North Carolina General Statutes
ARTICLE 12D.

Environmental Review Commission.

§ 120-70.41. Commission established.

The Environmental Review Commission is hereby established.

§ 120-70.42. Membership; cochairs; vacancies; quorum.

(a) The Environmental Review Commission shall consist of six Senators appointed by the President Pro Tempore of the Senate, six Representatives appointed by the Speaker of the House of Representatives, who shall serve at the pleasure of their appointing officer, the Chair or a Cochair of the Senate Committee on Agriculture, Environment, and Natural Resources or the equivalent committee, the Chair or a Cochair of the House of Representatives Committee on Environment and Natural Resources or the equivalent committee, the Chair or a Cochair of the Senate Committee on Appropriations – Natural and Economic Resources or the equivalent committee, and the Chair or a Cochair of the House of Representatives Committee on Appropriations – Natural and Economic Resources or the equivalent committee.

(b) The President Pro Tempore of the Senate shall designate one Senator to serve as cochair and the Speaker of the House of Representatives shall designate one Representative to serve as cochair.

(c) Except as otherwise provided in this subsection, a member of the Commission shall continue to serve for so long as the member remains a member of the General Assembly and no successor has been appointed. A member of the Commission who does not seek reelection or is not reelected to the General Assembly may complete a term of service on the Commission until the day on which a new General Assembly convenes. A member of the Commission who resigns or is removed from service in the General Assembly shall be deemed to have resigned or been removed from service on the Commission. Any vacancy that occurs on the Environmental Review Commission shall be filled in the same manner as the original appointment.

(d) A quorum of the Environmental Review Commission shall consist of nine members.

§ 120-70.43. Powers and duties.

(a) The Environmental Review Commission shall have the following powers and duties:

(1) To evaluate actions of all boards, commissions, departments, and other agencies of the State and local governments as such actions relate to the environment or protection of the environment, including but not limited to an evaluation of:

a. Benefits of each program relative to costs;

b. Achievement of program goals;

c. Use of measures by which the success or failure of a program can be measured; and
d. Conformity with legislative intent;

(2) To study on a continuing basis the organization of State government as it relates to the environment or to the protection of public health and the environment, including but not limited to:
a. Improvements in administrative structure, practices, and procedures;
b. Increased integration and coordination of programs and functions;
c. Increased efficiency in budgeting and use of resources;
d. Efficient administration of licensing, permitting, and grant programs;
e. Prompt, effective response to environmental emergencies;
f. Opportunities for effective citizen participation; and
g. Broadening of career opportunities for professional staff;

(3) To make any recommendations it deems appropriate regarding the reorganization and consolidation of environmental regulatory agencies and the recodification of statutes relating to the environment, including but not limited to:
a. Ways in which agencies may operate more efficiently and economically;
b. Ways in which agencies can provide better services to the State and to the people; and
c. Instances in which functions of agencies are duplicative, overlapping, incomplete in scope or coverage, fail to accomplish legislative objectives, or for any other reason should be redefined or redistributed;

(4) To review and evaluate changes in federal law and regulations, relevant court decisions, and changes in technology affecting the environment or protection of the environment;

(5) To review existing and proposed State law and rules affecting the environment or protection of the environment and to determine whether any modification of law or rules is in the public interest;

(6) To make reports and recommendations, including draft legislation, to the General Assembly from time to time as to any matter relating to the powers and duties set out in this section; and

(7) To undertake such additional studies as it deems appropriate or as may from time to time be requested by the President Pro Tempore of the Senate, the Speaker of the House of Representatives, either house of the General Assembly, the Legislative Research Commission, the Joint Legislative Commission on Governmental Operations, the Joint Legislative Utility Review Committee, or the Joint Select Committee on

Low-Level Radioactive Waste and to make such reports and recommendations to the General Assembly regarding such studies as it deems appropriate; provided that the Environmental Review Commission shall not undertake any study which the General Assembly has assigned to another legislative commission or committee.

(b) The Environmental Review Commission may continue the study of environmental agency consolidation and reorganization. The study of environmental agency consolidation shall include, but is not limited to:

(1) Monitoring the implementation of Session Laws 1989, c. 727;

(2) Evaluation of the organization, programs, and operation of the Department of Environment and Natural Resources;

(3) Evaluation of the organization, functions, powers, and duties of the components of the Department of Environment and Natural Resources, including boards, commissions, councils, and regional offices; and

(4) Recodification of the General Statutes relating to the environment and environmental agencies.

(c) In addition to its general powers and duties, the Environmental Review Commission shall have the following powers and duties with respect to hazardous waste management:

(1) To study the current and projected need for hazardous waste treatment, storage, and disposal capacity in the State in light of anticipated generation of hazardous waste and alternatives for hazardous waste treatment and disposal;

(2) To evaluate the potential for the development of additional hazardous waste treatment, storage, and disposal capacity by the private sector;

(3) To study the necessity for and scope of hazardous waste treatment, storage, and disposal facilities which are sited, owned, or operated by the State;

(4) To review progress in securing a volunteer county to host a hazardous waste treatment facility;

(5) To study incentives and compensation for the community which hosts, either voluntarily or involuntarily, a hazardous waste treatment facility, including any additional incentives and compensation which may be needed, whether there should be differential compensation for a volunteer county, options for use of funds by local governments, distribution of compensation among local governments, and methods of providing flexibility in the development of an incentives and compensation package for a particular local community;

(6) To review progress in developing interstate agreements for the treatment, storage, and disposal of hazardous waste;

(7) To assist in the development of cooperative, comprehensive regional approach to hazardous waste treatment and disposal;

(8),(9) Repealed by Session Laws 2001-474, s. 12.

(10) To study the capacity assurance requirement under the Comprehensive Environmental Response, Compensation and Liability Act of 1980, Pub. L. No. 96-510, 94 Stat. 2767, 42 U.S.C. 9601 et seq., as amended, and the Superfund Amendments and Reauthorization Act of 1986, Pub. L. No. 99-499, 100 Stat. 1613, as amended as it relates to the continued eligibility of North Carolina for remedial actions under Superfund;

(11) To study alternatives available to the State for dealing with hazardous waste and the ramifications of those alternatives; and

(12) To receive and evaluate reports of every State agency, board, and commission which has any power or duty with respect to hazardous waste management.

§ 120-70.44. Additional powers.

The Environmental Review Commission, while in the discharge of official duties, may exercise all the powers provided for under the provisions of G.S. 120-19, and G.S. 120-19.1 through G.S. 120-19.4. The Environmental Review Commission may meet at any time upon the call of either cochairman, whether or not the General Assembly is in session. The Environmental Review Commission may meet in the Legislative Building or the Legislative Office Building upon the approval of the Legislative Services Commission.

Notwithstanding any rule or resolution to the contrary, proposed legislation to implement any recommendation of the Environmental Review Commission regarding any study the Environmental Review Commission is authorized to undertake or any report authorized or required to be made by or to the Environmental Review Commission may be introduced and considered during any session of the General Assembly.

§ 120-70.45. Compensation and expenses of members.

Members of the Environmental Review Commission shall receive subsistence and travel expenses at the rates set forth in G.S. 120-3.1.

§ 120-70.46. Staffing.

The Legislative Services Officer shall assign as staff to the Environmental Review Commission professional employees of the General Assembly, as approved by the Legislative Services Commission. Clerical staff shall be assigned to the Environmental Review Commission through the offices of the Supervisor of Clerks of the Senate and Supervisor of Clerks of the House of Representatives. The expenses of employment of clerical staff shall be borne by the Environmental Review Commission.

§ 120-70.47. Funding.

From funds available to the General Assembly, the Legislative Services Commission shall allocate monies to fund the work of the Environmental Review Commission.

Re: Study of Renewable Energy Portfolio Standard

Dear Ms. Sanford:

Late last year I, on behalf of the Environmental Review Commission (ERC), requested that Commissioner James Y. Kerr, II, of the North Carolina Utilities Commission (NCUC) determine whether and under what circumstances the NCUC would be willing to undertake a study of options for, and the potential costs and benefits of, implementing a renewable energy portfolio standard in North Carolina. This request was based on a 2005 legislative proposal for such a study that was not enacted. In the course of considering this matter, Commissioner Kerr and I determined that some of the parties who are interested in this subject had significant concerns about the scope and direction of the study as initially proposed in the various study bills.

To address these concerns, Commissioner Kerr convened a meeting of interested parties on 11 January 2006. This meeting resulted in a proposal for a study of issues related to renewable energy portfolio standards that is acceptable to all parties. At its 24 January 2006 meeting, the ERC heard a presentation by Commissioner Kerr that included a description of the process outlined above and the nature, scope, cost, and timeline for the proposed study. An important aspect of this study is ongoing advisory consultation by the NCUC and its staff with all interested parties.

Following Commissioner Kerr's presentation, the ERC discussed the proposal and ultimately adopted a motion "to request the NCUC to undertake the proposed study of renewable energy portfolio standards as described by Commissioner Kerr." Thus the purpose of this letter is to officially convey that request. It is my understanding that preparations to conduct the study are already underway. A transcript of Commissioner Kerr's presentation and the related discussion during the 24 January meeting of the ERC is enclosed for reference. We request that the NCUC

provide the ERC with a status report on the study no later than 1 July 2006 and a final report on the study no later than 1 December 2006.

Please accept my sincere thanks on behalf of the ERC to the NCUC for its willingness to undertake this important study and to the staff of the NCUC for its assistance with this matter. In addition, we particularly appreciate the time and attention that Commissioner Kerr has devoted to moving this project forward. Please feel free to contact me if you have any questions of if I can be of any assistance to the NCUC.

Respectfully yours,

s/

George F. Givens
Commission Counsel

Enclosure (1)

Dot Waugaman, Commission Clerk

Environmental Review Commission: 24 January 2006

Transcript from portion of the meeting related to the study of a renewable energy portfolio standard:

Representative Gibson recognized Mr. James Y. Kerr, Commissioner of the North Carolina Utilities Commission, to discuss a proposed study of the costs and benefits of a renewable energy portfolio standard. The Commission has followed interest in the General Assembly in the conduct of a cost-benefit study of a renewable energy portfolio standard in North Carolina. The State energy policy also speaks to such a study. Mr. Givens contacted the Commission about their willingness or interest in conducting a study in the absence of formal legislation. The answer was that they are happy to do whatever the General Assembly wants them to do. They did want to get an idea of the parameters of such a study and to make sure their thoughts about the matter were in sync with a number of stakeholders that would be interested in such a study, including the ERC staff. Regardless of what the General Assembly did or did not ask them to do, there are a number of issues at the Commission: for example, integrated resource planning and new nuclear generation facilities. There are a number of issues to which renewable energy alternative sources generation and possibly renewable portfolio standards would be of interest to the Commission; therefore, the interests of the Commission and the General Assembly seem to coincide.

In preparation for discussing the subject with the ERC, Commissioner Kerr convened a gathering of the most prominent stakeholders, including the load serving entities in the state, the regulated utilities, the NC Sustainable Energy Association, ERC staff, Mr. Steve Rose from the Joint Utility Review Commission, and representatives of the existing North Carolina Green Power program. As a result of the discussions, the Commission is convinced that conducting a study consistent with the desires of what they believe is representative of a well represented group of stakeholders, is something within their ability and more importantly, within their budget. What they propose doing undertaking the conduct of such a study, committing up to $200,000 of their budget for the project. They have done some preliminary research into what studies in other states have cost, and think that $100,000 to $150,000 is a good range. The more detailed the study, and the more follow-up work involved, the more expensive it would be. What the Commission contemplates is that in any engagement they would enter into with a consultant, part of the agreement would be to have the consultant available to the ERC, and to other interested committees of the General Assembly once the study is completed, to interpret the study, answer questions, run additional scenarios, and so forth.

In terms of the details of the study, Commissioner Kerr noted that the study bill that passed one of the houses was fairly prescriptive in its design and some of the items it sought to have studied. He said he did not believe those are necessarily bad ideas, but at this juncture, based on the research the Commission has done, it does not appear that any particular manner of conducting the study has been decided upon by other states who have conducted studies. No single template, no single set of scenarios, no single exhaustive, well-settled list of the types of issues to be looked at has developed. The Commission believes it would be best to convene a meeting with stakeholders representing the key interests, and have them organized so they can assist the Commission in drafting an appropriate request for proposals. The Commission would then propose issue a request for proposal and let the consultant conduct the study. What they would be paying for is the best expertise available at the time. The Commission would then have the consultant help them design the study, including the issues to be considered and the manner in which the study would be modeled, not only to derive the quantifiable benefits, but also to look at the qualitative issues relevant to the study.

With a stakeholder process developed, the stakeholders would also have input into the design of the study. Then, the study would be conducted, and the stakeholders would be required at that time to provide raw data to the consultant. A lot of the information needed to input into the study exists in various places, whether it be the State Energy Office, or at the load serving entities. The stakeholders would be involved again in providing raw data. The Commission envisions the

consultant coming up with a preliminary draft report; then the stakeholder group, who would be familiar with the North Carolina situation, would review the preliminary draft. The Commission would then propose to produce a final report. All interested parties would have an opportunity to file comments. The Commission would propose bundling the study as well as the comments of any interested parties together, and then present them to the ERC and to the Joint Utility Review Commission or any other appropriate committee within the General Assembly.

The study called for a 1 April 2006 deadline, unrealistic at this point in time. The Commission would hope to have the study completed in the late fall of 2006, certainly before the 2007 session of the General Assembly. They would like staff and committees to have access to the final report before session.

Commissioner Kerr said the Commission is willing to undertake the study. They would benefit from being asked by ERC to conduct it with an obligation to come back and report back at a future meeting. They would chose a consultant and budget for the consultant in a way that would make the consultant available to the committee for any follow-up work. He commented that the Commission does not envision coupling the presentation of the study with any particular policy recommendation. The product they envision would be a factual, analytical, reference point provided to the ERC. ERC and other organs of the General Assembly would be responsible for making the policy suggestions. The Commission would be happy to answer questions once the policy is properly in their arena. They foresee their study producing a reference point to give factual information to any policy discussions ERC wanted to have.

Senator Albertson moved the ERC request the Utility Commission undertake the proposed study of renewable energy portfolio standards as described in the presentation by Commissioner Kerr.

Ms. Dot Waugaman, Commission Clerk
309 Legislative Office Building
Raleigh, NC 27601

Dear Ms. Waugaman:

During the February 14th meeting of the Environmental Review Commission, several of you mentioned trucks and buses and their effect on air quality.

In my professional capacity, I own and operate a small trucking fleet which has to meet rigorous air quality standards. In the last five years, truck engines have evolved to one of the cleanest internal combustion engines, and during the 2007 model year, these air quality standards will be even more rigorous.

I am pleased to enclose a brochure describing the accomplishment of the industry to date and hope you find it informative and enjoyable.

Very truly yours,

Daniel F. McComas

MINUTES
ENVIRONMENTAL REVIEW COMMISSION
24 January 2006

The Environmental Review Commission (ERC) met on Tuesday 24 January 2006 at 9:30 a.m. in Room 544 of the Legislative Office Building. Representative Pryor Gibson presided.

The following members were present: Senators Albertson, Clodfelter, Forrester, Kinnaird, Swindell, and Weinstein; and Representatives Gibson, Hackney, Harrell, Harrison, Justice, and Warren. Mr. George Givens, Commission Counsel; Mr. Jeffrey Hudson, Assistant Commission Counsel; Ms. Jennifer McGinnis, Assistant Commission Counsel; Ms. Susan Iddings, Assistant Commission Counsel: Mr. Tim Dodge, Commission Analyst; and Ms. Mary Watson, Substitute Commission Clerk, were also present.

On 9 January 2006, notice was sent to members and interested parties via e-mail and regular mail. A copy of the notice is included in the attachments to these minutes as **Exhibit A**. Copies of the agenda for the meeting and visitor registration sheets are included in the attachments as **Exhibits B** and **C**.

Representative Pryor called the meeting to order and asked Mr. Givens for any comments he might have. Mr. Givens announced that two reports have been received since the previous meeting (the annual report on implementation of resident inspectors program at commercial hazardous waste facilities [**Exhibit D**] and the annual report on the comprehensive hazardous waste management plan [**Exhibit E**]). Both annual reports were distributed at the meeting. Four additional reports have been held for presentation at future meetings. They include:

- Annual Report on the Compliance/Enforcement of Water Quality Laws for Facilities that Discharge into Surface Waters
- Parks and Recreation Trust Fund Annual Report, Fiscal Year 2003-2004
- North Carolina Natural Heritage Trust Fund Award Report, Fiscal Year 2003-2004
- Report on the Pilot Program for the Inspection of Animal Waste Management Systems

Mr. Givens commented that the studies bill usually prescribes agenda items for the ERC; however, the studies bill was not enacted in 2005. A number of non-controversial items included in various editions of the bill form the agenda for today's meeting. The first item is an action item to do with developing a renewable energy portfolio standard. If the study bill had passed, the Utilities Commission would have been asked to do the study and report to the ERC. They are willing to do the study if asked to do so by the ERC. Commissioner Kerr is to report on that item. The Commissioner held a stakeholders meeting on the issue at Mr. Givens' request at the Utilities Commission office a week ago, at which time an agreement was reached. The balance of the agenda focuses on solid waste issues. There will be a meeting of the Commission on Seafood and Aquaculture on Tuesday, 31 January 2006, and the first meeting of the Commission on Global Climate Change will be Friday, 3 February 2006 at 10:00 a.m. in Room 643, LOB. A working group on risk-based limited liability for environmental cleanup has begun meeting and will report at a later date. The next meetings of the ERC will be Tuesday, 14 February 2006 and probably Wednesday, 15 February 2006, with field trips. The public planning meeting for the February meetings has been changed. It is now scheduled for Monday, 6 February 2006 at 2:00 p.m.. The public planning meeting for the March meeting is scheduled for Thursday, 2 March 2006. The public planning meeting for this meeting was held on Tuesday 17 January 2006.

Senator Clodfelter was recognized to comment on the Joint North Carolina-South Carolina Commission on the Catawba Water Basin, which held its second meeting last week. Senator Clodfelter said he was very pleased with the meeting. The main topic of discussion was water supply planning in the basin. One of the most exciting items was that Duke Energy presented to members the development of their model for predicting water flow along the river and in all the lakes from the headwaters of the Catawba River to the Santee Cooper system. Duke Energy has developed a modeling capability that will

allow them to reconstruct data from all climate conditions over the last 75 years to know exactly what lake levels will be, what water flow will be, and what the safe withdrawals are for water supply usage up and down the river. The Commission took some action to endorse a protocol that has been agreed in the Federal Energy Regulatory Commission (FERC) licensing process to put in place conservation measures in the event of future droughts such as ones in 2001 and 2002. They also discussed North Carolina's water supply planning model, which South Carolina does not have. There was a good deal of discussion about getting the model copied in South Carolina. There was also some discussion about gaps and need for amendments for the interbasin transfer policy of the two states based on the new data now available. Permitted withdrawals from the Catawba Basin already exceed the carrying capacity of the river today in drought conditions. Duke Energy has made the model available both to DENR and to South Carolina Department of Health and Environmental Control, and both agencies will be using it to evaluate issues of expansion of water treatment plants and withdrawals from river basins. He added that the Commission did not discuss the specifics of the pending Cabarrus-Kannapolis-Concord application, but they did discuss generally the states' rules and regulations on transfers in light of the fact that we now have the ability to predict what the impact of those will be. What Duke Energy has developed for the Catawba does not exist for any of our other river basins, but it does give us an ability to copy the model in the other river basins of the two states that cross the state lines as well as those that are internal to North Carolina. There was no hearing or discussion of the specifics of any applications pending. The Commission will meet quarterly. Mr. Givens said there is a reporting requirement in the statute that sets up the state's involvement in the Commission. The report is due October 1.

Senator Clodfelter added that the low-flow protocols settled on do not affect any intakes other than those in the Duke Energy controlled areas. DENR and DHEC have agreed to look at what regulatory changes should be recommended to ERC and to South Carolina counterparts to bring everyone under the same drought protocol in the event of another drought.

Senator Swindell commented that he is a member of the Roanoke Virginia/North Carolina Commission. It met once last year and has not met since. He suggested all interstate commissions should be activated.

Representative Gibson recognized Mr. James Y. Kerr, Commissioner of the North Carolina Utilities Commission, to discuss a proposed study of the costs and benefits of a renewable energy portfolio standard. The Commission has followed interest in the General Assembly in the conduct of a cost-benefit study of a renewable energy portfolio standard in North Carolina. The State energy policy also speaks to such a study. Mr. Givens contacted the Commission about their willingness or interest in conducting a study in the absence of formal legislation. The answer was that they will do whatever the General Assembly wants them to do. They did want to get an idea of the parameters of such a study and to make sure their thoughts about the matter were in sync with a number of stakeholders that would be interested in such a study, including the ERC staff. Regardless of what the General Assembly did or did not ask them to do, there are a number of issues at the Commission: for example, integrated resource planning and new nuclear generation facilities. There are a number of issues to which renewable energy alternative sources generation and possibly renewable portfolio standards would be of interest to the Commission; therefore, the interests of the Commission and the General Assembly seem to coincide.

In preparation for discussing the subject with the ERC, Commissioner Kerr convened a gathering of the most prominent stakeholders, including the load serving entities in the state, the regulated utilities, the NC Sustainable Energy Association, ERC staff, Mr. Steve Rose from the Joint Utility Review Commission, and representatives of the existing North Carolina Green Power program. As a result of the discussions, the Commission is convinced that conducting a study consistent with the desires of what they believe is representative of stakeholders, is something within their ability and more importantly, within their budget. What they propose isdoing undertaking the conduct of such a study, committing up to $200,000 of their budget for the project. They have done some preliminary research into what studies in other states' studies have cost, and believe that $100,000 to $150,000 is a good range. The more detailed the study, and the more follow-up work involved, the more expensive it would be. What the Commission contemplates is that in any engagement they would enter into with a consultant, part of the agreement would be to have the consultant available to the ERC and to other interested committees of

the General Assembly once the study is completed, to interpret the study, answer questions, run additional scenarios, and so forth.

In terms of the details of the study, Commissioner Kerr noted that the study bill that passed one of the houses was fairly prescriptive in its design and some of the items it sought to have studied. He said he did not believe those are necessarily bad ideas, but at this juncture, based on the research the Commission has done, it does not appear that any particular manner of conducting the study has been decided upon by other states who have conducted studies. No single template, no single set of scenarios, no single exhaustive, well-settled list of the types of issues to be looked at has developed. The Commission believes it would be best to convene a meeting with stakeholders representing the key interests, and organize them so they can assist the Commission in drafting an appropriate request for proposals. The Commission would then propose issue a request for proposal to find the best consultant to conduct the study. The Commission would then have the consultant help them design the study, including the issues to be considered and the manner in which the study would be modeled, not only to derive the quantifiable benefits, but also to look at the qualitative issues relevant to the study.

With a stakeholder process developed, the stakeholders would also have input into the design of the study. Then, the study would be conducted, and the stakeholders would be required at that time to provide raw data to the consultant. A lot of the information needed to input into the study exists in various places, whether it be the State Energy Office, or at the load serving entities. The stakeholders would be involved again in providing raw data. The Commission envisions the consultant coming up with a preliminary draft report; then the stakeholder group, who would be familiar with the North Carolina situation, would review the preliminary draft. The Commission would then propose to produce a final report. All interested parties would have an opportunity to file comments. The Commission would propose bundling the study as well as the comments of any interested parties together, and then present them to the ERC and to the Joint Utility Review Commission or any other appropriate committee within the General Assembly.

The study called for a 1 April 2006 deadline, unrealistic at this point in time. The Commission would hope to have the study completed in the late fall of 2006, certainly before the 2007 session of the General Assembly. They would like staff and committees to have access to the final report before session.

Commissioner Kerr said the Commission is willing to undertake the study. They would benefit from being asked by ERC to conduct it with an obligation to come back and report back at a future meeting. He commented that the Commission does not envision coming up with any particular policy recommendation. The product they envision would be a factual, analytical, reference point provided to the ERC. ERC and other organs of the General Assembly would be responsible for making the policy suggestions. The Commission will answer questions once the policy is properly in their arena. They foresee their study producing a reference point to give factual information to any policy discussions ERC wants to have.

Senator Albertson moved the ERC request the Utility Commission undertake the proposed study of renewable energy portfolio standards as described in the presentation by Commissioner Kerr.

Senator Kinnaird asked how many states already have renewable energy portfolio standards. Commissioner Kerr replied that 22 states have renewable energy portfolio standards of some sort. There are probably other proposals being considered at this time. The Commissioner said Berkeley Laboratory in Oakland, CA, has completed a survey of all the studies that have been conducted (38). No best practices have emerged on how to conduct such a study. In the Berkeley studies, about 55 percent of the renewable energy reflected in the studies is wind energy. While North Carolina has some wind resources, we also have countervailing environmental concerns with respect to the use of wind.

Representative Harrison asked if the Utilities Commission is able to adopt renewable energy policies absent a legislative mandate for a renewable energy portfolio standard,. Commissioner Kerr replied he had not considered whether the Commission could force anyone to do anything without

legislative direction. He added he thought they might be able to persuade, but not compel, as they have with the North Carolina Green Power program. By statute, the Commission is mandated to provide the least cost reasonable alternative energy generation, which probably would result in ruling against renewable energy unless there were some overriding policy decision, because renewable energy is now more costly than currently used sources of energy.

The motion by Senator Albertson carried.

Representative Gibson recognized Mr. Scott Mouw, Chief of the Community and Business Assistance Section, Division of Pollution Prevention and Environmental Assistance (DPPEA), DENR, to discuss measures to reduce the amount of solid waste disposed of within North Carolina landfills, bans on the disposal of certain types of waste in landfills, and more aggressive recycling requirements (see **EXHIBIT F** for PowerPoint presentation).

Senator Kinnaird asked if the Community and Business Assistance Section works with the League of Municipalities, the Association of County Commissioners and the Association of Solid Waste. Mr. Mouw replied that they do. He said they have collected data with the League of Municipalities to see how municipalities perform. The League includes articles in their newsletters about recycling and how communities can increase recovery. The Section has worked with the County Commissioners and the Solid Waste Association of North America on similar issues. Those groups conduct workshops and training in which Section staff takes part, teaching local governments on how to increase recovery of recyclables.

Representative Gibson recognized Mr. Paul Crissman, Head of the Planning and Program Management Branch, Solid Waste Section, Division of Waste Management (DWM), DENR, to present the annual report on the status of solid waste management efforts. He traced the development of lined landfills and federal and state legislation regulating solid waste from the late 1980's to the present time. He showed a Clay County landfill in its active state in 1988 and the same area in 2005, demonstrating the results of good practice in closing landfills. He showed pictures of modern transfer stations. Landfills are now often regional, serving a particular geographic area, usually areas with a 100-mile radius. Mr. Crissman noted the increasing cost of fuel prices could have an effect on that statistic. Statistics show there is not only an increase in total tonnage of solid waste, but there is also an increase in per capita tonnage of solid waste. Capacity is not universally available within a 90-mile radius. There are also permit conditions and other limiting factors at landfills. North Carolina relies heavily on out-of-state landfills to handle North Carolina's solid waste. Almost 10 percent of our waste goes out of state. Our imports are relatively negligible, but could dramatically increase in the future.

As our society has changed, we have adopted products that require disposal (coffee-to-go houses, water bottles, etc.). These changes cause dramatic increases in waste to deal with in the near future. Another change is that some big landfills are going to close in the future. Wake County is much closer to reaching the limit of its landfill capacity than the statewide average of 18.7 years.

Representative Gibson asked for a larger print copy of the net export/net import chart showing existing and future prediction, including a time line.

Senator Forrester asked what would happen if Virginia and South Carolina refused to accept our solid waste. He also asked about the status of co-generation plants to help with recycling and processing our waste. Would there be a tax advantage to counties getting into the co-generation business. Mr. Crissman replied that waste is a commodity and cannot be barred or taxed. Virginia has tried several times to halt the importation of waste, but their attempts have not been successful. Concerning co-generation efforts, he said a lot of waste has been used as boiler fuel. He added that New Hanover County has burned mixed solid waste to create electricity, but it is a very expensive process.

Senator Clodfelter asked if Mr. Crissman has any data on the composition of the waste stream and how it is changing. He further asked to what extent packaging is a component of the waste stream. Mr. Crissman said North Carolina has not conducted such a study recently. Georgia completed a study a

couple of years ago and found that the primary elements of the waste stream are fiber and paper. He is not aware if the sources of the waste were identified. Senator Clodfelter asked if there could be differential taxes on products based on the amount of packaging materials.

Senator Albertson asked staff to find out what Alaska does with its waste. He also asked how long landfill liners last. Mr. Crissman replied that the design of the landfill is such that is irrelevant because landfills have a strong cap. The cover requirements are very strict and keep water away from the waste.

Representative Gibson recognized Mr. Edward F. Mussler, Supervisor, Solid Waste Permitting Branch, DWN, DENR, to discuss the permitting requirements for landfills and proposed rules related to solid waste management (see **Exhibit H** for a copy of his PowerPoint presentation). As of 1993, EPA mandated liners and leachate collection systems for all landfills. Mr. Mussler showed pictures of the process used to make landfills be compliant with EPA requirements. North Carolina transitioned all unlined municipal landfills to lined landfills by 1998. He explained the permitting process and then discussed the four proposed landfills in eastern North Carolina: Riegel Ridge (Columbus County), Black Bear (Camden County), Alligator River (Hyde County), and North Carolina Resource Conservation and Recovery (Brunswick County). He also reported on solid waste rulemaking for construction and demolition debris.

Senator Kinnaird asked about how solid waste material decomposes if the liquid is removed. Mr. Mussler replied that in the past the process was to remove the leachate to create a "tomb." Currently, there is a movement to reintroduce leachate into the landfill (leachate recirculation) in an attempt to break down the material. Dr. Mort Barletts at North Carolina State University is looking at biological processes in landfills to operate them as big compost piles so that the environmental liability would be reduced if something catastrophic would happen. It would also increase methane gas production to be used for renewable energy portfolio standard. Composting is an aerobic process, which needs oxygen. A different biological process, anaerobic, occurs in the lack of oxygen. It gives off methane as a by-product. In a landfill, oxygen is not preferred because a landfill heats up and adding oxygen causes it to catch on fire, so the anaerobic process (adding water) is preferred. Waste Management Industries, Inc., is doing a lot of research across the country. They operate a landfill aerobically, and when the temperature gets high, they convert it to anaerobic. While the processes do something a little different biologically, the outcome is about the same.

Representative Hackney commented that notification of people living near proposed landfills has been deficient. He asked if the new rules addressed the notification issue. Mr. Mussler replied that there are statutes that require local governments to inform the community and to hold meetings about what occurring; however there are no rules specifying who is to be notified. Representative Hackney asked that he look at the notification issue to address who is to be notified and how they are to be notified.

Mr. Givens asked where the rules are in the rulemaking process. Mr. Mussler replied they have been through DENR, fiscal notes have been prepared, and the rules are ready to be published in the Register. Three meetings are scheduled around the state (in Asheville, Charlotte and Greenville) to discuss the rules with interested parties. There will be a public hearing in Raleigh in April. The Commission for Health Services meets on May 10. Mr. Givens asked if the rules could be revised to provide for direction of notification of adjacent or proximate landowners. Representative Gibson recognized Mr. Dexter Matthews, Director of the Division of Waste Management, for his comments. Mr. Matthews said it is not too late to add to the final rules before they go before the Commission for Health Services. He said the Division would look at the issue of notification of adjacent landowners.

Representative Harrison asked for information about the financial qualifications aspect of the permitting process, specifically what backing is required for Limited Liability Corporations (LLCs) that run landfills. In three of the four eastern proposed landfills, there is a corporation behind the LLC. Mr. Mussler said the issue arises when there is an LLC behind a partnership that has LLPs that are owned by a holding company that could be offshore. He said the Division is looking for people to help them deal with those issues. What they look at is what happens financially in the long term, because there are

concerns even after the landfill closes. While the Division has financial assurance on municipal solid waste landfills, they do not have that assurance for other types of operations.

Senator Clodfelter observed requiring a bond up front would solve the problem of the corporate structure situation, since a bond remains no matter what the corporate structure is. Mr. Mussler commented the Division has the ability to ask for financial assurance for closure and post-closure expenses for 30 years after closure. They do not have the authority to require assurances on the front end.

Representative Gibson recognized Mr. Murray K. Griffin, President and CEO of Atlantic Coast Consulting, Inc., to discuss technical and economic issues associated with the development and operation of new solid waste landfills (see **Exhibit I** for a copy of his statement and **Exhibit J** for a cutaway picture of a landfill in operation).

Representative Gibson recognized Mr. Richard B. Whisnant, Associate Professor of Public Law and Government, University of North Carolina School of Government, to discuss legal issues concerning the disposal of solid waste, including landfill franchise issues and the importation of out-of-state waste (see **Exhibit K** for a summary of his remarks). He said franchises are an important way of having private-public partnerships and getting access to capital and expertise from companies. He identified issues that raise concerns worthy of legislative attention:

- How much citizen participation should there be before the award of a franchise?
- Does the landfill site have to be identified before a franchise is awarded?
- Can companies compel counties to create franchise ordinances?
- Who controls rates/fees and how are they reviewed?

Mr. Whisnant ended his presentation with a discussion of whether trash is a problem or an economic development opportunity. There is a mismatch between the stated policy of trying to encourage reduction, reuse and recycling, and the fact that franchise agreements lock counties into a "more is better" mentality.

