation techniques would lengthen NCDAQ timelines for transportation conformity, SIP modeling and emission inventories

EXHIBIT I

Presentation to the Environmental Review Commission

Good Morning! My name is Michael Douglas. I am the Regional Engineer for the Public Water Supply Section, Raleigh Regional Office. I work with and supervise a staff of eight engineers, technicians and a water treatment plant consultant. The Public Water Supply Section regional offices consist of 51 staff member working to serve the citizens of North Carolina.

The primary responsibility of the Public Water Supply Central Office and regional offices is to protect public health as the primacy agency for EPA in the administration of the Safe Drinking Water Act. The regional offices conduct routine inspections of the groundwater and surface water systems throughout the state. Inspections serve to ensure regulatory compliance, identify deficiencies, issue Notice of Violations, and provide technical assistance.

Water system operators conduct a wide array of monitoring and testing on all drinking water, especially surface water sources. While the quality of groundwater is somewhat constant, surface water quality can vary with the weather conditions (heavy rains or drought conditions), man influenced events such as spills, and other factors.

Although the main focus in surface water treatment plant is the finished water to the consumers, water system operators perform operational testing on the raw water source to ensure the necessary treatment occurs.

Operators of surface water systems monitor the following parameters on both the raw and finished water:

Temperature
Turbidity
Color
pH
Carbon Dioxide
Total Organic Carbon
Total alkalinity
Total hardness
Dissolved Oxygen
Iron
Manganese
Fluoride
Chloride
Phosphate
Bacteria

These parameters are monitored and analyzed on the raw water in the daily operations of a surface water treatment plant. Water system operators vary chemical feed requirements based on the analytical results of these parameters. This data is submitted to the Public Water Supply Section, both the Central Office and the respective regional office, in a monthly operating report.

In additional to the analyses within the treatment plant, distribution samples are taken. Samples are collected by water system personnel and analyzed by certified laboratories. The laboratories send the analyses to the Public Water Supply Central Office to determine compliance with monitoring requirements. Systems monitor for:

Bacteria
Lead and Copper
Volatile Organic Chemicals
Synthetic Organic Chemicals
Disinfection By-Products (Trihalomethanes and HAAs)
Radionuclides
Inorganic Chemicals

When the monthly operating reports come to the regional offices, the Water Treatment Plant Consultants review them. Here is a typical report from the City of Raleigh. The consultants look at the turbidity levels, total water treated, hours of plant operation, process flow rates, fluctuation in chemical dosages, filter run times, backwash frequency and remaining information on the monthly operating reports. They are looking either for rule violations or operational problems, such as widely varying chemical feed rates that might indicate some problem at the facility. If some operational issue is identified, we contact the water system to provide assistance.

We inspect surface water treatment plants annually. We also conduct several other onsite visits during the year. Generally, the working relationship with the water system personnel is good. The regional staff

receives telephone calls and email inquires for technical assistance with operational and regulatory concerns. Our technical assistance is used to help water system operators to optimize effective of treatment. Some examples of technical assistance provided:

1. We assisted one system in the evaluation of its water chemistry to determine optimal chemical feed rates to enhance turbidity removal.

2. When one water plant had clogged its filter with treatment chemicals, they contacted us to assist in developing a solution.. The consultant's working knowledge of the treatment processes were invaluable to returning the facility to operation.

3. We have provided several systems technical assistance in resolving taste and odor problems with suggestions as chemical addition, such as potassium permanganate or granular activated carbon.

4. We provide onsite training and particpate in the licensing schools for water and distribution operators.

The balancing act that water systems must conduct in order to meet treatment and water quality standards is increasingly difficult, needing higher level of operator expertise and more input and involvement from the

state. The standards that water systems must meet are continuously tightening. The details of the requirements are so involved that continuous support and training are needed. In general, water system operators take compliance with standards seriously: remember, they and their families typically drink the water they produce too.

The goal of the Public Water Supply Section regional offices is to work with local governments, water system operators, and water consumers to ensure compliance with the regulations. We will work through regulatory actions, such issuance of violations as needed, but we also provide significant technical assistance to systems to help them maintain compliance in the first place.

If you have any questions, I will be happy to try to address them at this time.

Individual Filter Monitoring Report

PWS: **City of Raleigh – E.M. Johnson WTP** PWS ID#: **03-92-010**

Did any Individual Filter Turbidity Exceedance(s) trigger the EPA-required reporting during this month? Yes ☐ No ☒
If yes, please enter the appropriate information in the table below for each exceedance.

Filter #	Turbidity	Date(s) Exceeded	Reason for Exceedance	Corrective Action Taken

I certify that turbidity was measured for each individual filter at least every 15 minutes for the entire month and that records are available for review:

Increase to Nutrient Offset Fees

Environmental Review Commission
May 3, 2006

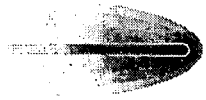
Background

- Voluntary Program – Established by EMC
- Response to S.L. 1995-572
- Used to meet estuary nitrogen load in Neuse
- Provides options/flexibility for development
- Development pays fee to "purchase" nitrogen reduction off-site.
- EEP uses fees to mitigate off-site.

Original Offset Fee

- Established in 1998.
- Set at $11 per pound of nitrogen per year.
- Based on very little field data.
- Never updated or changed until now.
- Limited to Neuse River Basin.

Need for Changes



- Original fee was never updated.
- Program is entirely self-sustaining.
  - Receives no outside funding.
- Original fee not sufficient to pay for "purchased" stormwater mitigation.
- If fee was not changed – program could not support itself.

Requested Changes

- Oct 04: WQC requests changes to program.
- Regulated community in Tar-Pam requested access to program for Tar-Pam NSW Rules.
- Changes to accomplish two goals.
  - Update fee.
  - Expand program to Tar-Pam River Basin.

Proposed Changes to Offset Rule

- Expand program to Tar-Pam Basin.
- Change nitrogen fee to $57 per pound.
- Incorporate mechanism for land costs.
  - Land costs for mitigation sites not included in original rule.
  - EEP must purchase land near development site for mitigation.

For further information contact:

Tom Reeder
919-733-5083 extension 528
tom.reeder@ncmail.net

Why $57 per pound?

- $57/lb based on actual NCSU field data.
- Orig. $11/lb based on very little field data.
- $11/lb assumed $24K per acre of mitigation
- NCSU costs – approx. $100K per acre.
  - $100K does not include land costs.
- Verified costs with other sources.
  - $150K + per acre of mitigation w/o land costs.

Rulemaking Process

- Changes followed APA Rulemaking Proc.
- Noticed in Sept 1, 2005 *NC Register*
  - EMC specifically solicited alternative cost data.
- 2 Public Hearings
- Approved by GovOps in Oct 2005.
- Approved by RRC in Feb 2006
  - No letters requested legislative review.

Summary

- Voluntary Program
- Completely self-sustaining
- Changes allowed program to continue operation & expand to Tar-Pam.
- Fee change based on actual costs.

MINUTES
ENVIRONMENTAL REVIEW COMMISSION
15 May 2006

The Environmental Review Commission (ERC) met on Monday 15 May 2006 at 4:00 p.m. in Room 544 of the Legislative Office Building. Senator Albertson presided.

The following members were present: Senators Albertson, Bingham, Dorsett, Kinnaird, and Swindell; and Representatives Gibson, Hackney, Harrison, Justice, and Warren. Mr. George Givens, Commission Counsel; Mr. Jeffrey Hudson, Assistant Commission Counsel; Ms. Jennifer McGinnis, Assistant Commission Counsel; Mr. Tim Dodge, Commission Analyst; and Ms. Dot Waugaman, Commission Clerk, were also present.

On 10 May 2006, notice was sent to members and interested parties via e-mail and regular mail. A copy of the notice of the meeting is included in the attachments to these minutes as **Exhibit A**. Copies of the agenda for the meeting and visitor registration sheets are included in the attachments as **Exhibits B** and **C**.

Senator Albertson welcomed the members and audience and recognized Mr. Givens for his comments. Mr. Givens said there are 27 bills to be considered. Twenty-five of the draft bills were attached to a memorandum to the members (see **Exhibit D**). The other two drafts were handed out separately.

Senator Albertson announced each of the drafts by short title, asked for discussion, requested a motion on acceptance of each draft, and votes were taken. Mr. George Givens pointed out that the bills that are approved will be included in the final report of the Commission to the General Assembly and therefore be made eligible for consideration during the short session. The results are as follows:

- **Environmental Technical Corrections 2006 – 2005-SYz-29 [v.3] (04/21)** (see **Exhibit E**)
  Mr. George Givens said there are no controversial items in the bill. Representative Pryor Gibson moved that the bill be recommended for consideration by the General Assembly during the 2006 Regular Session and included as a legislative proposal in the report of the Commission to the General Assembly. Motion carried

- **Amend Environmental Laws 2006 – 2005-SYz-27 [v.5] (03/26)** (see **Exhibit F**)
  Mr. Givens stated there were five items in the bill. Representative Gibson moved that the bill be recommended for consideration by the General Assembly during the 2006 Regular Session and included as a legislative proposal in the report of the Commission to the General Assembly. Motion carried.

- **Amend Natural Resources Laws 2006 – 2005-SYz-34 [v.34] (05/09)** (see **Exhibit G**)
  Mr. Givens stated there were three items in the bill. Representative Gibson moved that the bill be recommended for consideration by the General Assembly during the 2006 Regular Session and included as a legislative proposal in the report of the Commission to the General Assembly. Motion carried.

- **Environmental Reports Consolidation 2006 – 2005-SYz-31 [v.3] (04/21)** (see **Exhibit H**)
  Representative Gibson moved that the bill be recommended for consideration by the General Assembly during the 2006 Regular Session and included as a legislative proposal in the report of the Commission to the General Assembly. Motion carried.

- **Delay CWMTF Amendments – 2005-Rlz-15 [v.3] (04/14)** (see **Exhibit I**)
  The bill was requested by Mr. William Holman on behalf of the Board of the Clean Water Management Trust Fund. Representative Gibson moved that the bill be recommended for consideration by the General Assembly during the 2006 Regular Session and included as a

legislative proposal in the report of the Commission to the General Assembly. Motion carried.

- **Extend Climate Change Commission – 2005-SYz-25 [v.6] (04/25)** (see **Exhibit J)**
  The bill was requested by the Climate Change Commission. Representative Pricey Harrison moved that the bill be recommended for consideration by the General Assembly during the 2006 Regular Session and included as a legislative proposal in the report of the Commission to the General Assembly. Motion carried.

- **Fund Stream Mapping – 2005-Rlz-16 [v.3] (04/14)** (see **Exhibit K**)
  The bill was requested by the Clean Water Management Trust Fund. Representative Gibson moved that the bill be recommended for consideration by the General Assembly during the 2006 Regular Session and included as a legislative proposal in the report of the Commission to the General Assembly. Motion carried.

- **State Parks System Additions – 2005-Rlz-13 [v.2] (04/04)** (see **Exhibit** L)
  The bill was requested by the Division of Parks and Recreation. Representative Gibson moved that the bill be recommended for consideration by the General Assembly during the 2006 Regular Session and included as a legislative proposal in the report of the Commission to the General Assembly. Motion carried.

- **Tax Credits for Certain Real Prop. Donations – 2005-Flfz-19 [v.4] (03/14/)** (see **Exhibit M**)
  The bill was introduced last year, but the ERC was asked to re-recommend the bill for the short session. Representative Gibson moved that the bill be recommended for consideration by the General Assembly during the 2006 Regular Session and included as a legislative proposal in the report of the Commission to the General Assembly. Senator Bingham asked for an explanation of the tax election cap on page 2 of the bill. Mr. Bill Flournoy, DENR, who manages the conservation tax credit program, explained that DENR is requesting that the tax credit be allowed to be claimed against franchise tax and gross premium tax as well as income tax to allow those who do not have to pay income tax other ways to use the tax credit. Senator Bingham asked how much of an impact it would be. Mr. Flournoy said he did not know but would get the information for the Commission. Motion carried.

- **Mercury Switch Amendments – 2005-Rlz-17 [v.4] (05/03)** (see **Exhibit N**)
  Senator Bingham asked if there was any controversy on the part of the salvage dealers on the provisions of the bill. Mr. Dexter Matthews, Director of the Division of Waste Management, DENR, reported that the Division is still working with stakeholders. There is interest in a new federal program agreement in which the auto manufacturers will assist in the removal of the switches by paying for the transportation of the material. The bill would give time for the agreement to become effective. If the agreement at the federal level is reached, then all stakeholders will be content. Representative Gibson moved that the bill be recommended for consideration by the General Assembly during the 2006 Regular Session and included as a legislative proposal in the report of the Commission to the General Assembly. Motion carried.

- **Underground Storage Tank Amendments 2006 – 2005-RTfz-20 [v.3] (05/03)** (see **Exhibit O**)
  Senator Bingham asked where the pilot program for site specific cleanup standards will be. Mr. Givens replied the pilot program will be used at the discretion of the responsible parties at various sites. Mr. Grover Nicholson, Underground Storage Tank Program, DENR, said he does not know how many sites would elect to use the program, but he believes it will be multiple sites. There is a time limit in the bill, but not a number of sites limit. Representative Gibson moved that the bill be recommended for consideration by the General Assembly during the 2006 Regular Session and included as a legislative proposal in the report of the Commission to the General Assembly. Motion carried.

- **Underground Storage Tank Prgm. Funds – 2005-RTz-21 [v.1] (05/03)** (see **Exhibit P**)
  Representative Gibson moved that the bill be recommended for consideration by the General Assembly during the 2006 Regular Session and included as a legislative proposal in the report of

the Commission to the General Assembly. Motion carried.

- **Stormwater Management 2006 – 2005-RTz-19 [v.7] (05/03)** (see **Exhibit Q**)
  Mr. Givens said the bill is a work in progress. It reflects the work of the stakeholders group on a group of issues being negotiated. There is a commitment from all interested parties to continue to negotiate in good faith, but consensus has not yet been reached. If the General Assembly does not act this year, there will be two sets of competing stormwater rules that do not agree. The bill would disapprove the rules and repeal the Session Law and provide for a compromise scheme that would fall somewhere between the two. Representative Gibson moved that the bill be recommended for consideration by the General Assembly during the 2006 Regular Session and included as a legislative proposal in the report of the Commission to the General Assembly. Motion carried.

- **Low Emission Vehicles/Funds – 2005-SYz-40 [v.1] (05/09)** (see **Exhibit R**)
  Representative Harrison moved that the bill be recommended for consideration by the General Assembly during the 2006 Regular Session and included as a legislative proposal in the report of the Commission to the General Assembly. Motion carried.

- **Child Lead Poisoning/DENR Authority – 2005-SYz-39 [v.1] (05/09)** (see **Exhibit S**)
  Senator Bingham moved that the bill be recommended for consideration by the General Assembly during the 2006 Regular Session and included as a legislative proposal in the report of the Commission to the General Assembly. Motion carried.

- **Radiation Protection Program Fee Amendments – 2005-SYfz-37 [v.3] (05/09)** (see **Exhibit T**)
  Representative Harrison moved that the bill be recommended for consideration by the General Assembly during the 2006 Regular Session and included as a legislative proposal in the report of the Commission to the General Assembly. Motion carried.

- **Amend Sanitary District Authority – 2005-Rlz-14 [v.3] (04/14)** (see **Exhibit U**)
  Senator Bingham asked if someone who has a functional septic tank could be required to hook up to a sewer system. Mr. William Holman, Executive Director of the Clean Water Management Trust Fund, answered that the bill will treat sanitary districts the same as other water and sewer units and a person with a functional septic tank could be required to hook up to a sewer system to make it economically feasible for the service provider. Senator Bingham moved that the bill be recommended for consideration by the General Assembly during the 2006 Regular Session and included as a legislative proposal in the report of the Commission to the General Assembly. Motion carried.

- **Well Construction Fund/Grants for Local Prgms. – 2005-SYz-33 [v.3] (05/09)** (see **Exhibit V**)
  Representative Harrison moved that the bill be recommended for consideration by the General Assembly during the 2006 Regular Session and included as a legislative proposal in the report of the Commission to the General Assembly. Motion carried.

- **Private Drinking Water Wells/Local Well Prgms. – 2005-SYz-41 [v.2] (05/09)** (see **Exhibit W**)
  Representative Gibson moved that the bill be recommended for consideration by the General Assembly during the 2006 Regular Session and included as a legislative proposal in the report of the Commission to the General Assembly. Motion carried.

- **Clarify Animal Waste Tech Specialist Cert Rqs. – 2005-SYz-28 [v.3] (04/01)** (see **Exhibit X**)
  Representative Gibson moved that the bill be recommended for consideration by the General Assembly during the 2006 Regular Session and included as a legislative proposal in the report of the Commission to the General Assembly. Motion carried.

- **Community Conservation Assistance Program – 2005-SYz-38 [v.3] (05/09)** (see **Exhibit Y**)
  Representative Gibson moved that the bill be recommended for consideration by the General

Assembly during the 2006 Regular Session and included as a legislative proposal in the report of the Commission to the General Assembly. Motion carried.

- **Amend Solid Waste Franchise Statutes – 2005-RIz-18 [v.s] (01/24)** (see **Exhibit Z**) Representative Harrison moved that the bill be recommended for consideration by the General Assembly during the 2006 Regular Session and included as a legislative proposal in the report of the Commission to the General Assembly. Ms. Robin Smith, Assistant Secretary, DENR, explained that the primary consideration of the bill is to make sure that the public notice and public participation requirements already in the statutes allow for informed public participation. It adds more detail to the public notice requirements so when the franchise agreements are being considered at the local level, there is information available for people to review with respect to the size, type of facility and specific location. Motion carried.

- **Exempt Certain Greenhouses from Bldg Code – 2005-RFz-19 [v.6] (04/04)** (see **Exhibit AA**) Representative Gibson moved that the bill be recommended for consideration by the General Assembly during the 2006 Regular Session and included as a legislative proposal in the report of the Commission to the General Assembly. Motion carried.

- **Fertilizer Spreaders/Registration Exemption – 2005-RFfz-16 [v.5] (04/18)** (see **Exhibit BB**) Representative Gibson moved that the bill be recommended for consideration by the General Assembly during the 2006 Regular Session and included as a legislative proposal in the report of the Commission to the General Assembly. Senator Bingham asked if farmers transporting grain from one field to another could be added to this bill. Mr. Givens replied that it could be added to the bill in committee during the session. Motion carried.

- **Land Disturbing Activities Near Trout Waters – 2005-SBz-29 [v.2] (05/03)** (see **Exhibit CC**) Representative Gibson moved that the bill be recommended for consideration by the General Assembly during the 2006 Regular Session and included as a legislative proposal in the report of the Commission to the General Assembly. Representative Hackney asked if the bill would mean the Administrative Law Judge's (ALJ) decision would not have to be followed. Ms. Mary Penny Thompson, General Counsel for DENR, stated that is correct. The ALJ would make it a complete prohibition of activities to remain in the buffer, but the bill would allow for some minimal activities to occur in the buffer such as public infrastructure and stream restoration that have an impact on the stream but also have a benefit to the public and to the environment. Motion carried.

- **Limit Nutrient Offset Payments – 2005-SBfz-28 [v.3] (05/03)** (see **Exhibit DD**) Representative Gibson moved that the bill be recommended for consideration by the General Assembly during the 2006 Regular Session and included as a legislative proposal in the report of the Commission to the General Assembly. He later withdrew his motion and the bill will not be included in the ERC report.

- **Amend Interbasin Transfer Laws – 2005-SBz-27 [v.6] (04/27)** (see **Exhibit EE**) Representative Gibson moved that the bill be recommended for consideration by the General Assembly during the 2006 Regular Session and included as a legislative proposal in the report of the Commission to the General Assembly. Motion carried.

After consideration of the bills, Representative Gibson commented that most of the bills approved for the report have been discussed at ERC meetings and many are continuing items. He added that if anyone has any problem with any of the bills, he would speak with the Chair of the House Environment Committee, Representative Carolyn Justice, and ask that the bills not be reported out of Committee until the provisions in question are worked out. The purpose of including the bills in the ERC report is to provide eligibility or an infrastructure for continuing conversation in workgroups. Representative Gibson then moved to instruct staff to prepare a report and include all the bills that received a favorable motion in the report. Motion carried. Representative Gibson noted that a quorum was present for the meeting.

The meeting adjourned at 4:45 p.m.

Senator Daniel Clodfelter, Co-Chair

Senator Charlie Albertson, Co-Chair
Presiding

Representative Pryor Gibson, Co-Chair

Dot Waugaman, Commission Assistant

RE: **Notice of Commission Meeting**
Additional Information

COMMISSION MEETING – 15 May 2006:

The Environmental Review Commission (ERC) will meet at **4:00 p.m. Monday 15 May 2006 in Room 544 of the Legislative Office Building in Raleigh** to consider legislative proposals for recommendation to the 2006 Regular Session of the General Assembly.

SCHEDULE OF FUTURE MEETINGS:

The Commission may also meet at other times while the General Assembly is in session (G.S. 120-70.44). When the Commission meets while the General Assembly is in session, written notice will not be mailed to persons on the mailing list. Rather, notice will be given at a session of the Senate and House of Representatives as provided by G.S. 143-318.12(b) and will be distributed by email, if possible. The Commission will resume a schedule of regular monthly meetings following adjournment of the 2006 Session of the General Assembly.

ADDITIONAL INFORMATION:

If you have questions related to the Commission, please feel free to contact the Commission Counsel or other Commission staff at (919) 733-2578.

Re: Draft legislative proposals

Attached are the legislative proposals for consideration by the Environmental Review Commission for recommendation to the 2006 Regular Session of the 2005General Assembly.

LEGISLATIVE PROPOSALS

#	Short Title
1.	Environmental Technical Corrections 2006.
2.	Amend Environmental Laws 2006.
3.	Amend Natural Resource Laws 2006.
4.	Environmental Reports Consolidation 2006.
5.	Delay CWMTF Provisions.
6.	Extend Legislative Commission on Global Climate Change.
7.	Fund Stream Mapping.
8.	State Parks System Additions.
9.	Tax Credits For Certain Real Property Donations.
10.	Mercury Switch Amendments.

11. Underground Storage Tank Amendments 2006.

12. Underground Storage Tank Program Funds.

13. Stormwater Management 2006.

14. Low-Emission Vehicles/Funds.

15. Childhood Lead Poisoning - Clarification Of DENR Authority.

16. Radiation Protection Program Fee Amendments.

17. Amend Sanitary District Authority.

18. Well Construction Fund/Grants for Local Prgms.

19. Private Drinking Water Wells/Local Well Programs.

20. Clarify Animal Waste Technical Specialist Certification Requirements.

21. Community Conservation Assistance Program.

22. Amend Solid Waste Franchise Statutes.

23. Exempt Certain Greenhouses from Building Code.

24. Fertilizer Spreaders Exempt from Registration.

25. Land Disturbing Activities near Trout Streams.

Please contact George Givens, Jeff Hudson, Jennifer McGinnis, or Tim Dodge at (919) 733-2578 if you have any questions or comments.

Referred to:

A BILL TO BE ENTITLED

AN ACT TO MAKE CLARIFYING, CONFORMING, AND TECHNICAL AMENDMENTS TO VARIOUS LAWS RELATED TO THE ENVIRONMENT, ENVIRONMENTAL HEALTH, AND NATURAL RESOURCES, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. G.S. 113-174.2(c)(6)i. reads as rewritten:

"i. Resident ~~Elderly~~ Age 65 Lifetime CRFL. – $15.00. This license shall be issued only to an individual who is 65 years of age or older and who is a resident of the State."

SECTION 2. G.S. 113-351(c)(3)e. reads as rewritten:

"e. Resident ~~Elderly~~ Age 65 Lifetime Unified Sportsman/Coastal Recreational Fishing License. – $30.00. This license shall be issued only to an individual who is 65 years of age or older and who is a resident of the State."

SECTION 3. G.S. 143B-291(a)(1) reads as rewritten:

"(1) One member who is the ~~chairman~~ chair of the North Carolina State University Minerals Research Laboratory Advisory Committee, ex officio."

SECTION 4. G.S. 143B-291(g) reads as rewritten:

"(g) Staff. – All clerical and other services required by the Commission shall be supplied by the Secretary of ~~the Department.~~Environment and Natural Resources."

SECTION 5. G.S. 143B-292 reads as rewritten:

"**§ 143B-292. North Carolina Mining Commission – officers.**

The North Carolina Mining Commission shall have a ~~chairman~~ chair and a ~~vice-chairman~~vice-chair. The ~~chairman~~ chair shall be designated by the Governor from among the members of the Commission to serve as ~~chairman at his pleasure.~~chair at the

pleasure of the Governor. The ~~vice-chairman~~vice-chair shall be elected by and from the members of the Commission and shall serve for a term of two years or until the expiration of ~~his~~ the vice-chair's regularly appointed term."

SECTION 6. G.S. 143B-293 reads as rewritten:

"**§ 143B-293. North Carolina Mining Commission – meetings.**

The North Carolina Mining Commission shall meet at least semiannually and may hold special meetings at any time and place within the State at the call of the ~~chairman~~ chair or upon the written request of at least five members."

SECTION 7. G.S. 143B-296 reads as rewritten:

"**§ 143B-296. Soil and Water Conservation Commission – officers.**

The Soil and Water Conservation Commission shall have a ~~chairman~~ chair and a ~~vice-chairman.~~vice-chair. The ~~chairman~~ chair shall be designated by the Governor from among the members of the Commission to serve as ~~chairman~~ chair at the pleasure of the Governor. The ~~vice-chairman~~vice-chair shall be elected by and from the members of the Commission and shall serve for a term of two years or until the expiration of ~~his~~ the vice-chair's regularly appointed term."

SECTION 8. G.S. 143B-297 reads as rewritten:

"**§ 143B-297. Soil and Water Conservation Commission – meetings.**

The Soil and Water Conservation Commission shall meet at least quarterly and may hold special meetings at any time and place within the State at the call of the ~~chairman~~ chair or upon the written request of at least four members."

SECTION 9. G.S. 143B-299 reads as rewritten:

"**§ 143B-299. Sedimentation Control Commission – members; selection; compensation; meetings.**

(a) Creation; Membership. – There is hereby created in the Department of Environment and Natural Resources the North Carolina Sedimentation Control Commission, which is charged with the duty of developing and administering the sedimentation control program provided for in this Article. The Commission shall consist of the following members:

(1) A person to be nominated jointly by the boards of the North Carolina League of Municipalities and the North Carolina Association of County Commissioners;

(2) A person to be nominated by the Board of the North Carolina Home Builders Association;

(3) A person to be nominated by the Carolinas Branch, Associated General Contractors of America;

(4) The president, vice-president, or general counsel of a North Carolina public utility company;

(5) The Director of the North Carolina Water Resources Research Institute;

(6) A member of the State Mining Commission who shall be a representative of nongovernmental conservation interests, as required by G.S. 74-38(b);

(7) A member of the State Soil and Water Conservation Commission;

(8) A member of the Environmental Management Commission;
(9) A soil scientist from the faculty of North Carolina State University;
(10) Two persons who shall be representatives of nongovernmental conservation interests; and
(11) A professional engineer registered under the provisions of Chapter 89C of the General Statutes nominated by the Professional Engineers of North Carolina, Inc.

(b) Appointment. – The Commission members shall be appointed by the Governor. All Commission members, except the person ~~filling position number five, as specified above,~~ appointed under subdivision (5) of subsection (a) of this section, shall serve staggered terms ~~of office~~ of three years and until their successors are appointed and duly qualified. The person ~~filling position number five~~ appointed under subdivision (5) of subsection (a) of this section shall serve as a member of the Commission, subject to removal by the Governor as hereinafter specified in this section, so long as ~~he~~ the person continues as Director of the Water Resources Research Institute. The terms ~~of office~~ of members ~~filling positions two, four, seven, and eight~~ appointed under subdivisions (2), (4), (7), and (8) of subsection (a) of this section shall expire on 30 June of years evenly divisible by three. The terms ~~of office~~ of members ~~filling positions one, three, and ten~~ appointed under subdivisions (1), (3), and (10) of subsection (a) of this section shall expire on 30 June of years that follow by one year those years that are evenly divisible by three. The terms ~~of office~~ of members ~~filling positions six, nine, and eleven,~~ appointed under subdivisions (6), (9), and (11) of subsection (a) of this section shall expire on 30 June of years that precede by one year those years that are evenly divisible by three. Except for the person ~~filling position number five,~~ appointed under subdivision (5) of subsection (a) of this section, no member of the Commission shall serve more than two complete consecutive three-year terms. Any member appointed by the Governor to fill a vacancy occurring in any of the appointments shall be appointed for the remainder of the term of the member causing the vacancy. The Governor may at any time remove any member of the Commission for inefficiency, neglect of duty, malfeasance, misfeasance, ~~nonfeasance or, in the case of members filling positions five, six, seven, eight, nine, and eleven as specified above,~~ nonfeasance, or because they no longer possess the required qualifications for membership. ~~In each instance appointments to fill vacancies in the membership of the Commission shall be a person or persons with similar experience and qualifications in the same field required of the member being replaced.~~ The office of the North Carolina Sedimentation Control Commission is declared to be an office that may be held concurrently with any other elective or appointive office, under the authority of Article VI, Sec. 9, of the North Carolina Constitution.

(b1) ~~Chairman.~~Chair. – The Governor shall designate a member of the Commission to serve as ~~chairman.~~chair.

(c) Compensation. – The members of the Commission shall receive the usual and customary per diem allowed for the other members of boards and commissions of the State and as fixed in the Biennial Appropriation Act, and, in addition, the members of the Commission shall receive subsistence and travel expenses according to the

prevailing State practice and as allowed and fixed by statute for such purposes, which said travel expenses shall also be allowed while going to or from any place of meeting or when on official business for the Commission. The per diem payments made to each member of the Commission shall include necessary time spent in traveling to and from their places of residence within the State to any place of meeting or while traveling on official business for the Commission.

(d) Meetings of Commission. – The Commission shall meet at the call of the ~~chairman~~ chair and shall hold special meetings at the call of a majority of the members."

SECTION 10. G.S. 143B-300(c) reads as rewritten:

"(c) The Commission may by rule delegate any of its powers, other than the power to adopt rules, to the Secretary of Environment and Natural Resources or ~~his~~ the Secretary's designee."

SECTION 11. This act is effective when it becomes law.

BILL DRAFT 2005-SYz-27 [v.5] (03/26)

(THIS IS A DRAFT AND IS NOT READY FOR INTRODUCTION)
5/11/2006 3:45:31 PM

Short Title: Amend Environmental Laws 2006. (Public)

Sponsors:

Referred to:

A BILL TO BE ENTITLED

AN ACT TO AMEND VARIOUS ENVIRONMENTAL LAWS TO: (1) CLARIFY THE REQUIREMENT THAT MOTOR VEHICLES OPERATED ON A FEDERAL INSTALLATION IN AN EMISSIONS COUNTY ARE SUBJECT TO EMISSIONS INSPECTION REQUIREMENTS; (2) CLARIFY THE REQUIREMENT THAT LAND-DISTURBING ACTIVITY BE CONDUCTED IN ACCORDANCE WITH AN APPROVED PLAN; (3) AUTHORIZE THE ENVIRONMENTAL REVIEW COMMISSION AND THE JOINT LEGISLATIVE COMMISSION ON SEAFOOD AND AQUACULTURE TO CONTRACT FOR CONSULTANTS; (4) PROVIDE THAT A PERSON WHO INSTALLS, REPAIRS, OR PUMPS SEPTIC SYSTEMS MAY PURCHASE AND INSTALL APPROVED EFFLUENT FILTERS; AND (5) PROVIDE THAT STORMWATER CONTROL ORDINANCES THAT ARE ADOPTED BY CITIES MUST AT LEAST MEET ALL OF THE MINIMUM STATUTORY REQUIREMENTS, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. G.S. 20-183.2(b)(1) reads as rewritten:

"(1) It is subject to registration with the Division under Article 3 of this ~~Chapter.~~Chapter, except for motor vehicles operated on a federal installation as provided in sub-subdivision (e) of subdivision (5) of this subsection.

SECTION 2. G.S. 113A-57 is amended by adding a new subdivision to read:

"(5) The land-disturbing activity shall be conducted in accordance with the approved erosion and sedimentation control plan."

SECTION 3. G.S. 120-70.44 reads as rewritten:

"**§ 120-70.44. Additional powers.**

(a) The Environmental Review Commission, while in the discharge of official duties, may exercise all the powers provided for under the provisions of G.S. 120-19, and G.S. 120-19.1 through G.S. 120-19.4. The Environmental Review Commission may meet at any time upon the call of either cochairman, whether or not the General Assembly is in session. The Environmental Review Commission may meet in the Legislative Building or the Legislative Office Building upon the approval of the Legislative Services Commission.

(b) Notwithstanding any rule or resolution to the contrary, proposed legislation to implement any recommendation of the Environmental Review Commission regarding any study the Environmental Review Commission is authorized to undertake or any report authorized or required to be made by or to the Environmental Review Commission may be introduced and considered during any session of the General Assembly.

(c) The Commission may contract for consultants or hire employees in accordance with G.S. 120-32.02."

SECTION 4. G.S. 120-70.63 reads as rewritten:

"**§ 120-70.63. Additional powers.**

(a) The Commission, while in the discharge of official duties, may exercise all the powers of a joint committee of the General Assembly provided for under the provisions of G.S. 120-19, and G.S. 120-19.1 through G.S. 120-19.4. The Commission may meet at any time upon the call of either cochair, whether or not the General Assembly is in session. The Commission may meet in the Legislative Building or the Legislative Office Building upon the approval of the Legislative Services Commission.

(b) The Commission may contract for consultants or hire employees in accordance with G.S. 120-32.02."

SECTION 5. G.S. 130A-335.1(a) reads as rewritten:

"(a) The ~~manufacturer of each of, or the~~ person who manufactures, installs, repairs, or pumps any septic tank to be installed in this State as a part of a septic tank system that is designed to treat 3,000 gallons per day or less of sewage shall provide an effluent filter approved by the Department pursuant to the requirements of G.S. 130A-335, this section, and rules adopted by the Commission. Any person who installs, repairs, or pumps systems described in this section may purchase and install any approved filters on the systems. The person who installs the ~~septic tank system~~ effluent filter shall install the effluent filter as a part of the septic tank system in accordance with the specifications provided by the manufacturer of the effluent filter. An effluent filter shall:

(1) Be made of materials that are capable of withstanding the corrosives to which septic tank systems are normally subject.

(2) Prevent solid material larger than one-sixteenth of an inch, as measured along the shortest axis of the material, from entering the drainfield.

(3) Be designed and constructed to allow for routine maintenance.

(4) Be designed and constructed so as not to require maintenance more frequently than once in any three-year period under normally anticipated use."

SECTION 6. Part 8 of Article 19 of Chapter 160A of the General Statutes is amended by adding a new section to read:

"**§ 160A-459. Stormwater control.**

A city may adopt and enforce a stormwater control ordinance as authorized by Part 1 of Article 21 of Chapter 143 of the General Statutes. A stormwater control ordinance adopted pursuant to this section must at least meet all of the minimum requirements of Part 1 of Article 21 of Chapter 143 of the General Statutes."

SECTION 7. This act is effective when the act becomes law.

GENERAL ASSEMBLY OF NORTH CAROLINA

SESSION 2005

U D

BILL DRAFT 2005-SYz-34 [v.3] (05/09)

(THIS IS A DRAFT AND IS NOT READY FOR INTRODUCTION)
5/11/2006 3:47:09 PM

Short Title: Amend Natural Resources Laws 2006. (Public)

Sponsors:

Referred to:

A BILL TO BE ENTITLED

AN ACT TO AMEND VARIOUS NATURAL RESOURCES LAWS TO: (1) CLARIFY THE DEFINITION OF AGRICULTURE; (2) MAKE CLARIFYING CHANGES TO FISHING LICENSE REQUIREMENTS; AND (3) PROHIBIT THE DISCLOSURE OF PERSONAL IDENTIFYING INFORMATION COLLECTED BY THE WILDLIFE RESOURCE COMMISSION FOR LICENSING PURPOSES EXCEPT UNDER CERTAIN CIRCUMSTANCES, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. G.S. 106-581.1(3) reads as rewritten:

"(3) Dairying and the raising, management, care, and training of livestock, including horses, bees, poultry, ~~deer, elk,~~ and other animals for individual and public use, consumption, and marketing."

SECTION 2. G.S. 113-271(d)(9) reads as rewritten:

"(9) Special Landholder and Guest Fishing License – $50.00. This license shall be issued only to the ~~owner or lessee~~landholder of private property bordering inland or joint fishing ~~waters, including public mountain trout waters, and entitles persons~~ water. This license shall entitle the landholder and guests of the landholder to fish from the shore or any pier or dock originating from the property without any additional fishing license. This license is applicable only to private property and private docks and piers and is not valid for any public property, pier, or dock nor for any private property, pier, or dock operated for any commercial purpose whatsoever. ~~The guest fishing~~This license shall not be in force unless displayed on the premises of the property and only entitles fishing without additional license to persons fishing from the licensed property and then only

when fishing within the private property lines. ~~The guest fishing~~This license is not transferable as to person or location. For purposes of this subsection, a guest is any individual invited by the landholder to fish from the property at no charge. A charge includes any fee, assessment, dues, rent, or other consideration which must be paid, whether directly or indirectly, in order to be allowed to fish from the property, regardless of the stated reason for such charge."

SECTION 3. G.S. 113-272.3(d) reads as rewritten:

"(d) In issuing lifetime ~~sportsman combination~~ licenses, the Wildlife Resources Commission is authorized to adopt rules to establish a personalized series for certain license types and to charge a five dollar ($5.00) administrative fee, to be deposited in the Wildlife Fund, to defray the cost of issuance of the personalized license."

SECTION 4. G.S. 113-351(c)(4)a. reads as rewritten:

"(4) Lifetime Unified Inland/Coastal Recreational Fishing Licenses. – Except as provided in sub-subdivisions b. and c. of this subdivision, a license issued under this subdivision is valid for the lifetime of the licensee. A license issued under this subdivision authorizes the licensee to fish with hook and line for all fish in all inland fishing waters and joint fishing waters, including public mountain trout waters, and to engage in recreational fishing in coastal fishing waters.

a. Resident Lifetime Unified Inland/Coastal Recreational Fishing License. – $450.00.

. . . ."

SECTION 5. G.S. 143B-289.52(h) is repealed.

SECTION 6. G.S. 143B-289.52 is amended by adding two new subsections to read:

"(i) Personal identifying information obtained by the Commission or Division from the Wildlife Resources Commission pursuant to G.S. 143-254.5(b), from an applicant for a license issued under G.S. 113-174.3 or G.S. 113-174.4, or from a person complying with a biological data sampling or survey program under G.S. 113-174.1 is confidential under G.S. 132-1.2 and shall only be disclosed as provided in this section. The Commission or Division may disclose personal identifying information to any officer, employee, or authorized representative of any federal, state, or local government agency if disclosure is necessary to carry out a proper function of the Commission, Division, or other agency. As used in this section, "personal identifying information" includes a person's mailing address, residence address, date of birth, telephone number, electronic mail address, driver license number, and social security number.

(j) The Commission may adopt rules to exempt individuals who participate in organized fishing events held in coastal or joint fishing waters from recreational fishing license requirements for the specified time and place of the event when the purpose of the event is consistent with the conservation objectives of the Commission."

SECTION 7. This act is effective when it becomes law.

BILL DRAFT 2005-SYz-31 [v.3] (04/21)

(THIS IS A DRAFT AND IS NOT READY FOR INTRODUCTION)
5/11/2006 4:00:11 PM

Short Title: Environmental Reports Consolidation 2006. (Public)

Sponsors: .

Referred to:

A BILL TO BE ENTITLED

AN ACT TO AMEND OR REPEAL VARIOUS ENVIRONMENTAL REPORTING REQUIREMENTS, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. G.S. 113-206(f) reads as rewritten:

"(f) In evaluating claims registered pursuant to G.S. 113-205, the Secretary shall favor public ownership of submerged lands and public trust rights. The Secretary's action does not alter or affect in any way the rights of a claimant or the State.

~~To facilitate resolution of claims registered pursuant to G.S. 113-205, the Secretary, in cooperation with the Secretary of Administration and the Attorney General, shall establish a plan to resolve these claims by 31 December 2003. The Secretary shall notify the Secretary of Administration and the Attorney General of the resolution of each claim. In addition, on or before October 1 of each year, the Secretary shall submit a report to the Joint Legislative Commission on Governmental Operations stating the following:~~

~~(1) The number of claims registered pursuant to G.S. 113-205 that were resolved during the preceding year;~~

~~(2) The cost of resolving these claims;~~

~~(3) The number of unresolved claims; and~~

~~(4) Payments made to acquire claims by condemnation.~~"

SECTION 2. Section 11 of S.L. 2002-4 reads as rewritten:

"**SECTION 11.** The Environmental Management Commission shall study the desirability of requiring and the feasibility of obtaining reductions in emissions of oxides of nitrogen (NOx) and sulfur dioxide (SO2) beyond those required by G.S. 143-215.107D, as enacted by Section 1 of this act. The Environmental Management Commission shall consider the availability of emissions reduction

technologies, increased cost to consumers of electric power, reliability of electric power supply, actions to reduce emissions of oxides of nitrogen (NOx) and sulfur dioxide (SO2) taken by states and other entities whose emissions negatively impact air quality in North Carolina or whose failure to achieve comparable reductions would place the economy of North Carolina at a competitive disadvantage, and the effects that these reductions would have on public health, the environment, and natural resources, including visibility. In its conduct of this study, the Environmental Management Commission may consult with the Utilities Commission and the Public Staff. The Environmental Management Commission shall report its findings and recommendations to the General Assembly and the Environmental Review Commission annually beginning 1 September ~~2005.~~2007."

SECTION 3. G.S. 143-215.107C(c) is repealed.

SECTION 4. G.S. 143B-279.12(e) reads as rewritten:

"(e) No later than ~~October 1, 2004, and annually thereafter,~~1 March of each year, the Department of Environment and Natural Resources shall report to the ~~House of Representatives and the Senate Appropriations Subcommittees on Natural and Economic Resources, the~~ Fiscal Research ~~Division,~~Division and the Environmental Review Commission the number of environmental permits subject to this section that took more than 90 days to issue or deny, the types of permits those were, the reasons for the extended processing time of those permits, and how the time within which the permit was actually issued or denied compared with the projected time frame provided to the applicant by the Department as required by this section. Based on the data gathered under this subsection, the Department shall include in its annual report recommendations regarding permit time frames for all major permits issued by the Department."

SECTION 5. G.S. 147-12(b) reads as rewritten:

"(b) The Department of Transportation, the Department of Correction, the Department of Crime Control and Public Safety, the State Highway Patrol, the Wildlife Resources Commission, the Division of Parks and Recreation in the Department of Environment and Natural Resources, and the Division of Marine Fisheries in the Department of Environment and Natural Resources shall deliver to the Governor by February 1 ~~and August 1~~ of each year detailed information on the agency's litter enforcement, litter prevention, and litter removal efforts. The Administrative Office of the Courts shall deliver to the Governor by February 1 ~~and August 1~~ of each year detailed information on the enforcement of the littering laws of the State, including the number of charges and convictions under the littering laws of the State. The Governor shall gather the information submitted by the respective agencies and deliver a consolidated ~~semiannual~~ annual report on or before March 1 ~~and September 1~~ of each year to the Environmental Review Commission, the Joint Legislative Transportation Oversight Committee, and the House of Representatives and the Senate Appropriations Subcommittees on Natural and Economic Resources."

SECTION 6. G.S. 130A-295.02(m) reads as rewritten:

"(m) The Department shall report annually on or before 1 ~~September~~ October to the Environmental Review Commission on the implementation of the resident inspectors program."

SECTION 7. This act becomes effective when it becomes law.

Referred to:

A BILL TO BE ENTITLED

AN ACT TO APPROPRIATE FUNDS TO IMPLEMENT THE RECOMMENDATIONS OF THE GEOGRAPHIC INFORMATION COORDINATING COUNCIL TO IMPROVE THE MAPPING AND DIGITAL REPRESENTATION OF SURFACE WATERS IN NORTH CAROLINA, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

Whereas, existing State, local, and federal maps of streams and surface waters are outdated, inadequate, inaccurate, and inconsistent; and

Whereas, State, local, and federal agencies, private developers, and nonprofit conservation organizations use maps of streams and surface waters on a daily basis to make environmental and economic decisions concerning the location of schools, highways, wastewater facilities, stormwater facilities, industries, businesses, homes, greenways, hazard mitigation projects, and stream and wetland mitigation projects; and

Whereas, State, local, federal, and private agencies and organizations must frequently send staff or consultants to the field to identify the location of streams and surface waters; and

Whereas, up-to-date and accurate maps of surface waters made available to government agencies and the public over the Internet on NC OneMap would increase the productivity of, and reduce costs for, the public and private sectors; and

Whereas, NC OneMap is currently serving data over the Internet for 54 local governments and more local governments desire to participate; and

Whereas, the General Assembly has invested over $50,000,000 to update and improve the mapping and digital representation of floodplains that can be utilized to improve the mapping and digital representation of surface waters; and

Whereas, in Section 33.1 of S.L. 2004-161, the General Assembly directed the Geographic Information Coordinating Council and the Department of Environment and Natural Resources to develop and recommend a plan to improve the mapping and

digital representation of surface waters in North Carolina to the General Assembly and the Environmental Review Commission; and

Whereas, the Geographic Information Coordinating Council established a Stream Mapping Working Group composed of State, local, and federal agencies to develop the plan; and

Whereas, the Stream Mapping Working Group determined user requirements, mapping specifications, implementation options, and developed a time line and a budget for stream mapping; and

Whereas, the Geographic Information Coordinating Council adopted the "Implementation Plan to Improve Mapping and Digital Representation of Surface Waters," at a cost of sixteen million two hundred thirty-six thousand five hundred dollars ($16,236,500) over five years; Now, therefore,

The General Assembly of North Carolina enacts:

SECTION 1. There is appropriated from the General Fund to the Department of Environment and Natural Resources the sum of sixteen million two hundred thirty-six thousand five hundred dollars ($16,236,500) for the 2006-2007 fiscal year to fund the Implementation Plan to Improve Mapping and Digital Representation of Surface Waters adopted by the Geographic Information Coordinating Council on 5 January 2005 and presented to the Environmental Review Commission on 13 January 2005.

SECTION 2. The Department of Environment and Natural Resources shall make the mapping and digital representation of surface waters available to other State agencies and the public as soon as practicable over the Internet on NC OneMap.

SECTION 3. The Department of Environment and Natural Resources shall seek funds from federal agencies, including, but not limited to, the Federal Emergency Management Agency, United States Army Corps of Engineers, United States Environmental Protection Agency, United States Geological Survey, and United States Department of Agriculture to help fund the Implementation Plan to Improve Mapping and Digital Representation of Surface Waters.

SECTION 4. This act becomes effective 1 July 2006.

Referred to:	

A BILL TO BE ENTITLED

AN ACT TO AUTHORIZE THE ADDITION OF MOUNTAIN BOG STATE NATURAL AREA AND SANDY RUN SAVANNAS STATE NATURAL AREA TO THE STATE PARKS SYSTEM, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

Whereas, Section 5 of Article XIV of the North Carolina Constitution states that it shall be a proper function of the State of North Carolina to acquire and preserve park, recreational, and scenic areas and, in every other appropriate way, to preserve as a part of the common heritage of this State its open lands and places of beauty; and

Whereas, the General Assembly enacted the State Parks Act in 1987, declaring that the State of North Carolina offers unique archaeological, geological, biological, scenic, and recreational resources, and that such resources are part of the heritage of the people of the State to be preserved and managed by those people for their use and for the use of their visitors and descendants; and

Whereas, mountain bogs are wetlands that support a variety of rare and unique species. Because of their location on small flat sites in the mountains, bogs are highly vulnerable to damage from clearing, grading, and development. Very few of North Carolina's mountain bogs remain intact, and they are one of the State's most endangered habitats; and

Whereas, Mountain Bog State Natural Area would be comprised of two mountain bogs, Sugar Mountain Bog and Pineola Bog.

Whereas, rare species found at one or both of the bogs include the bog turtle, bog rose, bog fern, cranberry, gray's lily, large purple-fringed orchid, purple-leaf willowherb, four-toed salamander, and Baltimore checkerspot; and

Whereas, the Mountain Bog site has been found to possess biological resources of statewide significance; and

Whereas, savannas are renowned for extraordinary plant diversity and high numbers of rare species. Savannas are an important component of the State's natural landscape, but are poorly represented in the existing state parks system; and

Whereas, the Sandy Run Savannas State Natural Area would be comprised of a cluster of nationally significant savannas along the border of Pender and Onslow counties; and

Whereas, the Sandy Run Savannas site is important as a military buffer, and is strategically located as a hub surrounded by Camp LeJeune, Holly Shelter Game Land, and Angola Bay Game Land; and

Whereas, the Sandy Run Savannas site contains rare species that include Venus flytrap, golden sedge, red-cockaded woodpecker, Cooley's meadowrue, yellow fringeless orchid, Carolina goldenrod, and rough-leaf loosestrife; and

Whereas, the Sandy Run Savannas site has been found to possess biological resources of statewide significance; Now, therefore,

The General Assembly of North Carolina enacts:

SECTION 1. The General Assembly authorizes the Department of Environment and Natural Resources to add Mountain Bog State Natural Area to the State Parks System as provided in G.S. 113-44.14(b).

SECTION 2. The General Assembly authorizes the Department of Environment and Natural Resources to add Sandy Run Savannas State Natural Area to the State Parks System as provided in G.S. 113-44.14(b).

SECTION 3. This act is effective when it becomes law.

GENERAL ASSEMBLY OF NORTH CAROLINA

BILL DRAFT 2005-RIfz-19 [v.4] (03/14)

(THIS IS A DRAFT AND IS NOT READY FOR INTRODUCTION)
5/15/2006 12:31:00 PM

Short Title: Tax Credits for Certain Real Prop. Donations. (Public)

Sponsors: .

Referred to:

A BILL TO BE ENTITLED

AN ACT TO RECODIFY THE CREDIT FOR CERTAIN REAL PROPERTY DONATIONS AND TO INCREASE THE CREDIT FOR CERTAIN PASS-THROUGH ENTITIES, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. Chapter 105 of the General Statutes is amended by adding a new Article to read:

"Article 3H

"Tax Credit for Certain Real Property Donations.

"**§ 105-129.70. Tax credit allowed.**

A person who makes a qualified donation of an interest in real property located in North Carolina during the taxable year that is useful for (i) public beach access or use, (ii) public access to public waters or trails, (iii) fish and wildlife conservation, or (iv) other similar land conservation purposes is allowed a credit equal to twenty-five percent (25%) of the fair market value of the donated property interest. To be eligible for this credit, the interest in property must be donated in perpetuity to and accepted by the State, a local government, or a body that is both organized to receive and administer lands for conservation purposes and qualified to receive charitable contributions under the Code. Lands required to be dedicated pursuant to local governmental regulation or ordinance and dedications made to increase building density levels permitted under a regulation or ordinance are not eligible for this credit. To support the credit allowed by this Article, the taxpayer must file with the tax return for the taxable year in which the credit is claimed a certification by the Department of Environment and Natural Resources that the property donated is suitable for one or more of the valid public benefits set forth in this section. The certification for a qualified donation made by a pass-through entity must be filed by the pass-through entity.

"**§ 105-129.71. Credit amount.**

(a) Corporations. – The aggregate amount of credit allowed to a corporation in a taxable year under this Article for one or more qualified donations, whether made directly or indirectly as owner of a pass-through entity, may not exceed five hundred thousand dollars ($500,000). That portion of a qualifying donation that is the basis for a credit allowed under this subsection is not eligible for deduction as a charitable contribution under G.S. 105-130.9 if it is claimed against income tax under Article 4 of this Chapter.

(b) Individuals. – The aggregate amount of credit allowed to an individual in a taxable year under this Article for one or more qualified donations, whether made directly or indirectly as owner of a pass-through entity, may not exceed two hundred fifty thousand dollars ($250,000). In the case of property owned by a married couple, if both spouses are required to file North Carolina income tax returns, the credit allowed by this section may be claimed only if the spouses file a joint return. If only one spouse is required to file a North Carolina income tax return, that spouse may claim the credit allowed by this Article on a separate return.

(c) Pass-Through Entities. – The aggregate amount of credit allowed to a pass-through entity in a taxable year under this section for one or more qualified donations, whether made directly or indirectly as owner of another pass-through entity, may not exceed five hundred thousand dollars ($500,000). Each individual who is an owner of a pass-through entity is allowed as a credit an amount equal to the owner's allocated share of the credit to which the pass-through entity is eligible under this subsection, not to exceed two hundred fifty thousand dollars ($250,000). Each corporation that is an owner of a pass-through entity is allowed as a credit an amount equal to the owner's allocated share of the credit to which the pass-through entity is eligible under this subsection, not to exceed five hundred thousand dollars ($500,000).

§ 105-129.72. Tax Election; Cap.

(a) Tax election. – The credit provided in this Article are allowed against the franchise tax levied in Article 3 of this Chapter, the income taxes levied in Article 4 of this Chapter, and the gross premiums tax levied in Article 8B of this Chapter. The taxpayer must elect the tax against which a credit will be claimed when filing the return on which the credit is claimed. This election is binding. Any carryforwards of a credit must be claimed against the same tax.

(b) Cap. – The credit allowed in this Article may not exceed the amount of tax against which it is claimed for the taxable year reduced by the sum of all credits allowed except payments of tax made by or on behalf of the taxpayer. This limitation applies to the cumulative amount of credit, including carryforwards, claimed by the taxpayer under this Article against each tax for the taxable year.

"**§ 105-129.73. Carryforward Election; Refund.**

A taxpayer may elect to carry forward any unused portion of this credit as follows:

(1) For the next succeeding five years or

(2) For the next succeeding two years, and after a credit has been carried forward for two years, the Secretary must refund to the taxpayer in the

next succeeding year an amount equal to fifty percent (50%) of the remaining unused amount of the credit.

"**§ 105-129.74. Marshland.**

In the case of marshland for which a claim has been filed pursuant to G.S. 113-205, the offer of donation must be made before December 31, 2003, to qualify for the credit allowed by this section.

"**§ 105-129.75. Reports.**

The Department of Revenue must report to the Revenue Laws Study Committee and the Fiscal Research Division of the General Assembly by May 1 of each year all of the following information for the 12-month period ending the preceding December 31:

(1) The number of taxpayers that claimed a credit allowed in this Article.

(2) The amount of each credit claimed.

(3) The total amount refunded in excess of tax liability.

(4) The total cost to the General Fund of the credits claimed."

SECTION 2. G.S. 105-130.34 is repealed.

SECTION 3. G.S. 105-151.12 is repealed.

SECTION 4. In order to pay for its costs of computer programming to implement this act, the Department of Revenue may withhold not more than fifty-five thousand dollars ($55,000) during the 2006-2007 fiscal year from individual income tax collections under Part 2 of Article 4 of Chapter 105 of the General Statutes.

SECTION 5. The title of Article 16 of Chapter 113A of the General Statutes reads as rewritten:

"Article 16.

"Conservation ~~Easements~~ Incentive Program."

SECTION 6. .S. 113A-231 reads as rewritten:

"**§ 113A-230. Legislative findings; intent.**

The General Assembly finds that a statewide network of protected natural areas, riparian buffers, and greenways can best be accomplished through a conservation ~~easements~~ incentive program. The General Assembly further finds that other public conservation and use programs, such as natural area protection, beach access, trail systems, historic landscape protection, and agricultural preservation, can benefit from increased conservation tools. In this Article, the General Assembly therefore intends to extend the ability of the Department of Environment and Natural Resources to achieve these purposes and to strengthen the capability of private nonprofit land trusts to participate in land and water conservation."

SECTION 7. G.S. 113A-231 reads as rewritten:

"**§ 113A-231. Program to accomplish conservation purposes.**

The Department of Environment and Natural Resources shall develop a nonregulatory program that uses conservation tax credits as a prominent tool to accomplish conservation purposes, including the maintenance of ecological systems. As a part of this program, the Department shall exercise its powers to protect real property and interests in real property: donated for tax credit under ~~G.S. 105-130.34 or G.S. 105-151.12;~~ G.S. 105-129.70; conserved with the use of other financial incentives;

or, conserved through nonregulatory programs. The Department shall call upon the Attorney General for legal assistance in developing and implementing the program."

SECTION 8. G.S. 113A-232(c) reads as rewritten:

"(c) Property Eligibility. – In order for real property or an interest in real property to be the subject of a grant under this Article, the real property or interest in real property must possess or have a high potential to possess ecological value, must be reasonably restorable, and must qualify for tax credits under ~~G.S. 105-130.34 or G.S. 105-151.12.~~ G.S. 105-129.70."

SECTION 9. G.S. 113A-232(c1) reads as rewritten:

"(c1) Grant Eligibility. – State conservation land management agencies, local government conservation land management agencies, and private nonprofit land trust organizations are eligible to receive grants from the Conservation Grant Fund. Private nonprofit land trust organizations must be qualified pursuant to ~~G.S. 105-130.34 and G.S. 105-151.12~~ G.S. 105-129.70and must be certified under section 501(c)(3) of the Internal Revenue Code."

SECTION 10. G.S. 113A-233 reads as rewritten:

"**§ 113A-233. Uses of a grant from the Conservation Grant Fund.**

(a) Allowable Uses. – A grant from the Conservation Grant Fund may be used only to pay for one or more of the following costs:

(1) Reimbursement for total or partial transaction costs for a donation of real property or an interest in real property from an individual or corporation satisfying either of the following:

a. Insufficient financial ability to pay all costs or insufficient taxable income to allow these costs to be included in the donated value.

b. Insufficient tax burdens to allow these costs to be offset by the value of tax credits under ~~G.S. 105-130.34 or G.S. 105-151.12~~ G.S. 105-129.70 or by charitable deductions.

(2) Management support, including initial baseline inventory and planning.

(3) Monitoring compliance with conservation easements, the related use of riparian buffers, natural areas, and greenways, and the presence of ecological integrity.

(4) Education on conservation, including information materials intended for landowners and education for staff and volunteers.

(5) Stewardship of land.

(6) Transaction costs for recipients, including legal expenses, closing and title costs, and unusual direct costs, such as overnight travel.

(7) Administrative costs for short-term growth or for building capacity.

(b) Prohibition. – The Fund shall not be used to pay the purchase price of real property or an interest in real property."

SECTION 11. G.S. 105-130.9 reads as rewritten:

"**§ 105-130.9. Contributions.**

Contributions shall be allowed as a deduction to the extent and in the manner provided as follows:

(1) Charitable contributions as defined in section 170(c) of the Code, exclusive of contributions allowed in subdivision (2) of this section, shall be allowed as a deduction to the extent provided herein. The amount allowed as a deduction hereunder shall be limited to an amount not in excess of five percent (5%) of the corporation's net income as computed without the benefit of this subdivision or subdivision (2) of this section. Provided, that a carryover of contributions shall not be allowed and that contributions made to North Carolina donees by corporations allocating a part of their total net income outside this State shall not be allowed under this subdivision, but shall be allowed under subdivision (3) of this section.

(2) Contributions by any corporation to the State of North Carolina, any of its institutions, instrumentalities, or agencies, any county of this State, its institutions, instrumentalities, or agencies, any municipality of this State, its institutions, instrumentalities, or agencies, and contributions or gifts by any corporation to educational institutions located within North Carolina, no part of the net earnings of which inures to the benefit of any private stockholders or dividend. For the purpose of this subdivision, the words "educational institution" shall mean only an educational institution which normally maintains a regular faculty and curriculum and normally has a regularly organized body of students in attendance at the place where the educational activities are carried on. The words "educational institution" shall be deemed to include all of such institution's departments, schools and colleges, a group of "educational institutions" and an organization (corporation, trust, foundation, association or other entity) organized and operated exclusively to receive, hold, invest and administer property and to make expenditures to or for the sole benefit of an "educational institution" or group of "educational institutions."

(3) Corporations allocating a part of their total net income outside North Carolina under the provisions of G.S. 105-130.4 shall deduct from total income allocable to North Carolina contributions made to North Carolina donees qualified under subdivisions (1) and (2) of this section or made through North Carolina offices or branches of other donees qualified under the above-mentioned subdivisions of this section; provided, such deduction for contributions made to North Carolina donees qualified under subdivision (1) of this section shall be limited in amount to five percent (5%) of the total income allocated to North Carolina as computed without the benefit of this deduction for contributions.

(4) The amount of a contribution for which the taxpayer claimed a tax credit pursuant to ~~G.S. 105-130.34~~ G.S. 105-129.70shall not be

eligible for a deduction under this section. The amount of the credit claimed with respect to the contribution is not, however, required to be added to income under G.S. 105-130.5(a)(10)."

SECTION 12. G.S. 105-277.3(d1) reads as rewritten:

"(d1) Exception for Easements on Qualified Conservation Lands Previously Appraised at Use Value. – Property that is appraised at its present-use value under G.S. 105-277.4(b) shall continue to qualify for appraisal, assessment, and taxation as provided in G.S. 105-277.2 through G.S. 105-277.7 as long as the property is subject to an enforceable conservation easement that would qualify for the conservation tax credit provided in ~~G.S. 105-130.34 and G.S. 105-151.12,~~ G.S.105-129.70 without regard to actual production or income requirements of this section. Notwithstanding G.S. 105-277.3(b) and (b1), subsequent transfer of the property does not extinguish its present-use value eligibility as long as the property remains subject to an enforceable conservation easement that qualifies for the conservation tax credit provided in ~~G.S. 105-130.34 and G.S. 105-151.12.~~ G.S.105-129.70.The exception provided in this subsection applies only to that part of the property that is subject to the easement."

SECTION 13. G.S. 113-77.9(d) reads as rewritten:

"(d) Acquisition. – The Department of Administration may, pursuant to G.S. 143-341, acquire by purchase, gift, or devise all lands selected by the Trustees for acquisition pursuant to this Article. Title to any land acquired pursuant to this Article shall be vested in the State. A State agency with management responsibility for land acquired pursuant to this Article may enter into a management agreement or lease with a county, city, town, or private nonprofit organization qualified under ~~G.S. 105-151.12 and G.S. 105-130.34~~ G.S.105-129.70 and certified under section 501(c)(3) of the Internal Revenue Code to aid in managing the land. A management agreement or lease shall be executed by the Department of Administration pursuant to G.S. 143-341."

SECTION 14. G.S. 113A-256(g) reads as rewritten:

"(g) Tax Credit Certification. – The Trustees shall develop guidelines to determine whether land donated for a tax credit under ~~G.S. 105-130.34 or G.S. 105-151.12~~ G.S.105-129.70 are suitable for one of the purposes under this Article and may be certified for a tax credit."

SECTION 15. G.S. 105-151.26 reads as rewritten:

"§ 105-151.26. Credit for charitable contributions by nonitemizers.

A taxpayer who elects the standard deduction under section 63 of the Code for federal tax purposes is allowed as a credit against the tax imposed by this Part an amount equal to seven percent (7%) of the taxpayer's excess charitable contributions. The taxpayer's excess charitable contributions are the amount by which the taxpayer's charitable contributions for the taxable year that would have been deductible under section 170 of the Code if the taxpayer had not elected the standard deduction exceed two percent (2%) of the taxpayer's adjusted gross income as calculated under the Code.

No credit shall be allowed under this section for amounts deducted from gross income in calculating taxable income under the Code or for contributions for which a credit was claimed under ~~G.S. 105-151.12~~ G.S.105-129.70 or G.S. 105-151.14. A nonresident or part-year resident who claims the credit allowed by this section shall

reduce the amount of the credit by multiplying it by the fraction calculated under G.S. 105-134.5(b) or (c), as appropriate. The credit allowed under this section may not exceed the amount of tax imposed by this Part for the taxable year reduced by the sum of all credits allowed, except payments of tax made by or on behalf of the taxpayer."

SECTION 16. Section 1 of this act is effective for credits claimed against income tax or gross premiums tax for taxable years beginning on or after January 1, 2006, and for credits claimed against franchise tax for taxable years beginning on or after January 1, 2007, and applies to property interests contributed on or after January 1, 2006. Sections 4 and 16 of this act are effective when this act becomes law. The remainder of this act is effective for taxable years beginning on or after January 1, 2006.

Short Title: Mercury Switch Amendments. (Public)

Sponsors: .

Referred to:

A BILL TO BE ENTITLED

AN ACT TO AMEND THE STATUTES GOVERNING THE REMOVAL, COLLECTION, AND RECOVERY OF MERCURY SWITCHES FROM CERTAIN MOTOR VEHICLES, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. G.S. 130A-310.50 reads as rewritten:

"**§ 130A-310.50. Definitions.**

As used in this Part:

(1) "Capture rate" means the ~~annual~~ removal, collection, and recovery of mercury ~~switches~~ switches, as required by this Part, expressed as a ~~percentage~~ ratio of the number of switches removed, divided by the total number of mercury switches available for removal from end-of-life ~~vehicles.~~vehicles, minus the number of switches that were inaccessible due to the condition of the vehicle.

(1a) 'Destination facility' has the same meaning as in 40 Code of Federal Regulations § 273.9 (1 July 2006 Edition).

(2) "End-of-life vehicle" means a vehicle that is sold, given, or otherwise conveyed to a vehicle recycler or scrap metal recycling facility for the purpose of recycling.

(3) "Manufacturer" means a person, firm, association, partnership, corporation, governmental entity, organization, combination, or joint venture that is the last person in the production or assembly process of a new vehicle that utilizes mercury switches, or in the case of an imported vehicle, the importer or domestic distributor of the vehicle.

(4) "Mercury minimization plan" means a plan for removing, collecting, and recovering mercury switches from end-of-life vehicles that is

prepared as provided in G.S. 130A-310.52 and implemented as provided in G.S. 130A-310.53.

(5) "Mercury switch" means each mercury-containing capsule, commonly known as a "bullet", that is part of a convenience light switch assembly installed in a vehicle.

(6) "Scrap metal recycling facility" means a fixed location where machinery and equipment are used to process scrap metal into specific grades of scrap metal for sale and whose primary product is scrap iron, scrap steel, or nonferrous metallic scrap.

(6a) 'Universal waste' has the same meaning as in 40 Code of Federal Regulations § 273.9 (1 July 2006 Edition).

(6b) 'Universal waste handler' has the same meaning as in 40 Code of Federal Regulations § 273.9 (1 July 2006 Edition).

(7) "Vehicle" means any passenger automobile or passenger car, station wagon, truck, van, or sport utility vehicle with a gross vehicle weight rating of less than 12,000 pounds.

(8) "Vehicle recycler" means an individual or entity engaged in the business of acquiring, dismantling, or destroying six or more end-of-life vehicles in a calendar year for the primary purpose of resale of parts of the vehicle."

SECTION 2. G.S. 130A-310.52 reads as rewritten:

"**§ 130A-310.52. Mercury minimization plan.**

(a) The Department shall develop and administer a mercury minimization plan to annually achieve the goal of having ~~a~~ an annual capture rate of at least ninety percent (90%). In preparing the plan, the Department shall consult with manufacturers of vehicles, who shall participate in the development of the plan on an advisory basis. To the extent practicable, the mercury minimization plan shall utilize the currently available end-of-life vehicle recycling infrastructure. To the extent adequate, affordable, and environmentally sound end-of-life vehicle recycling infrastructure is unavailable, the plan shall provide for the development of this infrastructure. Nothing in this Part shall preclude the Department from approving a program sponsored by the manufacturers for the collection and disposal of mercury switches taken from vehicle recyclers and scrap metal recycling facilities.

(b) A plan developed under subsection (a) of this section shall include the following:

(1) A compilation of the make, model, and year of any vehicle that was sold or offered for sale by the vehicle manufacturer and contains one or more mercury switches and a description and the location of each mercury switch in the vehicle. A vehicle manufacturer shall report to the Department the information needed to make the compilation.

(2) A description of all safe and environmentally sound methods for removal of mercury switches from end-of-life vehicles. A vehicle manufacturer shall report to the Department the information needed to make the description.

(3) A presumption that if the manufacturer does not know or is uncertain as to whether or not a switch contains mercury, the switch does contain mercury.

(4) A system to mark end-of-life vehicles that are to be shredded or crushed to indicate the presence or absence of a mercury switch.

(5) Educational materials to assist a vehicle recycler or a scrap metal recycling facility in undertaking a safe and environmentally sound method for the removal of the mercury switches from end-of-life vehicles. The materials shall include information on hazards related to mercury and on the proper handling of ~~mercury.~~mercury switches by a vehicle recycler or scrap metal recycling facility during removal, collection, storage, and preparation for transport of the switches to a universal waste handler or destination facility subject to the requirements of 40 Code of Federal Regulations Part 273 (1 July 2006 Edition).

(6) A method for storage and ~~disposal~~ handling of the mercury ~~switches,~~ switches removed by vehicle recyclers and scrap metal recycling facilities in accordance with the rules adopted by the Commission concerning universal waste, including packaging and shipping of mercury switches to a universal waste handler or destination facility subject to the requirements of 40 Code of Federal Regulations Part 273 (1 July 2006 Edition).. ~~permitted recycling, storage, or disposal facilities. To the extent adequate, affordable, and environmentally sound mercury switch disposal technology is unavailable, a method for the temporary storage of mercury switches.~~"

SECTION 3. G.S. 130A-310.53 reads as rewritten:

"**§ 130A-310.53. Removal of mercury switches from end-of-life vehicles.**

(a) A vehicle recycler that conveys ownership of an end-of-life vehicle to a scrap metal recycling facility shall remove all mercury switches identified in the mercury minimization plan prior to delivery of the vehicle to the scrap metal recycling facility. If a mercury switch is inaccessible, the fact that the mercury switch remains in the vehicle shall be noted on the vehicle recycler's invoice.

(b) A scrap metal recycling facility that accepts an end-of-life vehicle that has not been flattened, crushed, baled, or shredded and that contains mercury switches shall remove the mercury switches before the end-of-life vehicle is flattened, crushed, baled, or shredded unless the mercury switch is inaccessible.

(c) A mercury switch is inaccessible if, due to the condition of the vehicle, the switch cannot be removed in accordance with the mercury minimization plan and removal of the switch would significantly increase the risk of a release of mercury into the environment.

(d) A vehicle recycler or scrap metal recycling facility that removes mercury switches pursuant to subsection (a) or (b) of this section ~~shall make quarterly reports to the Department on the following:~~shall, no later than 1 March, make an annual report to the Department on all of the following for the previous calendar year:

(1) The number of vehicles ~~that~~ it processed for ~~recycling.~~recycling that contained mercury switches and the total number of switches contained in those vehicles.

(2) The number of vehicles from which it removed a mercury switch by ~~make.~~make and the total number of switches removed from each make.

(3) The number of vehicles for which it could not remove the mercury switch because the switch was ~~inaccessible.~~inaccessible and the total number of inaccessible switches.

(4) The number of mercury switches sent to a universal waste handler or destination facility subject to the requirements of 40 Code of Federal Regulations Part 273 (1 July 2006 Edition).

(e) Mercury switches that are removed from end-of-life vehicles are considered ~~'universal waste' as defined in 40 Code of Federal Regulations § 273.9 (1 July 2004 Edition).~~ universal waste. Mercury switches that are removed from end-of-life vehicles shall be collected, transported, treated, stored, disposed of, and otherwise handled in accordance with rules adopted by the Commission governing universal waste and in compliance with the requirements of 40 Code of Federal Regulations Part 273 (1 July 2006 Edition)."

SECTION 4. G.S. 130A-310.54 reads as rewritten:

"**§ 130A-310.54. Funds to implement plan.**

(a) The Mercury Pollution Prevention Account is established in the Department. Revenue is credited to the Account from the certificate of title fee under G.S. 20-85.

(b) Revenue in the Mercury Pollution Prevention Account shall be used to reimburse the Department and others for costs incurred in implementing the mercury minimization plan. The reimbursable costs are:

(1) Five dollars ($5.00) for each mercury switch ~~removed~~ removed, managed in accordance with the rules adopted by the Commission concerning universal waste, and sent to a universal waste handler or destination facility subject to the requirements of 40 Code of Federal Regulations Part 273 (1 July 2006 Edition) by a vehicle recycler or scrap metal recycling facility pursuant to this ~~Article.~~ Article, including shipment through any manufacturer-sponsored collection program for mercury switches that has been approved by the Department.

(2) Costs incurred by the Department in administering the plan.

(c) ~~The Department shall reimburse vehicle recyclers and scrap metal recycling facilities based on the quarterly reports submitted under G.S. 130A-310.53. The Department may request any information needed to determine the accuracy of the reports.~~Reimbursements to vehicle recyclers and scrap metal recycling facilities shall be based on the number of mercury switches sent to other universal waste handlers or destination facilities.

(d) A vehicle recycler or scrap metal recycling facility shall maintain and submit documentation as required by the Department to substantiate the information included

in its annual reports. Supporting documentation for each annual report shall be kept for three years from the last day of the calendar year covered by the report."

SECTION 5. G.S. 130A-310.55 reads as rewritten:

"**§ 130A-310.55. Violations of Article; enforcement.**

(a) It is unlawful for a person to do any of the following:

(1) Knowingly flatten, crush, bale, shred, or otherwise alter the condition of a vehicle from which accessible mercury switches have not been removed, in any manner that would prevent or significantly hinder the removal of a mercury switch.

(2) Willfully fail to remove a mercury switch when the person is required to do so.

~~(3) Knowingly make a false report that a mercury switch has been removed from an end-of-life vehicle.~~

~~(4) Obtain a mercury switch from another source and falsely report that it was removed from a vehicle processed for recycling.~~

(b) Any person who violates subsection (a) of this section shall be guilty of a Class 1 misdemeanor and upon conviction shall be punished as provided in G.S. 14-3.

(c) It is unlawful for a person to do any of the following:

(1) Knowingly make a false report that a mercury switch has been removed from an end-of-life vehicle.

(2) Obtain a mercury switch from another source and falsely report that it was removed from a vehicle processed for recycling.

(d) Any person who violates subsection (c) of this section shall be guilty of a Class 2 misdemeanor and upon conviction shall be punished as provided in G.S. 130A-26.2.

(e) A violation of any provision of this Part, including subsections (a) and (c) of this section and any rules adopted by the Commission governing universal waste, may be enforced by an administrative or civil action ~~This Part may be enforced~~ as provided in Part 2 of Article 1 of this Chapter."

SECTION 6. G.S. 130A-310.57 reads as rewritten:

"**§ 130A-310.57. Report on plan.**

The Department shall publish an annual report on the mercury minimization plan on or before 1 November ~~1~~ based on its evaluation of annual reports submitted for the previous calendar year and any information provided from an approved manufacturer-sponsored collection program. The report shall include, at a minimum, all of the following:

(1) A detailed description and documentation of the capture rate achieved.

(2) In the event that ~~a~~ an annual capture rate of at least ninety percent (90%) is not ~~achieved,~~ achieved annually, a description of additional or alternative actions that may be implemented to improve the mercury minimization plan and its implementation.

(3) The number of mercury switches collected, the number of end-of-life vehicles containing mercury switches, the number of end-of-life

vehicles processed for recycling, and a description of how the mercury switches were managed.

(4) A statement that details the costs required to implement the mercury minimization plan."

SECTION 7. Section 3 of S.L. 2005-384 is rewritten to read:

"**SECTION 3.** The Commission for Health Services shall amend 15A NCAC 13A .0119 to adopt rules governing the management of waste mercury-containing ~~devices,~~ devices as universal waste, as defined in the Final Rule published on 5 August 2005 in the Federal Register, Volume 70, Number 150, Pages 45508 through 45522.~~Notice of Proposed Rulemaking published on 12 June 2002 in the Federal Register, Volume 67, Number 113, Pages 40507 through 40528, as universal waste.~~"

SECTION 8. This act becomes effective 1 January 2007. The first annual report required by G.S. 130A-310.53(d) is due 1 March 2008. The first annual report required by G.S. 130A-310.57 is due 1 November 2008. This act expires on 31 December 2017.

BILL DRAFT 2005-RTfz-20 [v.3] (05/03)

(THIS IS A DRAFT AND IS NOT READY FOR INTRODUCTION)
5/15/2006 12:30:07 PM

Short Title: Underground Storage Tank Amendments 2006. (Public)

Sponsors: .

Referred to:

A BILL TO BE ENTITLED

AN ACT (1) TO PROVIDE FOR A TRANSITION TO RELIANCE ON PRIVATE INSURANCE AND SIMILAR MECHANISMS FOR THE DEMONSTRATION OF FINANCIAL RESPONSIBILITY REQUIRED UNDER FEDERAL LAW OF OWNERS AND OPERATORS OF COMMERCIAL PETROLEUM UNDERGROUND STORAGE TANKS, (2) TO IMPLEMENT THE TRANSITION TO PRIVATE INSURANCE BY MEANS OF A MARKET-BASED APPROACH THAT UTILIZES A PROGRESSIVE SCHEDULE OF INCREASES IN TANK FEES, (3) TO REDUCE THE INCIDENCE OF LEAKS BY REQUIRING SECONDARY CONTAINMENT FOR ALL COMPONENTS OF REGULATED PETROLEUM UNDERGROUND STORAGE TANK SYSTEMS, (4) TO PROVIDE FOR EXPEDITED ASSESSMENT AND CLEANUP OF RELEASES AND DISCHARGES FROM PETROLEUM UNDERGROUND STORAGE TANKS BY REQUIRING THE DEPARTMENT OF ENVIRONMENT AND NATURAL RESOURCES TO ESTABLISH A PILOT PROGRAM TO EVALUATE THE USE OF SITE-SPECIFIC CLEANUP STANDARDS, (5) TO PROVIDE FOR VARIOUS STUDIES AND REPORTS, AND (6) TO MAKE OTHER IMPROVEMENTS TO THE UNDERGROUND STORAGE TANK CLEANUP PROGRAM, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. G.S. 143-215.94B reads as rewritten:

"**§ 143-215.94B. Commercial Leaking Petroleum Underground Storage Tank Cleanup Fund.**

(a) There is established under the control and direction of the Department the Commercial Leaking Petroleum Underground Storage Tank Cleanup Fund. This Commercial Fund shall be a nonreverting revolving fund consisting of any monies

appropriated for such purpose by the General Assembly or available to it from grants, other monies paid to it or recovered on behalf of the Commercial Fund, and fees paid pursuant to this Part.

(b) The Commercial Fund shall be used for the payment of the following costs up to an aggregate maximum of one million dollars ($1,000,000) per occurrence resulting from a discharge or release of a petroleum product from a commercial underground storage tank:

(1) For discharges or releases discovered or reported between 30 June 1988 and 31 December 1991 inclusive, the cleanup of environmental damage as required by G.S. 143-215.94E(a) in excess of fifty thousand dollars ($50,000) per occurrence.

(2) For discharges or releases discovered on or after 1 January 1992 and reported between 1 January 1992 and 31 December 1993 inclusive, the cleanup of environmental damage as required by G.S. 143-215.94E(a) in excess of twenty thousand dollars ($20,000) per occurrence.

(2a) For discharges or releases discovered and reported on or after 1 January 1994 and prior to 1 January 1995, the cleanup of environmental damage as required by G.S. 143-215.94E(a) in excess of twenty thousand dollars ($20,000) if the owner or operator (i) notifies the Department prior to 1 January 1994 of its intent to permanently close the tank in accordance with applicable regulations or to upgrade the tank to meet the requirements that existing underground storage tanks must meet by 22 December 1998, (ii) commences closure or upgrade of the tank prior to 1 July 1994, and (iii) completes closure or upgrade of the tank prior to 1 January 1995.

(3) For discharges or releases reported on or after 1 January ~~1994,~~1994 and prior to 1 January 2017, the cleanup of environmental damage as required by G.S. 143-215.94E(a) in excess of twenty thousand dollars ($20,000) if, prior to the discharge or release, the commercial underground storage tank from which the discharge or release occurred met the performance standards applicable to tanks installed after 22 December 1988 or met the requirements that existing underground storage tanks must meet by 22 December 1998.

(4) For discharges or releases reported on or after 1 January 1994 and prior to 1 January 2017 from a commercial underground storage tank that does not qualify under subdivision (2a) of this subsection or does not meet the standards in subdivision (3) of this subsection, sixty percent (60%) of the costs per occurrence of the cleanup of environmental damage as required by G.S. 143-215.94E(a) that exceeds twenty thousand dollars ($20,000) but is not more than one hundred fifty-seven thousand five hundred dollars ($157,500) and one hundred percent (100%) of the costs above this amount, up to the limits established in this section.

(5) Compensation to third parties for bodily injury and property damage in excess of one hundred thousand dollars ($100,000) per occurrence.

(6) Reimbursing the State for damages or other costs incurred as a result of a loan from the Loan Fund. The per occurrence limit does not apply to reimbursements to the State under this subdivision.

(7) Recordation of residual petroleum as required by G.S. 143B-279.11 if the Commercial Fund is responsible for the payment of costs under subdivisions (1) through (4) of this subsection.

(b1) In the event that two or more discharges or releases at any one facility, the first of which was discovered or reported on or after 30 June 1988, result in more than one plume of soil, surface water, or groundwater contamination, the Commercial Fund shall be used for the payment of the costs of the cleanup of environmental damage as required by G.S. 143-215.94E(a) in excess of the multiple discharge amount up to the applicable aggregate maximum specified in subsections (b) and (b2) of this section. The multiple discharge amount shall be calculated as follows:

(1) Each discharge or release shall be considered separately as if it were the only discharge or release, and the cost for which the owner or operator is responsible under subdivisions (1), (2), (2a), or (3) of subsection (b) of this section, whichever are applicable, shall be determined for each discharge or release. For each discharge or release for which subdivision (4) of subsection (b) of this section is applicable, the cost for which the owner or operator is responsible, for the purpose of this subsection, shall be seventy-five thousand dollars ($75,000). For purposes of this subsection, two or more discharges or releases that result in a single plume of soil, surface water, or groundwater contamination shall be considered as a single discharge or release.

(2) The multiple discharge amount shall be the lesser of:

a. The sum of all the costs determined as set out in subdivision (1) of this subsection; or

b. The product of the highest of the costs determined as set out in subdivision (1) of this subsection multiplied by one and one-half (1 1/2).

(b2) In the event that the aggregate costs per occurrence described in subsection (b) or (b1) of this section exceed one million dollars ~~($1,000,000),~~ ($1,000,000) for a discharge or release that is reported prior to 1 January 2017, the Commercial Fund shall be used for the payment of eighty percent (80%) of the costs in excess of one million dollars ($1,000,000) up to a maximum of one million five hundred thousand dollars ($1,500,000). The Department shall not pay or reimburse costs under this subsection unless the owner, operator, or landowner eligible for reimbursement under G.S. 143-215.94E(b1) submits proof that the owner, operator, or landowner eligible for reimbursement under G.S. 143-215.94E(b1) has paid at least twenty percent (20%) of the costs for which reimbursement is sought.

(b3) For purposes of subsections (b) and (b1) of this section, the cleanup of environmental damage includes connection of a third party to a public water system if

the Department determines that connection of the third party to a public water system is a cost-effective measure, when compared to other available measures, to reduce risk to human health or the environment. A payment or reimbursement under this subsection is subject to the requirements and limitations of this section. This subsection shall not be construed to limit any right or remedy available to a third party under any other provision of law. This subsection shall not be construed to require a third party to connect to a public water system. Except as provided by this subsection, connection to a public water system does not constitute cleanup under Part 2 of this Article, G.S. 143-215.94E, G.S. 143-215.94V, any other applicable statute, or at common law.

(b4) The Commercial Fund shall pay any claim made after 1 September 2001 for compensation to third parties pursuant to subdivision (5) of subsection (b) of this section only if the owner, operator, or other party responsible for the discharge or release has complied with the requirements of G.S. 143B-279.9 and G.S. 143B-279.11, unless compliance is prohibited by another provision of law.

(c) The Commercial Fund is to be available on an occurrence basis, without regard to number of occurrences associated with tanks owned or operated by the same owner or operator.

(d) The Commercial Fund shall not be used for:

(1) Costs incurred as a result of a discharge or release from an aboveground tank, aboveground pipe or fitting not connected to an underground storage tank, or vehicle.

(2) The removal or replacement of any tank, pipe, fitting or related equipment.

(3) Costs incurred as a result of a discharge or release of petroleum from a transmission pipeline.

(4) Costs intended to be paid by the Noncommercial Fund.

(5) Costs associated with the administration of any underground storage tank program other than the program administered pursuant to this Part.

(6) Costs paid or reimbursed by or from any source other than the Commercial Fund, including but not limited to, any payment or reimbursement made under a contract of insurance.

(7) Costs incurred as a result of the cleanup of environmental damage to groundwater to a more protective standard than the risk-based standard required by the Department unless the cleanup of environmental damage to groundwater to a more protective standard is necessary to resolve a claim for compensation by a third party for property damage.

(8) Costs in excess of those required to achieve the most cost-effective cleanup.

(9) Costs incurred as a result of a discharge or release from an underground storage tank first placed in service on or after 1 January 2007 if either of the following apply:

a. The facility of which the tank is a component is first placed in service on or after 1 January 2007.

b. The underground storage tank is a component of a facility at which all underground storage tanks are replaced on or after 1 January 2007.

(e) The Commercial Fund shall be treated as a special trust fund and shall be credited with interest by the State Treasurer pursuant to G.S. 147-69.2 and G.S. 147-69.3.

(f) During each fiscal year, the Department may use up to two million five hundred thousand dollars ($2,500,000) of the funds in the Commercial Fund for performance-based cleanups as provided in this subsection. The Department may also use any funds that are available from any other source and that are specifically intended to be used for performance-based cleanups as provided in this section. Each performance-based cleanup shall comply with the requirements of this Part and any other provisions of law that govern the cleanup of environmental damage resulting from the discharge or release of a petroleum product from a commercial underground storage tank. The Department or any owner, operator, or landowner may contract for performance-based cleanups with environmental services firms that the Department has determined to be qualified to satisfactorily complete the work associated with a cleanup. Before the award of the contract, the environmental services firms shall secure a surety or performance bond equal to the price of the firm's services under the contract and shall demonstrate having secured the surety or performance bond to the satisfaction of the Department. The surety shall be liable on the bond obligation when the environmental services firms fail to perform as specified in the contract. A performance-based contract shall provide that cleanup will be completed within the time and for the cost stated in the contract. The Department or any owner, operator, or landowner shall select environmental services firms for performance-based cleanup through a competitive bidding process. The Commission shall adopt rules governing the competitive bidding process and any other rules necessary to implement this subsection. The rules shall establish qualifications for environmental services firms and for individuals and firms that provide engineering services as part of a contract to satisfactorily complete work associated with cleanup."

SECTION 2. G.S. 143-215.94C reads as rewritten:

"**§ 143-215.94C. Commercial leaking petroleum underground storage tank cleanup fees.**

(a) ~~For purposes of this subsection, each compartment of a commercial underground storage tank that is designed to independently contain a petroleum product is a separate petroleum commercial underground storage tank.~~ The owner or operator of a commercial petroleum underground storage tank facility shall pay to the Secretary for deposit into the Commercial Fund an annual operating ~~fee according to the following schedule:~~permit fee. In addition to the operating permit fee, an owner or operator of a commercial petroleum underground storage tank facility who demonstrates financial responsibility as required by G.S. 143-215.94H on the basis of eligibility for the payment of any of the costs described in subsections (b) or (b1) of G.S. 143-215.94B from the Commercial Fund shall pay to the Secretary for deposit into the Commercial Fund an annual financial responsibility fee. The operating permit fee and the financial

responsibility fee shall be paid together as one annual comprehensive fee. The annual comprehensive fee shall be determined from the following schedule. For purposes of this subsection, each compartment of a commercial underground storage tank that is designed to independently contain a petroleum product is a separate petroleum commercial underground storage tank.

Year	Operating Permit Fee Per Tank	Financial Responsibility Fee Per Tank	
		Tanks of 3,500 gallons capacity or less	Tanks greater than 3,500 gallons capacity
2007	$72.00	$228.00	$384.00
2008	$72.00	$228.00	$384.00
2009	$72.00	$252.00	$396.00
2010	$72.00	$312.00	$420.00
2011	$72.00	$468.00	$468.00
2012	$72.00	$588.00	$588.00
2013	$72.00	$732.00	$732.00
2014	$72.00	$912.00	$912.00
2015	$72.00	$1,152.00	$1,152.00
2016	$72.00	$1,512.00	$1,512.00
2017+	$72.00	Not available	Not available

~~(1) For each petroleum commercial underground storage tank of 3,500 gallons or less capacity - two hundred dollars ($200.00).~~

~~(2) For each petroleum commercial underground storage tank of more than 3,500 gallon capacity - three hundred dollars ($300.00).~~

(a1) Once an owner or operator of a commercial petroleum underground storage tank facility elects to demonstrate financial responsibility as required by G.S. 143-215.94H without reliance on the Commercial Fund, the owner or operator must continue to demonstrate financial responsibility as required by G.S. 143-215.94H without reliance on the Commercial Fund.

(b) The annual ~~operating~~ comprehensive fee shall be determined on a calendar year basis. For petroleum commercial underground storage tanks in use on 1 January and remaining in use on or after 1 December of that year, the annual ~~operating~~ comprehensive fee due for that year shall be as specified in subsection (a) of this section. For a petroleum commercial underground storage tank that is first placed in service in any year, the operating permit fee due for that year shall not be prorated. For a petroleum commercial underground storage tank that is first placed in ~~use~~ service in any year, the ~~annual operating~~financial responsibility fee due for that year shall be determined by multiplying one-twelfth (1/12) of the amount specified in subsection (a) of this section by the number of months remaining in the calendar year. For a petroleum commercial underground storage tank that is permanently removed from use in any year, the ~~annual operating~~financial responsibility fee due for that year shall be determined by multiplying one-twelfth (1/12) of the amount specified in subsection (a) of this section by the number of months in the calendar year preceding the permanent removal from use. In calculating the pro rata ~~annual operating~~financial responsibility fee for a tank that is first placed in ~~use~~ service or permanently removed during a calendar

year under the preceding two sentences, a partial month shall count as a month, except that where a tank is permanently removed and replaced by another tank, the total of the ~~annual operating~~financial responsibility fee for the tank that is removed and the replacement tank shall not exceed the ~~annual operating~~financial responsibility fee for the replacement tank. The annual ~~operating~~ comprehensive fee shall be due and payable on the first day of the month in accordance with a staggered schedule established by the Department. The Department shall implement a staggered schedule to the end that the total amount of fees to be collected by the Department is approximately the same each quarter. A person who owns or operates more than one petroleum commercial underground storage tank may request that the fee for all tanks be due at the same time. The fee for all commercial underground storage tanks located at the same facility shall be due at the same time. A person who owns or operates 12 or more commercial petroleum storage tanks may request that the total of all fees be paid in four equal payments to be due on the first day of each calendar quarter, provided that the fee for all commercial underground storage tanks located at the same facility shall be due at the same time.

(c) Beginning no later than sixty days before the first due date of the annual ~~operating~~ comprehensive fee imposed by this section, any person who deposits a petroleum product in a commercial underground storage tank that would be subject to the annual ~~operating~~ comprehensive fee shall, at least once in each calendar year during which such deposit of a petroleum product is made, notify the owner or operator of the duty to pay the annual ~~operating~~ comprehensive fee. The requirement to notify pursuant to this subsection does not constitute a duty owed by the person depositing a petroleum product in a commercial underground storage tank to the owner or operator and the person depositing a petroleum product in an underground storage tank shall not incur any liability to the owner or operator for failure to give notice of the duty to pay the ~~operating~~ annual comprehensive fee.

(d) Repealed by Session Laws 1991, c. 538, s. 3.1.

(e) An owner or operator of a commercial underground storage tank who fails to pay an annual ~~operating~~ comprehensive fee due under this section within 30 days of the date that the fee is due shall pay, in addition to the fee, a late penalty of five dollars ($5.00) per day per commercial underground storage tank, up to a maximum equal to the annual ~~operating~~ comprehensive fee due. The Department may waive a late penalty in whole or in part if:

(1) The late penalty was incurred because of the late payment or nonpayment of an annual ~~operating~~ comprehensive fee by a previous owner or operator.

(2) The late penalty was incurred because of a billing error for which the Department is responsible.

(3) Where the late penalty was incurred because the annual ~~operating~~ comprehensive fee was not paid by the owner or operator due to inadvertence or accident.

(4) Where payment of the late penalty will prevent the owner or operator from complying with any substantive law, rule, or regulation

applicable to underground storage tanks and intended to prevent or mitigate discharges or releases or to facilitate the early detection of discharges or releases."

SECTION 3.(a) G.S. 143-215.94E is amended by adding two new subsections to read:

"(j) An owner, operator, or landowner shall request that the Department determine whether any of the costs of assessment and cleanup of a discharge or release from a petroleum underground storage tank are eligible to be paid or reimbursed from either the Commercial Fund or the Noncommercial Fund within one year after completion of any task that is eligible to be paid or reimbursed under G.S. 143-215.94B(b), 143-215.94B(b1), or 143-215.94D(b1).

(k) An owner, operator, or landowner shall request payment or reimbursement from the Commercial Fund or the Noncommercial Fund for the cost of a task within one year after the completion of the task. The Department shall deny any request for payment or reimbursement of the cost of any task that would otherwise be eligible to be paid or reimbursed if the request is not received within 12 months after the later of the date on which the:

(1) Department determines that the cost is eligible to be paid or reimbursed.

(2) Task is completed."

SECTION 3.(b) Notwithstanding G.S. 143-215.94E(k), as enacted by subsection (a) of this section, an owner, operator, or landowner shall request payment or reimbursement of the cost of any task completed prior to 1 January 2007 that is eligible to be paid or reimbursed from the Commercial Fund or the Noncommercial Fund no later than 1 January 2008. The Department shall deny any request for payment or reimbursement of the cost of any task to which this subsection applies that is made after 1 January 2008.

SECTION 4. G.S. 143-215.94G is amended by adding four new subsections to read:

"(g) If the Department paid or reimbursed costs that are not authorized to be paid or reimbursed under G.S. 143-215.94B or G.S. 143-215.94D as a result of a misrepresentation by an agent who acted on behalf of an owner, operator, or landowner, the Department shall first seek reimbursement, pursuant to subdivision (1) of subsection (d) of this section, from the agent of monies paid to or retained by the agent.

(h) The Department shall take administrative action to recover costs or bring a civil action pursuant to subdivision (1) of subsection (d) of this section to seek reimbursement of costs in accordance with the time limits set out in this subsection.

(1) The Department shall take administrative action to recover costs or bring a civil action to seek reimbursement of costs that are not authorized to be paid from the Commercial Fund under subdivisions (1), (2), (3), or (9) of G.S. 143-215.94B(d) or from the Noncommercial Fund under subdivisions (1), (2), or (3) of G.S. 143-215.94D(d) within five years after payment.

(2) The Department shall take administrative action to recover costs or bring a civil action to seek reimbursement of costs other than those described in subdivision (1) of this subsection within three years after payment.

(3) Notwithstanding the time limits set out in subdivisions (1) and (2) of this subsection, the Department may take administrative action to recover costs or bring a civil action to seek reimbursement of costs paid as a result of fraud or misrepresentation at any time.

(i) An administrative action or civil action that is not commenced within the time allowed by subsection (h) of this section is barred.

(j) Except with the consent of the claimant, the Department may not withhold payment or reimbursement of costs that are authorized to be paid from the Commercial Fund or the Noncommercial Fund in order to recover any other costs that are in dispute unless the Department is authorized to withhold payment by a final decision of the Commission pursuant to G.S. 150B-36 or an order or final decision of a court."

SECTION 5. G.S. 143-215.94H reads as rewritten:

"**§ 143-215.94H. Financial responsibility.**

(a) The Department shall require each owner and operator of a petroleum underground storage tank who is required to demonstrate financial responsibility under rules promulgated by the United States Environmental Protection Agency pursuant to 42 U.S.C. § 6991b(d) to maintain evidence of financial responsibility ~~of not less than~~ that is the lesser of:

(1) The full amount of the financial responsibility that an owner or operator is required to demonstrate under rules promulgated by the United States Environmental Protection Agency pursuant to 42 U.S.C. § 6991b(d).

(2) The amounts required to be paid for by the owner or operator pursuant to G.S. 143-215.94E(b) per occurrence for costs described in G.S. 143-215.94B(b) and ~~G.S. 143-215.94D(b1).~~ G.S. 143-215.94B(b1) if costs are eligible to be paid under those subsections.

(b) Financial responsibility may be established in accordance with rules adopted by the Commission which shall provide that financial responsibility may be established by either insurance, guarantee, surety bond, letter of credit, qualification as a self-insurer, or any combination thereof. The compliance date schedule for demonstrating financial responsibility shall conform to the schedule adopted by the Environmental Protection Agency."

SECTION 6. G.S. 143-215.94T reads as rewritten:

"**§ 143-215.94T. Adoption and implementation of regulatory program.**

(a) The Commission shall adopt, and the Department shall implement and enforce, rules relating to underground storage tanks as provided by G.S. 143-215.3(a)(15) and G.S. 143B-282(2)h. These rules shall include standards and requirements applicable to both existing and new underground storage tanks and tank systems, may include different standards and requirements based on tank capacity, tank

location, tank age, and other relevant factors, and shall include, at a minimum, standards and requirements for:

(1) Design, construction, and installation, including monitoring systems.
(2) Notification to the Department, inspection, and registration.
(3) Recordation of tank location.
(4) Modification, retrofitting, and upgrading.
(5) General operating requirements.
(6) Release detection.
(7) Release reporting, investigation, and confirmation.
(8) Corrective action.
(9) Repair.
(10) Closure.
(11) Financial responsibility.
(12) Tank tightness testing procedures and certification of persons who conduct tank tightness tests.
(13) Secondary containment for ~~nontank~~ all components of petroleum underground storage tank systems.

(b) Rules adopted pursuant to subsection (a) of this section that apply only to commercial underground storage tanks shall not apply to any:

(1) Farm or residential underground storage tank of 1,100 gallons or less capacity used for storing motor fuel for noncommercial purposes.
(2) Underground storage tank of 1,100 gallons or less capacity used for storing heating oil for consumptive use on the premises where stored.
(3) Underground storage tank of more than 1,100 gallon capacity used for storing heating oil for consumptive use on the premises where stored by four or fewer households.

(c) Rules adopted pursuant to subdivision (13) of subsection (a) of this section shall require secondary containment for all ~~nontank~~ components of underground storage tank systems, ~~including all piping and~~ including, but not limited to, tanks, piping, fittings, pump heads, and dispensers. Secondary containment requirements shall include standards for double wall ~~piping~~ tanks, piping, and fittings and for sump containment for pump heads and dispensers. The rules shall provide for ~~monthly~~ release detection monitoring of double wall interstices and sump containments. The rules shall apply to any underground storage tank system that is installed on or after the date on which the rules become effective and to the replacement of any ~~nontank~~ component of an underground storage tank system on or after that date."

SECTION 7. The Environmental Management Commission shall adopt rules to require and set standards for secondary containment for all components of underground storage tank systems pursuant to G.S. 143-215.94T, as amended by Section 4 of this act. The rules shall apply to any underground storage tank system that is installed on or after 1 January 2007 and to the replacement of any component of an underground storage tank system on or after 1 January 2007. To the extent that the rules that are required to be adopted by this section are not effective on or after 1 January 2007, the provisions of 40 Code of Federal Regulations § 280.42(b)(1) through

§ 280.42(b)(4) (1 July 2004 Edition) shall govern any component of an underground storage tank system that is installed on or after 1 January 2007 and to the replacement of any component of an underground storage tank system on or after 1 January 2007.

SECTION 8. G.S. 143-215.94U reads as rewritten:

"**§ 143-215.94U. Registration of petroleum commercial underground storage tanks; operation of petroleum underground storage tanks; operating permit required.**

(a) The owner or operator of each petroleum commercial underground storage tank shall annually obtain an operating permit from the Department for the facility at which the tank is located. The Department shall issue an operating permit only if the owner or ~~operator:~~operator has done all of the following:

(1) ~~Has notified~~Notified the Department of the existence of all tanks as required by 40 Code of Federal Regulations § 280.22 (1 July 1994 Edition) or 42 U.S.C. § 6991a, if applicable, at the ~~facility;~~facility.

(2) ~~Has paid~~Paid all fees required under G.S. 143-215.94C for all commercial petroleum underground storage tanks located at the ~~facility;~~facility.

(3) Complies with applicable release detection, spill and overfill protection, and corrosion protection requirements set out in rules adopted pursuant to this Chapter, notifies the Department of the method or combination of methods of leak detection, spill and overfill protection, and corrosion protection in use, and certifies to the Department that all applicable release detection, spill and overfill protection, and corrosion protection requirements are being met for all petroleum underground storage tanks located at the ~~facility;~~facility.

(4) If applicable, complies with the Stage I vapor control requirements set out in 15A North Carolina Administrative Code 2D.0928, effective 1 March 1991, notifies the Department of the method or combination of methods of vapor control in use, and certifies to the Department that all Stage I vapor control requirements are being met for all petroleum underground storage tanks located at the ~~facility; and~~facility.

(5) ~~Has substantially~~Substantially complied with the air quality, groundwater quality, and underground storage tank standards applicable to any activity in which the applicant has previously engaged and has been in substantial compliance with federal and State laws, regulations, and rules for the protection of the environment. In determining substantial compliance, the compliance history of the owner or operator and any parent, subsidiary, or other affiliate of the owner, operator, or parent may be considered.

(6) Demonstrated financial responsibility as required by G.S. 143-215.94H.

(b) The operating permit shall be issued at the time the commercial underground storage annual ~~tank operating~~ comprehensive fee required under G.S. 143-215.94C(a) is paid and shall be valid from the first day of the month in which the fee is due through

the last day of the last month for which the fee is paid in accordance with the schedule established by the Department under G.S. 143-215.94C(b).

(c) No person shall place a petroleum product, and no owner or operator shall cause a petroleum product to be placed, into an underground storage tank at a facility for which the owner or operator does not hold a currently valid operating permit.

(d) The Department shall issue an operating permit certificate for each facility that meets the requirements of subsection (a) of this section. The operating permit certificate shall identify the number of tanks at the facility and shall conspicuously display the date on which the permit expires. Except for the owner or operator, no person shall be liable under subsection (c) of this section if an unexpired operating permit certificate is displayed at the facility, unless the person knows or has reason to know that the owner or operator does not hold a currently valid operating permit for the facility.

(e) The Department may revoke an operating permit only if the owner or operator fails to continuously meet the requirements set out in subdivisions (1) through (4) of subsection (a) of this section. If the Department revokes an operating permit, the owner or operator of the facility for which the operating permit was issued shall immediately surrender the operating permit certificate to the Department, unless the revocation is stayed pursuant to G.S. 150B-33. An owner or operator may challenge a decision by the Department to deny or revoke an operating permit by filing a contested case under Article 3 of Chapter 150B of the General Statutes. The Secretary shall make the final agency decision regarding the revocation of a permit under this section."

SECTION 9.(a) The definitions set out in G.S. 143-215.94A apply to this section. As used in this section, "Department" means the Department of Environment and Natural Resources and, with respect to any power or duty assigned to the Environmental Management Commission under Article 21A of Chapter 143 of the General Statutes, includes the Environmental Management Commission. As used in this section, "site-specific cleanup standards" means standards developed using the methodology described in the Standard Guide for Risk-Based Corrective Action Applied at Petroleum Release Sites adopted by the American Society for Testing and Materials (ASTM) as E1739-95(2002).

SECTION 9.(b) The Department shall establish a pilot program to evaluate the use of site-specific cleanup standards for the cleanup of discharges or releases of petroleum from underground storage tanks as an alternative to the use of the risk-based assessment and corrective action standards set out in 15A NCAC 2L.0115. The purpose of the pilot program is to determine the extent to which the use of site-specific standards would provide effective protection of public health, safety, and the environment in a cost-effective manner and at a lower overall cost as compared with the use of the risk-based standards set out in 15A NCAC 2L.0115. The pilot program shall apply only to discharges or releases that are classified as intermediate risk under 15A NCAC 2L.0115(d). The pilot program shall evaluate the use of site-specific standards in the cleanup of contamination that results from a discharge or release of petroleum from: (i) an underground storage tank; and (ii) an underground storage tank that is commingled

with petroleum contamination from a source of contamination other than an underground storage tank, as provided in G.S. 143-215.94V(h).

SECTION 9.(c) Participation in the pilot program shall be at the election of the owner, operator, or landowner. To participate in the pilot program, an owner, operator, or landowner shall perform a site-specific risk assessment and submit the assessment to the Department. If the Department determines that the use of site-specific cleanup standards will provide effective protection of public health, safety, and the environment, the Department shall set site-specific soil and groundwater cleanup standards for the discharge or release. These site-specific standards shall apply in lieu of the risk-based assessment and corrective action standards set out in 15A NCAC 2L.0115.

SECTION 9.(d) If soil and groundwater contamination from a discharge or release is no greater than the site-specific soil and groundwater cleanup standards set by the Department, the Department shall notify an owner, operator, or landowner that no cleanup, further cleanup, or further action will be required. If soil and groundwater contamination from a discharge or release is greater than the site-specific soil and groundwater cleanup standards set by the Department, the owner, operator, or landowner shall submit a corrective action plan to achieve the standards. The Department may require the owner, operator, or landowner to evaluate the impact of the site-specific cleanup standards on public health, safety, and the environment through use of an appropriate model. The Department shall not set site-specific soil and groundwater cleanup standards for the discharge or release that allow for contamination in excess of unrestricted use standards, as defined in G.S. 143B-279.9, on any real property that is not subject to land-use restrictions under G.S. 143B-279.9 and recordation under G.S. 143B-279.11.

SECTION 9.(e) Except as provided in this section, the provisions of Part 2A and Part 2B of Article 21A of Chapter 143 of the General Statutes apply to this section.

SECTION 9.(f) The Department shall annually report to the Environmental Review Commission on the number of site-specific risk assessments submitted to the Department under the pilot program, the disposition of those submissions, and, for any submissions for which site-specific soil and groundwater cleanup standards are not set, the basis for the decision not to set site-specific cleanup standards. The report shall include a comparison of assessment and corrective action of discharges or releases under the pilot program to assessment and corrective action of intermediate risk discharges or releases pursuant to the risk-based assessment and corrective action standards set out in 15A NCAC 2L.0115. The comparison shall include all of the following:

(1) The costs associated with investigation, assessment, initial response, abatement, analysis of risk, and development and implementation of a corrective action plan.

(2) The immediate and long-term impacts on public health, safety, and the environment.

(3) The need for and use of land-use restrictions as part of the corrective action plan.

(4) The extent to which corrective action addresses vapor intrusion.

SECTION 9.(g) The Department shall submit the first report required by subsection (f) of this section on or before 1 September 2007. The Department shall include in the report due on or before 1 September 2011 any recommendations, including legislative proposals, based on the findings of the pilot program.

SECTION 10.(a) The definitions set out in subsection (a) of Section 7 of this act apply to this section. It is the policy of the State that a discharge or release be reclassified as low-risk if, based on site-specific cleanup standards, investigation, assessment, initial response, abatement, risk-based corrective action, or other corrective action, the Department determines that the discharge or release poses no significant risk to human health or the environment. An owner, operator, or landowner may request that a discharge or release be reclassified to a lower risk classification. If the Department denies a request to reclassify a discharge or release to a lower risk classification, the owner, operator, or landowner may file a petition for a contested case hearing as provided in Article 3 of Chapter 150B of the General Statutes.

SECTION 10.(b) The Department shall report on or before 1 September of each year to the Environmental Review Commission on the number of sites for which reclassification was requested based on site-specific information and the disposition of each request. The Department shall submit the first report required by this section on or before 1 September 2007.

SECTION 11. The Department of Environment and Natural Resources shall establish a process to provide informal notice of any proposed policy change or rule interpretation that is not a rule, as defined in G.S. 150B-2, to interested parties. Except in a situation that requires immediate action, the Department shall receive and consider oral and written comment from interested parties before the Department implements the proposed policy change or rule interpretation. Except in a situation that requires immediate action, the Department shall provide written notice of a policy change or rule interpretation to interested parties at least 30 days prior to its implementation.

SECTION 12. The Department of Insurance, in consultation with the Petroleum Underground Storage Tank Funds Council and the Department of Environment and Natural Resources, shall provide guidance and technical assistance for the formation of an insurance pool pursuant to G.S. 143-215.94I to any responsible entity that requests assistance.

SECTION 13. Section 8 of S.L. 2001-442 reads as rewritten:

"**SECTION 8.** Sections 1 through 5 of this act become effective 1 October 2001. Sections 6, 7, and 8 of this act are effective when this act becomes law. Sections 1, 2, 3, 4, 5, and 7 of this act expire 1 October ~~2006.~~2007."

SECTION 14. This act shall not be construed to amend Section 11.4 of S.L. 2003-284 as modified by subsection (b) of Section 30.10 of S.L. 2004-124. The designation of a portion of the commercial leaking petroleum underground storage tank cleanup fees due under G.S. 143-215.94C(a), as amended by Section 2 of this act, as an annual operating permit fee shall not be construed to alter the amount available to the Department of Environment and Natural Resources from the Commercial Fund for the

administration of Parts 2A and 2B of Article 21A of Chapter 143 of the General Statutes.

SECTION 15. Sections 1, 4, 5, 6, 7, 11, 12, 13, and 15 of this act are effective when it becomes law. Sections 2, 8, and 14 of this act become effective 1 January 2007. Section 3 of this act becomes effective 1 January 2007 and applies to determinations of eligibility and requests for payments made on or after that date. Sections 9 and 10 of this act are effective when it becomes law and expire 1 September 2012.

A BILL TO BE ENTITLED

AN ACT TO APPROPRIATE FUNDS TO THE COMMERCIAL LEAKING PETROLEUM UNDERGROUND STORAGE TANK CLEANUP FUND TO EXPEDITE THE ASSESSMENT AND CLEANUP OF DISCHARGES AND RELEASES FROM PETROLEUM UNDERGROUND STORAGE TANKS AND TO FACILITATE THE TRANSITION TO RELIANCE ON PRIVATE INSURANCE, AND TO APPROPRIATE FUNDS TO THE DEPARTMENT OF ENVIRONMENT AND NATURAL RESOURCES TO COVER INCREASED PROGRAM OPERATING COSTS AND THE COSTS OF ANY LEGISLATIVE SALARY INCREASE FOR PERSONNEL WHO ADMINISTER THE PROGRAM, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. There is appropriated from the General Fund to the Commercial Leaking Petroleum Underground Storage Tank Cleanup Fund the sum of fifteen million dollars ($15,000,000) for the 2006-2007 fiscal year to be used as provided in Part 2A and 2B of Article 21A of Chapter 143 of the General Statutes. It is the intent of the General Assembly that the appropriation made by this subsection be a continuing appropriation through the 2016-2017 fiscal year.

SECTION 2.(a) There is appropriated from the Commercial Leaking Petroleum Underground Storage Tank Cleanup Fund to the Department of Environment and Natural Resources up to one hundred thousand dollars ($100,000) for the 2006-2007 fiscal year as needed to cover increased program operating costs and the cost of any legislative salary increase for personnel who administer the underground storage tank program under Parts 2A and 2B of Article 21A of Chapter 143 of the General Statutes.

SECTION 2.(b) There is appropriated from the Noncommercial Leaking Petroleum Underground Storage Tank Cleanup Fund to the Department of Environment

and Natural Resources up to one hundred thousand dollars ($100,000) for the 2006-2007 fiscal year as needed to cover increased program operating costs and the cost of any legislative salary increase for personnel who administer the underground storage tank program under Parts 2A and 2B of Article 21A of Chapter 143 of the General Statutes.

SECTION 2.(c) It is the intent of the General Assembly that funds appropriated under this section are recurring funds and that these funds are in addition to funds appropriated under subsection 11.4(b) of S. L. 2003-284 and subsection 30.10(b) of S.L. 2004-124.

SECTION 3. This act becomes effective 1 July 2006.

Referred to:	

AN ACT TO PROVIDE FOR THE IMPLEMENTATION OF FEDERAL PHASE II STORMWATER MANAGEMENT REQUIREMENTS AND TO PROTECT WATER QUALITY, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1.(a) Disapproval of Certain Rules. – Pursuant to G.S. 150B-21.3 and S.L. 2003-229, the following rules, as adopted by the Environmental Management Commission and approved by the Rules Review Commission on 17 November 2005, are disapproved:

15A NCAC 2H.1014 (Stormwater Management for Urbanizing Areas)
15A NCAC 2H.1015 (Urbanizing Area Definitions)
15A NCAC 2H.1016 (Urbanizing County Designations)
15A NCAC 2H.1017 (Application Schedule and Required Contents)
15A NCAC 2H.1018 (Post-Construction Model Practices)
15A NCAC 2H.1019 (Exceptions)
15A NCAC 2H.0126 (Stormwater Discharges)
15A NCAC 2H.0150 (Definitions)
15A NCAC 2H.0151 (Public Entity Designations)
15A NCAC 2H.0152 (Petitions)
15A NCAC 2H.0153 (Application Schedule and Required Contents)
15A NCAC 2H.0154 (Implementation Schedule)
15A NCAC 2H.0155 (Post-Construction Model Practices)
15A NCAC 2H.0156 (Exceptions)

SECTION 1.(b) Certain Rules Not Disapproved. – Notwithstanding subsection (a) of this section, the following rules, as adopted by the Environmental Management Commission and approved by the Rules Review Commission on 17 November 2005, are not disapproved. These rules become effective 1 July 2006 and

shall be implemented in conjunction with the provisions of this act. References in these rules to any rule that is disapproved pursuant this section shall be deemed to refer to the relevant provisions of this act and shall not be construed to give effect to the disapproved rule. To the extent that any provision of these rules is inconsistent with the provisions of this act, the provisions of this act control.

15A NCAC 2H.1014 (Stormwater Management for Urbanizing Areas)
15A NCAC 2H.1017 (Application Schedule and Required Contents)
15A NCAC 2H.0126 (Stormwater Discharges)
15A NCAC 2H.0153 (Application Schedule and Required Contents)

SECTION 1.(c) Sunset of 2004 Phase II Stormwater Management Legislation. – Section 15 of S.L. 2004-163 reads as rewritten:

"**SECTION 15.** This act is effective when it becomes law and expires ~~1 October 2011.~~1 July 2006."

SECTION 2. Definitions. – The following definitions apply to this act and its implementation:

(1) The definitions set out in 40 Code of Federal Regulations § 122.2 (Definitions) and § 122.26(b) (Storm Water Discharges) (1 July 2003 Edition).
(2) The definitions set out in G.S. 143-212 and G.S. 143-213.
(3) The definitions set out in 15A NCAC 2H .0103 (Definitions of Terms).
(4) The definitions set out in 15A NCAC 2H .1002 (Definitions), except for the definition of "Built-upon area", which is defined below.
(5) "1-year, 24-hour storm" means 24-hour rainfall of an intensity expected to be equaled or exceeded, on average, once in 12 months and with a duration of 24 hours.
(6) "BMP" means Best Management Practice.
(7) "Built-upon area" means that portion of a development project that is covered by impervious or partially impervious surface including, but not limited to, buildings; pavement and gravel areas such as roads, parking lots, and paths; and recreation facilities such as tennis courts. "Built-upon area" does not include a wooden slatted deck, the water area of a swimming pool, or pervious or partially pervious paving material to the extent that the paving material absorbs water or allows water to infiltrate through the paving material.
(8) "Division" means the Division of Water Quality in the Department.
(9) "New Development" means any project that increases the amount of built-upon area and for which a building permit, phased development plan approval, or site-specific development plan has been obtained on or after the date on which the requirements of this act becomes applicable to area in which the project is located. The applicable date depends on which public entity implements the requirements in the project area. If the Department implements the requirements, the date is the effective date of this act. If a public entity implements the

requirements through delegation, the date is the date on which the delegation becomes effective. If a public entity implements these requirements pursuant to a permit issued by the Department, the date is the date on which the public entity implementing ordinance or regulations become effective.

(10) "Planning jurisdiction" means the territorial jurisdiction within which a municipality exercises the powers authorized by Article 19 of Chapter 160A of the General Statutes, or a county may exercise the powers authorized by Article 18 of Chapter 153A of the General Statutes.

(11) "Public entity" means the United States; the State; a city, village, township, county, school district, public college or university, or single-purpose governmental agency; or any other governing body that is created by federal or State law.

(12) "Redevelopment" means any rebuilding activity other than a rebuilding activity that results in no net increase in built-upon area and provides equal or greater stormwater control than the previous development.

(13) "Regulated entity" means any public entity that must obtain a Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management for its municipal separate storm sewer system (MS4).

(14) "Sensitive receiving waters" means any of the following:

a. Waters that are classified as high quality, outstanding resource, shellfish, trout, or nutrient-sensitive waters in accordance with subsections (d) and (e) of 15A NCAC 2B .0101 (Procedures for Assignment of Water Quality Standards – General Procedures).

b. Waters that are occupied by or designated as critical habitat for aquatic animal species that are listed as threatened or endangered by the United States Fish and Wildlife Service or the National Marine Fisheries Service under the provisions of the Endangered Species Act of 1973 (Pub. L. No. 93-205; 87 Stat. 884; 16 U.S.C. §§ 1531, et seq.), as amended.

c. Waters for which the designated use, as described by the classification system set out in subsections (c), (d), and (e) of 15A NCAC 2B .0101 (Procedures for Assignment of Water Quality Standards – General Procedures), have been determined to be impaired in accordance with the requirements of subsection (d) of 33 U.S.C. § 1313.

(15) "Significant contributor of pollutants" means a municipal separate storm sewer system (MS4) or a discharge that contributes to the pollutant loading of a water body or that destabilizes the physical structure of a water body such that the contribution to pollutant loading or the destabilization may reasonably be expected to adversely affect the quality and uses of the water body. Uses of a water body shall be

determined pursuant to 15A NCAC 2B .0211 through 15A NCAC 2B .0222 (Classifications and Water Quality Standards Applicable to Surface Waters and Wetlands of North Carolina) and 15A NCAC 2B .0300, et seq. (Assignment of Stream Classifications).

(16) "Total maximum daily load (TMDL) implementation plan" means a written, quantitative plan and analysis for attaining and maintaining water quality standards in all seasons for a specific water body and pollutant.

SECTION 3.(a) New Development and Redevelopment in Unincorporated Areas of Counties. –

(a) New development or redevelopment located in the unincorporated area of a county shall comply with the standards set forth in Section 7 of this act beginning 1 July 2007 if the new development or redevelopment is located in:

(1) An area that is designated as an urbanized area under the 1990 or 2000 census by the Bureau of the Census.

(2) The unincorporated area of a county outside of a municipality designated as an urbanized area under the 1990 or 2000 census by the Bureau of the Census that:

a. Extends one mile beyond the corporate limits of a municipality with a population of less than 10,000 individuals.

b. Extends two miles beyond the corporate limits of a municipality with a population of 10,000 or more individuals but less than 25,000 individuals.

c. Extends three miles beyond the corporate limits of a municipality with a population of 25,000 or more individuals.

(3) An area delineated pursuant to subsection (b) of this section.

(4) A county that contains an area that is designated as an urbanized area under the 1990 or 2000 census by the Bureau of the Census in which the unduplicated sum of: (i) the area that is designated as an urbanized area under the 1990 or 2000 census by the Bureau of the Census; (ii) the area described in sub-subdivision b. of this subdivision; (iii) the area delineated pursuant to subsection (b) of this section; (iv) the jurisdiction of a regulated entity designated pursuant to Section 4 of this act; (v) the area that is regulated by a Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management required pursuant to Section 5 of this act; and (vi) areas in the county that are subject to any of the stormwater management programs administered by the Division equals or exceeds fifty percent (50%) of the total geographic area of the county, unless the county has an actual population growth rate of less than the State population growth rate for the previous 10 years. For purposes of this subdivision, the stormwater programs administered by the Division are:

a. Water Supply Watershed (WS-I) – 15A NCAC 2B.0212.

b. Water Supply Watershed (WS-II) – 15A NCAC 2B.0214.

c. Water Supply Watershed (WS-III) – 15A NCAC 2B.0215.
d. Water Supply Watershed (WS-IV) – 15A NCAC 2B.0216.
e. High Quality Waters (HQW) – 15A NCAC 2H.1006.
f. Outstanding Resource Waters (ORW) – 15A NCAC 2H.1007.
g. The Coastal Stormwater Program 15A NCAC 2H.1005.
h. The Neuse River Nutrient Sensitive Waters (NSW) Stormwater Management Program – 15A NCAC 2B.0235.
i. The Tar-Pamlico River Nutrient Sensitive (NSW) Stormwater Management Program – 15A NCAC 2B.0258.
j. Other Environmental Management Commission Nutrient Sensitive Waters (NSW) Classifications – 15A NCAC 2B.0223.

(5) A county that contains an area that is designated as an urbanized area under the 1990 or 2000 census by the Bureau of the Census that has an actual population growth rate that exceeds 1.3 times the State population growth rate for the previous 10 years or that has a projected population growth rate that exceeds 1.3 times the projected State population growth rate for the next 10 years.

(b) Delineation process. – The Commission shall delineate regulated coverage areas as provided in this subdivision.

(1) Schedule. – The Commission shall implement the delineation process in accordance with the schedule for review and revision of basinwide water quality management plans as provided in G.S. 143-215.8B(c).

(2) Potential candidate coverage areas. – A potential candidate coverage area is the unincorporated area of a county that is outside a municipality designated as a regulated entity pursuant to subdivisions (2) and (3) of Section 4 of this act that:
a. Extends one mile beyond the corporate limits of a municipality with a population of less than 10,000 individuals.
b. Extends two miles beyond the corporate limits of a municipality with a population of 10,000 or more individuals but less than 25,000 individuals.
c. Extends three miles beyond the corporate limits of a municipality with a population of 25,000 or more individuals.

(3) Identification of candidate coverage areas. – The Commission shall identify an area within a potential candidate coverage area described in sub-subdivision b. of this subdivision as a candidate coverage area if the discharge of stormwater within or from the unincorporated area has the potential to adversely impact water quality. An adverse impact on water quality includes any activity that violates water quality standards, including, but not limited to, any activity that impairs designated uses or that has a significant biological or habitat impact.

(4) Notice and comment on candidacy. – The Commission shall notify each public entity that is located in whole or in part in a candidate coverage area. After notification of each public entity, the Commission

shall publish a map of the unincorporated areas within the river basin that have been identified as candidates for delineation as regulated coverage areas. The Commission shall accept public comment on the proposed delineation of a candidate coverage area as a regulated coverage area for a period of not less than 30 days.

(5) Delineation of regulated coverage areas. – After review of public comment, the Commission shall delineate regulated coverage areas. The Commission shall delineate a candidate coverage area as a regulated coverage area only if the Commission determines that the discharge of stormwater within or from the candidate coverage area either:

a. Adversely impacts water quality.

b. Results in a significant contribution of pollutants to sensitive receiving waters, taking into account the effectiveness of other applicable water quality protection programs. To determine the effectiveness of other applicable water quality protection programs, the Commission shall consider the water quality of the receiving waters and whether the waters support the uses set out in subsections (c), (d), and (e) of 15A NCAC 2B .0101 (Procedures for Assignment of Water Quality Standards – General Procedures) and the specific classification of the waters set out in 15A NCAC 2B .0300, et seq. (Assignment of Stream Classifications).

(6) Notice of delineation. – The Commission shall provide written notice to each public entity that is located in whole or in part in a candidate coverage area of its delineation determination. The notice shall state the basis for the determination.

(c) Except as provided in this subdivision and Section 8 of this act, the Commission shall administer and enforce the standards for new development and redevelopment in the regulated coverage areas. To the extent that the new development or redevelopment is located in a municipal planning jurisdiction, the municipality shall administer and enforce the standards. A public entity may request that the Commission delegate administration and enforcement of the stormwater management program to the public entity as provided in Section 8 of this act.

SECTION 3.(b) New Development and Redevelopment in Non-Phase II Incorporated Areas in Certain Counties. – New development or redevelopment located in the incorporated areas of a county described in subdivisions (4) and (5) of subsection (a) of this section, that are not designated as an urbanized area under the 1990 or 2000 census by the Bureau of the Census, shall comply with the standards set forth in Section 7 of this act beginning 1 July 2007. The Commission shall administer and enforce the standards for new development and redevelopment unless the public entity requests that the Commission delegate administration and enforcement of the stormwater management program to the public entity as provided in Section 8 of this act.

SECTION 4. Designation of Regulated Entities. – A public entity that owns or operates a municipal separate storm sewer system (MS4) may be designated as a regulated entity through federal designation, through a State designation process, or under a total maximum daily load (TMDL) implementation plan as provided in this section.

(1) Federal designation. – A public entity that owns or operates a municipal separate storm sewer system (MS4) may be designated as a regulated entity pursuant to 40 Code of Federal Regulations § 122.32 (1 July 2003 Edition).

(2) State designation process. – The Commission shall designate a public entity that owns or operates a municipal separate storm sewer system (MS4) as a regulated entity as provided in this subdivision.

a. Designation schedule. – The Commission shall implement the designation process in accordance with the schedule for review and revision of basinwide water quality management plans as provided in G.S. 143-215.8B(c).

b. Identification of candidate regulated entities. – The Commission shall identify a public entity as a candidate for designation as a regulated entity if the municipal separate storm sewer system (MS4) either:

1. Discharges stormwater that has the potential to adversely impact water quality. An adverse impact on water quality includes any activity that causes or contributes to a violation of water quality standards, including, but not limited to, any activity that impairs designated uses or that has a significant biological or habitat impact.

2. Serves a public entity that has not been designated pursuant to subdivision (1) of this section and that has either a population of more than 10,000 or more than 4,000 housing units and either a population density of 1,000 people per square mile or more or more than 400 housing units per square mile.

c. Notice and comment on candidacy. – The Commission shall notify each public entity identified as a candidate for designation as a regulated entity. After notification of each public entity, the Commission shall publish a list of all public entities within a river basin that have been identified as candidates for designation. The Commission shall accept public comment on the proposed designation of a public entity as a regulated entity for a period of not less than 30 days.

d. Designation of regulated entities. – After review of the public comment, the Commission shall make a determination on designation for each of the candidate public entities. The Commission shall designate a candidate public entity that owns

or operates a municipal separate storm sewer system (MS4) as a regulated public entity only if the Commission determines either that:

1. The public entity has an actual population growth rate that exceeds 1.3 times the State population growth rate for the previous 10 years.
2. The public entity has a projected population growth rate that exceeds 1.3 times the projected State population growth rate for the next 10 years.
3. The public entity has an actual population increase that exceeds fifteen percent (15%) of its previous population for the previous two years.
4. The municipal separate storm sewer system (MS4) discharges stormwater that adversely impacts water quality.
5. The municipal separate storm sewer system (MS4) discharges stormwater that results in a significant contribution of pollutants to receiving waters, taking into account the effectiveness of other applicable water quality protection programs. To determine the effectiveness of other applicable water quality protection programs, the Commission shall consider the water quality of the receiving waters and whether the waters support the uses set out in subsections (c), (d), and (e) of 15A NCAC 2B .0101 (Procedures for Assignment of Water Quality Standards – General Procedures) and the specific classification of the waters set out in 15A NCAC 2B .0300, et seq. (Assignment of Stream Classifications).

e. Notice of designation. – The Commission shall provide written notice to each public entity of its designation determination. For a public entity designated as a regulated entity, the notice shall state the basis for the designation and the date on which an application for a Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management must be submitted to the Commission.

f. Application schedule. – A public entity that has been designated as a regulated entity pursuant to this subdivision must submit its application for a Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management within 18 months of the date of notification.

(3) Designation under a total maximum daily load (TMDL) implementation plan. – The Commission shall designate an owner or operator of a small municipal separate storm sewer system (MS4) as a regulated entity if the municipal separate storm sewer system (MS4) is

specifically listed by name as a source of pollutants for urban stormwater in a total maximum daily load (TMDL) implementation plan developed in accordance with subsections (d) and (e) of 33 U.S.C. § 1313. The Commission shall provide written notice to each public entity of its designation determination. For a public entity designated as a regulated entity, the notice shall state the basis for the designation and the date on which an application for a Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management must be submitted to the Commission. A public entity that has been designated as a regulated entity pursuant to this subdivision must submit its application for a Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management within 18 months of the date of notification.

SECTION 5. Petition Process. – A petition may be submitted to the Commission to request that an owner or operator of a municipal separate storm sewer system (MS4) or a person who discharges stormwater be required to obtain a Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management as follows:

(1) Connected discharge petition. – An owner or operator of a permitted municipal separate storm sewer system (MS4) may submit a petition to the Commission to request that a person who discharges into the permitted municipal separate storm sewer system (MS4) be required to obtain a separate Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management. The Commission shall grant the petition and require the person to obtain a separate Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management if the petitioner shows that the person's discharge flows or will flow into the permitted municipal separate storm sewer system (MS4).

(2) Adverse impact petition. – Any person may submit a petition to the Commission to request that an owner or operator of a municipal separate storm sewer system (MS4) or a person who discharges stormwater be required to obtain a Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management.

a. Petition review. – The Commission shall grant the petition and require the owner or operator of the municipal separate storm sewer system (MS4) or the person who discharges stormwater to obtain a Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management if the petitioner shows any of the following:

1. The municipal separate storm sewer system (MS4) or the discharge discharges or has the potential to discharge stormwater to sensitive receiving waters in an area with:

(i) an actual population growth rate that exceeds 1.3 times the State population growth rate for the previous 10 years; (ii) a projected population growth rate that exceeds 1.3 times the projected State population growth rate for the next 10 years; or (iii) an actual population increase that exceeds fifteen percent (15%) of its previous population for the previous two years.

2. The municipal separate storm sewer system (MS4) or the discharge provides a significant contribution of pollutants to sensitive receiving waters.

3. The municipal separate storm sewer system (MS4) or the discharge is specifically listed by name as a source of pollutants for urban stormwater in a total maximum daily load (TMDL) implementation plan developed in accordance with subsections (d) and (e) of 33 U.S.C. § 1313.

b. Types of evidence for required showing. – Petitioners may make the required showing by providing to the Commission the following information:

1. Monitoring data that includes, at a minimum, representative sampling of the municipal separate storm sewer system (MS4) or discharge and information describing how the sampling is representative. The petitioner must notify the owner or operator of the municipal separate storm sewer system (MS4) or the person who discharges stormwater of its intent to conduct monitoring activities prior to conducting those activities.

2. Scientific or technical literature that supports the sampling methods.

3. Study and technical information on land uses in the drainage area and the characteristics of stormwater runoff from these land uses.

4. A map that delineates the drainage area of the petitioned entity; the location of sampling stations; the location of the stormwater outfalls in the adjacent area of the sampling locations; general features, including, but not limited to, surface waters, major roads, and political boundaries; and areas of concern regarding water quality.

5. For stormwater discharges to impaired waters, documentation that the receiving waters are impaired or degraded and monitoring data that demonstrates that the municipal separate storm sewer system (MS4) or

discharge contributes pollutants for which the waters are impaired or degraded.

6. For stormwater discharges to nonimpaired waters, monitoring data that demonstrates that the owner or operator of the municipal separate storm sewer system (MS4) or the person who discharges stormwater is a significant contributor of pollutants to the receiving waters.

c. Water quality protection program offset. – If the petitioner makes the required showing, the Commission shall review the effectiveness of any existing water quality protection programs that may offset the need to obtain a Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management. To determine the effectiveness of other applicable water quality protection programs, the Commission shall consider the water quality of the receiving waters and whether the waters support the uses set out in subsections (c), (d), and (e) of 15A NCAC 2B .0101 (Procedures for Assignment of Water Quality Standards – General Procedures) and the specific classification of the waters set out in 15A NCAC 2B .0300, et seq. (Assignment of Stream Classifications). The Commission may deny the petition if it finds that existing water quality protection programs are adequate to address stormwater impacts on sensitive receiving waters and to insure compliance with a TMDL implementation plan.

(3) Petition administration. – The Commission shall process petitions in the following manner:

a. The Commission shall only accept petitions submitted on Department forms.

b. A separate petition must be filed for each municipal separate storm sewer system (MS4) or discharge.

c. The Commission shall evaluate only complete petitions. The Commission shall make a determination on the completeness of a petition within 90 days of receipt of the petition, or it shall be deemed complete. If the Commission requests additional information, the petitioner may submit additional information; and the Commission will determine, within 90 days of receipt of the additional information, whether the information completes the petition.

d. The petitioner shall provide a copy of the petition and a copy of any subsequent additional information submitted to the Commission to the chief administrative officer of the municipal separate storm sewer system (MS4) or the person in control of the discharge within 48 hours of each submittal.

e. The Commission shall post all petitions on the Division Web site and maintain copies available for inspection at the Division's office. The Commission shall accept and consider public comment for at least 30 days from the date of posting.

f. The Commission may hold a public hearing on a petition and shall hold a public hearing on a petition if it receives a written request for a public hearing within the public comment period, and the Commission determines that there is a significant public interest in holding a public hearing. The Commission's determination to hold a public hearing shall be made no less than 15 days after the close of the public comment period. The Commission shall schedule the hearing to be held within 45 days of the close of the initial public comment period and shall accept and consider additional public comment through the date of the hearing.

g. An additional petition for the same municipal separate storm sewer system (MS4) or discharge received during the public comment period shall be considered as comment on the original petition. An additional petition for the same municipal separate storm sewer system (MS4) or discharge received after the public comment period ends and before the final determination is made shall be considered incomplete and held pending a final determination on the original petition.

1. If the Commission determines that the owner or operator of the municipal separate storm sewer system (MS4) or the person who discharges stormwater is required to obtain a Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management, any petitions for that municipal separate storm sewer system (MS4) or discharge that were held shall be considered in the development of the Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management.

2. If the Commission determines that the owner or operator of the municipal separate storm sewer system (MS4) or the person who discharges stormwater is not required to obtain a Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management, an additional petition for the municipal separate storm sewer system (MS4) or discharge must present new information or demonstrate that conditions have changed in order to be considered. If new information is not provided, the petition shall be returned as substantially incomplete.

h. The Commission shall evaluate a petition within 180 days of the date on which it is determined to be complete. If the Commission determines that the owner or operator of the municipal separate storm sewer system (MS4) or the person who discharges stormwater is required to obtain a Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management, the Commission shall notify the owner or operator of the municipal separate storm sewer system (MS4) or the person who discharges stormwater within 30 days of the requirement to obtain the permit. The owner or operator of the municipal separate storm sewer system (MS4) or the person who discharges stormwater must submit its application for a Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management within 18 months of the date of notification.

SECTION 6. Permit Standards. – To obtain a Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management, an applicant shall develop, implement, and enforce a stormwater management plan approved by the Commission that satisfies the six minimum control measures required by 40 Code of Federal Regulations § 122.34(b) (1 July 2003 Edition). The evaluation of the post-construction stormwater management measures required by 40 Code of Federal Regulations § 122.34(b)(5) (1 July 2003 Edition) shall be conducted as provided in Section 7 of this act.

SECTION 7. Post-Construction Model Practices. –

(a) Permittees, delegated programs, and regulated entities must require stormwater controls appropriate to a project's level of density as follows:

(1) Post-Construction Model Practices for Low Density Projects. – A low density project contains no more than 12 percent built-upon area if the project is within one-half mile of and draining to Class SA waters or no more than 24 percent built-upon area if the project is located elsewhere. Low density projects must use vegetated conveyances to the maximum extent practicable to transport stormwater runoff from the development. On-site stormwater treatment devices such as infiltration areas, bioretention areas, and level spreaders may also be used as added controls for stormwater runoff.

(2) Post-Construction Model Practices for High Density Projects. – A high density project exceeds the low density thresholds of 12 percent built-upon area if the project is within one-half mile of and draining to Class SA waters or 24 percent built-upon area if the project is located elsewhere. High density projects must use structural stormwater management systems that will control and treat runoff from the first one inch of rain unless the project is in a county that is subject to the Coastal Area Management Act of 1974, in which case the project must use structural stormwater management systems that will control and

treat runoff from the first one and one-half inches of rain. The structural stormwater management system must also meet the following design standards:

a. Draw down the treatment volume no faster than 48 hours, but no slower than 120 hours.

b. Discharge the storage volume at a rate equal or less than the pre-development discharge rate for the one-year, 24-hour storm.

c. Remove an 85% average annual amount of Total Suspended Solids.

d. Meet the General Engineering Design Criteria set out in 15A NCAC 02H .1008(c).

(b) Permittees, delegated programs, and regulated entities must require built-upon areas to be located at least 30 feet landward of all perennial and intermittent surface waters. For purposes of this section, a surface water shall be present if the feature is shown on either the most recent version of the soil survey map prepared by the Natural Resources Conservation Service of the United States Department of Agriculture or the most recent version of the 1:24,000 scale (7.5 minute) quadrangle topographic maps prepared by the United States Geologic Survey (USGS). Relief from this requirement may be allowed when surface waters are not present in accordance with the provisions of 15A NCAC 02B .0233(3)(a). In addition, an exception to this requirement may be pursued in accordance with subsection (a) of Section 9 of this act.

(c) Permittes, delegated program, and regulated entities must implement or require a fecal coliform reduction program that controls, to the maximum extent practicable, the sources of fecal coliform. At a minimum, the program shall include the development and implementation of an oversight program to ensure proper operation and maintenance of on-site wastewater treatment systems for domestic wastewater. For municipalities, this program may be coordinated with local county health departments.

(d) Permittes, delegated programs and regulated entities must impose or require recorded deed restrictions and protective covenants that ensure development activities will maintain the project consistent with approved plans.

(e) Permittes, delegated programs, and regulated entities must implement or require an operation and maintenance plan that ensures the adequate long-term operation of the structural BMPs required by the program. The operation and maintenance plan must require the owner of each structural BMP to submit a maintenance inspection report on each structural BMP annually to the local program.

(f) Permittes, delegated programs, and regulated entities may allow cluster development on a project-by-project basis only if the project meets all of the following criteria:

(1) Overall density of the project meets the low density thresholds of no more than 12 percent built-upon area for projects within one half mile of and draining to Class SA waters and no more than 24 percent built-upon area for all other projects.

(2) Built-upon areas, by design and location, minimize stormwater runoff impact to the receiving waters, minimize concentrated stormwater

flow, maximize the use of sheet flow through vegetated areas, and maximize the length of flow through vegetated areas.

(3) Development areas that have density that is greater than the overall project area density are located in upland areas and, to the maximum extent practicable, away from surface waters and drainageways.

(4) Areas other than built-upon areas within the project must remain undeveloped. The undeveloped area may be conveyed to a property owners association, a local government, or a conservation organization for preservation as a park or greenway. The undeveloped area may also be placed in a permanent conservation or farmland preservation easement. A maintenance agreement for the undeveloped area must be filed with the property deed.

(5) The project transports stormwater through vegetated conveyances to the maximum extent practicable.

(g) For areas draining to Class SA waters, permittees, delegated programs, and regulated entities must:

(1) Use BMPs that result in the highest degree of fecal coliform die off and controls to the maximum extent practicable sources of fecal coliform while still incorporating the stormwater controls required by the project's density level.

(2) Implement a program to control the sources of fecal coliform to the maximum extent practicable, including a pet waste management component, which may be achieved by revising an existing litter ordinance, and an on-site domestic wastewater treatment systems component to ensure proper operation and maintenance of such systems, which may be coordinated with local county health departments.

(3) Prohibit new points of stormwater discharge to Class SA waters and prohibit both increases in the volume of stormwater flow through conveyances and increases in capacity of conveyances in existing stormwater conveyance systems that drain to Class SA waters. Any modification or redesign of a stormwater conveyance system within the contributing drainage basin must not increase the net amount or rate of stormwater discharge through existing outfalls to Class SA waters. Diffuse flow of stormwater at a non-erosive velocity to a vegetated buffer or other natural area capable of providing effective infiltration of the runoff from the one-year, 24-hour storm shall not be considered a direct point of stormwater discharge. Consideration shall be given to soil type, slope, vegetation, and existing hydrology when evaluating infiltration effectiveness.

(h) For areas draining to Trout Waters, permittees, delegated programs, and regulated entities must:

(1) Use BMPs that avoid a sustained increase in the receiving water temperature, while still incorporating the stormwater controls required for the project's density level.

(2) Allow on-site stormwater treatment devices such as infiltration areas, bioretention areas, and level spreaders as added controls.

(i) For areas draining to Nutrient Sensitive Waters, permittees, delegated programs, and regulated entities must:

(1) Use BMPs that reduce nutrient loading, while still incorporating the stormwater controls required for the project's density level. In areas where the Department has approved a Nutrient Sensitive Water Urban Stormwater Management Program, the provisions of that program fulfill the nutrient loading reduction requirement. Nutrient Sensitive Water Urban Stormwater Management Program requirements are found in 15A NCAC 02B .0200.

(2) Implement a nutrient application management program for both inorganic fertilizer and organic nutrients to reduce nutrients entering waters of the State.

SECTION 8. Delegation. – A public entity that does not administer a Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management throughout the entirety of its planning jurisdiction and whose planning jurisdiction includes a regulated coverage area under Section 3 of this act may submit a stormwater management program for its regulated coverage area or a portion of its regulated coverage area to the Commission for approval pursuant to G.S. 143-214.7(c). An ordinance or regulation adopted by a public entity shall at least meet and may exceed the minimum requirements of this act and the six minimum control measures required by 40 Code of Federal Regulations § 122.34(b) (1 July 2003 Edition). Two or more public entities are authorized to establish a joint program and to enter into any agreements that are necessary for the proper administration and enforcement of the program. The resolution, memorandum of agreement, or other document that establishes any joint program must be duly recorded in the minutes of the governing body of each public entity participating in the program, and a certified copy of each resolution must be filed with the Commission. The Commission shall review each proposed program submitted to it to determine whether the submission is complete. Within 90 days after the receipt of a complete submission, the Commission shall notify the public entity submitting the program that it has been approved, approved with modifications, or disapproved. The Commission shall only approve a program upon determining that its standards equal or exceed those of this act and the six minimum control measures required by 40 Code of Federal Regulations § 122.34(b) (1 July 2003 Edition). If the Commission determines that any public entity is failing to administer or enforce an approved stormwater management program, it shall notify the public entity in writing and shall specify the deficiencies of administration and enforcement. If the public entity has not taken corrective action within 30 days of receipt of notification from the Commission, the Commission shall assume administration and enforcement of the

program until such time as the public entity indicates its willingness and ability to resume administration and enforcement of the program.

SECTION 9.(a) Exceptions. – The Department or an appropriate local authority, pursuant to Article 18 of G.S. 153A or Article 19 of G.S. 160A, may grant exceptions from the 30-foot landward location of built-upon area requirement as well as the deed restrictions and protective covenants requirement as follows:

(1) An exception may be granted if the application meets all the following criteria:

a. Unnecessary hardships would result from strict application of the act.

b. The hardships result from conditions that are peculiar to the property, such as the location, size, or topography of the property.

c. The hardships did not result from actions taken by the petitioner.

d. The requested exception is consistent with the spirit, purpose, and intent of this act; will protect water quality; will secure public safety and welfare; and will preserve substantial justice. Merely proving that the exception would permit a greater profit from the property shall not be considered adequate justification for an exception.

(2) Notwithstanding subdivision (1) of this section, exceptions shall be granted in any of the following instances:

a. When there is a lack of practical alternatives for a road crossing, railroad crossing, bridge, airport facility, or utility crossing as long as it is located, designed, constructed, and maintained to minimize disturbance, provide maximum nutrient removal, protect against erosion and sedimentation, have the least adverse effects on aquatic life and habitat, and protect water quality to the maximum extent practicable through the use of BMPs.

b. When there is a lack of practical alternatives for a stormwater management facility; a stormwater management pond; or a utility, including but not limited to, water, sewer or gas, construction and maintenance corridor; as long as it is located 15 feet landward of all perennial and intermittent surface waters and as long as it is located, designed, constructed, and maintained to minimize disturbance, provide maximum nutrient removal, protect against erosion and sedimentation, have the least adverse effects on aquatic life and habitat, and protect water quality to the maximum extent practicable through the use of BMPs.

c. A lack of practical alternatives may be shown by demonstrating that, considering the potential for a reduction in size,

configuration or density of the proposed activity and all alternative designs, the basic project purpose cannot be practically accomplished in a manner which would avoid or result in less adverse impact to surface waters.

(3) Reasonable and appropriate conditions and safeguards may be imposed upon any exception granted.

(4) Local authorities must document the exception procedure and submit an annual report to the Department on all exception proceedings.

(5) Appeals of the Department's exception decisions must be filed with the Office of Administrative Hearings, under G.S. 150B-23. Appeals of a local authority's exception decisions must be made to the appropriate Board of Adjustment or other appropriate local governing body, under G.S. 160A-388 or G.S. 153A-345.

SECTION 9.(b) Exemption. – A municipality with a population of less than 1,000, including a municipality designated by the 1990 or 2000 census, is not required to obtain a Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management unless the municipality is shown to be contributing to an impairment of State waters, as determined under the requirements of 33 U.S.C. § 1313(d).

SECTION 10. Implementation Schedule. – The requirements of this act shall be implemented as follows:

(1) Public education and outreach minimum measures shall be implemented no later than 12 months from date of permit issuance.

(2) A regulated entity must implement its post-construction program no later than 24 months from the date the permit is issued

(3) The Department shall include permit conditions that establish schedules for implementation of each minimum measure of the regulated entity's stormwater management program based on the submitted application so that the regulated entity fully implements its permitted program within five years from permit issuance.

SECTION 11. Federal and State Development or Redevelopment Projects. – A federal or State agency may apply to the Commission for a Phase I or Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management that applies to all of the activities of the agency or that applies to a particular development or redevelopment project. The Commission shall have exclusive jurisdiction to establish stormwater management requirements with respect to a particular project that is not under the jurisdiction of a federal or State agency that holds a Phase I or Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management that applies to all of the activities of the agency or that applies to the particular development or redevelopment project. If a federal or State agency does not hold a Phase I or Phase II National Pollutant Discharge Elimination System (NPDES) permit for stormwater management that applies to the particular development or redevelopment project, then the project is subject to the stormwater management requirements of this act as implemented by the Commission or by a local

government. The provisions of G.S. 153A-347 and G.S. 160A-392 apply to the implementation of this act.

SECTION 12. General Permit. – The Commission shall develop and issue a Phase II National Pollutant Discharge Elimination System (NPDES) general permit for stormwater management. The general permit requirements for post-construction stormwater management measures required by 40 Code of Federal Regulations § 122.34(b)(5) (1 July 2003 Edition) shall require a permittee to meet the standards set out in Section 7 of this act but shall not impose any requirement on the permittee that exceeds the standards set out in Section 7 of this act. After the Commission has issued a Phase II National Pollutant Discharge Elimination System (NPDES) general permit for stormwater management, a public entity that has applied for a permit may submit a notice of intent to be covered under the general permit to the Commission. The Commission shall treat an application for a permit as an application for an individual permit unless the applicant submits a notice of intent to be covered under a general permit under this section.

SECTION 13. Additional Rule-Making. – The Environmental Management Commission may adopt rules to replace the rules that are disapproved as provided in subsection (a) of Section 1 of this act. If the Commission adopts rules pursuant to this section, the rules shall be substantively identical to the provisions of Sections 2 through 11 of this act. The Commission may amend the rules referenced in subsection (b) of Section 1 of this act to provide a complete and consistent regulatory scheme. If the Commission amends rules pursuant to this section, the amended rules shall be substantively identical to the rules referenced is subsection (b) of Section 1 of this act. The Commission may reorganize or renumber any of the rules to which this section applies as its discretion. Rules adopted pursuant to this section are not subject to G.S. 150B-21.9 through G.S. 150B-21.14. Rules adopted pursuant to this section shall become effective as provided in G.S. 150B-21.3(b1) as though 10 or more written objections had been received as provided by G.S. 150B-21.3(b2).

SECTION 14.(a) County Stormwater Control Ordinances. – Article 23 of Chapter 153A is amended by adding a new section to read:

"**§ 153A-453. Stormwater control.**

A county may adopt and enforce a stormwater control ordinance as authorized by Part 1 of Article 21 of Chapter 143 of the General Statutes or by any other provision of law. A stormwater control ordinance adopted pursuant to this section must at least meet all of the minimum requirements of Part 1 of Article 21 of Chapter 143 of the General Statutes or other provision of law."

SECTION 14.(b) City Stormwater Control Ordinances. – Part 8 of Article 19 of Chapter 160A is amended by adding a new section to read:

"**§ 160A-459. Stormwater control.**

A city may adopt and enforce a stormwater control ordinance as authorized by Part 1 of Article 21 of Chapter 143 of the General Statutes or by any other provision of law. A stormwater control ordinance adopted pursuant to this section must at least meet all of the minimum requirements of Part 1 of Article 21 of Chapter 143 of the General Statutes or other provision of law."

SECTION 15. Construction of Act. –

(1) Nothing in this act shall be construed to limit, expand, or otherwise alter the authority of the Environmental Management Commission or any unit of local government to adopt stormwater management requirements that exceed the requirements of this act.

(2) The exclusions from the requirement to obtain a Phase II National Pollutant Discharge Elimination System (NPDES) permit set out in 40 Code of Federal Regulations § 122.3 (1 July 2003 Edition), including the exclusions for certain nonpoint source agricultural and silvicultural activities, apply to the provisions of this act.

(3) This act shall not be construed to affect any delegation of any power or duty by the Commission to the Department or subunit of the Department.

(4) This act shall not be construed to affect any vested right to development under any provision of statutory or common law.

SECTION 16. Certain Provisions of Act not Codified; Set Out as Note. – Except for Sections 17.(a) and 17.(b) of this act, notwithstanding G.S. 164-10, the Revisor of Statutes shall not codify any of the provisions of this act. The Revisor of Statutes shall set out the text of this act as a note to G.S. 143-214.7 and may make notes concerning this act to other sections of the General Statutes as the Revisor of Statutes deems appropriate.

SECTION 17. Effective Date. – This act becomes effective 1 July 2006. Sections 2 through 11 of this act expire when permanent rules to replace those sections have become effective as provided by Section 13 of this act.

GENERAL ASSEMBLY OF NORTH CAROLINA

SESSION 2005

U D

BILL DRAFT 2005-SYz-40 [v.1] (05/09)

(THIS IS A DRAFT AND IS NOT READY FOR INTRODUCTION)
5/11/2006 3:39:48 PM

Short Title: Low Emission Vehicles/Funds. (Public)

Sponsors: .

Referred to:

A BILL TO BE ENTITLED

AN ACT TO IMPROVE AIR QUALITY IN THE STATE BY PROVIDING FOR THE SALE OF LOW EMISSION VEHICLES, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. Article 21B of the General Statutes is amended by adding a new section to read:

"**§ 143-215.107E. Low-Emission Vehicles.**

(a) Definitions. – As used in this section:

(1) 'Consumer' means the purchaser, other than for purposes of resale, or lessee from a commercial lender, lessor, or from a manufacturer or dealer, of a vehicle, and any other person entitled by the terms of an express warranty to enforce the obligations of that warranty.

(2) 'Dealer' means any person engaged in the business of selling, offering to sell, soliciting or advertising the sale of new vehicles who holds a valid sales and service agreement, franchise or contract, granted by the manufacturer or distributor for the retail sale of said manufacturer's or distributor's new vehicles.

(3) 'Emergency vehicle' means any authorized vehicle publicly owned and operated that is used by a peace officer, used for fighting fires or responding to emergency fire calls, used by emergency medical technicians or paramedics, used for towing or servicing other vehicles, or used for repairing damaged lighting or electrical equipment.

(4) 'Emission control label' means a paper, plastic, metal or other permanent material, welded, riveted or otherwise permanently attached to an area within the engine compartment or to the engine, in such a

way that it will be visible to the average person after installation of the engine in all new vehicles certified for sale in this State.

(5) 'Fleet average emission' means a vehicle manufacturer's average vehicle emissions of all non methane organic gases from all new vehicles delivered for sale or lease in this State in any model year.

(6) 'Light-duty truck' means any 2010 or subsequent model year vehicle rated at 8,500 pounds gross vehicle weight or less, and any other 2010 or subsequent model year vehicle, rated at 6,000 pounds gross vehicle weight or less, that is designed primarily for purposes of transportation of property or is a derivative of such a vehicle, or is available with special features enabling off-street or off-highway operation and use.

(7) 'LEV-II' means the California 'LEV II' exhaust emission standards for passenger cars, light-duty trucks and medium-duty vehicles codified in Title 13 of the California Code of Regulations, (13 May 2005 Edition).

(8) 'Manufacturer' means any person or corporation, resident or nonresident, who manufactures or assembles or imports or distributes new motor vehicles that are sold in this State.

(9) 'Medium-duty vehicle' means any 2010 or subsequent model year vehicle rated at 8,501 or more pounds but less than 14,000 pounds gross vehicle weight.

(10) 'Model year' means a vehicle manufacturer's annual production period that includes 1 January of a calendar year or, if the manufacturer has no annual production period, the calendar year. In case of any vehicle manufactured in two or more stages, the time of manufacture shall be the date of completion of the chassis.

(11) 'New vehicle' means any vehicle with 7,500 miles or fewer on its odometer.

(12) 'Passenger car' means any 2010 or subsequent model year vehicle designed primarily for transportation of persons and having a design capacity of twelve persons or less.

(13) 'PZEV credit' means partial zero emission vehicle credit.

(14) 'Recall' means:

a. The issuance of a notice directly to consumers that vehicles in their possession or control should be corrected.

b. Efforts to actively locate and correct vehicles in the possession or control of consumers.

(15) 'Smog index label' means a decal securely affixed by the manufacturer to a window of all passenger cars and light-duty trucks that discloses the smog index for the vehicle in accordance with LEV-II standards.

(16) 'Vehicle' means a motor vehicle.

(17) 'ZEV credit' means zero emission vehicle credit.

(b) LEV-II vehicles. – No person, including a manufacturer or dealer, shall deliver for sale or lease, offer for sale or lease, sell or lease, import, acquire, receive,

purchase, or rent a new vehicle that is a passenger car or light-duty truck in this State unless the vehicle meets the following LEV-II standards and criteria:

(1) Exhaust emissions standards.
(2) Emission control label and smog index label requirements.
(3) Evaporative emissions standards.
(4) Refueling emissions standards.
(5) Malfunction and diagnostic system requirements.
(6) Assembly-line testing procedure requirements.
(7) Specifications for fill pipes and openings of vehicle fuel tanks.
(8) Warranty requirements.
(9) Recall requirements.

(c) Exempt vehicles. – This section shall not apply to any of the following new vehicles:

(1) An emergency vehicle.
(2) A vehicle with a right-hand drive configuration that is not available in a model that complies with LEV-II standards, purchased by a rural route postal carrier and used primarily for work.
(3) A vehicle designed exclusively for off-highway use.

(d) Exempt transactions. – This section shall not apply to any of the following types of vehicle transactions:

(1) A transfer by court decree.
(2) A transfer by inheritance.
(3) A purchase by a nonresident prior to establishing residency in this State.
(4) A purchase for the purpose of being wrecked or dismantled.
(5) A purchase that will be registered out of the State.
(6) A purchase by a licensed dealer from another licensed dealer.

(e) Fleet requirements. – Each manufacturer shall meet the following fleet requirements for new vehicles delivered for sale or lease in this State.

(1) Compliance with medium-duty vehicle phase-in requirements.
(2) Compliance with the Zero Emission Vehicle sales requirement, including the earning and banking of ZEV and PZEV credits."

SECTION 2. Article 3 of Chapter 20 of the General Statutes is amended by adding a new section to read:

"**§ 20-54.2. Title and registration of low-emission motor vehicles; exemptions; penalties.**

(a) The Division shall refuse issuance of a certificate of title or registration or any transfer of registration of a motor vehicle that is subject to but does not comply with the provisions of G.S. 143-215.107E.

(b) The Governor may, in consultation with the Secretary of Transportation and the Secretary of Environment and Natural Resources, exempt certain motor vehicles from the provisions of G.S. 143-215.107E.

(1) Exemptions established under this subsection shall be limited to motor vehicles that would be exempted from the low-emission vehicle program established under the laws of the State of California.

(2) Any motor vehicle exempted under this subsection shall be permanently exempt from the provisions of G.S. 143-215.107E. The Division shall note the exemption on the title of the motor vehicle.

(c) The Department, in consultation with the Department of Environment and Natural Resources, shall adopt rules to prohibit the transfer of motor vehicles or motor vehicle engines that are not in compliance with G.S. 143-215.107E if the rules are necessary to achieve equivalence with the low-emission vehicle program established under the laws of the State of California.

(d) A person shall not transfer or attempt to transfer a motor vehicle or motor vehicle engine that is subject to but does not comply with G.S. 143-215.107E.

(e) A person may not procure or attempt to procure through fraud or misrepresentation the title or registration of a motor vehicle that is subject to but does not comply with G.S. 143-215.107E.

(f) The enforcement and penalty provisions of this Article shall apply to a violation of this section and the rules adopted pursuant to this section.

(g) Each transfer and each attempted transfer of a motor vehicle or motor vehicle engine that does not comply with G.S. 143-215.107E shall constitute a separate violation.

(h) As used in this section, 'transfer' means to acquire, purchase, sell, or lease."

SECTION 3. The Environmental Management Commission shall adopt rules to establish motor vehicle emissions standards and compliance requirements that are equivalent to those applicable under laws of the State of California pursuant to G.S. 143-215.107E(e), as enacted by Section 1 of this act. To minimize the administrative impact of the low-emission vehicle program and to minimize the impact of motor vehicle emissions generated out of this State on the air quality of this State, the Commission:

(1) May adopt rules to incorporate regulations issued by the California Air Resources Board, and other applicable rules, procedures, and certification data by reference.

(2) May work in cooperation and enter into contracts or agreements with the State of California, other states that have implemented a low-emission vehicle program that is equivalent to the low-emission vehicle program established by this act, and the District of Columbia to administer certification, in-use compliance, recall, and warranty requirements for the low-emission vehicle program under this act.

(3) Shall work in conjunction with other states and the District of Columbia to promote and facilitate the regional adoption of low-emission vehicle programs that is equivalent to the low-emission vehicle program established by this act.

SECTION 4. This act is effective when it becomes law.

Short Title: Child Lead Poisoning/DENR Authority. (Public)

Sponsors: .

Referred to:

A BILL TO BE ENTITLED

AN ACT TO CLARIFY THE AUTHORITY OF THE DEPARTMENT OF ENVIRONMENT AND NATURAL RESOURCES AND THE SECRETARY OF ENVIRONMENT AND NATURAL RESOURCES TO CARRY OUT CERTAIN RESPONSIBILITIES RELATED TO THE PREVENTION AND CONTROL OF LEAD POISONING IN CHILDREN, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. G.S. 130A-4(c) reads as rewritten:

"(c) The Secretary of Environment and Natural Resources shall administer and enforce the provisions of Part 4 of Article 5 and Articles 8, 9, 10, 11, and 12 of this Chapter and the rules of the Commission."

SECTION 2. G.S. 130A-12 reads as rewritten:

"**§ 130A-12. Confidentiality of records.**

All records containing privileged patient medical ~~information or~~information, information protected under 45 ~~C.F.R.~~ Code of Federal Regulations Parts 160 and ~~164~~ 164, and information collected under the authority of Part 4 of Article 5 of this Chapter that are in the possession of the Department of Health and Human Services, the Department of Environment and Natural Resources, or local health departments shall be confidential and shall not be public records pursuant to G.S. 132-1. Information contained in the records may be disclosed only when disclosure is authorized or required by State or federal law. Notwithstanding G.S. 8-53 or G.S. 130A-143, the information contained in the records may be disclosed for purposes of treatment, payment, or health care operations. For purposes of this section, the terms "treatment," "payment," and "health care operations" have the meanings given those terms in 45 ~~C.F.R.~~Code of Federal Regulations § 164.501."

SECTION 3. G.S. 130A-17(b) reads as rewritten:

"(b) The Secretary of Environment and Natural Resources and a local health director shall have the same rights enumerated in subsection (a) of this section to enforce the provisions of Part 4 of Article 5 and Articles 8, 9, 10, 11, and 12 of this Chapter."

SECTION 4. G.S. 130A-18(b) reads as rewritten:

"(b) The Secretary of Environment and Natural Resources and a local health director shall have the same rights enumerated in subsection (a) of this section to enforce the provisions of Part 4 of Article 5 and Articles 8, 9, 10, 11, and 12 of this Chapter."

SECTION 5. G.S. 130A-19(b) reads as rewritten:

"(b) The Secretary of Environment and Natural Resources and a local health director shall have the same rights enumerated in subsection (a) of this section to enforce the provisions of Part 4 of Article 5 and Articles 8, 9, 10, 11, and 12 of this Chapter."

SECTION 6. G.S. 130A-20(b) reads as rewritten:

"(b) The Secretary of Environment and Natural Resources and a local health director shall have the same rights enumerated in subsection (a) of this section to enforce the provisions of Part 4 of Article 5 and Articles 8, 9, 10, 11, and 12 of this Chapter."

SECTION 7. This act is effective when it becomes law.

Referred to:

A BILL TO BE ENTITLED

AN ACT TO AUTHORIZE THE DEPARTMENT OF ENVIRONMENT AND NATURAL RESOURCES TO CHARGE AND COLLECT FEES TO ENSURE HOMELAND SECURITY IN NORTH CAROLINA AND TO ENSURE THAT RADIOACTIVE MATERIAL AND CERTAIN OTHER TYPES OF RADIATION RECEIVE ADEQUATE REGULATORY OVERSIGHT AND MONITORING, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. G.S. 104E-19(a) reads as rewritten:

"(a) In order to meet the anticipated costs of administering the educational and training programs in G.S. ~~104E-11(c),~~104E-11(c); of enforcing and carrying out the inspection provisions in G.S. 104E-7(a)(7) and G.S. ~~104E-11(a), and~~ 104E-11(a); of administering the licensing ~~program in~~ and registration provisions under G.S. 104E-7(a)(2), G.S. 104E-7(a)(4), G.S. 104E-7(a)(6), and G.S. ~~104E-10.3,~~ 104E-10.3; of reviewing submissions as provided under G.S. 104E-9(a)(3); of collecting information as provided under G.S. 104E-9(a)(4); of responding to emergencies and incidents as provided under G.S. 104E-9(a)(5); and of developing and maintaining a statewide environmental radiation program for monitoring radioactivity as provided under G.S. 104E-9(a)(6), the Department ~~is authorized to~~ may charge and collect ~~such~~ reasonable fees as it may by rule establish."

SECTION 2. G.S. 104E-9(a)(5) reads as rewritten:

"(5) To respond to any emergency ~~which~~ or incident that involves possible or actual release of radioactive material; ~~and~~ to respond to any emergency or incident that involves possible or actual unexpected exposures to sources of radiation; to perform investigations of situations that involve, are alleged to involve, or could potentially involve, sources of radiation that could negatively impact the public

health and safety; to perform or supervise decontamination and otherwise protect the public health and safety in any manner deemed ~~necessary.~~ necessary; and to charge responsible parties for any costs incurred by the State in carrying out this response, investigation, decontamination, or other actions necessary to protect public health and safety. This section does not in any way alter or change the provisions of Chapter 166 of the North Carolina General Statutes concerning response during an emergency by the Department of Military and Veterans Affairs or its successor. This section does not apply to fixed nuclear facilities in North Carolina that produce nuclear fuel or electricity subject to the provisions of a license issued by the United States Nuclear Regulatory Commission."

SECTION 3. G.S. 104E-9(a)(8) reads as rewritten:

"(8) To establish annual fees for activities under this Chapter based on actual administrative costs to be applied to training, enforcement, licensure and registration, certification, ~~and inspection~~ inspection, and collection of information related to the sources of radiation pursuant to the provisions of this Chapter and to charge and collect fees from operators and users of low-level radioactive waste facilities pursuant to the provisions of this Chapter."

SECTION 4. G.S. 104E-16(a)(1) reads as rewritten:

"(1) ~~Emergency response~~ Response to and decontamination of radiation ~~accidents~~ emergencies and incidents as provided in G.S. 104E-9(a)(5), or".

SECTION 5. This act becomes effective July 1, 2006.

Referred to:	

A BILL TO BE ENTITLED

AN ACT TO AMEND THE AUTHORITY OF SANITARY DISTRICTS TO REQUIRE CONNECTIONS TO WATER AND SEWER SYSTEMS, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. G.S. 130A-55 reads as rewritten:

"A sanitary district board shall be a body politic and corporate and may sue and be sued in matters relating to the sanitary district. Notwithstanding any limitation in the petition under G.S. 130A-48, but subject to the provisions of G.S. 130A-55(17)e, each sanitary district may exercise all of the powers granted to sanitary districts by this Article. In addition, the sanitary district board shall have the following powers:

...

(16) To adopt rules for the promotion and protection of the public health and for these purposes to possess the following powers:

a. ~~To require any person owning, occupying or controlling improved real property within the district to connect with either or both the water or sewage systems of the district when the local health director, having jurisdiction over the property, determines that the health of the people residing within the district will be endangered by a failure to connect.~~ To require the owners of developed property on which there are situated one or more residential dwelling units or commercial establishments located within the jurisdiction of the district and within a reasonable distance of any waterline or sewer collection line owned, leased as lessee, or operated by the district to connect the property with the waterline, sewer connection line, or both and fix charges for the connections.

The power granted by this subdivision may be exercised by a district only to the extent that the service, whether water, sewer, or a combination thereof, to be provided by the district is not then being provided to the improved property by any other political subdivision or by a public utility regulated by the North Carolina Utilities Commission pursuant to Chapter 62 of the General Statutes. In the case of improved property that would qualify for the issuance of a building permit for the construction of one or more residential dwelling units or commercial establishments and where the district has installed water or sewer lines or a combination thereof directly available to the property, the district may require payment of a periodic availability charge, not to exceed the minimum periodic service charge for properties that are connected.

..."

Short Title: Private Drinking Water Wells/Local Well Prgms. (Public)

Sponsors: .

Referred to:

A BILL TO BE ENTITLED

AN ACT TO PROTECT PUBLIC HEALTH AND WATER QUALITY FOR RESIDENTS OF THE STATE THAT RECEIVE DRINKING WATER FROM PRIVATE WELLS BY PROVIDING FOR THE AUTHORIZATION OF LOCAL WELL TESTING PROGRAMS; TO REQUIRE NOTIFICATION OF GROUNDWATER CONTAMINATION TO RESIDENTS AND WELL USERS THAT LIVE OR WORK NEAR A CONTAMINATED WELL; TO ESTABLISH A GROUNDWATER QUALITY DATABASE; TO ESTABLISH AN EMERGENCY DRINKING WATER FUND; AND TO APPROPRIATE FUNDS, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. Chapter 130A of the General Statutes is amended by adding a new Article to read:

"Article 10A.
"Private Drinking Water Wells.

"**§ 130A-330.1. Purpose.**

The purpose of this Article is to ensure the safety and quality of potable water delivered from private drinking water wells in the State.

"**§ 130A-330.2. Definitions.**

The following definitions shall apply throughout this Article:

(1) 'Certified laboratory' means a facility that has received interim or final certification by either the United States Environmental Protection Agency or the Department for performing bacteriological, chemical, or other analyses on water.

(2) 'Contaminant' means any physical, chemical, biological, or radiological substance or matter in water.

(3) 'Fund' means the Emergency Drinking Water Fund established by G.S. 130A-330.5.
(4) 'Groundwater standards' means water quality standards for groundwater adopted by the Environmental Management Commission pursuant to G.S. 143-214.1.
(5) 'Local well testing program' means a program established by a city, county, or regional office of the Department for the purpose of protecting public health from groundwater contamination.
(6) 'Private well' means a drinking water well that has less than 15 service connections or that does not regularly serve 25 or more individuals.
(7) 'Resident' means a person or group of persons residing in the same dwelling unit or working at the same business at which drinking water is supplied from a private well.
(8) 'Water test' means a test of drinking water conducted in accordance with G.S. 130A-330.3 and rules adopted by the Commission pursuant to this Article.
(9) 'Well user' means a person or group of persons residing in the same dwelling unit or working at the same business at which drinking water is supplied from a private well.

"**§ 130A-330.3. Water test procedures.**

(a) The Commission shall establish criteria and procedures for the testing of water provided from a private well to determine whether the well provides water that complies with groundwater standards. The criteria and procedures shall include an analysis for at least the following contaminants:
(1) Bacteria (total coliform).
(2) Nitrates.
(3) Heavy metals.
(4) Volatile organic compounds.

(b) The Commission may authorize testing for additional contaminants in areas of the State where additional contaminants may pose a threat to public health.

(c) A water test conducted pursuant to this Article shall be completed by a certified laboratory.

(d) The Commission shall develop a standard report form that certified laboratories shall use to report the results of a water test conducted pursuant to this Article.

"**§ 130A-330.4. Local well testing programs.**

(a) The Department shall develop a program to provide grants to cover the costs of testing of private wells in the vicinity of known groundwater contamination incidents. The Department shall approve all grants authorized under this section.

(b) The Department shall consider for grant assistance any local well testing program that meets all of the following criteria:
(1) The local well testing program shall identify a set of groundwater contamination incidents that it determines pose a threat to public health, based on the toxicity of contaminants, the known concentration

and geographic extent of contamination, the contaminant's propensity to migrate, and the number of drinking water wells estimated to be in the area.

(2) The local well testing program shall notify, to the extent practicable, all residents within a 1,500-foot radius of the known boundaries of each groundwater contamination incident identified in subdivision (1) of this subsection. The notification shall be issued in both English and Spanish and shall include all of the following information:

a. The location of the groundwater contamination incident.

b. The name and potential health effect of each contaminant known to be present at the groundwater contamination incident at levels in excess of groundwater standards.

c. Instructions explaining how the resident can voluntarily seek testing of private well water by the local well testing program.

d. Contact information for the local well testing program and the closest office of the Department.

(3) The local well testing program shall offer free testing of private wells to well users conducted pursuant to subdivision (2) of this subsection. The test shall be conducted in accordance with the water test procedures established in G.S. 130A-330.3.

(4) A certified laboratory shall submit results of the water test to the local well testing program no later than 15 days after completion of any analysis. A certified laboratory shall electronically submit the results of a water test conducted pursuant to this Article to the Department no later than 30 days after completion of the analysis.

(6) The local well testing program shall provide the following information to each user whose well is tested under this section:

a. The location of the well from which the sample was collected.

b. The name, groundwater standard, and level of each contaminant for which the well was tested.

c. The potential health effects of each contaminant detected in the water sample.

d. If any contamination is found in excess of groundwater standards, instructions for how the resident can seek alternative drinking water supplies or treatment of contaminated water from the Department on a temporary or permanent basis pursuant to G.S. 130A-330.5.

e. Contact information for the local health department and the closest office of the Department.

f. Any other information required by the rules of the Commission.

(c) Eligible projects shall be funded according to provisions established by the Department. No individual grant may exceed fifty thousand dollars ($50,000).

"**§ 130A-330.5. Emergency Drinking Water Fund.**

There is established under the control and direction of the Department the Emergency Drinking Water Fund. The Fund shall be a nonreverting, interest-bearing fund consisting of monies appropriated to the Fund by the General Assembly and investment interest credited to the Fund. The Fund may be used to pay for local well testing programs pursuant to G.S. 130A-330.4 and for the provision of alternative drinking water supplies for parties affected by groundwater contamination on a temporary or permanent basis. The Department shall disburse monies from the Fund based on financial need and on the risk to public health posed by groundwater contamination.

"**§ 130A-330.6. Annual report.**

The Department, in consultation with the Commission and county health departments, shall report no later than 1 November of each year to the Environmental Review Commission, the House and Senate Appropriations Subcommittees on Natural and Economic Resources, and the Fiscal Research Division on the implementation of this Article. The report shall include the purpose and amount of all expenditures from the Fund during the prior fiscal year, a discussion of the benefits and deficiencies realized as a result of the Article, and may also include recommendations for any legislative action."

SECTION 2. Article 21 of Chapter 143 of the General Statutes is amended by adding a new part to read:

"Part 11. Groundwater Quality Database.

"**§ 143-215.74J. Database established.**

The Department shall establish a Groundwater Quality Database as a resource center and repository for the results of groundwater quality monitoring conducted and submitted pursuant to programs administered by the Department under Articles 9, 10, and 10A of Chapter 130A and Articles 21 and 21A of Chapter 143 of the General Statutes. The Department shall:

(1) Collect, maintain, and make available the information contained in the Database in a manner that is accessible to State agencies, local governments, and the general public.

(2) Assess the quality and reliability of the data and organize the Database in a usable format. The Database shall include geographic information sufficient to locate: (i) groundwater wells; (ii) natural and anthropogenic occurrences of contaminants at levels in excess of groundwater standards; and (iii) proximity of contamination to surface waters of the State. The information shall be available by latitude, longitude, depth, and contaminant levels.

(3) Prescribe the format for submission of information and ensure quality control for all data collected or submitted.

"**§ 143-215.74K. Annual report.**

The Department shall report no later than 1 November of each year to the Environmental Review Commission on the status of groundwater quality in the State. The report shall include information on the status of the Groundwater Quality Database, groundwater monitoring efforts conducted by the Department, and trends in

groundwater quality, movement, and quantity. The report may also include issues related to groundwater quality, deficiencies in groundwater quality information, and recommendations, if any, to improve the Department's understanding of the quality, movement, and quantity of groundwater resources in the State."

SECTION 3. There is appropriated from the General Fund to the Emergency Drinking Water Fund established by G.S. 130A-330.5, as enacted by Section 1 of this act, the sum of nine hundred and sixty thousand dollars ($960,000) for the 2006-2007 fiscal year.

SECTION 4. It is the intent of the General Assembly that the funds appropriated by this act shall be recurring funds.

SECTION 5. Nothing in this act shall be construed to limit or preempt the authority of a local health department or local board of health to make or cause to be made an inspection or test of a private well as may be necessary to ensure the health and safety of residents of the State.

SECTION 6. The first report required pursuant to G.S. 130A-330.6, as enacted by Section 1 of this act, is due on or before 1 November 2007. The first report required pursuant to G.S. 143-215.74K, as enacted by Section 2 of this act, is due on or before 1 November 2007.

SECTION 7. Sections 1 and 2 of this act become effective 1 January 2007. Section 3 of this act becomes effective 1 July 2006. The remaining sections of this act are effective when the act becomes law.

Referred to:

A BILL TO BE ENTITLED

AN ACT TO PROVIDE THAT ANIMAL WASTE MANAGEMENT SYSTEMS TECHNICAL SPECIALISTS ARE NOT REQUIRED TO BE PROFESSIONAL ENGINEERS, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. G.S. 139-4(d)(11) reads as rewritten:

"(11) To develop and implement a program for the ~~approval~~ certification of water quality and animal waste management systems technical specialists. The Commission shall not require a person to be a licensed professional engineer under Chapter 89C of the General Statutes in order to be certified as an animal waste management systems technical specialist."

SECTION 2. G.S. 89C-25 reads as rewritten:

"**§ 89C-25. Limitations on application of Chapter.**

This Chapter shall not be construed to prevent or affect:

...

(11) The development of plans for the closure of lagoons that are components of animal waste management systems in accordance with the requirements of the practice standards of the Natural Resources Conservation Service of the United States Department of Agriculture, so long as the design or installation of a spillway is not needed. As used in this subdivision, 'lagoon' has the same meaning as in G.S. 106-802 and 'animal waste management system' has the same meaning as in G.S. 143-215.10B.

(12) The development of plans for the application of animal waste to crop and pasturelands as required under G.S. 143-215.10C.

(13) Any practice related to animal waste management systems subject to Part 1A of Article 21 of Chapter 143 of the General Statutes when the practice does not involve the structure of an animal waste management system and the practice is conducted by an animal waste management systems technical specialist certified by the Soil and Water Conservation Commission under G.S. 139-4."

Short Title: Community Conservation Assistance Program. (Public)

Sponsors: .

Referred to:

A BILL TO BE ENTITLED

AN ACT TO ESTABLISH THE COMMUNITY CONSERVATION ASSISTANCE PROGRAM IN THE DEPARTMENT OF ENVIRONMENT AND NATURAL RESOURCES, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. Article 21 of Chapter 143 of the General Statutes is amended by adding a new Part to read:

"Part 11. Community Conservation Assistance Program.

"**§ 143-215.74M. Community Conservation Assistance Program.**

(a) Program Established. – There is established the Community Conservation Assistance Program. The Program shall be implemented and supervised by the Soil and Water Conservation Commission.

(b) Purposes. – The purpose of the Program shall be to reduce the input of nonpoint source pollution into the waters of the State. The Program shall be subject to the following requirements and limitations:

(1) Subject to subdivision (5) of this subsection, priority designations for inclusions in the Program for State funding shall be established by the Soil and Water Conservation Commission. The Soil and Water Conservation Commission shall allocate the cost share and technical assistance funds under the program.

(2) Areas shall be included in the Program as the funds are appropriated and the technical assistance becomes available from the local Soil and Water Conservation District.

(3) Funding may be provided to assist community conservation practices approved by the Soil and Water Conservation Commission.

(4) State funding shall be limited to seventy-five percent (75%) of the average cost for each practice with the assisted applicant providing twenty-five percent (25%) of the cost, which may include in-kind support of the practice, with a maximum of seventy-five thousand dollars ($75,000) per year to each applicant.

(5) Priority designation for inclusion in the Program for State funding shall be given to projects that improve water quality. To be eligible for cost share funds under this subdivision, a project shall be evaluated before funding is awarded and after the project is completed to determine the impact on water quality.

(6) Participation in the Program shall be voluntary.

(c) Availability of Funds. – State funds for the Program shall remain available until expended.

(d) Advisory Committee. – The Program shall be reviewed, prior to implementation, by the Community Conservation Assistance Program Advisory Committee. The Advisory Committee shall meet quarterly to review the progress of the Program. The Advisory Committee shall consist of the following members:

(1) The Director of the Division of Soil and Water Conservation or the Director's designee, who shall serve as the Chair of the Advisory Committee.

(2) The President of the North Carolina Association of Soil and Water Conservation Districts or the President's designee.

(3) The Director of the Cooperative Extension Service at North Carolina State University or the Director's designee.

(4) The Executive Director of the North Carolina Association of County Commissioner's or the Executive Director's designee.

(5) The Executive Director of the North Carolina League of Municipalities or the Executive Director's designee.

(6) The State Conservationist of the Natural Resources Conservation Service of the United States Department of Agriculture or the State Conservationist's designee.

(7) The Executive Director of the Wildlife Resources Commission or the Executive Director's designee.

(8) The President of the North Carolina Conservation District Employee's Association or the President's designee.

(9) The President of the North Carolina Association of Resource Conservation and Development Councils or the President's designee.

(10) The Director of the Division of Water Quality or the Director's designee.

(11) The Director of the Division of Forest Resources or the Director's designee.

(12) The Director of the Division of Land Resources or the Director's designee.

(13) The Director of the Division of Coastal Management or the Director's designee.

(14) The Director of the Division of Water Resources or the Director's designee.

(15) The President of the Carolinas Land Improvement Contractors Association or the President's designee.

(e) Report. – The Soil and Water Conservation Commission shall report no later than 31 January of each year to the Environmental Review Commission and the Fiscal Research Division. The report shall include a summary of projects that received State funding pursuant to the Program, the results of the evaluation conducted pursuant to subdivision (5) of subsection (b) of this section, findings regarding the effectiveness of each project to accomplish its primary purpose, and any recommendations to assure that State funding is used in the most cost-effective manner and accomplishes the greatest improvement in water quality."

SECTION 2. The Community Conservation Assistance Program Advisory Committee shall review the program prior to expenditure of any funds from the Program. The Advisory Committee shall report on the findings of its program review to the Speaker of the House of Representatives, the President Pro Tempore of the Senate, the Chairs of the Appropriations Committees of the Senate and the House of Representatives, the Director of the Fiscal Research Division of the Legislative Services Office, and the Environmental Review Commission no later than 31 March 2007.

SECTION 3. The first report required pursuant to G.S. 143-215.74M(e), as enacted by Section 1 of this act, is due on or before 31 January 2008.

SECTION 4. This act is effective when it becomes law.

BILL DRAFT 2005-RIz-18 [v.3] (01/24)

(THIS IS A DRAFT AND IS NOT READY FOR INTRODUCTION)
5/15/2006 12:14:26 PM

Short Title: Amend Solid Waste Franchise Statutes.	(Public)
Sponsors: .	
Referred to:	

A BILL TO BE ENTITLED

AN ACT TO AMEND THE STATUTES GOVERNING SOLID WASTE FRANCHISE AGREEMENTS IN ORDER TO ENSURE THAT SANITARY LANDFILL FRANCHISES ARE AWARDED AND RENEWED ONLY AFTER ADEQUATE PUBLIC NOTICE OF THE LOCATION OF A PROPOSED SITE AND AFTER PUBLIC PARTICIPATION IN THE DECISION TO AWARD THE FRANCHISE; TO CLARIFY THAT LOCAL GOVERNMENTS, MAY, BUT ARE NOT REQUIRED TO, AWARD SOLID WASTE FRANCHISES; AND, TO ENSURE THAT SOLID WASTE FRANCHISES ARE CONSISTENT WITH LOCAL SOLID WASTE MANAGEMENT PLANS AND ARE SUBJECT TO LOCAL GOVERNMENT OVERSIGHT AND REGULATION OF RATES AND FEES, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. G.S. 130A-294(b1)(2) reads as rewritten:

"(2) Within 10 days after receiving an application for a permit, for the renewal of a permit, or for a substantial amendment to a permit for a sanitary landfill, the Department shall notify the clerk of the board of commissioners of the county or counties in which the sanitary landfill is proposed to be located or is located and, if the sanitary landfill is proposed to be located or is located within a city, the clerk of the governing board of the city, that the application has been filed and shall file a copy of the application with the clerk. Prior to the award or renewal of a franchise for construction or operation of a sanitary landfill or the entry of any host agreement or other contract providing for issuance of a franchise for a sanitary landfill, ~~the issuance of a permit, the renewal of a permit, or a substantial amendment to a~~

~~permit,~~ the board of commissioners of the county or counties in which the sanitary landfill is proposed to be located or is located or, if the sanitary landfill is proposed to be located or is located in a city, the governing board of the city shall conduct a public ~~hearing when sufficient public interest exists.~~ hearing. The board of commissioners of the county or counties in which the sanitary landfill is proposed to be located or is located or, if the sanitary landfill is proposed to be located or is located in a city, the governing board of the city shall provide ~~adequate notice~~at least 30 days' notice to the public of the public ~~hearing~~ hearing. The notice shall include the proposed location of any proposed solid waste facilities governed by the proposed franchise or permit, and shall specify the procedure to be followed at the public hearing. At the time public notice of the public hearing is given the applicant for a franchise shall provide a copy of a conceptual facility plan for development of the sanitary landfill to the governing board. The applicant shall also provide a copy of the plan to the public library closest to the proposed landfill site to be made available for inspection and copying by the public. The notice of public hearing shall state where the facility plan may be reviewed and copied by the public. The conceptual facility plan shall include the boundaries of the proposed facility, proposed development of the site in five-year operational phases, the boundaries of the area, final elevations and capacity of all waste disposal units, and shall show the location of soil borrow areas, leachate facilities, and all other facilities and infrastructure, including ingress and egress to the facility. The conceptual facility plan shall also include a description of environmental controls, the types of waste to be disposed of at the facility, the area and population to be served by the landfill, the amount of waste to be received per day in tons, the total waste disposal capacity of the landfill in tons, the projected useful life of the landfill, and a description of any other waste management activities to be conducted at the facility."

SECTION 2. G.S. 130A-294(b1)(3) reads as rewritten:

"(3) An applicant for a new permit, the renewal of a permit, or a substantial amendment to a permit for a sanitary landfill shall obtain, prior to applying for a permit, a franchise for the operation of the sanitary landfill from each local government having jurisdiction over any part of the land on which the sanitary landfill and its appurtenances are located or to be located. A local government ~~shall~~ may adopt a franchise ordinance under G.S. 153A-136 or G.S. 160A-319 prior to the submittal by an applicant of an application for a new permit, the renewal of a permit, or a substantial amendment to a permit for a sanitary landfill. A franchise granted for a sanitary landfill shall include:

a. A statement of the population to be served, including a description of the geographic area.
b. A description of the volume and characteristics of the waste stream.
c. A projection on the useful life of the landfill.
d. An explanation of how the franchise will be consistent with the jurisdiction's solid waste management plan required under G.S. 130A-309.09A, including provisions for waste reduction, reuse, and recycling.
e. The procedures to be followed for governmental oversight and regulation of the fees and rates to be charged by facilities subject to the franchise.
f. An exact description of the boundaries of the proposed site for the landfill and its appurtenances for which the franchise is issued and the number of acres the site covers."

SECTION 3. This act is effective when it becomes law and applies to applications for franchise awards or renewals pending on or after that date.

BILL DRAFT 2005-RFz-19 [v.6] (04/04)

(THIS IS A DRAFT AND IS NOT READY FOR INTRODUCTION)
5/15/2006 1:59:00 PM

Short Title: Exempt Certain Greenhouses from Bldg Code. (Public)

Sponsors: .

Referred to:

A BILL TO BE ENTITLED

AN ACT TO CLARIFY THE EXEMPTION FOR GREENHOUSES FROM THE BUILDING CODE WHEN THEY ARE BUILT IN ACCORDANCE WITH THE NATIONAL GREENHOUSE MANUFACTURERS ASSOCIATION STRUCTURAL DESIGN MANUAL AND USED FOR GROWING PLANTS, AND NOT USED FOR RETAIL SALES PURPOSES, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. G.S. 143-138(b) reads as rewritten:

"(b) **(Effective July 1, 2006)** Contents of the Code. – The North Carolina State Building Code, as adopted by the Building Code Council, may include reasonable and suitable classifications of buildings and structures, both as to use and occupancy; general building restrictions as to location, height, and floor areas; rules for the lighting and ventilation of buildings and structures; requirements concerning means of egress from buildings and structures; requirements concerning means of ingress in buildings and structures; rules governing construction and precautions to be taken during construction; rules as to permissible materials, loads, and stresses; rules governing chimneys, heating appliances, elevators, and other facilities connected with the buildings and structures; rules governing plumbing, heating, air conditioning for the purpose of comfort cooling by the lowering of temperature, and electrical systems; and such other reasonable rules pertaining to the construction of buildings and structures and the installation of particular facilities therein as may be found reasonably necessary for the protection of the occupants of the building or structure, its neighbors, and members of the public at large.

In addition, the Code may regulate activities and conditions in buildings, structures, and premises that pose dangers of fire, explosion, or related hazards. Such fire prevention code provisions shall be considered the minimum standards necessary to

preserve and protect public health and safety, subject to approval by the Council of more stringent provisions proposed by a municipality or county as provided in G.S. 143-138(e). These provisions may include regulations requiring the installation of either battery-operated or electrical smoke detectors in every dwelling unit used as rental property, regardless of the date of construction of the rental property. For dwelling units used as rental property constructed prior to 1975, smoke detectors shall have an Underwriters' Laboratories, Inc., listing or other equivalent national testing laboratory approval, and shall be installed in accordance with either the standard of the National Fire Protection Association or the minimum protection designated in the manufacturer's instructions, which the property owner shall retain or provide as proof of compliance.

The Code may contain provisions regulating every type of building or structure, wherever it might be situated in the State.

Provided further, that nothing in this Article shall be construed to make any building rules applicable to farm buildings located outside the building-rules jurisdiction of any municipality. For purposes of this Article, "farm building" shall include greenhouses. As used in this subsection, "greenhouse" shall mean a structure used for growing plants. Greenhouses located within the building-rules jurisdiction of any municipality shall not be subject to any building rules provided that (i) the greenhouse is built in accordance with the National Greenhouse Manufacturers Association Structural Design manual, and (ii) the greenhouse is not used for retail sales.

Provided further, that no building permit shall be required under the Code or any local variance thereof approved under subsection (e) for any construction, installation, repair, replacement, or alteration costing five thousand dollars ($5,000) or less in any single family residence or farm building unless the work involves: the addition, repair, or replacement of load bearing structures; the addition (excluding replacement of same size and capacity) or change in the design of plumbing; the addition, replacement or change in the design of heating, air conditioning, or electrical wiring, devices, appliances, or equipment, the use of materials not permitted by the North Carolina Uniform Residential Building Code; or the addition (excluding replacement of like grade of fire resistance) of roofing.

Provided further, that no building permit shall be required under such Code from any State agency for the construction of any building or structure, the total cost of which is less than twenty thousand dollars ($20,000), except public or institutional buildings.

For the information of users thereof, the Code shall include as appendices

(1) Any rules governing boilers adopted by the Board of Boiler and Pressure Vessels Rules,

(2) Any rules relating to the safe operation of elevators adopted by the Commissioner of Labor, and

(3) Any rules relating to sanitation adopted by the Commission for Health Services which the Building Code Council believes pertinent.

In addition, the Code may include references to such other rules of special types, such as those of the Medical Care Commission and the Department of Public Instruction as may be useful to persons using the Code. No rule issued by any agency other than the

Building Code Council shall be construed as a part of the Code, nor supersede that Code, it being intended that they be presented with the Code for information only.

Nothing in this Article shall extend to or be construed as being applicable to the regulation of the design, construction, location, installation, or operation of (1) equipment for storing, handling, transporting, and utilizing liquefied petroleum gases for fuel purposes or anhydrous ammonia or other liquid fertilizers, except for liquefied petroleum gas from the outlet of the first stage pressure regulator to and including each liquefied petroleum gas utilization device within a building or structure covered by the Code, or (2) equipment or facilities, other than buildings, of a public utility, as defined in G.S. 62-3, or an electric or telephone membership corporation, including without limitation poles, towers, and other structures supporting electric or communication lines.

In addition, the Code may contain rules concerning minimum efficiency requirements for replacement water heaters, which shall consider reasonable availability from manufacturers to meet installation space requirements.

No State, county, or local building code or regulation shall prohibit the use of special locking mechanisms for seclusion rooms in the public schools approved under G.S. 115C-391.1(e)(1)e., provided that the special locking mechanism shall be constructed so that it will engage only when a key, knob, handle, button, or other similar device is being held in position by a person, and provided further that, if the mechanism is electrically or electronically controlled, it automatically disengages when the building's fire alarm is activated. Upon release of the locking mechanism by a supervising adult, the door must be able to be opened readily."

SECTION 2. This act is effective when it becomes law.

Referred to:

A BILL TO BE ENTITLED

AN ACT TO EXEMPT FERTILIZER SPREADER VEHICLES FROM THE REQUIREMENTS OF REGISTRATION AND CERTIFICATE OF TITLE, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. G.S. 20-51 reads as rewritten:

"**§ 20-51. Exempt from registration.**

The following shall be exempt from the requirement of registration and certificate of title:

...

(5a) Fertilizer spreader vehicles, including those operated on a for-hire basis, when used by a farmer, his tenant, agent, or employee in transporting fertilizer from place to place on the same farm, or from one farm to another. This exemption shall extend also to fertilizer spreader vehicles while on any trip within a radius of 10 miles from the point of loading, provided that the vehicle does not exceed a speed of 35 miles per hour.

...."

Short Title: Land Disturbing Activities Near Trout Waters. (Public)

Sponsors: .

Referred to:

A BILL TO BE ENTITLED

AN ACT TO AMEND THE LAWS GOVERNING LAND-DISTURBING ACTIVITIES NEAR TROUT WATERS, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. G.S. 113A-57(1) reads as rewritten:

"(1) No land-disturbing activity during periods of construction or improvement to land shall be permitted in proximity to a lake or natural ~~watercourse~~ watercourse.~~unless a buffer zone is provided along the margin of the watercourse~~

a. Waters other than those classified as trout waters by the Environmental Management Commission shall have a buffer zone of sufficient width to confine visible siltation within the twenty-five percent (25%) of the buffer zone nearest the land-disturbing activity.

b. Waters that have been classified as trout waters by the Environmental Management Commission shall have an undisturbed buffer zone 25 feet wide or of sufficient width to maintain the ecological functions provided by the buffer zone and confine visible siltation within the twenty-five percent (25%) of the buffer zone nearest the land-disturbing activity, whichever is greater. ~~Provided, however, that the~~

c. The Sedimentation Control Commission may ~~approve~~ approve, or approve with modifications, plans ~~which~~ that include land-disturbing activity within the buffer zone along trout waters ~~when the duration of said disturbance would be~~

~~temporary and the extent of said disturbance would be minimal.~~if any of the following criteria are met:

1. The land-disturbing activity is planned so as to result in temporary and minimal impacts from erosion and sedimentation. A plan meets this criteria if the applicant demonstrates that the land-disturbing activity disturbs less than ten percent (10%) of the total length of the buffer zone within the tract to be disturbed, disturbs no more than 100 linear feet in each 1,000 linear feet of buffer zone, meets all other provisions of this Article and rules adopted pursuant to this Article, and provides temporary ground cover that controls erosion and sedimentation to at least the same extent as pre-disturbance conditions as soon as practicable, but no more than 21 days after completing the disturbance.
2. The land-disturbing activity exceeds the level of disturbance described in sub-sub-subdivision 1. of this sub-subdivision and is associated with a road that will be a part of the State highway system; a water line; wastewater or other utility infrastructure; a stormwater control structure; or a temporary erosion and sedimentation control device. Impacts to the buffer shall be approved under this sub-sub-subdivision only if the Department finds that the impacts to the buffer cannot reasonably be avoided, impacts have been minimized to the extent practicable, and the area affected by construction activity is restored. An erosion and sedimentation control plan meets the avoidance, minimization, and restoration criteria in this sub-sub-subdivision if the erosion and sedimentation control plan meets all other provisions of this Article and rules adopted pursuant to this Article and demonstrates all of the following:
   I. The basic project purpose cannot be practically accomplished in a manner that would better avoid erosion and sedimentation impacts to the trout buffer or stream.
   II. The land disturbing activity cannot be practically reduced in size or density, reconfigured, or redesigned to minimize the temporary and permanent erosion and sedimentation impacts to the trout buffer or stream.

III. The plan incorporates all reasonable means and measures to restore the trout buffer or stream upon completion of construction.

3. The land-disturbing activity is part of a stream restoration activity that is designed to improve water quality, aquatic habitat, or habitat along the bank. Stream restoration activities include mitigation projects approved through a State or federal water quality permit or funded by a State or federal program in an effort to improve water quality.

d. ~~This subdivision~~Sub-subdivision c. of this subdivision shall not apply to a land-disturbing activity in connection with the construction of facilities to be located on, over, or under a lake or natural watercourse."

SECTION 2. This act is effective when it becomes law and applies to land disturbing activities that commence on or after this date.

Short Title: Amend Interbasin Transfer Laws. (Public)

Sponsors: .

Referred to:

A BILL TO BE ENTITLED

AN ACT TO AMEND THE STATUTE GOVERNING THE REGULATION OF INTERBASIN TRANSFERS, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION.

The General Assembly of North Carolina enacts:

SECTION 1. G.S. 143-215.22G is amended by adding a new subdivision to read:

"(1a) "Safe yield" means the amount of water that can be continuously withdrawn from a source water body without adverse effects to water quality and aquatic habitat during 7Q10 conditions, as defined in G.S. 130A-295.01."

SECTION 2. G.S. 143-215.22I reads as rewritten:

"**§ 143-215.22I. Regulation of surface water transfers.**

(a) No person, without first securing a certificate from the Commission, may:

(1) Initiate a transfer of 2,000,000 gallons of water or more per day from one river basin to another.

(2) Increase the amount of an existing transfer of water from one river basin to another by twenty-five percent (25%) or more above the average daily amount transferred during the year ending July 1, 1993, if the total transfer including the increase is 2,000,000 gallons or more per day.

(3) Increase an existing transfer of water from one river basin to another above the amount approved by the Commission in a certificate issued under G.S. 162A-7 prior to July 1, 1993.

(b) Notwithstanding the provisions of subsection (a) of this section, a certificate shall not be required to transfer water from one river basin to another up to the full

capacity of a facility to transfer water from one basin to another if the facility was existing or under construction on July 1, 1993.

(c) An applicant for a certificate shall petition the Commission for the certificate. The petition shall be in writing and shall include the following:

(1) A description of the facilities to be used to transfer the water, including the location and capacity of water intakes, pumps, pipelines, and other facilities.

(2) A description of the proposed uses of the water to be transferred.

(3) ~~The~~ To assure the efficient use of the water and the avoidance of waste, the water conservation measures ~~to be~~ used by the applicant at the time of application and any additional water conservation measures that will be implemented by the applicant if the certificate is granted. ~~to assure efficient use of the water and avoidance of waste.~~

(4) The applicant's water supply plan and 25-year population projections, as appropriate.

(5) An itemized report detailing the source, volume, and maximum permitted capacity of all existing water withdrawals and interbasin transfers from the source river basin.

(6) A determination of whether the proposed interbasin transfer and existing, permitted, and other proposed withdrawals are within the safe yield of the source water body.

(7) A letter of support from each downstream public water supplier, including each water supplier in downstream states, that make withdrawals from the source water body stating that the proposed interbasin transfer will not negatively affect existing water users and is consistent with local water supply plans.

(8) The most recent information available from the Division of Water Quality of the Department concerning the water quality of the source river basin and the receiving river basin.

(9) The most recent information available from the Wildlife Resources Commission concerning aquatic habitat for rare, threatened, and endangered species in the source river basin and the receiving river basin.

~~(4)~~(10) Any other information deemed necessary by the Commission for review of the proposed water transfer.

(d) Upon receipt of the petition, the Commission shall hold a public hearing on the proposed transfer after giving at least 30 days' written notice of the hearing as follows:

(1) By publishing notice in the North Carolina Register.

(2) By publishing notice in a newspaper of general circulation in the ~~area~~ areas of the river basin that withdraw water from the source water body downstream from the point of the proposed withdrawal.

(3) By giving notice by first-class mail to each of the following:

a. A person who has registered under this Part a water withdrawal or transfer from the same river basin where the water for the proposed transfer would be withdrawn.

b. A person who secured a certificate under this Part for a water transfer from the same river basin where the water for the proposed transfer would be withdrawn.

c. A person holding a National Pollutant Discharge Elimination System (NPDES) wastewater discharge permit exceeding 100,000 gallons per day for a discharge located downstream from the proposed withdrawal point of the proposed transfer.

d. The board of county commissioners of each county that is located entirely or partially within the river basin that is the source of the proposed transfer.

e. The governing body of any public water supply system that withdraws water downstream from the withdrawal point of the proposed transfer.

(e) The notice of the public hearing shall include a nontechnical description of the applicant's request and a conspicuous statement in bold type as to the effects of the water transfer on the source and receiving river basins. The notice shall further indicate the procedure to be followed by anyone wishing to submit comments on the proposed water transfer.

(f) In determining whether a certificate may be issued for the transfer, the Commission shall specifically consider each of the following items and state in writing its findings of fact with regard to each item:

(1) The necessity, reasonableness, and beneficial effects of the amount of surface water proposed to be transferred and its proposed uses.

(2) The present and reasonably foreseeable future detrimental effects on the source river basin, including present and future effects on public, industrial, and agricultural water supply needs, wastewater assimilation, water quality, fish and wildlife habitat, hydroelectric power generation, navigation, and recreation. Local water supply plans that affect the source major river basin shall be used to evaluate the projected future municipal water needs in the source major river ~~basin.~~basin and to determine whether the proposed interbasin transfer will have a detrimental impact on the future water supplies of local governments that make withdrawals from the source water body.

(2a) The cumulative effect on the source major river basin of any water transfer or consumptive water use that, at the time the Commission considers the application for a certificate is occurring, is authorized under this section, or is projected in any local water supply plan that has been submitted to the Department in accordance with G.S. 143-355(l).

(3) The detrimental effects on the receiving river basin, including effects on water quality, wastewater assimilation, fish and wildlife habitat, including wetlands, navigation, recreation, and flooding.

(4) Reasonable alternatives to the proposed transfer, including their probable costs, and environmental impacts.

(5) If applicable to the proposed project, the applicant's present and proposed use of impoundment storage capacity to store water during high-flow periods for use during low-flow periods and the applicant's right of withdrawal under G.S. 143-215.44 through G.S. 143-215.50.

(6) If the water to be withdrawn or transferred is stored in a multipurpose reservoir constructed by the United States Army Corps of Engineers, the purposes and water storage allocations established for the reservoir at the time the reservoir was authorized by the Congress of the United States.

(7) Any other facts and circumstances that are reasonably necessary to carry out the purposes of this Part.

(f1) An environmental assessment as defined by G.S. 113A-9(1) shall be prepared for any petition for a certificate under this section. The determination of whether an environmental impact statement shall also be required shall be made in accordance with the provisions of Article 1 of Chapter 113A of the General Statutes. The applicant who petitions the Commission for a certificate under this section shall pay the cost of special studies necessary to comply with Article 1 of Chapter 113A of the General Statutes. The environmental assessment or environmental impact statement shall include an evaluation of the applicant's ability to meet the applicant's water supply needs from sources that do not require an interbasin transfer and through the use of water conservation measures. The environmental assessment or environmental impact statement shall include an evaluation of measures to mitigate any damage that may arise from the proposed interbasin transfer. The environmental assessment or environmental impact statement shall be completed and made available to the public at least 30 days before the public hearing required by subsection (d) of this section.

(g) A certificate shall be granted for a water transfer if the proposed interbasin transfer will not supply more than five percent (5%) of the water used by the applicant and the applicant establishes and the Commission concludes by a preponderance of the evidence based upon the findings of fact made under subsection (f) of this section that: (i) the benefits of the proposed transfer outweigh the detriments of the proposed transfer, and (ii) the detriments have been or will be mitigated to a reasonable degree. The conditions necessary to ensure that the detriments are and continue to be mitigated to a reasonable degree shall be attached to the certificate in accordance with subsection (h) of this section.

(h) The Commission may grant the certificate in whole or in part, or deny the certificate. The Commission may also grant a certificate with any conditions attached that the Commission believes are necessary to achieve the purposes of this Part. The conditions may include mitigation measures proposed to minimize any detrimental effects of the proposed transfer and measures to protect the availability of water in the

source river basin during a drought or other emergency. The certificate shall include a drought management plan that specifies how the transfer shall be managed to protect the source river basin during drought conditions. The certificate shall indicate the maximum amount of water that may be transferred. No person shall transfer an amount of water that exceeds the amount in the certificate.

(i) In cases where an applicant requests approval to increase a transfer that existed on July 1, 1993, the Commission shall have authority to approve or disapprove only the amount of the increase. If the Commission approves the increase, however, the certificate shall be issued for the amount of the existing transfer plus the requested increase. Certificates for transfers approved by the Commission under G.S. 162A-7 shall remain in effect as approved by the Commission and shall have the same effect as a certificate issued under this Part.

(j) In the case of water supply problems caused by drought, a pollution incident, temporary failure of a water plant, or any other temporary condition in which the public health requires a transfer of water, the Secretary of Environment and Natural Resources may grant approval for a temporary transfer. Prior to approving a temporary transfer, the Secretary shall consult with those parties listed in G.S. 143-215.22I(d)(3) that are likely to be affected by the proposed transfer. However, the Secretary shall not be required to satisfy the public notice requirements of this section or make written findings of fact and conclusions in approving a temporary transfer under this subsection. If the Secretary approves a temporary transfer under this subsection, the Secretary shall specify binding conditions to protect other water users. A temporary transfer shall not exceed six months in duration, but the approval may be renewed for a period of six months by the Secretary based on demonstrated need as set forth in this subsection. A temporary transfer may be renewed no more than two times after the initial approval.

(k) The substantive restrictions and conditions upon surface water transfers authorized in this section may be imposed pursuant to any federal law that permits the State to certify, restrict, or condition any new or continuing transfers or related activities licensed, relicensed, or otherwise authorized by the federal government.

(l) When any transfer for which a certificate was issued under this section equals eighty percent (80%) of the maximum amount authorized in the certificate, the applicant shall submit to the Department a detailed plan that specifies how the applicant intends to address future foreseeable water needs. If the applicant is required to have a local water supply plan, then this plan shall be an amendment to the local water supply plan required by G.S.143-355(l). When the transfer equals ninety percent (90%) of the maximum amount authorized in the certificate, the applicant shall begin implementation of the plan submitted to the Department.

(m) It is the public policy of the State to maintain, protect, and enhance water quality within North Carolina. To that end, there is a presumption that a certificate for an interbasin transfer shall not be granted unless the interbasin transfer is necessary to protect and promote public health and welfare. Further, it is the public policy of the State that the cumulative impact of transfers from a source river basin shall not result in a violation of the antidegradation policy set out in 40 Code of Federal Regulations §

131.12 (1 July 1997 Edition) and the statewide antidegradation policy adopted pursuant thereto.

(n) The Commission may modify any certificate granted for an interbasin transfer if the Commission determines that:

(1) The cumulative impact of existing, permitted, and proposed withdrawals has exceeded or will exceed the safe yield of the source water body;

(2) The cumulative impact of existing, permitted, and proposed withdrawals has caused or contributed to or will cause or contribute to the deterioration of water quality in either the source river basin or the receiving river basin; or

(3) The projections of population growth, water supply, or water demand upon which the certificate for the interbasin transfer was granted were inaccurate."

SECTION 3. This act is effective when it becomes law and applies to any petition for a certificate or for the modification of a certificate for an interbasin transfer that is submitted to the Environmental Management Commission on or after that date.

NCDENR
North Carolina Department of Environment and Natural Resources

Michael F. Easley, Governor

William G. Ross Jr., Secretary

RECEIVED
MAY 23 2006
RESEARCH DIVISION

To: George Givens, Counsel to ERC

From: Bill Flournoy, NCCTC Program Manager BF.

Subject: ERC question on NCCTC amendment

Date: May 22, 2006

At the May 15 meeting of the ERC a question was raised about the proposed NC Conservation Tax Credit amendment creating a "Franchise Tax Election". The explanation was that currently the NC Conservation Tax Credit (NCCTC) can only be applied to income tax liability. The bill supported by the ERC (HB 2156 and SB 1563) proposes authorization of expansion of NCCTC applicability to corporate franchise and gross premium taxes. Insurance companies pay gross premium tax in lieu of income taxes. Generally speaking, franchise tax is paid by privately owned utility companies in addition to income taxes. Therefore, the taxpayer would be required to "elect" whether they wanted their NCCTC applied to their franchise tax or income tax liability.

The explanation was followed by a request for data on corporate taxes paid last year. The following figures are provided by the NC Department of Revenue for FY 04-05 collections.

Franchise	$ 498,681,391
Gross Premium	$ 431,664,202
Corporate Income	$1,193,529,164

For the purpose of perspective, it may be informative to recognize the amount of NCCTC actually claimed against income tax. (Please note that these figures from the Department of Revenue are available for only two years, and they include both corporate and individual taxes.)

	Available credit	Credit utilitized
2000	$7,266,109	$1,933,008
2001	$7,615,160	$1,521,901

The bills also include a provision to improve annual reporting of NCCTC utilization data.

NORTH CAROLINA
NATURAL HERITAGE
TRUST FUND

MEMORANDUM

May 31, 2006

TO: George Givens, General Counsel, Environmental Resources Commission

FROM: Lisa Riegel, Natural Heritage Trust Fund

SUBJECT: Copies of Resolutions for Hamilton Horton and Hugh Morton

In March the three conservation trust funds met jointly for the first time. The group assembled unanimously passed two resolutions, for Senator Hamilton Horton and for Hugh Morton, in recognition and appreciation of their work in protecting North Carolina's natural resources.

Last time we met, you thought the ERC would appreciate a copy of the resolution for Senator Hamilton Horton since he served on that commission.

If you have any questions, please contact me at (919) 715-8014.

Dear Mrs. Horton,

In March, the Trustees of the Natural Heritage Trust Fund, the Clean Water Management Trust Fund, and the Parks and Recreation Trust Fund met jointly, along with many of the other state and non-governmental conservation organizations that work in our state. The group assembled took a collective moment to recognize the great work your husband Senator Hamilton Horton did to support conservation of natural resources in North Carolina. Specific mention were his leadership of the Natural Heritage Trust Fund and of the protection of the New River. The Trustees of the three trust funds unanimously passed a resolution in recognition and appreciation of his work.

Please accept the enclosed signed resolution as a sign of our sincere appreciation and gratitude.

Sincerely,

J. Robert Gordon
Chairman, Natural Heritage Trust Fund

A RESOLUTION EXPRESSING DEEP GRATITUDE AND RESPECT FOR THE MEMORY OF SENATOR HAMILTON C. HORTON, JR., FOR HIS LEADERSHIP AND IMPORTANT CONTRIBUTIONS TO CONSERVATION IN THE STATE OF NORTH CAROLINA

WHEREAS, during a long political career including nine terms in the General Assembly, Senator Hamilton Horton, Jr. was a determined protector of important historic and natural sites in the State; and

WHEREAS, Senator Horton was a key leader in the battle to protect the New River from hydropower projects and to ensure the continued protection of this, the oldest river in the world, as an important ecological resource to the citizens of North Carolina; and

WHEREAS, Senator Horton served as the first Chairman for the North Carolina Natural Heritage Trust Fund, contributing his time, energy and wisdom to the establishment of many important conservation preserves and projects across the State; and

WHEREAS, Senator Horton's support of the establishment of the Park and Recreation Trust Fund has benefited all citizens of this State; and

WHEREAS, Senator Horton's support of tax credits for the costs of restoring historic homes and structures encouraged and made possible the restoration of many of North Carolina's most historic buildings; and

WHEREAS, on March 3, 2006, at the Strategic Visioning for Conservation in North Carolina conference and joint meeting of the natural resources conservation trust funds, the memory of Senator Horton's many contributions to the welfare of the State of North Carolina were the subject of unanimous acclaim by those present, and the undersigned were selected as representatives of the show of esteem and therefore have entered their signatures below.

NOW, THEREFORE, be it resolved that, for all of these contributions, and more, we express our deep and lasting appreciation and devotion to the memory of Senator Hamilton C. Horton, Jr.

This the third day of March, 2006.

Linville, NC 28604

Dear ~~Mr. Morton~~,

Earlier this month we had the first-ever meeting of North Carolina's three natural resource conservation trust funds, along with many of the other state and non-governmental conservation organizations that work in our state. The group assembled wanted you to know how much we appreciate the great work you do to support conservation of natural resources in North Carolina. The three trust funds unanimously passed a resolution in recognition and appreciation of the work you have done.

Please accept the signed copy of the resolution as a sign of our sincere appreciation and gratitude.

Sincerely,

William G. Ross, Jr.

One NorthCarolina Naturally

A RESOLUTION EXPRESSING APPRECIATION AND DEVOTION TO HUGH MORTON, FOR HIS MANY YEARS OF INNOVATIVE AND EFFECTIVE PROTECTION OF THE NATURAL RESOURCES OF THE STATE OF NORTH CAROLINA

WHEREAS, for more than 50 years, Hugh Morton has worked diligently to protect Grandfather Mountain, the Blue Ridge Parkway, our North Carolina Mountains, and the very air we breathe; and

WHEREAS, the easements that Hugh Morton early-on donated to The Nature Conservancy established one of the earliest and best examples of how easements can be used to protect private lands; and

WHEREAS, Hugh Morton led the effort to establish a ridge law to restrict inappropriate development of our mountain ridges, and led the "Year of the Mountain" effort in 1995 and 1996; and

WHEREAS, our ability to understand and appreciate nature in North Carolina was enhanced by the publication of *Hugh Morton's North Carolina* and in various other ways and means by which he shared with us his genius in photography and the study of nature; and

WHEREAS, Hugh Morton was of great assistance in establishing the Gorges State Park and in beginning the efforts that have protected 30,000 acres along the Blue Ridge Parkway; and

WHEREAS, Hugh Morton has long been a leader in making the public aware of the threat that air pollution and acid rain present to our mountain ridges and forests; and

WHEREAS, on March 3, 2006, at the Strategic Visioning for Conservation in North Carolina conference and joint meeting of the natural resources conservation trust funds, Hugh Morton`s contributions to the State of North Carolina were the subject of unanimous acclaim by those present, and the undersigned were selected as representatives of the show of esteem and therefore have entered their signatures below.

NOW, THEREFORE, be it resolved that, for all of these things, and more, we express our deep and lasting appreciation and devotion to Hugh Morton.

This the third day of March, 2006.

North Carolina General Statutes
ARTICLE 12D.

Environmental Review Commission.

§ 120-70.41. Commission established.

The Environmental Review Commission is hereby established.

§ 120-70.42. Membership; cochairs; vacancies; quorum.

(a) The Environmental Review Commission shall consist of six Senators appointed by the President Pro Tempore of the Senate, six Representatives appointed by the Speaker of the House of Representatives, who shall serve at the pleasure of their appointing officer, the Chair or a Cochair of the Senate Committee on Agriculture, Environment, and Natural Resources or the equivalent committee, the Chair or a Cochair of the House of Representatives Committee on Environment and Natural Resources or the equivalent committee, the Chair or a Cochair of the Senate Committee on Appropriations – Natural and Economic Resources or the equivalent committee, and the Chair or a Cochair of the House of Representatives Committee on Appropriations – Natural and Economic Resources or the equivalent committee.

(b) The President Pro Tempore of the Senate shall designate one Senator to serve as cochair and the Speaker of the House of Representatives shall designate one Representative to serve as cochair.

(c) Except as otherwise provided in this subsection, a member of the Commission shall continue to serve for so long as the member remains a member of the General Assembly and no successor has been appointed. A member of the Commission who does not seek reelection or is not reelected to the General Assembly may complete a term of service on the Commission until the day on which a new General Assembly convenes. A member of the Commission who resigns or is removed from service in the General Assembly shall be deemed to have resigned or been removed from service on the Commission. Any vacancy that occurs on the Environmental Review Commission shall be filled in the same manner as the original appointment.

(d) A quorum of the Environmental Review Commission shall consist of nine members.

§ 120-70.43. Powers and duties.

(a) The Environmental Review Commission shall have the following powers and duties:

(1) To evaluate actions of all boards, commissions, departments, and other agencies of the State and local governments as such actions relate to the environment or protection of the environment, including but not limited to an evaluation of:

a. Benefits of each program relative to costs;

b. Achievement of program goals;

c. Use of measures by which the success or failure of a program can be measured; and
d. Conformity with legislative intent;

(2) To study on a continuing basis the organization of State government as it relates to the environment or to the protection of public health and the environment, including but not limited to:
a. Improvements in administrative structure, practices, and procedures;
b. Increased integration and coordination of programs and functions;
c. Increased efficiency in budgeting and use of resources;
d. Efficient administration of licensing, permitting, and grant programs;
e. Prompt, effective response to environmental emergencies;
f. Opportunities for effective citizen participation; and
g. Broadening of career opportunities for professional staff;

(3) To make any recommendations it deems appropriate regarding the reorganization and consolidation of environmental regulatory agencies and the recodification of statutes relating to the environment, including but not limited to:
a. Ways in which agencies may operate more efficiently and economically;
b. Ways in which agencies can provide better services to the State and to the people; and
c. Instances in which functions of agencies are duplicative, overlapping, incomplete in scope or coverage, fail to accomplish legislative objectives, or for any other reason should be redefined or redistributed;

(4) To review and evaluate changes in federal law and regulations, relevant court decisions, and changes in technology affecting the environment or protection of the environment;

(5) To review existing and proposed State law and rules affecting the environment or protection of the environment and to determine whether any modification of law or rules is in the public interest;

(6) To make reports and recommendations, including draft legislation, to the General Assembly from time to time as to any matter relating to the powers and duties set out in this section; and

(7) To undertake such additional studies as it deems appropriate or as may from time to time be requested by the President Pro Tempore of the Senate, the Speaker of the House of Representatives, either house of the General Assembly, the Legislative Research Commission, the Joint Legislative Commission on Governmental Operations, the Joint Legislative Utility Review Committee, or the Joint Select Committee on

Low-Level Radioactive Waste and to make such reports and recommendations to the General Assembly regarding such studies as it deems appropriate; provided that the Environmental Review Commission shall not undertake any study which the General Assembly has assigned to another legislative commission or committee.

(b) The Environmental Review Commission may continue the study of environmental agency consolidation and reorganization. The study of environmental agency consolidation shall include, but is not limited to:

(1) Monitoring the implementation of Session Laws 1989, c. 727;

(2) Evaluation of the organization, programs, and operation of the Department of Environment and Natural Resources;

(3) Evaluation of the organization, functions, powers, and duties of the components of the Department of Environment and Natural Resources, including boards, commissions, councils, and regional offices; and

(4) Recodification of the General Statutes relating to the environment and environmental agencies.

(c) In addition to its general powers and duties, the Environmental Review Commission shall have the following powers and duties with respect to hazardous waste management:

(1) To study the current and projected need for hazardous waste treatment, storage, and disposal capacity in the State in light of anticipated generation of hazardous waste and alternatives for hazardous waste treatment and disposal;

(2) To evaluate the potential for the development of additional hazardous waste treatment, storage, and disposal capacity by the private sector;

(3) To study the necessity for and scope of hazardous waste treatment, storage, and disposal facilities which are sited, owned, or operated by the State;

(4) To review progress in securing a volunteer county to host a hazardous waste treatment facility;

(5) To study incentives and compensation for the community which hosts, either voluntarily or involuntarily, a hazardous waste treatment facility, including any additional incentives and compensation which may be needed, whether there should be differential compensation for a volunteer county, options for use of funds by local governments, distribution of compensation among local governments, and methods of providing flexibility in the development of an incentives and compensation package for a particular local community;

(6) To review progress in developing interstate agreements for the treatment, storage, and disposal of hazardous waste;

(7) To assist in the development of cooperative, comprehensive regional approach to hazardous waste treatment and disposal;

(8),(9) Repealed by Session Laws 2001-474, s. 12.

(10) To study the capacity assurance requirement under the Comprehensive Environmental Response, Compensation and Liability Act of 1980, Pub. L. No. 96-510, 94 Stat. 2767, 42 U.S.C. 9601 et seq., as amended, and the Superfund Amendments and Reauthorization Act of 1986, Pub. L. No. 99-499, 100 Stat. 1613, as amended as it relates to the continued eligibility of North Carolina for remedial actions under Superfund;

(11) To study alternatives available to the State for dealing with hazardous waste and the ramifications of those alternatives; and

(12) To receive and evaluate reports of every State agency, board, and commission which has any power or duty with respect to hazardous waste management.

§ 120-70.44. Additional powers.

The Environmental Review Commission, while in the discharge of official duties, may exercise all the powers provided for under the provisions of G.S. 120-19, and G.S. 120-19.1 through G.S. 120-19.4. The Environmental Review Commission may meet at any time upon the call of either cochairman, whether or not the General Assembly is in session. The Environmental Review Commission may meet in the Legislative Building or the Legislative Office Building upon the approval of the Legislative Services Commission.

Notwithstanding any rule or resolution to the contrary, proposed legislation to implement any recommendation of the Environmental Review Commission regarding any study the Environmental Review Commission is authorized to undertake or any report authorized or required to be made by or to the Environmental Review Commission may be introduced and considered during any session of the General Assembly.

§ 120-70.45. Compensation and expenses of members.

Members of the Environmental Review Commission shall receive subsistence and travel expenses at the rates set forth in G.S. 120-3.1.

§ 120-70.46. Staffing.

The Legislative Services Officer shall assign as staff to the Environmental Review Commission professional employees of the General Assembly, as approved by the Legislative Services Commission. Clerical staff shall be assigned to the Environmental Review Commission through the offices of the Supervisor of Clerks of the Senate and Supervisor of Clerks of the House of Representatives. The expenses of employment of clerical staff shall be borne by the Environmental Review Commission.

§ 120-70.47. Funding.

From funds available to the General Assembly, the Legislative Services Commission shall allocate monies to fund the work of the Environmental Review Commission.

MINUTES
ENVIRONMENTAL REVIEW COMMISSION
9 October 2006

The Environmental Review Commission (ERC) met on Monday 9 October 2006 at 9:30 a.m. in Room 643 of the Legislative Office Building. Senator Charlie Albertson presided.

The following members were present: Senators Albertson, Bingham, Dorsett, and Weinstein; and Representatives Gibson, Harrison, Justice and McComas. Mr. George Givens, Commission Counsel; Jeffrey Hudson, Assistant Commission Counsel; Jennifer McGinnis, Assistant Commission Counsel; Jennifer Mundt, Commission Analyst; and Mary Watson, Acting Commission Clerk, were also present.

On 15 September 2006, notice was sent to members and interested parties via e-mail and regular mail. A copy of the notice is included in the attachments to these minutes as **Exhibit A**. Copies of the agenda for the meeting and visitor registration sheets are included in the attachments as **Exhibits B** and **C**.

Senator Albertson called the meeting to order and asked George Givens to give his report and explain the agenda items. Mr. Givens noted that since the previous meeting, Tim Dodge has resigned to attend law school, and Jennifer Mundt has been hired as Commission Analyst. He noted for the record that the Commission's authorizing legislation was amended during the 2006 regular session to authorize the Commission to contract for consultant services with the approval of the Legislative Services Commission. He pointed out that a memorandum from Ms. Jennifer Mundt (see **Exhibit D**) transmitting two reports to the Commission had been placed at each member's desk. The reports are Implementation of the "Clean Smokestacks" Act (see **Exhibit D-1**) and a status report on the study of potential costs and benefits of enacting a renewable energy portfolio standard in North Carolina (see **Exhibit D-2**). The reports that concern today's agenda items have been removed from the package and are inserted at the appropriate place in the minutes. The package also included a memo re the status of legislation recommended by the ERC to the 2006 session (see **Exhibit D-3**), brief descriptions of environmental legislation enacted during the 2006 session (see **Exhibit D-4**), a list of studies to be conducted by the ERC (see **Exhibit D-5**), and status of reports to the ERC required by law (see **Exhibit D-6**).

Mr. Givens reported on discussions he had had with the co-chairs on each of the studies to be conducted by the ERC. He said that because there had been an agenda item on mercury during the last interim it would probably not be reconsidered during this interim. With regard to abandoned homes, he intends to discuss the issues with stakeholders to determine how to proceed. With regard to issues related to solid waste management, the study will begin with a report given today by the Department of Environment and Natural Resources (DENR) on options for the Commission. The study will continue in a manner yet to be resolved. With regard to studying the merger of the Ecological Enhancement Program with the Clean Water Management Trust Fund, the Joint Legislative Transportation Oversight Committee will take the lead. Issues related to the nutrient offset program will be discussed at a working group to determine the best way to proceed with the study. He believes a consultant will be hired to investigate that matter. An executive branch committee is looking at amendments to the Mercury Switch Act, which needs to be reported to the next session. The swine moratorium is set to expire on 1 September 2007 and he expects the ERC will spend some time and attention on that issue in the upcoming months.

The focus of today's meeting is on water quantity issues and on solid waste. An update on the Underground Storage Tank Program has also been added. The final report today will be on the Apex fire. Mr. Givens also noted for the record that the planning meeting for this meeting was held on 21 September, 2006.

Senator Albertson recognized Ms. Robin Smith, Assistant Secretary for Environment, DENR, to inform the ERC of organization and personnel changes within the department (see **Exhibit E**). Richard Rogers will serve in the newly created Assistant Secretary for Natural Resources position. Ms. Smith will serve as Assistant Secretary for Environment. A third assistant secretary will be for information systems.

The latter position was created in response to direction from the State Office of Information Technology Services to exercise more control over information technology decision-making and purchases. Ms. Smith also introduced Ms. Elizabeth Self as the new legislative liaison.

Senator Albertson next recognized Dr. David Moreau, Chair of the Environmental Management Commission, to give his report on activities of the Commission for the previous two quarters (see **Exhibit F** for his PowerPoint presentation, **Exhibit G** and **Exhibit H** for copies of the quarterly reports, and **Exhibit I** for a timeline of activities on the Concord and Kannapolis IBT Petition. He said the Clean Air Mercury Rule and the Petition for an Innovation Transfer by the cities of Kannapolis and Concord have occupied a lot of the Commission's time over the past two to three years.

The Clean Air Mercury Rule was issued by the US Environmental Protection Agency (EPA) in May of 2005. The states had 18 months to revise or submit a state implementation plan to execute the program. It was estimated by EPA that this rule would reduce mercury emissions by about 20 percent by 2010 and by 70 percent by 2018. They chose to regulate mercury emissions from electric power plants as a cap and trade program. There is a lawsuit concerning this program in the courts. The EMC took almost a year of study and negotiations to get a rule out to public hearing. It was approved to go to public hearing in March of 2006. Hearings were held across the state in Raleigh, Charlotte and Winterville. The impact of the program on North Carolina is that it set allowances of about 33,700 ounces of mercury emissions per year for Duke Energy and Progress Energy for the period 2010 to 2017. In Phase 2, the allocation was reduced to about 14,000 ounces per year. Meeting the 2018 cap would require about 80 percent reduction of mercury emissions from the 2004 level. The cap and trade program works as follows: if the utilities exceed the allocated credits, they must go on the national market to purchase credits to meet the cap. The problem is that the market does not yet exist, and when it comes into being, it is uncertain how many credits will be available and at what price. If the utilities reduce their emissions to a level below their allocated cap, they can market the excess emission credits to other utilities. A minimum for mercury emissions is set for new utility sources. The Commission looked into whether the federal performance standard is sufficient for North Carolina, if the emission limits should be more stringent than the federal limits, if the state should allow the use of the national trading program, and how growth and new facilities will be handled with respect to the caps.

A key point of confusion is the baseline. The Director of the Division of Air Quality (DAQ) has been quoted as saying that the state can expect about a 60 percent reduction in mercury emissions as a co-benefit of the Clean Smokestacks Act (CSA). Advocates for more stringent controls want a 90 percent reduction. One baseline used is the mercury in the coal that is burned with 90 percent reduction relating to the mercury in the coal that is burned. The other baseline is the estimated emissions in 2004. The estimate is that the current controls (electrostatic precipitators) on all of the power plants reduced the mercury emissions currently by 30 percent, so that the 2004 emissions are about 67,500 ounces; and the mercury in the coal is about 96,000 ounces. The Commission estimates that under the Clean Smokestacks Act, about 41 percent of the mercury in the coal will be controlled to the 90 percent level; 45 percent will be controlled to about the 66 percent level, and the non-CSA facilities will account for about 13 percent of the total. The best guess is that the utilities will be able to meet the 2010 objective. There are no plans in place for 2018, so the level of emissions in 2018 is still an uncertainty. The estimate is that it will require a state-wide reduction of utility emissions of 85 percent if the cap is to be achieved in North Carolina. The EMC is currently in the process of drafting language for resolving the outstanding issues and hope to have a draft of the rules within the next two weeks. They will then make a decision about whether to go back to public hearing.

The other matter Dr. Moreau discussed is the petition for inter-basin transfers (IBTs) for Kannapolis and Concord. The two cities have requested transfers from the Catawba basin and from the Yadkin basin (see **Exhibit I**). The decision on the transfer is expected to be made in January of 2007. Most of the discussion has focused on the impacts on the Catawba basin; however, the Yadkin basin is being given more attention at the present time. The Commission is obligated to make findings of fact, put them in writing, and satisfy a list of requirements within the statute. The decision criterion is that the EMC has to make their decision based on the findings of fact by weighing the beneficial and adverse effects and insuring that any adverse effects are mitigated. The Commission is given the authority to grant the

petition in whole, deny it, or grant it in part. It also has the authority to set whatever conditions on those permits it deems necessary. The impacts are being measured in a variety of ways, mostly on the impact on water availability. Most of the impact is being measured by the elevation duration curves, frequency with which the levels of the lake are at certain elevations, and comparison with and without the transfers. It is hard to find differences with and without the transfers at various magnitudes. Staff has focused on the worst case, the drought period from 2001-2002, and look at the details of what would have happened with the transfer during the worst period of hydrologic record. The systems are dominated by hydroelectric power generation, and the new low inflow protocol, which has been adopted as a part of the relicensing on the Catawba, imposes the low inflow protocol. With the IBT, the protocol is triggered earlier, thus reducing the amount of hydroelectric power being generated. Curiously enough, the lake levels actually as a rise as a result of the IBT. One of the difficulties of the analyses is that they are being run with proprietary software. The EMC has been trying to get outside of the simulation model to see what the impacts would be of the transfers independent of power generation. One effort to determine the impact is to find out how lake levels would drop if the transfer was skimmed off the top with no inflow for six months.

Senator Bingham asked Dr. Moreau if there were any adverse effects of IBTs on power generation. Dr. Moreau said there would be an adverse effect on power generation because the low inflow protocol reduces power generation. Duke Energy has agreed to the low inflow protocol as a part of the federal energy relicensing process. Senator Bingham then asked how future effects of IBTs would be addressed. Dr. Moreau replied that the issue is under consideration. Senator Bingham went on to ask if there was a process for reconsidering transfers when one area began to have water supply problems. Dr. Moreau answered in that case, the area could come to the EMC and request a capacity use designation to cause the EMC to re-examine all the transfers and demands on the basin.

Dr. Moreau added that there is a problem with the statute for IBTs in that the statute is silent on any time limit for the certificate. He said he personally would be more comfortable if there were time limits on the transfers.

Representative McComas asked why there were no public hearings on the mercury rule on the coast. Dr. Moreau replied that Winterville was selected as the eastern public hearing site. Representative McComas commented that the focus of the hearings on mercury emissions is on the power companies. He asked if other generators of mercury emissions are being considered. Dr. Moreau said the EPA rule is specific to electric utility generators and the state must adopt a rule in concert with the EPA requirements. It does not address municipal incinerators or other industrial boilers. Dr. Moreau said he does not know what portion of mercury emissions is being covered at the current time. The general assumption is that the dominant source of the mercury emissions is the electric power generating units.

Mr. Givens asked if there are existing regulations that regulate emissions of mercury from other types of smokestacks. Dr. Moreau said he did not have any knowledge of any. Senator Albertson asked Dr. Moreau to find out the answer and report back to the ERC.

Representative Gibson asked Dr. Moreau if he believes the General Assembly needs to change some of the statutes concerning IBTs. Dr. Moreau replied that he does not find much wrong with the current statute. The only provision he would change is to place the burden of proof somewhere. He suggested adding a presumption against IBTs to increase the level of burden of proof. Dr. Moreau said there is plenty of water in the state, but people have to be careful about making withdrawals in the worst drought conditions. Mr. Givens commented that the current statutory evidentiary standard for IBTs is the preponderance of evidence standard, which is the lowest (51 percent) of the three generally established judicial standards.

Senator Albertson recognized Mr. John Morris, Director, Division of Water Resources DWR), DENR, to discuss issues related to the IBTs (see **Exhibit J,** Analysis of Reservoir Levels and Water Supply: Impacts of Proposed Concord Kannapolis Interbasin Transfer and **Exhibit K**, Information on Interbasin Transfers in South Carolina). Mr. Morris said the report on water resources would address

three subjects: (1) the context of IBTs and how they have worked in the three transfer cases to date, (2) the annual report on state water supply planning activities, and (3) a report on progress being made with the new statute on the Drought Management Advisory Commission that will be made by Mr. Woody Yonts.

Many North Carolina towns, cities, counties and economic regions are divided by the 38 water basin lines. Many of them are in two or three different basins. IBTs occur when a city or county in two different basins tries to arrange for their water supply needs. There are over 160 IBTs in North Carolina. Many are very small. There are over 40 IBTs that are over 1 million gallons a day. The threshold for permitting is 3 million gallons a day. Three IBTs have been permitted by the EMC. The first is Cary, Apex and other communities in the Triangle area. Cary and other Triangle communities have had tremendous growth recently, and they have found that Jordan Lake, a large federal reservoir, has a substantial amount of water storage available. The lake is in the Cape Fear basin, and Cary is partly in the Cape Fear basin, but more in the Neuse basin. Use of water from Jordan Lake results in a transfer from the Cape Fear basin to the Neuse basin. The new growth in Cary is westward toward the Cape Fear basin, so now Cary is developing a new wastewater plant that will return the water used in the western area back into the Cape Fear basin. The City of Durham is partly in the Neuse basin and partly in the Cape Fear basin. Historically, their reservoirs have been developed in the Neuse basin, and when the reservoirs provide water to the part of the City of Durham that is in the Cape Fear basin, some of that water is discharged to the Cape Fear River. To a significant degree, then, the transfer from the Neuse to the Cape Fear by Durham cancels out the transfer in the other direction by Cary and Apex.

The second transfer approved by the EMC is in the Piedmont Triad area, particularly involving Greensboro and High Point. The two cities are in the upper end of the Cape Fear basin where the natural availability of water is somewhat limited. The local governments decided to take a regional approach, and founded the Piedmont Triad Regional Water Authority, which involves Greensboro, High Point, Archdale, Jamestown, Randleman and Randolph County. Over a period of years they planned to build a new reservoir project, Randleman Lake, which is on the Deep River. Building a reservoir does not create water, but it provides for storage of water from wet periods to use during dry periods. The use of water from the lake involves some IBTs. Water that goes to Greensboro goes from the Deep River basin to the Haw River basin, both part of the Cape Fear basin; however, the statute defines them as two separate basins. A much smaller amount of water used by High Point goes from the Deep River to the Yadkin River basin. One of the conditions placed on the lake project by the EMC is that the stored water in the reservoir is to be used to provide a higher flow in the Deep River during drought periods.

The third transfer permitted by the EMC is in the Charlotte Mecklenburg area. The City of Charlotte is in two different river basins, the Catawba basin and the Rocky River basin. The University of North Carolina at Charlotte and the associated economic development is outside the Catawba basin in the Rocky River basin. Charlotte found it was cost effective and sustainable to use water from their existing sources and investments in the Catawba basin to serve the area just across the basin divide in the Rocky River basin.

Mr. Morris shared four conclusions about the present status of IBTs in the state. First, the IBT is a long range commitment of water resources, so it needs to be carefully regulated to assure that the source river basin is fully protected and that there is good long range water availability in the source river basin. The Commission has been very careful in the three permits they have given to date. The have put some substantial conditions on the use of water that protect the source river basin. Second, it does not appear that the IBT mechanism is a rapidly growing trend in the state. Third, IBT is not at this time a significant factor in any of the river basins, so it is a very small factor in overall state water management. Fourth, IBTs are very critical local or regional water supply solutions, allowing reliable and cost effective water sources to be provided, and the transfers can be done in a way that is carefully regulated and protective of the source river basin.

Essentially, the statutes for IBTs require a very detailed environmental analysis to document all the impacts of a proposed transfer. The analysis has to stand public scrutiny in the public hearing process. The Department is responsible for considering all comments and criticisms made and correcting

the document if needed to respond to those comments and criticisms. The goal is to have a thorough and accurate document that tells all interested parties exactly what the impact of the transfer will be. Then the analysis goes to the EMC, and the statute gives them very specific guidance as to how they weigh the positive and negative factors and make their decision. Mr. Morris added that South Carolina does not have the same procedures for making IBTs. They do not have the same kind of public notice, there is no requirement for mandatory public hearings, and no environmental impact statement is required.

Senator Weinstein asked if there is any long range planning to assure a sufficient water supply as our state grows. Mr. Morris replied that the Division looks 50 years into the future.

Mr. Givens asked about IBTs that were grandfathered when the legislation was passed. Mr. Morris said two of the three transfers discussed above were given certificates under old legislation. If there were transfers in place in 1993, they were grandfathered to the extent that physical facilities were in place to transfer that amount of water. Transfers below the threshold of 2 million gallons a day are allowed, but if the transfers increase to above 2 million gallons a day, a certificate will be required. Mr. Givens asked Mr. Morris about Dr. Moreau's concerns with the statute (the time limit of certificates and the evidentiary standard the EMC uses to determine if a petition should be granted). Mr. Morris said the time limit could be considered; South Carolina does use time limits. He added that the EMC inserts a statement into their certificates that says if the environmental analysis on which the certificate was based turns out to have errors in it or new information comes to light, the Commission can reopen the certificate and reconsider it. He went on to say that if there is a capacity use area declared for an entire basin it should override the IBT certificate. That would happen if it was perceived that in the entire river basin there is a potential depletion of water resources. Mr. Givens asked if he believed that the statutory delineation of river basins and sub-basins is correct. Mr. Morris said counting the 38 basins was a compromise between the 17 major river basins and the over 100 basins that some identified.

Mr. Morris said he was in favor of the North Carolina approach to sustainability of the water supply through the Water Use Act. If the EMC determines there is a region of the state where water use has grown to the extent that it threatens to deplete water resources within the region, or if there is a harmful competition between water users, the EMC can adopt an administrative rule to define the area. Then water users of over 100,000 gallons a day have to get a permit from DENR. There is only one capacity use area in the state at this time, a 15-county region in the coastal plan where there was a problem of overuse of the groundwater. The solution involves a 16-year transition period where groundwater users will reduce their withdrawals from certain aquifers in three stages, while developing other water sources that will be sustainable.

Mr. Morris continued with agenda item 7, a status report on water supply planning (see **Exhibit L**). He discussed water quantity monitoring, water use monitoring, local water supply plans, the North Carolina Water Supply Plan (NCWSP), river basin water supply plans, water use during droughts, central coastal plan capacity use area, southern coastal plain capacity use investigation, IBT certifications, IBT requests, and hydropower facility relicensing. He said he believes that when the long range plans and water supply models are completed for each river basin, the state will have a good basis upon which to evaluate any kind of future demand on water supply.

Senator Weinstein asked about the overuse of aquifers, specifically by Smithfield Foods. Mr. Morris replied that the EMC has asked DWR to investigate that area as a potential capacity use area. DWR has talked to Smithfield Foods and the Lumber River Council of Governments to find a solution. If the area users can make rapid progress toward solving the problem, a regulatory solution will not be needed. An agreement has been reached between Smithfield Foods and the Lower Cape Fear Water and Sewer Authority to develop a new water source from the Cape Fear River and reduce the impact on groundwater. DWR is hopeful and encouraged that the new surface water source will be able to serve local governments in the area as well.

Representative Gibson asked if the model for water supply can reflect new water uses and sources to determine the effect on long range water availability. Mr. Morris replied that it can.

Representative Gibson asked if local authorities get the information regularly. Mr. Morris answered that the models are made available to the local governments for their use in looking at future scenarios based on prospective changes.

Senator Albertson recognized Mr. Woody Yonts, Water Resources Engineer, to discuss the annual report by the Drought Management Advisory Council (see **Exhibit M**). Mr. Yonts said the State of North Carolina is leading the nation in water supply planning, ground monitoring, and communicating with communities in order to respond to droughts.

Senator Albertson recognized Mr. Dexter Matthews, Director, Division of Waste Management, DENR, to discuss issues related to solid waste management (see **Exhibit N**). Mr. Matthews commented on the strides made in the early 1990s in the area of solid waste legislation: goals were established for waste reduction, scrap tire and white good management programs were implemented, programs to address medical waste were implemented, the first bans on disposal of certain kinds of waste were instituted, all unlined landfills were required to be closed by 1 January 1998. As a result of these actions, North Carolina closed all unlined landfills, cleaned up all the major scrap tire sites in the state, addressed the disposal of medical waste was through new regulatory requirements, and developed waste reduction programs.

Mr. Matthews said to prepare for his presentation he has surveyed 16 states across the country on their solid waste laws and regulations. He addressed the following issues:

- Owner and operator liability and solvency – need to be sure that Limited Liability Companies (LLCs) have enough financial resources to take on the responsibility of solid waste disposal, and to be sure all companies have financial responsibility requirements for closure and post closure care for landfills
- Compliance with North Carolina bans on disposal of certain waste types – there needs to be a way to insure that banned substances do not make their way into our landfills
- Alternative analysis and impact study – DENR does not require landfill impact studies to look for the best place for landfills to be sited; the permitting process does not require looking at alternatives to landfills
- Local government franchise/host fees – recent franchises have led to local governments being a partner in the financial success of private landfill projects, and raise the question if these partnerships bring liability to the local government as an owner/participant in the success of the project
- State regulatory program resources –a permit fee should be imposed to provide additional resources for the oversight of landfills
- Old landfill sites – there has been no adequate cleanup of the approximately 700 old landfill sites, even identification of their locations, and resources should be provided to do so, probably with a tip fee at the point of disposal in North Carolina
- Technology/design and operational enhancements – there have been many advances in landfill technology and design and additional rulemaking is desirable

Mr. Matthews reported that DWM is talking with other states about buffer requirements, including separation from groundwater and vertical requirements, cover requirements, critical and sensitive areas, facility size, groundwater sampling, leachate controls, landfill gas controls, liner design and construction, LLC questions, local government approvals, traffic studies, and waste acceptance. He said DWM is hoping to have a report for the December ERC meeting with requests for changes to rules. Currently the Division is looking at double containment for all leachate appurtenances located outside the lined disposal area, full leak detection for the liner with electrical methods that are now available, leak detection under pumps, and elimination of penetrations of liners such as leachate and gas collection pipes.

Representative Harrison asked what changes Mr. Matthews would suggest in the statute to ensure the financial resources of LLCs to handle releases from private landfills. He replied that legislation to make it clear that DWM has the authority to require financial assurance prior to the release of a facility

would be helpful. Representative Harrison then asked about waste screening legislation. Mr. Matthews said the franchise operators would be violating a law if they disposed of waste not allowed in landfills. Waste screening has been in place for public landfills because of federal requirements concerning hazardous and liquid waste in landfills. There is a potential for a problem when a person from another state, not knowing North Carolina laws and not knowing where their waste would ultimately be disposed of, could place something into their waste that is not allowed in our state. Mr. Matthews suggested the requirements need to be enhanced to protect against that kind of problem. Representative Harrison asked why landfills are exempt from the State Environmental Protection Act (SEPA). Mr. Matthews replied that was done years ago. Federal law, the Resource Conservation and Recovery Act (RCRA) is very comprehensive, and much of the criteria involved siting a landfill under RCRA is the same as under SEPA. The biggest difference is the alternative analysis. Another concern is for DWM to be able to place additional requirements on a particular landfill site because it is a marginal site. Mr. Matthews added that a number of states require impact analyses as part of their landfill permitting process.

Representative Harrison asked how other states handle tipping fees and how have states that have tipping fees been able to overcome resistance to the fees. Mr. Matthews replied that about 21 states have tipping fees, and the fees have been used to meet a variety of needs. He said DWM would want to use the fees generated by charging a tipping fee for the cleanup of orphan sites in the state.

Representative Gibson asked if the Division is in conversation with regulated parties to let them know that the financial responsibility issue is a DENR concern. Mr. Matthews replied the operators are aware of the LLC issue. There is no committee in place looking at possible rules; however, he has talked with a number of associations and mentioned the issues he has discussed today. Representative Gibson asked if DWM would be looking at the ERC to help get additional resources to handle backlog and reduce time for permitting. Mr. Matthews said they would. Representative Gibson asked how much funding it would take to clean up orphan sites. Mr. Matthews answered that he did not have the information today, but said he would have it available at the next meeting.

Mr. Givens asked what percentage of the solid waste management budget is receipts supported, what percentage is federally supported and what percentage is funded from the General Fund. Mr. Matthews replied that solid waste is almost completely funded by General Fund appropriations. Mr. Givens asked if DWM has information on what other states charge for tipping fees. Mr. Matthews said the outside ranges are from 50 cents to $10.

Senator Bingham asked if in states with high tipping fees waste is disposed of responsibly or have regulators noted an increase in illegal dumping. Mr. Matthews said he did not believe a $2 a ton tip fee would make a lot of difference. He added that what will make a difference in an individual's decision to dispose of waste responsibly is the adequacy of disposal options. He added that he would ask his counterparts in states with high tip fees to see if they have seen any changes because of the high fee.

Mr. Givens asked if there is a known figure for the amount of waste disposed of by an average household in a year. Mr. Matthews said DWM looks at those figures based on the total population divided by the total number of tons of solid waste disposed. That figure is just over 1 ton per person per year in the state; however, that figure includes commercial waste as well as household waste. He said residential waste would be about one-third of a ton per person, which would result in about a $2 tip fee per year for a 3-person household with a fee of $2 per ton..

Representative Justice asked about the capacity of landfills and if counties would be more inclined to participate in regional landfills. Mr. Matthews said there is no capacity problem in North Carolina taken as a whole, but there is a capacity issue in particular areas of the state. He added that a number of enhancements being discussed for legislation or rule-making will have an impact on local governments. He said the changes may make a difference to local governments in whether or not they want to operate their own landfills or transfer waste to other facilities.

Representative Gibson asked how long it takes for a typical county in North Carolina to get a solid waste landfill permitted. Mr. Matthews said that it would take about 3-5 years, including all the work done prior to submission and the permitting process.

Representative Harrison asked if the enhancements Mr. Matthews foresees will require legislative action. Mr. Matthews said there may be some, although many of the changes could be effected through rulemaking.

Representative McComas asked if DWM has looked at the requirements for getting a permit to operate a mine concerning financial responsibility to see if those requirements might apply to landfills. Mr. Matthews said he has not. He added that DWM does require financial assurance for closure and post-closure care, but they do not have financial assurance up front for potential releases from the site. DWM has looked at requirements for financial responsibility in regard to hazardous waste regulations. They are proposing that the operator have financial assurance on the front end for potential releases, so if a company that has a permit becomes insolvent, the Division knows they have the resources to respond to the release.

Senator Albertson recognized Mr. Grover Nicholson, Chief, Underground Storage Tank Section, DWM, DENR, to give the annual report on the status of leaking petroleum underground storage tank (UST) program and the State cleanup funds (see **Exhibit O** for the report, and **Exhibit P** for notes on his presentation).

In addition to his notes, Mr. Nicholson said that prevention in the form of owner and operator training and UST inspections and compliance are the best ways to reduce the number and severity of releases and thereby reduce the amount of money required to be spent to clean up the problems. The Federal Energy Act recognizes that prevention is important. It mandates an increased inspection frequency and training, and requires secondary containment for many UST systems. EPA is also changing the law so that some of the money from the LUST fund can be used for prevention. There are many different kinds of UST leak prevention systems; therefore it is better to train the owner and operator on the site. Secondary containment is required by the Federal Energy Act for any system that is being installed within 1,000 feet of a water supply. North Carolina rules promulgated to be in place by July of 2007 will require any new or replacement UST system to have secondary containment for the entire system.

Mr. Nicholson spoke about the effects of Session Law 2004-124, which was implemented in October of 2004. The law said that if the State could not reimburse approved cleanup claims within 90 days of claim approval, no more work could be directed. As a result of the law, DWM has developed a balance sheet showing demands against the fund as well as the resources the fund has. Because of that law and Session Law 2003-352, DWM work is prioritized, so they work on the riskiest sites first. Every release is given a priority number, and every week they look at the list and include more incidences they can direct, depending on available resources. Mr. Nicholson said they were directing 60 incidents at the beginning of the process, and now are directing over 300, good but not close to the 8300 active incidents already known. EPA has continued to be uncomfortable with the implementation of the law and the use of North Carolina's Trust Fund as a mechanism for financial responsibility. There are mechanisms other than a state trust fund to ensure financial responsibility, such as private insurance, self insurance, bonding, and a personal trust fund. Many states have state trust funds.

EPA has a minimal federally mandated cleanup requirement for USTs, which is removal of "free product" as soon as possible and as much as possible. When a UST leaks, free product in the form of a type of petroleum flows down through the soil and stays on top of groundwater, forms a lens of whatever is leaking. That lens continues to dissolve into the groundwater, so it acts continually as a source of groundwater contamination. It also rises up and down through the soil layer as the groundwater level fluctuates seasonally, recontaminating the soil. Removal of this free product is a positive action. There are about 714 commercial sites and 190 non-commercial sites with free product. Under the present implementation of Session Law 2004-124, 35 of the sites are being addressed, sites that are already contaminating or threatening to contaminate a well. EPA is becoming increasingly uncomfortable with

this approach, because the state is not meeting the federal law minimum (see the copy of a letter from EPA to Secretary Ross dated 19 September 2006 in the Annual Report—the last two pages of **Exhibit O**).

With the Federal Energy Act, it is still possible for EPA to approve a State program, but to withdraw their approval of the state fund as a sufficient financial responsibility mechanism. Conceivably, EPA could decide that North Carolina's trust fund is not providing the financial responsibility that it needs to, and they could require all tank owners to use another mechanism to assure financial responsibility.

Senator Bingham asked what would happen if EPA did make that decision. Mr. Nicholson replied that owners would be required to find another approach to providing financial responsibility, or the state could put more money in the trust fund so they would be able to address the free product sites. He added that it would be good to take a longer term look to see if North Carolina still needs to be in the subsidy business for commercial tanks. He went on to say that DWM staff had a meeting of a stakeholders group that came up with consensus legislation in 2005 that included both ideas—put more money in the fund to enable funding of the releases they are already responsible for, and the other equally important part is to sunset the financial responsibility by the State and transition into other means of financial responsibility. The State does not have the resources to address all of the approximately 900 sites with free product and to address all the sites that have already contaminated or are threatening someone's well.

Representative Gibson asked that the agenda of the meeting be sent to all members of the General Assembly because several of the items would be of interest to them. He also asked that the reports be made available on the NCGA website so members could have access to them.

Senator Albertson recognized Mr. Dexter Matthews again, this time to report on the fire that occurred the previous weekend in Apex, North Carolina. The facility, Environmental Quality Industrial Services of North Carolina, Inc. (EQ), was permitted by the Division in April 2005. The permit and accompanying regulations control all aspects of management of waste at the facility. Prior to issuance of the draft permit, they went through full public notice and comment, both on the application from the applicant and then on the draft permit. EQ was permitted to receive, consolidate and ship a wide variety of regulated hazardous waste, including solids, liquids and lab packs. The wastes are collected at EQ, repackaged and sent for final disposal, recycling or use as a fuel.

On 6 October 2006, explosions and a fire caused thousands of people to be evacuated from the area around the EQ facility. Response to the fire and explosions was very good. Local Wake County responders did exactly what they needed to do—they got people out of harm's way and let the fire burn out. Since the incident, the Divisions within DENR have done a very good job as well.

EQ is one of eleven hazardous waste management companies that are part of a 15-year old resident inspector program. The sites are inspected a minimum of four times each month. The resident inspector program is a North Carolina program that allows DWM to have the resources to conduct the four monthly inspections. If it were not for the resident inspectors program, facilities would be inspected once a year or every two years. Violations noted during inspections are usually corrected while inspectors are there. If there are violations that rise to the level warranting a penalty, the penalty is punitive, not one to get them to get into compliance, because they will be in compliance well before the penalty is issued.

Waste containers are subject to standards governing labeling, dating, storage practices, and spill containment. The penalty that was issued to EQ in March of 2006 primarily addressed the company's failure to respond appropriately when strong odors were generated during the pumping of waste from 55 gallon drums into a tanker truck. In addition to the penalty that addressed the container management violations, there were also failure to properly maintain an inspection log, failure to label a particular container, storage of two containers of incompatible waste next to each other, and failure to maintain 24 inches of aisle space between containers at the site.

The Hazardous Waste Section (HWS) is currently working with investigators to determine the cause of the fire, and to assist in the cleanup of the site, including proper identification and disposal of residual waste materials. A meeting of several government environmental officials, both federal and state, was held on site at 10:00 a.m. the day of the meeting to begin development of a sampling plan for the facility as the initial step to clean up the site. The cause or causes of the explosions and fire are not known yet, but will be determined before any further operations are allowed at the facility.

Senator Dorsett asked what the penalty was, and if the state has any liability. Mr. Matthews replied the penalty was in the area of $32,000, and the liability rests with the company, not the state.

Mr. Givens said the resident inspector program legislation has been amended a number of times to create a large number of inspections so that some facilities are not required to have a resident inspector. He asked where the EQ facility fell in that categorization. Mr. Matthews replied that there is a tiered approach, based on the amount and toxicity of waste managed at a facility as to how many inspections they receive. EQ falls in the category of facilities that are inspected a minimum of four times a month. Mr. Givens asked what significance Mr. Matthews attached to press reports that this is the second fire the company has experienced within the last two years. Mr. Matthews replied there was another event in Michigan. He does not know whether or not it was the same type of facility. Federal investigators are currently looking at that issue.

Representative McComas asked if the permits specify what chemicals and solvents may be stored or consolidated at the site, or is it a broad listing of "hazardous materials." Mr. Matthews replied that the particular type of waste that can be managed at the facility is in the permit. During the operation of the site, they receive waste in during the day, and they export waste during the day, so what particular chemicals are on the site at any particular point in time cannot be identified. A broad spectrum of waste types could be at the facility at any given time.

Senator Albertson recognized two Humphrey Fellows brought to the meeting by Senator Kinnaird—Dr. Roger Williams F Nascimento from Brazil, and Mr. Nguyen (Yim) Ngoc Deim from Vietnam. He invited them to return to visit the Commission at any time.

The meeting adjourned at 12:50 p.m.

Senator Charlie Albertson, Co-Chair
Presiding

Representative Pryor Gibson, Co-Chair

Dot Waugaman, Commission Assistant

Senator Daniel Clodfelter, Co-Chair

FIRST REVISION

TO: Members of the Environmental Review Commission
Interested Parties

FROM: George F. Givens, Commission Counsel
Dot Waugaman, Commission Clerk

RE: **Notice of Commission Meeting**
Notice of Planning Meeting
Schedule of Future Meetings
Meetings of Interested Parties (605 Working Groups)
Additional Information

COMMISSION MEETING:

The Environmental Review Commission (Commission) will meet at 9:30 a.m. Monday 9 October 2006 in Room 643 of the Legislative Office Building in Raleigh.

At this meeting, the Commission will begin or continue studies for which the Commission is responsible, hear reports from State agencies, discuss topics to be considered at future meetings, and attend to other matters. Listed below are potential agenda topics for this meeting and for future meetings. More specific information regarding the agenda for the 9 October meeting of the Commission will be developed at the staff planning meeting discussed below.

STUDIES

1) Issues related to solid waste (S.L. 2006-244, Sec.4)

2) Issues related to the nutrient offset payment program with regard to the costs associated with providing nutrient controls that are adequate to offset point source and nonpoint source discharges of nitrogen; whether nutrient offset payments should be authorized for additional nutrients, including phosphorus; and whether the nutrient offset program should be expanded to other areas of the State (S.L. 2006-215, Sec. 2)

3) Issues related to abandoned manufactured (mobile) homes with regard to impacts on public health and safety, the environment, and the State's scenic resources (S.L. 2006-248, Sec. 8.3)

4) The merger of the organization and functions of the Ecosystem Enhancement Program and the Clean Water Management Trust Fund with the Joint Legislative Transportation Oversight Committee (S.L. 2006-248, Sec. 16)

5) Measures to reduce the quantity of mercury that is released into the environment, that impacts natural resources, and that harms the public health of the citizens of the State (S.L. 2006-248, Sec. 8.2)

6) Establishment of a consistent and uniform risk-based approach to the assessment, prioritization, and remediation of environmental contamination

7) Issues related to liability for the cleanup of environmental damage and the defenses to liability that are available to innocent landowners and prospective purchasers of contaminated properties

REPORTS *(Report due dates are indicated in parentheses)*

General/Miscellaneous:

8) Quarterly report on the activities of the Environmental Management Commission (G.S. 143B-282(b)) *(15 July, 15 October)*

9) Annual report on the mercury minimization plan prepared by DENR (G.S. 130A-310.57) *(1 November)*

10) Implementation of the Ecosystem Enhancement Program and use of funds in the Ecosystem Restoration Fund (G.S. 143-214.13) *(1 November)*

11) Annual report on the cost of the State's environmental permitting programs contained within the Department of Environment and Natural Resources (DENR) (G.S. 143-215.3A(c)) *(1 November)*

12) Annual report on the implementation of Pay for Performance Program (S.L. 2001-442) *(1 September)*

13) Annual report on the evaluation and adjustment of the boundaries of the area served by each Metropolitan Planning Organization (G.S. 136-202(d)) *(1 November)*

Air Quality:

14) Annual report on the cost of the Title V Program (G.S. 143-215.3A(c)) *(1 November)*

15) Annual report on implementation of S.L. 2002-4 (Clean Smokestacks Act) (S.L. 2002-4, Sec. 14) *(1 June)*

16) Annual report on the desirability of requiring and the feasibility of obtaining reductions in emissions of oxides of nitrogen (NOx) and sulfur dioxide (SO2) beyond those required by the Clean Smokestacks Act (S.L. 2002-4, Sec. 11) *(1 September)*

17) Annual report on development and implementation of a plan to reduce vehicle miles traveled by State employees and vehicle emissions resulting from job-related travel, including commuting to and from work (G.S. 143-215.107C(d)) *(1 October)*

18) Annual report on development and implementation of a plan to reduce vehicle miles traveled by private sector employees and vehicle emissions resulting from job-related travel, including commuting to and from work (G.S. 143-215.107C(e)) *(1 October)*

Coastal Management:

19) Annual report on the progress in developing and implementing the Coastal Habitat Protection Plans and reports on the completion or substantial revision of each draft Coastal Habitat Protection Plan (G.S. 143B-279.8(e) and G.S. 143B-279.8(f)) *(1 September)*

20) Annual report by the Coastal Resources Commission evaluating the impacts on water quality and other environmental impacts from new urban waterfront area development (S.L. 2004-117, Sec. 4) *(1 October)*

Hazardous Waste Management:

21) Annual report on the Inactive Hazardous Sites Program (G.S. 130A-310.10) *(1 October)*

22) Annual report on implementation of the Resident Inspectors Program at commercial hazardous waste facilities (G.S. 130A-295.02(m)) *(1 October)*

23) Report of Superfund cost share fund expenditures for cleanup of sites on the National Priorities List (S.L. 1999-237(15.6)(b)) *(Floating, within 30 days of expenditure)*

24) Annual report on the North Carolina Hazardous Waste Management Plan (G.S. 130A-294(i)) *(1 October)*

25) Annual report on the Effectiveness of the Brownfields Property Reuse Act (G.S. 130A-310.40) *(1 October)*

Land Resources:

26) Annual report on the cost of implementing the Mining Act of 1971 (G.S. 74-54.1(c)) *(1 September)*

27) Annual report on implementation of the Sedimentation Pollution Control Act of 1973 (G.S. 113A-67) *(1 October)*

Parks and Recreation / Land Conservation:

28) Parks and Recreation Trust Fund Annual Report, Fiscal Year 2003-2004 (G.S. 113-44.15(c)) *(1 October)*

29) North Carolina Natural Heritage Trust Fund Award Report, Fiscal Year 2003-2004 (G.S. 113-77.9(e)) *(1 October)*

30) Annual report on progress towards attaining the State's goal of protecting one million acres of farmland, open space, and conservation lands (G.S. 113A-241(c)) *(1 October)*

31) Annual report on implementation of the Conservation Easements Program and inventory of all conservation easements held by DENR (G.S. 113A-235(c)) *(1 October)*

32) Report on the master plan for farmland preservation in North Carolina (S.L. 2004-124, Sec. 6.31(b)) *(March 2005)*

Solid Waste Management:

33) Annual report on the recycling efforts of the public schools in the State including information provided by local school administrative units on the number of public schools that have recycling programs and the types of recyclable materials that are collected (S.L. 2001-512, Sec. 11) *(15 December)*

Water Quality:

34) Report on the evaluation of the training and qualification requirements for approval as an animal waste management systems technical specialist (S.L. 2006-38, Sec. 2) *(15 November 2006)*

35) Annual report on permitting and inspecting animal waste management systems/Animal Waste Compliance Report (G.S. 143-215.10M) *(1 October)*

36) Semiannual report on the pilot program for inspection of animal waste management systems including a comparison of the costs of conducting operations reviews and inspections under the pilot program with the costs of conducting operations and inspections under G.S. 143-215.10D and G.S. 143-215.10F *(15 October)*

37) Annual report on the compliance/enforcement of water quality laws for facilities that discharge into surface waters (G.S. 143-215.9A) *(1 October)*

38) Annual report on the Wastewater Discharge Elimination Program (S.L. 2001-452, Sec. 2.9) *(15 October)*

39) Semiannual report on the effectiveness of the pilot program to inspect animal waste management systems by the Division of Soil and Water Conservation (S.L. 2003-340, Sec. 6.2) *(15 October)*

40) Annual report on Basinwide Water Quality Management Plans (G.S. 143-215.8B) *(1 October)*

41) Final report on the Neuse River Monitoring and Modeling Project (S.L. 2005-386, Sec. 2.3) *(1 November 2005)*

42) Annual report on the Dry-Cleaning Solvent Cleanup Program (G.S. 143-215.104U) *(1 October)*

43) Annual report on the status of leaking petroleum underground storage tanks, the State cleanup funds, and the Groundwater Protection Loan Fund (G.S. 143-215.94M) *(1 September)*

44) Annual report by the Roanoke River Basin Bi-State Commission (G.S. 77-98)

45) Annual report on implementation of the Clean Water Management Trust Fund (G.S. 113-145.6A(a)) *(1 December)*

46) Annual report on the implementation of stormwater rules and programs (G.S. 143-214.7(e)) *(1 October)*

47) Annual report by the Catawba/Wateree River Basin Advisory Commission and the Yadkin/Pee Dee River Basin Advisory Commission (G.S. 77-117) *(1 October)*

48) Annual report and analysis of how the implementation of the Sedimentation Pollution Control Act is affecting activities that contribute to the sedimentation of the State's waters and review of the effectiveness of local erosion and sedimentation control programs (G.S. 113A-67) *(1 October)*

Water Quantity:

49) Annual report on the progress of water supply planning (G.S. 143-355(n)) *(1 September)*

50) Annual report by the Drought Management Advisory Council, including a review of drought advisories issued by the Council and any recommendations to improve coordination among local, State, and federal agencies; public water systems; and water users to improve the management and mitigation of the harmful effects of drought (G.S. 143-355.1(g)) *(1 October)*

51) Annual report by the State Water Infrastructure Commission on its activities and findings, includes any recommendations of the Commission that require action by the General Assembly to implement (G.S. 159G-67) *(1 November)*

PLANNING MEETING:

To facilitate development of the agenda for the 9 October meeting of the Commission, to begin planning for subsequent meetings of the Commission, and to receive input from interested persons regarding the work of the Commission, the Commission Counsel will hold an informal planning meeting at **10:00 a.m. on Thursday 21 September 2006 in Room 605 of the Legislative Office Building**. Persons who wish to participate in the development of the agenda for meetings of the Commission, or who are interested in any matter before the Commission, are invited to attend.

SCHEDULE OF FUTURE MEETINGS:

Below is a schedule of meetings of the Environmental Review Commission for October 2006 through January 2007. This schedule is tentative and subject to adjustment. For planning purposes, however, please reserve these dates. Please note the following:

1. Commission meetings normally begin at 9:30 a.m., include a lunch break, and run until mid-afternoon. Please plan on meeting from 9:30 a.m. until at least 3:30 p.m. The Commission will meet in the Legislative Building (LB) or the Legislative Office Building (LOB) as indicated.

2. To facilitate development of the agenda for meetings of the Commission and to receive input from interested persons regarding the future work of the Commission, the Commission Counsel holds informal planning meetings for staff and interested parties. Commission members are not expected to attend these meetings. Unless otherwise announced, public staff planning meetings will be held at 10:00 a.m. in Room 605 LOB.

3. The 2007 Regular Session is scheduled to begin at 12:00 noon on Wednesday 24 January 2007. The Commission may meet shortly after the beginning of the session to complete work and to consider any legislative proposals and recommendations.

Commission Meeting	Location	Staff Planning Meeting (605 LOB)
Monday 9 October 2006	643 LOB	Thursday 21 September 2006
Wednesday 25 October 2006	544 LOB	Friday 13 October 2006
Wednesday 15 November 2006	1228 LB	Friday 3 November 2006
Wednesday 13 December 2006	1228 LB	Friday 1 December 2006
Wednesday 17 January 2007	544 LOB	Monday 8 January 2007
Tuesday 23 January 2007	1228 LB	Monday 8 January 2007

MEETINGS OF INTERESTED PARTIES (605 WORKING GROUPS):

The Commission Counsel will hold meetings of interested parties on specific topics as indicated below:

- To be announced.

ADDITIONAL INFORMATION:

If you have questions related to the Commission, please feel free to contact the Commission Counsel or other Commission staff at (919) 733-2578.

AGENDA
9:30 a.m. Monday 9 October 2006
Room 643 Legislative Office Building
Raleigh, North Carolina

1. Call to order
   Senator Charles W. Albertson, Presiding

2. Introductory remarks by Cochairs
   Senator Charles W. Albertson
   Senator Daniel G. Clodfelter
   Representative Pryor A. Gibson

3. Report to the Commission and explanation of agenda items
   George F. Givens, Commission Counsel

4. Update on organization and personnel changes in the Department of Environment and Natural Resources (DENR)
   Robin W. Smith, Assistant Secretary for Environment
   DENR

5. Quarterly reports by the Environmental Management Commission (EMC) as to its operations, activities, programs, and progress for the period of April 2006 through October 2006 (G.S. 143B-282(b))
   Dr. David H. Moreau, Chairman
   Environmental Management Commission

6. Discussion of issues related to the interbasin transfer of water
   John N. Morris, Director
   Division of Water Resources, DENR

7. Annual report on the implementation of G.S. 143-355 and development of the State Water Supply Plan (G.S. 143-355(n))
   John N. Morris, Director
   Division of Water Resources, DENR

8. Annual report by the Drought Management Advisory Council, including a review of drought advisories issued by the Council and any recommendations to improve coordination among local, State, and federal agencies; public water systems; and water users to improve the management and mitigation of the harmful effects of drought (G.S. 143-355.1(g))
   Woodrow "Woody" Yonts, Water Resources Engineer
   Water Supply Planning Section, Division of Water Resources, DENR

9. Discussion of issues related to solid waste management (S.L. 2006-244, Sec. 4)
   Dexter R. Matthews, Director
   Division of Waste Management, DENR

10. Annual report on the status of the leaking petroleum underground storage tank program and the State cleanup funds (G.S. 143-215.94M)
    Grover Nicholson, Chief
    Underground Storage Tank Section, Division of Waste Management, DENR

11. Report on the fire at the Environmental Quality Industrial Services of North Carolina, Inc, hazardous waste facility located in Apex, North Carolina
    Dexter R. Matthews, Director
    Division of Waste Management, DENR

12. Commission discussion and announcements

13. Adjourn

SCHEDULE OF FUTURE MEETINGS:

A schedule of meetings of the Commission for October 2006 through January 2007 is set out in bold below. This schedule is tentative and subject to adjustment.

To facilitate development of the agenda for meetings of the Commission and to receive input from interested persons regarding the future work of the Commission, the Commission Counsel holds informal planning meetings for staff and interested parties. The schedule of these public Commission staff planning meetings is also set out below.

9:30 a.m. Wednesday 25 October 2006
Location: 544 LOB
Staff Planning Meeting: 10:00 a.m. Friday 13 October 2006 – 605 LOB

9:30 a.m. Wednesday 15 November 2006
Location: 1228 LB
Staff Planning Meeting: 10:00 a.m. Friday 3 November 2006 – 605 LOB

9:30 a.m. Wednesday 13 December 2006
Location: 1228 LB
Staff Planning Meeting: 10:00 a.m. Friday 1 December 2006 – 605 LOB

9:30 a.m. Wednesday 17 January 2007
Location: 544 LOB
Staff Planning Meeting: 10:00 a.m. Monday 8 January 2007 – 605 LOB

9:30 a.m. Tuesday 23 January 2007
Location: 1228 LB
Staff Planning Meeting: 10:00 a.m. Monday 8 January 2007 – 605 LOB

OTHER MEETINGS:

To be announced.

ADDITIONAL INFORMATION:

Persons having questions about the Commission meeting or other matters related to the Commission may contact Commission Counsel or other Commission staff at (919) 733-2578. Information regarding Commission membership, authorizing legislation, and prior Commission meetings may be found at: http://www.ncleg.net/Committees/environmentalre_/default.htm

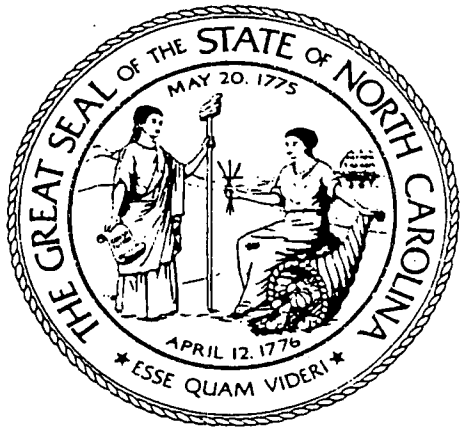
Implementation of the "Clean Smokestacks Act"

A Report to the Environmental Review Commission and the Joint Legislative Utility Review Committee



Submitted by the North Carolina Department of Environment and Natural Resources and the North Carolina Utilities Commission

June 1, 2006

Implementation of the "Clean Smokestacks Act"

A Report to the Environmental Review Commission and the Joint Legislative Utility Review Committee

Submitted by the North Carolina Department of Environment and Natural Resources and the North Carolina Utilities Commission

June 1, 2006

Implementation of the "Clean Smokestacks Act"

A Report to the Environmental Review Commission and the Joint Legislative Utility Review Committee

Submitted by the North Carolina Department of Environment and Natural Resources and the North Carolina Utilities Commission

This report is submitted pursuant to the requirement of Section 14 of Session Law 2002-4, Senate Bill 1078 enacted June 20, 2002. The actions taken to date by Progress Energy Carolinas, Inc. and Duke Energy Carolinas, LLC appear to be in accordance with the provisions and requirements of the Clean Smokestacks Act.

Signed: _____

William G. Ross, Jr., Secretary
Department of Environment and Natural Resources

Signed: _____

Jo Anne Sanford, Chair
North Carolina Utilities Commission

June 1, 2006

Implementation of the "Clean Smokestacks Act"

A Report to the
Environmental Review Commission and the
Joint Legislative Utility Review Committee

June 1, 2006

The General Assembly of North Carolina, Session 2001, passed Session Law 2002-4 also known as Senate Bill 1078. This legislation is titled "*An Act to Improve Air Quality in the State by Imposing Limits on the Emission of Certain Pollutants from Certain Facilities that Burn Coal to Generate Electricity and to Provide for Recovery by Electric Utilities of the Costs of Achieving Compliance with Those Limits*" ("the Clean Smokestacks Act" or "the Act"). The Clean Smokestacks Act, in Section 14, requires the Department of Environment and Natural Resources ("DENR") and the Utilities Commission ("Commission") to report annually, i.e., by June 1 of each year, on the implementation of the Act to the Environmental Review Commission and the Joint Legislative Utility Review Committee.

The Act, in Section 9, requires Duke Energy Carolinas, LLC ("Duke Energy"), and Progress Energy Carolinas, Inc. ("Progress Energy") to submit annual reports to DENR and the Commission containing certain specified information. Duke Energy and Progress Energy filed reports, with DENR and the Commission, by cover letters dated March 30, 2006. Specifically, such reports were submitted in compliance with the requirements of G.S. 62-133.6(i). Duke Energy's and Progress Energy's reports are attached, and made part of this report, as Attachments A and B, respectively.

Additionally, by letter dated May 10, 2006, the Secretary of DENR wrote to the Commission stating that, pursuant to G.S. 62-133.6 (j), DENR has reviewed the information provided, and the submittals comply with the Act. The Secretary further stated that the plans and schedules of the Companies appear adequate to achieve the emission limitations set out in G.S. 143-215.107D.

This report is presented to meet the reporting requirement of the Act pertaining to DENR and the Commission, as discussed above, and is submitted jointly by DENR and the Commission. The report is structured to address the various actions that have occurred pursuant to the provisions of Sections 9, 10, 11, 12, and 13 of the Act. Reports of actions under these Sections describe the extent of implementation of the Act to this date.

I. Section 9(c) of the Act, Codified as Section 62-133.6(c) of the North Carolina General Statutes

G.S. 62-133.6(c) provides: *The investor-owned public utilities shall file their compliance plans, including initial cost estimates, with the Commission and the Department of Environment and Natural Resources not later than 10 days after the date on which this section becomes effective. The Commission shall consult with the Secretary of Environment and Natural Resources and shall consider the advice of the Secretary as to whether an investor-owned public utility's proposed compliance plan is adequate to achieve the emissions limitations set out in G.S. 143-215.107D.*

Status: North Carolina's investor-owned electric utilities, Progress Energy and Duke Energy, filed their initial compliance plans as required in June and July of 2002, respectively, in accordance with G.S. 62-133.6(c), Section 9(c) of Session Laws 2002-4, the Clean Smokestacks Act. DENR reviewed this information and determined that the submittals comply with the Act and, as proposed, appear adequate to achieve the emission limitations set out in G.S. 143-215.107D.

II. Section 9(i) of the Act, Codified as Section 62-133.6(i) of the North Carolina General Statutes

G.S. 62-133.6(i) provides: *An investor-owned public utility that is subject to the emissions limitations set out in G.S. 143-215.107D shall submit to the Commission and to the Department of Environment and Natural Resources on or before 1 April of each year a verified statement that contains all of the following [specified information]:*

The following are the eleven subsections of G.S. 62-133.6(i) and the related responses from Progress Energy and Duke Energy for each subsection:

1. **G.S. 62-133.6(i)(1) requires:** *A detailed report on the investor-owned public utility's plans for meeting the emissions limitations set out in G.S. 143-215.107D.*

Progress Energy Response: "The initial plan for Progress Energy Carolinas, Inc. was submitted on July 29, 2002. Appendix A [of the attached Progress Energy submittal dated March 30, 2006, i.e., Attachment B] contains an updated version of this plan, effective April 1, 2006."

Duke Energy Response: "Exhibits A and B [of the attached Duke submittal dated March 30, 2006, i.e., Attachment A, outline the updated plan as of April 1, 2006,] . . . for technology selections by facility and unit, projected operational dates, expected emission rates, and the corresponding tons of emissions that demonstrate compliance with the provisions of G.S. 143-215.107D."

2. **G.S. 62-133.6(i)(2) requires:** *The actual environmental compliance costs incurred by the investor-owned public utility in the previous calendar year, including a description of the construction undertaken and completed during that year.*

Summary of Progress Energy Report: The actual environmental compliance costs (capital costs) incurred by Progress Energy in calendar year 2005 were $181.27 million. Progress Energy performed a significant amount of work at the Asheville and Roxboro plants. Progress Energy successfully placed the first wet scrubber in service on Asheville Unit 1 in November of 2005. At the Roxboro plant, engineering, procurement, and construction began or continued for each of the four units. At the Mayo, Lee, and Sutton plants, preliminary engineering, design, and procurement activities were initiated, however no construction activities commenced in 2005.

Summary of Duke Energy Report: The actual environmental compliance costs incurred by Duke Energy in calendar year 2005 were $346.42 million. Significant construction occurred in 2005 at the Marshall Steam Station. Construction activities included, but were not limited to: fabrication and installation of absorber outlet ducts and flue liners; site earthwork for the gypsum landfill; and completion of all remaining major building and equipment foundations, structural steel erection for duct supports, assembly of ball mills, recycle pumps, hydroclones, underground and aboveground piping, electrical work, installation of material handling equipment, and wastewater buildings. At the Belews Creek Steam Station, the construction team was mobilized and initiated construction activities that resulted in completion of approximately 10 percent of the project. Approximately 20 percent of this project's total costs was incurred during 2005.

For the remaining Steam Stations (Allen, Cliffside, Buck, Dan River, and Riverbend), the Company reported that costs were incurred for a variety of things such as project studies and investigations, engineering, equipment specifications development, equipment layout, contracting related costs, logistics, etc.

3. **G.S. 62-133.6(i)(3) requires:** *The amount of the investor-owned public utility's environmental compliance cost amortized in the previous calendar year.*

Summary of Progress Energy and Duke Energy Reports: Progress Energy amortized $147 million in 2005. Duke Energy amortized $311.2 million in 2005. As indicated in the June 1, 2005 report to the Environmental Review Commission and the Joint Legislative Utility Review Committee ("the June 1, 2005 report"), Progress Energy, in response to a data request submitted by the Commission, had projected that it would amortize $107 million of environmental compliance costs in 2005. Also, as indicated in the June 1, 2005 report, Duke Energy, in response to a Commission data request, had projected that it would amortize $281 million of environmental compliance costs in 2005.

4. **G.S. 62-133.6(i)(4) requires:** *An estimate of the investor-owned public utility's environmental compliance costs and the basis for any revisions of those estimates when compared to the estimates submitted during the previous year.*

Summary of Progress Energy Report: Progress Energy reported that its total estimated net capital costs (that is, excluding the portion for which the Power Agency is

responsible) are currently projected to be between $1.1 billion and $1.4 billion, with the current point estimate being $1.36 billion. In its 2005 report, Progress Energy, at that time, estimated its cost of compliance to be $895 million. Therefore, its current estimate of $1.36 billion is $465 million, or 52 percent, higher than the cost estimate reported in 2005.

The cost increases are due to several factors according to Progress Energy, including design changes such as the conversion of the Asheville scrubber from dry to wet and higher construction material prices (detailed in the attached Progress Energy report). Additionally, Progress Energy indicated that it did not initially account for major costs associated with the wastewater treatment system in the initial plan, but is now including cost associated with wastewater processing.

Progress Energy's current cost estimate of $1.36 billion is $547 million, or 67 percent, higher than the original 2002 cost estimate of $813 million.

Summary of Duke Energy Report: Duke Energy reported that its currently expected costs are less than the estimates provided in 2005. More specifically, in its 2006 report, the Company estimated its compliance costs to be $1.732 billion, as compared to the $1.742 billion reflected in its 2005 report, a decrease of $10 million, or 0.6 percent (detailed in Exhibit C of Attachment A of the Duke Energy report). As stated by Duke Energy, the reasons for this decrease were: "SNCR [Selective Non-Catalytic Reduction] Projects – In addition to the deletion of the Dan River Unit 3 SNCR project, refinement of the SNCR work scope at each location has resulted in a lower overall estimated cost. The most significant change to this scope over the last year has been to remove the Riverbend central reagent (urea) distribution center scope of work and replace with individual station storage and dilution water equipment."

Duke Energy's current cost estimate of $1.732 billion is $232 million, or 15 percent, higher than the original 2002 cost estimate of $1.5 billion.

5. **G.S. 62-133.6(i)(5) requires:** *A description of all permits required in order to comply with the provisions of G.S. 143-215.107D for which the investor-owned public utility has applied and the status of those permits or permit applications.*

Progress Energy Response:

Asheville Plant

- Numerous soil erosion and sedimentation control plans have been approved
- Authorization to Construct (ATC) the wastewater treatment system for the pretreatment of flue gas desulfurization wastewater was approved
- ATC engineer's certifications for pretreatment and constructed wetlands were submitted

Roxboro Plant

- An air permit for coal handling and limestone handling was issued

- Several soil erosion and sedimentation control plans have been approved
- An Army Corps of Engineers' permit and water quality certification to fill wetlands for gypsum storage area was received
- A non-discharge permit for the wastewater treatment system was received
- Authorization to Construct (ATC) the wastewater treatment system was approved
- Letter to the Commission identifying work in the ash pond was approved

Lee Plant
- A Prevention of Significant Deterioration (PSD) air permit application for the installation of low NOx burners was submitted

Sutton Plant
- An air permit for the installation of low NOx burners was received

Duke Energy Response:
Belews Creek
- NPDES Permit modification received
- Initial erosion control permit received
- Landfill site suitability application submitted
- Air permit for flue gas desulfurization (FGD) project received
- Non-discharge permit revision to include FGD wastewater received
- Authorization to Construct (ATC) application for the wastewater treatment system was approved
- Revised landfill construction plan application submitted
- Air Permit – Notice of Intent to Construct received
- Several soil erosion and sedimentation control plans have been approved

Cliffside
- Air permit application submitted
- A complimentary Prevention of Significant Deterioration permit application was submitted for proposed new generating units

Marshall
- Several soil erosion and sedimentation control plans have been approved
- Landfill construction plan application received
- Authorization to Construct (ATC) application for solids removal system was approved
- ATC application for constructed wetlands was approved
- Selective Non-Catalytic Reduction permits received for Units 1, 2, and 3

Allen
- Air permits approved for Unit 3 and Unit 4

Riverbend

- Selective Non-Catalytic Reduction permits received for Units 4, 5, 6 and 7
- Burner application permits received for Unit 5 and Unit 6

6. **G.S. 62-133.6(i)(6) requires:** *A description of the construction related to compliance with the provisions of G.S. 143-215.107D that is anticipated during the following year.*

Progress Energy Response: See Appendix C of the attached letter from Progress Energy dated March 30, 2006 (Attachment B), for details of construction and installation of equipment. Significant construction activities at the Asheville Plant in 2006 include the completion of systems for the Unit 2 scrubber so that it can be placed into service by the end of May 2006. Construction activities will also begin for the Asheville Unit 1 selective catalytic reduction project. At the Roxboro Plant, significant construction activities for the Unit 2 scrubber will occur in 2006. Construction of the gypsum conveying equipment will also begin. Construction activities for the Unit 3 and Unit 4 scrubbers will include the erection of an absorber tower for each unit and installation of the flue gas liners in the Unit 3 and Unit 4 chimneys.

Duke Energy Response: See attached letter from Duke Energy dated March 30, 2006 (Attachment A), for details of construction anticipated for the next year for:

Allen Steam Station

- Relocation of existing rail spurs and switches and relocation of existing plant services including ash sluice lines, diesel oil tank, electrical and potable water lines
- Begin earthwork and grading for new entrance road and foundations
- Complete detailed engineering for selective non-catalytic reduction (SNCR) equipment on Unit 2
- Complete installation of SNCR equipment on Unit 4

Belews Creek Steam Station

- Construct major foundations for the flue gas desulfurization (FGD) system
- Complete all construction on approximately 5% of the sub-systems that make up the total FGD system
- Complete construction of the concrete shell for the two new chimneys
- Achieve a completion status of 75% on the overall project

Cliffside Steam Station

- Continue engineering study to finalize the project scope

Marshall Steam Station

- Complete ductwork installation using large crane

- Complete construction, turnover, and commissioning of Unit 4
- Begin testing and tuning of Unit 4 and common systems
- Complete construction, turnover, and commissioning of Unit 3 systems
- Begin testing and tuning of Unit 3 and common systems
- Complete detailed engineering for selective non-catalytic reduction (SNCR) equipment on Unit 2 and Unit 4
- Complete installation of SNCR equipment on Unit 1

Buck Steam Station

- Complete detailed engineering for selective non-catalytic reduction (SNCR) equipment on Unit 5 and Unit 6
- Complete detailed engineering for burners on Unit 3 and Unit 4

Dan River Steam Station

- Substantially complete installation of burners on Units 2 and 3

Riverbend Steam Station

- Complete detailed engineering for selective non-catalytic reduction equipment on Units 4, 5, 6, and 7

7. **G.S. 62-133.6(i)(7) requires:** *A description of the applications for permits required in order to comply with the provisions of G.S. 143-215.107D that are anticipated during the following year.*

Progress Energy Response:

Asheville Plant

- Revisions to the air permit to test and install technology to reduce SO_3 may be necessary
- Erosion and sedimentation control plan
- Revision J for the construction of the demineralizer pipe, pump, and ductbank was approved in January 2006

Roxboro Plant

- Revisions to the air permit will be necessary to address fugitive emissions of hydrogen sulfide from the wastewater treatment system
- Authorization to Construct (ATC) for the gypsum settling pond was received in March 2006
- Receipt of the ATC for the bioreactor is anticipated in the second quarter of 2006
- Erosion and sedimentation control plan

Mayo Plant

- A construction permit will be required for the flue gas

desulfurization system

- A non-discharge permit application to be submitted for the wastewater treatment system
- A request for authorization to construct for the wastewater treatment system
- Erosion and sedimentation control plan

Cape Fear Plant

- A construction permit may be required to conduct a trial of an air pollution control technology

Lee Plant

- A construction permit will be required for the installation of the Rotamix system for NOx control

Duke Energy Response:

Allen Steam Station

- A request for authorization to construct for the wastewater treatment system - Plan to submit August 2006
- Air Permit Application – Plan to submit April 2006
- Request to revise non-discharge permit to include flue gas desulfurization (FGD) wastewater submitted January 2006
- Submittal to DENR/Army Corps of Engineers (ACOE) regarding stream crossing of entrance road – Plan to submit March 2006
- Erosion control plans for the Allen FGD project
- Plan to submit air permit application for selective non-catalytic reduction equipment on Unit 2
- Authorization to Construct (ATC) application for the dilution water piping on Unit 4 - Plan to submit to City of Belmont in March 2006

Belews Creek Steam Station FGD

- Authorization to Construct (ATC) application for the sanitary waste lagoon – Plan to submit in March 2006

Buck Steam Station

- Air permit burner application for Units 3 and 4 – Plan to submit March 2006
- Air permit application for selective non-catalytic reduction equipment for Units 5 and 6 – Plan to submit March 2006

Cliffside Steam Station Unit 5 FGD

- It may be necessary to submit a revised air permit application for a standalone Unit 5 FGD – Possible submission in 3rd or 4th quarter 2006

Dan River Steam Station

- Air permit burner applications for Units 1, 2, and 3 – Submitted February 2006

Marshall Steam Station

- Air permit application for selective non-catalytic reduction equipment for Unit 4 – Plan to submit September 2006

8. **G.S. 62-133.6(i)(8) requires:** *The results of equipment testing related to compliance with G.S. 143-215.107D.*

Progress Energy Response: "No equipment testing related to compliance with G.S. 143-215.107D occurred in 2005."

Duke Energy Response: "No additional equipment related testing occurred in 2005."

9. **G.S. 62-133.6(i)(9) requires:** *The number of tons of oxides of nitrogen (NOx) and sulfur dioxide (SO2) emitted during the previous calendar year from the coal-fired generating units that are subject to the emissions limitations set out in G.S. 143-215.107D.*

Progress Energy Response: "The total calendar year 2005 emissions from the affected coal-fired Progress Energy Carolinas units are:

- NOx 49,621 [tons]
- SO_2 202,041 [tons]"

Duke Energy Response: In the 2005 calendar year, the following were emitted from the North Carolina based Duke Energy coal-fired units:

- NOx 56,073.3 tons
- SO2 298,780.5 tons

10. **G.S. 62-133.6(i)(10) requires:** *The emissions allowances described in G.S. 143-215.107D(i) that are acquired by the investor-owned public utility that result from compliance with the emissions limitations set out in G.S. 143-215.107D.*

Progress Energy Response: "During 2005, PEC did not acquire any allowances as a result of compliance with the emission limitations set out in N.C. General Statute 143-215.107D."

Duke Energy Response: "No emissions allowances have been acquired by Duke Power Company resulting from compliance with the emissions limitations set out in G.S. 143-215.107D."

11. **G.S. 62-133.6(i)(11) requires:** *Any other information requested by the Commission or the Department of Environment and Natural Resources.*

Summary of Commission Request: The Commission submitted informational requests to Progress Energy and Duke Energy on April 19, 2006. The information requested, among other things, concerned current projected amortization schedules over the remaining years of the seven-year accelerated cost-recovery period.

Progress Energy Response: Progress Energy noted that the Act requires it to amortize $569 million, which represents 70 percent of the original cost estimate of $813 million, by the end of 2007. The Company indicated that $395 million had been amortized as of December 31, 2005, leaving a total of $174 million to be amortized during 2006 and 2007. Progress Energy stated that, assuming ratable amortization of such remainder, the annual amount of amortization would be $87 million in both 2006 and 2007. However, the Company also observed that the Act grants Progress Energy the flexibility to vary the amortization schedule from $0 to $174 million per year.

With regard to the amounts to be amortized in 2008 and 2009, Progress Energy noted that such amounts remain to be determined. Nevertheless, the Company indicated that, assuming the 30 percent residual amount of the total original cost estimate of $813 million, i.e., $244 million, is amortized ratably in 2008 and 2009, the amount of the annual amortization in each of those two years would be $122 million.

Progress Energy stated that it currently has no plans to write off or amortize any amounts above $813 million. **[DENR/COMMISSION NOTE:** As previously indicated, the Company currently estimates its total net environmental compliance costs to be approximately $1.36 billion.**]**

Progress Energy also stated that it believed that G.S. 62-133.6(d) and (f) address the present issue(s) by requiring the Commission to hold a hearing to determine the Company's just and reasonable environmental compliance costs, including the amounts that should be amortized in 2008 and 2009, and preserve Progress Energy's right to seek recovery of its actual environmental compliance costs above $813 million in its next rate case.

Duke Energy Response: In regard to calendar years 2006 and 2007, Duke Energy responded that it now expects to amortize environmental compliance costs in the amounts of $250 million and $281 million, respectively. With regard to the amounts to be amortized in 2008 and 2009, Duke Energy indicated that such amounts had not yet been determined and that they were subject to Commission approval. The Company further responded as follows:

> While Duke Power recognizes that amortization in 2008 and 2009 of any amounts in excess of the original 2002 estimated environmental compliance cost of $1.5 billion is an option, it has not yet determined what recovery it will seek for any such amounts. Notably, the cost figures

stated in Duke's Compliance Plan Annual Update filed on April 3, 2006 are estimates, based on Duke's current best judgment. As required by N.C.G.S. 62-133.6(i), Duke will continue to update its cost estimates annually.

Duke notes that the Clean Smokestacks Statute provides some direction on the methodology and extent of recovery for environmental compliance costs. Specifically, Section 62-133.6(b) of the NC General Statutes allows Duke to accelerate the recovery of its 'estimated environmental compliance costs over a seven-year period, beginning January 1, 2003 and ending December 31, 2009.' It also expressly recognizes that '[t]he amounts to be amortized pursuant to this subsection are estimates of the environmental compliance costs that may be adjusted as provided in this section.' Id.

Further, Section 62-133.6(d) requires that, subject to the provisions of Section 62-133.6(f), the Commission shall hold a hearing to review an investor-owned utility's environmental compliance costs. It expressly authorizes the Commission to 'modify and revise these costs as necessary to ensure that they are just, reasonable, and prudent based on the most recent cost information available and determine the annual cost recovery amounts that each investor-owned public utility shall be required to record and recover during calendar years 2008 and 2009.' Additionally, it requires the Commission to issue an order by December 31, 2007. Section 62-133.6(f) in turn provides that '[i]n any general rate case initiated to adjust base rates effective on or after January 1, 2008, the investor-owned utility shall be allowed to recover its actual environmental compliance costs . . . less the cumulative amount of accelerated cost recovery recorded pursuant to subsection (b) . . . .'

The Clean Smokestacks Statute, therefore, contemplates that an investor-owned utility such as Duke would fully recover its prudently incurred actual environmental compliance costs, with the determination of the annual amounts of cost recovery for 2008 and 2009 being subject to Commission approval.

[DENR/COMMISSION NOTE: As previously noted, Duke Energy currently estimates its environmental compliance costs to total $1.732 billion.**]**

III. Section 10 of the Act provides: *It is the intent of the General Assembly that the State use all available resources and means, including negotiation, participation in interstate compacts and multistate and interagency agreements, petitions pursuant to 42 U.S.C. § 7426, and litigation to induce other states and entities, including the Tennessee Valley Authority, to achieve reductions in emissions of oxides of nitrogen (NOx) and sulfur dioxide (SO2) comparable to those required by G.S. 143-215.107D, as enacted by Section 1 of this act, on a comparable schedule. The State shall give*

particular attention to those states and other entities whose emissions negatively impact air quality in North Carolina or whose failure to achieve comparable reductions would place the economy of North Carolina at a competitive disadvantage.

DENR/Division of Air Quality (DAQ) and Department of Justice Activities to Implement this Section:

The State continues to pursue opportunities to carry forward the legislature's objectives in section 10. The State reports the following recent activities and developments:

1) On January 30, 2006, the State, through the Attorney General, sued the Tennessee Valley Authority (TVA) in federal district court in Asheville. The suit alleges that emissions of SO_2 and NOx from TVA's fleet of coal-fired power plants are inadequately controlled and therefore create a public nuisance. The Attorney General has asked the Court to require TVA to install NOx and SO_2 controls to abate the public nuisance.

2) On July 8, 2005, the Attorney General filed in federal appeals court in the District of Columbia a petition for review of the United States Environmental Protection Agency's (EPA) Clean Air Interstate Rule. Among other things, the State is alleging that the Rule fails to take into account significant air quality problems in North Carolina, fails to guarantee a remedy to North Carolina because the Rule relies too heavily on the trading of pollution credits, and fails to require controls to be installed expeditiously. The matter is still pending. In addition, also on July 8, 2005, the Attorney General filed a petition with the EPA requesting that the EPA reconsider certain aspects of the rule, but this petition was denied. Further action regarding this denial is under consideration.

3) On May 9, 2005, the Attorney General secured a consent decree from the United States District Court for the Eastern District of North Carolina mandating a schedule for the EPA to respond to North Carolina's Section 126 Petition. By the Section 126 Petition, the State requested that the EPA impose NOx and/or SO_2 controls on large coal-fired utility boilers in thirteen upwind states that impact North Carolina's air quality. On August 1, 2005, the EPA proposed to deny the Section 126 Petition, and the Attorney General filed a detailed response alleging that a denial of the Petition would be arbitrary, irrational, and unlawful. On March 15, 2006, the EPA denied the State's petition. Further action regarding this denial is under consideration.

4) Since the enactment of the Clean Smokestacks Act, the Attorney General and the Department of Environment and Natural Resources have on several occasions presented the Clean Smokestacks Act in other jurisdictions to demonstrate leadership and prompt similar actions in surrounding areas that impact North Carolina. On April 6, 2006, Governor Ehrlich of Maryland signed into law the Healthy Air Act (2006 Md. Laws 301) -- a Clean Smokestacks-type law that significantly limits emissions of SO_2 and NOx from large coal-fired utility boilers in Maryland. A bill to enact the Virginia Clean Smokestacks Act (H.B. 1055) was introduced in the Virginia House of Delegates on January 11, 2006, after a similar bill was defeated in the 2005 session.

IV. Section 11 of the Act provides: *The environmental Management Commission shall study the desirability of requiring and the feasibility of obtaining reductions in emissions of oxides of Nitrogen (NOx) and Sulfur Dioxide (SO_2) beyond those required by G.S. 143-215.107D, as enacted by Section 1 of this act. The Environmental Management Commission shall consider the availability of emission reduction technologies, increased cost to consumers of electric power, reliability of electric power supply, actions to reduce emissions of oxides of nitrogen (NOx) and sulfur dioxide (SO_2) taken by states and other entities whose emissions negatively impact air quality in North Carolina or whose failure to achieve comparable reductions would place the economy of North Carolina at a competitive disadvantage, and the environment, and the natural resources, including visibility. In its conduct of this study, the Environmental Management Commission may consult with the Utilities Commission and the Public Staff. The Environmental Management Commission shall report its findings and recommendations to the General Assembly and the Environmental Review Commission annually beginning 1 September 2005.*

Environmental Management Commission and DENR Response: A letter was submitted to the Environmental Review Commission from Dr. David Moreau, Environmental Management Commission Chairman dated April 3, 2006, stating the following:

> Since the Clean Smokestacks Act was passed in June 2002, significant Federal regulatory changes have occurred. Specifically, the Clean Air Interstate Rule (CAIR) requires North Carolina's neighboring states to achieve major reductions in NO_x and SO_2 -- reductions that require installation of state-of-the-art control equipment. Although there may be questions about the timing and emissions reductions of CAIR, the Division of Air Quality (DAQ) believes CAIR will ultimately provide major benefits to North Carolina's air quality.
>
> The Clean Smokestacks Act already requires that state of the art control equipment be installed on many units in North Carolina. CAIR annual NO_x and SO_2 emissions budgets are even lower than those set by the Clean Smokestacks Act and this could result in even more units in North Carolina having state of the art control equipment applied.
>
> Given the recent action by the Federal government regarding power plant emissions, it is recommended that the study as to whether or not further State action is required be deferred until an evaluation is made of the progress of North Carolina and her neighbors in complying with CAIR. The EMC would propose that the reporting begin on December 1, 2013. This will give the specified electric generation facilities in North Carolina time to implement their control strategies and will also give the DAQ time to quantify the air quality impacts. Requiring reporting prior to the complete implementation of these control technologies will provide little

new or beneficial information. Furthermore, the evolution of new control technologies is fairly long term and it is recommended that the frequency of the reporting thereafter be on a three-year basis.

V. **Section 12 of the Act provides:** *The General Assembly anticipates that measures implemented to achieve the reductions in emissions of oxides of nitrogen (NOx) and sulfur dioxide (SO2) required by G.S. 143-215.107D, as enacted by Section 1 of this act, will also result in significant reductions in the emissions of mercury from coal-fired generating units. The Division of Air Quality of the Department of Environment and Natural Resources shall study issues related to monitoring emissions of mercury and the development and implementation of standards and plans to implement programs to control emissions of mercury from coal-fired generating units. The Division shall evaluate available control technologies and shall estimate the benefits and costs of alternative strategies to reduce emissions of mercury. The Division shall annually report its interim findings and recommendations to the Environmental Management Commission and the Environmental Review Commission beginning 1 September 2003. The Division shall report its final findings and recommendations to the Environmental Management Commission and the Environmental Review Commission no later than 1 September 2005. The costs of implementing any air quality standards and plans to reduce the emission of mercury from coal-fired generating units below the standards in effect on the date this act becomes effective, except to the extent that the emission of mercury is reduced as a result of the reductions in the emissions of oxides of nitrogen (NOx) and sulfur dioxide (SO2) required to achieve the emissions limitations set out in G.S. 143-215.107D, as enacted by Section 1 of this act, shall not be recoverable pursuant to G.S. 62-133.6, as enacted by Section 9 of this act.*

DAQ Actions to Implement this Section: The DAQ submitted reports in September of 2003, 2004, and 2005, as required by this Section. The first report primarily focused on the "state of knowledge" of the co-benefit of mercury control that will result from the control of NOx and SO_2 from coal-fired utility boilers. Also, preliminary estimates were made for this co-benefit for the North Carolina utility boilers based on the initial plans submitted by Progress Energy and Duke Energy. The second report primarily focused on "definition of options". The Division has also submitted the third and final report titled Mercury Emissions and Mercury Controls for Coal-Fired Electrical Utility Boilers. The Clean Air Mercury Rule (CAMR) has been drafted and public hearings have been scheduled to solicit input from the public. A hearing was held on May 25, 2006, in Charlotte and two other hearings are scheduled for June 1, 2006, in Raleigh and June 8, 2006 in Winterville. Comments from these hearings will be taken into consideration and the CAMR will then be presented to the Environmental Management Commission in September of 2006.

VI. **Section 13 of the Act provides:** *The Division of Air Quality of the Department of Environment and Natural Resources shall study issues related to the development and implementation of standards and plans to implement programs to control emissions of carbon dioxide (CO2) from coal-fired generating units and other*

stationary sources of air pollution. The Division shall evaluate available control technologies and shall estimate the benefits and costs of alternative strategies to reduce emissions of carbon dioxide (CO2). The Division shall annually report its interim findings and recommendations to the Environmental Management Commission and the Environmental Review Commission beginning 1 September 2003. The Division shall report its final findings and recommendations to the Environmental Management Commission and the Environmental Review Commission no later than 1 September 2005. The costs of implementing any air quality standards and plans to reduce the emission of carbon dioxide (CO2) from coal-fired generating units below the standards in effect on the date this act becomes effective, except to the extent that the emission of carbon dioxide (CO2) is reduced as a result of the reductions in the emissions of oxides of nitrogen (NOx) and sulfur dioxide (SO2) required to achieve the emissions limitations set out in G.S. 143-215.107D, as enacted by Section 1 of this act, shall not be recoverable pursuant to G.S. 62-133.6, as enacted by Section 9 of this act.

DENR Actions to Implement this Section: The DAQ submitted reports in September of 2003, 2004, and 2005, as required by this Section. The first report primarily focused on the "state of knowledge" and actions being taken or planned elsewhere regarding CO_2 control from coal-fired utility boilers. The second report primarily focused on "definition of options". The DAQ submitted the third and final report titled, "Carbon Dioxide (CO2) Emission Reduction Strategies for North Carolina", to the Environmental Management Commission and the Environmental Review Commission as required. Numerous recommendations were set forth in this report including a recommendation for a North Carolina Climate Action Plan.

The North Carolina Global Warming/Climate Change Bill (HB 1191/SB 1134) was enacted during the 2005 Session of the General Assembly. Along with the passage of the bill, the North Carolina 2005 Session of the General Assembly passed the Global Climate Change Act. This act established a Legislative Commission on Global Climate Change (LCGCC). Additionally, a formalized stakeholder group, the Climate Action Plan Advisory Group (CAPAG) was formed by DENR. The CAPAG's purpose is to research, educate, discuss, and formalize consensus-based recommendations to the DENR for their process and potential implementation by the General Assembly through a formal stakeholder process including determination of economic benefits. The CAPAG will work in conjunction with the LCGCC providing periodic updates. The inaugural meeting of the CAPAG was held on February 16, 2006. The CAPAG is now in the early stages of utilizing technical workgroups. These technical workgroups contain experts in the following five sectors: 1) Agriculture, Forestry, and Waste; 2) Energy Supply; 3) Transportation and Land Use; 4) Residential, Commercial, and Industrial; and 5) Cross Cutting (for issues that cut across different sectors, such as establishing a greenhouse gas registry). The CAPAG is working diligently towards a comprehensive North Carolina Climate Action Plan, with a current target to complete it by the spring of 2007.

VII. Supplementary Information: As noted in earlier reports, the Public Staff - North Carolina Utilities Commission (Public Staff) will audit the books and records of Progress

Energy and Duke Energy on an ongoing basis in regard to the costs incurred and amortized in compliance with the provisions of the Act. The Public Staff has undertaken such a review, focusing on the verification of costs related to complying with the Act, the amortization of those costs, and the operating results of emission reduction equipment installed by Progress Energy and Duke Energy.

The Public Staff filed its most recent reports in the present regard with the Commission on May 22, 2006. Such reports, which are a continuation of the Public Staff's ongoing review, present an overview of certain work performed by the Public Staff and its findings for the 12-month period ending December 31, 2005. Attached, and made part of this report, are the Public Staff's reports for Duke Energy and Progress Energy, Attachments C and D, respectively.

CONCLUSION

Actions taken to date by Progress Energy and Duke Energy appear to be in accordance with the provisions and requirements of the Clean Smokestacks Act.

Subject: Docket No. E-7, Sub 718
Duke Power Compliance Plan Annual Update NO_x Control

Record No. NC CAP 005

Dear Ms. Thigpen:

Duke Power is required by Senate Bill 1078 to file information on or before 1 April of each year to update the Commission on progress to date, upcoming activities and expected strategies to achieve the emissions limitations set out in G.S. 143-215.107D. Enclosed for filing are the original and thirty (30) copies of Duke Power's Compliance Plan Annual Update for 2006 that fully describe the company's efforts to comply with this clean air legislation.

The current plan to meet the emission requirements for NO_x and SO_2 includes:

NO_x Control – The installation of Selective Catalytic Reduction (SCR) on Cliffside Steam Station Unit 5 and Belews Creek Steam Station Units 1&2 has been completed. Our NOx plans include installation of Selective Non-Catalytic Reduction (SNCR) at 15 units, and burner work at our remaining sites with the exception of Cliffside Units 1-4. With these installations, Duke can demonstrate compliance with our 2007 and 2009 NOx caps under Senate Bill 1078.

SO_2 Control – The installation of wet scrubbers on our twelve largest generating units continues to be our plan. We have worked with the Department of Environment and Natural Resources on a plan to accelerate the scrubber installation schedule at Plant Allen. Acceleration of the Allen scrubbers maintains our design and construction continuity and helps assure Duke Power can meet the recently finalized Clean Air Interstate Rule. Costs for our scrubber projects have gone up at Plant Allen due to increases in material (steel and petroleum-based products) and labor costs. Explanations for these increases have been shared with the Public Staff.