Senator Clodfelter commented that the franchise model does not work. It presumes a state of affairs that no longer exists, that solid waste is still tracking along the traditional view of a franchise where the local community would allow a power company, a local bus company or a cable TV company to provide a service to citizens of that particular community instead of the government doing it. With the regionalization of waste facilities, that is not what is happening. Landfills serve groups of regions and counties. The better model of regulation might be a Utilities Commission model of regulation where there is a commission to issue certificates of public convenience and necessity. Senator Clodfelter asked for Mr. Whisnant's ideas on how to address some of the issues.

Representative Gibson suggested that the franchise model would be a better model than the utilities model because of the permanence of the issues. He said he would like the counties to make the decisions and take the criticism for them.

Senator Kinnaird asked if it would be possible to write into franchise agreements that companies would have to do a certain amount of recycling. Mr. Whisnant replied he believed that could be done. He said currently there are statutory requirements concerning what should be in franchise agreements. There is a requirement to have a fairly simply statement about the area and the population to be served. The General Assembly may decide to debate whether more requirements are needed.

Representative Gibson recognized Ms. Nancy E. Scott, Assistant Attorney General, Environmental Division, North Carolina Department of Justice, for a brief overview of the constraints the federal courts have imposed on local and state laws under the Commerce Clause of the United States Constitution. Article I, Section 8, Clause 3 of the U. S. Constitution provides that Congress shall have the power to regulate commerce among the states. The Supreme Court long ago concluded that this Clause not only empowers Congress to regulate interstate commerce, but also imposes limitations on the states

in the absence of congressional action. It understands the economic unit to be the nation as a whole. One state in its dealings with another state may not place itself in a situation of economic isolation. Through the years, Supreme Court decisions have nullified state laws, which they have found to constitute economic protectionism, while at the same time the courts have recognized that incidental burdens on interstate commerce may be unavoidable when a state legislates to safeguard the health and safety of its people.

In 1978, in the case of Philadelphia v. New Jersey, the Supreme Court first held that solid waste, even though it may have no intrinsic value, is an article in commerce. The State of New Jersey, noting the rapid increase in the volume of solid and liquid waste, enacted a prohibition on the treatment and disposal of all wastes, which originated or was collected outside the state. New Jersey's reasons for this prohibition were to conserve its existing landfill sites and to preserve the environmental quality of the state. The Court struck down New Jersey's law as violating the Commerce Clause, acknowledging that New Jersey had indeed the right to protect both the pocketbooks of its citizens and the environment of the state. The Court stated that these purposes might not be accomplished by discriminating against articles of commerce coming from outside the state unless there is some reason apart from their origin to treat them differently. The State conceded the harm caused by waste arises after the waste is disposed in the landfill. At that point, the State conceded there is no basis to distinguish out-of-state waste from domestic waste. If waste of any kind is inherently harmful, so is any waste. The Court held that both on its face and in its plain effects, the New Jersey law violated the principles of non-discrimination under common Commerce Clause and was clearly impermissible. The Court observed that the New Jersey law blocked the importation of waste in an obvious effort to "saddle those outside the state with the entire burden of slowing the flow of refuse into New Jersey's remaining landfill sites." The Court also noted that New Jersey may pursue its objectives by slowing the flow of all waste into the state's remaining landfills, even though interstate commerce may incidentally be affected. The scope of the dormant Commerce Cause is in fact a judicial creation. The Court has generally distinguished between two types of impermissible regulations: where a law or regulation affirmatively discriminates against interstate commerce on its face or in practical effect, or was enacted with a discriminatory purpose it violates the Constitution, unless the state or local government actually can demonstrate that the law is justified by a valid factor unrelated to economic protectionism and that there are no nondiscriminatory alternatives adequate to preserve the local interest.

Under this analysis, the law is subjected to strict scrutiny by the courts. In fact the Fourth Circuit Court of Appeals has called this scrutiny a "virtually per se rule of invalidity." A regulation which does not discriminate on its face or in practical fact, in which it is supported by a legitimate state interest, which incidentally burdens interstate commerce is subject to a balancing test. The test was first set forth in a 1970 Supreme Court case of Pike v. Bruce Church. Such a law is constitutional unless, under the balancing test, the burden on interstate commerce is clearly excessive in relation to the local benefits. Of course, there is no clear line separating these two broad categories of regulation and prescribing the appropriate level of scrutiny by the courts.

Since deciding Philadelphia v. New Jersey, the Supreme Court has decided four other cases challenging state or local legislation impermissibly burdening interstate commerce. In each case, the Court struck down the challenged laws. In both Chem Waste Management v. Hunt (a 1992 case) and Oregon Waste Systems, Inc. v. Oregon (a 1994 case) the Court invalidated higher disposal fees or surcharges imposed by a state on waste disposed in the state which originated outside the state. In Fort Gratchit Landfill v. Michigan (a 1992 case), the court invalidated a Michigan statute which had the effect of barring a private landfill owner from accepting solid waste originating outside of a county in which a landfill was located.

In CAN Carbone v. the Town of Clarkstown (a 1994 case), the Supreme Court invalidated a town ordinance which required all non-hazardous solid waste within the town to be processed at the town's designated, privately owned transfer station. Carbone, the plaintiff in the case, brought solid waste from outside the state into a facility which Carbone owned in the town, where the company separated recyclable materials from the rest of the waste stream. Instead of sending the residue after the recyclables were taken out, to the transfer station designated by the town, Carbone wanted to transfer it

directly to an out-of-state landfill, which Carbone alleged was cheaper. A five justice majority found that the ordinance in practical effect discriminated against interstate commerce by "driving up the cost of waste disposal from out-of-state generators and by excluding out-of-state and other in-state waste processors from the local market." The Court observed that garbage is a profitable business because its possessor must pay to get rid of it. The article of commerce, the Court said, is not so much the solid waste itself, but the service of processing and disposing of it. The Court concluded. "the flow control ordinance is just one more instance of local processing requirements that we have long held to be invalid." They further noted that the flow control ordinance hoards solid waste and the demand to get rid of solid waste for the benefit of the preferred processing facility. Clarkstown itself maintained that the waste flow control ordinance was really a financing measure to insure the long-term survival of the designated facility, which the town found was necessary in order to provide safe handling and environmentally sound disposal of solid waste generated within the town. The courts said there were nondiscriminatory alternatives available for addressing these legitimate concerns of the town: health, safety, environmental, and financial concerns. The courts suggested the town could have uniform safety regulations, which were enacted without the objective to discriminate, and these regulations would insure that competitors like Carbone would not underprice the market by cutting corners on his environmental safety. The court also suggested the town thought that if special financing were necessary, the town may actually subsidize the facility through general taxes or municipal bonds. The Court said, "But having elected to use open market to earn revenues for its project, the town may not employ discriminatory regulation to give that project an advantage over rival businesses from out of state." Justice O'Connor filed a concurring opinion in this case. She found that the ordinance was in fact even handed in its approach, but under her application of the Pike v. Bruce Church balancing test to these ordinance, she found that the burdens under interstate commerce outweighed the local benefits.

Since the decision in Philadelphia v. New Jersey, there have been dozens of solid waste commerce clause cases decided in the federal circuit courts of appeals. Ms. Scott focused on the Fourth Circuit only. The Fourth Circuit has decided three significant cases in the past ten years. In 1995, in the case of Chambers Medical Technologies of South Carolina v. Bryant, the court held that a South Carolina law that imposed a fluctuating cap on the amount of solid waste that a licensed incinerator may handle on an annual basis did not discriminate on its face or in practical effect. Although the cap was based on the amount of waste projected to be generated within the state, the cap did not impose any limits on out-of-state waste, which could be eligible for disposal through in-state facilities. However, it is important to note that the court remanded the case for a factual determination by the lower court whether or not the creation of the cap itself showed the legislature's discriminatory intent.

Following the remand of the case, Solid Waste Treatment Council v. South Carolina, the Fourth Circuit in 1996 in the same case with a different name (Environmental Technical Council v. Sierra Club), the court affirmed a permanent injunction against enforcement of certain state laws, executive orders, and regulations that limited the amount of out-of-state hazardous waste eligible for disposal within the state of South Carolina. There were exceptions written into both the disposal cap and the regulations for the needs requirement for the expansions and new facilities that could be based only on in-state concerns and had no relationship to rates generated from out-of-state. The Appeals Court found that these measures were overtly discriminatory on the basis of where the waste originated because these exceptions were based only on in-state concerns.

In Waste Management Holdings, Inc. v. Gilmore (a 2002 case), the Fourth Circuit held that the legislative record and other official statements demonstrated that certain state laws were purposely designed to discriminate against out-of-state waste by preventing or limiting its flow into the state of Virginia. Provisions of the laws, including daily tonnage cap requirements on landfills, restricted stacking of containerized waste on barges, truckload certifications, special requirements for vehicles with four or more axles, and a ban on using three rivers for waste importation were also discriminatory in effect, the Court said. The state failed to show in that case that less restrictive alternatives were unavailable. Of course, as Justice O'Connor observed in the Carbone case, "it is within Congress' power to authorize local imposition of flow control. Should Congress revisit this area and enact legislation providing a clear indication that it intends for states and localities to implement waste flow control, the State would defer to that legislative judgment."

Senator Clodfelter asked if the state could say that any waste coming to a landfill in North Carolina has to originate from a source that has a recycling program that meets at least the standards required of North Carolina communities that generate waste. Ms. Scott said there was a case in a different circuit that may have addressed that issue, but she did not read the case for her presentation. She said she would provide more information on the case to the Commission members.

Representative Gibson recognized Mr. Scott Mouw again, this time to discuss policy alternativers and programs for the management of electronic waste (see **Exhibit L** for a copy of his PowerPoint presentation). Senator Clodfelter asked about getting advanced recycling fees from out-of-state vendors. Mr. Mouw replied he would look at what California has experienced, as well as at what some data on market share of computers and televisions shows.

Representative Harrison asked about the grant program from a trust fund for solid waste. Some of the Solid Waste Trust Fund revenue comes from advanced recycling fees on ires and white goods and some from cost sharing by local government from public outreach programs. She asked if grants have been helpful in encouraging counties to adopt recycling programs. Mr. Mouw said that local government recycling grant rounds are held every spring. At that time, the Section receives a vast array of ideas from local governments.

Representative Gibson recognized Ms. Charlotte Jesneck, Head of the Inactive Hazardous Sites Branch, Superfund Section, DWM, DENR, to present the annual report on the inactive hazardous sites program (see **Exhibit M** for an outline of her remarks and **Exhibit N** for a copy of the report). She listed sites that have no financially viable financial party due to dischargers filing for bankruptcy: Burlington Industries, Cannon Mills, Cone Mills and Texfi Industries. The Department has filed claims in bankruptcy court to get cleanup costs to address the sites, but often little can be retrieved. Payouts have been between $0 to 33 percent of the cost needed to address the site. Ms. Jesneck reviewed HB 1769 (2005 Session) that proposed a $1 per ton surcharge on waste coming into landfills. In 2002, there were 29 states that had a state-wide surcharge, ranging from less than $1 to $9 per ton. Of the 29 states, 22 have a $1 a ton or higher surcharge.

Representative Hackney said there needs to be a mechanism to address the most serious of the orphan dumps. He recommends making a proposal for funding consideration during the upcoming short session.

Representative Gibson asked if the Branch has determined there are more sites that have not yet been found. Ms. Jesneck replied that they continue to discover about 10 sites a year.

Mr. Givens asked if Branch staff expect the Governor's Budget to include a recommendation for General Fund funding of the Superfund program. Ms. Robin Smith, Assistant Secretary, DENR, commented the department has not developed an expansion budget request on this issue, except by introducing the $1 a ton surcharge for solid waste. The fee would generate about $10 million a year to create a dedicated source of funding for the inactive hazardous sites fund as well as brownfields redevelopment and to address orphan landfills. They are, however, looking for other funding options for the short term.

Representative Gibson recognized Mr. Jack Butler, Chief of the Superfund Section, DWM, DENR, to report on Superfund cost share fund expenditures for cleanup of sites on the National Priorities List (NPL) (see **Exhibit O** for a supporting document summarizing the 10% cost-share fund). He explained the process by which the Section gets the sites and how they respond. When a new site comes into the Superfund Section, it is assessed to see if the Federal Superfund Program is the best option for addressing the site. It so, it goes through a site assessment process, including a hazard ranking score (HRS). If it scores high enough, it can become a candidate for proposal on the NPL. After public comment and finalization it becomes a final NPL site. During the process, EPA does a Potentially Responsible Party (PRP) search, and if it becomes an NPL site, they issue an order to any PRPs, for them to clean up the site. Should no PRPs be found, or if the PRPs are unable to pay for the cleanup,

EPA can access federal Superfund monies to clean up the site. When that happens, they request the state to enter into a Superfund State contract, which commits the state to provide a 10% cost share of the total clean up costs as well as 100% of any eventual Operation and Maintenance (O&M) costs. If groundwater contamination is present at the site, the first 10 years of treatment of ground water is considered part of the remediation, and the federal government pays 90% of O&M costs, with the state paying 10%. EPA says the process of getting funding for Superfund sites is very competitive since funds for clean up are limited. When EPA gets the go ahead for funding of specific sites, and presents a contract to the state, the state has to have their funds available or the contract cannot be signed. If the contract is not signed, EPA loses the 90% money and it reverts. It is very unusual to have a site for which money has been returned be approved at a later time. It is important to maintain a sufficient balance in the account so the state can be ready to participate in any Superfund State contracts.

Mr. Givens asked if Mr. Butler has an estimate of what the clean up of Ward Transformer in Wake County might cost. Mr. Butler replied he does not. At present, the PRPs are paying for clean up activity at the facility itself. Further downstream through Lake Crabtree is an unknown. The PRPs have not agreed to pay for that clean up; however, they may be willing to do so in the future. A big question is also what technology would be used to clean up the site, so the cost of the cleanup is totally unknown at this time. Whether it would be Superfund financed or PRP financed is also not known. If it is Superfund financed, the state cost would be well over the $743,000 remaining in the state matching money for Superfund contracts. The PCBs in Lake Crabtree have been found in lower levels in the lake. It could be that the Lake would be capped as is, or it could be that the lake would have to be dredged and the PCBs disposed of as hazardous waste. If the lake is dredged, it could go into the 10s of millions of dollars for the total cleanup cost.

Representative Gibson recognized Mr. Bruce Nicholson, Brownfields Program Manager, DWM, DENR, for a report on the effectiveness of the Brownfields Property Reuse Act (see **Exhibit P** for a copy of the report, and **Exhibit Q** for a list of project locations by county and a map showing the sites). He used Pilot Mills, a site within a mile of the Legislative Building, as an example. The property had been on the tax rolls as a $200,000 property. It is now completely developed and has a tax value of $12 million. The environmental problem is chlorinated solvents in the groundwater. To make the site safe for reuse, certain areas of the site that contained small amounts of mercury and arsenic were capped. The capped areas have to be maintained as a land use restriction. As an additional safeguard, there cannot be any organized athletic use of any of the fields in the area. If someone were to put the site to a use that negated the land use restrictions, they would be required to clean up the site. There is a requirement in a brownfield agreement that an annual land use restriction update is to be sent to DENR. The remedies made for the brownfield sites are risk-based, so receptors around the site are taken into consideration in determining what needs to be done to make the site available for development. Receptors include wells, surface water bodies, storm sewers that go to surface water bodies, and so forth.

Senator Swindell asked if potential brownfields are catalogued when a plant closes. Mr. Nicholson said that many of the sites coming into the program are textile related. He added that the program works closely with the Department of Commerce as they recruit industry to the sites. The state's largest layoff was the Pillowtex facility in Kannapolis. A brownfields agreement has been applied for that site.

Representative Gibson asked if the time line for approval of sites has improved. Mr. Nicholson replied that the time line has been fairly steady over the years, and is fairly short for someone to gain closure on a site. He said the program has a challenge because of the increasing number of agreements being sought. He added that the federal government provided start up funds for the program, but those funds have now leveled off, requiring more state funds to operate the program. Therefore, fees are being increased as allowed in the statute to offset the costs to the Department of hiring more technical and legal staff for the program.

Representative Hackney commented that developing with brownfield agreements is a way of pushing the cleanup off on a future generation. Mr. Nicholson added that the program does not alleviate the responsible party that contaminated the site from any liability. There are many sites in the program

where a cleanup program is being enforced against a responsible party while there is a buyer who seeks to reuse that property has received a simultaneous brownfield agreement.

Mr. Givens reminded the committee that the next meeting is on February 14, 2006.

The meeting adjourned at 1:20 p.m.

Representative Pryor Gibson, Co-Chair

Schedule of Future Meetings
Meetings of Interested Parties (605 Working Groups)
Additional Information

COMMISSION MEETING – 24 JANUARY 2006:

The Environmental Review Commission (ERC) will meet at 9:30 a.m. Tuesday 24 January 2006 in Room 544 of the Legislative Office Building in Raleigh. With regard to Wednesday 25 January 2006, please see the Local Site Visits section of this notice.

At the 24 January meeting, the Commission will begin or continue studies for which the Commission is responsible, hear reports from State agencies, discuss topics to be considered at future meetings, and attend to other matters. Listed below are potential agenda topics for this meeting. More specific information regarding the agenda for the 24 January meeting of the Commission will be developed at the staffMee planning meeting discussed below.

POSSIBLE AGENDA TOPICS:

Solid and Hazardous Waste Management:

1) Issues related to solid waste, including measures to reduce the amount of solid waste disposed of within North Carolina landfills, statewide tipping fees, bans on the disposal of certain types of waste in landfills, more aggressive recycling requirements, and enhanced regulatory requirements for landfills and other solid waste management facilities

2) Annual report on the Inactive Hazardous Sites Program (G.S. 130A-310.10)

3) Annual report on implementation of the Resident Inspectors Program at commercial hazardous waste facilities (G.S. 130A-295.02(m))

4) Report of Superfund cost share fund expenditures for cleanup of sites on the National Priorities List (S.L. 1999-237(15.6)(b))

5) Annual report on the North Carolina Hazardous Waste Management Plan (G.S. 130A-294(i))

6) Annual report on the Effectiveness of the Brownfields Property Reuse Act (G.S. 130A-310.40)

7) Semiannual report on agency litter enforcement, litter prevention, and litter removal efforts (G.S. 147-12(b))

8) Annual report on the Dry-Cleaning Solvent Cleanup Program (G.S. 143-215.104U)

9) Annual report on the mercury minimization plan prepared by DENR (G.S. 130A-310.57)

10) Measures to reduce the quantity of mercury that is released into the environment that impacts natural resources and that harms the public health of the citizens of the State

11) Issues related to liability for the cleanup of environmental damage and the defenses to liability that are available to innocent landowners and prospective purchasers of contaminated properties

12) Establishment of a consistent and uniform risk-based approach to the assessment, prioritization, and remediation of environmental contamination

13) Discussion of policy alternatives and programs for the management of electronics waste

General/Miscellaneous:

14) Annual report on fish kills within the preceding year (G.S. 143B-279.7(c))

15) Annual report on Basinwide Water Quality Management Plans (G.S. 143-215.8B)

16) Issues related to actions available to governmental agencies to respond to violations and noncompliance by licensed environmental professionals and consultants

17) Other matters related to the Commission's powers and duties under G.S. 120-10.43

LOCAL SITE VISITS – 25 JANUARY 2006:

The Commission will not hold a business meeting on Wednesday 25 January 2006. This date may be utilized, however, for site visits in the Raleigh area or as an alternative meeting date in the event of inclement weather. Further information on the site visits, including transportation arrangements, will be sent to members of the Commission at a later date.

PLANNING MEETING:

To facilitate development of the agenda for the 24 January meeting of the Commission, to plan for subsequent meetings of the Commission, and to receive input from interested persons regarding the work of the Commission, the Commission Counsel will hold an informal planning meeting at **2:00 p.m. on Tuesday 17 January 2006 in Room 605 of the Legislative Office Building**. Persons who wish to participate in the development of the agenda for meetings of the Commission, or who are interested in any matter before the Commission, are invited to attend.

SCHEDULE OF FUTURE MEETINGS:

Below is a schedule of meetings of the Environmental Review Commission for January 2006 through May 2006. This schedule is tentative and subject to adjustment. For planning purposes, however, please reserve these dates. Please note the following:

1. This schedule has been developed in anticipation of the need for at least one full-day business meeting each month to address the regular workload. In addition, it allows for at least two joint meetings with other oversight entities, including the Joint Legislative Commission on Seafood and Aquaculture, the Joint Legislative Transportation Oversight Committee, and the Joint

Legislative Utility Review Committee. It includes enough days to allow for the possibility of one or more optional field trips and for cancellations as a result of hazardous weather conditions.

2. Commission meetings normally begin at 9:30 a.m., include a lunch break, and run until mid-afternoon. Please plan on meeting from 9:30 a.m. until at least 3:30 p.m. Unless otherwise announced, the Commission will meet in room 544 LOB.

3. To facilitate development of the agenda for meetings of the Commission and to receive input from interested persons regarding the future work of the Commission, the Commission Counsel holds informal planning meetings for staff and interested parties. Commission members are not expected to attend these meetings. Only one staff planning meeting is scheduled per month, regardless of the number of scheduled meetings of the Commission. Unless otherwise announced, public staff planning meetings will be held in room 605 LOB.

4. The 2006 Regular Session is scheduled to begin at 12:00 noon on Wednesday 9 May 2006. The Commission may meet shortly after the beginning of the session to complete work and to consider any legislative proposals and recommendations.

Commission Meeting	**Staff Planning Meeting**
Tuesday 24 January 2006	2:00 p.m. Tuesday 17 January 2006
Tuesday 14 and Wednesday 15 February 2006	***2:00 p.m. Monday 6 February 2006*** *(Please note change in date and time)*
Tuesday 14 and Wednesday 15 March 2006	10:00 a.m. Friday 3 March 2006
Tuesday 11 and Wednesday 12 April 2006	2:00 p.m. Monday 3 April 2006
Wednesday 3 May 2006	10:00 a.m. Thursday 27 April 2006
Monday 8 May 2006	

MEETINGS OF INTERESTED PARTIES (605 WORKING GROUPS):

The Commission Counsel will hold meetings of interested parties on specific topics as indicated below:

Risk-Based/Limit Liability for Environmental Cleanups Working Group
- 2:00 p.m. Thursday 26 January 2006 – 605 Legislative Office Building
- 2:00 p.m. Monday 13 February 2006 – 605 Legislative Office Building
- 2:00 p.m. Monday 6 March 2006 – 605 Legislative Office Building

ADDITIONAL INFORMATION:

If you have questions related to the Commission, please feel free to contact the Commission Counsel or other Commission staff at (919) 733-2578.

AGENDA
9:30 a.m. Tuesday 24 January 2006
Room 544 Legislative Office Building

1. Call to order
   Representative Pryor A. Gibson, Presiding

2. Introductory remarks by Cochairs
   Representative Pryor A. Gibson
   Senator Charles W. Albertson
   Senator Daniel G. Clodfelter

3. Report to the Commission and explanation of agenda items
   George F. Givens, Commission Counsel

4. Discussion of a proposed study of the costs and benefits of a renewable energy portfolio standard
   James Y. Kerr, II, Commissioner
   North Carolina Utilities Commission

5. Discussion of measures to reduce the amount of solid waste disposed of within North Carolina landfills, bans on the disposal of certain types of waste in landfills, and more aggressive recycling requirements
   Scott B. Mouw, Chief
   Community and Business Assistance Section, Division of Pollution Prevention and Environmental Assistance (DPPEA), Department of Environment and Natural Resources (DENR)

6. Annual report on the status of solid waste management efforts (G.S. 130A-309.06(c))
   Paul S. Crissman, Head
   Planning and Program Management Branch, Solid Waste Section, Division of Waste Management (DWM), DENR

7. Discussion of permitting requirements and proposed rules related to solid waste management
   Edward F. Mussler, Supervisor
   Solid Waste Permitting Branch, DWM, DENR

8. Discussion of technical and economic issues associated with the development and operation of new solid waste landfills
   Murray K. Griffin, President and CEO
   Atlantic Coast Consulting, Inc.,
   Atlanta, Georgia

9. Discussion of legal issues concerning the disposal of solid waste, including landfill franchise issues and the importation of out-of-state waste
   Richard B. Whisnant, Associate Professor of Public Law and Government
   UNC School of Government

   Nancy E. Scott, Assistant Attorney General
   Environmental Division, North Carolina Department of Justice

10. Discussion of policy alternatives and programs for the management of electronics waste
    Scott B. Mouw, Chief
    Community and Business Assistance Section, DPPEA, DENR

11. Report of Superfund cost share fund expenditures for cleanup of sites on the National Priorities List (S.L. 1999-237(15.6)(b))
    Jack R. Butler, Chief
    Superfund Section, DWM, DENR

12. Annual report on the Inactive Hazardous Sites Program (G.S. 130A-310.10)
    Charlotte V. Jesneck, Head
    Inactive Hazardous Sites Branch, Superfund Section, DWM, DENR

13. Annual report on the Effectiveness of the Brownfields Property Reuse Act (G.S. 130A-310.40)
    Bruce I. Nicholson, Brownfields Program Manager
    DWM, DENR

14. Commission discussion and announcements

15. Adjourn

SCHEDULE OF FUTURE MEETINGS:

Below is a schedule of meetings of the Commission for February 2006 through May 2006. This schedule provides for two-day meetings in February, March, and April. Two days have been reserved in these months because it may be necessary or desirable to have a two-day meeting to accommodate the workload and to allow for the possible scheduling of joint meetings with other committees and commissions. This also allows for the possibility of one or more out of town meetings that could include field trips or site visits on one of the two days. This schedule is tentative and subject to adjustment.

To facilitate development of the agenda for meetings of the Commission and to receive input from interested persons regarding the future work of the Commission, the Commission Counsel holds informal planning meetings for staff and interested parties. The schedule of these public Commission staff planning meetings is also set out below.

9:30 a.m. Tuesday 14 February and 9:30 a.m. Wednesday 15 February 2006
Location: 544 LOB / To be determined
Staff Planning Meeting: 2:00 p.m. Monday 6 February 2006 – 605 LOB

9:30 a.m. Tuesday 14 March and 9:30 a.m. Wednesday 15 March 2006
Location: 544 LOB / To be determined
Staff Planning Meeting: 10:00 a.m. Thursday 2 March 2006 – 605 LOB

Tuesday 11 April and Wednesday 12 April 2006
Location: 544 LOB / To be determined
Staff Planning Meeting: 2:00 p.m. Monday 3 April 2006 – 605 LOB

Wednesday 3 May 2006
Location: 544 LOB
Staff Planning Meeting: 10:00 a.m. Thursday 27 April 2006 – 605 LOB (This meeting will also serve as the Commission staff planning meeting for the Commission meeting scheduled for 8 May 2006.)

Monday 8 May 2006
Location: 544 LOB

OTHER MEETINGS:

The Commission Counsel will hold meetings of interested parties on specific topics as indicated below:

Risk-Based/Limit Liability for Environmental Cleanups Working Group (HB 1778/HB 1099/SB 1121)

2:00 p.m. Thursday 26 January 2006 – 605 Legislative Office Building
2:00 p.m. Monday 13 February 2006 – 605 Legislative Office Building
2:00 p.m. Monday 6 March 2006 – 605 Legislative Office Building

RESIDENT INSPECTOR PROGRAM
2005 ANNUAL REPORT

This annual report is presented to the Joint Legislative Commission on Governmental Operations and the Environmental Review Commission pursuant to Article 9, G.S. 130A-295.02(m). The report covers the activities of the Resident Inspector Program from July 1, 2004 through June 30, 2005.

I. OVERVIEW

The Resident Inspector Program has been operating for more than 14 years in the Division of Waste Management. This program monitors all aspects of the commercial hazardous waste facilities in North Carolina and assures compliance with all laws and rules administered by the Department of Environment and Natural Resources. It may also enforce laws or rules administered by any other state agency through a memorandum of agreement.

The Resident Inspector Program was established "... to enhance the ability of the Department to protect the public health and the environment by providing the Department with the authority and resources necessary to maintain a rigorous inspection and enforcement program at commercial hazardous waste facilities" [G.S. 130A-295.02(f)].

II. PROGRAM STAFFING

For this fiscal year, the program was comprised of two resident inspectors assigned to home duty stations, one administrative assistant and a program supervisor (See Attachment 1 for the Organization Chart). The Resident Inspector Program resides within the Hazardous Waste Section's Compliance Branch.

III. THE RESIDENT INSPECTOR

Most state agencies perform their compliance monitoring inspections as required from their specific respective regulations. The Resident Inspector Program, however, is unique in that its inspections utilize a multi-media approach. This approach covers all regulatory responsibilities for which DENR is authorized, such as hazardous waste management and treatment requirements, workplace safety, air emissions requirements, wastewater treatment and discharge requirements, etc.

There are inherent overlaps of DENR's regulatory requirements with regulations administered by other departments. Two examples include the Department of Labor's Occupational Safety & Health Act and the Department of Transportation's hazardous materials transportation regulations. Deviations from these various departments' regulations could adversely affect public health and the environment, as well as a facility's compliance with air, water or hazardous waste management regulations. As part of the Resident Inspector Program's comprehensive approach to monitoring commercial hazardous waste facilities, resident inspectors also evaluate these sites for potential violations in these other regulatory areas. When necessary, they make recommendations to the facilities and/or make referrals to the authorized agency or agencies. The mandated frequency of inspection at each facility gives resident inspectors the time needed to achieve this high degree of oversight.

To prepare resident inspectors for their multimedia approach to inspections, initial training typically consists of Hazardous Waste Operations and Emergency Response (40 hours), Environmental Surveillance, RCRA Hazardous Waste Training, Hazardous Materials Transportation and the care and use of Level B / Personal Protective Equipment.

Annual training for resident inspectors includes an 8-hour Health & Safety Basic Refresher, Level B Update and Environmental Surveillance Update. Depending upon the inspector's area of expertise and responsibility, other miscellaneous training may be received, including Hazardous Waste Incineration, Ambient Air Monitoring, Air Pollution Control Devices, Chemical Safety Audit, OSHA Inspector's Course, Hazardous Materials Management and various EPA regulatory workshops.

IV. SUBJECT FACILITIES

To be subject to oversight by the Resident Inspector Program, the facility must be a commercial hazardous waste facility. The term "commercial," as it relates to a hazardous waste facility, is defined as a facility " ... that accepts hazardous waste from the general public or another person for a fee" [G.S. 130A-290(a)(3)]. Presently, 11 permitted commercial hazardous waste treatment, storage, and disposal facilities in North Carolina are under the jurisdiction of the Resident Inspector Program. In September 2004, the permitted treatment, storage and disposal facility, Giant Resource Recovery, completed RCRA closure for all hazardous waste operations at the Stanly County location. The Carolina Solite facility (owned by the Giant Resource Recovery) continues to operate the light weight aggregate kilns using "used oil" as a fuel and continues to be monitored by the Division of Air Quality. With the RCRA closure of this facility, it is no longer considered a commercial hazardous waste treatment, storage or disposal facility and therefore not inspected under the Resident Inspector Program. The permitted treatment, storage and disposal facility, Heritage Environmental Services, (one of four commercial permitted treatment, storage and disposal facilities located in Mecklenburg County),continues with suspended operations during a corporate economic evaluation. Although not currently treating, storing or disposing of hazardous waste at the Charlotte facility, Heritage Environmental Services continues to provide disposal services for their North Carolina customers, using this Charlotte facility as a transfer station. As the RCRA Part 'B' TSDF permit is still valid, this facility continues to be monitored by the Resident Inspector Program.

V. FACILITY CATEGORY RANKINGS

Each commercial hazardous waste treatment, storage and disposal facility is ranked to determine its required inspection fees and minimum inspection frequency as required under 15A NCAC 13A .0116.

The frequency of the inspections at each facility is dependent upon its qualification as a "special purpose" commercial hazardous waste facility and the category ranking assigned to it. Currently, all existing commercial hazardous waste treatment, storage and disposal facilities in North Carolina qualify as "special purpose" facilities. (See Attachment 2 for current category rankings and primary waste treatment activities for these facilities.) The designated categories of 1, 2 or 3 correspond to a minimum inspection frequency of two, four or six times per month, respectively.

VI. FUNDING & EXPENSES

The Resident Inspector Program is funded by fees collected from the commercial hazardous waste facilities. These fees are based upon each facility's category ranking and volume (tons) of hazardous waste handled. The category ranking system is designed to be an indirect measure of the costs associated with the oversight at each commercial hazardous waste facility. While the commercial hazardous waste facilities' total tonnage output has increased this year to pre "9/11" levels, yielding increased program fees, program operating expenses have increased due to transportation / fuel costs. However, program costs were reduced due to a 75% turnover in personnel, which caused a savings to the salary budget during the re-staffing period (lapse in personnel coverage). This savings was partially offset by the cost incurred for the vacancy re-staffing and training of new personnel. The turnover has been caused by the program's inability to keep and attract skilled competent staff with sufficient compensation in today's job market. Due to the periodic loss of personnel, it remains necessary for the Resident Inspector Program supervisor to conduct a greater portion of the required inspections to meet the program's minimum mandates.

For FY 2004-2005, the budget was developed using anticipated revenues from Resident Inspector Program fees of approximately $275,000. The actual hazardous waste tonnage received by two of the commercial facilities greatly increased over the previous year, while all other facilities remained relatively unchanged. (A detailed list of the individual tonnages received by each of the commercial hazardous waste facilities in FY 2004-2005 can be found in Attachment 3.) The actual Program receipts in FY 2004-2005 totaled $287,036, while Program expenses for the year were held to $247,272.

VII. INSPECTION GOALS & ACHIEVEMENT

During FY 2004-2005, for the periods when the program was fully staffed additional inspections were conducted. The 469 inspections exceeded the required minimum of 438 inspections. These inspections included routine site inspections as well as specific inspections to monitor closure activities at one facility and temporary suspension of normal operation at another facility, and to assist in improving compliance performance by other facilities. (A detailed list of the inspections performed by program staff at the commercial hazardous waste facilities in FY 2004-2005 can be found in Attachment 4.)