Exhibits A and B outline current unit specific technology selections, projected operational dates, expected emission rates, and the corresponding tons of emissions that demonstrate compliance with the legislative requirements to the best of Duke Power's knowledge at this time. The projected estimates of 'environmental compliance costs' for these pollution control projects are included in Exhibit C.

Duke Power will continue to examine the technology selection, implementation schedule and associated costs. Annual updates will be provided to the NC Utilities Commission as required. If you have questions regarding any aspect of our plan, please do not hesitate to contact my office at 919-235-0955.

Sincerely,

George T. Everett

George T. Everett, Ph.D.

Duke Power Company

General Assembly of North Carolina Session 2001
Senate Bill 1078 – Improve Air Quality/Electric Utilities (NC Clean Air Legislation)
2006 Annual Data Submittal

1. **A detailed report on the investor-owned public utility's plans for meeting the emissions limitations set out in G.S. 143-215.107D.**

Exhibits A and B outline the plan as of this date for technology selections by facility and unit, projected operational dates, expected emission rates, and the corresponding tons of emissions that demonstrate compliance with the provisions of G.S. 143-215.107D. Changes to the expected plan for meeting these emissions limitations as compared to past compliance plans are highlighted in these exhibits and described below:

NO_x Compliance

- Technology Change – The Dan River Unit 3 SNCR project has been deleted from the plan because of the expected high cost to install and operate a single unit SNCR system.
- Schedule Changes – Numerous project schedule changes are included in this 2006 update:
  - The Buck Units 3&4 Burner projects were accelerated from 2008 to the spring of 2007 to better support compliance with the Phase I cap of 35,000 tons per year.
  - The Buck Unit 5 SNCR project was accelerated to the fall of 2006 to better align with the Buck Unit 6 SNCR schedule and allow for the most effective outage and work sequencing.
  - The Dan River Units 2&3 Burner projects were delayed until the fall of 2006 because of the elimination of the pollution control project (PCP) exemption in July 2005 and its effect on the permitting process.
  - The Riverbend Unit 4 SNCR project was accelerated to the spring of 2007 for outage optimization and to better support compliance with the Phase I cap of 35,000 tons per year.
  - The Riverbend Units 6&7 SNCR projects were accelerated to the fall of 2006 for outage optimization.
- Rate Changes – Expected rates have been adjusted in this 2006 update based on 2005 operational performance, project schedule changes and other factors:
  - Allen Units 1-5 expected rates were adjusted based on 2005 ozone season performance; Allen Units 1&3 SNCR operation demonstrated that 0.16 could be achieved with system optimization.
  - The Belews Creek Units 1&2 expected rates were also lowered based on 2005 ozone season results.
  - The Buck Units 3&4 rates were adjusted as a result of the Burner project accelerations.

- Buck Units 5&6 expected rates were lowered based on 2005 ozone season performance along with SNCR equipment guarantees.
- Cliffside Units 1&2 expected rates increased based on 2005 ozone season performance.
- The Cliffside 5 expected rate decreased slightly based on 2005 ozone season performance of the SCR equipment.
- The Dan River Unit 2 expected rate was adjusted slightly based on expected performance.
- The Dan River Unit 3 expected rate was changed based on expected performance of the burner equipment, the burner outage schedule and the deletion of the SNCR equipment.
- The Marshall Unit 2 expected rate changed due to the timing of the SNCR installation outage and 2005 ozone season performance.
- The Marshall Units 3&4 expected rates changed based on the 2005 ozone season performance and the current SNCR installation outage schedule; the 2009 expected rates for these units reflect expected further optimization of the SNCR equipment.
- The Riverbend expected rates were adjusted based on the SNCR installation schedule changes and lower SNCR equipment guarantees.

Because the expected 2009 NO_x emissions are so close to the 31,000 ton limit, Duke will continue to evaluate options to improve performance, including the addition of SCR on Marshall Unit 3 and reconsideration of a Dan River Unit 3 SNCR system.

SO_2 Compliance

- New Pulverized Coal (PC) Units – This 2006 update includes the proposed addition of two new 800 MW coal units in 2011 and 2012 at the Cliffside Steam Station. The 2013 expected compliance plan includes these units along with the associated retirement of Cliffside Units 1-4 if the new units are put in service.
- Schedule Changes – Both the Belews Creek Unit 2 and Cliffside Unit 5 FGD (Scrubber) operational dates were adjusted in this plan. The Belews Creek Unit 2 operational date has shifted slightly from the fall of 2007 until early 2008; the Cliffside 5 operational date has shifted out to 2010 to better align with the proposed operational dates for the new units.
- Rate Changes – Expected rate changes have been adjusted in this 2006 update based on changes to operational dates and other considerations:
  - The Allen expected rates were adjusted based on the new sequencing of FGD operational dates in 2009; Allen Units 1, 2 & 5 are now expected to be operational in the spring of 2009 and supported by one FGD absorber while Units 4&5 are expected to be operational in the fall of 2009 and supported by the second FGD absorber.
  - The Buck rates were adjusted based on the expected use of a lower sulfur coal
  - The Cliffside rates were adjusted based on the expected use of a higher sulfur coal and the FGD operational date change for Unit 5.

2. **The actual environmental compliance costs incurred by the investor-owned public utility in the previous calendar year, including a description of the construction undertaken and completed during that year.**

In the 2005 calendar year, Duke Power Company spent $346,420,000 on activities in support of compliance with the provisions of G.S. 143-215.107D. Exact amounts associated with each project are provided in Exhibit C, and a description of the associated activities is provided below:

Allen Steam Station FGD

- Initiated Phase II portion of project including preliminary engineering, project scope development, plant interface studies, contract exhibits and project estimates

Belews Creek Steam Station FGD

- Executed the Engineering, Procurement and Construction (EPC) agreement with the Consortium of ALSTOM Power Inc. and Shaw/Stone & Webster (Alstom/Shaw)
- Mobilized the project's construction management team to the Belews Creek site and initiated construction activities
- Completed the installation of a new fuel oil tank and the removal of the existing fuel oil and elevated water storage tanks from the area planned for the main portions of the FGD system
- Removed the existing hill from the area planned for the main portions of the FGD system (approximately 300,000 cubic yards of soil and rock)
- Initiated construction of the major foundations for the FGD system
- Completed approximately 20% of the overall project (approximately 10% of the construction activities)

Cliffside Steam Station Unit 5 FGD

- Continued preliminary construction planning and development of conceptual site layout

Marshall Steam Station FGD

- Completed fabrication and installation of absorber outlet ducts and flue liners
- Completed site earthwork for gypsum landfill, wetlands (including plantings)
- Completed all remaining major building and equipment foundations including wetlands equalization basin, transformers, switchgear and major tanks
- Completed structural steel erection for absorber, reagent prep, dewatering buildings, transfer towers 1&2, limestone unloading & stackout, and duct support sections 1 through 11
- Completed assembly of ball mills, absorber recycle pumps, hydrocyclones, dewatering belt filters, limestone unloading and major field-erected tanks
- Completed installation of underground piping, above group piping systems and makeup water station tie-ins

- Completed majority of transformers setting, switchgear and underground ductbank work
- Completed majority of material handing equipment installation
- Completed erection of all wastewater treatment tanks and sludge press building

Allen Steam Station SNCR, Unit 2

- Completed preliminary engineering

Allen Steam Station SNCR, Unit 3

- Completed installation of Unit 3 SNCR equipment and supporting plant air equipment

Allen Steam Station SNCR, Unit 4

- Completed detailed engineering and received mechanical, electrical and installation drawings
- Procured material in preparation for 2006 installation

Allen Steam Station SNCR, Unit 5

- Completed preliminary engineering

Buck Steam Station SNCR, Unit 5

- Completed preliminary engineering

Buck Steam Station SNCR, Unit 6

- Completed preliminary engineering

Dan River Steam Station Burners, Unit 2

- Completed detailed engineering and material procurement in preparation for 2006 installation

Dan River Steam Station Classifiers, Unit 2

- Completed installation of advanced static classifier technology in fall of 2005

Dan River Steam Station Burners, Unit 3

- Completed detailed engineering and material procurement in preparation for 2006 installation

Dan River Steam Station Classifiers, Unit 3

- Completed installation of advanced static classifier technology in fall of 2005

Marshall Steam Station SNCR, Unit 1

- Completed detailed engineering and received mechanical, electrical and installation drawings
- Procured material in preparation for 2006 installation

Marshall Steam Station SNCR, Unit 2

- Completed preliminary engineering

Marshall Steam Station SNCR, Unit 3

- Completed installation of SNCR equipment

Marshall Steam Station SNCR, Unit 4

- Continued preliminary engineering and planning for project

Riverbend Steam Station SNCR, Unit 4

- Completed preliminary engineering

Riverbend Steam Station Burners, Unit 5

- Incurred final costs associated with project to install burners on unit in early 2005

Riverbend Steam Station SNCR, Unit 5

- Completed preliminary engineering

Riverbend Steam Station Burners, Unit 6

- Completed installation of SOFA technology on unit in spring of 2005

Riverbend Steam Station Classifiers, Unit 6

- Completed installation of advanced static classifier technology in spring of 2005

Riverbend Steam Station SNCR, Unit 6

- Completed preliminary engineering

Riverbend Steam Station SNCR, Unit 7

- Completed preliminary engineering

3. **The amount of the investor-owned public utility's environmental compliance costs amortized in the previous calendar year.**

In the 2005 calendar year, **$311,236,000** was amortized related to construction work activity in support of compliance with the provisions of G.S. 143-215.107D. **$637,429,142** in total has now been amortized for the program through year-end 2005.

4. **An estimate of the investor-owned public utility's environmental compliance costs and the basis for any revisions of those estimates when compared to the estimates submitted during the previous year.**

The estimated 'environmental compliance costs' as defined in G.S. 143-215.107D are provided in Exhibit C. Changes to the expected costs as compared to past compliance plans are highlighted in this exhibit and described below:

- Allen FGD Project – The Allen FGD estimate has increased since 2005 and is attributable to ramp up in the power generation and/or environmental retrofit construction market, and continued escalation of labor costs. The Cliffside 5 FGD estimate is also affected by these issues, but is expected to be offset by savings if this project is executed in conjunction with the proposed construction of new generating units at the Cliffside station.
- SNCR Projects – In addition to the deletion of the Dan River Unit 3 SNCR project, refinement of the SNCR work scope at each location has resulted in a lower overall estimated cost. The most significant change to this scope over the last year has been to remove the Riverbend central reagent (urea) distribution center scope of work and replace with individual station storage and dilution water equipment.
- Dan River Unit 3 Burner Project – The Dan River Unit 3 Burner project experienced some costs increases estimated at $470,000 due to the delay in installation discussed above.

5. **A description of all permits required in order to comply with the provisions of G.S. 143-215.107D for which the investor-owned public utility has applied and the status of those permits or permit applications.**

Belews Creek Steam Station FGD

- NPDES Permit Modification – Submitted 6/30/04; received 5/16/05
- Initial Erosion Control Permit – Submitted 2/4/05; received 3/7/05
- Landfill Site Suitability Application – Submitted 3/30/05; expect Site Suitability by April 2006
- Air Permit Application for Belews Creek FGD project – Submitted 4/18/05; received 2/6/06
- Request to revise NPDES Permit to include FGD wastewater – Submitted 6/30/04; received permit revision 5/16/05
- Authorization to Construct (ATC) application for Wastewater Treatment System – Submitted 7/21/05; received 12/27/05
- Authorization to Construct (ATC) application for Constructed Wetlands – Submitted 7/21/05; expect final permit April 2006
- Revised Landfill Construction Plan Application – Submitted 9/30/05; expect permit July 2006
- Air Permit – Notice of Intent to Construct – Submitted 10/11/05; received 10/24/05
- NOTE: Revisions to Erosion Control Permit submitted on various dates; most recent revised permit received 12/20/05

Cliffside Steam Station Unit 5 FGD

- Air Permit Application – Submitted 12/16/05
- NOTE: A complimentary PSD permit application was submitted on this same 12/16/05 date for the proposed new generating units at the Cliffside site. If this associated PSD air permit is not approved or withdrawn, it will be necessary to submit a revised Air Permit Application for a standalone Unit 5 FGD.

Marshall Steam Station FGD

- Landfill Construction Plan Application – Submitted 4/1/04; received 2/4/05
- Sedimentation and Erosion Control Plan Permits
  - Limestone/Gypsum Conveyor – Submitted 6/17/04; received 7/9/04
  - Limestone/Gypsum Conveyor Expansion – Submitted 12/15/04; received 12/30/04
  - Constructed Wetland Treatment System – Submitted 7/26/04; received 8/18/04
  - Gypsum Landfill – Submitted 3/31/04; received 4/21/04
- Authorization to Construct (ATC) application for Solids Removal System – Submitted 11/19/04; received 12/22/04
- Authorization to Construct (ATC) application for Constructed Wetlands – Submitted 5/21/04; received 8/10/04

Allen Steam Station SNCR, Unit 3

- Air Permit Application – Submitted 7/15/04; Received 2/5/05

Allen Steam Station SNCR, Unit 4

- Air Permit Application – Submitted 7/15/05; Received 1/15/06

Marshall Steam Station SNCR, Unit 1

- Air Permit Application – Submitted 9/18/05; Received 12/20/05

Marshall Steam Station SNCR, Unit 2

- Air Permit Application – Submitted 9/18/05; Received 12/20/05

Marshall Steam Station SNCR, Unit 3

- Air Permit Application – Submitted 5/14/04; Received 10/13/04

Riverbend Steam Station SNCR, Unit 4

- Air Permit Application – Submitted 3/20/05; Received 8/1/05

Riverbend Steam Station Burners, Unit 5

- Air Permit Application – Submitted 4/2/04; Received 4/30/04

Riverbend Steam Station SNCR, Unit 5

- Air Permit Application – Submitted 3/20/05; Received 8/1/05

Riverbend Steam Station Burners, Unit 6

- Air Permit Application – Submitted 5/14/03; Received September 2003

Riverbend Steam Station SNCR, Unit 6

- Air Permit Application – Submitted 11/5/05; Received 1/1/06

Riverbend Steam Station SNCR, Unit 7

- Air Permit Application – Submitted 11/5/05; Received 1/1/06

6. **A description of the construction related to compliance with the provisions of G.S. 143-215.107D that is anticipated during the following year.**

Allen Steam Station FGD

- Finalize EPC agreement with the Alstom/Shaw consortium
- Relocate existing plant services including ash sluice lines, diesel oil tank, electrical and potable water lines
- Relocate existing rail spurs and switches
- Construct new FGD entrance road from state highway
- Begin earthwork and grading for project, including initial site clearing
- Begin installation of piles and foundations
- Install new ductwork tie-ins to Unit 2

Belews Creek Steam Station FGD

- Complete the construction of the major foundations for the FGD system
- Complete the construction of the concrete shell for the two new chimneys
- Complete all construction on approximately 5% of the sub-systems that make up the total FGD system
- Complete construction of the Constructed Wetlands (part of the wastewater treatment system)
- Initiate commissioning activities on the completed sub-systems of the total FGD system
- Achieve a completion status of 75% on the overall project (65% of construction activities)

Cliffside Steam Station Unit 5 FGD

- Continue engineering study to finalize the project scope, funding and implementation schedule

Marshall Steam Station FGD

- Mobilize large crane for ductwork installation
- Complete initial tie-in of the Unit 4 ductwork and install blanking plate
- Complete ductwork installation using large crane
- Complete construction, turnover and commissioning of Unit 4 and common systems

- Complete final tie-in of the Unit 4 ductwork and removal of blanking plate
- Begin testing and tuning of Unit 4 and common systems
- Achieve Substantial Completion for Unit 4 and common systems
- Complete initial tie-in of the Unit 3 ductwork and install blanking plate
- Complete construction, turnover and commissioning of Unit 3 systems
- Complete final tie-in of the Unit 3 ductwork and removal of blanking plate
- Begin testing and tuning of Unit 3 and common systems
- Achieve Substantial Completion for Unit 3 systems

Allen Steam Station SNCR, Unit 2

- Complete detailed engineering for SNCR equipment and reagent storage
- Begin material procurement activities in support of installation in early 2007
- Complete procurement and construction of reagent storage equipment

Allen Steam Station SNCR, Unit 4

- Complete installation of SNCR equipment, including incremental compressed air and dilution water systems, in time to support 2006 ozone season operation

Allen Steam Station SNCR, Unit 5

- No significant activity expected in 2006

Buck Steam Station Burners, Unit 3

- Complete detailed engineering and material procurement activities in support of installation in early 2007

Buck Steam Station Classifiers, Unit 3

- No significant activity expected in 2006

Buck Steam Station Burners, Unit 4

- Complete detailed engineering and material procurement activities in support of installation in early 2007

Buck Steam Station Classifiers, Unit 4

- No significant activity expected in 2006

Buck Steam Station SNCR, Unit 5

- Complete detailed engineering and material procurement activities in support of installation in late 2006
- Substantially complete installation of SNCR equipment including incremental air, dilution water and storage needs in time to support 2007 operation

Buck Steam Station SNCR, Unit 6

- Complete detailed engineering and material procurement activities in support of installation in late 2006
- Substantially complete installation of SNCR equipment including incremental air, dilution water and storage needs in time to support 2007 operation

Dan River Steam Station Burners, Unit 1

- No significant activity expected in 2006

Dan River Steam Station Burners, Unit 2

- Substantially complete installation of burners

Dan River Steam Station Burners, Unit 3

- Substantially complete installation of burners

Marshall Steam Station SNCR, Unit 1

- Complete installation of SNCR equipment in time to support 2006 ozone season operation

Marshall Steam Station SNCR, Unit 2

- Complete detailed engineering for SNCR equipment and reagent storage
- Begin material procurement activities in support of installation in early 2007
- Complete procurement and construction of reagent storage equipment

Marshall Steam Station SNCR, Unit 4

- Complete detailed engineering for SNCR equipment
- Begin material procurement activities in support of installation in early 2007

Riverbend Steam Station SNCR, Unit 4

- Complete detailed engineering for SNCR equipment
- Begin material procurement activities in support of installation in early 2007

Riverbend Steam Station SNCR, Unit 5

- Complete detailed engineering for SNCR equipment
- Begin material procurement activities in support of installation in late 2007

Riverbend Steam Station SNCR, Unit 6

- Complete detailed engineering and material procurement activities in support of installation in late 2006
- Substantially complete installation of SNCR equipment including reagent storage needs in time to support 2007 operation

Riverbend Steam Station SNCR, Unit 7

- Complete detailed engineering and material procurement activities in support of installation in late 2006
- Substantially complete installation of SNCR equipment including incremental air and dilution water needs in time to support 2007 operation

7. **A description of the applications for permits required in order to comply with the provisions of G.S. 143-215.107D that are anticipated during the following year.**

Allen Steam Station FGD

- Authorization to Construct (ATC) application for Wastewater Treatment System – Plan to submit August 2006; expect to receive February 2007
- Air Permit Application – Plan to submit April 2006; expect to receive approval July 2006
- Request to revise NPDES Permit to include FGD wastewater – Submitted 1/24/2006; expect to receive revision May 2006
- Submittal to DENR/ACOE regarding stream crossing of entrance road – Plan to submit March 2006
- NOTE: all erosion control permits are in EPC contractor's scope for the Allen FGD Project

Belews Creek Steam Station FGD

- Authorization to Construct (ATC) application for Sanitary Waste Lagoon – Plan to submit March 2006; expect to receive September 2006

Cliffside Steam Station Unit 5 FGD

- NOTE: A complimentary PSD permit application was submitted on 12/16/05 for the proposed new generating units at the Cliffside site. If this associated PSD air permit is not approved or withdrawn, it will be necessary to submit a revised Air Permit Application for a standalone Unit 5 FGD. This application would be made in the 3rd or 4th Quarter of 2006.

Allen Steam Station SNCR, Unit 2

- Air Permit Application – Plan to submit July 2006; expect to receive approval January 2007

Allen Steam Station SNCR, Unit 4

- Authorization to Construct (ATC) application for the dilution water piping – Plan to submit to the City of Belmont March 2006

Buck Steam Station Burners, Unit 3

- Air Permit Application – Plan to submit March 2006; expect to receive approval February 2007

Buck Steam Station Burners, Unit 4

- Air Permit Application – Plan to submit March 2006; expect to receive approval February 2007

Buck Steam Station SNCR, Unit 5

- Air Permit Application – Plan to submit March 2006; expect to receive approval July 2006

Buck Steam Station SNCR, Unit 6

- Air Permit Application – Plan to submit March 2006; expect to receive approval July 2006

Dan River Steam Station Burners, Unit 1

- Air Permit Application – Submitted 2/23/06; expect to receive approval August 2006

Dan River Steam Station Burners, Unit 2

- Air Permit Application – Submitted 2/23/06; expect to receive approval September 2006

Dan River Steam Station Burner Project, Unit 3

- Air Permit Application – Submitted 2/23/06; expect to receive approval September 2006

Marshall Steam Station SNCR, Unit 4

- Air Permit Application – Plan to submit September 2006; expect to receive approval January 2007

8. The results of equipment testing related to compliance with G.S. 143-215.107D.

No additional equipment related testing occurred in 2005. The SNCR and SCR tests that occurred in prior years that were used in evaluating technology selections are repeated in this 2006 report for reference.

Allen Steam Station SNCR, Unit 1

- SNCR Equipment installation was completed in May 2003 followed by equipment acceptance testing in late 2003. During this test run, it was determined that the SNCR system met all commercial performance guarantees with approximately a 25% reduction in NOx with ammonia slip of less than 5 ppm at full load
- During the 2004 ozone season, Allen Unit 1 achieved a 0.162# NO_x/MMBTU outlet rate, 5% better than the 0.17#/MMBTU target established for the unit.

Belews Creek Steam Station SCR

- SCR Equipment installation was completed in 2003 in support of the EPA/SIP Call requirements for NO_x reduction. While Belews Creek had operational problems in the first half of the 2004 ozone season, many of these issues were addressed on Belews Creek Unit 1 by August, 2004. Subsequently, tests performed during the months of August and September showed that when the SCR Equipment was in service during this time, emissions averaged 0.07# NO_x/MMBTU

9. **The number of tons of oxides of nitrogen (NO_x) and sulfur dioxide (SO_2) emitted during the previous calendar year from the coal-fired generating units that are subject to the emissions limitations set out in G.S. 143-215.107D.**

   In the 2005 calendar year, 56,073.3 tons of NO_x and 298,780.5 tons of SO_2 were emitted from the North Carolina based Duke Power Company coal-fired units located in North Carolina and subject to the emissions limitations set out in G.S 143-215.107D.

10. **The emissions allowances described in G.S. 143-215.107D(i) that are acquired by the investor-owned public utility that result from compliance with the emissions limitations set out in G.S. 143-215.107D.**

    No emissions allowances have been acquired by Duke Power Company resulting from compliance with the emissions limitations set out in G.S. 143-215.107D.

11. **Any other information requested by the Commission or Department of Environment and Natural Resources.**

    No additional information has been requested to be included in this annual data submittal.

Expected Duke Power Company Co[illegible]ance for NC Clean Air Plan as of 4/1/2006

Significant changes from 4/1/2005 Plan Highlighted

Progress Energy

March 30, 2006

Mrs. Geneva S. Thigpen
Chief Clerk
North Carolina Utilities Commission
4325 Mail Service Center
Raleigh, NC 27699-4325

Re: Annual NC Clean Smokestacks Act Compliance Report
Docket No. E-2, Sub 815

Dear Mrs. Thigpen:

Progress Energy Carolinas, Inc. submits the attached report for calendar year 2005 regarding the status of compliance with the provisions of the North Carolina Clean Smokestacks Act. Section 9(i) of the Act requires that an annual report of compliance progress be submitted to the Commission by April 1 of each year for the previous calendar year.

Very truly yours,

Len S. Anthony /mhm

March 30, 2006

Mr. William G. Ross, Jr.
Secretary
North Carolina Department of Environment and Natural Resources
1601 Mail Service Center
Raleigh, NC 27699-1601

Dear Secretary Ross:

Progress Energy Carolinas, Inc. (PEC) submits the attached report for calendar year 2005 regarding the status of compliance with the provisions of the North Carolina Clean Smokestacks Act. Section 9(i) of the Act requires that an annual compliance progress report be submitted by April 1 of each year for the previous calendar year. PEC appreciates the efforts of your staff to work with us and looks forward to continuing our positive working relationship to facilitate fulfillment of PEC's obligations with this important law.

Please don't hesitate to contact me at (919) 546-3775 if you have any questions.

Sincerely,

Caroline Choi
Director, Environmental Services

[Page 2 intentionally left blank]

Progress Energy Carolinas, Inc.
North Carolina Clean Smokestacks Act
Calendar Year 2005 Progress Report

On June 20, 2002, North Carolina Senate Bill 1078, also known as the "Clean Smokestacks Act," was signed into effect. This law requires significant reductions in the emissions of nitrogen oxides (NOx) and sulfur dioxide (SO_2) from utility owned coal-fired power plants located in North Carolina. Section 9(i) of the bill, which is now incorporated as Section 62-133.6(i) of the North Carolina General Statutes, requires that an annual progress report regarding compliance with the Clean Smokestacks Law be submitted on or before April 1 of each year. The report must contain the following elements, taken verbatim from the statute:

1. A detailed report on the investor-owned public utility's plans for meeting the emissions limitations set out in G.S. 143-215.107D.
2. The actual environmental compliance costs incurred by the investor-owned public utility in the previous calendar year, including a description of the construction undertaken and completed that year.
3. The amount of the investor-owned public utility's environmental compliance costs amortized in the previous calendar year.
4. An estimate of the investor-owned public utility's environmental compliance costs and the basis for any revisions of those estimates when compared to the estimates submitted during the previous year.
5. A description of all permits required in order to comply with the provisions of G.S. 143-215.107D for which the investor-owned public utility has applied and the status of those permits or permit applications.
6. A description of the construction related to compliance with the provisions of G.S. 143-215.107D that is anticipated during the following year.
7. A description of the applications for permits required in order to comply with the provisions of G.S. 143-215.107D that are anticipated during the following year.
8. The results of equipment testing related to compliance with G.S. 143-215.107D.
9. The number of tons of oxides of nitrogen (NOx) and sulfur dioxide (SO_2) emitted during the previous calendar year from the coal-fired generating units that are subject to the emissions limitations set out in G.S. 143-215.107D.
10. The emissions allowances described in G.S. 143-215.107D(i) that are acquired by the investor-owned public utility that result from compliance with the emissions limitations set out in G.S. 143-215.107D.
11. Any other information requested by the Commission or the Department of Environment and Natural Resources.

Information responsive to each of these report elements follows. The responses are given by item number in the order in which they are presented above.

1. **A detailed report on the investor-owned public utility's plans for meeting the emissions limitations set out in G.S. 143-215.107D.**

The plan for Progress Energy Carolinas, Inc. was originally submitted on July 29, 2002. Appendix A contains an updated version of this plan, effective April 1, 2006. We continue to evaluate various design, technology and generation options that could affect our future compliance plans.

2. **The actual environmental compliance costs incurred by the investor-owned public utility in the previous calendar year, including a description of the construction undertaken and completed that year.**

The actual capital costs incurred by Progress Energy in 2005 were $181,274,000.

We successfully placed in service our first wet scrubber on Asheville Unit 1 in November 2005. A significant amount of work was performed at the Asheville plant in 2005 in order to place the Unit 1 scrubber in service. This work included the installation of electrical power and control cables and circuits, piping, pumps, valves, oxidation air compressors, instruments and controls (including the scrubber distributed control system), agitators, absorber tower outlet hood, spray headers, trays and other tower internals, limestone and gypsum handling equipment, and gypsum dewatering equipment. Work efforts also included constructing the wetlands and industrial wastewater treatment system for treating scrubber blowdown wastewater, completing ductwork from the precipitator to the scrubber tower and from the scrubber tower to the stack, and installing new induced draft fans and various other process equipment. Much of the equipment noted above was also installed for the Asheville Unit 2 scrubber, which will be placed in service in 2006.

In addition to the scrubber projects at Asheville, detailed design, engineering and procurement activities began for the Asheville Unit 1 SCR, which will be installed and operational in late 2007. Based on the changes in forecasted energy demand, the in-service date for these NOx controls was accelerated from 2008 to ensure compliance with the Act's annual tonnage cap. Detailed design and engineering activities included preparation of various specifications and bill of materials, civil engineering of foundation systems, structural engineering of flue gas path components and associated structural steel, and mechanical engineering for various piping systems. Work on the Asheville Unit 1 SCR also included issuing purchase orders for the SCR catalyst, ammonia injection grids, static mixers, urea to ammonia system equipment, ash handling system changes, and sonic horns.

At the Roxboro plant, environmental projects work increased significantly in 2005. Engineering, procurement and construction began or continued for each of the four units. The new electrical switchgear building that will provide power for much of the common

scrubber equipment was completed. Various power distribution panels and load centers located in the electrical switchgear building were placed into service. Purchase orders were issued for most of the major equipment. Structural steel was erected, along with various floor elevations for the new limestone preparation/gypsum dewatering building. Erection began on the limestone ball mills and the limestone storage silos. Two new concrete chimney shells (one for Units 1 and 2 and one for Units 3 and 4) were constructed. Many of the fiberglass reinforced plastic sections that make up the flue gas liners were fabricated off site to be ready for installation beginning in early 2006. Foundations were completed for all four absorber towers and their adjacent pump buildings. The ceramic tile-lined concrete absorber tower for the Unit 2 scrubber was built. Excavation began for the limestone storage pile and conveying equipment. Erection also started on the pipe bridge between the absorber towers and the limestone preparation/gypsum dewatering building.

At the Mayo plant, initial general arrangement drawings for the wet scrubber were developed. Engineering studies were completed for the scrubber distributed controls system, electrical power distribution, and induced draft fans options. Work began on the water supply, scrubber blowdown wastewater treatment, and boiler/ductwork transient analysis studies. Engineering was also performed to support the modeling required to determine the height of the new chimney. A purchase order was issued for the absorber recycle pumps. The procurement of these pumps requires a long lead time; they were purchased in 2005 to ensure availability and minimize cost increases. A milestone project schedule was developed. There were no construction activities in 2005.

At the Lee plant, preliminary engineering, design, and procurement activities were initiated for the installation of low-NOx burners in 2006. The PSD permit application was prepared and submitted to the Division of Air Quality for review and approval. There were no construction activities in 2005.

At the Sutton Plant, preliminary engineering, design, and procurement activities were initiated for the installation of low-NOx burners in 2006. There were no construction activities in 2005.

3. The amount of the investor-owned public utility's environmental compliance costs amortized in the previous calendar year.

Progress Energy Carolinas, Inc. amortized $147 million in 2005.

4. An estimate of the investor-owned public utility's environmental compliance costs and the basis for any revisions of those estimates when compared to the estimates submitted during the previous year.

Appendix B contains the capital costs incurred toward compliance with G.S. 143-215.107D in 2005 and the projected costs for future years through 2013, which show the net cost to PEC excluding the portion for which the Power Agency is responsible. The

estimated total capital costs, including escalation, are currently projected to be between $1.1B and $1.4B, with the current point estimate being $1.36B. This represents an increase of 52% from the 2005 cost estimate of $895 million. Prior reports have discussed the cost impact of project scope changes such as the use of a wet scrubber at Asheville in lieu of a dry scrubber, the capability to burn higher sulfur coals, and increased sulfur removal efficiency; all of which provide increased fuel flexibility for the Asheville, Roxboro, and Mayo plants. These additional cost increases reflect 1) increased costs for materials of construction, such as steel, concrete, and electrical power and control cables; 2) the need for a greater volume of these materials than originally forecast; 3) increased costs for equipment, such as pumps, fans, and electrical transformers; 4) the addition of wastewater treatment facilities, which were not included in the original program estimate; and 5) adjusting future project costs based on the actual project costs for our first completed scrubber and the current detailed cost estimates for the scrubbers under construction. It should be noted that significant design work remains to be completed, especially for the SO_2 controls at Mayo, Cape Fear, and Sutton. Our current estimates are subject to further adjustment as the engineering for these projects is completed.

The cost increases that we are experiencing are not unique to PEC. Other utilities with major construction projects for environmental controls are experiencing similar increases. Significant cost increases are also being experienced on other, non-utility, large construction projects in North Carolina, especially in the Raleigh area. For example, the project costs for the expansion of Terminal C at the Raleigh Durham International Airport were recently reported to have increased by 23% over the last 3 years due to inflation and rising building costs; projected costs for new Wake County schools were recently reported to have increased by 18-20% a year compared with an overall inflation rate of 2.7 to 3.4% due to higher prices for construction materials; the project costs for the planned commuter rail service from Raleigh to Durham were recently reported to have increased by 9% since 2004 (not adjusted for inflation); and the costs for the new Raleigh convention center currently under construction were recently reported to have increased by 12% due to the volatility of equipment and material prices in the construction market.

Independent cost indices, such as the Chemical Engineering Plant Cost Index, also show that the costs for construction labor and materials have increased sharply. The net overall plant escalation from December 2002 through November 2005 was 19%, which is substantially higher than the 2.0 to 2.5% per year (7.7% over the same December 2002-November 2005 period) escalation rates used for the original program cost estimates.

5. A description of all permits required in order to comply with the provisions of G.S. 143-215.107D for which the investor-owned public utility has applied and the status of those permits or permit applications.

Progress Energy applied for the following permits in 2005:

Asheville Plant

Erosion and Sedimentation Control Plan

Several updates were submitted for the erosion and sedimentation control plan:

- Rev H for the wastewater treatment discharge pipeline, truck scale, truck wash station was approved April 6, 2005.
- Rev 1 for the river pumps conduit was approved June 2, 2005.
- Rev I for the Unit 1 SCR was approved November 14, 2005.

NPDES Permit

An Authorization to Construct (ATC) the wastewater treatment system for the pretreatment of flue gas desulfurization wastewater was approved March 29, 2005 –ATC No. 0000396A03.

The ATC engineer's certifications for pretreatment and constructed wetlands were submitted November 8, 2005.

Roxboro Plant

Air Permit

An update to the air permit for coal handling and limestone handling was submitted on August 25, 2005. This permit was issued on February 9, 2006.

Erosion and Sedimentation Control Plan

Several updates were submitted for the erosion and sedimentation control plan:

- Rev G for the gypsum storage area was approved January 21, 2005
- Rev H was rolled in with Rev G (revision H was a response to questions on revision G) and so was also approved January 21, 2005.
- Rev I for the emergency access road, fire protection piping, conduit, temporary haul road was approved May 17, 2005.
- Rev J for the makeup water pipeline, gypsum conveyor foundations, settling pond and bioreactor site was approved September 13, 2005

Wetlands Permitting

An Army Corps of Engineers permit and water quality certification to fill wetlands for gypsum storage area was received September 6, 2005.

NPDES permit

An NPDES permit for the wastewater treatment system was received August 10, 2005.

Submissions were made for the Authorization to Construct (ATC) the wastewater treatment system on October 3, November 1 and December 2, 2005. Approval for construction of the settling basin is expected in March 2006. Approval for the construction of the bioreactor is expected in the second quarter of 2006.

Dam/Impoundment Safety

Progress Energy's letter to the NCUC identifying work in the ash pond was approved December 5, 2005.

Lee Plant

Air Permit

A prevention of significant deterioration (PSD) permit application for the installation of low NOx burners was submitted on December 7, 2005. A draft permit was received February 13, 2006 and is expected to be final in March 2006.

Sutton Plant

Air Permit

Air permit 01318T18 for the installation of Low NOx Burners was received February 21, 2005.

6. A description of the construction related to compliance with the provisions of G.S. 143-215.107D that is anticipated during the following year.

Appendix C presents the planned construction schedule for compliance with G.S. 143-215.107D. Please note that this is a projected schedule of construction activity through 2013 that is subject to modification. The schedule will be updated as part of this report each year.

The planned construction activities at Asheville in 2006 include the completion of the mechanical, electrical and controls systems for the Unit 2 scrubber. This includes completion of the flue gas ductwork from the precipitator to the absorber tower, and installation, checkout and commissioning of the major equipment including the distributed controls system and absorber recycle pumps. Systems common to both Units 1 and 2 were commissioned during the checkout and startup activities for the Unit 1 scrubber. The unit 2 scrubber is expected to be placed into service at the end of May

Construction activities will also begin for the Asheville Unit 1 SCR project. These activities include installation of foundations for the new SCR structural steel; fabrication,

delivery and erection of the SCR support steel; fabrication and delivery of the inlet and outlet ducts for the SCR and the SCR reactor modules; and various mechanical and electrical activities to support placing this SCR in service in 2007.

At Roxboro, the significant construction activities for the Unit 2 scrubber include installation of the absorber recycle pumps, hydroclones, oxidation air compressors, absorber tower outlet hood, flue gas ductwork from the precipitator to the absorber tower and from the absorber tower to the chimney, spray headers, trays and other tower internals, agitators, and various process piping and tanks. Flue liners for each boiler will be installed in the chimney. The structural steel for the absorber recycle pump building will be erected. Systems common to the scrubbers for all units such as the gypsum handling conveyors, limestone handling and preparation equipment (conveyors, feeders, silos, and ball mills), dewatering equipment (belt filters), wastewater treatment settling ponds and bio-reactor will be installed. Various mechanical, electrical and controls equipment that support the scrubber process will also be installed. Installation of the gypsum conveyor from the dewatering building to the storage pile will begin. Construction activities for the Unit 3 and Unit 4 scrubbers will include the erection of the absorber tower for each unit and installation of the flue gas liners in the Units 3 and 4 chimneys. Installation will begin for various electrical power and control cables and circuits along with the installation of various process equipment and piping. Minimal construction activities for Unit 1 will be performed. Construction of these systems and the scrubber blowdown wastewater treatment system will continue through 2008.

7. **A description of the applications for permits required in order to comply with the provisions of G.S. 143-215.107D that are anticipated during the following year.**

Several recent changes to permitting processes in the state have dramatically increased the lead time to prepare and review environmental permits necessary for Clean Smokestacks projects. A recent court decision [D.C. Circuit Court of Appeals Decision in *New York v. EPA*, No. 02-1387 (June 24, 2005)] eliminated the provision exempting pollution control equipment from new source review. For Progress Energy Carolinas, this results in increased costs for consultants and modeling. For the NC Division of Air Quality (DAQ), this results in longer permit application processing times. For example, the application for the installation of a low-NOx burner, which formerly took 3-4 months, now requires review under the PSD program, a process typically lasting a year or more. The staff at the DAQ has expedited this process for the recent permit submission for the Lee plant. We appreciate the collaborative efforts the DAQ staff has made to assure our construction and installation schedules remain on track. However, the longer permit processing times continue to be a serious concern for future projects as not every permit can reasonably be expedited. PEC wishes to work collaboratively with the DAQ to prevent such delays from occurring.

The following permit applications and permit approvals are anticipated for 2006:

Asheville Plant

Air Permit

Revisions to the air permit may be necessary to test and, if necessary, install technology to reduce emissions of SO_3.

Erosion and Sedimentation Control Plan

Revision J for the construction of the demineralizer pipe, pump and ductbank was approved in January 2006.

Roxboro Plant

Air Permit

Revisions to the air permit will be necessary to address fugitive emissions of hydrogen sulfide from the wastewater treatment system.

NPDES Permit

The ATC for the gypsum settling pond was received March 3, 2006.
Receipt of the ATC for the bioreactor is anticipated in the second quarter 2006.

Erosion and Sedimentation Control Plan

- Rev K for the haul road, transformers, main plant area wastewater pipe trench and gypsum conveyor foundations was approved in February 2006
- Rev L for burying the wastewater pipeline - approval is anticipated second quarter 2006

Additional revisions to the plan may be necessary.

Mayo Plant

Air Permit

A construction permit will be required for the flue gas desulfurization system - anticipated submission Spring 2005.

NPDES Permit

NPDES permit modification application for wastewater treatment system submitted February 23, 2006.

A request for authorization to construct the wastewater treatment system is expected to be submitted in the fourth quarter 2006.

Erosion and Sedimentation Control Plan

The first of the erosion and sedimentation plans for the main construction area and laydown yards will be submitted during the second quarter, 2006. Additional plan revisions will be necessary as construction plans are developed.

Cape Fear Plant

Air Permit

A construction permit may be required to conduct a trial of an air pollution control technology. If required, this permit application will be submitted during the second quarter of 2006.

Lee Plant

Air Permit

A construction permit will be required for the installation of the Rotamix system for NOx control. This permit application will be submitted during the second quarter 2006.

8. The results of equipment testing related to compliance with G.S. 143-215.107D.

No equipment testing related to compliance with G.S. 143-215.107D occurred in 2005.

9. The number of tons of oxides of nitrogen (NOx) and sulfur dioxide (SO_2) emitted during the previous calendar year from the coal-fired generating units that are subject to the emissions limitations set out in G.S. 143-215.107D.

The total calendar year 2005 emissions from the affected coal-fired Progress Energy Carolinas units are:

NOx 49,621 tons
SO_2 202,041 tons

10. The emissions allowances described in G.S. 143-215.107D(i) that are acquired by the investor-owned public utility that result from compliance with the emissions limitations set out in G.S. 143-215.107D.

During 2005, PEC did not acquire any allowances as a result of compliance with the emission limitations set out in N.C. General Statute 143-215.107D.

11. Any other information requested by the Commission or the Department of Environment and Natural Resources.

NC Clean Smokestacks Audit Public Staff Data Request No. 5 was issued to Progress Energy Carolinas in February of 2005, and a response was provided on March 4, 2005. NC Clean Smokestacks Commission staff request was issued to Progress Energy Carolinas in April of 2005, and a response was provided on May 2, 2005 with revisions filed on May 6, 2005. NC Clean Smokestacks Audit Public Staff Data Request No. 6 was issued to Progress Energy Carolinas in February of 2006, and a response was provided on March 24, 2006.

Appendix A

Progress Energy Carolinas, Inc's (PEC) Air Quality Improvement Plan Supplement

April 1, 2006

On June 20, 2002, Governor Easley signed into law SB1078, which caps emissions of nitrogen oxides (NOx) and sulfur dioxide (SO_2) from utility owned coal-fired power plants located in North Carolina. PEC's annual NOx emissions must be less than 25,000 tons beginning in 2007 and annual SO_2 emissions must be less than 100,000 tons beginning in 2009 and less than 50,000 tons beginning in 2013. These caps represent a 56% reduction in NOx emissions from 2001 levels and a 74% reduction in SO_2 from 2001 levels for PEC.

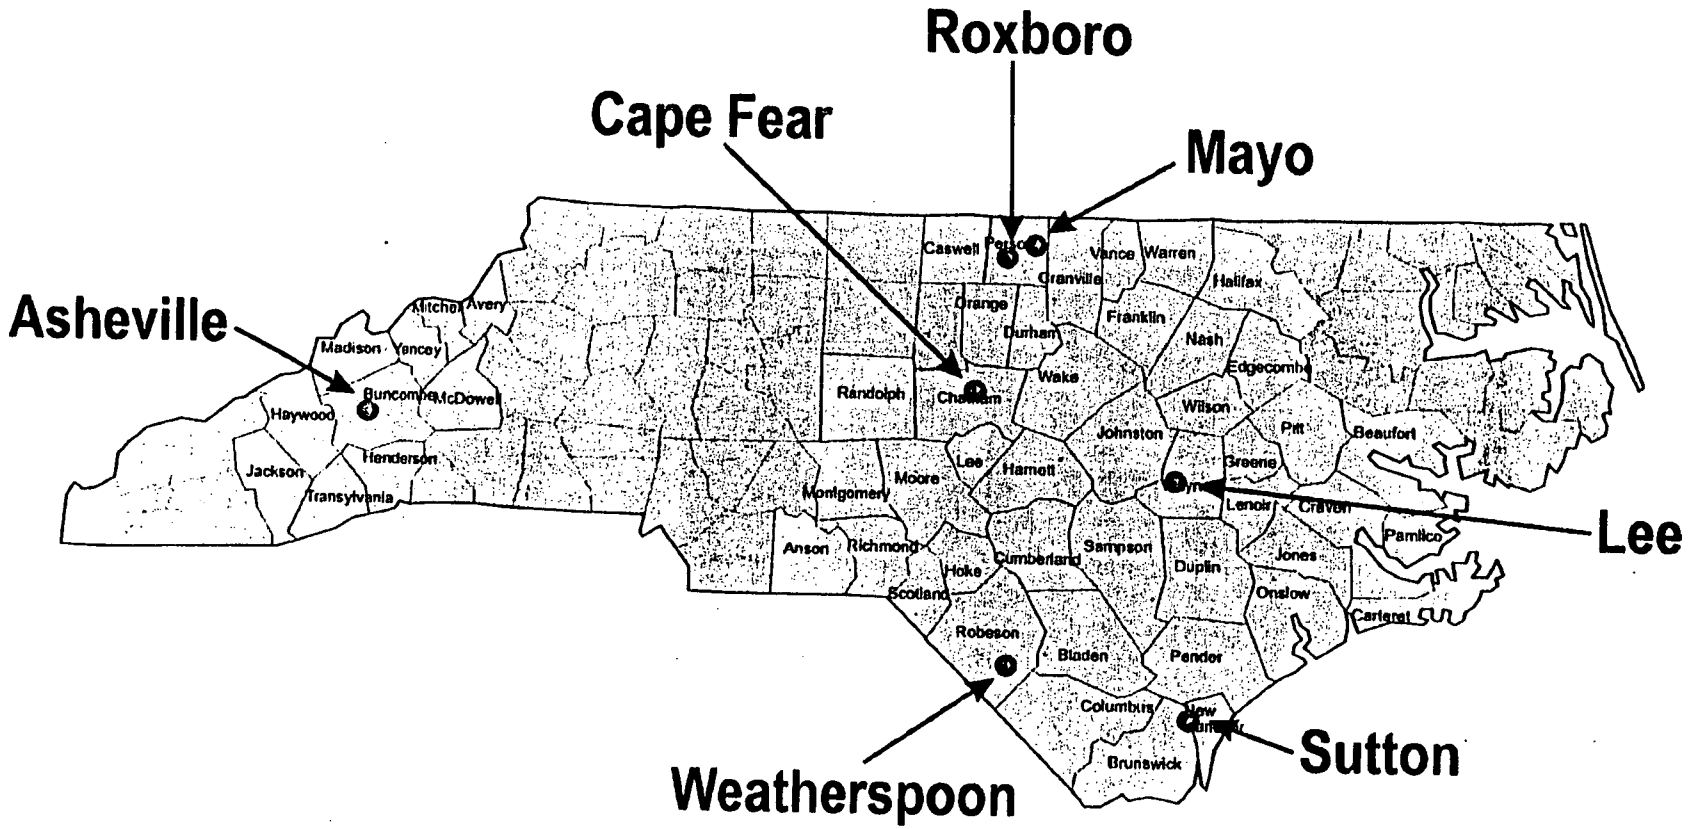
PEC owns and operates 18 coal-fired units at seven plants in North Carolina. The locations of these plants are shown on Attachment 1.

Nitrogen Oxides Emissions Control Plan

PEC has been evaluating and installing NOx emissions controls on its coal-fired power plants since 1995 in order to comply with Title IV of the Clean Air Act and the NOx SIP Call rule adopted by the Environmental Management Commission (EMC). Substantial NOx emissions reductions have already been achieved (50,000 tons of NOx in 2004 compared with 112,000 tons in 1997) and further reductions will ensure compliance with the Clean Smokestacks Act 25,000 ton cap in calendar year 2007. This target will be achieved with a mix of combustion controls (which minimize the formation of NOx) such as low-NOx burners and over-fire air technologies, and post-combustion controls (which reduce NOx produced during the combustion of fossil fuel to molecular nitrogen) such as selective catalytic reduction (SCR) and selective non-catalytic reduction (SNCR) technologies.

Attachment 2 details PEC's North Carolina coal-fired electric generating units, their name plate generation capacity, the control technologies already installed, and those planned for installation. As technologies evolve or other circumstances change, a different mix of controls may be selected. Attachment 2 also projects the NOx emissions on a unit-by-unit basis based on the energy demand forecast and expected efficiencies of the NOx emissions controls employed. This information is provided only to show how compliance may be achieved and is not intended in any way to suggest unit-specific emission limits. Actual emissions for each unit may be substantially different in 2007.

Sulfur Dioxide Emissions Control Plan



PEC will be installing wet flue gas desulfurization systems (FGD or "scrubbers") to remove 97% of the SO_2 from the flue gas of its Asheville, Roxboro and Mayo boilers. Screening studies will be conducted for the Cape Fear 5 and 6 and Sutton 3 units to select the most appropriate technology for these plants. Wet scrubbers produce unique waste

and by-product streams. Issues related to wastewater permitting and solid waste disposal are being addressed for each site. PEC plans to treat the scrubber wastewater stream at the Asheville Plant using an innovative constructed wetlands treatment system to ensure compliance with discharge limits. A bioreactor technology is being evaluated for the Roxboro Plant. A contract has been executed with a gypsum product end-user that will construct a wallboard facility near the Roxboro plant to use the synthetic gypsum produced by the Roxboro and Mayo plants for the manufacture of drywall products. PEC is also negotiating with another gypsum company for the use of the synthetic gypsum that will be produced at the Asheville plant

Specific units are listed in Attachment 3 with data on projected schedules and projected annual emissions in 2009 and 2013. These projections assume a 97% SO_2 removal efficiency, forecasted energy demand, 3.3 lbs SO_2/Mbtu coal on scrubbed units, and 1.2 lbs SO_2/Mbtu coal on the other units. Please note that these are projected schedules and are subject to revision.

Particular units controlled and control technologies utilized are subject to change depending on future developments in SO_2 removal technologies, energy demand, sulfur content of coal, and other circumstances which may produce a more optimal plan for meeting the SO_2 emissions limits in 2009 and 2013. DENR will be advised as changing circumstances dictate.

Attachment 1: Location of PEC's Coal-Fired Power Plants in North Carolina

Duke Power Company, LLC, d/b/a Duke Energy Carolinas, LLC

Dear Ms. Vance:

Enclosed herewith for filing in the above-referenced docket are twenty-one (21) copies of the Report of the Public Staff on Costs Incurred and Amortized by Duke Energy Carolinas, LLC ("Duke") in Compliance with Session Law 2002-4 ("the Clean Smokestacks Act" or "the Act"). This report presents the results of the Public Staff's review of environmental compliance costs incurred and amortized by Duke through the end of calendar year 2005.

Sincerely,

Antoinette R. Wike
Chief Counsel

REPORT OF THE PUBLIC STAFF ON COSTS INCURRED AND AMORTIZED BY DUKE ENERGY CAROLINAS, LLC IN COMPLIANCE WITH SESSION LAW 2002-4

Docket No. E-7, Sub 718

May 22, 2006

Section 14 of Session Law 2002-4 ("the Clean Smokestacks Act" or "the Act") requires the Department of Environment and Natural Resources ("DENR") and the Utilities Commission ("Commission") to report, by June 1 of each year, on the implementation of the Act to the Environmental Review Commission and the Joint Legislative Utility Review Committee. The May 30, 2003, report of DENR and the Commission states that the Public Staff will audit the books and records of the investor owned utilities on an ongoing basis in regard to the costs incurred and amortized in compliance with the Act. The Public Staff has undertaken such a review, focusing on the verification of costs related to complying with the Act, the amortization of those costs, and the operating results of emission reduction equipment installed by Duke Power Company, LLC, d/b/a Duke Energy Carolinas, LLC ("Duke"). This report is a continuation of the Public Staff's ongoing review and presents the Public Staff's findings for the twelve months ended December 31, 2005.

I. Work To Be Performed

Duke's original plan to install Selective Non-catalytic Reduction ("SNCR") technology to remove NO_x and flue-gas desulfurization technology ("scrubbers") to remove SO_2 to comply with the Act remains practically the same with only minor changes to the compliance schedule and plan. Duke continues to evaluate SNCR technology and has indicated that it will continue to deploy this technology at least through the initial compliance dates approved in the plan. If additional NO_x removal is required, Duke will likely deploy Selective Catalytic Reduction ("SCR") technology on specific units that have yet to be determined.

II. Environmental Compliance Costs

Duke is required by the Act to submit a report to the Commission and to DENR on or before April 1 of each year containing its actual environmental compliance costs incurred during the previous calendar year. As defined by G.S. 62-133.6(a)(2), "environmental compliance costs" include only capital costs.

In its Compliance Plan Annual Update for 2006 ("2006 Compliance Update"), Duke reported that its actual environmental compliance costs in calendar year 2005 were $346,420,000. The cumulative environmental compliance costs incurred by Duke through 2005 were $473,396,146, as follows:

Year 2001	$ 692,433
Year 2002	1,024,223
Year 2003	18,424,921
Year 2004	106,834,479
Year 2005	346,420,000
Total	$473,396,155

Duke's expenditures to date involve emission reduction technologies at its Allen, Belews Creek, Buck, Cliffside, Dan River, Marshall, and Riverbend facilities. Environmental compliance costs were incurred for project studies and investigations, engineering, equipment procurement, and contracting.

As part of its review, the Public Staff requested information from Duke on the project costs, invoices documenting costs, and the purpose of the costs. Duke provided project cost sheets delineating actual project costs by year into the following categories: (1) direct labor costs; (2) labor loads; (3) contract costs; (4) material costs; (5) overhead costs; and, (6) other costs. These costs are as follows:

Direct Labor	$ 3,335,962
Labor Loads	1,440,489
Contracts	329,203,068
Materials	2,882,645
Overheads	491,855
Other	9,065,981
Total	$ 346,420,000

The project cost sheets were supported by project detail reports that incorporated all expenditures for a particular category or group. The Public Staff selected invoices in each category from the detailed spreadsheets and requested Duke to provide specific information on the selected costs. The Public Staff also had extensive discussions with Duke personnel to gain a better understanding of the cost items charged to each specific project. Duke provided documentation to support each selected cost.

Duke has estimated its environmental compliance costs at $1,731,510,400, as set forth on Exhibit C in its 2006 Compliance Update. This represents an increase of $231,510,400 or 15.4% over Duke's original estimate of $1,500,000,000, as set forth in G.S. 62-133.6(b). According to Duke personnel, several factors have contributed to the increase in the estimate, including industry-wide initiation of similar environmental compliance work nationwide and its effect on labor availability, and the increases in the prices for materials. These cost increases have been mitigated by refinement in the SNCR work scope and the proposal concerning the retirement of Cliffside Units 1-4. While no decisions have yet been made to retire Cliffside Units 1-4, Duke 's total project amount of $1,731,510,400 does not include the costs associated with NO_x removal for these units.

The Public Staff will continue to monitor the factors causing increases in the environmental compliance cost estimates.

III. Amortization of Costs

In Section 9 of the Act [G.S. 62-133.6(b)], the investor owned utilities are allowed to accelerate the recovery of their estimated environmental compliance costs over a seven-year period, beginning January 1, 2003, and ending December 31, 2009. The statute requires that a minimum of 70% of the environmental compliance costs be amortized before December 31, 2007, when the rate freeze period expires. In Duke's case, this amount is $1,050,000,000. The annual levelized amount is $214,285,714. The maximum amount that can be amortized in any given year is 150% of the annual levelized environmental compliance costs or $321,428,000.

Using the protocols established by the Act and subsequent Commission orders, Duke reported that its environmental compliance costs amortization for 2005 is $311,236,000. The Public Staff reviewed Duke's quarterly amortization filings and supporting journal entries and concluded that the amounts appear to be accurate. The cumulative amortization to date is $637,429,142.

IV. Contracts

No contracts were reviewed during this audit period. Contracts in 2003 and 2004 are still in effect, with changes relating only to cost increases and schedules.

V. Site Inspections

On March 8, 2006, the Public Staff conducted another inspection of Duke's Marshall Steam Station in Mooresville, North Carolina. Specifically, the Public Staff inspected the construction of the scrubbers and associated wastewater and gypsum handling facilities. The Public Staff confirmed that the installation of scrubbers, stack, conveyor systems ductwork, and wastewater treatment systems is progressing on schedule. No other facilities were inspected. It is the intent of the Public Staff to continue inspections of other coal-fired generating facilities as Duke continues to install emission reduction equipment in its boiler units.

REPORT OF THE PUBLIC STAFF ON COSTS INCURRED AND AMORTIZED BY PROGRESS ENERGY CAROLINAS, INC. IN COMPLIANCE WITH SESSION LAW 2002-4

Docket No. E-2, Sub 815

May 22, 2006

Section 14 of Session Law 2002-4 ("the Clean Smokestacks Act" or "the Act") requires the Department of Environment and Natural Resources ("DENR") and the Utilities Commission to report, by June 1 of each year, on the implementation of the Act to the Environmental Review Commission and the Joint Legislative Utility Review Committee. The May 30, 2003, report of DENR and the Commission states that the Public Staff will audit the books and records of the investor owned utilities on an ongoing basis in regard to the costs incurred and amortized in compliance with the Act. The Public Staff has undertaken such a review, focusing on the verification of costs related to complying with the Act, the amortization of those costs, and the operating results of emission reduction equipment installed by Progress Energy Carolinas, Inc. ("PEC"). This report is a continuation of the Public Staff's ongoing review and presents the Public Staff's findings for the twelve months ended December 31, 2005.

I. Work Being Performed

PEC's original plan to install Selective Catalytic Reduction ("SCR") technology to remove NO_x and flue-gas desulfurization technology ("scrubbers") to remove SO_2 to comply with the Act remains practically the same with only minor changes to the compliance schedule and plan.

Substantial work has been accomplished at the Asheville and Roxboro plants. The scrubber on Asheville Unit 1 was placed into operation in November 2005. Work is steadily progressing to complete the scrubber on Asheville Unit 2. It is scheduled to become operational in the spring of 2006. Substantial work is also being done at Asheville to construct an SCR, which is expected to be online in 2007.

The Roxboro plant construction is also well underway. New coal and limestone handling facilities have been completed. Scrubbers on all four units are in varying stages of completion.

II. Environmental Compliance Costs

PEC is required by the Act to submit a report to the Commission and to DENR on or before April 1 of each year containing the actual environmental compliance costs incurred during the previous calendar year. As defined by G.S. 62-133.6(a)2, "environmental compliance costs" include only capital costs.

In its calendar year 2005 Progress Report ("2005 Report"), PEC reported that its actual environmental compliance costs in calendar year 2005 were $181,274,000. The cumulative environmental compliance costs incurred by PEC through 2005 are $289,365,900, as follows:

Year 2002	$ 1,377,417 [1]
Year 2003	26,528,942
Year 2004	80,185,975
Year 2005	181,273,566
Total	$289,365,900 [2]

PEC's expenditures to date involve emission reduction technologies at its Asheville, Mayo, Roxboro, Lee, and Sutton facilities. Environmental compliance costs were incurred for project studies and investigations, engineering, contracting, and equipment acquisition.

As part of its review, the Public Staff requested information from PEC on the project costs, invoices documenting costs, and the purpose of the costs. PEC provided project cost sheets delineating actual project costs by year into the following categories: (1) company labor costs; (2) materials costs; (3) outside services costs; (4) burdens; and (5) other costs. These costs are as follows:

Company Labor	$ 2,721,834
Material	109,853,444
Outside Services	65,488,943
Labor Loads/Overheads	2,737,459
Other	471,886
Total	$181,273,566

The project cost sheet was supported by detailed spreadsheets for a particular category. The Public Staff selected invoices in each category from the detailed spreadsheets and requested PEC to provide specific information on the selected costs. The Public Staff had discussions with PEC personnel regarding the cost items charged to projects. PEC provided documentation to support the selected costs.

PEC has estimated its environmental compliance costs at $1,362,293,000, as set forth on Appendix B in its 2005 Report. This represents an increase of $549,293,000

[1] Per Appendix B, costs for 2002, 2003 and 2004 are slightly different than the costs reported for those years in previous reports. For 2004, a majority of the difference relates to a Company adjustment to include Asheville wastewater treatment (WWT) costs in the FGD line items for Asheville. In 2005, PEC began reporting WWT project costs separately.

[2] PEC's estimated and reported environmental compliance costs exclude certain costs attributable to the portions of its Mayo and Roxboro facilities that are owned by the NC Eastern Municipal Power Agency ("NCEMPA). According to PEC's FERC Form No. 1 for 2005, PEC entered into an agreement with NCEMPA in 2005 to limit its aggregate cost associated with PEC's environmental compliance costs to approximately $38 million.

or 67.6% over PEC's original estimate of $813,000,000, as set forth in G.S. 62-133.6(b). According to PEC personnel, several factors have contributed to the increase in the estimate, including its decision in 2003 to use wet scrubber technology instead of dry scrubbers, a significant increase in the price of materials, an increase in equipment costs due to the limited number of suppliers available, and adjustments of future costs based on actual costs of projects already completed or substantially completed.

Conversion to wet scrubber technology instead of the originally proposed dry scrubber technology has resulted in several modifications to the design and size of scrubber equipment, including the need for wastewater treatment. PEC has explained that the use of wet scrubber technology provides PEC greater flexibility in the types of coal it can burn. This will increase PEC's options with regard to minimizing the operational costs associated with Clean Smokestacks compliance. The Public Staff will continue to monitor this matter to determine the operational value of wet scrubbers as compared to their higher capital costs.

III. Amortization of Costs

In Section 9 of the Act [G.S. 62-133.6(b)], the investor owned utilities are allowed to accelerate the cost recovery of their estimated environmental compliance costs over a seven-year period, beginning January 1, 2003, and ending December 31, 2009. The statute requires that a minimum of 70% of the environmental compliance costs be amortized before December 31, 2007, when the rate freeze period expires. In PEC's case, this amount is $569,100,000. The annual levelized amount is $116,142,857. The maximum amount that can be amortized in any given year is 150% of the annual levelized environmental compliance costs or $174,214,285.

Using the protocols established by the Act and subsequent Commission orders, PEC reported that its environmental compliance costs amortization for 2005 is $147,000,000. The Public Staff reviewed PEC's quarterly amortization filings, as well as the journal entries recorded, and concluded that the reported amounts appear to be accurate. The cumulative amortization to date is $395,218,808.

IV. Contracts

No contracts were reviewed during this audit period. Contracts reviewed in 2004 are still in effect, with only changes relating to cost increases and schedules.

V. Site Inspections

On April 5, 2006, the Public Staff conducted a site inspection of PEC's Asheville Steam Station at Arden, North Carolina. The Public Staff confirmed the operation of the Unit 1 scrubber and related equipment. The Public Staff observed the significant work in progress associated with the unit 2 scrubber and the SCR. The Public Staff also toured the new plant control room, which was updated in conjunction with the installation of the scrubbers and SCR.

On April 7, 2006, the Public Staff conducted a site inspection of PEC's Roxboro Steam Station at Roxboro, North Carolina. The Public Staff was able to confirm that significant progress had been made on the scrubbers for all four units, as well as the relocation of coal and limestone handling facilities. Similar control room improvements and updates were made on the unit 2 console, with plans to update other unit consoles in the near future. The Public Staff also observed measures being taken by PEC to provide redundancy and reliability in the operation of the units. These measures are intended to allow the Roxboro Station to continue operations in the event a scrubber related piece of equipment become inoperable.

It is the intent of the Public Staff to continue inspections of other coal-fired generating facilities as PEC continues to install emission reduction equipment in its boiler units.

VI. Other Issues

At the filing of this report, the Public Staff is still reviewing data responses received from PEC. The Public Staff will address any significant issues that arise in its next report to the Commission.

MEMORANDUM

To: Members of the Environmental Review Commission
From: Jennifer Mundt, Commission Analyst
Re: Reports to the Commission

The following reports have been submitted to the Environmental Review Commission by State agencies since the last reports distribution on 15 May 2006 are designated as read only. Copies of the reports are attached to this memorandum.

1. *Implementation of S.L. 2002-4 (Clean Smokestacks Act).* North Carolina Utilities Commission and the Department of Environment and Natural Resources. 1 June 2006. Statutory Authority: S.L. 2002-4, Sec. 11.

2. *Status report on the study of potential costs and benefits of enacting a renewable energy portfolio standard (RPS) in this State.* North Carolina Utilities Commission. 30 June 2006. Authority: Request of Environmental Review Commission in at its 24 January 2006 meeting.

The following three reports have been submitted to the Environmental Review Commission by State agencies since the last reports distribution on 15 May 2006 are being held for distribution in conjunction with potential agenda items at future Commission meetings:

1. *Progress in developing and implementing Coastal Habitat Protection Plans.* Coastal Resources Commission, Environmental Review Commission, and the Marine Fisheries Commission. Statutory Authority: (G.S.143B-279.8(e)).

2. *Activities and allocations from the Parks and Recreation Trust Fund from the prior fiscal year.* Parks and Recreation Authority. Statutory Authority: (G.S. 113-44.15(c)).

3. *Pilot program for inspection of animal waste management systems.* Statutory Authority: S.L. 1999-329(3.3), S.L. 2001-254(6), S.L. 2002-176(1.2).

The following two reports have been submitted to the Environmental Review Commission by the Environmental Management Commission and are distributed in connection with agenda Item 5:

1. and 2. *Quarterly report by the EMC as to its operations, activities, programs, and progress during the previous quarter (G.S. 143B-282(b)).* Environmental Management Commission. 1 July 2006 and 1 October 2006. Statutory Authority: G.S. 143B-282(b).

Please contact George Givens, Jeff Hudson, Jennifer McGinnis, or Jennifer Mundt at (919) 733-2578 if you have any questions or comments.

Dear Messrs. Albertson, Clodfelter, and Gibson:

On January 24, 2006, the Environmental Review Commission (ERC) of the North Carolina General Assembly adopted a motion requesting the North Carolina Utilities Commission (Commission) to undertake a study of the potential costs and benefits of enacting a renewable energy portfolio standard (RPS) in this State. The process proposed to and adopted by the ERC requires the Commission to issue a request for proposals (RFP) and to ultimately contract with an experienced consultant to perform the study under the direction and guidance of the Commission.

On February 23, 2006, we received a letter from George Givens, ERC Counsel, memorializing the above request. In his letter, Mr. Givens requested that the Commission provide the ERC with a status report on the study no later than July 1, 2006, and a final report on the study no later than December 1, 2006. We are pleased to provide the ERC with this status report of our progress to date, and we remain committed to provide our final report by December 1, 2006, as requested.

From the beginning, the Commission has recognized the importance of working with interested stakeholders and soliciting their input. Prior to the January 2006 ERC meeting, the Commission met with utility and environmental representatives to discuss options for performing a cost/benefit study. After the ERC meeting, the Commission formed an advisory group representing various stakeholder interests, including ratepayers, utilities, and environmental groups, to assist it in preparing its report for the legislature. The following nine persons have agreed to serve on the RPS Advisory Group:

Mitch Williams, Progress Energy
David Beam, North Carolina Electric Membership Corporation
Ivan Urlaub, North Carolina Sustainable Energy Association
Kris Coracini, Environmental Defense
Sue Gouchoe, North Carolina Solar Center
Preston Howard, Manufacturers and Chemical Industry Council of NC
Dr. Ed Erickson, Professor of Economics, North Carolina State University
James McLawhorn, Public Staff-NCUC
Len Green, North Carolina Attorney General's Office

Because this project involves the expenditure of State funds, it was necessary to solicit competitive bids from consultants willing to perform the cost/benefit study. The Commission's initial task, therefore, was to prepare a memorandum for the Department of Commerce (Commerce) to seek approval from the Department of Administration, Division of Purchasing and Contracts (Administration), to issue a request for proposals (RFP) to engage an experienced consultant to perform the required study. This memorandum was prepared and sent to Commerce on March 10, 2006. Approval to issue an RFP was received on April 6, 2006.

While awaiting approval to issue an RFP, the Commission, with the assistance of the RPS Advisory Group, drafted an RFP. After reviewing efforts undertaken in other states, Commission Staff prepared a draft RFP and circulated it to the RPS Advisory Group for comment. A final draft RFP was sent to Commerce on April 21, 2006. Additional changes were made, and the final RFP was sent to Administration on April 27, 2006.

After approval by Administration, the RFP was posted on May 12, 2006, with bids due on June 5, 2006. A copy of the final RFP is enclosed. Notice of the issuance of the RFP was posted on the Commission's web site. In addition, based upon input from the RPS Advisory Group and inquiries from press reports, nineteen individuals representing sixteen consulting firms were specifically notified by email and invited to bid. The Commission ultimately received five bids in response to the RFP.

To most efficiently complete the evaluation process, the following balanced, representative subset of the RPS Advisory Group was selected to assist the Commission with evaluating the bids submitted in response to the RFP: James McLawhorn, Ivan Urlaub, Mitch Williams, and Dr. Ed Erickson. All members of the RPS Advisory Group, however, will participate and lend their expertise in the remaining phases of this project, both in providing input to define the parameters of the study as well as in reviewing the work performed.

The evaluators met on May 26, 2006, before the bids were due, to determine the criteria against which the bids would be evaluated. The group decided that technical merits

of the bids would be primarily evaluated against the non-cost criteria stated in Section 4.I of the RFP – "completeness, content, experience with similar projects, the ability of the offeror and its staff, proposed plan of action to carry out the requirements set forth herein" – and the bidder's references. The group further decided that bids would be evaluated by the group as a whole, rather than individually by each evaluator.

On June 6, 2006, copies of the bidders' proposals were distributed to evaluators, who then met on June 9, 2006, to evaluate the proposals. Based upon the results of the evaluation, a memorandum was sent to Commerce on June 15, 2006, requesting that the costs proposals be opened for those bidders who successfully passed the technical review. The required two days' notice was sent to those bidders on June 20, 2006, and the cost proposals were opened on June 23, 2006. Based upon a review of the cost proposals, a memorandum was sent to Commerce on June 23, 2006, recommending a bidder with which the contract should be awarded. The recommendation is currently being reviewed by Administration and a contract should be awarded shortly.

The Commission will meet with the consultant and the RPS Advisory Group within two weeks after the contract is awarded to discuss and determine the specifics of the study to be performed, including the analytical methods and models to be used, sources of data to be used as input for the study, assumptions to be made and used in the study, scenarios to be analyzed in the study, and sensitivity analyses to be performed as part of the study. Knowledgeable input from the consultant based upon prior similar research will be vital in determining the specific scope and details of the study and in maximizing the usefulness of the study to the legislature in its deliberations. The Commission expects the consultant, in gathering data for the study, to confer, to the greatest extent possible, with the State Energy Office, the North Carolina Solar Center, NC GreenPower, utilities, and others who have previously investigated or attempted to inventory the potential for renewable energy production in North Carolina. However, the consultant shall endeavor to independently verify the reasonableness of all data and assumptions used in the study.

The consultant shall deliver to the Commission an initial draft report, incorporating the results of the cost/benefit analysis, within twelve weeks after the contract has been awarded. The draft report will be circulated to members of the RPS Advisory Group for comment and critique. The consultant shall meet in Raleigh with the Commission and members of the RPS Advisory Group to discuss comments received and to determine final revisions necessary to the report, and shall deliver to the Commission a final report within three weeks thereafter. Lastly, the consultant shall assist the Commission in presenting the

results of the study to the ERC and shall remain available to meet with the Commission and others to present and discuss the results of the study.

Please feel free to contact me if you have any questions. With warmest personal regards, I am

Very truly yours,

James Y. Kerr, II

NORTH CAROLINA DEPARTMENT OF COMMERCE
REQUEST FOR PROPOSALS
May 12, 2006

RFP #43-22111004-06

TITLE: Consulting Services on a Renewable Energy Portfolio Standards Study

USING AGENCY: North Carolina Utilities Commission

CLOSING DATE: 3:00 p.m., June 5, 2006

Sealed proposals subject to the conditions made a part thereof will be received until the specified closing date and time specified above, for furnishing services described herein.

Mailing Instructions:

IF DELIVERED BY US POSTAL SERVICE, ADDRESS AS BELOW:

RFP #43-22111004-06
NC Department of Commerce
Purchasing Office
ATTN: Brenda Allen
4302 Mail Service Center
Raleigh, NC 27699-4302

IF DELIVERED BY ANY OTHER METHOD, ADDRESS AS BELOW:

RFP #43-22111004-06
NC Department of Commerce
Purchasing Office
ATTN: Brenda Allen
301 N. Wilmington St., Rm. 586
Raleigh, NC 27601

It is the sole responsibility of the offeror to have the proposal in this office by the specified time and date of closing.

IMPORTANT: Indicate firm name ("Technical Proposal" or "Cost Proposal") *(if applicable)* and RFP number on the front of each sealed proposal envelope or package, along with the date for receipt of proposal specified above. **Technical and cost proposals** must be sealed separately within this package.

IMPORTANT: NO QUESTIONS CONCERNING THE TECHNICAL SPECIFICATIONS IN THIS RFP WILL BE ANSWERED VERBALLY. QUESTIONS MAY BE FAXED OR E-MAILED UNTIL 5:00 P.M., MAY 22, 2006. QUESTIONS RECEIVED AFTER THIS DATE WILL NOT BE CONSIDERED. A WRITTEN SUMMARY OF ALL QUESTIONS RECEIVED IN ACCORDANCE WITH THE AFOREMENTIONED DEADLINE WILL BE ANSWERED AND POSTED ON THE INTERNET AS AN ADDENDUM TO THIS RFP NO LATER THAN 5:00 P.M., MAY 26, 2006. IT IS THE SOLE RESPONSIBILITY OF THE OFFEROR TO ACCESS THE INTERNET FOR ADDENDA TO THIS RFP. ACCESS THE INTERNET AS FOLLOWS:

WEB ADDRESS: www.ips.state.nc.us/ips/pubmain.asp

Purchasing Officer
FAX # (919) 733-8802
E-MAIL: ballen@nccommerce.com

WITHIN TWO (2) DAYS AFTER NOTIFICATION OF AWARD OF THIS CONTRACT, THE SUCCESSFUL VENDOR MUST REGISTER WITH NC E-PROCUREMENT @ YOUR SERVICE (http://vendor.ncgov.com). MORE INFORMATION ON THIS REQUIREMENT IS IN THE BODY OF THIS DOCUMENT.

GENERAL INFORMATION ON SUBMITTING PROPOSALS

1. **EXCEPTIONS: All proposals are subject to the terms and conditions outlined herein. All responses shall be controlled by such terms and conditions and the submission of other terms and conditions, price lists, catalogs, and/or other documents as part of an offeror's response will be waived and have no effect either on this Request for Proposals or on any contract that may be awarded resulting from this solicitation.**
   Offeror specifically agrees to the conditions set forth in the above paragraph by signature to the proposal.

2. **CERTIFICATION:** By executing the proposal, the signer certifies that this proposal is submitted competitively and without collusion (G.S. 143-54), that none of our officers, directors, or owners of an unincorporated business entity has been convicted of any violations of Chapter 78A of the General Statutes, the Securities Act of 1933, or the Securities Exchange Act of 1934 (G.S. 143-59.2), and that we are not an ineligible vendor as set forth in G.S. 143-59.1. False certification is a Class I felony.

3. **ORAL EXPLANATIONS:** The State shall not be bound by oral explanations or instructions given at any time during the competitive process or after award.

4. **REFERENCE TO OTHER DATA:** Only information which is received in response to this RFP will be evaluated; reference to information previously submitted shall not be evaluated.

5. **ELABORATE PROPOSALS:** Elaborate proposals in the form of brochures or other presentations beyond that necessary to present a complete and effective proposal are not desired.

   In an effort to support the sustainability efforts of the State of North Carolina we solicit your cooperation in this effort.

   It is desirable that all responses meet the following requirements:
   - All copies are printed **double sided**.
   - All submittals and copies are printed on **recycled paper with a minimum post-consumer content of 30%** and indicate this information accordingly on the response.
   - Unless absolutely necessary, all proposals and copies should **minimize or eliminate use of non-recyclable or non re-usable materials** such as plastic report covers, plastic dividers, vinyl sleeves, and GBC binding. Three-ringed binders, glued materials, paper clips, and staples are acceptable.
   - Materials should be submitted in a format which allows for **easy removal and recycling** of paper materials.

6. **COST FOR PROPOSAL PREPARATION:** Any costs incurred by offerors in preparing or submitting offers are the offerors' sole responsibility; the State of North Carolina will not reimburse any offeror for any costs incurred prior to award.

7. **TIME FOR ACCEPTANCE:** Each proposal shall state that it is a firm offer which may be accepted within a period of 90 days. Although the contract is expected to be awarded prior to that time, the 90 day period is requested to allow for unforeseen delays.

8. **TITLES:** Titles and headings in this RFP and any subsequent contract are for convenience only and shall have no binding force or effect.

9. **CONFIDENTIALITY OF PROPOSALS:** In submitting its proposal the offeror agrees not to discuss or otherwise reveal the contents of the proposal to any source outside of the using or issuing agency, government or private, until after the award of the contract. Offerors not in compliance with this provision may be disqualified, at the option of the State, from contract award. Only discussions authorized by the issuing agency are exempt from this provision.

10. **RIGHT TO SUBMITTED MATERIAL:** All responses, inquiries, or correspondence relating to or in reference to the RFP, and all other reports, charts, displays, schedules, exhibits, and other documentation submitted by the offerors shall become the property of the State when received.

11. **OFFEROR'S REPRESENTATIVE:** Each offeror shall submit with its proposal the name, address, and telephone number of the person(s) with authority to bind the firm and answer questions or provide clarification concerning the firm's proposal.

12. **SUBCONTRACTING:** Offerors may propose to subcontract portions of the work provided that their proposals clearly indicate what work they plan to subcontract and to whom and that all information required about the prime contractor is also included for each proposed subcontractor.

13. **PROPRIETARY INFORMATION:** Trade secrets or similar proprietary data which the offeror does not wish disclosed to other than personnel involved in the evaluation or contract administration will be kept confidential to the extent permitted by NCAC T01:05B.1501 and G.S. 132-1.3 if identified as follows: Each page shall be identified in boldface at the top and bottom as "CONFIDENTIAL". Any section of the proposal which is to remain confidential shall also be so marked in boldface on the title page of that section. Cost information may not be deemed confidential. In spite of what is labeled as confidential, the determination as to whether or not it is shall be determined by North Carolina law.

14. **HISTORICALLY UNDERUTILIZED BUSINESSES:** Pursuant to General Statute 143-48 and Executive Order #150, the Agency invites and encourages participation in this procurement process by businesses owned by minorities, women, disabled, disabled business enterprises and non-profit work centers for the blind and severely disabled.

15. **PROTEST PROCEDURES:** When an offeror wants to protest a contract awarded by the Secretary of Administration or by an agency over $25,000 resulting from this solicitation, they must submit a written request to the State Purchasing Officer at Purchase and Contract, 1305 Mail Service Center, Raleigh, NC 27699-1305. This request must be received in the Division of Purchase and Contract within thirty (30) consecutive calendar days from the date of the contract award. When an offeror wants to protest a contract awarded by an agency or university resulting from this solicitation that is over $10,000 but less than $25,000 for any agency, or any contract awarded by a university, they must submit a written request to the issuing procurement officer at the address of the issuing agency. This request must be received in that office within thirty (30) consecutive calendar days from the date of the contract award. Protest letters must contain specific reasons and any supporting documentation for the protest. Note: Contract award notices are sent only to those actually awarded contracts, and not to every person or firm responding to this solicitation. Contract status and Award notices are posted on the Internet at http://www.state.nc.us/pandc/. All protests will be handled pursuant to the North Carolina Administrative Code, Title 1, Department of Administration, Chapter 5, Purchase and Contract, Section 5B.1519. (See Protest Information at http://www.doa.state.nc.us/PandC/protests.pdf for more information.)

16. **TABULATIONS:** The Division has implemented an Interactive Purchasing System (IPS) that allows the public to retrieve bid tabulations electronically from our Internet web site: http://www.state.nc.us/pandc/. Click on the IPS BIDS icon, click on Search for Bid, enter the RFP number, and then search. Tabulations will normally be available at this web site not later than one working day after opening. Lengthy tabulations may not be available on the Internet, and requests for these verbally or in writing cannot be honored.

17. **VENDOR REGISTRATION AND SOLICITATION NOTIFICATION SYSTEM:** Vendor Link NC allows vendors to electronically register free with the State to receive electronic notification of current procurement opportunities for goods and services available on the Interactive Purchasing System. Online registration and other purchasing information are available on our Internet web site: http://www.state.nc.us/pandc/.

18. **RECIPROCAL PREFERENCE:** G.S. 143-59 establishes a reciprocal preference law to discourage other states from applying in-state preferences against North Carolina's resident offerors. The "Principal Place of Business" is defined as the principal place from which the trade or business of the offeror is directed or managed.

Section 1

Background

The North Carolina Utilities Commission (Commission) is an agency of the State of North Carolina created by the General Assembly to regulate the rates and services of all public utilities in North Carolina. The purpose of regulation of public utilities is to protect the interest of the public to the end that adequate service may be provided at reasonable rates. The Commission's authority to regulate public utilities throughout the State is set forth in Chapter 62 of the North Carolina General Statutes, the Public Utilities Act. The Commission's seven members are appointed by the Governor and confirmed by the General Assembly.

Section 2

Introduction

A renewable energy portfolio standard (RPS) policy is a requirement that retail electric suppliers within a given jurisdiction include a minimum amount of renewable energy in their supply portfolios. While various means have been employed, utility compliance with an RPS is often accomplished through either self-generation using renewable energy resources, such as wind, solar, geothermal, biomass, and hydropower, or the purchase of renewable energy credits (RECs) from other renewable energy generators. At least one other state has also allowed electric suppliers to apply substantial and meaningful energy efficiency measures toward the RPS requirement. Numerous states have adopted an RPS, and the debate over whether to adopt an RPS in North Carolina has been ongoing for the past several years.

At its January 24, 2006 meeting, the Environmental Review Commission (ERC) of the North Carolina General Assembly requested that the North Carolina Utilities Commission (Commission) undertake a study of the potential costs and benefits of enacting an RPS in this State. The process proposed to and adopted by the ERC requires the Commission to issue a Request for Proposals (RFP) and to ultimately contract with an experienced consultant to perform the study under the direction and guidance of the Commission. As a part of this process, the Commission intends to work closely with interested stakeholders and has formed a nine-member RPS Advisory Group representing various stakeholder interests, including ratepayers, utilities, and environmental groups.

The request by the General Assembly for an economic cost/benefit analysis is beyond the normal scope of work handled by the Commission, and the Commission is not adequately staffed to handle this work. Current staff is fully engaged in day-to-day operations of the Commission. There is no ability within current staff to take on a new project of this magnitude, and the time and cost to develop such expertise and analytical tools within the agency would not allow the Commission to timely respond to the legislature's request. The Commission, therefore, must secure the services of a consultant that has the appropriate expertise and experience to perform the requested analysis of the potential costs and benefits of an RPS in North Carolina.

Section 3

Scope of Work

The following outlines the specific components that will comprise the entire work being requested of Contractor:

1. **Produce a research report suitable for delivery to the North Carolina General Assembly on the potential costs and benefits of the adoption of an RPS in North Carolina.**

   The report shall present and explain the results of a detailed analysis performed by the consultant of the potential quantitative and qualitative costs and benefits of reasonable RPS scenarios compared to the status quo based upon those proposed in North Carolina and those adopted in other states. The analysis and report shall explicitly address both the impact of various RPS scenarios on electric rates and the range of costs and benefits beyond impacts to electricity rates. In addition to addressing other issues relevant to consideration of an RPS, the report shall include a quantitative analysis and discussion of the potential capacity and feasibility by resource (i.e., solar, wind, biomass, etc.) for renewable energy generation in North Carolina. The report shall identify any policy, regulatory, or legislative issues which might impede further development of renewable energy and implementation of an RPS in North Carolina. The cost/benefit analysis underlying the report shall be based upon sound economic modeling techniques, and all assumptions shall be clearly expressed and explained.

   The consultant shall meet in Raleigh with the Commission and members of the RPS Advisory Group within two (2) weeks after the contract has been awarded to discuss and determine the specifics of the study to be performed, including the analytical methods and models to be used, sources of data to be used as input for the study, assumptions to be made and used in the study, scenarios to be analyzed in the study, and sensitivity analyses to be performed as part of the study. Knowledgeable input from the consultant based

upon prior similar research is vital in determining the specific scope and details of the study and in maximizing the usefulness of the study to the legislature in its deliberations.

The consultant shall, in gathering data for the study, confer, to the greatest extent possible, with the State Energy Office, the North Carolina Solar Center, NC GreenPower, electric utility companies, and others who have previously investigated or attempted to inventory the potential for renewable energy production in North Carolina. However, the consultant shall endeavor to independently verify the reasonableness of all data and assumptions used in the study.

The consultant shall deliver to the Commission an initial draft report, incorporating the results of the cost/benefit analysis, within twelve (12) weeks after the contract has been awarded. The draft report shall be circulated to members of the RPS Advisory Group for comment and critique. The consultant shall meet in Raleigh with the Commission and members of the RPS Advisory Group to discuss comments received and to determine final revisions necessary to the report.

The consultant shall deliver to the Commission a final report within three (3) weeks of the meeting with the Commission and members of the RPS Advisory Group to discuss comments on the initial draft report.

2. **Coordinate with Commission to present overview of report and results of underlying cost/benefit analysis to members of ERC.**

The consultant shall work with the Commission to prepare and present a final presentation to members of the North Carolina General Assembly. The consultant shall deliver to the Commission a PowerPoint slide presentation at least one (1) week in advance of any such presentation and shall travel to Raleigh to assist the Commission with presenting the results of the study. It is anticipated that such a presentation may be scheduled for January 2007; however, the timing is at the discretion of the legislature.

The consultant shall remain available to meet with the Commission and others to present and discuss the results of the study.

Contractor Requirements:

Awarded Contractor: It is the general intent to award this contract to a single overall bidder on all items outlined in the Request for Proposal. Offer will submit a proposal on all components as a whole. The contract requirements will not be split into multiple components due to the connectivity of the project.

Experience:

Offeror must have a broad base of experience in all work areas. Preferably, the offeror will have national, state and local experience in:

- Generation, transmission, and distribution of electric power
- Production of electricity from non-renewable and renewable energy sources
- Forecasting changes in the cost of fuel and cost of electric generation from non-renewable and renewable energy sources
- Evaluating electric demand offset by use of energy efficiency measures
- Ratemaking methodology
- Economic modeling of costs and benefits of public policy decisions
- Working with state utility commissions
- Working with diverse stakeholder groups

The Commission will evaluate the proposal on the following factors, in addition to other evaluation criteria noted in Section 4, I :

- Extent of prior experience modeling costs and benefits of RPS; **bidder must have experience providing at least one (1) OBJECTIVE RSP cost/benefit analysis to a governmental regulatory or legislative client.**
- Quality of previously performed and published economic costs/benefit analyses.
- Organization capacity to produce the required work product within the desired time frame.
- Technical approach of project
- Reasonable cost structuring in light of the tasks to be accomplished and the national experience sought.

Approach to Work: Offeror must be able to work with a wide range of audiences and stakeholders including public sector and private sector, elected officials, and community advocates. Groups may have competing agendas and the bidder must be able to bring a common vision to the groups.

Availability: Offeror should have sufficient staff to meet all requirements of the work within the agreed timeframes, and have the flexibility to respond to the demands of the work to meet the timeframes.

Reports/Meetings: The Contractor will be required to provide written monthly progress reports to the Commission.

Section 4

Procurement Process

A. Offerors are urged to submit a proposal for establishing and performing the services described herein. All proposals must be submitted strictly in accordance with the requirements of the Request for Proposal. Failure to furnish any required information with your proposal is grounds for rejection, at the option of the State.

B. Each offeror shall demonstrate in its proposal that the firm, its management and employees are experienced and competent and has the background, training and experience to perform the services required by this Request for Proposal.

C. Proposals in one original and seven (7) copies will be received from each offeror in two separate sealed packages – the Technical Proposal and the Cost Proposal. Each original shall be signed and dated by an official authorized to bind the firm. Unsigned proposals will not be considered.

NOTE: No technical information shall be contained in the cost proposal. No cost information shall be contained in the technical proposal. If any cost information is included in the technical proposal and/or if any technical information is included in the cost proposal, the offeror's entire proposal shall be rejected.

D. All proposals must be received by the issuing agency not later than the date and time specified on the cover sheet of this RFP. Refer to the cover page for mailing/delivery instructions.

E. At that date and time, the package containing the **technical proposals** from each responding firm will be publicly opened and the name of each offeror announced publicly. A notation will also be made whether a separate sealed cost proposal has been received. Cost proposals will be placed in safekeeping until opened at a later date.

F. Technical proposals will be evaluated first.

G. Upon completion of the technical evaluation, the cost proposals of those firms whose technical proposals have been deemed acceptable will be publicly opened. The total cost offered by each firm will be tabulated and become a matter of public record. Interested parties are cautioned that these costs and their components are subject to further evaluation for completeness and correctness and therefore may not be an exact indicator of an offeror's pricing position.

H. At their option, the evaluators may request oral presentations or discussion with any or all offerors for the purpose of clarification or to amplify the materials presented in any part of the proposal. However, offerors are cautioned that the evaluators are not required to request clarification; therefore, all proposals should be complete and reflect the most favorable terms available from the offeror.

I. Proposals will be evaluated according to completeness, content, experience with similar projects, the ability of the offeror and its staff, proposed plan of action to carry out the requirements set forth herein, and cost. Award of a contract to one offeror does not mean that the other proposals lacked merit, but that, all factors considered, the selected proposal was most advantageous to the State.

In addition to any other evaluation criteria identified in the State agency's solicitation document, the agency shall, for purposes of evaluating proposed or actual contract performance outside of the United States, consider the following factors to ensure that any award will be in the best interest of the State:

Total cost to the State
Level of quality provided by the vendor
Contractor Experience – Address all areas listed in Contractor Requirements Section, Page 5
Process capability across multiple jurisdictions
Protection of the State's information and intellectual property
Availability of pertinent skills
Ability to understand the State's business requirements and internal operational culture
Risk factors such as the security of the State's information technology
Relations with citizens and employees
Contract enforcement jurisdictional issues

J. Offerors are cautioned that this is a request for offers, not a request to contract, and the State reserves the unqualified right to reject any and all offers when such rejection is deemed to be in the best interest of the State.

K. **NOTE:** This is a service contract and the 1.75% fee described therein will not be assessed. **However, if your firm is the successful vendor as a result of this solicitation, formal award will not be finalized until your firm has completed the vendor registration process with the Statewide E-Procurement Service.** This registration is necessary in order for the Department to have the capability to issue purchase orders for the services described herein. Electronic registration can be accessed at http://vendor.ncgov.com. If you experience any problems with the registration process, contact E-Procurement Customer Service by phone at 1-888-211-7440 or e-mail at ephelpdesk@ncmail.net.

Section 5

Proposal Requirements

Proposals shall be submitted in a sealed package. The package shall be labeled "PROPOSAL" and must bear the name of the Division, the RFP number and closing date. Technical proposals and cost proposals **must** be sealed separately within this package.

The proposal must contain the following information:

Table of Contents
Corporate Background and Experience
References
Project Staffing and Organization
Technical Approach (see Section 3)
Outsourcing
Cost **(must be submitted in a separate sealed package)**
Execution Page
Service Location Page
Report Samples

Corporate Background and Experience
This section will include background information on the organization and should give details of experience in conducting economic modeling and cost/benefit analyses, particularly with regard to energy policy or renewable energy renewable portfolios. Include list of clients for whom you have provided similar services. See Contractor Requirements, Page 5.

References
A list of references (including a minimum of 3 contact persons and telephone numbers) for whom similar work has been performed must be included.

Project Staffing and Organization
This section must include the proposed staffing, deployment and organization of personnel to be assigned to this account. The offeror shall provide information regarding the qualifications and experience of all executive, managerial, legal and professional personnel to be assigned to this project, including resumes citing education, experience with similar projects and the responsibilities to be assigned to each person.

Technical Approach
This section shall include, in narrative, outline, and or/graph form the offeror's approach to accomplishing the tasks outlined in the Scope of Work section of this RFP. A description of each task and deliverable and the schedule for accomplishing each shall be included. Indicate what services, if any, could not be done in-house and would have to be subcontracted.

Outsourcing
The Vendor must detail the manner in which it intends to utilize resources or workers located outside of the United States, and the State of North Carolina will evaluate the additional risks, costs and other factors associated with such utilization to make the award for this proposal as deemed by the awarding authority to be in the best interest of the State.

For any proposed or actual utilization or contract performance outside of the United States, the offeror's proposal must include:

- The location of work performed under a state contract by the vendor, any subcontractors, employees, or other persons performing the contract.

- The corporate structure and location of corporate employees and activities of the vendors, its affiliates or any subcontractors.

The State may initiate proceedings to debar a vendor from participation in the RFP process and from contract award as authorized by North Carolina law, if it is determined that the vendor has refused to disclose or has falsified any information provided herein.

Cost Proposal
The Cost Proposal shall be submitted in a separate, sealed package and contain:

Personnel Costs (including hourly rates and total hours)
Travel and Subsistence Expenses
Subcontractor Costs (if any)
Other Costs (e.g., office expenses)
TOTAL COST A total not to exceed cost representing the maximum amount for all work to be performed must be clearly indicated under this heading.

NOTE: Award will be made based on Not To Exceed (NTE) amount, but billing shall be based on the hourly rates plus expenses.

Execution Page
The Execution Page (SEE PAGE 9) must be included in your proposal.

Service Location Page
The Service Location Page (SEE PAGE 10) must be included in your proposal.

Report Samples
Offeror should submit copies of any analyses/reports/studies relevant to the experience outlined in this RFP. Offeror is requested to submit at least one report sample and no more than three different samples. Five copies of each sample should be submitted.

Section 6
Contract Term
The term of this contract will be on or about July 1, 2006 through June 30, 2007. The Department reserves the right to extend this contract for two additional one-year periods. Total contract term will not exceed three years. Any extensions will be made by written amendments duly executed by the Contractor and the Department.

Contract Administrator
The Department shall designate one person as the Contract Administrator for this contract. This person will be responsible for the following duties:

1. The Contract Administrator and liaison for the contract will be Sam Watson. The Contract Administrator will approve the work schedule. Any documents that may be generated as a result of this contract will be submitted to the Contract Administrator for approval.

2. Determination as to whether the Contractor is satisfactorily performing the services delineated in the contract shall be at the discretion of the Contract Administrator. In the event performance is unsatisfactory, the Contract Administrator shall be responsible for initiating notifications to the Contractor as outlined in the contract. Any desired change in the contract must be approved by the Department's Purchasing Officer.

Contract Document

The contract shall be deemed to include, by verbatim incorporation, the following documents:
1. The Request for Proposal, dated May 12, 2006.
2. The offeror's proposal.
3. The acceptance of proposal.
4. Any written amendments to the contract which may be issued. Changes to the contract, or any of its terms and conditions, may be made only by written amendments stipulating the changes to be made and the effective date. Each amendment must be signed by both the Contractor and the Department with prior approval being granted by the Departmental Purchasing Office and the State Division of Purchase and Contract.

EXECUTION OF PROPOSAL

By submitting this proposal, the potential contractor certifies the following:

This proposal is signed by an authorized representative of the firm.

It can obtain insurance certificates as required within 10 calendar days after notice of award.

The cost and availability of all equipment, materials, and supplies associated with performing the services described herein have been determined and included in the proposed cost.

All labor costs, direct and indirect, have been determined and included in the proposed cost.

The offeror can and will provide the specified performance bond or alternate performance guarantee (if Applicable).

The potential contractor has read and understands the conditions set forth in this RFP and agrees to them with no exceptions.

The offeror is registered in NC E-Procurement @ Your Service or agrees to register within two days after notification of contract award.

Therefore, in compliance with this Request for Proposals, and subject to all conditions herein, the undersigned offers and agrees, if this proposal is accepted within 90 days from the date of the opening, to furnish the subject services.

NORTH CAROLINA GENERAL CONTRACT TERMS AND CONDITIONS

1. **GOVERNING LAW:** This contract is made under and shall be governed and construed in accordance with the laws of the State of North Carolina.

2. **SITUS:** The place of this contract, its situs and forum, shall be North Carolina , where all matters, whether sounding in contract or tort, relating to is validity, construction, interpretation and enforcement shall be determined

3. **INDEPENDENT CONTRACTOR:** The Contractor shall be considered to be an independent contractor and as such shall be wholly responsible for the work to be performed and for the supervision of its employees. The Contractor represents that it has, or will secure at its own expense, all personnel required in performing the services under this agreement. Such employees shall not be employees of, or have any individual contractual relationship with the Agency.

4. **KEY PERSONNEL:** The Contractor shall not substitute key personnel assigned to the performance of this contract without prior written approval by the Agency's Contract Administrator. The individuals designated as key personnel for purposes of this contract are those specified in the Contractor's proposal.

5. **SUBCONTRACTING:** Work proposed to be performed under this contract by the Contractor or its employees shall not be subcontracted without prior written approval of the Agency's Contract Administrator. Acceptance of an offeror's proposal shall include any subcontractor(s) specified therein.

6. **PERFORMANCE AND DEFAULT:** If, through any cause, the Contractor shall fail to fulfill in timely and proper manner the obligations under this agreement, the Agency shall thereupon have the right to terminate this contract by giving written notice to the Contractor and specifying the effective date thereof. In that event, all finished or unfinished deliverable items under this contract prepared by the Contractor shall, at the option of the Agency, become its property, and the Contractor shall be entitled to receive just and equitable compensation for any satisfactory work completed on such materials. Notwithstanding, the Contractor shall not be relieved of liability to the Agency for damages sustained by the Agency by virtue of any breach of this agreement, and the Agency may withhold any payment due the Contractor for the purpose of setoff until such time as the exact amount of damages due the Agency from such breach can be determined.

   In case of default by the Contractor, the State may procure the services from other sources and hold the Contractor responsible for any excess cost occasioned thereby. The State reserves the right to require performance bond or other acceptable alternative guarantees from successful offeror without expense to the State.

   Upon the entering of a judgment of bankruptcy of insolvency by or against the Contractor, the Agency may terminate this contract for cause.

   In addition, in the event of default by the Contractor under this contract, the State may immediately cease doing business with the Contractor, immediately terminate for cause all existing contracts the State has with the Contractor, and de-bar the Contractor from doing future business with the State. Upon the Contractor filing a petition for bankruptcy or the entering of a judgment of bankruptcy by or against the Contractor, the State may immediately terminate, for cause, this contract and all other existing contracts the Contractor has with the State, and de-bar the Contractor from doing future business with the State.

   Neither party shall be deemed to be in default of its obligations hereunder if and so long as it is prevented from performing such obligations by any act of war, hostile foreign action, nuclear explosion, riot, strikes, civil insurrection, earthquake, hurricane, tornado, or other catastrophic natural event or act of God.

7. **TERMINATION:** The Agency may terminate this agreement at any time by *60 days* notice in writing from the Agency to the Contractor. In that event, all finished or unfinished deliverable items prepared by the Contractor under this contract shall, at the option of the Agency, become its property. If the contract is terminated by the Agency as provided herein, the Contractor shall be paid for services satisfactorily completed, less payment or compensation previously made.

8. **PAYMENT TERMS:** Payment terms are Net not later than 30 days after receipt of correct invoice(s) or acceptance of services, whichever is later, or in accordance with any special payment schedule identified in this RFP. The using agency is responsible for all payments to the Contractor under the contract. Payment by some agencies may be made by procurement card and it shall be accepted by the Contractor for payment if the Contractor accepts that card (Visa, Mastercard, etc.) from other customers. If payment is made by procurement card, then payment may be processed immediately by the Contractor.

9. **AVAILABILITY OF FUNDS:** Any and all payments to the Contractor are dependent upon and subject to the availability of funds to the Agency for the purpose set forth in this agreement.

10. **CONFIDENTIALITY:** Any information, data, instruments, documents, studies or reports given to or prepared or assembled by the Contractor under this agreement shall be kept as confidential and not divulged or made available to any individual or organization without the prior written approval of the Agency.

11. **CARE OF PROPERTY:** The Contractor agrees that it shall be responsible for the proper custody and care of any property furnished it for use in connection with the performance of this contract or purchased by it for this contract and will reimburse the State for loss of damage of such property.

12. **COPYRIGHT:** No deliverable items produced in whole or in part under this agreement shall be the subject of an application for copyright by or on behalf of the Contractor.

13. **ACCESS TO PERSONS AND RECORDS:** The State Auditor shall have access to persons and records as a result of all contracts or grants entered into by State agencies or political subdivisions in accordance with General Statute 147-64.7.
The Contractor shall retain all records for a period of three years following completion of the contract.

14. **ASSIGNMENT:** No assignment of the Contractor's obligations nor the Contractor's right to receive payment hereunder shall be permitted. However, upon written request approved by the issuing purchasing authority , the State may:
    a. Forward the contractor's payment check(s) directly to any person or entity designated by the Contractor, or
    b. Include any person or entity designated by Contractor as a joint payee on the Contractor's payment check(s).
In no event shall such approval and action obligate the State to anyone other than the Contractor and the Contractor shall remain responsible for fulfillment of all contract obligations.

15. **COMPLIANCE WITH LAWS:** The Contractor shall comply with all laws, ordinances, codes, rules, regulations, and licensing requirements that are applicable to the conduct of its business, including those of federal, state, and local agencies having jurisdiction and/or authority.

16. **AFFIRMATIVE ACTION:** The Contractor shall take affirmative action in complying with all Federal and State requirements concerning fair employment and employment of people with disabilities, and concerning the treatment of all employees without regard to discrimination by reason of race, color, religion, sex, national origin, or disability.

17. **INSURANCE:** During the term of the contract, the contractor at its sole cost and expense shall provide commercial insurance of such type and with such terms and limits as may be reasonably associated with the contract. As a minimum, the contractor shall provide and maintain the following coverage and limits:

    a. Worker's Compensation - The contractor shall provide and maintain Worker's Compensation Insurance, as required by the laws of North Carolina, as well as employer's liability coverage with minimum limits of $150,000.00, covering all of Contractor's employees who are engaged in any work under the contract.
    If any work is subcontracted, the contractor shall require the subcontractor to provide the same coverage for any of its employees engaged in any work under the contract.

    b. Commercial General Liability - General Liability Coverage on a Comprehensive Broad Form on an occurrence basis in the minimum amount of $500,000.00 Combined Single Limit. (Defense cost shall be in excess of the limit of liability.

    c. Automobile - Automobile Liability Insurance, to include liability coverage, covering all owned, hired and non-owned vehicles, used in connection with the contract. The minimum combined single limit shall be $150,000.00 bodily injury and property damage; $150,000.00 uninsured/under insured motorist; and $1,000.00 medical payment.

    Providing and maintaining adequate insurance coverage is a material obligation of the contractor and is of the essence of this contract. All such insurance shall meet all laws of the State of North Carolina. Such insurance coverage shall be obtained from companies that are authorized to provide such coverage and that are authorized by the Commissioner of Insurance to do business in North Carolina. The contractor shall at all times comply with the terms of such insurance policies, and all requirements of the insurer under any such insurance policies, except as they may conflict with existing North Carolina laws or this contract. The limits of coverage under each insurance policy maintained by the contractor shall not be interpreted as limiting the contractor's liability and obligations under the contract.

18. **ADVERTISING:** Contractor agrees not to use the existence of this contract, the name of the agency, or the name of the State of North Carolina as part of any commercial advertising.

19. **ENTIRE AGREEMENT:** This contract and any documents incorporated specifically by reference represent the entire agreement between the parties and supersede all prior oral or written statements or agreements. This Request for Proposals, any addenda thereto, and the offeror's proposal are incorporated herein by reference as though set forth verbatim.

    All promises, requirements, terms, conditions, provisions, representations, guarantees, and warranties contained herein shall survive the contract expiration or termination date unless specifically provided otherwise herein, or unless superseded by applicable Federal or State statutes of limitation.

20. **AMENDMENTS:** This contract may be amended only by written amendments duly executed by the Agency and the Contractor. The NC Division of Purchase and Contract shall give prior approval to any amendment to a contract awarded through that office.

21. **TAXES:** G.S. 143-59.1 bars the Secretary of Administration from entering into contracts with vendors if the vendor or its affiliates meet one of the conditions of G. S. 105-164.8(b) and refuse to collect use tax on sales of tangible personal property to purchasers in North Carolina. Conditions under G. S. 105-164.8(b) include: (1) Maintenance of a retail establishment or office, (2) Presence of representatives in the State that solicit sales or transact business on behalf of the vendor and (3) Systematic exploitation of the market by media-assisted, media-facilitated, or media-solicited means. By execution of the bid document the vendor certifies that it and all of its affiliates, (if it has affiliates), collect(s) the appropriate taxes.

22. **YEAR 2000 COMPLIANCE/WARRANTY:** Vendor shall ensure the product(s) and service(s) furnished pursuant to this agreement ("product" shall include, without limitation, any piece of equipment, hardware, firmware, middleware, custom or commercial software, or internal components, subroutines, and interfaces therein) which perform any date and/or time data recognition function, calculation, or sequencing, will support a four digit year format, and will provide accurate date/time data and leap year calculations on and after December 31, 1999, at the same level of functionality for which originally acquired without additional cost to the user. This warranty shall survive termination or expiration of the agreement.

23. **GENERAL INDEMNITY:** The contractor shall hold and save the State, its officers, agents, and employees, harmless from liability of any kind, including all claims and losses accruing or resulting to any other person, firm, or corporation furnishing or supplying work, services, materials, or supplies in connection with the performance of this contract, and from any and all claims and losses accruing or resulting to any person, firm, or corporation that may be injured or damaged by the contractor in the performance of this contract and that are attributable to the negligence or intentionally tortious acts of the contractor provided that the contractor is notified in writing within 30 days that the State has knowledge of such claims. The contractor represents and warrants that it shall make no claim of any kind or nature against the State's agents who are involved in the delivery or processing of contractor goods to the State. The representation and warranty in the preceding sentence shall survive the termination or expiration of this contract.

24. **OUTSOURCING:** Any vendor or subcontractor providing call or contact center services to the State of North Carolina shall disclose to inbound callers the location from which the call or contact center services are being provided.
    If, after award of a contract, the contractor wishes to outsource any portion of the work to a location outside the United States, prior written approval must be obtained from the State agency responsible for the contract.

    Vendor must give notice to the using agency of any relocation of the vendor, employees of the vendor, subcontractors of the vendor, or other persons performing services under a state contract outside of the United States.

Re: Status of recommended legislation

The following table lists legislation recommended by the Environmental Review Commission to the 2006 Regular Session of the 2005 General Assembly, and the status of the recommended legislation. Recommendations that were enacted are followed by Session Law number, bill number, and short title. Recommendations not enacted are designated as such.

LEGISLATIVE RECOMMENDATIONS

#	Short Title		
1.	Environmental Technical Corrections 2006.		
	2006-79	HB 2165	Env. Tech Corrects/Reporting Reqs.
2.	Amend Environmental Laws 2006.		
	2006-255	SB 1587	Amend Env. & Nat. Resources Laws.
3.	Amend Natural Resource Laws 2006.		
	2006-255	SB 1587	Amend Env. & Nat. Resources Laws.
4.	Environmental Reports Consolidation 2006.		
	2006-79	HB 2165	Env. Tech Corrects/Reporting Reqs.
5.	Delay CWMTF Provisions.		
	2006-178	HB 2208	CWMTF Amendments.
6.	Extend Legislative Commission on Global Climate Change.		
	2006-73	SB 1591	Extend Climate Change Commission.

7. Fund Stream Mapping.
Not Enacted

8. State Parks System Additions.
2006-138 HB 2127 State Parks System Additions.

9. Tax Credits For Certain Real Property Donations.
Not Enacted

10. Mercury Switch Amendments.
2006-255, Sec. 5 SB 1587 Amend Env. & Nat. Resources Laws.

11. Underground Storage Tank Amendments 2006.
Not Enacted

12. Underground Storage Tank Program Funds.
2006-200 SB 1584 Underground Storage Tank Prgm. Adm. Funds.

13. Stormwater Management 2006.
2006-246 SB 1566 Stormwater Management 2006.

14. Low-Emission Vehicles/Funds.
Not Enacted

15. Childhood Lead Poisoning - Clarification of DENR Authority.

Enacted Legislation

Animal Waste Management

Clarify Animal Waste Management System Technical Specialist Certification Requirements

S.L. 2006-38 (SB 1598) extends from July 1, 2006 to September 1, 2007 the period of time that an animal waste management system technical specialist may provide the current level of services related to an animal waste management system and holds constant the requirements for approval as a technical specialist. The act directs the Department of Environment and Natural Resources (DENR) to evaluate the training and qualification requirements for technical specialists to determine whether the current approval process ensures an appropriate level of knowledge and expertise. In conducting the evaluation, DENR must consult with representatives from interested parties and organizations. DENR must submit a report of its findings, including any legislative recommendations, to the Environmental Review Commission on or before November 15, 2006.

This act became effective July 1, 2006. (TD)

Climate Change

Extend Climate Change Commission

S.L. 2006-73 (SB 1591) extends the period of time during which the Legislative Commission on Global Climate Change (Commission) may meet and prepare its final report, including any legislative recommendations, from November 1, 2006, to April 15, 2008. The act directs the Commission to submit an interim report to the General Assembly and the Environmental Review Commission no later than January 15, 2007, and authorizes the Commission to submit additional reports at its discretion.

This act became effective July 10, 2006. (TD)

Coastal Development

Increase Penalties for CAMA Violations

S.L. 2006-229 (HB 1523) increases the maximum civil penalty that may be assessed for a minor development violation under Coastal Area Management Act of 1974 (CAMA) from $250 to $1,000, and increases the maximum civil penalty that may be assessed for a major development violation under the Act from $2,500 to $10,000. In addition, the act authorizes the Coastal Resources Commission to assess reasonable costs of any investigation, inspection, or monitoring

that results in the assessment of a civil penalty for minor and major development violations under CAMA.

This act becomes effective December 1, 2006, and applies to violations and offenses committed on or after that date. (TD)

Environmental Health

Certify On-Site Wastewater Contractors

S.L. 2006-82 (HB 688) requires the construction, installation, repair, and inspection of on-site wastewater systems in the State to be conducted by a certified on-site wastewater contractor or inspector. To be certified, an individual must be at least 18 years old, submit a completed application and fee, and meet certain training and experience requirements. The act exempts certain individuals from the certification requirements including: an employee or contractor working under the direct and personal supervision of a certified contractor or inspector; a landowner who constructs, installs, or repairs a single septic system so long as it is intended for use by that person and members of that person's immediate family; a licensed general contractor who constructs or installs an on-site wastewater system ancillary to the building being constructed; and other qualified individuals.

The act establishes the On-Site Wastewater Contractors and Inspectors Certification Board (Board). The Board consists of nine members, three appointed by the Governor, three by the General Assembly upon recommendation of the President Pro Tem of the Senate, and three by the General Assembly upon recommendation of the Speaker of the House of Representatives. The members of the Board serve staggered four-year terms. The Board has administrative and disciplinary powers, and may determine eligibility requirements, establish grades of certification, develop and administer exams, and establish fees, not to exceed the following statutory maximums:

Purpose of Fee	Fee Amount
Application for basic certification	$150.00
Application for each step grade	$50.00
Certification renewal	$100.00
Reinstatement of revoked or suspended certification	$500.00
Application for on-site wastewater system inspector certification	$200.00
Replacement of a certificate	$25.00
Late renewal	$25.00

The certification requirements, continuing education requirements, and disciplinary powers of the Board become effective January 1, 2008. The remaining provisions of the act became effective July 10, 2006. (TD)

Wastewater System Approvals/Small Counties

S.L. 2006-136 (HB 1094) establishes a pilot program to modify the approval process for an on-site wastewater system in certain counties. To be eligible to participate in the pilot program, a county must meet all of the following criteria:

- The population of the county must not exceed 25,000 according to the most recent federal decennial census.

- The county must have more than 900 applications for improvement permits or authorizations to construct that are pending before the local health department as of July 19, 2006.
- The board of county commissioners and the local board of health for the county must both approve a resolution requesting to participate in the pilot program

The pilot program expands the authority to conduct soil and site evaluations as part of the process for issuance of an improvement permit to include licensed soil scientists, as well as agents of the local health department or the Department of Environment and Natural Resources (DENR). A licensed soil scientist who submits an application for an improvement permit or an authorization to construct must carry errors and omissions insurance or other appropriate liability insurance with a policy limit of not less than $1,000,000, and must include certain identifying information on each improvement permit or an authorization to construct that is prepared by or based on work provided by the licensed soil scientist. A local board of health may impose an additional fee not to exceed $200 for the costs of review and consideration of applications for an improvement permit or an authorization to construct that has been prepared by a licensed soil scientist. DENR must evaluate the effectiveness of the program and report its findings annually to the Environmental Review Commission. The pilot program began August 1, 2006 and expires July 1, 2011.

This act became effective July 19, 2006. (TD)

Fisheries

Oyster Shell Tax Credit

S.L. 2006-66, Sec. 24.18 (SB 1741, Sec. 24.18). See **Finance**.

Striped Bass Permit

S.L. 2006-254 (SB 1242) authorizes the Marine Fisheries Commission to adopt rules to establish gear specific permits to take striped bass from the Atlantic Ocean; limit the number and type of these permits that may be issued to a person; and establish a fee to compensate the Division of Marine Fisheries for the administrative costs associated with the permits, not to exceed ten dollars ($10.00).

This act is effective when it becomes law. (JH)

Miscellaneous

Community Conservation Assistance Program

S.L. 2006-78 (HB 2129) establishes the Community Conservation Assistance Program (Program) in the Department of Environment and Natural Resources. Similar to the Agriculture Cost-Share Program for Nonpoint Source Pollution Control, the Program's primary focus is to reduce nonpoint source pollution into the waters of the State. The Program applies statewide, however, and is not limited to reducing agricultural nonpoint source pollution.

The Soil and Water Conservation Commission must establish priority designations for inclusion in the Program for State funding, and is also responsible for the allocation of cost share and technical assistance funds under the Program. To be eligible for priority designation, a project must be evaluated before and after the project is completed to determine the impact of

the project on water quality. The Soil and Water Conservation Commission must report annually to the Environmental Review Commission on the implementation and effectiveness of the Program.

This act became effective July 10, 2006. (TD)

Environmental Technical Corrections/Reporting Requirements

S.L. 2006-79 (HB 2165) makes technical amendments to various environmental laws and amends or repeals various environmental reporting requirements.

This act became effective July 10, 2006. (TD)

Schoolchildren's Health Act

S.L. 2006-143 (HB 1502). See **Education**.

Amend Boating Safety/Vessel Titling Law

S.L. 2006-185 (SB 948). See **Agriculture and Wildlife**.

Underground Storage Tank Program Administer Funds

S.L. 2006-200 (SB 1584) appropriates up to $137,106 from the Commercial Fund and up to $137,106 from the Noncommercial Fund to the Department of Environment and Natural Resources to cover increased program operating costs and the costs of any legislative salary increase for Program personnel. The appropriations are in addition to similar appropriations made in the 2003 Appropriations Act (S.L. 2003-284) and in the 2004 Appropriations Act (S.L. 2004-124). This act states that it is the General Assembly's intent that the funds appropriated are recurring funds.

This act became effective July 1, 2006. (TD) (JRM)

Amend Sanitary District Authority

S.L. 2006-214 (HB 2164) authorizes a sanitary district to require an owner of improved real property located within the district with existing residential units or commercial establishments to connect to water or sewer service if the property is located within a reasonable distance of a waterline or sewer collection line that is owned, operated, or leased by the sanitary district without a determination by the local health director. Previously, a determination by the health director that the health of the people residing in the district would be endangered by a failure to connect was required to mandate a connection.

The act also authorizes a sanitary district to fix charges for connection to water and sewer service. In the case of improved property that would qualify for the issuance of a building permit for the construction of residential units or commercial establishments, and where the district has installed water or sewer lines that are directly available to the property, a sanitary district may require payment of a periodic availability charge, provided that the availability charge does not exceed the minimum service charge for properties that are connected.

These provisions are similar to the authority currently available for cities, counties, water and sewer authorities, and other local government entities. The power granted by the act may be exercised by a sanitary district only to the extent that the service to be provided by the district

is not currently being provided to the property by any other political subdivision or by a regulated public utility.

This act becomes effective September 1, 2006. (TD)

Enhance Local Government Administration of Environmental Programs

S.L. 2006-250 (HB 1413) makes the following changes to the administration of environmental programs by local governments:

Self-Inspection. – The act requires the inspection of the area covered by an erosion and sedimentation control plan (plan) after each phase of the plan has been completed and after establishment of temporary groundcover. The landowner, financially responsible party, or their agent must perform each inspection and maintain and make available a record of the inspection at the site. The record must indicate whether the erosion control measures required by the plan were installed and are being maintained in accordance with the plan. The report must also indicate if there was any deviation from the approved plan, measures required to correct the deviation, and document the completion of those measures.

Jurisdiction of the Sedimentation Control Commission. – The act clarifies that the Sedimentation Control Commission has concurrent jurisdiction with local governments that administer a delegated program. The act authorizes the Commission to: (i) review plan approvals made by a delegated program and to require a revised plan if the Commission determines that the plan does not comply with the Sedimentation Pollution Control Act of 1974 and rules adopted pursuant to the Act; and (ii) review the compliance activities of a delegated program and take appropriate action upon determination that the delegated program has failed to take appropriate compliance action.

Authorization of Limited Local Programs. – The act authorizes a local government to request that the Commission approve and delegate a limited program that allows the local government to only inspect land-disturbing activities, and assess and collect appropriate fees. Local governments may adopt ordinances and regulations necessary to establish a limited program, which must at least meet and may exceed the minimum requirements regarding the inspection of land-disturbing activities under the Act and the associated rules. If the Commission approves a limited local program, the Commission would retain responsibility for administering all components of the program, other than the inspection of land-disturbing activities. Local governments that adopt a limited program must establish a fee for the review of a plan and related compliance activities, not to exceed $100.00, and submit a portion of the fee to the Commission to compensate the Commission for the costs associated with the administration and enforcement of other parts of the program.

Local Government Fee Authority Not Impaired. – The act clarifies that G.S. 143-215.3D, which provides the fee schedule for water quality permits, does not limit the authority of a local government to collect a fee for the review of a permit application or mitigation plan, or inspection of a site.

Local Permit Programs for Reclaimed Water Utilization Systems. – The act authorizes local governments to establish and administer their own permit program, in lieu of required State permits, for construction, operation, alteration, extension, or change of a reclaimed water utilization system. The statute already authorizes local government permit programs for these activities with regard to sewer systems.

Civil Penalties for Violations. – The act provides that local governments certified and approved by the EMC to enforce stormwater or riparian buffer protection programs may assess civil penalties for violations of the respective programs.

The act also authorizes local governments to regulate solicitation of charitable contributions within the local government's municipal corporate limits. For additional information on this authorization, see **Local Government.**

The provisions of this act related to local government administration of environmental programs become effective September 1, 2006. (TD)

Amend Environment & Natural Resources Laws

S.L. 2006-255 (SB 1587) makes the following changes to environment and natural resource laws:

- Clarifies the requirement that motor vehicles operated on a federal installation in an emissions county are subject to emissions inspection requirements.
- Clarifies the requirement that land disturbing activity be conducted in accordance with an approved erosion and sedimentation control plan.
- Authorizes the Environmental Review Commission and the Joint Legislative Commission on Seafood and Aquaculture to contract for consultants upon the prior approval of the Legislative Services Commission
- Authorizes a person who manufactures, installs, repairs, or pumps septic systems to also purchase and install approved effluent filters.
- Delays by one year the effective date of certain provisions of S.L. 2005-384, an act to require the removal, collection, and recovery of mercury switches from certain motor vehicles. This provision became effective July 1, 2006.
- Authorizes septage management firms to land apply septage generated from small wastewater systems, so long as the land application complies with existing State and federal requirements for septage management.
- Establishes the Emergency Drinking Water Fund in the Department of Environment and Natural Resources (DENR). The Fund may be used to pay for notification of persons supplied water from a private drinking water well that is located within 1,500 feet of, and at risk from, known groundwater contamination. The Fund may also be used for the costs of testing private drinking water wells for contamination and for the provision of alternative water supplies to persons whose drinking water well is contaminated.
- Provides that donations of real property under the Riparian Buffer Protection Program is required to be located within the same basin as the riparian buffer that is lost, but is not required to be located on the same stream as the riparian buffer that is lost. This provision became effective August 1, 2006 and expires September 1, 2007.
- Exempts certain air quality permits that are submitted and determined to be administratively complete by August 1, 2006, from recent changes in air quality rules that were adopted by the Environmental Management Commission. In order to be eligible for this exemption, the permitted facility must meet specific performance criteria established in the act.
- Removes deer and elk from consideration as livestock in the definition of agriculture that is used for agricultural development and farmland preservation purposes.
- Clarifies that the For Hire Blanket Coastal Recreational Fishing License is issued for the for hire boat rather than the boat captain.
- Clarifies that the Special Landholder and Guest Fishing License only applies when the guests are invited to fish at no charge.
- Increases the types of licenses that the Wildlife Resources Commission may establish as personalized licenses.
- Clarifies that the Lifetime Unified Inland/Coastal Recreational Fishing License is a resident only license.

- Provides that personal identifying information obtained by the Wildlife Resources Commission, the Marine Fisheries Commission, or the Division of Marine Fisheries of DENR must be treated as provided in the statute that governs the treatment of such information by State agencies generally. The provision in the act contains a broader definition of protected identifying information.
- Authorizes the Marine Fisheries Commission to exempt certain organized fishing events from license requirements.
- Clarifies the authority of DENR and the Secretary of Environment and Natural Resources to carry out certain responsibilities related to the prevention and control of lead poisoning in children.

Except as otherwise provided, this act became effective August 23, 2006. (GFG, TD)

Redevelopment of Certain Manufacturing Districts

S.L. 2006-264, Sec. 99.5 (SB 602, Sec. 99.5) amends S.L. 2005-462 by providing for expiration of the act on 1 September 2008 if the Secretary of State has not approved at least one certification by a new operator of a manufacturing facility that is required to establish a manufacturing redevelopment district prior to 1 September 2008.

This section became effective August 27, 2006. (JRM)

Parks and Public Spaces

State Parks System Additions

S.L. 2006-138 (HB 2127) authorizes the Department of Environment and Natural Resources (DENR) to add Mountain Bog State Natural Area and Sandy Run Savannas State Natural Area to the State Parks System, and directs the Division of Parks and Recreation (DPR) of DENR to study the establishment of a new State Park at Cabin Lake.

- Mountain Bog State Natural Area: This unit is proposed to include two nationally significant mountain bogs in Avery County, Sugar Mountain Bog and Pineola Bog. Rare species found at one or both of the bogs include the bog turtle, bog rose, bog fern, cranberry, gray's lily, large purple-fringed orchid, purple-leaf willowherb, four-toed salamander, and Baltimore checkerspot (a butterfly).
- Sandy Run Savannas State Natural Area: This unit is proposed to comprise a cluster of nationally significant savannas along the border of Pender and Onslow counties. Rare species known to occur in the project area include Venus flytrap, golden sedge, red-cockaded woodpecker, Cooley's meadowrue, yellow fringeless orchid, Carolina goldenrod, and rough-leaf loosestrife.
- Study of new State Park at Cabin Lake: The act directs DPR to study the feasibility and the desirability of acquiring land and establishing a State Park at Cabin Lake, and report its findings and recommendations, including any legislative proposals, to the Environmental Review Commission on or before January 15, 2007. Cabin Lake (sometimes referred to as Cottage Lake) is a county park located in Duplin County consisting of approximately 167 acres, 69 acres of which is a lake.

This act became effective July 19, 2006. (JLM)

Solid/Hazardous Waste

Public-Private Solid Waste Collection

S.L. 2006-193 (SB 951). See **State Government**.

Landfill Moratorium and Studies

S.L. 2006-244 (SB 353) does the following:

Moratorium Established. – The act establishes a moratorium on consideration of applications for a permit and on issuance of permits to construct new landfills for a period of one-year beginning August 1, 2006 and ending on August 1, 2007. The act provides certain exceptions from the moratorium, to allow consideration of applications for or issuance of:

- An amendment, modification, or other change to a permit for a landfill issued on or before 1 June 2006.
- A permit for a horizontal or vertical expansion of the landfill permitted on or before 1 June 2006.
- A permit to construct a new landfill within the facility boundary identified in the facility plan of a landfill permitted on or before 1 June 2006.
- A permit to operate a new landfill if a permit to construct the new landfill was issued on or before 1 June 2006.
- A permit for a sanitary landfill used only to dispose of waste generated by a coal-fired generating unit that is owned or operated by an investor-owned utility subject to the requirements of G.S. 143-215.107D.
- A permit for a sanitary landfill determined to be necessary by the Secretary of Environment and Natural Resources in order to respond to an imminent hazard to public health or a natural disaster.

ERC Study on Solid Waste Issues. – The act directs the Environmental Review Commission (ERC) to study issues related to solid waste and report its findings and any legislative recommendations to the 2007 General Assembly upon its convening.

Establishment of Joint Select Committee on Environmental Justice. – The act establishes a 12 member Committee on Environmental Justice to study the impact of the siting of landfills in low-income and minority communities in the State, and directs the Committee to report its findings and any legislative recommendations to the ERC and the General Assembly on or before February 1, 2007.

This act became effective August 14, 2006. (JLM)

Amend Solid Waste Franchise Statutes

S.L. 2006-256 (SB 1564) makes the following changes to the solid waste franchise statutes: (i) clarifies that local governments may, but are not required to, award a franchise for a sanitary landfill; (ii) authorizes the award of preliminary franchises as well as franchises, and specifies the information to be included therein; (iii) requires additional measures to enhance public notice and public participation prior to award of a preliminary franchise or franchise; (iv) provides that franchises are to be awarded only after public notice of the proposed landfill location; and (v) increases information required as part of an application for a franchise.

This act became effective August 23, 2006, and applies to any application for a preliminary franchise or franchise that is filed with a local government on or after that date. The act does not affect any franchise that has been awarded as of August 23, 2006, unless the franchise provides for a final vote of the governing board of the local government on the franchise and the final vote occurs on or after November 1, 2006, in which case the provisions of G.S. 130A-294(b1), as amended by the act, apply. (JLM)

Water Quality/Quantity/Groundwater

Private Well-Water Testing Fee

S.L. 2006-66, Sec. 10.20 (SB 1741, Sec. 10.20) authorizes the Secretary of Health and Human Services to charge a fee of up to $55.00 for analyzing private well water samples sent to the State Laboratory of Public Health by local health departments.

This section became effective July 1, 2006. (JLM)

Increase Certain Public Water Systems Annual Operating Permit Fees/Impose Fees for Review of Engineering Plans and Specifications for the Construction or Alteration of Public Water Systems

S.L. 2006-66, Sec. 11.7 (SB 1741, Sec. 11.7) expands the types of water systems that must obtain a permit and pay a fee under G.S. 130A-328 to include non transient non-community water systems. Section 11.7 also:

- Increases annual operating permit fees for certain public water systems.
- Establishes fees for the review of engineering plans and specifications for the construction or alteration of public water systems.
- Establishes an administrative fee for late payment of annual operating permit fees.
- Provides that the Department of Environment and Natural Resources may phase in the increased annual operating permit fees.

This section becomes effective January 1, 2007. (JH)

Funds for Stormwater Projects

S.L. 2006-66, Sec. 21.14 (SB 1741, Sec. 21.14) directs $15,000,000 of the funds available to the Department of Transportation be transferred to the Department of Environment and Natural Resources during the 2006-2007 fiscal year for a stormwater pilot project to clean up State-maintained ocean outfalls and associated outlets through new and innovative technologies and filtering mechanisms

This section became effective July 1, 2006. (JRM)

Brownfields Property Reuse Act Amendments

S.L. 2006-71 (SB 1121) makes the following changes to the Brownfields Property Reuse Act of 1997:

- Excludes properties that are on the National Priorities List from the definition of "brownfields properties" and specifically prohibits the Department of Environment and Natural Resources from entering into a brownfields agreement for a property that is on the National Priorities List. Properties that are listed on the National Priorities List are generally those that are the most serious uncontrolled or abandoned hazardous waste sites that have been identified for possible long-term remediation under the federal Superfund program.
- Clarifies that "unrestricted use standards" are contaminant concentrations that are acceptable for all uses of a property.
- Clarifies that "prospective developer" is a person with a "bona fide, demonstrable desire" to buy or sell a brownfields property for the purpose of redevelopment.
- Reduces the period for public comment on a proposed brownfields agreement from 60 to 30 days.
- Reduces the time periods involved in requesting and noticing a public meeting on a proposed brownfields agreement from 30 to 15 days.

This act becomes effective January 1, 2007. (JH)

Safe Drinking Water/Private Wells

S.L. 2006-202 (HB 2873) establishes permitting, inspection, and water quality testing requirements for new private drinking water wells. This act provides for consistent statewide enforcement of regulations governing the location, construction, operation, repair, maintenance, and abandonment of private drinking water wells. This act excludes repair or replacement of a well pump from the requirement to obtain a permit.

Definition of Private Drinking Water Well. – Means any excavation that is cored, bored, drilled, jetted, dug, or otherwise constructed to obtain groundwater for human consumption and that serves or is proposed to serve 14 or fewer service connections or that serves or is proposed to serve 24 or fewer individuals. The definition also includes a well that supplies drinking water to a transient noncommunity water system as defined in 40 Code of Federal Regulations §141.2 (July 1 2003 Edition).

Clarification of Environmental Management Commission Authority. – The Commission is authorized to adopt rules governing the permitting and inspection of private drinking water wells with a designed capacity of 100,000 gallons per day or greater. Private drinking water wells with a designed capacity of 100,000 gallons per day or greater will be subject to permitting and inspection by the Commission, and not by a local health department. Local health departments will be authorized to permit and inspect all other private drinking water wells.

Permitting, Inspection, and Testing Requirements. – Each county, through its local health department, must implement and administer a private drinking water well permitting, inspection, and testing program:

- Permits are required for the construction or repair of a private drinking water well. A repair permit is not required for private drinking water well maintenance that does not involve breaking or opening the well seal or for the repair or replacement of a pump.
- The local health department is required to conduct a field investigation to evaluate the proposed site of the private drinking water well and issue a construction permit if it determines that the proposed well can be constructed in compliance with the General Statutes. Construction or repair permits are valid for 5 years and may be revoked by the local health department if material changes in fact upon which the permit has been issued have been made.
- The local health department will issue a "certificate of completion" when a new or repaired private drinking water well is inspected and determined to have been

constructed or repaired in compliance with the applicable permit. Without a certificate of completion, a private drinking water well must not be placed into service.

- The local health department will test the drinking water from a newly constructed drinking water well for the presence of 19 pollutants within 30 days after it issues the certification of completion. S.L. 2006-66, Sec. 10.20.(a) authorizes the Secretary of Health and Human Services to charge a fee of up to $55.00 for analyzing private well water samples sent to the State Laboratory of Public Health by local health departments.
- The Commission for Health Services will adopt rules governing sampling, testing, and reporting and will allow local health departments to designate third-parties to collect and test samples and report results. Test results will be provided to the owner of the newly constructed private drinking water well, and to the extent practicable, to any leaseholder of a dwelling unit or other facility served by the well at the time the water is sampled.
- The local health department must retain a registry identifying the location of each private drinking water well and a record of the results of all tests until the well is properly closed.

Impose Fees for Services Rendered. – The local health department is authorized to impose fees for services rendered under this act.

Defense of Local Sanitarians. – Local health department sanitarians who enforce the rules of the Environmental Management Commission are to be defended by the Attorney General and be protected from civil and criminal liability for acts done or omissions made in the scope of enforcing the Commission's rules. Existing State law provides this same protection for sanitarians enforcing rules of the Commission for Health Services.

The provisions concerning permitting, inspections and testing of private drinking water wells by local health departments will become effective July 1, 2008. All other provisions under this act including the Commission for Health Services authorization to adopt rules became effective August 7, 2006. (GG) (JRM)

Clean Water Management Trust Fund Amendments

S.L. 2006-178 (HB 2208): (i) eliminates the requirement that certain criteria receive priority as applied to grants and loans made for wastewater collection system projects, wastewater treatment works projects, and stormwater collection projects; (ii) eliminates an authorization to the Board of Trustees of the Clean Water Management Trust Fund (CWMTF) to require up to a 20% match of the amount awarded to grant recipients; (ii) and provides that no member of the Board of Trustees of the CWMTF (Board) may serve more than two consecutive four-year terms or a total of ten years.

The section of the act pertaining to limitation of terms for Board members became effective July 1, 2006. The term limitation does not apply to any person who is a member of the Board on June 30, 2006. The remainder of the act became effective retroactively to January 1, 2006. (JLM)

Nutrient Offset Payments

S.L. 2006-215 (SB 1862) temporarily sets the per pound factors for nitrogen and phosphorous under the Nutrient Offset Fee Program at $11 per pound of nitrogen per year and at $11 per tenth of a pound of phosphorous per year. Under rules adopted by the Environmental Management Commission in March 2006, the fees would have been raised from $11 per pound of

nitrogen per year to $57 and would have been set at $45 per tenth of a pound of phosphorous per year. The act directs the Environmental Review Commission (ERC) to study issues related to nutrient offset payments and to report its findings to the General Assembly upon the convening of the 2007 Regular Session.

2006-218 (SB 927) amends S.L. 2006-215 to provide that the Department of Environment and Natural Resources (DENR) must not be required to accept a nutrient offset payment for phosphorous as a means of fulfilling any requirement of the nutrient sensitive waters management strategy for the Tar Pamlico River Basin if DENR finds that the payment is not sufficient to cover the full costs of nutrient reduction measures needed to comply with the nutrient sensitive waters management strategy. If DENR declines to accept a nutrient offset payment for phosphorous, DENR must provide an estimate of the full cost of the nutrient reduction measures required for compliance with the nutrient sensitive waters management strategy. The act also authorizes DENR to negotiate and enter into contracts to provide nutrient reduction measures needed to fulfill any requirement of the nutrient sensitive waters management strategy for phosphorous for the Tar Pamlico River Basin based on the full cost of providing the nutrient reduction measures.

These acts became effective August 1, 2006, and expire September 1, 2007. (GFG, TD)

Professional Engineering Services for Public Water Systems

S.L. 2006-238 (HB 1099) clarifies that a local government, commission, authority, or board may either employ a licensed engineer ***or contract with a licensed engineer*** in order to meet the statutory requirement that a local approval program for water system plans have adequate "engineering staff" in order to be certified by the Department of Environment and Natural Resources.

This act became effective August 13, 2006. (JLM)

Stormwater Management 2006

S.L. 2006-246 (SB 1566) provides for the implementation of the federal Phase II stormwater management requirements.

Phase II Stormwater Management Background

In the early 1990's, the United States Environmental Protection Agency (USEPA) adopted regulations to require large municipalities to obtain a National Pollutant Discharge Elimination System (NPDES) stormwater management permit for stormwater discharges from municipal separate storm sewer systems (MS4s). In 1999, under "Phase II" of these regulations, USEPA extended the NPDES stormwater management permit requirements to small and medium sized communities.

Based on federal census data, the USEPA identified 123 cities and 33 counties in North Carolina where permits for stormwater management would be required. In order to obtain a NPDES stormwater management permit, the USEPA regulations require the development of a stormwater management program that includes certain minimum stormwater management measures, is sufficient to control stormwater pollution to the maximum extent practicable, and protects water quality standards.

The USEPA has delegated to the State the authority to issue NPDES stormwater management permits. In 1999, the Division of Water Quality (DWQ) of the Department of Environment and Natural Resources (DENR) and the Environmental Management Commission (EMC) initiated a rulemaking process in response to the Phase II regulations adopted by USEPA. On October 10, 2002, the EMC adopted temporary Phase II stormwater management rules that

became effective November 1, 2002. On July 10, 2003, the EMC adopted two permanent Phase II stormwater management rules that would have become effective August 1, 2004. One of the permanent rules would have required municipalities to obtain a Phase II NPDES stormwater management permits; the other would have required urbanized counties to obtain a comparable State stormwater management permit.

On January 15, 2004, the Rules Review Commission (RRC) reviewed the permanent Phase II stormwater management rules. The RRC returned the rules to the EMC for failure to comply with the Administrative Procedure Act and objected to the rules based on ambiguity and lack of statutory authority. The RRC's return of the permanent Phase II stormwater management rules caused the temporary rules to expire and prevented the permanent rules from becoming effective on August 1, 2004. The EMC subsequently sued the RRC over the return of the permanent rules. In June of 2005, a Wake County Superior Court ruled in the EMC's favor, finding that the RRC erred, acted arbitrarily, and exceeded its statutory authority in unilaterally returning the rules to the EMC. The Court remanded the rules to the RRC for further review in a manner consistent with the court's decision. The RRC subsequently approved the EMC rules.

While the case was pending and there were no Phase II stormwater management rules in effect, the General Assembly enacted S.L. 2004-163 (Phase II Stormwater Management), which provided for the temporary implementation of the federal stormwater requirements. S.L. 2004-163 adopted many of the provisions of the EMC temporary rules and also established a number of new and different requirements for stormwater management. S.L. 2004-163 became effective in August of 2004.

S.L. 2006-246 disapproves the EMC's permanent Phase II stormwater management rules; sunsets S.L. 2004-163 effective July 1, 2006; and provides for the implementation of the Phase II stormwater management requirements as follows.

Areas Covered by Phase II Stormwater Management Requirements

S.L. 2006-246 provides that development that cumulatively disturbs one acre or more of land located in the unincorporated area of a county must comply with the post-construction stormwater management standards beginning July 1, 2007 if the new development or redevelopment is located in:

- An area that is federally designated as an urbanized area in the most recent federal census.
- Certain unincorporated areas of counties that extend one, two, or three miles outside of a municipality that has been designated as an urbanized area under the most recent federal census.
- An unincorporated area of a county that is delineated as a regulated coverage area. An unincorporated area is delineated as a regulated coverage area based on its geographical proximity to a municipality and the environmental impact of stormwater discharges within or from the area.
- A county in which the unduplicated sum of: (i) the area that is federally designated urbanized area; (ii) certain unincorporated areas of the county that extend outside of a municipality that has been designated as an urbanized area; (iii) the area delineated as a regulated coverage area; (iv) the jurisdiction of a designated regulated entity; (v) the area that is regulated by a NPDES stormwater management permit required pursuant to the petition process; and (vi) areas of the county that are subject to any stormwater management program administered by DWQ equals or exceeds seventy-five percent (75%) of the total geographic area of the county.
- A county that contains an area that is designated as an urbanized area under the 1990 or 2000 federal census and that has an actual population growth rate that exceeded the State population growth rate for the period 1995 through 2004.

In addition to establishing stormwater management requirements for certain unincorporated areas, S.L. 2006-246 provides that development that cumulatively disturbs one

acre or more of land located in the incorporated areas of a county that is covered by the stormwater management standards that are not designated as an urbanized are under the federal census must comply with the post-construction stormwater management standards beginning July 1, 2007.

S.L. 2006-246 also provides a designation process and a petition process by which additional local governments and other entities may be required to obtain a NPDES stormwater management permit.

Exclusions from Phase II Stormwater Management Requirements

S.L. 2006-246 provides that the post-construction stormwater management requirements will not apply to:

- Development that is conducted pursuant to one of the following authorizations that was obtained prior to the effective date of the post-construction stormwater control requirements:
    - A building permit.
    - A site-specific development plan.
    - For an area where the EMC implements post-construction requirements, a phased development plan approved by a county that provides certain types of information based on the phase of the development.
    - A vested right under statutory or common law.

  Development is defined as land-disturbing activity that increases the amount of impervious or partially pervious cover or that otherwise decreases the infiltration of precipitation into the soil.

- Redevelopment. Redevelopment is defined as any land-disturbing activity that does not result in a net increase in impervious or partially pervious cover and that provides equal or greater stormwater control than the previous development.

S.L. 2006-246 also authorizes DENR or a local government to grant exceptions from certain stormwater management requirements to development that meets certain criteria; exempts a municipality with a population of less than 1,000 from NPDES stormwater management permit requirements if the municipality is not contributing to the impairment of State waters; and authorizes DENR to waive the NPDES stormwater management permit requirement for certain small municipalities.

Post-Construction Stormwater Management Requirements

S.L. 2006-246 provides that certain existing water quality programs will satisfy the post-construction requirements. The legislation also provides that a number of different strategies may be used by an entity that implements a stormwater program to satisfy the post-construction requirements as long as the chosen strategy meets the federal post-construction requirements to minimize the water quality impacts of stormwater.

S.L. 2006-246 provides that stormwater controls should be based on a project's level of density and its proximity to Shellfish Resource Waters. Shellfish Resource Waters are waters classified by the EMC as Class SA waters (shellfish growing waters) that contain an average concentration of 500 parts per million of natural chloride ion (saltwater). The specific requirements are as follows:

- Low Density Projects: A project that is located within one-half mile of and draining to Shellfish Resource Waters is a low density project if it contains no more than 12% built-upon area. A project that is not located within one-half mile of Shellfish Resource Waters is a low density project if it contains no more than 24% built-upon area or no more than two dwelling units per acre. Low density projects must use vegetated conveyances to the maximum extent practicable to transport stormwater runoff from the project.

- High Density Projects: A project that is located within one-half mile of and draining to Shellfish Resource Waters is a high density project if it contains more than twelve percent (12%) built-upon area. A project that is not located within one-half mile of Shellfish Resource Waters is a high density project if it contains more than twenty-four percent (24%) built-upon area or more than two dwelling units per acre. High density projects must use structural stormwater management systems that will control and treat runoff from the first one inch of rain unless the project is in a coastal county, in which case the project must use structural stormwater management systems that will control and treat runoff from the first one and one-half inches of rain. In addition, projects that are located within one-half mile and draining to Shellfish Resource Waters must control and treat the difference in the stormwater runoff from the pre-development and post-development conditions for the one-year, twenty-four hour storm as well as meet certain design standards.

S.L. 2006-246 also provides for a number of other requirements that must be met by an entity that implements a stormwater management program.

Implementation Schedule

S.L. 2006-246 provides that a regulated entity must:

- Apply for a NPDES stormwater management permit within 18 months of being notified that it is a regulated entity subject to the requirements of this act.
- Implement its post-construction program no later than 24 months from the date the permit is issued.
- Fully implement its permitted program within five years of permit issuance.

Environmental Management Commission Rulemaking Authority

S.L. 2006-246 authorizes the EMC to adopt rules to replace the disapproved rules. If the EMC does adopt rules, the rules must be substantively identical to the provisions of this act and will be automatically subject to review by the General Assembly and not subject to review by the RRC.

Construction of the Act

S.L. 2006-246 provides that:

- Except as provided in the express rulemaking authority granted by the legislation, nothing in this act will alter the authority of the EMC or a local government.
- Federal exemptions from NPDES stormwater management permit requirements for agriculture and silviculture apply to the legislation.
- The legislation does not affect any delegation of power or duty to the EMC or DENR.
- The definitions of "development" and "redevelopment" set out in the legislation do not alter the definition of "redevelopment" set out in the Coastal Area Management Act (CAMA).
- The phrase "common plan of development or sale" as used in the legislation, will be interpreted and implemented consistent with the July 24, 2006 memorandum from the Director of the Division of Water Quality of the Department of Environment and Natural Resources to Interested Parties referenced as "Guidance Interpreting Phase II Stormwater Requirements". This memorandum describes how the Division and Department currently interpret and implement the phrase "common plan of development or sale".

This act became effective retroactively to July 1, 2006. The substantive provisions of the act expire when permanent rules to replace them have become effective. (JH)

Nutrient Management Strategy

S.L. 2006-259, Sec. 31. (SB 1523, Sec. 31.) amends the date from 1 July 2008 to 1 July 2009 for the Environmental Management Commission to develop and implement a nutrient management strategy for drinking water supply reservoirs. This section requires the Commission to report its progress in developing and implementing nutrient management strategies for reservoirs to the Environmental Review Commission on 1 April of each year beginning 1 April 2006.

This section became effective August 23, 2006. (JRM)

Renewable Energy/Alternative Fuels

Ethyl Alcohol Tax Credit

S.L. 2006-66, Sec. 24.7 (SB 1741, Sec. 24.7). See **Finance**.

Tax Credit for Biodiesel Producer

S.L. 2006-66, Sec. 24.8 (SB 1741, Sec. 24.8). See **Finance.**

State Energy Use Planning/Energy Assistance

S.L. 2006-206 (SB 2051) makes the following changes to energy and water conservation policies in the State:

Reduce and Displace Petroleum Products in State Fleets: The act directs the Department of Administration (Department) to develop a plan for the targeted conversion of fuel dispensing facilities to provide greater availability of biodiesel, ethanol, and other alternative fuels for State-owned fleets. The purpose of this plan is to promote attainment of the twenty percent (20%) reduction or displacement of petroleum products consumed in State-owned vehicle fleets by January 1, 2010, as required by Section 19.5 of the 2005 Appropriations Act (S.L. 2005-276).

The Department must submit the plan to the Joint Legislative Committee on Governmental Operations no later than November 1, 2006, and will report annually on progress in implementing the plan as part of its existing reporting requirement on the 20% reduction goal.

Provide Energy Assistance for Low-Income Persons: The act codifies the North Carolina Energy Assistance Program for Low-Income Persons. This program, implemented by the Office of Economic Opportunity of the Department of Health and Human Services, includes a number of programs related to weatherization assistance, heating and air conditioning repair and replacement, and other energy-related assistance programs for low-income persons in existing housing. The act authorizes the Office of Economic Opportunity and the Secretary of Administration to exercise a number of powers and duties to implement the program, including the adoption of rules, the creation of a Policy Advisory Council, and administration of any grants or funds to implement the program for the benefit of low-income persons in existing housing.

Biofuels Industry Strategic Plan: The act establishes the North Carolina Biofuels Industry Strategic Plan Work Group in order to develop a strategic plan for expansion of biofuels as an industry in North Carolina. The Work Group must include representatives of the College of Agriculture and Life Sciences at North Carolina State University, The School of Agriculture and Environmental Sciences at North Carolina Agricultural and Technical State University, the North Carolina Biotechnology Center, and the Rural Economic Development Center, Inc. The Work

Group will consult with a number of additional stakeholders in the development of the plan. The Work Group must submit the strategic plan, including any legislative proposals, to the Environmental Review Commission and the General Assembly no later than February 1, 2007.

Study Energy and Water Use in State Facilities: The act directs the Joint Legislative Oversight Committee on Capital Improvements (Committee) to study the costs and benefits of reducing energy and water use in State facilities by 20% by January 1, 2012. The Committee must consider the following factors: (1) the role of repair and renovation investments for existing facilities; (2) the construction and design of new facilities; (3) The State's method of funding utility costs for State facilities; (4) the State's method of funding and planning capital projects in order to improve the integration of long-term operating costs into the design of the facilities; (5) the costs and benefits of constructing green buildings; (6) the relationship of guaranteed energy savings contracts to the State's investments in capital facilities; and (7) any other issue the Committee determines is pertinent to the reduction of water and energy use in State-owned facilities. The Committee must report its findings to the 2007 General Assembly no later than February 1, 2007.

This act became effective August 8, 2006. (TD)

Studies

New/Independent Studies/Commissions

Land and Water Conservation Study

S.L. 2006-223 (SB 1122) establishes the Land and Water Conservation Commission to: (i) identify and evaluate existing sources of funding for land and water conservation, historic preservation, and economic and community development tied to conservation and preservation; (ii) collect research and information on tools and techniques for land conservation; (iii) hold at least three public meetings across the State; and (iv) prepare a report concerning the funding needs and other issues affecting land and water conservation in the State. The Commission must report its findings and recommendations to the General Assembly and the Environmental Review Commission on or before February 1, 2007

This act became effective August 10, 2006. (JLM)

Landfill Moratorium and Studies

S.L. 2006-244, Sec. 5 (SB 353, Sec. 5) establishes the Joint Select Committee on Environmental Justice to study the impact of the siting of landfills in low-income and minority communities in the State, and report its findings and any legislative recommendations to the ERC and the General Assembly on or before February 1, 2007. The act directs the Committee to study:

- The location of landfills in the State, and identification of landfills located in proximity to minority and low-income communities.
- The impacts that landfills located in proximity to minority and low-income communities have on these communities with regard to human health, the environment, and economic development.
- Factors, including economic factors, that may have caused landfills to be concentrated in minority and low-income communities in the State.

- Past enforcement actions taken at landfills in the State in order to assess whether enforcement practices for violations at these sites have resulted in uneven enforcement outcomes, and to determine if alternative or stronger enforcement measures could be taken, or in the alternative if other methods could be used to allocate resources, in order to more equitably serve minority and low-income communities.
- Statutes, rules, and policies used by State, regional, and local governments, and a review of the role played by these entities to influence or make siting and land-use decisions concerning landfills in the State.
- Data and methodologies by which State, regional, and local governments might become more specifically aware of situations in which neighborhoods are at particularly high risk for potential threats to human health and the environment from the siting of landfills.
- Approaches to ensure consideration of environmental justice and equity issues when formulating and implementing policies, procedures, and legislation within governmental agencies and other institutions.

This act became effective August 14, 2006. (JLM)

Waterfront Access Study Committee

S.L. 2006-248, Secs. 45.1 through 45.6 (HB 1723, Sec. Sec. 45.1 through 45.6) establishes the Waterfront Access Study Committee. The Committee consists of 21 members and will study the degree of loss and potential loss of the diversity of uses along the coastal shoreline of North Carolina and how these losses impact access to the public trust waters of the State. The Committee will gather information about land-use management and zoning, current shoreline development trends, and local tax rates; collect research and information from North Carolina and other states and jurisdictions regarding incentive-based techniques and management tools to preserve waterfront diversity; and assess the applicability of such tools to North Carolina's shorelines. The Committee may submit an interim report of its study to the Joint Legislative Commission on Seafood and Aquaculture, the Marine Fisheries Commission, and the Coastal Resources Commission no later than January 15, 2007. The Committee must submit a final report and recommendations to these Commissions on or before April 15, 2007 at which time the Committee will terminate.

This section became effective August 16, 2006. (JH) (JRM)

Referrals to Existing Commissions/Committees

Landfill Moratorium and Studies

S.L. 2006-244, Sec. 4 (SB 353, Sec. 4) directs the Environmental Review Commission ERC to study issues related to solid waste, including: financial responsibility requirements for landfills; application of franchise requirements and local government approval for landfill permits, siting, design, and operational requirements for landfills that are proposed in areas susceptible to flooding from natural disasters, areas with high water tables, and other environmentally sensitive areas; traffic considerations for proposed landfills; regulatory oversight and staffing for permitting and compliance of solid waste landfills; compliance with statutory prohibitions on disposal of certain types of solid waste; ways to reduce the amount of solid waste disposed of within North

Carolina landfills. The ERC is directed to report its findings and any legislative recommendations to the 2007 General Assembly upon its convening.

This act became effective August 14, 2006. (JLM)

Mercury Reduction and Education

S.L. 2006-248, Sec. 8.2 (HB 1723, Sec. 8.2) authorizes the Environmental Review Commission to study measures to reduce the quantity of mercury that is released into the environment, that impacts natural resources, and that harms the public health of the citizens of the State. If the Commission undertakes this study, it may refer to the mercury reduction and education measures set out in the First Edition of H1513 and mercury reduction and education measures adopted by other states. If the study is conducted, the Commission must report its findings and recommended legislation to the 2007 General Assembly upon its convening.

This section became effective August 16, 2006. (JRM)

Abandoned Mobile Homes

S.L. 2006-248, Sec. 8.3 (HB 1723, Sec. 8.3) authorizes the Environmental Review Commission to study issues related to abandoned manufactured homes. The Commission may establish a subcommittee of the Commission to facilitate the study. Nonlegislative subcommittee members with special knowledge or expertise on this issue will be appointed in consultation with the President Pro Tempore of the Senate and the Speaker of the House of Representatives. If the study is conducted, the Commission must report its findings and recommended legislation to the 2007 General Assembly upon its convening.

This section became effective August 16, 2006. (JLM) (JRM)

Merger of Ecosystem Enhancement Program and Clean Water Management Trust Fund

S.L. 2006-248, Sec. 16 (HB 1723, Sec. 16) directs the Environmental Review Commission and the Joint Legislative Transportation and Oversight Committee to jointly study the merger of the organization and functions of the Ecosystem Enhancement Program and the Clean Water Management Trust Fund. The Commission and Committee may hire consultants to assist with this study. The final report must be made to the 2007 General Assembly.

This section became effective August 16, 2006. (JRM)

Management of Menhaden and Atlantic Thread Herring

S.L. 2006-248, Sec. 37 (HB 1723, Sec. 37) authorizes the Joint Legislative Commission on Seafood and Aquaculture to study the management of menhaden and Atlantic thread herring, including whether it should be unlawful to take menhaden or Atlantic thread herring with a purse seine off the shore of Brunswick and New Hanover Counties during all or part of each year. If the study is conducted, the Commission must report its findings and recommendations, including legislative proposals, to the 2007 General Assembly.

This section became effective August 16, 2006. (JH) (JRM)

Referrals to Departments, Agencies, Etc.

Measures to Prevent or Mitigate Potential Flooding in Certain Areas

S.L. 2006-248, Sec. 30 (HB 1723, Sec. 30) directs the Department of Environment and Natural Resources to study the causes of the flooding in Canton, Biltmore Village, Blue Ridge Paper Company, and the City of Newland to determine what measures can be taken to prevent or mitigate the flooding potential in those areas. The Department must report its findings to the 2007 General Assembly.

This section became effective August 16, 2006. (JRM)

Study Inherently Dangerous Animals

Costs and Benefits of Reducing Motor Vehicle Emissions

S.L. 2006-248, Sec. 43 (HB 1723, Sec. 43) directs the Division of Air Quality of the Department of Environment and Natural Resources to study the costs and benefits of reducing emissions of oxides of nitrogen, particulate matter, and greenhouse gases from motor vehicles in this State. The Division must evaluate the desirability and air quality benefits of adopting motor vehicle emissions standards adopted in other states. The Division must submit an interim report on its findings and recommendations, including legislative proposals, no later than January 15, 2007 and must submit a final report no later than April 1, 2007 to the Environmental Review Commission and the Legislative Commission on Global Climate Change.

This section became effective August 16, 2006. (JRM)

Amount and source of available funds used for 10% cost share required for Superfund cleanup of NPL sites, the o&m costs associated w/ these cleanups, and the cleanup of priority inactive hazardous substance or waste sites	ERC, Gov Ops SL 1999-237(15.6)(b)	30 days after spend Superfund/ Inactive Haz Sites funds	Sep 03 distrib 2/24/04 June 04 distrib 10/21/04 May 05 distrib 11/22/05 Aug 05 distrib 11/22/05 Jan 06 oral 1/24/06

land resources

DENR	Report To/ Authority	Report Due	Status*
Annual report and analysis of how the implementation of SPCA is affecting activities that contribute to the sedimentation of streams, rivers, lakes, and other waters of the State; shall also review effectiveness of local programs	ERC G.S. 113A-67; S.L. 2004-195, Sec. 2.1	Annually (beginning 1 Oct 05)	Dec 05 oral 12/20/05

Onsite wastewater

DENR	Report To/ Authority	Report Due	Status*
Shall evaluate whether: (i) the program resulted in a reduction in the length of time improvement permits or authorizations to construct are pending in the participating counties	ERC S.L. 2006-136, Sec. 3	Annually (beginning 1 October 2007)	

parks and conservation

DENR	Report To/ Authority	Report Due	Status*
Report on the conservation easement program + inventory of all conservation easements held by DENR	ERC GS 113A-235(c) SL 2004-195, Sec. 2.2	Annually (Oct 1)	Jan 03 oral 1/16/03 Dec 03 oral 4/22/04 Oct 04 oral 1/13/05 Mar 06 oral 3/14/06
Shall study vehicle use at Fort Fisher State Recreation Area, including consideration of: the demand for vehicle access to the beach during different times of the year; the impact of vehicles on sea turtles and nesting birds;...	ERC S.L. 2004-124, Secs. 12.3.(b) and 12.3.(c)	1 Feb 2005	Mar 05 distrib 3/8/06

* "oral" indicates oral report was given to ERC or S+A; "mail" indicates the report was mailed to members; "in" indicates that the report has been received but not yet distributed.

DENR (North Carolina Parks and Recreation Authority)	Report To/ Authority	Report Due	Status*
Activities and allocations from the Parks and Recreation Trust Fund from the prior fiscal year	ERC, Gov Ops, NER, Fiscal Research GS 113-44.15(c)	Annually (Oct 1) + progress (March 15)	Mar 03 distrib 03/20/03 Oct 03 oral 4/22/04 Oct 04 oral 1/13/05 Mar 05 distrib 4/22/05 Mar 06 oral 3/14/06 Oct 06

DENR (Secretary)	Report To/ Authority	Report Due	Status*
Acquisitions made with funds from the Natural Heritage Trust Fund	ERC, NHTF Trustees, Gov Ops, NER, Fiscal Research GS 113-77.9(e)	Semiannually, within 30 days of each revision	Nov 03 oral 4/22/04 Sep 04 oral 1/13/05 Sep 05 distrib 3/14/06
Progress towards attaining the State's goal of protecting one million acres of farmland, open space, and conservation lands	ERC, Governor GS 113A-241(c) S.L. 2004-195, Sec. 2.3	Annually (Oct 1)	Jan 03 oral 1/16/03 Dec 03 oral 4/22/04 Sep 04 oral 1/13/05 Mar 06 oral 3/14/06

Division of Parks and Recreation of DENR	Report To/ Authority	Report Due	Status*
Study the feasibility and the desirability of acquiring land and establishing a State Recreation Area at Blewett Falls Lake. The study shall include estimates of the cost of developing the proposed recreation area.	ERC S.L. 2004-24, Sec. 2	1 December 2005	Dec 05 distrib 3/8/06

Parks and open space

Land and Water Conservation Study Committee	Report To/ Authority	Report Due	Status*
Shall report its findings and recommendations	ERC S.L. 2006-223, Sec. 11	1 Feb 2007	

Parks and Recreation

DPR (DENR)	Report To/ Authority	Report Due	Status*
shall study the feasibility and the desirability of acquiring land and establishing a State Park at Cabin Lake.	ERC S.L. 2006-138, Sec. 3	On or before 15 January 2007	

* "oral" indicates oral report was given to ERC or S+A; "mail" indicates the report was mailed to members; "in" indicates that the report has been received but not yet distributed.

Renewable Energy

Biofuels Energy Strategic Plan Work Group	Report To/ Authority	Report Due	Status*
Shall report on the development of the strategic plan, including any preliminary findings, recommendations, and legislative proposals	ERC S.L. 2006-206, Sec. 3.2	Interim: 15 Jan 2007 Final: 1 April 2007	

solid waste

DENR	Report To/ Authority	Report Due	Status*
Solid Waste Management Annual Report (see also other reports with "SWM Annual Report" noted at the end of the topic line)	Governor, ERC GS 130A-309.06(c)	Annually (Jan 15)	Jan 02 oral 1/30/02 Jan 03 oral 1/28/03 Jan 04 oral 3/25/04 Jan 05 oral 1/13/05 Jan 06 oral 1/24/06

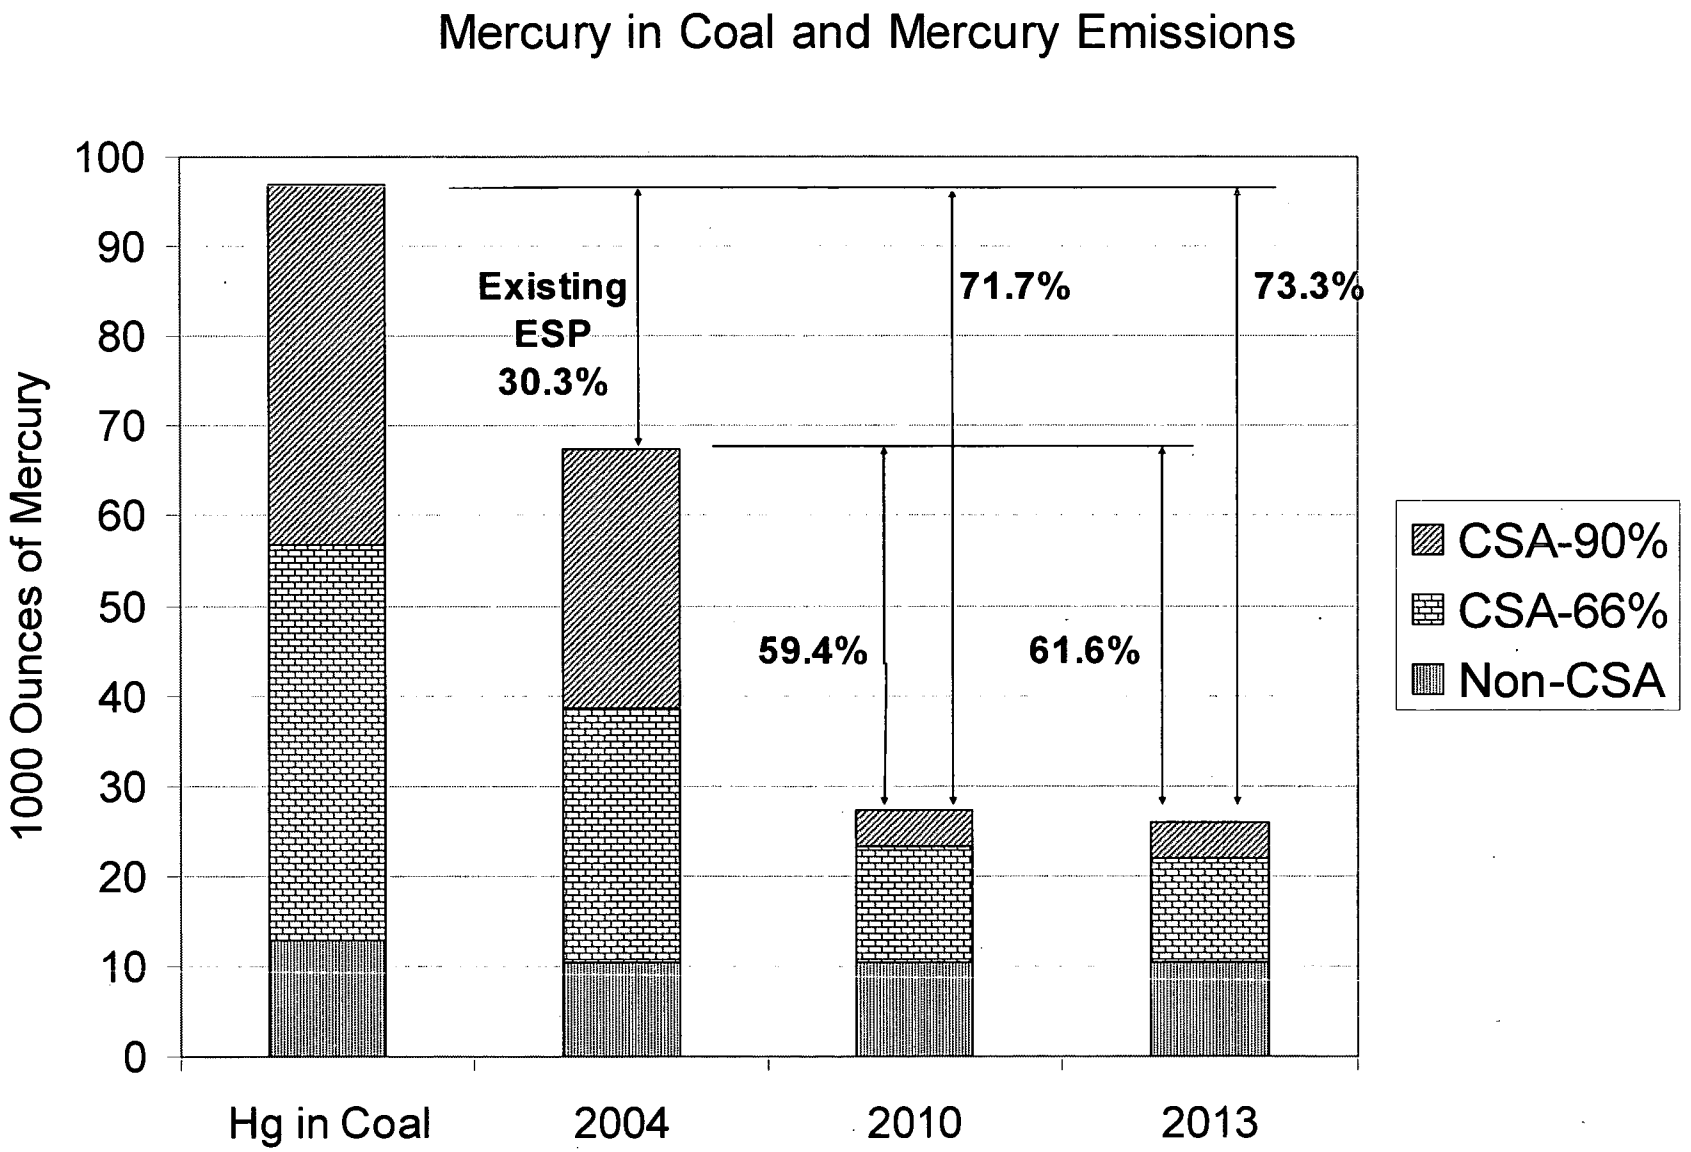
Organization Chart

NCDENR

EXHIBIT E

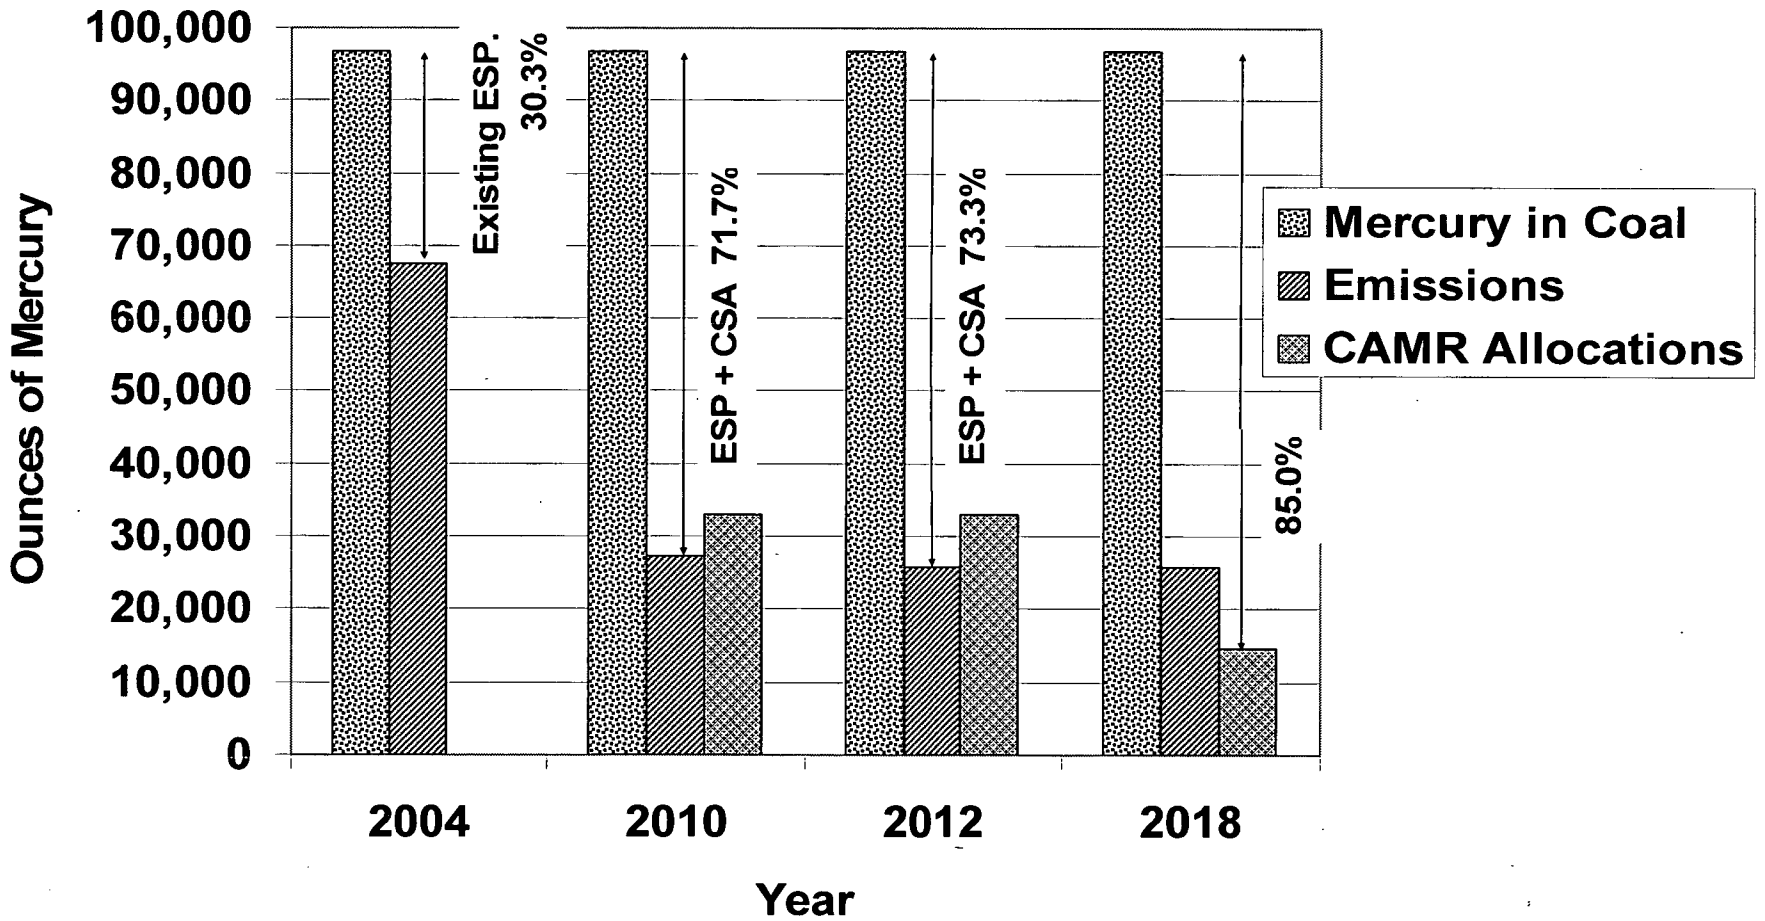
09.06

Clean Air Mercury Rule



- Issued May 2005 – states have 18 months to submit SIP
- USEPA estimates the federal rule will reduce national mercury emissions by about 20 percent in 2010 and 70 percent in 2018.
- Mercury regulated as a cap and trade program
- USEPA estimates emission reduction by about 20 percent in 2010 and 70 percent in 2018.
- EMC approved draft rule March 2006
- Public hearings held
  - May 25, 2006 Charlotte
  - June 1, 2006 Raleigh
  - June 8, 2006 Winterville.

EXHIBIT F



- North Carolina's Cap
  - Duke & Progress allocated about 33,700 ounces of credits for 2010-2017
  - Duke & Progress allocated about 14,000 ounces of credits for 2018 and beyond
- If annual emissions exceed allocated credits, must purchase credits on national markets
- Floor set for performance of new sources

Issues

- New source performance standard
  - federal or more stringent
- Emission limits for North Carolina
  - federal or more stringent
- Use of national trading program
- Handling growth and new facilities with respect for the cap

Timeline of Process

Jan 2007	*Decision on IBT petition by EMC*
Nov-Dec	*EIS revised to address public comments*
Oct 31, 06	*Close of Public Comment Period*
Sept 2006	Public Meetings held in Valdese and Charlotte
Aug 31, 06	EIS Supplement issued to correct errors.
July 7, 06	EIS Supplement issued with additional analysis
May, 06	Final EIS released and beginning of public review period.
2005-06	Additional technical analyses and revisions to the EIS
Aug 05	Closing of public comment period on IBT petition and Draft EIS
June 05	EMC conducts two public hearings on IBT petition and Draft EIS
Feb 05	EMC authorizes proceeding to public hearing
Nov 04	Concord and Kannapolis petition EMC to request IBT
Dec 03	Draft EIS submitted for DENR review.

Applicable mandatory written findings:

- Necessity, reasonableness, and beneficial effects
- Present and reasonably foreseeable future detrimental effects on the source river basin
- Cumulative effect on source basin
- Detrimental effects on the receiving river basin
- Reasonable alternatives
- Any other facts and circumstances that are reasonably necessary

Decision Criteria

- A certificate shall be granted …if the applicant establishes and the Commission concludes by a preponderance of the evidence based upon the findings of fact …that: (i)
  - benefits of the proposed transfer outweigh the detriments , and
  - (ii) detriments have been or will be mitigated to a reasonable degree.
- Commission may grant the certificate
  - in whole or in part, or deny the certificate.
  - with any conditions attached that the Commission believes are necessary

Impacts on Donor Basins using the CHEOPS Model

- **I. Elevation Duration Curves -** percentage of time over the period of record that reservoir levels are equaled or exceeded.
- **II. Outflow Duration Curves** percentage of
- time over the period of record that specified daily average reservoir outflows are equaled or exceeded.
- **III. Elevation Profiles** for the extreme drought of 2001-02 show when the LIP stages were invoked for each of the scenarios.

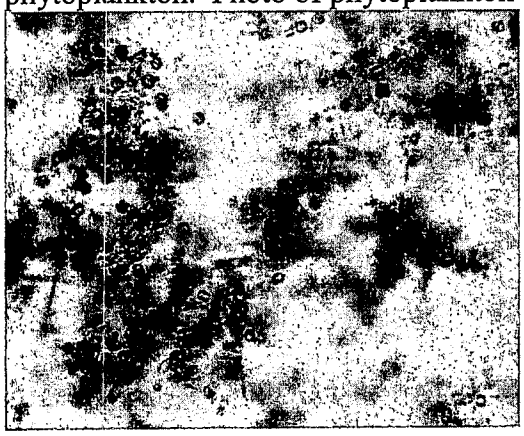
III. SUMMARIES OF ENVIRONMENTAL MANAGEMENT COMMISSION (EMC) ACTIONS

IV. EXPECTED FUTURE AGENDA ITEMS

I. SESSION LAW 2005-190 REPORTING REQUIREMENTS

Based upon Section 2. (b) of Session Law 2005-190, the Environmental Management Commission continues to assess and identify nutrient control strategies and criteria necessary to prevent excess nutrient loading in each drinking water supply reservoir. In compliance with the goals of the Section, the Division of Water Quality received US EPA approval of a plan of action evaluating the current surface water quality standards to determine if adequate nutrient criteria controls are in place to prevent nutrient impairments in North Carolina lakes. Approval to continue with development of additional or revised lake nutrient criteria was granted by the US EPA on June 27, 2006.

Report to the Environmental Review Commission on the Status of Nutrient Management Strategies for Drinking Water Reservoirs
Session Law 2005-190, Section 3.



July 2006, Quarterly Report

Section 3.(a) No action on this section as these requirements were described in First Quarterly Report.

Section 3.(b) No new or increased nutrient loadings have been requested for the Falls of the Neuse Reservoir area.

Section 3.(c) Technical work continues on the Falls of the Neuse Reservoir project, as described on the attached project update provided to the stakeholders participating in the Technical Advisory Committee.

Falls of the Neuse Reservoir Nutrient Management Strategy
Project Update for the Technical Advisory Committee
June 28, 2006

- Field monitoring continues as scheduled. In-situ monitoring of chlorophyll using the SCUFA is being implemented, as is monitoring at all stations added by the TAC.
- One of the new stations on Falls of the Neuse Reservoir is the Ellerbe Creek Cove site (ELL10). On February 23, 2006, chlorophyll *a* at this station was recorded at 103 ug/L. Additional phytoplankton analysis indicated the sample was dominated by a centric diatom (97%) at a total unit density of 88,000 (units/ml) and a total biovolume of 87,800 (mm^3/m^3). Chlorophyll is not the primary pigment of these phytoplankton. Photo of phytoplankton below.
- 
- NCSU Center for Applied Aquatic Ecology provided data for Falls of the Neuse Reservoir for the 2004 and 2005 time periods. The data include nutrient concentrations and chlorophyll *a*.
- DWQ began the process of contracting with Jing Lin, PhD of NCSU to perform the combined hydrodynamic and nutrient response modeling for Falls of the Neuse Reservoir. We expect this contract to be in place by the end of July. Jing attended our November 2005 meeting.
- Jing believes that EFDC would be a better model for turbidity/sediment transport than CE-QUAL-W2. EPA Region 4 agrees. EPA Region 4 has a version of WASP that will simulate multiple phytoplankton groups as well as pH. NCSU and DWQ will obtain this version of WASP. Current plans are to couple this enhanced WASP model with EFDC for the Falls combined hydrodynamic, sediment transport and nutrient response model.
- Target dates associated with Session Law 2005-190 (Senate Bill 981) have not been modified as of 28Jun06.
- DWQ is setting up a WARMF model application for the Falls of the Neuse Reservoir watershed. Data gathering for this model application has begun, as has initial model setup (e.g., getting hydrography, importing land use information, etc.).

- The Modeling & TMDL Unit was unable to get additional funds to update the LU/LC database. The 2001 MRLC database, which is available in in the BASINS modeling package, will be used.
- Next scheduled TAC meeting, November 1, 2006, 9:30 am at TJCOG offices.

Report to the Environmental Review Commission on the Status of Nutrient Management Strategies for Drinking Water Reservoirs
Session Law 2005-190, Section 3.

March 2006, First Quarterly Report

Section 3. Develop and adopt nutrient strategies for certain reservoirs.

Using applicability criteria given in **Section 3(a)** of the Act, the EMC has determined that Section 3 applies to the Falls of the Neuse Reservoir in the Neuse River Basin. The following table details this determination, eliminating candidate reservoirs reading from left to right. Falls of the Neuse Reservoir is located in the piedmont physiographic region of North Carolina and supplies drinking water to the City of Raleigh and its customers. The reservoir serves a population greater than 300,000 people. It is designated as a Nutrient Sensitive Water (NSW). Available water quality monitoring data indicates that water quality in the reservoir violates the chlorophyll *a* standard (see report for Section 2(a) referenced above), and the Division of Water Quality (DWQ) has not prepared or updated a calibrated nutrient response model for the reservoir since 1 July 2002.

Municipalities Evaluated (Reservoir)	Estimated 2005 Population (a)	Reservoir Serve Population >300,000?	All/Any Part of Reservoir Designated NSW?	Data Indicate Violations of Chlorophyll *a* Standard? (b)	DWQ Not Done or Updated Calibrated Nut. Response Model Since 7/1/02?
Charlotte (Mountain Island Lake)	665,643	Yes	No		
Raleigh (Falls of the Neuse Lake)	326,653	Yes	Yes	Yes	True
Greensboro (Lakes Brandt and Townsend)	279,164	No			
Durham (Lake Michie)	231,313	No			
Winston-Salem (N/A)	229,041	No			
Fayetteville (Cross & Little Cross Cr. Res.'s)	218,074	No			
Cary-Apex (B. Everett Jordan Lake)	157,813	No			
Wilmington (N/A)	153,972	No			

N/A = A reservoir does not supply drinking water to this municipality.
(a) Source: http://money.cnn.com/best/bplive/states/NC.html

Section 3(c) of Session Law 2005-190 requires the EMC to develop a nutrient management strategy for applicable waters by 1 July 2008. This strategy "shall be based on a calibrated nutrient response model...". DWQ developed a plan to determine assimilative capacity of Falls of the Neuse Reservoir in 2005. Field studies to support the development of a calibrated nutrient response model began in March of 2005. The field study plan is available on the internet at

http://h2o.ehnr.state.nc.us/tmdl/documents/MonitoringPlan.pdf. A Technical Advisory Committee was formed in July of 2005 to evaluate the existing monitoring strategy and assist with the development of a modeling strategy. This group met monthly between July 2005 and February 2006. During the summer of 2005, analytical problems at the chemistry laboratory resulted in the invalidation of a portion of the field data related to chlorophyll *a*. The Technical Advisory Committee has recognized the need for extending the field study in order to have a more complete set of data on which to base the calibrated nutrient response model, and the full TAC agreed to seek a 2-year extension during the next legislative session.

II. STANDING COMMITTEE MEETINGS

i. WATER ALLOCATION COMMITTEE

The Water Allocation Committee conducted business in May 2006.

ii. WATER QUALITY COMMITTEE

The Water Quality Committee conducted business in May 2006.

iii. GROUNDWATER COMMITTEE

The Groundwater Committee conducted business in May 2006.

iv. AIR QUALITY COMMITTEE

The Air Quality Committee conducted business in May 2006.

v. STEERING COMMITTEE

The Steering Committee did not meet during this quarter.

vi. NPDES COMMITTEE

The NPDES Committee did not meet during this quarter.

III. SUMMARIES OF ENVIRONMENTAL MANAGEMENT COMMISSION (EMC) ACTIONS

Agenda Item: Hearing Officer's Report on Clean Air Interstate Rules

Explanation: On January 5, 2006 in Charlotte and on January 11, 2006 in Raleigh, Mr. Gessaman, Mr. Weber, and Mrs. Deerhake held public hearings on proposed new regulations on Clean Air Interstate Rules (CAIR).

On May 12, 2005, the EPA promulgated the requirement for States to adopt rules limiting the emissions of nitrogen oxides (NOx) and sulfur dioxide (SO_2) and guideline rules for the states to use in developing their rules. The purpose of these rules are to reduce interstate transport of precursors to fine particulate and ozone.

These rules apply to (1) any stationary, fossil-fuel-fired boiler or stationary, fossil-fuel-fired combustion turbine serving at any time, since the start-up of a unit's combustion chamber, a generator with nameplate capacity of more than 25 MWe producing electricity for sale and (2) for a unit that qualifies as a cogeneration unit during the 12-month period starting on the date that the unit first produces electricity and continues to qualify as a cogeneration unit, a cogeneration unit serving at any time a generator with nameplate capacity of more than 25 MWe and supplying in any calendar year more than one-third of the unit's potential electric output capacity or 219,000 MWh, whichever is greater, to any utility power distribution system for sale

Under the EPA rules, North Carolina has caps as follows:

1. annual NOx: 62,183 tons for 2009-2014 and 51,819 tons for 2015 and each year thereafter;
2. ozone season NOx: 28,392 tons for 2009-2014 and 23,660 tons for 2015 and each year thereafter;

3. annual SO_2: 137,341 tons for 2010-2014 and 96,319 tons for 2015 and each year thereafter.

The State's NOx allocations have been distributed among the covered facilities. EPA will determine the SO_2 allocations, which are based on the acid rain program.

For the most part the proposed rules incorporate the model rule. The EPA model rule for definitions; permitting; monitoring, reporting, and recordkeeping; trading and banking; designated representative; opt-in provision, and new source growth are incorporated by reference.

The proposed rules require the EMC to periodically review the allocations in 2010 and every five years thereafter and to decide whether to reallocate. These rules do not preclude the EMC from adopting additional emission reduction requirements for covered sources if necessary to obtain or maintain an ambient air quality standard.

The hearing record was sent to you earlier.

Recommendation: The Hearing Officers recommend that the Commission adopt the proposed new rules as presented in Chapter II of the hearing record.

EMC ACTION: The EMC adopted rules.

Agenda Item:

Request Approval of Hearing Officer's Recommendations to Adopt Subchapter 2T for the Waste Not Discharged To Surface Waters Rules and Repeal of Section 2H .0200 and Rules 2H .0122 and 2H .0123.

Explanation:

In May, 2005 the Environmental Management Commission (Commission) authorized the Division of Water Quality (Division) to proceed to public notice and hearings with the proposed adoption of Subchapter 2T and repeal of Section 2H .0200 and Rules 2H .0122 and .0123. The notice of text for these proceedings was published in the *North Carolina Register* on October 2, 2005. Public hearings were held in Williamston on Oct. 19, Kenansville on Oct. 20, Asheville on Oct. 24, Raleigh on Oct. 26, and Salisbury on Oct. 27. Thirteen speakers made comments at these hearings and 56 written comments were received.

Systems covered by 2H .0200 and the proposed Subchapter 2T include wastewater collection systems, animal waste management systems, wastewater residuals, and other non-discharge systems including wastewater irrigation, reclaimed water utilization, groundwater remediation and soil remediation projects.

The intent of the proposed rules is to restructure the existing rules (new Subchapter 2T replacing Section 2H .0200 and Rules 2H .0122 and .0123), make editorial updates, make the rules easier to follow, clarify requirements, and reflect current policy not previously addressed in the rules. The rules also propose criteria to provide routine consideration of an applicant's compliance status under 143-215.1(b)(4)b.2 as well as certain program modifications. Another goal of the rule process is to allow delegation from EPA for the federal residuals program under 40 CFR parts 501 and 503. Additional federal rule references are made to address recently promulgated Concentrated Animal Feeding Operations rules. In order to consolidate

	all Rules related to Concentrated Animal Feeding Operations into one Section, a part of the proposed rule making process is the repeal of 2H .0122 and 2H .0123.
Recommendation:	That the Commission adopt Subchapter 2T with the modifications based on public comments as presented in the Hearing Officers' report and repeal Section 15A NCAC 2H .0200 and Rules 15A NCAC 2H .0122 and .0123. If approved, the rules would proceed to the Rules Review Commission.

EMC ACTION: The EMC approved the Hearing Officers' recommendations to adopt the rules.

Agenda Item: Hearing Officer's Report on the Proposed Reclassification of the Neuse River (Wake County, Neuse River Basin) to Class Water Supply V (WS-V)

Explanation: A segment of the upper Neuse River, Richland Creek and associated unnamed tributaries were requested to be reclassified from Class Water Supply –IV (WS-IV) NSW and WS-IV CA NSW to WS-V NSW. A request for this reclassification was submitted by the City of Raleigh ("City") although these waters were recently reclassified to WS-IV and WS-IV CA per the request of the Town of Wake Forest ("Town"). These waters are located within the jurisdiction of Wake County as well as the City and Town. The Town does not object to this reclassification. Please note that the current intake involved is still operable, and according to Division of Environmental Health staff, the intake does not have to be rendered useless because it is privately held.

The reason for this reclassification is that the Town decided to merge water systems with the City after the WS-IV recent reclassification, and neither municipality have used, currently use, or intend to use the waters as a public water supply source. No water quality study was required for this proposed reclassification as the waters were formerly used as water supplies.

If reclassified, nonpoint source and stormwater pollution control requirements associated with the WS-IV classifications will no longer be required by the State. The local governments with jurisdiction in the proposed reclassification area would not be required to revise their water supply watershed protection ordinances as a result of the proposed reclassification to WS-V. However, wastewater discharge permit requirements associated with

Water Supply classifications will apply, as in-stream water supply water quality standards remain applicable.

Additional existing requirements will remain applicable, too. For instance, the Town will still be subject to NPDES stormwater permitting (Phase II) requirements in accordance with Session Law (SL) 2004-163. The Neuse River Basin-Nutrient Sensitive Waters Management Strategy, and the NSW classification associated with this strategy, will still apply to the subject waters, too. Wake County and the City are currently included in the list of local governments designated for the stormwater management requirements as a part of this strategy. Please note that the Neuse River Basin-Nutrient Sensitive Waters Management Strategy, as well as the Phase II regulations, does not implicitly dictate impervious surface constraints or limits. Rather these rules address riparian zone function, stormwater management, nitrogen loading and Total Suspended Solids reduction necessary to affect the protection of water quality in a river basin that has experienced and is vulnerable to severe nutrient influences.

The buffer rules associated with the Neuse River Basin-Nutrient Sensitive Waters Management Strategy require that new development adjacent to buffered streams achieve diffuse flow of stormwater through the riparian zone, thereby allowing the buffers to function with respect to removal of nutrients. Coincidentally, this diffuse flow requirement also satisfactorily achieves the 85% Total Suspended Solids (TSS) reduction, a benchmark management requirement of stormwater best management requirements of water supply rules and state stormwater regulations. Where diffuse flow cannot be accomplished due to impervious surface amounts and/or geomorphological/topographic constraints (regardless of any impervious percentage thresholds), advanced engineered stormwater treatment is required such that 30% Total Nitrogen reduction is achieved. This requirement, in almost every occasion, also achieves 85% TSS reduction.

In May 2005 and July 2005, the Water Quality Committee and the Commission approved the request to proceed with rule-making for the proposed reclassification, respectively. A public hearing was held in February 2006 in Raleigh. Of the seven individuals who spoke at the hearing, five spoke in favor of the proposed reclassification, and two spoke against the proposed reclassification. 19 letters were received during the comment period, of which two were for and 17 were against the proposed reclassification, respectively.

The comments against the proposed reclassification cited several reasons opposing the proposal, which the Hearing Officers subsequently thoroughly considered. There was no finding that the proposed classification would fail to meet water supply water quality standards, or that the reclassification would prohibit local governments having jurisdiction within the affected watershed to seek a reclassification at a later date. The Hearing Officers' Report of Proceedings sent to the EMC includes further details.

Recommendation:

The Hearing Officers recommend that the proposed reclassification be approved by the Commission. If reclassified as proposed, and approved by RRC in June 2006, the effective date will be July 1, 2006.

EMC ACTION: The EMC took action to reopen the comment period through August 15, 2006 due to current interest from a local government inquiring about the water supply intake. The EMC requested that the Hearing Officers return to the EMC in September 2006 with the reclassification request.

Agenda Item: Request for Approval of the Proposed Reclassification of the Uwharrie River (Montgomery and Randolph Counties, Yadkin-Pee Dee River Basin) to Class B (Primary Recreation)

Explanation: Citizens Against River Pollution staff submitted a request to reclassify a section of the Uwharrie River to Class B. According to the request, "This section of the river is being used for swimming, skiing,...," "During warm weather, particularly on the weekends, many people are swimming in the river...," and "Primary contact recreation occurs... throughout the summer and fall." Water quality studies conducted in August 2004 show that the waters proposed to be reclassified meet Class B criteria.

If reclassified, new NPDES wastewater discharges to these waters will need to comply with reliability standards. In addition, new NPDES permitted discharges that contain fecal coliform will be required to meet a fecal limit. Please note that there are no current or proposed dischargers to the waters proposed to be reclassified.

In December 2004 and April 2005, the Water Quality Committee and the Commission, respectively, approved the request to proceed with rule-making for the proposed reclassification. A public hearing was scheduled for September 15, 2005, but it had to be cancelled due to state employee travel restrictions associated with Hurricane Katrina. Since a public hearing is not actually required for a proposed reclassification and no comments against this proposed reclassification were received, a public hearing was not rescheduled for this proposal. A notice to not reschedule the hearing was published; this notice did afford the opportunity to request a hearing, and instructions on

how and by when to request a hearing, but no hearing was requested. This notice also provided a second opportunity for comments on the proposal to be submitted to the Division of Water Quality.

Only one written comment was received during the two comment periods, and it was in favor of the proposed reclassification. The Report of Proceedings sent to the members of the EMC includes further details.

Recommendation: Staff recommends that the proposed reclassification be approved by the Commission. If reclassified as proposed, and approved by the RRC in June 2006, the effective date will be July 1, 2006.

EMC ACTION: The EMC approved the reclassification of these waters to Class B for primary recreation.

IV. EXPECTED FUTURE AGENDA ITEMS

Future Air Quality Items
Future Groundwater Items
Future Water Quality Items

MS FOR AIR QUALITY COMMITTEE AND ENVIRONMENTAL MANAGEMENT COMMISSION
July 2006 - Jan 2009

- B. WATER QUALITY COMMITTEE
- C. GROUNDWATER COMMITTEE
- D. AIR QUALITY COMMITTEE
- E. STEERING COMMITTEE
- F. NPDES COMMITTEE

III. SUMMARIES OF ENVIRONMENTAL MANAGEMENT COMMISSION (EMC) ACTIONS

IV. EXPECTED FUTURE AGENDA ITEMS

I. SESSION LAW 2005-190 REPORTING REQUIREMENTS

Based upon Section 2. (b) of Session Law 2005-190, the Environmental Management Commission continues to assess and identify nutrient control strategies and criteria necessary to prevent excess nutrient loading in each drinking water supply reservoir. In compliance with the goals of the Section, the Division of Water Quality received US EPA approval of a plan of action evaluating the current surface water quality standards to determine if adequate nutrient criteria controls are in place to prevent nutrient impairments in North Carolina lakes. Approval to continue with development of additional or revised lake nutrient criteria was granted by the US EPA on June 27, 2006.

Monitoring is continuing as scheduled in Falls Lake and the Falls Lake watershed and has been extended to September 2007. This extension will cover another growing season to accommodate the collection of adequate chlorophyll *a* data.

Modeling tasks associated with this project have also progressed. Work has begun on three of the models to be developed for Falls Lake and the reservoir watershed. As of September 1, 2006, DWQ has a fully executed contract with NC State University to perform hydrodynamic and water quality modeling of Falls Lake. DWQ staff has begun to process data and information for another model, the watershed loading model.

Although Session Law 2006-259 technically corrected the target date for the EMC to develop a nutrient management strategy for the Falls Lake Reservoir from July 1, 2008 to July 1, 2009, the target date for the EMC to adopt the rules to implement the nutrient management strategy by the same date (July 1, 2009) does not allow rulemaking and rule adoption in accordance with the Administrative Procedures Act, General Statutes 150B. The inaccurate date will not interfere with the EMC's goal; however, to be technically correct, the Session Law should be corrected to complete rulemaking and adoption by July 15, 2010 (Note: July 15 gives time for the EMC to meet in July and adopt the rules).

The next scheduled Falls Reservoir Technical Advisory meeting is scheduled for Nov. 1, 2006, 9:30 am at the TJCOG offices.

II. STANDING COMMITTEE MEETINGS

i. WATER ALLOCATION COMMITTEE

The Water Allocation Committee conducted business in July and September 2006.

ii. WATER QUALITY COMMITTEE

The Water Quality Committee conducted business in July and September 2006.

iii. GROUNDWATER COMMITTEE

The Groundwater Committee conducted business in July 2006.

iv. AIR QUALITY COMMITTEE

The Air Quality Committee conducted business in July and September 2006.

v. STEERING COMMITTEE

The Steering Committee conducted business in September 2006.

vi. NPDES COMMITTEE

The NPDES Committee did not meet during this quarter.

III. SUMMARIES OF ENVIRONMENTAL MANAGEMENT COMMISSION (EMC) ACTIONS

Agenda Item: Request to Proceed to Public Hearing on VOC and NOx Reasonable Available Control Technology

Explanation:

The Environmental Management Commission is requested to approve one or more public hearings on the amendments to rules to extend the applicability of reasonable control technology (RACT) rules for volatile organic compounds (VOC) and nitrogen oxides (NOx) to all the counties in the Charlotte nonattainment area for ozone.

The applicability rules for VOC RACT (15A NCAC 02D .0902) and for NOx RACT (15A NCAC 02D .1402) are proposed to be amended to require facilities with the potential to emit 100 tons per year or more of VOC or NOx to comply with the RACT requirements for VOC or NOx if they are in the Charlotte nonattainment area for ozone. Counties covered are Cabarrus, Gaston, Lincoln, Mecklenburg, Rowan, and Union. Also, Davidson and Coddle Creek Townships in Iredell County are covered.

The compliance schedule rules (15A NCAC 02D .0909 and .1403) are proposed to be amended to add compliance schedules for the facilities to comply with the RACT requirements.

These rule changes are being proposed to meet EPA requirements for a complete State Implementation Plan (SIP) submittal for the Charlotte ozone nonattainment SIP.

Recommendation: The Director recommends that the Commission authorize a public hearing(s) on these amendments and that the Chairman appoint a member(s) of the Commission to serve hearing officer(s).

EMC ACTION: **THE EMC APPROVED SENDING THE PROPOSED AMENDED RULES TO PUBLIC HEARING.**

Agenda Item: Hearing Officer's Report on Best Available Retrofit Technology Rule

Explanation: On April 6, 2006 in Winterville and on April 12, 2006 in Candler, Dr. Blanks, Mr. Wakild, and Mr. Curry held public hearings on a proposed new rule on Best Available Retrofit Technology (BART).

15A NCAC 02D .0543, Best Available Retrofit Technology, is proposed for adoption to establish best available retrofit technology requirements for certain older sources of emissions of visibility impairing pollutants impacting visibility in federal parks and wilderness Class I areas as part of efforts required region-wide to address the regional haze problem. The requirements are proposed for adoption in response to federal requirements that states address these emissions in their state implementation plan (SIP) for regional haze.

On July 6, 2005, US EPA promulgated 40 CFR Part 51 Appendix Y Guidelines for Determining Best Available Retrofit Technology (BART) Determinations. The proposed rule establishes a framework for making these determinations and incorporates the 40 CFR Part 51, Appendix Y guidelines by reference.

The proposed rule applies to sources that have the potential to emit 250 tons or more of a visibility impairing pollutant, were in existence on August 7, 1977 and began operation after August 7, 1962, and fall within one of the 26 industrial source categories listed in the guidance. The visibility impairing pollutants for BART purposes are sulfur dioxide (SO2), nitrogen oxides (NOx), and fine particulate matter (PM2.5).

The proposed rule allows affected sources to demonstrate in accordance with the guidelines that the source does not contribute to visibility impairment and should be exempted. Non-exempt sources are required to undergo a determination of best available retrofit technology. For sources that are not exempted, the rule establishes a deadline of September 1, 2006 for submittal of permit

applications proposing best available retrofit technology. The rule, as proposed, requires that BART controls be installed and begin operation by June 1, 2010. The rule also specifies that compliance with the Clean Air Interstate Rule (CAIR) by subject electric utility sources constitutes BART for such sources for sulfur dioxide and nitrogen oxides emissions. The rule does not preclude the EMC from adopting additional emission reduction requirements for covered sources if necessary to obtain or maintain an ambient air quality standard or meet other state implementation plan requirements.

Eight people commented on the rule. The majority of comments focused on ensuring the rule incorporates the maximum flexibility provided in the federal rule for the state to approve exemption modeling protocols and demonstrations, BART determinations, and on extending the compliance deadline.

Six persons commented that the rule should incorporate the maximum flexibility afforded by the federal rule. The Division believes that the proposed rule, which incorporates the federal requirements by reference, adopts the maximum flexibility given states; however, language has been added as paragraph (c) to make this explicit to the reader.

Two commenters stated that the Division should be able to approve any exemption modeling methodology it deems technically and scientifically sound methodology and that the EMC should add a paragraph to address modeling protocol issues. Paragraph (c) has been added that reiterates for the reader that the Division has all the authorities afforded it by the federal rule.

One person commented that the permit application deadline should be extended for EGUs if visibility impact modeling is required for such sources. Another commenter said that due dates for BART information from affected sources should be extended. Language has been added to Paragraph

(g) to allow the Director to extend the permit submittal deadline if necessary.

Six commenters said that the compliance deadline should be changed to that in the federal rule to allow adequate time for planning, installation and operation of any required controls. The compliance deadline has been changed to December 31, 2012 to allow the maximum time for compliance and still allow for inclusion of the benefits of BART controls in the first reasonable progress report to EPA.

Two commenters stated that the rule should specify the elements to be considered in a BART determination. Although they are included in the Clean Air Act, the referenced rule, and guidelines, the factors to be considered in the BART determination have been explicitly added to the rule as Paragraph (e).

Two persons commented that the rule should specify that emission limits don't apply if BART is determined to be no control. No rule change is necessary.

Two commenters stated that the rule should provide emissions trading options to affected sources. The EPA rule on emissions trading for BART purposes has not yet been finalized, therefore no change in rule language has been made.

EPA commented that they concur that compliance with CAIR by EGUs is considered compliance with BART for SO2 and NOx. No rule change is necessary.

One person commented that the reasonably attributable visibility impairment provisions should be referenced rather than providing specific information on how to obtain the guidance. The NC rulemaking procedures require such information to be provided for referenced materials, therefore no change is made.

One person commented that language specifying that BART determinations will be incorporated into Title V permits should be added. Language has been added to Paragraph (f) referencing the permitting procedures.

Recommendation: The Hearing Officers recommend that the Commission adopt the proposed new rules as presented in Chapter II of the hearing record.

EMC ACTION: **THE EMC ADOPTED THE PROPOSED RULE AS RECOMMENDED BY THE HEARING OFFICER.**

Agenda Item: Request to Proceed to Public Hearing on Amendments to Annual Emissions Reporting

Explanation: The Environmental Management Commission is requested to approve one or more public hearings on an amendment to the annual emissions reporting rule (15A NCAC 02Q .0207). The amendment requires reporting of emissions of volatile organic compounds (VOC) and nitrogen oxides (NOx) for the counties in the Charlotte ozone nonattainment areas.

This rule requires facilities with Title V permits to report emissions of regulated pollutants annually. It also requires sources that emit 25 tons or more of VOC or NOx and are in ozone maintenance areas to report annually their emissions of VOC or NOx. The amendment would extend this latter requirement to cover the newly designated counties and townships in the Charlotte ozone nonattainment area that are not currently covered under this rule. These new areas are Cabarrus, Lincoln, Rowan, and Union Counties and Davidson and Coddle Creek townships in Iredell County.

This amendment is a necessary part of the State Implementation Plan for the Charlotte ozone nonattainment area.

Recommendation: The Director recommends that the Commission authorize a public hearing(s) on this amendment and that the Chairman appoint a member(s) of the Commission to serve as hearing officer(s).

EMC ACTION: **THE EMC APPROVED SENDING THE PROPOSED RULE AMENDMENTS TO PUBLIC HEARING.**

Agenda Item:

Request for Adoption of Hearing Officers' Recommendations for Revisions to Proposed Rules 15A NCAC 2E .0600, Water Use During Drought Rules

Explanation:

In October of 2005 (Action Item 05-33), the Environmental Management Commission (EMC) authorized the Division of Water Resources to proceed to public notice and hearings with proposed rules 15A NCAC 2E .0600, Water Use During Drought Rules. The notice of text for these proceedings was published in the *North Carolina Register* on January 3, 2006, and three public hearings were conducted in Lexington, Goldsboro and Asheville on January 19, January 24 and January 31, 2006, respectively.

Eighty six oral and written comments regarding these proposed rules were received during the public comment\ period, which ended on March 6, 2006. All of the comments and the Hearing Officers' responses to these comments are contained in the Hearing Officers' Report (attached). As a result of the public comments, several revisions to the rules have been recommended by the Hearing Officers. The Hearing Officers' Report includes the following information: Background; Overview; Part I: Proposed Rule Language (Public Hearings), Recommended Rule Revisions, and the Final Rule Language; Part II: Summary Table of Public Comments, Responses to Public Comments, and a brief explanation of these documents; Part III: Hearing Officers' Opening Comments, HB 1215 Presentation, and Public Hearing Transcripts; Part IV: Written Comments Received; and Part V: Notice of Public Hearings, Public Hearing Attendance Sheets, HB 1215 (SL2002-167) Text, and North Carolina General Statutes Cited in the Rules for Authority.

Recommendation:

That the Environmental Management Commission adopt the proposed rules 15A NCAC 2E .0600, as recommended by the Hearing Officers in the Hearing Officer's Report. If the proposed rules are

adopted and approved by RRC in August 2006, the Water Use During Drought Rules will become effective on September 1, 2006.

EMC ACTION:

THE EMC ADOPTED THE RULES, 15A NCAC 2E .0600, AS PROPOSED BY THE HEARING OFFICERS.

Agenda Item:

Request for Approval of the Proposed Reclassification of the Yadkin River (Surry and Yadkin Counties, Yadkin-Pee Dee River Basin) to Class Water Supply-IV (WS-IV) Critical Area (CA)

Explanation:

The Town of Elkin submitted a request to reclassify a section of the Yadkin River to Class WS-IV CA. The reason for this reclassification is to allow a new intake structure to be placed in the river in order to supply the town with an emergency source of water. The waters to be reclassified meet water supply water standards according to DWQ staff. DWR and DEH staff have approved of the proposed intake.

If reclassified, development and discharge restrictions will apply. However, there are no current or planned dischargers and no planned development in the proposed reclassification area; the affected area is residential in character with some agricultural land. Yadkin County and the Town of Elkin, the only local governments with jurisdiction in the reclassification area, would need to modify their water supply watershed protection ordinances within 270 days after the reclassification effective date. Yadkin County and the nearby Town of Jonesville support this reclassification.

In May 2005 and July 2005, the Water Quality Committee and the Commission, respectively, approved the request to proceed with rule-making for the proposed reclassification. Since a public hearing is not actually required for a proposed reclassification and no comments against this proposed reclassification were received, a public hearing was not scheduled for this proposal. The notice published for this reclassification, as well as the announcements sent out for this proposal, did afford the opportunity to request a hearing, and instructions on how and by when to request a hearing, but no hearing was requested. The notice and announcement also provided an opportunity for comments on the proposal to be submitted to the Division of Water Quality.

No written comment was received during the comment period. The Report of Proceedings sent to the members of the EMC includes further details on this proposed reclassification.

Recommendation: Staff recommends that the proposed reclassification be approved by the Commission. If reclassified as proposed, and approved by the RRC in August 2006, the effective date will be September 1, 2006.

EMC ACTION: **THE EMC APPROVED THE RECLASSIFICATION OF THESE SURFACE WATERS.**

Agenda Item:	Approval of Water Quality Committee Recommendation Regarding a Site-Specific Variance for the Kinnakeet Sand Mine
Explanation:	In accordance with the provisions of 15A NCAC 2B .0226, the EMC was requested to consider and approve a recommendation from the Water Quality Committee (WQC) regarding the granting of a site-specific variance from the Wetlands Standards contained in 15A NCAC 2B .0231 for the Kinnakeet Sand Mine on Hatteras Island.
Recommendation:	That the EMC consider and approve the WQC's recommendation in this matter.
EMC ACTION:	**THE EMC HELD A SPECIAL MEETING BY CONFERENCE CALL ON AUGUST 9, 2006, TO DEAL WITH THE EMERGENCY NATURE OF THIS REQUEST IN ORDER TO PROVIDE A SAND SUPPLY TO NCDOT OPERATIONS. THE EMC APPROVED THE REQUEST WITH THE CONDITIONS REQUIRED BY STAFF.**

Agenda Item: Hearing Officers' Recommendations for the Adoption of 15A NCAC 2H .1020, the Universal Stormwater Management Program Rule

Explanation: In Nov of 2005 the Environmental Management Commission (EMC) authorized the Division to proceed to public notice and hearings with the proposed adoption of 15A NCAC 2H .1020, the Universal Stormwater Management Program Rule. The notice of text for these proceedings was published in the *North Carolina Register* on March 15, 2006, and public hearings were conducted in Hickory, Wilmington, and Raleigh on April 4, 6, and 11, 2006, respectively. Sixteen oral comments regarding this proposed adoption were received at the public hearings and a total of 25 written comments were received prior to the close of the comment period. As a result of these comments the Hearing Officers have recommended the following major changes to the proposed rule:

- That an impervious surface density limit of 36% be established for development activities located within 575 feet of shellfishing waters or located within the designated Critical Area of Water Supply Watersheds.

- That the threshold for coastal county development be raised from 5,000 square feet to 10,000 square feet of disturbance.

- That local governments located within the 20 Coastal Counties be allowed to adopt the program and elect to have the Division of Water Quality implement and administer the program within their jurisdictions, either whole or in part.

- That a paragraph be added to the Rule that would facilitate the implementation of the program on DoD installations.

All of the comments and the Hearing Officers' responses to these comments are contained in the

Report of Proceedings. The proposed revised rule is also attached.

Recommendation: That the Environmental Management Commission adopt 15A NCAC 2H .1020 as recommended by the Hearing Officers in the Report of Proceedings.

EMC ACTION: **THE EMC DEFERRED ACTION AND REPOSTED THE RULES TO ACCEPT COMMENT FOR 60 MORE DAYS.**

Agenda Item: Request for Adoption of Changes to Subchapter 2T Based on Rules Review Commission Objections

Explanation: In May, 2006 the Environmental Management Commission (EMC) adopted Subchapter 2T and repealed Section 2H .0200 and Rules 2H .0122 and .0123. It is anticipated (see note) that the Rules Review Commission (RRC) will object, based on recommendations by RRC staff, to the requirements in the Subchapter 2T rules that require submittal of certain documents by licensed professionals. [Note: The RRC did not meet as scheduled on June 15 due to a lack of attending commissioners; as a result the meeting and associated action on the Subchapter 2T rules will not be taken until the rescheduled RRC meeting –June 29]

For example, Rule 2T .0504(b) requires that Soils Reports be prepared by a Licensed Soil Scientist – "As required by G.S. 89F, a soil scientist shall prepare this evaluation: ..." The RRC staff has recommended that the RCC object to this language as exceeding the EMC's authority (i.e., that this authority lies with the respective boards).

To resolve the potential objection, staff proposes the following example language with RRC staff: "As If required by G.S. 89F, soil scientist shall prepare this evaluation: ..." In addition, a note would be added to the text of the rule as follows: "[Note: The North Carolina Board for Licensing of Soil Scientists has determined that preparation of the soils report required by Paragraph (b) of this Rule constitutes practicing soil science under G.S. 89F.]"

Recommendation: That the Commission adopt the above changes to Subchapter 2T with respect to the professional licensure requirements (any item requiring a professional licensure in accordance with G.S. 89C, 89E, or 89F) for re-submittal to the RRC.

EMC ACTION: **THE EMC APPROVED THE RULE CHANGES TO BE SUBMITTED TO THE RRC TO SATISY THE RRC'S OBJECTIONS.**

Agenda Item:	Request for Delegation of Authority of the Neuse and Tar-Pamlico River Riparian Area Protection Rules to Pitt County, NC
Explanation:	On July 12, 2006 the Water Quality Committee approved sending forward a request for the EMC to grant Delegation of Authority of the Neuse River Riparian Area Protection Rule (15A NCAC 2B .0233) and the Tar-Pamlico Riparian Area Protection Rule (15A NCAC 2B .0259) to Pitt County per 15A NCAC 2B .0241 and .0261, respectively. If delegated, Pitt County will be responsible for implementing the riparian area protection programs as described in 15A NCAC 2B .0233 and .0259 for the Neuse and Tar-Pamlico River Basins, respectively. The Pitt County Board of Commissioners has adopted a "Pitt County Riparian Buffer Protection Ordinance", and the Pitt County Planning Department staff and Pitt County Technical Review Committee will administer the program, if delegated. The Division of Water Quality (DWQ) staff recommended this delegation to the WQC in July 2006 and the WQC approved sending the item forward to the EMC
Recommendation:	That the Delegation of Authority to Pitt County for the implementation of riparian area programs be approved.
EMC ACTION:	**THE EMC APPROVED THE DELEGATION OF THE RIPARIAN AREA PROTECTION PROGRAMS TO PITT COUNTY.**

Agenda Item: Hearing Officers' Report on the Proposed Reclassification of a Neuse River Segment in Wake County (Neuse River Basin)

Explanation: A segment of the upper Neuse River, Richland Creek and associated unnamed tributaries were requested to be reclassified from Class Water Supply –IV (WS-IV) NSW and WS-IV CA NSW to WS-V NSW. A request for this reclassification was submitted by the City of Raleigh ("City") although these waters were recently reclassified to WS-IV and WS-IV CA per the request of the Town of Wake Forest ("Town"). These waters are located within the jurisdiction of Wake County as well as the City and Town. The Town does not object to a WS-V reclassification. Please note that the current intake involved is still operable, and according to Division of Environmental Health staff, the intake does not have to be rendered useless because it is privately held.

The reason for the request to WS-V was because the Town decided to merge water systems with the City after the WS-IV recent reclassification.

Just prior to the May EMC meeting, the County of Franklin ("County") expressed interest in using the water supply, even though the County does not have any jurisdiction within the water supply watershed. In response to that, in May 2006, the EMC directed DWQ to reopen the comment period in order to provide further opportunity for additional comments, and to return to the EMC in September.

As a reminder, a public hearing was held in February 2006 in Raleigh. Of the seven individuals who spoke at the hearing, five spoke in favor of the proposed reclassification to WS-V, and two spoke against the proposed reclassification to WS-V. 19 letters were received during the comment period, of which two were for and 17 were against the proposed reclassification. The comments against the proposed reclassification cited several reasons opposing the proposal, which the Hearing Officers subsequently thoroughly considered. There was no

finding that the proposed classification would fail to meet water supply water quality standards, or that the reclassification would prohibit local governments having jurisdiction within the affected watershed to seek a reclassification at a later date.

Regardless of the classification, existing requirements remain applicable. For instance, the Town will still be subject to NPDES stormwater permitting (Phase II) requirements in accordance with Session Law (SL) 2004-163. The Neuse

River Basin-Nutrient Sensitive Waters Management Strategy, and the NSW classification associated with this strategy, still apply to the subject waters, as well.

Please note that the additional comment period ended on August 15, 2006. It was discussed at the May 2006 EMC meeting that the Hearing Officers would need time to consider all comments before making a recommendation to the EMC. An addendum to the existing Hearing Officers' Report of Proceedings will include further details, and it is anticipated that this addendum will be sent to all EMC members in early September 2006, prior to the September EMC meeting.

As of August 15, 2006, approximately twelve letters supporting the WS-V reclassification had been received during the additional comment period. There is one letter received that is opposed to the WS-V reclassification that has been received during the additional comment period, and this letter conveys that Franklin County has investigated this water supply intake as a feasible water supply source.

Recommendation:	The Hearing Officers recommend that the classification of this segment of the Neuse River remain as Class WS-IV NSW and Class WS-IV NSW CA waters.
EMC ACTION:	**THE EMC APPROVED THE HEARING OFFICERS RECOMMENDATION TO LEAVE THE WATERS PROTECTED AND CLASSIFIED FOR WATER SUPPLY USE.**

Agenda Item: Request for Approval of the Final Roanoke River Basinwide Water Quality Plan

Explanation: The *Roanoke River Basinwide Water Quality Plan* is in its third cycle of basinwide water quality plans that the Division of Water Quality is preparing for all 17 river basins across the state.

In May 2006, the draft basinwide plan was approved by the Water Quality Committee (WQC) to be released for public review and comment. The draft plan included language developed during an in-depth interim review process. The Division of Water Quality received written and verbal comments from both state and local agencies, as well as comments from private landowners and local watershed groups. Revisions were made and information was added to or clarified in the draft plan. Copies of the revised plan were sent to EMC members in the EMC package.

This Basinwide Water Quality Plan is a planning document that will guide the Division's actions in this river basin over the next five years and beyond. The management actions are based on existing rules and policies. Therefore, approval and endorsement of this plan by the Commission would affirm that the management actions set forth in this plan are consistent with the rules adopted by the Commission and with the decision-making policies under which the Division has acted in the past.

Recommendation: It is recommended that the *Roanoke River Basinwide Water Quality Plan* be approved and endorsed by the Commission as a guide to water quality program management and implementation by the Division of Water Quality as it carries out its Water Quality Program duties and responsibilities in the Roanoke River basin.

EMC ACTION: **THE EMC APPROVED THE ROANOKE RIVER BASINWIDE WATER QUALITY PLAN AS PRESENTED.**

Agenda Item: Request to Proceed to Public Notice & Hearing to Revise the Groundwater Quality Standard for Arsenic

Explanation: According to the criteria in the EMC's Rule 15A NCAC 2L .0202, the current groundwater quality standard for arsenic should be revised. In accordance with the groundwater rules, the preferred reference for groundwater standards is the U.S. EPA's Integrated Risk Information System (IRIS).

Research in recent years on arsenic toxicology has resulted in the federal MCL being revised to 10 ug/L (or 0.01 mg/L). In addition, the U.S. EPA's federal Science Advisory Board continues its ongoing efforts through its Arsenic Review Panel. Its reports have not yet been finalized and incorporated into the IRIS database. With no definitive timeline in place for the incorporation of the final federal Science Advisory Board's work into the IRIS database, the DWQ staff, with the concurrence of the DPH staff, recommend using the information that is currently available in the IRIS database to calculate a revised groundwater standard of 0.02 ug/L (or 0.00002 mg/L) for arsenic. On July 12, 2006, the Groundwater Committee of the EMC approved bringing this recommendation forward to proceed to public notice.

Recommendation: In accordance with Rule 15A NCAC 2L .0202, DWQ recommends that the groundwater standard for arsenic be revised to 0.02 ug/L (or 0.00002 mg/L). It is requested that the Environmental Management Commission approve proceeding to public notice and hearing with this recommendation.

EMC ACTION: **THE EMC APPROVED SENDING THE PROPOSED REVISION TO THE ARSENIC GROUNDWATER STANDARD TO PUBLIC HEARING.**

Summary of Actions Related to Water Resources IBT Issues

Issue:

The Cities of Concord and Kannapolis have requested EMC approval of an interbasin transfer of surface water from the Catawba and Yadkin River Basins to the Rocky River Basin of up to 36 millions gallons per day combined from the two source basins. The 60-day public review period for the Final EIS began on May 26, 2006 and was scheduled to close on July 25. Staff discovered errors in the modeling portion of the EIS and was in the process of preparing supplemental information to correct the errors. Many members of the public opposing the transfer have requested one or more public hearings in order to provide their input to the commission.

Motion Before the Commission:

It was moved by Commissioner Waldroup that the EMC extend the public comment period until September 30 in order to provide time for staff to prepare the supplemental report, verify its correctness, and release it for public review and comment. It was further moved that the EMC would request that at least one public meeting be held by staff in the Catawba River Basin during the public review period.

Action by the EMC: The motion was passed.

Note: Two public meetings were held by staff in September in Valdese and Charlotte. Comments from the meetings were recorded and transcribed for the record. The decision on the IBT request, originally scheduled for the November EMC meetings, was later delayed by Chairman Moreau until the next EMC meeting. The purpose was to provide more time for public consideration of the EIS, and to allow more time for the EMC to consider the request. Chairman Moreau also recommended to the hearing officers that the comment deadline be extended from September 30 to October 31, 2006. This recommendation was later agreed upon by the hearing officers.

IV. EXPECTED FUTURE AGENDA ITEMS

FUTURE AIR QUALITY ITEMS
FUTURE GROUNDWATER ITEMS
FUTURE WATER QUALITY ITEMS
FUTURE WATER ALLOCATION ITEMS

FUTURE ITEMS FOR AIR QUALITY COMMITTEE AND ENVIRONMENTAL MANAGEMENT COMMISSION
Nov 2006 - Jan 2009

MONTH	AQC CONCEPTS	AQC DRAFT RULES	EMC ACTION
Nov 06		-Require Prescribe Forest Land Burners to Use Smoke Management (446) -Repeal of Tailpipe Emission Standard Rule (447) -Cross-Reference Correction to 2D .0953, .0954 and ,1110 (448) -Repeal of 2Q .0506 (449) -Excluding Trades Under CAIR and CAMR from 2Q .0523 (440) -Exclude Recently Promulgated Guideline Rules from 2D .0524 (411) -Remove Coverage of 2D .0519 to Nitric Acid Plants and Boilers Covered Under NSPS (443) -NOx and VOC RACT for Charlotte Ozone Nonattainment Area (431) -Correction to the Banking Applicability Rule (433) -Removal of Obsolete Language from Leak Tester Certification Rule (434) -Other Solid Waste Incinerators (437) -Replace 08/17/71 Method 5 with Method 202 in Rule .0501(c)(3) and Stack Testing (100, 297) and Stack Testing (148a) -Extend New Source Review Rule for Nonattainment Areas to Particulate Nonattainment Areas (450)	Adoption -Leaks at Gasoline Terminal Clarification (412) -Revision of Reporting Requirements for Excess Emissions and Deviations (424) -Change the Definition of Insignificant Activities Because of Category@ (425) -Additional Permit Conditions Requiring Public Participation (428) -Prohibition of Submittal of False Information (429) -Clarification of Title V Administrative Amendments Re State Enforceable Only Conditions (430) -Delegation of Dry-cleaning MACT and NSPS to DWM (432) -Implementation of New Authority sales and service of analyzers (323d) -Extension of Emission Inventory Requirements to New Nonattainment Areas (442) Adoption -Clean Air Mercury Rule (427)
Jan 07			Hearing Request -Require Prescribe Forest Land Burners

FUTURE WAC ITEMS

A decision by the EMC is scheduled for January 11, 2007 on the request by the Cities of Concord and Kannapolis to transfer surface water from the Catawba and Yadkin River Basins to the Rocky River Basin of up to 36 millions gallons per day combined from the two source basins. The EMC may decide to either: 1) delay its decision, 2) approve the request, 3) deny the request, or 4) approve the request subject to conditions.

Summary of Notification for June 22-23, 2005 Hearings

(1) Notice was published in Volume 19, Issue 22 of the NC Register on May 16, 2005.

(2) Notice was published in the Charlotte Observer on May 23, 2005.

(3) Notice of the hearing was provided by first-class mail to 276 parties in the Catawba and Yadkin River Basins. Parties included:

a. Persons with registered withdrawals or transfers in the Catawba and Yadkin Basins

b. Charlotte Mecklenburg Utilities, the only interbasin transfer certificate holder in either the Catawba or Yadkin Basins

c. Persons with NPDES permits in the Catawba and Yadkin Basins

Note: All permit holders in both basins were notified, though the statute only requires notification of those that discharge downstream of the proposed withdrawal point(s).

d. County Manager and the Chairs of the County Commissioners of each of the following counties:

Alexander	Alleghany	Anson
Ashe	Avery	Burke
Caldwel	lCatawba	Davidson
Davis	Forsyth	Gaston
Guilford	Iredell	Lincoln
McDowell	Mecklenburg	Mitchell
Montgomery	Randolph	Richmond
Rowan	Stanly	Stokes
Surry	Union	Watauga
Wilkes	Yadkin	

e. Public water system administrators in the Catawba and Yadkin River Basins

Note: All public water system administrators in the two basins were notified, though the statute requires notification of only those downstream of the proposed withdrawal point(s).

(4) Notice was posted on the website of the Division of Water Resources on May 10, 2005 at: http://www.ncwater.org/Permits_and_Registration/Interbasin_Transfer/Status/Concord/ConKannPHNotice.pdf

(5) Notice was made in the May 11, 2005 meeting of the Water Allocation Committee.

EXHIBIT J

Analysis of Reservoir Levels and Water Supply Impacts of Proposed Concord Kannapolis Interbasin Transfer

Supplement to the Final Environmental Impact Statement

August 31, 2006

Division of Water Resources
North Carolina Department of Environment and Natural Resources

Michael F. Easley, Governor

William G. Ross Jr., Secretary
John Morris, Director

The color version of this document may be downloaded at:
http://www.ncwater.org/Data_and_Modeling/Catawba/Reports/August31_2006_Analysis_Report.pdf
500 copies of this document were printed at a cost of $365.00 or $0.73 per copy.

Summary

1. Computer modeling previously done by the Division of Water Resources for the Final Environmental Impact Statement on the proposed Concord-Kannapolis Interbasin Transfer and for the supplement to the Final Environmental Impact Statement (Final EIS), dated July 7, 2006, is not reliable for two reasons. First, this modeling did not use the final version of the Catawba-Wateree CHEOPS Operations Model of the Catawba basin and the final version of the Low Inflow Protocol (drought management plan) for the Catawba basin, which were not yet available at the time of the Final EIS. Second, the Division of Water Resources made unit conversion and data input errors, which affected the modeling results. The Division of Water Resources regrets and apologizes for these errors. New modeling has been done using the latest version of the computer model and the final version of the Low Inflow Protocol, which are being used for Duke Energy's hydropower license application. The Division of Water Resources has checked its latest modeling by having three engineers review the inputs and also by obtaining an outside review by Devine Tarbell & Associates, the consultant to Duke Energy, which developed the CHEOPS model (Attachments A and B).

2. Four scenarios were modeled using the Catawba-Wateree CHEOPS Operations Model for the purpose of evaluating the impacts of the proposed interbasin transfer (IBT) of water from the Catawba River by Concord and Kannapolis. Each scenario modeled a different quantity of withdrawal. The following IBT quantities were modeled: Zero, an average of 10 millions gallons per day (MGD), an average of 16 MGD, and an average of 22 MGD. All results may be downloaded at the website of the Division of Water Resources at:

   http://www.ncwater.org/Permits_and_Registration/Interbasin_Transfer/Status/Concord/

3. The reservoir level and outflow duration curves included in this report show that, on a large time scale, average daily interbasin transfers of 10, 16, and 22 MGD have little or no noticeable effect on reservoir elevations and reservoir outflows in North and South Carolina over the 75-year period of hydrologic record from 1929-2003.

4. In the future, Duke Energy's reservoirs will be operated under a Low Inflow Protocol (LIP) during periods of low flow. As the stage of the LIP increases from Stage 1 to Stage 4, stricter water use restrictions are applied. Over the 75-year period, the impacts of the proposed IBT on occurrences of the various stages of LIP were evaluated. For a 10 MGD average interbasin transfer, no changes are predicted in the occurrence of Low Inflow Protocol Stages 1 and 2 compared to the Zero transfer scenario. The model predicts one additional month of LIP Stage 1 for a 16 MGD average interbasin transfer. Nine additional months of Stage 1 and one less month of Stage 2 is predicted for an average interbasin transfer of 22 MGD. Stages 3 or 4 are not triggered under any of the modeled scenarios.

5. A closer examination was made of the modeled effects of the proposed interbasin transfer during the most severe drought, specifically in 2000-2002. During this drought, the model predicts that for the 10 MGD and 16 MGD IBT scenarios, levels

in Lake James are reduced by about a quarter of a foot for a period of about two months. For the 22 MGD IBT scenario, the model predicted an increase in the elevation of Lake James, compared to the other scenarios, for about nine months. This is thought to be because of the seven additional months of Stage 1 LIP restrictions predicted for the 22 MGD IBT scenario.

6. Reservoir levels in the system of 11 Duke Energy Reservoirs are significantly affected by reservoir operating policies and by the Low Inflow Protocol. In order to isolate the effect of the interbasin transfer from these other variables, a simple analysis was done, assuming that the entire interbasin transfer would be withdrawn from six of the reservoirs in North Carolina for six months, assuming no inflow to the reservoirs and no withdrawals from them. This simple analysis showed that the effect of withdrawing 10, 16, and 22 MGD from the six reservoir system continuously for six months would lower reservoir elevations by 1 inch to 5 inches. Although this simplified analysis does not match the way the reservoirs are operated, it does provide a way to estimate the magnitude of the impact associated with the proposed transfer.

7. A short summary of portions of the Duke Energy Water Supply Study is presented. During relicensing of the Duke Energy reservoirs in the Catawba-Wateree basin in North and South Carolina, a high priority has been to determine if the basin could withstand the increased demands projected for the future. These demands are expected to include larger water supply withdrawals, increased releases from reservoirs for aquatic habitat, greater consumptive use of cooling water for electric power generation, and maintenance of critical reservoir elevations to assure water supply security. Duke Energy worked with water supply users and other interested parties to project water needs to 2058. The projection show an increase of total withdrawals from 496 MGD in 2008 to 946 MGD and an increase in "net outflows" or consumptive uses from 215 MGD in 2008 to 475 MGD. The Duke Energy Water Supply Study concluded that all of these projected increased water uses for municipalities, industry, power generation, and agriculture could be met past 2048, even during the most severe drought of the 75 years of hydrologic record, without violating the critical reservoir elevations needed to assure the operability of public water supply sources. This analysis included projected increases in interbasin transfers from the basin, including Concord and Kannapolis' proposed transfer, as well as the many other demands on water resources. This independent conclusion by the Duke Energy Water Supply Study shows that all projected future demands on the basin can be met for more than 40 years into the future.

8. A summary of consumptive water use in the Catawba Basin is presented. The Duke Energy Water Supply Study shows that consumptive water use in the Catawba Basin, as a percent of average flow from Lake Wateree, is expected to increase from 2008 to 2038. Consumptive use for power generation is projected to grow from 3.0 % to 5.2 % of average flow by 2038. Consumptive use for public water systems, excluding interbasin transfers, are projected to grow from 1.5% to 4.5% of average flow over the same period. Interbasin transfers are projected to increase from 0.5% to 2.0% of average flow, including 0.8% of average flow for an IBT to Concord and Kannapolis, over the same period.

Purpose

The purpose of this supplement is to provide updated computer modeling results and other analyses to evaluate potential impacts on the Catawba River Basin of the proposed interbasin transfer (IBT) of water by the Cities of Concord and Kannapolis from the Catawba River and Yadkin River Basins to the Rocky River Basin. These updated modeling results pertain only to the Catawba River Basin. The results replace previous modeling results in the Final Environmental Impact Statement (EIS) and the July 7, 2006 supplement to the EIS which contained data input and unit conversion errors.

In addition to the computer modeling analysis, this report includes a simplified analysis of the incremental effects of the proposed IBT on the reservoirs within North Carolina in the Catawba River Basin. This less complex approach evaluates the impacts on reservoir levels of the proposed IBT, assuming no inflows to the system and no other withdrawals over a six-month period. These assumptions were used to isolate the effects of the proposed IBT from other factors, such as reservoir operations.

This report also includes a summary of some of the relevant water supply related information in the Water Supply Study carried out for Duke Energy as a part of its Federal Energy Regulatory Commission (FERC) relicensing process.

Finally, a brief summary is included that compares the proposed IBT to other present and future consumptive water uses in the Catawba River Basin.

IBT Request

The Cities of Concord and Kannapolis are requesting an IBT certificate to meet their projected water supply shortfall during the next 30 years. The Cities and their service areas in Cabarrus County (Figure S-1) are within the Rocky River Basin.

The Cities are requesting permission to transfer an average of 22 million gallons per day (MGD) from the Catawba River and Yadkin River Basins for use in the Rocky River Basin. The maximum day IBT being requested is up to 36 MGD. The Cities are requesting permission to transfer up to a maximum of 10 MGD from the Yadkin River Basin with the remainder of up to a maximum of 36 MGD to come from the Catawba River Basin. Therefore, if permission is granted to transfer 10 MGD from the Yadkin River Basin, then the requested amount of the transfer from the Catawba River Basin is reduced to a maximum day transfer of up to 26 MGD.

The Cities submitted an IBT petition and supporting EIS. The Draft EIS was reviewed by agencies of the Department of Environment and Natural Resources and the Wildlife Resources Commission. It was then revised by the applicant to address agency comments. A public comment period on the revised Draft EIS and IBT Petition began in May 2005 and ended August 11, 2005. Public hearings were held in Charlotte, NC and Albemarle, NC on June 22 and 23, 2005.

The Final EIS, which addressed comments received on the revised Draft EIS and the IBT Petition, was released for public review on May 26, 2006. Due to modeling errors in the Final EIS, the public review, originally scheduled for 60 days, was extended by the Environmental Management Commission until September 30, 2006.

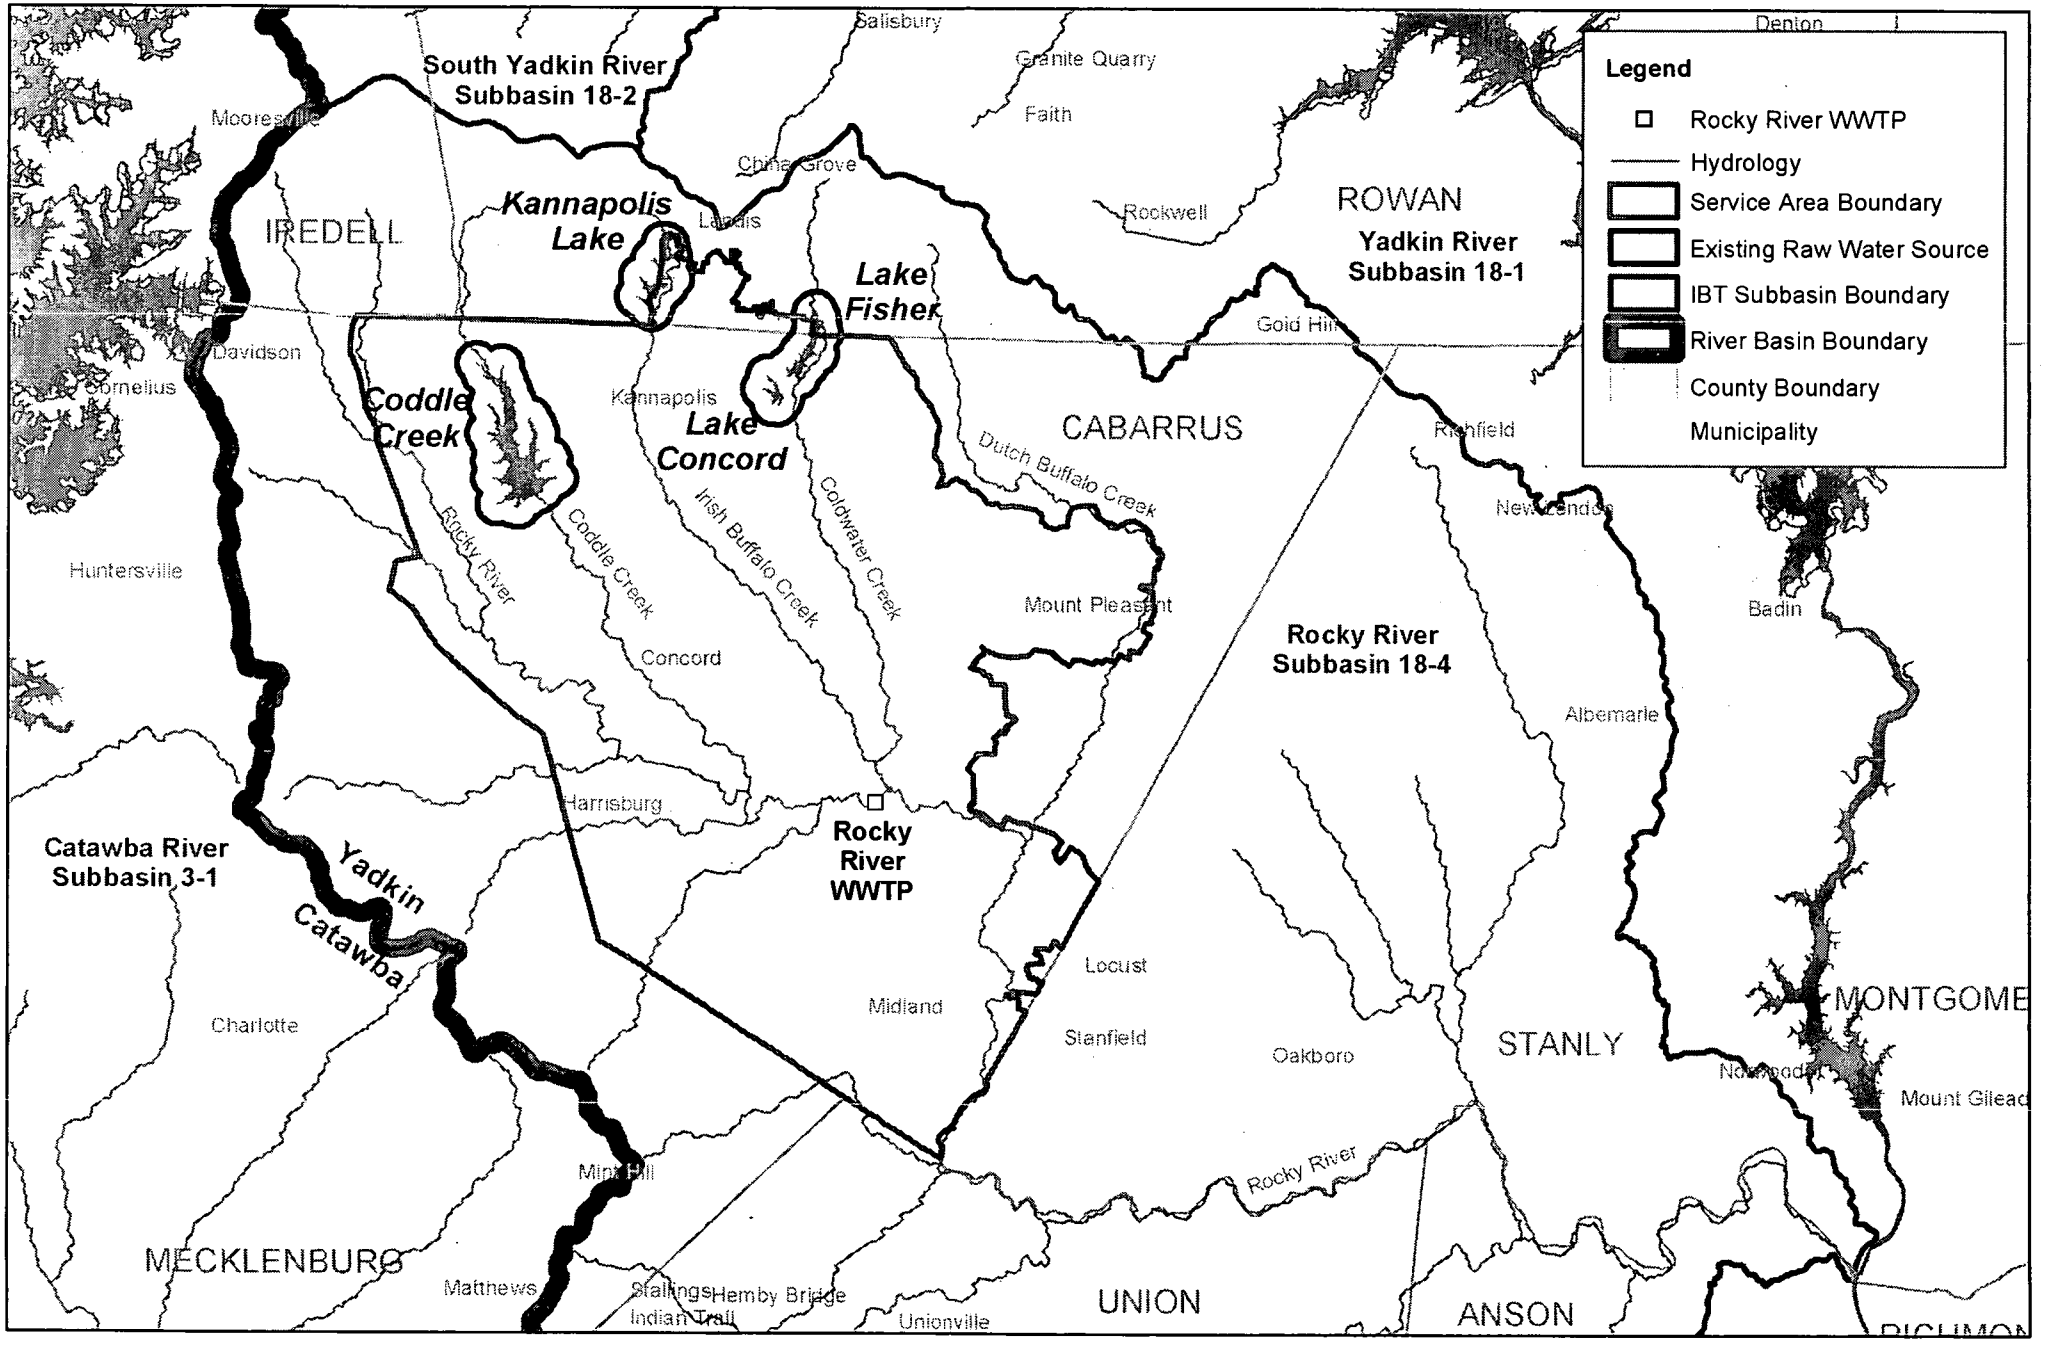

Figure S-1
Existing Raw Water Souces
Concord/Kannapolis IBT Environmental Impact Statement

Public meetings will be held to facilitate further public comment on this project in the Town of Valdese, NC on September 7, 2006 and in the Charlotte area the week of Sept 18 (details not yet available). Details of the September 7 meeting and the Charlotte meeting (when they become available) may be found at the Division of Water Resources (DWR) website: http://www.ncwater.org/Permits_and_Registration/Interbasin_Transfer/Status/Concord/.

It is anticipated that the EMC will act on this request at their November 9, 2006 meeting.

Computer Modeling

Computer modeling results presented in this report have been developed using the most recent version of the Catawba-Wateree CHEOPS Operations Model (Version 8.7 released in March, 2006). This computer model was developed to describe the effects of water quantity related operational changes and physical modifications to the hydropower facilities operated by Duke Energy in the Catawba-Wateree River Basin. Version 8.7 includes the most recent Low Inflow Protocol (LIP) developed for the Catawba-Wateree Project. This version of the model is being used by Duke Energy as the basis for the Federal Energy Regulatory Commission (FERC) license application and for the Final Comprehensive Relicensing Agreement for the Catawba-Wateree Hydro Project filed with FERC in August 2006.

Due to the timing of the request for certification, the modeling that was presented in the Final Environmental Impact Statement (EIS) released in May 2006 had to be done using previous versions of the model and the LIP. This previous modeling, conducted as a part of the Final EIS and a supplement to the EIS distributed on July 7, 2006, is unreliable due to input errors related to the Concord and Kannapolis IBT quantities. DWR apologizes for these data input errors, has corrected the errors, and has taken steps to ensure that results presented in this document are accurate. The inputs to the updated modeling have been reviewed in detail by Devine Tarbell & Associates (DTA), the developers of the Catawba-Wateree CHEOPS Operations Model. The detailed results of the updated modeling presented in Attachment A, *Revised Report: CHEOPS Simulation of Proposed Concord-Kannapolis Interbasin Transfer from the Catawba River Basin.* DTA's review report is found in Attachment B, *Catawba-Wateree CHEOPS™ Model Review of Input Concord Kannapolis, NC Final EIS for IBT Certification.*

Updated CHEOPS Results

Four levels of proposed interbasin transfer were analyzed as follows:

Scenario Name	Concord Kannapolis IBT
Zero MGD IBT	Zero IBT
10 MGD IBT	10 MGD Average IBT withdrawn from Lake Norman
16 MGD IBT	16 MGD Average IBT withdrawn from Lake Norman
22 MGD IBT	22 MGD Average IBT withdrawn from Lake Norman

All IBT scenarios assume that the water is withdrawn from Lake Norman. Apart from the Concord Kannapolis IBT, all other inputs to the model for the four scenarios are the same.

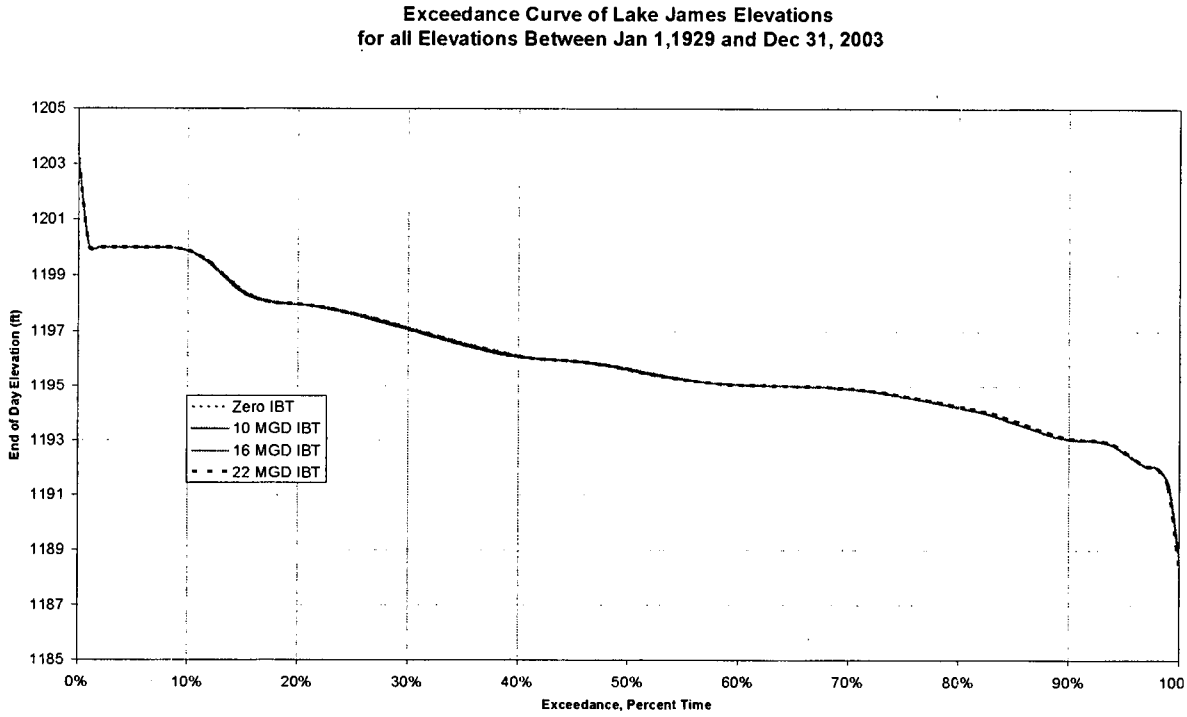
The model uses a 75-year historical record of inflows for the Catawba River system from 1929 to 2003 to simulate the effects of the IBT. The analysis is based on a projection of water supply needs for the year 2035, including municipal water supply, power plant cooling, agricultural, and industrial demands based on the Water Supply Study developed as part of FERC relicensing. These demands include other IBTs that are either certified, grandfathered, or anticipated, but not certified. The model requires that withdrawals be supplied as annual average daily withdrawal values. Since the withdrawal is not the same for every day of the year, the annual average daily values are adjusted to produce monthly use patterns to simulate seasonal water use patterns. In the CHEOPS model, each withdrawal's monthly distribution is based on the historical pattern for that water user. The Concord-Kannapolis proposed IBT withdrawals were distributed according to Concord and Kannapolis' monthly demand patterns reflected in their 2002 local water supply plans. Table S-1 shows the monthly distribution of average demands as a percentage of annual average demand that was used in the CHEOPS model for the Concord Kannapolis withdrawal in all four scenarios.

Table S -1: Monthly Distribution for Concord and Kannapolis Water Demands

Month	% of Average
January	91%
February	90%
March	90%
April	101%
May	108%
June	116%
July	110%
August	111%
September	102%
October	103%
November	91%
December	88%

Results of these simulations have been summarized on a long term time scale using duration curves of reservoir level and reservoir outflow, and using a summary of the occurrences of LIP stages. The effects of the transfer are also examined on a shorter term time scale by examining changes in reservoir elevation and LIP stages during the drought of record. While the whole system of 11 reservoirs was modeled and analyzed, this summary includes results of the modeling for Lakes James, Norman, Wylie and Wateree, chosen as representative reservoirs. Information for additional reservoirs can be found in Attachment A and additional modeling results are available on the DWR website at

http://www.ncwater.org/Permits_and_Registration/Interbasin_Transfer/Status/Concord/



Long Term Analysis

The duration curves presented here are cumulative frequency curves showing the percentage of time over the period of record that a specified reservoir level or outflow is equaled or exceeded. They show in a probabilistic way how the various levels of IBT are predicted to affect reservoir levels and outflows, and provide a means of presenting the impacts of the transfers on a large time scale.

Figures S-2 and S-3 show reservoir elevation duration curves for Lake James and Lake Norman for the four scenarios. Tables S-2 and S-3 show the reservoir elevation duration data for Lake James and Lake Norman. Figures S-4 and S-5 show reservoir outflow duration curves for outflow from Lake James and Lake Wylie. Tables S-4 and S-5 show reservoir outflow duration data for outflow from Lake James and Lake Wylie.

Duration curves are typically used because they provide an easy way to compare results of several different scenarios. In this case the results of the four scenarios are so similar, few differences are noticeable on the graphs. Tables showing the values for selected frequency percentages are included to make it easier to see the differences between the four scenarios. For example, in the case of Lake James elevation shown below, the differences in minimum elevation, the elevation exceeded 100% of the time, is not discernable from the graph. However, the data table shows that the predicted absolute minimum elevation is 0.54 feet lower with a 22 MGD transfer compared to what the model predicts for the zero transfer scenario. The minimum predicted elevations for Lake James for IBT amounts of 10 and 16 MGD are 0.11 and 0.20 feet lower, respectively.

Effects on Low Inflow Protocol Implementation

In the future, Duke Energy's reservoirs will be operated under a Low Inflow Protocol during periods when inflows to the system are not adequate to maintain required water levels in the reservoirs while supplying required downstream releases. As the stage of the LIP increases from Stage 1 to Stage 4, stricter water use restrictions are applied.

Another long term approach to examining the impacts of the IBT is to evaluate changes to the occurrence of Low Inflow Protocol stages for the four levels of transfer modeled. Each LIP stage stipulates water management actions designed to manage project operations and withdrawals during drought conditions. Stage 0 is a watch stage, and Stages 1-4 impose increasing levels of water use reduction measures and changes to outflows from the reservoirs. The Low Inflow Protocol included in the Catawba-Wateree CHEOPS Operations Model Version V8.7 is included with this report as Attachment C.

Table S-6 is a summary of the LIP actions for public water supply systems.

TABLE S- 6
Summary of Catawba River Basin Low Inflow Protocol Stages

Stage	Public Water Supply Actions	Water Use Reduction Goals
-1	Normal Conditions	None
0	Low Inflow Watch – DMAG Meets	None
1	Voluntary Water Use Restrictions	3 to 5 percent
2	Mandatory Use Restrictions	5 to 10 percent
3	Increased Mandatory Use Restrictions	10 to 20 percent
4	Emergency Use Restrictions	20 to 30 percent

DMAG = Drought Management Advisory Group

The Low Inflow Protocol included in the Catawba-Wateree CHEOPS Operations Model Version 8.7 is included with this report as Attachment C.

The model examines the effect of the four scenarios of IBT on the LIP stage over the 75 years of available hydrologic record. Occurrences of Stages 1-4 are particularly important in the evaluation because these stages require water users in the basin to reduce water use and require reductions in normal outflows from the reservoirs. In this analysis, neither Stage 3 nor Stage 4 is triggered by any of the four levels of transfer modeled.

The top part of Table S-7 shows that the model predicts the 10 MGD IBT scenario would produce the same months of Stages 1 and 2 occurrences as the Zero MGD IBT scenario. The 16 MGD IBT scenario has one additional month of Stage 1 compared to the Zero MGD IBT scenario. The model predicts that the 22 MGD IBT scenario would have an additional seven months of Stage 1 restrictions and one less month of Stage 2 restrictions than the Zero MGD IBT scenario. All of the predicted deviations in LIP stage between the four scenarios occurred during the hydrologic conditions experienced in the period 2000-2002.

Further, the lower part of Table S-7 shows that for all four IBT scenarios, the model predicts that Stage 1 voluntary restrictions would be implemented in ten of the 75 years studied and Stage 2 mandatory restrictions would be implemented in one year, the year 2002. Stage 0 watch measures would have been implemented in 55 of 75 years according to the model, one less than for the other three scenarios. This is because more months are spent in Stage 1 voluntary restriction under the 22 MGD IBT scenario.

Extreme Case Analysis

To assess impacts on a shorter time scale, the effect of the proposed IBT amounts during significant droughts in the period of record were examined.

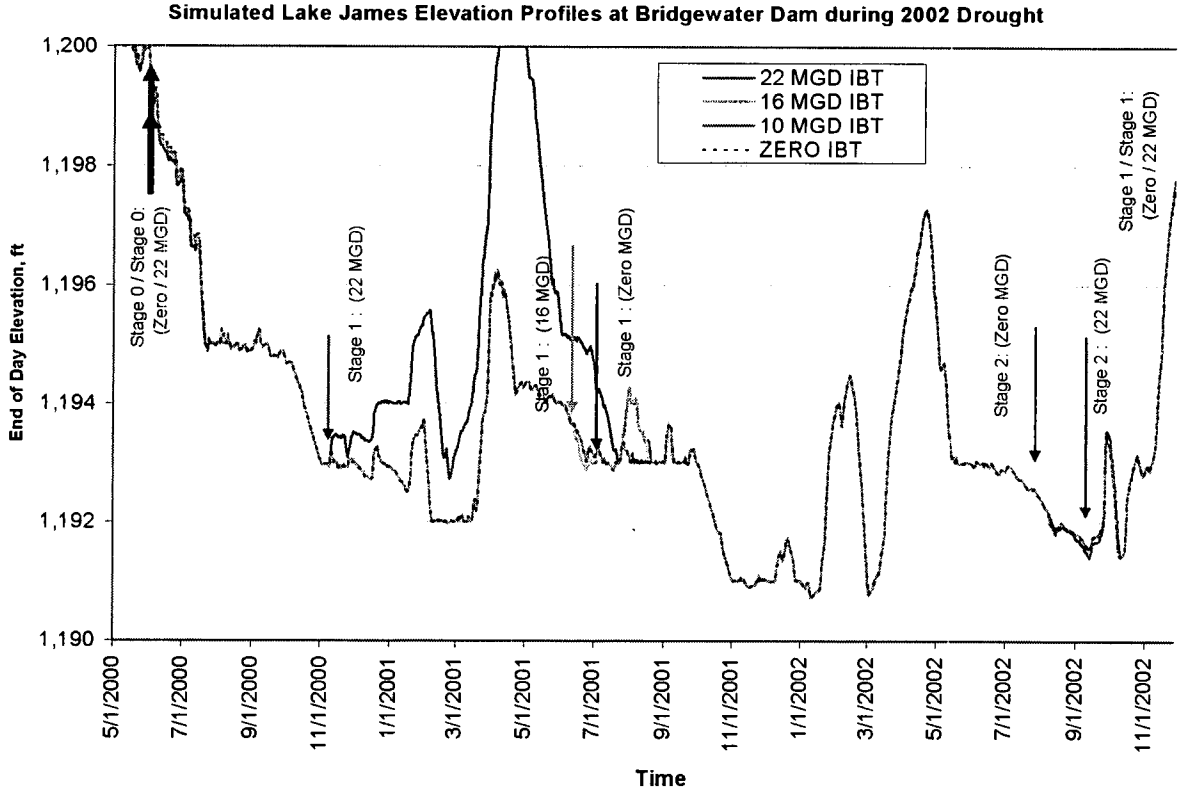
The most severe drought during the 75-year period of record in the Catawba Basin occurred during 2001-02. Figures S-6 and S-7 show the period of greatest variation between the four modeled scenarios in reservoir elevations of Lake James and Lake Norman predicted by the model during the 2001-02 droughts. LIP stage levels are indicated in the figures for the four scenarios.

Modeling predicts that for the 75 year record all variations in LIP implementation caused by the IBT would occur during a repeat of the hydrologic conditions experienced from early summer 2000 through the spring of 2003. During this three-year period, under all scenarios, restrictions at the level of Stage 1 and above would be in place by mid-summer of year two (2001 on the graph) and continue through the end of year three (2002 on the graph). Under

the Zero MGD IBT and 10 MGD IBT scenarios, Stage 1 is initiated in July of year two and under the 16 MGD IBT scenario, it is initiated a month earlier in June. Under the 22 MGD IBT scenario, Stage 1 is initiated in November of year one (2000 on the graph), adding an additional eight months of restrictions to the nineteen months predicted under the Zero and 10 MGD scenarios, and seven months to the twenty months predicted for the 16 MGD scenario. In summary, during conditions similar to those experienced during the drought of record, the model predicts that with a 22 MGD IBT, the basin would experience one additional Winter, Spring and early Summer under LIP Stage 1 restrictions, compared to what would occur under the other three scenarios.

As the LIP goes to each higher stage, additional reductions in hydropower production, water withdrawals, and required outflows occur, thereby reducing the volume of water that leaves the reservoirs. The modeling shows that during hydrologic conditions similar to the drought of record, one effect of the 22 MGD IBT is that the LIP would be in Stage 1 for a longer period of time than in the other scenarios. The earlier and longer reduced outflows required under Stage 1 restrictions postpone initiation of Stage 2 restrictions by one month. This reduces Stage 2 restrictions to four consecutive months as opposed to five consecutive months under the other three scenarios. As Figure S-6 shows, the modeling indicates that for Lake James, the reduction in outflows associated with the additional months of Stage 1 restrictions with a 22 MGD transfer, results in an increase in water elevation in the reservoir. Reservoir elevations would be higher than what is predicted for the other scenarios over the additional seven months of Stage 1 restrictions.

Figure S-6: Lake James Elevation during 2001-02 Drought



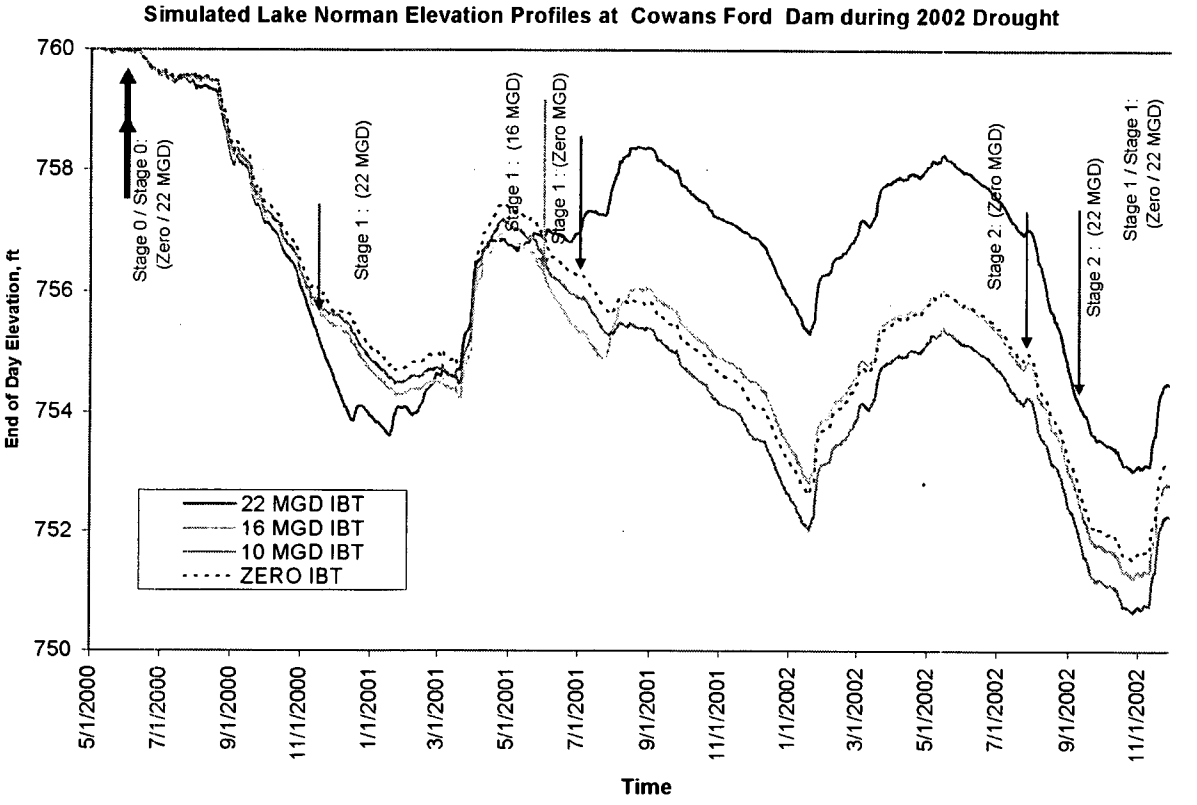


Figure S-6 shows the plot of the predicted reservoir levels of Lake James during the 2001-02 drought. It shows that the Zero, 10 MGD and 16 MGD curves follow each other closely indicating little variation in the reservoir elevation between these scenarios. For the 16 MGD IBT scenario, the LIP stage moves to Stage 1 in June 2001, one month earlier than the Zero and 10 MGD IBT scenarios. The earlier shift to Stage 1 appears to cause the 16 MGD reservoir level curve to drop slightly below the Zero and 10 MGD IBT curves for approximately two months, and then it rises above the Zero and 10 MGD IBT curves from July to August of 2001. From September 2001 through the end of 2003, the water levels for Lake James are almost identical under all four scenarios.

The 22 MGD IBT curve follows the other three curves until November 2000, when the LIP stage shifts to Stage 1, 7 months before the 16 MGD IBT scenarios shifts to Stage 1. This shift in LIP stage has a significant effect on the reservoir level. The model predicts that upon implementation of the LIP Stage 1, the Lake James level would rise above the other three curves before joining the other curves in August 2001 when Stage 1 is in place for all four scenarios.

The reservoir levels predicted by the model for Lake Norman during the hydrologic conditions experienced in 2000-2002 are also significantly affected by LIP restrictions. Figure S-7 shows that all four scenarios closely follow each other until November 2000 when the 22 MGD would trigger LIP Stage 1. This causes the 22 MGD curve to drop to about 1.5 feet below the other three curves over the next four months. Later, however, the 22 MGD curve joins the others and, beginning in about June of 2001, rises up to about 2 feet above the other curves over the following 18 months. This increase in reservoir levels is explained by the extra months of Stage 1 LIP measures predicted in the 22 MGD scenario. These results show that predicted reservoir levels may be significantly affected by the LIP drought stage level and the associated drought response measures built into the model.

Figure S-7: Lake Norman Elevation during 2001-02 Drought

Water Quality Impacts

In the Final EIS, the predicted impacts on reservoir elevation and outflow were used to evaluate potential water quality impacts of the proposed IBT. Since the proposal is to remove water from the basin and not discharge water into the basin, the proposed IBT would not directly increase the inputs of pollutants to the Catawba River Basin. It is necessary to assess whether the transfer of the specified volumes of water out of the river system could influence the ability of the basin to assimilate pollutants.

The modeling results presented in Figures S-2, S-3, S-4 and S-5 show there are little or no noticeable effects of the proposed IBT amounts on the frequency of occurrence of reservoir elevations or reservoir outflows. Some effects of the IBT were noted at the 22 MGD level when focusing specifically on the 2001-0202 drought of record. Hydrologic conditions, stream flow and reservoir volume are major input parameters to the water quality model developed as part of the relicensing effort. Because there were no significant changes to hydrologic conditions, and the proposed withdrawal of water from the basin are not expected to directly increase the pollutant inputs, additional water quality modeling was considered unwarranted in the Final EIS. The updated CHEOPS™ analysis presented in this report predicts less effects on system hydrology than the analysis in the Final EIS; therefore, additional modeling to evaluate water quality effects in the Catawba River Basin of the IBT is not required.

Simplified Analysis

Another evaluation of the impacts associated with the proposed transfer of water for Concord and Kannapolis was greatly aided by the availability of the complex and powerful Catawba-Wateree CHEOPS Operations Model. However, so that the model not be the only analysis tool for evaluating the impacts of the proposed IBT, a simpler analysis was also conducted to evaluate the effect of the IBT on reservoir levels.

Procedure

An analysis was conducted to show the effects of the proposed IBT on reservoir elevations for reservoirs located in North Carolina over a six-month period. The analysis is designed to answer the following question: How much would the elevation of water in the six reservoirs in North Carolina be changed by the proposed IBT if that was the only withdrawal and no water was flowing in to replace lost water? The no-inflow assumption is chosen in order to evaluate the case of extreme drought, and would not be expected to ever actually occur. During the period of analysis, no downstream releases are made from any of the reservoirs. To help simulate drought conditions, two starting points were used, one with reservoir levels at 90 percent, and one at 75 percent of storage volume. The 10 MGD, 16 MGD and 22 MGD withdrawals were distributed over the six reservoirs proportionally by volume. The share of IBT taken from each reservoir is the ratio for storage in that reservoir to storage in all six reservoirs. In order to isolate the impacts of the IBT, no other withdrawals were included.

To summarize the assumptions for this analysis:

1. No inflows to the system for a six month period.
2. Evaporation neglected.
3. No required releases.
4. Only the six reservoirs in North Carolina are included in the analysis.
5. Reservoirs begin the 6-month period either 75% full or 90% full by volume.
6. The share of the IBT taken from each reservoir is the ratio of storage in that reservoir to storage in all six reservoirs.
7. Other than the IBT, no other water withdrawals from the system are included.

Table S-8 summarizes the results of the analysis. Note that the reductions in elevation in the table are shown in inches.

Table S-8. No Inflow Assumption Analysis

	Reduction in Reservoir Elevations (inches) for Transfers of 10, 16, and 22 MGD					
	10 MGD		16 MGD		22 MGD	
	Initial Storage Conditions					
Reservoir	90% storage	75% storage	90% storage	75% storage	90% storage	75% storage
James	2.1	2.3	2.1	3.7	4.5	5.0
Rhodhiss	1.1	1.2	1.1	1.9	2.4	2.6
Hickory	1.4	1.6	1.4	2.5	3.0	3.5
Lookout Shoals	1.3	1.3	1.3	2.1	2.8	2.9
Norman	1.4	1.7	1.4	2.6	3.1	3.6
Mountain Island	0.9	1.0	0.9	1.6	2.1	2.3

The results show a range of potential reductions in reservoir elevation from 1 to 5 inches.

To reiterate, this is a worst case analysis, since no inflow to the reservoirs is assumed and storage volume is taken only out of the upper six reservoirs in the system. In reality, Duke Energy operates the project as a whole and balances storage throughout the system, which would tend to lessen the impact on reservoir level of each of the six reservoirs considered. Despite these conservative assumptions, this analysis is useful for comparing the magnitude of the IBT to the amount of storage in the Catawba Basin.

Duke Energy Water Supply Study

One of the concerns with the proposed IBT is whether the Catawba River Basin can continue to meet the water supply needs for the growth and development of communities in the basin and for increased power generation for the region without adverse impacts to users and the environment.

This same issue was a top priority during relicensing. Relicensing participants wanted to know if the Catawba-Wateree River Basin could support large projected increases in water use and electric power generation, while providing higher downstream releases for aquatic habitat and meeting critical reservoir elevation targets.

To answer this question, Duke Energy contracted for a Water Supply Study to be conducted, with the participation of major water users in the basin in North and South Carolina, as part of the relicensing process. The Water Supply Study projected future water use to 2058 for industrial, public water supply, power generation and agricultural irrigation water use for the Catawba-Wateree River Basin in North Carolina and South Carolina above Lake Wateree Dam. The projections included grandfathered, permitted, and other potential IBTs, including Concord and Kannapolis. Table S-9 is a summary of these projections by category and shows this projected growth in water use for the watersheds of each of the reservoirs.

Table S-9: Catawba-Wateree River Basin Water Withdrawals (mgd)

Reservoir Watershed	Type	2008	2018	2028	2038	2048	2058

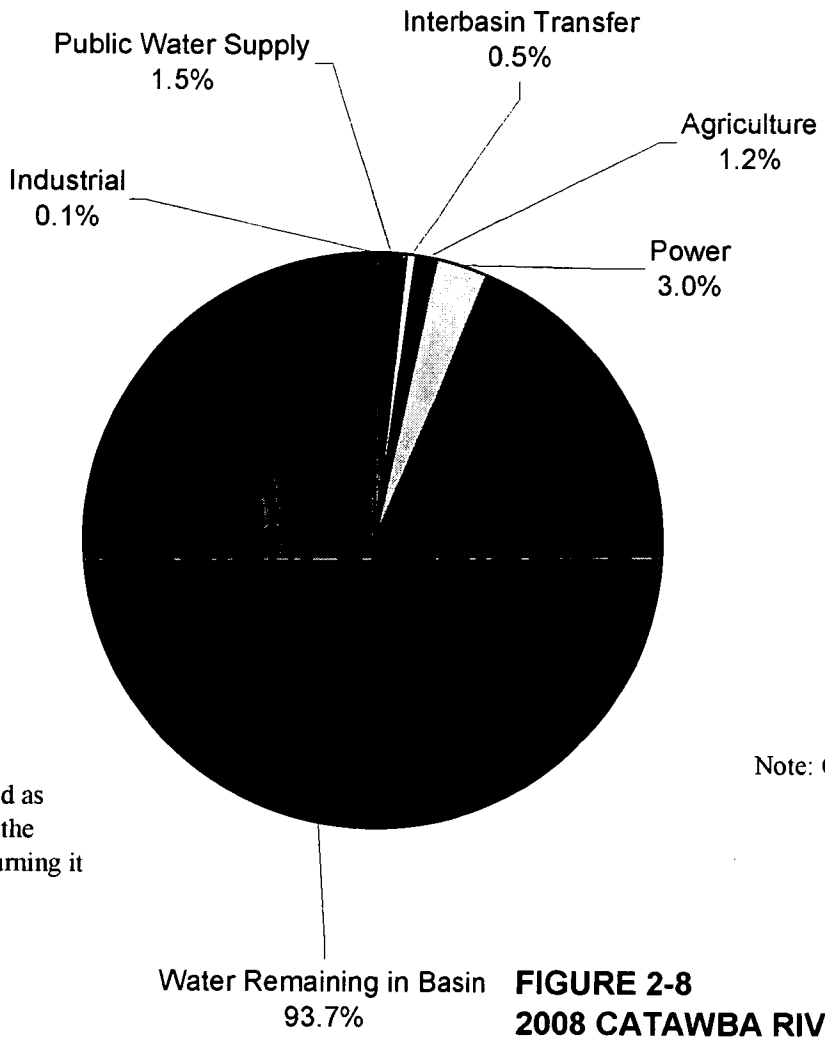
1. Totals represent total withdrawals or demands by category and do not consider whether any portion is returned to the basin.

The public water system estimates from the Water Supply Study show increases in demand for all public water system withdrawals for the period 2008 to 2058. For example, the withdrawal for Valdese is modeled as growing 2.1 MGD from 6.2 MGD to 8.3 MGD and Morganton's withdrawal is modeled to increase 6 MGD from 8.9 MGD to 14.9 MGD. Hickory's withdrawal is modeled as growing from 14.3 MGD to 38.1 MGD an increase of 23.8 MGD this is similar to the increase expected for Gastonia, modeled to grow 24.8 MGD from 15.4 MGD to 40.2 MGD. Further downstream in South Carolina Rock Hill's withdrawal is modeled as increasing 24.1 MGD from 14.3 MGD to 38.4 MGD and the Chester Metro system withdrawal is modeled to grow by 15.9 MGD from 4 MGD to 19.9 MGD. To support growth in the Mecklenburg County area, the Charlotte Mecklenburg Utilities' demand is modeled as increasing 95.2 MGD from 128 MGD to 223.2 MGD. The water withdrawal information tabulated above does not quantify what part of the withdrawal is returned to the basin after use and what part is lost to the basin due to evaporation, incorporation into products, other consumptive uses or transfers out of the basin. The relicensing Water Supply Study also evaluated these losses to the basin (withdrawals minus returns), which were collectively presented as "net outflows" in the final report.

The annual growth rate (AGR) for net outflows for industrial, public water supply, agricultural, and power generation water uses were estimated. These annual growth rates from the study are shown in Table S-10. Continued significant growth in net outflows from the basin is anticipated over the next 50 years, especially for the public water supply category.

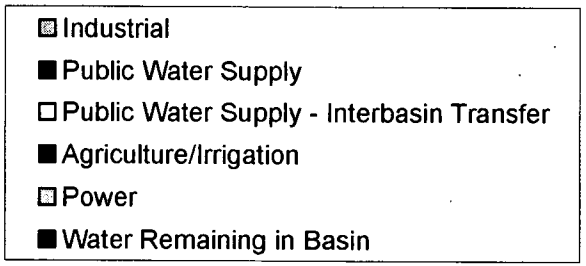
Table S-10: Projected Net Outflows and Annual Growth Rates (AGR)

Table S-10			
Water Supply Study - Projected Net Outflows and Annual Growth Rates (AGR)			
Water User Category	**Current MGD**	**2058 MGD**	**AGR**
Industrial	3.7	5.9	0.85%
Public Water Supply	55.0	243.0	2.74%
Agricultural/Irrigation	31.2	53.5	0.99%
Power	80.8	173.0	1.39%
Total Basin	**170.7**	**475.4**	**1.88%**



The Safe Yield analysis developed for the Water Supply Study was evaluated using the Catawba-Wateree CHEOPS ™ Operations Model. The analysis using the final set of operating protocols and the final LIP shows that the projected demands shown in Table S-9, including all anticipated interbasin transfers, can be met beyond 2048. The Duke Energy Water Supply Study concluded that through 2048, with an additional 354 MGD of water withdrawals, and a total of 421 MGD of net outflows, the Catawba-Wateree Basin can meet these demands even during a reoccurrence of drought conditions like 2001-2002 (the worst on record) without any reservoir dropping below critical elevations for the existing water supply intakes. Usable storage was limited for each reservoir by the highest intake elevation in the reservoir. Modifications of intake elevations could further increase the usable storage.

Consumptive Uses in the Catawba Basin

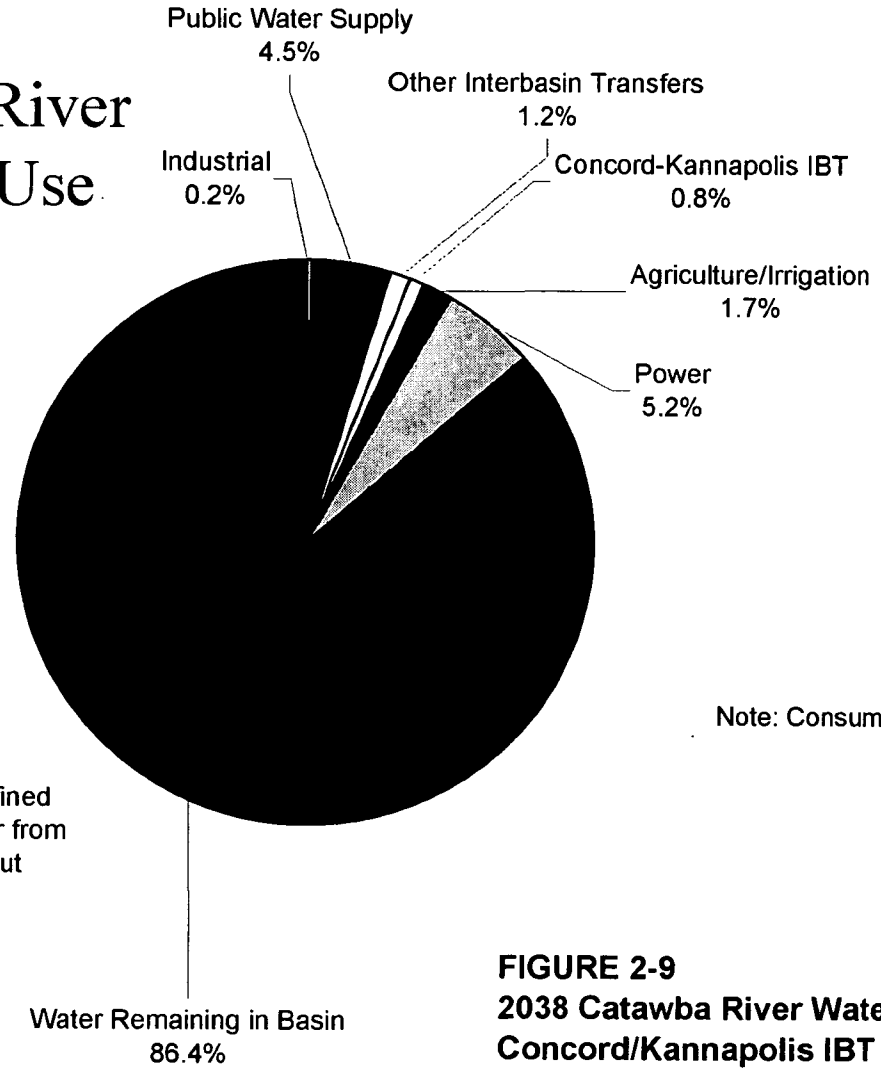


A key factor affecting river basin water supply is the amount of water that is withdrawn and not directly returned to the river system, or "consumptive water use". Consumptive water use for this evaluation refers to the difference between the volume of water withdrawn by water users and the volume of water directly returned to the river system. This is also referred to as "net outflow" in the Duke Energy Water Supply Study. The principal consumptive water users in the Catawba River Basin are public water supply systems, thermal electric power plants (cooling water use), and irrigation. For the Catawba-Wateree River system above Lake Wateree dam, the Water Supply Study projected an average day withdrawal of 747 MGD in 2038. Of this amount, the study projected 355 MGD of consumptive use, or net outflow.

In order to compare the magnitude of present and projected IBTs in the Catawba River Basin to other consumptive uses, IBTs were separated from other public water supply uses in this analysis. Figure S-8 shows consumptive use estimates for 2008. Figure S-9 shows projected consumptive use estimates for the year 2038, near the end of the planning period for the proposed Concord Kannapolis IBT. The IBT amount depicted in the pie chart for Concord and Kannapolis is based on no IBT in 2008 and an average of 22 MGD in 2038.

These charts show that all IBTs are expected to be about 0.5% of the average flow in the Catawba Basin in 2008. In 2038, IBTs are expected to increase to about 2.0% of the average flow, 0.8% of which would be attributed to Concord and Kannapolis if the entire 22 MGD request were certified. Another approach to put into context the impact of the proposed Concord-Kannapolis Interbasin Transfer, relative to all water demands on the basin, is to examine all water uses that remove water from the basin, including consumptive use and interbasin transfer. These water uses that remove water from the basin were compared to the average flow at Lake Wateree in SC.

2008 Catawba River Consumptive Use



Note: Consumptive Use is measured at Lake Wateree

Note: Consumptive uses are defined as those uses that remove water from the Catawba River system without returning it to the basin.

Department of Environment and Natural Resources
Division of Water Resources
STATUS REPORT TO THE GENERAL ASSEMBLY
ON
WATER SUPPLY PLANNING
SEPTEMBER 1, 2005 THROUGH AUGUST 31, 2006

Assuring a sustainable future water supply for North Carolina is the primary mission of the Division of Water Resources. To carry out this responsibility, the Division administers several monitoring, planning and regulatory programs.

The Division, in partnership with the US Geological Survey, monitors the availability of water through a network of monitoring wells and stream gages. DWR receives and maintains water use data from the mandatory registration of large water withdrawals.

DWR assists community water systems with the preparation of Local Water Supply Plans and prepares the North Carolina Water Supply Plan. In partnership with local governments and other water users, the Division is in the process of preparing long term water supply plans for each river basin to assure the sustainability of future water supplies.

DWR issues permits for water withdrawals in designated capacity use areas, manages applications for certification of interbasin transfers of surface water, and is the lead agency for the Department of Environment and Natural Resources in the relicensing of hydropower projects.

This status report provides an update on these water supply programs and on other related Division activities.

Water Quantity Monitoring

The Division maintains ground water and surface water monitoring networks both directly and in partnership with federal agencies. The data from these networks provide essential information on the condition of water resources throughout the state. North Carolina cooperates with the United States Geological Survey to maintain stream gage sites with real time data collection capabilities. The Division maintains a large network of ground water monitoring wells. Data from these wells are collected quarterly. About fifty percent of these wells have data recorders that provide daily water level data. To improve the accessibility and usefulness of this data for water resource management, the Division has recently joined with the State Climate Office at NC State University, the US Army Corps of Engineers, the United States Geological Survey and others to develop a uniform database to store and disseminate water resources data.

In recent years, with the support of the General Assembly, the Division has expanded the monitoring well network in the Coastal Plain region, an area where ground water resources are being stressed by over-pumping. Fourteen new wells were added over the last year to aid in management of the regional aquifer systems. The Division will expand the monitoring well network as funds permit to improve data for ground water management.

Changes to the funding formula for the monitoring stations operated cooperatively with the United States Geological Survey have resulted in the discontinuance of data

collection at some monitoring sites. Maintenance of near-real time data reporting in the system will require upgrading existing equipment in the near future.

Water Use Monitoring

Knowing how much water is being withdrawn by water users across the state is vital information for effective water resources planning. Currently, water use data are provided by several programs. Units of local government that provide water to the public and other large community water systems submit water use information at least every five years in their Local Water Supply Plans. Large self-supplied water users report water use data every five years under the water withdrawal registration program. Non-agricultural facilities that withdraw 100,000 gallons per day or more and agricultural operations that withdraw one million gallons per day or more are required to register their withdrawals with the Division.

Additional reporting requirements apply in the fifteen counties of the Central Coastal Plain Capacity Use Area. Permitted water users submit water use data to the Division monthly. Others that withdraw 10,000 gallons per day or more must report monthly water use annually.

The five year pattern of updates under the local water supply planning and water withdrawal registration programs leaves significant gaps in our water use data. With final approval of the new rules governing water use during droughts and water supply emergencies, gaps in the water use records will be filled. The rules include requirements for water systems that have to prepare a Local Water Supply Plan under G.S. 143-355(l) and water withdrawers that have to register under G.S. 143-215.22H to report water use annually.

Local Water Supply Plans

The General Assembly established a water supply planning program under General Statutes 143-355(l) and (m) to assure the availability of adequate supplies of good quality water to protect the public health and to support desirable economic growth. Local Water Supply Plans are required from units of local government that supply or plan to supply water to the public and from other community water systems that regularly serve 1,000 or more service connections or 3,000 or more individuals.

Local Water Supply Plans describe current water use and future water needs and assess the water system's ability to meet those needs. The plans must be adopted by the water system's local governing board and be updated at least every five years. The Division of Water Resources is responsible for reviewing Local Water Supply Plans for completeness and consistency.

The plans provide a valuable source of data for all local and regional water supply planning. Information from the local plans is available on the Division's web site www.ncwater.org. The Division is still receiving and reviewing local plans based on water system conditions in 2002. Division staff members expect to receive updated or new plans from 576 water systems. As of September 14, 2006, 523 water systems have submitted their local plans for review by the Division.

Session Law 2003-387, which expanded the scope of water systems required to prepare a Local Water Supply Plan, also added the requirement that water systems include a description of how they will respond to drought and other water shortage emergencies and continue to meet essential public water supply needs as part of their Plan. Division staff members provide assistance with developing these Water Shortage Response Plans. Of the

523 draft plans submitted, 326 include a water shortage response plan. Provisions of administrative rule 15A NCAC 02E .0600 Water Use During Droughts and Water Supply Emergencies, currently awaiting legislative review prior to implementation, include more specific drought management items that will have to be addressed in water shortage response plans.

North Carolina Water Supply Plan (NCWSP)

The Division uses the information from the LWSPs and other sources to develop the North Carolina Water Supply Plan (NCWSP), mandated by G.S. 143-355(m). The NCWSP presents a summary of water use by major river basin and identifies areas of concern where water availability or conflicts between users may limit the ability to meet water demands.

The 2001 NCWSP is available on the Division of Water Resources web site at www.ncwater.org. The plan is based on information from the 1992 and 1997 LWSPs and 1999 water withdrawal registrations submitted pursuant to General Statute 143-215.22H. No changes were made to this document during the period covered by this report. The NCWSP will be updated to reflect information in the 2002 Local Water Supply Plans and the results of the River Basin Water Supply Plans discussed in the next section.

River Basin Water Supply Plans

To further the legislative goal of assuring the availability of adequate supplies of water, the Division of Water Resources is developing a River Basin Water Supply Plan for each of the major river basins in the state. The River Basin Water Supply Plans will provide a basin analysis of long-range cumulative water supply demands. By projecting water needs to 2050 and evaluating these future demands with a hydrologic model, the plans will give local governments and other water users a reliable, quantitative framework within which to plan for sustainable and cost-effective water sources to meet future needs.

Analysis of the impacts of projected increases of water supply withdrawals on the water resources of a river basin depends on the ability to determine the effects of withdrawals and discharges on river flows. This analysis is performed by using a computer-based hydrologic model that can simulate water movement in the river system.

The Division prepared a Cape Fear River Basin Water Supply Plan in 2002 in conjunction with analysis of allocations of water supply storage in B. Everett Jordan Lake. This model has been updated with technical and financial support of water users in the basin that have recognized the value of the model as a water supply planning tool.

The Division is now developing River Basin Water Supply Plans for the Catawba and Yadkin river basins. Hydrologic models for these basins were constructed in conjunction with the relicensing of the hydropower projects on these rivers. Long-term water supply needs have been documented and included in the hydrologic modeling used to analyze management options considered in developing settlement agreements and license applications submitted to the Federal Energy Regulatory Commission. Hydrologic models for the Neuse, Roanoke and Tar-Pamilico river basins are in the initial stages of development.

Data from the River Basin Water Supply Plans will be available to the Division of Water Quality for use in the development of their Basinwide Water Quality Plans.

Water Use During Droughts

Session Law 2002-167 (House Bill 1215) required the Environmental Management Commission (EMC) to develop administrative rules establishing minimum standards and practices for water use during drought and water emergencies. The Division coordinated the effort to develop these rules.

On October 13, 2005, the EMC approved taking the draft rules to public hearing for comments. Public comments were received from January 18, 2006 to March 6, 2006. Three public hearings were held in January 2006, one each in Asheville, Lexington and Goldsboro. Minor changes were made to the proposed rule language in response to comments received during the comment period. The EMC approved a final package of fifteen rules on July 13, 2006. The Rules Review Commission (RRC) approved final language of all but one of the fifteen rules at its August 17, 2006 meeting. The final rule in the package was approved by the RRC on September 21, 2006. The package of rules developed to complete the task assigned to the EMC by the General Assembly in Session Law 2002-167 are ready for implementation after review by the legislature during its next session.

Central Coastal Plain Capacity Use Area

Rules creating the Central Coastal Plain Capacity Use Area (CCPCUA) and establishing a water withdrawal permitting system became effective August 1, 2002. The rules were fashioned to gradually reduce withdrawals from the endangered Black Creek and Upper Cape Fear aquifers in the fifteen designated counties. The rules require stepped reductions in withdrawals from the endangered aquifers over a sixteen-year transition period and encourage the development of alternative sustainable sources of water. Anyone wishing to withdraw more than 100,000 gallons a day of ground water must apply for and receive a permit from the Division of Water Resources. As of September 21, 2006, there were a total of 203 permitted users in the Central Coastal Plain Capacity Use Area. At that time there were eleven applications for new permits and renewals under review.

The CCPCUA rules provide an initial six-year period for systems to develop plans to adjust water withdrawals and develop alternative sources. Affected water withdrawers are required to make reductions in water use from the impacted aquifers by August 2008, the end of this period. Public water supply systems have made significant progress in identifying new sustainable water sources and management options to improve the conditions in the regional aquifer systems while supporting economic growth. Additional information on the Central Coastal Plain Capacity Use Area and the associated rules can be found on the Division's website at www.ncwater.org.

Southern Coastal Plain Capacity Use Investigation

In December 2002, the Water Allocation Committee of the EMC asked the Division to conduct a capacity use investigation of the Southern Coastal Plain area surrounding Bladen County. The study determined that there are areas in the region where ground water levels are declining due to overpumping.

The monitoring well network in this region is sparse and new wells need to be added to effectively monitor the area. Over the last year, six of the new wells added to the monitoring network were sited in Sampson and Robeson counties.

Water users in Scotland, Robeson, Hoke, Bladen and Sampson counties are cooperating on studies to identify long-term water supply solutions for the region. One study

shows that water users in Scotland, Hoke and western Robeson counties can likely meet predictable demand from existing sources without causing significant reductions in ground water levels. More monitoring is needed in this area to understand how much water could be available to provide water for unexpected demands such as a new industrial facility or increased agricultural irrigation.

Water users in Sampson, Bladen and eastern Robeson counties are investigating the development of a surface water treatment plant using water from the Cape Fear River to reduce ground water withdrawals from the underlying confined aquifers. The proposed plant will supply treated water to Smithfield Foods and to some of the surrounding water systems that currently use the same aquifer as Smithfield Foods. The number of communities that will be connected to the new surface water supply has not been determined.

The Lumber River Council of Governments (LRCOG) is coordinating these water supply planning activities as required by an agreement signed by the EMC, DWR and LRCOG to improve management of regional water sources. The Southern Coastal Plain Capacity Use Investigation report is available on the Division's website at www.ncwater.org.

Interbasin Transfer Certifications

Many communities in North Carolina are located on or near the high ground that creates the divides between river basins. Other communities are located in the headwaters of river basins where the limited water supply availability has proven to be inadequate as the economy and population of the state has grown. In these situations, municipal water systems may need to depend on moving water across basin divides. Carefully regulated interbasin transfers can be the most practical, economical and environmentally sound way to provide water and sewer service to the residents of some communities and support the growth of the State's economy. However, the Surface Water Transfer Act must be applied in a way that will assure that the economy and resources of the source river basin are protected.

Initiating new transfers or increasing existing transfers of surface water between legislatively defined river basin is regulated by General Statute 143-215.22I. The river basin boundaries established by this statute are defined in G.S. 143-215.22G and its associated map that has been filed with the Secretary of State.

Anyone wishing to initiate a transfer of two million gallons of water a day , to increase a transfer permitted under relevant statutes prior to July 1, 1993, or to increase a transfer above their system's capacity to transfer water on July 1, 1993, such that the new transfer would be more than two million gallons a day, must obtain permission from the Environmental Management Commission.

G.S. 143-215.22G provides a list of potential impacts in the source and receiving basins that must be considered by the EMC in determining whether or not to grant a certificate. The process requires an environmental analysis and provides opportunities for public comment. If the EMC concludes, based on the findings of fact, that the benefits outweigh the detriments a certificate is issued for a specific volume of water and will include provisions to mitigate detriments. The EMC can issue a certificate for a volume other than that requested and can attach conditions to the certificate.

While many communities move water between river basins, there have only been three Interbasin Transfer Certificates issued under the current legislation. Charlotte Mecklenburg Utilities has a certificate to transfer up to 33 million gallons per day from the Catawba River to the Rocky River basin. Cary, Apex, Morrisville, and Wake County jointly hold a certificate

to transfer up to 24 million gallons per day from the Haw River basin to the Neuse River basin. The Piedmont Triad Regional Water Authority was issued a certificate to transfer up to 30.5 million gallons per day from the Deep River to the Haw River and Yadkin River basins.

Interbasin Transfer Requests

The Cities of Concord and Kannapolis jointly submitted a request for an Interbasin Transfer Certificate in November 2004. They are requesting permission to transfer an average of 22 million gallons per day into the Rocky River Sub-basin. They requested the ability to transfer up to 10 million gallons per day from the Yadkin River with the remainder to come from the Catawba River. Public hearings were held on this request and the accompanying Draft Environmental Impact Statement in June 2005. A Final Environmental Impact Statement (FEIS) was released for public review and comment in May 2006. This was followed by two supplements released in July and August 2006. Public comments will be received on the FEIS and the supplements through October 31, 2006. After the close of the comment period, DWR will prepare a report summarizing the comments for the Hearing Officers. The Hearing Officers expect to present their recommendation to the Environmental Management Commission at its January 2007 meeting.

In early 2004, the Kerr Lake Regional Water System began the process to certify a transfer above their grandfathered capacity to transfer water from the Roanoke River to the Tar and Neuse river basins to accommodate the expansion of their water treatment plant from 10 to 20 million gallons per day. The system managers are still in the process of determining what will have to be addressed in the environmental analysis.

Union County has released and received initial comments on a Draft Environmental Impact Statement for an increase in their grandfathered transfer of 5 million gallons per day up to 30 million gallons per day. Union County withdraws water from the Catawba River in South Carolina in partnership with Lancaster County, SC. This request is to support the construction of a water reclamation facility to treat wastewater collected in Union County and discharged to the Rocky River.

The Greenville Utilities Commission is working with several neighboring communities to develop a regional solution to replace ground water currently being pumped from the regulated aquifers in the Central Coastal Plain Capacity Use Area. Sharing surface water to reduce ground water withdrawals will require an IBT certificate for Greenville. Water systems pumping water from the regulated aquifers face an August 2008 deadline to reduce their ground water withdrawals from those aquifers.

Hydropower Facility Relicensing

The Federal Energy Regulatory Commission (FERC) licenses non-federal hydroelectric generation projects on navigable waterways. The licenses, issued for 30 to 50 years, govern how the hydroelectric projects are managed and therefore how the rivers on which they are located are affected. Upon expiration of an existing license, the licensee has to apply for a new license in order to continue operating the project. Five years prior to the expiration date of an existing license, the licensee has to file a Notice of Intent to apply for a new license. The license application is filed 24 months before the expiration of the existing license. The three years between filing the Notice of Intent and the filing of the license application are used to compile the data needed to evaluate the impacts of a project on regional resources and to draft the application and requested provisions of the new license.

There are 26 FERC licensed projects in North Carolina. Fourteen of the projects have licenses that expire between 2015 and 2047, two projects received new licenses in 2005, and seven have filed license applications that are under review by FERC. DWR staff expect the licenses for these seven projects to be be issued in the near future. The remaining three projects, that include most of the major reservoirs in the Catawba and Yadkin-Pee Dee river basins in North Carolina, have licenses that expire in 2008. The licensees of these projects have filed applications for new licenses.

Duke Energy operates the Catawba-Wateree Hydro Project under FERC license No.2232, consisting of 11 reservoirs and 13 hydropower generation facilities in North Carolina and South Carolina. Over 150 stakeholders worked over the last three years to develop a relicensing settlement agreement that was filed with the license application in August 2006. The agreement contains recommended operational and non-operational provisions the signers would like to see included in the new license. The agreement, signed by almost all of the stakeholder groups, included recommended instream flows, recreational water releases, reservoir water levels and drought management protocols. The modeling used to analyze the provisions of the settlement agreement included consideration of growth in water withdrawals by public and non-public water systems in the basin to meet future demands.

Alcoa Power Generating Inc. – Yadkin Division operates the Yadkin Project under FERC license No.2197, comprised of four reservoirs and hydropower generation facilities on the Yadkin River in North Carolina. Progress Energy Carolinas, Inc. operates the Yadkin-Pee Dee River Project under FERC license No.2206, with two reservoirs and hydropower generation facilities on the Pee Dee River in North Carolina downstream of Alcoa Power Generating Inc. – Yadkin Division's project. Applications for new licenses for these projects were filed in April 2006. Both licensees continue to meet with stakeholders and resource agencies to develop settlement agreements presenting recommended license provision to be filed with the FERC.

The Division has worked closely with the licensees to ensure that water supply issues are given due consideration in the relicensing process. Development of river basin water supply plans for the Catawba-Wateree and Yadkin-Pee Dee river basins has been greatly facilitated by the computer models developed in conjunction with the relicensing process. In the Catawba-Wateree River Basin, the licensee funded an independent study of future water use, including interbasin transfers, in both North Carolina and South Carolina through 2058. The results of this study were used in the computer modeling of alternative operating scenarios.

MEMORANDUM

TO: Governor Michael F. Easley
Secretary William G. Ross, Jr.
Environmental Review Commission

FROM: Woody Yonts, Chair, Drought Management Advisory Council
Division of Water Resources

SUBJECT: Submittal of Annual Report on the Implementation of the Drought Management Advisory Council

The Drought Management Advisory Council is required to report to the Governor, the Secretary of Environment and Natural Resources, and the Environmental Review Commission on the implementation of North Carolina General Statute 143-355.1 by Oct. 1 of each year. This year's report has been completed and is attached. Council activities and review of the drought advisories issued for the period Oct. 1 through Sept. 30, 2006, are summarized in the report.

The Council and its members will continue to move forward to refine the system to make decisions based on the best information available and issue drought advisories to either regions or individual water suppliers as needed. If you have specific questions or comments about the report or about the Drought Management Advisory Council, please contact me at (919) 715-5453.

North Carolina Drought Management Advisory Council

Annual Report-2006

Introduction

This is the second report of the North Carolina Drought Management Advisory Council on the implementation of North Carolina General Statute 143-355.1, which created the council in 2003. The General Assembly amended this statute in 2004, adding a new section requiring an annual report: "(g) The Council shall report on the implementation of this section to the Secretary, the Governor, and the Environmental Review Commission no later than 1 October of each year. The report shall include a review of drought advisories issued by the Council and any recommendations to improve coordination among local, State, and federal agencies; public water systems; and water users to improve the management and mitigation of the harmful effects of drought. (2003-387, s. 2; 2004 195, s. 2.5.)"

Drought Management Advisory Council

The Drought Monitoring Council was an interagency coordination and information exchange body created in 1992. The council did a creditable job of monitoring and coordinating drought responses in 2002 and increased public awareness of its functions and its effectiveness. The General Assembly recognized the Drought Monitoring Council's leadership and performance by giving it an official statutory base and by changing its name to Drought Management Advisory Council (DMAC), reflecting the broader role of the council, which goes beyond monitoring of drought conditions.

North Carolina General Statute 143.355.1., ratified July 17, 2003, assigns the DMAC an important new role, the need for which became evident in 2002. A number of local governments indicated that it would be helpful to have official, objective drought status advisories, to give them a reliable basis for their management responses. The new statute assigns this role to the DMAC and specifies that the drought advisories are to be based on technical data and are to be crafted to fit varying conditions in different parts of the state. This system will avoid the problems that some states have experienced in declaring drought warnings statewide, when conditions did not warrant it in all parts of the state.

Section 1 of this Act also makes drought response provisions mandatory in local government water supply plans and extends this planning responsibility to all community water systems that serve 1,000 or more connections or 3,000 or more individuals.

The intent of the new statute is for the DMAC to continue with essentially the same membership and functions that the Drought Monitoring Council previously exercised, but with new statutory authority and a new responsibility for providing a system of drought advisories when needed. Most importantly, the operations of the DMAC will carry on the same role as the Drought Monitoring Council did in support of the North Carolina Emergency Operations Plan.

Monitoring Drought Conditions

The U.S. Drought Monitor of North Carolina **(www.ncdrought.org)** is the reference for drought classifications and response actions in the state. The drought monitor is a map identifying general drought areas, labeling droughts by intensity, with D1 being the least intense and D4 being the most intense. D0 signifies drought watch areas either drying out and possibly heading for drought, or recovering from drought but not yet back to normal, suffering long-term impacts such as low reservoir levels or minimum streamflow for the time of year.

The Drought Advisory Study Team participates each Tuesday in a conference call to gather and feed information to the National Drought Monitor author about local drought conditions in North Carolina. The team includes DMAC representatives and National Weather Service offices located in Tennessee, South Carolina, and Virginia. The Drought Monitor is published on Thursday morning of each week.

While drought does not currently affect much of North Carolina, local drought problems were present in 2005 and 2006. Indeed, much of the state was under drought advisories during the spring of 2006, a time when reservoirs are normally full and crops are being planted. In April 2006, all counties had some level of drought classification.

Council Meetings

Due to the impact of drought conditions on some water supply systems and reservoirs in the state, the DMAC chairman called for meetings of the council on Oct. 5 and Nov. 15, 2005 and on Mar.28 and May 4, 2006, at the Archdale Building in Raleigh. Average attendance was about 33 representatives.

Items on the meeting agenda included assessment and forecast reports about the seasonal drought outlook; streamflow and ground water levels; lake and reservoir levels; and agriculture, forestry and public water system conditions.

Press Releases

Press releases were sent out after each DMAC meeting. A total of nine press releases were sent out concerning drought conditions and drought advisories issued by the DMAC, encouraging all citizens to conserve water and adhere to water restrictions in their local communities.

Drought Advisories Issued

The DMAC issued official drought advisories based on data adjusted for varying conditions in different parts of the state to provide local governments with a reliable basis for managing drought response in their region.

Local drought problems were present in the fall and winter of 2005 and 2006. The first North Carolina Drought Advisory, #1-05, was issued by the DMAC in October 2005. The advisory was updated each week **(www.ncdrought.org)** to reflect drought classifications on the weekly U.S. Drought Monitor of North Carolina.

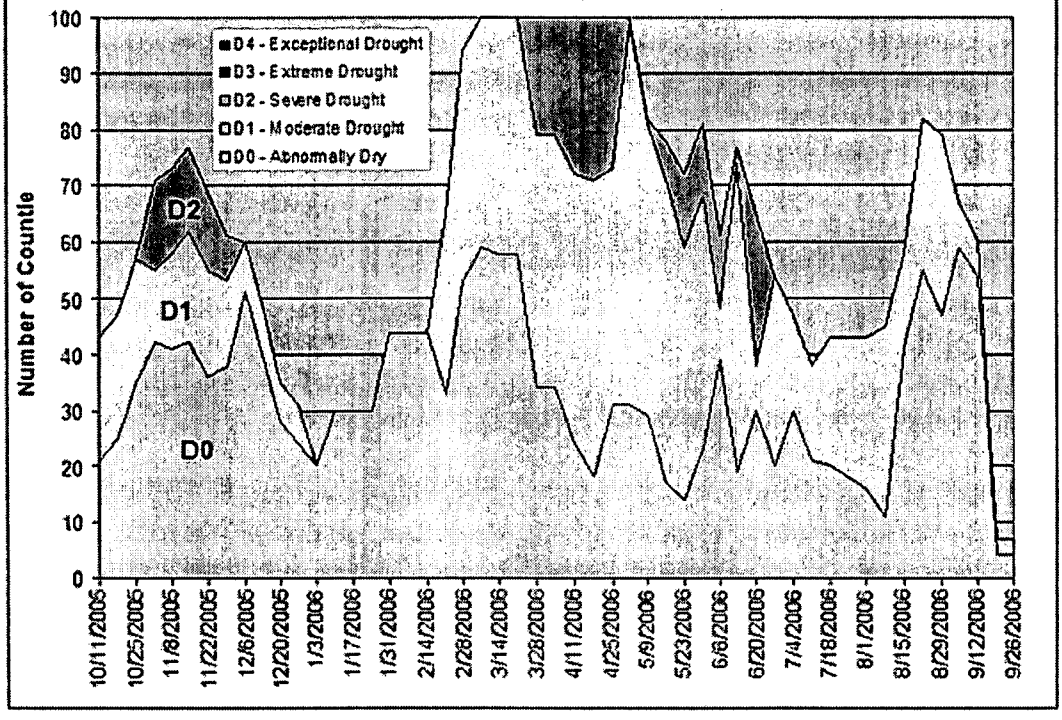
The drought advisory requests the implementation of drought response actions until further notice for all water users located in or dependent upon water resources from the areas of the state experiencing drought. The highest drought classification applies to the entire county, if any portion of the county is depicted on the U.S. Drought Monitor of North Carolina as having those conditions. Counties under the current advisory and requested drought response actions are updated each Thursday and listed **(www.ncdrought.org)** by drought classification.

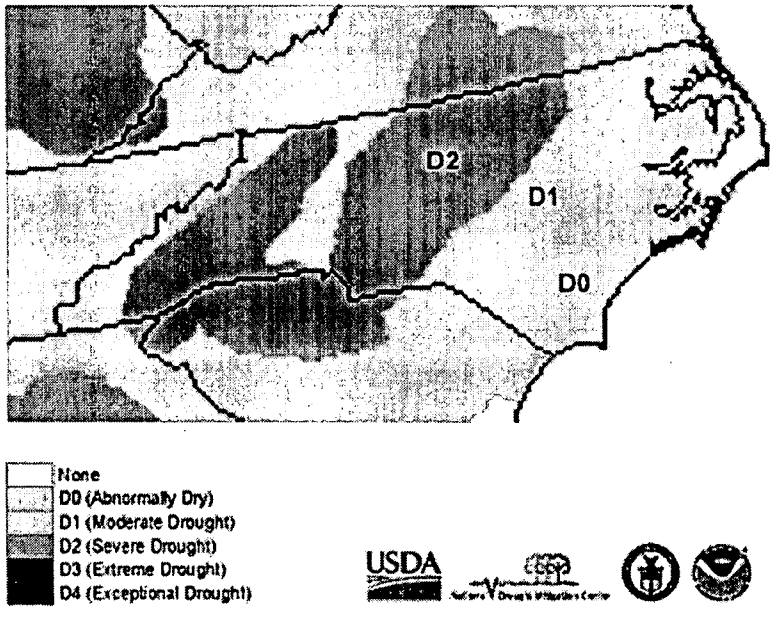
During the months of March and April 2006, all 100 counties in the state had some level of drought classification. Figure 1 summarizes the number of counties each week under drought advisories as issued by the DMAC.

During the month of April, severe drought (D2) was ongoing in 29 counties, 42 counties had moderate drought (D1), and 31 counties were classified as having abnormally dry conditions (D0).

Figure 2 indicates the peak drought monitor conditions that occurred Oct. 2005 to Sept. 2006 in the state. For six months we had parts of the state to peak at severe drought (D2) and every county reached at least abnormally dry (D0).