VIII. ENFORCEMENT & COMPLIANCE

Enforcement Activities

In general, the commercial hazardous waste facilities continue to be cooperative and have rapidly responded with corrective action in most cases when deficiencies or violations were cited or recommendations made. When either of these actions do not result in timely and consistent

compliance, a more severe enforcement action is taken, such as, a compliance order with administrative penalty.

During the past fiscal year, resident inspectors issued one Notice of Violation to a commercial facility (see Attachment 5 for current and historic enforcement tracking). This Notice of Violation, when compared to the actual number of inspections, translates to an overall compliance rate of 99.8 percent.

Compliance Assistance Activities & Homeland Security

Compliance assistance activities offered under this program are conducted routinely during the inspectors' site visits. Since the inspectors are at these facilities at least semi-monthly, they have the opportunity to become very familiar with the operations of each facility and may offer compliance assistance in several ways. Inspectors identify past trouble areas and work with the facility toward a permanent solution. They also increase scrutiny of these areas during each visit to keep the facility's compliance awareness high. Inspectors communicate frequently with facility management and front-line workers to clarify the permit and current regulatory requirements, the reasons for the requirements, and the potential risks incurred for noncompliance. Inspectors continue to develop and schedule and facilitate roundtable training workshops customized for each specific facility. These workshops cover the most frequent violations observed overall at commercial facilities, the most frequent violations observed at their particular facility, any potential areas of concern and positive facility operations.

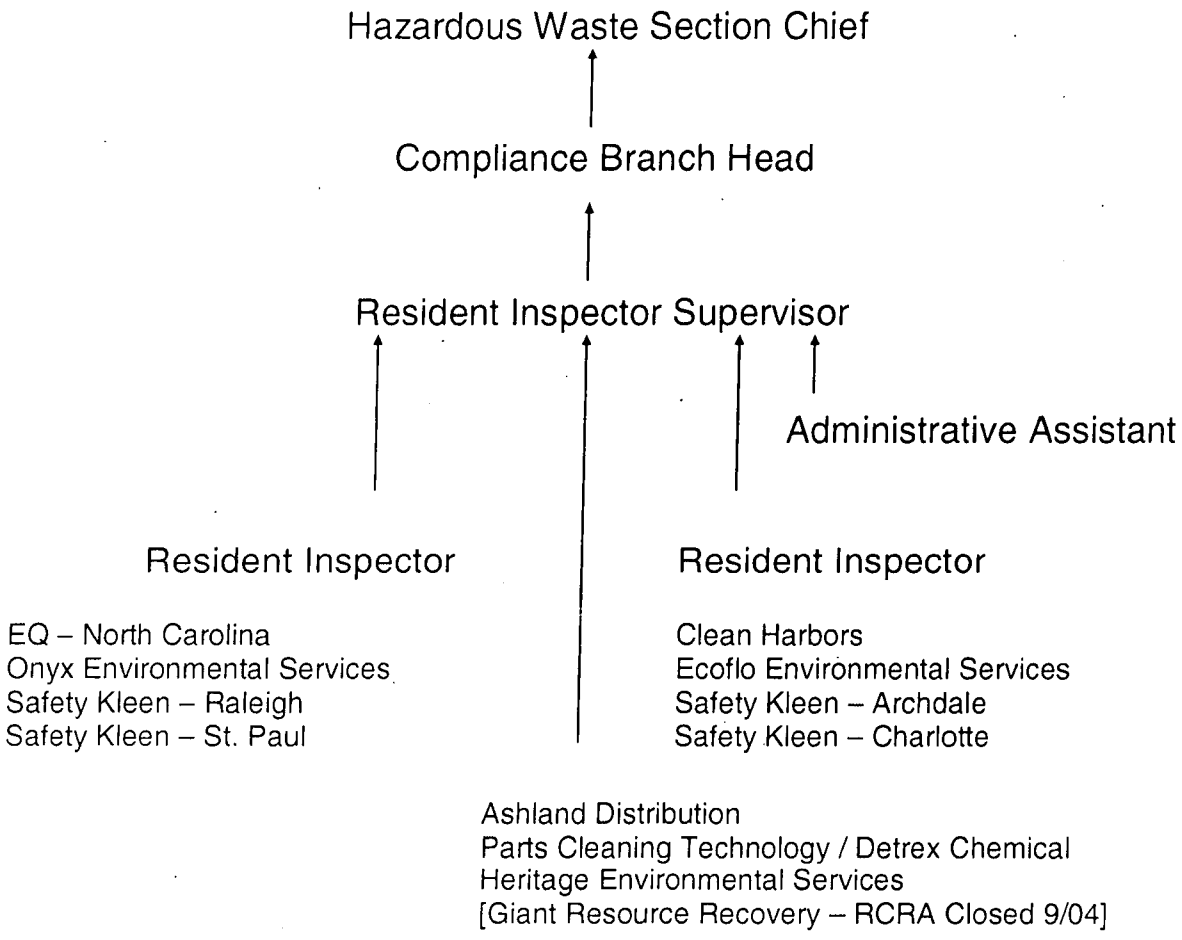
If a facility repeats a violation, the primary inspector and program supervisor will set up an informal enforcement conference with the local facility compliance managers, the plant manager, and, if applicable, the corporate compliance officers. They discuss the facility's current compliance issues and work with the facility to find a permanent solution, which may include formal enforcement.

IX. PUBLIC MEETINGS / HEARINGS & PERMIT RENEWALS

Resident Inspector Program staff continues to observe and assist/support public meetings/hearings that involve the operation of and proposed modifications to the commercial hazardous waste facilities in this state. A continuing program goal is for the staff to be fully aware of public concerns and to be conscious of these concerns during oversight efforts at these facilities. Program staff have provided assistance in facility compliance audits by generators, consultants, other agencies and the public. Program staff work with area schools to provide information in the classroom about environmental responsibility and how the facilities help with that responsibility.

The Resident Inspector Program staff continue to work with the Facility Management Branch (the permitting arm of the Hazardous Waste Section) and each commercial hazardous waste facility during the permit renewal/application process and other compliance reviews, such as , closure of a permitted unit (storage tank, processing area, container storage area, etc.). The purpose of this joint effort is to provide clarification, address areas of concern, and assist in ensuring the permit application accurately reflects the facility as it is operated.

X. SUMMARY



At the conclusion of the program's 14th year, Resident Inspector staff continue to provide rigorous oversight of the commercial hazardous waste facilities in this state. This is reflected in the facilities' overall compliance rate of 99.8 percent. Staff constantly seek new approaches and initiatives to

improve the department's ability to protect public health and the environment. Staff also work to ensure that new regulatory requirements are fully understood by the facilities so they can be implemented rapidly and correctly. Proactive approaches, such as workshops, program oversight and compliance assistance efforts, have clearly demonstrated a heightened level of compliance at the commercial hazardous waste facilities in North Carolina.

INTRODUCTION

The State of North Carolina requires that the Department of Environment and Natural Resources (DENR) develop a comprehensive hazardous waste management plan every two years. The first plan was completed on July 1, 1990; the latest plan was completed in 2004. Beginning October 1, 2003, N.C.G.S. 130A-294(i) required DENR to make an annual report on the hazardous waste management plan. This report includes an evaluation of hazardous waste management in North Carolina and identifies DENR's activities and recommendations in the following areas: improving waste management; cleaning up of hazardous waste; reducing the amount of waste generated; minimizing the amount of hazardous waste which must be disposed of; and maximizing resource recovery, reuse and conservation.

NORTH CAROLINA HAZARDOUS WASTE PROGRAM

The North Carolina Hazardous Waste program is administered by the Hazardous Waste Section within DENR's Division of Waste Management. A combination of federal and state resources support a staff of 55 people who implement the state's federally-authorized regulatory program, based on the federal Resource Conservation and Recovery Act (RCRA). The activities of the Hazardous Waste Section include:

- Regulating the management of hazardous waste by generators, transporters, treaters, storers, and disposers;
- Issuing and maintaining permits that specify requirements that each hazardous waste treatment, storage or disposal facility must meet;
- Conducting compliance inspections and, in cooperation with the North Carolina Attorney General's Office, taking appropriate enforcement action against violators;
- Requiring groundwater assessments, facility investigations and corrective measures at facilities where hazardous wastes have previously been released into the environment;
- Ensuring environmental protection through emergency response and site cleanup;
- Educating the public and the hazardous waste community on the requirements for managing hazardous waste by providing technical assistance through individual consultations and seminars;
- Protecting public health and the environment by encouraging waste reduction, sound recycling methods, safe management practices and proper disposal as a last resort; and
- Ensuring staff receives continuing training to implement their responsibilities.

HAZARDOUS WASTE GENERATION, MANAGEMENT AND CLEANUP

In 2003, the latest date for which complete information is available, 440 North Carolina large quantity generators (LQGs) reported that 63,615 tons of hazardous waste was generated. Of the 440 LQGs, the top 10 generating facilities produced 43,610 tons, or 69 percent, of the total quantity of hazardous waste generated in North Carolina.

In 2003, 40 North Carolina treatment, storage or disposal facilities (TSDFs) reported they managed 20,031 tons of hazardous waste through treatment, storage or disposal. Of the 40

TSDFs, the top 10 facilities managed 19,312 tons, or 96 percent, of the total hazardous waste managed in North Carolina. Common hazardous waste management methods include solvent recovery, incineration, fuel blending, energy recovery, sludge treatment, waste stabilization and metals recovery. Although only LQGs and TSDFs are required to report their hazardous waste generation and management quantities to DENR, it is important to note that there are also 1,775 small quantity generators (SQGs) and 4,374 conditionally exempt small quantity generators (CESQGs) currently known to be located in North Carolina.

Inspection and enforcement activities by the Hazardous Waste Section from October 2004 to September 2005 resulted in the prevention or mitigation of potentially significant adverse human health and environmental effects. As a direct result of these activities, more than 4,000 tons of hazardous solid wastes and 29,000 gallons of liquid hazardous wastes were either remediated or brought into compliance with management requirements. These actions have prevented more than 4,500 individuals who lived or worked in proximity to these materials from being potentially adversely affected by the mismanagement of hazardous waste.

North Carolina has 35 facilities in the hazardous waste permitting universe and 55 facilities in the post-closure monitoring universe. Approximately 99 percent of these facilities are permitted, under an administrative order or under another approved control mechanism for management and/or remediation of their hazardous waste. There are 109 facilities that are subject to site-wide Corrective Action. Progress in the Corrective Action Program is tracked through environmental indicators that address measurable environmental outcomes. Currently, 100 percent of high priority corrective action sites have human exposures to contamination under control, and 82 percent of high priority corrective action sites have migration of contaminated groundwater under control.

NORTH CAROLINA HAZARDOUS WASTE REDUCTION INITIATIVES

A. North Carolina's Commitment To Waste Minimization

The Hazardous Waste Section has taken the following actions with respect to Waste Minimization:

- Incorporated general pollution prevention training into annual generator workshops, industry meetings and enforcement settlement negotiations;
- Reviewed facility requests for alternative uses of hazardous waste (use/reuse, substitution, reclassification and delistings);
- Conducted inspections that include monitoring facility compliance with Land Ban/Land Disposal restrictions, air emission rules, universal waste requirements and used oil regulations. These regulations are all designed to reduce exposures and encourage recycling.
- Initiated a program to encourage the state's largest emitters of toxic compounds to reduce generation of wastes containing toxic materials, focusing primarily on wastes containing lead.

B. Environmental Stewardship Initiative

DENR's Environmental Stewardship Initiative, implemented by the Division of Pollution Prevention and Environmental Assistance (DPPEA) promotes and encourages superior environmental performance by North Carolina's regulated community. This voluntary program stimulates the development and implementation of programs that use pollution prevention and innovative approaches to meet and exceed regulatory requirements. There are three levels of participation. "Environmental Partners" is for organizations interested in developing a systematic approach to improving their environmental performance. The "Rising Steward" level is designed for those organizations that have a mature environmental management program. The "Environmental Steward" level is for organizations that already display a commitment to exemplary environmental performance beyond what is required by law. All participants must set environmental performance goals that include pollution prevention and are required to report annually on progress towards these goals and net pollution reductions.

This important program not only recognizes outstanding environmental performance at the "Steward" level, but provides encouragement and assistance, fostering improved environmental performance, to North Carolina organizations. Coaches (technical staff) are assigned to each participant to provide technical assistance on pollution prevention and developing an environmental management system. Networking opportunities allow participants to learn from each other and share success stories. This program seeks to reduce the impact on the environment beyond measures required by any permit or rule, producing a better environment, conserving natural resources and resulting in long-term economic benefits.

C. Other Activities

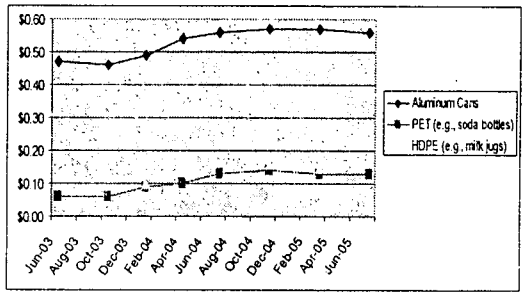
In addition to continuing its work with the U.S. Environmental Protection Agency (EPA) and other DENR agencies on waste reduction initiatives, HWS has also accomplished the following:

- Received the necessary federal authorization updates for the Hazardous Waste Section from EPA in order to continue implementation of existing laws and regulations for the comprehensive management of hazardous waste and to receive federal funding.
- Began implementation of the Mercury Switch Removal Program enacted by the General Assembly during its 2005 session.
- Continued to improve the data management program, so that information on hazardous waste generation, management and enforcement will be available to the Department, the regulated community and the public for sound decision-making and hazardous waste trend analysis.
- Conducted four generator workshops in May 2005. These workshops aid in educating generators on hazardous waste regulations, expectations of hazardous waste inspectors, and pollution prevention opportunities. Also participated in other events such as the Manufacturers and Chemical Industry Council's annual Environmental and Safety Conference.
- Continued an initiative that was started in 2002 to target the vast Small Quantity Generator (SQG) universe through the use of a SQG self-certification compliance form. Data collected has been reviewed to identify management trends and help identify educational needs of SQGs.

- Pursued funds for environmental cleanup from several companies in bankruptcy in order to ensure protection of human health and the environment.
- Re-established the pilot project on Community-Based Environmental Protection which encourages business-to-business information exchange on waste management and waste reduction focusing on SQGs and Conditionally Exempt Small Quantity Generators (CESQG)s.
- Established a committee with DPPEA to identify North Carolina waste generation trends and mutual waste management goals and objectives.
- Developed innovative regulatory strategies to allow commercial re-development of hazardous waste sites under the Brownfields program while still meeting statutory and regulatory mandates for protection of human health and the environment.

FUTURE TRENDS AND RECOMMENDATIONS

Major priorities for the Hazardous Waste Program for the coming year include moving Corrective Action sites toward selection and implementation of final remedy, which includes placing all sites under an appropriate regulatory mechanism to achieve remediation; ensuring that financial assurance for investigation and remediation is in place; and maintaining an aggressive compliance and enforcement program. The Hazardous Waste Section will also continue to implement all of the other elements of the program, which include permitting, data management, emergency response, generator cleanups, rulemaking and state authorization, technical assistance, and other activities.

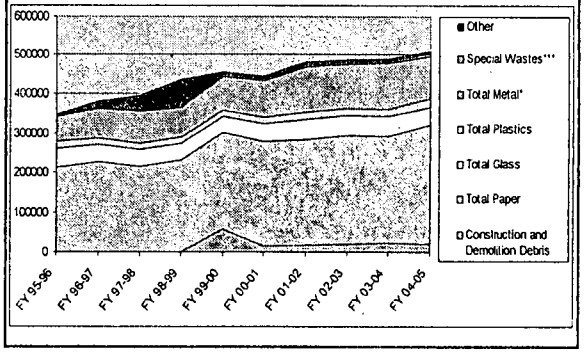


North Carolina can expect a tightening of federal resources allocated to the state for the purpose of hazardous waste management, because of high federal budget deficits and competing federal funding priorities, including hurricane recovery and homeland security. This may require that state resources contribute a more substantial share of support in order to maintain the current level of environmental and human health protection provided by the program. Alternative sources of funding will also need to be investigated, including reimbursement of enforcement investigative costs; hazardous waste generator security deposits, or generator bonds, to fund cleanup of abandoned facilities; and an increased reliance on hazardous waste activity and tonnage fees and/or state appropriations.

EXHIBIT F

Recycling Markets

- Robust demand for recyclable materials
- Export markets increasingly absorbing materials
- Prices for materials sustained at above-average rates in recent years
- Markets need more recyclables



Price increases for aluminum and plastic

City and County Recycling Efforts

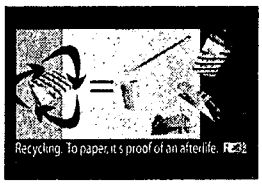
- Small, incremental growth each year
- Many programs outdated:
  - low participation
  - collecting only basic materials
- Local inefficiency causing a few programs to be cut.
- Best run programs show that cost-per-ton to recycle is as good or better than cost-per-ton for disposal.
- All indications are that local governments can and should collect more recyclables.

Local Recycling Efforts (in tons)

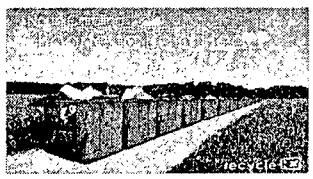
Increasing Recycling:
Example of SW Trust Fund Grant Projects

- $25,000 to increase C&D recycling in New Hanover County
- $19,400 to expand Kernersville's residential recycling program
- $10,000 to Surry County to increase cardboard recycling efforts
- $10,727 to improve Greensboro's commercial recycling program
- $15,000 to computer recycler in Charlotte to increase capacity
- $15,000 to pallet recycler in Rocky Mount to raise tonnage throughput.
- $28,000 to composter in Chatham County to process more wood, pallets, gypsum, and other organics.
- Grant requests not met in FY 05:
  - $1.5 million in requests vs. $600,000 awarded

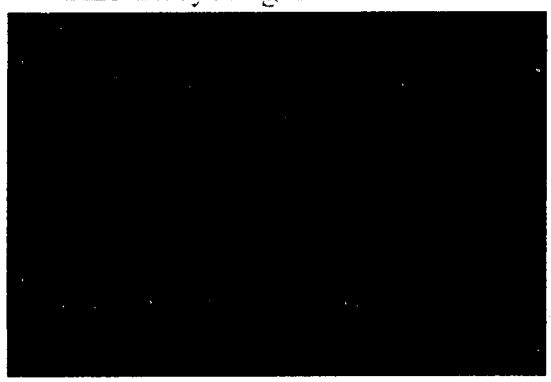
Increasing public recycling participation:
North Carolina's outreach programs



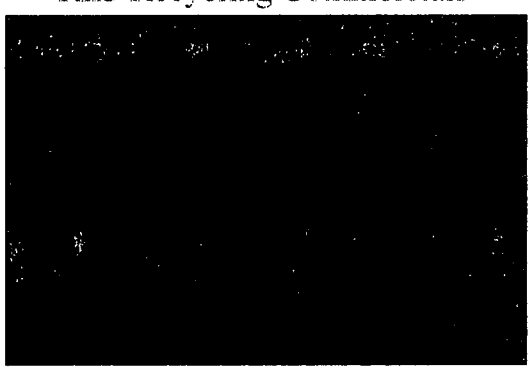
- Two main outreach efforts:



- Materials and training provided to local governments.
- Partnerships with local governments and other parties.
- TV-based campaigns with other media support: cinema ads, radio, etc.
- Programs starting to increase public commitment to recycling.

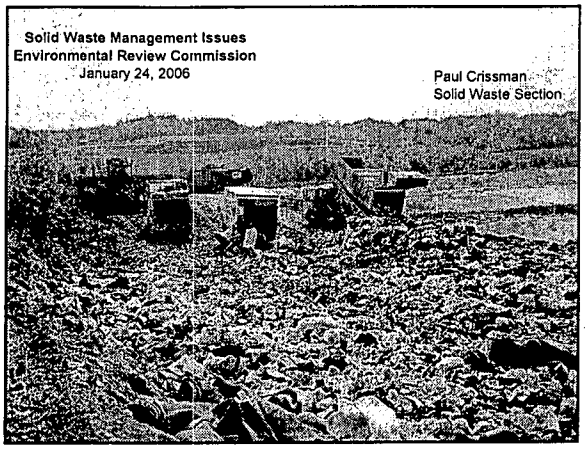


Examples of Cinema and Truck Ads

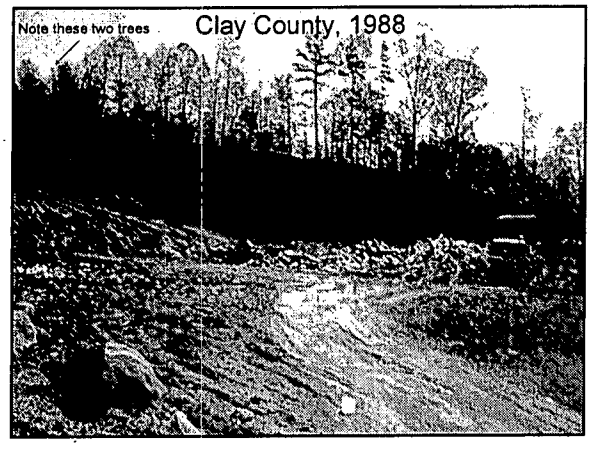


RE3 Recycling Commercials

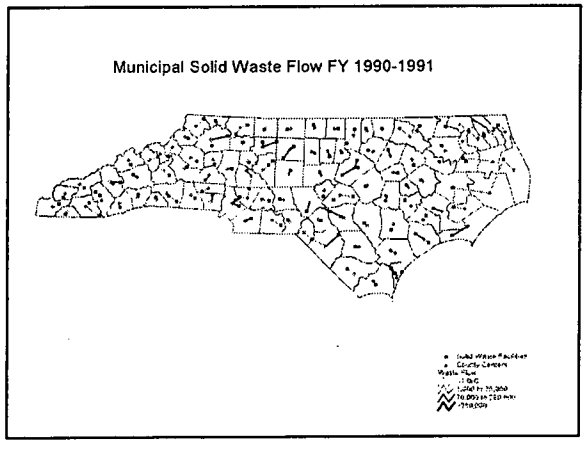
RE3 Recycling Commercials



General Issues



- Local governments can improve performance, but some face fiscal constraints
- Disposal bans and ABC bill passed in 2005 will increase diversion:
  - bans on pallets, oil filters, plastic bottles, and oyster shells effective October 2009
  - ABC license holders begin recycling beverage container January 2008
- Some materials are growing in volume and are in need of attention: e.g., electronics
- Recycling markets all want more materials, with opportunities for job creation and business growth.



Recyclables in the Disposed Waste Stream

- 87,000 tons of plastic bottles
- 50,000 tons of electronics
- 700,000 tons of wood and pallets
- 1.5 million tons of recyclable paper
- 200,000 tons of glass bottles
- 95,000 tons of aluminum and steel cans
- 300,000 tons of wallboard
- 1.2 million tons of food waste

  .9 million tons/year, source - east coast

Solid Waste in North Carolina
The future:

More of the same

(Probably continue to have more and more waste)

Yet very different

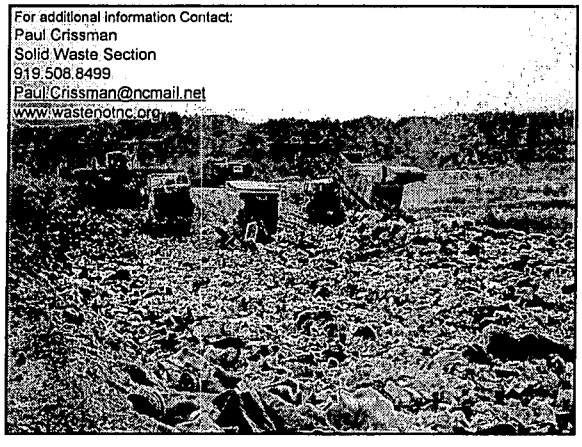
(Probably become one of the nation's leading importers of waste)

Options

Do Nothing

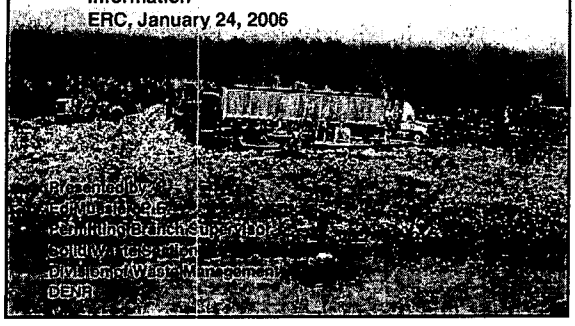
Institute a tipping fee

Ban certain materials (i.e..clean wood, cardboard)



Institute advance disposal fees (i.e. electronics)

Require program activity (i.e. recovery targets)



Five Goals Identified in the State Planning Process

- By 2010, **improve landfill technology** to secure long term protection of the environment
- By 2010, a **larger portion** of solid waste will be managed by **recycling and composting** than disposal in landfills.
- By 2010, **litter and illegal disposal shall be reduced** by 50% from 2000-2001 levels.
- By 2010, implement a **public participation** and public education program for new proposed solid waste management facilities, and existing and closed solid waste management facilities.
- By 2010 the State of North Carolina will have **adequate capacity** to manage solid waste that requires landfill disposal.

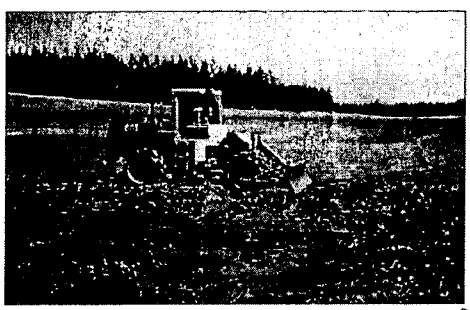
Solid Waste Management Permit Issues and Information
ERC, January 24, 2006

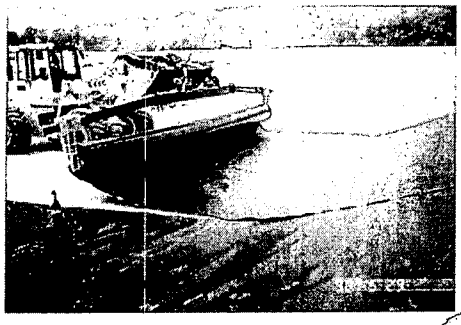
Presentation Objectives

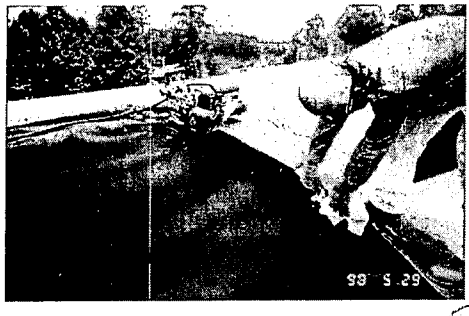
- Lined Landfill Components
- Permit Process
- Update on Large Projects
- Update on proposed Construction and Demolition Debris Rules

Modern Municipal Solid Waste Landfill



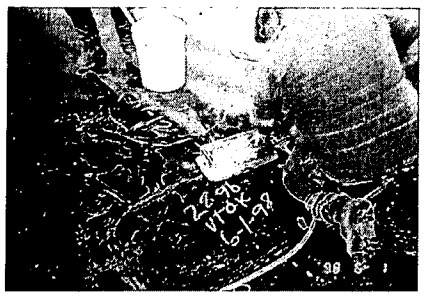
MUNICIPAL SOLID WASTE LANDFILL CONSTRUCTION



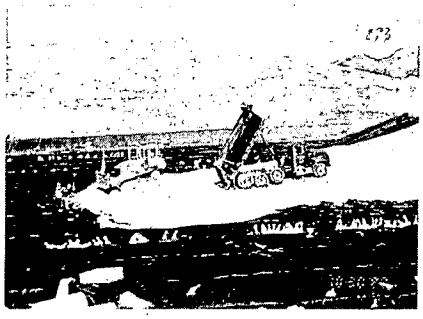


Clay Liner

Compactive Effort

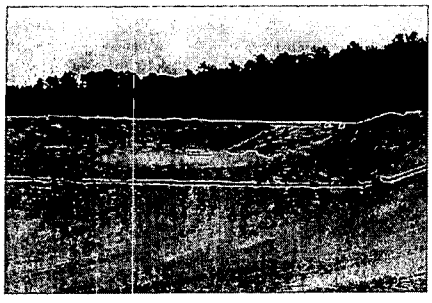


HDPE Deployment

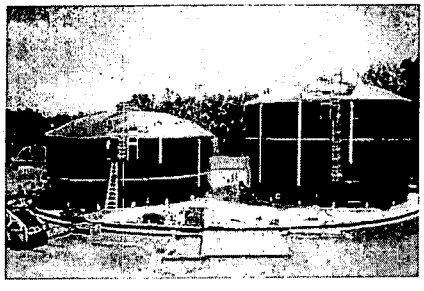


Fusion Welding

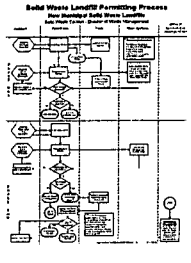
Seam Testing - Air Pressure



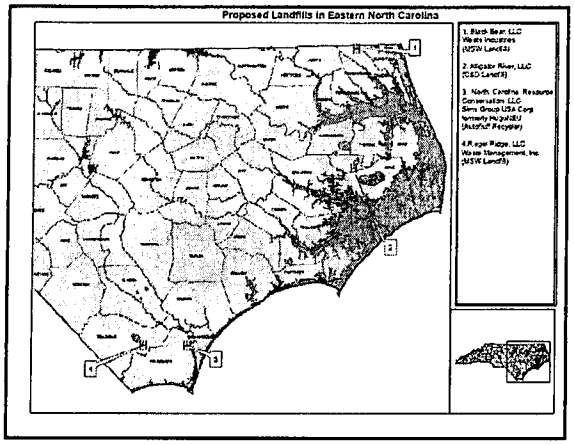
Seam Testing - Vacuum



Leachate Collection - Granular Drainage and Protective Layer

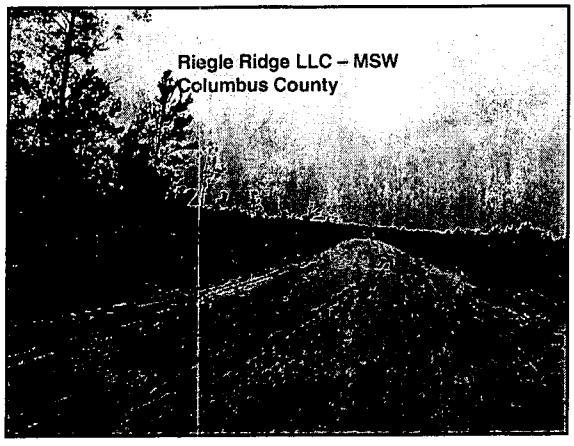


Leachate Collection Pipe Trench



Sump and Riser

Leachate Storage Tanks

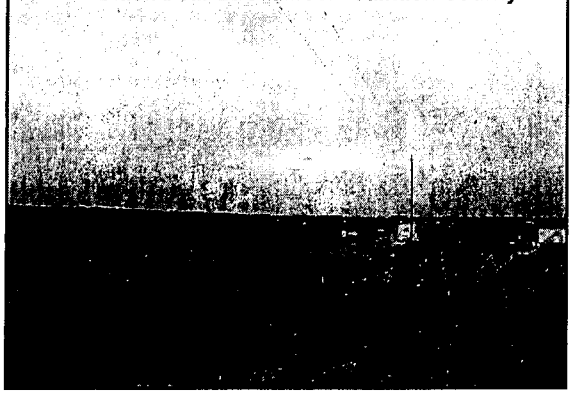


Riegel Ridge LLC- MSW

- Location- Columbus County
- Parent Company- Waste Management of the Carolinas, (Waste Management Inc.)
- 107 acre footprint, 20 year life
- 1500 tons per day
- Service area- 25 NC and 15 SC counties

Riegel Ridge Continued..

- Under Review for several years
- Section conducting compliance audit
- Awaiting wetlands permit from the Army Corps of Engineers
- Major technical and permitting issues satisfied for site study
- Site Suitability Letter to follow in the near future



Black Bear LLC, MSW

- Location- Camden County, on US 17 south of the VA state line
- Parent- Waste Industries USA Inc.
- 490 acre footprint, 30 year life
- 10,000 tons per day
- Service area, East of I-75
- Anticipate barge waste to Norfolk and truck down US 17.

Black Bear LLC Continued

- Submitted in October of 2004
- Under Review
- Waste Industries will be a party to the permit, financial qualifications reasons
- Not yet officially on the application
- Need compliance audit
- Subject to legal action from City of Chesapeake, Va.

Black Bear LLC – MSW- Camden County

Alligator River Recycling LLC

Construction and Demolition Debris

Recycling and Treatment and Processing Facility with a Landfill

- Location- Hyde County, on the Intercoastal Waterway between the Alligator and Pungo Rivers
- 100 Acre Footprint, 3000 tons per day
- Service area- East of I-75
- Barge facility with recycling
- Company permitting barge facilities in Delaware and possibly Massachusetts.

Alligator River LLC Continued

- Currently under review
- Business structure being determined so that financial qualifications can be evaluated
- Needs compliance audit
- Barge facility undergoing Environmental Impact Assessment process for the Corps and CAMA
- Early in the permit process

North Carolina Resource Conservation and Recovery LLC

Industrial Treatment, Processing and Storage Unit for ASR (Auto Shredder Residue)

- Location- Navassa, Brunswick County
- Parent – Sims Group USA Corp, formerly Hugo Neu
- 5000 tons per day for processing
- USA service area

NCRCR LLC Continued

- Sims recently acquired Hugo Neu
- Financial Qualifications and compliance audit to be performed
- Company working on wetland permits
- Preliminary hydrogeologic investigation underway.
- Navassa has confirmed the franchise and agreed to Sims being a party to the permit

Solid Waste Rulemaking - Construction and Demolition Debris Proposed Rules

15 A NCAC 13B .0531-.0547

- Rules for Construction and Demolition Debris proposed (Feb 15, 2006 publication in NC Register)
- Currently under the old, 1980's vintage, sanitary landfill rules
- Process began in 2000, after Hurricane Floyd
- Rules were proposed in 2003, withdrawn to revise in response to comments.

C&D Rule Making continued

- Revisions address the primary concern of continued operation of C&D units on top of old, closed MSW's
- Include provisions for public participation, updated environmental protections, waste acceptance criteria, closure and post-closure plans and funding

C&D on top of MSW

- Owners may continue the use of C&D's on top of MSW's if they meet the following:
- Obtain local government approval
- Prepare an Assessment of Corrective Action Plan under Section 1600.
- Update Operations, Closure and Post-closure Plans
- Post Financial Assurance

Solid Waste Landfill Permitting Process

New Municipal Solid Waste Landfills

Solid Waste Section - Division of Waste Management

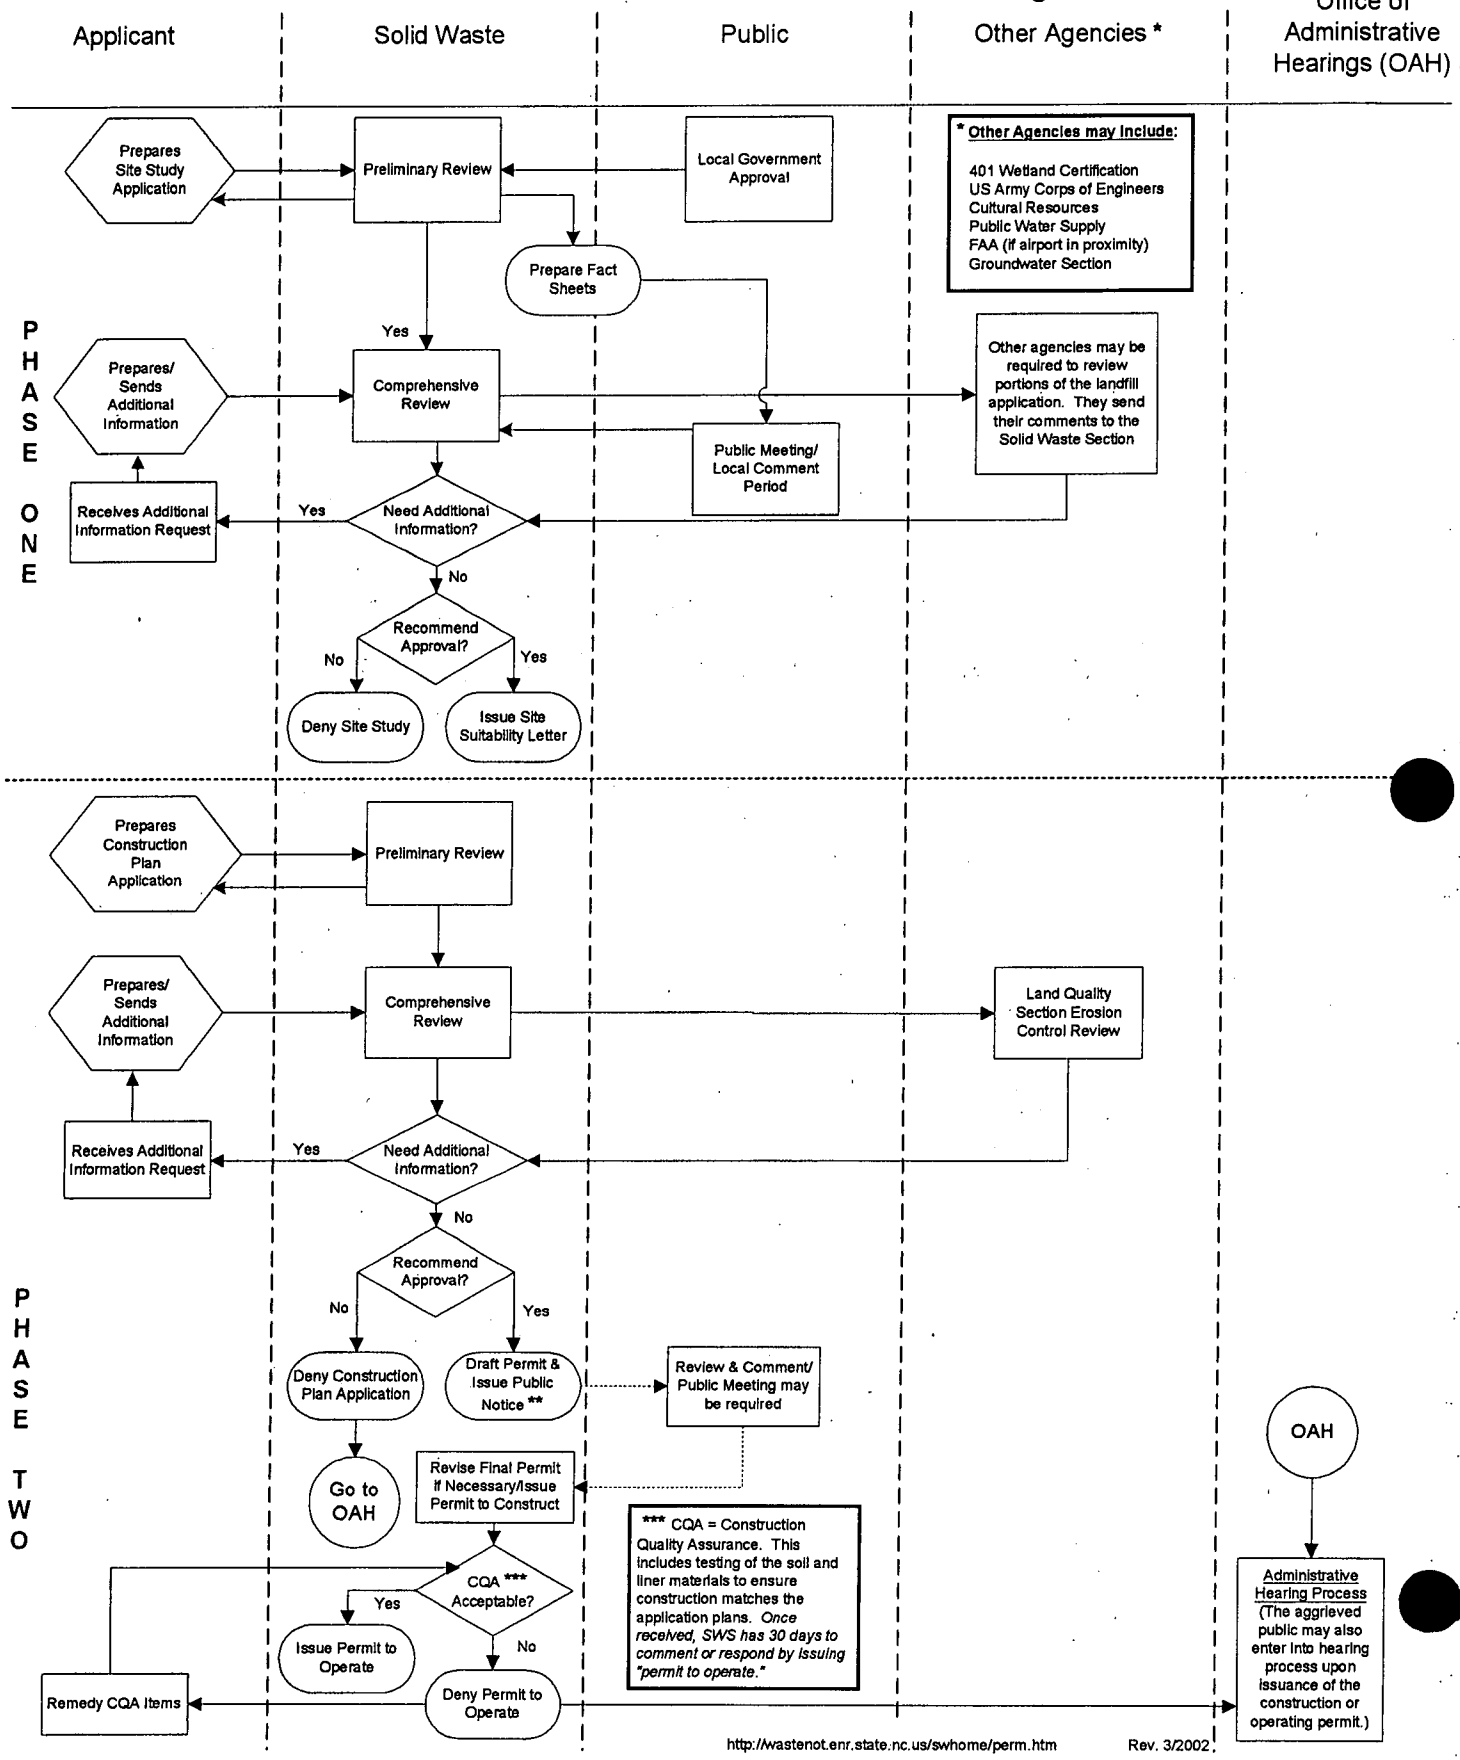

EXHIBIT I

My name is Murray Griffin and I am a consulting engineer from Atlanta, Georgia who specializes in solid waste management planning and engineering. I am here to provide you with information regarding today's requirements and costs associated with waste management disposal. I am not here advocating any particular method of waste management or disposal or the approval of any of the specific landfill projects pending before the agency. Because of my experience in the industry representing many clients in the private and public sectors, and as someone familiar with the economics of landfill development and operation costs, I have been asked to provide you with information on three specific items and to answer any questions that you might have. The three items I will discuss are 1) The initial steps, and siting criteria and costs associated with the development of a modern Subtitle D compliant municipal solid waste (MSW) landfill; 2) The costs to meet today's design construction and operational requirements; and finally; 3) The costs associated with closing today's modern landfills and performing the required annual post closure care.

I am a 1979 civil engineering graduate of Georgia Tech, a registered professional engineer in multiple states, and the president of Atlantic Coast Consulting, Inc. (ACC) which I formed in October 2005.Prior to that I worked for over 27 years for the consulting engineering firm of Jordan, Jones, and Goulding (JJG) where I ended my service with that firm as a Sr. Vice President and a National Service Leader for JJG's Site Development Service Area. JJG has multiple regional offices throughout the southeast including Charlottee. I have served on the Board of Directors of the Georgia Chapter of the Solid Waste Management Association of North America (SWANA) for the past 10 years and am a past President and current Corporate Director of the Chapter.

SWANA is a trade organization for both public and private solid waste professionals. I am also the Vice-Chairman of the Georgia Chapter of the National Solid Waste Management Association (NSWMA), a trade organization for privately owned waste companies and vendors. I have testified as an expert in the field of solid waste, spoken multiple times before similar legislative committees in Georgia, and participated on numerous solid waste committees for the Georgia Environmental Protection Division Land Protection Branch. I served for five years on the faculty of Georgia's Landfill Operators Certification School held semi-annually at the University of Georgia. I have designed, permitted, and certified the construction of numerous solid waste landfills, transfer stations, and other solid waste facilities in the Southeast and Puerto Rico. My solid waste clients have included cities, counties, authorities, contractors, private waste companies, and regulatory agencies. Finally, on a personal note, I grew up on a dirt road in Chatham County, Georgia, and spent the better part of 18 years in a house located approximately 2000 feet down wind of an old borrow pit that was turned into a "dump". If nothing else does, that in it self should qualify someone to talk about waste management. For the record, I am not being compensated for my time to do this and neither my firm nor I have any existing or pending clients or projects in North Carolina.

With the promulgation of the Federal Subtitle D regulations and subsequent adoption by North Carolina in 1993 and other states, the days of the old "dumps" like I lived near were numbered. While many of the old dumps were non-engineered and poorly regulated, today's waste management facilities are highly regulated and highly engineered and inspected. Today's facilities are designed to protect human health and the environment, our air and our water. Today's landfills require the following essential

systems: composite base liner; leachate collection, storage and treatment; groundwater and methane monitoring wells, surface water monitoring, landfill gas collection, odor control; and a composite landfill cap system. While in construction operation NC's regulations require that a "project engineer" that is defined as the official representative of the permittee who is licensed to practice engineering in North Carolina, be responsible for observing, documenting, and certifying that activities related to the quality assurance of the construction of the solid waste management facility conforms to NC's Division of Waste Management's approved plan, the permit to construct and the Division's Rules. The new regulations produced a lot of new work for the engineering community and we thank you.

The initial step in permitting a new MSW landfill in NC specified in Division's Rules is for the owner operator of the proposed facility to prepare and submit a Site Study per rule .1618. Prior to taking this initial step in the development of a new landfill a private developer generally has to invest money in the project for real estate fees, to obtain land purchase options, preliminary surveying and geotechnical work, and legal. Depending upon the size of the site and the site's potential for development, these ***pre-development costs that is costs even before a site study can range from tens of thousands to hundreds of thousands of dollars.***

The Site Study presents a characterization of the site, incorporating various investigations and requirements pertinent to the suitability of an MSW landfill. The Site Study must be prepared by qualified environmental professionals and must include a Regional characterization study of the property within two miles of the facility, amore

detailed Local Characterization Study of the property within 2000 feet of the facility, a Site Hydrogeologic Report, Documentation of Compliance with Location restrictions, local government approval and a Proposed Facility Plan, which is referred to in the Rules as a "conceptual plan for the development of the facility." The Facility Plan includes engineering drawings, calculations, and documents for the active life of the site. The applicant submits these documents along with a Site Study application to the Division for a determination of Site Suitability. The regulatory agency's "Comprehensive Review" of these documents takes many months but can take years to complete. The costs to a landfill developer (county, city or private party) to get to this point in the process will again depend upon many factors including the size of the site, the complexity of the geology, the number of regulatory agencies involved, and the level of opposition to the site. My experience has been that ***the engineering fees alone to get a letter of site suitability for a 150 acre site are at least $250,000 to $300,000. When you combine the costs associated with the initial development phase of a project the total costs to the developer can easily be a million dollars or more and that is even before you have assurance the site will be suitable.***

In NC, assuming that the facility is issued a Site Suitability letter, the applicants can now prepare a Construction Plan application and submit it to the Division. The complete application requires the submittal of the Facility Plan, Engineering Plans for the initial phase of landfill development, a construction quality assurance plan, an operation plan, a closure and post-closure plan, and a water quality monitoring plan. The Division again conducts a comprehensive review of the documents and if found approvable a Draft Permit is issued and the public is notified. The Division may require

another Public Meeting if felt necessary. This portion of the permitting process again takes many months or even years to complete. My experience has been that the engineering fees alone to get to a construction permit for a site are another $150,000 to $200,000, bringing the total engineering fees for a new landfill permit to $400,000 to $500,000. Many sites require legal action to obtain a permit or letter of site suitability. Legal fees, land costs, and other fees associated with public hearings and meetings can easily drive those costs into the millions of dollars.

The final step of the process is the actual construction of the initial phase of the project. NC limits this initial phase to no more than 5 years of operating capacity. Typically a minimum 5 to 10 acres of lined landfill will be constructed along with the associated support facilities such as entrance roads, scales and scale house, maintenance building, leachate storage monitoring wells, etc... The total cost for development of this initial phase obviously depends upon how big of a cell is built, how elaborate the landfill facilities are, how many monitoring wells ,the availability of adequate soils on site, etc... My recent experience with landfill construction indicates that today's construction costs for a MSW landfill liner system is in the $250,000 per acre range. On top of this an owner will face an additional $100,000 to $200,000 in engineering fees for construction administration engineering and construction quality assurance. With architectural fees for the facilities, the total construction cost alone for the initial phase can easily reach $3,000,000 to $ 5,000,000. These costs are in addition to the operational costs for the staff, equipment, fuel, insurance, labor, and other costs associated with properly operating today's landfill.

The cost of landfill development and operation has made many smaller counties and cities consider regional landfill options. Basic modern landfill economics dictates that the more waste handled the lower the cost of operation per ton. If a facility does not attract enough waste, their unit cost of operation will not be competitive and if the amount of waste coming to a facility is insufficient an operator or owner may find the cost per ton of disposal to be prohibitive. It is important to know that the costs of development and operation of a modern subtitle D facility is enormous and a certain minimum level of flow of waste to the facility is essential to make a facility feasible. The concept of regionalization which I understand N C encourages seems to make good economic sense and does limit exposure to environment simply because of limiting the number of sites.

If the costs to develop and operate a new MSW landfill are not enough, remember that the owners and operators must provide financial assurance that funds will be available to close the site and to conduct post closure care for a minimum of 30 years. This is of course after the landfill generates its revenue. We are just beginning to close some of our new Subtitle D Landfills, but my experience indicates that **the cost of closure today is in the $115,000 to $125,000 per acre range assuming the facility already has a landfill gas system installed. If not the landfill gas system could add another $15,000 to $20,000 per acre to the closure cost.** Post-closure costs vary from site to site depending upon the monitoring costs, leachate disposal costs, and landfill gas system operational costs. **Annual post-closure care costs in the $100,000 to $125,000 per year range are not uncommon. Remember this annual cost will be faced for at least 30 years.** Today's landfills are expensive, but it has been my experience that

at this point in time in our history, land filling is still the most feasible method of waste management and it is the only method that does not require additional disposal facilities.

I thank you for allowing me to speak to you on this subject. I hope you can tell that I am passionate about this issue as I believe our modern facilities employ every means reasonably available to protect our environment and provide safe and affordable access to disposal. I am happy to answer your questions if you have any. I will submit a copy of my remarks which has my contact information if any of you are interested. Thank you again for allowing me to speak and thank you for your attention.

Memorandum

To: N.C. Environmental Review Commission
From: Richard Whisnant, School of Government-UNC-CH
Re: Municipal solid waste (MSW) landfill franchise issues
Date: January 24, 2006

Franchise landfill operations are a large and increasingly important component of North Carolina's MSW handling system. But the laws governing them have some problems.

1. Little citizen participation prior to franchise award

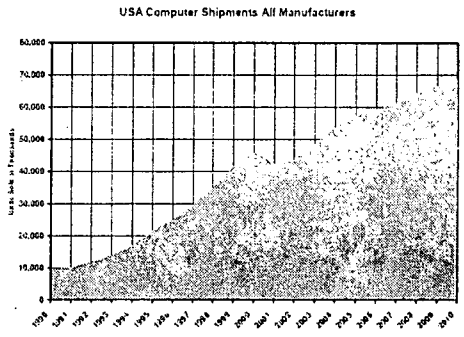
The statutes require two regular board meetings before a franchise is awarded; a DENR rule requires a public meeting, but only for "local government approval." The rule pre-dates the statutory franchise requirement and appears not to cover a franchise award. Thus 20 or 30-year exclusive franchises may be awarded with little public input.

2. Site identification after franchise award

The statutes arguably do not require a franchisee to identify a site before a franchise is awarded (The State disagrees with this interpretation). Companies understandably want local government buy-in before options or other site control is acquired, but is a long-term exclusive franchise really necessary? It results in potential for playing counties off against each other and also lock-in of the county board when a site is actually identified, which moots much of the point of local government approval of sites.

3. Can companies compel counties to create franchise ordinances?

Statutory language can be read to suggest that counties **must** adopt franchise ordinances if asked. This seems counter to the basic notion of a franchise as a legislative choice made by a local government to provide a governmental service through a public-private partnership. The statute could be clarified to make clear that the mandatory requirement is for potential private permittees to obtain a franchise, not for counties to award one.



4. Who controls rates, and how?

The county solid waste franchise statute states that nothing in a franchise agreement can delegate away county regulatory control over rates at a franchised landfill. But few if any current franchise agreements acknowledge this or spell out how it should work. An unregulated exclusive franchise arguably violates the N.C. Constitution's prohibition on monopolies. There should be some system for ongoing review of reasonability of rates. There are also broader policy concerns raised by franchise rate arrangements, especially for those who wish to see more waste reduction and recycling. Most franchises align the county with private interests in maximizing the amount and rate of waste disposal.

EXHIBIT L

Electronics Use and Generation

- Amount of material growing:
  - Average household has about 25 consumer electronic products: computers, televisions, DVD players, video game systems, etc.
  - An estimated one million computers and 900,000 TVs sold in NC each year.
  - Households have an average of 3.1 televisions: Approximately 9.92 million TVs in use in NC homes.
  - An estimated 60 percent of households have at least one computer: at least 1.9 million in use in NC homes.
  - EPA estimated that 250 million computers were going to be obsolete by 2005 – NC Share = 7,150,000
  - Switch to high definition TV in 2009 could drive disposal of televisions

Current status of collection efforts

- Local government collection programs slowly growing:
  - Approximately ten permanent collection programs
  - About a dozen more with periodic collections
- Majority of counties offer no collection services – main issue is funding.
- Some of the permanent programs are limited – e.g., Gaston and Mecklenburg do not collect TVs
- Some manufacturers offer collection programs but usually at a cost and not as convenient as local drop-offs.

Options

- Three major policy approaches available on electronics:
  - Stay with the status quo: no state law or funding to drive collection.
  - Adopt a Producer Responsibility law, requiring manufacturers to take back their products.
  - Adopt an Advanced Recycling Fee to fund local government collection programs statewide.

Status Quo – Pros and Cons

- Would not require state to enact fees/taxes or major mandates.
- Many North Carolinians would have little or no access to local electronics recycling services.
- Majority of electronic discards would probably be disposed.

Producer Responsibility - Pros and Cons

- Holds manufacturers responsible for their products
- Requires no state fees or taxes
- Does not necessarily require communities to run collection programs but those who do so will have costs.
- Uncertainty as to who would be responsible for the large amount of historical and "orphan" electronic waste.
- Collection system would probably be less convenient for citizens than Advanced Recycling Fee system
- In Maine's system, citizens have to pay to recycle and municipalities have an unfunded mandate to collect materials.

Advanced Recycling Fee - Pros and Cons

- Would not hold individual manufacturers responsible for their products.
- Would result in a small increase in the purchase price of electronics.
- Should cause no disadvantage to in-state retailers.
- Generally supported by local governments, environmental groups, and majority of electronics industry.
- Like white goods and tires, funding would establish an electronics recycling program in each county.
- Collection of large volumes would increase job and business creation in North Carolina by electronics recyclers.

Inactive Hazardous Sites Program

Established by the legislature to identify, control and correct properties contaminated with hazardous substances.

1882 Total known and suspected contaminated sites cataloged

- 426 All work complete
- 1452 Sites remaining that require work

  - 758 Old unlined landfills and dumps
  - 694 Chemical spill/disposal sites

Old Unlined Landfills/Dumps

- 72% have residence, church, school, day care, or drinking water source on or within 1000 feet of the landfill
- Most expected to have groundwater contaminated with hazardous substances
- Landfill gas (methane and hazardous vapors) migrating into structures also a concern

Chemical Spill/Disposal Sites

- Many sites becoming orphaned (no financially-viable responsible party available) through bankruptcy of discharger
- Have not made a determination at all sites, but 44 sites cataloged known to not have responsible parties available

Inactive Hazardous Sites Cleanup Fund

Funds depleted

Last of funds used recently to cleanup:

- Pesticide contamination at a church
- Lead contamination at residential property due to a former battery dump
- Lead contamination at another battery dump on agricultural property where 2 years of crops had to be blocked from the market due to lead content

Orphan Site Cleanup Needs

- Texfi – Fayetteville (threatened city water supply)
- Battery dumps in residential areas
- Uncontrolled development including residential on old landfills
- Groundwater contamination near or in private wells

No continuing revenue source

Statewide Waste Disposal Tax
HB 1769 – Session 2005

- Surcharge on waste coming into landfills including waste from out of state
- Up to 80% of the funds generated would go to address old unlined landfills and orphaned chemical spill sites
- Proceeds could provide a means to characterize and control the hazards posed by old unlined landfills and convert them to a safe reuse
- May provide a means of converting many old unlined landfills into green space

One NorthCarolina Naturally

Report to the North Carolina General Assembly
On the
Inactive Hazardous Sites Program

October 2005

Superfund Section
Division of Waste Management
North Carolina Department of Environment and Natural Resources

http://www.wastenotnc.org

EXECUTIVE SUMMARY

The Inactive Hazardous Sites Program was created by the North Carolina General Assembly to identify, control and correct properties contaminated with hazardous substances.

To date, 1,882 chemical spill or disposal sites and old, unlined dumps or landfills have been catalogued. Of this number, 1,456 still require work to address their hazards. The old, unlined landfills make up about one half of the sites still requiring action. In most cases, the locations of the landfills are still being determined. The Inactive Hazardous Sites Branch has received federal funding for one full-time equivalent position to locate these landfills, collect information on property use, determine the potential for exposure and work with owners for safe final solutions. The Branch previously had a contractor conducting some of this work. The contract funds were depleted in 2003. Under this former contract, location and use determinations were completed at about one-third of the cataloged sites. The new federal funding is insufficient to conduct this work very rapidly due to the number of sites. However, state funds from hurricane relief efforts have been appropriated to continue this work in eligible counties. A contract is being initiated to continue the work. The federally-funded staff will supervise the contract work and will conduct the work directly in the counties not eligible for state-funded contract work.

Of the old dumps inspected thus far, 72 percent have a residence, school, church, day care or drinking water source on or within 1,000 feet of the landfill. Based on observations at sites investigated by the USEPA and the North Carolina Division of Waste Management, most of North Carolina's unlined landfills can be expected to have groundwater contamination.

Currently no funds remain in the Inactive Hazardous Sites Cleanup Fund to assess and remediate old unlined landfills and other orphan inactive hazardous substance or waste disposal sites. Legislation was introduced in the 2005 session (HB 1769) to initiate a solid waste tipping fee, of which up to 80% of the funds generated would address these sites. Without a source of revenue, these sites will remain a threat.

To increase the program's effectiveness, the General Assembly authorized the use of private environmental consulting firms to oversee voluntary cleanup actions. Registered Environmental Consultants (RECs) are providing supervision for cleanup work on 33 sites. State staff audit a portion of the REC's work activities. At present, 70 firms have received REC status. In addition, oversight of remedial actions at two sites is being provided by federally-funded staff and oversight of work at 35 former manufactured gas plant sites is being provided through an agreement with a consortium of utilities and municipalities that funds two staff members.

The following summarizes site cleanup activities over this past reporting year.

Sites Identified	
Chemical spill or disposal sites	1,124
Old unlined dumps and landfills	758
Total Number Sites Identified	**1,882**

Sites With All Work Complete Since last status report in 10/04	5
Total Number Sites Requiring No Further Action	**426**
Ongoing Cleanup Actions	
Ongoing REC-Supervised Site Cleanup Actions	33
Ongoing Priority Cleanup Actions Supervised by State Staff	84
Total	**117**

The Inactive Hazardous Sites Response Act requires annual reporting to the General Assembly. All of the reporting requirements specified under N.C.G.S. 130A-310.10 are met in this report.

I. THE INACTIVE HAZARDOUS WASTE SITES PRIORITY LIST

The Inactive Hazardous Sites Branch is part of the North Carolina Department of Environment and Natural Resources' Division of Waste Management. It implements the Inactive Hazardous Sites Response Act of 1987. This act requires DENR to maintain a catalog of inactive hazardous substance or waste disposal sites. Table 1, on the following page, provides a list of sites added to that inventory since the last program report in October 2004. Table 2, on page 3, provides a list of sites assigned "No Further Action" status. The entire inventory can be found in Appendix II. Figure 1, on page 4, shows how the inventory is distributed by category. Appendix I provides a description of each inventory category.

N.C.G.S. 130A-310.2 requires that sites catalogued in the Inactive Hazardous Sites Inventory be prioritized based on their threat to public health and the environment. After discovery, sites are first cataloged in the "Evaluations Pending" category of the Inactive Hazardous Sites Inventory until their rank is determined. Site rankings are determined using the rules found in 15A NCAC 13C .0200. Once ranked, sites are transferred to the Inactive Hazardous Waste Sites Priority List. This list is provided in Table 3, found on page 5.

II. SITES THAT MAY OR ARE KNOWN TO REQUIRE USE OF THE INACTIVE HAZARDOUS SITES CLEANUP FUND

Purpose of the Fund

The Inactive Hazardous Sites Cleanup Fund is used to: (1) address imminent hazard sites; (2) pay for assessment and cleanup when responsible parties do not comply with orders to clean up sites; (3) pay for assessment and cleanup of sites that do not have financially-viable responsible parties (orphan sites); and (4) pay for state-contracted survey and legal assistance necessary to prepare notices of Inactive Hazardous Substance or Waste Disposal Sites where owners do not comply with orders to conduct such work. The state must attempt to recover its expenditures from responsible parties in the first, second and fourth cases.

The Inactive Hazardous Waste Sites Priority List helps determine priorities for cleanup. Responsible parties for top priority sites are encouraged to voluntarily clean up their sites. When a responsible party does not comply with a request and subsequent order to clean up a site, the State must perform the cleanup using the Inactive Hazardous Sites Cleanup Fund. The demand for state funds to conduct site cleanups depends on two factors: 1. how often responsible parties refuse to comply with orders to conduct cleanup; 2. the number of sites that lack financially-viable responsible parties. To date, the program has been successful in obtaining cleanup by responsible parties. Funds are mainly needed for orphan sites where the responsible party either cannot be located or has no financial resources.

The statute requires that the program report the list of sites known to require funds and the list of sites suspected to require funds for cleanup. Determining if responsible parties exist (and thus, if funds are needed) is often a complex and lengthy process. This information can become dated as owners and operators of the facilities change over time. To avoid the need to update the information several times, responsible party research is not done until a site is next in priority for action. For this reason, the total number of orphan sites on the SPL requiring state funds is not presently known.

Orphan Chemical Sites

In the last two years, the Inactive Hazardous Sites Cleanup Fund has been used to clean up two sites (Bone Farm Pesticide Site in Nashville and Cartrette Field in Chadbourn), remove the majority of waste at a third (Mary Circle Battery in Concord), and conduct sampling at three other sites (Gaither Transou in Greensboro, Bryant Farm in Gatewood and Texfi in Fayetteville). There are now 44 sites identified that have no financially-viable responsible parties that require action. Six of these are former Burlington Industry properties. The Inactive Hazardous Sites Branch was able to recover approximately $450,000 through a bankruptcy claim to help address the contamination. While the amount of funds is limited, the funds will be used to remove sources of contamination, thereby reducing the further spread of groundwater contamination and encouraging natural attenuation processes. The branch has also recovered approximately $420,000 in funds through a bankruptcy claim against Texfi, Inc. that will be used to remove sources of contamination at the Fayetteville property. The remaining few thousand dollars in the Inactive Hazardous Sites Fund, not committed to addressing the Texfi, Inc. site described below, will be used to address one more site this year.

Inactive Hazardous Sites Cleanup funds have also been used to conduct an interim cleanup measure at the Texfi site in Fayetteville, Cumberland County. Groundwater contaminated with hazardous substances migrated from Texfi to the adjoining City of Fayetteville's Hoffer Water Plant property. The contaminated groundwater was in contact with the city's primary finished drinking water holding tank. This concrete tank sits, in part, below the groundwater table. In addition, the city's drinking water intakes on the Cape Fear River, 450 feet downstream from the Texfi property, and a city park adjoining the Texfi property, are also concerns. The interim measure involved construction of a subsurface barrier wall in 2001 to prevent additional flow of contaminated water toward the tank. Extraction wells were installed to remove contaminated water that had already passed on to the water plant property around the tank. Groundwater contaminant concentrations on the tank side of the wall have been reduced approximately 95% as a result of this action. Thus far, analyses indicate the drinking water has not been affected. The construction of the barrier wall, the removal of contaminated groundwater from between the wall and the tank and monitoring of the city's drinking water are being conducted as immediate protective measures. These activities will not clean up the larger groundwater contaminant plume or its sources at the Texfi site. Funds were appropriated in 04-05 and 05-06 to continue the monitoring and maintenance of the interim measure. This amount of funding along with the residual funds previously set aside for this purpose will allow continued monitoring through about September of 2007.

There is a risk that the barrier wall will fail overtime. Thus, it is important to remove the source of the groundwater contamination on the Texfi property. The sources are solvents in the subsurface.

Settlement of North Carolina's bankruptcy claim against the Texfi estate mandated that a portion of the proceeds from the estate's law suits and property sales are to be placed in a trust fund to conduct the removal of contaminant sources. On July 1, 2005 a total of $420,000 in funds became available. This amount is now sufficient to initiate a contract to conduct the contaminant source removal. There is a possibility that additional bankruptcy recoveries will provide further removal funds down the road. After removing the sources contributing to groundwater contamination, it could take many years before significant reductions in groundwater contaminant concentrations occur.

Unlined Landfills

Hundreds of old unlined landfills have been cataloged in the state. Based on information from landfills across the country, most will likely have groundwater contaminated with hazardous substances. The branch had previously received state and federal funds to determine the location and current use of these sites. This work was completed in a total of 38 of the 100 counties. We continue to conduct location work in the other counties with some additional limited federal funding. In total, we have completed field surveys of 314 old landfills. Of the landfills inspected, 204 are considered priorities. This is due to a drinking water source, a residence, a school, a church, or a daycare on the property or within 1,000 feet of the landfill.