Figure 1. County Summary with Drought Advisories issued
October 2005 to September 2006





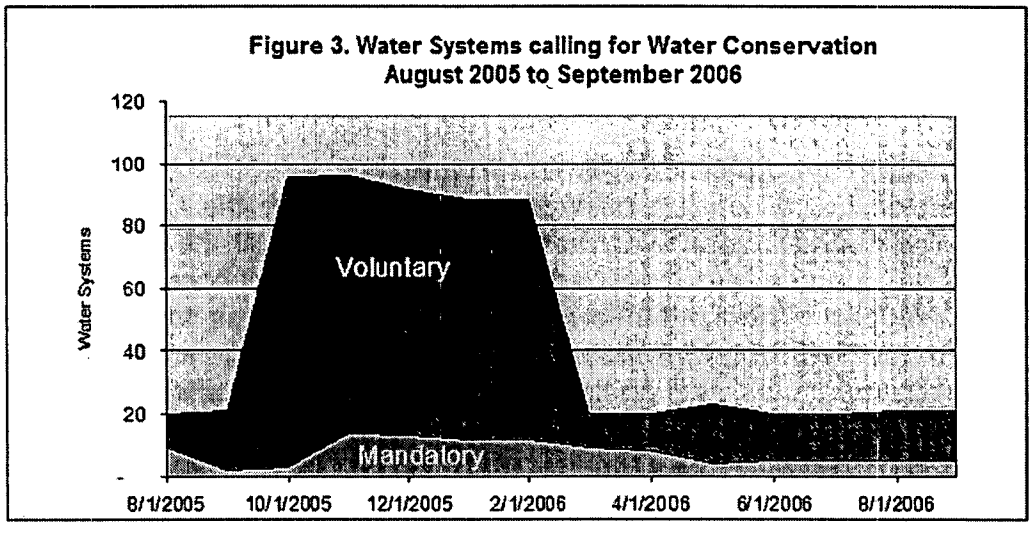


Figure 2. Peak Drought Monitor Classification
October 2005 to September 2006

Water System Water Conservation Status

The Division of Water Resources and Public Water Supply Section (PWSS) regional offices are working together to make possible this reporting and data available on the Web. This on-line database provides a consistent way to document and track impacts to public water supply systems. The system is operational and in use, and tracks the more than 584 water systems throughout the state provided by PWSS. This information can be accessed at: **(www.ncwater.org/Drought_Monitoring/reporting/displaystate.php).**

The number of water systems that called for water use restrictions is displayed in Figure 3. During the months of October 2005 to February 2006, the maximum number of water systems calling for mandatory water use restrictions were 14, providing water services to 600,000 people. During the same time, 92 systems, serving about 1.9 million people, were requesting voluntary water use restrictions.

Improving Coordination and Drought Depiction

DMAC Web Site

The DMAC Web site **(www.ncdrought.org)** depicts the U.S. Drought Monitor for North Carolina that is updated and released on Thursday 8:30 a.m. EST each week. The data cutoff for each week is Tuesday 7:30 a.m. EST. The weekly release can include drought advisories issued by the DMAC for all water users located in or dependent on water resources from the areas of the state experiencing drought conditions. Advisories are color-coded and range from Abnormally Dry (D0) to Exceptional Drought (D4).

The U.S. Drought Monitor establishes a baseline for hydrological and agricultural drought conditions; North Carolina is fortunate in that it has the

DMAC to work closely with the U.S. Drought Monitor to adjust designations to better reflect North Carolina's local conditions.

The DMAC Web site also has a number of tabs that link to available resources of information, some with real-time data about current conditions, news, information about the DMAC, contact information and education about drought, archives (N.C. monitor) and water conservation tips.

Drought Indicator Wells

Drought indicator wells are a network of wells that monitor the effects of droughts and other climate variability on ground water levels in the surficial aquifers (water table). The Division of Water Resources has a goal of increasing the number and geographic distribution of drought indicator wells. DWR currently has 43 actively monitored wells in the network and has a short-term goal of adding two wells to that network this fiscal year. The long-term goal is to have a minimum of 60 drought indicator wells. This will allow a much more complete assessment of impending or actual drought conditions in each of the major river basins of the state.

River Basin Drought Management Plans

As part of the relicensing of hydropower projects in the Catawba-Wateree and Yadkin-Pee Dee river basins, procedures will be established for adjusting operations during periods of low inflow to conserve the limited water supply. The Low-Inflow Protocol (LIP) provides trigger points and procedures for how the projects will be operated as well as water withdrawal reduction measures and goals for other water users during periods of low inflow. A trial run of the LIP that has been developed for the Catawba-Wateree Projects by Duke Energy was underway this year. The LIP for the Yadkin-Pee River Basin is still under development.

Efforts are currently underway with stakeholders in the Neuse River Basin to work together with the Division of Water Resources to fund and develop a drought management model for the basin.

Water Resources Information

The Division of Water Resources is working together with the N.C. State Climate Office, the U.S. Army Corps of Engineers, and the U.S. Geological Survey to develop a water resources information, storage, analysis, and retrieval system (WRISARS). This program will provide a single archive of historical and current data about hydrology (including stream flow, groundwater and reservoir data), weather and climate, and water use in North Carolina. Continued funding will be necessary in order to maintain this program. Preliminary products are now available for public use at: **(http://www.ncwater.org/wrisars/index.php)**.

EXHIBIT N

Outline Of Issues
Solid Waste Study
Environmental Review Commission

Brief History: The environment of solid waste management today is different than the late 1980s and early 1990s when significant changes were made to solid waste law and regulations.

Activities of the Division in preparation for the Solid Waste Study

The following issues should be considered as a part of the solid waste study and addressed to enhance the regulatory structure for solid waste management in today's environment:

I. Owner and Operator Liability and Solvency
NC statutes currently provide liability protection to members, managers, directors, and executives of a Limited Liability Company for the obligations of an LLC and provide that they do not become liable by participating, in whatever capacity, in the management or control of the business. In recent years the State has received several landfill permit applications from LLCs; those applications have raised concerns about the ability of LLCs to meet financial qualifications to demonstrate they have the resources to own and operate a landfill.

In addition, federal and state rules provide financial responsibility requirements for closure and post closure care for municipal solid waste landfills and construction and demolition landfills, but only require financial responsibility for releases from landfills once a release occurs.

II. Compliance with NC Bans on Disposal of Certain Waste Types
In North Carolina, both the State and local governments have adopted bans on disposal of certain materials in landfills based on waste reduction goals, toxicity, and pathogenic potential. Some of the new landfills proposed in North Carolina would be receiving waste from states that allow landfill disposal of materials prohibited for landfill disposal in North Carolina. Generators of waste (industry, commercial operations, and citizens) in those states could put material in the waste stream that would be in compliance with requirements in their state, but in violation of North Carolina law and rules. There needs to be a mechanism for insuring that importation of waste does not result in disposal of materials in violation of North Carolina standards.

III. Alternative Analysis and Impact Study
The current landfill permitting process does not require consideration of alternative sites or alternative waste management and waste reduction measures. The existing regulatory system also does not require a comprehensive landfill impact study with a method to weigh the environmental sensitivity of an individual site.

IV. Local Government Franchise/Host Fees

Local government franchise requirements were intended to give local governments an opportunity to regulate the waste collection and disposal activities of private waste management companies in the local government's jurisdiction. The statute requires consideration of local solid waste management needs; state policies on waste reduction, reuse and recycling; and public participation in the decision to grant a franchise. In recent years, the payment of host fees and other financial benefits for the local government have been negotiated in exchange for issuance of a franchise. These negotiated monetary benefits were not anticipated when the legislature gave franchise authority to local governments and may be changing the basis for local government franchise decisions.

The franchise statute was also based on the assumption that siting and construction of a landfill would generally have local impacts. Proposals for very large landfills with multi-state service areas raise the question of whether regional and statewide concerns are adequately addressed in the franchise decision.

V. State Regulatory Program Resources

The state solid waste program was at its highest staffing level in 1996. The program has lost 8 positions though budget reductions since that time. The number of permit applications and complexity of facilities permitted have increased over the period since 1996. Permits for solid waste facilities are one of the few environmental permits that require no permit or operational fee. The state program will need additional resources to adequately review landfill permit applications and provide sufficient oversight for landfill construction and operation. This need becomes even more acute as the size and service area of the proposed landfills increase.

VI. Old Landfill Sites

There are approximately 700 old unlined landfills that operated prior to a permitting program in North Carolina. Many of these sites directly impact the environment through degradation of groundwater and surface water quality and can pose hazards through explosive methane migration. The landfill sites were operated primarily by or for local government as a public health measure. These landfills were not operated for profit and there are no resources currently identified for cleanup of these sites.

VII. Technology/Design/and Operational Enhancements

Regulations for municipal solid waste landfills were adopted for NC 13 years ago. They were formed from existing policy and rules for sanitary landfills and new regulations from EPA for municipal solid waste landfills. Experience with lined municipal solid waste landfills in NC, technology advances, and information from other state's experiences can be applied to rulemaking to enhance current requirements and improve protection of public health and the environment.

EXECUTIVE SUMMARY

The Department of Environment and Natural Resources is required to prepare an annual report on the status of leaking petroleum underground storage tanks.

The Division of Waste Management's UST Section in DENR administers North Carolina's underground storage tank program. The section enforces UST regulations and manages funds used to perform cleanups of petroleum UST discharges or releases. The program was initiated in 1988 in response to growing reports of USTs leaking petroleum into soil and drinking water supplies. Funding for the program has been provided by the Commercial and Noncommercial UST Trust Funds, the Groundwater Protection Loan Fund, the Federal UST Regulatory Grant, and the Federal Leaking UST Grant.

Summary of Commercial UST Cleanup

Since 2004, the pace of cleanup at sites contaminated by a petroleum release from a commercial UST has been slowed as a result of legislation that limits the amount of cleanup activity based on the availability of funds for reimbursement of those activities. Of over 6,000 active commercial UST contaminated sites, cleanup activities are underway on 311. As directed by the legislation, the UST program orders cleanup activity based on the level of risk posed by the contamination. The need to immediately address sites that pose a risk to water supplies, combined with the prohibition against ordering cleanup activity that cannot be reimbursed within 90 days, means that a number of sites with free petroleum product (a lens of petroleum from several inches to several feet thick floating on the surface of the groundwater) are not currently being remediated. Federal rules require that free product be removed as soon as possible, so the delays in free product removal at a number of North Carolina UST sites has led the United States Environmental Protection Agency to send a letter expressing concern that North Carolina's Commercial UST Trust Fund may not provide adequate financial responsibility for UST owners and operators as required by federal law.

Summary for the period July 1, 2005 through June 30, 2006

Commercial Fund Revenues	$28,143,119
Commercial Fund Total Expenditures	$18,111,218
Noncommercial Fund Revenues *	$ 7,615,613
Noncommercial Fund Total Expenditures	$ 6,304,019
Petroleum UST Incidents – Reported	891
Petroleum UST Incidents – Closed Out	1051

Includes transfer of $1,922,601 motor fuel and kerosene tax from commercial to non-commercial trust fund.

Summary for the entire history of the UST program (7/1/88 -6/30/06)

Commercial Fund Revenues	$452,184,756
Commercial Fund Total Expenditures	$438,407,229
Noncommercial Fund Revenues	$103,911,336
Noncommercial Fund Total Expenditures	$ 98,673,123
Petroleum UST Incidents – Reported	21,102
Petroleum UST Incidents – Closed Out	12,748

Status of the Trust Funds as of June 30, 2006

Commercial Fund Balance	$ 13,747,190
Commercial Fund Claims Pending	$ 2,459,046
Noncommercial Fund Balance	$ 5,240,209
Noncommercial Fund Claims Pending	$ 2,620,641

STATUS OF CLEANUPS UNDER THE COMMERCIAL UST TRUST FUND

Federal law requires that owners and operators of commercial USTs demonstrate financial responsibility for cleanup of any petroleum releases from the UST system. Since 1988, owners and operators of commercial USTs in North Carolina have been able to rely on the Commercial UST Trust Fund to meet the federal financial responsibility requirement (in lieu of an environmental insurance policy or other financial assurance mechanism). A percentage of Trust Fund revenues come from fees paid by commercial UST owners but most of the revenues come from the gasoline tax. Since 2002, claims for cleanup work have exceeded revenues in the Commercial Trust Fund, leading to delays in reimbursement of claims of up to 13 months. Session Law 2004-124, effective in October 2004, made several changes in the UST program designed to reduce the delay in reimbursement of claims. The session law directed the UST program to expend available resources on release incidents that pose the greatest risk. The law also changed the way the program responds to petroleum releases by only allowing the program to order the amount of cleanup work that can be reimbursed from the trust funds within 90 days (with an exception for emergency situations). In essence, Session Law 2004-124 slowed the response activities of the UST program to match the resources that are available to pay for those activities. However, nothing in this law relieves tank owners and operators from their responsibilities to conduct initial abatement activities, assessment activities, and risk determinations immediately upon discoveries of releases. Similarly, nothing in this law relieves tank owners and operators of their responsibilities to clean up releases as resources become available.

To implement Session Law 2004-124, the UST program first determined the relative risks of active release incidents using the criteria listed in 15A NCAC .02L .0400. Those criteria include emergency situations (fire, explosion, etc.); the proximity of a release to receptors (water supply wells, surface water sources, etc.); known, suspected, or potential contamination of receptors; the existence of free product; the number of wells and people potentially affected; and others. The UST program is ordering cleanup of petroleum contamination at the highest risk releases first and at a pace that allows the cost of the work to be reimbursed from the trust funds within 90 days.

The manner in which the UST program has implemented Session Law 2004-124 has ensured, so far, that public health is not at risk from UST releases. However, implementation does not allow the program to immediately remove free product at all incidents. Free product is petroleum that has leaked from a UST system and is floating on top of the ground water table. Sometimes free product is found in lenses more than 10 feet thick, although in about 40% of the incidents, the free product is less than one inch thick. These lenses of free product continue to spread laterally and to dissolve into the ground water, prolonging contamination of the ground water. Of the approximately 6000 active regulated UST incidents (commercial tanks), about 714 (12 %) include existing free product. Of the approximately 2100 unregulated UST incidents (home heating oil tanks), about 190 (9%) include existing free product. At present, the UST program is directing work at only about 35 of these incidents with free product (33 regulated USTs and 2 unregulated USTs). The slow pace of free product removal results from the demand for trust fund resources to clean up higher risk incidents that do not have existing free product, but are contaminating (or threatening to contaminate) water supplies.

Federal UST law requires the removal of free product at UST release incidents as soon as practicable and to the maximum extent practicable. Other cleanup criteria are generally left up to individual states. Since the UST program cannot presently direct free product removal at every incident, the US EPA is questioning whether North Carolina's Commercial Trust Fund is actually providing the financial responsibility required of UST owners and operators by federal law. In a 19 September 2006 letter to NC DENR Secretary William Ross, the US EPA Regional Administrator for Region 4, J. I. Palmer, expresses US EPA's concern that North Carolina's Commercial Trust Fund is not adequate to allow UST owners and operators to comply with federal law. The letter also notes that UST owners and operators would be required to find alternative mechanisms for financial responsibility if EPA withdraws approval of North Carolina's Commercial Trust Fund for that purpose. The letter is attached to this report in the appendices.

At the implementation of Session Law 2004-124 in October 2004, the Commercial Trust Fund was over $18 million in deficit and the Noncommercial Trust Fund was about $500,000 in deficit. At that time, the UST program determined that resources were available to direct work on 87 regulated incidents and 7 unregulated incidents. Every week, the UST program reviews the available fund resources, expenditures, and obligations. Since October 2004, we have adjusted the implementation six times and are now directing work at 311 regulated incidents and 20 unregulated incidents. Unobligated funds total almost $3 million in the Commercial Trust Fund and almost $1 million in the Noncommercial Trust Fund, which will allow us to continue to adjust the implementation and direct work at more and more incidents.

FUNDING FOR THE UNDERGROUND STORAGE TANK CLEANUP PROGRAM

Program funding is provided by revenues from the Commercial and Noncommercial Trust Funds and the Groundwater Protection Loan Fund. The Federal UST Regulatory Grant and the Federal Leaking UST Grant are provided by the Environmental Protection Agency. Of the 91.8 Full Time Equivalent (FTE) positions assigned to the UST program, state revenue funds 63.83 positions and 27.97 are supported by federal grants. In addition, the trust funds and federal grant pay for one laboratory position and four regional administrative positions, which support the program.

Commercial and Noncommercial Trust Funds

The Leaking Petroleum Underground Storage Tank Cleanup Act of 1988 (GS 143-215.94A et.seq) established two separate funds: the Commercial Trust Fund and the Noncommercial Trust Fund. Both may be used to reimburse eligible UST owners, operators and landowners for reasonable and necessary costs incurred as a result of environmental cleanup and third party liability claims. Additionally, both funds enable UST Section staff to:

- record and track UST release incidents;
- register and permit commercial USTs, manage the database and receive annual UST operating fee payments;
- identify responsible parties;
- provide technical assistance to tank owners and operators;
- inspect USTs to ensure compliance with UST regulations;
- monitor site cleanups;

- review site assessments and corrective action plans;
- evaluate innovative assessment and cleanup technologies;
- review reimbursement claim procedures;
- manage contracts for cleanups designated as "State Lead";
- inspect and monitor land applications of contaminated soil; and
- identify and evaluate abandoned petroleum USTs.

The UST Section has the authority to contract for the cleanup of petroleum UST incidents if the owner or operator cannot be identified or located, if the owner or operator is financially unable to perform cleanup or if the owner or operator refuses to perform the required cleanup. In the latter case, the section is authorized by general statute to recover costs incurred during assessment and cleanup activities.

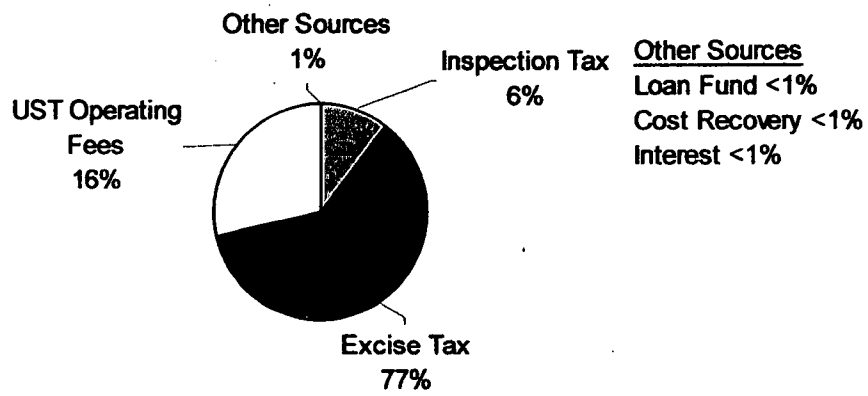
Sources of funding for the Commercial Trust Fund include:

- a motor fuel and kerosene inspection tax (1/4 of $0.01/gallon);
- a re-occurring excise tax (19/32 of $0.005/gallon) on motor fuel and kerosene sales;
- annual payment of UST operating fees;
- costs recovered from UST owners and operators for State Lead sites;
- loan collection and interest for the Groundwater Protection Loan Fund; and
- interest earned on the account.

Owners and operators are required to pay annual operating fees to receive operating permits and to be eligible for the Commercial Fund. Annual fees for commercial USTs began at a rate of $30 for tanks with a capacity equal to or less than 3,500 gallons (small tanks) and $60 for tanks with a capacity in excess of 3,500 gallons (large tanks). Tank fees increased annually from 1989 to 1993. From 1993 to 1997, fees were $150 for small tanks and $225 for large tanks. Beginning Jan. 1, 1997, annual fees were increased to $200 for commercial USTs with a capacity equal to or less than 3,500 gallons and $300 for commercial USTs with capacity in excess of 3,500 gallons.

Revenues received for the Commercial Fund for the twelve-month period from July 1, 2005 to June 30, 2006 were approximately $28 million (Table 1). The relative contributions to the Commercial Fund from each of the funding sources are illustrated in Figure 1.

Table 1 – Commercial Trust Fund Revenues
7/1/05- 6/30/06



Motor Fuel & Kerosene Inspection Tax	$ 2,836,253
Motor Fuel & Gasoline Excise Tax	$ 17,123,883
UST Operating Fees	$ 7,951,508
State Lead Cost Recovery	$ 24,562
Interest	$ 198,909
Loan Fund Collection and Interest	$ 8,004
Total Commercial Revenues	**$ 28,143,119**
Transfers to Noncommercial	$ (1,922,601)
Net Commercial Revenues	**$ 26,220,518**

Groundwater Protection Loan Fund

The Groundwater Protection Loan Fund Program was created in 1991.* It provided financial assistance to owners of commercial USTs who replaced or upgraded their tanks to meet the performance standards required for all USTs by Dec. 22, 1998. Administrative rules implementing the program were adopted by DENR and became effective Dec. 1, 1992. Revenues for the fund were generated through a 0.0025 cent (one quarter of one cent) per gallon motor fuel excise tax received from Jan. 1, 1992 through Dec. 31, 1994.

*Session Laws 1991, c. 538, s. 25 - G.S. 143-215.94P

Figure 1 - Commercial Fund Revenue Sources

Funding for the Noncommercial Trust Fund is provided by a motor fuel and kerosene inspection tax and excise taxes (0.047 cents per gallon) on kerosene and motor fuel sales.[1] Owners and operators of noncommercial USTs are not required to pay annual operating fees. Revenues received for the Noncommercial Fund for the 12-month period from July 1, 2005 to June 30, 2006 were approximately $15 million (Table 2).

[1] House Bill # 681 of 1993

Table 2 – Noncommercial Trust Fund Revenues
7/1/05 - 6/30/06

Motor Fuel & Kerosene Inspection Tax	$ 2,836,253
Motor Fuel & Gasoline Excise Tax	$ 2,705,441
Interest	$ 150,714
Transfer from Commercial Fund	$ 1,922,601
Cost Recovery	$ 604
Total Noncommercial Revenues	**$ 7,615,613**

Federal UST Regulatory Grant Program

This program promotes compliance with UST regulations. It provides the state's UST Section with $186,675 per year to fund three positions in the DWM central office. The positions provide technical assistance to the owners and operators of USTs, develop materials, conduct educational activities, train regional staff and conduct UST inspections.

Federal Leaking UST Grant

The Federal Leaking UST Trust Grant is used to clean up petroleum contamination from leaking USTs, provide potable water to affected third-parties, perform emergency activities, relocate residents affected by leaking USTs and conduct enforcement activities. The use of this grant is limited to regulated USTs, primarily commercial tanks used for storing motor fuels. Tanks used for heating oil and those used for farm or residential uses (1,100 gallons capacity or less) are not covered by this fund.

Individuals (i.e., owners/operators) do not have access to the grant. Only the federal government and states with cooperative agreements with the EPA can draw on the grant. It may be used in situations when: (1) the responsible party cannot be identified; (2) the responsible party is financially unable to pay for the cleanup; or (3) the responsible party is unwilling and refuses to undertake assessment and/or cleanup actions.

Since the state's UST program began in 1988, the Federal Leaking UST Grant has made 23 awards totaling $43,873,118 to the state's UST Section. As of June 30, 2006, the state spent $43,464,600 from these awards. Of this amount, $19,979,810 was spent for cleanup-related activities and $3,925,890 for enforcement actions. Administrative, operating, travel and equipment costs totaled $19,558,900.

The program is obligated to seek recovery of all costs incurred during state lead cleanups. As of June 30, 2006, the UST Section had recovered $ 1,727,144 in federal cleanup money through cost recovery actions. Of this amount, $ 912,411 came from the North Carolina Commercial Fund for sites determined eligible for Commercial Fund coverage after cleanup activities had begun.

The EPA approved $1,994,660 for North Carolina from the Leaking UST Fund for FY 2005-2006.

PETROLEUM UST INCIDENTS

Discharges or releases from petroleum USTs are reported to DENR regional offices where they are added to an incident management database. Table 3 lists the number of incidents reported and closed out in each region during the twelve-month period from July 1, 2005 through June 30, 2006. It also shows the number of incidents reported and closed out since the UST program began in 1988.

Beginning January 2, 1998, the UST Section implemented risk-based corrective action rules for petroleum UST incidents. Discharges or releases under these rules receive a risk classification of "high," "intermediate," or "low" based on the potential threat to human health and the environment. Of the total number of UST incidents closed since 1988, 67 percent were closed following implementation of Risk-Based Corrective Action. The total number of open incidents has generally increased since 1988; however, recent data indicates the trend may be leveling off (see Figure 2).

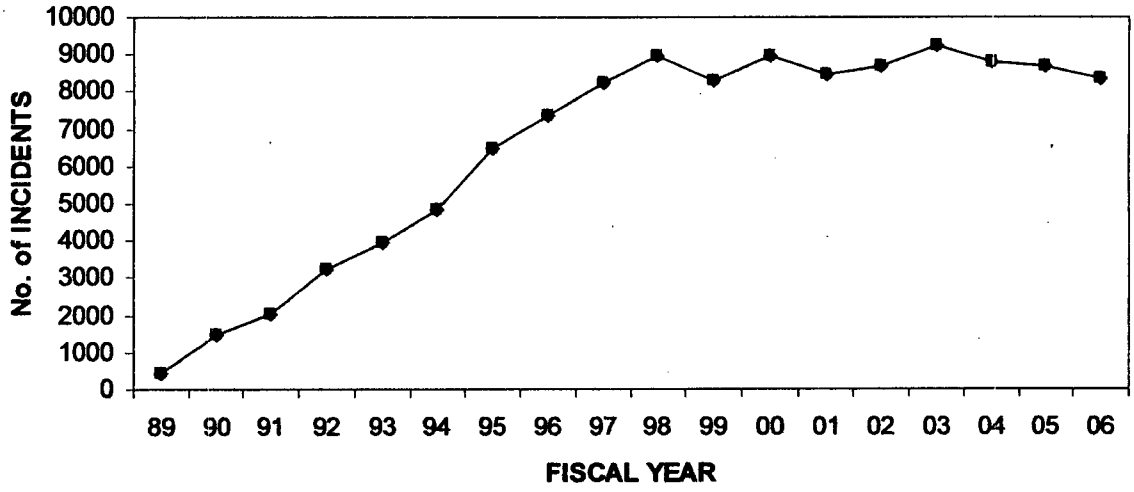


Table 3 – Petroleum UST Incidents by Region[1]

REGION	7/1/05 - 6/30/06		7/1/88 - 6/30/06	
	Reported	Closed	Reported	Closed
Asheville	94	61	2,151	1343
Fayetteville	57	57	1,598	818
Mooresville	151	202	4,194	2,713
Raleigh	202	253	4,287	2,572

TOTAL	**891**	**1051**	**21,102**	**12,748**

Total reported releases affecting groundwater that have been closed out:	4,293
Total reported releases closed out since implementation of RBCA[1]:	8,536
Total remaining open sites:	8,354
Open commercial sites:	6,565
Open noncommercial sites:	1,789

1. Risk-based corrective action implemented 1/2/98.

Figure 2 - Open UST Incidents

RECEIPTS AND DISBURSEMENTS: COMMERCIAL AND NONCOMMERCIAL TRUST FUNDS AND GROUNDWATER PROTECTION LOAN FUND

Commercial and Noncommercial Funds

UST owners, operators and landowners may submit reimbursement claims for reasonable and necessary costs incurred during environmental assessment and cleanup activities. Claims may be submitted if the eligibility requirements for the trust funds are met. Deductibles that must be met before receiving reimbursement from the Commercial Fund range from $20,000 to $75,000. Noncommercial Fund deductibles are $0 for UST owners and operators, and $5,000 for landowners. Table 4 lists the receipts and disbursements by fiscal year for both funds for the period July 1, 1988 to June 30, 2005.

Table 4 – Receipts & Disbursements for Cleanups
7/1/88 - 6/30/05

FISCAL YEAR	RECEIPTS		DISBURSEMENTS[1]	
	Commercial	Noncommercial	Commercial	Noncommercial
FY 88-89	$ 2,337,685	$ 0	$ 14,768	$ 0
FY 89-90	5,773,632	2,905,035	79,080	0

TOTAL	**$452,184,756**	**$103,911,336**	**$407,389,998**	**$85,377,366**

[1] Does not include administrative costs.
[2] Commercial receipts for FY 94-95 included $31,288,889 that was transferred from the Groundwater Protection Loan Fund.
[3] Adjustment due to a transfer from the Commercial Fund to the Federal Trust Fund of $288,117 as a cleanup expenditure rather than as an administrative cost.
[4] $33,866 transferred to Federal Trust Fund as a cleanup expenditure.
[5] $2 million transferred out of Noncommercial Fund to the state's General Fund.
[6] Includes transfer of $784,382 from Circle K Settlement Fund
[7] Includes transfer of $3,418,990 of motor fuel and kerosene tax from Commercial to Noncommercial trust fund due to balance below $5 million - General Statute 119-18(b).

[8] Includes transfer of $2,036,932 from Commercial to Noncommercial trust funds per GS 119.18(b); transfer of $90,000 to Dept. of Agriculture; and transfer of $52,722 to Federal trust fund as a cleanup expenditure.
[9] Includes transfer of $3,150,730 from Commercial to Noncommercial trust fund per GS119:18(b). Transfer from Agriculture Department; transfer of $38,702 to Federal trust fund.
[10] Includes additional revenue from the 1-year 1.1 cent per gallon excise tax or $19,000,000 to the Trust Fund.
[11] Includes $1,922,601 transfer to Noncommercial Fund, $90,000 transfer to Dept. of Agriculture, and $30,016 transfer to repay Federal Trust Fund for State Lead program expenses.

The administrative budget for the state-funded portion of the UST program is derived from the Commercial and Noncommercial Funds. Table 5 lists past administrative expenditures since the beginning of the UST program.

Table 5 – Administrative Expenditures

FISCAL YEAR	COMMERCIAL	NONCOMMERCIAL
FY 89-90	$ 201,255	$ 201,254
FY 90-91	547,595	547,595
FY 91-92	517,221	517,221
FY 92-93	601,687	601,686
FY 93-94	694,424	694,423
FY 94-95	666,270	666,270
FY 95-96	2,322,632	783,684
FY 96-97	2,623,339	801,143
FY 97-98	2,530,036	667,724
FY 98-99	2,567,668	620,574
FY 99-00	2,579,540*	570,738
FY 00-01	2,730,236	733,811
FY 01-02	2,397,264	913,755
FY 02-03	2,221,851	1,166,494
FY 03-04	2,527,451	1,244,864
FY 04-05	2,654,447	1,265,079
FY 05-06	2,636,228	1,298,441
TOTAL	**$ 28,382,916**	**$11,996,315**

Incorporating the administrative costs into receipts and cleanup disbursements yields these Commercial and Noncommercial Fund balances:

Commercial Fund Balance (as of June 30, 2006)	**$13,747,190**
Noncommercial Fund Balance (as of June 30, 2006)	**$ 5,240,209**

*Adjustment due to a transfer of $288,117 from the Commercial Fund to the Federal Trust Fund as a cleanup expenditure rather than an administrative cost.

Groundwater Protection Loan Fund

After the Groundwater Protection Loan Fund was created, 11 North Carolina banks agreed to administer the loan program. As of June 30, 1995, four loans totaling $1,228,350 had been closed. After this date, remaining funds of $31,288,889 were deposited into the Commercial Trust Fund. Loan repayments are also deposited into the Commercial Fund. During the twelve-month period ending June 30, 2006, $ 24,562 was repaid. Total receipts for the Loan Fund since its inception in January 1992 are $33,168,709. The program is no longer active, but loan payments continue to be received.

CLAIMS AGAINST THE CLEANUP FUNDS

Claims against both the Commercial and Noncommercial Funds are processed on a "first-come, first-served" basis. The status of all claims requesting reimbursement from both funds that were received as of June 30, 2006 is presented in Table 6. These claims only include costs claimed to date, and do not represent the total costs for cleanups.

UST Section staff have supervised contract cleanups at 558 commercial and noncommercial sites (Table 6, 443 commercial and 115 noncommercial). In FY 2005-2006, DENR went through a new contract selection process. Twenty-six firms submitted proposals for DENR consideration. Based on the firms' technical expertise, project qualifications and cost proposals, DENR selected six environmental engineering/geology firms to work in the Trust Funds State Lead program. The firms perform a range of assessment and cleanup actions. The new contract period started with FY 2005-2006.

Table 6 – Claims Against the Cleanup Funds
7/1/88 - 6/30/06

	Commercial Fund		Noncommercial Fund	
	Number	Cost	Number	Cost
Claims Paid	25,741	$387,581,510	9,909	$ 80,252,212
Incidents Denied Totally [1]	33	$ 4,573,040	4	$ 59,845
Claims Denied Partially [2]	14,798	$ 79,218,134	4,456	$ 10,909,354
Total Deductibles Paid	-------	$ 72,212,204	-------	$ 661,007
Claims Pending	263	$ 2,420,870	274	$ 2,532,273

[1] Ineligible
[2] Excessive or undocumented costs
[3] State Lead actions undertaken or completed

COMMERCIAL AND NONCOMMERCIAL FUNDS BALANCES AND PROJECTED NEEDS

Commercial Fund

As of June 30, 2006, the Commercial Fund balance was $13,747,190 with pending claims of $2,459,046 (see Figure 3, Page 9). From fiscal year 2000 through 2004, the difference between the fund balance and the pending claim amounts steadily increased (see Figure 4, Page 9). This was largely due to the fact that the UST Section implemented an expedited review process during fiscal year 2001-2002 in an effort to reduce the time for claim review. While claim review time was reduced, the result was a delay in the reimbursement payment, since the Commercial Fund could only pay out what had been received for the month. This trend continued up to fiscal year 2004-2005. With the passage of Session Law 2004-124, the difference decreased markedly. The present situation represents a significant change in the commercial fund program over previous years because the UST Section now directs most of the work that can be accomplished, and only those commercial and noncommercial sites with a threshold level risk will be directed to continue on with assessment and remediation. This results in greater fiscal control over the program, while focusing on those sites exhibiting the greatest risk to human health and the environment.

Figure 3 - Commercial Fund Balance and Claims Pending Amount

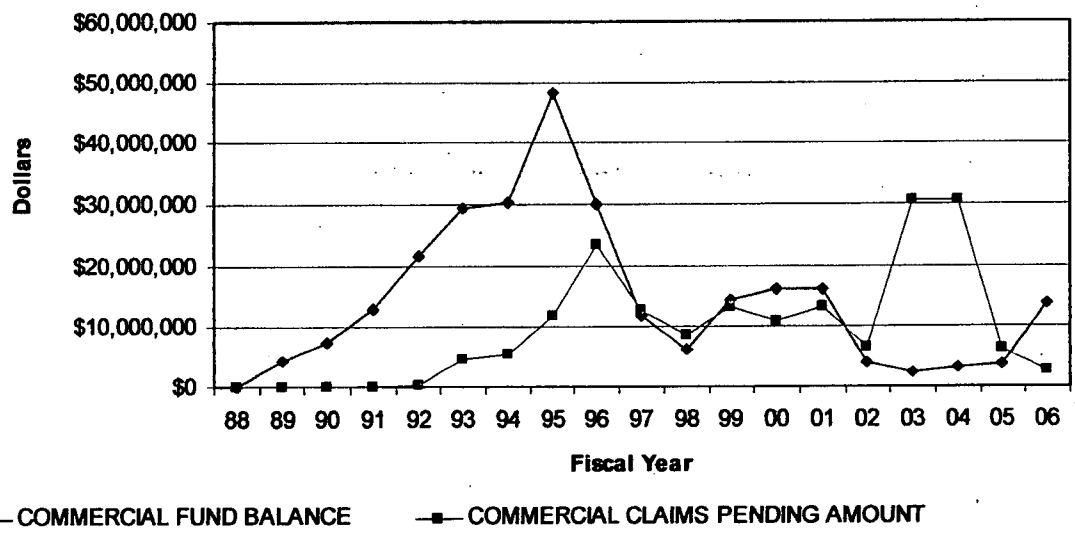

Figure 4 - Commercial Fund Balance Minus Claims Pending Amount

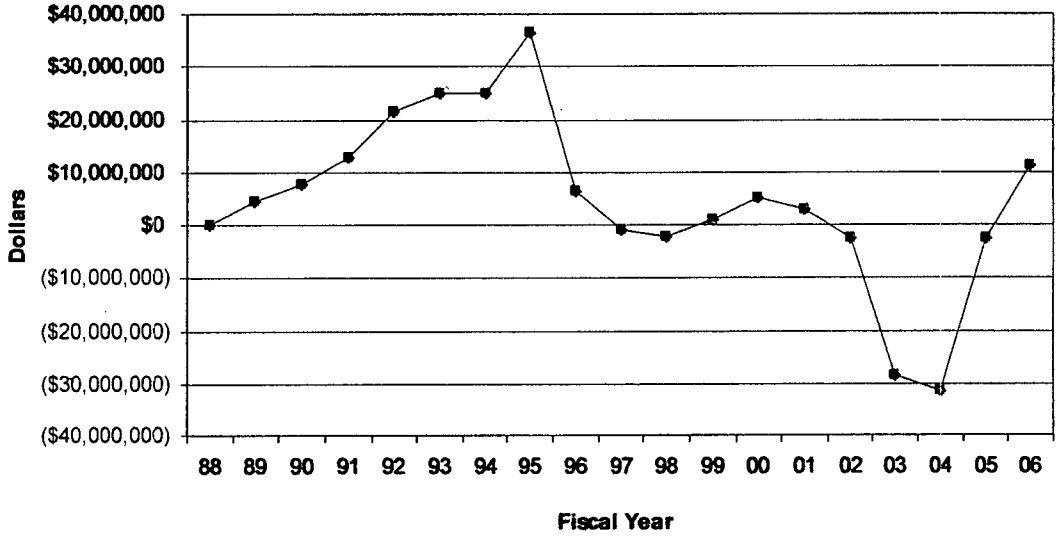

Table 7 - Total Commercial Fund Revenues and Expenditures
7/1/05 – 6/30/06

Total Commercial Revenues (see Table 1)	**$28,143,119**
Total Claims and Contracted Cleanups	$13,432,373
Transfers[1]	2,042,617
Administrative Costs	$ 2,636,228
Total Commercial Expenditures	**$18,111,218**

1-From Table 4, footnote 11 monies transferred to the Noncommercial Fund, Dept. of Agriculture, and Federal Trust Fund for State Lead expenses.

One initiative which may affect a future demand on the Commercial Fund is pay-for-performance based cleanups. On Oct. 1, 2001, the General Assembly ratified House Bill 1063, which allows responsible parties to participate in the pay-for-performance program on a voluntary basis. Pay-for-performance is a reimbursement method that requires cleanup goals to be met before payments can be made to environmental consultants. This reimbursement method requires the Trust Fund to obligate the contracted cleanup costs. Pay-for-performance obligations may initially place a higher demand on the Trust Fund, but should greatly decrease the costs of cleanups and thus result in a lesser burden to the Trust Fund.

Other factors that may affect future demands on the Commercial Fund are claims for bodily injuries and property damages brought by third parties. There are currently several pending third-party claims totaling approximately $1.7 million (less the $100,000 deductible per incident amount) that will place an additional burden on the Commercial Fund. Other third party claims may be planned that have not yet been submitted for review.

After UST operating fees were raised on Jan. 1, 1997, revenue from this funding source declined through the end of FY 1998-99 (see Table 8). This decrease was likely due to the reduction in the number of registered USTs that occurred as a result of the federal 1998 upgrade regulations. Overall, since 1998, the number of registered USTs has generally decreased. As in FY 2004-05, the number of registered USTs has decreased during the period from July 1, 2005 to June 30, 2006. UST operating fees have remained essentially stable.

Table 8 - Commercial UST Population and Operating Fee Revenue

Fiscal Year	No. of Commercial USTs Billed	Operating Fee Revenue
FY 1988-89	-	$ 4,322,917
FY 1989-90	-	$ 8,086,895
FY 1990-91	57,385	$ 6,889,969
FY 1991-92	52,529	$ 9,910,737
FY 1992-93	48,812	$18,032,784
FY 1993-94	43,314	$ 23,661,875
FY 1994-95	39,289	$ 8,500,000
FY 1995-96	37,529	$ 11,050,000
FY 1996-97	37,776	$ 10,839,975
FY 1997-98	36,563	$ 10,008,917
FY 1998-99	34,428	$ 8,697,468
FY 1999-00	33,558	$ 8,844,093
FY 2000-01	33,776	$ 8,464,019
FY 2001-02	32,839	$ 8,553,715
FY 2002-03	31,155	$ 8,087,033
FY 2003-04	32,005	$ 8,309,807
FY 2004-05	31,518	$ 7,987,101
FY 2005-06	30,638	$ 7,951,508

At present, there are approximately 6,991 commercial incidents that have yet to be closed out. Risk levels at these sites rank from low to high. With implementation of Session Law 2004-124, the Department now directs most work done at both Commercial and Noncommercial incidents. In addition, all high risk incidents have been assigned a relative risk, and further assessment and remediation is being directed on only those incidents with a high enough relative risk. While the statutory responsibility of the responsible party to address their incident remains, the Session Law limits the number of incidents that can be addressed and the cost of work reimbursed. This improves fiscal control and management, but it will result in a longer time necessary to address all petroleum releases.

Data tracking improvements are continuously made to the UST incident management database. These changes will enable the UST Section to better predict the number of incident closures and project Commercial Fund expenditures.

UST systems pose a substantial threat to human health and the environment. On average, over 1,200 leaks are reported each year. Maintaining the quality of North Carolina's drinking water and groundwater depends on preventing releases to the environment. Direct education and technical assistance for tank owners and operators is critical. Only education and assistance

ensure responsible handling of petroleum products (including methyl tertiary-butyl ether) and early detection in the event of a leak.

North Carolina currently has about 30,638 active regulated USTs at 11,003 facilities. We estimate that 40 to 50 percent of the facilities are located within 500 feet of both domestic and public drinking water supplies. Our inspection data show that over 30 percent of tank owners and operators do not comply with UST regulations. These regulations cover proper operation and maintenance, with an emphasis on leak detection. If we are to preserve the quality of North Carolina's drinking water, improving compliance must be given increased priority.

To ensure that all UST facilities are in compliance with the rules and regulations necessary to prevent releases, the UST program presently has 11 inspectors, one support staff, and one attorney. These inspectors are responsible for all phases of facility compliance, including inspection preparation, on-site inspecting, inspection data entry, follow-up inspections, owner and operator training, and enforcement activities. Each inspector can complete approximately 250 inspections per year. This inspection rate only allows the program to inspect each facility once every 4 to 5 years. Experience has shown that more frequent inspections lead to improved compliance and fewer releases, particularly since many facilities change ownership each year and many new owners are unfamiliar with UST regulations. The preferred inspection frequency is once every two years and, in fact, the federal Energy Act mandates a three-year inspection frequency by 2010. This year, the UST program focused more resources on compliance by creating two inspector positions from two incident management positions, and by negotiating 2.5 time-limited inspector positions under a federal grant from US EPA. Although these actions will help, more are needed to meet inspection and compliance goals. An additional nine full-time inspectors, one support staff, and one attorney are needed to get the inspection rate to the desired two-year cycle

Noncommercial Fund

As of June 30, 2006, the Noncommercial Fund balance was $5,240,209. The total for pending claims stood at $2,620,641. Based on the past 12 month period, the demands on the Fund have decreased. We anticipate that this will improve the timeliness of payments, just as in the Commercial Fund (see Figure 5).

Figure 5 - Noncommercial Fund Balance and Claims Pending Amount

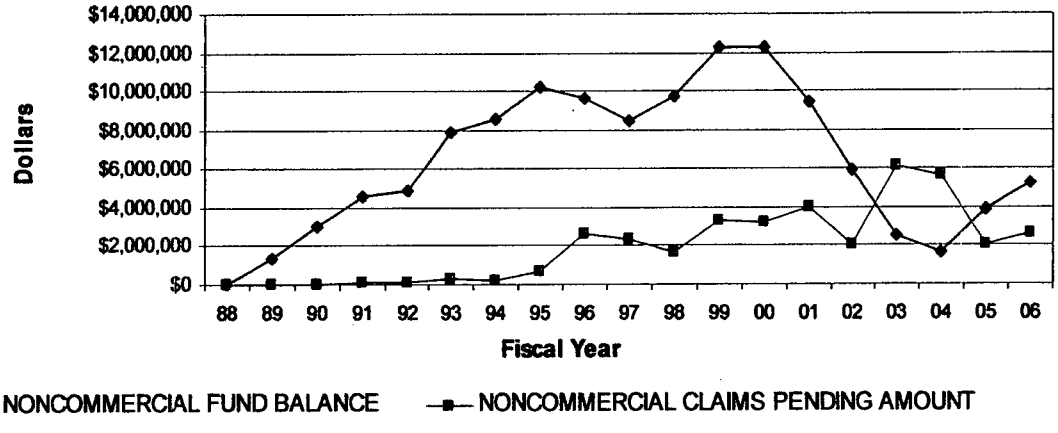

Figure 6 - Noncommercial Fund Balance Minus Claims Pending Amount

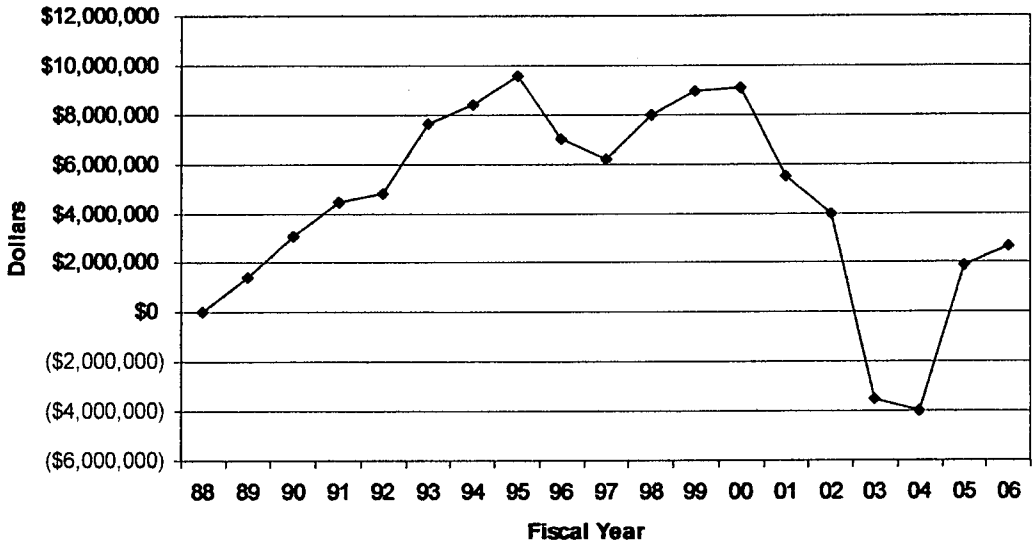

Table 9 – Total Noncommercial Fund Revenues and Expenditures
7/1/05-6/30/06

Total Noncommercial Revenues (see Table 2, page 3)	**$ 7,615,613**
Total Claims and Contracted Cleanups	$ 5,005,578
Administrative Costs	$ 1,298,441
Total Noncommercial Expenditures	**$ 6,304,019**

Table 10 shows the estimated cost to complete cleanups for noncommercial incidents reported from July 1, 2005 to June 30, 2006. It should be noted, however, that cleanups can easily extend over several years and costs may vary greatly. In addition, these figures do not include remedial costs for reported releases from past fiscal years.

Table 10 - Estimate of Cleanup Costs for Noncommercial Incidents
7/1/05-6/30/06

Region	Incidents*	Total Estimated Cleanup Cost**
Asheville	94	$ 2,321,800
Fayetteville	57	$ 1,407,900
Mooresville	151	$ 3,729,700
Raleigh	202	$ 4,989,400
Washington	128	$ 3,161,600
Wilmington	81	$ 2,000,700
Winston-Salem	178	$ 4,396,600
Total	**891**	**$22,007,700**

* Calculations of the last twelve-month period indicate that approximately 22 percent of reported new releases are from noncommercial sites.

** An average cost of $24,700 is used as an estimate of total cleanup costs for noncommercial sites.

PAY FOR PERFORMANCE

On October 15, 2001, House Bill 1063 was enacted by the North Carolina General Assembly. This bill gives the Division of Waste Management's Underground Storage Tank program the authority to allow performance-based cleanups of sites where petroleum has been discharged or released from underground storage tanks. Sites selected for the pilot program were posted for competitive bidding in the North Carolina Interactive Purchasing System. A performance-based contract was awarded to the qualified environmental services firm that submitted the lowest, technically qualified bid for an acceptable remedial proposal for the advertised site. A series of milestones (generally percentage reductions in contaminate levels in the soil and groundwater) must be achieved before payments are made to the cleanup firm from the Commercial or Non-Commercial Fund.

On November 2, 2001, the Division of Waste Management convened a stakeholders workgroup consisting of representatives of the Professional Engineers of North Carolina, the Consulting Engineers Council of North Carolina, the North Carolina Board for the Licensing of Geologists and the North Carolina Petroleum Marketer's Association to develop a temporary rule. A follow-up meeting on November 9, 2001 resulted in the further refinement of the rule and the discussions of the contract and bidding procedures proposed for use with the rule.

The proposed temporary rule was presented to the Groundwater Committee of the Environmental Management Commission on December 12, 2001 and received a favorable vote to proceed to full commission review in February 2002. On February 14, 2002, the EMC voted to approve the publication of the temporary rule in the North Carolina Register. The temporary rule was published for public comment between March 15 and April 15, 2002 in Volume 16, Issue 18, p. 2019 of the NC Register. No comments were received. The Commission adopted the temporary rule on May 14, 2002. On July 11, 2002 the Commission voted to allow the Division of Waste Management to proceed with permanent rule making. The permanent rule was published in the September 2004 issue of the NC Register.

In July of 2003, House Bill 897 was passed, allowing $2.5 million from the Commercial Fund and $250,000 from the Non-Commercial Fund to be allocated for the Pay-for-Performance Program in each fiscal year. At present, there have been four commercial sites accepted into the pilot program. Of the four sites, one has naturally attenuated to the point that a Notice of No Further Action has been issued with the filing of a Notice of Residual Petroleum. A contract has been awarded for the second site and installation of the remediation system has begun. Bid specification packages for the last two sites are being prepared.

In June of 2005, the UST Section opened and reviewed six offers for the first Pay for Performance contract to be placed out to bid for cleanup. Unfortunately, the six offers were not detailed enough in the technical proposal to justify the cost proposals submitted. The performance contract was placed back out to bid, with an updated technical proposal description, on July 21, 2005 with a closing date of August 31, 2005.

In order to be considered for the Pay for Performance Program, an incident must have a completed comprehensive site assessment and not be considered an emergency cleanup. Any responsible party who would like their incident considered for the program, and who can meet the requirements, may contact the UST Trust Fund Section.

On January 4, 2006, the first voluntary Pay for Performance contract, #N06004, was awarded to Pyramid Environmental & Engineering, P.C. and then amended on May 12, 2006 to finalize the contract terms and conditions. In June and July of 2006, the first milestone was met: installation and startup of the remediation system. Monitored attenuation of the plume will be conducted under the terms of the contract until the site has met the cleanup levels stipulated in the contract.

In 2001, the UST Section entered into a Pay for Performance based cleanup contract as part of a third party lawsuit settlement agreement. This contract, while not allowing for flexible cleanup goals due to the settlement agreement between the responsible party and the affected party, did set the cleanup timetable and fix the cleanup costs. Over the past five years, this site has met all contractual milestones up to and including the 99% contaminant reduction goal. At present, the consultant of record is trying to meet the final cleanup goals and begin the one year of monitoring following system shut down to ensure that the cleanup milestone has been met and that contamination levels do not rebound.

RECOMMENDATIONS

Based on the results of this report, the UST Section makes the following recommendations for the Commercial and Noncommercial Trust Funds:

1) Continuing as the primary recommendation, transition (and ultimately terminate) the providing of required financial responsibility (FR) for owners and operators of regulated, commercial USTs by the trust fund to other mechanisms, such as private insurance and self-insurance. Ending the use of the trust fund as a provider of FR will eventually greatly reduce the need to use trust fund resources to clean up new releases. Transitioning to private insurance, self-insurance, or other non-trust fund mechanisms of FR will also tend to reduce the number and severity of releases by making tank owners and operators more fiscally involved and more vigilant in preventing releases early, before the contamination of significant areas of soil and ground water.

2) Continue to increase the inspection frequency for USTs in North Carolina. More frequent inspections will have the following positive effects: detect and correct more out-of-compliance equipment and operating procedures that could allow a release, detect some undiscovered releases, and provide more frequent release prevention and detection training to UST owners and operators. This last benefit is particularly important due to the large number of UST facilities being bought and operated by new and inexperienced owner/operators each year.

3) Incrementally increase the annual operating fees for USTs in order to increase the amount of money available in the trust fund for cleaning up existing releases and to provide an incentive for tank owners and operators to transition from the trust fund to other FR mechanisms.

4) Implement a phase-in of secondary containment requirements for existing UST systems. Implement a phased approach by requiring secondary containment of the oldest and most failure-prone UST systems first.

5) Increase the amount of money coming into the trust funds in order to clean up the existing UST releases.

6) Continue to find and implement better and more cost-effective methods for assessing and cleaning up petroleum releases, including reviewing existing rules and regulations and reducing or eliminating requirements whenever practical, while maintaining a sufficient level of protection for public health and the environment.

7) Implement technical changes to existing law, such as setting time limits on filing claims and seeking eligibility determination, in order to lessen the logistics of the process and to determine the trust fund's total liability for cleaning up releases.

8) Continue to encourage responsible parties of UST releases to consider pay-for-performance cleanups of their incidents. Pay-for-performance (PFP) is a reimbursement method that requires cleanup goals to be met before payments can be made to environmental consultants. States which incorporate the use of PFP programs for corrective actions have realized a reduction in their costs for cleanups over non-PFP based cleanups. Two states, Florida and

South Carolina, have used PFP programs for several years. In evaluating their effectiveness, these states have experienced overall reductions in cleanup costs, primarily through a decrease in the length of time required to achieve remediation. South Carolina's program continues to realize an average cost reduction of 40 percent. The Department of Environment and Natural Resources will monitor the obligated costs for pay-for-performance contracts and the potential cleanup cost savings of the PFP program.

9) Renew and expand the PFP effort based on the initial pilot PFP program results.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION 4
ATLANTA FEDERAL CENTER
61 FORSYTH STREET
ATLANTA, GEORGIA 30303-8960

SEP 19 2006

William G. Ross, Jr., Secretary
North Carolina Department of Environment
and Natural Resources
1601 Mail Service Center
Raleigh, NC 27699-1601

Dear Secretary Ross:

The U. S. Environmental Protection Agency (EPA) has monitored the status of North Carolina's Commercial Leaking Petroleum Underground Storage Tanks Cleanup Fund (State Fund) over the past several years as the State has worked to clean up leaking underground storage tank (UST) sites. Because it serves as a financial responsibility mechanism for tank owners and operators to ensure the availability of funds to clean up new releases from regulated tanks and provides funds to clean up many sites contaminated before the establishment of financial responsibility requirements, the State Fund is a vital component of the State UST Program. I am concerned that the State Fund is not adequately capitalized to meet its current and future liabilities.

As part of annual reviews of the State's UST Program undertaken during fiscal years 2002 through 2005, our staff expressed growing concern about the solvency of the State Fund. From 2002 to 2004, the Fund's unpaid claims liability ballooned to more than $31,000,000. In 2004, the North Carolina General Assembly responded to our concerns by providing money from the Highway Trust Fund to pay backlogged claims and placing controls on future State Fund obligations to prevent unchecked increases in claims. Those controls limited the number of sites subject to remediation based on the State Fund's financial ability to reimburse for claims. As a result, the number of contaminated sites undergoing assessment and remediation immediately decreased. I understand that state policymakers expected a steady increase in the number of sites that could be funded under the new controls as the Department of Environment and Natural Resources (DENR) modified its reimbursement procedures. During the past two years, DENR has worked hard to implement the provisions of 2004 N.C. Sess. Laws 124 by prioritizing sites and has periodically increased the number of sites that could be addressed based on the availability of funds; however, it appears to us that many sites required to be addressed under federal and state UST rules remain unattended as a result of inadequacies in the State Fund.

I recently requested and received information from your staff showing that only 33 of the 714 contaminated sites, with a measurable level of free petroleum in the ground water, are being addressed because of the State Fund's financial status. While it is understandable that the priority scheme implemented by DENR focuses on sites posing the greatest risks to public health and the environment, we are concerned about the deficient response at the other 681 sites with free product. Under federal rules, many aspects of leaking underground storage tank site remediation are left to the discretion of the state; however, removal of free product is a federal requirement that exists to ensure protection of ground water as a vital natural resource.

As you are aware, the Underground Storage Tank Compliance Act of 2005 (Title XV, Subtitle B of the Energy Policy Act of 2005) authorizes the EPA Administrator to withdraw approval of state assurance funds as a financial responsibility mechanism without withdrawing approval of an entire state UST program. If approval is withdrawn, UST owners and operators would be required to arrange an alternative means to comply with state and federal financial responsibility rules. These rules require that tank owners and operators maintain a minimum of $1,000,000 liability coverage to pay for corrective action and third party damage claims. Within the next few months, EPA anticipates issuing guidelines for implementing these provisions of the 2005 Act.

In conclusion, we are concerned that the State Fund is not adequately funded at this time to allow DENR to address all sites requiring clean up. Given our concerns that the State Fund may be deemed inadequate under the draft guidance, I strongly encourage North Carolina to have a strategy in place for addressing its fund solvency issues before implementation occurs. Our staff stands ready to work with you in addressing issues and concerns. If you would like to discuss this matter further or need additional information, please feel free to contact me or have a member of your staff contact John Mason of our UST Section at (404) 562-9441.

Sincerely,

J. I. Palmer, Jr.
Regional Administrator

cc: Dexter Matthews, Director
Division of Waste Management Division, DENR

EXHIBIT P

Presentation to the North Carolina Environmental Review Commission on the North Carolina Underground Storage Tank Program

9 October 2006

presented by
Grover Nicholson, Chief, UST Section
919-733-1300
grover.nicholson@ncmail.net

A: The Universe of Underground Storage Tanks (as of 31 December 2006)

1. In North Carolina, there are 11,926 UST facilities, which have 33,852 tanks.

2. These facilities are owned by 5,432 owners.

3. Of these 33,852 tanks, 29,391 are regulated and 3,566 are commercial heating oil tanks.

4. Of the 29,391 regulated USTs, 19% were installed more than 30 years ago; 26% were installed 20-29 years ago; 38% were installed 19-10 years ago; and 17% were installed less than 10 years ago.

5. We estimate that there are also 250,000 home heating oil tanks in the state. These are unregulated tanks.

B: The UST Program's Corrective Action Progress (as of 30 June 2006)

1. Since the program's inception, we have recorded 21,102 incidents of leaking tank systems.

2. We have closed 12,748 of these incidents.

3. Of the remaining 8,354 active incidents 2,371 are High-Risk; 1,455 are Intermediate-Risk; 2,815 are Low-Risk; and 1,713 are Unconfirmed-Risk.

4. In FY2005, about 97 new releases were reported each month. The majority of these new releases (about 57 %) were from non-regulated (home heating oil) tanks.

5. In addition, there have been 6,357 "clean closures" of tank systems. These were closures where there was no release of petroleum (and therefore no reported incident).

C: The UST Program's Compliance Progress

In North Carolina, there are approximately 11,926 UST facilities. These facilities contain just over 33,852 UST systems (underground storage tanks, piping, dispensers, related valves, vents, sumps, and fill pipes, leak detection equipment, corrosion protection equipment, and monitoring equipment). In the North Carolina program, inspectors are responsible for all phases of UST system inspection and compliance, including pre-inspection preparation, on-site inspection activity, data accumulation and data entry, follow-up inspection, violation notification, violation follow-up, compliance monitoring, compliance enforcement, oversight of initial release investigation, and UST owner/operator training. At present, the UST program has 13 inspectors (up from 11 inspectors last year) and each inspector can inspect about 250 facilities each year, which means that the UST program can inspect each facility once every 3-1/2 to 4 years. Nine additional inspectors, and support staff, will enable the UST program to inspect every facility at least once every two years, which is the inspection frequency that protects the environment and public health, and minimizes the severity of releases and the costs of cleaning up releases. This additional inspection capability will also allow the UST program to ensure that the installations of new UST systems meet construction and testing standards and are not constructed too close to water supply wells.

D: The Commercial Fund

1. Since the inception of the Commercial Trust Fund in 1988, it has received about $452 million and disbursed about $407 million. 93% of that money been spent cleaning up UST releases and paying third-party claims. 7% of the money has been used to administer the UST program.

2. As of 30 June 2006, the balance of the Commercial Fund was $13,747,190. Claims pending against the Commercial Fund total $2,459,046.

E: The Non-Commercial Fund

1. Since the inception of the Non-Commercial Trust Fund in 1988, it has received about $104 million and disbursed about $85 million. About 86% of that money has been spent cleaning up releases from USTs. 14% of the money has been used to administer the UST Program.

2. As of 30 June 2006, the balance of the Non-Commercial Fund was $5,240,209. Claims pending against the Non-Commercial Fund total $2,620,641.

The primary effects of the Federal Energy Policy Act Of 2005 on North Carolina's Underground Storage Tank Program

The short title of the Act is the Underground Storage Tank Compliance Act of 2005. It was enacted on August 8, 2005 and amends Subtitle I of the Solid Waste Disposal Act (42 USC 6991 et seq.)

***Sec. 1522. LUST Trust Fund Distribution.**

(1) Prohibits EPA from distributing LUST Trust Fund appropriations to a state that has diverted funds from a state fund or state assurance program for purposes not related to the regulation of USTs. This applies to diversions of funds taking place after the date of Act enactment.

(2) Provides EPA with authority to withdraw approval of a state fund or state assurance program for cause without withdrawing approval of the State UST program.

(3) Allows LUST Trust Funds to be used for inspection and enforcement of release detection/prevention requirements for regulated USTs (including federal and tribal USTs), operator training and delivery prohibition. [*This provision cannot be implemented until funds are appropriated and allocated to the States. Also Congress must remove a penalty in the tax law that automatically reduces or eliminates LUST Trust fund revenues when funds designated for LUST (corrective action) are used for another purpose].*

Required Actions: It may be necessary to include in NC State law, a provision that prohibits any person from diverting funds from the Commercial State Trust Fund for purposes other than for regulation of USTs.

***Sec. 1523 Inspections of USTs.**

A State receiving LUST Trust Funds must conduct on-site inspections within two years to determine compliance for all USTs not inspected since December 22, 1998. After completion of these inspections, a State must conduct on-site inspections at least once every three years thereafter. EPA may extend the first three-year inspection interval up to one additional year if a State demonstrates that it does not have sufficient resources to comply. It is expected that a State will track inspection/compliance and enforcement data collected and generate periodic performance reports for EPA and Congress.

Required Actions:

August 8, 2007 – Complete inspections of USTs not inspected since December 22, 1998. It is expected that NC will meet this deadline with its current resources.

August 8, 2010 – Complete the first three-year inspection cycle. EPA may extend this deadline by one year if a State has insufficient resources to accomplish this goal. NC will

not meet this deadline with its current number of inspectors. To accomplish the three-year cycle, NC will need an additional 9 full-time inspectors, one additional supervisor to supervise and train these inspectors, and one attorney to process the additional enforcement action appeals. The program also must continue to develop and maintain a data management system to track, store and retrieve the inspection/compliance/enforcement data. The required reporting for EPA and Congress will be far more complex that what is being required now. These new inspectors should be hired and trained, and a data management system developed and put into production, by August 2007, the beginning of the first three year cycle.

***Sec. 1524 Operator Training.**

EPA, in consultation and cooperation with States, and after public notice and comment, must issue guidelines that specify training requirements for three distinct classes of operators responsible for operation and maintenance of regulated UST systems. Within two years of the date on which EPA publishes its guidelines, a State receiving LUST Trust Funds must develop state-specific training requirements based on EPA's guidelines. EPA can award a financial incentive to a State of up to $200,000 for this purpose

Required Actions:

August 8, 2007 – EPA must publish final operator training guidelines.

August 8, 2009 – States must complete development of state-specific operator training program in accordance with EPA's guidelines. Statutory authority and rules will be necessary to make operator training a requirement in NC.

Depending on EPA's guidelines, it is hoped that the State can accomplish this mandate with as little cost as possible. There are two ways this might be done relatively inexpensively. The first alternative incorporates operator training into the facility inspection process. All operators would be trained at the time the State inspects the facility that they operate. This is desirable because the operators will be trained by the State and will be provided with information that is specific to their UST release detection/prevention equipment and methods. Further, the inspection itself serves as a testing mechanism. The second alternative involves inviting a third party testing company such as International Code Council (ICC) to administer a state-specific test to operators and to notify the State of the test results. The State would work with ICC to develop a state-specific test. The cost for testing would be borne by the operator. Training for the test would also be left up to the operators and private trainers.

Both methods will require that the UST program develop and maintain a data management system to store, track and retrieve this information to ensure that the requirement is being met. Compliance with this requirement will have to be tied into the existing permitting and enforcement processes. Currently, the program has no operational data management system that can handle this component.

Sec. 1526 Public Record.

Within two years, a State receiving LUST Trust Funds must submit a report to EPA that contains inspection and compliance information about all USTs owned or operated by Federal, State and local governments. In addition, a State must maintain, update and make available to the public, a record of all regulated USTs. To the maximum extent practicable, the record must include each year: the number, sources and causes of UST releases, a record of compliance for all regulated USTs, and data on the number of UST equipment failures.

Required Actions:

August 8, 2007 – The State's compliance report on government-owned USTs and first annual public record is due. NC will be able to comply with the reporting deadline for the government-owned USTs. However, the State does not currently collect and track detailed information on the sources and causes of releases or the number of equipment failures for all regulated USTs. A data management system will be needed to store, manage and retrieve this information. To meet the reporting requirements, database development must begin immediately.

***Sec. 1527 Delivery Prohibition.**

Within two years of the date of enactment of the Energy Policy Act, it will be unlawful to deliver, deposit into or accept a regulated substance into an UST at a facility that has been identified by the EPA or a State as being ineligible to receive the regulated substance. Within one year after the date of enactment, EPA in consultation with the States, UST owners and product delivery companies, must publish guidelines on implementation of this section. States that receive LUST Trust Funds must comply with the processes and procedures established EPA's guidelines.

Required Actions:

August 8, 2007 – States must implement EPA's guidelines in order to receive LUST Trust Funds. Depending on EPA's guidelines, it appears that NC already complies with most of this requirement through its UST annual operating permit statute (NCGS 143-215.94U). However, the Energy Policy Act is somewhat broader than State law in that it appears to cover all USTs containing regulated substances. This includes hazardous substance USTs as well as petroleum USTs. Currently, the NC UST operating permit statute only covers USTs storing petroleum. If EPA includes hazardous substance USTs in its implementation guidance, then the State's operating permit statute will need to be amended to include hazardous substance tanks also. At present, about 216 active hazardous substance USTs are registered with the State.

Sec. 1528 Federal Facilities.

This section clarifies and underscores that all USTs owned or operated by any department or agency of the federal government must comply with all federal, state, interstate and local government UST requirements. This section also explicitly waives any federal sovereign immunity from such requirements. The only exception is a specific waiver that the President may invoke if the President determines that waiving such a requirement is in the "paramount interest" of the United States. Within one year of the date of enactment of the Energy Policy Act, each federal department or agency that owns or operates USTs must submit an extensive UST compliance report to EPA and Congress.

Required Actions:

August 8, 2006 – Federal facilities must submit a UST compliance report to EPA and Congress. NC will need to provide inspection and compliance information to federal facilities to assist them in preparing their compliance reports.

***Sec. 1530 Additional Measures to Protect Groundwater.**

Within 18 months of enactment of the Energy Policy Act, a State receiving LUST Trust Funds must require one of the following two options:

(1) New or replaced tanks and piping within 1,000 feet of an existing community water system or existing potable drinking water well must be secondarily contained (includes interstitial leak detection monitoring). New dispenser systems in the above areas must have under dispenser spill containment.

(2) Manufacturers and installers of UST systems must maintain evidence of financial responsibility in order to provide for the costs of corrective action related to releases caused by improper manufacture or installation. Also, an installer must have one of six forms of certification (already required in the existing federal and state UST regulations).

Required Actions:

February 8, 2007 – States must implement secondary containment or financial responsibility provisions. NC already meets the secondary containment requirements for UST systems installed or replaced within 100 feet of a potable well, within 500 feet of a well serving a public water supply and within 500 feet of surface water classified as Water Supply (WS)-I and WS-II. In addition, existing legislation specifies that new installations or replacements of non-tank components including UST dispensers at all locations must be provided with secondary containment. North Carolina already has draft rules in the rulemaking process that will require secondary containment for all new or replacement UST systems.

MINUTES
ENVIRONMENTAL REVIEW COMMISSION
15 November 2006

The Environmental Review Commission (ERC) met on Wednesday 15 November 2006 at 9:30 a.m. in Room 1228 of the Legislative Building. Representative Pryor Gibson presided.

The following members were present: Senators Albertson, Bingham, Clodfelter, Dorsett, Forrester, Kinnaird and Weinstein; and Representatives Gibson, Hackney, Harrell, Harrison, Justice, McComas and Warren. Mr. George Givens, Commission Counsel; Jeffrey Hudson, Assistant Commission Counsel; Jennifer McGinnis, Assistant Commission Counsel; Susan Iddings, Assistant Commission Counsel; Jennifer Mundt, Commission Analyst; and Dot Waugaman, Commission Clerk, were also present.

On 31 October 2006, notice was sent to members and interested parties via e-mail and regular mail. A copy of the notice is included in the attachments to these minutes as **Exhibit A**. Copies of the agenda for the meeting and visitor registration sheets are included in the attachments as **Exhibits B** and **C**.

Representative Gibson called the meeting to order and asked George Givens to present his report and explain the agenda items. Mr. Givens pointed out that a package of two groups of reports with an explanation memorandum from Ms. Jennifer Mundt was at their desks (see **Exhibit D**). The first group of six reports consists of reports that have been submitted to the Commission since the last meeting that are designated as Read Only. They include the annual report of the Coastal Habitat Protection Plan Program, 2005-2006 (see **Exhibit D-1**); report to the General Assembly on the Inactive Hazardous Sites Program, dated October 2006 (see **Exhibit D-2**); 2006 semiannual report for the Pilot Program for Inspections of Animal Waste Management Systems, dated October 2006 (see **Exhibit D-3**); annual report on Basinwide Water Quality Management Plans, dated October 2006 (see **Exhibit D-4**); annual report on the Dry-Cleaning Solvent Cleanup Act Program, dated October 2006 (see **Exhibit D-5);** and annual report on Implementation of Stormwater Rules and Programs, dated October 2006 (see **Exhibit D-6)**. The second group of reports was also submitted to the Commission since the last meeting. Those reports relate to items on the agenda. They are placed in the minutes according to the agenda item to which they relate. Mr. Givens added that also at their desks was a document entitled, "Status of Reports to the ERC Required by Law", dated 14 November 2006 (see **Exhibit E**). The only reports being held are those relating to Parks and Recreation issues. They will be distributed at a meeting when parks and recreation issues are discussed sometime before the convening of the 2007 session.

Mr. Givens noted that the public-staff planning meeting for this meeting was held at 10:00 a.m. on 13 October 2006. He then reviewed the agenda for Commission members. In regard to Agenda Item #12, he reported he has heard from some people who want to be heard on the issue and therefore the agenda item will appear again at the January meeting. He added that the Nutrient Offset Payment Working Group has met once and will meet again on Wednesday 22 November at 10:00 a.m. The group is working on a Request for Proposals for a consultant to assist with a study of the issue. The next meeting of the ERC will be Wednesday 13 December 2006 in Room 1228 of the Legislative Building. One of the items on the agenda will be issues related to abandoned manufactured or mobile homes. Another will be a report on the Sedimentation Control and Pollution Control Act. The Utilities Commission is scheduled to complete its study and report to the ERC on renewable energy portfolio standards at that meeting, and Leaking Underground Storage Tank program will also be discussed.

Representative Gibson recognized Mr. Givens to report on the proposed merger of the organization and functions of the Ecosystem Enhancement Program (EEP) with the Clean Water Management Trust Fund (CWMTF) as required by Part 16 of the 2006 studies bill. Mr. Givens said Transportation Oversight staff members are working on a Request for Proposals (RFP) to hire a consultant as is authorized by the legislation. The Transportation Oversight Committee met the previous day and approved the draft RFP. It is before the ERC for approval today. The staff recommendation is

that it be approved subject to technical and scheduling modifications necessary as it is perfected. Transportation Oversight and ERC staff will work together to select the consultant who will be charged with preparing a fair and balanced report.

Representative Gibson recognized Ms. Lisa Hollowell, Senior Fiscal Analyst, Fiscal Research Division, North Carolina General Assembly, to outline the RFP with particular focus on the scope of the work to be performed by the consultant (see **Exhibit F** for a copy of the draft RFP).

Senator Clodfelter asked if the study could be done by existing staff and how much the outside consultant would cost. Representative Gibson remarked that with the complexity of this and other issues staff is dealing with, and the short time frame required, current staff is unable to fit it into their work schedules. Mr. Givens replied that the study has been postponed for a year because the 2005 studies bill did not pass, and that the same language was in the 2006 studies bill which did pass, including the authorization to hire a consultant.

Senator Weinstein moved that the Commission approve the draft Request for Proposals for a consultant to assist the Commission and the Joint Legislative Transportation Oversight Committee (JLTOC) in the joint study of the merger of the organization and functions of the Ecological Enhancement Program with the Clean Water Management Trust Fund, subject to technical and scheduling modifications by the staff, and to authorize the Commission Counsel to work with the staff of the JLTOC in the selection of a consultant from among the proposals received. The motion includes the following understandings: (1) that the employment of the consultant is subject to approval by the Legislative Services Commission; (2) that the consultant will be paid from funds available to the Commission and the JLTOC through the Legislative Services Commission; (3) that the consultant will report its findings and recommendations in time for the 2007 session to consider the recommendations; and (4) that the Commission will review the cost and work schedule of the consultant at its December or January meeting. The motion carried.

Representative Gibson recognized Ms. Robin Smith, Assistant Secretary for Environment, DENR, for a report on recent action by the Environmental Management Commission (EMC) on the Clean Air Mercury Rule (see **Exhibit G** for a copy of the rule as recommended by the hearing officers to the full EMC at their 9 November 2006 meeting). The EMC did adopt the rule. In the process they made a couple of minor changes that affected only the reporting requirement, but it did not alter the rule at all.

Ms. Smith explained the background of the rule. The U.S. Environmental Protection Agency adopted a mercury rule addressing emissions from power plants. Part of the rule set a national cap for mercury emissions. A cap was then assigned to each state individually. Under the federal rule, North Carolina has a cap for mercury emissions that our power plants will have to comply with by 2018. Within the cap for each state, the federal program allows for cap and trade. Essentially, the power companies across the country have the opportunity to meet the emissions allocations under the state caps, either by actually reducing their mercury emissions, or by trading for credits in a national cap and trade program. If a given utility was not able to actually reduce their emissions to the limit of the allocations within their state cap, they could buy credits in the national cap and trade program to offset their shortfalls. There has been a lot of concern nationally about addressing mercury with a cap and trade program, because such a program would allow some utilities to achieve their reductions not by actually controlling mercury but by buying credits that would leave hotspots. Across the country, a number of states (approximately 20) have looked at adopting more stringent rules than the federal rule that is allowed under the federal regulatory program. The biggest concern in those states has been how and whether to participate in the national cap and trade program for mercury credits.

In North Carolina, the EMC has struggled with the issue for about 18 months. Much of the struggle had to do with how to use the cap and trade program. There was a strong sentiment that we wanted to get the largest amount of actual mercury reductions in North Carolina that we could achieve without relying on the trading program. There was discussion over the last 18 months about the feasibility of achieving up to 90 percent reductions in mercury emissions without trading, but there was also a great

deal of uncertainty over what is achievable. How much could be reduced depends on many factors such as how much mercury is in the coal that an individual utility is using, what types of mercury control equipment is installed, along with a number of other variables. There is no good mercury emissions data in existence to rely on, so decisions have been based on modeling and estimates of what reductions will be achieved by installing different types of equipment. The uncertainty has the utilities nervous about their ability to reach certain targets. At the end of the process, the Division of Air Quality had looked at estimating emissions reductions that could be achieved in North Carolina based first on the clean smokestacks controls.

It is known that the installation of the technologies to control for NOx and SOx2 emissions in the state would reduce some mercury emissions. DENR estimates that by 2013, five years ahead of any mandatory emissions reductions under the federal rule, North Carolina is expected to achieve about 73 percent reductions in mercury emissions in the state from power plants based on the installations of clean smokestacks controls. However, additional reductions would be required to reach the federal cap. The rule ultimately sets a numerical target for the second phase reductions. The EMC adopted a narrative standard that requires the utilities to return to the Commission in 2013 with a mercury control plan for their entire system.

The plans will have to address the clean smokestacks units as well as any units that remain uncontrolled, and propose a plan for installing additional mercury control technology to achieve the maximum level of actual reductions that is technically and economically feasible.in North Carolina without reliance on the trading program. The EMC will have to approve the plans. It also requires controls on all units with an exception for very small units. It may not be technically and economically feasible to control the very small units because there would not be sufficient mercury reduction from those units to justify the cost of the technology. If the EMC found that that to be true, and also found that allowing a particular unit to function without controls would not create a localized problem with respect to human health and the environment, they could allow that unit to remain uncontrolled as long as the utility achieved additional reductions from another unit in their system. If by 2018 when these plans have been approved and the utilities have installed all their mercury control equipment in compliance with their approved plan, it turns out that they have not quite met the level of emissions reduction required to fall under the federal cap, they could use the national cap and trade program to buy credits to offset the difference. The point of the rule is to make the effort to obtain the maximum actual feasible reductions before participating in the trading program.

It was a difficult rulemaking process, but agreement has been achieved with the utilities in the past three weeks. The agreement on the rule met the utilities' concerns that even with all the controls installed they would still not be able to reach the reductions needed. It met the environmental concerns of the EMC and the environmental community that they not go to a cap and trade program that would allow for localized mercury impact unless there was no other option.

Senator Clodfelter asked if our utilities reach their reductions and would be able to reduce the emissions even more they would be able to sell their credits to other utilities. Ms. Smith answered that presumably they would. She added that the way the rule is written, the utilities do not need to stop when they reach the federal cap. If it turns out 4-5 years from now that the control equipment is actually more efficient than currently thought, and they can exceed the level of reductions required under the federal cap, they are expected to sell their credits to other utilities.

Senator Albertson asked if Ms. Smith has a map showing the mercury hotspots. She replied she does not, but that she would get the information for the committee.

Senator Clodfelter asked if the state could put any limitations on where we buy and sell our credits to protect our environment. Ms. Smith said because the trading program is a federal program, we cannot have that kind of control. She added that the state could adopt standards for North Carolina power plants and affect what their standards are in the state before they can take advantage of the trading program. Mr. Givens commented that there are some court case incidents that would suggest that a state's attempt to manipulate the trading program process would be considered interference with

the federal plan and would therefore be unconstitutional. With the smokestacks program, the utilities voluntarily agreed to surrender all their smokestacks credits to the state, but the General Assembly actually has control of those and presumably will have them sequestered forever. Senator Clodfelter asked if there was any discussion about what to do if credits were donated. Ms. Smith said she did not believe there had been, and added that she does not believe this could function as the smokestacks program did because in that situation the state was ahead of any federal program. In this case, there is a federal cap and trade program established and functioning under federal rules. Mr. Givens said the issue would be worth another look.

Senator Forrester asked if this program would mean there would be no more coal fired electric plants built in the state. Ms. Smith replied that the rule is written with a growth allowance. The rule takes the state cap that EPA set and subtracts from that cap a certain percentage to put in a new growth account. That amount then comes out of what was allocated to the existing units and their mercury allocations. The actual level of emissions reductions that existing units have to reach is tighter because DENR has taken a percentage off the top to put in a growth account for potential energy source development.

Senator Kinnaird commented that because of the properties of mercury versus NOx and SOx2, she believes there should not be a cap and trade program. Senator Albertson added that the report shows that we need to be developing alternative sources of energy, energy efficiency and energy conservation in the state.

Mr. Givens told the ERC that the rule will now go to the Rules Review Commission, and either will or will not be subject to legislative review during the 2007 session depending on that review.

Mr. Givens also announced that procedurally, in regard to the RFPs (see above), the statute requires that the RFPs be approved by the Legislative Services Commission (the Speaker of the House and the President *Pro Tempore* of the Senate).

Representative Gibson recognized Mr. Paul Crissman, Head, Planning and Program Management Branch, Solid Waste Section, Division of Waste Management (DWM), DENR, to report on a survey of solid waste management regulations of other states and on issues related to the processing of solid waste management permits by the Division of Solid Waste. The moratorium bill passed during the 2006 session directed the study of solid waste.

Mr. Crissman first answered questions from the previous meeting (see **Exhibit H** for a copy of his PowerPoint presentation and **Exhibit I** for a map showing states with tip fee surcharges). He also shared two studies on illegal dumping and the causes of illegal dumping (see **Exhibit J** and **Exhibit K**). The two primary causes of illegal dumping are (1) lack of access or a collection program and (2) lack of a local enforcement program. The North Carolina experience supports the studies with one additional comment:. there seems to be a local custom of illegal dumping in some specific areas of the state.

The states studied have some things in common: they are seaboard states and neighbor states. They are the states from which we expect to receive waste if we become a host state for waste, or they are states that are host states that currently receive waste from states that we would expect to receive waste from. Besides the questions shown in the PowerPoint presentation, the study is looking at whether or not there are bans on certain types of waste and what types of articles are banned, what types of wastes are accepted, and what screening processes are used. A meeting was held yesterday to determine what data they still need to collect.

Mr. Crissman said he believes the existing landfills are performing well. The current system is not broken. There are no base liners that they are aware of that leak today. We know the monitoring systems work. There have been some problems with some of the leachate collection systems, with some of the leachate collection ponds, and some sabotage at a landfill. The moratorium gives us a chance to look at our rules in comparison with other states, and in comparison with our performance. We have

experience in the state with lined landfills. We have a history of working with local governments. There are some big landfills, some with over 1,000,000 tons a year, and there are some very small ones.

In December, DWM will come to the ERC with recommendations. One recommendation consists of a list of rules that need to be written. A second is the idea of designating sensitive areas such as a brown water recharge area, or a groundwater recharge area. Some states have a specific defined regulatory response for sensitive areas. The defined response may be a double liner with a leak protection system. A third option would be to have an open-ended response for a sensitive area. The response would be a design or site-specific response, subject to the applicant's design. That would require a legislative change because the Rules Review Committee will not allow DWM the flexibility in their rules to have an open ended response. Another recommendation would be to require a full environmental impact statement for every proposed landfill.

Many states also require a transportation study. One of the major complaints and frustrations of landfill neighbors is the transportation of the waste to the landfill. DENR has no regulatory control or influence over anything outside the landfill. Another suggestion could be expanding the list of location restrictions based on certain criteria.

The study is comprehensive. It is being done by DSWM staff at the cost of time. The existing permit backlog is growing for a couple of reasons: permits are growing in complexity and frequency, and the public is more vigorously and contentiously involved than they used to be. It is difficult to recruit people to do permit work and the budget shortfalls have contributed to the problem.

Representative Gibson recognized Ms. Sara Evans, Manager, Recycling and Local Assistance Branch, Division of Waste Management, Department for Environmental Protection, Environmental and Public Protection Cabinet, Commonwealth of Kentucky, to discuss the Kentucky solid waste tipping fee surcharge and solid waste management programs (see **Exhibit L** for a copy of her PowerPoint presentation). Ms. Evans said Kentucky faced some of the same problems North Carolina is now facing, and they have had successful outcomes. She added that their permit backlog has decreased from three years in 2002 to a currently backlog of two months.

Representative Gibson recognized Mr. Richard Whisnant, Associate Professor of Public Law and Government, UNC-CH School of Government, to discuss legal limits and policy options (see **Exhibit M**). Mr. Whisnant said the one thing that can be done to keep on safe constitutional ground is to focus on local and state benefits of whatever it is that is being proposed to do. He said the state needs to consider if the current tipping fee fully covers all the costs of solid waste disposal. He spoke about conflicting interests between local and state and regional jurisdictions.

Representative Gibson recognized Mr. Paul Meyer, Assistant General Counsel, North Carolina Association of County Commissioners, to speak on local government perspectives on solid waste management. Mr. Meyer made three points. For many reasons, landfills have become a viable economic development option. The problem then becomes a revenue problem, not a solid waste problem. The siting of landfills is a necessary component for the disposal of trash in the state. Local governments play an interesting role. They are both owners and operators of landfill facilities and may be franchisors. Until there are more cost effective technologies, landfills will continue to play a significant role in terms of trash disposal and overall economic development. Market forces dictate that less populous areas and less valued land will lead to lower disposal costs. It is inevitable that due to low cost land and low cost labor in North Carolina, landfills and trash will be coming to this state. Further complicating this, the state has a large list of fiscally strapped county governments. Some of the counties that have triggered the current situation are Columbus County (23% poverty rate in the county—5th highest in the state, 12% of their budget is spent on Medicaid), Scotland County (21% poverty rate, 10% of their budget is spent on Medicaid), and Hyde County (16% poverty rate, and 5% of their budget goes to Medicaid).

With no other economic development options, landfills become a viable solution. However, it is a long and arduous process for local governments to enter into landfill agreements. The receipt of host fees by local governments is a standard practice throughout the country. The money is used to recoup

some of the costs related to the landfill. Camden County has done everything right; however, they are receiving a significant amount of heat for their decision to bring a large landfill to their county. Imposing a state tipping excise tax could actually hurt the counties that are trying to survive economically because the companies will use the existence of a state excise tax to negotiate a lower local host fee. In fact, some of the existing contracts between private industry and local government have a clause that says if there is a state imposed excise tax, the local government will absorb the fee.

Although counties look at landfills as a way to help economic development, county leaders are also concerned with the environment and public health. Conventional wisdom says that because a local government receives host fees they will turn their backs on environmental and public health concerns; however, that is not the case. No county wants to destroy the groundwater quality in their county or damage the natural resources in their jurisdictions. They do not want to deter future economic development. Many local governments already hire additional inspectors at landfills because they acknowledge that DENR does not have the resources and staff to conduct the inspections. Mr. Meyer said the state should not become an active franchisor of solid waste facilities. There is a significant local role in land use and franchising as well as the development of landfills. He added that as North Carolina becomes more fully populated, and fully urbanized, the need for landfill capacity will continue to grow, and large regional landfills could very well be a necessary solution to that problem.

Mr. Meyer ended his presentation by saying that counties should not be prevented from exercising local autonomy over what their citizens want and need. There is a state interest, but it should not result in elimination of local control and local participation in the process.

Representative Gibson recognized Mr. Edward Repa, Director, Environmental Program, National Solid Wastes Management Association, to speak to the private solid waste management industry perspectives on solid waste management. Mr. Repa brought materials concerning the interstate movement of municipal solid waste (see **Exhibit N**). He said his Association works with the federal government in developing regulations. He first discussed the safety of the landfills. Modern landfills are well-designed and engineered facilities that are located, designed and operated to insure environmental protection. In the mid-1980s, as a result of the Federal Resource Conservation and Recovery Act (RCRA), the EPA put together the Subtitle D regulations, which are under 40 CFR part 258, and which the state adopted. The purpose of the federal rules was to set a minimum standard so that no matter where a landfill was sited, and no matter what a state did, the rules would insure protection of the environment and human health. The federal rules require liners, leachate collection systems, groundwater monitoring, financial assurance, closure and post-closure care for the facilities and if there is a problem, the responsible party is required to perform corrective actions. The RCRA regulations have forced the closing of old smaller landfills because they could not meet the requirements.

Since the rules have been in place, no new landfills have had any problems in protecting groundwater and the environment. This includes sensitive areas. Although coastal areas have been a problem because of the high water table, there have been over 20 years experience operating the landfills without a groundwater contamination problem. The Association looks for new technologies to assure environmental protection around landfills, including new materials for liners and leachate collection systems. Some states have bioreactor landfills in which the waste decomposes more quickly than in traditional landfills. In the 1980s, the average tipping fee was $8 a ton; today it is $34 a ton. This increase in cost is a result of concern for the environment.

Over 39 million tons or about 10 percent of waste generated across the country moves between states for disposal. There are basically 207 waste interactions—trades between one state and another. Almost 70% of the interactions are between neighboring states. Only three states do not dispose of waste outside their borders. North Carolina, for example, ships over 1 million tons of waste out of state for disposal. Sixty-two counties in North Carolina ship some of their waste out of state, not all to neighboring states. The landfill problem is not an engineering problem, it is a political problem. The counties have been looking at landfills as a way to help increase their revenues, take care of their waste, and also help them finance schools, fire departments and police departments.

Representative Gibson recognized Mr. Jim Stephenson, Program Analyst, North Carolina Coastal Federation, to speak on behalf of the Coastal Federation, the Sierra Club and the Conservation Council of North Carolina (see **Exhibit O**). Mr. Stephenson spoke to the issue of DENR regulation of mega-landfills and made seven recommendations for the Commission to consider. He added that the coastal plain is particularly vulnerable to mega landfills. He showed a graph that demonstrated the heights of the proposed mega landfills in relation to the Cape Hatteras Lighthouse at 208 feet. All but one of the landfills was planned to be higher that the Cape Hatteras Lighthouse.

Mr. John Runkle, General Counsel of the Conservation Counsel of North Carolina, spoke from the perspective of the environmental advocacy community. He told the ERC that in his private practice he has represented over 20 private groups that have opposed landfills or wanted to modify landfills. Presently he is representing citizen groups and landowners in Camden, Hyde, Duplin, Brunswick, Scotland, Bladen and Richmond Counties. The reason the groups are opposing or wanting to modify the proposed landfills is that landfills have effects on their neighbors, the near community and some regionally. In the last 20 years, there have been two troublesome trends. The first is that landfills are getting larger. The proposed Camden landfill is six times as large as the next largest landfill, the Charlotte Motor Speedway Landfill. It would take 10,000 tons per day, much of it barged into the City of Chesapeake. The City of Chesapeake has sued Camden County Commissioners because the landfill would affect all the truck traffic and barge traffic through their town, and the landfill sits in their watershed next to a state park. Secondly, as the landfills are getting larger, the owners and operators are now relying more on the LLC form of organization, with a growing concern for assuring that financial resources would be available in case of the need to remedy a landfill problem. He stated that the entity operating the landfill needs to be able to be financially responsible.

Representative Gibson recognized Ms. Joyce Hartman, a realtor from Camden County who was representing herself and her family, to speak on the community perspective of large landfills. Ms. Hartman brought some photographs of the area showing standing water after a fairly simple rain storm in August (see **Exhibit P**) and a map of the Camden County landfill area (see **Exhibit Q**). She thanked the members for the moratorium that allowed the County to look more closely at the issue. Last week, a new group of County Commissioners decided to postpone a vote on the extension of the franchise agreement. When the former County Commissioners were approached by the waste company to purchase the land and make a franchise agreement, the citizens of Camden County were not informed. Appropriate legal notices were not given to adjacent landowners. It is important to have policies and procedures put in place and enforced to protect the citizens.

The land bought for the landfill is former converted wetland, converted into farmland between 30 and 50 years ago. The area is extremely sensitive. The water table in the northeastern part of Camden County is two feet below ground level. Runoff from routine storms will be an issue. Because of Ms. Hartman's family's proximity to the landfill, they were invited to special public meetings by the landfill applicant to ask questions and express concerns. One meeting detailed the latest and greatest landfill liner that would be used. At another meeting, they were divided into groups of five or six and at her table, a state employee was there to answer her questions about the proposed landfill. The employee had not had a tour of the site for the landfill and could not answer questions about its proximity to houses.

Ms. Hartman said the moratorium has given citizens time to reassess the situation. She ended her remarks by stating she hopes that the ERC will put into place some protocols for local governments to follow so no other citizens have to experience what the citizens of Camden County have experienced.

Senator Forrester commented that any LLC that owns a landfill should be required to have a 100-year bond for $10 billion to assure their liability is covered. He also asked Mr. Crissman about fuel generation plants in which solid waste is burned for fuel energy. Mr. Crissman said the plants were found to be too expensive to build and operate. It provides an inconsistent and irregular fuel supply which is difficult to maintain and manage. New Hanover County is still keeping their facility active, but it is extremely expensive to operate. It does significantly reduce what has to be placed in a landfill, but it is more expensive.

Senator Kinnaird asked why a full environmental impact statement has not been required for landfills. Mr. Crissman said landfills are exempt from the State Environmental Policy Act (SEPA). Mr. Givens said it was exempted in legislation to allow a particular landfill to be permitted more quickly. Senator Kinnaird suggested the Commission look at changing that exemption. She added that the General Assembly must provide enough funds for the Solid Waste Section to do its job. She also asked for information about the Rules Revision lawsuit.

Representative Harrison asked if there is enough staff for regular monitoring of landfill sites. Mr. Crissman replied they are behind on inspections this year. Staffing in general is a growing problem. With a staff of 42 in the section, 36 are devoted to traditional solid waste. A series of budget reductions have reduced the staff by six positions compounded by the need to hold on filling vacant positions during the very tight budget years. There has also been a growing workload and an growing number of increasingly complex facilities to inspect. The public is also becoming more aware of environmental concerns and has higher expectations. Division staff also has to respond to complaints. Mr. Crissman asked Mr. Mark Poindexter, head of the Inspections Branch, to comment on a new task which requires mapping of risk assessments within a 1500 foot radius of landfills. Staff members are also working with counties that have a large poultry population to plan for disposal of a large number of birds in case of an avian flu epidemic. Staffing level, workload change, and complexity of the 1500 facilities that require inspections have caused the backlog. Representative Harrison asked if they would need statutory authorization to impose a permit fee. Mr. Crissman replied they would.

Senator Clodfelter asked Mr. Meyer if it could be said that since counties are authorized by statute to operate certain public enterprises for the purpose of serving their citizens, but also that anything counties are authorized to operate to serve citizens as a public enterprise can be franchised to a private operator to operate, the General Assembly could take the policy position that the counties' authority to franchise extends only as far as they can operate a public enterprise to serve their own citizens. What counties are now purporting to do with their franchises is to begin to authorize the operation of private business entities that are not intended to serve the purposes of serving only their citizens. The only franchising counties (or cities) are authorized to do is in substitution of local government offering the service directly to their citizens. Mr. Meyer responded that there could be more than one interpretation of the phrase "serve your citizens." It could mean that they could derive revenues with which other general governmental functions could be provided. He added that any of the landfills that bring waste from other jurisdictions would also include the home county. Senator Clodfelter suggested counties have authority to franchise for the service of their county, but beyond that, the state would have to approve a franchising permit.

Mr. Givens commented that the franchise statute was created solely for the purpose of getting at the importation of out of state waste without calling it that. It was done specifically with respect to the Kernersville landfill. He added that the only reason there has not been a constitutional challenge is because the franchise grants are so large that they have excluded potential plaintiffs. Senator Clodfelter said he believes the state could be a plaintiff in the situation. It is probably unconstitutional to grant a franchise under the perpetuities and monopoly clause for the purposes Mr. Meyer discussed. He added that if the discussion is about landfills that are not local service landfills, the policy should come from the state, not local governments. Representative Gibson commented that the franchise statute was constructed to protect those entities that do not have the expertise to take on an issue that is as complex and complicated as landfills or water treatment. Mr. Meyer said that fewer and fewer counties and cities are feeling competent to run these types of facilities, and they are turning to entities that do have the professional expertise.

Representative Gibson asked how long it takes to fully permit a landfill. Mr. Crissman replied that it takes five to seven years for the full planning and building of the landfill.

Senator Albertson asked about what happens to areas where the landfills have been sited. Mr. Runkle responded that property values decrease significantly. In some locations in the state, residences have been bought by the local governments because no one would buy or rent them. People do not want to live around landfills. In contrast, Mr. Repa said the end use determines what the property values are.

Multi-million homes are being built around landfills in California, Illinois, Indiana, and Virginia. He added that the Archdiocese of Chicago allowed landfilling on their property so they could convert land that was not usable into something that could be used as a cemetery. Ms. Hartman commented that what drives property value is a person's perception of the landfill. A landfill that is 75 feet tall is much different than a landfill that is 280 feet tall. Different kinds of waste also make a difference.

Senator Albertson asked if a landfill donor state can be required to have a recycling program comparable or superior to North Carolina's recycling program. Mr. Whisnant replied that Virginia had tried to use that criterion, but the court struck the Virginia law down because Virginia had said out of state waste could not be trusted to be of the same waste quality as Virginia's, and therefore they would require more stringent inspection on all incoming waste. The Fourth Circuit said if the state did that, it is discriminating against out of state waste and inspections must be done in the least restrictive method possible. The Court suggested if Virginia had determined how each individual state's waste would be handled, it might pass legal muster. Operationally, that approach sounds very difficult. It is not as clear that a state cannot do anything to enforce its standards. If you are going to have standards, you have to be as unrestrictive as possible so as to not burden interstate commerce unduly.

Senator Albertson asked if the fees charged are more for a more expensively constructed landfill over a less expensively constructed landfill. Mr. Crissman said the permit charge would be the same to review the permit, but the construction and design costs of a double-lined landfill would be more. The costs associated with the construction, design and operation may be more, so there would be increased costs associated with disposal; however, a fee cost or a tax would not be affected. Different fees are charged at different places based on the cost of construction.

Representative McComas asked Mr. Crissman about the proposed Brunswick County landfall, whether the industrial waste that the landfill is being proposed to handle is considered hazardous waste in Europe. Mr. Ed Mussler, Chief of the Permitting Section, said they are not far enough along in the permitting process to answer the question. Representative McComas asked if, after getting a permit to one type of waste, a company decides to handle another type of waste, they would need to go through the permitting process again. Mr. Mussler said they would.

Representative McComas referred to Senator Clodfelter's question concerning the authority of the counties to franchise for larger areas than their jurisdiction. He said in Brunswick County, the County Commissioners are unanimous in their opposition to the landfill; however, a small local government is granting the franchise. Mr. Givens said the unit of local government that has the zoning jurisdiction over the property in question has the franchise authority. In the Brunswick County situation, there was either a satellite annexation or an ETJ that affected that particular piece of property and put it under the Town of Navassa instead of Brunswick County.

Representative Justice asked whether a local government could stop development of a landfill. Mr. Whisnant replied that local government has to approve it before it comes to the state for permitting. If the Board of Commissioners does not want to grant the approval because it does not meet the county's land use ordinances or for whatever reason, the Commissioners would not have to grant the approval. Representative Justice asked if all the soils along the coast are hydric. Mr. Stephenson replied that not all soils in the coastal plain are, but there are areas where there are hydric soils that supported wetlands at one time. Representative Justice asked Mr. Crissman if there is a restriction for hydric soils. Mr. Crissman commented that there is some question if there is a state law that would allow a local government to supersede a state environmental law. Mr. Givens said he recalled that state law provides for a uniform system of solid waste regulation perhaps relating to hazardous waste only. He added that the SEPA exemption for landfills was passed in 1983 as a special provision in the budget bill.

Senator Clodfelter asked about solid waste that is on its way to the landfill. He asked if a fee could be imposed based on the distance the waste has to be transported because there is a direct correlation between the transportation of the waste and how much litter shows up on the roadsides. Mr. Whisnant said that probably has been tried, but he will have to research to find out when and where. He added that constititutionally, it would be a gray area and would be difficult to predict what a court would

decide. He added that if a good basis for local or state benefits or environmental benefits such as litter control existed, it would make a good argument in front of the court.

Ms. Evans said that in Kentucky it was recognized in the late 1960s that hosting a solid waste facility could have an impact on the roads, so counties were given the authority to impose a fee of 6.25 percent of gross receipts on the revenues of that particular facility. The money so collected could be used for litter abatement and other solid waste management programs.

Senator Clodfelter asked Ms. Evans what Kentucky did in three years' time to cut costs for cleanup from $54 a bag to $12 a bag and increase by ten times the number of bags picked up. Ms. Evans replied that prior to the funding being distributed by the cabinet department, the funding for litter cleanup came from the county governments. They would then report to the state what they were spending. When the money was transferred from the Department of Transportation to the Department of Environmental Protection, the fund was administered to the counties with strict standards attached. Prior to the legislation, the counties could conduct cleanups when it was determined to be necessary. Now they are required to do the equivalent of three road cleanups for every mile of road in their county every year. Senator Clodfelter asked Mr. Meyer if the counties would agree to do that. Mr. Meyer replied they would be willing to discuss the idea.

Representative Gibson asked how the $1.75 tipping fee was passed by the legislature. Ms. Evans said it was largely driven by the counties, since they are the ones that are responsible for cleaning up illegal dumps and abandoned landfills. The only counties that benefited from host agreements were the 26 counties that hosted a landfill (out of 120 total counties in the state). She added that the private solid waste haulers supported the fee because of their concerns with the permit backlog and abandoned landfills.

Senator Bingham asked Ms. Evans if the volume of imported waste stayed the same through the process of raising the tipping fee. She replied that it did remain steady, although there was a quadrupling of imported waste through the 1990s and into 2001. The higher fees perhaps affected the importation. It did not increase; it stayed the same, whereas prior to that time it had increased. Senator Bingham asked if the state has looked into accepting only biodegradables in landfills. Ms. Evans said the end users who make products from recycled materials are not as enthusiastic about accepting only biodegradables because that affects the amount of material available for them to use in making their products. Staff said they would look into the possibility.

Representative Harrison asked if Kentucky has bans on specific items such as aluminum cans, plastics or other items from landfills. Ms. Evans replied the only landfill bans Kentucky has is on whole tires. She added that they are trying to encourage the recycling of electronics by providing options for disposal to forestall the possibility of illegal dumping when they are banned.

Mr. Crissman asked to add something to the question of workforce retention and staffing of the Solid Waste Section. He said that 30 percent of their staff is either at retirement age or within less than 2 years of retirement age. Therefore there will be a significant challenge with retention and transition in the near term.

The Commission took a lunch break at 12:40 p.m. and reconvened at 1:30 p.m.

Representative Gibson recognized Ms. Miriam S. Perry, Director, Public Transportation Division (PTD), Department of Transportation (DOT), to make an annual report on development and implementation of a plan to reduce vehicle miles traveled by State employees and vehicle emissions resulting from job-related travel, including commuting to and from work, and an annual report on development and implementation of a plan to reduce vehicle miles traveled by private sector employees and vehicle emissions resulting from job-related travel, including commuting to and from work (see **Exhibit R**).

Last summer the DOT revised the process by which they allocate Federal Highway Administration congestion mitigation and air quality funds. They provided an allocation by formula to all Metropolitan Planning Organizations (MPOs) and Rural Planning Organizations (RPOs) that were in non-attainment areas. It was the responsibility of the MPOs and RPOs to solicit local applications for the Congestion, Mitigation and Air Quality (CMAQ) funds. There were 37 transit projects state-wide that were selected to receive CMAQ funding. The funds are being used to expand express commuter service in Charlotte from neighboring cities, to convert transit vans in Chatham County from gas to biodiesel, and to initiate new transit service in Greensboro to provide service to area colleges and universities. To support this effort, the Public Transportation Division submitted an application for CMAQ funding. It was approved for funding to support a commuter assistance program manager and to develop a state-wide transit awareness campaign. They are in the process of evaluating proposals received through a formal solicitation process for a firm to work with their Public Information Office on developing a state-wide transit awareness campaign. The position will be posted shortly and Ms. Perry hopes to have the position filled within six to eight weeks.

The PTD continues to operate the state-wide rural vanpool program. They are in the process of completing the evaluation of the proposals received for actual operation of the state-wide rural vanpool program. There are currently 31 vans in the state—from Transylvania County to Hyde County—and they hope to expand to 50 vanpools within the first year of the contract period.

Representative Gibson asked if there is any information on the federal-state interface relating to the programs. Ms. Perry said under the reauthorization bill, there is an emphasis on more coordinated planning and delivery of services, recognizing there will never be enough federal money or state money to meet the demand. NCDOT has initiated a program to encourage smaller transit systems in rural areas to team up with fixed route systems in their areas. They are trying to move the smaller transportation systems operating in individual counties to more regional transportation systems that recognize regional travel patterns. PTD's emphasis has been on coordinated delivery of transit services and DOT has followed suit. Representative Gibson asked if there is coordination between what the Public Transportation Division is doing and what some of the internal human resources offices within state government are doing about teleworking. Ms. Perry replied that teleworking policies are being tightened up in her Division.

Representative Gibson recognized Mr. Dexter Matthews, Director of the Division of Waste Management (DWM), DENR, to update the Commission on the cleanup activities as a result of the fire at Environmental Quality Industrial Services of North Carolina, Inc. (EQ) that occurred 5-7 October 2006. EQ was one of 11 permitted commercial hazardous waste management facilities in North Carolina and is subject to the permitting standards of the federal Resource Conservation and Recovery Act (RCRA). It is also under compliance monitoring under the state's Resident Inspector's Program.

The DWM has had one to two staff members on the EQ site to monitor all activities during daylight hours since the fire was extinguished and various agencies completed their investigations of the causes of the incident. No nighttime activities have been allowed on the site. EQ is providing 24 hour security guards with hourly checks of the entire facility, documented in writing. Berms have been maintained around the site and all precipitation has been collected in tanks. On 25 October, the Division suspended the portions of EQ's permit that allowed hazardous waste operations at the site, using the state's imminent hazard authority. That suspension remains in effect today. The other parts of the permit that allow cleanup of the site, financial assurance and so forth, remain in place. The DWM has allowed EQ to process and ship non-hazardous waste that was on site at the time of the fire to an off-site location. The waste is being sent to the Upper Piedmont Environmental Landfill in Person County.

The waste residue from the fire has been characterized for purposes of disposal. It has been contained in 32 covered roll-off boxes. Formal approval has been issued for off-site shipment of 25 of the roll-offs to a hazardous waste landfill in Michigan. The hazardous waste in the remaining roll-offs was to have been shipped to a hazardous waste incinerator in Ohio. However, as of the previous day, the off-site shipment has been halted because the DOT weight limits were exceeded on some of the roll-offs. The concrete pad that served as the containment area for the facility where burned wastes were stored

has been pressure washed a number of times with wash water being stored pending analysis and shipment off-site. Final evaluation of the pad is pending final approval of the post-incident site investigation plan. DWM is currently reviewing EQ's post-incident site investigation sampling and analysis plan prior to approving EQ to begin a detailed assessment of the on-site impact of the fire. Once the residue from the fire itself has been removed from the site, there will be further assessment to see if there is remaining contamination of soils that needs remediation. Off-site sampling data is being compiled and analyzed by the Division of Air Quality, the Division of Waste Management, and the Division of Public Health from approximately 35 locations, including air, groundwater, surface water, soil, external surfaces, and interiors of residences, schools and churches. The results of the off-site sampling are expected to be announced on Friday 17 November.

On 24 October, four plaintiffs obtained a protective order in Federal District Court that temporarily halted assessment and remediation activity on the site. DWM worked with the involved parties to have that order vacated by allowing the plaintiffs to take some samples from the site for one day. DWM will be defending the decision to suspend permitted hazardous waste operations at the facility before an Administrative Law Judge. The pre-hearing statements on that matter are due Monday 27 November.

In addition, the formation of the Governor's Hazardous Materials Task Force, co-chaired by Dempsey Benton, Chief Deputy Secretary, DENR, and Doug Hoell, Director of the Division of Emergency Management, Department of Crime Control and Public Safety, was announced on 17 October. The task force has met twice. DWM made a number of recommendations to the taskforce at their meeting the previous day. Some of the areas they recommended enhancing in the Hazardous Waste Regulations are to look at additional financial assurance requirements specifically for immediate response activities and to fund the agencies to do sampling off-site. They have also called for strengthening the requirements for the contingency plan with local fire responders. The current plan is that DWM gets a statement from the applicant stating that the contingency plan has been sent to local authorities such as hospitals, police departments and fire departments. DWM wants to strengthen the requirement so that they receive concurrence as a part of the application for any commercial hazardous waste treatment, storage or disposal facility to assure that local authorities have seen it and concurred that they have the right type of personnel and equipment to respond to an event. They want the concurrence to be renewed on an annual basis.

DWM is also looking at enhancing the public notification and public participation requirements by requiring that letters be sent out to any property owner within a one-quarter mile radius of the facility for any permit action that the agency would be taking. Another recommended enhancement is increasing the security requirements by requiring 24-hour-a-day, 7-day-a-week security by the owner-operator at the facility. They want to use changing land use patterns around commercial hazardous waste treatment, storage and disposal facilities to determine the number of inspections required by the resident inspectors program. They also recommend shortening the permit period for commercial facilities from 10 years to 5 years as well as a number of specific technical requirements to strengthen the containment separation and construction standards at commercial hazardous waste facilities. They are also looking at regulating 10-day transfer sites and requiring a permit for transporters to store waste for ten days. Currently, there can be a great deal of waste on a particular site that is not required to be permitted, and not subject to a number of requirements of treatment, storage and disposal facilities, so they recommend initiating rulemaking in that particular area. These recommendations were gone over in greater detail before the Governor's Hazardous Waste Task Force.

Representative Gibson recognized Ms. Liz Cannon, Chief of the Hazardous Waste Section, DWM, DENR, to present two annual reports: the first on the NC Hazardous Waste Management Plan (see **Exhibit S**) and the other on the Resident Inspectors Program (see **Exhibit T**).

The Hazardous Waste Section is funded by federal funds (70 percent) and fees collected from the regulated universe as well as from state appropriations. It provides for a staff of 56 and a budget of $4.5-5 million. The functions of the program are to permit hazardous waste facilities, conduct inspections of generators of hazardous waste and permittees, to undertake enforcement action against violators, and to oversee the closure and cleanup of the permitted facilities as well as to provide administrative support

functions. The universe is composed of generators (the entities who create the waste), and the treatment, storage and disposal facilities who manage the waste after it is generated. Treatment, storage and disposal facilities are divided into commercial facilities, facilities that are operating businesses, and facilities that used to have land disposal of hazardous waste and are now closed and are being cleaned up. A large quantity generator of hazardous waste is a generator who creates more than 220 pounds per month. Large quantity generators are inspected every other year and more frequently if violations are found. Small quantity generators create between 200 and 220 pounds of hazardous waste per month. Exempt small quantity generators create less than 200 pounds of hazardous waste per month. In addition to the core functions, the Section provides technical and compliance assistance to the regulated community, responds to complaints, manages a financial assurance program for closure and cleanup, assists in emergency response, and maintains a database that tracks and records all their activities.

The Resident Inspector Program is a subset of the overall Hazardous Waste Program. It was established in the early 1990s by the General Assembly to provide closer regulatory oversight of companies that receive and process waste for a fee. The program is self-supporting from fees from the commercial facilities located in North Carolina. For the last fiscal year, the receipts totaled $295,000. It supports two inspectors, one supervisor and one administrative assistant. During the last fiscal year, the 11 facilities in the state received 30,000 tons of hazardous waste. Hazardous waste generation rates rise and fall with the economy. When the economy is booming, generation goes up. When the economy is down, generation rates fall. The largest facility in the state is Clean Harbors in Reidsville. It received 10,560 tons of waste last year. The smallest ones are four safety clean facilities that receive on an average of 300-400 tons per year. EQ is the second largest facility in terms of receipts, receiving 7,345 tons of hazardous waste in 2005-2006.

The number of inspections required in these facilities is determined by a formula set out in regulations. The formula considers the capacity of the facility, the nature of the hazardous waste managed, and the types of treatment. All the activities are given a score and the facility is classified as a Class 1, 2 or 3, with Class 1 being the least risky. Class 1 facilities are subject to two inspections a month, Class 2, 4 inspections a month, and Class 3, 6 inspections a month. Last year, 49 inspections were conducted at EQ. Two compliance orders with penalty were ordered and one notice of violation the previous year, but there were many other minor deviations from the regulations that the inspector corrected immediately while on site. Compliance rates at the facilities tend to be high.

Based on experience, HWS believe there are two root causes of non-compliance at these facilities. One is a change in personnel, when the person on duty on inspection day is not completely familiar with the requirements. The other is a similar matter. When the company has recently changed procedures, deviations from the procedures often will be found. The recent events at EQ and the subsequent investigations, the Governor's Task Force, and the review by the Chemical Safety Board will give the Section more information on how the program can be improved so that events such as occurred at EQ in October will not be repeated.

Representative Gibson asked if the Governor's Task Force will address the situation of assuring that the surrounding cities and counties will have the information they need to respond to a problem at a hazardous waste site. Mr. Matthews replied he expected so, because representatives of cities and counties are represented on the Task Force. He added that all the facilities and the zoning around the facilities have been mapped so local governments and services will know what they need to know to protect the citizens. He said that the key is to increase the interaction between the facilities and the local responders so the local responders are aware of the types of materials at the facilities on a regular basis.

Mr. Givens asked if some of the recommendations of the Governor's Task Force would require legislation. Mr. Matthews replied they would look at each of the recommendations to identify which ones would. The final report to the Governor is due 15 December. Mr. Givens commented there is no hazardous waste disposal capacity in the state. He added he was part of a search 17 years ago to look for a place to site one but no appropriate site was located. Therefore the state is a net exporter of hazardous waste. He commented that if we are successful in excluding out-of-state trash from being

landfilled here, other states might use whatever mechanism they could to keep us from using their hazardous waste disposal sites and we would have a problem.

Representative Harrison asked what happens to the hazardous waste that requires disposal. Mr. Givens replied that a landfill in Alabama gets a lot of it. Mr. Matthews added that a great deal of hazardous waste generated within the state is treated to make it non-hazardous.

Representative Gibson recognized Mr. Todd Bennett, Environmental Engineer, Animal Feeding Operation Unit, Aquifer Protection Section, DWQ, DENR, to give the annual report on permitting and inspecting animal waste management systems (see **Exhibit U** for a copy of his PowerPoint presentation and **Exhibit V** for a copy of the annual report). He noted that in drier years there were fewer violations, probably because the waste is easier to manage with less rain. Inspections by both DWQ and the Division of Soil and Water Conservation (DSWC) consist of looking at the records, the facility, the conditions of the fields, and the conditions of the structures on site. The DWQ is more concerned with enforcement and issue violations; Soil and Water Conservation more with technical assistance. In response to a question from Representative Harrison, Mr. Givens said there was a pilot program in two to four counties for several years in which the Soil and Water Conservation did both inspections. There is a report of the pilot program in the packet (see **Exhibit D-3**).

Representative Hackney asked if any of the 18 discharges to surface water were of great magnitude. Mr. Bennett replied the discharges were in the 1,000 to 10,000 gallon range.

Representative Justice asked if there would be a problem if a farm does not have enough land to spray waste to get ready for impending storms. Mr. Bennett replied that the facilities are required to follow the permit which spells out exactly under what conditions they can apply waste to fields. If the conditions are not suitable for those applications, the farmer is responsible for finding another way to reduce lagoon levels. Farmers can call DWQ for assistance in finding alternative solutions, such as pump and haul. Representative Justice asked for the opportunity for ERC to discuss an early adoption program proposal to protect the health of the people who work in the facilities as well as the health of the livestock. She cited an article from the Associated Press on 12 October that reported the recent outbreak of e-coli from contaminated spinach was an example of the potential for devastating effects of failing to control livestock waste. Representative Gibson conferred with Senator Albertson who agreed that it should be calendared at later meeting.

Senator Albertson asked for the number of gallons of discharges into surface waters from hog lagoons and for numbers of gallons of discharges from municipalities. Mr. Bennett said he would provide that information.

Representative Gibson recognized Mr. Tom Belnick, Environmental Specialist, Point Source Branch, Surface Water Protection Section, DWQ, DENR, to give the annual report on compliance with and enforcement of water quality laws for facilities that discharge into surface waters (see **Exhibit W** for a copy of his PowerPoint presentation and **Exhibit X** for a copy of the annual report). He focused on two programs: the Non-Polluting Discharge Enforcement System (NPDES) and some of the results for the sewer collection program to reduce sanitary sewer overflows (SSOs). The compliance figures of almost 90 percent for the NPDES are impressive, because one non-compliant report in a year means the facility is reported as out of compliance for the entire year. The purpose of the permits is to encourage the facilities to become more proactive to spills. It requires more inspections of their sewer lines, the development of better operations maintenance plans, and more pro-activity in regard to repairs and capital improvements requirements over the next ten years. Rainfall also has an effect on overflows. There are still sewer blockages due to fats, oils and greases in sewer lines. Mr. Belnick said he believes there will be an increase in civil penalties assessed in the future for major overflows that reach surface waters.

Representative Justice asked if there is any way to force municipalities to use the moneys collected from sewer enterprise funds for maintenance of the sewer lines instead of putting the proceeds into their general funds.

Senator Albertson asked how much waste needs to be spilled before the event is labeled a discharge. Mr. Belnick replied a spill to land of over 1,000 gallons must be reported. Any spill that reaches surface waters must be reported.

Representative Gibson recognized Mr. William Holman, Chairman of the State Water Infrastructure Commission and Executive Director, Clean Water Management Trust Fund (CWMTF), to give the annual report of the State Water Infrastructure Commission on its activities and findings, including recommendations of the Commission that require action by the General Assembly (see **Exhibit Y** for a copy of the recommendations to the Governor and **Exhibit Z** for the report of the Infrastructure Commission to the Governor). Mr. Holman commented on the good work done through the CWMTF and thanked the General Assembly for the investments made by the legislature through its lifetime.

Mr. Holman said the General Assembly created the State Water Infrastructure Commission in 2005 as part of a rewrite of the state's water financing laws. There are 13 people on the Commission, representatives from DENR, Commerce, Association of County Commissioners, League of Municipalities, engineers, and the General Assembly. The state has a lot of aging infrastructure, a lot of growth, and it is difficult to keep up with the need for infrastructure. The federal government's role in financing drinking water and waste water infrastructure is declining. There are still North Carolinians who lack indoor plumbing, failing or no septic tanks, and unsafe drinking water. He next presented the recommendations from the Commission. Local governments and local rate payers will share most of the burden for water, waste water and stormwater. For a variety of reasons, the Commission believes the state should continue to play an important role in helping local communities address the infrastructure needs, particularly in the Tier 1 counties.

Senator Kinnaird commended and thanked Mr. Holman for his work with the Commission and the Clean Water Management Trust Fund, as he has taken a position with Duke University beginning in January of 2007.

Representative Gibson recognized Mr. Manley Wilder, Director, Division of Soil and Water Conservation (DSWC), DENR, to report on the evaluation, training and qualification requirements for approval as an animal waste management systems technical specialist (see **Exhibit AA** for a copy of his PowerPoint presentation and **Exhibit BB** for a copy of the report). He described conservation partnerships as federal, state, local and private. At the federal level is the Natural Resources Conservation Service in the U. S. Department of Agriculture; at the state level it is DSWC; at the local level it is the Soil and Water Conservation District employees; and at the private level it involves a variety of people such as technical service providers.

In regard to the recommendation to consider legislation, Mr. Wilder requested the General Assembly wait until he has heard back from the PE Board to see what they will recommend as a result of DSWC's request for a review of the determination on specific practices.

Mr. Givens told Commission members he handed out a memorandum from Mr. Richard Phillips, PE, concerning "District Technician Job Approval Authority" for their information. Mr. Phillips asked to be on the agenda, and Mr. Givens said the item may be on the January 2007 agenda. Senator Kinnaird asked that the item be placed at the beginning of the January agenda.

Representative Gibson recognized and welcomed two new members of the House, Representative-elect Braxton from Lenoir County and Representative-elect Brissom from Bladen County.

The meeting adjourned at 3:40 p.m.

Representative Pryor Gibson, Co-Chair, Presiding

Senator Charlie Albertson, Co-Chair

Dot Waugaman, Commission Assistant

Senator Daniel Clodfelter, Co-Chair

Notice of Planning Meeting
Schedule of Future Meetings
Meetings of Interested Parties (605 Working Groups)
Additional Information

COMMISSION MEETING:

The Environmental Review Commission (Commission) will meet at 9:30 a.m. Wednesday 15 November in Room 1228 of the Legislative Building in Raleigh.

At this meeting, the Commission will begin or continue studies for which the Commission is responsible, hear reports from State agencies, discuss topics to be considered at future meetings, and attend to other matters. Listed below are potential agenda topics for this meeting and for future meetings. More specific information regarding the agenda for the 15 November meeting of the Commission will be developed at the staff planning meeting discussed below.

STUDIES

1) Issues related to solid waste management (S.L. 2006-244, Sec.4)

2) Issues related to the nutrient offset payment program with regard to the costs associated with providing nutrient controls that are adequate to offset point source and nonpoint source discharges of nitrogen; whether nutrient offset payments should be authorized for additional nutrients, including phosphorus; and whether the nutrient offset program should be expanded to other areas of the State (S.L. 2006-215, Sec. 2)

3) Issues related to abandoned manufactured (mobile) homes with regard to impacts on public health and safety, the environment, and the State's scenic resources (S.L. 2006-248, Sec. 8.3)

4) The merger of the organization and functions of the Ecosystem Enhancement Program and the Clean Water Management Trust Fund with the Joint Legislative Transportation Oversight Committee (S.L. 2006-248, Sec. 16)

REPORTS *(Report due dates are indicated in parentheses)*

General/Miscellaneous:

5) Annual report on the evaluation and adjustment of the boundaries of the area served by each Metropolitan Planning Organization (G.S. 136-202(d)) *(1 November)*

Air Quality:

6) Annual report on the cost of the Title V Program (G.S. 143-215.3A(c)) *(1 November)*

7) Annual report on the desirability of requiring and the feasibility of obtaining reductions in emissions of oxides of nitrogen (NOx) and sulfur dioxide (SO2) beyond those required by the Clean Smokestacks Act (S.L. 2002-4, Sec. 11) *(1 September)*

8) Annual report on development and implementation of a plan to reduce vehicle miles traveled by State employees and vehicle emissions resulting from job-related travel, including commuting to and from work (G.S. 143-215.107C(d)) *(1 October)*

9) Annual report on development and implementation of a plan to reduce vehicle miles traveled by private sector employees and vehicle emissions resulting from job-related travel, including commuting to and from work (G.S. 143-215.107C(e)) *(1 October)*

Coastal Management:

10) Annual report on the progress in developing and implementing the Coastal Habitat Protection Plans and reports on the completion or substantial revision of each draft Coastal Habitat Protection Plan (G.S. 143B-279.8(e) and G.S. 143B-279.8(f)) *(1 September)*

Hazardous Waste Management:

11) Annual report on the Inactive Hazardous Sites Program (G.S. 130A-310.10) *(1 October)*

12) Annual report on implementation of the Resident Inspectors Program at commercial hazardous waste facilities (G.S. 130A-295.02(m)) *(1 October)*

13) Annual report on the North Carolina Hazardous Waste Management Plan (G.S. 130A-294(i)) *(1 October)*

14) Annual report on the Effectiveness of the Brownfields Property Reuse Act (G.S. 130A-310.40) *(1 October)*

Land Resources:

15) Annual report on implementation of the Sedimentation Pollution Control Act of 1973 (G.S. 113A-67) *(1 October)*

Water Quality:

16) Report on the evaluation of the training and qualification requirements for approval as an animal waste management systems technical specialist (S.L. 2006-38, Sec. 2) *(15 November 2006)*

17) Annual report on permitting and inspecting animal waste management systems/Animal Waste Compliance Report (G.S. 143-215.10M) *(1 October)*

18) Semiannual report on the pilot program for inspection of animal waste management systems including a comparison of the costs of conducting operations reviews and inspections under the pilot program with the costs of conducting operations and inspections under G.S. 143-215.10D and G.S. 143-215.10F (S.L. 2003-340, Sec. 6.2) *(15 October)*

19) Annual report on the compliance/enforcement of water quality laws for facilities that discharge into surface waters (G.S. 143-215.9A) *(1 October)*

20) Annual report on the Wastewater Discharge Elimination Program (S.L. 2001-452, Sec. 2.9) *(15 October)*

21) Annual report on Basinwide Water Quality Management Plans (G.S. 143-215.8B) *(1 October)*

22) Annual report on the Dry-Cleaning Solvent Cleanup Program (G.S. 143-215.104U) *(1 October)*

23) Annual report on the implementation of stormwater rules and programs (G.S. 143-214.7(e)) *(1 October)*

24) Commercial Leaking Petroleum Underground Storage Tanks Cleanup Fund – Follow up on the USEPA, Region 4 letter sent to Secretary Ross regarding concerns that the State Fund is not adequately capitalized to meet current and future liabilities.

Water Quantity:

25) Annual report by the State Water Infrastructure Commission on its activities and findings, includes any recommendations of the Commission that require action by the General Assembly to implement (G.S. 159G-67) *(1 November)*

PLANNING MEETING:

To facilitate development of the agenda for the 15 November meeting of the Commission, to begin planning for subsequent meetings of the Commission, and to receive input from interested persons regarding the work of the Commission, the Commission Counsel will hold an informal planning meeting at **10:00 a.m. on Friday 3 November 2006 in Room 605 of the Legislative Office Building**. Persons who wish to participate in the development of the agenda for meetings of the Commission, or who are interested in any matter before the Commission, are invited to attend.

SCHEDULE OF FUTURE MEETINGS:

Below is a schedule of meetings of the Environmental Review Commission for November 2006 through January 2007. This schedule is tentative and subject to adjustment. For planning purposes, however, please reserve these dates. Please note the following:

1. Commission meetings normally begin at 9:30 a.m., include a lunch break, and run until mid-afternoon. Please plan on meeting from 9:30 a.m. until at least 3:30 p.m. The Commission will meet in the Legislative Building (LB) or the Legislative Office Building (LOB) as indicated.

2. To facilitate development of the agenda for meetings of the Commission and to receive input from interested persons regarding the future work of the Commission, the Commission Counsel holds informal planning meetings for staff and interested parties. Commission members are not expected to attend these meetings. Unless otherwise announced, public staff planning meetings will be held at 10:00 a.m. in Room 605 LOB.

3. The 2007 Regular Session is scheduled to begin at 12:00 noon on Wednesday 24 January 2007. The Commission may meet shortly after the beginning of the session to complete work and to consider any legislative proposals and recommendations.

Commission Meeting	Location	Staff Planning Meeting (605 LOB)
Wednesday 15 November 2006	1228 LB	Friday 3 November 2006
Wednesday 13 December 2006	1228 LB	Friday 1 December 2006
Wednesday 17 January 2007	544 LOB	Monday 8 January 2007
Tuesday 23 January 2007	1228 LB	Monday 8 January 2007

MEETINGS OF INTERESTED PARTIES (605 WORKING GROUPS):

The Commission Counsel will hold meetings of interested parties on specific topics as indicated below:

Nutrient Offset Payment Working Group
2:00 p.m. Monday 6 November 2006 – 605 Legislative Office Building

ADDITIONAL INFORMATION:

If you have questions related to the Commission, you may contact the Commission Counsel or other Commission staff at (919) 733-2578.

AGENDA
9:30 a.m. Wednesday 15 November 2006
Room 1228 Legislative Building
Raleigh, North Carolina

1. Call to order
   Representative Pryor A. Gibson, Presiding

2. Introductory remarks by Cochairs (*5 minutes*)
   Representative Pryor A. Gibson
   Senator Charles W. Albertson
   Senator Daniel G. Clodfelter

3. Report to the Commission and explanation of agenda items (*10 minutes*)
   George F. Givens, Commission Counsel

4. Study of the merger of the organization and functions of the Ecosystem Enhancement Program with the Clean Water Management Trust Fund (Part XVI, Section 16 of S.L. 2006-248) (*10 minutes*)
   George F. Givens, Commission Counsel

   Lisa Hollowell, Senior Fiscal Analyst
   Fiscal Research Division

5. Report on recent action by the Environmental Management Commission on the Clean Air Mercury Rule (*10 minutes*)
   Robin W. Smith, Assistant Secretary for Environment
   Department of Environment and Natural Resources (DENR)

6. Continuation of the discussion of issues related to solid waste management (S.L. 2006-244, Sec.4) (*1 hour and 50 minutes*)

Survey of the Solid Waste Management Regulations of Other States and report on Issues Related to the Processing of Solid Waste Management Permits by the Division of Solid Waste (*30 minutes*)

Paul S. Crissman, Head
Planning and Program Management Branch, Solid Waste Section, Division of Waste Management (DWM), DENR

Ed F. Mussler, Branch Head
Solid Waste Permitting Branch, Solid Waste Section, DWM, DENR

Discussion of the Kentucky solid waste tipping fee surcharge and solid waste management programs (*10 minutes*)

Sara D. Evans, Manager
Recycling and Local Assistance Branch, Division of Waste Management, Department for Environmental Protection, Environmental and Public Protection Cabinet, Commonwealth of Kentucky

Discussion of legal limits and policy options (*20 minutes*)

Richard B. Whisnant, Associate Professor of Public Law and Government
UNC School of Government

Local government perspectives (*10 minutes*)

Paul A. Meyer, Assistant General Counsel
North Carolina Association of County Commissioners

Private solid waste management industry perspectives (*20 minutes*)

Edward Repa, Director
Environmental Program, National Solid Wastes Management Association

Environmental advocacy community perspectives (*20 minutes*)

Jim H. Stephenson, Program Analyst
North Carolina Coastal Federation

John D. Runkle, General Counsel
Conservation Council of North Carolina

Joyce F. Hartman, Realtor
Camden County

7. Air quality: reduction in vehicle miles traveled (*10 minutes*)

Annual report on development and implementation of a plan to reduce vehicle miles traveled by State employees and vehicle emissions resulting from job-related travel, including commuting to and from work (G.S. 143-215.107C(d))

Annual report on development and implementation of a plan to reduce vehicle miles traveled by private sector employees and vehicle emissions resulting from job-related travel, including commuting to and from work (G.S. 143-215.107C(e))

Miriam S. Perry, Director
Public Transportation Division, Department of Transportation

***LUNCH** – Estimated for noon to 1:00 p.m.*

8. Hazardous Waste Management (*30 minutes*)

Update on the investigation of the fire at the Environmental Quality Industrial Services of North Carolina, Inc, hazardous waste facility located in Apex, North Carolina

Annual report on implementation of the Resident Inspectors Program at commercial hazardous waste facilities (G.S. 130A-295.02(m))

Annual report on the North Carolina Hazardous Waste Management Plan (G.S. 130A-294(i))

Dexter R. Matthews, Director
DWM, DENR

Elizabeth W. Cannon, Chief
Hazardous Waste Section, DWM, DENR

9. Annual report on permitting and inspecting animal waste management systems (Animal Waste Compliance Report) (G.S. 143-215.10M) (*10 minutes*)

Todd A. Bennett, Environmental Engineer
Animal Feeding Operation Unit, Aquifer Protection Section, Division of Water Quality (DWQ), DENR

10. Annual report on compliance with and enforcement of water quality laws for facilities that discharge into surface waters (G.S. 143-215.9A) (*10 minutes*)

Tom J. Belnick, Environmental Specialist
Point Source Branch, Surface Water Protection Section, DWQ, DENR

11. Annual report by the State Water Infrastructure Commission on its activities and findings, including any recommendations of the Commission that require action by the General Assembly to implement (G.S. 159G-67) (*15 minutes*)

William E. Holman, Chairman
State Water Infrastructure Commission and
Executive Director, Clean Water Management Trust Fund

12. Report on the evaluation of the training and qualification requirements for approval as an animal waste management systems technical specialist (S.L. 2006-38, Sec. 2) (*15 minutes*)

Manley S. Wilder, Director
Division of Soil and Water Conservation, DENR

13. Commission discussion and announcements (*10 minutes*)

14. Adjourn (*Estimated for 2:30 p.m.*)

SCHEDULE OF FUTURE MEETINGS:

Below is a schedule of meetings of the Commission for November 2006 through January 2007. This schedule is tentative and subject to adjustment.

To facilitate development of the agenda for meetings of the Commission and to receive input from interested persons regarding the future work of the Commission, the Commission Counsel holds informal planning meetings for staff and interested parties. The schedule of these public Commission staff planning meetings is also set out below.

9:30 a.m. Wednesday 13 December 2006
Location: 1228 LB
Staff Planning Meeting: 10:00 a.m. Friday 1 December 2006 – 605 LOB

9:30 a.m. Wednesday 17 January 2007
Location: 544 LOB
Staff Planning Meeting: 10:00 a.m. Monday 8 January 2007 – 605 LOB

9:30 a.m. Tuesday 23 January 2007
Location: 1228 LB
Staff Planning Meeting: 10:00 a.m. Monday 8 January 2007 – 605 LOB

OTHER MEETINGS:

The Commission Counsel will hold meetings of interested parties on specific topics as indicated below:

Nutrient Offset Payment Working Group (S.L. 2006-215 (SB 1862), as amended by S.L. 2006-218 (SB 927))
10:00 a.m. Wednesday 22 November 2006 – 605 Legislative Office Building

MEMORANDUM

To: Members of the Environmental Review Commission
From: Jennifer Mundt, Commission Analyst
Re: Reports to the Commission

The following reports have been submitted by the Department of Environment and Natural Resources (DENR) to the Environmental Review Commission since the last reports distribution on 9 October 2006 are designated as read only reports. Copies of the reports are attached to this memorandum:

1. Annual Report on the Progress in Developing and Implementing the Coastal Habitat Protection Plans. 1 September 2006. Statutory Authority: G.S. 143B-279.8(e) and G.S. 143B-279.8(f).

2. Annual Report on the Inactive Hazardous Sites Program. 1 October 2006. Statutory Authority: G.S. 130A-310.10.

3. Semi-Annual Report on the Pilot Program for Inspection of Animal Waste Management Systems. 15 October 2006. Authority: S.L. 2003-340, Sec. 6.2.

4. Annual Basinwide Water Quality Management Plans. 1 October 2006. Statutory Authority: G.S. 143-215.8B.

5. Annual Report on the Dry-Cleaning Solvent Clean-Up Program. 1 October 2006. Statutory Authority: G.S. 143-215.104U.

6. Annual Report on the Implementation of Stormwater Rules and Programs. 1 October 2006. Statutory Authority: G.S. 143-214.7(e).

The following reports have been submitted by the indicated agency to the Environmental Review Commission and are distributed in connection with Agenda Items as noted below:

1. Annual report by the Department of Transportation on the development and implementation of a plan to reduce vehicle miles traveled by State employees and vehicle emissions resulting from job-related travel, including commuting to and from work. The annual report on

development and implementation of a plan to reduce vehicle miles traveled by private sector employees and vehicle emissions resulting from job-related travel, including commuting to and from work. 1 October 2006. Statutory Authority: G.S. 143.215.107C(d) and G.S. 143.215.107C(e). ***Agenda Item #7***

2. Annual Report by DENR on the North Carolina Hazardous Waste Management Plan. 1 October 2006. Statutory Authority: G.S. 130A-294(i). ***Agenda Item #8***

3. Annual Report by DENR on the Resident Inspectors Program at Commercial Hazardous Waste Facilities. 1 October 2006. Statutory Authority: G.S. 130A-295.02(m). ***Agenda Item #8***

4. Annual Report by DENR on Permitting and Inspecting Animal Waste Management Systems (Animal Waste Compliance Report). 1 October 2006. Statutory Authority: G.S. 143.215.10M. ***Agenda Item #9***

5. Annual Report by DENR on compliance with enforcement of water quality laws for facilities that discharge into surface waters. 1 October 2006. Statutory Authority: G.S. 143-215.9A. ***Agenda Item #10***

6. Annual Report by the State Water Infrastructure Commission on its Activities and Findings. 1 November 2006. Statutory Authority: G.S. 159G-67. ***Agenda Item #11***

7. Report by DENR on the evaluation of the training and qualification requirements for approval as an animal waste management systems technician. 15 November 2006. Authority: S.L. 2006-38, Sec. 2. ***Agenda item #12***

Please contact George Givens, Jeff Hudson, Jennifer McGinnis, or Jennifer Mundt at (919) 733-2578 if you have any questions or comments.

COASTAL HABITAT PROTECTION PLAN PROGRAM

2005 - 2006

ANNUAL REPORT

TO THE

JOINT LEGISLATIVE COMMISSION ON SEAFOOD AND AQUACULTURE

AND

ENVIRONMENTAL REVIEW COMMISSION

OF THE

NORTH CAROLINA GENERAL ASSEMBLY

FROM

NORTH CAROLINA MARINE FISHERIES COMMISSION,
NORTH CAROLINA COASTAL RESOURCES COMMISSION, AND
NORTH CAROLINA ENVIRONMENTAL MANAGEMENT COMMISSION
AND
NORTH CAROLINA DEPARTMENT OF ENVIRONMENT AND NATURAL RESOURCES

September 2006

Highlights

September 2005 – August 2006 Accomplishments

- The Department of Environment and Natural Resources (DENR) allocated a position with primary responsibility for coordinating implementation of the Coastal Habitat Protection Plan (CHPP). The position of Eastern Region Field Officer was filled in January of 2006.
- The Intercommission Review Committee (IRC) officially changed its name in December of 2005 to the CHPP Steering Committee. The primary function of this committee is now to facilitate communication among the commissions, staff of the three primary divisions charged with implementing the CHPP, and DENR.
- Elizabeth City State University continued its federally funded work to support the CHPP Program. Mapping of sea grass in the Albemarle-Pamlico system is the primary task for this work.
- The Marine Fisheries Commission and the Division of Marine Fisheries (MFC/DMF):
  - Enhanced three existing oyster reef sanctuaries, one with mitigation money from NC DOT and established two new oyster reef sanctuaries – the Bluff Point and Neuse River sanctuaries
  - Continued to develop guidelines for identification, delineation, and management of Strategic Habitat Areas
  - Closed 36,940 acres to the mechanical harvest of shellfish in order to further protect shallow water fish habitat
  - Established an agreement under which Marine Fisheries aircraft regularly take Coastal Management personnel aloft to survey the status of coastal development projects,
  - Closed over 4,000 acres in Core Sound to mechanical shellfishing to protect SAV habitat
  - Requested that the Environmental Management Commission begin actions to control effects of coastal stormwater pollution in shellfish waters
- The Coastal Resources Commission and the Division of Coastal Management (CRC/DCM):
  - Developed and received public comment on proposed rules that define beach nourishment sediment compatibility utilizing guidelines developed and recommended by the Commission's Science Panel on Coastal Hazards
  - Enhanced habitat education through the "Estuary Live" web-based learning program and added new displays at public meetings
  - Obtained a new partial set of coastal aerial photographs to aid in permit management and mapping of coastal fish habitats
- The Environmental Management Commission and the Division of Water Quality (EMC/DWQ):
  - Conducted on-site inspections for all coastal state stormwater permits up for renewal in 2005-2006
  - Included special provisions in the Phase II Stormwater Rules that will provide an enhanced level of protection for shellfishing waters in Phase II communities
  - Completed a survey of all non Phase II municipally-owned stormwater outfalls to salt waters
  - Procured, via an EPA Grant, 3 additional staff members that will be tasked to perform technical assistance and compliance inspections of wetlands certifications and stormwater permits in areas covered under the CHPP.
- Public outreach efforts continued with talks on the CHPP at various local government, state and federal agency, and interest group meetings, as well as an enhanced web site at (http://www.ncdmf.net/habitat/index.html) that includes the following:
  - North Carolina Coastal Habitat Protection Plan
  - CHPP Implementation Plan for all three regulatory Commissions, their administrative agencies (Divisions of Water Quality, Coastal Management, and Marine Fisheries), and DENR
  - Report on research needs identified in the CHPP

- Hosting of the web site was moved from Marine Fisheries to DENR in the Office of Conservation and Community Affairs
- The University of North Carolina Sea Grant College Program, under a grant from the Division of Coastal Management, managed a multi-agency project to address management issues associated with siting and operation of multi-slip docking facilities in coastal waters
- There were productive quarterly meetings among the state and federal permitting and review agencies that manage development in the coastal area at the Washington and Wilmington DENR offices
- The General Assembly funded several CHPP implementation initiatives:
  - Three positions and operations for DMF oyster sanctuaries and shell recycling
  - Five positions and operations for DMF shell bottom and SAV mapping
  - Four positions and operations for DCM permit compliance review
  - Three positions and operations for DEH shellfish sanitation shoreline surveys
  - Funding to begin development of a coastal beach and inlet management plan
  - Funding to begin removal/retrofitting of municipal stormwater outfalls to coastal waters
  - Funding for continuation of cooperative university-DOT water quality monitoring in Pamlico Sound through the FERRYMON program

September 2006 – August 2007 Planned Actions

- The Marine Fisheries Commission and Division of Marine Fisheries will
  - Expand the oyster sanctuary program in Pamlico Sound, including biological monitoring of planted sites
  - Expand shell bottom mapping to the lower Cape Fear River and Brunswick County
  - Participate with other agencies in coast wide mapping of submerged aquatic vegetation (SAV)
  - Adopt and begin using the Strategic Habitat Area identification/selection process
- The Coastal Resources Commission and Division of Coastal Management will
  - Begin development of, in cooperation with the Division of Water Resources and other agencies, a coastal beach and inlet management plan
  - Enhance compliance monitoring of permitted projects in the coastal area
- The Environmental Management Commission and Division of Water Quality will:
  - Develop improved compliance and renewal strategies for the coastal stormwater permitting program that will include education and outreach, on-site permit compliance evaluations, and standard permit renewal procedures
  - Reduce negative effects of coastal stormwater pollution through implementation of Phase II stormwater rules (as revised by the North Carolina General Assembly) and other initiatives
  - Assess cumulative but unmitigated wetland and stream losses in the Cape Fear and White Oak River basins, and based on analysis, determine if additional controls are needed
  - Review existing coastal stormwater programs and development trends to determine if additional coastal areas need to be considered for designation by the EMC as EPA Phase II Stormwater areas or if rulemaking action needs to be initiated to revise the existing State and Shellfishing Waters Stormwater Rules
  - Complete the update of the Division of Water Quality's Stormwater Best Management Practices Manual
- The Department of Environment and Natural Resources through other divisions will
  - Enhance shoreline sanitary surveys to identify specific pollution sources (DEH)
  - Utilize new funding to begin development of a coastal beach and inlet management plan (DCM and DWR)
  - The Albemarle-Pamlico National Estuary Program will provide funding for cooperative SAV mapping in the coastal area

Introduction

Fisheries Reform Act

The North Carolina General Assembly established the Coastal Habitat Protection Plan program within the North Carolina Department of Environment and Natural Resources (DENR) with passage of the Fisheries Reform Act of 1997. The Act (General Statute or G.S. 143B-279.8) requires preparation of Coastal Habitat Protection Plans (CHPPs) for critical fisheries habitats in the coastal area. The Act states "[t]he goal of the Plans shall be the long-term enhancement of coastal fisheries associated with each coastal habitat." Within DENR, the Divisions of Marine Fisheries, Water Quality, and Coastal Management are designated as the lead agencies for implementing the CHPP program. Many other DENR agencies also participate in CHPP work. By law the CHPP includes:

1. A description of fisheries habitats and their biological systems;
2. An evaluation of the functions, fisheries' values, status, and trends within the habitats;
3. Identification of existing and potential threats to the habitats and impacts of those threats on coastal fishing; and
4. Recommended actions to protect and restore the habitats.

Role of the Commissions

The Coastal Resources, Environmental Management, and Marine Fisheries commissions adopted the CHPP in December of 2004. Now that the CHPP has been adopted, along with implementation plans which were adopted by each commission in June and July 2005 (see Implementing the North Carolina Coastal Habitat Protection Plan 2005), rule making and policy actions taken by all three commissions are to comply "to the maximum extent practicable" with the plan.

The three commissions are to report by 1 September each year to the Joint Legislative Commission on Seafood and Aquaculture and the Environmental Review Commission on their progress in implementing the Coastal Habitat Protection Plan. This document reports on the progress made, by the respective commissions, in implementing the CHPP during year beginning in September 2005 and ending in August 2006.

Recent Progress

North Carolina Coastal Habitat Protection Plan (CHPP)

The CHPP focuses on six basic fish habitat: water column, shell bottom, submerged aquatic vegetation (SAV), wetlands, soft bottoms, and ocean hard bottom. A chapter is devoted to each type. Each of the habitat chapters is organized to provide the information specified in the Act:

- Description and distribution of the habitat,
- Ecological role and function,
- Status and trends,
- Threats, and
- Recommended management actions to deal with the threats.

The CHPP describes the functions of habitats necessary for production of economically important fish stocks and the links between those habitats and various life history stages of the fish. The CHPP also discusses the various types of threats to the habitats upon which productive coastal fisheries depend.

Moreover, the plan summarizes the institutional structures for management of fisheries habitat, adjacent lands, water quality, and fisheries in eastern North Carolina. Finally, the plan includes 19 management recommendations for the Coastal Resources, Environmental Management, and Marine Fisheries Commissions, DENR (primarily the divisions of Water Quality, Coastal Management, and Marine Fisheries), and others to implement in order to address the identified threats.

Attachment 1 lists the current members of the CHPP Steering Committee.

Administration, Products, and Public Outreach

- Administrative Activities

After the CHPP was formally adopted in December of 2004, the commissions, their administrative divisions, and DENR also developed and adopted implementation plans during the summer of 2005. These implementation plans detail more than 100 specific steps they would take during the 2005/06 – 2006/07 fiscal years to implement the CHPP recommendations. The draft and approved implementation plans were placed on the CHPP web site to facilitate public review.

The CHPP also identified more than 90 research needs. The CHPP Team summarized those needs in a report placed on the CHPP web site and distributed to the academic, and state and federal agency research community. These research needs continue to be a vital component of the CHPP and its implementation.

The CHPP Steering Committee, comprised of two members each from the Environmental Management, Coastal Resources, and Marine Fisheries commissions, continues to be very active role in the CHPP implementation process. Members of the Steering Committee meet quarterly with senior DENR officials and technical staff from DENR divisions and the Wildlife Resources Commission (CHPP Team) to discuss CHPP related topics and exchange information regarding CHPP implementation activities of the respective commissions and divisions.

The DENR assigned its Eastern Region Field Officer as the coordinator for CHPP implementation. This person is strategically housed in the DENR Office of Conservation and Community Affairs, which also include the Albemarle-Pamlico National Estuary Program (APNEP) and the One North Carolina Naturally program, both of which focus heavily on improved management of important habitats, including the coastal area.

The CHPP Coordinator and the CHPP Team members participate in relevant meetings and give numerous CHPP presentations at various gatherings concerning coastal issues: DENR and its agencies, the Commissions, Coastal Resources Advisory Council, North Carolina Sea Grant Program, APNEP, Outer Banks Association of Realtors, The Nature Conservancy, the Coastal Caucus, the North Carolina Coastal Federation, local governments, and several local civic clubs and groups with environmental concerns.

- Products

The CHPP program published, in the fall of 2005, the booklet *Implementing the North Carolina Coastal Habitat Protection Plan 2005* to provide an easy-to-understand version of the CHPP Implementation Plan. In the summer of 2006, DENR released a series of three posters focused on the theme "Home is where the habitat is … ." The posters feature SAV and shell bottom habitats, and habitat use by fish.

- Public Outreach

The DCM scheduled its Fall 2005 *Estuary Live* program around the CHPP and habitat functions. Unfortunately, Hurricane Ophelia caused cancellation of the program. The DCM presented the live, interactive program in May 2006 to a school audience of thousands of students in North Carolina and elsewhere.

The CHPP poster was updated and used at several meetings concerned with coastal habitat, such as the three North Carolina Oyster Summit programs in March 2006. CHPP Team members gave talks at meetings of the NC Sedimentation Control Commission; the boards of directors of the Clean Water Management Trust Fund, the Natural Heritage Trust Fund, and the Parks and Recreation Trust Fund; and the annual meeting of the NC Beach, Inlet, and Waterway Association in November 2005.

Specific Implementation of the CHPP Implementation Plan

Numerous specific actions have been accomplished or are underway. All three commissions and their DENR agencies are active in using the CHPP and its recommendations as guidance in their regulatory and operational programs. Attachment 2 lists the overall CHPP Implementation Plan, and activities and accomplishments for each of the three Commissions, their administrative divisions, and DENR relative to that plan.

Other Accomplishments

With assistance from the divisions of Coastal Management and Marine Fisheries, as well as the Albemarle-Pamlico National Estuary Program, Elizabeth City State University (ECSU) continued to operate a remote sensing program and laboratory. Much of the justification for the grant was based on the need to obtain and analyze remotely sensed data (including satellite imagery and aerial photography) to aid in preparation of the CHPP. Under this program, ECSU staff is mapping sea grass beds in northeastern North Carolina, including Currituck Sound and Back Bay, Kitty Hawk Bay, and portions of Albemarle Sound.

ATTACHMENT 2.

NORTH CAROLINA COASTAL HABITAT PROTECTION PLAN GOALS AND IMPLEMENTATION RESULTS

North Carolina has a number of programs in place to manage coastal fisheries and the natural resources that support them. The Coastal Habitat Protection Plan (CHPP) has identified gaps in the protection provided for important fish habitats under these programs, and also notes that these habitats would benefit from stronger enforcement of existing rules and better coordination among agencies. The focus of the CHPP, per the Fisheries Reform Act of 1997, is on activities regulated by the Marine Fisheries, Coastal Resources and Environmental Management Commissions. In 2005, each commission and the Department of Environment and Natural Resources (DENR) adopted plans to implement the recommendations found in the CHPP, with a focus on actions that could be taken based on existing resources and within the 2005-2007 budget cycle. Some actions are completed. Some are underway, and most will be completed before the update of this plan in 2010. There is also an understanding among agencies that all recommendations and their associated actions will be supported regardless of lead agency. Listed in this attachment are some of the completed recommendations as well as those which will be completed within the year.

Department of Environment and Natural Resources

DENR is the lead stewardship agency for the preservation and protection of North Carolina' outstanding natural resources. The organization, which has offices from the mountains to the coast, administers regulatory programs designed to protect air quality, water quality, and the public's health. Through its natural resource divisions, DENR works to protect fish, wildlife and wilderness areas. The DENR implementation plan focuses on coordination among the Commissions and the Department, as well as ensuring that all DENR Divisions are taking actions consistent with the goals and recommendations of the CHPP.

Marine Fisheries Commission and Division of Marine Fisheries

The Marine Fisheries Commission (MFC) and Division of Marine Fisheries (DMF) manage the commercial and recreational fisheries in North Carolina's estuarine and ocean waters. These waters, including their specific physical habitats (water column, wetlands, sea grasses, soft and hard bottoms, and shell bottoms), produce the finfish, shrimp, crabs, oysters, and other economically important species sought by fishermen, as well as the forage base that supports them. The Division implements the Commission's rules and Department initiatives. The Division's mission is to ensure sustainable marine and estuarine fisheries for the benefit of the people of North Carolina. Division staff drafted the CHPP, and they will staff many of the groups working on implementation actions. Staff in DMF district offices will also utilize CHPP information to review potential impacts of coastal development projects.

Environmental Management Commission and Division of Water Quality

The Environmental Management Commission (EMC) is responsible for adopting rules for the protection, preservation and enhancement of the State's air and water resources. The Commission oversees and adopts rules for several divisions of DENR, including the Divisions of Air Quality, Water Resources, and Water Quality. The goal of the Division of Water Quality (DWQ) is to maintain or restore and improve the aquatic environment and to ensure compliance with state and federal water quality

standards. In coordination with the CRC and MFC, and their respective staffs, the EMC and DWQ have developed specific actions to begin implementation of the CHPP recommendations.

Coastal Resources Commission and Division of Coastal Management

The Coastal Resources Commission (CRC) establishes policies for North Carolina's Coastal Management Program and adopts implementing rules for both the N.C. Coastal Area Management Act (CAMA) and the N.C. Dredge and Fill Law. The commission designates areas of environmental concern, adopts rules and policies for coastal development within those areas, and certifies local land-use plans. The Division of Coastal Management (DCM) serves as staff to the CRC and works to protect, conserve, and manage North Carolina's coastal resources through an integrated program of planning, permitting, education and research. With jurisdictional authority at the interface of many of the habitats identified in the CHPP, the CRC and DCM take actions to compliment those of the MFC/DMF and EMC/DWQ.