We can estimate the number of old, unlined landfills that pose the greatest hazard by using the following equation:

Number of landfills with exposure concerns (204) ÷ number of landfills surveyed thus far (314) X total number of landfills in inventory (758) = estimated 492 landfills with potential exposure concerns.

Almost without exception, these landfills were operated either by private individuals with limited financial resources or by counties and municipalities that operated in the public interest and did not make a profit. Thus, these sites may be considered to have no responsible parties available to pay for any corrective measures required.

Cleanup Funds Needed

There are a total of 802 orphan chemical sites and old unlined landfills that remain to be addressed. Of these, 225 are considered higher priorities due to exposure potential (21of the 44 currently identified orphan chemical sites and 204 old landfills that have greater exposure potential). Not all of the landfills have yet been inspected to know whether they also pose a greater concern. As these landfills are located and inspected, others may be identified as being higher priorities as the above estimate would indicate. Based on the average cost expended per site for the recent orphan cleanups conducted, another $177,913 per site or $3,736,173 for 21 or $40,030,425 for 225 higher priority sites will be needed.

The Texfi, Inc. site has no other responsible parties. The federal government has already indicated the site is not a candidate for a cleanup under Superfund. Drinking water for the entire population of the City of Fayetteville is threatened. The legislature has provided up to $50,000 in each of the 04-05 and 05-06 budget cycles to continue operation of the interim protective remedy (the operation of the groundwater extraction well system and sampling) while bankruptcy funds accrue to a level that can support a source area removal. Approximately $420,000 in bankruptcy proceeds have accrued. The branch is initiating a contract to begin the first phase of the contaminant source removal at the site. Additional funds may be received through the bankruptcy over the next several years. It is very possible that no additional funds will be obtainable. Once the removal action is complete, it may be several years before groundwater contaminant concentrations drop as a result of any removal. State funds are currently available to continue the operation of the interim remedy and sampling through September 2007.

As of July 1, 2005, the balance of the Inactive Hazardous Sites Cleanup Fund totaled $115,360. Of this, $100,321 is committed to continue the operation of the Texfi interim remedy through September of 2007. The remaining $15,039 will be used to address another priority site over the next several months.

The branch will also be using the proceeds from the state's bankruptcy claim against Burlington Industries to address six former Burlington sites. Thus far, $413,082 has been received, with an additional payment of approximately $40,000 expected in June of 2006.

III. NATIONAL PRIORITIES LIST SITES REQUIRING A STATE COST SHARE

National Priorities List sites are those hazardous substance or waste disposal sites that are priorities for cleanup under the federal Comprehensive Environmental Response, Compensation and Liability Act, more commonly known as Superfund. North Carolina has 30 NPL sites.

The NPL includes both sites with financially-viable responsible parties and orphan sites. Cleanup costs are financed either by responsible parties or by a federal trust fund with a state cost share. When the federal trust fund is used, CERCLA requires North Carolina to pay 10 percent of the cleanup cost plus 100 percent of the cost to operate and maintain the remediation system.

Table 4, found on page 47, provides a list of the North Carolina NPL sites, their locations, investigation/cleanup status, estimated costs, and projected start dates for cleanup. Part I, found on page 47, includes those sites where the Federal Trust Fund/North Carolina cost share is required. A summary of North Carolina's cost share obligations is provided at the end of this part. Part II, found on page 49, includes the status of responsible party funded cleanups.

TABLE 4. NORTH CAROLINA NATIONAL PRIORITIES LIST SITES
PART 1 – SITES WHERE FEDERAL TRUST FUND/NORTH CAROLINA COST SHARE IS REQUIRED

Reasor Chemical	Castle Hayne, New Hanover	Entire Site	RD/RA	$1,204,807	2005
Sigmon's Septic Tank	Statesville, Iredell	Entire Site	FS	$2,300,000	2007
Ward Transformer	Raleigh, Wake	Entire Site	FS	$20,000,000	2005

SUMMARY OF NORTH CAROLINA COST SHARE REQUIREMENTS
As of July 1, 2005

Estimated total cost of pending/ongoing federal trust fund/N.C. cost share cleanups: $111,866,598*

N.C.'s 10 percent cost share for pending/ongoing cleanups: $11,186,660*

Fund disbursements for cost share payments: $6,012,560

Current fund balance: $5,642,519

Encumbered amount of the fund balance for cost share payments: $5,174,099

* This number will increase due to remedial action cost estimates not being available for all sites. Also, other sites may be added to the National Priorities List which will require a state cost share.

** Date applies to eithe r entire site or operable unit.

IV. RESPONSIBLE PARTY VOLUNTARY SITE REMEDIAL ACTION

When the Inactive Hazardous Sites Branch solicits the cooperation of responsible parties in taking action at a priority site, most parties agree to voluntarily conduct a cleanup with branch approval. In addition to these voluntary actions, responsible parties and owners often come forward on their own to initiate an approved assessment and/or remedial action. Due to the number of volunteers and very limited staff resources, the branch was authorized by the General Assembly to privatize its oversight role at lower priority, voluntary site remedial actions. Sites with more severe public health threats or concerns are still reviewed by state staff.

The privatized portion of the voluntary cleanup program is called the Registered Environmental Consultant, or REC Program. Under this program a responsible party hires an REC to both conduct, and to certify the regulatory compliance of, a site's assessment and cleanup. In order for a firm to qualify as an REC, it must demonstrate it meets certain regulatory qualifications criteria. The REC certification replaces state oversight. The state audits a portion of the REC projects to ensure the integrity of the program. The state sanctions RECs where necessary. A state staff auditor is funded through fees collected from the voluntary participants.

A current list of sites which have parties conducting assessments and cleanups in accordance with consent agreements with the state is provided in Table 5 on the following page. Table 6, found on page 54, is a list of additional, ongoing, Branch-directed priority actions not under consent agreements.

Note: There are 20 additional sites with active ongoing bankruptcy claims, new site screenings or requests for "no further action reviews."

V. IMMINENT HAZARD SITES

The N.C. Department of Environment and Natural Resources and the USEPA are committed to addressing imminent hazard sites when identified. Table 7 provides a list of sites where imminent hazards have been discovered, or where abatement activities have continued, in fiscal year 04-05. Their location, a site description, status and funding source are also provided.

TABLE 7. SUMMARY OF IMMINENT HAZARD SITES

Site	*City/ County*	*Site Description*	*Status*	*Funding Source*
Holtra Chem/Honeywell	Riegelwood/ Columbus	Tanks, lagoons, ponds, soils, materials and a building contaminated with mercury.	Bulk waste removal completed this year. USEPA/State continue to oversee assessment and cleanup of contaminated media being conducted by owner.	Owner
Loflin Gold Mine	Trinity/ Randolph	Arsenic laden soils in a residential area.	USEPA removed all soil containing arsenic above naturally occurring concentrations.	USEPA
Rhodera Drive Wells	Stallings/ Union	Buried drums in a residential area. USEPA previously connected residents to city water.	USEPA completed removal of buried drums and is working on a soil cleanup.	USEPA
Spectra Designs	Farmville/Pitt	Abandoned drums containing corrosives in an open parking lot near residences.	USEPA completed a removal of the drums.	USEPA
Texfi Industries	Fayetteville/ Cumberland	Chlorinated solvent groundwater contaminant plume has migrated from a former textile mill to the City of Fayetteville's water plant property. The city's finished drinking water holding tank sits in contact with contaminated groundwater. The city's drinking water intakes on the Cape Fear River are 450 feet downstream from the Texfi property line.	The State constructed a barrier wall to prevent further contaminant migration to the holding tank area and installed extraction wells to remove contamination in the area of the tank. Concentrations have been reduced. The State has been provided additional appropriated funds to operate the extraction wells and monitor the groundwater. Funds are sufficient to continue this work through November 2007. Funds, through a bankruptcy settlement, have sufficiently accrued to where the State is initiating a contract to conduct a source removal.	State

VI. SUMMARY OF THE INACTIVE HAZARDOUS SITES CLEANUP FUND AND NATIONAL PRIORITIES LIST COST SHARE FUND

Inactive Hazardous Sites Cleanup Fund
As of July 1, 2005

Deposits (04-05)	
Interest	$3,855
No further action review fees	$1,000
Transfer from NPL Cost Share Account for Texfi Monitoring for 05-06	$50,000
Total Deposits	**$54,855**
Withdrawals (04-05)	
Texfi Industries-Fayetteville emergency abatement contract	$40,250
Reversion of unspent 04-05 funds to NPL Cost Share Account	$9,750
Orphan priority site sampling/removal contract	$30,092
Total Withdrawals	**$80,092**
Current Balance	**$115,360**
Obligations	
Texfi emergency abatement contract	$100,321
Orphan priority site sampling/removal contract	$15,039
Total Current Obligations	**$115,360**
Effective Balance	**$0**
Orphan Cleanup Cost Requirements (see Chapter II for more details)	
Funds needed for 31 additional priority orphan sites	$3,736,173
Funds needed to address 204 old landfills with exposure concerns	$36,294,252
Priority Orphan Site Cleanup Costs	**$40,030,425**

National Priorities List Cost Share Fund
As of July 1, 2005

Estimated cost of federal trust fund/N.C. cost share cleanups	$111,866,598
N.C.'s 10 percent cost share for pending/ongoing cleanups	$11,186,660*
Fund disbursements for cost share payments	$6,012,560
Current balance	$5,642,519
Encumbered amount of the fund balance for cost share payments	$5,174,099
Effective Balance	**$468,420***

* Cleanup cost estimates are not yet available for all sites. The cost share figure will increase as cost estimates become available. Also, other sites may be added to the National Priorities List that will require a state cost share. This account will also be required to pay for the state's operation and maintenance obligations which will begin in the next few years at some sites. Aside from interest, the fund has no continuing source of income. A $950,000 05-06 appropriation is not reflected in the balance.

APPENDIX I

INACTIVE HAZARDOUS SITES INVENTORY
Description of Categories

The Department of Environment and Natural Resources is required by North Carolina General Statute 130A-310.1(a) to maintain an inventory of inactive hazardous substance or waste disposal sites. The Inactive Hazardous Sites Inventory accounts for all of the sites in the EPA's Comprehensive Environmental Response, Compensation and Liability Act inventory of potential contaminated sites called CERCLIS. The intent is to address those sites determined not to be federal priorities. Many sites in the CERCLIS inventory, and therefore also the Inactive Hazardous Sites Inventory, are regulated by other state and federal laws. Thus, they are not priorities for the Inactive Hazardous Sites Branch. The Inactive Hazardous Sites Inventory (Appendix II) is organized in the categories described below. To avoid duplication of work, sites being addressed by other agencies are tracked in separate categories. Ten of the inventory sites appear in multiple other agency lead categories (4 through 10).

1. **Sites Priority List (pgs 60-70)**
   The SPL includes sites with confirmed contamination or known disposal of hazardous substances that have been ranked using the Prioritization System rules (15A NCAC Subchapter 13C .0200).

2. **Responsible Party Voluntary Remedial Action Sites (pgs 71-72)**
   In accordance with North Carolina General Statute 130A-310.9(b), voluntary cleanups or "remedial actions" conducted by responsible parties under agreements with the state must be listed in a separate category.

3. **Sites with Evaluations Pending (pg 73)**
   This category includes those sites that require evaluation before site priority can be determined. Each site with evidence of contamination will be ranked and transferred to the SPL. Those sites where no further action is required will also be transferred to that category.

4. **National Priorities List (pg 74)**
   The NPL consists of sites the federal government has determined to be the most serious, uncontrolled hazardous waste disposal sites in the nation. Either federal and state dollars or responsible parties will fund these cleanups. This list only includes North Carolina NPL sites.

5. **Non-NPL Federal Superfund Cleanups (pg 75)**
   NPL-caliber sites where the USEPA has entered into agreements with responsible parties to conduct remedial action are supervised by the USEPA. This list includes only the USEPA non-NPL remedial action sites located in North Carolina.

6. **RCRA Permitted or Interim Status Facilities* (pgs 76-77)**
   Facilities that are permitted or have interim status under the Resource Conservation and Recovery Act are tracked in this category. These sites are exempt pursuant to G.S. 130A-310(3) and come under the jurisdiction of the North Carolina Hazardous Waste Section.

7. **RCRA Non-Permitted Corrective Action Sites* (pg 78)**
   The inventory includes some non-permitted sites that are currently undergoing Resource Conservation and Recovery Act corrective action under the direction of the North Carolina Hazardous Waste Section.

8. **Sites Under the Jurisdiction of the Solid Waste Section* (pg 79)**
   Permitted solid waste landfills being monitored and controlled by the North Carolina Solid Waste Section, including those subject to post-closure care requirements, are tracked in this category.

9. **Sites Under the Jurisdiction of the Division of Water Quality * (pgs 80-81)**
   Sites in this category include those where the North Carolina Division of Water Quality has been specified as the lead agency to oversee assessment and/or cleanup.

10. **Sites Under the Jurisdiction of the Division of Environmental Health's Radiation Protection Section* (pg 82)**
    Sites conducting assessment and cleanup under the direction of the North Carolina North Carolina Radiation Protection Section are tracked in this category.

11. **Old Unlined Landfills (pgs 83-99)**
    This is a list of all the old unlined landfills catalogued by the branch. Some of the landfills were already included in the inventory before the addition of the larger catalog of old landfills. As a result, they also appear in other categories.

* **Additional sites, not included in the Inactive Hazardous Sites Inventory, may be managed by these regulatory agencies. A few sites have multiple agency jurisdiction.**

Brownfields Property Reuse Act - Annual Report to the General Assembly October 2005

Executive Summary

This report to the General Assembly, required by the Brownfields Property Reuse Act (BPRA) of 1997 (G.S. 130-310.30 *et seq.*), describes the activities and status of the N.C. Brownfields Program in 2005. DENR is pleased to report continued success and growth in the state's efforts to revitalize and safely reuse brownfields properties through the N.C. Brownfields Program and its partnership with the U.S. Environmental Protection Agency. The program continues to be a model of high return on public investment in that the relatively small sums of public funds spent leverage large sums of private investment in brownfields redevelopment. Furthermore, DENR receives no state-appropriated funds for the program. To date, all of the public dollars spent are federal funds from a cooperative agreement with the U.S. EPA. With these funds, the program has facilitated over $1.2 billion in committed private investment in brownfields redevelopment.

Because of continued growth in brownfields redevelopment, the program is at a crossroads year. The history of the program is one of steady expansion over time to accommodate the needs of brownfields developers. The program continues to gain popularity, and word has continued to spread about how it helps the brownfields developer define and encapsulate environmental cleanup liability. More and more brownfields property developers are now seeking its services and the program again needs further staff resources to meet this demand. The last time the program was in such a position, it was able to obtain approximately $1 million in federal grant funds for expansion. However, the available U.S. EPA funds for state brownfields programs are at their likely maximum and indeed may be cut in the future, depending on the federal budget. Therefore, DENR proposes to exercise its statutory authority to develop fees to help cover the cost of the department to develop and implement brownfields agreements.

Previous years' reports have detailed the program's results on a calendar year basis. However, in order to align this report with both the General Assembly's reporting date of October 1 of each year and the program's U.S. EPA funding source, this report reflects the status of the program and of the projects therein for Federal Fiscal Year (FFY) 2005, the period from October 1, 2004 through September 30, 2005. Thus, this reporting will be consistent for both the General Assembly and the U.S. EPA.

Program progress for the one-year period from October 1, 2004 through September 30, 2005 can be summarized with the following statistics:

- Program applications received: 59 (a 40 percent increase over previous year)
- Brownfields agreements finalized: 18 (more than ever and a 50 percent increase over previous year)

The total number of completed agreements since the inception of the program stands at 66. More important than the numbers themselves is what they represent- the state brownfields agreement is a sought-after mechanism for breaking down barriers that prospective developers encounter in obtaining financing on environmentally-impacted brownfields properties.

Background

Redeveloping brownfields properties has become increasingly popular as developers and local governments realize that these properties offer viable opportunities to bring economic growth, public health protection, jobs, and quality of life benefits to cities and rural areas. Brownfields are abandoned, idled or underutilized properties where environmental contamination hinders redevelopment due to concerns about environmental liability. The BPRA gives DENR the authority to enter into brownfields agreements with prospective developers who did not cause or contribute to site contamination. The BPRA modifies the environmental liability barrier for prospective developers and motivates them to bring these properties and their hindrances to DENR's attention. DENR partners with the prospective developer to evaluate the possible risks associated with site contamination, and then negotiates a brownfields agreement that stipulates the steps necessary to make the site safe for a specific intended reuse. The result is a redevelopment project that works economically and also protects public health and the environment.

Because brownfields agreements afford prospective developers liability protection for as long as they make and maintain the site safely for its intended reuse, the specter of open-ended financial uncertainty is lifted. This economic shield allows prospective developers to obtain financing previously unavailable for these properties.

Thus, the BPRA allows DENR to distinguish between prospective developers of brownfields properties and the properties' polluters. Instead of mandating that the site be cleaned to current standards, the BPRA requires developers who did not cause or contribute to the contamination to make the site safe for reuse. The program must examine the risks to public health or environment posed by the site. Then, DENR determines what the prospective developer must do to ensure safe redevelopment. These actions can range from land-use restrictions to cleanup, or a mixture of both. In addition to holding prospective developers accountable to their agreements, DENR reserves the right to enforce against those parties responsible for the original contamination. The process is summarized in Table 1 below.

Table 1. Summary of the Brownfield Process

Step 1 – A prospective developer with a brownfields site that needs liability protection submits a letter of intent with basic site facts. DENR determines if the prospective developer and the property proposed for reuse are eligible under the BPRA statute.

Step 2 - DENR reviews existing site data to determine the risk posed by contamination at the site. If the data are insufficient to evaluate such risk, DENR advises the prospective developer on further site assessment to gather the necessary data.

Step 3 - DENR determines what actions are necessary to make the site safe for reuse and includes these actions in a draft brownfields agreement. The prospective developer pays statutory fee and negotiates/concurs with DENR on provisions in brownfields agreement.

Step 4 - The brownfields agreement is published with a 60-day public comment period.

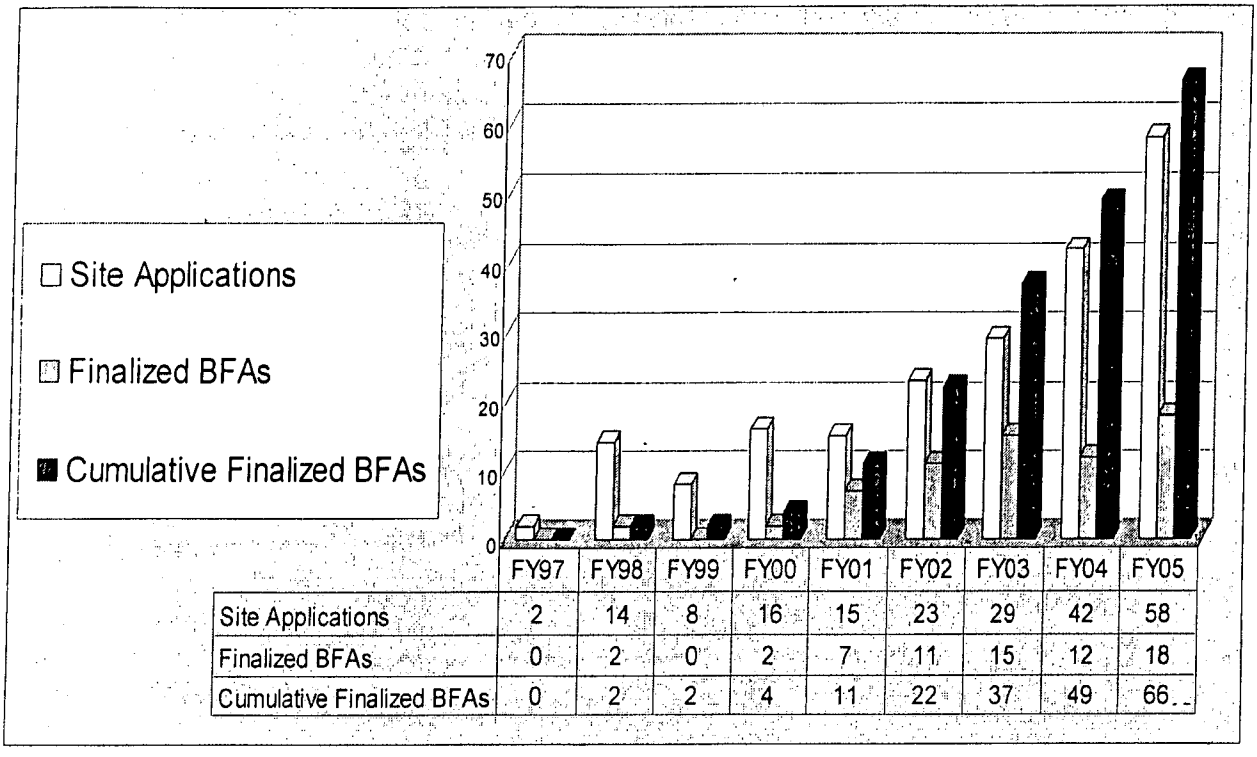
Step 5 - The brownfields agreement is finalized after any public comments are considered and incorporated. The prospective developer uses the final brownfields agreement, which provides liability protection, to obtain financing for the project. Liability protection is contingent upon the completion of the actions required by the brownfields agreement. The brownfields agreement makes the site eligible for the brownfields property tax incentive.

The ancillary brownfields property tax incentive for prospective developers allows them to recoup funds spent on assessment and cleanup. The program motivates the market to recycle these sites to productive reuse, while preserving or reducing the use of pristine or undeveloped "greenfields" property. While the environmental benefits are obvious, most redevelopments also create a significant number of jobs and put properties back on the tax rolls. This dual economic-environmental gain benefits the state, local government, and the brownfields developer. As these benefits have become better known, the program's popularity and demand for its services have increased significantly. In 2005, the program saw its fifth consecutive year of record-setting growth, represented at the end of FFY 2005 by 66 completed brownfields agreements and 85 others in the pipeline. In excess of $1.2 billion in private investment dollars have been committed to redevelop abandoned properties that blight urban and rural landscapes.

The overall result is a winning scenario for both the environment and economic development. Risk reductions and cleanups are achieved at sites that could have harmed the public or the environment, and prospective developers redevelop abandoned properties that once had little hope for productive reuse. The public benefits of job creation, improved quality of life in the surrounding neighborhoods, local tax base expansion and contribution to the general fund are other positive impacts.

The program also supports smart growth, sustainability and the One North Carolina Naturally agenda. Every project that reuses property, whether it is in an urban center or a rural area, preserves green space. Often it also reduces suburban sprawl and supports sustainable urban development. In a very real sense, for each brownfield redeveloped, a greenspace is saved. The properties that have received the 66 completed agreements are estimated to represent approximately 1,500 acres, and the other 85 in the pipeline represent another 2,000 acres. This is, in effect, acreage that is being recycled into reuse rather than greenspace that is being developed.

Program Status



The program is preparing to receive its third year of funding from the U.S. EPA under its State Response Program Cooperative Agreement authorized under the federal brownfields act. The program has hired a full complement of staff under its planned cooperative agreement budget. This amounts to 5.5 brownfields project managers, an environmental toxicologist, and an IT database professional. These staff members are all fully engaged in processing and tracking of brownfields agreements. However, federal funds are leveling, and additional capacity must come from other funding sources in the future.

During FFY 2005, the program received a record 58 applications for projects seeking entry into the program and a brownfields agreement for a specific brownfields redevelopment project. This demand for program services compares to 42 applications received during FFY 2004, and represents 40 percent growth over last year's applications.

During FFY 2005, the program completed a record 18 brownfields agreements. This is an increase of 50 percent over last year's 12 agreement completions.

Table 2 below shows the progress during the program's history since the BPRA became effective in 1997. One can see the steady upturn in demand for the program in the number of brownfields applications and the number of cumulative brownfields agreements. There was a noticeable growth in completed agreements in 2000 when the program received sufficient EPA funds to hire its first full time staff person. Successive hires in years 2002 onward have lead to greater brownfields agreement processing capacity and outreach ability. Hence, there is clear growth in

Table 2. Program Progress Summary

	FY97	FY98	FY99	FY00	FY01	FY02	FY03	FY04	FY05
Site Applications	2	14	8	16	15	23	29	42	58
Finalized BFAs	0	2	0	2	7	11	15	12	18
Cumulative Finalized BFAs	0	2	2	4	11	22	37	49	66

applications into the program and completed agreements. At the same time, the number of finalized brownfields agreements annually is tending towards leveling off at the number that can be produced by the current staff resources. This year, that number is 18 agreements. If that number is to increase along with the number of sites in the program, the staff capacity must expand as well. Although federal brownfields act resources have allowed an increase in the number of staff and a corresponding increase in the number of agreements completed, the demand for more agreements continues to grow. This demand threatens to outstrip the ability of the existing staff to provide services to brownfields developers to obtain a brownfields agreement in a timely manner. Hence, increased resources commensurate with the demand are key to the continued success of the program. Proposals for accomplishing this are discussed in greater detail in the Improving Effectiveness section.

We anticipate continued increases in demand as the program's expansion serves to better educate both the public and the development community about the benefits of brownfields redevelopment. Local interest in brownfields continues to grow and local governments in this state continue to have great success in competing for EPA brownfields grant funds. The federal

grants for brownfields assessment and cleanup totaling $787,750 were awarded by the U.S. EPA to North Carolina local governments in 2005, including Rocky Mount, Fletcher, Woodfin, and the Western Piedmont Council of Governments. Job Training grants for an additional $400,000 were awarded to Winston-Salem and Southeastern North Carolina through Concurrent Technologies Corporation. More local governments received EPA brownfields grants than in any other state in EPA Region 4, and for the second year in a row these represent more federal grant funds than any other southeastern state. These local brownfields activities will serve to strengthen local interest in brownfields redevelopment and will certainly further increase interest in developers seeking brownfields agreements from DENR as these communities begin their local brownfields redevelopment efforts.

Outreach and Education

The program is largely market driven in that prospective developers bring their sites to the program in order to break liability barriers for financing. One of the clear goals of the program is to educate the development community and local governments as to the program's existence and usefulness as a tool for both private and public redevelopment stakeholders. We have again done so this year and efforts to increase awareness of the program have clearly worked well with an ever increasing number of applicants and a strong award rate for them.

Through our staff person in Asheville, the program participated heavily in the Western North Carolina Brownfields Workshop sponsored by the Land-of-Sky Regional Council. Brownfields staff continue to conduct outreach at conferences and programmatic information booths and attend meetings held by EPA for local governments in order to meet and serve their interest in brownfields redevelopment. The program also has made concerted efforts to continually improve information offering on its web site (**www.ncbrownfields.org**) and receives consistent positive feedback on the informative nature of this important outreach component.

Cooperation with Local Government

The Brownfields Program has long held the strategy that brownfields redevelopment is largely a local issue, and therefore has made strong efforts to coordinate with local governments. The success of its cooperative agreement with the City of Charlotte that placed a DENR employee in city offices in May of 2002 was the culmination of much work with local governments. This provides direct face-to-face cooperation with the developers, lenders, and economic developers in that locality. This formula has enabled the completion of 26 brownfields agreements in the Charlotte area.

Seeking to duplicate this success in western North Carolina, last year the program placed a project manager in the offices of the Land-of-Sky Regional Council in Asheville to work in much the same way. Several projects came into the program as a result of this placement, and it has continued to yield very positive results. The project manager has improved the program's local effectiveness there and developers have brought numerous projects to the program as a result. The manager is a participating member of the Land-of-Sky's Regional Brownfields Team and coordinates efforts with Land-of-Sky to encourage brownfields redevelopment in partnership with them. As part of the mutual benefits of such a relationship, the Land-of-Sky Regional Council continues to grow its federal brownfields grants such that to date they have received more federal grant funding than any other local government in the state.

Site Summaries

For brief descriptions of all brownfields projects in the program as of September 30, 2005, please see the Appendix. The table there is divided into three sections: active eligible projects, projects pending eligibility, and projects with finalized brownfields agreements.

Active eligible projects have been deemed eligible for a brownfields agreement under BPRA statutory criteria. These developers are working with DENR in some stage of data gathering, analysis or agreement negotiation. As of September 30, 2005 there were 85 active projects. Projects at this stage receive guidance from DENR as the developers gather the additional data needed to ensure protection of public health and the environment. Once research is complete, DENR analyzes the data, then drafts and negotiates the terms of the brownfields agreement with the prospective developer. At most of these sites, DENR is waiting for additional data requested by the program.

Projects pending eligibility are in the initial stage of the brownfields process as they apply for entry into the program. Sites in this category have yet to meet the requirements under the statute for eligibility for a brownfields agreement. For the sites in this category, the program has requested clarification or additional information from prospective developers regarding a site. Normally developers respond to these requests for clarification, the sites are usually deemed eligible and are then quickly moved into the active eligible category. As of September 30, 2005, 12 sites were in this category.

Projects with finalized brownfields agreements have completed the public notice phase of the brownfields process and either have a signed brownfields agreement or are waiting for the agreement to be executed. As of September 30, 2005, 66 projects were in this category, 18 of which were completed in the one year period from October 1, 2004 to September 30, 2005.

Improving Effectiveness

Throughout its existence, the Brownfields Program has provided a high economic development value for the federal funds it uses. The program's 66 brownfields agreements and 85 other projects in the pipeline represent in excess of $1.2 billion in committed private redevelopment investment. The high ratio to which the federal funds have been successfully leveraged into private development dollars for brownfields redevelopment is just one measure of the effectiveness and efficiency of the BPRA.

While DENR continues to report that the program is highly effective, this year the program is also at a crossroads regarding resources and must address this issue for continued success in supporting the brownfields redevelopment economy of the state. By continuing to add needed staff over the last several years, the program has significantly increased its volume capacity for brownfields agreements during that time. The program has always recognized that encouraging brownfields redevelopment means that it must maintain the capability to respond quickly and provide brownfields agreements within timeframes that help developers make time critical business decisions. However, the trend lines discussed above clearly show that demand for brownfields agreements continues to grow while the future federal resources are anticipated to be

level or slightly cut. The program cannot serve the increasing numbers of applicants with the same effectiveness it traditionally has. Unless further resources are found, the program will develop a large waiting list, developer's transactions will be threatened, and they will hesitate to seek the program's services. Redevelopment opportunities will be lost.

The Brownfields Property Reuse Act requires that the program collect a $2,000 initial fee plus an additional fee equivalent to all costs to the Department. However, since inception, the brownfields program has defrayed the expenses of the program by using purely federal funds without cost to the Department. These funds have grown from $100,000 in 1999 to nearly $1,000,000 in recent years. Therefore, in the past the program could grow in capacity through these federal funds and not have to pass on any fees to the prospective developer other than the statutory $2,000 initial fee. The program purposefully maintained these fees as low as possible in order to encourage developers to come into the program. However, as federal funds have leveled off, the Brownfields Program continues to see growth in demand for its services. The program will employ the statutory authority for imposing fees to meet this challenge. Prospective developers will be bearing more of the resource burden for the program as a result.

The program believes strongly that increased cooperation between DENR and local governments has yielded significant benefits and is a trend it wants to continue to strengthen. DENR has recognized the effectiveness of placing a staff person in the City of Charlotte offices and has duplicated that effort by placing a staffer in the offices of the Land-of-Sky Regional Council. It will continue to look to similar cooperative efforts across the state as it grows in capacity.

Internally, as the program has more and more projects, its data management needs have increased commensurately. The program has been developing business automation application along with a database. This system is being developed as a completely web-based tool consistent with DENR's initiative to share program information across programs and with the public via the Internet. The first module of this application has been developed in code and is in the beta testing stage. We anticipate its use by the program in 2006. This will assist the program in tracking project status, as well as tracking land use restrictions placed on the properties.

Fund Status

The Brownfields Property Reuse Act Implementation Account authorized under the statute receives the $2,000 fee charged to prospective developers who enter the program and is to be used by DENR to defray the cost of the program. For the reporting year from October 1, 2004 through September 30 2005, the Brownfields Property Reuse Act Implementation Account had a beginning balance of $101,380, receipts from fees and interest of $47,617 and no expenditures. This yields an ending balance in the fund of $148,997. In previous years, this fund has not been large enough to be used for hiring staff. It is now large enough to be used for such purposes and will fit into DENR's plans for fee funded positions for the program in the future in addition to additional outreach, software, database development needs.

Further Information

For additional information on the Brownfields Program and how it works, please visit our Web site at **www.ncbrownfields.org.**

APPENDIX

Status Summary of Brownfield Projects as of September 30, 2005

Appendix

Status Summary of Brownfield Projects as of September 30, 2005

Project Inventory is divided into three segments as follows:

Active eligible projects have been deemed eligible for a brownfields agreement under BPRA statutory criteria. These developers are working with DENR in some stage of data gathering, analysis or agreement negotiation.

Projects pending eligibility are in the initial stage that sites are in as they enter the program. Sites in this category have yet to meet the requirements under the statute for eligibility for a brownfields agreement.

Projects with finalized brownfields agreements have completed the public notice phase of the brownfields process and either have a signed brownfields agreement or are waiting for the agreement to be executed.

ACTIVE ELIGIBLE PROJECTS (85)

PD = Prospective Developer; RP = Responsible Party

A GREAT ESCAPE 1806 Funtime Blvd. Winston-Salem, Forsyth County PD: A Great Escape LLC	Prospective developer wants to purchase this approximately 5-acre abandoned amusement park (miniature golf and go cart track), which is located on edge of a former municipal landfill, refurbish it, and re-open it with in same use.
AIRPORT EXXON 3305 North Liberty St. Winston-Salem, Forsyth Co. PD: Mrs. Becky Flowers	Former automobile engine repair and maintenance facility with known soil and likely groundwater contamination involving petroleum and degreasing solvent constituents. Intended redevelopment is a gas station/convenience store to serve the Smith-Reynolds Airport users and employees.
ALAMAC AMERICAN 1885 Alamac Road Lumberton, Robeson Co. PD: Alamac American Knits, LLC	The former knit textile manufacturing facility has perchloroethylene contamination associated with former drycleaning operations. The PD is using the facility to also manufacture knit textiles but does not use perchloroethylene on the premises.
ALCAN PACKAGING FOOD 1600 Westinghouse Blvd. Charlotte, Mecklenburg County PD: Alcan Packaging Food & Tobacco	Approximately 9-acre parcel in a industrial portion of Charlotte. The soil and groundwater are impacted from historic operations with n-propyl acetate and n-propyl alcohol. The PD intends to sell the property for redevelopment of industrial and commercial uses.
ALLISON MANUFACTURING 930 Old Charlotte Road Albemarle, Stanly County PD: NCSC Properties, LLC	An 18.93-acre parcel with a 120,000 square foot former manufacturing facility used in silk-screen production, fabric printing and knitting. PD needs loan in order to improve and repair facility and recruit additional tenants. Naphthalene, 1,1-DCD and PCE in soil; petroleum hydrocarbons and chlorinated solvents in groundwater.

AMERICAN TOBACCO HISTORIC DISTRICT Blackwell & Pettigrew Streets Durham, Durham County PD: SBER Development Holdings, LLC	A 5.56-acre former cigarette manufacturing facility that has possible soil and groundwater contamination. PD intends to redevelop the site in mixed residential and commercial use, to include offices, condos, apartments and retail.
FORMER AMP FACILITY 1126 Church Street Greensboro, Guilford Co. PD: Church Street Medical, LLC	Approximately 10-acre site is the former location of AMP Incorporated, a metal stamping, plating, and manufacturing facility. Closed since the mid-1980s, the site has known chlorinated solvent contamination in groundwater, which is being remediated under an approved Corrective Action Plan within the NC DWQ Aquifer Protection Section. PD intends to redevelop the site as a medical office campus.
ARROW LAUNDRY & CLEANERS 4735 Monroe Road Charlotte, Mecklenburg County PD: Lake City Tractor Supply	Approximately 15-acres of land that was the former Arrow Laundry and Cleaners, Woonsocket Mills, and vacant land. Site groundwater is impacted with chlorinated solvents and petroleum. PD intends to redevelop the site as mixed use, including residential and various commercial uses.
ASHEVILLE ICE PLANT PD: Ice Plant of Asheville, LLP 90 Riverside Drive Asheville, Buncombe County	The site consists of 3.15 acres in Asheville's French Broad River district. It is a former ice plant with warehouse space that has been out of business and abandoned for years. Contamination at the site is perceived, the Ice Plant of Asheville, LLP, is working with the Land of Sky Regional Council to complete a Phase I ESA and likely a Phase II. The redevelopment will be consistent with Asheville's riverfront redevelopment plans for mixed use. The prospective developer plans either condominiums with a retail component or a riverfront hotel.
ASHEVILLE INDUSTRIES PD: Monarch Main LLC 1829 Hendersonville Road Arden, Buncombe County	This site is 10.5 acres and is a portion of a larger 50-acre parcel that was the former Asheville Industries. The 10.5-acre site was used for drum storage and landfilling, clean up of the drums was conducted with the oversight of DENR. There is some residual soil and groundwater contamination with volatiles. The property is undeveloped, the prospective developer would like to develop it into a retail/office park consistent with growth along this economic corridor.
ASHEVILLE MICA PD: T.R. Enterprises 75 Thompson Street Asheville, Buncombe County	The site consists of 2.41 acres located east of Biltmore Village along the Swannanoa River. There are five buildings on site with 2 currently used for the Asheville Mica facility and storage of mica product. The prospective developer plans to rehab the 80-year old structures that are currently unused as well as the mica facilities into moderately priced, pet friendly apartments with the northern undeveloped section as a dog park. Based on preliminary Phase II reports the groundwater is contaminated with volatiles in an upgradient quadrant of the property and soil near the former boiler has elevated levels of oil and grease. The prospective developer is working with the Land of Sky Regional Council to complete a Phase II as a Phase I ESA was just completed in June 2005.

ASHEVILLE WASTE PAPER PD: Daniel B. Sellers 304 Lyman Street Asheville, Buncombe County	This site consists of multiple properties along Asheville's French Broad River district, totaling 14.32 acres. There is a former tannery, warehouses, and the Asheville Waste Paper property. Known petroleum contamination to soil is from a UST and AST releases on file with DENR, soil and groundwater contamination is suspected from bulk fuel, dye and tannery operations. A request for all available reports and information has been made with the Letter of Eligibility. It is likely that a Phase II if not already complete will be required to gain further information on the site conditions. The prospective developer is planning a commercial retail and light manufacturing redevelopment related to mountain sports like kayaking.
BUSS COATING PD: SALT Investments, LLC and S&S Holdings of Lenoir, LLC 511 Creekside Drive Lenoir, Caldwell County	This site consists of 4.52 acres and was a part of Buss Automation a contiguous property. Both Buss Automation and Buss Coatings have gone out of business, leaving the property abandoned since 2003. There is known groundwater and soil contaminated with volatiles and petroleum. Several reports are being reviewed by the DENR Brownfields program to determine if more assessment work will be necessary. The prospective developer plans to renovate the structure to accommodate manufacturing and commercial businesses. A number of businesses have expressed an interest in leasing space upon its completion.
C.C. MANGUM 6105 Chapel Hill Road Raleigh, NC PD: CCM 54, LLC	Approximately 9.9-acres site used since 1940 as an asphalt plant, construction waste landfill, equipment yard, vehicle maintenance and fueling, and a machine shop. Impacts include petroleum and chlorinated compounds in soil and groundwater. PD intends to reuse the site for office and warehouse space.
CAMDEN ROAD 1600 Camden Road Charlotte, Mecklenburg Co. PD: Harris Murr & Vermillion, LLC	Approximately 0.25-acre parcel in Historic SouthEnd of Charlotte. The site has known groundwater impacts from historical site operations as a gas station, tire repair, plumbing repair, and other uses. PD intends to redevelop the property for commercial and retail purposes
CANAC KITCHENS 401, 403, 603, 607 Meacham Rd; and 2001 Speedball Rd. Statesville, Iredell County PD: Canac Kitchens U.S. Limited	The site, which has been idle since 2002, consists of approximately 28 acres and was formerly occupied by a kitchen cabinetry manufacturer. Site impacts include chromium contaminated groundwater and elevated levels of lead and nickel in the soil. The PD intends to reuse the facility for the manufacture of kitchen cabinetry, retrofitting it with upgraded manufacturing equipment.
CAROLINA CREOSOTING CORP Eastbrook Drive Leland, Brunswick County PD: E.G. Dale Enterprises	The site is approximately 90 acres and was a former wood treating facility resulting in creosote and pentachlorophenol contaminated soil and possibly groundwater. The PD plans initially to redevelop the site as a rail terminal with other redevelopment activities possible in the future. The planned redevelopment would create jobs and increase the tax base for the property.
CEDAR CREEK 3468 Cedar Creek Road Fayetteville, Cumberland Co. PD: DAK Resins, LLC	The property was formerly operated by Monsanto to produce herbicide and before that was used to produce nylon and polyester. DAK Resins, LLC plans to use the onsite utilities to produce steam and cooling water, use storage and distribution facility. Resin production may occur on the site in the future.

CELANESE DRP 2300 Archdale Avenue Charlotte, Mecklenburg County PD: Easlan Capital of Charlotte	Site contains approximately 120 acres and was developed by the Celanese Corporation in 1955 as an office and research facility known as the Dryfus Research Park. Operations ceased in the late 1990s. The site has known PCE and TCE impacts in soil and groundwater. PD intends to redevelop the property in residential townhouses and condominiums.
CHARLOTTE TANK TRUCK Border Drive Charlotte, Mecklenburg Co. PD: WR Deal Holdings LLC	Propane manufacturing company with soil and groundwater contamination from an adjacent property. PD intends to expand his current site operations.
CHATHAM PARK NC Hwy. 268 Elkin, Surry Co. PD: Town of Elkin	A 30-acre site containing solid waste disposal area used by former textile manufacturing facility. Known VOC and SVOC contamination exists in groundwater at the site. PD intends to redevelop the property for park and recreational uses in keeping with the current use of adjoining property as baseball fields.
CLIFFSIDE MILLS PROPERTY 272 Main Street Cliffside, Rutherford County PD: Cliffside Mills LLC	The site consists of 32.85 acres with the Cone Mills Yarn and Finishing Plant buildings currently used for storage of yarn and equipment and a hydroelectric power plant. The mill was historically used for cotton processing, yarn production, and textile manufacturing. A limited Phase II was conducted in 2004 and showed SVOCs, VOCs, and metals in the soil and VOCs in the groundwater. The PD intends to refurbish the hydroelectric power plant and work with Duke Power to place the plant on the Duke Power grid. The PD also intends to lease the Cone Companies warehouse space for yarn storage.
COLOR-TEX INTERNATIONAL 2555 Hwy 29 North, Salisbury, Rowan County PD: North Carolina Warehouse LLC	This approximately 200-acre site was formerly a 1916 vintage fabric-finishing mill. Site contaminants are in soil and groundwater and include metals, PAHs, chlorinated solvents, and petroleum constituents. The Prospective Developer intends to redevelop the property for the following uses: residential, recreational, retail, commercial and a race track.
FORMER CONBRACO FACILITY 701 Matthews-Mint Hill Rd Matthews, Mecklenburg County PD: Carlton Development	The site is the former sediment and runoff basin for the former Conbraco Facility. The site was remediated in the EPA Superfund Program and given a "No Further Remedial Action Planned (NFRAP)" status. PD intends to redevelop the site as a medical office with other commercial uses.
COSTCO PD: Costco Wholesale Corporation 14.8 acres 2838 Wake Forest Road Raleigh, Wake County	The former Pepsi manufacturing and bottling company was located on this site until it relocated in 2002. The southeastern portion of the property covers about 2.6 acres of a former City of Raleigh 44-acre municipal landfill. The former Alcatel site is upgradient and a potential source of chlorinated solvents found in the groundwater. Prospective Developer plans to build a 149,000 SF Costco membership warehouse and a membership gasoline station outparcel on the property.

CULTURAL ARTS CENTER 205 McDonald Street, and Old Braswell Library 344 Falls Road Rocky Mount, Nash County, NC PD: Imperial Centre Partners, LP	Former Imperial Tobacco Plant is 2.42 acres with140,000 square feet of floor space and Braswell Memorial Library is 4.93 acres with 16,000 square feet floor space. The PD owns the site and is working with City to finance and redevelop the site into the Rocky Mount Cultural Arts Center (RMCAC). The RMCAC will be the new home to the Children's Museum, the Arts Center and the Playhouse Theater, all of which were lost to major flood damage from the overflowing Tar River during Hurricane Floyd in September 1999. Contamination at the site includes gas, diesel, heating oil from USTs and #6 fuel oil from AST, lead, chlordane, asbestos.
FORMER DAYCO FACILITY Location: 2150 South Main Street Waynesville, Haywood County PD: Haywood Advancement Foundation	The site consists of 35.29 acres with existing buildings totaling 600,000 square feet plus a separate warehouse of 250,000 square feet. The facility was used for rubber hose manufacturing until it closed in 1997. The facility contained numerous ASTs and USTs, both soil and groundwater contamination exists on site. Contamination has been identified primarily as Toluene with some soil PAHs. Currently the ROR Group, a rubber manufacturer, occupies the Banbury building and the Haywood County Sheriff's office occupies a small office section. The majority of the facility is abandoned and in extremely poor condition. The Haywood Advancement Foundation is working with a potential developer to redevelop the property into a commercial property with retail stores.
EASTWAY PHASE I 3014 Eastway Drive Charlotte, Mecklenburg Co. PD: Blaine Lake, LLC	Shopping Plaza in the City of Charlotte that has contamination from a dry cleaning operation and adjacent properties. The groundwater is contaminated. PD intends to redevelop the shopping plaza and maintain jobs in the area.
EASTWAY PHASE II 3124 Eastway Drive Charlotte, Mecklenburg Co. PD: Blaine Lake, LLC	Shopping Plaza in the City of Charlotte that has contamination from a dry cleaning operation and adjacent properties. The groundwater is contaminated. PD intends to redevelop the shopping plaza and maintain jobs in the area.
EDMUNDS MANUFACTURING 1016 Battleground Avenue Greensboro, Guilford County PD: Carroll Investment Properties, LLC	This approximately 4.5-acre site was used as a metals fabrication facility. The site has petroleum and chlorinated impacts in soil and solvent contamination in groundwater. PD intends to redevelop the site into a commercial center with retail, office and storage space, or possibly a mixed residential-commercial use.
ELECTRONIC COMPONENTS CORP. Burgaw, Pender County	The approximately 5-acre site was first developed in 1966 as a facility for manufacturing small transformers. The property was idled in 1999. Site groundwater is contaminated with chlorinated solvents. Prospective Developer intends to reuse the site to manufacture sound equipment and other music related equipment.
ELK MOUNTAIN LANDFILL Woodfin, Buncombe Co.	Approximately 156-acre site contains a former municipal landfill which was operated under lease by the City of Asheville, and which has been closed since the late 1970s. PD has operated a 9-hole golf course on the site since 1990. PD will conduct assessment activities to determine if there is actual contamination at the site. PD intends to redevelop the site into an 18-hole golf course and approximately 250 condominiums in areas outside of the waste cells.

EVERHART LUMBER SITE Thurmond Road New Bern, Craven county PD: Brice's Creek Bible Church	This 32-acre property was developed as a lumber mill and wood treating facility in the late 1940s. Operations ceased in 1979, and the property has been idled and vacant since. Site contains PCP impacts in soil and groundwater. Prospective Developer intends to redevelop the site into a church center.
FABRICTEX 376 Clarks Creek Road Lincolnton, Lincoln County PD: CCR Real Estate Holdings, LLC	Property consists of approximately 15 acres and was first developed in 1981 to manufacture roof shingles. The site was converted to a textile dyeing, finishing and knitting operation, which was closed and abandoned in 2004. Contamination consists primarily of chlorinated solvents in groundwater. Prospective Developer intends to re-establish textile finishing and knitting operations at the facility.
FIELDCREST BLANKET MILL 206 Warehouse Street Eden, Rockingham County PD: Riverwalk Development, LLC	Approximately 19-acre site was a former textile manufacturing facility and has known waste oil, metals, and chlorinated solvent contamination of site soil and groundwater. PD intends to redevelop the site as a cultural center with public benefits that include the creation of approximately 325 jobs, increased tax base and providing a spur to additional redevelopment in the vicinity of the property.
FISHBURNE EQUIPMENT Airport Road Arden, Buncombe Co. PD: R. & P. Van Praag	Former metal fabrication and tobacco press manufacturing facility with suspected VOC contamination in soil and groundwater, based on detection of these compounds on adjoining, downgradient property, the former Buncombe County landfill. PD intends to redevelop the site for light manufacturing/assembly, warehousing, and public storage uses.
FLORENCE MILL 186 Mill Street Forest City, Rutherford County PD: Florence Mill Redevelopment	Consisting of approximately 8.2 acres, the Florence (Cone) Mill is a former industrial mill that went out of business in 2001. The property also has a number of former mill warehouses that are vacant, as well as dry cleaner properties that are separate from the Cone Mill but included in Prospective Developer's submittal. Site impacts include petroleum contaminated soil and PCE impacts to site soil and groundwater. The PD intends to redevelop the property into a town hall, residences, restaurant, cinema, and pavilion with open space.
FORMER FONTAINE 5TH WHEEL 3883 South Church Street Rocky Mount, Nash County PD: New Standard Corporation	This former metals fabrication/manufacturing facility has been vacant since 2001 and the property contains chlorinated solvent and petroleum contamination in soil and groundwater. Prospective Developer intends to reuse the three site buildings for metal stamping, fabrication and assembly operations.
FREUHAUF TRAILER CO. 310 Dalton Avenue Charlotte, Mecklenburg County PD: First Industrial B&L, LLC	A light manufacturing facility that was contaminated by historical site operations by former Freuhauf Trailer Corporation. The site is also impacted by chlorinated solvents from adjacent parcels. PD intends to redevelop the site in industrial and commercial uses.
GENERAL WOOD 1901 Wood Treatment Road Leland, Brunswick County PD: Leland Land, LLC	A 120-acre pole treatment facility (creosote, chromated copper arsenate (CCA) and pentachlorophenol (PCP)) under Chapter 11 bankruptcy that is currently under RCRA jurisdiction. PD's intent is to be able to distinguish old from new contamination and then continue with pole treatment (CCA and PCP only). Groundwater contamination mainly associated with creosote and petroleum. Metal and PCP contamination in soil.

GLEN RAVEN MILLS 114 Raven Circle Kings Mountain, Cleveland Co. PD: Consortium for Progress	Former textile manufacturing facility with solvent contamination in groundwater. PD intends to redevelop the property as a residential/retirement center for senior citizens. Responsible party will continue assessment and/or cleanup activities under state Voluntary Cleanup Program.
GREY HOSIERY MILL Fourth & Laurel Streets Hendersonville, Henderson Co. PD: Old Mill Arts Committee	Former hosiery manufacturing facility located in downtown Hendersonville with low concentrations of chlorinated solvents in site groundwater. PD intends to renovate the building and redevelop the property as a performing arts center.
GRIFFITH STREET PROPERTY 565 Griffith St. & 536 Jetton St. Davidson, Mecklenburg Co. PD: Five Six Five, LLC	Prior industrial operations resulted in soil and groundwater contamination by petroleum and VOCs. The PD plans to redevelop the facility as a charter school and as retail and commercial space.
HISTORIC COTTON MILL 191 Riverside Drive Asheville, Buncombe Co. PD: RiverLink, Inc.	A 2.63-acre site formerly occupied by a cotton mill that operated from the 1900s but has been abandoned for many years. PD will conduct environmental assessment to determine if the site has any contamination. PD intends to redevelop the site in mixed commercial/retail and residential uses. This project is part of the Asheville French Broad Riverfront Plan.
HOLMES PROPERTY 450 & 498 Carolina Pines Avenue, and 500 Granite Road Raleigh, Wake County PD: South Saunders Redevelopment LLC	This 2.4-acre site was first developed in the mid-1960s and has been used in auto repair, electricians offices, printing and office supplies, and, most recently, as a graphics and screen printing shop. Site impacts include PAHs in soil and metals and solvents in groundwater. Prospective Developer intends to reuse the site principally for vehicular access to a larger redevelopment project on adjoining property.
HOME INNOVATIONS SITE Hwy 52 S & Ratliff Gin Road Morven, Anson Co. PD: Dan River Inc.	Former textile manufacturing facility with petroleum hydrocarbon and VOC contamination in soil and groundwater. PD intends to redevelop the site as a modern textile manufacturing operation where present environmental contaminant compounds are not used. Project has significant job creation potential.
HUNT MANUFACTURING 2301 Speedball Road Statesville, Iredell County PD: Speedball Road LLC	The 18-acre site was first developed in the late 1950s by the Hunt Corporation as an office products manufacturing facility. The facility was closed in 2004. Site has known solvent and cyanide contamination in groundwater. Prospective Developer intends to reuse the site for manufacturing art materials and related products.
INDUSTRIAL PLASTICS Location: 4810 Clover Road, Greensboro, Guilford County PD: Standard Tools & Equipment	The site comprises 17.77 acres and was initially used as for plastic manufacturing and then metal plating. It was idled for several years. The PD currently leases the property and, once a BFA is in effect, plans to purchase it and continue its manufacturing operations, thereby keeping it in productive use. The site has environmental impacts from zinc, chromium and other metals formerly used in the electroplating process.
JDS UNIPHASE 3026 Cornwallis Road Research Triangle Park, Wake County PD: Cree, Inc.	This 55-acre site was developed in 1984 as a semiconductor research and development facility. The site has been idle and vacant since 2002. Site impacts include chlorinated solvents, chloride in groundwater and VOCs and oil & grease in soil. Prospective Developer intends to reuse the facility for semiconductor manufacturing.

KIDD LANE BATTERY DISPOSAL 3607 Kidd Lane Charlotte, Mecklenburg Co. PD: Joshua's Farm	Abandoned dairy farm with historical lead battery disposal operations. The approximately 1-acre parcel is adjacent to a 22-acre horse & animal farm area for the Joshua's Farm Operations. The site has a limited area with lead contamination in the surficial soils. PD intends to redevelop the area as a parking lot for the horse and animal farm operations.
LAROCHE SITE 500 Broome Road Greensboro, Guilford County PD: TBREC, LLC	This 18-acres property has metals and phenols and pesticide contamination in soil and groundwater. PD intends to redevelop the site as a manufacturing and/or distribution facility. Public benefits will include job creation, increased property taxes, and environmental cleanup.
MILLENNIUM FUND 923, 955, 967 Brookstown Avenue Winston-Salem, Forsyth County PD: The Millennium Fund	This project plus West End Village replace the former Unity Place Brownfields project. The property will be developed for general commercial use, in tandem with the adjacent West End Village project to create a European-style town center atmosphere. A gasoline station and automotive repair shop is on one of the parcels, and the entire property is located in the vicinity of adjacent properties with known and/or potential sources of contamination.
MITCHELLS FORMAL WEAR 115-145 Scaleybark Road Charlotte, Mecklenburg County PD: Crosland Centre Associates	A strip shopping center along the proposed South End Light Rail Corridor that has been impacted with chlorinated solvents in the soil and groundwater. PD intends to redevelop the site as mixed use to include commercial, retail, and residential.
MOREHEAD MACHINE SHOP 206 North 4th Street Morehead City, Carteret County PD: Cherokee Morehead, LLC	The property is 1.45 acres and has been historically used for ship building and maintenance. Soil at the site is contaminated with metals and petroleum products. Groundwater contained lead and MTBE. The PD plans to redevelop the property into a 45-slip marina with residential condominiums and first floor commercial establishments. The public benefits include environmental cleanup, tax base improvement and job creation.
MODEL LINEN PD: QUB Studios 120 West Lewis Street Greensboro, Guilford Co.	The site was used to manufacture wood stoves and has low levels of chlorinated solvents in the groundwater. The site will be redeveloped as a photographic studio and other commercial space.
FORMER MTE HYDRAULICS 105 Chickasaw Road (intersection of Chickasaw Rd. & Pearson's Turnpike (state Hwy 2663) Gastonia, NC 28052 Gaston County Prospective Developer: Liberty Land, LLC	A 9.76-acre parcel in Gastonia. The site has known soil and groundwater impacts from historical site operations which included the manufacturing of hydraulic components and brake pads and other uses. Prospective Developer intends to upgrade the property for manufacturing purposes and additional commercial use.
NATIONAL TEXTILES Morgantown, Burke Co.	Former textile manufacturing facility with chlorinated solvent contamination in soil and groundwater. The applicant PD intends to sell the site to an identified potential buyer for conversion and reuse as a furniture manufacturing facility.
NORTH HILLS MALL 4217 Six Forks Road Raleigh, Wake Co. PD: North Hills Mall Ownership Organization, LLC	This 31-acre site was originally developed in 1963, and was expanded into one of Raleigh's earliest enclosed malls. The site has known petroleum and chlorinated solvent contamination in soil and groundwater from auto gas and repair facilities and from an off-site drycleaner. Developer intends to redevelop the site into a pedestrian friendly mixed-use retail, commercial and residential complex.

NORTH TERMINAL River Road Wilmington, New Hanover County PD: State Ports Authority	The site consists of 36 acres historically used as a para-xylene and fuel oil bulk storage and handling facilities (i.e., tank farms). The decades-long use of the tank farms has resulted in soil and groundwater contamination by para-xylene and volatile and semi-volatile fuel oil constituents. The PD wishes to use the property to expand the state port's container yard and as a staging area for military operations and specialty import/export cargoes. The redevelopment would result in an estimated 50 percent increase in shipping container movements which would directly and indirectly create hundreds of jobs and increase state and local taxes by $1.7 million.
OLD WNC FAIRGROUNDS Location: Intersection of James Street and Mill Street East Flat Rock, Henderson County PD: Henderson County Public Schools	Project is former Western North Carolina Fairgrounds, it is currently vacant land, approximately 27 acres. The site was also used as training grounds for the Blue Ridge Fire Department. The training exercises led to soil contamination consisting of petroleum hydrocarbons in the training area. The PD intends to redevelop the property into an industrial park with the assistance of Henderson County Partnership for Economic Development.
PADGETTE LANE PROPERTY 105 Padgette Lane Carrboro, Orange County PD: Downtown Urban Ventures, LLC	Less than 1-acre site with a 3,500 square foot former automobile repair shop. Contamination appears to be restricted to incidental housekeeping related releases from site activities. PD intends to redevelop the site for 55 residential condos and/or apartments for a total of 63,950 square feet with the intent to market students at UNC-Chapel Hill.
PARK BOAT COMPANY 3.8 acres PD: Washington Center LLC block at intersection of W. Third and Van Norden Streets Washington, Beaufort County	The former Washington manufactured gas plant was located on a portion of this property, and is currently under the first phase of assessment. The remainder of the block had residential use until the early 20th century, and had commercial and light industrial usage since that time. A mixed use office/retail/residential development with a parking garage is planned for the property.
PARKER HANNIFIN Wake Forest, Wake Co.	A 33-acre former air control devices manufacturing facility with known Trichloroethene contamination in soil and groundwater resulting from former wastewater treatment operations. PD intends to redevelop the site in mixed commercial, retail, and office space uses. Responsible party is currently undertaking assessment and remediation within RCRA and N.C. Hazardous Waste Section oversight.

FORMER PELTON & CRANE PLANT 200 Clanton Road Charlotte, Mecklenburg County PD: Clanton Partners I, LLC	Site of a manufacturing facility specializing in equipment for the dental industry, this approximately 6-acre property has known metals, chlorinated solvent and PAH contamination in soil and groundwater. PD intends to redevelop the site into office and showroom space for non-profit involved in serving the educational, employment and enrichment needs of developmentally disabled children and adults.
PIEDMONT TRIAD RESEARCH PARK Various properties east and south of downtown Winston-Salem Winston-Salem, Forsythe County PD: PTRP Holdings, LLC	This redevelopment project covers approximately 180 acres and involves some 240+ individual tax blocks/lots located east and southeast of downtown Winston-Salem. The property consists of former industrial and manufacturing facilities with a wide range of known and possible impacts in soil and groundwater. The site is slated to be redeveloped into a world-class bio-technology research park in affiliation with Wake Forest University Health Sciences.
PILLOWTEX PLANT 1 1 Lake Circle Drive Kannapolis, Rowan & Cabarrus Counties, NC PD: City of Kannapolis	A 158-acre site with 5.6 million square feet in 17 buildings. Closed/bankrupt textile manufacturing plant is available for purchase through bankruptcy court. The PD is working with SouthEast Developers to purchase and redevelop the property as a sports and entertainment complex, office space and other businesses. The City is working on submitting a bid to purchase the property through the bankruptcy court. Potential or known contamination at the site includes gas, diesel fuel, varsol, PAHs, acids, caustics, alcohols, maleic acid, formaldehyde, benzidine, naphthylamines, used oil, coal (PAHs, inorganics).
POND ROAD LANDFILL PD: Sonia Gribble 79 Pond Road Asheville, Buncombe County	This site is a former landfill, more recently used as an auto salvage yard by a private owner/operator. It is a 4.72 acre site that is currently abandoned. A preliminary Phase II found soil contaminated with Chromium, oil and grease, and volatile organic compounds. The prospective developer is ready to move forward with the Land of Sky Regional Council's assistance to complete a Phase I ESA and further assessment work as needed. The prospective developer has plans to renovate the site as a recycling and resource recovery facility.
PPD HEADQUARTERS SW corner of Harnett and Front Streets Wilmington, New Hanover County PD: River Ventures, LLC	Approximately 8-acre site is a small portion of the ~ 40-acre Almont Shipping site that will all eventually be redeveloped once Almont moves to the Wilmington Port Authority. Almont has been a dealer in bulk commodities (saltcake, urea, potash, phosphate, etc.). The site as a whole has been in business for almost a hundred years, with warehouses currently on this property being built in the late 1970s. Prior to that time it was operated as a fuel depot with large ASTs located on the site. Contamination from the adjacent CSX property spill of 2.2 million gallons of diesel in 1982 is suspected, although a Phase II assessment is currently underway. PD intends to demolish the buildings on site in order to construct a 400,000 SF office building.

PRARIE PLASTICS Location: 5210 Zmax Road Harrisburg, Cabarrus County PD: Speedway Motorsports, Inc	The property is a 25-acre tract of vacant land with a plume of chlorinated solvent-contaminated groundwater migrating on to the property from offsite. The PD plans to facilitate the development of the property into a manufacturing facility which would eventually employee an estimated 350 people.
PRIDE-TRIMBLE PLANT U.S. Hwy. 1 and Yadkin Road Southern Pines, Moore County PD: Lady Builders, LLC	Approximately 37-acre site former manufacturer of children's metal tube type of furniture, then warehousing and a trucking firm. Next door to SCM Proctor-Silex, a state Superfund site undergoing a feasibility study for the cleanup of chlorinated solvents in the groundwater and PAHs in the soil. This contamination is found under the Pride-Trimble Site. PD intends to reuse the site as a small business incubator.
FORMER REXNORD INDUSTRIES 1000 Chain Road Morganton, Burke County PD: ForSite Development	The site consists of 80.66 acres, and contains facility formerly used to manufacturer engineered chain products. The facility is currently dormant, the Prospective Developer suspects there are soil and groundwater issues on site due to past manufacturing operations. The PD intends to redevelop the property for manufacturing and commercial uses.
R.W. McCOLLUM SITE 107 West Meadowbrook Road Greensboro, Guilford County PD: Mr. David Cooke	Site contains approximately 6.5 acres and was used originally to wash tanker trucks. Impacts consist primarily of TCE and its degradation products, mostly in groundwater. PD intends to expand the facility to include truck and trailer sales and maintenance and a dispatch center.
SALEM UNIFORM 4015 N. Cherry Street Winston-Salem, Forsyth County PD: Winston Weaver Co. Inc.	2.53-acre site that has been vacant for many years. Was leased out from 1967-83 to Salem Uniform and from 1983-86 to Cintus Corporation who purchased the assets for Salem Uniform. During a Limited Site Assessment for petroleum USTs, high levels of PCE were discovered, probably from dry cleaning solvents. PD is currently leasing space, but would like to improve it for use for fertilizer storage and other commercial usage.
FORMER SCHLAGE LOCK FACILITY 3551 North Wesleyan Blvd. Rocky Mount, Nash County PD: Community Resource Exchange	49.15 acre/196,000 square foot former manufacturing facility for lock/doorknob plating and assembly that used PCE as a degreasing solvent. Working with the Hazardous Waste Section as site is a RCRA TSD post-closure facility with active voluntary GW remediation system (Ingersoll-Rand is RP). Chlorinated solvents (PCE, TCE, 1,2-DCE, toluene and acetone are main constituents of concern in both soil and groundwater. PD is non-profit organization who needs loan in order to make improvements to former manufacturing facility in order to provide tenant space for non-profit organizations and possible outparcels for commercial retail businesses.
SCOTLAND MEMORIAL HOSPITAL PD: City of Laurinburg 5.3 Acres 600 McLean Street Laurinburg, Scotland County	This project has been a recipient of federal Brownfields Funding (assessment and remediation). City plans to demolish former hospital that has been abandoned for over twenty years and partner with Richmond Community College to build a 10,000 SF building to house a LPN training program and other local industry-driving vocational training program in this Tier 1 county.
SCOTT AVIATION 309/310 W. Crowell Street Monroe, Union County PD: City of Monroe	Former metal fabrication facility contains approximately 10 acres and has known metals and chlorinated solvent contamination in soil and groundwater. PD intends to redevelop the property as a civic center and expects public benefits to include job creation, increased tax base and a spur to further redevelopment in the area.

SHELBY DYEING & FINISHING 1000 West Grover Street Shelby, Cleveland Co. PD: GMAC Commercial Credit, LLC	Former textile dyeing and finishing facility with solvent and metals contamination in soil and groundwater. Through its sale of the property to Environmental Fibers, PD intends to facilitate the redevelopment of the site as a cotton recycling facility, bringing the two site buildings back into productive use, and bringing jobs and tax base improvements to the community.
SOUTH ELM STREET 44 properties along South Elm St. Greensboro, Guilford County PD: City of Greensboro, Dept. of Housing and Urban Development	Wide range of previous uses have resulted in known impacts to soil and groundwater that include solvents, petroleum products, inks, MGP-associated wastes. PD intends to redevelop the site in mixed-use including residential, office and commercial space. Public benefits include the creation of approximately 3,250 jobs, increased tax base, and a spur to additional redevelopment.
SOUTH TERMINAL 3334 River Road Wilmington, New Hanover County PD: NC State Ports Authority	25-acre property was a former petroleum shipping terminal and has known petroleum contamination in soil and groundwater. PD intends to redevelop the property in an expansion of the Port of Wilmington, and expects the project will create approximately 275 new jobs and increased property taxes.
SPARTA TEAPOT MUSEUM 48, 90, 114 West Whitehead St; and 111 West Doughton Street Sparta, Alleghany County PD: New River Community Partners	The site consists of 5.2 acres in downtown Sparta, where multiple parcels will be combined for the future museum. The existing parcels are residential, former post office, former dry cleaner, and a welding facility. PCE impacts are known to exist at the site in both soil and groundwater. The PD intends to redevelop the property into a teapot museum.
STRATFORD METAL FINISHING 807 S. Marshall Street Winston-Salem, Forsyth County PD: City of Winston-Salem	The Stratford Metal site was developed as a plating facility in the mid 1960s. Suspected contaminants include various metals in soil and groundwater. Prospective Developer intends to redevelop the half-acre property into a parking lot for the City of Winston-Salem's historic district, Old Salem.
TEXFI-NEW BERN Bosch Boulevard New Bern, Craven County PD: MGR, LLC	The site consists of approximately 20 acres located adjacent to a former Texfi textile facility and formerly used by Texfi as a dump for empty drums, refuse and other solid waste material generated in its manufacturing operations. The site has known solvent contamination in groundwater. PD intends to redevelop the property as an industrial park for suppliers to the nearby and recently modernized Bosch manufacturing facility.
TOWN & COUNTRY RENT-A-CAR 5324 East Independence Boulevard Charlotte, Mecklenburg Co. Prospective Developer: SRE North Carolina-2, LLC	Approximately 1.6-acre tract in Charlotte. The site has known petroleum soil impacts from past use as a heating oil distribution location, a service station, an automobile repair shop, a car wash and other uses. Prospective Developer plans to facilitate the redevelopment of the vacant property through its sale to a prospective purchaser, who will most likely build a car dealership.
V. F. Site 2831 Wilson Park Road Statesville, Iredell Co. PD: Statesville Partnership LLC	This former textile plant has chlorinated solvent contamination as a result of on site drycleaning operations. The PD plans to upgrade the property for light manufacturing or distribution facility.