GOAL 1

IMPROVE EFFECTIVENESS OF EXISTING RULES AND PROGRAMS PROTECTING COASTAL FISH HABITATS

Division of Coastal Management

(1.1) Ongoing - DCM signed a MOA with DMF for 2006 to provide a plane and pilot to conduct aerial enforcement flights. Several Dredge & Fill violations were detected during the routine surveillance flights, and DCM followed-up with enforcement actions. The contract with the DMF Marine Patrol has been successful and efficient.

(1.1) New – CAMA Civil Penalties. House Bill 1523 was signed into law by Governor Easley on August 10, 2006 to amend G.S. 113A-126(d) raising the civil penalty for a minor CAMA development violation from $250 to $1,000 and the penalty for a major development violation from $2,500 to $10,000.

(1.1) New – CHPP Compliance Coordinators. The General Assembly took action in the 2006-07 State budget to include four new positions in DCM to improve the Division's focus on compliance and enforcement of CAMA rules. Staff will be able to provide oversight of projects as they are being constructed. The most frequent comment from the public during the CHPP development was that current rules are not adequately enforced. This perception of slow or inadequate enforcement response portrays an image that violations go unchecked, providing an incentive for noncompliance and further violations to occur. The Compliance Coordinators will also perform proactive compliance assistance activities, such as workshops for realtors and contractors, ultimately leading to a decrease in violations.

(1.1) Ongoing - DCM is coordinating quarterly meetings with DENR agencies and the USACE to discuss projects and enforcement issues. Cooperation among agencies has been enhanced.

(1.3) New – Estuary Live Highlights CHPP. In May 2006, the NC National Estuarine Research Reserve included a segment on Estuary-Live focusing on fish habitat hosted by Anne Deaton with DMF. Ms. Deaton discussed the six habitats detailed in the CHPP, concentrating on the importance of marshes and shell bottom.

(1.3) New – The NC Coastal Reserve Program completed a "critter posters" series highlighting oysters which are geared toward elementary students.

(1.4) Ongoing - DWQ Basinwide Planners are reviewing CAMA Land Use Plans (LUPs) including: New Hanover County/Wilmington, Kure Beach, and Carteret County.

Division of Water Quality

(1.1) Additional action: Secured EPA funding for three new regional positions, including one in the Washington Regional Office. Positions will be primarily responsible for conducting 401 Water Quality Certification compliance inspections.

(1.1) Additional action: Secured funding from NOAA to continue inspections of coastal stormwater permit sites that are up for renewal in 2007. In addition, to help improve permit compliance, will prepare and conduct training on stormwater treatment best management practice installation and

maintenance requirements, and develop protocols for processing permit renewals that assures site compliance prior to permit re-issuance. Project is scheduled to begin in fall 2006.

(1.1) Provided funds to local governments for educating citizen in their jurisdictions about DWQ's Neuse and Tar-Pamlico riparian buffer rules.

Division of Marine Fisheries

(1.1) Submitted a proposal for funding to enhance permit application review program

(1.1) Coordinating aerial surveillance with DCM

(1.3) Enhanced habitat web pages. In May, the Division transferred the CHPP web site responsibilities to DENR and the Office of Conservation and Community Affairs (OCCA).

Department of Environment and Natural Resources

(1.1) Supported legislative actions to increase civil penalties for violations of CRC and EMC rules and permits

(1.2) Received funding for continuation of cooperative university-DOT water quality monitoring in Pamlico Sound through the FERRYMON program

(1.2) DEH received funding for three new positions from the General Assembly. One position is for GIS Data Management and the other two are for shoreline surveyors.

GOAL 2

IDENTIFY, DESIGNATE AND PROTECT STRATEGIC HABITAT AREAS

Division of Marine Fisheries

(2.1) The Strategic Habitat Area Advisory (SHA) Committee has reviewed the SHA selection process using the lower Chowan sub-basin and the Core-Bogue sounds area as its test regions. The process appears to be objective and understandable. The Committee will have a draft report to the MFC in the fall and complete its work by December 2006.

(2.1) The Division's shell bottom mapping work continues, with current work in the western Pamlico Sound. The mapping staff based in Wanchese, also completed out-of-sequence mapping of all of Stumpy Point Bay to aid several DENR agencies in evaluation of a proposed DOT dredging project and a proposed community wastewater treatment project.

Division of Coastal Management

(2.1) New - Submerged Aquatic Vegetation Mapping. In addition to serving on the interagency SAV Mapping Workgroup being coordinated by the Albemarle-Pamlico National Estuary Program, Coastal Reserve staff is beginning an SAV mapping project for the Rachel Carson National Estuarine Research Reserve.

Division of Water Quality

(2.2) Ongoing - Study the Feasibility and Benefits of an SAV Mitigation Program: This project is currently ongoing as a result of the settlement agreement between DENR and DOT over the Currituck ferry incident.

GOAL 3

ENHANCE HABITAT AND PROTECT IT FROM PHYSICAL IMPACTS

Division of Marine Fisheries

(3.1) Work is ongoing on Pamlico Sound oyster sanctuaries with new state funding for positions and operations, including expansion of the oyster shell recycling program.

(3.3) The MFC closed an additional 36,940 acres in the Pamlico Sound system to mechanical harvest of shellfish to protect shallow water fish habitat. The DMF closed 4,642 acres in northern Core Sound to mechanical harvest of shellfish to protect shallow water fish habitat, especially SAV.

(3.3) Consideration is being given to closure of some SAV areas in Bogue Sound to use of mechanical harvest methods as part of preparation of the Bay Scallop FMP.

(3.3) The MFC closed approximately 6,900 acres in Core Sound to shrimp trawling in order to protect SAV as part of the Shrimp FMP.

Division of Coastal Management

(3.1) New – Consistency of CRC Rules with DMF Oyster Reef Program. During March 2006, DCM and DMF staff reviewed the CRC's rules for consistency with the DMF's efforts to establish oyster reefs. The creation of oyster sanctuaries by DMF has not been interpreted as constituting development under CAMA and has not created any permitting issues for either agency. In addressing the specific action in the CRC/DCM CHPP Implementation Plan, the CRC's rules and policies are not causing a hindrance to this important program.

(3.2) Ongoing – Proposed beach nourishment sediment compatibility standards drafted and reviewed (Technical Standards for Beach Fill Projects: 15A NCAC 7H .0312); will go to public hearing September 21, 2006. Proposed effective date of rules is December 1, 2006.

(3.2) New - Beach and Inlet Management Plan (BIMP):
Included in draft NOAA CZMA Section 309 5-Year Program Enhancement Strategy (2006-2011) being finalized based on NOAA review.

* A workgroup has been formed and a federal-level funding request made by the USACE to support NC efforts in developing Regional Sediment Management Planning.
* Developed a beach fill project database. Includes over 100 articles used in developing the sediment criteria, monitoring reports and university databases.
* DWR received initial funding in their capital budget ($500,000) to partner with DCM for development of a Beach and Inlet Management Plan.

(3.4) New – CRC Estuarine Shoreline Stabilization Subcommittee. The CRC Estuarine Shoreline Stabilization Subcommittee (ESSS) met in February to review the Commission's Concepts and Principles for Estuarine Shoreline Stabilization Policy Assessment and Development. The Subcommittee also reappointed an Estuarine Shoreline Biological Processes Workgroup to develop recommendations for shoreline stabilization relative to shoreline type. The Workgroup met several times and is ranking eight preferred stabilization techniques associated with 11 shoreline types. The ESSS received an update on the progress of the Work Group at the June CRC meeting. The Workgroup hopes to finish its task before the end of 2006.

(3.4) Ongoing - Draft NOAA CZM Section 309 5-Year Program Enhancement Strategy (2006-2011) being finalized based on NOAA review. The following activities are proposed specific to the estuarine shoreline: Development of tools and methodology for estuarine shoreline delineation. An inventory of engineered structures on the estuarine shoreline in three CAMA counties (Carteret, Craven and Pamlico). Convene/staff the Estuarine Shoreline Stabilization Subcommittee review and update the Estuarine Waters of Environmental Concern AEC.

(3.4) Ongoing - CRC approved for public hearing a rule to raise permit fees for bulkheads and riprap estuarine shoreline stabilization projects sited below high water. The rule was adopted by the CRC at its June 2006 meeting.

GOAL 4

ENHANCE AND PROTECT WATER QUALITY

Division of Marine Fisheries

(4.7) The Division is participating in the initial marina management improvements through the Multi-Slip Docking Facility work group being led by NC Sea Grant.

Division of Coastal Management

(4.5) New – Stormwater Education for Real Estate Professionals Workshops. In January and February of 2006, the NC Coastal Reserve staff hosted two workshops for realtors focusing on stormwater pollutants, the water cycle, low impact development and retrofits to existing developments. The workshops were attended by 45 real estate professionals and were held in Wilmington and New Bern in cooperation with the Craven County Cooperative Extension Service. Reserve staff also conducted two workshops, one for teachers/educators and one for teaching fellows in Manteo and Currituck. Both workshops included critical coastal habitat activities and information. Additional workshops are planned in June and September that will highlight some information found in the CHPP. In addition, CHPP implementation activities are being incorporated into student field trips and summer public field trips by focusing on habitats such as oysters and the water column represented at Coastal Reserve sites.

(4.6) The CRC enacted a rule to establish a General Permit specifically for Ecosystem Enhancement Program mitigation projects

(4.7) Ongoing - Sea Grant Marina Advisory Group formed and meeting to discuss marina siting policies and multi-slip docking facilities (MSDF's). The group is addressing uses of multi-slip docking facilities as well as appropriate water depths for slips. Two public meetings were held in March in Wilmington and Washington to gather public comment on issues. The meetings were attended by 58 people who provided comments on the need to consider cumulative impacts of MSDF's, CAMA permit application structure, the need for property owner guidance, and stricter siting standards. The public comments will be used by the Advisory Group in the development of recommendations.

Division of Water Quality

(4.3) Ongoing - Develop an optional plan that local governments could undertake to meet multiple stormwater regulatory requirements: the Universal Stormwater Management Program (USMP) Rule. The USMP Rule went to three public hearings throughout the State, and the public comment period closed on May 15, 2006. As a result of the public comment, a proposed maximum impervious surface limit of 36% for development within 575 feet of shellfishing waters has been added to the revised rule.

(4.4) Revision of DWQ Coastal Stormwater Rules: As a result of a DWQ survey regarding the effectiveness of the State's existing coastal stormwater rules that was presented to the EMC in October 2005, the CRC in January 2006, and the MFC in April 2006, the MFC prepared a letter to the EMC requesting the WQC/EMC to initiate rulemaking proceedings to revise these rules to make them more protective of coastal waters. In its letter, the MFC suggested some actions the EMC might consider. This letter was discussed at the July WQC meeting.

(4.8) Work with Department on reducing NPS pollution from large-scale animal operations: Proposed administrative rules for the regulation of third party animal waste applicators ("Manure Haulers") have been approved by the EMC, awaiting final approval by the RRC. The rules, as proposed, require registration and annual reporting for all "Manure Haulers" who land apply more than 100 tons of manure per year. The proposed rules also require land application at agronomic rates and set forth setbacks for land application and stockpiles.

Department of Environment and Natural Resources

(4.5) Three new water quality forester positions were established in DFR to help reduce water quality impacts from forestry operations.

Pilot Program for Inspections of Animal Waste Management Systems

2006 Semiannual Report
For Calendar Year 2006

N.C. Division of Soil and Water Conservation

EXECUTIVE SUMMARY

From 1999 to June 2006, the pilot program has collected data from 2,307 documented site visit reports to 166 permitted animal operations in Brunswick, Columbus, Jones and Pender Counties. The Division of Soil and Water Conservation (DSWC) staff has used this data to study and better understand the factors that influence compliance and affect the potential for environmental impact by animal waste management systems. For the 2006 calendar year, DSWC experienced or observed the following:

- DSWC and Division of Water Quality (DWQ) staff continues to use one reporting form and one database. (p.4)
- Below normal precipitation for the first half of 2006 resulted in no "Immediate Threat" operational indicators observed on pilot farms. (p.6)
- Pilot farms made up 39% of the site visits reports noted for high waste levels in storm storage range for the first two quarters of 2006. (p.6)
- Pilot farm performed better than all farms statewide in 7 out of 9 of the listed "Potential Threat" operational indicators. (p.7)
- DSWC to focus additional technical assistance and follow-up efforts to "newer" farms to the program in Pender County for improved compliance with required Plans of Action to address high waste levels. (p.8)
- Following Tropical Storm Ernesto, "veteran" pilot farms noted with high waste levels have a higher frequency of having been categorized as a potential "high impact" farm prior to 2006. (p.8)
- Following Tropical Storm Ernesto, "veteran" pilot farms noted with high waste levels have a higher frequency of having operated on a required Plan of Action prior to Tropical Storm Ernesto. (p.8)
- DSWC *operating cost per hour* was further refined and resulted in an increase over previous years. (p.9)
- DSWC *per-visit* costs continue to be less for pilot farms when compared to non-pilot farms. (p.9)
- DSWC *per-farm* costs are lower for pilot farms at this time but are projected to be higher for pilot farms than non-pilot farms at the end of 2006 due to increased frequency of site visits to pilot farms. (p.9)

BACKGROUND

The objectives of the Animal Waste Management Inspection Pilot (hereinafter the pilot), and in accordance with Section 12.7(b) of S.L. 2005-276, are:

1. To determine how DSWC staff can respond more quickly and effectively, with technical assistance, to complaints and problems to help farms achieve compliance with environmental regulations;
2. To compare costs of conducting operations reviews and inspections under the pilot program with the costs of conducting operations and inspections pursuant to G.S. 143-215.10D and G.S. 143-215.10F
3. To determine the needed resources to expand the pilot program to all counties.

The need to improve effectiveness and efficiency of each site visit is essential as operating costs increase. DSWC believes this need is best satisfied through resource targeting. The pilot program allows Department of Environment and Natural Resources (DENR) staff to test approaches for earlier identification of problems, and to target DENR's resources for expediting corrective actions.

The pilot differs from the state's traditional animal inspections program in that DSWC staff conducts annual *routine* compliance inspections, in addition to performing *routine* operation reviews of all permitted livestock operations in Brunswick, Columbus, Jones and Pender Counties. DWQ staff provides regulatory oversight, performs compliance audits with DSWC staff of "targeted" potential high environmental impact farms, responds to DSWC referrals and conducts additional compliance inspections for further investigation and enforcement actions as warranted.

DSWC and DWQ staff continues to use one reporting form and DWQ's Basinwide Implementation Management System (BIMS) database.

The pilot program was expanded into Pender County in January 2006 in accordance with Section 12.7(b) of S.L. 2005-276. To facilitate the additional workload, DSWC employed one additional Environmental Specialist to work with the current operation review staff. This employee is a technical specialist designated by the Soil and Water Conservation Commission as required by § 143-215.10D.

With the addition of Pender County, the program expanded from 106 to 166 permitted animal farms in the pilot area. Pilot farms are comprised of:

- 94 swine farms operating under a National Pollutant Discharge Elimination System (NPDES) General Permit,
- 71 swine farms operating under a State Non-Discharge (AWS) General Permit,
- 1 horse farm operating under a State Non-Discharge (AWI) Individual Permit.

Activity for the first two quarters of 2006, both in and out of the pilot area, is based on the following data queried from BIMS and DWQ's *Quarterly Report for the Period Ending June 30, 2006*:

- Statewide, 2,500 animal operations were subject to permitting and inspection
- Statewide, DENR staff conducted 2,325 site visits (1,173 by DSWC & SWCD and 1152 by DWQ)
- In the pilot area, DENR staff conducted 237 site visits (178 by DSWC and 7 by DWQ)

The pilot program is currently scheduled to end September 1, 2007.

PRECIPITATION & COMPLIANCE TRENDS

Annual precipitation amounts and events have the biggest impact on compliance performance by farms both in and out of the pilot program area. This has been continually noted in the data contained in earlier pilot reports.

All pilot counties experienced below normal precipitation amounts for the first two quarters of 2006. The deficits ranged from less than 4 inches in Columbus County to 9.5 inches in Brunswick County.

Location	Station	Actual (inches)	Normal (inches)	Deviation
Brunswick - Southport 5 N	318113	16.66	26.20	9.54" below normal
Columbus - Whiteville 7 NW	319357	20.49	24.44	3.95" below normal
Jones - Trenton	318706	17.02	25.24	8.22" below normal
Pender - Willard 4 SW	319423	19.67	24.75	5.08" below normal

Table 1. Actual and normal precipitation amounts for January 2006 through June 2006. Data provided by the State Climate Office of North Carolina's CRONOS (NC Climate Retrieval and Observations Network Of the Southeast) Database. This data set is based on daily observations with 100% of records compiled

DSWC staff has been tracking five "Immediate Threat" operational indicators since 2001 and as listed in **Table 2** on page 6. "Immediate Threat" problems are identified as posing the most severe and immediate threat to the environment. Because of below average rainfall during the first two quarters of 2006, less than 3% of the statewide site visits by DENR staff are noted for any type of "Immediate Threat" problem. Even more notable, site visits to pilot farms reflected no incidents of "Immediate Threat" problems.

"Potential Threat" problems are defined as those problems that left uncorrected, would eventually develop into an immediate threat to the environment. DSWC has been tracking nine "Potential Threat" operational indicators as shown in **Table 2**. Pilot farms received 8% of the site visits conducted from January through June 2006 and had a lower than 8% frequency of occurrence for most of the "Potential Threat" operational parameters. Pilot farms did make up 39% of the site visit reports noted with high *waste levels in storm storage* range. While DSWC cannot offer a definitive answer for this high variance, staff feels that focused resources in the pilot counties allows for a higher number of follow-up site visits to farms with reported high waste levels.

Operational Indicators	Statewide	Pilot	% Pilot/Statewide
Immediate Threat			
Offsite Discharge	10	0	0
Structural integrity compromised	17	0	0
Waste in structural freeboard range	5	0	0
Hydraulic overloading/ponding	10	0	0
Nitrogen over-applied ≥ 10% of plan	15	0	0
Potential Threat			
Waste level in storm storage	18	7	39%
Irrigation system maintenance deficiency	5	0	0
Structural maintenance deficiency	243	13	5%
Receiving crop inconsistent with waste plan	30	2	7%
Irrigation records deficient	73	1	1%
Waste level records deficient	50	5	10%
Receiving crop/application field needs improvement	164	12	7%
Waste analysis deficient	63	2	3%
Soils analysis deficient	69	4	6%
DENR Site Visits	**2318**	**184**	**8%**

Table 2. Operational indicators noted from January 1, 2006 through June 30, 2006, and performed by DSWC and DWQ staff. Operational indicators may contain duplications for site visits conducted jointly by DSWC and DWQ staff.

TROPICAL STORM ERNESTO

Tropical Storm Ernesto made landfall in Brunswick County on the evening of August 31 and moved across the Coastal Plain region on Friday, September 1, 2006 with the storm's center of circulation crossing Brunswick and Pender Counties. Unofficial rainfall totals from the National Weather Service in Raleigh, NC show pilot counties received between 4 and 11 inches of rain with minor to severe flooding.

Official rainfall totals, compliance trends and farm categorization into environmental impact groups will be discussed in more detail in the April 15, 2007 *Interim Report on the Pilot Program for Inspections of Animal Waste Management Systems*. For this report, DSWC examined the farms that were reported as having high, noncompliant waste levels as a direct or indirect impact from TS Ernesto.

For this data set, DSWC queried all incident reports logged into the BIMS database between August 31, 2006 and September 21, 2006 for the counties covered by DENR's Washington and Wilmington Regional Offices (WaRO/WiRO). A total of 117 incident reports for animal operations were logged in under the categories of non-compliance reporting or emergency with 25% of the incident reports originating from pilot farms.

The 29 incident reports were documented for 27 pilot farms - all with high waste levels. Five farms noted for waste levels within the structural freeboard elevation range (an "Immediate Threat" operational indicator).

Pender County farms account for 15 incident reports with only six farms implementing mandatory 30-day and 5-day Plans of Action (PoA) to describe:

(1) How the waste will be properly land applied for compliance within specified compliance schedules, and
(2) Any additional corrective measures to be implemented.

The low percentage of farms implementing PoA's in Pender County has alerted DSWC to focus additional technical assistance for better waste management and to increase follow-up efforts to pilot farms immediately following extreme weather events to ensure improved compliance with PoA requirements for high waste levels as needed.

Twelve Brunswick and Jones County farms account for the 14 remaining incident reports. All of these farms implemented the required 30-day and 5-day PoA's for high waste levels. Since these farms have participated in the pilot program since 1999 and earlier, DSWC staff is more knowledgeable about with their individual compliance histories and waste management systems, and observed the following:

- Since 1999, 11 of the 12 farms operated at least once on a 30-day or 5-day PoA to address high waste levels prior to TS Ernesto.
- 8 of the 12 farms (67%) were determined to be potential "high impact" farms at least once prior to 2006 (see previous pilot reports for farm categorization

information). In comparison, only 36 of the remaining 93 farms (39%) were identified at least once since 1999 as potential "high impact" farms.

COST & LABOR COMPARISONS

Cost and labor comparisons for the DSWC operation review core staff were better refined in 2006 with the incorporation of actual mileage costs. In addition, salaries, office rent, administrative and operating costs, and coded work hours were updated and compiled to determine a DSWC operating cost of $29.26 per hour for the first two quarters of the 2006 Calendar Year. This cost is up from the $26.93 per hour in 2005 and $26.37 in 2004. The significant increase is due to the use of actual mileage costs and employee turnover that resulted in training of two new employees to become designated technical specialists.

DSWC's hourly operating cost is the same for pilot and non-pilot farms alike. As previously reported, differences between pilot versus non-pilot costs arise as a result of the frequency and duration of site visits. Since this report is based on the first two quarters of 2006 only, the second *routine* compliance inspection by DSWC has not been performed and will be conducted in the last two quarters of the calendar year.

Table 3 reflects key cost and labor comparisons. The DSWC's *per-visit costs continue to remain less* for pilot farms than non-pilot farms. Presently DSWC's *per-farm costs are lower for pilot farms* but will increase during the second half of 2006 when the second round of routine compliance inspections are completed. *Per-farm costs for pilot farms* are higher than non-pilot farms as a direct function of the higher frequency of site visits made to pilot farms.

	Pilot Farms	Non-pilot Farms
	$187.93 per DSWC visit	$217.87 per DSWC visit
	1.07 visits per farm	1.01 visits per farm
	6.42 hours per visit	7.44 hours per visit
	$201.51 per farm	$219.68 per farm

Table 3. 2006 Key Cost and Labor Comparisons for DSWC Operation Review Staff

RE: Annual Report on Basinwide Water Quality Management Plans

G.S. 143-215.8B requires the Department of Environment and Natural Resources to report to the Environmental Review Commission each year on the progress in developing and implementing basinwide water quality management plans and on increasing public involvement and public education in connection with basinwide water quality management planning. If you have any questions please contact Darlene Kucken at (919) 733-5083, extension 354.

One NorthCarolina Naturally

Annual Report from the Basinwide Planning Program on Progress in Developing and Implementing Basinwide Water Quality Plans

For the Period of October 1, 2005 through September 30, 2006

I. Basin Plan Development Activities

The Basinwide Planning Program finalized the first cycle of basin plans in May 1998. The second cycle of plans was completed in March 2003. The third cycle of basinwide water quality plans is well underway, with the finalization and Environmental Management Commission approval of the *Neuse (July 2002), Lumber (December 2003) Tar-Pamlico (March 2004), Catawba (September 2004), French Broad (April 2005), New (October 2005), Cape Fear (October 2005), and Roanoke (September 2006) River Basinwide Water Quality Plans*. Completion of the remaining third cycle plans is well underway and these remaining plans will be presented to the Water Quality Committee in the next few months for public review and input. Activities related to gathering formal public input on the basinwide plans during October 2005 through September 2006 are presented below.

River Basin	Plans Approved by Environmental Management Commission	Public Review
New	October 2005	August 2005
Cape Fear	October 2005	May 2005
Roanoke	September 2006	July 2006

II. Coordination and Collaboration Activities Related to Basinwide Planning Implementation

Many additional activities have occurred over the past year that are not tied to a specific basin, but rather can be applied to the program as a whole. The Basinwide Planning Program has been tracking public contact opportunities since 2004; with approximately 9,000 individuals receiving direct outreach through formal or informal presentations or technical assistance. Many more public contact opportunities, such as emails and phone calls, are made by program staff but are not tracked. Some of the more significant activities are as follows.

- In an effort to assure Basinwide Plan implementation and to increase coordination among Division of Water Quality staff and other agencies, meetings to discuss implementation needs are held regularly for each river basin. At least one meeting

has been held with each regional office staff during this reporting period to discuss the Implementation Packet for each river basin covered by the regional office. Central office staff from various units may attend these meetings with Basinwide staff, or further coordination is conducted with central office staff as follow-up to the meetings.

- Additional coordination is conducted with other agency personnel and local watershed organizations as needed to discuss specific management strategies and to assess progress being made to implement these strategies. These meetings are also used as an opportunity to share more information and jointly develop appropriate management strategies to address specific problems.
- Basinwide staff coordinate with the Ecosystem Enhancement Program staff on prioritization of targeted watersheds.
- Basinwide staff coordinates with state, federal and local agencies to obtain information pertinent to the basinwide plans, increasing the level of coordination and communication with these agencies and their participation in the development of basinwide plans. Discussions frequently occur between the Basinwide Planning Program and the following agency staff: NC Division of Soil and Water Conservation and Soil and Water Conservation Districts, Environmental Health, Coastal Management, Water Resources and Marine Fisheries, as well as the Wildlife Resources Commission and US Fish and Wildlife. These discussions have resulted in improved communication, sharing information and assuring appropriate information is presented in the basin plans.
- Basinwide information was provided to applicants for Clean Water Management Trust Fund and Sections 319 and 205(j) grants. Basin planners also provide technical reviews of these applications.
- Basinwide plans, notices of public input opportunities, and other information relevant to the basinwide planning program are updated on the web site to provide more information access (see http://h2o.enr.state.nc.us/basinwide/).
- Basinwide staff coordinates with the Classifications & Standards Unit and other federal and state agencies to develop management strategies for threatened and endangered species per DWQ rule.
- Basinwide staff continues to work with US Geologic Survey, NC Department of Transportation (NCDOT) and the Center for Geographic Information and Analysis in development of 1:24,000 National Hydrography Data (NHD) for North Carolina. Methods continue to be developed and tested to incorporate water quality and NCDOT data onto the NHD. The NHD will be a necessary data layer for submittal of future 303(d) impaired waters lists to the Environmental Protection Agency.
- Basinwide staff continues to develop information and improve skills related to Geographic Information System procedures. The results of these efforts have increased proficiency in mapping capabilities and analysis of data, as well as higher quality maps for public use.
- Basinwide staff continues to enhance procedures, methods and database implementation pertaining to use support decisions on surface water quality status.
- Solicitation for water quality information from outside sources for the Yadkin-Pee Dee and Lumber River basins was conducted in 2005. All river basins were solicited

in 2006. This activity entails mailing thousands of flyers to all persons on the Planning Section mailing list database for all basins, including NPDES dischargers.

- Basinwide staff is preparing draft plans for public review for the White Oak, Savannah, Watauga, Hiwassee, Little Tennessee, Chowan, Pasquotank, and Neuse River basins. This activity entails conducting data analysis and making use support decisions based on all available information, obtaining public input as noted above, preparing text and maps identifying watershed level water quality problems and potential solutions.
- Basinwide staff conducted public review and comment phase on the Roanoke River basin. This activity entails mailing notices of the availability of the draft plan on-line or by hard copy, meeting with various interested parties as noted above, editing the plan to reflect the comments as needed, and conducting final preparation of the plan for approval by the Environmental Management Commission.
- Basinwide staff continues to coordinate with river basin coalitions and watershed groups to identify high priority waters and issues of relevance to that group, and identify potential means to address the issues. This activity entails providing technical assistance and guidance on water quality initiatives developed and implemented at the local level.
- Basinwide staff continues to participate in FERC hydropower relicensing negotiation efforts for the Catawba and Yadkin-Pee Dee River basins. This activity entails assuring that water quality conditions in the basin are maintained or improved as a result of relicensing activities.
- Basinwide staff continues to review and provide comments to the Division of Coastal Management staff on content and accuracy of land-use plans related to water quality in coastal areas.
- The Basinwide Program has embarked on a collaboration effort with the Soil and Water Conservation Districts across the state as each basin plan is revised. This initiative is intended to meet the expectations of the DENR Strategic Plan Directive 3. The Districts provide watershed level information for the basin plans and contribute to implementation strategy development.

RE: Annual Report on the Dry-Cleaning Solvent Cleanup Act Program

G.S. 143-215.104U requires the Department of Environment and Natural Resources to report to the Environmental Review Commission each year on the progress in developing and implementing the Dry-Cleaning Solvent Cleanup Act Program which was created to address contamination at current and former dry-cleaning facilities and wholesale distribution facilities that store, distribute and sell dry-cleaning solvents. If you have any questions, please contact Jack Butler at (919) 508-8450.

DRY-CLEANING SOLVENT CLEANUP ACT ANNUAL REPORT

Executive Summary

As required by the Dry-Cleaning Solvent Cleanup Act (DSCA) of 1997 and amendments (G.S. 143-215.104A *et seq.*), this report provides an annual update on activities conducted in the DSCA Program in 2006. The DSCA of 1997 and its amendments created a fund for assessment and cleanup of dry-cleaning solvent environmental contamination at dry-cleaning and wholesale distribution facilities.

Significant progress has been made in all aspects of program implementation. Areas of program development showing the most progress are risk-based rule development, Assessment and Remediation Agreements, work authorizations, prioritization and comprehensive assessments, priority ranking, contracting, imminent hazard abatement and emergency response, assessment guidance and database development, operating facility compliance with minimum management practices and outreach.

The Department of Environment and Natural Resources (DENR) has identified 225 operating or abandoned dry-cleaning facilities with environmental contamination by dry-cleaning solvent. Of these, 161 have voluntarily petitioned for acceptance, and 149 have been certified into the DSCA Program. Assessment and Remediation Agreements have been executed for 130 sites and 92 sites have been prioritized.

The majority of claims against the Fund to date have been for "past costs." The DSCA Program is authorized to reimburse petitioners for reasonable, necessary and documented costs incurred between October 1997 and June 2001 in certain situations. Petitioners have submitted past cost reimbursement claims for 13 sites totaling $2,612,290. Of that total, $1,555,757.21 has been approved for reimbursement. A total of $1,458,908.46 has been paid to petitioners through FY 2005-06. The remaining $96,848.75 will be paid in FY 2006-07. A claim totaling $80,357.12 that had previously been disallowed by the DSCA Program will also be paid in FY 2006-07 because the Environmental Management Commission ruled in July 2006 that the petitioner should be reimbursed for that claim.

With the infusion of the sales tax monies, which began in July 2003, DSCA now appears to have sufficient financial resources to assess and clean up the contaminated dry-cleaning facilities identified to date by DENR. New discoveries will continue to be reported, largely due to property transactions. However, with 29 new sites reported in 2006, if the rate of discovery remains steady, the addition of new sites to the program should not overwhelm the DSCA Fund.

The program is currently developing risk-based rules as required by DSCA for the assessment and cleanup of contaminated dry-cleaning sites. A contractor who specializes in the development of risk-based programs for state regulatory agencies was hired in 2005 to assist in the rulemaking process. It is anticipated that these rules will be completed by November 2007.

Fund expenditures for site work will increase significantly when additional contracts with environmental engineering firms are executed and the risk-based rules are completed. Expenditures are projected to increase by approximately 230 percent beginning in FY 2006-07.

Program Status

DENR has made significant progress in implementing DSCA. DENR has solicited input from members of the DSCA Stakeholders Working Group (DSCA Stakeholders) and other interested parties to develop new policies and procedures. Participants in the DSCA Stakeholders include the following:

- DENR representatives and Department of Justice attorneys assigned to DENR,
- Dry cleaners from leadership of the North Carolina Association of Launderers and Cleaners,
- Environmental consultants,
- Representatives from environmental advocacy organizations,
- Dry cleaners using alternative dry-cleaning technologies,
- North Carolina State University's School of Textiles faculty, and
- Private attorneys representing dry cleaners and shopping centers.

A summary of DSCA Program site status is provided in Table 1.

Table 1. DSCA Program Site Status

Step 1. The dry cleaner or property owner petitions DENR for certification and signs an Assessment and Remediation Agreement.	To date, 161 sites have petitioned for entry into the Program. The main motivating factors for petitioning have been real estate transactions and redevelopment.
Step 2. DENR certifies the site and executes the Assessment and Remediation Agreement. DENR determines whether the contamination is posing an imminent hazard to human health or the environment.	Of the 161 sites that have petitioned, 149 sites have been certified into the Program. Two sites have been denied certification due to failure to meet the requirements for certification as mandated by DSCA. The remaining ten sites that have not yet been certified are currently under review. The Assessment and Remediation Agreement (ARA) is a legally binding agreement between DENR and the petitioner that covers all phases of work at a site including the prioritization assessment. All work done under these agreements is performed by independent environmental contractors hired by DENR. ARAs for 130 sites have been executed between DENR and petitioners. Each petition is reviewed for imminent threats to human health or the environment. Drinking water sources have been identified in proximity to several sites. Evaluation of potential imminent threats has been expedited for these sites.

Step 3. DENR assigns the site to one of its independent contractors for a prioritization assessment.	In August 2004, DENR executed contracts with four environmental contractors to perform site assessment and remediation. These four firms have been granted three-year contracts totaling $2.4 million. In May 2006, DENR executed three additional contracts totaling $9 million over three years. Additional contracts are anticipated to be awarded during the first half of FY 06-07. Following execution of an ARA, DENR assigns the site to one of its contractors, who performs a prioritization assessment and determines if an imminent hazard exists at the site. Petitioners will be billed by DSCA to cover site deductibles after the expenses have been incurred.
Step 4. DENR ranks the site and checks again for imminent threats.	Information collected during the priority assessment is used by DSCA to rank each site in terms of risk to human health and the environment. The DSCA Prioritization Ranking System and supporting database application were developed to efficiently assign priority ranking scores to sites. To date, 92 sites have been prioritized.
Step 5. DENR approves its contractors to proceed with imminent hazard response, comprehensive assessment and remediation (where necessary) with funds obligated to higher priority sites first.	Six sites have been identified where drinking water wells have been impacted by dry-cleaning solvents. DSCA is responding to these threats by connecting residences and businesses to municipal water lines and installing point-of-entry filtration systems to remove contaminants. Comprehensive assessments and groundwater monitoring have been initiated at the prioritized sites.

Program Development

The primary objective of DSCA in 2006 was to continue working toward full implementation of the program. To attain this goal, DSCA staff directed significant energy towards the development of supporting policies, procedures, and guidance. To reduce resource consumption and optimize customer service, DSCA uses its web site (www.ncdsca.org) and e-mail as the primary means to deliver program documents to its customers. As in the previous year, DSCA staff continued reviewing petitions, determining site eligibility, executing assessment and remediation agreements, screening sites for imminent hazards, supply well sampling, providing users of impacted water supply wells with clean water, site prioritization, comprehensive site assessments and groundwater monitoring. New activities performed in 2006 includes investigation of potential vapor intrusion hazards in buildings and the removal of highly contaminated soil beneath buildings that was causing indoor vapor hazards.

Specifically, progress was achieved in the following areas:

- Risk-Based Rule Development
- Past-Cost Reimbursement
- State-Lead Contracts
- Assessment and Remediation Agreement
- Prioritization Assessments
- Prioritization of Sites

- Comprehensive Site Assessments
- Database Application
- Facility Compliance and Outreach

Risk-Based Rule Development

DENR has been delegated the task of developing rules that establish a risk-based approach to assessing, prioritizing, and cleaning up dry-cleaning solvent contamination that resulted from releases at certified facilities or abandoned sites. During the past year, the DSCA Program has worked with an independent contractor, the RAM Group of Houston, Texas, a firm that specializes in helping states develop risk-based rules and implementation guidance. The RAM Group has developed a draft guidance document with risk procedures as well as standardized reporting forms and customized spreadsheets that perform the risk calculations necessary to determine site-specific, risk-based cleanup levels. Review and discussion of this draft guidance and the first draft of the risk-based rules have been performed within DENR and with a review group composed of DSCA Stakeholders. Modifications and improvements to the draft rules are currently underway and following additional DENR and stakeholder review, the draft rules will be advanced through the rulemaking process. It is anticipated that these rules will be completed by November 2007.

Past-Cost Reimbursement

The DSCA Program is authorized to reimburse petitioners for appropriately documented and reasonably necessary costs incurred between October 1997 and June 2001 in certain situations pursuant to Section 2.(a) of House Bill 1062 (Session Law 2001-265). Petitioners have submitted past cost reimbursement claims for 13 sites totaling $2,612,290.79. After reviewing the claims to determine eligible costs and subtracting the required $50,000 deductible for each site, the DSCA Program determined that a total of $1,555,757.21 could be reimbursed to petitioners for 11 of the 13 sites.

Through FY 2005-06 the DSCA Program has reimbursed $1,458,908.46. The remaining total of $96,848.75 will be reimbursed in FY 2006-07. The program also received a past-cost claim totaling $80,357.12 which had been disapproved because it had not been received prior to the statutory deadline of July 1, 2002. However, the petitioner appealed to the Environmental Management Commission who ruled in July 2006 that the petitioner should be reimbursed the contested amount. Therefore, an additional $80,357.12 that had not been previously approved will be paid in FY 2006-07.

DSCA Contracts

In July 2004, DENR executed contracts with four independent environmental engineering firms to perform assessment and remediation at DSCA sites. The contracts total $2.4 million with a term of three years. In May 2006, DENR entered into three additional contracts totaling $9 million with engineering firms. During FY 05-06, the contractors performed prioritization assessments, comprehensive assessments and imminent hazard response activities, including the removal of contaminated soil and provision of clean drinking water to residences with contaminated water supply wells. The DSCA Program anticipates soliciting proposals for

three additional contractors in October 2006 with these contracts totaling $18 million over three years.

Assessment and Remediation Agreement

An Assessment and Remediation Agreement (ARA) that is executed by the DSCA Program and petitioners for certified sites was developed for use beginning in September 2004. An amended version was released in July 2005. This agreement encompasses all phases of site work (prioritization and comprehensive assessments and remedial action) and allows DSCA to direct all work using its independent contractors. Petitioners must sign this agreement in order to obtain the liability protection afforded by DSCA and to allow DSCA's contractors to assess and remediate certified sites. ARAs for 130 sites have been executed to date. Prior to September 2004, Prioritization Assessment Agreements (PAAs) between DSCA and petitioners were used to prioritize sites. However, the PAA has been phased out and all future work will be performed under the ARA.

Prioritization Assessments

Unless site assessment information obtained during an earlier pre-DSCA investigation is available, a prioritization assessment must be performed at DSCA sites following certification into the program. Work performed during this phase consists of limited soil and groundwater sampling to determine the severity of contamination. This sampling is conducted in conjunction with a survey of the area surrounding the site to locate all potential receptors (public and private drinking water wells, surface water bodies, sensitive ecological environments) that may be threatened by the contamination.

DSCA project managers instruct the program's contractors to submit work plans that follow procedures outlined in a prioritization assessment guidance document that details the necessary scope for this work phase. Following authorization by the DSCA Program, the contractor performs the assessment and submits a prioritization assessment report that enables the program to determine the priority ranking of the site. Pursuant to the requirements of the DSCA statute, money from the fund must be obligated to higher priority sites first.

Following completion of the prioritization assessment and receipt of the contractor's invoice, the DSCA project manager prepares and mails an invoice to the site's petitioner(s) for an amount up to the site's applicable deductible. Once the deductible has been met, the DSCA fund covers all costs until total site costs reach $200,000, at which point the petitioner(s) become responsible for one to three percent of incurred costs.

Prioritization of Sites

A total of 92 sites have been prioritized to date. In October 2004 the DSCA Program implemented a new priority scoring system that was based on the threat of contamination to nearby receptors such as supply wells and surface water. The new scoring system assigns a score that corresponds to the specific receptor that is being threatened. For example, a score of "1.2" indicates that "an active domestic drinking water supply well is impacted or immediately threatened by the release and that the user has no access to another public or private water

supply." DSCA staff can immediately know what actual or potential hazard exists at a site based simply on its score. If multiple sites are assigned the same score, then DSCA staff can evaluate other factors such as magnitude of contamination in determining priority order.

Database and Geographic Information System (GIS) Application

The DSCA Program has invested significant time and effort to develop and refine its database and GIS applications. Rapid application development techniques have been used to ensure its ability to manage data is flexible and can grow with the program. Technical and financial information has been entered into the database. The programmatic tracking and reporting applications are frequently revised to respond to changing information management needs.

Major improvements in 2006 focused on refining the database so that it could track project financial details. Reporting capabilities include project status, current site actions, site deductibles, costs applied toward the deductible, past-cost reimbursements, invoices, payments, work authorized on a task order basis and change orders.

In July 2005 DENR purchased GIS software that the DSCA Program will use to view site information utilizing digital mapping. This technology is currently being integrated by the program to enhance project managers' ability to quickly evaluate site conditions regarding contamination, thereby assisting in site assessment and remediation.

Facility Compliance and Outreach

DENR has been authorized under DSCA to develop rules that operating dry-cleaning facilities must follow to prevent environmental contamination by dry-cleaning solvents. These rules, or Minimum Management Practices (MMPs), were implemented in 2001 as temporary rules and were approved as permanent rules in 2002. In 2005 the DSCA Program created and filled a new position that will coordinate compliance assistance visits and formal inspections of facilities and also serve as the lead for enforcement actions where necessary. In May 2006 DSCA hired a new inspector to perform compliance assistance and facility inspections in the eastern part of the state. Two additional inspectors will be hired to cover the central and western part of the state by January 2007.

In November 2005 the DSCA Program entered into a memorandum-of-agreement with the Division of Air Quality that enables the program to perform compliance inspections for air quality regulations that are applicable to dry-cleaning facilities. The program is also planning to inspect facilities for compliance with Resource Conservation and Recovery Act (RCRA) regulations, which currently are administered by the Division of Waste Management's Hazardous Waste Section. Such multimedia inspections will enable one program within DENR to ensure compliance with all environmental regulatory requirements and will give dry cleaners and the public a single DENR point-of-contact for compliance questions or concerns.

To identify the dry-cleaning facilities in North Carolina, the DSCA Program has obtained lists from the state's Department of Labor and a private marketing research firm. The Department of Labor has been inspecting boilers at dry cleaners since about 1970. After combining these lists and determining which facilities are pickup stores only (stores where dry cleaning is not

actually performed), DSCA determined that there are approximately 700 active facilities where dry cleaning is being performed. During 2006 DSCA compliance inspectors performed full inspections and provided compliance assistance at 62 dry cleaning facilities across the state. Although violations of varying severity were identified at many of these facilities, the program has primarily tried to educate business owners and operators regarding the MMPs and hazardous waste and air quality regulations. If subsequent visits to these facilities reveal that corrections have not been made, enforcement with civil penalties may be initiated by the program. It is anticipated that at least 300 facilities will be inspected in 2007 at which time the compliance program will be fully staffed.

The DSCA Program has continued its association with dry-cleaning programs in other states through its participation in the State Coalition for the Remediation of Drycleaners (SCRD). This work group is sponsored by the EPA's Technology Innovation Office. DSCA has benefited greatly from this organization by learning from the experiences of other states.

Annual Report Elements Required by G.S. 143-215.104U

(1) DRY-CLEANING SOLVENT CONTAMINATION REPORTED TO THE DEPARTMENT OF ENVIRONMENT AND NATURAL RESOURCES

DSCA maintains files and a database inventory of 225 sites that are contaminated by dry-cleaning solvent. This number represents all dry-cleaning solvent releases known to DENR, assuming other agencies have forwarded notices of release to DSCA. Table 2 provides a list, by county, of all known sites contaminated with dry cleaning solvent. A total of 29 new dry-cleaning solvent releases were reported to DSCA in 2005. Many of these contaminated sites were identified as a result of real estate transactions and redevelopment projects.

(2) SITES CERTIFIED BY THE COMMISSION

DSCA must review a petition and the site file to determine if the site and the petitioner meet the statutory criteria for certification into the Program. Of the 161 sites that have petitioned for Program entry, 149 have been certified into the Program. Two sites have been denied certification due to failure to meet the requirements for certification as mandated by DSCA. The ten remaining sites that have not yet been certified are newly received petitions that are currently under review. The certified sites are shown in Table 3 along with current site status.

Data from these petitions have been compiled to evaluate general site characteristics. A summary is presented in Table 4. The majority of the petitioners are property owners (135), as opposed to drycleaner business owners/operators (75). Of the sites that applied, 60 percent are abandoned sites.

Property Owners	135	64
Dry-cleaning Business Owners/Operator	75	36

(3) COST ESTIMATE FOR ASSESSMENT AND REMEDIATION OF CERTIFIED SITES

Actual costs to assess and remediate DSCA sites are anticipated to vary widely from site to site. Factors influencing costs include site geology, age of release, the chemical nature of the solvents released and the threats posed to potential receptors. However, an annual spending cap of $200,000 per site is applied by statute unless contamination at a site poses an imminent threat to public health. In these cases, annual expenditures are capped at $400,000 per site.

Based on costs figures provided by other states, DSCA can calculate an approximate total cleanup cost for those sites that have been certified into the program. Using an average total cleanup cost of $250,000 per site, the total projected cost to remediate the 149 presently certified sites is approximately $37 million. Based on figures from the North Carolina Department of Labor, there are at least 2,000 active and abandoned dry-cleaning facilities in the state. Investigations performed across the nation indicate that contamination is present in about 75 percent of all dry-cleaning operations. Applying this percentage to the number of current and former facilities in North Carolina, a total of 1,500 contaminated sites may be present. If only 50 percent of these contaminated sites are accepted into the DSCA Program, the projected total cleanup cost would be approximately $188 million.

[1] Assessment and Remediation Agreements
[2] Reflects multiple petitioners for some sites

The DSCA Program controls site costs by reviewing and pre-approving all work plans submitted by its environmental engineering contractors prior to the start of field activities. All plans are required to provide sufficient detail (e.g., unit costs, subcontractor bids) to allow for an effective pre-approval review. DSCA's contracts include set unit rates that the contractors must follow for all assigned work.

(4) RECEIPTS AND DISBURSEMENTS FOR THE FUND

The primary funding sources for the dry-cleaning solvent cleanup fund are a tax on dry-cleaning solvents and, beginning in July 2003, the state portion of the current sales tax on dry-cleaning. The DSCA Fund's finances through FY 2004-05 (ending June 30, 2005) are summarized below:

Collections FY 97-98	$ 474,717.47
Collections FY 98-99	$ 927,004.50
Collections FY 99-00	$ 968,993.09
Collections FY 00-01	$ 863,772.16
Collections FY 01-02	$1,061,298.70
Collections FY 02-03	$1,076,826.57
Collections FY 03-04	$9,487,233.94 *
Collections FY 04-05	$9,660,612.84
Collections FY 05-06	$9,913,615.29
Solvent Tax Revenue (all years)	$ 7,428,069.68
Sales Tax on Dry-cleaning Revenue	$24,882,587.95
Deductible/Co-Pay Payments from Petitioners	$ 8,488.50
Miscellaneous (file copying charges)	$ 36.00
Interest	$ 2,114,892.43
Total Collections	**$34,434,074.56**
Dept. of Revenue Expenses	$ 57,272.02 **
Cleanup Expenses	
Reimbursements to Petitioners	$ 1,675,584.61
Payments to DSCA Contractors	$ 1,251,613.72
DENR Administrative Expenses	$ 2,261,136.13
Total Expenditures	**$ 5,245,606.48**
Fund Balance	**$29,188,468.08**
Funds Encumbered in Contracts	$10,283,386.28

* The significant increase in collections during FY 03-04 compared to previous years is due to the addition of the sales tax on dry-cleaning revenue.

** This represents the actual amount charged by the Department of Revenue for its expenses. The Department of Revenue is authorized by DSCA to charge no more than $125,000 per year.

Fund expenditures for site work will increase significantly when additional contracts with environmental engineering firms are executed and the risk-based rules are completed. The DSCA Program up to this time has been assessing the extent of contamination at certified sites and performing remediation to address imminent hazard situations such as treatment and replacement of contaminated drinking water and excavation of hazardous soil. Once developed and implemented, the risk-based rules will enable the Program to determine site-specific cleanup levels at all sites. Remediation, the most expensive phase of site work, can then commence at those sites where the risks posed by the contamination are unacceptable as defined by the rules. Expenditures are projected to increase by approximately 230 percent beginning in FY 2006-07.

(5) CLAIMS AGAINST THE FUND

There are two types of claims against the DSCA Fund. The majority of claims come from petitioners that incurred past investigative/remedial costs in response to an order or notice of violation from DENR prior to DSCA implementation. Past-cost claims that meet the requirements of Section 2.(a) of House Bill 1062 (Session Law 2001-265) were described previously in the section on "Past-Cost Reimbursement". Of those eligible past costs totaling $1,555,757.21, a total of $1,458,908.46 has been reimbursed and the remaining $96,848.75 will be paid in FY 2006-07. The DSCA Program will also be reimbursing $80,357.12 for the disputed claim that the Environmental Management Commission determined in July 2006 should be paid.

The second type of claim against the DSCA Fund is for approved costs for site work which exceed the site's deductible that was performed by an environmental contractor hired by the petitioner. Beginning in September 2004, the DSCA Program began assigning all site work to its state-lead contractors. However, some claims will be submitted for prioritization assessments conducted by contractors hired by petitioners prior to that time. After subtracting the deductible amount for each of these sites, approximately $110,000.00 will be reimbursed to these petitioners.

(6) RECOMMENDATIONS TO ASSURE THE SOLVENCY OF THE FUND

DENR has no recommendations regarding fund solvency at this time. Prior to passage of statutory amendments to DSCA in 2000 (S.L. 2000-19), it was clear that the fund balance was inadequate to address all of the dry-cleaning sites in the state. However, with the passage of the DSCA Amendments that established a second funding mechanism, the General Assembly took the most important step necessary to assure future fund solvency. With the infusion of the sales tax monies, which began in July 2003, DSCA now appears to have sufficient financial resources to assess and remediate the contaminated dry-cleaning facilities on a priority basis.

The Fiscal Note on the DSCA Amendments (S.L. 2000-19) anticipated that the funding mechanisms would provide the fund with $8 million to $10 million annually. As noted above,

total collections for FY 2005-06 were approximately $9.9 million. Therefore, the DSCA Fund is solvent.

RE: Annual Report on Implementation of Stormwater Rules and Programs

G.S. 143-2154.7(e) requires the Environmental Management Commission to report to the Environmental Review Commission each year on the implementation and status of stormwater control programs in the State. If you have any questions please contact Bradley Bennett at (919) 733-5083, extension 525.

Stormwater Management Program Annual Report
In Accordance With G.S. 143-214.7(e)
October 2006

The Environmental Management Commission (EMC), through the N.C. Department of Environment and Natural Resources and the N.C. Division of Water Quality (DWQ), implements numerous programs to control the water quality impacts of stormwater runoff from development activities and urban and developing areas. These programs include a federal National Pollutant Discharge Elimination System (NPDES) program that requires permits for point source discharges of stormwater from industrial activities and from certain urban and developing areas and a state stormwater permitting program that is designed to control stormwater runoff from new development and redevelopment activities occurring near sensitive waters.

The Division continues to implement regular permit activities within both the NPDES and state stormwater program areas. Both of these programs have experienced changes and growth that have increased permitting and implementation responsibilities. NPDES programs are administered entirely through Division review and oversight. State stormwater permit programs include a combination of state and local government administration with state oversight. Under these programs the Division continues to work closely with the regulated community, especially local governments. The major program focus over the last few years has been implementation efforts for the federal NPDES municipal stormwater program, or the "Phase II Stormwater Rules."

Previous reports and meeting presentations have outlined ongoing activities associated with implementation of the phase II stormwater rules. The phase II rules were adopted by the U.S. Environmental Protection Agency to, in large part, address the stormwater runoff impacts from urbanized and developing areas across the nation. For more information on the impacts of stormwater runoff see: http://h2o.enr.state.nc.us/su/what_is_stormwater.htm. The EMC previously (2002 and 2003) adopted temporary and permanent rules addressing implementation of the Phase II stormwater program in North Carolina. In January of 2004 the Rules Review Commission (RRC) objected to and returned the permanent rules to the EMC. The EMC challenged the RRC's decision in court. While this process was pending the General Assembly enacted S.L. 2004-163 which provided temporary implementation of the federal phase II requirements. Iin 2005 a Wake Superior Court ruled in the EMC's and remanded the EMC's permanent rules to the RRC for further review. The RRC subsequently approved the EMC's permanent phase II rules in late 2005. These permanent rules came before the General Assembly in the 2006 short session. Addressing differences between the EMC's rules and the previous session law resulted in the 2006 enactment of S.L. 2006-246 which provides for a compromise set of requirements for phase II implementation.

The Division has issued phase II permit coverage to around ninety local governments so far and we are in the review and drafting process for a number of additional communities including renewals of larger phase I communities' permits. We anticipate public notice of draft permits for a number of these entities by the end of 2006. The Division has also been working with public notices and other procedures to address waiver requests and exemptions for other communities. In addition, the Division has been working to implement other provisions of S.L. 2006-246. One major component is that new development and redevelopment activities in certain areas around

municipalities covered by the NPDES phase II requirements will be required to provide post-construction stormwater management control on their project site. The area of coverage includes:

- federally designated urbanized areas,
- unincorporated areas in one to three mile boundaries around designated municipalities,
- whole county areas where the county has been "tipped in" due to the extent of existing stormwater coverage or the growth rate of the county and
- incorporated areas not covered by an NPDES municipal permit but located in a tipped in county

These requirements become effective July 1, 2007 and will be implemented by the Division unless a local government requests delegation. The Division is already working on setting up this process. The Division is working on implementation procedures, educational and technical materials and web based mapping tools to assist in the process. The Division has worked with the UNC Institute of Government to develop a model ordinance for local government use in the phase II implementation. This model will be revised based on new requirements in the 2006 S.L. We are also continuing with additional revisions to our Stormwater Best Management Practices Guidance Document. We received a large number of comments on the draft document and continue to work through these issues and changes associated with the recent phase II requirements. As pieces of the manual are finalized they are being made available on our website (http://h2o.enr.state.nc.us/su/bmp_updates.htm).

The Division and Department continue to look at other important stormwater management areas as well. The EMC and Division have worked to review the effectiveness of stormwater programs in sensitive areas like coastal communities and will continue over the coming year to assess needed changes/updates. The EMC and Division are near finalization of a voluntary stormwater management effort (the Universal Stormwater Program) that will allow local governments to consolidate some of their current stormwater programs under one set of requirements. Stormwater education efforts through a statewide education coordinator have continued to produce effective results that benefit the state, local governments and other interested parties. These efforts have resulted in key partnerships with local government groups that have lead to outreach through various media outlets and production of a strong information source – see information at: http://www.ncstormwater.org/.

The Division of Water Quality and the EMC presently anticipate initiating rulemaking action under the Administrative Procedures Act (APA) to incorporate the Phase 2 requirements of Session Law 2006-246 into DWQ Rules. This rulemaking action is expected to commence sometime in early 2007.

MEMORANDUM

To: Members of the Environmental Review Commission
From: Jennifer Mundt, Commission Analyst
Re: Reports to the Commission

The following reports have been submitted by the Department of Environment and Natural Resources (DENR) to the Environmental Review Commission since the last reports distribution on 9 October 2006 are designated as read only reports. Copies of the reports are attached to this memorandum:

1. Annual Report on the Progress in Developing and Implementing the Coastal Habitat Protection Plans. 1 September 2006. Statutory Authority: G.S. 143B-279.8(e) and G.S. 143B-279.8(f).

2. Annual Report on the Inactive Hazardous Sites Program. 1 October 2006. Statutory Authority: G.S. 130A-310.10.

3. Semi-Annual Report on the Pilot Program for Inspection of Animal Waste Management Systems. 15 October 2006. Authority: S.L. 2003-340, Sec. 6.2.

4. Annual Basinwide Water Quality Management Plans. 1 October 2006. Statutory Authority: G.S. 143-215.8B.

5. Annual Report on the Dry-Cleaning Solvent Clean-Up Program. 1 October 2006. Statutory Authority: G.S. 143-215.104U.

6. Annual Report on the Implementation of Stormwater Rules and Programs. 1 October 2006. Statutory Authority: G.S. 143-214.7(e).

The following reports have been submitted by the indicated agency to the Environmental Review Commission and are distributed in connection with Agenda Items as noted below:

1. Annual report by the Department of Transportation on the development and implementation of a plan to reduce vehicle miles traveled by State employees and vehicle emissions resulting from job-related travel, including commuting to and from work. The annual report on

development and implementation of a plan to reduce vehicle miles traveled by private sector employees and vehicle emissions resulting from job-related travel, including commuting to and from work. 1 October 2006. Statutory Authority: G.S. 143.215.107C(d) and G.S. 143.215.107C(e). ***Agenda Item #7***

2. Annual Report by DENR on the North Carolina Hazardous Waste Management Plan. 1 October 2006. Statutory Authority: G.S. 130A-294(i). ***Agenda Item #8***

3. Annual Report by DENR on the Resident Inspectors Program at Commercial Hazardous Waste Facilities. 1 October 2006. Statutory Authority: G.S. 130A-295.02(m). ***Agenda Item #8***

4. Annual Report by DENR on Permitting and Inspecting Animal Waste Management Systems (Animal Waste Compliance Report). 1 October 2006. Statutory Authority: G.S. 143.215.10M. ***Agenda Item #9***

5. Annual Report by DENR on compliance with enforcement of water quality laws for facilities that discharge into surface waters. 1 October 2006. Statutory Authority: G.S. 143-215.9A. ***Agenda Item #10***

6. Annual Report by the State Water Infrastructure Commission on its Activities and Findings. 1 November 2006. Statutory Authority: G.S. 159G-67. ***Agenda Item #11***

7. Report by DENR on the evaluation of the training and qualification requirements for approval as an animal waste management systems technician. 15 November 2006. Authority: S.L. 2006-38, Sec. 2. ***Agenda item #12***

Please contact George Givens, Jeff Hudson, Jennifer McGinnis, or Jennifer Mundt at (919) 733-2578 if you have any questions or comments.

Status of Reports to the ERC Required by Law

Organized by topics: air quality, coastal issues, env. health, fishing, general, hazardous substances, land resources, parks and conservation, solid waste, water quality, water quantity, wetlands

air quality

NORTH CAROLINA GENERAL ASSEMBLY

Report on the study of the merger of the Ecological Enhancement Program and the Clean Water Management Trust Fund

REQUEST FOR PROPOSALS

November 18, 2006

Proposals subject to the conditions made a part hereof will be received until **5:00 p.m. EST December 08, 2006** for furnishing services described herein. Send all proposals to the following:

Lisa Hollowell
Fiscal Research Division
General Assembly of North Carolina
Room 619 Legislative Office Building
300 N. Salisbury St.
Raleigh, NC, 27603
Phone: 919-733-4910

Email: lisah@ncleg.net

Questions about the RFP should be sent by email to Ms. Hollowell.

NOTE: Indicate firm name on the front of each sealed proposal envelope or package.

Introduction

The Joint Legislative Transportation Oversight Committee (JLTOC) of the North Carolina General Assembly and the Environmental Review Commission (ERC) of the North Carolina General Assembly are seeking a consultant to study the merger of the organization and functions of the Ecological Enhancement Program (EEP) and the Clean Water Management Trust Fund (CWMTF).

Section 16 of Part XVI of Session Law 2006-248, House Bill 1723, directs the ERC and JLTOC to jointly study the merger of the organization and functions of the two programs.

> **PART XVI. MERGER OF ECOLOGICAL ENHANCEMENT PROGRAM AND THE CLEAN WATER MANAGEMENT TRUST FUND (Jenkins)**
>
> **SECTION 16.** The Environmental Review Commission and the Joint Legislative Transportation Oversight Committee shall jointly study the merger of the organization and functions of the Ecological Enhancement Program with the Clean Water Management Trust Fund. The Commission and the Committee may hire consultants to assist with the study. The final report shall be made to the 2007 General Assembly.

Ecosystem Enhancement Program

In 2003, the United States Army Corps of Engineers (USACE), North Carolina Department of Transportation (NCDOT) and North Carolina Department of Environment and Natural Resources (NCDENR) signed a memorandum of agreement (MOA) that created the Ecosystem Enhancement Program (EEP). The agreement created procedures and guidelines for providing the compensatory mitigation to offset impacts to waters and wetlands due to transportation activities and construction. The MOA provided for the incorporation of the Wetlands Restoration Program (WRP), which had been established by State law in 1996 to provide the compensatory mitigation required by the section 404 permit issued by the USACE for land development impacting wetlands, into the EEP. The MOA also provided that the WRP would be renamed as the EEP, which was confirmed by the enactment of conforming legislation in 2005.

Clean Water Management Trust Fund

The Clean Water Management Trust Fund (CWMTF) is a non-regulatory agency that administers a water quality grants program. The grant funds are awarded to local governments, State agencies, nonprofit conservation organizations, and other subdivisions of the State and may be used to acquire conservation easements or fee simple ownership of land in order to "preserve riparian buffers, wetlands, floodplains, and greenways; to restore riparian buffers, streams and wetlands; to repair failing wastewater collection and

treatment systems; to eliminate failing septic tanks and straight pipes, to prevent, reduce, collect and treat stormwater pollution and to plan water quality projects". (*Annual Report 2005, The North Carolina Clean Water Management Trust Fund*)

A brief history of the CWMFT follows:
In 1996 the General Assembly created the Clean Water Management Trust Fund with a prescribed mission to "clean up pollution in the State's surface waters and to protect and conserve those waters that are not yet polluted" (GS 113A-251). The General Assembly provided a dedicated and recurring funding source and required a Board of Trustees, Executive Director and staff. The Board of Trustees was empowered to establish a grant funding program to advance the mission. Since 1996, the CWMTF Board has approved over $595.8 million in grants for projects which have leveraged significant additional funds in private and other public funding.

During the 2005-2006 biennium the General Assembly appropriated recurring funding of $100 million for each year of the biennium for the grant program. During 2005, the CWMFT Board of Trustees approved funding for 159 projects for a total amount of $112.7 million and approved an administrative budget of $1.663 million for fiscal year 2006.

Scope of Study

1. The study will fully analyze, describe, and compare the organizational structures, missions, and budgets (both administrative and programmatic) of the EEP and the CWMTF. The comparison will identify whether there have been land purchases that may be utilized in both mitigation for North Carolina Department of Transportation projects and aid in cleaning up pollution in waters or preventing waters from becoming polluted. The consultant will analyze and may recommend whether to combine some or all of the activities of the two programs into one organization.

The Consultant shall provide the following detailed information on the EEP:

- Full description of the mitigation process including: selection of target areas, acquisition of land, crediting of land, use of the land, banking of surplus or unused credits. Describe how the EEP approach differs from the past approach when NCDOT handled mitigation within the agency. Describe the guidelines and requirements of the USACE and relate how these guidelines impact the policies established within EEP.
- Inventory the acquisitions and credits and restored or preserved lands accrued to date and describe how these acquisitions and credits have been assigned to projects and the process by which they may be reassigned or re-categorized for future projects. Include in a separate inventory the NCDOT transferred land credits and assigned projects.
- Detail the process for valuing the credits and restored acres assigned to projects in the near future and the surplus credits. Calculate the value of the credits currently in inventory with EEP. Identify options for the State

regarding the surplus land acquisitions that is not needed in the near future for mitigation purposes.

- The consultant shall identify best practices for mitigation processes and provide examples from other states.

II. The consultant will conduct a mitigation banking analysis that compares the relative effectiveness, efficiency, and total cost of the State's mitigation program to that of private mitigation banks. The consultant shall identify the State's processes and private sector processes of mitigation including Design, Bid, Build (EDP) and Full Delivery Procurement (EDP). The consultant will review current State policies with respect to the activities that private mitigation banks may undertake with respect to the services that private mitigation banks provide. The consultant will make recommendations for future mitigation banking policies as a result of the analysis.

III. The consultant will provide (1) alternative options to the merger of the programs into one entity, and (2) detail other collaborative arrangements that could exist in lieu of a complete merger and (3) identify other ways in which to provide mitigation in a more cost-effective way.

IV. The consultant will review and analyze pending and likely changes at the Federal level that may impact the State's programs.

V. The consultant will create an implementation schedule with timeline on any consultant-recommended options including projected budgets.

Qualifications

Potential vendors submitting proposals must demonstrate their knowledge of states' environmental preservation and mitigation processes, federal government environmental regulations related to highway/road building and construction, and demonstrated capability to produce clear, well-written reports by providing examples of completed projects.

Project Timeframe

The schedule is listed below:

Activity	Date
RFP Distributed	November 18, 2006
Proposals from Vendors Due	December 8, 2006
Award Contract	December 22, 2006
Sign Contract/Begin Work	January 2, 2007
Final Report	The consultant will propose a delivery date not to exceed 20 weeks.

Reports

The consultant will deliver up to four legislative presentations. The consultant will provide interim written reports and the final report will include an electronic version and 100 hardcopy reports.

Required Contents for Proposal

The response to this request for proposals shall consist of the following sections:

a) Executive Summary
   The executive summary shall consist of a brief summary of the contents of the proposal.
b) Corporate Background and Experience
   This section shall include:
   1) Background information on the organization and details of experiences with similar projects.
   2) A list of at least three references, including contacts and telephone numbers, for whom similar work has been performed.
   3) Samples of work products.
c) Financial Statement
   The vendor's most recent financial statement or similar evidence of financial stability.
d) Project Staffing and Organization
   This section shall include:
   1) Proposed staffing, deployment and organization of personnel to be assigned to this project.
   2) The vendor shall include resumes of key personnel who will actually be assigned to the project, describing experience with similar projects and the responsibilities to be assigned to each person.
   3) How the study will be planned, organized and conducted.
e) Technical Proposal
   This section shall include, in narrative, outline or graph form, the vendor's approach to accomplishing the tasks outlined in the project description section of this RFP. A description of each task and the schedule for accomplishing each shall be included.
f) Cost Proposal
   The cost proposal must contain the following information:
   1) Personnel costs (including hourly rates and total hours)
   2) Travel and subsistence expenses
   3) Office space, telephone, and other support needs, if any, anticipated from the General Assembly
   4) Subvendor costs (if any)
   5) Other costs
   6) Total cost for completing the project
   7) Rates for additional analyses requested during the project period

Proposal Submittal Process

a) Two original and 10 copies of the proposal plus electronic copy, PDF preferred.
b) Each original shall be signed and dated by an official authorized to bind the firm.

Vendor Selection Process

The selection of the vendor will be determined by a "Best Value" methodology, with key factors to be considered to include experience of the vendor and its consultants with related projects and price.

General Conditions Related to Submittal of Proposals

Right to Reject

The Joint Legislative Transportation Oversight Committee (hereinafter "Committee") reserves the unqualified right to reject any and all proposals when such rejection is deemed to be in the best interest of the State of North Carolina.

Right to Accept Part of Proposal, Negotiate Content and Cost

The Committee reserves the right to accept part of any proposal, and to divide any proposal into parts deliverable in stages over an extended time period. The Committee reserves the right to negotiate and alter the content, form, schedule, and deliverables of any proposal or portion of a proposal accepted. The Committee reserves the right to negotiate the cost of any proposal or portion of a proposal accepted.

Time for Acceptance

Each proposal shall state that it is a firm offer that may be accepted within a period of 30 days from the date of submission.

Unsolicited Proposal Changes

Any unsolicited change to a proposal that is received after the closing date of this RFP will be rejected.

Responsibility to Make Timely Submission

The vendor is responsible for assuring the timely delivery of a proposal. Late proposals will be rejected without review.

Cost for Proposal Preparation

Any costs incurred by vendors in preparing or submitting offers are the vendor's sole responsibility; the Committee will not reimburse any vendor for any costs incurred prior to award.

Elaborate Proposals

Elaborate proposals in the form of brochures or other presentations beyond that necessary to present a complete and effective proposal are not desired. Vendors are encouraged to limit proposals to approximately 10 pages or less (not including examples of work products).

Oral Explanations

The Committee shall not be bound by oral explanations or instructions given at any time during the competitive process or after award.

Confidentiality of Proposals

In submitting its proposal the vendor agrees not to discuss or otherwise reveal the contents of the proposal to any source outside of the Committee or its Legislative Services Office staff until after the award of the contract.

Form of Proposal

Proposals shall be submitted in a form that, in the opinion of the Committee, may be incorporated verbatim into a contract.

Exception to Terms

Any exception, interpretation, or suggestion for clarification by the vendor to any of the terms and conditions of this RFP must be clearly stated by the vendor.

Competitive Offer

Pursuant to the provision of G.S. 143-54, and under penalty of perjury, the signer of any proposal submitted in response to this RFP thereby certifies that this proposal has not been arrived at collusively or otherwise in violation of either Federal or North Carolina antitrust laws.

Right to Submitted Materials

All responses, inquiries, and correspondence relating to or in reference to this RFP shall become the property of the State of North Carolina when received.

Vendor's Representative

Each vendor shall submit with its proposal the name, address, telephone number, and email address of the person(s) with authority to bind the firm and answer questions or provide clarification concerning the vendor's proposal.

Proprietary Information

All vendors' information submitted in the proposal has the potential to become public information. Vendors are cautioned that any proprietary information contained in the proposal may not be protected as confidential and should not be submitted in response to this RFP.

Terms and Conditions of Resulting Contract

The following are terms and conditions that will be included in the contract for conducting the project. Other terms and conditions may be added prior to the signing of the contract.

Vendor

The contract is between the Joint Legislative Transportation Oversight Committee (subject to the approval of the Legislative Services Commission) and the selected vendor (hereinafter referred to as "Vendor").

Governing Law

This contract is made under and shall be governed and construed in accordance with the laws of the State of North Carolina.

Situs

The place of this contract, its situs and forum, shall be Raleigh, North Carolina, where all matters, whether sounding in contract or tort, relating to its validity, construction, interpretation and enforcement shall be determined.

Contract Period

The terms of the contract shall begin at its signing and shall end twelve weeks after contract signing, unless extended or terminated as provided in this document.

Termination

Upon mutual written agreement of the Committee and the Vendor, the contract may be terminated at any time. Failure to perform by the Vendor may result in termination by the Committee. In addition, the Committee has the right to terminate the contract at its discretion with 10 days written notice. In the event of termination, the Vendor will be paid an amount commensurate with work completed.

Independent Vendor

The Vendor shall be considered to be an independent vendor and as such shall be wholly responsible for the work to be performed and for the supervision of its employees. The Vendor represents that it has, or will secure at its own expense, all personnel required in performing the services under this agreement. Such employees shall not be employees of, or have any individual contractual relationship with the Committee or the Legislative Services Office.

Key Personnel

The Vendor shall not substitute key personnel assigned to the performance of this contract without prior written approval by the Committee. The individuals designated as key personnel for purposes of this contract are those specified in the Vendor's proposal.

Subcontracting

Work proposed to be performed under this contract by the Vendor or its employees shall not be subcontracted without prior written approval of the Committee.

Performance and Default

If, through any cause, the Vendor shall fail to fulfill in timely and proper manner the obligations under this agreement, the Committee shall thereupon have the right to terminate this contract by giving written notice to the Vendor and specifying the effective date thereof. In that event, all finished or unfinished deliverable items under this contract prepared by the Vendor shall, at the option

of the Committee, become its property, and the Vendor shall be entitled to receive just and equitable compensation for any satisfactory work completed on such materials. Notwithstanding, the Vendor shall not be relieved of liability to the Committee for damages sustained by the Committee by virtue of any breach of this agreement, and the Committee may withhold any payment due the Vendor for the purpose of setoff until such time as the exact amount of damages due the Committee from such breach can be determined. In case of default by the Vendor, the Committee may procure the services from other sources and hold the Vendor responsible for any excess cost occasioned thereby. Neither party shall be deemed to be in default of its obligations hereunder if and so long as it is prevented from performing such obligations by any act of war, hostile foreign action, nuclear explosion, riot, strikes, civil insurrection, earthquake, hurricane, tornado or other catastrophic natural event or act of God.

Bankruptcy

Upon the filing for bankruptcy or insolvency by or against the vendor, the Committee may terminate the contract, and the provisions of paragraph entitled "Performance and Default" shall apply.

Performance Bond

The Committee may require either a performance bond up to the full amount of the contract or another performance guarantee.

Availability of Funds

Any and all payments to the Vendor are dependent upon and subject to the availability of funds to the Committee for the purpose set forth in this agreement.

Confidentiality

The vendor agrees to protect the confidentiality of any files, data, or other materials provided by the Committee and to restrict their use to the purpose of performing the contract. The vendor shall comply with the provisions of Article 17 of Chapter 120 of the North Carolina General Statutes regarding confidentiality between the vendor and members of the General Assembly.

Care of Property

The Vendor agrees that it shall be responsible for the proper custody and care of any files or other property furnished by the Committee.

Copyright

No deliverable items produced in whole or in part under this agreement shall be the subject of an application for copyright by or on behalf of the Vendor.

Access to Persons and Records

The State Auditor shall have access to persons and records as a result of all contracts or grants entered into by State agencies or political subdivisions in

accordance with General Statute 147-64.7. The Vendor shall retain all records for a period of three years following completion of the contract.

Transfer or Assignment

The contract shall not be transferred or assigned to a third party.

Compliance with Laws

The Vendor shall comply with all laws, ordinances, codes, rules, regulations and licensing requirements that are applicable to the conduct of its business, including those of federal, state, and local agencies having jurisdiction or authority.

Equal Opportunity Statement

The nondiscrimination clause contained in Section 202 Executive Order 11246, as amended by Executive Order 11375, relative to equal employment opportunity for all persons without regard to race, color, religion, sex, age or national origin, and the rules and regulations prescribed by the Secretary of Labor, are incorporated herein. The program for Employment of the Handicapped (Affirmative Action) Regulations issued by the Secretary of Labor of the United States in Title 20, Part 741, Chapter VI, Subchapter "C" of the Code of Federal Regulations, pursuant to the provisions of Executive Order 11758 and Section 503 of the Federal Rehabilitation Act of 1973, are incorporated herein.

Insurance

The Vendor shall obtain, pay for, and keep in force, for the duration of the contract, worker's compensation insurance, as required by the laws of North Carolina, covering all of the Vendor's employees engaged in any work on the project in the State.

Additional Contract Expenses

The contract for the project is not a time and materials agreement. Any expenses of the vendor in addition to those contracted for, or above the contract amount, are the sole responsibility of the Vendor.

Advertising

Vendor agrees not to use the results or existence of the contract, or the products produced pursuant to the contract as a part of any news release or commercial advertising without the prior written approval of the Committee.

ATTACHMENT A

SESSION LAW 2006-178
House Bill 2208

AN ACT TO REPEAL THE REQUIREMENT THAT CERTAIN STATUTORY CRITERIA RELATED TO GRANTS FROM THE CLEAN WATER MANAGEMENT TRUST FUND FOR WASTEWATER AND STORMWATER COLLECTION AND TREATMENT PROJECTS HAVE PRIORITY OVER CRITERIA ESTABLISHED BY THE BOARD OF TRUSTEES OF THE CLEAN WATER MANAGEMENT TRUST FUND, TO CLARIFY THE AUTHORITY OF THE BOARD OF TRUSTEES WITH RESPECT TO MATCH REQUIREMENTS IN CONNECTION WITH GRANT AWARDS, AND TO ESTABLISH TERM LIMITS FOR THE BOARD OF TRUSTEES.

The General Assembly of North Carolina enacts:

SECTION 1. G.S. 113A-254 reads as rewritten:

"**§ 113A-254. Grant requirements.**

(a) Eligible Applicants. – Any of the following are eligible to apply for a grant from the Fund for the purpose of protecting and enhancing water quality:

(1) A State agency.
(2) A local government unit.
(3) A nonprofit corporation whose primary purpose is the conservation, preservation, and restoration of our State's environmental and natural resources.

(a1) Criteria. – The criteria developed by the Trustees under G.S. 113A-256 apply to grants made under this Article. The common criteria for water projects set in G.S. 159G-23 and the criteria set out in this section also apply to wastewater collection system projects, wastewater treatment works projects, and stormwater quality projects. ~~The common criteria set in G.S. 159G-23 have priority over the criteria set under this Article for wastewater collection system projects, wastewater treatment works projects, and stormwater quality projects.~~ An application for a wastewater collection system project or a wastewater treatment works project that serves an economically distressed local government unit has priority.

(b) Matching Requirement. – The Board of Trustees shall establish matching requirements for grants awarded under this Article. ~~The Board of Trustees may require a match of up to twenty percent (20%) of the amount of the grant awarded.~~ This requirement may be satisfied by the donation of land to a public or private nonprofit conservation organization as approved by the Board of Trustees. The Board of Trustees may also waive the requirement to match a grant pursuant to guidelines adopted by the Board of Trustees.

(c) Restriction. – No grant shall be awarded under this article to satisfy compensatory mitigation requirements under 33 USC § 1344 or G.S. 143-214.11.

(d) Wastewater Limits. – A wastewater collection system project or a wastewater treatment works project is eligible for a grant under this Article only if it is a high-unit-cost project, as defined in G.S. 159G-20. A grant made under this Article for a wastewater collection system project or a wastewater treatment works project is subject to the cost limits and recipient limits set in G.S. 159G-36 for a grant awarded from the Wastewater Reserve.

(e) Stormwater Limits. – The amount of a grant awarded under this Article for a stormwater quality project may not exceed the construction costs of the project. The total amount of grants awarded under this Article to the same recipient for stormwater quality projects for a fiscal year may not exceed the limit set in G.S. 159G-36(c)(1) for grants to the same recipient from the Wastewater Reserve.

(f) Withdrawal. – An award of a grant under this Article is withdrawn if the grant recipient fails to enter into a construction contract for the project within one year after the date of the award, unless the Trustees find that the applicant has good cause for the failure. If the Trustees find good cause for a recipient's failure, the Trustees must set a date by which the recipient must take action or forfeit the grant."

SECTION 2. G.S. 113A-255 is amended by adding a new subsection to read:

"(b2) Limitation on Length of Service. – No member of the Board of Trustees shall serve more than two consecutive four-year terms or a total of 10 years."

SECTION 3. Sections 1 and 3 of this act are effective retroactively to 1 January 2006. Section 2 of this act is effective retroactively to 1 July 2006. This act shall not apply to any person who is a member of the Board of Trustees of the Clean Water Management Trust Fund on 30 June 2006.

In the General Assembly read three times and ratified this the 17th day of July, 2006.

CHAPTER II

15A NCAC 02D .2501 is proposed for adoption as follows:

SECTION .2500 –MERCURY RULES FOR ELECTRIC GENERATORS

15A NCAC 02D .2501 PURPOSE AND APPLICABILITY

(a) Purpose. The purpose of this Section is to control mercury emissions from coal-fired electric steam generating Hg units and to comply with the mercury emission caps of 1.133 tons (36,256 ounces) per year between 2010 and 2017 inclusive and 0.447 tons (14,304 ounces) per year for 2018 and thereafter as set out in 40 CFR 60.24.

(b) Applicability. This Section applies to:

(1) any stationary coal-fired boiler or ~~coal-gasification unit servicing~~ any stationary coal-fired combustion turbine serving at any time, since the start-up of a unit's combustion chamber, a generator with nameplate capacity of more than 25 MWe producing electricity for sale; or

(2) for a unit that qualifies as a cogeneration unit during the 12-month period starting on the date that the unit first produces electricity and continues to qualify as a cogeneration unit, a cogeneration unit serving at any time a generator with nameplate capacity of more than 25 MWe and supplying in any calendar year more than one-third of the unit's potential electric output capacity or 219,000 MWh, whichever is greater, to any utility power distribution system for sale. If a unit that qualifies as a cogeneration unit during the 12-month period starting on the date the unit first produces electricity but subsequently no longer qualifies as a cogeneration unit, the unit shall be subject to Subparagraph (1) of this Paragraph starting on the day on which the unit first no longer qualifies as a cogeneration unit; or

(3) the ~~sources~~Hg budget unit identified in the table in Rule .2503, of this Section.

(c) Retired Hg unit exemption. Any Hg unit that is permanently retired shall be exempted from the annual trading program if it complies with the provisions of 40 CFR 60.4105.

(d) Effect on other authorities. No provision of this Section, any application submitted or any permit issued pursuant to Rule .2504 of this Section, or any exemption under 40 CFR 60.4105, shall be construed as exempting any ~~source~~Hg unit or ~~facility~~source covered under this Section or the owner or operator or designated representative of any ~~source~~Hg unit or ~~facility~~source covered under this Section from complying with any other requirements of this Subchapter or Subchapter 15A NCAC 02Q.

(e) Additional controls. The Commission shall require additional reductions in mercury emissions when needed to reduce mercury concentrations to levels that do not cause or contribute to mercury-related health problems.

Authority G.S. 143-215.3(a); 143-215.107(a)(5), (10).

15A NCAC 02D .2502 has been adopted as published in 20:21 NCR-1794:

15A NCAC 02D .2502 DEFINITIONS

(a) For the purpose of this Section, the definitions in 40 CFR 60.4102, shall apply.

(b) For the purpose of this Section, the abbreviations and acronyms listed in 40 CFR 60.4103 shall apply.

Authority G.S. 143-215.3(a); 143-215.107(a)(5), (10).

15A NCAC 02D .2503 has been adopted as published in 20:21 NCR 1794-1797 with changes as follows:

15A NCAC 02D .2503 MERCURY EMISSION

(a) Allocations. The table in this Paragraph contains allocations in ounces of total mercury.

~~(b) The allocations in the table in Paragraph (a) of this Rule shall be reduced under Rule .2508 of this Section by:~~

~~(1) five percent in 2010 through 2017 and~~

~~(2) three percent in 2018 and thereafter.~~

~~(c)~~(b) Compliance. The emissions of mercury of a ~~unit listed in the table~~Hg budget source ~~in Paragraph (a) of this Rule~~ shall not exceed the number of allowances that it has in its compliance account ~~established under~~according to Rule .2510 of this Section.

~~(d)~~(c) Emission measurement requirements. The emissions measurements recorded and reported according to 40 CFR 60.4170 through 60.4176 shall be used to determine compliance by each source identified in this rule with its emissions limitation according to 40 CFR 60.4106(c).

~~(e)~~(d) Excess emission requirements. The provisions of 40 CFR 60.4106(d) shall be used for excess emissions.

~~(f)~~(e) Liability. The owner or operator of any source covered under this Section shall be subject to the provisions of 40 CFR 60.4106(f).

~~(g)~~(f) Modification and reconstruction, replacement, retirement, or change of ownership. The modification or reconstruction of a source covered under this Rule shall not make that source a "new" source for the purposes of this Section; it could be considered a new source under Rule 15A NCAC 02D .0524, New Source Performance Standards, or 40 CFR Part 60. A source that is modified or reconstructed shall retain

its emission allocation under Paragraph (a) of this Rule. If one or more sources covered under this Rule is replaced, the new source shall receive the allocation of the source, or sources, that it replaces instead of an allocation under Rule .2508 of this Section. If the owner of a source changes, the emission allocations under this Rule and revised emission allocations made under Rule .2509 of this Section shall remain with the source. If a source is retired, the owner or operator of the source shall follow the procedures in 40 CFR 60.4105. The allocations of a retired source shall remain with the owner or operator of the retired source until a reallocation occurs under Rule .2509 of this Section when the allocation shall be removed and given to other sources if the retired source is still retired.

(g) The Director shall comply with the timing requirements for mercury allocations under 40 CFR 60.4141.

Authority G.S. 143-215.3(a); 143-215.65; 143-215.66; 143-215.107(a)(5), (10).

15A NCAC 02D .2504 has been adopted as published in 20:21 NCR 1797 with changes as follows:

15A NCAC 02D .2504 PERMITTING

(a) The owner or operator of any Hg budget source covered under this Section shall submit permits applications to comply with the requirements of this Section following the procedures and requirements in 40 CFR 60.4106(a), 60.4121, and 60.4122 and in Subchapter 15A NCAC 02Q.

(b) The Director shall review applications submitted under Paragraph (a) of this Rule and issue permits for compliance with this Section following the procedures and requirements in 40 CFR 60.4106(a), 60.4120, 60.4123, and 60.4124 and in Subchapter 15A NCAC 02Q.

Authority G.S. 143-215.3(a); 143-215.107(a)(5), (10); 143-215.108.

15A NCAC 02D .2505 has been adopted as published in 20:21 NCR 1797 with changes as follows:

15A NCAC 02D .2505 MONITORING, REPORTING, AND RECORDKEEPING

(a) The owner or operator of a ~~source~~Hg budget unit covered under this Section shall comply with the monitoring, recordkeeping, and reporting requirements in 40 CFR 60.4106(b) and (e) and in 40 CFR 60.4170 through 60.4176.

(b) To approve or disapprove monitors used to show compliance with Rule .2503 of this Section, the Division shall follow the procedures in 40 CFR 60.4171.

Authority G.S. 143-215.3(a); 143-215.65; 143-215.66; 143-215.107(a)(5), (10).

15A NCAC 02D .2506 has been adopted as published in 20:21 NCR 1797 with changes as follows:

15A NCAC 02D .2506 DESIGNATED REPRESENTATIVE

(a) Designated representative. The owner or operator of any Hg budget source covered under this Section shall select a designated representative according to 40 CFR ~~6.411060~~60.4110. The designated representative shall have the responsibilities and duties set out in 40 CFR 60.4110.

(b) Alternate designated representative. The owner or operator of any Hg budget source covered under this Section shall select an alternate designated representative according to 40 CFR 60.4111. The alternate designated representative shall have the responsibilities and duties set out in 40 CFR 60.4111.

(c) Changing designated representative and alternate designated representative. The owner or operator of any Hg budget source covered under this Section may change the designated representative or the alternate designated representative using 40 CFR 60.4112.

(d) Changes in owners and operators. Whenever the owner or operator of a Hg budget source covered under this Section changes, the provisions in 40 CFR 60.4112(c) shall be followed.

(e) Certificate of representation. A complete certificate of representation for a CAMR designated representative or an alternate CAMR designated representative shall meet the requirements of 40 CFR 60.4113.

(f) Objections concerning CAMR designated representative. Objections concerning CAMR designated representative shall be handled according to the procedures in 40 CFR 60.4114.

Authority G.S. 143-215.3(a); 143-215.107(a)(5), (10).

15A NCAC 02D .2507 has been adopted as published in 20:21 NCR 1793-1794 as follows:

15A NCAC 02D .2507 COMPUTATION OF TIME

Time periods shall be determined as described in 40 CFR 60.4107.

Authority G.S. 143-215.3(a); 143-215.107(a)(5), (10).

15A NCAC 02D .2508 has been adopted as published in 20:21 NCR 1797 with changes as follows:

15A NCAC 02D .2508 NEW SOURCE GROWTH

~~(a) The procedures in 40 CFR 60.4142(c) shall be used to create allocations for sources that commenced construction on or after January 1, 2001 and are not listed in the table in Rule .2503 of this Section.~~

(a) The total mercury allowances available for allocation in the new Hg unit set-aside for each control period in 2010 through 2017 shall be 1,813 ounces; the total mercury allowance available for allocations in each control period in 2018 and thereafter shall be 429 ounces. Except for the reference to 40 CFR 60.4142(b), the procedures in 40 CFR 4142(c)(2) through (4) shall be used to create allocations for Hg units covered under this Section that commence operations on or after January 1, 2001 and that are not covered in the table in Rule 2503 of this Section.

(b) The number of allowances allocated to a ~~source~~Hg unit under this Rule shall not exceed the ~~source's~~Hg unit's actual emissions of mercury.

(c) New Hg unit allowances in Paragraph (a) of this Rule that are not allocated in a given year shall be distributed to Hg units covered in the table in Rule 2503 of this Section according to the provisions of 40 CFR 4142(d), except that the divisor used in calculating individual Hg unit allocations shall be:

(1) 1,813 ounces for each control period in 2010 through 2017, and

(2) 429 ounces for each control period in 2018 and thereafter.

Authority G.S. 143-215.3(a); 143-215.107(a)(5), (10).

15A NCAC 02D .2509 has been adopted as published in 20:21 NCR 1797-1798 with changes as follows:

15A NCAC 02D .2509 PERIODIC REVIEW AND REALLOCATIONS

(a) In 2010 and every five years thereafter, the Environmental Management Commission shall review the emission allocations of ~~sources~~ Hg units covered under Rules .2503 of this Section and new ~~sources~~ Hg units covered under this Section that have been permitted but are not named in Rule .2503 of this Section and decide if any revisions are needed. In making this decision the Environmental Management Commission shall consider the following:

(1) the size of the allocation pool for new ~~sources~~ Hg unit growth under Rule .2508 of this Section;

(2) the amount of emissions from ~~sources~~ Hg units receiving allocations under Rule .2508 of this Section;

(3) the amount of emissions allocations available through the trading program under Rule .2510 of this Section;

(4) the impact of reallocation on existing ~~sources~~ Hg units;

(5) the impact of reallocations on ~~sources~~ Hg units receiving allocations under Rule .2508 of this Section;

(6) impact of future growth; and

(7) other relevant information on the impacts of reallocation.

(b) The Division of Air Quality shall report to the Commission in July 2008 ~~2008, July 2011,~~ and July 2012. ~~2013.~~ Each report shall provide the Commission and public updated information on the regulation

of mercury emissions. The 2008 report ~~and 2011 reports~~ shall include the information under Subparagraphs (1) through (12) of this Paragraph, where available. The ~~2013~~ 2012 report shall include all the following information:

(1) actual emissions from ~~sources~~ units covered under this Section since 2010 and all other principal sources of mercury;

(2) estimates of the amounts of the different species of mercury being emitted;

(3) a mercury balance for North Carolina, including imported, exported, and in-state mercury emissions and the fate and transport of mercury in the air and waters of the State;

(4) projected mercury emissions for 2015, 2018, 2023, and 2025;

(5) the amount of new source growth and projected new ~~sources~~ units growth through 2025;

(6) the state of mercury control technology, including technological and economic feasibility;

(7) an assessment of cost and performance of mercury control technology as it may be applied to uncontrolled sources of mercury in North Carolina, including both coal-fired electric steam generating units and other sources that emit mercury and including ~~as~~ an assessment of technology used to satisfy requirements of the Clean Smokestacks Act (G.S. 143-215.107D) and other requirements for controlling nitrogen oxide and sulfur dioxide emissions.

(8) a recommendation of mercury control technology, including the cost and expected reductions in mercury;

(9) results of studies and monitoring on mercury in fish in North Carolina, including an evaluation of the impact of reduced mercury emissions from coal-fired power plants on the levels of mercury observed in fish tissue;

(10) a summary of mercury-related health problems in North Carolina, including accumulation of mercury in humans and mercury exposures from non-air emitting sources; and

(11) results of studies on mercury deposition, applying monitoring techniques, back trajectory analysis, source attribution methodology, and any other relevant methodologies to assess the role of coal-fired units in North Carolina deposition.

(12) recommendations, if any, on rule revisions.

(c) Based on the ~~2013~~ 2012 report, the Commission shall ~~determine~~ review mercury control requirements ~~for the units identified in Paragraphs (a) and (c) of Rule .2511~~ and decide if any ~~other~~ rule changes are needed.

~~(c)~~ (d) Any changes made as a result of the review under Paragraph (a) or report under Paragraph (b) of this Section shall be made through rulemaking.

(e) The Director shall report to the Commission in 2018 and 2023 on the state of mercury control technology, including the mercury removal efficiency of available technology and the cost of installation and operation.

Authority G.S. 143-215.3(a); 143-215.107(a)(5), (10).

15A NCAC 02D .2510 has been adopted as published in 20:21 NCR 1798 with changes as follows:

15A NCAC 02D .2510 TRADING PROGRAM AND BANKING

(a) EPA to administer. The United States Environmental Protection Agency (EPA) shall administer the allowance tracking system according to the procedures in 40 CFR 60.4151 through 60.4162.

(b) Compliance account. The ~~owner~~owners or ~~operator~~operators of each Hg budget source covered under this Section shall have a compliance account in the EPA administered tracking system that satisfies the requirements of 40 CFR 60.4151(a).

(c) General account. Any person may apply to open a general account to hold and transfer allowances by using the procedures and meeting the requirements in 40 CFR 60.4151(b) and may close that account using the procedures in 40 CFR 60.4157.

(d) Allowance transfers. Any person who has a compliance or general account established under 40 CFR 60.4151 may transfer allowances using the procedures in 40 CFR 60.4160.

(e) Submittal of information. Persons with accounts shall submit information to EPA following the requirement of 40 CFR 60.4152.

(f) Banking. Any person who has a compliance account or a general account may bank allowances for future use or transfer under 40 CFR 60.4155.

(g) Appeal Procedures. The appeal procedures for decisions of the Administrator are set forth in 40 CFR 60.4108

Authority G.S. 143-215.3(a); 143-215.107(a)(5), (10).

15A NCAC 02D .2511 has been adopted as published in 20:21 NCR 1798-1799 with changes as follows:

15A NCAC 02D .2511 MERCURY EMISSION LIMITS

~~(a) Duke Energy. With the exception allowed under Paragraph (b) of this Rule, the owner or operator of the facilities listed in this Paragraph shall shut down or install and operate mercury control technology in compliance with mercury control requirements determined by the Commission under Rule .2509 of this Section on eight of the units listed in this Paragraph by December 31, 2017. Duke Energy shall not operate any unit listed in this Paragraph after December 31, 2022 unless mercury control technology has been installed on each unit and is operating as permitted. The owner or operator shall determine the eight units on which to install and operate mercury control technology by December 31, 2017.~~

~~(1) Duke Energy, Buck units 5, 6, 7, 8, and 9;~~

~~(2) Duke Energy, Cliffside units 1, 2, 3, and 4;~~

~~(3) Duke Energy, Dan River units 1, 2, and 3;~~

~~(4) Duke Energy, Riverbend units 7, 8, 9, and 10.~~

~~(b) Duke Energy alternative. Duke Energy may propose mercury reductions from one or more of the Belews Creek, GG Allen and Marshall units in lieu of the installation of mercury control technology on a unit regulated under Paragraph (a) of this Rule (a "regulated unit"). The Director shall approve the alternative mercury reductions upon finding that they will result in at least 110 percent of the reductions in mercury emissions that would be achieved through control of the regulated unit in compliance with the mercury control requirements adopted by the Commission.~~

~~(c) Progress Energy. With the exception allowed under Paragraph (d) of this Rule, the owner or operator of the facilities listed in this Paragraph shall shut down or install and operate mercury control technology in compliance with mercury control requirements determined by the Commission under Rule .2509 of this Section on four of the units listed in this Paragraph by December 31, 2017. Progress Energy shall not operate any unit listed in this Paragraph after December 31, 2022 unless mercury control technology has been installed on each unit and is operating as permitted. The owner or operator shall determine the four units on which to install and operate mercury control technology by December 31, 2017.~~

~~(1) Progress Energy, L. V. Sutton units 1 and 2;~~

~~(2) Progress Energy, Lee units 1, 2, and 3;~~

~~(3) Progress Energy, W. H. Weatherspoon units 1, 2, and 3.~~

~~(d) Progress Energy alternative. Progress Energy may propose mercury reductions from one or more of the Asheville, Cape Fear, Mayo, and Roxboro units in lieu of the installation of mercury control technology on a unit regulated under Paragraph (c) of this Rule (a "regulated unit"). The Director shall approve the alternative mercury reductions upon finding that it will result in at least 110 percent of the reductions in mercury emissions that would be achieved through control of the regulated unit in compliance with the mercury control requirements adopted by the Commission.~~

(a) Initial reductions. Initial reductions in mercury emissions shall be achieved as a co-benefit of installing controls for nitrogen oxide (NOx) and sulfur dioxide (SO2) emissions pursuant to G.S. 143-215.107D. No later than January 1, 2013, Duke Energy and Progress Energy shall install controls for nitrogen oxide (NOx) and sulfur dioxide (SO2) emissions under their respective plans for compliance with G.S. 143-215.107D. Duke Energy and Progress Energy shall each monitor mercury emissions at no fewer than four boilers identified for control pursuant to G.S. 143-215.107D consistent with the requirements of Paragraphs (e) and (f) of this Rule to document the reductions in mercury emissions realized as a result of installing controls for nitrogen oxide and sulfur dioxide emissions.

(b) Mercury control plans. Duke Energy and Progress Energy shall each submit a mercury control plan to the Director by January 1, 2013. The plan shall identify the technology proposed for use at each unit owned or operated by the utility; the schedule for installation and operation of mercury controls at each unit; and shall identify any units that will be shut down. For purposes of this Rule, controls for nitrogen oxide and sulfur dioxide installed in compliance with G.S. 143-215.107D are considered to be mercury

controls. The plan shall provide for installation of mercury controls on the units to be controlled at the earliest date that is technically and economically feasible. Any unit that does not have mercury controls shall be shut down by December 31, 2017 unless the Commission has approved additional mercury reductions at a facility regulated under G.S. 143-215.107D in lieu of installing controls at the unit under the criteria set out in paragraph (c) of this Rule.

(c) Review and approval of plans. The Director shall review the mercury control plans submitted pursuant to Paragraph (b) of this Rule and shall recommend that the Commission approve the plans, disapprove the plans or conditionally approve the plans. The Commission shall approve a mercury control plan if it finds that the plan achieves the maximum level of reductions in mercury emissions that is technically and economically feasible without reliance on mercury allowances obtained through the allowance trading system under Rule .2510. Reductions in mercury are technically feasible if control technology exists that can reduce mercury emissions beyond the level achieved by an electrostatic precipitator for that particular unit. Economic feasibility is determined by considering environmental and health impacts; capital cost of compliance; risk of closure; annual incremental compliance cost; and impacts on local, regional and state economy. The Commission may approve additional reductions at a facility regulated under G.S. 143-215.107D in lieu of installing mercury controls at a unit that has no mercury controls if the Commission finds that:

(1) installation of controls at the unit is not economically and technically feasible; and

(2) continued operation of the unit without mercury controls will not cause or contribute to mercury-related health problems.

(e) Source testing. Duke Energy and Progress Energy shall each test several of its boilers in North Carolina, but no less than four boilers in North Carolina each, for mercury emissions that represent boiler types and control device configurations in North Carolina. The tests shall be conducted before installation of sulfur dioxide control devices and after the installation of sulfur dioxide control devices. All testing shall occur between the effective date of this Rule and January 1, 2009. Either continuous emission monitors that comply with Rule .2505 of this Section or Method 101 or 102 pf 40 CFR Part 61 Appendix B shall be used to measure mercury emissions. Each company shall submit a testing plan within nine months from the effective date of this Rule to the Director for his approval. The plan shall include:

(1) the identity of the boilers to be tested and an explanation of why they were selected.

(2) a schedule for testing the boilers, and

(3) a testing protocol including testing procedures.

(f) Approval of testing. The Director shall approve the testing plan submitted under Paragraph (e) of this Rule if he finds that:

(1) the elements required under Paragraph (e) of this Rule have been submitted,

(2) the boilers selected represent the boiler types and control device configurations that the company has in North Carolina, and

(3) the testing protocol and procedures are appropriate for the testing to be done.

(g) New sources.

~~**Option 1:**~~

~~Any coal-fired electric steam generating unit to which this Section applies and which begins operation after January 30, 2004 shall reduce its emissions of total mercury to no more than 0.021 pounds per gigawatt hour on an output basis.~~

~~**Option 2:**~~

~~Any coal-fired electric steam generating unit to which this Section applies and which begins construction after the effective date of this Rule shall:~~

~~(1) reduce its emissions of total mercury by 90 percent by weight across the control device as calculated under Paragraph (b) of this Rule or to no more than 0.0060 pounds per gigawatt hour averaged over a 12 month rolling average, and~~

~~(2) have enough allowances in its compliance account established under Rule .2510 of this Section to offset its actual emissions of mercury.~~

~~**Option 3:**~~

Any coal-fired electric steam generating unit to which this Rule applies and which begins construction after the effective date of this Rule shall install and operate best available control technology for mercury. For purposes of this Rule, "best available control technology" means an emissions limitation based on the maximum degree of reduction of mercury from coal-fired electric steam generating units that is achievable for such units taking into account energy, environmental, and economic impacts and other costs. The Director shall identify best available mercury control technology on a case by case basis. In no event shall application of best available control technology result in emissions of any pollutant which would exceed the emissions allowed by any applicable standard under 40 CFR parts 60, 61, or 63.

Authority G.S. 143-215.3(a); 143-215.107(a)(5); 143-215.107D

Solid Waste Section Moratorium Study

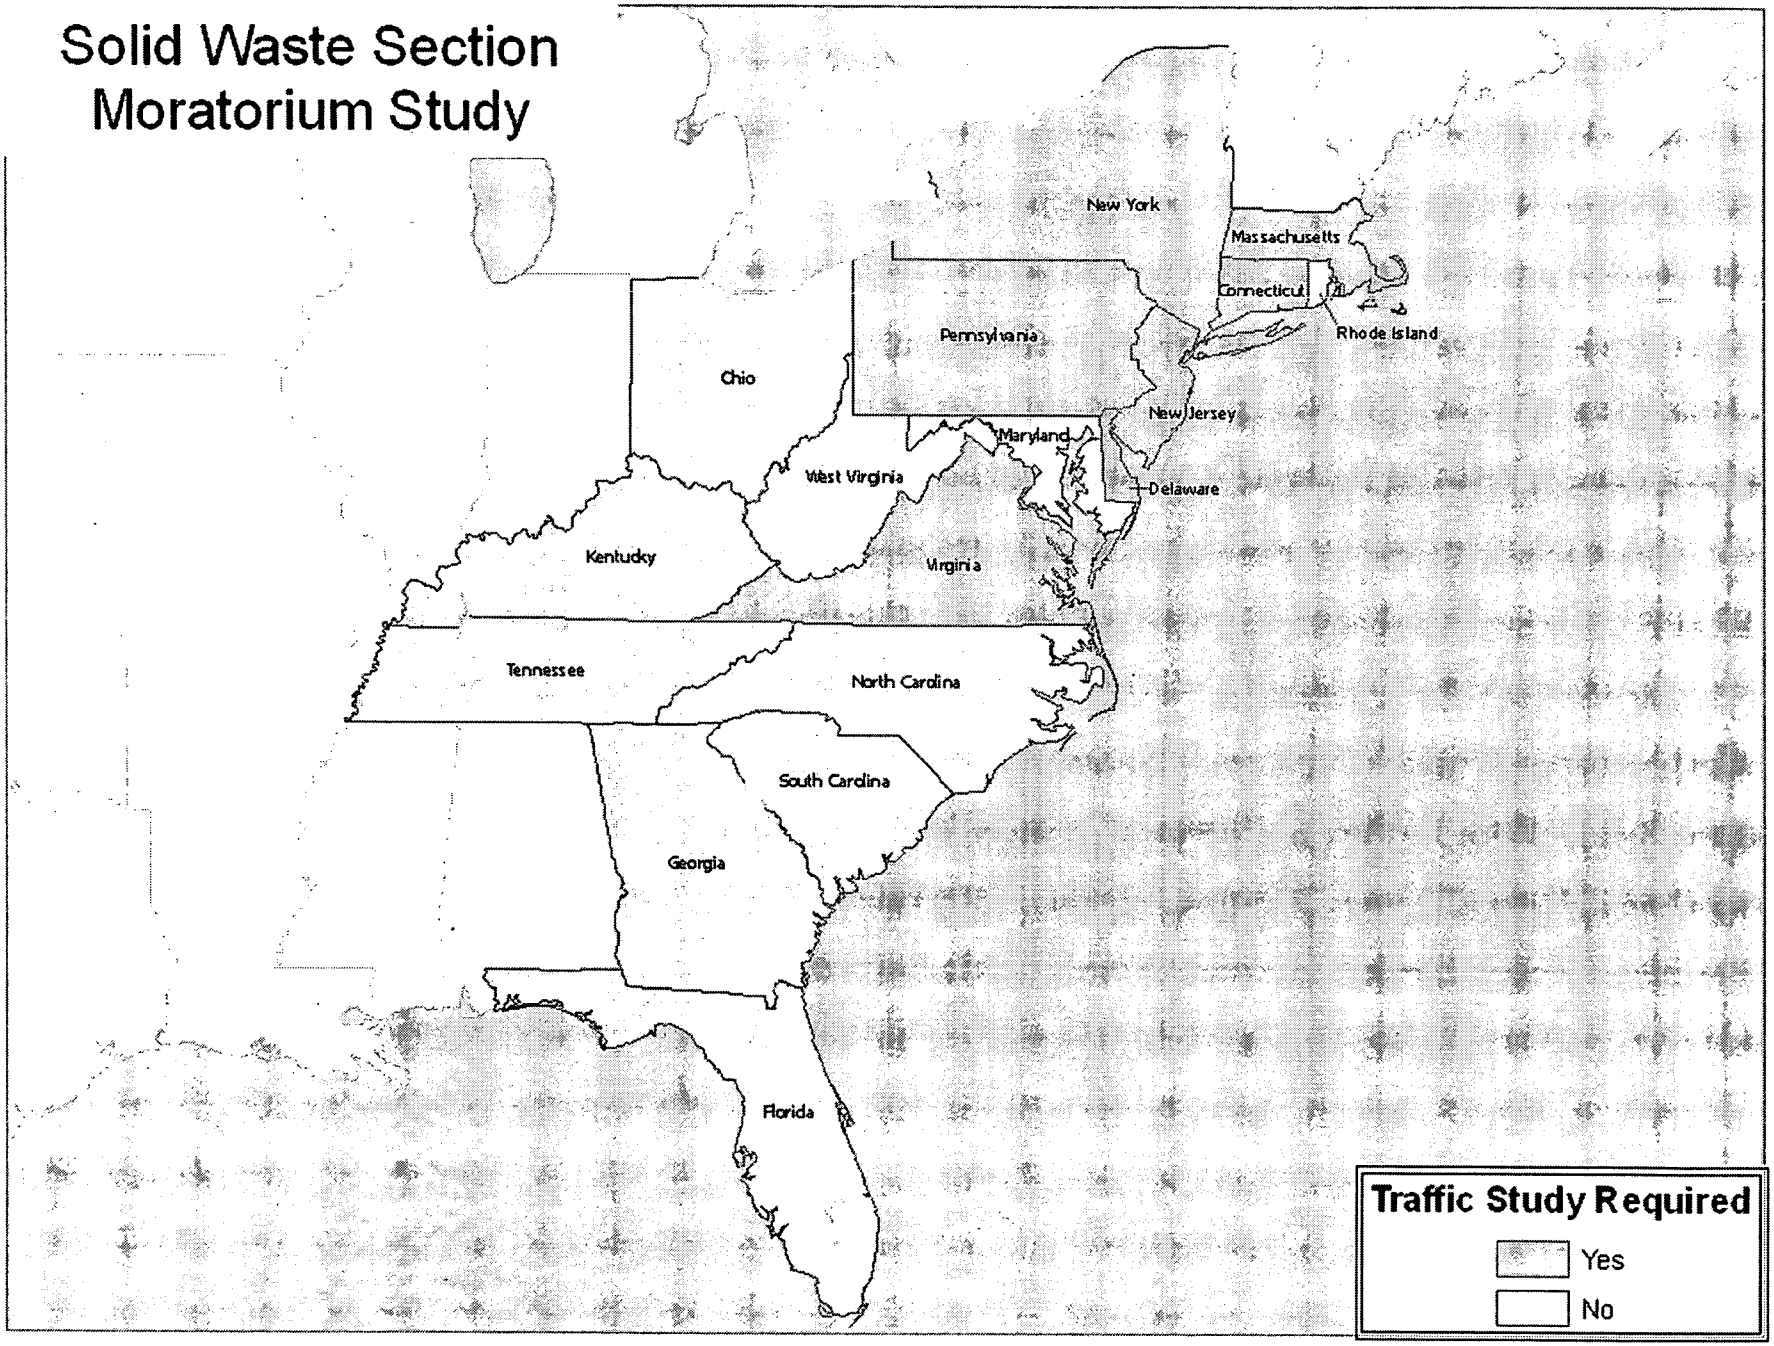

EXHIBIT H

Solid Waste Section Moratorium Study

Application & Permit Fees

What types of fees or charges are assessed permit holders?

What are the fees based on?

What programs do the fees support?

Who assesses the fees?

How are the fees assessed?

What are the penalties for nonpayment?

Buffer: Horizontal

What is the minimum distance from the edge of waste to:

-Property boundaries?

-Residences?

-Wells?

-Streams?

Buffer: Vertical

What is the vertical separation requirements from the average seasonal high water table to the post settlement bottom elevation of the base liner system or bottom of waste?

How do your rules address the separation distance between groundwater and the bottom of waste?

May a landfill facility be built below the high-groundwater table in your state?

Cover Requirements

How do your rules handle Alternative Daily Cover (ADC)?

Do you have a list of pre-approved ADC materials?

How do your rules handle storm-water runoff from Daily Cover? Intermediate Cover?

What is your agency's approach to requests for ADC, particularly Auto Shredder Residue?

Solid Waste Section Moratorium Study

Critical & Sensitive Areas

Do your rules define 'Critical' or 'Sensitive' areas?

What may be considered 'Critical' or 'Sensitive' under your rules?

Do your requirements vary based on their proximity to 'Critical' or 'Sensitive' areas?

Do you have special rules addressing 'Critical' or 'Sensitive' areas?

Facility Size

Do you classify facilities by size?

Does your state have specific requirements for large facilities?

Do your rules define what is a 'large' facility?

Does size affect siting, design, compliance, enforcement, closure, post-closure, groundwater monitoring, financial assurance or some other related aspect?

Do you have documented problems from 'large' landfills that are not present at smaller landfills? How are such problems addressed?

Are facilities regulated or limited by:

-Tons per day?

-Years?

-Volume?

-Geometry?

-Other parameters?

Groundwater Sampling

What is the minimum number of groundwater monitoring wells?

What is the groundwater sampling frequency?

What parameters are required for sampling?

Solid Waste Section Moratorium Study

Leachate Controls

Do your rules allow leachate recirculation?

Do your rules allow 'Bioreactor' or 'Biostabilization' type activities?

Do your rules allow recirculation over Alternative Liner Systems?

If your rules require periodic maintenance of the Leachate Collection System, then:

-How often does maintenance occur?

-Does maintenance include TV inspection of the lines?

LFG Controls

Does your state regulate differently from or in addition to federal rules for the emission of landfill gas?

Does your state have special requirements for the management, financial assurance or use of LFG?

Liner Design & Construction

What type of liner system is required?

Does facility size affect liner design requirements?

Does proximity to 'Critical' or 'Sensitive' areas affect liner design requirements?

What interior and exterior slopes are allowed?

Do your rules require leak testing after installation of the protective/leachate collection layers?

Do your rules require construction certification by a third-party?

What are the primary differences in liner requirements for MSW, C&D, and Industrial landfills?

Do your rules restrict facility height or size?

What are your state design slope requirements?

Solid Waste Section Moratorium Study

LLC	Do you have special rules for handling LLCs?
	Do you require landfill applicants to demonstrate financial qualifications for operating and maintaining a facility?
	How do LLCs demonstrate financial qualifications for operating and maintaining a facility?
	Do your financial assurance rules address LLCs?
Local Government Approval	What types of local government approvals are needed during the permitting process?
	What role do state agencies take during the local government approval process?
	Do state-issued landfill permits typically include operating or maintenance restraints that may be imposed by local governments?
Other Requirements	Are On-site inspectors required at landfill facilities in your state rules?
Traffic Study	Is a traffic study required?
	Who is responsible for submittal?
	Who reviews and approves the study?
	Who is responsible for funding any necessary improvements?
	What are the study parameters?

Solid Waste Section Moratorium Study

Waste Acceptance

Do your rules prohibit the disposal of certain items or materials?

Does your state have mandatory recycling for any items or materials?

Are CESQG materials allowed for disposal? How are such materials handled at transfer stations?

How does your state regulate the disposal of prohibited wastes transported by truck, barge or rail from out-of-state?

How does your state assure that out-of-state waste complies with your state rules?

EPA Illegal Dumping Prevention Guidebook

Recycling and Waste Disposal

PA CleanWays, a grassroots organization dedicated to the cleanup and prevention of illegal dumping throughout the Commonwealth, recently completed a project through the Pennsylvania Department of Conservation and Natural Resources to cleanup and explore ways to prevent illegal dumping in State Forests and State Parks. The project was funded through a grant authorized by the Forest Lands Beautification Act.

The Professional Recyclers of Pennsylvania (PROP) partnered with CleanWays and the Pennsylvania Environmental Council (PEC) to explore ways that illegal dumping might be prevented. PROP's primary role was to research what demographic factors played a role in illegal dumping and how programs and collection systems impacted the incidence of dumping. This excerpt from the project report focuses on the research undertaken by PROP and attempts to draw some conclusions from the large amount of data collected during the survey process.

Environmental and Economic Benefits of Kentucky's 2002 and 2006 Solid Waste Legislation

Presentation to North Carolina Environmental Review Commission

November 15, 2006

Kentucky Environmental & Public Protection Cabinet

Division of Waste Management

Recycling and Local Assistance Branch

Sara D. Evans, Manager

To Protect and Enhance Kentucky's Environment

Kentucky UNBRIDLED SPIRIT

Overview

- Solid waste challenges prior to 2002 legislation
  - Illegal Dumps
  - Litter
  - Waste Disposal
  - Abandoned/Orphan Landfills
  - Declining Recycling Rates
- HB 174
- Improvements realized since passage of legislation
- Summary

Kentucky UNBRIDLED SPIRIT

Illegal Dumps

- Kentucky had a legacy of thousands of illegal dumps across the state (over 4,000 reported annually during 1990's)
- In the late 90's, in the interest of improving the environment, tourism and economic development, Governor Patton, EPPC Secretary Bickford and Congressman Hal Rogers made Cleaning up Kentucky the state's top priority.
- Cabinet stepped up enforcement, including hidden cameras at dumpsites.
- Counties were responsible for cleanups, and joined forces in the cleanup campaign, but complained of unfunded mandate.

Kentucky UNBRIDLED SPIRIT

Litter

- With few requirements for cleanup and prevention, roadways were not routinely cleaned and state government received many citizen complaints.
- Law enforcement officials had limited time and staff to enforce litter laws.
- Most cleanups on rural roads and many state roads were conducted by volunteer groups.
- Transportation Cabinet conducted some cleanup of state roads, in some cases only once per year.

Division of Waste Management
4

Kentucky

Waste Disposal

- Kentucky hosts 26 contained landfills, 16 privately owned and 10 municipally owned.
- Prior to state review, Kentucky law requires local government approval for any landfill expansion or new construction.
- Kentucky has 20+ years of landfill capacity.
- Waste disposal increased 20% overall through the 1990's, with out of state waste imports almost quadrupling from 1991-2001.
- At an average of $26.00/ton in 2001, Kentucky's tipping fees were about $6.00 per ton cheaper than the average of the six surrounding states. All states but Virginia imposed an environmental remediation fee as part of the tipping fee.

Division of Waste Management
5

Kentucky

Orphan/Abandoned Landfills

- "Orphan landfills" distinguished from "illegal dumps" as a disposal site once considered the "de-facto" community waste site or a previously permitted but currently unused site.
- Approximately 670 orphan landfills statewide, with costs of characterization, remediation and closure varying from $500,000 to $9 million+ per landfill.
- Prior to 2002 legislation, county governments were responsible for closure and remediation, but most lacked funding and technical expertise.
- Closures occurred sporadically, approximately 1 every 5 years, with only a handful certified closed by 2001.

Division of Waste Management
6

Kentucky

Recycling

- In 2004, Kentuckians threw away $63 million in recycling value for paper, plastic and aluminum.
- We recycled 22% of our paper, plastic, aluminum, steel and glass in 2004, an improvement over 13% in 2001.
- Only 27% of Kentucky households have access to curbside recycling.
- Kentucky is home to twelve (12) major manufacturers of products made from recycled materials. Manufacturers buy recyclables worldwide, and expressed need for more Kentucky recyclables.
- These manufacturers contribute to Kentucky's economy an annual payroll of over $202 million, added a value of $612 million and contributed to gross sales of $1.34 billion in 2005. For every $1.00 of raw recycled materials processed in Kentucky, an additional value of $0.44 is added.

HB 174

- Proposed by Governor Patton and co-sponsored by majority leaders in House (D) and Senate (R), the 2002 General Assembly passed HB 174 with virtually unanimous support.
- HB 174 was supported by counties, cities, private landfill companies, Kentucky Farm Bureau, Associated Industries of Kentucky numerous associations and environmental organizations, including the Kentucky Environmental Quality Commission.

HB 174

- Assesses a $1.75/ton environmental remediation fee on waste disposed, generating about $11 million annually.
- About $6 million is provided to counties for illegal dump cleanups and $5 million for abandoned landfills.
- Authorized a one-time $25 million bond sale for orphan landfill program.
- Provides for state government assumption of orphan landfill program.
- Annual $5 million transfer from Transportation Road Fund to counties and cities for litter abatement programs.
- Cabinet retains $750,000 annually for implementation.

Improvements Since Passage of HB 174

Illegal Dumps:

- Illegal dumping declined 70% between 2001-2004.
- 2001- 1,807 dumps cleaned at a cost of $6.6 million, with 1,898 illegal dumps remaining to be cleaned.
- 2004 - 934 dumps cleaned at a cost of $3.3 million, with 621 illegal dumps remaining to be cleaned.

Improvements Since Passage of HB 174

Litter:

- Almost 10 times more litter was picked up in 2004 than in 2001, and the costs for cleanup dropped significantly:
- 2001 - 77,501 bags cleaned at a cost of $4.2 million **($54.19 per bag).**
- 2004 - 700,438 bags of litter cleaned from 114,837 miles of roadways at a cost of $8.9 million **($12.70 per bag).**

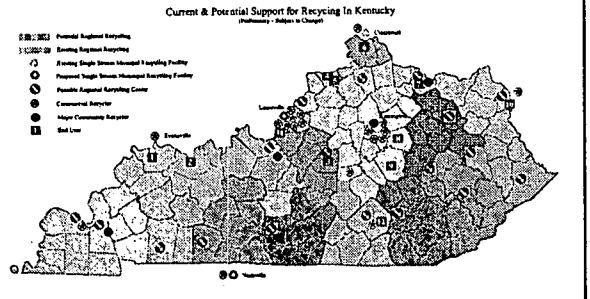
Improvements Since Passage of HB 174

Disposal:

- Average tipping fee was $28.67 in 2004, still $4 below the average of the surrounding states.
- Disposal continues to rise, but at a slower rate of 8% between 2001-2004. Out-of-state state waste imports have remained steady, and have not increased since 2001.
- 2004 garbage collection costs average of $12.12 per household per month, as compared with 2001 average of $11.67.

Improvements Since Passage of HB 174

Orphan Landfills:



- Cabinet developed prioritization scheme based on risks to human health, safety, and the environment including: exposed waste, leachate outbreaks, surface and groundwater contamination and potential for human use.
- Identified 55 high priority landfills, with 8 selected for immediate action and currently under contract for remediation and closure.

Improvements Since Passage of HB 174

Recycling:

- With success of illegal dump cleanup program, the 2006 General Assembly unanimously passed legislation to allow remaining illegal dump funds to be used for recycling grants to local governments (SB 50).
- Approximately $3 million will be available annually for recycling grants, beginning in 2007.
- Manufacturers, private recyclers, counties, cities, state and environmental groups convene quarterly meetings as Kentucky Recycling Interest Group (KRIG) and agree that funding for **recycling infrastructure** should be first priority for grants.

Recycling Infrastructure Projections

Recycling Infrastructure Projections

MAJOR COMMUNITY RECYCLING OPERATIONS

1. Regional Recycling Corp. (Corrections Industries) – Eddyville
2. Fort Knox Recycle Center – Fort Knox
3. Lexington Urban County Government/Bluegrass Regional Recycling – Lexington
4. Mason County Recycling Center - Maysville

END USERS

1. Weyerhaeuser – Henderson
2. Kimberly Clark – Owensboro
3. All Weather Insulation – Springfield
4. North American Stainless – Ghent
5. Gallatin Steel – Ghent
6. Signode – Florence
7. Temple – Inland – Maysville
8. Infiltrator Systems (Champion Polymers) – Winchester
9. Novells – Berea
10. AK Steel – Ashland
11. Arco Aluminum - Louisville
12. Play Mart - Somerset

Kentucky

Summary

- Kentucky has made significant headway in cleanups since passage of HB 174, with minimal cost to households($0.45 per month per household increase in garbage collection rates from 2001-2004).
- Waste disposal continues to rise, although more slowly, and importation of out-of-state waste has not increased.
- Making progress with orphan landfill closure, but will be ongoing program for many years at current funding level.
- Community recycling rates improving, and new infrastructure grants expected to significantly improve state's reaching goal of 35%+ by 2010.
- KRIG proving to be excellent forum for advancing and advising cabinet on recycling, reuse and beneficial reuse.
- Investing in recycling returns environmental and economic benefits in energy savings and hundreds of millions to state's economy.

Memorandum

To: N.C. Environmental Review Commission
From: Richard Whisnant, School of Government-UNC-CH
Re: Legal limits and policy possibilities for NC solid waste disposal facilities
Date: November 15, 2006

The big legal limit: Do not discriminate between in-state and out-of-state waste

A court may find your bill illegally discriminates:

- facially (e.g., "An act to increase regulation of imported waste")
- by its intent (e.g., sponsor says "this bill keeps out that stinking ___waste"). Cf. Virginia.
- by its impact. Less certain analysis. But see *United Haulers* case, to be argued in the U.S. Supreme Court early in 2007 (case from NY upholds county flow control on theory that local benefits outweigh any possible effect on interstate commerce).

Corollary: focus on state and local benefits of any proposed new regulation.

- The costs of tighter disposal regulations will affect persons (citizens, owners/operators including local governments) both inside and outside NC. Do you want disposal prices as cheap as possible ($30/ton avg in Southeast), or do you believe these prices do not fully cover state and local interests in disposal and want them pushed more in line with Mid-Atlantic ($46/ton) or Northeast ($70/ton) prices?

Local interests in this problem	State and regional interests around a facility
• Revenue for the jurisdiction. = waste maximization?	• Revenue for oversight. Waste minimization. Use of state funds. Land bans.
• Public health and environment	• Same, but broader geographic concerns
• Transportation problems	• Same, broader geography
• Reasonable disposal costs	• Same
• Long-term status of site	• Same, requires accountability
• Short-term siting, land use issues	•

Policy possibilities

1. Secondary, state review of franchises with broad geographic effects (e.g. service area outside surrounding counties?). State review to focus on how state and regional interests are met by preliminary franchise. Criteria would be important, hard, but do-able.
2. Statewide tip fee, perhaps as high as Pennsylvania's ($7.25) or higher; split and/or adjust revenue to address above interests. E.g. set baseline $6 fee that ramps up to $8 or higher for waste disposed above county's waste minimization goals. Return revenue to county for recycling and general government use.
3. Long-term accountability. Make all controlling parties for landfill owner/operators (whether LLCs, corporations or whatever) responsible for problems that occur. Consider requiring franchisors to be on the permit.
4. Full environmental and public health review of permits. Transport safety studies, alternatives to landfilling, alternative landfill design—could expand current state permit review beyond narrow engineering parameters. Or repeal SEPA exemption.

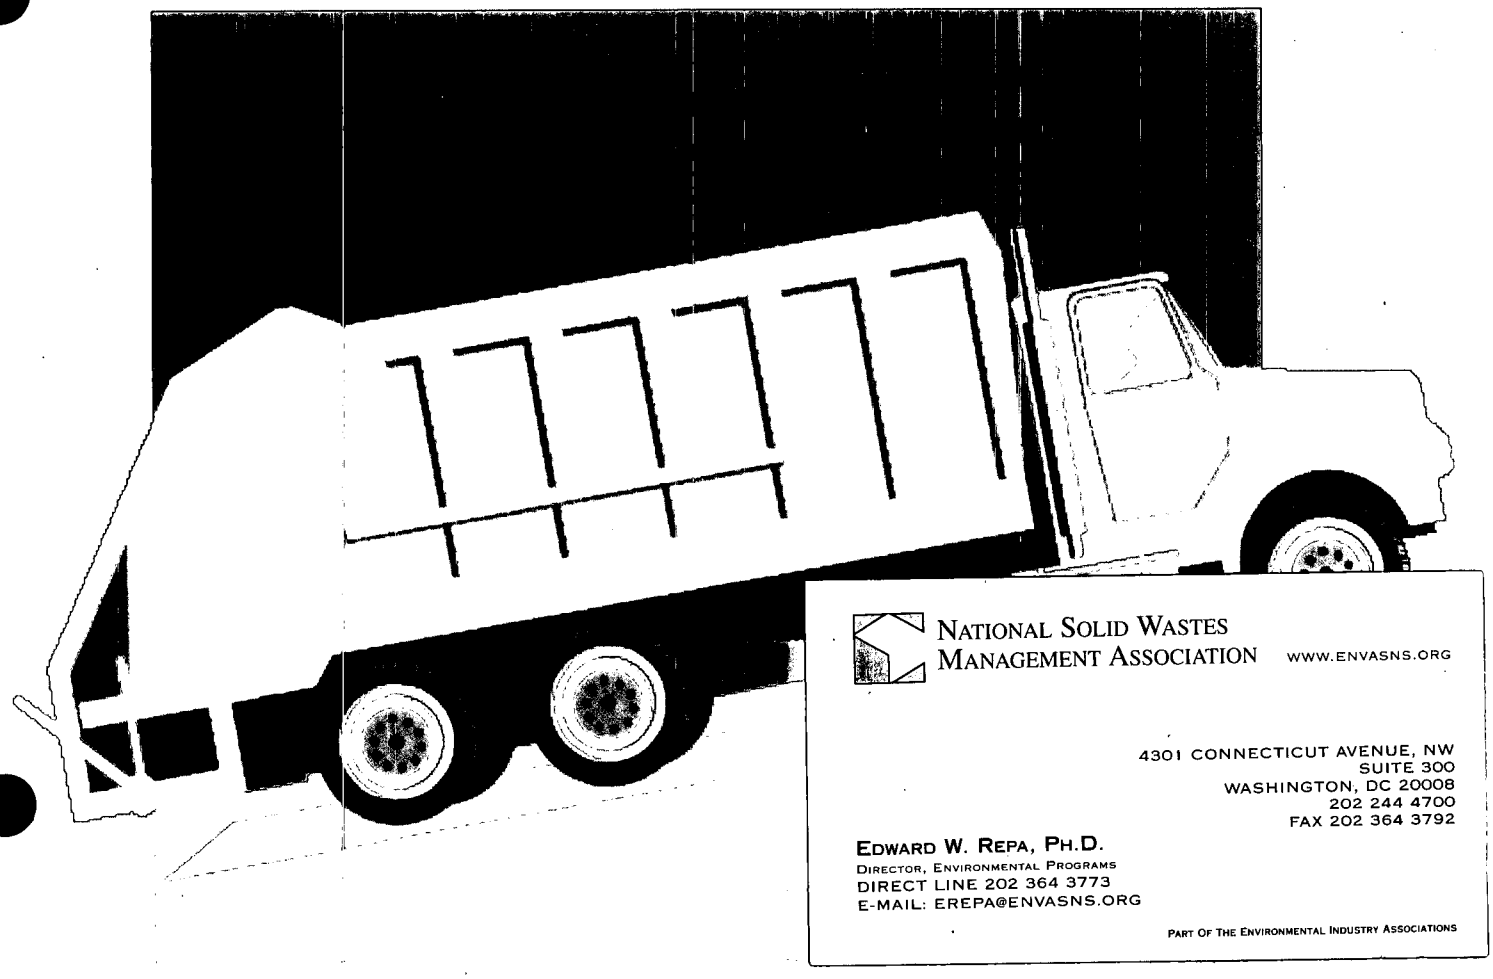

EXHIBIT N

Interstate Movement of Municipal Solid Waste

By Edward W. Repa. Ph.D.

Since the late 1980s, states have been concerned about the amount of solid waste they received from out-of-state sources for disposal. Some states attempted to pass legislation that would regulate these interstate waste receipts. However, federal courts have declared that any restrictions were unconstitutional. At the same time, Congress has considered, but not passed, numerous bills that would have provided states with the authority to control interstate waste shipments.

Because of the continuing congressional interest in interstate waste shipments, Congress in 1990 requested that the Congressional Research Service (CRS) determine the amount of municipal solid waste (MSW) moving interstate. CRS has updated its interstate report 8 times, most recently on September 9, 2004. This report summarizes the information collected by CRS on the movement of MSW interstate and provides data from select states that reported more data on interstate MSW flows than reported in the CRS report.

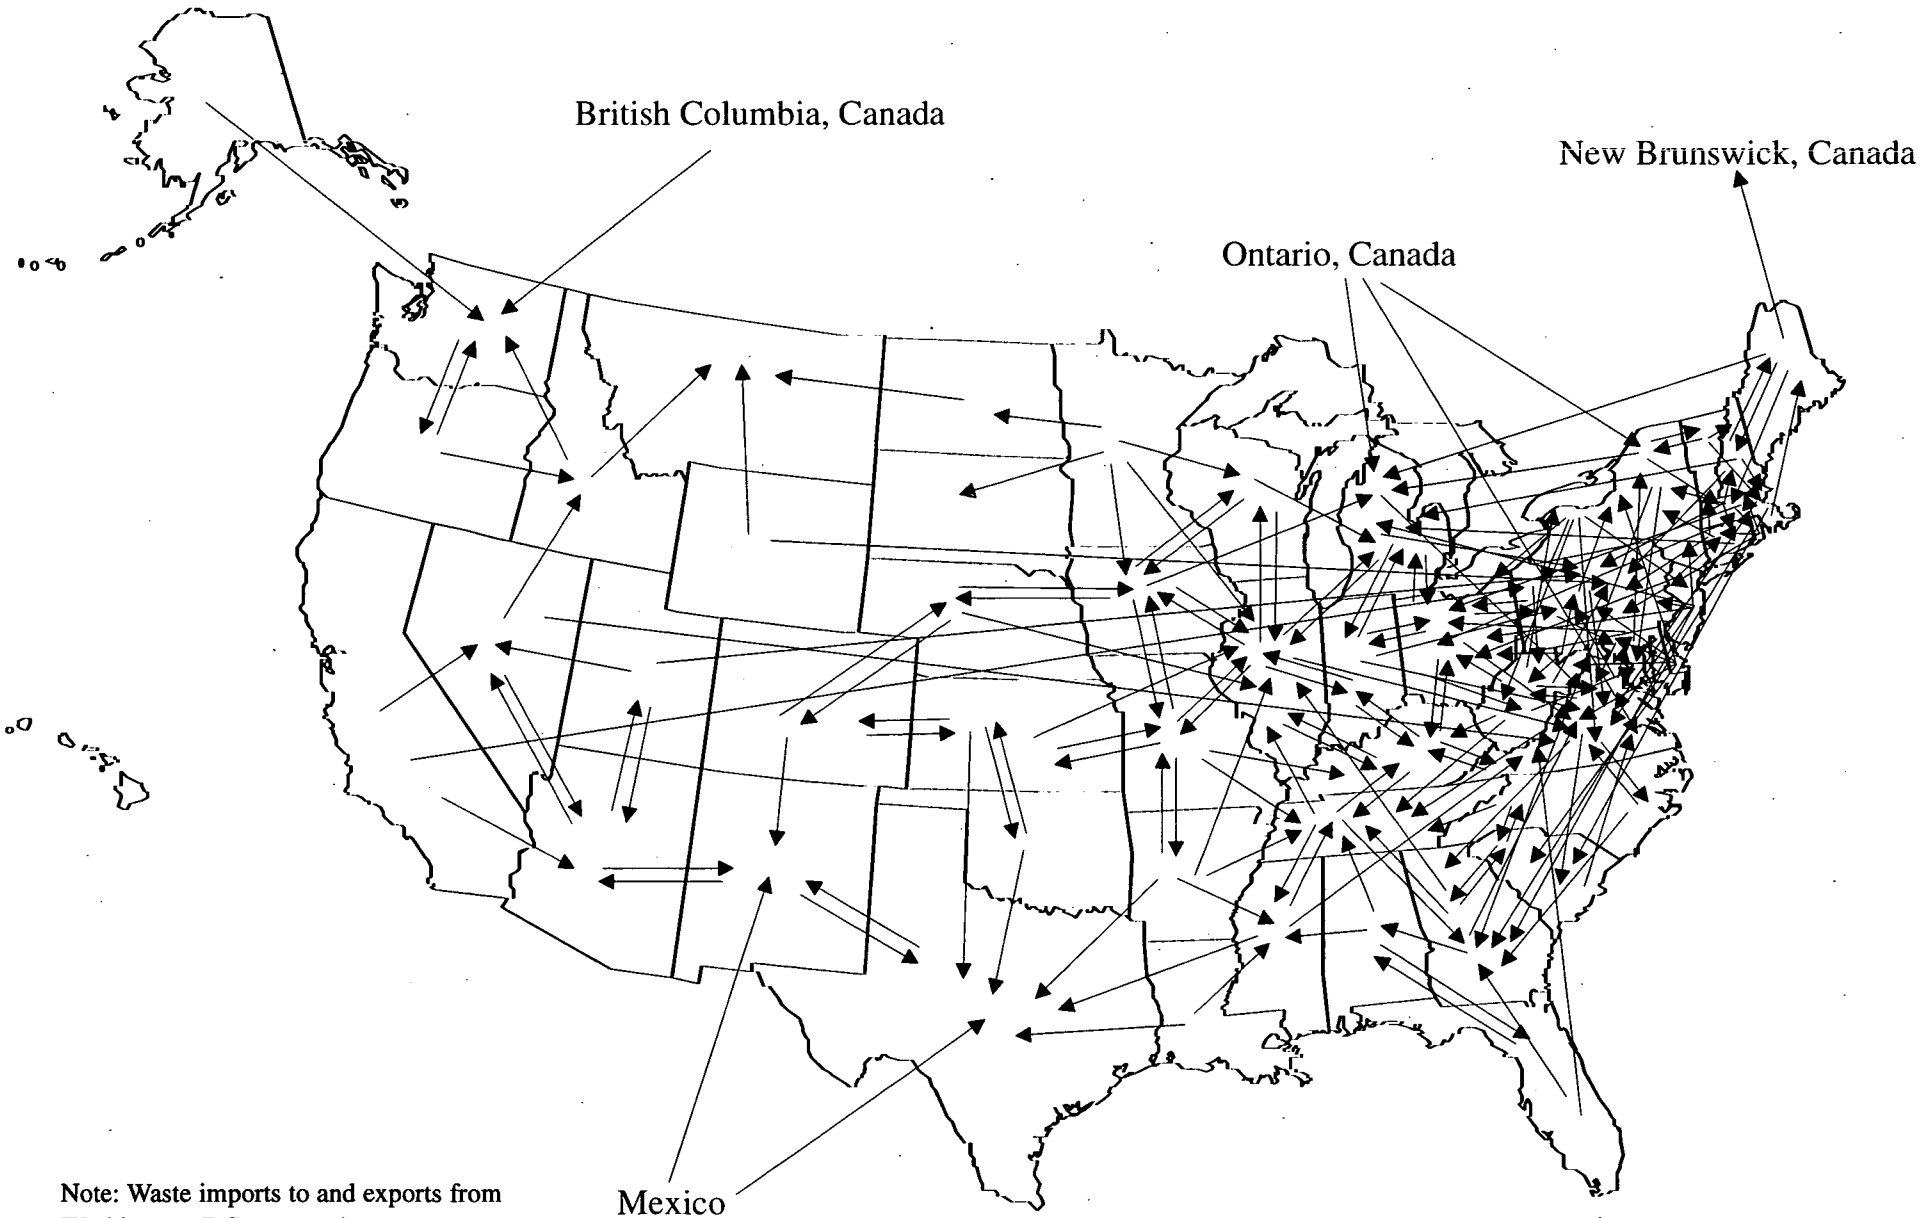
NATIONAL TRENDS

Figure 1 (below) shows the growth in MSW exports and imports based on the CRS data. The import and export data follow similar trends; however, the data are not equal because of the way states collect data. According to the first CRS report, about 12.6 million tons of MSW were exported in 1989 and 10.8 million tons were imported. The amount of MSW exported and imported by states has more than tripled over the last 14 years. Exports between 1989 and 2003 rose by 25.5 million tons, a 200 percent increase, and imports rose by 28.2 million tons, a 260 percent increase.

Table 1 (page 3) provides MSW exports and imports by state and the percent of a state's MSW exports or imports based on the state's generation rate (i.e., imports or exports divided by generation). On average, less than 10 percent of the MSW generated in the United States was either exported or imported to another state for disposal in 2003.

STATE TRENDS

Figure 2 (page 4) and Table 2 (page 5) show the extensive and intricate web of interstate MSW movements in 2003 between states and internationally. The CRS data identified 207 waste interactions, where an interaction is the movement of MSW between two states or countries as an import or export. This represents 2 more interactions than in 2001 and 72 more interactions than in 2000.



Of the 207 waste interactions, 139 (67%) were between neighboring states. Furthermore, 112 (54%) of the 207 interactions were paired interactions, where MSW moved as both an import and export between the same two states. Similar trends were reported in previous CRS studies on interstate waste movements.

Figure 3. MSW Exports in 2003

Exports

In 1989, CRS found that only 13 states and the District of Columbia exported waste to another state for disposal. As the waste volumes increased over the years, so did the number of states exporting waste. In 2003, the number of states exporting waste was 47 plus the District of Columbia, 3 Canadian provinces (British Columbia, New Brunswick, and Ontario), and Mexico.

Based on CRS's 2003 data (Table 1 and Figure 3), exports were:

- Eight states (Illinois, Maryland, Massachusetts, Missouri, New Jersey, New York, Ohio, and Washington), the District of Columbia, and Ontario, Canada, exported more than 1 million ton of MSW. The number of states exporting more than a million tons of MSW per year doubled in 2003 compared to 1989 when four states (Missouri, New Jersey, New York, and Pennsylvania) exported more than a million tons per year of MSW.

- The state exporting the largest volume of MSW in 2003 was New York (8.248 million tons) followed closely by New Jersey (5.803 million tons).

- Three states (California, Indiana, and North Carolina) exported between 0.75 million tons and 1.00 million tons of MSW in 2003.

- Twenty-one states (Arkansas, Connecticut, Delaware, Florida, Georgia, Iowa, Kansas, Kentucky, Louisiana, Michigan, Minnesota, Mississippi, Pennsylvania, Rhode Island, South Carolina, Tennessee, Texas, Vermont, Virginia, West Virginia, and Wisconsin) had exports that were less than 0.75 million tons, but greater than 0.10 million tons.

- Fifteen states (Alabama, Alaska, Arizona, Colorado, Idaho, Maine, Nebraska, Nevada, New Hampshire, New Mexico, North Dakota, Oklahoma, Oregon, Utah, and Wyoming) exported less than 100,000 tons.

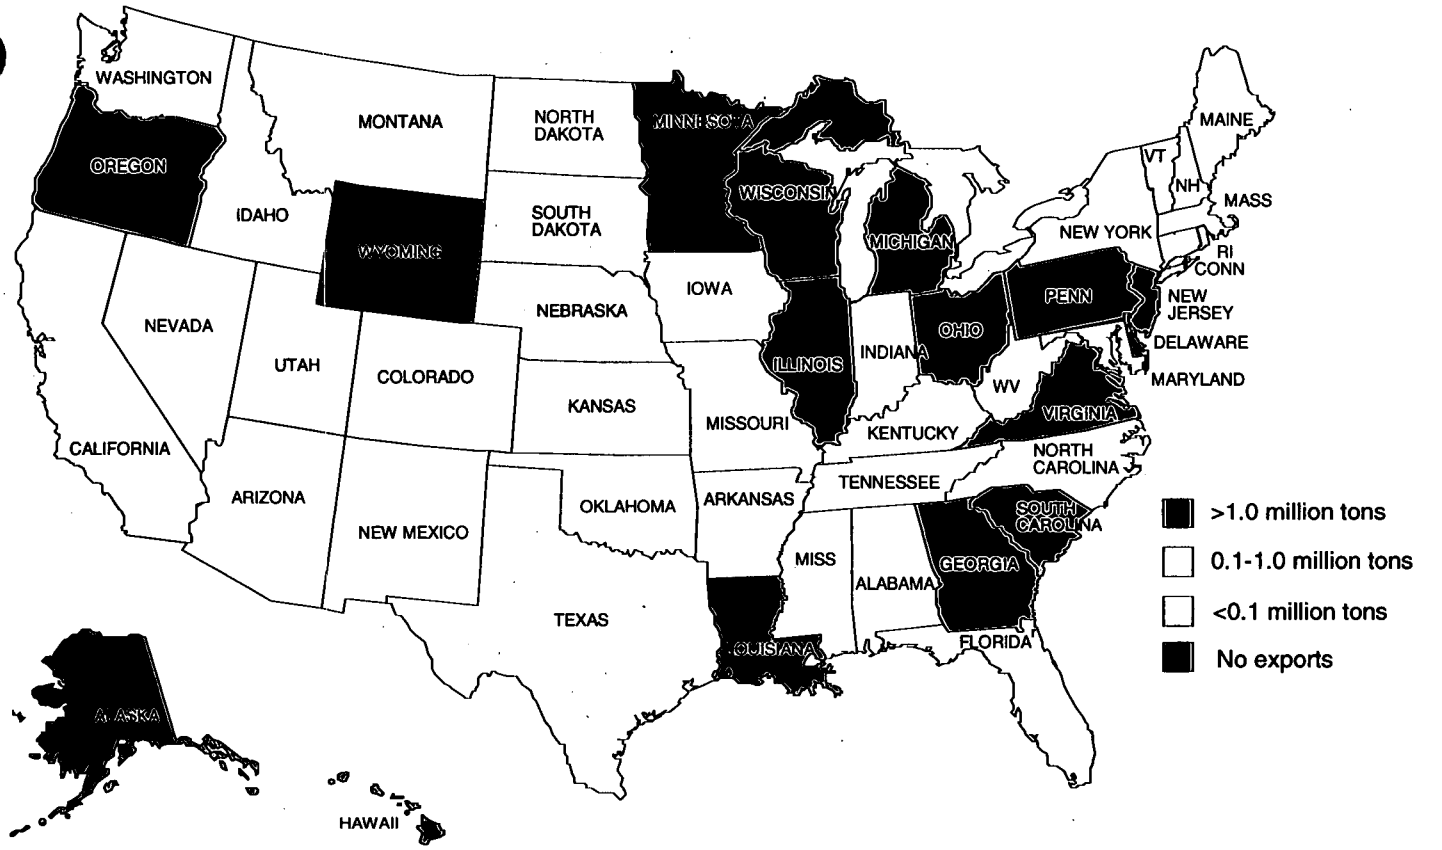
- Three states (Hawaii, Montana, and South Dakota) did not export MSW for disposal in another state.

Only the District of Columbia and New Jersey exported more than 50 percent of the MSW it generated. This high export rate in the District of Columbia (187%) is probably attributable to the lack of disposal capacity within its jurisdiction and waste being shipped through District transfer stations. Maryland and Missouri had the next highest export rate at 43 percent and 37 percent respectively. All other states had export rates of less than 30 percent of their generation rates. The majority of the exporting states (31 states) exported less than or equal to 10 percent of the MSW that they generated including the states of Alabama, Alaska, Arizona, Arkansas, California, Colorado, Florida, Georgia, Idaho, Kentucky, Louisiana, Maine, Michigan, Mississippi, Nebraska, Nevada, New Hampshire, New Mexico, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, South Carolina, Tennessee, Texas, Utah, Virginia, Wisconsin, and Wyoming.

Imports

In 1989, 14 states imported MSW for disposal and by 2003, 44 states imported MSW for disposal. The largest importer of MSW was Pennsylvania (9.156 million tons) followed by Virginia (5.489 million tons) and Michigan (4.503 million tons). Based on year 2003 data presented in Table 1 and Figure 4 (page 8), imports were:

- Ten states imported more than 1 million tons of MSW including Georgia, Illinois, Michigan, New Jersey, Ohio, Oregon, Pennsylvania, South Carolina, Virginia, and Wisconsin. In 1989, only Illinois, Indiana, Ohio, and Pennsylvania imported more than 1.0 million tons of MSW.



- Twenty-two states (Alabama, Arizona, Indiana, Iowa, Kansas, Kentucky, Maine, Maryland, Massachusetts, Mississippi, Missouri, Nevada, New Hampshire, New Mexico, New York, North Carolina, North Dakota, Oklahoma, Tennessee, Texas, Washington, and West Virginia) imported less than 1.0 million tons, but greater than 0.1 million tons.

- Twelve states (Arkansas, California, Colorado, Connecticut, Florida, Idaho, Montana, Nebraska, Rhode Island, South Dakota, Utah, and Vermont) and the District of Columbia imported less than 100,000 tons of MSW.

- Six states (Alaska, Delaware, Hawaii, Louisiana, Minnesota, and Wyoming) did not import MSW for disposal.

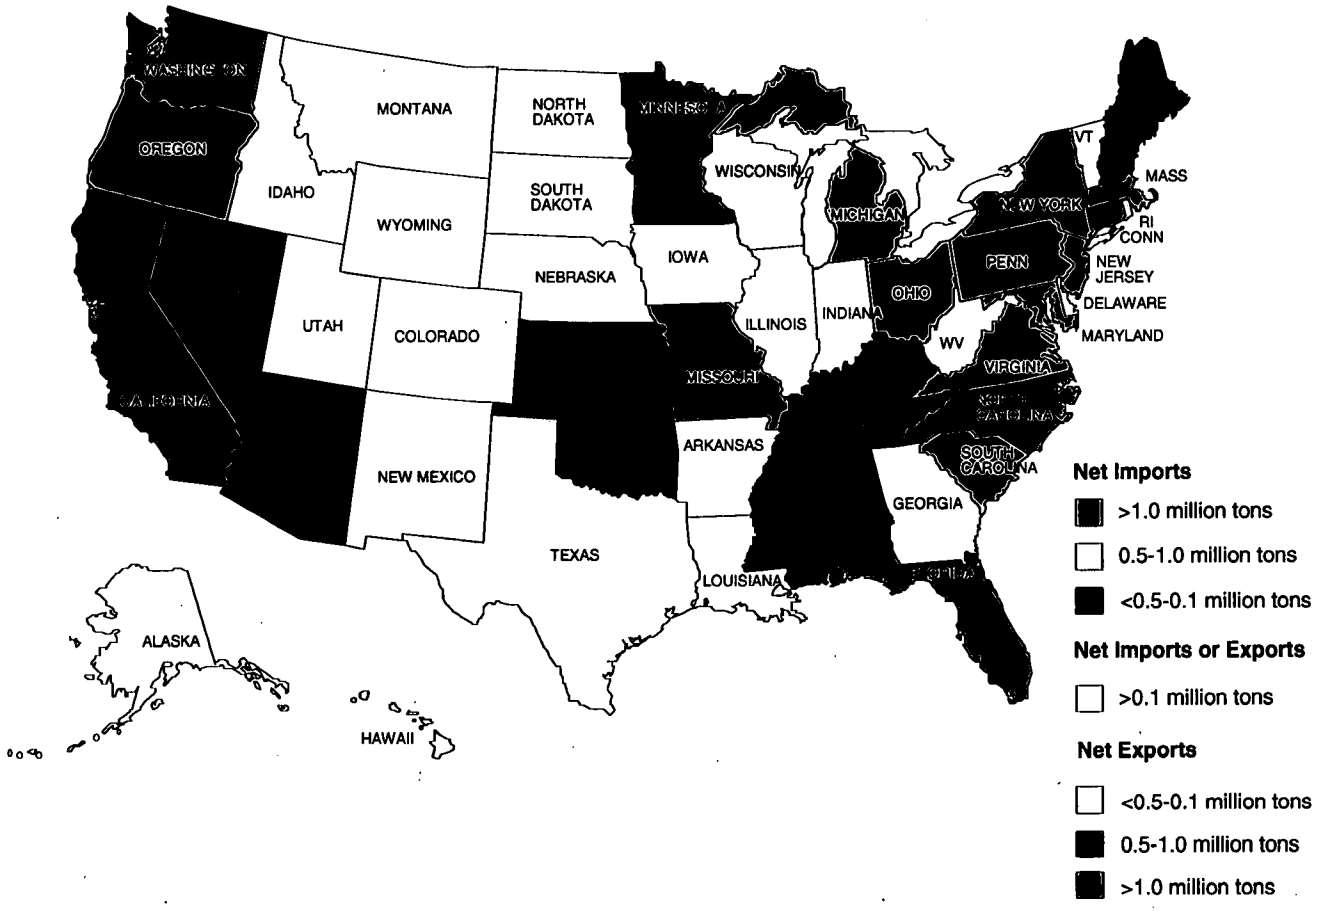
Pennsylvania, with the highest volumes of imports, also had the largest amount of imported waste compared to waste generated. Pennsylvania's imports were almost as large as the waste it generated (84%) in 2003. Eight states had import rates of at least 20 percent when compared to generation rates including Kansas (24.9%), Michigan (29.4%), Mississippi (20.0%), New Hampshire (30.9%), Oregon (31.0%), South Carolina (27.9%), Virginia (53.3%), and Wisconsin (26.3%). Twenty-one states (Alabama, Arizona, Arkansas, California, Colorado, Connecticut, Florida, Idaho, Maryland, Massachusetts, Missouri, Montana, Nebraska, New York,

Figure 4. MSW Imports in 2003

North Carolina, Rhode Island, South Dakota, Tennessee, Texas, Utah, and Washington) and the District of Columbia imported less than 10 percent of the waste they generated.

Net Imports and Exports

Table 1 and Figure 5 (page 9) contain data on the net volumes of imports and exports (i.e., import volumes minus export volumes) of MSW by state for the year 2003. The data showed:



- Six states had net imports greater than 1 million tons. Pennsylvania was the largest net importer at 8.597 million tons followed by Virginia (5.249 million tons), Michigan (4.280 million tons), Ohio (1.439 million tons), Oregon (1.406 million tons), and South Carolina (1.042 million tons).

- Three states (Georgia, New Mexico, and Wisconsin) had net imports greater than 500,000 tons, but less than 1 million tons.

- Six states (California, Connecticut, Florida, Minnesota, North Carolina, and Washington) had net exports greater than 500,000 tons, but less than 1 million tons.

- Five states, the District of Columbia, and Ontario, Canada, had net exports greater than 1 million tons. New York was the largest net exporter at 7.936 million tons, followed by New Jersey (4.132 million tons), Ontario (2.922 million tons), Missouri (2.128 million tons), Maryland (1.739 million tons), District of Columbia (1.176 million tons), and Massachusetts (1.060 million tons).

Figure 5. Net Imports and Exports in 2003

As shown in Figure 5, the majority of states had net imports or exports that were less than 500,000 tons. In fact, 15 states had net imports or exports that were less than 100,000 tons including Alaska, Arkansas, Colorado, Hawaii, Idaho, Indiana, Iowa, Montana, Nebraska, North Dakota, South Dakota, Utah, Vermont, West Virginia, and Wyoming.

CONCLUSION

In similar trends to the last decade, the latest data show that almost all states import or export MSW with the majority of the shipments occurring between neighboring states. These waste movements represent routine partnerships among states and municipalities that are based on economic, social, environmental, and political factors. Based on the available data, the amount of MSW moving interstate is expected to increase in future.

EXHIBIT O

Presentation to the ECR
November 15 2006

Speaking on behalf of the following groups:
NC Coastal Federation, Sierra Club, Conservation Council of NC

Our focus is on addressing new challenges presented by proposed regional mega-landfills as well as on North Carolina's broader challenge to reduce solid waste.

- proposed regional mega-landfills are of a size and scope not previously seen in North Carolina. Specific environmental concerns include impacts to groundwater, shallow wells, drinking water supplies, methane release, wildlife, and viewsheds among others.