WEST END VILLAGE Properties on N. Broad, W. Fourth, W. Fifth, North Green, N. Spring Streets and Brookstown Avenue Winston-Salem, Forsyth County PD: Boulevard Centro, LLC	This 10-acre project plus Millennium Fund replace the former Unity Place Brownfields project. The majority of properties were different facets of a large automotive dealership, although a paint and body shop and dry cleaners were also located here. Developer plans a mixed-use residential/commercial/retail development with 256 residential units (townhouses, penthouses and flats) with 45,500 SF of commercial space.
WILMINGTON CONVENTION CENTER 525 Nutt Street Wilmington, New Hanover Co. PD: River Ventures, LLC	This 9.22-acre site was formerly used as a petroleum receiving facility for CSX Transportation. The property has PAH contamination in the soil, low levels of naphthalene, arsenic, and PAH and EDB contamination in the groundwater. The currently vacant site will be re-used as a convention center/mixed-use development, including a hotel. Public benefits will include public access to a substantial amount of Wilmington's historic riverfront, an expanded tax base, and job creation. Substantial ancillary benefits, such as property taxes on marina slips and boats, room and sales taxes from the hotel, restaurants and other commercial businesses.
WEST END VILLAGE Properties on N. Broad, W. Fourth, W. Fifth, North Green, N. Spring Streets and Brookstown Avenue Winston-Salem, Forsyth County PD: Boulevard Centro, LLC	This 10-acre project plus Millennium Fund replace the former Unity Place Brownfields project. The majority of properties were different facets of a large automotive dealership, although a paint and body shop and dry cleaners were also located here. Developer plans a mixed-use residential/commercial/retail development with 256 residential units (townhouses, penthouses and flats) with 45,500 SF of commercial space.
WILMINGTON CONVENTION CENTER 525 Nutt Street Wilmington, New Hanover Co. PD: River Ventures, LLC	This 9.22-acre site was formerly used as a petroleum receiving facility for CSX Transportation. The property has PAH contamination in the soil, low levels of naphthalene, arsenic, and PAH and EDB contamination in the groundwater. The currently vacant site will be re-used as a convention center/mixed-use development, including a hotel. Public benefits will include public access to a substantial amount of Wilmington's historic riverfront, an expanded tax base, and job creation. Substantial ancillary benefits, such as property taxes on marina slips and boats, room and sales taxes from the hotel, restaurants and other commercial businesses.

PD = Prospective Developer; RP = Responsible Party

ABC ENGRAVERS Charlotte, Mecklenburg Co.	Former engraving and plating facility with known chromium and chlorinated solvent contamination in soil and groundwater. PD intends to redevelop the site as an office complex.
ALAMAC KNIT FABRIC Hamilton, Martin Co.	106-acre former textile manufacturing facility with known soil and groundwater contamination involving chlorinated solvents. Site is undergoing active remediation under NC DWQ. Intended reuse is as a non-polluting school locker manufacturing facility that will employ some 350 workers.
ALPHA MILLS Charlotte, Mecklenburg Co.	A 5.77-acre parcel that was historically a textile mill. Most recently the site was the former Consolidated Group Incorporated engraving facility. The site has known soil, groundwater, surface water, and sediment impacts from historical site operations. PD intends to redevelop the property for residential apartments with compatible commercial and retail development.
ANDREX INDUSTRIES Asheville, Buncombe Co.	A 9-acre light manufacturing site formerly used as a textile production facility that operated a knitting, weaving and cutting business along with dry cleaning, shrinking and packaging of fabrics. Tetrachloroethylene groundwater contamination from drycleaning operations being remediated by RP with pump-and-treat system. PD is adjacent property owner, a milk processing and distributing plant. Initial plan is to use part of property for truck and trailer parking. Within 3 years they plan to demolish Andrex buildings and expand the Milkco Plant to double capacity within 8 years.
ANCHOR MILL Huntersville, Mecklenburg Co.	Abandoned textile manufacturing facility with known metals contamination in soil, and lead, chlorinated solvent, and petroleum hydrocarbon contamination in groundwater. PD intends to redevelop the 32-acre site as a mixed-use transit village that reuses the old mill building and adds new office, retail, and residential components.
ARCHDALE MARKETPLACE Charlotte, Mecklenburg Co.	Approximately 13-acre parcel known as Archdale Marketplace Shopping Center. Groundwater is contaminated at the Property due to historical site operations by an A&P grocery store, Sno-White Cleaners, and K-mart auto service center. PD intends to redevelop the property for commercial and retail.
BALDOR ELECTRIC Charlotte, Mecklenburg Co.	Former electric motor and motor component assembly and manufacturing facility with solvent impacted soil and groundwater. PD intends to redevelop the property for use as industrial condominiums.

BOULIGNY SITE Charlotte, Mecklenburg Co.	Approximately 3.5-acre parcel that was the former R.H Boulingy facility. The site has known groundwater impacts from chlorinated solvents. PD intends to redevelop the property for mixed-use development with commercial, retail, industrial and residential.
BROWN'S SOLVENT CO. Charlotte, Mecklenburg Co.	Former paint and solvent formulation facility with known solvent-impacted soil and groundwater. PD intends to initially renovate & reuse the existing structure for office/warehouse use, and ultimately raze the building and redevelop the site as a mixed office/retail complex in keeping with other redevelopment taking place in Charlotte's South End.
BURKHART CAROLINA Henderson, Vance Co.	Former pickle processing and packing facility with chloride impacted soil and groundwater and minor solvent contamination in groundwater. PD intends to redevelop the property for commercial retail use. Simultaneously, the responsible party will implement groundwater remediation at the site under separate action. The PD's development will provide an impervious cap on the site, further assisting remedial efforts.
BURLINGTON – JAMESTOWN Jamestown, Guilford Co.	A 22-acre site containing a abandoned chemical formulation facility operated in support of Burlington Industries textile manufacturing operations. Known chlorinated and petroleum hydrocarbon contamination exists in site soil and groundwater and is being addressed under a consent order with DENR. PD intends to redevelop the property as polyurethane and polyacrylate emulsions manufacturing facility.
BURLINGTON MILLS Mooresville, Iredell Co.	Abandoned textile manufacturing facility with known petroleum hydrocarbon contamination in soil and groundwater, and chlorinated solvent contamination in groundwater. PD intends to redevelop the site as an auto racing industry complex with office, flex, shop, and R&D space.
CAMDEN SQUARE Charlotte, Mecklenburg Co.	Abandoned Knitting and Printing Operations rebuilt into the "Design Center of the Carolinas". Development supported by the Wilmore Community as a vital redevelopment in an economically depressed area. Land Use restrictions for chlorinated solvents in groundwater.
CAMDEN SQUARE ADDITION Charlotte, Mecklenburg Co.	This project will add, by amendment, 4.5 acres to the first brownfields agreement completed in North Carolina, Camden Square, in Charlotte's South End redevelopment corridor. Contamination includes VOC- and SVOC-impacted soil and groundwater. Intended reuse is for mixed office and retail.
CAROLINA LOG BUILDINGS Fletcher, Henderson Co.	Former wood treating facility with known pentachlorophenol contamination in soil and groundwater. PD intends to redevelop the 30-acre site as the new heart of the Town of Fletcher to include various office and retail uses.
CAROLINA PRODUCTION FINISHING Asheville, Buncombe Co.	Former textile finishing facility with metals contamination in both soil and groundwater. PD intends to redevelop the site for warehousing and as a sewing operation. PD is in the process of reviewing DENR's draft brownfields agreement for this site.

CENTRAL PARK LANDFILL Winston-Salem, Forsyth Co.	Former municipal landfill for the City of Winston-Salem. Site is 7.23 acres in size, and has been used as a city park since the 1950s. Low levels of chlorinated solvents, with no surficial soil contamination. PD intends to redevelop the site for soccer and a softball field for the adjoining Salem Academy and College so their current fields can be used for additional building space. A passive methane collection system will be installed prior to installation of the recreational fields.
CHEROKEE OIL Charlotte, Mecklenburg Co.	Approximately 2-acre site was formerly a non-permitted hazardous waste storage facility and the site of an EPA removal action. Known arsenic, oil & grease, and solvent contamination exists in site soil and groundwater. PD intends to redevelop the property as a nightclub and parking facility.
CHESTER STREET PROPERTY Gastonia, Gaston County	Site contained former Carson Dry Cleaner located in the center city area of Gastonia. Property has known chlorinated solvents contamination in the soil and groundwater. PD intends to redevelop the site in commercial retail uses.
CITY WEST COMMONS Charlotte, Mecklenburg Co.	Dilapidated shopping center seized in a drug raid by the U.S. Dept. of Justice that has been approved for transfer to the city of Charlotte. Site had VOC and chlorinated solvent contamination in soil and groundwater. The City intends to transfer the property to a not-for-profit development corporation to redevelop the site as commercial retail shopping facility.
C.K. LAND DEVELOPMENT Charlotte, Mecklenburg Co.	A large mixed use development on a former industrial services firm adjacent to a manufactured gas plant. Ground floor retail and studio with Office and residential units above. Project is in vicinity of Camden Square and provides redevelopment to economically depressed area. Capping and land use restrictions regarding PAHs in soil and chlorinated solvents in soil and groundwater.
CUMBERLAND SHOPPING CENTER Greensboro, Guilford Co.	Site of former shopping center and dry cleaners with chlorinated solvent impacted soil and groundwater. PD is a not-for-profit community development corporation. The PD has performed soil remediation activities and intends to redevelop the site with affordable residential housing.
DON CHRISTIAN PROPERTY Carrboro, Orange County	This approximately 0.5-acre underused site had been in use as a bulk oil facility and gas station since the 1920s and is currently in use as an auto repair shop. The site contains petroleum hydrocarbon impacts in soil and groundwater. PD intends to reuse the property in commercial/retail use as part of the renovation and expansion of the existing, adjoining shopping center.
DYNATECH INDUSTRIES Charlotte, Mecklenburg Co.	Former plating facility with metals-impacted soil and groundwater. EPA conducted soil removal activities at the site and has classified it as NFRAP. PD intends to redevelop the property for use as mixed office/retail complex.

EAST GANNON PROPERTY Zebulon, Wake Co.	This property consists of four parcels of land totaling 1.75 acres with four existing structures (former restaurant, current auto sales, auto service garage and hair salon). Site planned to be redeveloped into a stand-alone Eckerd Drug Store, with other surrounding complimentary retail tenants. Soil and groundwater are contaminated with petroleum constituents from above ground storage tanks used by previous gas station.
EAST PARK – BOYER Charlotte, Mecklenburg Co.	Approximately 0.39-acre parcel that is a portion of the East Park Development Project, with known chlorinated solvent and gasoline contamination. PD intends to redevelop the site as a pedestrian urban infill multiple use development with commercial, residential, recreational and common open space. The site is part of the City of Charlotte's East Park re-development zone.
EAST PARK – CRAVER Charlotte, Mecklenburg Co.	Approximately 0.65-acre parcel that is a portion of the East Park Development Project, with known chlorinated solvent and gasoline contamination. PD intends to redevelop the site as a pedestrian urban infill multiple use development with commercial, residential, recreational and common open space. The site is part of the City of Charlotte's East Park re-development zone.
EAST PARK – DOROTHY HALL Charlotte, Mecklenburg Co.	Approximately 0.8-acre parcel that is a portion of the East Park Development Project, with known chlorinated solvent and gasoline contamination. PD intends to redevelop the site as a pedestrian urban infill multiple use development with commercial, residential, recreational and common open space. The site is part of the City of Charlotte's East Park re-development zone.
EAST PARK – JOAL REALTY Charlotte, Mecklenburg Co.	Part of the 24-acre site encompassing a six-block area with known chlorinated solvent contamination. PD intends to redevelop the site as a model for urban infill mixed use development with an emphasis on the needs of pedestrians in an urban setting. The site is part of the City of Charlotte's East Park re-development zone located between the CBD and the historic residential neighborhoods of Elizabeth and Myers Park.
EAST PARK – KOSSOVE Charlotte, Mecklenburg Co.	Part of the 24-acre site encompassing a six-block area with known chlorinated solvent contamination. PD intends to redevelop the site as a model for urban infill mixed use development with an emphasis on the needs of pedestrians in an urban setting. The site is part of the City of Charlotte's East Park re-development zone located between the CBD and the historic residential neighborhoods of Elizabeth and Myers Park.
ECUSTA Pisgah Forest, Transylvania Co.	In its prime, this 540-acre site was the world's largest non-wood pulp and specialty paper manufacturing facility. Closed since late 2002, the site has known metals, caustic and solvent contamination. PD intends to re-start flax pulping operations and to market the pulp to paper manufacturers. PD may also undertake other uses of site buildings and facilities, including office space and possible use of excess wastewater treatment capacity by local municipalities.

ERWIN SQUARE Durham, Durham Co.	This approximately 6-acre property is a portion of a decommissioned former Burlington Industries site, other portions of which have already been redeveloped. There is known chlorinated solvent contamination in groundwater, and these impacts are being addressed under an approved Division of Water Quality corrective action plan. PD intends to redevelop the site in high-density residential use.
FLEMINGTON LANDFILL Wilmington, New Hanover Co.	Site of a closed (1979), privately operated domestic and industrial solid waste landfill with VOC-impacted soil and groundwater. Intended reuse is for a soccer complex. This is the first former landfill property proposed for redevelopment under the NC brownfields statute, and the project's feasibility and technical challenges are being carefully evaluated.
FLYNT FABRICS MILL PROPERTY Hillsborough, Orange County	Former Flynt Fabrics, a textile dyeing and finishing operation, closed in late 2000. Potential, but not confirmed, contamination at the site includes asbestos, lead, peroxide, acetic acid, #5 fuel oil, dyes, salts, bleaches, cleaners, and oils. Prospective Developer desires to purchase the old mill and parking portion of the Property and redevelop it in residential use.
FOOD LION Winston-Salem, Forsyth Co.	A new large supermarket placed on the site of an abandoned grocery store in urban Winston-Salem. Project had strong community support as a quality of life issue as the community had no supermarket. Land use restrictions for chlorinated solvent contamination in groundwater. Brownfield Assessment determined the source to be nearby drycleaner.
FULFLEX, INC. PROPERTY Scotland Neck, Halifax County	Approximately 20-acres property contains a vacant 100,000 SF building, the site of rubber product manufacturing until 2002. Fulflex is the responsible party and is currently working with the Aquifer Protection program to remediate a petroleum and chlorinated solvent plume. The town plans to make site improvements to attract a new manufacturing tenant, who will purchase the site at a reduced rate if they bring enough jobs to the area.
GATEWAY AT OLD SALEM Winston-Salem, Forsyth County	Project size is approximately 51 acres. The property is planned for mixed-use redevelopment including offices, commercial/retail space, residences, a YWCA , a private school and parking. Contamination is from a former Duke Power Plant substation (PCBs, PAHs in soil) and groundwater contamination from a number of sources, mainly petroleum but with a few chlorinated solvents. Cleanup of contamination at the Duke Power facility under the Inactive Hazardous Sites Program is almost complete. The Duke Power site comprises only a portion of this large brownfields redevelopment project.
GUILFORD MILLS Greensboro, Guilford Co.	A 55-acre site containing former textile manufacturing facility with known VOC contamination in soil and groundwater. PD intends to redevelop the property in mixed retail uses. Public benefits include the creation of an estimated 500 jobs and substantial tax roles increases.
GUILFORD MILLS – W. Market Street Greensboro, Guilford County	A 19.8-acre vacant textile facility with ancillary buildings. Minor groundwater contamination associated with former underground storage tanks. Other non-UST contamination has been documented but information has not yet been sent to us. PD plans to use the site for general commercial property.

HAMILTON PROPERTY Charlotte, Mecklenburg Co.	As small, dilapidated property bought for the expansion of Cost Effective Maintenance Inc., a small business in the South End area of Charlotte. Expansion into this property allowed CEM to stay in Charlotte instead of move to suburbs. Land use restrictions for chlorinated solvent contamination in groundwater.
HILLSBOROUGH VENTURES Raleigh, Wake Co.	Project involves redeveloping an area of parking lots and dilapidated, underused retail structures. Land use restrictions are in place for the petroleum hydrocarbon and chlorinated solvent contamination in soil and groundwater. PD intends to redevelop the property as mixed residential (private student dormitory for N.C. State University) and retail complex.
HILLSBOROUGH VENTURES ADDITION Raleigh, Wake Co.	Prospective developer added acreage to the footprint of original Hillsborough Ventures project, which involves redeveloping an area of parking lots and dilapidated, underused retail structures adjacent to N.C. State University for mixed residential (private student dormitory) and retail uses.
HOME DEPOT – South Blvd. Charlotte, Mecklenburg County	A 12-acre site currently occupied by a produce grocer and office rental store (1 acre), parking (7 acres), abandoned plant nursery (1 acre); the rest is undeveloped. Operations at adjacent Academy Steel Drum (ASD) from 1947-69 included the disposal of wastes and sludge from drums into pits/lagoons. The location of the lagoons and overflow drainage is suspected to have been partially on subject property. After ASD burned in 1969 the property was thoroughly re-graded with contaminated soil moved around. Elevated concentrations of lead, chromium, and PCBs in soil along with lead, 2-chlorophenol, and trichloroethene. PD plans to lease property to Home Depot for construction of a new Home Depot home improvement retail store.
LEWITH TEXTILE Charlotte, Mecklenburg Co.	Project involves the redevelopment of 50+ acres of abandoned and underused commercial and industrial property, including the former Lewith Textile facility. Contaminants include Petroleum hydrocarbon and chlorinated solvents in soil and groundwater. PD intends to redevelop the site as an industrial park for light manufacturing and warehousing/distribution.
LUCENT TECHNOLOGIES Greensboro, Guilford Co.	Former cotton mill and manufacturing facility with chlorinated solvent contamination in soil and groundwater. PD intends to redevelop the site in mixed commercial retail/office and residential.
MALLARD CREEK Charlotte, Mecklenburg Co.	A 21-acre site adjacent to former auto service station and chainsaw service center operations. Petroleum hydrocarbon and chlorinated solvent contamination in groundwater, sourced from underground and aboveground storage tanks releases on the adjacent site, has migrated onto the subject property. PD intends to redevelop the property as an apartment complex.
OXFORD PRINTING Oxford, Granville Co.	Former textile printing and finishing facility with VOC contamination in groundwater. PD has conducted remediation of floor drain contents. PD intends to redevelop the site for industrial/distribution use.
PILOT MILLS Raleigh, Wake Co.	Abandoned, condemned turn-of-the-century textile mill in Downtown Raleigh redeveloped into office space and preserved on the National Register of Historic Places. Land use restrictions for chlorinated solvent in groundwater and capping of mercury in soils.

QUALITY METAL PRODUCTS Gastonia, Gaston Co.	This 11- acre site contains an abandoned facility of 48,000 square feet formerly used as for metal fabrication. Parts cleaning activities resulted in solvent impacts to site soil and groundwater. PD intends to refurbish the facility for metal fabrication utilizing high-tech, non-contaminating methods.
REDMAN HOMES Mebane, Orange Co.	Former mobile home manufacturing facility with metals and solvent contamination in soil and groundwater. PD has performed drum removal and soil remediation activities. PD intends to redevelop the site as a manufacturing facility to produce windows and doors.
FORMER REEVES SITE Charlotte, Mecklenburg County	Approximately 20-acres parcel that was historically the former Reeves Brother Facility that operated as a textile research and development laboratory. The site has known groundwater impacts from chlorinated solvents. PD intends to redevelop the property for commercial and light industrial uses.
RUSAK PROPERTY Charlotte, Mecklenburg Co.	A 1.21-acre parcel that is adjacent to the Marie G. Davis Middle School. The site is contaminated from historical operations as a metal plating facility. The PD intends to incorporate the adjacent parcels into the new middle school construction. The brownfields parcel will be the plaza entrance.
SANFORD WWTP Sanford, Lee Co.	Former municipal wastewater treatment plant site with petroleum impacted sewer sludge and metals impacts in site soils and low concentrations of volatile and semi-volatile compounds in groundwater. PD intends to redevelop the property in commercial use, including restaurant, retail space and a multi-screen movie theater.
SINGER COMPANY Chocowinity, Beaufort Co.	Abandoned rural manufacturing facility with lead and phthalate contamination in soil and groundwater. The brownfields agreement provides for partial site remediation. PD intends to redevelop the site with mixed retail and light industrial uses.
SMITH METAL & IRON Charlotte, Mecklenburg Co.	Former site of a scrap metal yard and of a waste cell created for the temporary disposal of impacted soil removed during the construction of the adjoining Carolina Panther's practice field. The waste in the cell has been removed, and minor chlorinated solvent impacts remain in site groundwater. PD intends to redevelop the site in high density residential with additional office, entertainment, and retail potential.
SMITH PROPERTY Shelby, Cleveland Co.	Project involves the redevelopment of an area occupied by seven underused and dilapidated residential homes with petroleum hydrocarbon and chlorinated solvent contamination in groundwater. PD has the support of local residents to reuse the site as a parking lot serving the Cleveland County Offices.
SOUTH TRYON STREET Charlotte, Mecklenburg Co.	A 2.88-acre parcel near historic SouthEnd. PD intends to redevelop the property for commercial purposes such as office and showroom condominiums. Groundwater is contaminated at the Property due to historical site operations as industrial/warehouse storage.
SOUTHERN MANUFACTURING Charlotte, Mecklenburg Co.	This 9-acre site located in inner Charlotte was a former asbestos tile manufacturing facility. Asbestos was discontinued in 1986, and the facility was closed in 1999. The site has asbestos contamination in soils. Intended reuse of the site includes an outdoor amphitheater, a technical business park, or a mixed-use development with industrial, commercial, and residential uses.

STATE FARM ROAD Boone, Watauga Co.	Project involves the redevelopment of property occupied by a rural residence with chlorinated solvent contamination in groundwater and in a spring from an off-site source. PD intends to redevelop the site as a medical office complex.
STONEVILLE FURNITURE CO. Stoneville, Rockingham County	The site is a 22.5 acre historic furniture manufacturer that was idled in 2003. PD plans to redevelop the facility for light industrial, warehousing and flex space, thereby creating at least 200 jobs and greatly improving the tax base. The site has chlorinated solvent impacts to soil and groundwater.
TARTAN MARINE Hamlet, Richmond Co.	Former boat manufacturing facility with lead contamination in soil. Additional site sampling conducted by the PD has shown previous soil removal actions have left no health-based lead problems. PD intends to redevelop the site as a chair and table base manufacturing facility.
TERRELL MACHINE Charlotte, Mecklenburg Co.	Site of former textile manufacturing and gear box machining operations, property in Charlotte's South End district is being redeveloped with ground floor retail and office/residential above. Remedial actions to eliminate hot spot contamination included soil removal and groundwater pump and treat. Land use restrictions are in place to address chlorinated solvent contamination remaining in groundwater.
VANIER GRAPHICS Eden, Rockingham Co.	Former printing facility with petroleum and chlorinated hydrocarbon contamination in the soil and solvent contamination in the groundwater. Developer intends to redevelop the site as a furniture assembly and upholstering facility.
WEST VILLAGE EXPANSION Durham, Durham County	Approximately 9.13-acre former Liggett and Myers tobacco company complex consisting of three warehouses, the old and new cigarette factories, office building and research lab building, all of which are on the State Historic Preservation list and eligible for listing on the National Register of Historic places. No known contamination, although no groundwater sampling has been performed to date. Redevelopment is mixed-use and will consist of 417 loft style apartments, 110,000 SF of office lab space, 53,000 SF of urban retail space, 50,000 SF of small office lofts for businesses, 52,500 SF lab space, a parking garage, and Amtrak/light rail stations with a total of over 1,000,000 sq. ft. of renovation and new construction with a 65 percent residential and 35 percent non-residential mix.
WEST MOREHEAD Charlotte, Mecklenburg Co.	Former automobile repair and maintenance facility with chlorinated solvent contamination in soil and groundwater. Developer intends to redevelop the site, to include both facility renovation and new construction for use as commercial office/retail.
WILSON LANDFILL Wilson, Wilson Co.	This underused 14-acre site was formerly occupied by a wastewater treatment facility owned and operated by the City of Wilson. The site has known metals contamination in groundwater. Developer intends to redevelop in mixed commercial, warehousing, and residential uses.

2006

ENVIRONMENTAL REVIEW COMMISSION

MINUTES

MINUTES
ENVIRONMENTAL REVIEW COMMISSION
14 February 2006

The Environmental Review Commission (ERC) met on Tuesday 14 February 2006 at 9:30 a.m. in Room 544 of the Legislative Office Building. Senator Clodfelter presided.

The following members were present: Senators Albertson, Clodfelter, Dorsett, Forrester, Swindell, and Weinstein; and Representatives Gibson, Hackney, Harrell, Harrison, Justice, McComas, and Warren. Mr. George Givens, Commission Counsel; Mr. Jeffrey Hudson, Assistant Commission Counsel; Ms. Jennifer McGinnis, Assistant Commission Counsel; Ms. Susan Iddings, Assistant Commission Counsel: Mr. Tim Dodge, Commission Analyst; and Ms. Dot Waugaman, Commission Clerk, were also present.

On 1 February 2006, notice was sent to members and interested parties via e-mail and regular mail. A copy of the notice is included in the attachments to these minutes as **Exhibit A**. Copies of the agenda for the meeting and visitor registration sheets are included in the attachments as **Exhibits B** and **C**.

Senator Clodfelter called the meeting to order. He mentioned the death of long time member Senator Hamilton Horton on January 31. He then asked Mr. Givens for comments on the agenda. The planning meeting for this meeting was held on Monday 6 February. Mr. Givens announced that four reports received since the previous meeting were distributed to each member at their desk as read only reports:

- Basinwide Water Quality Management, dated 1 October 2005 (see **Exhibit D)**
- Annual Report on increasing the use of alternative-fueled and low emission light duty cars and trucks in privately owned fleets, dated 10 February 2006 (see **Exhibit E**)
- Report on Implementation of Senate Bill 953, NC Department of Transportation, dated 14 February 2006 (see **Exhibit F)**
- Fish Kills Report, 15 dated October 2005; note particularly an addendum that responds to questions brought to the Commission by Representative McComas at the previous meeting concerning a menhaden fish kill at Wrightsville Beach in December 2005

Three additional reports are being held for presentation at future meetings. They include:

- Annual report on permitting and inspecting animal waste management system (Annual Waste Compliance Report)
- Annual report on compliance enforcement of water quality laws
- Semi-annual report on the effectiveness of the pilot program to inspect animal waste management systems by the Division of Soil and Water Conservation

Mr. Givens noted other meetings of interest. The Joint Legislative Commission on Seafood and Aquaculture meets Tuesday 28 February 2006. The Legislative Commission on Global Climate Change meeting will meet Tuesday 7 March. A series of working group meetings on Risk-Based and Limited Liability are noted on the agenda for today's meeting. In answer to a question from Senator Clodfelter, Mr. Givens said he would be sending out a notice with a proposed date for the working group on Phase II stormwater issues.

The animal waste management agenda items had to be withdrawn from the agenda because the report is not yet ready. Dr. Mike Williams has indicated he expects to complete the report prior to 1 March. The co-chairs have agreed to have an additional ERC meeting on Wednesday 8 March at 9:30 a.m. in Room 544 of the LOB to focus on animal waste management issues. The next regularly scheduled meeting is Tuesday 14 March and Wednesday 15 March. The subject of the two-day meeting

is parks and recreation issues. The current plans are to meet for those two days at the North Carolina Zoological Park in Asheboro.

Senator Clodfelter recognized Mr. Brock Nicholson, Deputy Director of the Department of Environment and Natural Resources (DENR), to provide an overview of the federal vehicle emission standards, which are currently applicable in North Carolina (see **Exhibit H** for his PowerPoint presentation. Several acronyms were used in his presentation:

- LEV – Low Emitting Vehicle
- ULEV – Ultra Low Emitting Vehicle
- SULEV – Supra Ultra Low Emitting Vehicle
- ZEV – Zero Emitting Vehicle
- PZEV – Partial Zero Emitting Vehicle
- ATPZEV – Advanced Technology Partial Zero Emitting Vehicle

The regulations cover cars and medium duty trucks up to 14,000 pounds in California, and require a statewide fleet average for hydrocarbons.

Representative Harrison asked what determines what part of the California standards North Carolina will adopt. There is still debate as to whether a state can or should leave out a component of the California standards. If we select the California rule, and if the Vehicle Global Warming Law, AB 1493, know as the Pavley regulation, goes into effect in California, the regulation would be in effect in North Carolina. Mr. Givens announced he had distributed a useful paper entitled, "Legal Issues Pertaining to the Adoption of California Auto Emission Standards (Including GHG Standards) by Other States", prepared by David Bookbinder of the Sierra Club (see **Exhibit I**). In addition to the requirement that a third vehicle cannot be created, there are some other legal and practical considerations about whether there would be a challenge if some of the aspects of the California program were not adopted. There is also a question about which fleet would have to be averaged: California's, or would our Division of Motor Vehicles have to establish statistics for the fleet as sold in North Carolina?

Senator Clodfelter next recognized Ms. Kay Prince, Chief of the Air Planning Branch, United States Environmental Protection Agency (EPA), to comment on motor vehicle emissions standards from the federal point of view (see **Exhibit J**). Ms. Prince stated that EPA is supportive of states adopting the California car standards, however the Agency does not prescribe the adoption of the standards. It is a state decision. EPA has not made a decision about issuing a waiver for the Pavley provision. They have taken the position that a state can adopt the California standards without the ZEV requirement. She added that if a state is going to take credit in their State Implementation Plan (SIP) for the California car rule, the SIP credit must be modeled appropriately. If North Carolina chooses to adopt the California standards, EPA would urge them to coordinate early with the regional office on how to model that appropriately.

Senator Swindell asked where the monitoring stations will fit into the program. Ms. Prince replied that the Division of Air Quality operates a number of monitoring stations around the state to measure ambient air quality for various pollutants. They are the means whereby it is determined how well we are doing and what additional steps need to be taken. They measure all air pollution, from both stationary and mobile sources, so changing the technology of mobile sources of cars would not affect the monitoring.

Ms. Prince reiterated that the federal and California programs are based on entirely different approaches for emission reductions from vehicles. It is difficult to predict how much reduction will occur with the California program compared to the EPA federal tier II program. The standards are based on grams/mile; therefore, with the California program how many miles are traveled makes a difference in the reduction. The extensive monitoring network measuring ambient air quality generally exceeds the minimum standards set by EPA. Ms. Prince added that ozone is always formed as a secondary pollutant, and fine particulate material can be formed as a secondary pollutant. It is difficult to trace the source of

the pollution. Any emission reduction would show a decrease in the levels at the ambient air quality monitoring stations.

Senator Clodfelter recognized Ms. Coralie Cooper, Transportation Program Manager, Northeast States for Coordinated Air Use Management (NESCAUM), Boston Massachusetts, for an overview of northeast states low emission vehicle programs (see **Exhibit K** for a copy of her PowerPoint presentation), how the states have implemented the programs, what they have gone through in terms of modeling, their enforcement, and how their programs differ somewhat from state to state. The six New England states, New York and New Jersey are members of NESCAUM. NESCAUM's work plan is established by the member states. The standards need to be the same from state to state, but there is flexibility in enforcement. Each state has its own fleet-wide average that must be met, and the state Department of Environmental Protection (DEP) calculates whether or not each manufacturer is meeting the fleet-wide average at the end of every year. The calculation of the fleet-wide average is simple for the northeast states: for Massachusetts there is a single Excel spread sheet. Each manufacturer tells the state how many of four different categories of vehicles they sold in the year. The state then multiplies the number of vehicles times the emission standard for that category, bringing them a weighted average.

Representative McComas asked if legislation has been passed to allow golf-cart type electric vehicles to be used on city streets. Ms. Cooper replied that some of the states have changed the laws so the low-speed electric vehicles can operate on certain roads so they would qualify to get air quality credits. Others have not. Mr. Givens commented that the policy question is whether North Carolina should get into that system of accounting. If North Carolina did, the state would get some credit for the electric vehicles, depending on where they are allowed to go. Another question is tax breaks for certain types of vehicles. Senator Clodfelter referred to a report of several pending pieces of legislation filed by members of ERC that deal with credits on hybrid fuel or electric vehicles. Representative McComas commented that incentives would be good, particularly in the bigger cities where the air quality is poorest. Senator Clodfelter suggested the Commission take a look at the pending bills that give incentives for cleaner vehicles at the meeting just prior to session. He mentioned a prototype vehicle manufacturer relocated to North Carolina from California that produces battery-powered vehicles. They use off-the-line vehicles and convert the power train to total battery power. Some of the brands are Chrysler Crossfire, PT Cruiser, Volkswagen, etc. He added that the manufacturers told him they relocated to North Carolina because the talent pool in the automotive industry is stronger here than in California.