- After years of being a net exporter of waste, North Carolina is facing a future of being a net importer. If all proposed mega-landfills are permitted, North Carolina will become the 4th largest importer of waste in the nation.

- In 1991, the Solid Waste Management Act set a goal of reducing the waste going into North Carolina's landfills 40% by the year 2001. Instead, waste has increased by more than 57% as of 2004. This is in spite of a growing recycling industry eager for access to more "product." We need to take a closer look at our own home generated waste.

We will submit more detailed comments in writing, but today I'd like to highlight these recommendations:

1) The larger the landfill, the more important the need for a comprehensive review of environmental and community impacts, including an analysis of alternatives, as part of the permitting process. The state's current mechanism for this sort of review is the State Environmental Policy Act or SEPA. Landfills are currently exempt from SEPA.
   Recommendation: make SEPA applicable to all landfills over 1000 tons per day because they have a regional impact.

2) The bigger the project, the more DENR staff time is needed for thorough review of the application. Division Solid Waste is currently one of the only regulatory agencies in DENR not to charge permit fees.
   Recommendation: establish permit fees for solid waste permitting.

3) Recommendation: Enact a statewide tipping fee comparable to what other states charge. This will discourage the targeting of North Carolina for mega-landfills. Two important uses for these funds are to close out over 800 old abandoned, leaking landfills and to provide support for expanded local recycling programs.

4) Recommendation: Add additional siting restrictions. These should include exclusion zones that appropriately restrict the siting of landfills in hydric soils, wetlands, floodplains, near state and national parks and wildlife areas, or in areas with minimal natural separation with the groundwater.

5) Recommendation: Make existing bans on certain materials enforceable by hiring and training new DENR enforcement staff to ensure that facilities are complying with the bans. This will reduce the amount of waste going into landfills while promoting recycling industries. Additional staff is also needed to support expanded availability of recycling options statewide.

6) Recommendation: Ban electronics waste. It puts toxics in landfills and there is a viable industry to recycle it.

7) Recommendation: Ban single entity Limited Liability Corporations (LLC's) from owning landfills of any size or function.

Report on Implementation of Senate Bill 953
North Carolina Department of Transportation
Statewide Transportation Demand Management Program

General Statute 143-215.107C requires the departments of Transportation, Environment and Natural Resources, Administration, and Commerce, and the Office of State Personnel to develop a plan to reduce the number of vehicle miles traveled for both public and private sector employees. The statute also requires the Department of Transportation to report to Joint Legislative Transportation Oversight Committee and the Environmental Review Commission each year.

DOT Secretary Lyndo Tippett announced the completion of the Statewide Transportation Demand Management Program in April 2004. The plan was the culmination of work guided by a panel of 16 representatives appointed by Governor Easley. Transportation Demand Management (TDM) strategies influence travel behavior by mode, time of day, cost, frequency and other related activities to reduce traffic congestion, enhance mobility, and improve air quality. The panel consisted of existing representatives of TDM programs, local elected officials, developers, major employers in the state, marketing professionals and federal and state environmental agencies to guide the development of the statewide TDM plan. The work involved an analysis of the existing rideshare/TDM programs, and an evaluation of comparable program efforts in locations such as California, Washington, Maryland, Florida and Connecticut.

From this work, a series of guidelines were developed for the North Carolina Department of Transportation (NCDOT). The guidelines, further refined by the consulting firm of Parsons Brinkerhoff, NCDOT and the panel, include 20 action items that could be undertaken by NCDOT and local TDM programs in several areas to improve TDM statewide. The Panel prioritized the guidelines and developed a three-year action plan, including the establishment of a Commuter Assistance Program within the NCDOT that would focus on demand management techniques and TDM initiatives for North Carolina.

Activities and accomplishments during the past year are summarized below:

Activity: Statewide Best Workplaces for Commuters Program

Established a couple of years ago by the US Environmental Protection Agency (EPA) and the US Department of Transportation to publicly recognize employers whose commuter benefits reach the *National Standard of Excellence* (www.bwc.gov), this program highlights the efforts of many top employers to help get employees to work safely, on time, and free of commute-related stress. It provides the tools, guidance, and promotion necessary to help employers of any size incorporate commuter benefits into their standard benefits plan, reap financial benefits and gain national recognition. EPA believes that providing commuter benefits helps employers address limited or expensive parking, reduce traffic congestion, improve employee recruiting and retention, and minimize the environmental impacts associated with drive-alone commuting. Participating companies earn the designation "Best Workplaces for Commuters^{SM}"—a mark of excellence for environmentally and employee-friendly organizations.

Prior to implementing a statewide Best Workplaces for Commuters (BWC) Program as recommended in the plan, the NCDOT made the decision to expand ongoing TDM activities and focus its efforts on developing a BWC Program in the Triangle region. In partnership with the Triangle J Council of Governments, the NCDOT developed a Triangle Best Workplaces for Commuters program. In the summer of 2006, Triangle J and other members of the BWC Organizing Committee launched the 2006 Triangle Best Workplaces for Commuters Campaign.

Through the combined efforts of NCDOT, Triangle J and area TDM programs, the Triangle BWC Coalition will sponsor a campaign celebration on November 15, 2006 to recognize employers and announce the third annual list of Triangle Best Workplaces for Commuters. The list includes nineteen new Triangle employers that provide outstanding commuter benefits to their employees and have been designated by EPA, representing approximately 11,900 employees. Currently, North Carolina has almost 50% of state agencies designated as BWC employers, giving us the distinction of having the highest percentage of state agencies designated as BWC of any state in the country.

Activity: Commuter Choice Professional Development Training Program

The NCDOT has worked with the Center for Urban Transportation Research (CUTR) at the University of South Florida to include NCDOT transportation professionals in its Commuter Choice Certificate Program. The goal of the Commuter Choice Professional Development Training Program is to improve the effectiveness of transportation professionals in North Carolina by providing training and technology transfer related to transportation demand management strategies. TDM strategies influence travel behavior by mode, time of day, cost, frequency and other related activities to reduce traffic congestion, enhance mobility, and improve air quality.

Specific goals and objectives of the program are:

1. To provide technical training and transfer of technology for Commuter Choice transportation professionals in North Carolina.

2. To continually broaden the reach of the training program.
    a. Increase the number of individuals and agencies receiving training
    b. Expand access to training opportunities
    c. Reduce the costs for the participant through use of technology

3. To increase the effectiveness of training and technology transfer efforts
    a. Use technology and case studies to increase the comprehension of the material
    b. Foster active learning among participants

4. To increase program utility
    a. Offer an opportunity for Continuing Education Units (CEU)
    b. Offer an opportunity for participation in a certificate program with national reputation

NCDOT arranged with Triangle J Council of Governments to host a CUTR Netconference titled "Striving to be the Best: Employer TDM Programs That Deliver Results to Employees and Stockholders." This conference was held October 18th and TDM planners from across the state participated via the Internet. The conference provided presentations by TDM representatives of VPSI, a firm that provides vanpool services, for Wyeth Pharmaceuticals, by the principal transportation planner for the City of Berkeley, and the TDM coordinator for Yahoo in San Francisco. Each representative discussed how its TDM programs were developed as well as how each is funded and administered. There was also a discussion of various strategies used, including carsharing, ecopass, pre-tax commuter benefits, and ridematching services. The NCDOT TDM planner also participated in an EPA telephone forum on Commuter Benefits in Small Towns and Rural Areas. This forum highlighted the successful techniques that three BWC employers have used to solve their employees' rural commuting challenges.

In addition, NCDOT is investigating offering additional course modules from the CUTR TDM certification program. NCDOT has already received a proposal from CUTR, and some courses may be offered this winter. Other courses could possibly be offered in conjunction with the Southeast Association for Commuter Transportation Conference this spring and/or the Association for Commuter Transportation Conference in the summer. One course also being investigated is CUTR training on the use of the EPA Commuter Model. The EPA developed computer model can be used by MPO's, state DOT's, and employers to assess the effectiveness of Commuter Choice Programs. The computer model will estimate travel and emission impacts of transportation changes.

Activity: North Carolina TDM Planner Meetings

NCDOT held two meetings for TDM planners across the state. The first was held in Asheville on May 24th. At this meeting, the TDM planners were provided instruction on new features in the latest version of Ridepro-the web-based ridesharing matching program. There was also a review of the ad hoc reports available to the TDM Planners through Ridepro, including a new product for tracking and reporting vanpool ridership.

The second meeting was held on September 25th. Parsons-Brinkerhoff provided a Marketing "101" presentation to the TDM Planners. This presentation covered a framework plan for a marketing effort, working with the media, and how to deal with advertising placement and pricing. There was also a discussion on upcoming changes to the Ridepro Web site, the costs and potential for a adding a module in Ridepro, which will allow for registering for Emergency Ride Home Program, and creating an interface for ShareTheRideNC.org for student registration and matching. The web interface for the student registration introduces the ability to record a student's schedule by day of week, with individually set arrival time, departure time, and time flexibility for each day.

Activity: Contract with TJCOG to Coordinate TDM Programs in the Triangle

NCDOT contracted with the Triangle J Council of Governments to review workplans of department-funded TDM organizations to ensure coordinated and effective regional TDM planning. Triangle J also created and maintains a coordinated TDM marketing plan taking into account the activities of DOT-funded TDM organizations and convened meetings of the DOT-funded TDM programs in the Triangle. This effort has assisted in improving the effectiveness of the individual programs and enhanced the effectiveness and efficiency of the TDM activities.

Activity: Triangle 7-Year Long Range TDM Plan

The Triangle Transit Authority, with funding provided by the NCDOT Public Transportation Division, University of North Carolina at Chapel Hill, North Carolina State University, Triangle J Council of Governments, the Research Triangle Foundation, and the Durham and Capital Area MPO's, has contracted with UrbanTrans to develop a 7-Year TDM Plan for the Triangle by March 2007. The plan will do the following:

- Provide a comprehensive assessment of existing TDM Programs
- Document existing policies, ordinances, and activities that support or undermine TDM objectives and subsequent impacts on program success
- Identify policies and ordinances that local governments could adopt in support of transportation alternatives
- Assess current TDM market opportunities and reveal potential future markets
- Educate key stakeholders about the opportunities for TDM to serve as an integral component of the region's mobility solution and provide a process for input of key stakeholders into regional TDM workplans
- Establish a process for determining program priorities as related to annual funding levels and future investment recommendations based on continual evaluation of TDM Programs
- Evaluate the existing institutional arrangements for providing TDM services in the region, and reach consensus on changes needed to accomplish desired outcomes
- Establish a standardized data collection method for reporting program accomplishments for base year and future program years
- Determine effective methods of accounting for TDM program activities within long range transportation plans

Activity: Fare Free Transit for Raleigh-area Based State Employees

In September 2003, the North Carolina Department of Administration entered into agreement with Capital Area Transit (CAT) that would allow state employees to use transit services at no cost to the employee. The cost of the agreement is funded with revenue from state employee parking fees. Ridership by state employees has increased from 7,438 riders in the first month of the program back in September 2003 to 16,247 riders during the month of August 2006. Since the inception of the program, 440,318 trips have been taken by state employees on CAT.

The Triangle Transit Authority developed a proposal for a similar program that went into effect October 2005. State employee U-Pass ridership on TTA for October 2005 to August 2006 was

24,379. There were 79,341 boardings for NCSU and an estimated 109,000 boardings for UNC-Chapel Hill.

At the end of September 2005 the use of state ID cards to ride CAT and TTA was discontinued. In their place, employees are now issued GoPass cards, which are swiped in the farebox of the buses. This permits calculation of the number of U-Pass Program riders without the bus driver having to manually count the riders. A Web- based database has been established for the parking coordinators to enter data about state employees who request a GoPass. This has the advantage of developing a database of users that can be used for planning and marketing purposes. To date, approximately 2,000 GoPass cards have been distributed to state employees.

Activity: SmartCommute Challenge

The SmartCommute Challenge was held August 15 through September 30, 2006. The challenge was open to all employees of Wake, Durham, and Orange counties. The goal of the campaign was to increase awareness and encourage employees to try a commute alternative such as telecommuting, carpooling, vanpooling, taking the bus, biking or walking for at least one day during the challenge. There were 12, 700 persons who took the challenge. This resulted in a reduction of 1.4 million commuter miles of travel and saved more than 58,000 gallons of gas. This also resulted in a reduction of 1,572 kg of NOx. Participation in the 2006 challenge was up more than 5% compared to the 2005 SmartCommute Challenge. The most popular alternate commute option was carpooling, with an estimated 42% of participants pledging to carpool instead of drive alone. Of the participants, 25% pledged to take public transit rather than drive alone. Staff from NCDOT held informational sessions during the SmartCommute Challenge at the Highway Building, Century Center, and the Division of Motor Vehicles on New Bern Avenue. There were 120 participating employers, including NCDOT.

Activity: Downtown Raleigh Transportation Cooperative Association

The TDM planner from NCDOT participated in the Downtown Raleigh Transportation Cooperative Association Meetings. This is a group of representatives from downtown employers who meet to discuss transportation issues and formulate ideas for mitigation as well as provide education opportunities. Some of the ideas the group is working on include a downtown circulator system during midday so employees can run errands and eat lunch without having to bring their car to work, creating a Google map of all transit stops in downtown so users can easily plan their trips, and investigating the feasibility of a zipcar program in downtown to allow employees to lease cars by the hour. In addition, a lunch-n-learn was held to provide an update on the City of Raleigh Telework Initiative, which has produced impressive results in terms of gallons of gas saved, time saved, and vehicle miles traveled.

Activity: ShareTheRideNC.org

NCDOT paid for the implementation of a Web-based rideshare matching software program. This program allows individuals to enter information online regarding their address and work location/hours and to receive an instantaneous list of persons who might be potential matches for carpooling, vanpooling, or biking. The software also provides transit information and reporting

functions for those TDM programs with a license. The Web site is called ShareTheRideNC.org, and it went live October 2004. To date, 12,392 persons have registered in the ShareTheRideNC database. Over the past year, this has resulted in the estimated savings of $8,513,642 in commuting costs and an estimated reduction of parking needs in the amount of 3, 691 spaces.

Activity: Employee Commuter Survey

During the fall of 2005 and the spring of 2006, many employers in the Triangle area participated in the employee commuter survey conducted by TTA with financial assistance from NCDOT. There were a total of 15,041 surveys completed in the Triangle area, representing almost 70,000 employees. This survey asked questions about commuting patterns such as length of commute and type of mode used. It also asked for vehicle type and age to quantify air quality impacts. In addition to the surveys being required by the Durham Trip Reduction Ordinance, the survey results are used by employers designated as Best Workplaces for Commuters for the BWC requirement to certify that at least 14% of their employees are using an alternate form of commuting within 18 months of being designated as a BWC employer.

Statewide TDM Planner

The Public Transportation Division of NCDOT was awarded a Congestion Mitigation Air Quality grant for hiring a statewide TDM Planner. The grant will provide 80% of the funding for the position. The Public Transportation Division is in the process of getting this position posted. This will fulfill one of the strategies outlined in the Statewide TDM Plan, which recommends creating a new position within the NCDOT to staff and manage the Office of Commuter Assistance. The creation of this full-time position will improve our oversight of the TDM programs and enable greater technical assistance to both state agencies and the TDM programs.

2006 Total Transportation Demand Management and Urban Transit System Reductions in Vehicle Miles Traveled (VMT) and Nitrogen Oxide (NOx) Emissions

The NCDOT has developed a methodology to calculate the estimated reductions in both vehicle miles traveled and nitrogen oxide emissions due to vanpooling, carpooling and transit usage in urban areas. The total estimated reduction in VMT during the period September 1, 2005-August 31, 2006 is estimated at 162,920,512 miles, representing approximately a 7.3% reduction in the expected growth of VMT in the state. This resulted in an estimated 405.83 tons reduction in NOx emissions. Of the total reduction, the breakdown by transit, vanpooling, and carpooling is as follows:

Commuter Trips on Transit -- Reduction of 110,345,716 vehicle miles of travel and a reduction of 274.87 tons of NOx

Vanpool Trips -- Reduction of 51,379,776 vehicle miles of travel and a reduction of 127.98 tons of NOx

Carpool Trips - Reduction of 1,195,020 vehicle miles of travel and a reduction of 2.98 tons of NOx

INTRODUCTION

The State of North Carolina requires that the Department of Environment and Natural Resources (DENR) develop a comprehensive hazardous waste management plan every two years. The first plan was completed in July 1, 1990; the latest plan was completed in 2006. Beginning October 1, 2003, the Department was also required to make an annual report on the hazardous waste management plan per GS 130A – 294(i). This report includes an evaluation of hazardous waste management in North Carolina and identifies DENR's activities and recommendations in the following areas: improving waste management; cleaning up of hazardous waste; reducing the amount of waste generated; minimizing the amount of hazardous waste which must be disposed of; and maximizing resource recovery, reuse and conservation.

This report includes North Carolina data from the Environmental Protection Agency's (EPA) 2003 "Biennial Report of Hazardous Waste Generation" (2003 BR). Large Quantity Generators (LQGs) and Treatment, Storage, and Disposal Facilities (TSDFs) are required to provide EPA with information on their waste management activities on a biennial basis. The 2003 BR was published on October 1, 2003 and can be found at http://www.epa.gov/epaoswer/hazwaste/data/br03/index.htm. The 2005 BR data has not yet been published, so more recent data is not available at this time.

NORTH CAROLINA HAZARDOUS WASTE SECTION

The Hazardous Waste Section was authorized by EPA in 1980 to implement the Resource Conservation and Recovery Act (RCRA) in North Carolina in lieu of the EPA. Continuing developments in the hazardous waste program nationwide have required the Section to continually apply for authorization in program areas, such as case development audits (criminal and administrative investigations), corrective action, and alternatives to permitting and emission monitoring. The Hazardous Waste Section (HWS) has a staff of 54 people working in three branches: Compliance Branch, Facility Management Branch and Programs Branch. Collectively, the duties include, but are not limited to, the following areas:

- Regulate the management of hazardous waste by generators, transporters, treatment, storage, disposal and recyclers facilities;
- Educate the hazardous waste community by providing technical assistance through individual consultations and seminars that encourage waste reduction, sound recycling, safe management practices and proper disposal (as a last resort);
- Issue permits specifying requirements that each hazardous waste treatment, storage, recycling or disposal facility must meet;
- Provide a continuing compliance presence at commercial hazardous waste management facilities through the HWS Resident Inspector Program;
- Conduct compliance inspections and, in coordination with the North Carolina Office of the Attorney General, take enforcement actions against violators;

- Require groundwater assessments, facility investigations and corrective measures at facilities where hazardous wastes have been released into the environment and
- Ensure section staff receives necessary training and professional development opportunities to continually improve their job performance.

Information on most of the activities above is captured in the national hazardous waste database, Resource Conservation and Recovery Act Information (RCRAInfo). The database is managed by the EPA, and most of the data is entered by authorized state programs. RCRAInfo contains comprehensive information on all facilities that generate or manage hazardous waste within a state, as well as all the HWS's activities affecting these facilities. Data from RCRAInfo will be used to provide information to the Department's Facility Identification Template for States database (FITS) and the Departmental Decision Support System.

To view regulatory information for specific hazardous waste sites, visit http://www.epa.gov/enviro/. For details about the Division of Waste Management and the Hazardous Waste Section, visit http://www.wastenotnc.org/.

HAZARDOUS WASTE GENERATION, MANAGEMENT AND CLEANUP

In 2003, 439 North Carolina large quantity generators (LQGs) [1] reported generating 78,817 tons of hazardous waste. Of the 439 LQGs, the top 10 facilities generated 43,610 tons, or 55 percent, of the total quantity of hazardous waste generated by North Carolina's large quantity generators. In 2001, 501 LQGs generated 94,534 tons of hazardous waste and the top 10 facilities generated 32,515 tons.

Although only LQGs and TSDFs are required to report their hazardous waste generation and management amounts, it is important to note that North Carolina also has 1,827 small quantity generators and 4,498 conditionally exempt small quantity generators.[2] These facilities are not required to report the amount of hazardous waste they generate because they are typically small businesses for whom periodic reporting could be overly burdensome. However, these facilities collectively generate a significant amount of hazardous waste that must be managed properly and in compliance with all applicable rules. Significant resources are devoted to compliance and enforcement activities, technical assistance and outreach at these facilities.

North Carolina has 31 facilities in the permitting workload universe and 60 facilities in the post-closure workload universe. Approximately 93 percent of these facilities are permitted, under an order or other approved control for management or remediation of their hazardous waste. There are 109 facilities that are subject to RCRA Corrective

[1] Large Quantity Generators are defined as facilities that generate 1,000 kg (2,200 lbs.) or more of hazardous waste in a calendar month.

[2] Small Quantity Generators are defined as facilities that generate between 100 kg and 1,000 kg (220 lbs. to 2,200 lbs.) per calendar month. Conditionally Exempt Small Quantity Generators generate less than 100 kg (220 lbs.) per calendar month.

Action. Progress in the Corrective Action Program is tracked through environmental indicators. Currently, 100 percent of high priority corrective action sites have human exposures under control and 82 percent of high priority corrective action sites have groundwater migration under control.

NORTH CAROLINA HAZARDOUS WASTE REDUCTION INITIATIVES

HAZARDOUS WASTE REDUCTION INITIATIVES

A. Commitment to Hazardous Waste Minimization

The HWS continues to work with EPA Region 4 to solicit participants in the National Partnership for Environmental Priorities. This voluntary program fosters partnerships between government and industry to reduce hazardous waste -- especially waste containing any of the 30 chemicals known to be highly toxic. Partners who make significant progress in waste reduction receive national recognition for their achievements.

The North Carolina Hazardous Waste Section has also committed to the following:

- Incorporate pollution prevention training (based on targeted priority chemical waste streams) into annual generator workshops, industry meetings and enforcement settlement negotiations;
- Review facility requests for alternative management practices for hazardous waste (use/reuse, substitution, reclassification and delisting), and
- Support intervention projects to reduce/eliminate the presence of priority chemicals via partnerships with other agencies.

B. Environmental Stewardship Initiative

DENR's Environmental Stewardship Initiative promotes and encourages superior environmental performance by North Carolina's regulated community. This voluntary program stimulates the development and implementation of programs that use pollution prevention and innovative approaches to meet and exceed regulatory requirements. There are three levels of participation. "Environmental Partners" is for organizations interested in developing a systematic approach to improving their environmental performance. The "Rising Steward" level is designed for those organizations that have a mature environmental management program. The "Environmental Steward" level is for organizations that already display a commitment to exemplary environmental performance beyond what is required by law. All participants must set environmental performance goals that include pollution prevention and are required to report annually on progress towards these goals and net pollution reductions.

This important program not only recognizes outstanding environmental performance at the "Steward" level, but provides encouragement and assistance to foster improved environmental performance by North Carolina organizations. Coaches (technical staff)

are assigned to each participant to provide technical assistance on pollution prevention and develop an environmental management system. Networking opportunities allow participants to learn from each other and share success stories. This program seeks to reduce the impact on the environment beyond measures required by any permit or rule, producing a better environment, conserving natural resources and resulting in long-term economic benefits.

For more information about the program, visit http://www.p2pays.org/esi/.

C. Mercury Switch Removal

The HWS will soon implement a program to encourage removal and recycling of mercury-containing convenience light switches from automobiles. Enacted by the General Assembly in 2005, this program requires auto recyclers and scrap metal dealers to remove the switches before the vehicles are crushed, shredded, and recycled into new steel. The vehicle recyclers and scrap metal dealers will receive $5.00 for each switch that is removed, collected, and sent for recycling. Removal of the switches prior to recycling will greatly reduce mercury emissions during the steel-making process.

D. Other Activities

The HWS will continue to support safe hazardous waste management in North Carolina by:

- Supporting opportunities for waste minimization and recycling and supporting annual generator workshops that help educate the largest generators on hazardous waste regulations and the expectations of hazardous waste inspectors;
- Continuing the HWS initiative to improve compliance in the vast SQG universe through a SQG self-certification survey;
- Seeking to establish a hazardous waste generator security deposit to fund the cleanup of abandoned generator sites that do not meet acceptable environmental standards;
- Continuing to seek EPA authorization to maintain HWS's authority to implement newly promulgated regulations and standards;
- Improving the quality of hazardous waste data for hazardous waste trend analysis and sound decision-making; and
- Participating in EPA's rulemaking projects such as those involving standards for the recycling of used industrial rags and wipes, tailored waste management requirements for academic laboratories, revisions to the regulatory standards for materials that are recycled, and other regulatory proposals.

RESIDENT INSPECTOR PROGRAM
2006 ANNUAL REPORT

This annual report is presented to the Environmental Review Commission pursuant to Article 9, G.S. 130A 295.02(m). The report covers the activities of the Resident Inspector Program from July 1, 2005 through June 30, 2006.

I. OVERVIEW

The Resident Inspector Program has been operating for more than 15 years in the Division of Waste Management. This program monitors all aspects of the commercial hazardous waste facilities in North Carolina and assures compliance with all laws and rules administered by the Department of Environment and Natural Resources. It may also enforce laws or rules administered by any other state agency through a memorandum of agreement.

The Resident Inspector Program was established "... to enhance the ability of the Department to protect the public health and the environment by providing the Department with the authority and resources necessary to maintain a rigorous inspection and enforcement program at commercial hazardous waste facilities" [G.S. 130A-295.02(f)]. Under the program, commercial facilities, which receive and process a wide variety of hazardous waste from large quantity, small quantity and small quantity conditionally exempt generators, are subject to an inspection frequency of two, four or six times per month. This level of inspection presence helps to ensure a high compliance rate at these facilities whose primary business is the management of hazardous waste.

II. PROGRAM STAFFING

For this fiscal year, the program was comprised of two resident inspectors assigned to home duty stations, one administrative assistant and a program supervisor (See Attachment 1 for the Organization Chart). The Resident Inspector Program resides within the Hazardous Waste Section's Compliance Branch.

III. THE RESIDENT INSPECTOR

Most state agencies perform their compliance monitoring inspections as required from their specific respective regulations. The Resident Inspector Program, however, is unique in that its inspections utilize a multi-media approach. This approach covers all regulatory responsibilities for which DENR is authorized, such as hazardous waste management and treatment requirements, workplace safety, air emissions requirements, wastewater treatment and discharge requirements.

There are inherent overlaps of DENR's regulatory requirements with regulations administered by other departments. Two examples include the Department of Labor's Occupational Safety & Health Act and the Department of Transportation's hazardous materials transportation regulations. Deviations from these various departments' regulations could adversely affect public health and the environment, as well as a facility's compliance with air, water or hazardous waste management regulations. As part of the Resident Inspector Program's comprehensive approach to monitoring commercial hazardous waste facilities, resident inspectors also evaluate these sites for potential violations in these other regulatory areas. When necessary, they make recommendations to the facilities and/or make referrals to the authorized agency or agencies. The mandated frequency of inspection at each facility gives resident inspectors the time needed to achieve this high degree of oversight.

To prepare resident inspectors for their multimedia approach to inspections, initial training typically consists of Hazardous Waste Operations and Emergency Response (40 hours), Environmental Surveillance, RCRA Hazardous Waste Training, Hazardous Materials Transportation and the care and use of Level B / Personal Protective Equipment.

Annual training for resident inspectors includes an 8-hour Health & Safety Basic Refresher, Level B Update and Environmental Surveillance Update. Depending upon the inspector's area of expertise and responsibility, other miscellaneous training may be received, including Hazardous Waste Incineration, Ambient Air Monitoring, Air Pollution Control Devices, Chemical Safety Audit, OSHA Inspector's Course, Hazardous Materials Management and various EPA regulatory workshops.

IV. SUBJECT FACILITIES

To be subject to oversight by the Resident Inspector Program, the facility must be a commercial hazardous waste facility. The term "commercial," as it relates to a hazardous waste facility, is defined as a facility "... that accepts hazardous waste from the general public or another person for a fee" [G.S. 130A-290(a)(3)]. Presently, there are 11 permitted commercial hazardous waste treatment, storage, and disposal facilities in North Carolina under the jurisdiction of the Resident Inspector Program. Beginning in April, Heritage Environmental Services, (one of four commercial permitted treatment, storage and disposal facilities located in Mecklenburg County), ended their suspended operations status and resumed operation. Although currently treating, storing or disposing of hazardous waste at a limited/minimal operating level at the Charlotte facility, Heritage Environmental Services continues to provide full services for their North Carolina customers, still utilizing the Charlotte facility as a transfer station. While this permitted RCRA Part 'B' TSDF was inactive, the facility was monitored by the Resident Inspector Program as a Category 1; after operations were resumed, the facility ranking returned to a Category 3 (See Section V and Attachment 2).

V. FACILITY CATEGORY RANKINGS

Each commercial hazardous waste treatment, storage and disposal facility is ranked to determine its required inspection fees and minimum inspection frequency as required under 15A NCAC 13A .0116.

The frequency of the inspections at each facility is dependent upon its qualification as a "special purpose" commercial hazardous waste facility and the category ranking assigned to it, which is based on such factors as the capacity of the facility, the nature of the hazardous waste and the type of treatment being performed. Currently, all existing commercial hazardous waste treatment, storage and disposal facilities in North Carolina qualify as "special purpose" facilities. (See Attachment 2 for current category rankings and primary waste treatment activities for these facilities.) The designated categories of 1, 2 or 3 correspond to a minimum inspection frequency of two, four or six times per month, respectively.

VI. FUNDING & EXPENSES

The Resident Inspector Program is funded by fees collected from the commercial hazardous waste facilities. These fees are based upon each facility's category ranking and volume (tons) of hazardous waste handled. The category ranking system is designed to be an indirect measure of the costs associated with the oversight at each commercial hazardous waste facility. While the commercial hazardous waste facilities' total tonnage throughput has continued to increase this year, yielding increased Program fees, Program operating expenses have increased due to transportation / fuel costs. However, Program costs were again reduced due to delayed staff replacement caused by the previous year's 75% turnover in personnel. The savings to the salary budget during the re-staffing period (lapse in personnel coverage) was partially offset by the cost incurred for the vacancy re-staffing and training of new personnel. The Program's effectiveness is hampered by the inability to attract and keep sufficiently skilled, competent personnel with competitive compensation in today's job market. Due to the periodic loss of personnel, it remained necessary for the Resident Inspector Program supervisor to conduct a significant portion of the required inspections to meet the Program's minimum mandates.

For FY 2005-2006, the budget was developed using anticipated revenues from Resident Inspector Program fees of approximately $295,000. The actual hazardous waste tonnage received by two of the commercial facilities greatly increased over the previous year, while all other facilities remained relatively unchanged. (A detailed list of the individual tonnages received by each of the commercial hazardous waste facilities in FY 2005-2006 can be found in Attachment 3.) The actual Program receipts in FY 2005-2006 totaled $297,000, while Program expenses were held to $225,934.

VII. INSPECTION GOALS & ACHIEVEMENT

During FY 2005-2006, for the periods when the program was fully staffed, additional inspections were conducted. Thus, a total of 460 inspections were conducted, exceeding the required minimum of 444 inspections. These inspections included routine site inspections as well as specific inspections to monitor partial closure activities at one facility and the resumption of normal operation at another facility, and to assist in improving compliance performance by other facilities. (A detailed list of the inspections performed by program staff at the commercial hazardous waste facilities in FY 2005-2006 can be found in Attachment 4.)

VIII. ENFORCEMENT & COMPLIANCE

Enforcement Activities

In general, the commercial hazardous waste facilities continue to be cooperative and have rapidly responded with corrective action in most cases when deficiencies or violations were cited or recommendations made. When either of these actions do not result in timely and consistent compliance, a more severe enforcement action is taken, such as a compliance order with administrative penalty.

During the past fiscal year, resident inspectors issued one Notice of Violation to a commercial facility and two Compliance Orders (see Attachment 5 for current and historic enforcement tracking). These violations, when compared to the actual number of inspections, translate to an overall compliance rate of 97.8 percent. The root cause for the decline in compliance from the previous year has been identified as changes in facility operating personnel and/or changes in the facility's operating methods.

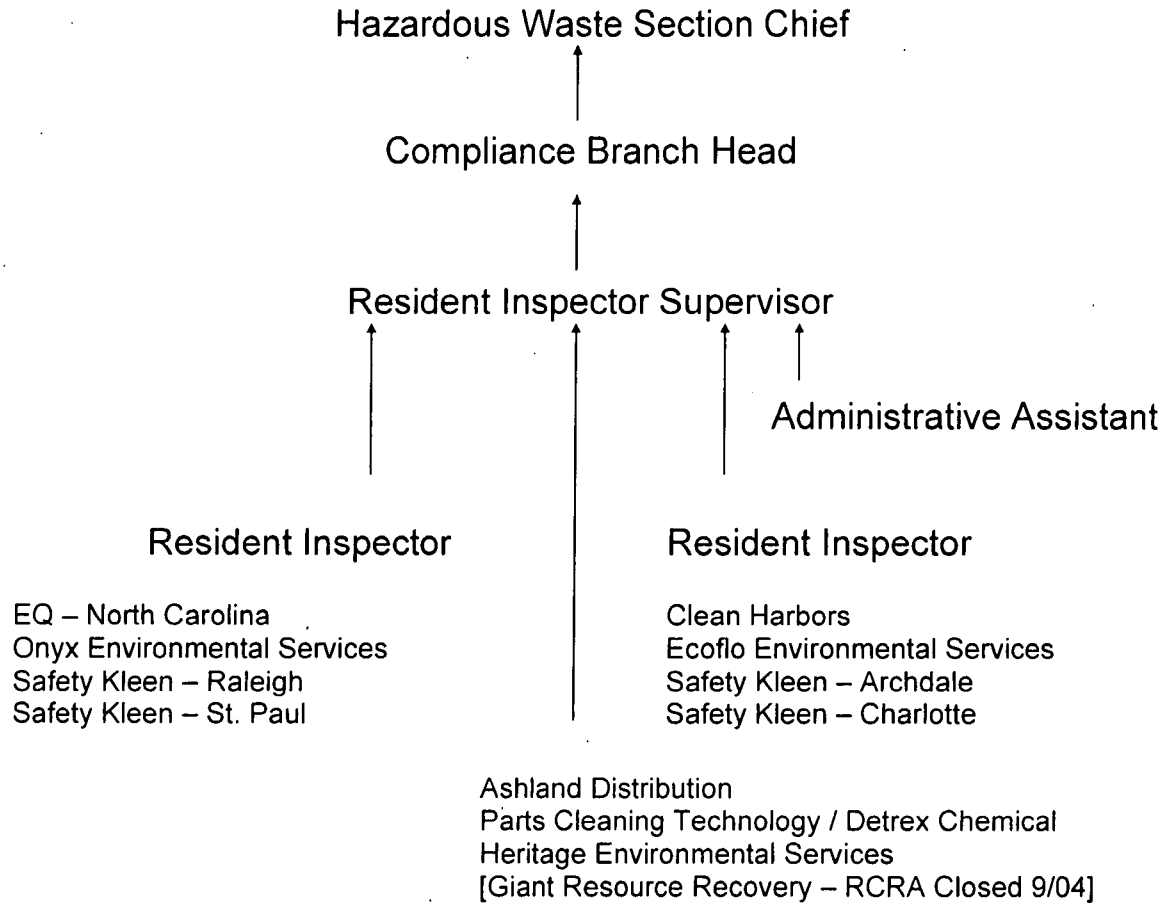
Compliance Assistance Activities & Homeland Security

Compliance assistance activities offered under this program are conducted routinely during the inspectors' site visits. Since the inspectors visit these facilities at least semi-monthly, they have the opportunity to become very familiar with the operations of each facility and may offer compliance assistance in several ways. Inspectors identify past trouble areas and work with the facility toward a permanent solution. They also increase scrutiny of these areas during each visit to keep the facility's compliance awareness high. Inspectors communicate frequently with facility management and front-line workers to clarify the permit and current regulatory requirements, the reasons for the requirements, and the potential risks incurred for noncompliance. Inspectors continue to develop and schedule and facilitate roundtable training workshops customized for each specific facility. These workshops cover the most frequent violations observed overall at commercial facilities, the most frequent violations observed at their particular facility, any potential areas of concern and positive facility operations.

If a facility repeats a violation, the primary inspector and program supervisor will set up an informal enforcement conference with the local facility compliance managers, the plant manager, and, if applicable, the corporate compliance officers. They discuss the facility's current compliance issues and work with the facility to find a permanent solution, which may include formal enforcement.

IX. PUBLIC MEETINGS / HEARINGS & PERMIT RENEWALS

The Resident Inspector Program staff continues to observe and assist/support public meetings/hearings that involve the operation of and proposed modifications to the commercial hazardous waste facilities in this state. A continuing program goal is for the staff to be fully aware of public concerns and to be conscious of these concerns during oversight efforts at these facilities. Program staff members have provided assistance in facility compliance audits by generators, consultants, other agencies and the public. Program staff work with area schools to provide information in the classroom about environmental responsibility and how the facilities help with that responsibility.



The Resident Inspector Program staff continues to work with the Facility Management Branch (the permitting arm of the Hazardous Waste Section) and each commercial hazardous waste facility during the permit renewal/application process and other compliance reviews, such as, closure of a permitted unit (storage tank, processing area, container storage area, etc.). The purpose of this joint effort is to provide clarification, address areas of concern, and assist in ensuring the permit application accurately reflects the facility as it is operated.

X. SUMMARY

At the conclusion of the program's 15th year, the Resident Inspector staff continues to provide rigorous oversight of the commercial hazardous waste facilities in this state. This is reflected in the facilities' overall compliance rate of 97.8 percent. The staff is constantly seeking new approaches and initiatives to improve the department's ability to protect public health and the environment. Also, the staff works to ensure that new regulatory requirements are fully understood by the facilities so they can be implemented rapidly and correctly. Proactive approaches, such as workshops, program oversight and compliance assistance efforts, have clearly demonstrated a heightened level of compliance at the commercial hazardous waste facilities in North Carolina.

*Numbers are reported as of 06/30/2006 and may vary from actual due to delays in data entry and continued refinements to database.

**From the period of 7/1/05 through 6/30/06, DWQ has issued approximately 137 Notice of Violations. This number can only be estimated due to the slight time delay between the issuance of a NOD or NOV from the DWQ regional staff, and the receiving of the copy of the letter by the DWQ Central Office.

Status Report on Individually Permitted Discharging Systems For the Period Beginning July 1, 2005 and Ending June 30, 2006.

Summary

North Carolina General Statute (N.C.G.S.) 143-215.9A requires the Department of Environment and Natural Resources to report to the Environmental Review Commission and the Fiscal Research Division on the status of facilities discharging into surface waters during the previous fiscal year. Facilities discharging into surface waters are required by N.C.G.S. 143-215.1 to first apply for and secure a permit from the Environmental Management Commission. As a result, the data provided within this fiscal report is captured for those facilities individually permitted with National Pollutant Discharge Elimination System (NPDES) permits.

The enclosed report details the inspections completed and the enforcement actions taken in North Carolina during fiscal year 2005-2006 by the Division of Water Quality. In addition, information on Special Orders by Consent is included. The report also includes a table showing the number of permits issued by region.

The enclosed tables list totals for each of the Department's regional offices as well as State totals. The regional offices are noted as follows:

- ARO – Asheville Regional Office
- FRO – Fayetteville Regional Office
- MRO – Mooresville Regional Office
- RRO – Raleigh Regional Office
- WARO – Washington Regional Office
- WIRO – Wilmington Regional Office
- WSRO – Winston-Salem Regional Office

If any additional information or clarification is needed, please contact Vanessa Manuel at 919/733-5083, extension 532.

CONTENTS

Table 1	Enforcement actions taken, Civil Penalties assessed and collected, and Remissions Requested from July 1, 2005 through June 30, 2006.
Table 2	Permits Issued and Inspections completed from July 1, 2005 through June 30, 2006.
Table 3	Special Orders by Consent (SOCs) active and pending from July 1, 2005 through June 30, 2006.
Addendum	Support information

ADDENDUM

The following is provided to support the information in the above status report.

- The Division of Water Quality does not have the data or management system in place to currently track information on the number of violations found during each inspection, the date of the violation, or the nature of the violation. A Basinwide Information Management System is, however, under development to address these needs. Funding has been allocated for the initial development phase. Completion of the system will require further funding. Therefore, at this time, the Division is unable to provide such information as requested in the amended G.S. 143-215.9A(a)(3).
- As found in Table 2, "Other Inspections" include:
  - **Audit Inspections**, a comprehensive review of all elements of a municipal's pretreatment program including a records review & an inspection of an industrial facility conducted once every 5 years;
  - **Bioassay Compliance Inspections**, evaluates the biological effect of a permittee's effluent discharge on test organisms using acute and chronic toxicity testing;
  - **Compliance Sampling Inspections**, a sampling inspection designed to verify the permittee's compliance with applicable permit self-monitoring requirements -- analytical results from representative samples collected during the inspection are used to evaluate the permittee's compliance;
  - **Diagnostic Inspections**, focuses on Publicly Owned Treatment Works that have not achieved permit compliance – the purpose is to identify the causes of noncompliance, suggest immediate remedies, and support current or future enforcement action;
  - **Operation & Maintenance Inspections**, focuses on the operation and maintenance aspect of a facility;
  - **Performance Audit Inspections**, inspections that include actual observation of the permittee performing the self-monitoring process from sample collection and flow measurements through laboratory analyses, data work-up and reporting;
  - **Pre-Treatment Inspections**, an annual inspection of a municipal's pretreatment program; and
  - **Toxicity Sampling Inspections**, same as CSI – however, increased emphasis is placed on toxic substances regulated by the NPDES Permit.
- Effective July 1, 1998, the Director of the Division of Water Quality delegated each Regional Water Quality Supervisor the authority to sign all Civil Penalty Assessments for fast-track enforcement actions for violations of NPDES Permit effluent limitations and/or monitoring frequencies in accordance with NCGS 143-215.6A.
- As found in Table 1, "Other Permit Condition Violations" may include
  - discharge violations (resulting from collection system overflows);
  - submitting late Discharge Monitoring Reports;
  - submitting late Toxicity Tests; and
  - permit condition violations (examples, violations of pre-treatment program, improper operation & maintenance of treatment works, or by-pass of treatment works)
- Due to the length of the post assessment process, total civil penalties assessed and total civil penalties collected will not coincide.

Recommendations to Governor Michael F. Easley and Members of the General Assembly of North Carolina From The North Carolina State Water Infrastructure Commission

---

The State Water Infrastructure Commission was created by act of the North Carolina General Assembly in 2005. The purpose of the Commission is to identify the State's water infrastructure needs, develop a plan to meet those needs, and monitor implementation of the plan. The Commission is comprised of 13 members representing State agencies and non-profits, organizations representing North Carolina local governments and members of the water infrastructure and water resources professions.

In its work thus far, the Commission has examined how water, wastewater and stormwater infrastructure is funded and developed today in North Carolina and in several other states faced with this same crunch. The Commission submitted a report on November 1, 2006 to the Governor and the members of the General Assembly that provides a careful assessment of what the Commission views as its most important near-term tasks - to understand the needs for infrastructure financing in the State and to make recommendations to the members of the General Assembly on potential solutions to those funding needs. The report calls for near term actions on part of the State of North Carolina and establishes a work agenda for the State Water Infrastructure Commission for the next several years.

Excerpt from report and recommendations:

Water is a resource we use daily. Yet, we rarely give a thought to where it comes from and where it goes to be disposed of in this State. Our complacency has grown because of the protections afforded by federal and State regulations. We expect safe drinking water and environmentally sound disposal of our wastewater. We also expect that business, those already in our State or those considering our State as a location, will find clean and plentiful water for their operations, thus enabling needed job creation and retention.

Yet, the reality is that North Carolinians face significant challenges to our environment and public health, and to our ability to create and retain jobs. These come in the form of a growing population, concentration of that growth in certain regions of the State, increased demand for water and growing volumes of wastewater for disposal. When coupled with complacency, we risk missing crucial opportunities to manage our water resource and infrastructure needs with time still on our side.

There are a wide range of water infrastructure needs facing the State of North Carolina. The Water 2030 Initiative, a recent study of the State's infrastructure capital needs, estimated we will need $16.6 billion between 2005 and 2030 to develop new treatment facilities and upgrade

those already existing, to improve operations and maintenance capacities, to provide much needed technical assistance and training for owners and managers, and to adequately plan for a sustainable water future.

Owners and operators of these systems know well the challenges they face as they work every day to produce safe drinking water and protect the environment from the degradation that can be caused by inadequate control and disposal of wastewater and stormwater. Costs of construction and maintenance, however, continue to rise. Systems across the State struggle to keep pace with inflation and only the most financially secure are prepared to address today's escalating construction cost overruns pushed by global forces such as increases in petroleum and material prices that affect the cost of water and wastewater pipe.

To adequately address the financing challenge will require that we put new ideas to work in North Carolina such as finding ways for our water and wastewater funds now available to work more effectively together, dedication of a permanent source of funding and encouraging systems to price water, wastewater and storm water services to customers to cover all costs associated with the provision of clean water. Customers of local systems must pay their fair share of these costs through their rates.

Drafters of our State's constitution found that protection and conservation of the State's natural resources were essential to create a sustainable future and provide for a rich quality of life in this State. The members of the State Water Infrastructure Commission believe it is our challenge to continue this tradition. We must continue to develop ways to effectively and efficiently provide for water, wastewater and stormwater infrastructure development. We must also ensure that these services are provided equitably and sustainably because every citizen of this State has a basic right to safe drinking water and adequate disposal of waste.

It shall be the policy of this State to conserve and protect its lands and waters for the benefit of all its citizenry, and to this end it shall be a proper function of the State of North Carolina and its political subdivisions to acquire and preserve park, recreational, and scenic areas, to control and limit the pollution of our air and water, to control excessive noise, and in every other appropriate way to preserve as a part of the common heritage of this State its forests, wetlands, estuaries, beaches, historical sites, openlands, and places of beauty. Article XIV, Section 5, North Carolina State Constitution

Recommendations to the Governor and the members of the North Carolina General Assembly are:

Establish new and stable State funding for water, wastewater and stormwater improvements

To ensure that North Carolina can protect human health, preserve its water resources for the future and sustain economic growth the Commission's first priority is to recommend that the Governor and the 2007 General Assembly provide stable, new state funding for drinking water, wastewater and stormwater infrastructure of at least $100,000,000 per year. The Commission's second priority is to recommend that the Governor and the 2007 General Assembly authorize a referendum for the voters of the State to consider passage of a $1 billion Clean Water Bond.

Provide $50 million in the 2007-2008 State Budget to address critical needs.

The 1998 Clean Water Bonds have been utilized. Coupled with the diminishing role of the federal government as a funder of infrastructure have left many North Carolina communities without the funding needed to make system improvements. Figures from October 2006 available from the Department of Environment and Natural Resources indicate that there are 114 wastewater systems under some type of order from the State, either limiting or preventing additional connections to their systems. The majority of these systems is located in rural, economically distressed areas and has small user populations, further limiting the ability of the system to afford improvements without some infusion of grant funds. The State Water Infrastructure Commission recommends appropriation of $50 million to address immediate and critical water infrastructure needs in fiscal years 2007-2008.

Establish conditions on State funding that ensure financial, technical and managerial efficiency of operation

State-supported funding assistance should carry certain conditions that ensure these funds support sustainable infrastructure investments. The State Water Infrastructure Commission recommends that technical assistance providers and funding providers develop a plan to guide future state investments that 1) ensures customers of public systems contribute their "fair share" to fund improvements, 2) ensures local Ability to Pay is analyzed and used to allocate funding types and amounts, 3) ensures collaboration between existing infrastructure funders is established to maximize the use of all available funds, and 4) ensures that regionalization, water reuse and other conservations practices become a standard part of project evaluation and funding.

Support efforts to improve operation and maintenance of water, wastewater and stormwater systems

The State Water Infrastructure Commission recognizes the importance of sound operation and timely maintenance to the efficiency and effectiveness of our state's water, wastewater and stormwater systems. The Commission encourages State support for improving system operations and maintenance including improved education for system owners, development of a shadowing program between current and retired operators, capitalization of two scholarship programs, one for continuing education, the other for enrollment in water resource management at a North Carolina community college, development of a list serve for operators to post questions, information and open an online dialog for operators, and production of educational materials for use in high school career fairs to promote the operator profession and for conferences.

Provide for Regular Updates to the State Water and Wastewater Data Layers

The State Water Infrastructure Commission supports full funding for an initial update of the Water 2030 water, wastewater and stormwater data and annual updates thereafter. Such data is essential to support planning and emergency management efforts and will be easily accessible to the public through **NCOneMap**.

Establish State Funding for North Carolina Stream Mapping Project: Phase II

The State Water Infrastructure Commission recommends full funding for completion of the NC Geographic Information Coordinating Council's plan to improve the mapping and digital representation of streams and surface waters. Stream Mapping Project data is a critical foundation for water quality monitoring and water supply planning.

Fund the State Water Infrastructure Commission

The State Water Infrastructure Commission recommends that the Governor and 2007 General Assembly appropriate $250,000 per year to fund the ongoing work of SWIC. In the current national environment, states are being called upon to define a broader and more comprehensive role in both the financing and development of infrastructure. The State Water Infrastructure Commission provides a necessary forum for discussion and decision-making on water resources and infrastructure matters for the State of North Carolina.

Members of the State Water Infrastructure Commission 2006-2008

Standing Members:

Bill Holman, Chairman (also Executive Director of the Clean Water Management Trust Fund)

Chris Beacham, Assistant Secretary, NC Department of Commerce

Dempsey Benton, Deputy Secretary- NC Department of Environment and Natural Resources

Billy Ray Hall, President, NC Rural Economic Development Center

Ellis Hankins, Executive Director, NC League of Municipalities

Vance Holloman, Deputy State Treasurer, Office of State Treasurer

David Thompson, Executive Director, NC Association of County Commissioners

RE: Report and Recommendations from State Water Infrastructure Commission

Dear Sirs:

On behalf of the members of the North Carolina State Water Infrastructure Commission, I submit this report which contains a series of recommendations for consideration by the members of the Environmental Review Commission, other members of the General Assembly and the Governor regarding drinking water, wastewater and stormwater infrastructure. The State Water Infrastructure Commission was created by act of the North Carolina General Assembly in 2005.

The purpose of the Commission is to identify the State's water infrastructure needs, develop a plan to meet those needs, and monitor implementation of the plan. This report outlines a series of seven recommendations we believe essential to the protection of public health and the environment and to the economic stability of our future in North Carolina.

Should you have any questions regarding the enclosed document, please contact me at (919) 733-6375. We look forward to scheduling a time to present the results of our work to the members of the Environmental Review Commission in January 2007.

Respectfully,

Bill Holman, Chairman
State Water Infrastructure Commission

Evaluation of Training and Qualification Requirements of Animal Waste Technical Specialists

SL 2006-38

Background

- 2002 Farm Bill required NRCS to develop system to hire private contractors for technical assistance to landowners.
- NRCS requested PE board to identify conservation practices that are engineering as criteria for hiring private contractors.
- PE board identified more than 60 conservation practices as engineering.

Impacts – Technical Specialists

- Closure of Waste Impoundments
  - Approx. 1,100 inactive lagoons/holding ponds
  - More 4,600 active lagoons
  - Increased cost of closure with Professional Engineers

Impacts – District Technicians

- 110 District Technicians affected
- Job Approval Authority rescinded for 46 different conservation practices (Table 4).

Impacts – NC Agriculture Cost Share Program

- 116 District Technicians funded by NCACSP
- $2,557,915 in state appropriations for TA.
- Added layer of review for practices.

1) Action

- Continue to provide technical services to clients.
- District technicians rely on Job Approval Authority of NRCS Employees

2) Actions

- Request PE Board to review determination on specific practices (Job Class I,II or III)

3) Recommendations

- Strengthen Division Engineering Staff
- Supports:
  - Ongoing Conservation Programs
  - Community Conservation Program

4) Recommendations

- Consider legislation to:
  - grant District employees job approval authority in accordance with existing NRCS Job Approval Authority Process
  - grant Animal Waste Technical Specialist authority for development of plans for closure of waste impoundments, except for design or installation of spillways if needed.

ACTIONS/RECOMMENDATIONS 16

EXECUTIVE SUMMARY

The 2002 Farm Bill required the USDA-Natural Resources Conservation Service (NRCS) to develop a system for hiring private contractors, known as Technical Service Providers (TSPs), to provide a portion of its technical services for Farm Bill Programs. The TSP program is intended to supplement the technical assistance resources that continue to be available from NRCS and local Soil and Water Conservation Districts.

By national NRCS policy and state law, only licensed Professional Engineers (PEs), or NRCS employees with assigned job approval authority, can legally approve the design and installation of those practices deemed to be engineering practices by the NC Board of Examiners for Engineers and Surveyors (PE Board). NRCS requested that the PE Board review NRCS conservation practice standards and determine which practices constitute the practice of engineering in North Carolina. This determination would be used in evaluating the qualifications of potential TSPs interested in contracting with NRCS.

The review of the conservation practices by the PE Board and subsequent determination that more than 60 practices constitute the practice of engineering (see Table 1) has broad impacts on the animal industry of North Carolina and the larger conservation effort in North Carolina. The authority of Animal Waste Technical Specialists designated by the Soil and Water Conservation Commission included some significant practices deemed to be engineering practices by the PE Board. On a broader scale, 110 District Technicians who had been granted job approval authority by NRCS for 46 of these conservation practices had their job approval authority rescinded because NRCS cannot grant job approval authority to District Employees for practices identified as engineering. Loss of Technical Specialist authority and District Employee job approval authority for these practices could significantly impair the conservation effort in this state, while significantly increasing the costs to the state and the agricultural community.

As a result of meetings held with interested parties, the Department has asked the PE Board to revisit this issue and reconsider their determination for some of the most common practices. (See attached letter). The Department is awaiting a response from the Board. The Department recommends that the ERC consider legislation that would provide an exemption to NC General Statute 89C-25 for employees of Soil and Water Conservation Districts having federal engineering job approval authority, and an exemption for development of plans for the closure of waste impoundments, except for the design or installation of a spillway if needed.

INTRODUCTION

Session Law 2006-38 (SB1598) requires the Department of Environment and Natural Resources to evaluate the training and qualification requirements for approval as an animal waste management systems technical specialist. The purpose of this evaluation is to determine whether the current approval process ensures an appropriate level of knowledge and expertise to provide services related to the development, implementation or operation of an animal waste management plan or animal waste management system.

In conducting the study, a meeting was held on September 18, 2006 in Raleigh to allow for input from interested parties. Representatives from the DENR-Division of Soil and Water Conservation, NC Farm Bureau, NC Department of Agriculture and Consumer Services, NC Cooperative Extension Service, NCSU Department of Biological and Agricultural Engineering, NC Pork Council, the Natural Resources Conservation Service (NRCS) of the United States Department of Agriculture, NC Conservation District Employees Association and the NC Board of Examiners for Engineers and Surveyors (PE Board) were in attendance at this meeting.

BACKGROUND

In 2003, NRCS requested that the PE Board review NRCS conservation practice standards and determine which practices constitute the practice of engineering in North Carolina. An official determination was required so that NRCS could properly implement its Technical Service Provider (TSP) program, as required in the 2002 Farm Bill. TSPs are private contractors who are certified through NRCS to provide planning, design and construction inspection and certification services for conservation practices. The TSP program is intended to supplement the technical assistance resources that continue to be available from NRCS and local Soil and Water Conservation Districts.

By national NRCS policy and state law, only Professional Engineers(PEs), or NRCS employees with assigned job approval authority, can legally approve the design and installation of those practices deemed to be engineering practices by the PE Board. As a result, all animal waste technical specialists, TSPs and district technicians would have to be PEs in order to design or

install any of the practices identified as engineering by the PE Board. There were a series of talks and discussions in 2003 and 2004 between the PE Board, representatives from NRCS, the Division of Soil and Water Conservation and other interested parties. A formal response was received from the PE Board in November, 2005. The list of NRCS Conservation Practices determined to be engineering by the PE Board and therefore require the services of a Professional Engineer are shown in Table 1.

REVIEW OF TRAINING/EDUCATION REQUIREMENTS FOR TECHNICAL SPECIALISTS

NC General Statute 139-4(d)(11) authorizes the NC Soil and Water Conservation Commission to develop and implement a program for the approval of animal waste management systems technical specialists. For animal operations required to obtain a State General Non-discharge Permit or a National Pollution Discharge Elimination System (NPDES) General Permit, a technical specialist is required to certify that the animal waste management system has been designed and installed so as to meet or exceed the conservation practice standards of NRCS or the Soil and Water Conservation Commission. Table 2 summarizes the various technical specialists categories, their responsibilities, experience, education and training requirements that have been developed by the Soil and Water Conservation Commission.

In 1996, the Division of Soil and Water Conservation requested the PE Board to review the technical specialist category for construction inspection (SI) of waste structures. At that time, the PE Board chose to review all categories of technical specialist designation for animal waste management systems. As a result of their review, design and installation inspection of waste storage structures (SD/SI) was determined to constitute the practice of engineering and is therefore reserved solely for Professional Engineers(PEs), and employees who have been granted appropriate job approval authority from NRCS.[1] Also during this review of technical specialist categories, the PE Board determined that irrigation (I) design is an engineering practice and would require the services of a Professional Engineer. As a result of this determination, the PE Board requested that the Soil and Water Conservation Commission amend their requirements for the I designation so as to require the services of a Professional Engineer. Agreement was not reached between the PE Board and the Soil and Water Conservation Commission on this issue. The General Assembly subsequently passed legislation (GS 89C-25(10)) that specifically provided an exemption from the requirements of the PE Law for the design of animal wastewater irrigation systems when the individual had met specific requirements for designation by the Soil and Water Conservation Commission as an irrigation (I) technical specialist. The Commission designation process for technical specialist categories for both runoff controls (RC) and irrigation

[1] As specified in GS 89C-25(6), the Soil and Water Conservation Commission recognizes that NRCS employees with appropriate engineering job approval authority meet the requirements for receiving the SD/SI designation.

design (I) recognizes that a PE may be qualified to provide technical assistance on these practices, but being a PE is not the sole criteria for designation in that category.

Waste Utilization Planning/Nutrient Management requires a four year degree in agronomy, three years of experience or a combination of education and experience totaling 4 years. The wettable acres (/WA) category is a supplemental designation that requires the individual to possess an I or WUP designation and successfully complete training provided by the Cooperative Extension Service on conducting wettable acre determinations. The Water Management (WM) category, which involves the design and installation of water control structures such as flashboard risers, is reserved solely for Professional Engineers(PEs), and agency employees with appropriate NRCS job approval authority. The Cooperative Extension Service, NCDA&CS, Division of Soil and Water Conservation, and NRCS are responsible for designating their own employees for the appropriate technical specialist category. Soil and Water Conservation District employees under the technical supervision of NRCS are designated as technical specialist by NRCS.

Table 2. SWCC Criteria for Technical Specialists Designation

Category	Role	Experience / Education / Other Requirements	Training Requirements
Collection, Storage, and/or Treatment (SD/SI Design/Installation)	Design and/or Installation Inspection of lagoons, storage ponds, dry stacks, storage structures, composters, pushoff ramps, curbing, settling basins and other similar structures.	1) NRCS job approval authority; or 2) Professional Engineer license	n/a
Runoff Controls (RC)	Development and implementation of filter strips, grass channels, and related nonstructural BMPs used to reduce runoff from exterior lots (primarily dairy operations)	1) Agency* designation of staff; or 2) Experience in design & implementation of nonstructural BMPs; or 3) Professional Engineer license.	n/a
Irrigation Equipment (I)	Design and installation of irrigation systems to include pipe size, pump horsepower, nozzle size, system layout, thrust blocks, etc. and operation plan to meet criteria of Waste Utilization Plan (hours per set, etc.).	1) Design Certification by National Irrigation Association; or 2) Professional Engineer license; or 3) Agency* designation of staff	n/a
Wettable Acres (/WA)	Determine wettable acres in accordance with Certified Animal Waste Management Plan	1) I or WUP Designation, or 2) Agency* designation of staff	Attend CES Wettable Acres Training Course
Waste Utilization Plan / Nutrient Management (WUP/NM)	1) Develop .0200 animal waste plans 2) Certify other items associated with animal waste, i.e. lagoon closures 3) Approve river basin nutrient management plans (/NM) 4) Certify the Land Application component of a USDA Comprehensive Nutrient Management Plan (/NM)	1) Previous WUP designation; or 2) 3 years of nutrient management planning; or 3) 4 year degree in agronomy or related field; or 4) a combination of education and experience totaling 4 years; or 5) Agency* designation of staff	1) Nutrient Management by CES (or NRCS**) 2) NC Nutrient Management Software 3) PLAT Course 4) Conservation Planning with RUSLE
Water Management (WM)	Design and installation approval of subsurface water management systems	1) NRCS job approval authority; or 2) Professional Engineer license	n/a

IMPACTS OF ENGINEERING DETERMINATION

The review of the conservation practices by the PE Board and subsequent determination that more than 60 practices constitute the practice of engineering has broad impacts on the animal industry of North Carolina and the larger conservation effort in North Carolina.

Table 3 shows the number of Technical Specialist by organization and by designation category. Agency personnel constitute the majority of technical specialists, but there are a significant number of private technical specialist in the WUP and I designation categories. Professional Engineers are recognized by rule as technical specialists for the SD/SI, I and RC designation categories. *The 12 private PEs shown in the table are the ones who have chosen to have their names listed as technical specialists with the Division. The fact that a particular Professional Engineer is not on our list does not prohibit that individual from providing engineering assistance to animal operations as a technical specialist.*

Table 3. Technical Specialists by Organization and Category

Technical Specialists by Organization							
Technical Specialist Category	NRCS	SWCD	CES	DSWC	NCDA	Private (non-PE)	PE
WUP	126	104	114	20	14	75	12
RC	112	73	0	9	0	5	12
I	13	2	0	2	0	21	12

Closure of Waste Impoundments (WUP Designation)

The standard for closure of waste impoundments applies to the closure of animal waste lagoons and waste storage ponds that are no longer used for their original intended purpose. Under current rules adopted by the Soil and Water Conservation Commission, individuals with the WUP technical specialist designation have the authority to develop closure plans for these structures and to certify their closure once the sludge and wastewater has been removed. Upon closure, the technical specialist is required to certify that the facility has followed a closure plan that meets all requirements set forth in the closure standard, all waste liquids and sludges have

been removed and land applied at agronomic rates, all input pipes have been removed, all slopes have been stabilized as necessary, and vegetation has been established on all disturbed areas.

There were extensive discussions with the PE Board in 2004 regarding whether the closure of waste impoundments constitutes the practice of engineering. However, the ultimate decision by the PE Board was that a Professional Engineer is required to implement this practice. Legislation had been introduced that would have provided an exemption from the decision of the PE Board for development of lagoon closure plans, except for the design or installation of a spillway when needed. However, this legislation was not enacted.

In North Carolina there are approximately 1,100 inactive lagoons/holding ponds that have not been closed and more than 4,600 active lagoons that will need to be properly closed at some point, when they are no longer in use. Closure of lagoons and holding ponds is already an expensive undertaking. Because of the flooding of numerous swine farms as a result of Hurricane Floyd in 1999, the Division of Soil and Water Conservation has been conducting a Swine Farm Buyout program for facilities located in the 100 year flood plain. This program is funded through the NC Clean Water Management Trust Fund. To date, this program has closed a total of 59 lagoons on 27 farms. The average closure cost is $31,603 per lagoon. The cost varies by size with an average cost of $40,125 per surface acre of lagoon. A determination that a Professional Engineer be required to close waste impoundments could result in a significant increase in the cost of these closures. This determination could delay the closure of lagoons in cases where landowners choose to receive assistance from NRCS employees with job approval authority for this practice, rather than obtain the services of a professional engineer.

Runoff Controls (RC Designation)

Runoff Controls are methods used to minimize the runoff of pollutants from lounging and heavy use areas. These are primarily applicable to dairies and beef feedlots. Diversions (code 362) and Heavy-Use Area Protection (code 561) are conservation practices that could currently be certified by a technical specialist with the Runoff Control (RC) designation. The PE Board has determined that these practices constitute the practice of engineering and would therefore require the seal of a Professional Engineer.

District Technician Impacts

Existing operational agreements between NRCS and Soil & Water Conservation Districts require that district technicians operate under the technical supervision of the federal NRCS District Conservationist in their office. District technicians receive job approval authority for specific conservation practices based on their training and demonstrated competency to design and/or install a particular practice. The purpose of the Job Approval Authority procedure is to ensure that all individuals who provide technical assistance have adequate training and demonstrated competency to design and/or install specific conservation practices. Most district technicians have received some level of job approval authority for practices determined to be engineering by the PE Board. There are a total of 110 district technicians statewide that have had their job approval authority rescinded for one or more practices as a result of the PE Board's review of NRCS conservation practices. Table 4 summarizes the impact of the determination by the PE Board on district technicians by practice. It also indicates the extent of the practice in the NC Agriculture Cost Share Program.

Table 4 District Technician Impacts

Code	Practice Name	Extent of Practice in ACSP	District Techs. Affected (No.)

The NC Agriculture Cost Share Program provides up to 50% cost share funding to local governments for 116 district technicians to design and install conservation practices in the 96 Soil and Water Conservation Districts across the state. In the current fiscal year, the state has provided $2,557,915 in state funds for technical assistance cost share, with an additional $203,581 in federal grant funds also being invested into the program. District technicians who have had their job approval authority rescinded will no longer be authorized to approve the design and installation of those practices deemed to be engineering practices by the PE Board. District technicians will now be required to have an NRCS employee with appropriate Job Approval Authority to review, approve and take responsibility for all practices identified as engineering. Implementation of this policy will hinder the ability of districts to get conservation practices installed. This problem is exacerbated by the fact that NRCS field staffing levels have been decreasing in recent years due to federal budget constraints.

District conservationists, employed by NRCS, are the primary source of technical supervision in the Soil & Water Conservation District office. NRCS currently has 76 District Conservationist, 24 Soil Conservation Technicians, 9 Soil Conservationists, 8 Civil Engineers and 4 Civil Engineering Technicians serving the state's 96 Soil and Water Conservation Districts. If the current trend towards decreased NRCS field staff continues, it will become increasingly difficult for District Technicians to perform their jobs in a timely and efficient manner. This would have a serious and significant negative impact on the NC Agriculture Cost Share Program and the overall conservation effort in North Carolina.

ACTIONS/RECOMMENDATIONS

1. The Division of Soil & Water Conservation and NRCS have encouraged affected district technicians to continue to provide technical services and receive full credit for the services provided, while complying with the requirement that NRCS is now required to review, approve and take technical responsibility for all work on conservation practices identified as engineering.
2. Provide adequate funding to the Division of Soil and Water Conservation to hire a Professional Engineer in each of the seven DENR regional offices to provide additional technical supervision to district staff and to provide necessary engineering oversight for work performed by District Technicians. This will support the ongoing work of district technicians with the NC Agriculture Cost Share Program and will also provide necessary engineering assistance for the Community Conservation Assistance Program enacted by the legislature in spring 2006.
3. The PE Board has previously reviewed the categories of technical specialist designation. The responsibilities of Technical Specialists designated by the Soil and Water Conservation Commission are in compliance with the PE Boards determination and/or specific statutory exceptions[2], except for the technical specialist authority related to Closure of Waste Impoundments and certain Runoff Control practices previously identified. The Division of Soil and Water Conservation has requested that the PE board review these practices, as well as additional conservation practices for which Job Approval authority has frequently been granted to District Technicians as specified in the attached letter. The Department has not yet received a response to this request.
4. The Department recommends that the Environmental Review Commission consider legislation that would provide an exemption to NC General Statute 89C-25 to employees of Soil and Water Conservation Districts having federal engineering job approval authority, and an exemption for development of plans for the closure of waste impoundments, except for the design or installation of a spillway if needed.

[2] GS 89C-25(10) provides an exception for "design of land application irrigation systems for an animal waste management plan when the individual is designated as an Irrigation Design Technical Specialists by the Soil & Water Conservation Commission.

NCDENR
North Carolina Department of Environment and Natural Resources

Michael F. Easley, Governor

William G. Ross Jr., Secretary

November 6, 2006

Andrew L. Ritter
Executive Director
North Carolina Board of Examiners
For Engineers and Surveyors
4601 Six Forks Rd., Suite 310
Raleigh, NC 27609

Dear Mr. Ritter:

On September 18, 2006, a meeting was held with interested parties to receive input on Senate Bill 1598. Mr. Frank Tyndall, past chair of the PE Board, was present at that meeting as the PE Board representative.

As discussed during this meeting, the determination by the PE Board that the identified practices in your response to NRCS dated November 15, 2005 constitute the practice of engineering has the potential to seriously impair the ability of Animal Waster Technical Specialists and Soil & Water Conservation District Technicians to carry out their duties with regard to implementation of conservation practices on agricultural lands.

During this meeting, Mr. Tyndall suggested the Board might consider revisiting some of these practices in order to minimize the impact on District Technicians and Technical Specialists. This letter is written to follow up on that discussion. Specifically, we ask that you revisit your previous engineering determination for certain conservation practices on agricultural lands. This request is made on the basis that the list of attached practices, at the specified scale or level of complexity **(non-shaded practice classes)** do not exceed the regulatory threshold such that a Professional Engineer is required in order to safeguard life, health, or property. The system of practice classes shown on the attached table is the same system used to assign Job Approval Authority to NRCS employees. The non-shaded classes in the list generally reflect the level of Job Approval Authority previously granted to District Technicians.

This request to the PE Board will be included in the report to the Environmental Review Commission (ERC) of the General Assembly as required under Senate Bill 1598. The Department looks forward to resolving this issue in a satisfactory manner to all parties so that the conservation efforts of NC farmers and the agricultural community are not unnecessarily impaired and safeguards to life, health and property are adequately maintained.

Please contact Manly Wilder or Vernon Cox of the Division of Soil and Water Conservation with any questions or comments.

Sincerely,

Richard Rogers

3309 Burlington Road/Greensboro, North Carolina 27405-7605 / (336) 375-5401 / Fax: (336) 375-5042

To: Environmental Review Commission

From: Richard L. Phillips, PE

Subject: District Technician Job Approval Authority

I address you today as a licensed Professional Engineer in N. C., a Guilford Co. SCD Supervisor, and as a retired State Conservation Engineer with the NRCS. I do this as a passionate conservationist.

I am concerned about the unnecessary restrictions which have been placed on District Technicians in this State by the NC Professional Engineer's Board. As a result, these actions severely impede our technician's efforts to conserve our soil resource and protect our waters.

North Carolina has always been a leader in the Nation in the conservation effort. Hugh Hammond Bennett, born in Anson County, was the founder of the Soil Conservation Service in the 1930's. On August 4, 1937, North Carolina was the first in the Nation to organize a soil conservation district. Further, North Carolina is second in the US in the number of District employees, some 270 in the field. And, North Carolina is a leader in the Nation in funding conservation measures through the Agriculture Cost Share Program.

The policy of the legislature in this matter is stated in G. S 139-2 (b), *"provide for the conservation of the soil.....and for the prevention of floodwater and sediment damages.....and promote the health, safety and general welfare of the people of this State"*

For more than 50 years, technicians (both Federal and State) have done the bulk of the work to plan and build conservation measures on our farms. These include the traditional practices to control erosion and sediment with terraces, diversions, waterways, ponds, and grade stabilization measures. Then with the passage of the Clean Water Act, their work was expanded to the control (and management) of agricultural pollutants using Best Management Practices like lagoons, manure storages, composting, and wastewater irrigation.

Yours for Life

District Technicians are very well qualified to do this work by education, experience, and training. Almost all have at least two years of college, and over half have BS degrees. Their expertise includes: plant and soil-water relationships, precipitation and runoff, evaporation and transpiration, soil structure and organic mater, nitrogen transformations and movement, phosphorus accumulation, cropping systems, residue management, soil losses by sheet and gully erosion, animal science, drainage, irrigation, waste treatment, manure storage, and composting. And, since most have farm backgrounds, they are able to work easily with farmers. In other words, District Technicians are the best available human resource in the State to tackle these problems, and they are already on the payroll.

My analysis of the situation is this:

- District Technicians have the ability to do this work, but are currently restricted from doing so because of the action of the NC PE Board. This has become a critical issue with the significant reduction of NRCS field staff reductions in recent years.
- Most of the jobs are small, usually less than $20,000, and are not of interest to professional engineers. PE's are not restricted from working on these problems, but their fees preclude it, and most farmers would not have the funds to employ them. It is only with incentives of the Agriculture Cost Share Program that farmers are willing and able to install the practices.
- Almost all of the Professional Engineers I know do not have the education, training, or experience to address these problems.

In conclusion, I recommend the law(s) be changed to allow District Technicians to resume what they have traditionally done so they can effectively carry forward this vital work.

Thank you for the opportunity to address this issue.

Sincerely,

Richard L. Phillips

Prepared for a meeting of the Environmental Review Commission, Raleigh, NC, November 15, 2006

2006

ENVIRONMENTAL REVIEW COMMISSION

MINUTES

MINUTES
ENVIRONMENTAL REVIEW COMMISSION
13 December 2006

The Environmental Review Commission (ERC) met on Wednesday 13 December 2006 at 9:30 a.m. in Room 1228 of the Legislative Building. Senators Clodfelter and Albertson presided.

The following members were present: Senators Albertson, Bingham, Clodfelter, Kinnaird and Weinstein; and Representatives Gibson, Hackney, Harrell, Harrison, Justice and Warren. Mr. George Givens, Commission Counsel; Jeffrey Hudson, Assistant Commission Counsel; Jennifer McGinnis, Assistant Commission Counsel; Susan Iddings, Assistant Commission Counsel; Jennifer Mundt, Commission Analyst; and Dot Waugaman, Commission Clerk, were also present.

On 28 November 2006, notice was sent to members and interested parties via e-mail and regular mail. A copy of the notice is included in the attachments to these minutes as **Exhibit A**. Copies of the agenda for the meeting and visitor registration sheets are included in the attachments as **Exhibits B** and **C**.

Senator Clodfelter called the meeting to order and recognized Mr. Phil Land, a staff counsel to Senator Wes Hayes of the South Carolina General Assembly. He has been the leading proponent of getting North and South Carolina into closer cooperation in managing our shared resources, particularly the Yadkin-Pee Dee River and the Catawba River. Senator Clodfelter then asked George Givens to present his report and explain the agenda items. Mr. Givens pointed out that a packet of Read Only reports with an explanation memorandum from Ms. Jennifer Mundt was at their desks (see **Exhibit D**). The reports consists of the Title V Air Quality Permit Program Accountability Report, dated November 2006 (see **Exhibit D-1**); the Annual Mining Permit Fee Use Report memorandum, dated 5 December 2006 (see **Exhibit D-2**); the Annual Report of the Fish Kill Events dated December 2006 (see **Exhibit D-3**); the 2006 Report to the Joint Legislative Education Oversight Committee on "*Strengthening Littering* Laws, dated 15 December 2006 (see **Exhibit D-4**); and a document entitled, "Status of Reports to the ERC Required by Law", dated 12 December 2006 (see **Exhibit D-5**).

Mr. Givens noted that the public-staff planning meeting for this meeting was held at 10:00 a.m. on 1 December 2006. He then reviewed the agenda for Commission members (see **Exhibit B**). He brought up the Request for Proposals (RFP) to be issued jointly by the ERC and the Joint Legislative Transportation Oversight Committee on the possible merger of the Ecosystem Enhancement Program and the Clean Water Management Trust Fund. The RFP was issued on 21 November 2006; proposals are due on 22 December 2006; and it is anticipated that the contract will be awarded on 10 January 2007. A copy of the final RFP is included as **Exhibit E**. Also handed out was a list of questions and answers concerning the RFP provided by the Fiscal Research Division (see **Exhibit F**).

Mr. Givens next drew attention to the draft RFP for a report on costs associated with providing nutrient controls that are adequate to offset point source and nonpoint source discharges of nitrogen and other nutrients (see **Exhibit G**). The RFP is to be issued this week; proposals will be due on 5 January 2007; the contract is to be awarded on 19 January 2007; and a final report is expected by 1 May 2007, in time to impact the decision expected to be made during the 2007 session. The current legislation sunsets on 1 September 2007. Representative Gibson moved that the draft Request for Proposals captioned: "Report on Costs Associated with Providing Nutrient Controls that are Adequate to Offset Point Source and Nonpoint Source Discharges of Nitrogen and Other Nutrients" be approved for distribution subject to any necessary technical, clarifying, conforming, and scheduling changes by the Commission Counsel, and that the Commission Counsel be authorized, with the approval of the Cochairs, to select a vendor to conduct the study. Representative Gibson further moved that the Commission Counsel and the Cochairs, with the approval of the Legislative Services Commission, be authorized to enter into a contract with the vendor in accordance with the Request for Proposals on behalf of the Commission. Mr. Givens reported he had two meetings with interested parties during the development of the RFP which led to an increase in the scope of the study. The contract will provide for consultation with stakeholders to make any mid-course corrections needed. The motion carried.

Senator Clodfelter recognized Dr. David H. Moreau, Chair, Environmental Management Commission (EMC), Department of Environmental and Natural Resources (DENR), to discuss the recommendation of the hearing officer concerning the petition by the cities of Concord and Kannapolis to the EMC for a certificate for an interbasin transfer (IBT) from the Catawba River Basin and the Yadkin River Basin to the Rocky River Basin (see **Exhibit H** for a copy of his PowerPoint presentation). Senator Clodfelter commented that the ERC's role is not to be involved in the decision to grant a permit, but to look at issues that might require legislation.

Dr. Moreau thanked the staff of the Division of Water Resources, members of the EMC, and to the hearing officers and public who have been involved in the discussion of the issue for two years. He stated the basis for the request, discussed the recommendation that the hearing officers have made to the EMC for action in January, and provided some of the evidence on which the recommendation was based.

Dr. Moreau noted the following about the maps in his presentation. First, a large part of the Catawba Basin in North Carolina drains into Lake Wylie below the Mountain Island Reservoir, so that portion of the basin is not generally available for public water supply upstream. In the Yadkin-Pee Dee Basin, the South Yadkin comes in above High Rock Lake. The Rocky River Basin is described as a separate basin in statute, requiring any transfer to be subject to the Interbasin Transfer Act. The area concerned with the transfer is a contiguous urban area with high population densities, including Kannapolis, Salisbury, Charlotte, Gastonia and Kings Mountain. It is bisected by interbasin lines. The water demand patterns do not follow the boundaries of the river basins. A large portion of Charlotte is in the Rocky River Basin. The demand center from Mountain Island and High Rock Lake are roughly equidistant, so the demand center is roughly equidistant from the two supplies. The existing supplies for Kannapolis and Concord are restricted to the relatively small watersheds upstream of the cities.

The impacts on the basins were measured in various ways. One was by the use of a computer simulation model that ran various scenarios from 0 to 22 million gallons a day under the 79 years of historical stream flow records. The model simulates how the system would perform in the future given a repeat of the historical stream flows in the area. The credibility of the model was determined by looking at how much the reservoirs would be drawn down if the interbasin transfer was skimmed off for six months without any inflow to the reservoir.

The systems were built for and dominated by hydroelectric power production; therefore separating out the effect of the IBT is difficult. Referring to Slide 11, Dr. Moreau said that if there was a significant impact, there would be differences in the lines for each one of the interbasin transfer scenarios. However, all four of the lines plot on top of one other. From looking at the 79 year summary, no difference can be detected. There is a similar situation for the outflows of Lake Norman (see Slide 12). The EMC then looked at the worst drought in the 79-year period, 2000-2002. The bottom line (see Slides 13 and 14) is the 0 transfer and the 10 million gallon per day transfer. The lines also plot right on top of each other. The model gives some counter-intuitive results with larger transfers such as the 22 million gallons a day transfer. The explanation is that with the larger transfer, the conservation program to reduce power generation is triggered sooner. A simple check of the model showed just inches of elevation lost with the IBT skimmed off for six months without any inflow to the reservoir.

Dr. Moreau told ERC members that the full report is available on the Division of Water Resources website.

Senator Albertson asked for an explanation of the conservation of power and water. Dr. Moreau replied that the conservation strategy for the systems was developed as part of the licensing of the power project. All the reservoirs on the Catawba River are owned by Duke Energy. They periodically come up for re-licensing. As part of the re-licensing process, they have developed a low in-flow protocol. It is a complex set of rules about how the system will be operated when a drought is declared. The dominant use of the reservoir system is for power generation, although there are environmental constraints. The permits are for 25-30 years. Senator Clodfelter asked what would be done if changes in growth occur. Dr. Moreau replied that the language allows for reopening the permit decision if there are significant changes.

Senator Clodfelter asked why the EMC is granting today an allocation that will not be needed for 29 years. Dr. Moreau replied that it was done so the water systems can adjust their plans, perhaps by building connecting lines. If there is not enough lead time, the users will have to look at other alternatives that are also considered in the report. He added that the 10 million gallons a day, reduced from the request of 26 million gallons a day, should be sufficient for a reasonable time in the future. Senator Clodfelter asked why the water that was needed would not be taken out of the Yadkin in the near term as there is more in that basin, and have the EMC make a master plan for the whole area for the long term. Dr. Moreau replied the EMC is in part bounded by what was asked for. He added that the EMC would like people to look at off-stream storage, taking water from periods of high flow and storing it for use in dry periods. There is more water than can possibly be used from January to May.

Senator Albertson commented the policies made by the General Assembly need to be the best for all the people of the state, and that should be the guide by which decisions on issues are made.

Representative Harrison asked for a review of the Interbasin Transfer law, and asked if it needs some modification. Dr. Moreau said he believes the statute is well constructed. He said changing the time limits on the permit might be considered. He is concerned with the implicit assumption in the statute that the water will be taken when it is needed (during drought periods), not when it is available. There are also some process issues. The petition, but not the recommendation, must be taken to public hearing. He suggested the ERC look at a two-stage process to include notice when the petition is received (including receiving comments), and then holding a public hearing when the recommended decision comes forward.

Mr. Givens asked about shifting the burden of proof on the petitioner. Dr. Moreau said there is a question about the weight of evidence and the benefits and adverse effects. The EMC is obligated to evaluate the beneficial and adverse effects on both the donor and the receiving basins, but the statute is neutral on how the effects are to be weighted. Dr. Moreau said that IBTs will be a reality in order to continue the economic growth of the state. At the same time, the interests of the donor basins need to be protected, and that is what the EMC has tried to do.

Senator Clodfelter commented on some policy issues that he sees need to be considered. The first is that the IBT program is not linked to a larger surface water use program. There are no presumptions about priority of use for available water supplies, because there is no way to link the IBT statute to a more comprehensive water utilization plan. He added that South Carolina is working on an integrated water utilization plan for all surface water withdrawals, not just basin transfers. In North Carolina there are no policies to guide EMC about how to prioritize different classes of users in the basin as opposed to those outside of the basin. The second is that there is a low-inflow protocol that when triggered, will produce measures to conserve water within the basin. The policy question is what is the purpose of the water conservation measures—to free up water to be transferred out of the basin, or to make sure sufficient water is available for use within the basin. In densely populated areas of the state, urbanization could be driven further and further away because it would be permissible to force water conservation measures within the basin to feed new development further outside the basin. That would lead to dispersion of population instead of concentration. He added a suggestion that the ERC take a look at the South Carolina legislation to see if it would be appropriate for North Carolina. He added that North Carolina should have regional water supply plans to manage all surface water withdrawals in each part of the state.

Dr. Moreau said that as part of the analysis a 50-year projection of water needs within the basin was incorporated into the model, so basin needs were considered as part of the simulation. Senator Clodfelter commented that every one of the growth projections rely on local estimates, and most estimates have proved unreliable over the last 25 years.

Representative Gibson said he believes the starting point of the analysis is availability. He asked Dr. Moreau how to work with the partners so that the alternative water supplies do not create their own ecosystem. He asked to hear from the regulators whether these innovative and very expensive alternatives would guarantee that every area would have water. He said that the rules would need to stay the same over an extended period of time. He added that a regional water supply plan is needed so all will know what water will be going where. Representative Gibson said North Carolina is blessed with water, but we are also

blessed with people coming to use it. Solving the availability of water will be painful and will require long-term investments. Senator Clodfelter commented that shorter-term permits would allow more flexibility.

Senator Clodfelter recognized Mr. Jim Kerr, a member of the North Carolina Utilities Commission, to discuss the study of a renewable energy portfolio standard (REPS) for North Carolina. Mr. Kerr recognized Mr. Jimmy Ervin of the Commission and Mr. Robert Gruber, Chair of the Public Staff of the Commission. He introduced the report on the costs and benefits of a renewable portfolio standard. The Utilities Commission committed to work with a nationally known consultant to create a study as a tool for the General Assembly to use to develop policy on a REPS.

Mr. Kerr also recognized an advisory group of stakeholders on the subject of REPS that worked with the consultants through the entire study. They included Mitch Williams of Progress Energy, David Beam of the North Carolina Electric Membership Corporation, Ivan Urlaub of the Sustainable Energy Association, Kris Coracini of the Environmental Defense Fund, Sue Gouchoe of the North Carolina Solar Center, Preston Howard of the Manufacturers and Chemical Industry Council of North Carolina, Dr. Ed Erickson, Professor of Economics at North Carolina State University, James McLawhorn of the Public Staff of the Utilities Commission, and Len Green of the Attorney General's Office. He also thanked the State Energy Office, the North Carolina Solar Center, and others for support of the consultant in providing the most current underlying data available for North Carolina. The report will be posted on the Utilities Commission website later in the day. With the posting, comments are being solicited (see **Exhibit I**). He said the comments would be summarized and given to the ERC by the middle of January in time for consideration during the next session.

Mr. Kerr introduced Mr. Jonathan Winer, La Capra Associates, to present information from the REPS study report (see **Exhibit J** for a copy of Mr. Winer's PowerPoint presentation). Mr. Winer thanked the Utilities Commission for their assistance during the study, the advisory group for their help, and for other members of the team that put the report together. (See **Exhibit K** and **Exhibit L** for the two study reports.)

Senator Kinnaird asked if increasing hydroelectricity involved the use of current plants or the development of new ones. Ms. Mon-Fen Hong of La Capra Associates replied that hydro potential came from an Idaho National Lab study where hydro potential was looked at in existing impoundments and in potential expansion of existing hydroelectric facilities. Most of the hydroelectric they looked at for actual potential possibilities was from impoundment without any current generation. No new building of dams is expected.

Representative Gibson asked what the cost would be per kilowatt. He asked how comfortable Mr. Winer is with the findings of the report and how comfortable the stakeholders will be with them. Mr. Winer replied that the cost would vary by site for most projects. He added that he is comfortable with the installed cost figures on page 40 of the Technical Report (**Exhibit L**). He went on to say that the numbers in the study were drawn from their knowledge of real projects in the United States in comparable situations. Mr. Kerr added that the advisory group was particularly helpful in testing the foundational information. He said further that the period for comment on the reports would be helpful in further testing the information.

Representative Harrison asked if externalities such as impacts on public health and the environment were considered when developing the cost figures. Ms. Hong replied they did not give a monetary value to the externality costs. In response to a further question, Mr. Winer said that each state has a different portfolio based on their previous renewable resources and their potential. He said he believes a 10% increase in North Carolina would be a big challenge unless energy efficiency is counted toward the 10%. There are four states that currently include energy efficiency as one of the resources that can be applied against the REPS (Connecticut, Pennsylvania, Nevada and Hawaii). La Capra did not study energy efficiency as a resource available to North Carolina in the next 10 years. Other states are adopting policies to encourage certain kinds of renewable energy resources, and suggestions for North Carolina to encourage solar resources are made in the report. Mr. Winer said the report included a certain amount of interconnection costs, but it did not model extensive system upgrades. He gave the example that if the wind resource were in a location with no transmission lines nearby, they modeled the substation and up to 10 miles of transmission lines to connect to the existing grid. The adoption of an REPS is usually accompanied

by a major review of all associated issues that would need to be considered in order for the REPS to be effectively implemented.

Representative Harrell asked what period of time it would take to implement the options. Mr. Winer replied it is doable within 10 years. La Capra modeled a 10-year period. They would strongly recommend a several year lead-in if North Carolina decides to go forward and adopt an REPS policy to allow for the development of required resources. He said the model assumed the development of the REPS would be 1/2 % in year 1, 1% in year 2, to reach an increase of 5% over a 10-year period. The 10% model assumed a 1% a year increase, which might also be doable. However, he stressed that it is important to have a lead-in time before you expect to reach the first 1% increase.

Mr. Kerr told the Commission that the consultants were available to them to answer further questions if needed.

Mr. Givens recognized Mr. Sam Watson, another member of the Utilities Commission, and thanked him for his attendance at the meeting.

Senator Clodfelter recognized Ms. Jeryl Covington, Director of Environmental Services, City of Greensboro, to speak about local government perspectives on the future availability of landfill capability (see **Exhibit M** and **Exhibit N** for an outline of issues being studied). She spoke about concerns for local government described by Mr. Paul Chrisman at the last meeting, namely, the loss of landfill capacity within the state, and the import/export of solid waste. She reported that Greensboro has recently closed their landfill and is competing with others for space in out-of-county landfills. It is a daunting task for State regulators to work with the communities to prove that facilities are safe and have been operated fairly. With their Subtitle D facility, Greensboro has been able to identify the differences in operations and in construction and monitoring. They do not want to get caught up in a quagmire of looking at isolated issues that are not broad enough to affect the whole solid waste community, but may have implications due to geographic locations or waste generations of particular regions. She requests that the State look at the regulation of solid waste landfills and asks that the rules be communicated swiftly.

Senator Clodfelter recognized Ms. Charlotte Jesneck, Branch Head, Inactive Hazardous Sites Branch, Superfund Section, Division of Waste Management (DWM), DENR, to speak about the inventory of closed and unregulated landfills and dumps (see **Exhibit O** for a copy of her PowerPoint presentation). She showed pictures of the Buxton dump site in Dare County and another in Wilson County that are now trailer parks. The area around the trailers has been checked for methane gas, and wells within 500 feet have been tested. No problems were found. She spoke about the benefits of a state-wide surcharge to provide a revenue stream to convert old unlined landfills to a safe use.

Senator Kinnaird asked what the tip fees are in other states. Ms. McGinnis said she would find the information and make it available to Commission members.

Representative Harrison asked how often the unlined landfills are inspected. Ms. Jesneck replied they are using one-time money to locate them and determine what the areas are currently being used for. They have looked into 40 counties over a three-year period. They hope to have the survey completed in another three years.

Senator Albertson took the chair and recognized Mr. Steve Wall, Policy Analyst, Office of the Secretary, DENR, to discuss liabilities and consequences associated with closed and unregulated landfills and dumps (see **Exhibit P**). He said the problem has been decades in the making, and it will take long-term solutions to solve it. The longer the state waits to clean up the sites, the greater the liability and the expense will be.

Senator Albertson recognized Mr. Peter Anderson, Executive Director, Center for Competitive Waste Industry, on behalf of the International Brotherhood of Teamsters, to discuss liabilities associated with existing and proposed landfills (see **Exhibit Q** for a copy of his PowerPoint presentation and **Exhibit R** for a report on the landfill crisis in California). He had participated in a study of California in 2004 concerning the

adequacy of landfill financial assurance and brought a few copies of the report. He offered to provide copies for each member of the Commission by mail.

He began by describing an experience in South Carolina in 1977 in which an old clay pit was converted into a kitty litter factory. Later, because it was clay bottomed, it became a de facto site for hazardous waste. Ownership of the site changed a few times, and by 1985, the South Carolina Department of Environmental Health Control realized they had an enormous liability. The landfill is on the shores of Lake Marion, a reservoir overlying two aquifers that provides the drinking water supply for the South Carolina coastal area. After nine years of regulatory and political process they called on the owner company, Laidlaw, to post a bond for $133 million. Laidlaw spent $200,000 lobbying the legislature, the members of the governing Board were changed, and the Board determined they could use anything Laidlaw decided as a reasonable way of providing the financial assurance. Laidlaw said they would use their own corporate IOU. In the year 2000, the company closed its office in Columbia, re-opened their office in Delaware, and from there declared bankruptcy. When South Carolina asked about the liability that by then had increased to $1billion, the company offered them an annuity valued at $49 million, not even enough to maintain the site, to say nothing of addressing the consequences of a $1 billion liability.

Mr. Anderson said there were two major considerations. He stated that what has been considered state of the art is not going to work in the age of mega landfills. The financial assurances that are supposed to protect the state from risks are limited to 30 years and they are very unsure funding mechanisms that assure only routine care. The consequences of accidents and corrective actions are not covered at all. After closure of a landfill, the cap will eventually degrade, causing a second wave of biological problems to solve without financial assurances because the responsible parties will no longer be involved. He said that the actual costs incurred to remediate failed sites have been about $25 million per site. Those, however, are small sites, and today much larger sites are being proposed.

The Environmental Protection Agency has used containment (not remediation) criteria in their Superfund corrective actions. Ten to 20 years later, the problems will recur. It takes about a $.5 million per acre to install a liner system, which encourages making higher landfills. With mega landfills, it is not just a failure mechanism in general that needs to be discussed, it is also the fact that when landfills do fail, particularly in urban areas, the problem cannot simply be contained. The landfill will have to be excavated, stabilized, and the waste re-interred at costs that could run from $50 to $100 a ton. The kind of cost being covered presently in landfill financial assurance in the 30 years might be $5 million to replace the basic systems, but it might take $40 million for remediation. Waste Management has $12 billion in revenues a year. Even just replacing the caps on their 385 landfills every 40 years, the cost will exceed their cash flow. That does not include any corrective action.

Mr. Anderson's recommendation is that the people best able to manage the risk are not government officials, but the insurance industry. They are trained in risk management and know how to make risk assessments. The most important fact is that the risk management industry has to put their own money behind the assurance whether it be by letter of credit or other instrument. Their assets and their profits stand behind the premium. If they understate the risk because of political influence, it is their financial situation that will be affected. Any company has a fiduciary responsibility to off-load its risk onto the public, but it also is a fiduciary responsibility of legislators to not let the industry govern public policy.

Senator Kinnaird asked if this insurance exists. Mr. Anderson replied that currently it does not. He added that it will exist only if it is required by the states. There will have to be pools and reinsurance to assure the money will be available when needed.

Senator Albertson asked Steve Wall what the current State policy is in regard to landfills. Mr. Wall said they would fall under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), or the Resource Conservation and Recovery Act (RCRA). Mr. Anderson commented that there is a difference between assurance and liability. If a company cannot pay, liability has no value. The state needs assurance, not liability.

Representative Harrison asked if bonding is an answer. Mr. Anderson replied that bonding would have to be even across the board and would be too expensive. The way to be fair to both parties is to use a probabilistic-based approach as insurance is. Bonding cannot work because the liabilities are so large and probabilistic in nature.

Representative Harrison asked for a report on the Emergency Drinking Water Fund from DENR at a future ERC meeting.

The Commission broke for lunch from 12:40 to 1:30 p.m.

Senator Albertson called the meeting back to order at 1:30 p.m. He recognized Mr. Givens who announced that Agenda Items 8-10 would be omitted from the meeting and heard at one of the January meetings.

Senator Albertson next recognized Mr. Jim Hickman, Local Government Assistance Team Leader, Division of Pollution Prevention and Environmental Assistance, DENR, to speak about the management of end-of-life manufactured homes (see **Exhibit S** for a copy of his PowerPoint presentation).

Mr. Hickman described the three categories of manufactured homes. The first is modular. These homes are manufactured off-site and built to North Carolina building code. The second, manufactured homes, are homes that are built to a federal building code codified June 15, 1976. The third, mobile homes, are pre-Housing and Urban Development (HUD) homes that were built prior to June 15, 1976. Their life expectancy can vary; however 20 years is usually the figure given for their life expectancy. The newer HUD homes rival stick built homes in their quality of construction.

Only three counties have permanent clean-up programs: Brunswick, Scotland and Davidson counties. There are some pilot programs, one in Rockingham County. The Perquimans-Chowan-Gates Solid Waste Management Commission has been investigating how to dispose of their mobile homes but has struggled with the cost. The Association of County Commissioners, in conjunction with the Manufactured Housing Institute, has sponsored three or four pilot programs in the state.

Senator Albertson recognized Mr. Paul Meyer, Assistant General Counsel, North Carolina Association of County Commissioners, to speak about the county perspective on the clean-up of abandoned manufactured homes (see **Exhibit T** for a copy of his PowerPoint presentation). He said that one solution to financing the clean-up of abandoned mobile homes would be an advance disposal fee. The Association of County Commissioners is expected to propose a bill for an advance disposal fee on manufactured housing in the 2007 session.

Senator Albertson recognized Ms. Stephanie Lewis, Assistant Director of Operation Services in Brunswick County, to explain the Appearance and Code Enforcement program (ACE) and mobile home recycling in Brunswick County (see **Exhibit U** for a copy of her PowerPoint presentation and **Exhibit V** for a brochure on the ACE program). After describing the two options available for the disposal of mobile homes in Brunswick County, Ms. Lewis stated they will end the voluntary program because of its expense. It will be reassigned to their Code Enforcement Department.

The ACE program requires a resident to sign a waiver to release the County from any property damage while they are demolishing an abandoned mobile home. The Planning Department approves the item and makes sure it is appropriate for demolition. Once everything is approved, the work order is sent to the Solid Waste and Operations Services for actual demolition and disposal. The county has used 104,000 cubic yards of space in their landfill over the past five years for this program, about 13% of the space used each year in their landfill. To help with the backlog of requests for demolition, if someone wants to get rid of a mobile home and can make it road worthy, they can tow it to the landfill and the tip fee will be waived.

Senator Albertson recognized Mr. Jim Blackwell, County Engineer, Scotland County, to speak about the management of abandoned manufactured homes in his county (see **Exhibit W** for a copy of his PowerPoint presentation). Scotland County does not use any of their general funds for their program. Mr. J.

R. Horne, Solid Waste Enforcement Officer, receives complaints from customers, meets with them, and takes necessary action to resolve the problem. He is part enforcement officer and part information officer. Other people involved are from the Sheriff's Department and the district attorney and judges.

For the last 25 years, the county has experienced an increase in the number of mobile homes. Recently over 50 percent of the homes permitted by the Inspection Department are mobile homes. Four years ago, the County Commissioners decided the county needed a financial feasible program to clean up abandoned structures and mobile homes. The direct benefits of the program include aesthetics, reduction of fire hazards, and protection of health and the environment.

The amount of financial resources available for the program limits the number of units they can dispose of. Mr. Blackwell said it costs $800 to dispose of a single unit mobile home--$500 for transportation and $300 for the tipping fee. The same unit demolished on the site and then transported to the landfill costs approximately $1500. Demolition and disposal of a double-wide on site costs approximately $2200, including transportation to the landfill..

To put the legalities in place, the county amended their solid waste management ordinance to allow the inclusion of abandoned structures and mobile homes in the definition of construction and demolition waste. The ordinance is on their website. Landowners are identified as the responsible party because either the landowner owned the mobile home or had signed a consent form to allow a person to put a mobile home on their property. The Court could give the Enforcement Office permission through an order to go on the property and clean the mobile home up at the landowner's expense. Expenses can be collected in the same way as taxes. Prior to enacting the changes in the ordinance, the Office of Solid Waste consulted with the district attorney's office and the county attorney to be sure the ordinance was legal and enforceable. Mr. Blackwell said the relationship with the district attorney's office is very important to make the program work.

Senator Albertson asked how many mobile homes they are able to dispose of in a year. Mr. Blackwell replied they have removed approximately 25 per year. Mr. Givens asked what kind of a backlog they have. Mr. Blackwell replied there are about 250 that need to be disposed of now and they add about 10 to 15 a year to that number.

Senator Bingham asked how much time it takes from identification of the problem to disposal. Mr. Blackwell replied it depends on the financial resources of the customer. If the customer is a developer, the disposal will take 60-90 days. If there is a disagreement about whether or not a mobile home or structure should be demolished, the building inspector decides based on code enforcement and safety issues.

Representative Justice asked that the issue of hog waste lagoons be put on the agenda for a future ERC meeting. Mr. Givens replied that he would discuss that with the co-chairs of the Commission.

Mr. Givens announced the next meeting of the Commission will be 17 January 2007 in Room 544 of the Legislative Office Building.

The meeting adjourned at 2:40 p.m.

Representative Pryor Gibson, Co-Chair

Senator Charlie Albertson, Co-Chair, Presiding

Dot Waugaman, Commission Assistant

Senator Daniel Clodfelter, Co-Chair, Presiding

RE: **Notice of Commission Meeting**
Notice of Planning Meeting
Schedule of Future Meetings
Meetings of Interested Parties (605 Working Groups)
Additional Information

COMMISSION MEETING:

The Environmental Review Commission (Commission) will meet at 9:30 a.m. Wednesday 13 December 2006 in Room 1228 of the Legislative Building in Raleigh.

At this meeting, the Commission will begin or continue studies for which the Commission is responsible, hear reports from State agencies, discuss topics to be considered at future meetings, and attend to other matters. Listed below are potential agenda topics for this meeting and for future meetings. More specific information regarding the agenda for the 13 December meeting of the Commission will be developed at the staff planning meeting discussed below.

STUDIES

1) Issues related to solid waste management (S.L. 2006-244, Sec.4)

2) Issues related to the nutrient offset payment program with regard to the costs associated with providing nutrient controls that are adequate to offset point source and nonpoint source discharges of nitrogen; whether nutrient offset payments should be authorized for additional nutrients, including phosphorus; and whether the nutrient offset program should be expanded to other areas of the State (S.L. 2006-215, Sec. 2)

3) Issues related to abandoned manufactured (mobile) homes with regard to impacts on public health and safety, the environment, and the State's scenic resources (S.L. 2006-248, Sec. 8.3)

4) The merger of the organization and functions of the Ecosystem Enhancement Program and the Clean Water Management Trust Fund with the Joint Legislative Transportation Oversight Committee (S.L. 2006-248, Sec. 16)

REPORTS *(Report due dates are indicated in parentheses)*

General/Miscellaneous:

5) Annual report on the evaluation and adjustment of the boundaries of the area served by each Metropolitan Planning Organization (G.S. 136-202(d)) *(1 November)*

6) Report on the study by the Utilities Commission on renewable energy portfolio standards.

7) Annual report on the mercury minimization plan prepared by DENR (G.S. 130A-310.57) *(1 November)*

Air Quality:

8) Annual report on the cost of the Title V Program (G.S. 143-215.3A(c)) *(1 November)*

Hazardous Waste Management:

9) Annual report on the Effectiveness of the Brownfields Property Reuse Act (G.S. 130A-310.40) *(1 October)*

10) Update on the fire at the Environmental Quality Industrial Services of North Carolina, Inc. hazardous waste facility located in Apex, North Carolina.

Land Resources:

11) Annual report on implementation of the Sedimentation Pollution Control Act of 1973 (G.S. 113A-67) *(1 October)*

12) Annual report on the cost of implementing the Mining Act of 1971 (G.S. 74-54.1(c)) *(1 September)*

Solid Waste Management:

13) Annual report on the recycling efforts of the public schools in the State including information provided by local school administrative units on the number of public schools that have recycling programs and the types of recyclable materials that are collected (S.L. 2001-512, Sec. 11 *(15 December)*

Water Quality:

14) Annual report on the Wastewater Discharge Elimination Program (S.L. 2001-452, Sec. 2.9) *(15 October)*

15) Annual report on the implementation of stormwater rules and programs (G.S. 143-214.7(e)) *(1 October)*

16) Implementation of the Clean Water Management Trust Fund; projects and awarded grants. (G.S. 113-145.6A(a) and S.L. 2002-148, Sec. 3) *(1 December)*

17) Follow up discussion on the USEPA, Region 4 letter sent to Secretary Ross regarding concerns that the Commercial Leaking Petroleum Underground Storage Tanks Cleanup Fund is not adequately capitalized to meet current and future liabilities.

18) Annual report on fish kills in the previous year. (G.S. 143B-297.7(c)) *(1 December)*

19) Implementation of the Ecosystem Enhancement Program and use of the Ecosystem Enhancement Fund, including inventory of property and easements. (G.S. 143-214.13) *(1 November)*

Water Quantity:

20) Discussion of issues related to the interbasin transfer of water.

21) Annual report by the Catawba/Wateree River Basin Advisory Commission and the Yadkin/Pee Dee River Basin Advisory Commission (G.S. 77-117) *(1 October)*

PLANNING MEETING:

To facilitate development of the agenda for the 15 November meeting of the Commission, to begin planning for subsequent meetings of the Commission, and to receive input from interested persons regarding the work of the Commission, the Commission Counsel will hold an informal planning meeting at **10:00 a.m. on Friday 1 December 2006 in Room 605 of the Legislative Office Building**. Persons who wish to participate in the development of the agenda for meetings of the Commission, or who are interested in any matter before the Commission, are invited to attend.

SCHEDULE OF FUTURE MEETINGS:

Below is a schedule of meetings of the Environmental Review Commission for December 2006 through January 2007. This schedule is tentative and subject to adjustment. For planning purposes, however, please reserve these dates. Please note the following:

1. Commission meetings normally begin at 9:30 a.m., include a lunch break, and run until mid-afternoon. Please plan on meeting from 9:30 a.m. until at least 3:30 p.m. The Commission will meet in the Legislative Building (LB) or the Legislative Office Building (LOB) as indicated.

2. To facilitate development of the agenda for meetings of the Commission and to receive input from interested persons regarding the future work of the Commission, the Commission Counsel holds informal planning meetings for staff and interested parties. Commission members are not expected to attend these meetings. Unless otherwise announced, public staff planning meetings will be held at 10:00 a.m. in Room 605 LOB.

3. The 2007 Regular Session is scheduled to begin at 12:00 noon on Wednesday 24 January 2007. The Commission may meet after the beginning of the session to complete work and to consider any legislative proposals and recommendations.

Commission Meeting	Location	Staff Planning Meeting (605 LOB)
Wednesday 17 January 2007	544 LOB	Monday 8 January 2007
Tuesday 23 January 2007	1228 LB	Monday 8 January 2007

MEETINGS OF INTERESTED PARTIES (605 WORKING GROUPS):

The Commission Counsel will hold meetings of interested parties on specific topics as indicated below:

Nutrient Offset Payment Working Group
10:00 a.m. Monday 4 December 2006 – 605 Legislative Office Building

ADDITIONAL INFORMATION:

If you have questions related to the Commission, you may contact the Commission Counsel or other Commission staff at (919) 733-2578.

AGENDA
9:30 a.m. Wednesday 13 December 2006
Room 1228 Legislative Building
Raleigh, North Carolina

1. Call to order
   Senator Daniel G. Clodfelter, Presiding

2. Introductory remarks by Cochairs (*5 minutes*)
   Senator Daniel G. Clodfelter
   Senator Charles W. Albertson
   Representative Pryor A. Gibson

3. Report to the Commission and explanation of agenda items (*10 minutes*)
   George F. Givens, Commission Counsel

4. Discussion of the petition by the Cities of Concord and Kannapolis to the Environmental Management Commission (EMC) for a certificate for an interbasin transfer (IBT) from the Catawba River Basin and Yadkin River Basin to the Rocky River Basin. *(45 minutes)*
   Dr. David H. Moreau, Chairman
   Environmental Management Commission, Department of Environment and Natural Resources (DENR)

5. Report on the study by the North Carolina Utilities Commission of a Renewable Energy Portfolio Standard (REPS) for the State of North Carolina. *(1 hour)*
   James Y. Kerr II, Commissioner
   North Carolina Utilities Commission

   Jonathan H. Winer, Managing Consultant
   La Capra Associates, Inc.

6. Continuation of the discussion of issues related to solid waste management (S.L. 2006-244, Sec.4) *(40 minutes)*

Local government perspective on the future availability of landfill capacity *(5 minutes)*
Jeryl Covington, Director of Environmental Services
City of Greensboro

Inventory of closed and unregulated landfills and dumps *(15 minutes)*
Charlotte V. Jesneck, Branch Head
Inactive Hazardous Sites Branch, Superfund Section, Division of Waste Management (DWM), DENR

Liabilities and consequences associated with closed and unregulated landfills and dumps *(5 minutes)*
Steve Wall, Policy Analyst
Office of the Secretary, DENR

Liabilities associated with existing and proposed landfills *(15 minutes)*
Peter N. Anderson, Executive Director
Center for Competitive Waste Industry on behalf of the International Brotherhood of Teamsters

***LUNCH** – Estimated for 12:10p.m. to 12:55 p.m.*

7. Discussion of issues related to abandoned manufactured (mobile) homes with regard to impacts on public health and safety, the environment, and the State's scenic resources *(40 minutes)*

Management of end-of-life manufactured homes *(15 minutes)*
Jim L. Hickman, Local Government Assistance Team Leader
Division of Pollution Prevention and Environmental Assistance, DENR

County perspective on the clean-up of abandoned manufactured homes *(5 minutes)*
Paul A. Meyer, Assistant General Counsel
North Carolina Association of County Commissioners

Appearance and code enforcement (ACE) and mobile home recycling in Brunswick County *(10 minutes)*
Stephanie M. Lewis, Assistant Director of Operation Services
Brunswick County

Management of abandoned manufactured homes in Scotland County *(10 minutes)*
Jim Blackwell, County Engineer
Scotland County

8. Report on the effectiveness of the Brownfields Property Reuse Act *(20 minutes)*
Bruce I. Nicholson, Brownfields Program Manager
DWM, DENR

9a. Report on the implementation of the Sedimentation Pollution Control Act of 1973 (*15 minutes*)
Jim D. Simons, State Geologist and Director,
Division of Land Resources, DENR

9b. Update on the approval of plans for land-disturbing activity along waters that have been classified as trout waters by the EMC (G.S. 113A-57(1)).
Mary Penny Thompson, Assistant General Counsel
Office of the Secretary, DENR

10. Report on the Implementation of the Ecosystem Enhancement Program and use of the Ecosystem Enhancement Fund, including inventory of property and easements (*20 minutes*)
Bill D.Gilmore, Director
Ecosystem Enhancement Program, DENR

11. Commission discussion and announcements (*10 minutes*)

12. Adjourn (*Estimated for 2:40 p.m.*)

SCHEDULE OF FUTURE MEETINGS:

Below is a schedule of meetings of the Commission for January 2007. This schedule is tentative and subject to adjustment.

To facilitate development of the agenda for meetings of the Commission and to receive input from interested persons regarding the future work of the Commission, the Commission Counsel holds informal planning meetings for staff and interested parties. The schedule of these public Commission staff planning meetings is also set out below.

9:30 a.m. Wednesday 17 January 2007
Location: 544 LOB
Staff Planning Meeting: 10:00 a.m. Monday 8 January 2007 – 605 LOB

9:30 a.m. Tuesday 23 January 2007
Location: 1228 LB
Staff Planning Meeting: 10:00 a.m. Monday 8 January 2007 – 605 LOB

OTHER MEETINGS:

The Commission Counsel will hold meetings of interested parties on specific topics as indicated below:

Underground Storage Tank Working Group
2:00 pm Monday 18 December 2006 – 605 Legislative Office Building

MEMORANDUM

To: Members of the Environmental Review Commission
From: Jennifer Mundt, Commission Analyst
Re: Reports to the Commission

The following reports have been submitted by the Department of Environment and Natural Resources (DENR) to the Environmental Review Commission since the last reports distribution on 15 November 2006. These reports are designated as read only reports. Copies of the reports are attached to this memorandum:

1. Annual Report on the Cost of the Title V Program. 1 November 2006. Statutory Authority: G.S. 143-215.3A(c).

2. Annual Report on the Cost of Implementing the Mining Act of 1971. 1 September 2006. Statutory Authority: G.S. 74-54.1(c).

3. Annual Report on the Fish Kills in the Previous Year. 1 December 2006. Statutory Authority: G.S. 143B-297.7(c).

The following report has been submitted by the Department of Public Instruction to the Environmental Review Commission since the last reports distribution on 15 November 2006. This report is designated as a read only report and is attached to this memorandum:

1. Annual report on the recycling efforts of the public schools in the State "*Strengthening Litter Laws*". 15 December 2006. Authority: S.L. 2001-512, Sec. 11.

The following reports have been submitted by the North Carolina Utilities Commission to the Environmental Review Commission and will be distributed in connection with ***Agenda Item #5*** as noted below:

1. A Study of the Feasibility of Energy Efficiency as an Eligible Resource as Part of a Renewable Energy Portfolio Standards for the State of North Carolina.

2. An Analysis of a Renewable Portfolio Standard for the State of North Carolina.

The following reports have been submitted by Department of Environment and Natural Resources (DENR) to the Environmental Review Commission and will be distributed in connection with Agenda Items as noted below:

1. Annual Report by DENR on the Effectiveness of the Brownfield Property Reuse Act. 1 October 2006. Statutory Authority: G.S. 130A-310.40. ***Agenda Item #8***

2. Annual Report by DENR on the Implementation of the Sedimentation and Pollution Control Act of 1973. 1 October 2006. Statutory Authority: G.S. 113-67. ***Agenda Item #9***

3. Annual Report by DENR on the implementation of the Ecosystem Enhancement Program and use of the Ecosystem Enhancement Fund. 1 November 2006. Statutory Authority: G.S. 143-214.13. ***Agenda Item #10***

Please contact George Givens, Jeff Hudson, Jennifer McGinnis, or Jennifer Mundt at (919) 733-2578 if you have any questions or comments.

DEPARTMENT OF ENVIRONMENT AND NATURAL RESOURCES

B. Keith Overcash, P.E.
Director

EXECUTIVE SUMMARY

The Clean Air Act Amendments of 1970, reviewed and amended by Congress in 1977 and 1990 formed the basis of the federal air pollution control currently in place. Health-based national ambient air quality standards are the strategic basis of the Clean Air Act. The standards were to be met through the application of control technology that would reduce emissions continuously and result in improved air quality. Costs of technological capability were to be subordinated to public health protection requirements. Also, all requirements were to be national, with no facility having a competitive edge by having to meet less stringent controls. The Environmental Protection Agency (EPA) is responsible for carrying out the program.

Prior to the 1990 Clean Air Amendments, EPA set two kinds of National Ambient Air Quality Standards (NAAQS) specifying maximum acceptable levels of pollutants for outdoor air. Primary standards set limits that protect human health; secondary standards provide welfare protection (i.e. plants, animals, aesthetics and materials). EPA set primary and secondary standards for six criteria pollutants: carbon monoxide, nitrogen dioxide, lead, sulfur dioxide, ozone and particulates. Eight substances were listed as hazardous air pollutants: asbestos, beryllium, mercury, vinyl chloride, radionuclides, inorganic arsenic, benzene, and coke oven emissions. National Emissions Standards for Hazardous Pollutants (NESHAPS) were promulgated for sources of seven of these pollutants.

Most air pollution comes from either stationary sources, such as factories, power plants and smelters, or mobile sources such as cars, trucks and airplanes. To limit mobile source pollution, controls were established for automobile emissions. EPA also set standards that applied to new industrial plants and existing ones that were substantially modified. Additionally, state governments were required to draw up State Implementation Plans (SIP's) that set out other measures to achieve acceptable air quality.

Under the Federal Clean Air Act Amendments of 1990 Congress mandated the Title V Permit Program primarily for regulating major air pollution sources; that is, sources with greater than 100 tons per year of the six criteria air pollutants and/or greater than 10 tons per year of any of the 189 Hazardous Air Pollutants (HAPs) or 25 tons per year of combined HAPs. The North Carolina Environmental Management Commission (EMC) established the state Title V Permit Program in 1994 in accordance with state and federal laws and with guidance from the N.C. Clean Air Act Advisory Council. The state Division of Air Quality (DAQ) carries out the program, which received interim approval from the U.S. Environmental Protection Agency (EPA) on December 15, 1995 and final approval in October 2001.

The DAQ in implementing the program was required to issue permits to existing major stationary facilities. The DAQ issued all permits to all existing facilities by the end of 2004. The DAQ is also required to issue permits to new sources.

A national Title V authority, D. R. van der Vaart (21 Va. Envtl. L.J. 1 (2002)), has succinctly described both the background and three fundamental purposes of the Title V program as follows:

"During the legislative debates preceding the passage of the CAA Amendments of 1990, Congress confronted the problem most facilities, state regulators, and concerned citizens had with the then existing state air quality permitting programs. The myriad of both federal and state requirements, including emission standards, monitoring standards, record keeping, and reporting requirements were difficult to reconcile, properly apply, and difficult to enforce. Congress looked to the existing federal permitting program authorized under the Clean Water Act ("CWA") when crafting a solution but added some fundamental changes. First, the permit would be a stand-alone comprehensive document to which all parties could look to determine a facility's CAA obligations. Second, the permit would be designed with compliance as its primary goal. To that end, Congress included sufficient authority to empower state agencies to include monitoring and record keeping sufficient to determine compliance with the emissions standards. Finally, the program would require Title V permit holders to certify compliance with the terms and conditions of the permit so their legal exposure would be sufficiently severe to motivate compliance with their requirements. Enforcement provisions were added to achieve this goal."

The Clean Air Act requires that permit fees cover the entire cost of the Title V Program. The fees consist of a base fee and a fee derived from the actual annual emissions of each Title V source in the state. Currently emission fees, last set in 2001, are $17.42 per ton. In North Carolina, the revenue raised from Title V permit fees is close to the estimated cost of the program. This is true even though the total fees collected are only about 67 percent of the minimum fees presumed necessary to run the program under the Federal Clean Air Act. Many other states charge the minimum presumptive fee, which is $41.02 per ton.

The last annual report (November 2005) indicated the DAQ would develop and research staffing levels and funding in a study of the DAQ Title V Permits Section and the entire Division's Title V program. The Executive Summary of the study may be found on page 4 of this report.

INTRODUCTION

This Accountability Report describes the Title V Permit Program in North Carolina as carried out by the Division of Air Quality, Department of Environment and Natural Resources. The report focuses on funding and staffing issues. It does not cover Title V permit programs under the jurisdiction of local air pollution control programs in Buncombe, Forsyth, and Mecklenburg counties.

Congress established the Title V Permit Program under the Federal Clean Air Act (1990 Amendments), primarily as a way to regulate major air pollution sources. Under the Clean Air Act, Title V Permits are required for certain industry groups as designated by the EPA as well as facilities that emit at least:

- 100 tons per year of regulated pollutants; or
- 10 tons per year of any hazardous air pollutant; or
- 25 tons per year of any combination of hazardous air pollutants.

In North Carolina, the General Assembly enacted laws in 1991 and 1993 authorizing the Title V program. The legislature also established the North Carolina Clean Air Act Advisory Council to develop the programs needed to comply with the Clean Air Act, including the structure of the Title V permit fees. The Clean Air Act Advisory Council issued a final report in August 1992, and the Environmental Management Commission followed the council's recommendations in adopting rules for the state Title V Permit Program in 1994. The EPA gave interim approval to North Carolina's Title V Permit Program on December 15, 1995, with final approval pending certain rules changes, which have been submitted to EPA. EPA gave final approval, in October 2001.The Clean Air Act as well as the N.C. General Assembly, the EPA, the EMC and the Clean Air Act Advisory Council all required or recommended accountability measures for the state Title V program. This Accountability Report includes:

- A discussion of program accomplishments and goals;
- A detailed description of the Title V permit fee structure for calendar year 2005;
- A detailed, line-item budget for state fiscal year 2005;
- An organizational chart for total staff in the Division of Air Quality and Title V related positions; and
- An account of Title V receipts and expenditures from state fiscal years 1992 to 2006;

The Division of Air Quality started receiving Title V permit applications after EPA's interim approval of the program on December 15, 1995. Facilities were given until December 1996 to submit their applications or they would be considered in violation of the permitting rules. Applications received during the aforementioned timeframe were called "Initial Title V Applications" and all other Title V applications received after December 1996 were called "First Time Title V Applications." By January 1998, DAQ had 475 Title V applications under review. Since program approval, the DAQ has processed a total of 3755 applications to date. To date DAQ has issued 75 of the First Time Title V permits and is currently reviewing 237 applications. Currently, DAQ has 356 operating facilities classified as Title V facilities.

Questions about this Accountability Report or request for copies should be directed to Charles Valrie, Division of Air Quality, Department of Environment and Natural Resources, 1641 Mail Service Center, Raleigh, NC 27699-1641; telephone (919) 715-6281; email: Charles.Valrie@ncmail.net.

ACCOMPLISHMENTS AND GOALS

The Division of Air Quality (DAQ), the Department of Environment and Natural Resources (DENR), and the North Carolina Environmental Management Commission (EMC) have accomplished the following measures in developing and carrying out a Title V Permit Program in North Carolina. Goals are included where applicable.

1. The DAQ has established a Title V Permit Program based on rules adopted by the EMC (15A NCAC 2Q .0500). The program meets the requirements of state law (N.C.G.S. §§143-215.3 and 143-215.108) that authorized the program in North Carolina and set up the North Carolina Clean Air Act Advisory Council. The EPA gave interim approval to the program in 1995, and following the DAQ's revision to the Title V regulations; EPA gave final program approval in October of 2001.

2. In 2002 the DAQ revised the Title V application forms including the development of special forms for the renewal of Title V permits. These revised forms are intended to facilitate the application process, and they have been placed on the Division's website (http://daq.state.nc.us/).

3. The DAQ has developed a permit fee schedule that generates an appropriate amount of revenue to carry out the Title V permitting program. The Federal Clean Air Act requires that Title V permit holders pay fees sufficient to cover the cost to administer the permitting program. The DAQ will continue to evaluate the fee structure to ensure that the necessary fees are collected.

4. The DAQ has hired approximately 139 staff members to implement and maintain the Title V program since it started in 1992. The total staff size is still smaller than the projected size from the Final Report of the Clean Air Act Advisory Council and has remained constant for several years.

5. DENR has established a Small Business Assistance Program, hired a Small Business Ombudsman, and appointed a Compliance Advisory Panel to conduct citizen overview of small business activity.

6. The DAQ continues to hold meetings, including quarterly Outside Involvement Committee meetings, to provide citizens and the regulated community the opportunity for input into DAQ's permitting and planning procedures.

7. DAQ provided and continues to provide a range of options to qualify facilities as Non-Title V facilities. Many facilities have taken advantage of these options, which is one of the reasons why the number of Title V facilities is much less than initial estimates; that is, 356 operating Title V facilities now versus the 2000 estimated in the Clean Air Act Advisory Council's Final Report. For example, the DAQ established the synthetic minor program so facilities could avoid the Title V permitting program by taking permitted emission limits and/or

operating restrictions. Also, the EMC adopted and EPA approved exclusionary rules to allow reasonable potential emission calculations in cases where standard methods would produce unreasonably high potential emissions thus subjecting such facilities to Title V. **Goal:** The DAQ will continue to issue appropriate permits to qualified facilities that wish to remain non-Title V facilities.

8. In 1994 DAQ conducted its first comprehensive emissions inventory was facilities in North Carolina. This comprehensive inventory process has been repeated every three years for all non-Title V facilities until January 2003, when the inventory requirement was changed to every five years for non-Title V facilities.
   Title V facilities continue to be required to submit an inventory annually. This emission information is stored on a computer database that DAQ uses to calculate fees and for use in regulatory planning. The DAQ has developed an electronic on-line inventory reporting system. This system has been available to permittees since 2003.

9. There have been many unanticipated programmatic developments for the Title V permitting engineering staff including:

- Renewals of permits are much more complex and time consuming than anticipated requiring the permit engineer to devote a comparable amount of time as that required during the issuance of initial Title V permits.
- Additional programmatic requirements include: addressing of Maximum Available Control Technology (MACT) and Compliance Assurance Monitoring (CAM) regulations; permit appeals; and administrative requirements including the updating of the emission source modules for the database supporting the emissions inventory.
- Title V permit modifications continue to expand in breadth and complexity as other programmatic demands impede permit issuance (e.g., ozone and particulate matter Non-Attainment Area reviews, state zoning consistency requirements).
- Increased complexity leads to staff time devoted to projects being uneven and unpredictable requiring frequent conference with management and peers to determine the proper approach.
- Enforcement and compliance problems are frequently addressed by the efforts of the Title V permit engineering staff and management.
- EPA reviews are becoming more rigorous. EPA frequently comments on significant modifications and renewals of the permits.
- The implementation of the MACT permitting program including assuring compliance with the state air toxics program is largely a duty of the Title V permitting staff.

10. According to last year's report (2005), there appears to be a need to review the adequacy of permit engineer staffing in the Permits Section. The DAQ developed a study whereby staffing levels, reorganization and the time accounting system were evaluated. The following executive summary is extracted rom the draft report "DAQ Title V Program Study":

- The external study to determine if the Permits Section is adequately staffed will continue but may be inconclusive;

- The internal study to determine if the Permits Section is adequately staffed would indicate additional permits engineers are required. The division of the Section into two functional groups will yield improvements in supervision and permit quality. Other organizational changes should be investigated;

- The fee system is adequate and the overhaul of the time accounting system may yield additional benefits useful for future man-hour activity studies; and

- The evaluation of other functional groups, e. g., compliance and enforcement, regional permitting, planning, and outreach should be conducted on an "as-needed" basis similar to the Permits Section by management.

CALENDAR YEAR 2005 PERMIT FEES TABLE

NOTES AND EXPLANATION

The federal Clean Air Act requires that the entire cost of the Title V Permit Program, including both direct and related expenses, be funded by facilities' permit fees and that Title V permit fees be used only for this purpose. The Clean Air Act also set a presumptive minimum for total fees at $25 per ton of air pollutant emissions in 1990 dollars. The Title V permit fees schedule for North Carolina now yields only 78 percent of the presumptive minimum. However, DAQ considers this amount adequate to run the program as long as all other funding sources for DAQ remain unchanged. The Title V permit fees are required by federal statutes and DAQ rules to be adjusted each January 1st by an official cost-of-living factor (it should be noted that the cost-of-living factor adjustment in the Title V fees has not been made by DAQ since 2001) from the U.S. Environmental Protection Agency.

The Clean Air Act Advisory Council established by the General Assembly recommended in 1992 that the Title V permit fees should total $25 per ton of emission (adjusted annually for cost-of-living from the 1990 base), rather than the $36.45 per ton shown by the workload analysis in the council's final report. The council recommended this level so North Carolina could remain competitive with neighboring states — most of which were expected to use the $25/ton plus inflation presumptive minimum — and because of the many uncertainties in the program at that time.

The advisory council also considered the fairness of basing fees entirely on the amount of pollutants emitted, rather than on the amount of work required to administer Title V permits for various types of facilities. Because a certain amount of work is required to issue every Title V permit, regardless of the facility's emissions, the council recommended that half of the total Title V permit fees come from an applications fee (an annual flat fee for each permit) and the other half of the revenues come from annual per-ton charges.

A major uncertainty during the advisory council's work was the number of facilities that would be required to hold Title V permits and their emissions levels. This existed because a comprehensive emission inventory had never been required for all facilities. Since the council concluded its work, the EPA has issued many regulations, policies, clarifications, and changes to the Title V program, and the state has responded accordingly.

The state also has shown flexibility in the Title V program by using size exclusions for some industry groups (such as service stations, grain elevators, dry cleaners and emergency generators) and by allowing facilities to adopt permit limits that reduce their potential emissions below the Title V thresholds (known as synthetic minor sources). As a result, the number of Title V facilities has decreased from an estimated 2,000 in the Clean Air Act Advisory Council's Final Report, to 850 when the Title V permit fees schedule was adopted effective March 8, 1994, to about 356 operating facilities today. The total amount of emissions has changed little since the council's final report.

In Table I, "non-attainment" refers to permits issued under special rules applicable in areas that are in non-attainment with federal standards for criteria air pollutants such as ozone or particles. "PSD"

refers to permits issued under federal Prevention of Significant Deterioration rules. "NSR/NAA" refers to permits issued under special rules for New Source Review in Non-attainment Areas.

Another feature of the fee schedule that should be noted is that no permit application fee is charged for a simple renewal of a permit. In addition, no permit application fee is charged when the reason for the change is initiated by the director of the Division of Air Quality or the Environmental Management Commission, e.g., new control equipment required by a new rule or even the initial Title V permits for existing permitted sources.

HISTORY
TITLE V FEES/ASSESSMENTS AND EXPENDITURES
EXPLANATION

DENR collected Title V assessments until the Environmental Management Commission adopted rules setting the permit fees schedule in 1994, as specified by the General Assembly in House Bill 551(N.C.G.S. 143-215.3 and 143-215.108). The rule adoption process occurred after the North Carolina Clean Air Act Advisory Council issued its final report in 1992, as specified by the legislature. Assessments were collected in state fiscal years 1992 (starting July 1, 1991) 1993, and 1994. The Title V permit fees set by rule were collected beginning in state fiscal year 1995 (starting July 1, 1994).

In 1997, facilities received a partial refund of Title V fees. This was accomplished by sending the facility a check, valued at 21 percent of the permit fees paid in 1997. This refund was to reduce the budgeted carry forward as of July 1, 1998.

The Division of Air Quality, based on an analysis of variability in fuel tax revenue, decided that it is prudent to have a carry forward of about 35 percent. The 35 percent is well within the statutory limitation that allows a state's Title V program to carry forward 100 percent of the expected cost of the Title V program for the next year. By terms of the Federal Clean Air Act, the entire cost of the Title V program must be paid with Title V permit fees, and Title V permit fees can only be used for this purpose.

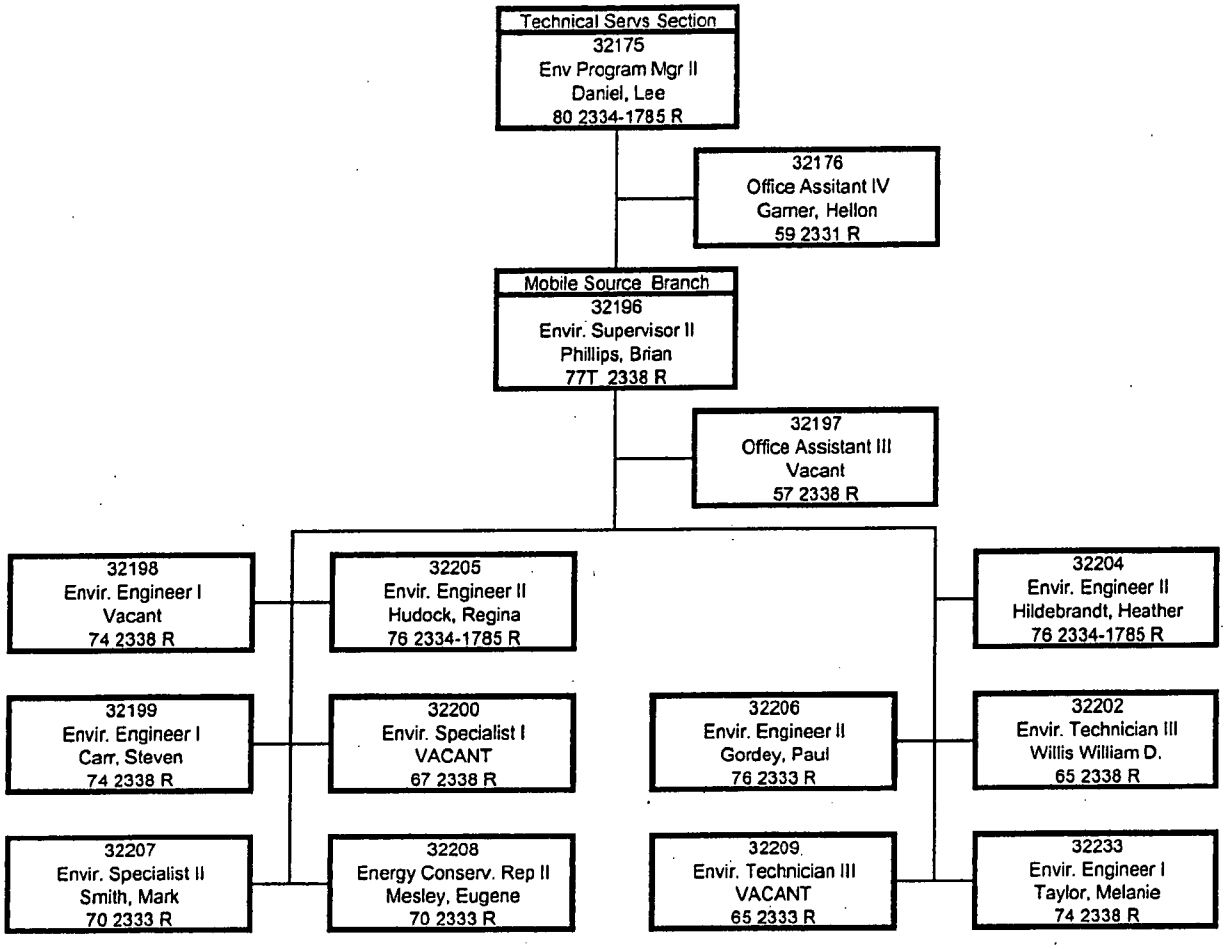
ORGANIZATION CHART EXPLANATION



The organization chart shown in this document lists all the positions authorized by State Personnel for the Division of Air Quality. Positions that are funded using Title V fees are listed with a funding designation of 2333R. Additionally, positions outside the Division of Air Quality that are funded through the transfer of Title V funds are listed separately.

MEMORANDUM

To: The Honorable Pryor Gibson, Co-Chair, Environmental Review Commission
The Honorable Daniel Clodfelter, Co-Chair, Environmental Review Commission
The Honorable Charles Albertson, Co-Chair, Environmental Review Commission

From: William G. Ross, Jr.

Subject: Annual Mining Permit Fee Use Report

G.S. 74-54.1 (c) of The Mining Act of 1971 requires the Department of Environment and Natural Resources to report annually to the Environmental Review Commission on the mining permit fees collected and use in implementing the state's mining program.

Attached is this year's report. If you have any questions, please contact Mell Nevils in the Division of Land Resources, 733-4574.

Total		$79,024.00

One position, an assistant mining specialist, was funded this year to assist in application review and permit issuance.

The number of permitted mines has increased 3.7 times (from 250 mines in 1971 to more than 930 mines in 2005) while the only increase to the original six appropriated positions has been this one fee-supported position. These seven positions are responsible for permitting, inspection and enforcement. The Mining Act of 1971 requires inspection of each mine at least annually to ensure compliance with public safety and environmental provisions in the mining permit. Statutory changes to the Mining Act of 1971 that increased interagency and public involvement in mine permitting and a more complex regulatory scheme within the state require the existing staff to spend more time in the permitting process. Consequently, only about a third of the permitted mines are inspected each year. The situation is expected to become even more critical in the future as the number of mines continues to increase. The current trend is that new mining permits issued each year exceed the number of mining permits released and mines closed.

One North Carolina Naturally

North Carolina Division of Water Quality
Annual Report of Fish Kill Events
2006

Division of Water Quality
Environmental Sciences Section
Raleigh, NC

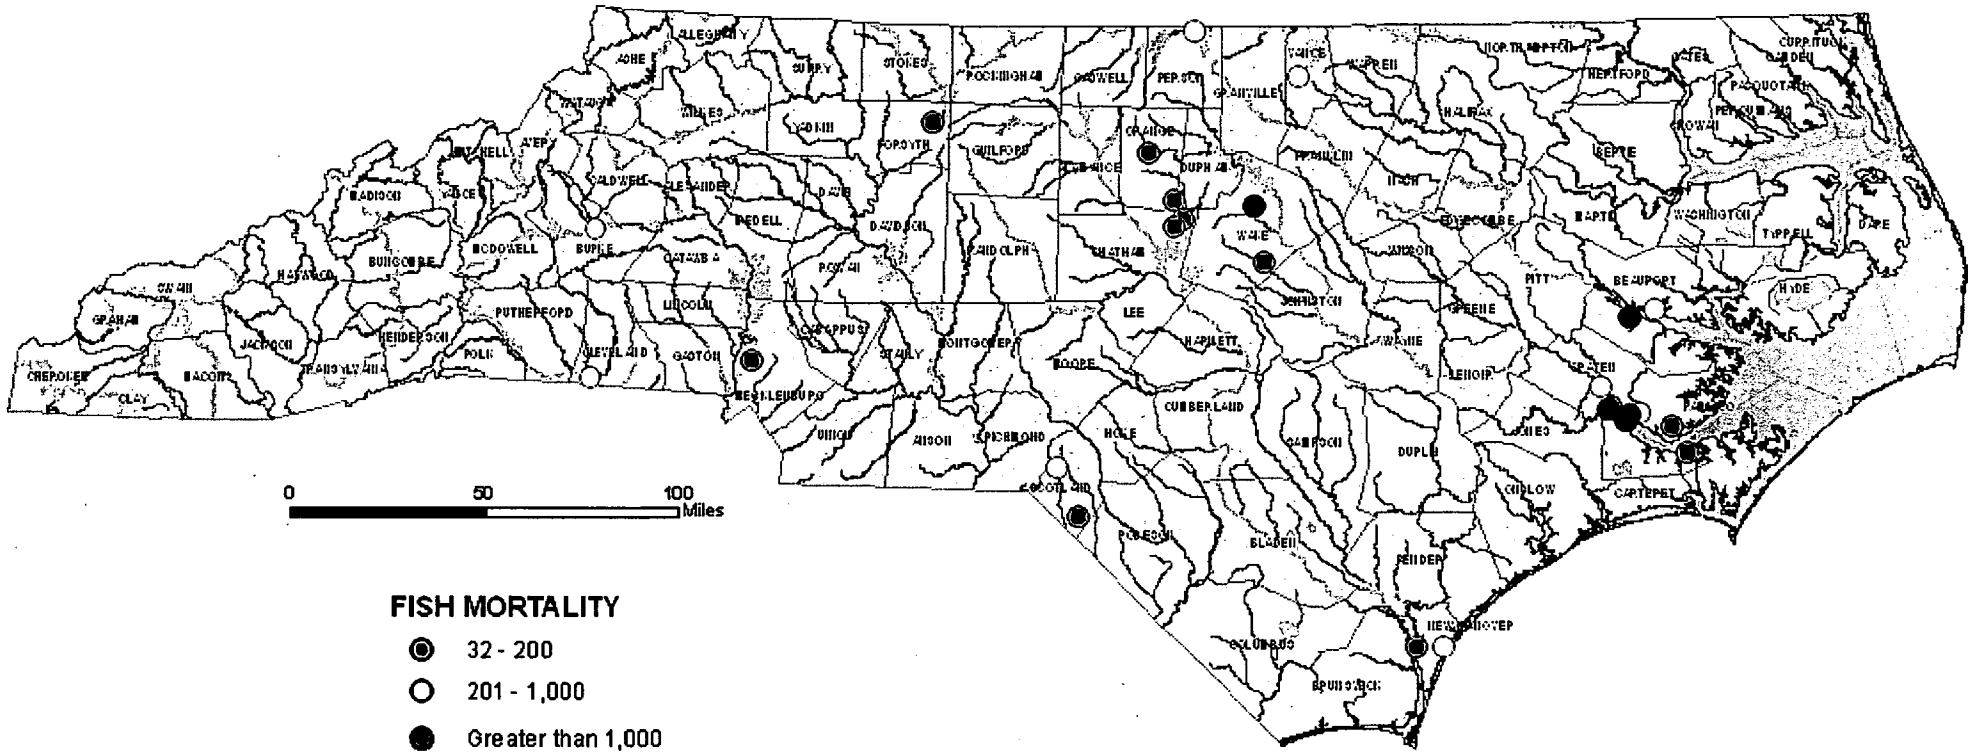
December 2006

Introduction

The investigation of fish kill activity across North Carolina currently involves protocols established by the North Carolina Division of Water Quality (DWQ) in 1996. The protocols were developed with assistance from DWQ Regional Office staff, North Carolina Wildlife Resources Commission biologists, and Division of Marine Fisheries personnel as a means to improve the tracking and reporting of fish kill events throughout the state. Fish kill and fish health investigation data are recorded on a standardized form and sent to the Division's Environmental Sciences Section (ESS) where the data are reviewed and compiled. Data from fish kill investigation forms, laboratory test results and supplemental information sent to the ESS are entered into a central database where the information can be managed, queried and reported. The procedure also requires the notification of appropriate state officials and scientists associated with the investigation of such events. In addition, fish kill information is posted weekly from June to November on the ESS website: http://h2o.enr.state.nc.us/esb/Fishkill/fishkillmain.htm. The following report will also be available at this website after submittal.

This year marks a complete decade during which DWQ protocols have been in place for kill investigations. The protocols have proven successful in standardizing reporting methods and enhancing the quality and quantity of information reported from kill events. It is the intent of DWQ to generate accurate information regarding fish kill activity across the state through the current investigation process.

This document is a summary of fish kill events reported to the DWQ from January to early December, 2006. The report is mandated under Section 4 of Chapter 633 of the 1995 North Carolina General Assembly Session Laws.



2006 Fish Kill Event Summary

Field investigators reported 25 fish kill events from January to December, 2006. Kill events were reported from coastal waters westward to the Piedmont as far as Burke County. Kill activity was documented during the year in 8 of the state's 17 major river basins. The ESS tracks fish kill events when at least 25 fish are affected and the event is confirmed by trained investigators.

The cumulative fish mortality for all 2006 reports was 35,395 individuals. This figure represents a continued downward trend in total annual fish mortality reported since 2003. Mortality counts for individual events ranged from 32 to 13,220 with a median mortality of 340. The majority of events were observed in fresh waterbodies, however, the three largest events for the year occurred in estuarine waters.

• **Total Kill Events for 2006**	**25**
• **Freshwater Kills**	**17**
• **Estuarine Kills**	**8**
• **Cumulative Mortality for 2005**	**35,395**
▪ *Estuarine*	*24,453*
▪ *Freshwater*	*10,942*
• **Report Mortality Range**	**32 to 13,220**
• **Report Median Mortality**	**340**
• **Basins with Activity**	**8 (of 17)**

Figure 1 : Fish Kill Events and Observed Mortality Reported to NCDWQ During 2006

Basin Activity

Investigators reported fish kill events in 8 of the state's 17 major river basins during 2006 (Figure 1, Table 1). Kill activity was most frequent in the Neuse Basin, especially in the river section below New Bern. This section of the Neuse, as well as the lower Pamlico estuary, have historically been plagued by adverse environmental factors such as low dissolved oxygen, high water temperatures, and fluctuating salinities. These factors have played a significant role in the frequency of events reported annually for the two areas. Activity in other river basins across the state remained light or absent throughout the 2006 season. Since 1996, annual totals of statewide events peaked in 2001 with 77 reports, but have since decreased and remained relatively low over the last five years (Table1).

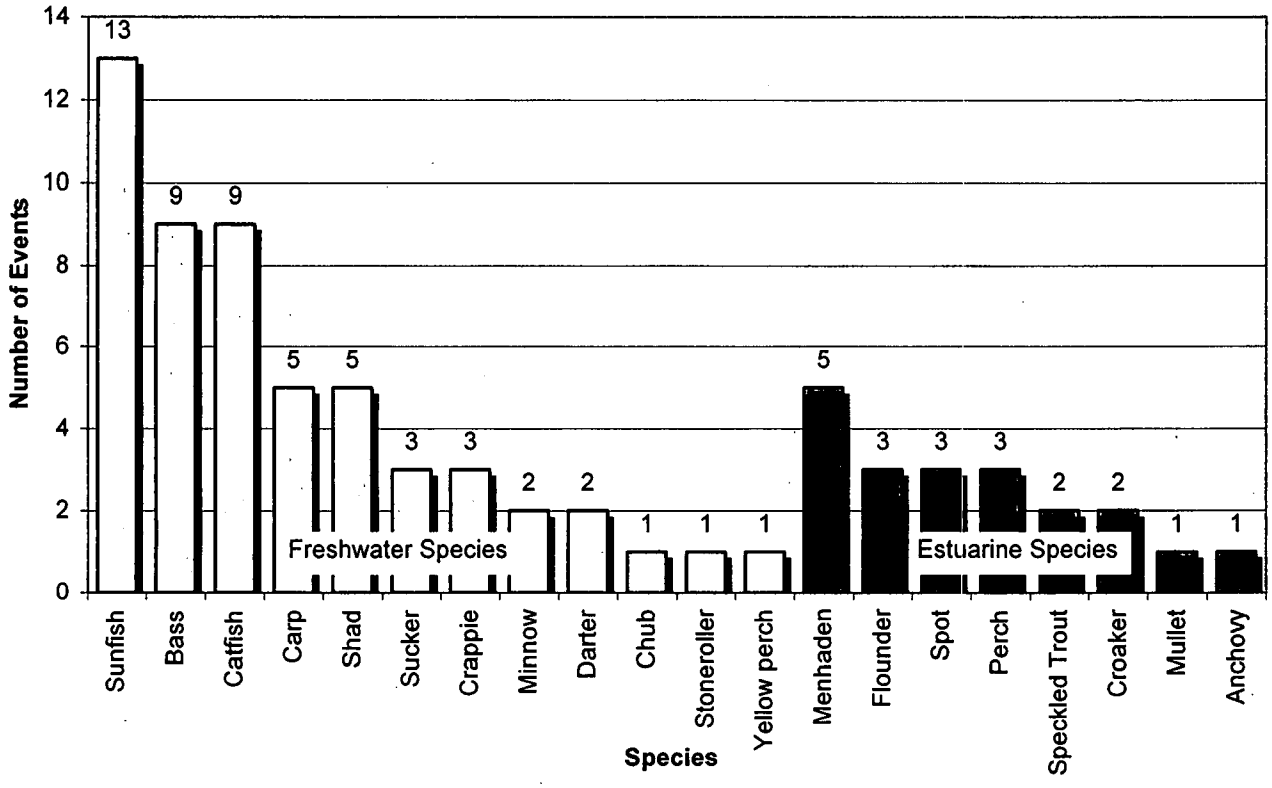
** No fish kill reports have been received from the Hiwassee, Little Tennessee., and Savannah basins since 1996.*

Fish Mortality

The 2006 season produced a fish mortality total of over 35,000 individuals reported in 25 events. (Figure 2). Although there was a slight increase in reported events from 2005, the total mortality figure is the lowest since DWQ protocols were implemented in 1996. Over one half of those fish reported killed in 2006 were observed in just two events on the Pamlico and Neuse rivers. Fish mortality figures on all 2006 reports ranged from 32 to 13,220 with a median mortality of 340 fish.

Figure 2: Reported annual fish kill events and mortality, 1996 to 2006



Finfish and Other Species Reported

Fish kill events in 2006 involved over 20 different species of fish in both estuarine and fresh waters (Figure 3). Freshwater species most commonly identified during investigations included sunfishes, largemouth bass, and catfish. Estuarine species most frequently reported included Atlantic menhaden and flounder. Menhaden have historically been the most common species reported in estuarine kill events and have exhibited various stages of stress and disease in conjunction with the events.

Reports of non-finfish species involved in fish kills were infrequent during 2006 (only five events). A gasoline spill into Paw Creek (Mecklenburg County) affected frogs, snakes, salamanders and crayfish. Species appearing on other reports included crayfish, salamanders, and blue crab.

Figure 3: Finfish observed during 2006 fish kill events

Suspected Causes of 2006 Events

Specific causes of fish kill events may or may not be obvious to investigators depending on a number of factors. Causes are often identified, but others remain unconfirmed or unclear due to an investigation occurring hours or days after the actual event. Kill events often result from many environmental factors, and sorting out the major reason(s) why a fish kill occurs is frequently a difficult and often subjective task. Investigators generally monitor environmental conditions surrounding an event and are encouraged to submit this information on reports along with observations regarding a suspected cause. This information aids in evaluating potential water quality trends and problems, and assists scientists and decision-makers with formulating future courses of action. Reported causes should not be viewed as a definitive label for a particular event.

Reported causes of 2006 kill events are listed in Table 2 in order of frequency. Those events where no specific causes could be determined were reported as "unknown".

Table 2: Major causes reported for 2006 fish kill events

Reported Cause	Number of Events
Dissolved Oxygen Depletion	7
Spills	6
Harmful Algal Blooms	5
Unknown	4
Temperature	2
Bycatch	1

Dissolved Oxygen Depletion: Low dissolved oxygen (DO) was cited as a factor in seven kill events during 2006. DO depletion was reported as a likely cause in the year's two largest fish kills observed during early August in the Pamlico and Neuse estuaries (see Notable Events). Estuarine fish kills have historically been associated with upwelling of hypoxic water from the river bottom or a depletion of DO in warm shallow areas, especially during the season's warmest months. .

Spills: Toxic spills may deplete DO levels in receiving streams or induce kills outright through physical or chemical toxicity. During 2006 investigators reported six events where the release of toxic substances induced a fish kill. These substances included concrete sealer, gasoline, runoff from facility fires, and sewage. Spill induced kills were limited to the Piedmont and western regions of the state.

Harmful Algae: Harmful algae was cited as a factor in five freshwater events during 2006. The most significant event (3800 fish killed) occurred in Pembroke Lake, New Bern as a result of an assemblage of euglenoid algae and diatoms. Additional phytoplankton species associated with kills in 2006 included non-filamentous and filamentous green algae, blue-green algae, diatoms, and cryptomonads. It should be noted that the presence of these species alone does not infer toxicity or environmental concerns. Algae and other phytoplankton begin to negatively affect water quality when excessive growths impair aquatic systems through physical and chemical means.

ESS staff routinely examine water samples associated with kills for the presence of harmful species. Samples that contain significant amounts potentially harmful algae are often sent to research laboratories throughout the state. The Center for Applied Aquatic Ecology in Raleigh has the ability to examine samples under scanning electron microscopy. Laboratories at the University of North Carolina at Greensboro and the National Oceanic and Atmospheric Administration laboratory in Beaufort can examine samples with molecular probes. Laboratories at UNC-Chapel Hill and UNC-Wilmington provide valuable taxonomic expertise. Algal samples and results are collected, exchanged, and discussed between DWQ and research laboratories as a professional courtesy.

Temperature: Two relatively minor freshwater fish kills were attributed to extremes in water temperature. A winter kill of shad was reported on Greenfield Lake, Wilmington during February, and high temperatures in the Broad River (Cleveland Co.) were reported as a cause for a kill of suckers and catfish during August.

Bycatch: Discarded fish from nearby fishing operations was reported as a cause in one event during the year. A small event involving menhaden in Long Creek (Craven County) was determined to be bycatch due to the presence of net marks on the carcasses. Water quality measurements were reported as normal and active fish were observed in the area during the investigation.

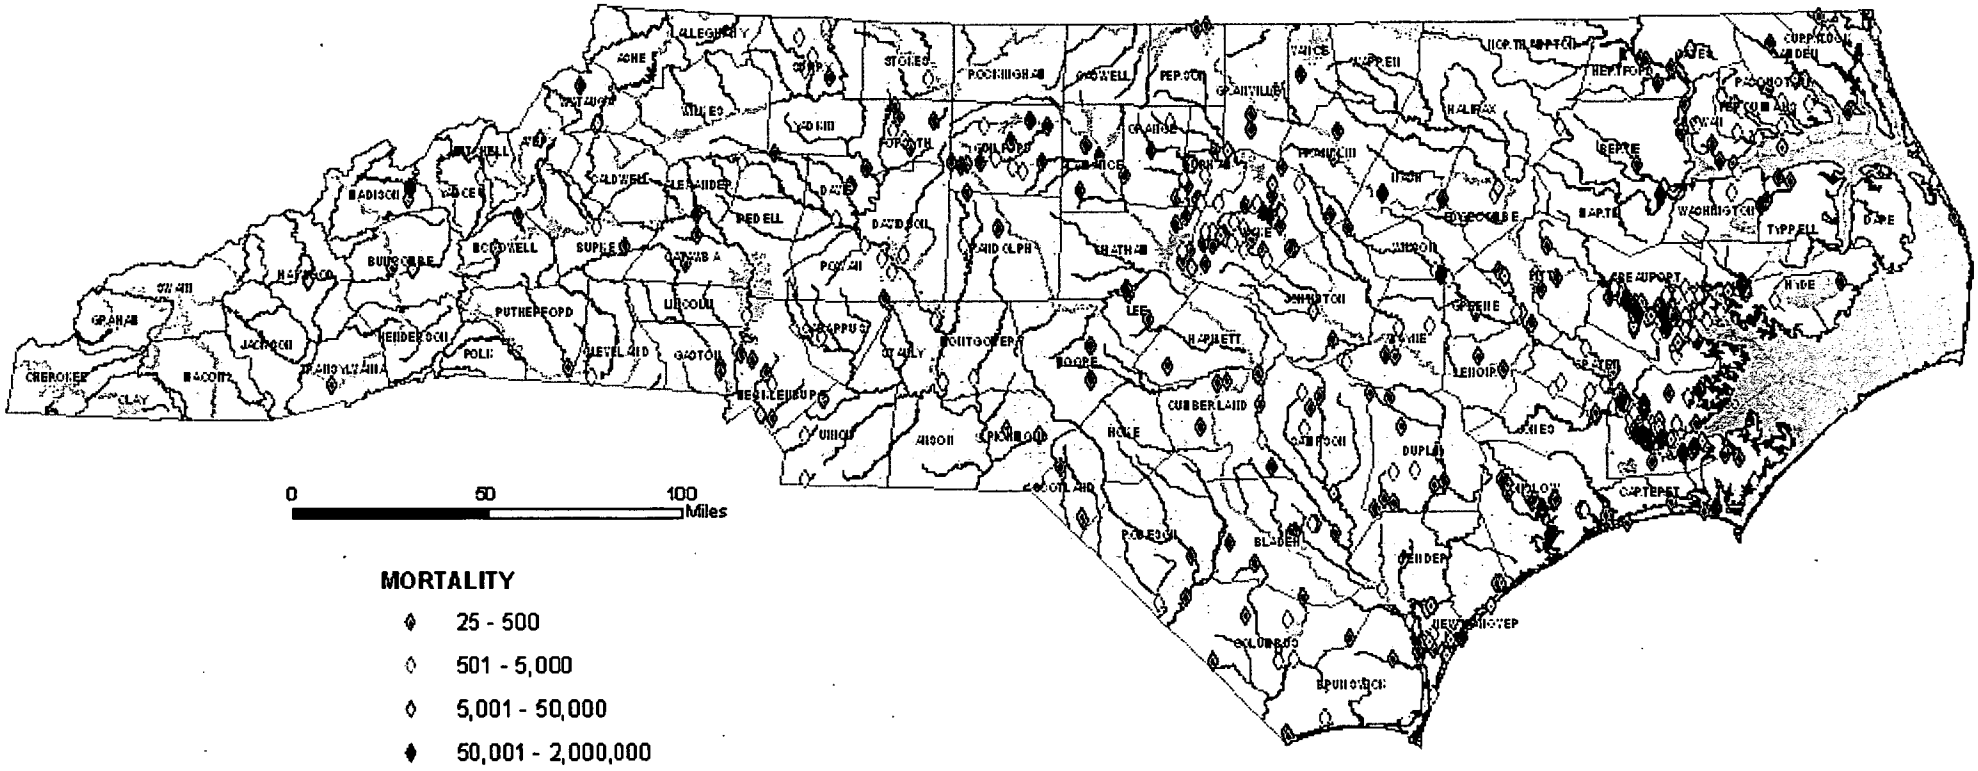
Unknown Causes: Causes for kill events are reported as unknown when investigators fail to cite specific reasons for an event. Investigations may not provide definitive causes when they are conducted too long after an event and no clear factors are determined, or when causes are suspected but not confirmed. Investigators failed to cite or confirm causes for four of the year's events. Events with unknown causes were all reported from estuarine waters during 2006. Investigations for such events yielded few clues and environmental conditions or water quality measurements were often reported as normal by the time personnel arrived on scene.

Notable Events

Pamlico River at Blounts Bay (Beaufort Co.), August: A multi-species kill consisting primarily of juvenille spot and croaker was reported over a half mile section of shoreline near the mouth of Blounts Creek in western Blounts Bay. Investigators also observed dead menhaden and blue crab. They estimated over 13,000 dead fish including 11,000 spot and over 1,000 croaker. At the time of the investigation the fish appeared to be less than 24 hours old. Measurements from the real time monitoring platform a few miles downstream revealed a sudden drop in dissolved oxygen the previous night. Water quality measurements during the investigation indicated dissolved oxygen had rebounded in the area and subsequently fish mortality appeared to cease. Recent heat and calm weather resulted in surface water temperatures exceeding 90 degrees Farenheit. Deeper waters throughout the river were reported as hypoxic (less than 1.0 mg/L).

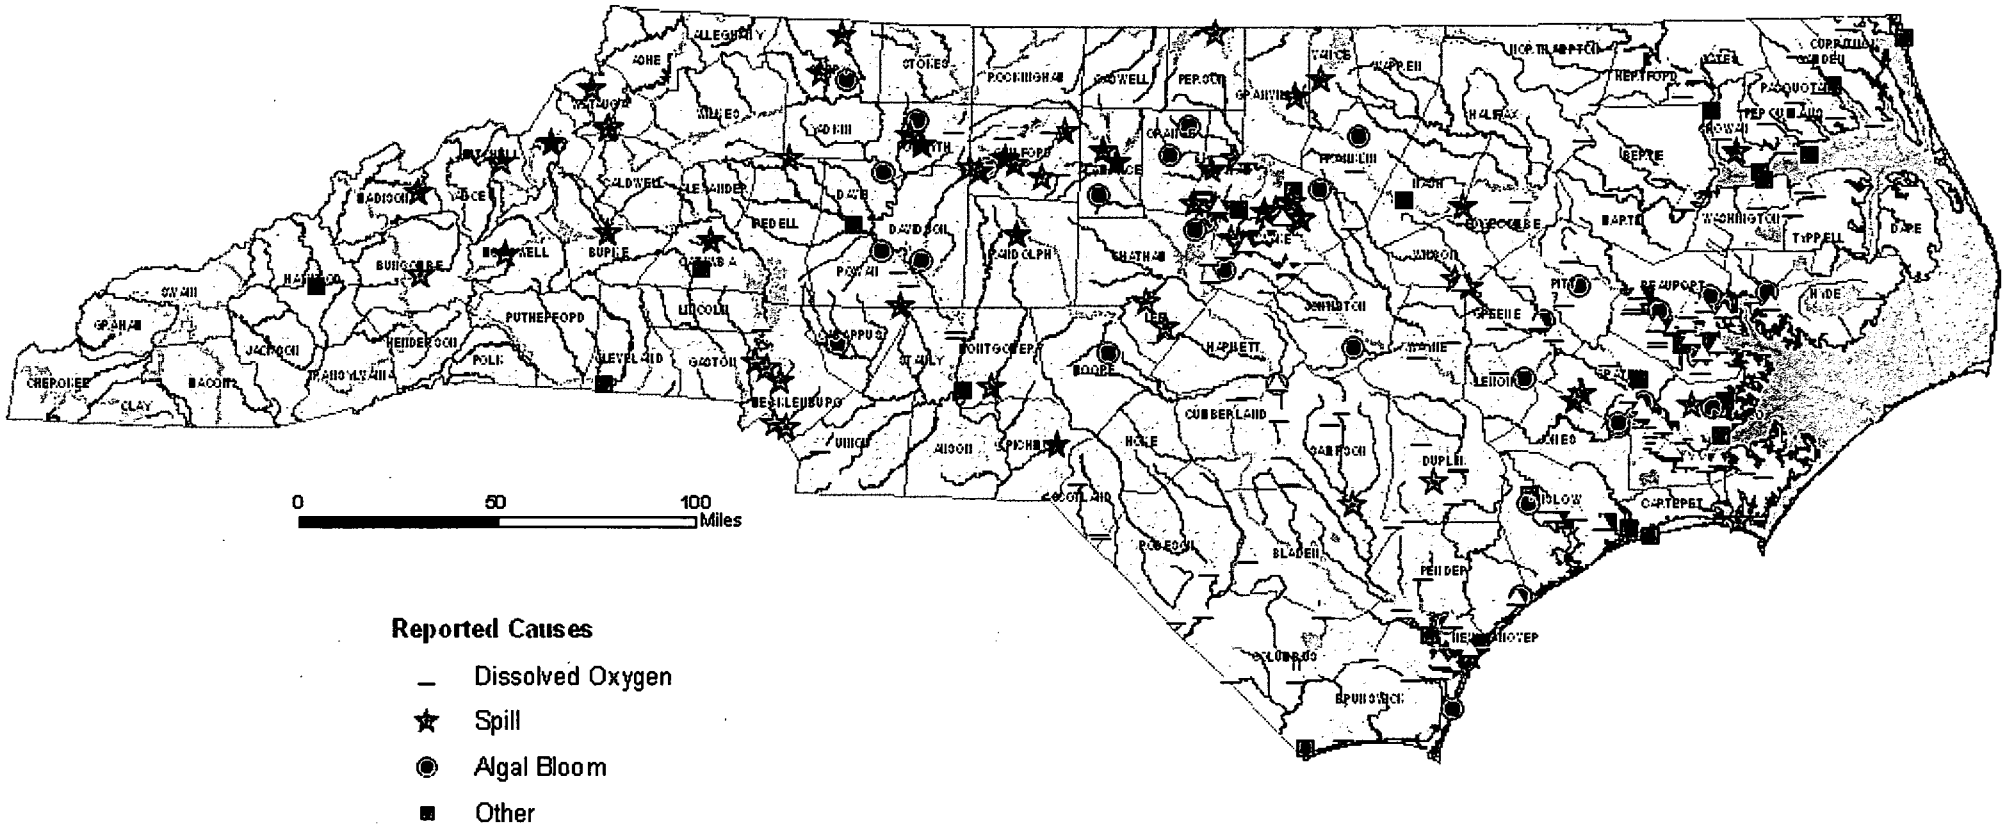
Neuse River, Johnson Point (Craven Co.), August: The kill, reported by the Neuse River Response Team, involved primarily silver perch and other species including croaker, menhaden, flounder, spot and blue crab. Most of the observed fish were juvenile, had no lesions, and appeared to be 24 hours old. The fish kill covered approximately 2 miles of shoreline from Johnson Point downstream and included approximately 5000 fish. The event coincided with a drop in dissolved oxygen levels measured at Channel Marker 11 located 3.5 miles downstream. Real-time monitoring equipment recorded hypoxic conditions near the area for almost 4 hours on the previous morning.

Bent and Mine Creeks (Wake Co.), April: Fish were killed after the release of concrete sealer via a storm drain from adjacent dwellings upstream of Bent Creek. Fish species included sunfish, catfish, suckers, darters, and minnows. Over 2000 fish were observed dead along a 1.2 mile stretch downstream of the storm drain.



Hunting Creek (Burke Co.), February: The event was the result of runoff from an explosion and fire at the Synthron chemical manufacturing facility in Morganton, NC and was investigated by both Catawba River Keeper Foundation and North Carolina Wildlife Resources staff. The fish kill began at site of Synthron explosion downstream to the confluence of Hunting Creek and Catawba River. The Catawba River Keeper Foundation estimated over 1,000 fish were killed along a 2 mile stretch of Hunting Creek. Catawba Foundation staff identified dead creek chubs, suckers, and sunfish species.

2006 Summary



Investigators reported fish kill events in 8 of the state's major river basins during 2006. In general, kill activity in basins across the state was light when compared to yearly activity reported since 1996. The number of fish kills reported during the year totaled 25, a slight increase from 2005 but a figure consistent with low totals reported for the last five years. Total fish mortality was reported near 35,000 individuals. This count represents the lowest since DWQ protocols were implemented in 1996.

A decrease in the reported frequency and intensity of fish kill activity over recent years remains unclear based on report data. Empirically, reports suggest that a majority of North Carolina's annual kill activity (or lack thereof) may depend on environmental conditions in certain key areas of the state, namely, the coastal basins and estuaries. Since 1996, these areas have produced the majority of reported activity statewide (see Appendix 1). Reports indicate that DO depletion, while occurring statewide in any given year, is more common in coastal waters and plays a significant role in kill activity in the region (Appendix 2). Conversely, favorable environmental conditions (ie: DO, weather, hydrology, water chemistry) have been documented in the states coastal waters during the current period of low fish kill activity. Determining if a decrease in fish kill reports reflects natural changes or is the result of improved water quality requires continued long term monitoring and research.

Appendix 1 : Fish Kill Events and Observed Mortality Reported to NCDWQ, 1996 to 2006

Appendix 2: Reported Causes for Fish Kill Events, 1996 to 2006

Note: Events with unknown causes are not shown.

Appendix 3: 2006 Fish Kill Event Summaries (by County)

Total 2006 Fish Kills: 25

Total 2006 Fish Mortality: 35395

Date	Kill Number	Waterbody	Location	Fish Species	Mortality	Comments
Beaufort						
7/19/2006	WA06005	Duck Creek	near Bath	Perch, Catfish	210	The kill involved about 100 silver perch about 3-6 inches in length and 10 catfish from 5-9" long. Dissolved Oxygen at middaywas above 130% saturation, and the pH was 7.6 suggesting an algal bloomwas present. Water temperature was about 91degrees F. Algal sampleswere collected and forwarded to DWQ/ESS. The fishwere fresh and likely died the previous night or early morning. No lesions were observed. ESS staff identified a dense bloom of the filamentous bluegreen alga Pseudanabaena (previously identified as Oscillatoria limnetica). This is a harmless algawhich frequently blooms in the state's coastal rivers during summer.
8/2/2006	WA06003	Pamlico River	Blounts Bay	Spot, Croaker, Menhaden, Pumpkinseed	13220	A citizen reported the kill at about 9:30am. It was a multi-species kill made up primarily of juveniile spot and croaker about 3-4" in length. Investigators also saw Blue Crab and Menhaden. They estimated over 13,000 dead fish over about a 1/2 mile section of shoreline near the mouth of Blounts Creek in Western Blounts Bay. This included about 11,000 spot and over 1,000 croaker. The fish appeared to be less than 24 hours old. Measurements from the real time monitoring platform at marker number 5 (a few miles downstream) revealed a sudden drop in dissolved oxygen the previous night between midnight and 3:AM. Water quality measurements during the investigation indicated dissolved oxygen had rebounded in the area and fish ceased to die. The recent heat and calm weather resulted in threatening conditions for fish in the area. Surface water temperatures approaching and exceeding 90 degrees Farenheit were measured. The deeperwaters throughout the riverwere reported as hypoxic.
					Total Kills for County: 2	Total Mortality for County: 13430
Burke						
2/2/2006	AS06001	Hunting Creek	near Morganton	Suckers,Chub,Sunfish,Darter, Stoneroller	1000	The eventwas the result of an explosion and fire at the Synthron chemical manufacturing facility in Morganton NC and was investigated by both Catawba River Keeper Foundation and NCWRC staff. The fish kill began at site of Synthron explosion (intersection of Kirksey and Amherst Roads) downstream to the confluence of Hunting Creek and Catawba River. The Catawba Riverkeeper Foundation estimated over 1,000 fishwere killed in approximately 2 miles of Hunting Creek. Catawba Foundation observed large fish, some as long as 14 inches during the assessment. They identified dead creek chubs, suckers, and sunfish species. On February 2, NCWRC staff examined Hunting Creek to determine the extent of the fish kill and the feasibility of executing a formal investigation. NCWRC staffwere able to inspect two sites along the approximately 3-km reach of the fish kill. NCWRC staffwalked the streambank which consisted of approximately 775 m of stream below the input source (Synthron, Inc). Evaluation of this reach resulted in the visual location of approximately 130 dead sucker species; no live fishwere observed within this reach. NCWRC staff also visually examined the confluence of Hunting Creek and Catawba River. No dead or moribund fishwere observed, but one live fish (unidentified species) was observed surfacing approximately 70 m below the culvert on Hunting Creek. NCWRC staffwere forced to halt further examination due to the development of physical ailments (headache and nausea) thatwere probably caused by exposure to fumes from ongoing chemical fires at the Synthron facility.
					Total Kills for County: 1	Total Mortality for County: 1000

Date	Kill Number	Waterbody	Location	Fish Species	Mortality	Comments
Chatham						
3/20/2006	RA06001	Jordan Lake	New Hope Creek Arm	Catfish,shad	50	Samples examined by ESS staff showed phytoplankton density at 45,000 units/ml which is considered a severe bloom (>30,000 units/ml). The assemblage was diverse and comprised of blue greens, greens, diatoms, and cryptomonads. The dominant taxon (>30% of total density) was the filamentous blue green Pseudanabaena at 17,000 units/ml. RRO staff received reports of more dead fish at Farrington Point on the same arm. Fisherman reported crappie piping for air.
3/25/2006	RA06002	Jordan Lake	Farrington Point	Catfish	60	Surface water readings taken at Farrington Point boat ramp showed high dissolved oxygen and ph. Fisherman stated seeing ~ 200 other fish washed up on rip rap area that was not accessible by foot. They stated they were primarily catfish with a few crappie. Water appeared to have greenish brown color and very thick.
					Total Kills for County: 2	Total Mortality for County: 110
Cleveland						
8/4/2006	MO06001	Broad River	NC 150 S. of Boiling Springs	Sucker, Catfish	700	Fish began dying on 8/2/06 High water temperatures recorded at time of investigation. Dissolved oxygen levels within acceptable range. Investigators suspected heat stress as cause for event.
					Total Kills for County: 1	Total Mortality for County: 700
Craven						
3/23/2006	WA06001	Batchelor Creek	near Bellair	Menhaden	700	The kill was approximately 2 days old and extended for 1.8 miles. It affected menhaden from 6-10 inches in length and no lesions were observed. Physical water quality data showed no obvious reason for the event. Cause unknown.
6/7/2006	WA06002	Pembroke Lake	New Bern	Shad, Carp, Sunfish, Largemouth Bass, Catfish	3850	Investigators suspected an algal bloom as a factor in kill event. ESS staff examined water samples and identified a bloom of euglenoid algae and diatoms. Green cloudy water and a dissolved oxygen level of < 2mg/L was observed during the investigation.
8/2/2006	WA06004	Neuse River	Johnson Point	Silver Perch, Croaker, Flounder	5000	The Neuse River Response Team investigated a fish kill in the Neuse River n the Johnson Pt. area along the south side of the river. The fish kill was reported by a local resident. The kill involved primarily silver perch, and other species including croaker, menhaden, flounder, blue crab, and spot. Most of the fish observed were juvenile from 3-8" in length, had no lesions, and appeared to be 24 hours old. The fish kill covered approximately 2 miles of shoreline from Johnson Pt. downstream and included approximately 5000 fish. The event coincided with a drop in dissolved oxygen levels measured at Channel Marker 11 located 3.5 miles downstream. Real-time monitoring equipment recorded hypoxic (less than 1.0 mg/L) conditions near the area for almost 4 hours on the morning of 8/2/06.
10/24/2006	WA06007	Upper Broad Creek		Speckled Trout, S. Flounder, Atlantic menhaden, Spot, Largemouth Bass, Pumpkinseed	502	The reporting source contacted NRRT to report a multi species fish kill in Broad Creek. They noted that fish were gulping at the surface on 10-23-06. Cause was not determined. Additional decomposed fish reported in Fairfield Harbor on 11/1/06. Investigators suspected Fairfield Harbor fish originated from this event and WA06008.

Date	Kill Number	Waterbody	Location	Fish Species	Mortality	Comments
10/25/2006	WA06008	Northwest Creek		Spot, Gizzard shad, S. Flounder, Atlantic menhaden, Pumpkinseed, Largemouth bass, Crappie, Yellow perch, Mullet, Anchovy, Speckled trout	4720	While NRRT members were responding to a fish kill in Broad Creek, a citizen reported a similar event occuring in neighboring, Northwest Creek. Upon investigation the following morning, team members found dead fish the entire stretch of the creek (2.17 miles) and estimated a total of 726 fish that included multiple species. Additional decomposed fish reported in Fairfield Harbor on 11/1/06. Investigators suspected Fairfield Harbor fish originated from this event and WA06007.
11/9/2006	WA06009	Long Creek	near Batchelor	Menhaden	50	The Neuse River Response Team investigated a fish kill in Long Creek after a call from a resident from the area. Long Creek is located 1.5 miles east of Clubfoot Creek off the Neuse River. Approximately 50 Atlantic Menhaden were found along the eastern shoreline of the creek. The fish were 8-9 inches in length and had no lesions. They appeared to be 3-4 days old, and had what appeared to be net marks on them. Water quality measurements did not indicate anything unusual at the time of investigation, and healthy fish were observed swimming in the area. No exact cause could be determined due to the age of the fish, although bycatch is the most likely culprit.
					Total Kills for County: 6	Total Mortality for County: 14822
Forsyth						
5/9/2006	WS06001	Spurgeon Creek	Unnamed Tributary	Crappie	200	Investigators suspected pond turnover. Rain and wind observed before event. No obvious contamination at the site or upstream during investigation.

Mecklenburg						
11/29/2006	MO06002	Paw Creek	Charlotte	Bass, Sunfish, Sucker, Minnow	180	Fish kill due to gasoline release from the BP Delivery Line (7401 Old Mt. Holly Rd) owned by Plantation Pipeline in Paw Creek, Mecklenburg County. State Incident No. 20080415S, EPA Incident # 819250. A site investigation was conducted along the impacted stream segment on 11/29/2006 and 12/4/2006 by CH2M Hill consultants.
					Total Kills for County: 1	Total Mortality for County: 180
New Hanover						
2/10/2006	WL06002	Greenfield Lake	Wilmington	Shad	200	Die-off of shad suspected as a result of low water temperatures or "winter kill". Water temperatures around the time of the investigation were recorded near 40 degrees F. No visible health problem seen on fish.
9/8/2006	WL06001	Bradley Creek	Airlee Gardens	Largemouth Bass, Perch	900	Investigators observe fish from various size ranges. Suspected runoff from Hurricane Ernesto rains caused low dissolved oxygen and subsequent fish kill.
					Total Kills for County: 2	Total Mortality for County: 1100
Orange						
4/7/2006	RA06003	Eno River	Lake Ben Johnson dam	Sunfish	32	Investigators observed a layer of scum impounded by some fallen trees (immediately upstream of the dam). Investigators suspected kill occurred in the impoundment and later flowed into the river. Because the kill was reported late, no samples were taken.

Date	Kill Number	Waterbody	Location	Fish Species	Mortality	Comments
8/3/2006	RA06006	Morgan Creek	Chapel Hill	Carp, Sunfish, Catfish	60	Plant bypass occurred putting 450,000 gallons of primary treated wastewater into Morgan Creek. Water samples were taken by OWASA staff.
					Total Kills for County: 2	Total Mortality for County: 92
Pamlico						
7/9/2006	WA06006	Dawson Creek	near Janeiro	Gizzard Shad	51	NRRT & PRRT team members responded to a fish kill in Dawson Creek. The kill was approximately 2-3 days old and extended for .725 miles. It affectected gizzard shad of 254-304 mm in length and no lesions were observed. Physical water quality data showed no obvious reason for the event. Cause of event is unknown to due to the old age of the fish. An oily surface film was observed at the same time.
					Total Kills for County: 1	Total Mortality for County: 51
Person						
6/15/2006	RA06007	Bowes Branch	Fire pond at La Pacific Corporation	Largemouth Bass, Sunfish, Carp,	340	The La. Pacific Corporation plant near Roxboro experienced a serious fire within the production facility. A subsequent fish kill occurred in the company's fire pond. During the fire, large quantities of water were pulled from the pond to spray on the fire. Runoff was at times about 3 to 4" deep running from the building to the stormwater system, thereby returning to the pond. The fire began at 2:41 AM on 6/13, and the use of water ended about 4:30 PM, a period of just under 14 hours. Production units experiencing fire included mixers in which the chemicals Methyl Diisocyanate, Paraformaldehyde, and Paraffin Wax were being applied to wood. Some undetermined quantity of these materials returned to the pond with the recycling firewater. There was heavy rain from the remnants of tropical depression Alberto most of the day of 6/14, as well. Dead fish were observed and reported at about 7:35 AM on 6/15. The pond was also observed at that time to have a reddish material floating along one edge where the wind had moved it. A total of 290 fish were observed killed the first day: 113 bass, 50 carp, and 127 sunfish. None was observed to be diseased, malformed, or otherwise abnormal. The next day, another 50 were gathered, 20 bass and 30 sunfish. About half were "fresh" enough to have expired overnight.
					Total Kills for County: 1	Total Mortality for County: 340
Scotland						
8/4/2006	FA06001	Private Pond	near Johns	Largemouth bass, Catfish, Sunfish, Crappie	100	Investigators suspected low dissolved oxygen resulting from pond turnover as a cause for the event. The event occurred after a heavy rainstorm.
9/5/2006	FA06002	Gattis Pond	near Laurel Hill	Largemouth bass, Sunfish, Carp	360	Investigators suspected low dissolved oxygen resulting from pond turnover as a cause for the event. Fish seen gasping at surface and acting lethargic. Some fish had been removed from the pond by owner at time of investigation.
					Total Kills for County: 2	Total Mortality for County: 460
Vance						
8/24/2006	RA06008	Private Pond	UT to Crooked Creek	Bass, Sunfish, Catfish	500	Pond is located on a spring fed tributary to Nutbush creek. An upstream neighbor had failing septic system and it had been piped into tributary for undetermined length of time. Low D.O. and Nitrates noted in water samples taken by private pond management company prior to calling DWQ. Aerators had been put in the pond by the time DWQ was contacted so D.O. Levels were acceptable upon investigation. DWQ followed the progression of the pond for several weeks. Correcting the upstream problem appeared to solve the problems in the pond.

Date	Kill Number	Waterbody	Location	Fish Species	Mortality	Comments
					Total Kills for County: 1	Total Mortality for County: 500
Wake						
4/1/2006	RA06004	Mine Creek	above Shelly Lake, Raleigh	Sunfish, Minnows, Darters, Bullhead Catfish	2260	Fish were killed after the release of concrete sealer via a storm drain from adjacent dwellings upstream of Bent Creek, including sunfish, catfish, suckers, darters, and minnows. The sealant release most likely occurred on March 29, 2006. NCWRC staff was contacted on March 31 and arrived at the accident site on April 1, 2006 to observe a consistent number of dead fish within a 1.2 mile stretch downstream of the storm drain. The NCWRC costs associated with the fish kill investigation, associated fish loss, and report preparation were $1,420.60. The NCWRC requested a total reimbursement of $1,420.60.
8/7/2006	RA06005	Swift Creek	below Lake Benson Dam	Carp	150	No water observed flowing over spillway at Lake Benson. Water below dam was stagnant and Swift Creek was very low below spillway. Some fish were traped in pools of water isolated from the creek. Dead fish were noted in shallow pools.
					Total Kills for County: 2	Total Mortality for County: 2410

2006 Report to the Joint Legislative Education Oversight Committee

Strengthening Littering Laws

SL2001-512, sec. 11

Senate Bill 1014

Due Date: December 15, 2006
Report #: 23
DPI Chronological Schedule, 2006-2007

2006 RECYCLING SURVEY

In September and October, 2006, the Department of Public Instruction, in conjunction with School Planning Section of the School Support Division conducted a survey to assess the recycling efforts of each school system in North Carolina. This survey is in response to Senate Bill 1014, which directs the State Board of Education to report on the recycling efforts on a yearly basis. Out of the 115 individual school systems in NC (LEAs), all 115 systems responded to the survey, for a response rate of 100%.

Survey results will be sent to, and used by the Joint Legislative Oversight Committee and The Environmental Review Commission to determine recycling status and trends from year to year. Results will be tabulated annually through the year 2007, for an accurate longitudinal assessment of the recycling program in North Carolina Public Schools.

Results

Does your LEA have a recycling program?

	# Recycle (2006)	% 2006	% 2005	% 2004
Yes	108	93.9	93.0	85.2
No	7	6.1[1]	7.0	14.8
Total	115	100.0	100.0	100.0

Is the recycling program organized at the school or LEA level?

	# Recycle (2006)	% 2006	% 2005	% 2004
LEA	34	29.6	34.8	27.8
School	36	31.3	32.2	25.2
Both	38	33.0	26.1	32.2
None	7	6.1	7.0	14.8
Total	115	100.0	100.0	100.0

When asked if a recycling program is in place within the 115 school systems the response was overwhelmingly positive, with almost all (93.9%) of LEAs having a program in all or at least some of the schools in their system. This resulted in a percent increase of 0.9% from 2005/2006. Additionally, the vast majority of *individual schools* in the North Carolina School System (88.7% or 2,051 schools)[2] report they recycle at least one item.

[1] This figure represents counties with no recycling programs, and refer to Anson, Bertie, Bladen, Hyde, Jackson, Northampton, and Sampson

[2] Please note: This percentage may be greater because not all school systems reported the exact number of participating schools.

Summary of Recycled Items

What items does your school system recycle?

	# Recycle (2006)	% 2006	% 2005	% 2004
Cans	88	76.5	72.2	74.8
Cardboard	87	75.7	73.9	73.9
Motor oil	83	72.2	71.3	68.7
Newspapers	77	67.0	67.0	61.7
Paper	76	66.1	67.8	61.7
Tires	71	67.0	65.2	60.9
Computer hard drives	67	58.3	49.6	56.5
Cooking oil	67	58.3	53.9	53.9
Computer keyboards	63	54.8	47.0	47.8
Printers	63	54.8	44.4	36.5
CRT monitors	59	51.3	40.9	40.0
Plastic bottles	53	46.1	44.4	43.5
Fax/printer ink cartridges	42	36.5	38.3	36.0
Glass bottles	30	26.1	23.5	25.2
Other glass containers	19	16.5	14.8	17.4
Plastic cafeteria plates and cups	18	15.7	11.3	10.4
Plastic cafeteria utensils	15	13.0	9.6	4.3
Other[3]	40	34.8	41.7	47.8

Slightly more than three-fourths (76.5%) of LEAs recycle cans, making it the most recycled item. Cardboard and motor oil are second and third on the list, with 75.7% and 72.2% of school systems recycling these items. The least recycled items reported are plastic cafeteria utensils (13.0%) and plastic cafeteria plates and cups (15.7%).

Although plastic cafeteria utensils ranked lowest, the recycling of these items more than tripled — from 4% in 2004 to 13% in 2006. The largest increases since 2005 were with computer equipment. There were 10.4% more LEAs that recycled printers and CRT monitors in 2006 compared to 2005. Computer hard drives and keyboards also saw significant increases of 8.7% and 7.7% respectively.

Only seven school systems have no organized recycling program intact. These are Anson, Bertie, Bladen, Hyde, Jackson, Northampton, and Sampson Counties. These school systems are all smaller than average and list cost, reliance on other counties, reliance on recycling companies, and manpower as huge factors and for the lack of a recycling system in their county. However most of these systems are currently in the process of trying to implement a recycling program.[4]

[3] Examples include: Cell phones, antifreeze, oil filters, and batteries. For a complete listing, see Appendix

[4] For complete listing, see Appendix

Appendix A– Written Comments

PLEASE LIST ANY OTHER ITEMS RECYCLED BY THE LEA (in order by LEA #)

- 030 Alleghany County Schools - Aluminum
- 080 Bertie County Schools - Batteries, metal
- 100 Brunswick County Schools - Old brake drums, radiators, brake shoes, discarded metal, batteries, computer equipment
- 110 Buncombe County Schools - Cell phones, books, digital cameras, magazines, laptop batteries
- 132 Kannapolis City Schools - Fluorescent light bulbs
- 180 Catawba County Schools – Mixed paper
- 181 Hickory Public Schools - Catalogs (1), library books (10), text books (10)
- 190 Chatham County Schools - Vehicle batteries, scrap metal (steel & copper), aluminum soda can tabs
- 200 Cherokee County Schools - Phones (1)
- 230 Cleveland County Schools - Computer towers, televisions, overhead projectors
- 250 Craven County Schools - Antifreeze
- 280 Dare County Schools - Antifreeze, Styrofoam, misc. metals, used kitchen equipment, used lawn/power equipment, used audio visual equipment, used furniture/student desks, used plumbing/electrical fixtures
- 300 Davie County Schools - Cell phones (1)
- 330 Edgecombe County Public Schools – Batteries
- 390 Granville County Schools – Batteries, pull tabs (2), tool cleanser
- 440 Haywood County Schools - Phones
- 470 Hoke County Schools - Bus batteries
- 480 Hyde County Schools - Textbooks
- 490 Iredell-Statesville Schools - Cell phones, textbooks
- 491 Mooresville Graded Schools - Cell phones
- 510 Johnston County Schools - Magazines (5)
- 540 Lenoir County Public Schools - Cell phones
- 590 McDowell County Schools - Cell phones, magazines, PDAs
- 600 Charlotte-Mecklenburg School System - Phonebooks, magazines, catalogs, brochures, Post-It Notes, file folders, colored paper, stapled paper, junk mail, blue prints, legal pads
- 630 Moore County Schools - Engine fluids, paints, vehicle parts, paint thinner, Freon, metal, phone books, batteries
- 650 New Hanover County Schools - Batteries (6), aluminum (1), phone directories (1), scrap metal (1), cell phones (3), plastic bags (2), antifreeze (1)
- 740 Pitt County Schools – Desks, lockers, water coolers
- 760 Randolph County Schools - Antifreeze, oil filters
- 761 Asheboro City Schools - Magazines (1), plastic grocery bags (1), catalogs (1)
- 780 Robeson County Public Schools - Cell phones, tin, aluminum steel, cast iron, general metals, stainless steel, copper, drink tabs
- 790 Rockingham County Schools - Antifreeze (1)
- 830 Scotland County Schools - Batteries, Styrofoam plates and cups
- 850 Stokes County Schools - Cell phones, textbooks
- 860 Surry County Schools - Batteries, cell phones, magazines, telephone directories, textbooks, workbooks
- 861 Elkin City Schools - Scrap metal, wood pallets, appliances, batteries
- 870 Swain County Schools - Oil filters, vehicle batteries, UPS batteries
- 900 Union County Public Schools - Cell phones (7), metal/steel (1)
- 920 Wake County Schools - Antifreeze (148), ballasts (148), batteries (148), bricks (148), carpet (148), cell phones (4), compressors (148), contaminated refrigerant (148), curb & paving materials (148), fluorescent tubes (148), gypsum (148), light bulbs (148), metal (148), phone books (148), polystyrene (148), sheet rock (148), stone (148), textbooks (148)
- 930 Warren County Schools - Batteries, scrap metal
- 970 Wilkes County Schools - Antifreeze (1)

( ) represents the # of schools that recycling the item listed

EXPLAIN PROBLEMS WITH RECYCLING PROGRAM (in order by LEA #)

- 040 Anson County Schools - We do not have an organized program. The schools collect and recycle some items.
- 050 Ashe County Schools - Computers are reused for parts in some cases
- 080 Bertie County Schools - The Child Nutrition Department found it to be an too much of an added expense. They are charged to have the cooking oil picked up.
- 090 Bladen County Schools - Program has not yet been implemented
- 120 Burke County Schools - All schools send computer type items to a central department for recycling; tires and motor oil also.
- 130 Currently, gathering information on recycling glass and plastic bottles. Computer hard drives, keyboards, and monitors are sold at auctions.
- 180 Catawba County Schools – Hopefully light bulbs in the future.
- 181 Hickory Public Schools - Computer hard drives, keyboards, printers, and monitors are sold through state surplus auctions. Test materials, student data, and finance records are shredded for recycling at least once during the fiscal year.
- 270 Currituck County Schools - Any aluminum parts from bus repairs are also recycled.
- 300 Davie County Schools - We changed our recycling program and a lot of items are no longer accepted. Cost is another reason for not recycling some items.
- 370 Edgecombe County Public Schools - Main reason for entire LEA not participating is the cost factor. It would require renting additional receptacles for separate pick-up; estimated cost of $300 per month for each school.
- 370 Gates County Schools - We are working on a plan to start recycling plastics, cans, and cardboard milk cartons.
- 480 Hyde County Schools - This program is being looked into. We are looking at recycling programs at other LEAs to gain more info.
- 490 Iredell-Statesville Schools - Inadequate transportation; Recycling company doesn't pick up for a couple of schools; Bi-weekly pick up not successful; Time, space, and money; No curbside recycling pickup.
- 491 Mooresville Grade Schools - We are working to expand our program.
- 500 Jackson County Schools - Currently, we do not have the personnel to handle taking the recyclables to the recycling centers.
- 590 McDowell County Schools - There has been no specific decision at the system level not to promote a recycling program. The survey results from the schools indicate someone has promoted and encouraged the schools to conduct recycling efforts. Our system has numerous new staff in key positions. As a system we will reassess our central efforts for recycling.
- 610 Mitchell County Schools - This is left to the discretion of each local school in Mitchell County. Our schools do a good job with individual school recycling plans.
- 650 New Hanover County Schools - A few schools do not know how to organize recycling programs. Lack of storage space and funding for bins and pickup are issues at several schools. A recycling company removed an outdoor dumpster from one school because the public used it for trash. Two schools have committees that have not met yet to consider a recycling program.
- 660 Northampton County Schools - Waste providers are limited in our area. When checking on why recycling program was avoided, found that it was too costly for the school system.
- 700 Elizabeth City-Pasquotank County Schools - Most paper, aluminum, and plastic items are handled by the Pasquotank County Recycling Coordinator.
- 720 Perquimans County Schools - All four schools were involved at one time. The school that is not organized now will be in the near future.
- 740 Pitt County Schools – Our Facilities Services Department recycles used equipment. Auctions are held throughout the year.
- 820 Sampson County Schools - While we do not have a recycling program, we do purchase items that have been recycled.
- 840 Stanly County Schools - Schools are encouraged to participate in beautification and recycling efforts as often as possible.
- 861 Elkin City Schools - We do this because it saves the system money.
- 890 Tyrrell County Schools - Pickup for recycled products is not available to us. We do all we can and we purchase recycled items often.
- 910 Vance County Schools - All computer equipment is handled throughout the LEA. All other items are handled by the individual schools.

NORTH CAROLINA GENERAL ASSEMBLY

Report on the study of the merger of the Ecological Enhancement Program and the Clean Water Management Trust Fund

REQUEST FOR PROPOSALS

November 21, 2006

Proposals subject to the conditions made a part hereof will be received until **5:00 p.m. EST December 22, 2006** for furnishing services described herein. Send all proposals to the following:

Lisa Hollowell
Fiscal Research Division
General Assembly of North Carolina
Room 619 Legislative Office Building
300 N. Salisbury St.
Raleigh, NC, 27603
Phone: 919-733-4910

Email: lisah@ncleg.net

Questions about the RFP should be sent by email to Ms. Hollowell.

NOTE: Indicate firm name on the front of each sealed proposal envelope or package.

Introduction

The Joint Legislative Transportation Oversight Committee (JLTOC) of the North Carolina General Assembly and the Environmental Review Commission (ERC) of the North Carolina General Assembly are seeking a consultant to study the merger of the organization and functions of the Ecological Enhancement Program (EEP) and the Clean Water Management Trust Fund (CWMTF).

Section 16 of Part XVI of Session Law 2006-248, House Bill 1723, directs the ERC and JLTOC to jointly study the merger of the organization and functions of the two programs.

> **PART XVI. MERGER OF ECOLOGICAL ENHANCEMENT PROGRAM AND THE CLEAN WATER MANAGEMENT TRUST FUND (Jenkins)**
>
> **SECTION 16.** The Environmental Review Commission and the Joint Legislative Transportation Oversight Committee shall jointly study the merger of the organization and functions of the Ecological Enhancement Program with the Clean Water Management Trust Fund. The Commission and the Committee may hire consultants to assist with the study. The final report shall be made to the 2007 General Assembly.

Ecosystem Enhancement Program

In 2003, the United States Army Corps of Engineers (USACE), North Carolina Department of Transportation (NCDOT) and North Carolina Department of Environment and Natural Resources (NCDENR) signed a memorandum of agreement (MOA) that created the Ecosystem Enhancement Program (EEP). The agreement created procedures and guidelines for providing the compensatory mitigation to offset impacts to waters and wetlands due to transportation activities and construction. The MOA provided for the incorporation of the Wetlands Restoration Program (WRP), which had been established by State law in 1996 to provide the compensatory mitigation required by the section 404 permit issued by the USACE for land development impacting wetlands, into the EEP. The MOA also provided that the WRP would be renamed as the EEP, which was confirmed by the enactment of conforming legislation in 2005.

Clean Water Management Trust Fund

The Clean Water Management Trust Fund (CWMTF) is a non-regulatory agency that administers a water quality grants program. The grant funds are awarded to local governments, State agencies, nonprofit conservation organizations, and other subdivisions of the State and may be used to acquire conservation easements or fee simple ownership of land in order to "preserve riparian buffers, wetlands, floodplains, and greenways; to restore riparian buffers, streams and wetlands; to repair failing wastewater collection and

treatment systems; to eliminate failing septic tanks and straight pipes, to prevent, reduce, collect and treat stormwater pollution and to plan water quality projects". (*Annual Report 2005, The North Carolina Clean Water Management Trust Fund*)

A brief history of the CWMFT follows:
In 1996 the General Assembly created the Clean Water Management Trust Fund with a prescribed mission to "clean up pollution in the State's surface waters and to protect and conserve those waters that are not yet polluted" (GS 113A-251). The General Assembly provided a dedicated and recurring funding source and required a Board of Trustees, Executive Director and staff. The Board of Trustees was empowered to establish a grant funding program to advance the mission. Since 1996, the CWMTF Board has approved over $595.8 million in grants for projects which have leveraged significant additional funds in private and other public funding.

During the 2005-2006 biennium the General Assembly appropriated recurring funding of $100 million for each year of the biennium for the grant program. During 2005, the CWMFT Board of Trustees approved funding for 159 projects for a total amount of $112.7 million and approved an administrative budget of $1.663 million for fiscal year 2006.

Scope of Study

1. The study will fully analyze, describe, and compare the organizational structures, missions, and budgets (both administrative and programmatic) of the EEP and the CWMTF. The comparison will identify whether there have been land purchases that may be utilized in both mitigation for North Carolina Department of Transportation projects and aid in cleaning up pollution in waters or preventing waters from becoming polluted. The consultant will analyze and may recommend whether to combine some or all of the activities of the two programs into one organization.

The Consultant shall provide the following detailed information on the EEP:

- Full description of the mitigation process including: selection of target areas, acquisition of land, crediting of land, use of the land, banking of surplus or unused credits. Describe how the EEP approach differs from the past approach when NCDOT handled mitigation within the agency. Describe the guidelines and requirements of the USACE and relate how these guidelines impact the policies established within EEP.
- Inventory the acquisitions and credits and restored or preserved lands accrued to date and describe how these acquisitions and credits have been assigned to projects and the process by which they may be reassigned or re-categorized for future projects. Include in a separate inventory the NCDOT transferred land credits and assigned projects.
- Detail the process for valuing the credits and restored acres assigned to projects in the near future and the surplus credits. Calculate the value of the credits currently in inventory with EEP. Identify options for the State

regarding the surplus land acquisitions that is not needed in the near future for mitigation purposes.

- The consultant shall identify best practices for mitigation processes and provide examples from other states.

II. The consultant will conduct a mitigation banking analysis that compares the relative effectiveness, efficiency, and total cost of the State's mitigation program to that of private mitigation banks. The consultant shall identify the State's processes and private sector processes of mitigation including Design, Bid, Build (EDP) and Full Delivery Procurement (EDP). The consultant will review current State policies with respect to the activities that private mitigation banks may undertake with respect to the services that private mitigation banks provide. The consultant will make recommendations for future mitigation banking policies as a result of the analysis.

III. The consultant will provide (1) alternative options to the merger of the programs into one entity, and (2) detail other collaborative arrangements that could exist in lieu of a complete merger and (3) identify other ways in which to provide mitigation in a more cost-effective way.

IV. The consultant will review and analyze pending and likely changes at the Federal level that may impact the State's programs.

V. The consultant will create an implementation schedule with timeline on any consultant-recommended options including projected budgets.

Qualifications

Potential vendors submitting proposals must demonstrate their knowledge of states' environmental preservation and mitigation processes, federal government environmental regulations related to highway/road building and construction, and demonstrated capability to produce clear, well-written reports by providing examples of completed projects.

Project Timeframe

The schedule is listed below:

Activity	Date
RFP Distributed	November 21, 2006
Proposals from Vendors Due	December 22, 2006
Award Contract	January 10, 2007
Sign Contract/Begin Work	January 22, 2007
Final Report	The consultant will propose a delivery date not to exceed 20 weeks.

Reports

The consultant will deliver up to four legislative presentations. The consultant will provide interim written reports and the final report will include an electronic version and 100 hardcopy reports.

Required Contents for Proposal

The response to this request for proposals shall consist of the following sections:

a) Executive Summary
   The executive summary shall consist of a brief summary of the contents of the proposal.

b) Corporate Background and Experience
   This section shall include:
   1) Background information on the organization and details of experiences with similar projects.
   2) A list of at least three references, including contacts and telephone numbers, for whom similar work has been performed.
   3) Samples of work products.

c) Financial Statement
   The vendor's most recent financial statement or similar evidence of financial stability.

d) Project Staffing and Organization
   This section shall include:
   1) Proposed staffing, deployment and organization of personnel to be assigned to this project.
   2) The vendor shall include resumes of key personnel who will actually be assigned to the project, describing experience with similar projects and the responsibilities to be assigned to each person.
   3) How the study will be planned, organized and conducted.

e) Technical Proposal
   This section shall include, in narrative, outline or graph form, the vendor's approach to accomplishing the tasks outlined in the project description section of this RFP. A description of each task and the schedule for accomplishing each shall be included.

f) Cost Proposal
   The cost proposal must contain the following information:
   1) Personnel costs (including hourly rates and total hours)
   2) Travel and subsistence expenses
   3) Office space, telephone, and other support needs, if any, anticipated from the General Assembly
   4) Subvendor costs (if any)
   5) Other costs
   6) Total cost for completing the project
   7) Rates for additional analyses requested during the project period

Proposal Submittal Process

a) Two original and 10 copies of the proposal plus electronic copy, PDF preferred.
b) Each original shall be signed and dated by an official authorized to bind the firm.

Vendor Selection Process

The selection of the vendor will be determined by a "Best Value" methodology, with key factors to be considered to include experience of the vendor and its consultants with related projects and price.

General Conditions Related to Submittal of Proposals

Right to Reject

The Joint Legislative Transportation Oversight Committee (hereinafter "Committee") reserves the unqualified right to reject any and all proposals when such rejection is deemed to be in the best interest of the State of North Carolina.

Right to Accept Part of Proposal, Negotiate Content and Cost

The Committee reserves the right to accept part of any proposal, and to divide any proposal into parts deliverable in stages over an extended time period. The Committee reserves the right to negotiate and alter the content, form, schedule, and deliverables of any proposal or portion of a proposal accepted. The Committee reserves the right to negotiate the cost of any proposal or portion of a proposal accepted.

Time for Acceptance

Each proposal shall state that it is a firm offer that may be accepted within a period of 30 days from the date of submission.

Unsolicited Proposal Changes

Any unsolicited change to a proposal that is received after the closing date of this RFP will be rejected.

Responsibility to Make Timely Submission

The vendor is responsible for assuring the timely delivery of a proposal. Late proposals will be rejected without review.

Cost for Proposal Preparation

Any costs incurred by vendors in preparing or submitting offers are the vendor's sole responsibility; the Committee will not reimburse any vendor for any costs incurred prior to award.

Elaborate Proposals

Elaborate proposals in the form of brochures or other presentations beyond that necessary to present a complete and effective proposal are not desired. Vendors are encouraged to limit proposals to approximately 10 pages or less (not including examples of work products).

Oral Explanations

The Committee shall not be bound by oral explanations or instructions given at any time during the competitive process or after award.

Confidentiality of Proposals

In submitting its proposal the vendor agrees not to discuss or otherwise reveal the contents of the proposal to any source outside of the Committee or its Legislative Services Office staff until after the award of the contract.

Form of Proposal

Proposals shall be submitted in a form that, in the opinion of the Committee, may be incorporated verbatim into a contract.

Exception to Terms

Any exception, interpretation, or suggestion for clarification by the vendor to any of the terms and conditions of this RFP must be clearly stated by the vendor.

Competitive Offer

Pursuant to the provision of G.S. 143-54, and under penalty of perjury, the signer of any proposal submitted in response to this RFP thereby certifies that this proposal has not been arrived at collusively or otherwise in violation of either Federal or North Carolina antitrust laws.

Right to Submitted Materials

All responses, inquiries, and correspondence relating to or in reference to this RFP shall become the property of the State of North Carolina when received.

Vendor's Representative

Each vendor shall submit with its proposal the name, address, telephone number, and email address of the person(s) with authority to bind the firm and answer questions or provide clarification concerning the vendor's proposal.

Proprietary Information

All vendors' information submitted in the proposal has the potential to become public information. Vendors are cautioned that any proprietary information contained in the proposal may not be protected as confidential and should not be submitted in response to this RFP.

Terms and Conditions of Resulting Contract

The following are terms and conditions that will be included in the contract for conducting the project. Other terms and conditions may be added prior to the signing of the contract.

Vendor

The contract is between the Joint Legislative Transportation Oversight Committee (subject to the approval of the Legislative Services Commission) and the selected vendor (hereinafter referred to as "Vendor").

Governing Law

This contract is made under and shall be governed and construed in accordance with the laws of the State of North Carolina.

Situs

The place of this contract, its situs and forum, shall be Raleigh, North Carolina, where all matters, whether sounding in contract or tort, relating to its validity, construction, interpretation and enforcement shall be determined.

Contract Period

The terms of the contract shall begin at its signing and shall end twelve weeks after contract signing, unless extended or terminated as provided in this document.

Termination

Upon mutual written agreement of the Committee and the Vendor, the contract may be terminated at any time. Failure to perform by the Vendor may result in termination by the Committee. In addition, the Committee has the right to terminate the contract at its discretion with 10 days written notice. In the event of termination, the Vendor will be paid an amount commensurate with work completed.

Independent Vendor

The Vendor shall be considered to be an independent vendor and as such shall be wholly responsible for the work to be performed and for the supervision of its employees. The Vendor represents that it has, or will secure at its own expense, all personnel required in performing the services under this agreement. Such employees shall not be employees of, or have any individual contractual relationship with the Committee or the Legislative Services Office.

Key Personnel

The Vendor shall not substitute key personnel assigned to the performance of this contract without prior written approval by the Committee. The individuals designated as key personnel for purposes of this contract are those specified in the Vendor's proposal.

Subcontracting

Work proposed to be performed under this contract by the Vendor or its employees shall not be subcontracted without prior written approval of the Committee.

Performance and Default

If, through any cause, the Vendor shall fail to fulfill in timely and proper manner the obligations under this agreement, the Committee shall thereupon have the right to terminate this contract by giving written notice to the Vendor and specifying the effective date thereof. In that event, all finished or unfinished deliverable items under this contract prepared by the Vendor shall, at the option

of the Committee, become its property, and the Vendor shall be entitled to receive just and equitable compensation for any satisfactory work completed on such materials. Notwithstanding, the Vendor shall not be relieved of liability to the Committee for damages sustained by the Committee by virtue of any breach of this agreement, and the Committee may withhold any payment due the Vendor for the purpose of setoff until such time as the exact amount of damages due the Committee from such breach can be determined. In case of default by the Vendor, the Committee may procure the services from other sources and hold the Vendor responsible for any excess cost occasioned thereby. Neither party shall be deemed to be in default of its obligations hereunder if and so long as it is prevented from performing such obligations by any act of war, hostile foreign action, nuclear explosion, riot, strikes, civil insurrection, earthquake, hurricane, tornado or other catastrophic natural event or act of God.

Bankruptcy

Upon the filing for bankruptcy or insolvency by or against the vendor, the Committee may terminate the contract, and the provisions of paragraph entitled "Performance and Default" shall apply.

Performance Bond

The Committee may require either a performance bond up to the full amount of the contract or another performance guarantee.

Availability of Funds

Any and all payments to the Vendor are dependent upon and subject to the availability of funds to the Committee for the purpose set forth in this agreement.

Confidentiality

The vendor agrees to protect the confidentiality of any files, data, or other materials provided by the Committee and to restrict their use to the purpose of performing the contract. The vendor shall comply with the provisions of Article 17 of Chapter 120 of the North Carolina General Statutes regarding confidentiality between the vendor and members of the General Assembly.

Care of Property

The Vendor agrees that it shall be responsible for the proper custody and care of any files or other property furnished by the Committee.

Copyright

No deliverable items produced in whole or in part under this agreement shall be the subject of an application for copyright by or on behalf of the Vendor.

Access to Persons and Records

The State Auditor shall have access to persons and records as a result of all contracts or grants entered into by State agencies or political subdivisions in

accordance with General Statute 147-64.7. The Vendor shall retain all records for a period of three years following completion of the contract.

Transfer or Assignment

The contract shall not be transferred or assigned to a third party.

Compliance with Laws

The Vendor shall comply with all laws, ordinances, codes, rules, regulations and licensing requirements that are applicable to the conduct of its business, including those of federal, state, and local agencies having jurisdiction or authority.

Equal Opportunity Statement

The nondiscrimination clause contained in Section 202 Executive Order 11246, as amended by Executive Order 11375, relative to equal employment opportunity for all persons without regard to race, color, religion, sex, age or national origin, and the rules and regulations prescribed by the Secretary of Labor, are incorporated herein. The program for Employment of the Handicapped (Affirmative Action) Regulations issued by the Secretary of Labor of the United States in Title 20, Part 741, Chapter VI, Subchapter "C" of the Code of Federal Regulations, pursuant to the provisions of Executive Order 11758 and Section 503 of the Federal Rehabilitation Act of 1973, are incorporated herein.

Insurance

The Vendor shall obtain, pay for, and keep in force, for the duration of the contract, worker's compensation insurance, as required by the laws of North Carolina, covering all of the Vendor's employees engaged in any work on the project in the State.

Additional Contract Expenses

The contract for the project is not a time and materials agreement. Any expenses of the vendor in addition to those contracted for, or above the contract amount, are the sole responsibility of the Vendor.

Advertising

Vendor agrees not to use the results or existence of the contract, or the products produced pursuant to the contract as a part of any news release or commercial advertising without the prior written approval of the Committee.

ATTACHMENT A

SESSION LAW 2006-178
House Bill 2208

AN ACT TO REPEAL THE REQUIREMENT THAT CERTAIN STATUTORY CRITERIA RELATED TO GRANTS FROM THE CLEAN WATER MANAGEMENT TRUST FUND FOR WASTEWATER AND STORMWATER COLLECTION AND TREATMENT PROJECTS HAVE PRIORITY OVER CRITERIA ESTABLISHED BY THE BOARD OF TRUSTEES OF THE CLEAN WATER MANAGEMENT TRUST FUND, TO CLARIFY THE AUTHORITY OF THE BOARD OF TRUSTEES WITH RESPECT TO MATCH REQUIREMENTS IN CONNECTION WITH GRANT AWARDS, AND TO ESTABLISH TERM LIMITS FOR THE BOARD OF TRUSTEES.

The General Assembly of North Carolina enacts:

SECTION 1. G.S. 113A-254 reads as rewritten:

"**§ 113A-254. Grant requirements.**

(a) Eligible Applicants. – Any of the following are eligible to apply for a grant from the Fund for the purpose of protecting and enhancing water quality:

(1) A State agency.
(2) A local government unit.
(3) A nonprofit corporation whose primary purpose is the conservation, preservation, and restoration of our State's environmental and natural resources.

(a1) Criteria. – The criteria developed by the Trustees under G.S. 113A-256 apply to grants made under this Article. The common criteria for water projects set in G.S. 159G-23 and the criteria set out in this section also apply to wastewater collection system projects, wastewater treatment works projects, and stormwater quality projects. ~~The common criteria set in G.S. 159G-23 have priority over the criteria set under this Article for wastewater collection system projects, wastewater treatment works projects, and stormwater quality projects.~~ An application for a wastewater collection system project or a wastewater treatment works project that serves an economically distressed local government unit has priority.

(b) Matching Requirement. – The Board of Trustees shall establish matching requirements for grants awarded under this Article. ~~The Board of Trustees may require a match of up to twenty percent (20%) of the amount of the grant awarded.~~ This requirement may be satisfied by the donation of land to a public or private nonprofit conservation organization as approved by the Board of Trustees. The Board of Trustees may also waive the requirement to match a grant pursuant to guidelines adopted by the Board of Trustees.

(c) Restriction. – No grant shall be awarded under this article to satisfy compensatory mitigation requirements under 33 USC § 1344 or G.S. 143-214.11.

(d) Wastewater Limits. – A wastewater collection system project or a wastewater treatment works project is eligible for a grant under this Article only if it is a high-unit-cost project, as defined in G.S. 159G-20. A grant made under this Article for a wastewater collection system project or a wastewater treatment works project is subject to the cost limits and recipient limits set in G.S. 159G-36 for a grant awarded from the Wastewater Reserve.

(e) Stormwater Limits. – The amount of a grant awarded under this Article for a stormwater quality project may not exceed the construction costs of the project. The total amount of grants awarded under this Article to the same recipient for stormwater quality projects for a fiscal year may not exceed the limit set in G.S. 159G-36(c)(1) for grants to the same recipient from the Wastewater Reserve.

(f) Withdrawal. – An award of a grant under this Article is withdrawn if the grant recipient fails to enter into a construction contract for the project within one year after the date of the award, unless the Trustees find that the applicant has good cause for the failure. If the Trustees find good cause for a recipient's failure, the Trustees must set a date by which the recipient must take action or forfeit the grant."

SECTION 2. G.S. 113A-255 is amended by adding a new subsection to read:

"(b2) Limitation on Length of Service. – No member of the Board of Trustees shall serve more than two consecutive four-year terms or a total of 10 years."

SECTION 3. Sections 1 and 3 of this act are effective retroactively to 1 January 2006. Section 2 of this act is effective retroactively to 1 July 2006. This act shall not apply to any person who is a member of the Board of Trustees of the Clean Water Management Trust Fund on 30 June 2006.

In the General Assembly read three times and ratified this the 17th day of July, 2006.

EXHIBIT F

Questions Received Related to the RFP – Report on the study of the merger of the Ecological Enhancement Program and Clean Water Management Trust Fund

1. Does the State have an estimated level of effort for this work?

No, we are asking the consultant to estimate the level of work required to fulfill the tasks of the scope of work.

2. The RFP indicates a project timeline of up to 20 weeks in the table in the Project Timeline section, but under Contract Period section it states that the contract "shall begin at signing and shall end twelve weeks after contract signing." Which timeframe should be assumed for this work?

We are asking that the study be completed within twelve weeks after the award and signing of the contract.

3. Please clarify the meaning of the acronym EDP in Scope of Study item II.

This acronym is incorrect, please disregard.

4. In producing the 2 originals and 10 copies of the proposal, are an equal number of sample work products needed?

No you do not have to submit multiple copies of your sample work products, one complete package of your work products is sufficient.

DRAFT—FOR REVIEW ONLY

EXHIBIT G

NORTH CAROLINA GENERAL ASSEMBLY

Report on Costs Associated with Providing Nutrient Controls that are Adequate to Offset Point Source and Nonpoint Source Discharges of Nitrogen and Other Nutrients

REQUEST FOR PROPOSAL

13 December 2006

Sealed proposals subject to the conditions made a part hereof will be received until **5:00 p.m., Friday 5 January 2007,** for furnishing services described herein. Send all proposals to the following:

George F. Givens, Commission Counsel
Environmental Review Commission
General Assembly of North Carolina
545 Legislative Office Building
300 North Salisbury Street
Raleigh, North Carolina 27603
Phone: 919-733-2578

The contact persons to whom you should direct all inquiries and questions about the request for proposal are George F. Givens and Jeffrey Hudson at the above address. E-mail: georgeg@ncleg.net and jeffreyh@ncleg.net.

NOTE: Indicate firm name, "Technical Proposal" or "Cost Proposal" on the front of each sealed proposal envelope or package, along with the date for receipt of proposals specified above.

Introduction

In accordance with Section 2 of Session Law 2006-215 and pursuant to G.S. 120-70.44(c), the North Carolina Environmental Review Commission (ERC) is seeking a consultant to:

1. Estimate the length of time that the existing North Carolina Nutrient Offset Fee Payments Program (NOFPP) will be able to continue as a completely self-sustaining program capable of providing adequate mitigation for the additional nitrogen loading purchased at the current cost of $11 per pound of nitrogen.
2. Study the costs associated with providing nutrient controls that are adequate to offset point source and nonpoint source discharges of nitrogen in the Neuse River Basin.
3. Study how a total nutrient offset payment fee should be determined.
4. Provide information and outline options, including the advantages and disadvantages of each option, to assist the ERC in deciding whether nutrient offset payments should be authorized for additional nutrients, including phosphorus, and whether the NOFPP should be expanded to other river basins, including the Tar-Pamlico River Basin.
5. Evaluate the ability of public entities other than the Environmental Enhancement Program (EEP) and private entities to provide nutrient offsets.
6. Prepare a comprehensive review and discussion of the types of potential nutrient mitigation efforts available.

Qualifications

Potential vendors submitting proposals must demonstrate:

1. Knowledge of and experience with the NOFPP.
2. An ability to estimate the length of time that the existing NOFPP will be able to continue as a completely self-sustaining program capable of providing adequate mitigation for the additional nitrogen loading purchased at the current cost of $11 per pound of nitrogen.
3. An ability to determine an accurate cost per pound factor for nitrogen, phosphorus, and other nutrients from point and nonpoint sources based on the cost of providing the appropriate mitigation that is required to offset this additional nutrient loading in accordance with Session Law 2006-215, 15A NCAC 2B .0235, and 15A NCAC 2B .0240.

4. An ability to recommend how a total nutrient offset payment fee should be determined.
5. Knowledge of and experience with nutrient issues in the river basins of North Carolina.
6. Knowledge of and experience with public entities other than the EEP and private entities that are capable of providing nutrient offsets.
7. Knowledge of and experience with the types of potential nutrient mitigation efforts available.
8. The ability to produce clear, well-written, and well-illustrated reports by providing examples of completed projects.

Work Plan

The vendor shall prepare a report that will:

1. Estimate the length of time that the existing NOFPP will be able to continue as a completely self-sustaining program capable of providing adequate mitigation for the additional nitrogen loading purchased at the current cost of $11 per pound of nitrogen as authorized in Session Law 2006-215.
2. Contain a proposed cost per pound for nitrogen point and nonpoint source loading in the Neuse River Basin for potential use in the NOFPP.
3. Make specific recommendations as to how a total nutrient offset payment fee should be determined, including any formula and the specific factors that should be incorporated into the calculation of the total nutrient offset payment fee.
4. Provide information and outline options, including the advantages and disadvantages of each option, to assist the ERC in deciding whether:
   a. Nutrient offset payments should be authorized for other nutrients, including phosphorous, and present a proposed cost per pound factor for the point and nonpoint source loading from these additional nutrients.
   b. The NOFPP should be expanded to other areas of the State, including specifically the Tar-Pamlico River Basin.
5. Evaluate the ability of public entities other than the EEP and private entities to provide nutrient offsets. This evaluation shall include a determination of whether, in comparison with the EEP, other entities are able to:
   a. Provide nutrient offsets of comparable effectiveness with respect to water quality.
   b. Deliver nutrient offsets in a comparable or shorter time period.

c. Deliver nutrient offsets at a comparable or lower cost.

6. Contain a comprehensive review and discussion of the types of potential nutrient mitigation efforts available.

The vendor shall contact and consult officials from State and local government agencies, interested stakeholders, and other individuals and organizations having knowledge and information about the NOFPP, nutrient issues in the river basins of North Carolina, and nutrient offsets generally. The vendor shall specifically evaluate the analysis of costs for nutrient offsets conducted by the Department of Environment and Natural Resources that was the basis of the Environmental Management Commission's March 2006 amendments to 15A NCAC 2B .0235 and 15A NCAC 2B .0240.

The vendor shall prepare the first phase report by 16 February 2007 and shall complete the entire report, including any revisions needed in the first phase report by 1 May 2007. The vendor shall provide the contracting officer an opportunity to review the draft first phase report one week before it is due and the final report two weeks before it is due and shall take review comments into account when preparing the first phase and final reports. The report shall be prepared in both paper and electronic formats.

In addition to a proposal based on the foregoing schedule, the vendor may propose a study based on an alternate schedule that allows additional time for completion of a thorough study. Preference will be given to proposals that envision completion of a thorough study of the following issues according to the foregoing schedule or in an alternative timeframe that will ensure that the study will be useful to the 2007 Regular Session of the General Assembly:

1. Estimate the length of time that the existing North Carolina Nutrient Offset Fee Payments Program (NOFPP) will be able to continue as a completely self-sustaining program capable of providing adequate mitigation for the additional nitrogen loading purchased at the current cost of $11 per pound of nitrogen.
2. Study the costs associated with providing nutrient controls that are adequate to offset point source and nonpoint source discharges of nitrogen in the Neuse River Basin.
3. Study how a total nutrient offset payment fee should be determined.
4. Provide information and outline options, including the advantages and disadvantages of each option, to assist the ERC in deciding whether nutrient offset payments should be authorized for additional nutrients, including

phosphorus, and whether the NOFPP should be expanded to other river basins, including the Tar-Pamlico River Basin.

Report Requirements

First Phase Report

The vendor shall prepare a first phase report that includes:

1. A detailed discussion of the methodology that will be utilized by the vendor to estimate the length of time that the existing NOFPP will be able to continue as a completely self-sustaining program capable of providing adequate mitigation for the additional nitrogen loading purchased at the current cost of $11 per pound of nitrogen as authorized in Session Law 2006-215.
2. A detailed discussion of the methodology that will be utilized by the vendor to examine the costs associated with providing nutrient controls and the methods that will be employed to determine an appropriate cost per pound factor for nitrogen loading from point and nonpoint sources.
3. A detailed discussion of the methodology that will be utilized by the vendor to determine the formulation of a fee equation and the factors included in that equation.
4. A review of the methods that will be used by the vendor to assist the ERC in determining whether to include nutrients other than nitrogen and whether to expand the NOFPP into other areas of the State.
5. A review of the methods that will be used by the vendor to evaluate the ability of public entities other than the EEP and private entities to provide nutrient offsets.
6. A review of the methods that will be used by the vendor to prepare a comprehensive review and discussion of the types of potential nutrient mitigation efforts available.
7. Any preliminary findings and recommendations that the vendor determines to be appropriate.

Final report

Self-Sustainability of the Current Nutrient Offset Fee Payments Program (NOFPP)

The report shall include an estimate of the length of time that the existing NOFPP will be able to continue as a completely self-sustaining program capable of providing adequate mitigation for the additional nitrogen loading purchased at the current cost of $11 per pound of nitrogen as authorized in Session Law 2006-215.

Examination of Costs Associated with Providing Nitrogen Controls

The report must provide a thorough examination and discussion of the current costs associated with providing nutrient controls that are adequate to offset point and nonpoint source discharges of nitrogen. This examination should include a description of the types of projects that can be implemented to achieve necessary reductions and their respective costs. Because buffer restoration is one of the cost-effective approaches to achieve nutrient reductions, an analysis of the extent of buffer restoration opportunities that may be pursued to achieve reductions should also be included.

Proposed Cost per Pound of Nitrogen

The report shall propose and justify a cost per pound for nitrogen loading from point and nonpoint sources. This cost factor must be sufficient to allow the NOFPP to continue in operation for the indefinite future as a totally self-sustaining program while successfully mitigating all nitrogen loads for which payments are made into the program.

Nutrient Offset Payments for Additional Nutrients

The report shall provide information and outline options, including the advantages and disadvantages of each option, to assist the ERC in determining whether nutrient offset payments should be authorized for other nutrient loads, including phosphorus. For any additional nutrients that the report will examine for inclusion in the NOFPP, the vendor shall provide and fully justify a proposed cost per pound factor for loading from point and nonpoint sources of these additional nutrients. These proposed cost factors must be sufficient to allow the NOFPP to continue in operation for the indefinite future as a totally self-sustaining program while successfully mitigating all additional nutrient loads for which payments are made into the program.

Calculation of Total Nutrient Offset Payment Fee

In addition to the cost per pound factors for nitrogen, phosphorus, and any other nutrients that the vendor may examine for inclusion in the NOFPP, the report shall examine and provide a recommendation for the use of a comprehensive formula and the specific factors that will be included in that formula for the calculation of the total nutrient offset payment fee for each option that will be required for nutrient loadings to meet the objectives of the NOFPP. Examples of specific factors that may be considered for inclusion in a comprehensive fee formula might include, but are not limited to:

- **Annual Adjustment Factor:** A factor that may be applied on an annual basis to automatically adjust the cost per pound nutrient factors in order to ensure that these cost factors keep pace with inflation.

- **Land Cost Factor:** A factor that may be included in the total fee equation in order to allow for the incorporation of land costs in the final fee calculation. This factor may be deemed necessary in order to establish a spatial relationship between additional nutrient loading and the mitigation needed to offset that loading.

- **Maintenance Factor:** A factor that may allow the EEP or other State agency tasked with the monitoring and maintenance of mitigation projects to recoup their costs associated with monitoring and maintenance.

- **Administrative Costs Factor:** A factor that may allow the EEP or other State agency, tasked with providing the mitigation funded by the NOFPP to recoup their administrative costs associated with the management of the program.

Regardless of the specific factors included in the calculation of the total nutrient offset payment fee, the vendor must provide the documentation necessary to demonstrate that the proposed total fee calculation method will be sufficient to allow the NOFPP to continue in operation for the indefinite future as a totally self-sustaining program while successfully mitigating all additional nutrient loads for which payments are made into the program.

Expansion to Other Geographic Areas of the State

The report shall provide information and outline options, including the advantages and disadvantages of each option, to assist the ERC in determining whether the

NOFPP should be expanded to other areas of the State beyond the Neuse River Basin. The report shall specifically address the expansion of the NOFPP to the Tar-Pamlico River Basin for nitrogen and phosphorus. The vendor shall provide information necessary for the ERC to determine whether to expand the NOFPP to other areas of the State beyond the Neuse River Basin.

Evaluation of Other Nutrient Offset Providers

The report shall evaluate the ability of public entities other than the EEP and private entities to provide nutrient offsets. This evaluation shall include a determination of whether, in comparison with the EEP, other entities are able to:

a. Provide nutrient offsets of comparable effectiveness with respect to water quality.
b. Deliver nutrient offsets in a comparable or shorter time period.
c. Deliver nutrient offsets at a comparable or lower cost.

Types of Mitigation

The report shall contain a comprehensive review and discussion of the types of nutrient mitigation that would adequately protect water quality that could be provided using the fees and cost factors recommended in the report. The report shall include:

1. Figures regarding the design, construction, and 30-year monitoring and maintenance costs of the types of nutrient mitigation.
2. Details regarding the nutrient removal rate for each type of nutrient mitigation that is discussed.
3. An analysis of the availability of the types of mitigation identified in order to ensure the long-term sustainability of the NOFPP.
4. A discussion of the adequacy and effectiveness of each type of nutrient mitigation in achieving reductions in nutrient loading and protecting water quality.

Meetings with Affected Stakeholders

Under the auspices of the Commission Counsel, the vendor will be required to periodically consult with and brief the stakeholders that are affected by, or interested in, this process in order to gather input from these affected parties. In

addition, the vendor may be required to present the First Phase Report, the Final Report, or both to the stakeholder group.

Presentations

The vendor may be required to present a final report to the ERC. The vendor may also be expected to give several presentations of the final report to various other legislative committees.

Project Timeframe

The schedule is listed below:

Activity	Date
Request for Proposals Distributed	15 December 2006
Proposals from Vendors Due	5 January 2007
Award Contract	19 January 2006
First Phase Report	16 February 2007
Final Report	1 May 2007

In addition to a proposal based on the foregoing schedule, the vendor may propose a study based on an alternate schedule that allows additional time for completion of a thorough study. Preference will be given to proposals that envision completion of a thorough study of the following issues according to the foregoing schedule or in an alternative timeframe that will ensure that the study will be useful to the 2007 Regular Session of the General Assembly:

1. Estimate the length of time that the existing North Carolina Nutrient Offset Fee Payments Program (NOFPP) will be able to continue as a completely self-sustaining program capable of providing adequate mitigation for the additional nitrogen loading purchased at the current cost of $11 per pound of nitrogen.
2. Study the costs associated with providing nutrient controls that are adequate to offset point source and nonpoint source discharges of nitrogen in the Neuse River Basin.
3. Study how a total nutrient offset payment fee should be determined.
4. Provide information and outline options, including the advantages and disadvantages of each option, to assist the ERC in deciding whether nutrient offset payments should be authorized for additional nutrients, including

phosphorus, and whether the NOFPP should be expanded to other river basins, including the Tar-Pamlico River Basin.

Required Contents for Proposal

Please limit the proposal to approximately 10 pages, excluding examples of prior work.

The response to this request for proposals shall consist of the following sections:

(a) Executive Summary – The Executive Summary shall consist of a brief summary of the contents of the proposal.

(b) Corporate Background and Experience – This section shall include:
- (1) Background information on the vendor's organization and details of vendor's experiences with similar projects.
- (2) A list of at least three references, including contact persons and telephone numbers, for whom the vendor has performed similar work.
- (3) Examples of previous work performed.

(c) Financial Statement – The vendor's most recent financial statement or similar evidence of financial stability.

(d) Project Staffing and Organization – This section shall include:
- (1) Proposed staffing, deployment, and organization of personnel to be assigned to this project.
- (2) Resumes of key personnel who will actually be assigned to the project, describing experience with similar projects and the responsibilities assigned to each person.
- (3) A description of how the study will be planned, organized, and conducted.

(e) Technical Proposal – This section shall include, in narrative, outline, or graphical form, the vendor's approach to accomplishment of the tasks outlined in the project description section of this request for proposals. This section shall include a description of each task and a schedule for completion of each task.

(f) Cost Proposal – The cost proposal must be submitted in a separate sealed package and must contain the following information:

(1) Personnel costs, including hourly rates and total hours.
(2) Travel and subsistence expenses.
(3) Fixed, overhead, support, or administrative costs, if any.
(4) Sub-vendor costs, if any.
(5) Other costs.
(6) Total cost for completion of the project.
(7) Rates for any additional analysis that may be requested during the project period.

Proposal Submittal Process

1. The vendor shall submit two original and 10 copies of both the technical proposal and cost proposal, in separate sealed packages.

2. Each original shall be signed and dated by an official authorized to bind the firm.

Vendor Selection Process

The selection of the vendor shall be determined by a "Best Value" methodology, with key factors to be considered to include experience of the vendor and its consultants with related projects and price.

General Conditions Related to Submittal of Proposals

1. Right to Reject
The ERC reserves the unqualified right to reject any and all proposals when such rejection is deemed to be in the best interest of the State of North Carolina.

2. Right to Accept Part of Proposal, Negotiate Content and Cost
The ERC reserves the right to accept part of any proposal, and to divide any proposal into parts deliverable in stages over an extended time period. The ERC reserves the right to negotiate and alter the content, form, schedule, and

deliverables of any proposal or portion of a proposal accepted. The ERC reserves the right to negotiate the cost of any proposal or portion of a proposal accepted.

3. **Time for Acceptance**
Each proposal shall state that it is a firm offer that may be accepted within a period of 30 days from the date of submission.

4. **Unsolicited Proposal Changes**
Any unsolicited change to a proposal that is received after the closing date of this request for proposal will be rejected.

5. **Responsibility to Make Timely Submission**
The vendor is responsible for assuring the timely delivery of a proposal. Late proposals will be rejected without review.

6. **Cost for Proposal Preparation**
Any costs incurred by vendors in preparing or submitting offers are the vendor's sole responsibility. The ERC will not reimburse any vendor for any costs incurred prior to award.

7. **Elaborate Proposals**
Elaborate proposals in the form of brochures or other presentations beyond that necessary to present a complete and effective proposal are not desired. Vendors are encouraged to limit proposals to approximately 10 pages excluding examples of prior work.

8. **Oral Explanations**
The ERC shall not be bound by oral explanations or instructions given at any time during the competitive process or after award.

9. **Confidentiality of Proposals**
In submitting its proposal the vendor agrees not to discuss or otherwise reveal the contents of the proposal to any source outside of the ERC or its Legislative Services Office staff until after the award of the contract.

10. **Form of Proposal**
Proposals shall be submitted in a form that may be incorporated verbatim into a contract.

11. Exception to Terms

Any exception, interpretation, or suggestion for clarification by the vendor to any of the terms and conditions of this request for proposals must be clearly stated by the vendor.

12. Competitive Offer

Pursuant to the provision of G.S. 143-54, and under penalty of perjury, the signer of any proposal submitted in response to this request for proposals thereby certifies that this proposal has not been arrived at collusively or otherwise in violation of either federal or North Carolina antitrust laws.

13. Rights to Submitted Proposals

All responses, inquiries, and correspondence relating to or in reference to this RFP shall become the property of the State of North Carolina when received.

14. Vendor's Representative

Each vendor shall submit with its proposal the name, address, and telephone number of the person(s) with authority to bind the firm and answer questions or provide clarification concerning the vendor's proposal.

15. Proprietary Information

All vendors' information submitted in the proposal has the potential to become public information. Vendors are cautioned that any proprietary information contained in the proposal may not be protected as confidential and should not be submitted in response to this request for proposals.

Terms and Conditions of Resulting Contract

The following are terms and conditions that will be included in the contract for conducting the project. Other terms and conditions may be added before the contract is signed.

1. Vendor

The contract is between the ERC, subject to the approval of the Legislative Services Commission (Commission), and the selected vendor (Vendor).

2. **Contract Period**
The terms of the contract shall begin at its signing and shall end on or before 1 June 2007, unless extended or terminated as provided in this document.

3. **Availability of Funds**
Any and all payments to the Vendor are dependent upon and subject to the availability of funds to the ERC or the Commission for the purpose set out in this agreement.

4. **Additional Contract Expenses**
The contract for the project is not a time and materials agreement. Any expenses of the vendor in addition to those contracted for, or above the contract amount, are the sole responsibility of the Vendor.

5. **Independent Vendor**
The Vendor shall be considered to be an independent vendor and as such shall be wholly responsible for the work to be performed and for the supervision of its employees. The Vendor represents that it has, or will secure at its own expense, all personnel required in performing the services under this agreement. Such employees shall not be employees of, or have any individual contractual relationship with the ERC, the Commission, or the Legislative Services Office.

6. **Key Personnel**
The Vendor shall not substitute key personnel assigned to the performance of this contract without prior written approval by the Commission. The individuals designated as key personnel for purposes of this contract are those specified in the Vendor's proposal.

7. **Subcontracting**
Work proposed to be performed under this contract by the Vendor or its employees shall not be subcontracted without prior written approval of the ERC.

8. **Confidentiality**
The Vendor agrees to protect the confidentiality of any files, data, or other materials provided by the Commission and to restrict their use to the purpose of performing the contract. The Vendor shall comply with the provisions of Article 17 of Chapter 120 of the North Carolina General Statutes regarding

confidentiality between the Vendor and members of the General Assembly. For purposes of this paragraph only, employees of the Vendor shall be considered "legislative employees" as defined in G.S. 120-129.

9. **Care of Property**
The Vendor agrees that it shall be responsible for the proper custody and care of any files or other property furnished by the Commission.

10. **Copyright**
No deliverable items produced in whole or in part under this agreement shall be the subject of an application for copyright by or on behalf of the Vendor.

11. **Access to Persons and Records**
The State Auditor shall have access to persons and records as a result of all contracts or grants entered into by State agencies or political subdivisions in accordance with General Statute 147-64.7. The Vendor shall retain all records for a period of three years following completion of the contract. To the extent that the Vendor acts on behalf of the ERC and the Commission pursuant to the contract, the Vendor shall comply with and take any action necessary to facilitate compliance by the ERC and the Commission with the provisions of Chapter 132 of the General Statutes.

12. **Transfer or Assignment**
The contract shall not be transferred or assigned to a third party.

13. **Termination**
Upon mutual written agreement of the ERC or the Commission and the Vendor, the contract may be terminated at any time. Failure to perform by the Vendor may result in termination by the ERC or the Commission. In addition, the ERC or the Commission has the right to terminate the contract at its discretion with 10 days written notice. In the event of termination, the Vendor will be paid an amount commensurate with work completed.

14. **Performance and Default**
If, through any cause, the Vendor shall fail to fulfill in timely and proper manner the obligations under this agreement, the ERC or the Commission shall thereupon have the right to terminate this contract by giving written notice to the Vendor and specifying the effective date thereof. In that event, all finished or unfinished deliverable items under this contract prepared by

the Vendor shall, at the option of the ERC or the Commission, become its property, and the Vendor shall be entitled to receive just and equitable compensation for any satisfactory work completed on such materials. Notwithstanding, the Vendor shall not be relieved of liability to the ERC or the Commission for damages sustained by the ERC or the Commission by virtue of any breach of this agreement, and the ERC or the Commission may withhold any payment due the Vendor for the purpose of setoff until such time as the exact amount of damages due the ERC or the Commission from such breach can be determined. In case of default by the Vendor, the ERC or the Commission may procure the services from other sources and hold the Vendor responsible for any excess cost occasioned thereby. Neither party shall be deemed to be in default of its obligations hereunder if and so long as it is prevented from performing such obligations by any act of war, hostile foreign action, nuclear explosion, riot, strikes, civil insurrection, earthquake, hurricane, tornado, or other catastrophic natural event or act of God.

15. Compliance with Laws

The Vendor shall comply with all laws, ordinances, codes, rules, regulations, other provisions of law, and licensing requirements that are applicable to the conduct of its business, including those of all federal, state, and local agencies that have jurisdiction or authority.

16. Equal Opportunity Statement

The nondiscrimination clause contained in Section 202 Executive Order 11246, as amended by Executive Order 11375, relative to equal employment opportunity for all persons without regard to race, color, religion, sex, age or national origin, and the rules and regulations prescribed by the Secretary of Labor, are incorporated herein. The program for Employment of the Handicapped (Affirmative Action) Regulations issued by the Secretary of Labor of the United States in Title 20, Part 741, Chapter VI, Subchapter "C" of the Code of Federal Regulations, pursuant to the provisions of Executive Order 11758 and Section 503 of the Federal Rehabilitation Act of 1973, are incorporated herein.

17. Insurance

The Vendor shall obtain, pay for, and keep in force, for the duration of the contract, worker's compensation insurance, as required by the laws of North Carolina, covering all of the Vendor's employees engaged in any work on the project in the State.

18. Bankruptcy

Upon the filing for bankruptcy or insolvency by or against the vendor, the ERC or the Commission may terminate the contract, and the provisions of paragraph entitled "Performance and Default" shall apply.

19. Performance Bond

The ERC or the Commission may require either a performance bond up to the full amount of the contract or another performance guarantee.

20. Advertising

Vendor agrees not to use the results or existence of the contract, or the products produced pursuant to the contract as a part of any news release or commercial advertising without the prior written approval of the ERC or the Commission.

21. Governing Law

This contract is made under and shall be governed and construed in accordance with the laws of the State of North Carolina.

22. Situs

The place of this contract, its situs and forum, shall be Raleigh, North Carolina, where all matters, whether sounding in contract or tort, relating to its validity, construction, interpretation, and enforcement shall be determined.

23. Schedule of Payments

The Legislative Services Office shall pay the Vendor according to the following schedule:

(a) Fifteen percent (15%) of the total cost for completion of the project within fifteen (15) days after the Vendor delivers the First Phase Report.

(b) Seventy percent (70%) of the total cost for completion of the project within fifteen (15) days after the Vendor delivers the Final Report.

(c) Fifteen percent (15%) of the total cost for completion of the project within fifteen (15) days of the end of the contract period.

The ERC shall request the Legislative Services Office to make payments to the Vendor as provided in this paragraph upon determination by the ERC that the Vendor has satisfactorily completed all work required to be completed under the foregoing schedule.

Basis for Request: Needed Supply

- Projected need in 2035 = 42.5 MGD (Ave. Day)
- Under DNER rules, new plan is required when demand = 80 percent of supply. The argument by K-C was that the 80 percent rule meant the supply was inadequate when demand = 0.8 x supply. Therefore
  0.8 x Requested Supply = 42.5
  Requested Supply = 53 MGD (Ave. Day)

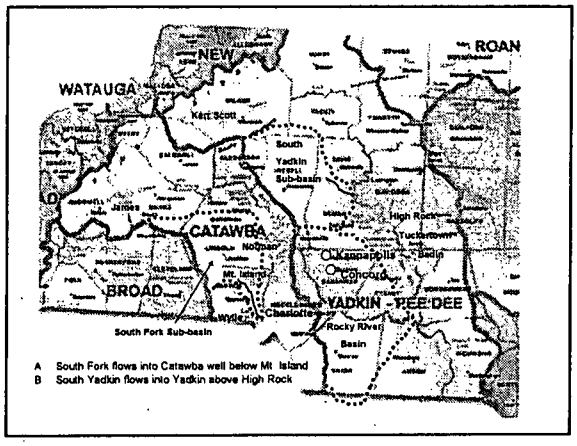
Shortfall

- Requested supply = 53 MGD Avg. Day
- Existing within-basin supply = 31 MGD
- Shortfall = 22 MGD Average Day
- Max Day = 1.6 Average Day
- 36 MGD maximum day

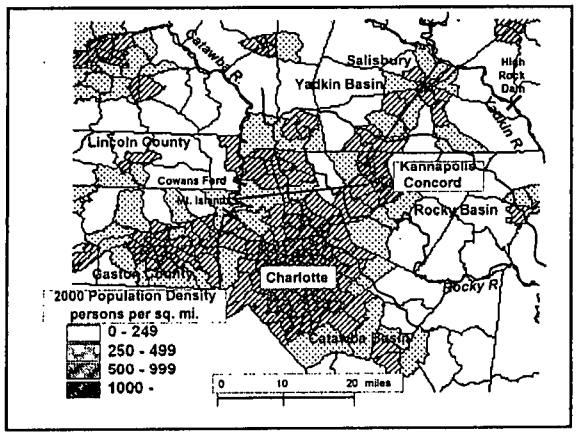
Request

- 10 MGD max day IBT from Yadkin
- Balance to come from Catawba
  - 26 MGD max day if the IBT from Yadkin is granted
  - Otherwise, 36 MGD from Catawba

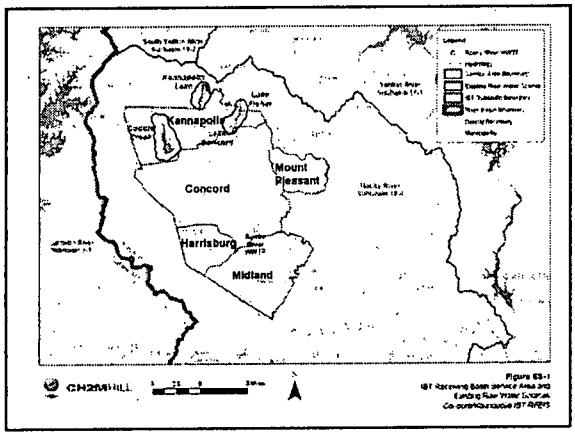
Recommended Decision presented to EMC for action in January



- Grant 10 MGD (max day) from Catawba via Charlotte-Mecklenburg Utilities
- Grant 10 MGD (max day) from Yadkin
- Subject to several conditions
  - Conservation policies in Catawba apply to Kannapolis-Concord
  - Changing needs in Catawba Basin
    - built in review after 20 years;
    - Capacity Use Act supercedes IBT certificate



Factors Leading to Recommendation: Calculation of Shortfall



- Rejected argument based on 80 percent rule which put need at 53 MGD instead of the 42.5
- average daily need adjusted to 42.5 MGD – 31 MGD = 11.5 MGD
- Maximum day demand = 11.5 x 1.6 = 18.4 MGD

Factors Leading to Recommendation: Relative Impacts on Donor Basins

- Transfers in excess of 10 MGD begin to have impacts on Catawba (even they are not major)
- Water availability in Yadkin at High Rock approximately twice that in Catawba at Mt. Island
- Future needs (30-years hence) in all three basins are uncertain

Notice Announcing the Availability of an Analysis of a Renewable Portfolio Standard for the State of North Carolina and Request for Public Comments December 13, 2006

On January 24, 2006, the Environmental Review Commission (ERC) of the North Carolina General Assembly adopted a motion requesting the North Carolina Utilities Commission (Commission) to undertake a study of the potential costs and benefits of enacting a renewable energy portfolio standard (RPS) in this State. The process proposed to and adopted by the ERC requires the Commission to issue a request for proposals (RFP) and to ultimately contract with an experienced consultant to perform the study under the direction and guidance of the Commission.

After evaluating the responses to the RFP, the Commission engaged La Capra Associates to perform the analysis requested by the ERC. On December 13, 2006, the Commission and La Capra presented the results of the study to the ERC.

The Commission is soliciting written comments on the report from the public to be provided to the ERC. Any written comments should be signed and mailed to the Chief Clerk, North Carolina Utilities Commission, 4325 Mail Service Center, Raleigh, North Carolina 27699-4325 or hand delivered to 430 North Salisbury Street, Fifth Floor, Raleigh, North Carolina 27603. The Commission will accept such comments through January 19, 2007.

Renewable Portfolio Standard

Analysis for the State of North Carolina

Presented by: Jonathan Winer
Mon-Fen Hong
Dick Spellman

December 12, 2006

La Capra Associates

Outline of Discussion

- Our Goal
- Key Findings
- Renewable and Energy Efficiency Potential
- Electric Rate Impact
- Other Potential Costs and Benefits

2

LaCapra Associates

Our Goal

Provide an objective view of the issues related to a possible Renewable Portfolio Standard for North Carolina.

3

LaCapra Associates

Three Key Findings

North Carolina has sufficient renewable resources to meet a 5% RPS requirement for new renewable generation

- Less than 1% increase in retail electricity rates
- Doubles current level of renewables
- Potential job creation and property tax benefits

4

LaCapra Associates

Three Key Findings

It would be difficult to meet a 10% RPS with only new North Carolina renewable supply resources

- Must include wind in both the west and off-shore locations and larger hydroelectric generation
- If these additional resources can be developed, a 3.6% estimated rate increase, at most, by the 10th year

5

LaCapra Associates

Three Key Findings

Inclusion of energy efficiency would enable the State to achieve a 10% RPS and would reduce consumers' overall electricity bill

- Energy efficiency could easily meet one-quarter of RPS
- Both a 5% RPS and a 10% RPS with energy efficiency could produce net savings of about half a billion dollars over 20 years
- Less than 1% increase in rates, but average bill decreases due to less usage overall

6

LaCapra Associates

Renewable Resource Overview

North Carolina has over 2,000 MW of renewable generation already

- Equal to 4% to 5% of the State's current energy needs

7

LaCapra Associates

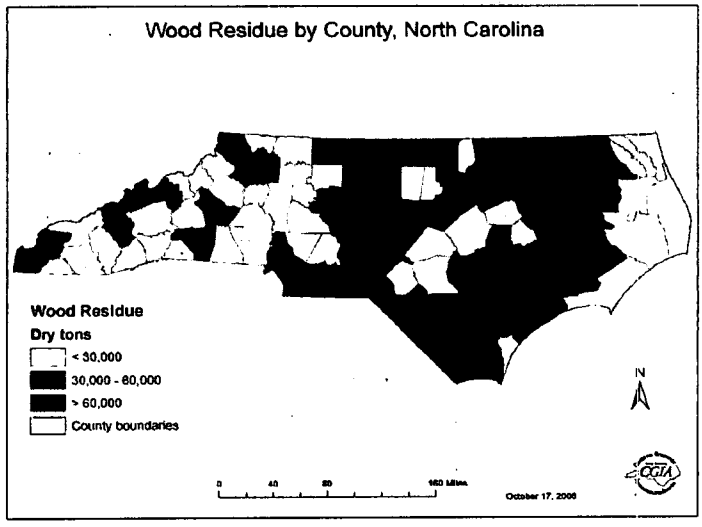
New Renewable Resource Potential in North Carolina

- **Technical potential for over 12,000 MW of new in-state renewable supply resources**
  - Strong logging and farming sectors – fuel for additional renewable generation
  - Good wind resources, but development may be more challenging
- **Practical potential is as much as 3,400 MW**
  - Maximum amount that could reasonably be expected to be implemented

8

LaCapra Associates

New Renewable Resource Potential in North Carolina



Resources	Technical Potential (MW)	Practical Potential (MW)	Practical Energy Potential (GWh)
Landfill Gas	240	150	1,000
Biomass (Wood and Ag. Crops Waste)	2,270	1,100	8,700
Co-Firing **	*1,875*	*384*	*2,500*
Poultry Litter	175	105	800
Hog Waste	116	93	600
Wind (on-shore)* **	9,600	1,500	3,900
Wind (off-shore)	N/A	N/A	N/A
Hydro** **	508	425	1,700
Solar PV	N/A	N/A	N/A
Total In-State Potential	**12,909**	**3,373**	**16,700**

*Energy estimate rounded to nearest hundred GWh.
***Includes wind development in the western mountains.
**Co-firing is a subset of the Biomass assessment.
**** Includes hydroelectric generation larger than 10 MW.

9

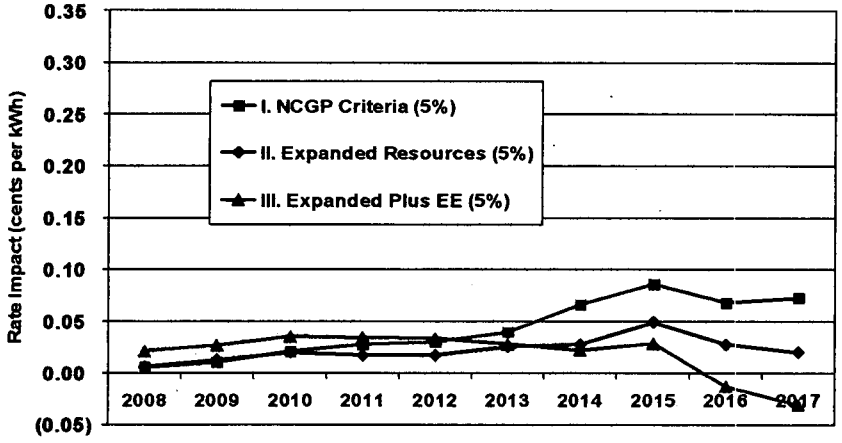
Source: TrueWind Solutions

12

LaCapra Associates

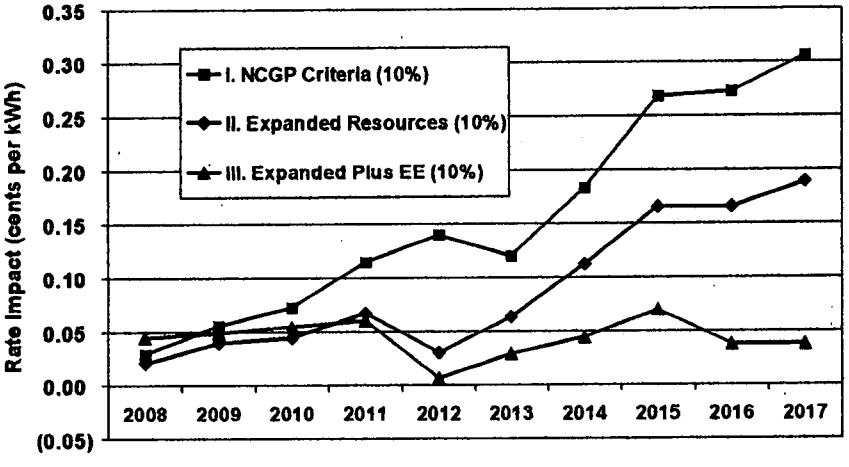


Hydroelectric Potential by River Basins

13

LaCapra Associates

Range of Rate Impacts for 5% RPS is -0.3% to 0.9% by 2017*

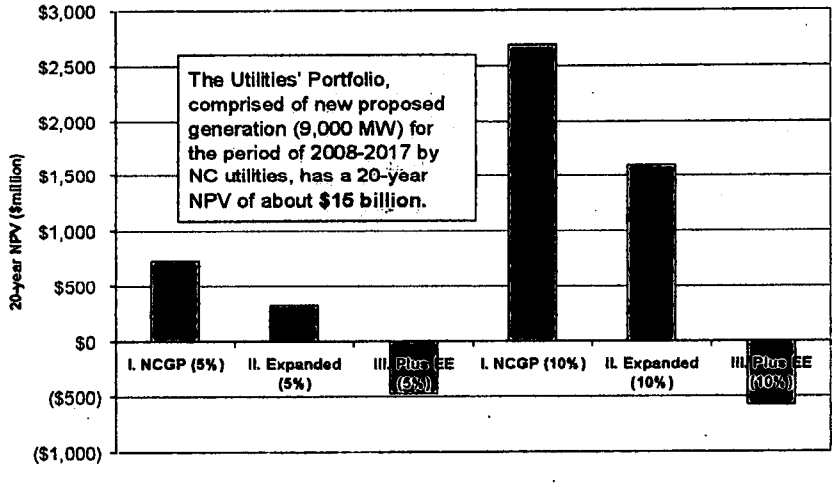


*Assumes average electricity rates of 8.5 cents per kWh by 2017

14

LaCapra Associates

Range of Rate Impacts for 10% RPS is 0.4% to 3.6% by 2017*

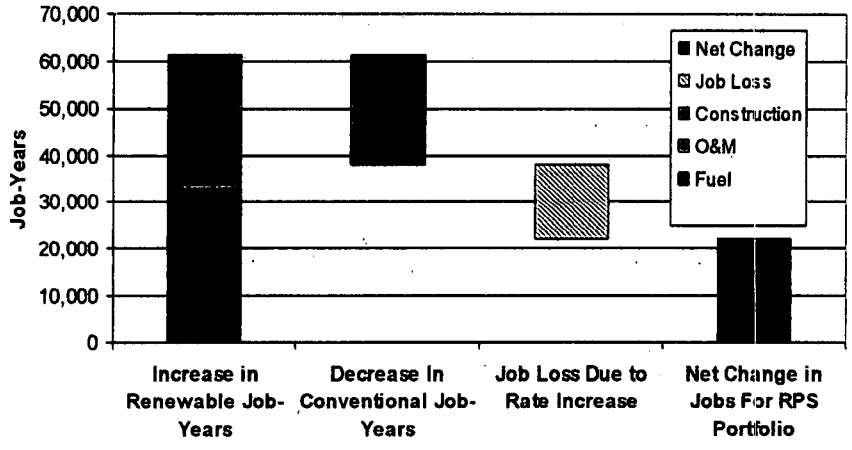


*Assumes average electricity rates of 8.5 cents per kWh by 2017

15

LaCapra Associates

Total Incremental Cost/Savings (NPV) Over 20 Years

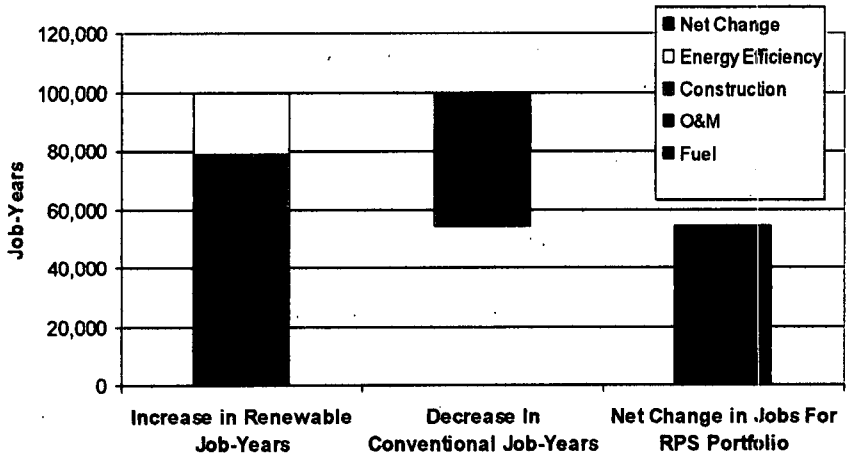


Total Cost for RPS Scenarios

16

LaCapra Associates

Jobs: 5% RPS Without Energy Efficiency*



*Job-years for O&M and Fuel assume 20 years of operation. Electricity rate impact assumed over 20 years.

17

LaCapra Associates

Jobs: 10% RPS With Energy Efficiency*

*Job-years for O&M and Fuel assume 20 years of operation. No electricity rate impact or job losses because overall electricity bill decreases.

18

LaCapra Associates

Key Environmental Benefits

- **Energy efficiency would have the greatest positive impact.**
- The annual **displacement of Carbon Dioxide**, once a 5% or 10% RPS is achieved, could total at least 7.3 to 13.6 million tons per year, respectively.
- **Potential displacement of emissions related to air quality and health**, such as Nitrogen Oxides, Sulfur Dioxide, particulate matter, and mercury.
- Renewable generation facilities either **do not produce waste or the waste products are more benign** than from coal and nuclear fuels.
- Renewable energy resources **do not have significant environmental impact from fuel extraction** in contrast to the extraction impacts of coal, oil, natural gas, and nuclear fuel.

19

LaCapra Associates

Conclusions

- There should be sufficient renewable resources within the State to meet a 5% RPS requirement for new renewable generation.
- The State would have difficulty meeting a more aggressive 10% RPS with only new renewable resources located within North Carolina.
- Inclusion of energy efficiency would enable the State to achieve a 10% RPS and reduce average electricity bill.
- An RPS would produce direct economic and environmental benefits to the State.
- An RPS may enable the State to avoid the development of 1,000 MW or more of baseload conventional generation.

City of Greensboro
North Carolina

Date: December 13, 2006

To: Members of the Environmental Review Commission

From: Jeryl W. Covington, P.E.
Director, Environmental Services Department

Reference: Local Government Perspective: Landfill Moratorium and Solid Waste Study

The City of Greensboro is pleased to have an opportunity to speak with the Environmental Review Commission regarding the recently enacted landfill moratorium and requested solid waste study. Upon learning of these decisions, the City of Greensboro contacted our regulatory agency to discuss the immediate impact(s) for our facility and the potential effect on our ability to provide an economical and a long-term disposal option for our community. Hence, our community has been present at many of the Commission meetings when solid waste issues are incorporated as agenda items. We are appreciative of the Commission's focus on such a relevant topic for our State.

During some of your most recent meetings, staff from the Waste Management Division presented compelling reports on the growth of the solid waste generation rates and recycling impacts across the State. Being from one of the larger North Carolina communities, Mr. Paul Crissman identified us as being included in the populace responsible for such growth rates. The maze of imports and exports arrows depicted on his waste map did not include our facility since our customer base is limited by permit to Guilford County. The permitted landfill capacity and future shortfalls as reported by Mr. Crissman clearly defined a pending problem for us as we entered a new solid waste management market.

For many years, the City of Greensboro has had a strong recycling and reduction program; yet, we continually understand that we will not be able to recycle out of our current waste generation state. Although many tons of materials have been diverted from our landfill, many more have been managed in place. Landfill bans have been effective and enforced by the permitted operators as well as opened new markets within the State which has been positively received as economic development. We recognize that any successful solid waste management program has to be comprehensive; addressing waste generation at the onset (i.e. selectively purchasing products with fewer waste components, and promoting reuse and second generation life) through the useful life and concluding with final disposal or destruction.

The City of Greensboro recently entered the competitive solid waste management market by transitioning from a landfill owner/operator to a solid waste exporter. Our municipal solid waste is currently managed at a privately-owned disposal site in another county. Conversely, our local solid waste management services will only provide construction and demolition disposal and composting operations. Our initial investigative steps into the competitive markets in 2001 faired favorably. At the time, landfill airspace was in abundance with new facilities being proposed and landfill expansions pending permit approval. Hence, we are aware that this climate has

P.O. Box 3136 • Greensboro, NC 27402-3136 • www.ci.greensboro.nc.us • (336) 373-2065 • TTY # 333-6930

changed as hints of stricter requirements, policy changes, evaluations of existing facilities, etc. proliferate across the industry. Limiting or delaying the development of available, in-state solid waste disposal options will directly affect the costs for disposal which will be borne by our public.

Prior to our transitioning to transporting our waste out-of-county, we reviewed many alternative solid waste management systems. We enlisted assistance from the Waste Management Division, solid waste consultants, and university scholars in order to decipher potential and viable management options. While many of the landfill alternatives were unproven, a few appeared to have potential applications in the solid waste management field. However, these potential technologies included a landfill component incorporated into the system in order to manage waste that was determined to be non-compatible with the "new technology" or for managing by-products of the process. Conclusively, we returned to the traditional solid waste management option, landfills.

Being a former municipal solid waste landfill owner/operator, we wish to acknowledge the daunting task set before our regulators in their efforts to depict levels of safety for the public regarding the siting and permitting of a new or expanding landfill. Through our operations, we have been able to contrast the performance differences between the design, construction, management, and monitoring of mature and closed landfills in comparison to the recently permitted facilities. Through our long-term operation, we have documented that the improvements gained through the adoption of the solid waste management rules have had a positive impact on our industry. Likewise, the Waste Management Division through their reviews, reports and analysis, has not acknowledged environmental impact from a Subtitle D landfill since promulgation of these rules. In evaluating the development and operations of new landfill facilities, we can support the Commission's recommendation to review existing regulations to ensure that we continually strive to protect public health and the environment. We are hopeful that this process will be open and allow input from all interested parties. Likewise, we are optimistic that this process will not evolve into a quagmire where the important task at hand becomes diluted by isolated concerns or a long-term evaluation of "what-if" scenarios.

In our partnering with the Waste Management Division, we understand the need to address staffing shortfalls and assessing formerly utilized and abandoned hazardous and solid waste sites. We believe plans and tip fees previously promoted by the Division to address the latter concern needs to be thoroughly evaluated since many communities will experience a shift of tax-payer dollars being utilized to address compliance issues for industrial and municipal properties in the absence of viable potentially responsible parties. The Division has made a compelling argument regarding their need to acquire, train, and maintain qualified staff. As a member of the regulated community, we can support such request since fulfilling this need will ensure a secure and safe environment.

The City of Greensboro appreciates the inclusiveness of your policy development process.

EXHIBIT N

Outline Of Issues
Solid Waste Study
Environmental Review Commission

Brief History: The environment of solid waste management today is different than the late 1980s and early 1990s when significant changes were made to solid waste law and regulations.

Activities of the Division in preparation for the Solid Waste Study

The following issues should be considered as a part of the solid waste study and addressed to enhance the regulatory structure for solid waste management in today's environment:

I. Owner and Operator Liability and Solvency

NC statutes currently provide liability protection to members, managers, directors, and executives of a Limited Liability Company for the obligations of an LLC and provide that they do not become liable by participating, in whatever capacity, in the management or control of the business. In recent years the State has received several landfill permit applications from LLCs; those applications have raised concerns about the ability of LLCs to meet financial qualifications to demonstrate they have the resources to own and operate a landfill.

In addition, federal and state rules provide financial responsibility requirements for closure and post closure care for municipal solid waste landfills and construction and demolition landfills, but only require financial responsibility for releases from landfills once a release occurs.

II. Compliance with NC Bans on Disposal of Certain Waste Types

In North Carolina, both the State and local governments have adopted bans on disposal of certain materials in landfills based on waste reduction goals, toxicity, and pathogenic potential. Some of the new landfills proposed in North Carolina would be receiving waste from states that allow landfill disposal of materials prohibited for landfill disposal in North Carolina. Generators of waste (industry, commercial operations, and citizens) in those states could put material in the waste stream that would be in compliance with requirements in their state, but in violation of North Carolina law and rules. There needs to be a mechanism for insuring that importation of waste does not result in disposal of materials in violation of North Carolina standards.

III. Alternative Analysis and Impact Study

The current landfill permitting process does not require consideration of alternative sites or alternative waste management and waste reduction measures. The existing regulatory system also does not require a comprehensive landfill impact study with a method to weigh the environmental sensitivity of an individual site.

IV. Local Government Franchise/Host Fees

Local government franchise requirements were intended to give local governments an opportunity to regulate the waste collection and disposal activities of private waste management companies in the local government's jurisdiction. The statute requires consideration of local solid waste management needs; state policies on waste reduction, reuse and recycling; and public participation in the decision to grant a franchise. In recent years, the payment of host fees and other financial benefits for the local government have been negotiated in exchange for issuance of a franchise. These negotiated monetary benefits were not anticipated when the legislature gave franchise authority to local governments and may be changing the basis for local government franchise decisions.

The franchise statute was also based on the assumption that siting and construction of a landfill would generally have local impacts. Proposals for very large landfills with multi-state service areas raise the question of whether regional and statewide concerns are adequately addressed in the franchise decision.

V. State Regulatory Program Resources

The state solid waste program was at its highest staffing level in 1996. The program has lost 8 positions though budget reductions since that time. The number of permit applications and complexity of facilities permitted have increased over the period since 1996. Permits for solid waste facilities are one of the few environmental permits that require no permit or operational fee. The state program will need additional resources to adequately review landfill permit applications and provide sufficient oversight for landfill construction and operation. This need becomes even more acute as the size and service area of the proposed landfills increase.

VI. Old Landfill Sites

There are approximately 700 old unlined landfills that operated prior to a permitting program in North Carolina. Many of these sites directly impact the environment through degradation of groundwater and surface water quality and can pose hazards through explosive methane migration. The landfill sites were operated primarily by or for local government as a public health measure. These landfills were not operated for profit and there are no resources currently identified for cleanup of these sites.

VII. Technology/Design/and Operational Enhancements

Regulations for municipal solid waste landfills were adopted for NC 13 years ago. They were formed from existing policy and rules for sanitary landfills and new regulations from EPA for municipal solid waste landfills. Experience with lined municipal solid waste landfills in NC, technology advances, and information from other state's experiences can be applied to rulemaking to enhance current requirements and improve protection of public health and the environment.

EXHIBIT O

Old Uncontrolled Landfills/Dumps

- 684 Old uncontrolled, unlined landfills and dumps
- Operated prior to landfill permitting program
- 40 % have been inspected thus far to determine location and uses

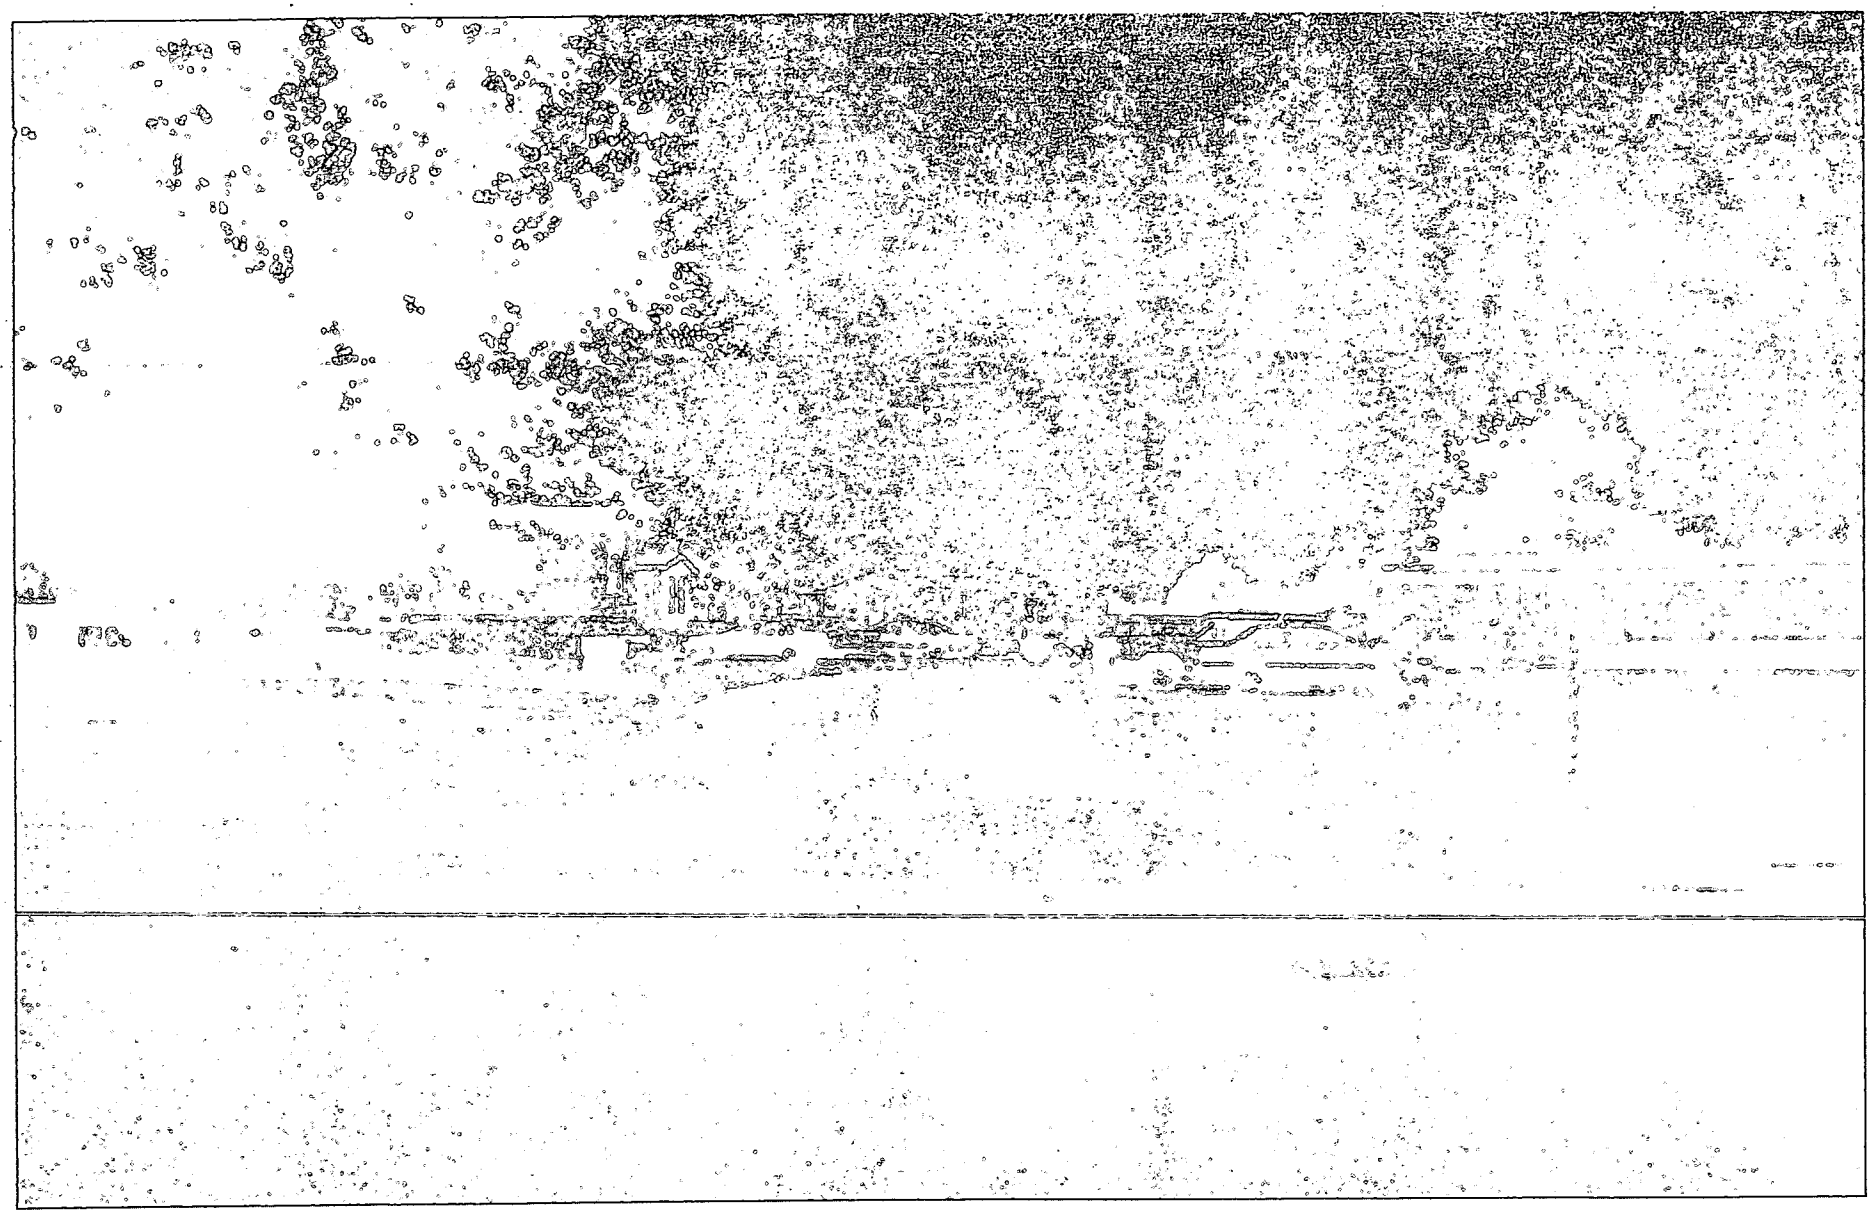
Non-Permitted, Unlined Landfills

Number of Landfills

- 0
- 1 - 5
- 6 - 10
- 11 - 15
- 16 - 30

North Carolina Division of Waste Management
DWM
Managing Waste Today For A Cleaner Tomorrow

November 6, 2006

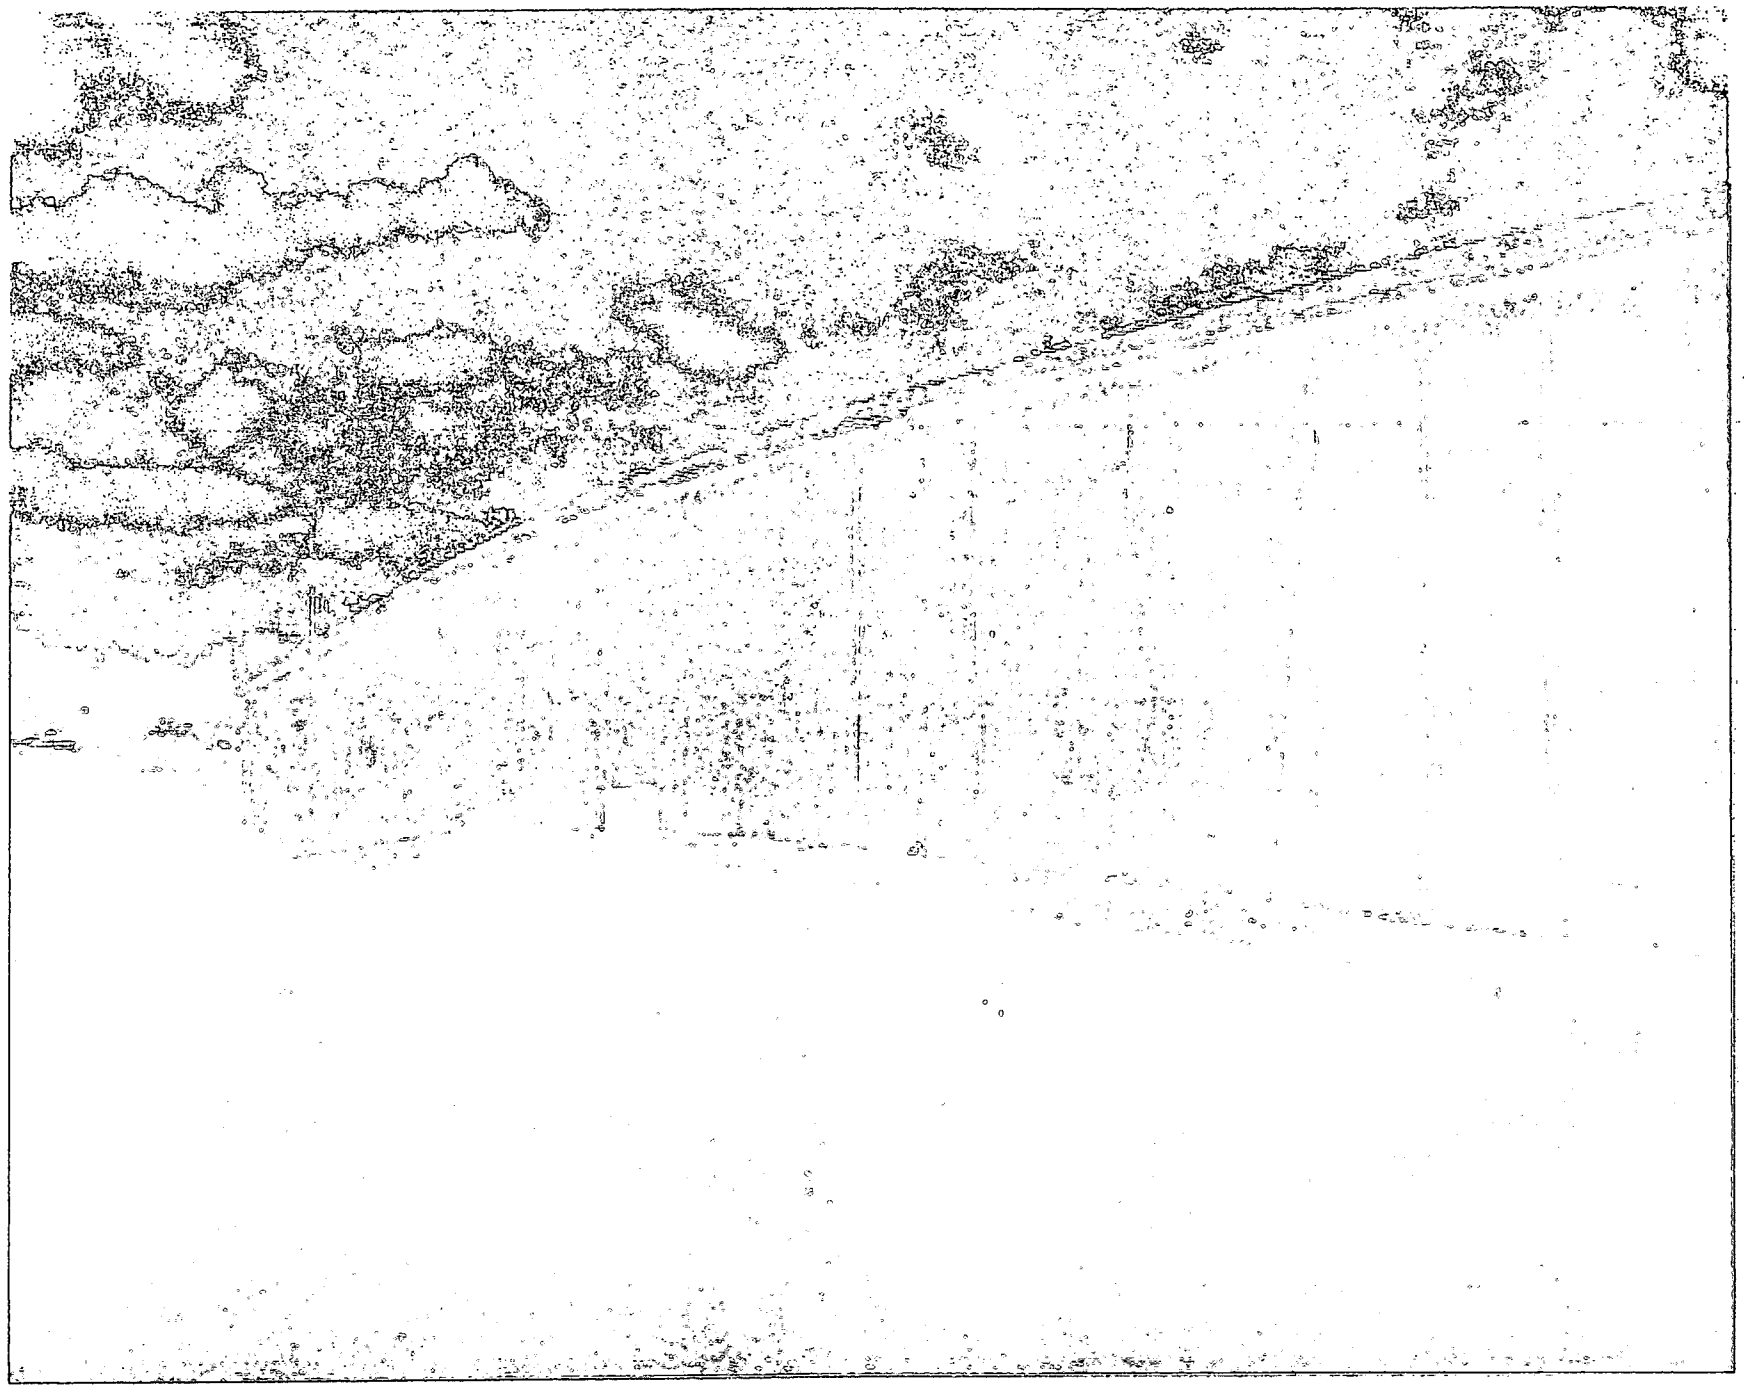


Old Uncontrolled Landfills/Dumps

- 71% of those inspected have a residence, school, day care, church or drinking water source within 1000 feet

- 102 of those inspected have drinking water wells within 500 feet

- 13 of those inspected have residences on the landfill



Old Uncontrolled Landfills/Dumps

- Many expected to have groundwater contaminated with hazardous substances
- Landfill gas (methane and hazardous vapors) migrating into structures also a concern
- Uncontrolled development on landfills could potentially pose risks to occupants of the property

Old Uncontrolled Landfills/Dumps

- The landfills were operated either by:

local governments

or

private individuals

Old Uncontrolled Landfills/Dumps

- Local governments operated the landfills not for profit, but to control indiscriminate dumping
- Individual property owners may not be available anymore as most of the dumping occurred 25 to 50 years ago
- The former individual operator and the current individual owner likely do not have sufficient funds to make the property safe

Old Uncontrolled Landfills/Dumps

- Last session, legislation was introduced that would establish a means of addressing these uncontrolled landfills

- HB 1769 (introduced 5/05) and HB 2845 (introduced 5/06) would have established a state-wide surcharge on waste coming into the state's landfills

- Many other states have state-wide surcharges or tip fees (29 according to 2002 survey)

Old Uncontrolled Landfills/Dumps

Benefits of a State-Wide Surcharge

- Proceeds could provide a means to characterize and control the hazards posed by old unlined landfills and convert them to a safe reuse

- May provide a means of converting many old unlined landfills into green space

- In short, removing public health threats, restoring land to some redevelopment potential, and possibly adding green space

MEMORANDUM

To: Members of the Environmental Review Commission

Overview of hazardous sites cleanup law

Federal law

The Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), more commonly known as Superfund, imposes liability upon certain parties who have engaged in disposal activities related to hazardous substances.

The federal definition of "hazardous substance" is quite broad. It includes substances found in industrial and manufacturing processes, but also more common substances such as paint, batteries, cleaning solutions and chemicals.

CERCLA provides that a person can be held liable for the costs of cleaning up a site if the person:

1) currently owns or operates the facility from which there is a release or threat of release;
2) owned or operated the facility in the past at a time when hazardous substances were disposed of at the facility;
3) generated hazardous substances now found at such a facility or arranged for transport; or
4) accepted hazardous substances for transport to disposal or treatment facility.

The federal courts have interpreted the liability provisions broadly. Liability under CERCLA is:
1) **strict:** without regard to fault;
2) **joint and several**: if more than one person is responsible, any one of them may be held liable for the entire cost of cleanup; and
3) **retroactive**: liability can extend to acts that occurred before enactment of CERCLA in 1980.

State law

Inactive Hazardous Sites Response Act (North Carolina General Statutes 130A-310 et seq.)
State statute provides that a responsible party is someone who:

1) discharges or deposits;
2) contracts or arranges for any discharge or deposit;
3) accepts for discharge or deposit; or
4) transports or arranges for transport for the purpose of discharge or deposit

any hazardous substance, the result of which discharge or deposit is the existence of an inactive hazardous substance site or waste disposal site.

Are old uncontrolled landfills regulated under CERCLA?

As a general rule, closed city and county landfills are subject to the same policies and regulations as other sites and facilities that may be discharging hazardous substances, such as abandoned manufacturing facilities.

Some city and county landfills disposed of both household and industrial wastes. Even those city and county landfills that accepted only household waste were disposing small amounts of hazardous substances, such as paints, solvents and pesticides. Consequently, courts have held local governments liable under CERCLA as owners/operators of landfills.

(over)

A 2nd Circuit case from 1992 (B.F. Goodrich Co. v. Murtha) held that CERCLA liability attaches to the disposal of municipal solid waste, even if the waste only contains minimal amounts of hazardous substances.

During the 1990's several attempts were made in Congress to exempt cities and counties from CERCLA liability. Although no legislation was approved, these efforts led to EPA putting a policy in place that limits local government liability in very narrow circumstances. In 2001 when Congress passed amendments to CERCLA, some new defenses and exemptions were added, but no broad exemption was provided to cities and counties.

What are the potential consequences of this liability?

Case Study: Georgetown, Kentucky

A residential development was placed on the town's old dump that had been used in the1930's to 1950's. Decades later, in the year 2000 workers putting in water lines discovered mounds of trash. Testing revealed that many of the properties were contaminated with high levels of heavy metals. The town agreed to buy 18 houses in the subdivision. Some of the cleanup funding has come from state funds but the town will be largely responsible for the cleanup which is estimated in the millions of dollars. Spotlight on this cleanup played a role in Kentucky becoming proactive in dealing with its waste problem.

Case Study: New Hanover County

Although the site in question was not an old unlined landfill, the Flemington landfill in New Hanover County is instructive as to the potential liability faced by local governments. In 1977 residents of Flemington, an area just outside of Wilmington began noticing problems with their water quality. After complaints were made to the county and the state, EPA became involved. In 1979 the landfill was closed due to these concerns. In 1980 EPA sued the owners and operators of the landfill along with New Hanover County seeking injunctive relief and reimbursement for the costs of the cleanup. After more than a decade of litigation and cleanup, the U.S. Department of Justice issued a final consent decree in 1996.

National Priorities List

Cities and counties also face having one of their closed landfills added to the National Priorities List. NPL is the list maintained by EPA of the very worst of the hazardous waste sites in the country. Of the 1500 national sites on the NPL list over 200 are local government landfills. While none of North Carolina's 31 sites on the NPL are local government landfills, both Virginia and South Carolina have had old landfills designated for listing on the NPL. In almost every case, the cleanup process for NPL sites is time consuming and expensive.

How have other states addressed the old landfill issue?

North Carolina is not alone. Other states in the Southeast and throughout the country are struggling with how to address the cleanup of old landfills. Among other states that are addressing this issue, there has been a general recognition that the potential liability for local governments is substantial and threatens smaller local governments with bankruptcy. It is within this context that in recent years some states have begun to address the problem of old uncontrolled landfills.

Most pressing need has been to find a funding source to begin to identify, assess and clean up:

- appropriations
- tipping fee
- bonds

Epilogue

The final lesson for California from South Carolina's financial crisis over Safety-Kleen's abandoned Pinewood landfill

"Some of these things you just want to put out of your mind," Richard Jabbour reflected recently, recalling the financial fallout from the Pinewood landfill near the shores of South Carolina's Lake Marion, which is the state's largest reservoir, over two aquifers, which provides drinking water to the state's coastal plain. "This," he exclaimed, "is one of them."

Jabbour was referring ruefully to a vote he had cast in 1995, which eliminated monetary protection the state had established the year before to insulate its taxpayers from the landfill's long-term liabilities. Over the next few years, he had slowly awakened to the realization that Pinewood had become a financial albatross around the state's neck because of that decision he had made to ignore the technical facts and acquiesce to political pressure.

Back in 1977, an old clay pit began a new life as a kitty litter mine, and, a year later was converted into a loosely regulated hazardous waste dump. Thereupon, the landfill went through a dizzying succession of different owners. First there was SCA, and then Laidlaw, which later morphed into Safety-Kleen.

By 1985, regulators had come to realize that the landfill's liners would eventually fail, threatening the water supply for tens of thousands of people. Eventually, they later projected, a major cleanup would be necessary that could cost as much as $1 billion.

[South Carolina] projected a major cleanup would be necessary that could cost as much as $1 billion.

After a series of confounding twists and turns, in 1994, the Board of the Department of Health and Environmental Control (DHEC) had required Laidlaw to post a $133 million cash bond before expanding the hazardous waste dump. But only the first $14.5 million installment was ever paid when the company's political machine was wheeled into action.

During the year that followed, Laidlaw spent $250,000 lobbying the Legislature, generating the political pressure to steam roll over the Department's technical decision.

When the DHEC Board sat down to revisit the issue the following year, three new

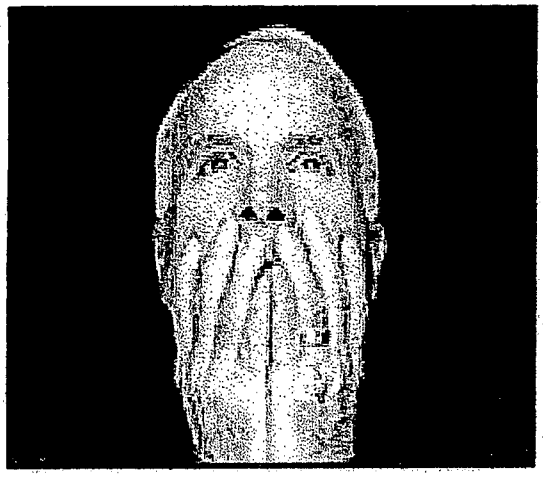
and more compliant members had been appointed, and they decided to let the operator, itself, determine how to provide financial assurance. To no one's surprise, the company offered up a corporate IOU, which had no more value than its dubious balance sheet. But, there was – everyone was assured – no need for concern. After all, this was a strong $2 billion company.

But, as spring gave way to the summer of 2000, things came unglued. Safety-Kleen, the site's last owner, ominously decamped its offices from Columbus to Delaware, and, thereupon, filed for bankruptcy. Then, this year, it offered South Carolina a take-it-or-leave-it annuity allegedly worth $49 million for the long term costs of maintaining the site. In the exceedingly unlikely event anything was left over, that would be no more than a *de minimus* down payment on the possibly billion dollar cost to clean up Pinewood. Even that pittance was contingent on their being legally relieved of responsibility for all future liabilities.

"We felt surely they would never go bankrupt," remembered Roger Leaks, who had been one of those new Board members appointed to remove the bonding requirement. "Maybe," he now wonders, "we should have held out for cash."

"The costs could be astronomical," fretted Sandra Molander, another former state environmental board member. "I'm sure there's not enough money there," she said.

But, by then, the horse was out of the barn. In the end, South Carolina realized it had little choice but to sign the release in order to get any cash. At that point, the state with license plates that say "Beautiful Places," and which prides itself on the benefits of being business-friendly, recognized they had been diddled, boxed in by political machinations into accepting a billion dollar liability for chump change.



Lake Marion stands as a poster child, teaching the rest of us how trading away protection from long-term landfill liabilities for political crumbs has been a monumental mistake..

Although Pinewood hasn't failed yet, a fuse has been lit because the site's toxic brew festers behind barriers doomed to eventually degrade. Someday, in the not to distant future, that ticking time bomb will detonate a massive tax increase to pay for the cleanup.

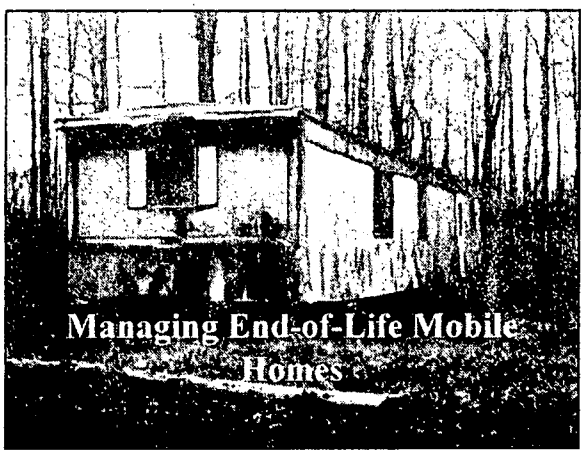
Lake Marion stands as a poster child, informing the rest of us how trading away protection from long-term landfill liabilities for political crumbs has been a monumental blunder.

❖

In the career of many in public life, there comes along one trial by fire that, by its enormous stakes, transcends the political adage, to get along, go along. Like the trillion dollar S&L debacle a generation before, now landfills' future risks exemplify those cases, made exceptional by their sheer magnitude, which must be carved out from the customary way politics is practiced in America.

"I fear the [Keating 5] episode probably will be on my tombstone." **– John McCain**

For most of us, we can, and we do, learn from history. And, by doing so now, we will not come to suffer the same fate as John McCain and Alan Cranston, both good men, honorable men, who slipped up once following Charles Keating's siren song nearly 20 years ago. Now, they expect to have that mistake on their tombstone as the legacy for which they will be remembered, rather than for all the good works they had championed over the course of their lives.

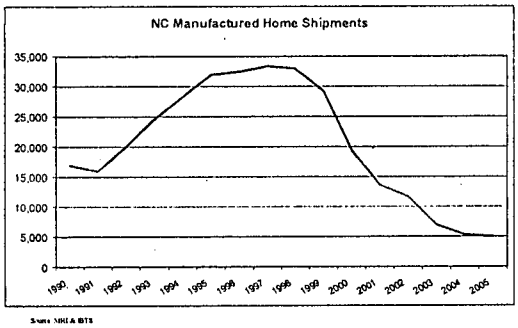


Past generations of regulators had the luxury of passing the buck to the next, but those days are now gone. Today is the day of reckoning, and this generation of regulators has – to paraphrase Roosevelt during those earlier times when the S&L's faced their first crisis – a rendevous with destiny.

The time for you to act is now.* ❐

---

* The Lake Marion story has been extensively chronicled by *The State*'s reporter, Sammy Fretwell. The background and quotations described in this Epilogue were largely excerpted from his article "Landfill deal threatens S.C. lake, taxpayers," published on June 13, 2004. The McCain quote in the photo caption is from his autobiography, John McCain, *Worth Fighting For* (Random House, 2003), at p. 204. Notably, as McCain wrestled with a bout of cancer that made him confront his mortality, he rued that "twelve years after [the conclusion of the Keating Five scandal] I still wince about it and find that—



> "if I do not repress the meaning, its recollection still provokes a vague but real feeling that I had lost something very important, something that was lost in pursuit of gratifying ambitions, mine and others', and that I might never possess again as assiduously as I once had."

Number of Manufactured/Mobile Homes

- 2000 Census
  - North Carolina
    - 577,323 units
    - 16.4% of housing stock
  - United States – manufactured homes account for 7.6% of housing
  - NC ranked 5th for percentage of housing stock

North Carolina Shipments

HUD v. Pre-HUD

- Pre-HUD homes
  - Mobile homes
  - Built prior to June 15, 1976
  - Life expectancy ≈ 20 years (can vary greatly)
- HUD Homes
  - Manufactured homes
  - Built after June 15, 1976
  - Life expectancy > 30 years
  - Larger and better built

Nuisance Structures

- Hard to Define
  - Habitable v. Uninhabitable
  - Abandoned v. Occupied
  - Used as Storage Building
  - Violating Local Ordinance
- Concerns
  - General Health and Safety
    - Playing in and around
  - Economic Development
  - Illegal Activities
    - Meth production

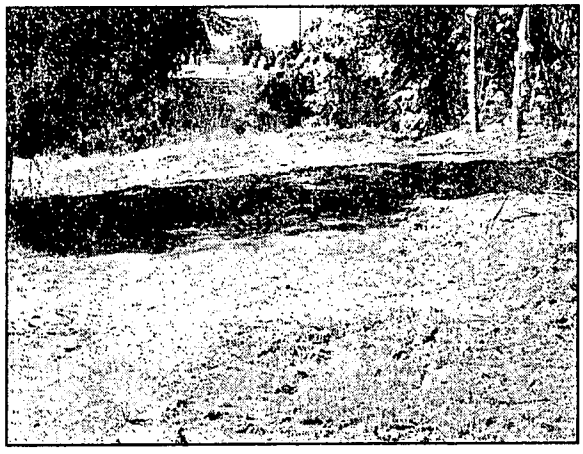
NC Nuisance Structure Estimate

- NCACC – 40,000 Nuisance Structures
  - DPPEA supports this estimate
- DPPEA Estimate of Pre-HUD Stock
  - As many as 163,000 structures
  - Roughly 28 percent of all stock
  - Based on AHS and CHP research.

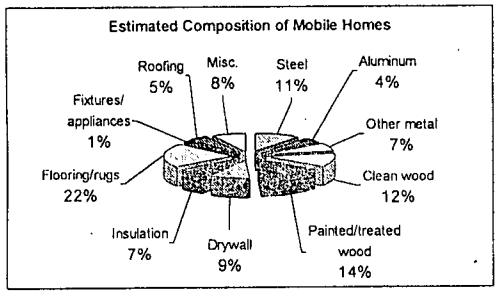
Supporting Data

- Onslow County - > 1,000 nuisance units
- Rockingham County – 450 to 500 units
  - 816 pre-HUD homes on tax records
- Brunswick County – 873 requests
  - 697 structures removed as of March 2004

Clean-Up Programs



- Two Types
  - Landfill Based
    - Has limitations due to over road transport
  - On-Site Demolition
    - Generally more expensive
- Current Status of Programs
  - Only three permanent programs
  - Some pilot programs
  - There is more interest than activity



Mobile Home Composition

- Average weight of a single unit – 6 tons
  - Newer data may raise this estimate
- Theoretical Recovery ≈ 52 %
- Economical Recovery ≈ 30 %
- Majority of recycling is from metals

Composition of a Mobile Home

Cost Per Unit

- Costs can vary greatly
  - Internalization of costs
  - Contracted v. public hauling
  - Tipping fees
  - Container rental
  - Transportation of structure
  - Site clean up – septic, etc.
- Average cost per unit - $750 to $1,500
  - Trending towards the higher side

County Perspective on the Clean-Up of Abandoned Manufactured Homes

Environmental Review Commission- Dec. 13, 2006

Paul Meyer
North Carolina Association of County Commissioners

What NCACC is hearing

- Abandoned MH "junks up" the community
- Abandoned MH limits economic development opportunities
- Abandoned MH reduces property values
- Abandoned MH damages the environment
- Abandoned MH jeopardizes public safety
- Citizens want abandoned MH cleaned up

Issues Impacting Clean-Up

- Minimal owner participation in clean-up
- Significant county resources required
  - Enforcement actions (nuisance/zoning)
  - Voluntary release
  - $800 per section (just hard costs)
  - Tax lien
- Ownership determination difficult

Few County Programs

- Models:
  - Funded from county general fund
  - Use of criminal code: requires significant intergovernmental cooperation and resource allocation by non-county sources
- Only impacting the tip of the iceberg
- Lack of resources greatest deterrent

Advance Disposal Fee

- Similar to white goods/scrap tire programs
- Paid at dealer/LG permitting
- Money used to fund clean-up efforts by participating counties

Questions?

EXHIBIT U

Mobile Home Recycling

Environmental Review Commission

December 13, 2006

Stephanie Lewis

Assistant Director of Operation Services

Brunswick County, NC

Two Options for Disposal of Mobile Homes in Brunswick County

- Developed an operational plan allowing mobile homes to be added to the acceptable materials at the County's Construction and Demolition Landfill. This would also allow for the recycling of metals from the mobile homes and thus became known as the Mobile Home Recycling program.
- Implemented a program called Appearance & Code Enforcement or (ACE). This has provided a service to County residents and is very popular.

Program History

- The Mobile Home Recycling Program was initiated by the Planning Department.
  - Zoning Ordinance to discontinue all non-conforming junkyards by January 2000.
  - The objective was to provide an alternative method of mobile home disposal.
  - The Planning Department approached the Solid Waste Department with the idea of recycling mobile homes.

Program History

- Applied for and received a C&D Recycling Grant from NCDENR in February of 2000.
  - Assist in identifying and implementing a cost-effective management method for recycling dilapidated mobile homes.
  - Target the recovery of recyclable materials from a waste stream which historically had been absent from intermediate processing.
- Brunswick County began accepting mobile homes at its C&D Landfill in February of 2000.

Appearance & Code Enforcement

- The ACE program was established in 2001.
- This effort is aimed at addressing concerns regarding the appearance of Brunswick County.
- The program was for a limited time and is promoted as a service to County citizens.

Items Addressed by ACE

- Junked/Abandoned Vehicles
- Junked Mobile Homes
- Dilapidated Housing

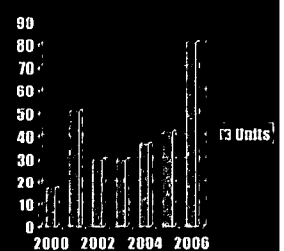
ACE Goals

- Improve County's appearance across its 856 scenic square miles.
- Protect and maintain property values.
- Eliminate public health/environmental nuisances.
- Protect public safety and welfare.
- Increase desirability for residential and economic development.

ACE Program Results

- Demolished a total of 1,227 mobile homes.
- Demolished a total of 952 dilapidated homes.
- Removed a total of 671 vehicles and 158 boats.
- Recycled approximately 4,037 tons of metal.
- Channeled over 5,000 tires to the proper waste stream.

ACE Program Costs



- Costs were determined using the following:
  - Five (5) Equipment Operators
  - One Excavator
  - Four Tandem Dump Trucks
  - One Lowboy Trailer & One Pickup Truck as needed
  - Administrative & Supervisory Costs
  - Tip Fee Costs

ACE Program Costs

- Estimated cost to demolish a mobile home = $1,200/unit (without disposal fees)
- Estimated cost to demolish & dispose of a mobile home = $1,500/unit (varies upon tip fee)
- Total ACE (Oct. 2001 – Nov. 2006) Costs:
  - Labor & Equipment Costs = $1,899,730
  - Disposal Costs (waived tip fees) = $1,907,738
    - Lost Landfill Space = 104,344 cubic yards

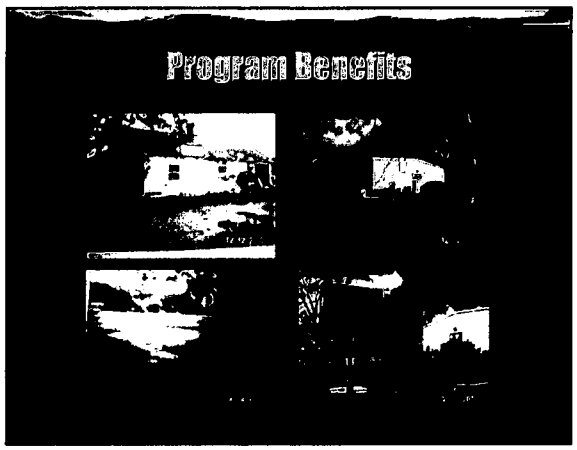
Landfill Program Results

- 2000 – 21 mobile homes
- 2001 – 53 mobile homes
- 2002 – 30 mobile homes
- 2003 – 30 mobile homes
- 2004 – 37 mobile homes
- 2005 – 42 mobile homes
- 2006 – 81 mobile homes

Landfill Program Costs

- 2 Equipment Operators
- One Excavator
- One Dump Truck
- ~ 30 minutes per unit (single wide mobile home)
- ~ in-house cost of $75 per unit for demolition, plus $185 - $275 for tip fees (depending on contents and size of MH & variable tip fees)
- Average cost for Brunswick County = $255/unit

Summary



- Program initiated by the Planning Department
- Received C&D grant from NCDENR
- Became operational in 2000 w/ ACE starting in 2001
- Has been very successful in several aspects:
  - Provides an alternative method of mobile home disposal for our residents.
  - Has vastly improved the appearance of our County.

Program Benefits

Program Benefits

Program Benefits

The following is a general outline and guide to voluntary participation in the Brunswick County Appearance & Code Enforcement effort. This effort is aimed at addressing concerns regarding the appearance of Brunswick County and for a limited time is being promoted as a service to its citizens. The following goals have been established in accordance with this effort:

- Improve County's appearance across its 856 scenic square miles.
- Protect and maintain property values.
- Eliminate public health/environmental nuisances.
- Protect public safety and welfare.
- Increase desirability for residential and economic development.

JUNKED/ABANDONED VEHICLES

Junk/abandoned motor vehicle(s) may be removed free of charge for a limited time only according to the following procedure.

After the limited period has expired, removal of junked/ abandoned vehicles will be mandatory and the vehicle owner(s) will be responsible for the cost of removal.

- Owner/applicant must contact Brunswick County Code Enforcement staff.
- Owner should sign vehicle release form(s) to indemnify the County for each vehicle to be removed from the premises.
- Owner should provide vehicle information (e.g., make, color, VIN and condition).
- Owner should clearly mark with an (X) all items to be removed.
- Staff will tow/transport vehicle(s) to County Landfill.

JUNKED MOBILE HOMES

Junked/uninhabitable mobile home(s) may be removed free of charge for a limited time only according to the following procedure.

After the limited period has expired, mandatory removal of junked/uninhabitable mobile homes will be required based on condemnation procedures. Owner will be responsible for the cost of mandatory removal.

- Owner/applicant must contact Brunswick County Code Enforcement staff.
- Owner shall sign release form to allow County to remove or dismantle mobile home.
- Owner should provide mobile home(s) information (e.g., color, make, serial number, condition, and title, if available).
- Owner should clearly mark with an (X) all items to be removed.
- Junk/uninhabitable mobile home(s) will either be dismantled on-site or towed to County Landfill depending upon condition.

DILAPIDATED HOUSING

Dilapidated house(s) will be demolished on-site free of charge for a limited time only, according to the following procedure.

After the limited period has expired, mandatory demolition of dilapidated houses will be required based on condemnation procedures. Owner will be responsible for the cost of mandatory removal.

- Owner/applicant must contact Brunswick County Code Enforcement staff.
- Owner shall sign release form giving County permission to demolish and remove structure.
- Owner should provide house information (e.g., color, construction and condition).
- Chief Building Inspector will perform free asbestos inspection.
- Owner/applicant will be responsible for any asbestos removal/disposal.
- Owner shall clearly mark with an (X) all structures to be demolished.
- County staff will demolish structures on-site and haul to County Landfill.

ALL ITEMS WILL ONLY BE ACCEPTED AT THE COUNTY LANDFILL LOCATED NEAR BOLIVIA

Scotland County Abandoned Mobile Home Program

- Solid Waste Department
- Sheriff's Department
- Court System
  District Attorney and Judges

Need for Abandoned Mobile Home Program

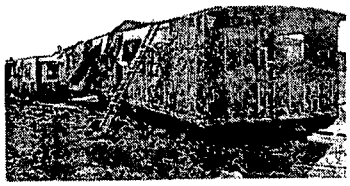
- History and Background
- Need for Program
- Financial Feasibility
- Benefits of Program

The Program Goals

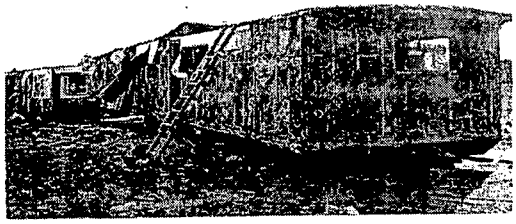
- Financially Feasible – no tax money could be used to support the project
- Legal – local ordinances used with civil and criminal penalties
- Environmentally Safe – all homes and debris must be brought to Scotland County landfill

Scotland County , North Carolina
Ordinance #22

SOLID WASTE MANAGEMENT ORDINANCE
FOR
SCOTLAND COUNTY, NORTH CAROLINA



The Program Process



1. Solid Waste Enforcement Officer sends a letter to the landowner to notify that there is a violation on his property. The landowner had 5 days in order to contact the officer of the details of the violation and 30 days in order to bring the violation into compliance.
2. Solid Waste Officer writes a criminal summons to the land owner and the owner either complies or goes to court.

3. Mobile home is transported to the landfill at the owner's expense, weighed and charged a construction demolition tipping fee. The home is taken to the designated area at the C&D landfill where staff dismantles the structure.

4. Items Recycled:
   * aluminum siding and window frames
   * wiring
   * white goods
   * structural steel frames and axles.
5. Un-recyclable wood framing and flooring are disposed in the C&D landfill.

Dismantling of Old Mobile Homes

Before and After

Summary

- The program has been effective in removing mobile homes without the use of tax dollars.
- The process is slow and without total cooperation with the District Attorney and Court System this program will not succeed.

- The Solid Waste Program pays for the administration and enforcement of the program. This is not a free program. Additional funding will speedup the process and increase the number of homes removed.