Representative Harrison asked if any states have addressed the issue of receiving less gas tax money because the cars use as much of the roads, but less gasoline. Ms. Cooper replied that with the electric vehicles, the amount was minimal; however, if the Pavley regulation is accepted by EPA, it would be more of an issue. She said that there is an offset; people have more disposable income for other consumer goods and services. She said she would get the figures on the amount of gas tax lost from the NESCAUM states for the Commission.

Ms. Cooper went on to say that all seven northeast states in the NESCAUM region that have adopted the LEV program have finalized their so-called Pavley regulation at the end of 2005, so they will be in line with California to have the standards in place in 2009. She told the Commission that there is a cost to the states for implementing the program. Vermont has a ½ time equivalent position at the DEP to oversee the program; New York has four staff people. The number varies by state depending on the size of the state.

Representative Harrison asked what other states have adopted the regulations. Ms. Cooper replied that Washington, Oregon, and Pennsylvania have either adopted or are in the process of adopting them.

Senator Clodfelter recognized Elizabeth Ouzts, State Director, Environment North Carolina and Brendan Bell, Associate Washington Representative, Sierra Club, to comment on motor vehicle emissions standards from the environmental and conservation community (see **Exhibit L** for a copy of their PowerPoint presentation). Ms. Ouzts led off describing the broad support for cleaner cars. Mr. Bell said the eleven states that have adopted clean car standards have a little less than 35 percent of the new

vehicles sold in the United States. Federal Tier II standards are cleaner than Federal Tier I standards; LEV II standards are cleaner than the original LEV standards, and the LEV II standards are cleaner than the federal Tier II standards.

Ms Ouzts continued the presentation. She said that the clean cars program is the next step to clean healthy air in North Carolina. The proponents advocate Option III-IV on Mr. Nicholson's slide: the California program including both the LEV (clean cars) and the ZEV (advanced technology vehicles) components. The current draft legislation on clean cars would allow the legislature to return to the issue to decide whether or not it wants to regulate greenhouse gas (CO2) pollution. She said that under the clean cars program, if it began in 2009, an estimated 95 percent of the cars on the road would be clean conventional cars and would include the advanced technology cars that are clean conventional gas burning cars. The increased cost would range between $100-$300.

Senator Clodfelter recognized Susan King Cope, Vice President of Programs and Advocacy, American Lung Association of North Carolina to comment on health impacts related to emissions from motor vehicles (see **Exhibit M** for a copy of her statement and **Exhibit N** for a fact sheet on health impacts).

Senator Dorsett asked if there are certain counties in the state that have a higher incidence of asthma than others. Ms. Cope said there are some pockets, particularly in Rowan and Cumberland Counties, in the mountains and in the coastal areas. Senator Albertson asked for a map showing the incidence of asthma across the state.

Senator Clodfelter recognized Mr. Gregory Dana, Vice President for Environmental Affairs, Alliance of Automobile Manufacturers, and Mr. John Policastro, General Counsel for the North Carolina Automobile Dealers Association. Mr. Dana told the members he had worked for EPA for 13 years regulating the automobile industry, and since 1986, he has worked for the auto industry. He stated the position of the Automobile Manufacturers is against making the California standards standard in North Carolina. He commented on some of the presentations made prior to his. Pennsylvania, purported to be on the way to requiring the California standards, has had several bills introduced prohibiting the state from doing so. Some Oregon lawmakers sued the governor as he vetoed a line item in the budget that would prevent him from spending money to move toward adopting the higher standards. He said adapting trucks to cleaner standards is more expensive because it takes more control equipment to meet the same standard. Trucks have higher funnel areas and carry heavier loads. Although it may take minimum resources to track the sales of cars on the state's side, it takes a lot more resources for the automobile manufacturers to keep track of how they are doing in meeting the standard.

Senator Clodfelter asked if the standard would require the state to use a fleet average, or would it be sufficient to say that all cars sold and registered in North Carolina must be LEV II compliant. Mr. Dana replied the state would have to do either federal or California standards. The fleet end log average is a fundamental part of the California program. A California sales mix is different than other states. If only California-compliant cars are sold in North Carolina, they may not meet the fleet average for the state.

Senator Clodfelter asked if North Carolina did have the California standards, which fleet average, would be easier for the automobile manufacturers to manage. Mr. Dana said he would not know without looking at the sales mix. Senator Clodfelter said he would be interested to know.

Mr. Dana referred to a chart (see **Exhibit O**) that showed a computer model, called the mobile model, which EPA uses to model motor vehicle emissions. The chart compares the previous federal standard (NLEV, National Low Emission Vehicle Program), a voluntary program the automobile industry agreed to meet with EPA in 2001 as the base line. The chart was made by Air Improvement Resources, an independent modeler hired by the automobile industry. Air Improvement Resources uses the EPA's assumption set for the model. There is about a 1 percent benefit from California LEV in 2020, showing there is a small incremental benefit between the federal and the California car in out years. Therefore, the automobile manufacturers do not believe it is worth the time for North Carolina to invest in the California standard. Senator Clodfelter asked why there would be no difference between the California

LEV II and the California LEV II without ZEV mandate. Mr. Dana replied the ZEV mandate does not have any impact on air quality. He added that the manufacturers are building cars so close to zero emissions today, that building a true zero emission vehicle means very little to air quality. The Clifornia Air Resources Board's (CARB) own data, back in 1990, showed the ZEV mandate would get a reduction of 13.2 tons per day. By 2003, it would get a reduction of less than 2 tons per day because no one knew how well the manufacturere could reduce emissions on conventional cars. The difference between true 0 and the small increment is very small. Mr. Dana said the industry is making gasoline cars that are PZEV incredibly clean. The first PZEV certified was a Nissan Ultima in California, about 3-4 years ago. The PZEV cars are smaller, 4-cylinder equipped cars to meet the PZEV standard. They need to meet a zero evaporative standard. Evaporative emissions are caused by fuel blowing off the fuel tank or the fuel lines. With bigger fuel tanks, it is much more difficult to meet the PZEV standard. EPA is on a court-ordered schedule to publish rules to reduce emissions from motor vehicles in two ways by 2007. It will reduce the evaporative emissions further than they are today, and it will reduce cold temperature (50 degree) tail pipe hydrocarbon emissions. The standards will take effect in the 2010 model year. If the model is redone at that time, and everything else stays the same, the difference will be almost nothing.

Mr. Dana next discussed the cost of cars. The costs for federal and California standard cars are different but very close. Because the standards are so similar, the same basic control technology is used on both federal and California cars today, so the cost differential is small. The difference exists because the standards are different: the California standard averages on hydrocarbons and the federal standard averages on NOx emissions. North Carolina needs to control NOx emissions. The federal program is more robust in NOx emissions than the California program. The cost is very similar for the LEV and Tier II vehicles today. Some manufacturers make "50-state cars", which meet both California and federal standards. Some companies selling in the low end of the market may not sell 50-state cars. Senator Clodfelter asked Mr. Dana to give staff a list of what companies are currently selling nation-wide cars that are both California and federal compliant.

Mr. Dana then explained the Pavley regulation, AB 1493. It regulates greenhouse gases for motor vehicles. It is to take effect in 2009, although it may be delayed because of a waiver proceeding. That standard, if you convert the CO2 number in 2016 to a miles per gallon number, it is 43.2 miles per gallon. The current fleet average fuel economy requirement is 27.5 miles per gallon. While the cost of the LEV program is close for the federal and California program, it is the cost of the greenhouse gas standards that is significant. The Alliance had a contractor do a 40-page paper looking at the cost analysis done by CARB (see **Exhibit P**). Even if North Carolina does nothing to adopt Pavley, but does adopt California LEV, and the Alliance loses the lawsuit they filed in California, North Carolina will get Pavley cars, because the manufacturers will have to build the cars for California to meet that requirement. Toyota said that if they had to meet the Pavley standard today, they could sell only the Echo and the Prius in California. The Alliance believes CARB is incorrect in assuming the industry can simply add technology to cars to make them meet the standard. Mr. Dana said the industry spends $15 billion a year in research and development to make cars cleaner, safer and better. He added there are four models of cars with synergy activation (when one-half the cylinders are shut off in a V-8 or V-6 car in low power mode such as cruising on a highway), resulting in a 12-20 percent improvement in fuel economy. The industry light truck fleet is facing a federal standard of 24.1 miles per gallon by 2011, an increase of almost 4 miles per gallon.

Mr. Dana brought a list of advanced technology vehicles to the attention of Commission members (see **Exhibit Q**). It lists 37 vehicles now on the road that are considered advanced technology vehicles, including biodiesel, hybrid, ethanol, and natural gas vehicles. Those vehicles are available in North Carolina. There are also more than 29 advanced technology vehicles in development at the present time. No government regulation is driving demand for hybrids today. Senator Clodfelter asked if the state adopted the California standard more hybrid cars would be made available to North Carolina. Mr. Dana answered that the way to get more hybrids to the state is to provide more tax incentives.

Mr. Dana said if North Carolina adopts California LEV II, theywould cede control of the state's motor vehicle mix to the state of California. California has the only extreme non-attainment area in the country, the Los Angeles basin. North Carolina has a much less severe non-attainment problem than

California does. The problem is that the attainment dates are not in line with all the emission control programs that are in place. The Tier II program being implemented since 2004 becomes fully effective in 2020. EPA has in place rules on heavy duty trucks to reduce NOx and particulate matter emission matter from those vehicles by 90-95 percent. They start in 2007 and phase in over 15-20 years. There are controls for air toxics on 110 types of sources across the country to reduce air toxics. There are other EPA rules going into place now that take effect in 2010 and later. EPA also has rules on off-road engines to control emissions, and sulfur has been controlled out of fuel, both gasoline and diesel. There are a whole host of emission control programs that will bring tremendous reductions of emissions in the 2015-2020 time frame. Unfortunately all the required attainment dates are 2009-2010. Every state faces the same problem. The federal program has resulted in cleaner air since the Tier II standards were put in place. There has been an 80 percent reduction in NOx emissions from previous year cars. Whatever the state does, the newer cars will continue to improve the air quality in the state, but something will have to be done by local industries to meet the attainment standards in 2009 and 2010. Adopting the California standard or keeping Tier II standard will not help the attainment problem.

There are a number of impediments to selling a light duty diesel vehicle in California, which can be sold under the federal program. If states are looking at following Pavley standards to improve the fuel efficiency of the fleet, they can do so by adopting LEV, which prohibits the industry from selling light duty diesels in the fleet. A new light duty diesel today gets 20-40 percent better fuel economy than a comparable gasoline engine. The diesels sold in Europe are very advanced technology diesels with very high pressure injectors. There is no smoke, no odor, and no soot. The cars are quiet and have tremendous performance. Over 60 percent of the luxury cars today are sold with diesel engines, because diesels have a tremendous amount of torque. Mr. Dana said he has driven a 7 series BMW (the biggest one they make) with a V-8 diesel engine that got 38 miles per gallon.

Mr. Dana contested the pie chart shown earlier that showed cars being 90 percent of the emission problem. He said that before current standards, cars made up 40-50 percent of the urban pollution problem. When the standards are fully phased in in 2020, the automobile industry will make up about 8 percent of the urban pollution problem.

Representative Justice asked about the disposal of the batteries of hybrid and electric vehicles. Mr. Dana replied that the lead acid batteries are 97 percent recyclable today because of the $1 fee attached to batteries when they are purchased. He hopes the same thing will be done with the nickel metal hydrite and lithium ion batteries in other cars today.

Mr. Dana also provided a one page paper on CO2 fuel economy key points (see **Exhibit R**). He ended his presentation by saying that California standards would get North Carolina very little if any air quality benefit. With that, whether it is done or not, North Carolina will have Pavley cars. They will be much less functional for the average consumer. Trucks will be lighter, will carry or tow less of a load. Cars will be smaller and lighter. Consumers will pay a premium of $1,000-$3,000 for the cars, getting less functional vehicles for more money.

Senator Clodfelter recognized Mr. Policastro, who spoke on behalf of the nearly 700 new car and truck dealers in North Carolina in support of Mr. Dana's comments. He added that their concerns are in the economical and practical implications of such a proposal, which would make North Carolina an island. Its neighbors of South Carolina, Virginia and Tennessee would not have the programs, and the dealers are concerned with the competitive disadvantage. North Carolinians would also have to buy lower standard, smaller cars, at increased cost. The Alliance supports market driven incentives to increase the availability and purchase of alternative fuel vehicles. The current federal standards are working well.

Senator Clodfelter asked if the state had a different standard than South Carolina and if a person could register a car in North Carolina only if it met North Carolina standards, would that drive sales back to North Carolina. Mr. Policastro said it probably would negate the unfair competition, but there are other factors. Dealers often trade cars across state lines to get a specific color or equipment. A Charlotte dealer selling to South Carolina consumers would still be at a cost competitive disadvantage.

Senator Clodfelter recognized Mr. George Millsaps, Liaison for Productivity and Legislative Affairs, Department of Administration, for comments on the costs of compliance by the State Motor Fleet with a low emission vehicle program that would require motor vehicles sold in North Carolina to meet the same motor vehicle emissions standards required for motor vehicles sold in California. Mr. Millsaps said the State does have the largest fleet of vehicles in the state: 8,500 vehicles. The fleet is both efficient, effective, and environmentally friendly. Over 4,800 of the vehicles are alternative fuel, low emission and ultra-low emission vehicles. Included in that figure is in excess of 4,600 E-85 vehicles. The Division purchased no virgin gasoline, either E-10 or E-85. They would like to see that expanded. The main car on the E-85 contract is being discontinued by the manufacturer. There are not any E-85 law enforcement vehicles available any where. For some reason, manufacturers have not chosen to sell or produce any E-85 hybrid vehicles. The fleet has 78 hybrids in the inventory with more on order. North Carolina is the third state in the nation to purchase hybrids. The State Motor Fleet leases the cars to state agencies as a self-supported entity. The range of rates is from $.25 to $.42 a mile; the average is closer to $27 to $.29 a mile. The rate includes all the purchase, maintenance, replacement, gasoline, oil, program administration and even insurance. They use rebuilt programs, economies of scale, purchase used federal surplus vehicles at about 38,000 miles. He added that they cannot find any data that will show moving to the California standards will decrease fuel efficiency and increase cost to the fleet. They do not have any data on any significant change in maintenance, nor do they believe the change would have a negative effect on resale or surplus value of the vehicles. They have not been able to determine actual incremental cost to themselves. The figures of additional cost they have from different sources range from $65 to $275 per vehicle. Based on that, the range of increase of cost to the State of North Carolina would be between $97,000 and $550,000 per year out of an agency budget of $45 million.

Mr. Millsaps summarized his remarks by saying that the change would not be significant enough for them to require a rate change to the agencies; thus there would be no impact on the general fund and no impact on agency costs. If vehicle maintenance got worse, and gasoline prices went up at the same time, a rate change might be required. He added that if the General Assembly goes forward with the California car standard legislation, the Department would like to participate but not be the lead in any rule-making or anything reducing the amount of miles that state employees would drive.

Senator Swindell asked if there have been any savings as the mileage at which they trade cars has decreased. Mr. Millsaps replied that they are identifying the cars that have maintenance issues and they get rid of them before the expensive repairs are needed. He believes it has had a beneficial effect on their costs.

Representative Gibson suggested Mr. Millsaps make the information discussed above available to local governments. Mr. Millsaps agreed to do so.

Senator Albertson asked if there is any information available to identify what health care costs are impacted by poor air quality, regardless of the source of pollution. Ms. Cope said she would get the information and provide it to the committee. Mr. Brendan Bell said for the state of Pennsylvania from all sources in their state, they estimate the health care costs at about $2 billion a year in additional costs because of poor air quality. Mr. Nicholson commented that EPA has considerable amount of health care cost information associated with not meeting the ambient air quality standards. It would be available on their website.

Senator Clodfelter asked if the emissions benefit of the California LEV standard is as it is portrayed in Exhibit L. Mr. Nicholson said there is quite a spread of results across the different analyses. He added that the more recent analyses have reduced the benefit. He said the important question is what is important to North Carolina. He answered that NOx is more important than VOC. A number of studies suggest that in 2020 the benefit would be in the 3-5 percent difference range. Some questions have been raised about the validity of the calculations. He said he has not seen any data that show it would not be a positive benefit. The federal Tier II level is close to the California LEV standard.

Representative Gibson asked if Mr. Nicholson would want to refute anything in the presentation made by Mr. Dana. Mr. Nicholson replied that the California LEV program is giving some degree of

additional benefit. Whether it is enough benefit to warrant adopting the program or not has not yet been determined.

Representative Hackney asked what Virginia has done with this issue. Mr. Nicholson replied that he does not know what they have done about air quality. He said they have made some attempts to mimic the North Carolina clean smokestacks legislation, but the attempts have failed in the legislature.

Representative Harrison asked what the overall average of poor air quality is due to mobile sources. Mr. Nicholson replied it is in the high 40 percent range for mobile sources and it was the same for stationary sources before the clean smokestacks legislation and the NOx eight-hour rule. He added that a comment made by Mr. Dana is realistic. The state is seeing considerably more NOx reduction from mobile sources due to the fleet turnover into the Tier II program or the California LEV program. The heavy duty diesel program will be a tremendous help when it kicks in in the 2007 model year. He went on to say that North Carolina has already taken two Section 177 actions to copy California, but by regulation, not by legislation.

Representative Gibson reminded the Commission members of the two-day meeting on 14 and 15 March, to be held in Asheboro. Mr. Givens reminded the members that the next meeting will be held on 8 March 2006. The topic for the 8 March meeting is animal waste management.

The meeting adjourned at 1:00 p.m.

Senator Daniel Clodfelter, Co-Chair
Presiding

Senator Charlie Albertson, Co-Chair

Dot Waugaman, Commission Assistant

Representative Pryor Gibson, Co-Chair

Notice of Planning Meeting
Schedule of Future Meetings
Meetings of Interested Parties (605 Working Groups)
Additional Information

COMMISSION MEETING –14 FEBRUARY 2006:

The Environmental Review Commission (ERC) will meet at 9:30 a.m. Tuesday 14 February 2006 in Room 544 of the Legislative Office Building in Raleigh. The Commission will not hold a business meeting on Wednesday 15 February 2006. This date may be utilized, however, as an alternative meeting date in the event of inclement weather.

At the 14 February meeting, the Commission will begin or continue studies for which the Commission is responsible, hear reports from State agencies, discuss topics to be considered at future meetings, and attend to other matters. Listed below are potential agenda topics for this meeting. More specific information regarding the agenda for the 14 February meeting of the Commission will be developed at the staff planning meeting discussed below.

POSSIBLE AGENDA TOPICS:

Air Quality:

1) Issues related to the implementation of a low emission vehicle program that would require motor vehicles sold in this State to meet the same motor vehicle emissions standards required for vehicles sold in California

2) Annual report on increasing the use of alternative-fueled and low-emissions light-duty cars and trucks in privately owned fleets (G.S. 143-215.107C(c))

3) Annual report on development and implementation of a plan to reduce vehicle miles traveled by State employees and vehicle emissions resulting from job-related travel, including commuting to and from work (G.S. 143-215.107C(d))

4) Annual report on development and implementation of a plan to reduce vehicle miles traveled by private sector employees and vehicle emissions resulting from job-related travel, including commuting to and from work (G.S. 143-215.107C(e))

Solid and Hazardous Waste Management:

5) Measures to reduce the quantity of mercury that is released into the environment that impacts natural resources and that harms the public health of the citizens of the State

6) Annual report on the mercury minimization plan prepared by DENR (G.S. 130A-310.57)

7) Annual report on the Dry-Cleaning Solvent Cleanup Program (G.S. 143-215.104U)

8) Semiannual report on agency litter enforcement, litter prevention, and litter removal efforts (G.S. 147-12(b))

Water Quality:

9) Discussion of issues related to the evaluation of alternative animal waste management technologies to determine whether those technologies are environmentally superior and economically feasible

10) Annual report on permitting and inspecting animal waste management systems/Animal Waste Compliance Report (G.S. 143-215.10M)

11) Annual report on the compliance/enforcement of water quality laws for facilities that discharge into surface waters (G.S. 143-215.9A)

12) Semiannual report on the effectiveness of the pilot program to inspect animal waste management systems by the Division of Soil and Water Conservation (S.L. 2003-340, Sec. 6.2)

13) Report on whether to continue or expand the pilot program to inspect animal waste management systems by the Division of Soil and Water Conservation (S.L. 2005-276, Sec. 12.7(c))

14) Annual report on fish kills within the preceding year (G.S. 143B-279.7(c))

15) Annual report on Basinwide Water Quality Management Plans (G.S. 143-215.8B)

General/Miscellaneous:

16) Issues related to actions available to governmental agencies to respond to violations and noncompliance by licensed environmental professionals and consultants

17) Other matters related to the Commission's powers and duties under G.S. 120-10.43

PLANNING MEETING:

To facilitate development of the agenda for the 14 February meeting of the Commission, to plan for subsequent meetings of the Commission, and to receive input from interested persons regarding the work of the Commission, the Commission Counsel will hold an informal planning meeting at **2:00 p.m. on Monday 6 February 2006 in Room 605 of the Legislative Office Building**. Persons who wish to participate in the development of the agenda for meetings of the Commission, or who are interested in any matter before the Commission, are invited to attend.

SCHEDULE OF FUTURE MEETINGS:

Below is a schedule of meetings of the Environmental Review Commission for February through May 2006. This schedule is tentative and subject to adjustment. For planning purposes, however, please reserve these dates. Please note the following:

1. This schedule has been developed in anticipation of the need for at least one full-day business meeting each month to address the regular workload. In addition, it allows for at least one joint meeting with other oversight entities, including the Joint Legislative Commission on Seafood and Aquaculture, the Joint Legislative Transportation Oversight Committee, and the Joint Legislative Utility Review Committee. It includes enough days to allow for the possibility of one or more optional field trips and for cancellations as a result of hazardous weather conditions.

2. Commission meetings normally begin at 9:30 a.m., include a lunch break, and run until mid-afternoon. Please plan on meeting from 9:30 a.m. until at least 3:30 p.m. Unless otherwise announced, the Commission will meet in room 544 LOB.

3. To facilitate development of the agenda for meetings of the Commission and to receive input from interested persons regarding the future work of the Commission, the Commission Counsel holds informal planning meetings for staff and interested parties. Commission members are not expected to attend these meetings. Only one staff planning meeting is scheduled per month, regardless of the number of scheduled meetings of the Commission. Unless otherwise announced, public staff planning meetings will be held in room 605 LOB.

4. The 2006 Regular Session is scheduled to begin at 12:00 noon on Wednesday 9 May 2006. The Commission may meet shortly after the beginning of the session to complete work and to consider any legislative proposals and recommendations.

Commission Meeting	**Staff Planning Meeting**
Tuesday 14 February 2006	2:00 p.m. Monday 6 February 2006
Tuesday 14 and Wednesday 15 March 2006	*10:00 a.m. Thursday 2 March 2006*
	(Please note change in date and time)
Tuesday 11 and Wednesday 12 April 2006	2:00 p.m. Monday 3 April 2006
Wednesday 3 May 2006	10:00 a.m. Thursday 27 April 2006
Monday 8 May 2006	

MEETINGS OF INTERESTED PARTIES (605 WORKING GROUPS):

The Commission Counsel will hold meetings of interested parties on specific topics as indicated below:

Risk-Based/Limit Liability for Environmental Cleanups Working Group
2:00 p.m. Monday 13 February 2006 – 605 Legislative Office Building
2:00 p.m. Monday 6 March 2006 – 605 Legislative Office Building

ADDITIONAL INFORMATION:

If you have questions related to the Commission, please feel free to contact the Commission Counsel or other Commission staff at (919) 733-2578.

AGENDA
9:30 a.m. Tuesday 14 February 2006
Room 544 Legislative Office Building

1. Call to order
   Senator Daniel G. Clodfelter, Presiding

2. Introductory remarks by Cochairs
   Senator Charles W. Albertson
   Senator Daniel G. Clodfelter
   Representative Pryor A. Gibson

3. Report to the Commission and explanation of agenda items
   George F. Givens, Commission Counsel

4. Discussion of issues related to the implementation of a low emission vehicle program that would require motor vehicles sold in this State to meet the same motor vehicle emissions standards required for motor vehicles sold in California

   Overview of federal motor vehicle emissions standards and California motor vehicle emissions standards
   Brock M. Nicholson, Deputy Director
   Division of Air Quality, Department of Environment and Natural Resources (DENR)

   Comment on motor vehicle emissions standards from the United States Environmental Protection Agency
   Kay Prince, Chief
   Air Planning Branch; Air, Pesticides, & Toxics Management Division; Region IV; United States Environmental Protection Agency

   Overview of northeast states low emission vehicle programs
   Coralie Cooper, Transportation Program Manager
   Northeast States for Coordinated Air Use Management (NESCAUM)
   Boston, Massachusetts

Comment on motor vehicle emissions standards from the environmental and conservation community

Brendan R. Bell, Associate Washington Representative
Sierra Club

Elizabeth H. Ouzts, State Director
Environment North Carolina

Comment on health impacts related to emissions from motor vehicles

Susan King Cope, Vice-President of Programs and Advocacy
American Lung Association of North Carolina

Comment on motor vehicle emissions standards from automobile manufacturers and automobile dealers

Gregory J. Dana, Vice President for Environmental Affairs
Alliance of Automobile Manufacturers, Washington, D.C.

T. John Policastro, General Counsel
North Carolina Automobile Dealers Association

Comment on the costs of compliance by the State Motor Fleet with a low emission vehicle program that would require motor vehicles sold in this State to meet the same motor vehicle emissions standards required for motor vehicles sold in California

George E. Millsaps, Jr., Liaison for Productivity and Legislative Affairs
Department of Administration

5. Commission discussion and announcements

6. Adjourn

SCHEDULE OF FUTURE MEETINGS:

Below is a schedule of meetings of the Commission for March 2006 through May 2006. This schedule provides for two-day meetings in March and April. Two days have been reserved in these months because it may be necessary or desirable to have a two-day meeting to accommodate the workload and to allow for the possible scheduling of joint meetings with other committees and commissions. This also allows for the possibility of one or more out of town meetings that could include field trips or site visits on one of the two days. This schedule is tentative and subject to adjustment.

To facilitate development of the agenda for meetings of the Commission and to receive input from interested persons regarding the future work of the Commission, the Commission Counsel holds informal planning meetings for staff and interested parties. The schedule of these public Commission staff planning meetings is also set out below.

Wednesday 8 March 2006
Location: 544 LOB
Staff Planning Meeting: 10:00 a.m. Thursday 2 March 2006 – 605 LOB (This meeting will also serve as the Commission staff planning meeting for the Commission meeting scheduled for 14 and 15 March 2006.)

Tuesday 14 March and Wednesday 15 March 2006
Location: North Carolina Zoological Park (Tentative)
Staff Planning Meeting: 10:00 a.m. Thursday 2 March 2006 – 605 LOB

Tuesday 11 April and Wednesday 12 April 2006
Location: 544 LOB / To be determined
Staff Planning Meeting: 2:00 p.m. Monday 3 April 2006 – 605 LOB

Wednesday 3 May 2006
Location: 544 LOB
Staff Planning Meeting: 10:00 a.m. Thursday 27 April 2006 – 605 LOB (This meeting will also serve as the Commission staff planning meeting for the Commission meeting scheduled for 8 May 2006.)

Monday 8 May 2006
Location: 544 LOB

OTHER MEETINGS:

The Commission Counsel will hold meetings of interested parties on specific topics as indicated below:

Risk-Based/Limit Liability for Environmental Cleanups Working Group (HB 1778/HB 1099/SB 1121)
2:00 p.m. Monday 6 March 2006 – 605 Legislative Office Building

Annual Report from the Basinwide Planning Program

For the Period of October 1, 2004 through September 30, 2005

I. Progress in Developing and Implementing Basinwide Water Quality Plans

A. Public Outreach/Involvement

The Basinwide Planning Program finalized the first cycle of basin plans in May 1998. The second cycle of plans was completed in March 2003. The third cycle of basinwide water quality plans is well underway, with the finalization and Environmental Management Commission approval of the *Neuse (July 2002), Lumber (December 2003) Tar-Pamlico (March 2004), Catawba (September 2004), French Broad (April 2005), New (October 2005) and Cape Fear (October 2005) River Basinwide Water Quality Plans*. Completion of the remaining eight third cycle plans is well underway. Activities related to gathering formal public input on the basinwide plans during October 2004 through September 2005 are presented below.

River Basin	Plans Approved by Environmental Management Commission	Public Review
French Broad	April 2005	February 2005
New	October 2005	August 2005
Cape Fear	October 2005	May 2005

B. Coordination and Collaboration Activities Related to Basinwide Planning Implementation

Many additional activities have occurred over the past year that are not tied to a specific basin, but rather can be applied to the program as a whole. Some of the more significant activities are as follows.

- In an effort to assure Basinwide Plan implementation and to increase coordination among Division of Water Quality staff and other agencies, meetings to discuss implementation needs are held regularily for each river basin. At least one meeting has been held with each regional office staff during this reporting period to discuss the Implementation Packet for each river basin covered by the regional office. Central office staff from various units may attend these meetings with Basinwide staff, or further coordination is conducted with central office staff as follow-up to the meetings.
- Additional coordination is conducted with other agency personnel and local watershed organizations as needed to discuss specific management strategies and to assess progress being made to implement these strategies. These meetings are also

used as an opportunity to share more information and jointly develop appropriate management strategies to address specific problems.

- Basinwide staff coordinate with the Ecosystem Enhancement Program staff on prioritization of targeted watersheds, getting input from local resource professionals, and utilizing information within the Phase I watershed scoping documents.
- Basinwide staff coordinates with state, federal and local agencies to obtain information pertinent to the basinwide plans, increasing the level of coordination and communication with these agencies and their participation in the development of basinwide plans. Discussions between the Basinwide Planning Program and the following agency staff: NC Division of Soil and Water Conservation, Environmental Health, Coastal Management, Water Resources, and Marine Fisheries, as well as the Wildlife Resources Commission and US Fish and Wildlife. These discussions have resulted in improved communication, sharing information and assuring appropriate information is presented in the basin plans.
- Basinwide information was provided to applicants for Clean Water Management Trust Fund and Sections 319 and 205(j) grants. Basin planners also provide technical reviews of applications.
- Basinwide plans, notices of public input opportunities, a river quiz and other relevant information to the basinwide planning program are updated on the web site to provide interested parties with more access to information (see http://h2o.enr.state.nc.us/basinwide/).
- Basinwide staff coordinates with the Classifications & Standards Unit and other federal and state agencies to develop management strategies for threatened and endangered species per DWQ rule.
- Basinwide staff continues to work with US Geologic Survey, NC Department of Transportation (NCDOT) and the Center for Geographic Information and Analysis in development of 1:24,000 National Hydrography Data (NHD) for North Carolina. Methods continue to be developed and tested to incorporate water quality and NCDOT data onto the NHD. The NHD will be a necessary data layer for submittal of future 303(d) impaired waters lists to the Environmental Protection Agency.
- Basinwide staff continues to develop information and improve skills related to Geographic Information System procedures. The result of these efforts will increase proficiency in mapping capabilities and analysis of data.
- Basinwide staff continues to enhance procedures, methods and database implementation pertaining to use support decisions on surface water quality status.
- Solicitation for water quality information from outside sources for the Chowan, Pasquotank, Neuse and Broad River basins was conducted in 2004. This activity entails mailing a flyer to all persons on the Planning Section mailing list database for these basins, including NPDES dischargers.
- Basinwide staff conducted public input phase for developing draft basinwide water quality plans for the Roanoke River basin through the Roanoke River Basin Association.
- Basinwide staff prepared draft plans for public review for the French Broad, New and Cape Fear River basins. This activity entails conducting data analysis and making use support decisions based on all available information, obtaining public input as

noted above, preparing text and maps by subbasin identifying watershed level water quality problems and potential solutions.

- Basinwide staff conducted public review and comment phase on the French Broad, New and Cape Fear River basins. This activity entails mailing notices of the availability of the draft plan on-line or by hard copy, meeting with various interested parties as noted above, editing the plan to reflect the comments as needed, and conducting final preparation of the plan for approval by the Environmental Management Commission.
- Basinwide staff continues to coordinate with river basin coalitions and watershed groups to identify high priority waters and issues of relevance to that group, and identify potential means to address the issues. This activity entails providing technical assistance and guidance on water quality initiatives developed and implemented at the local level.
- Basinwide staff continues to participate in FERC hydropower relicensing negotiation efforts for the Catawba and Yadkin-Pee Dee River basins. This activity entails assuring that water quality conditions in the basin are maintained or improved as a result of relicensing activities.
- Basinwide staff continues to review and provide comments to the DCM staff on content and accuracy of land-use plans related to water quality in coastal areas.
- The Basinwide Program has embarked on a collaboration effort with the Soil and Water Conservation Districts across the state as each basin plan is revised. This initiative is intended to meet the expectations of the DENR Strategic Plan Directive 3. Colloboration has begun on the French Broad, New and Roanoke River basins as start-up. The Districts provide watershed level information for the basin plans and contribute to implementation strategy development.

C. Some Plan Development and Implementation Activities Related to Specific River Basins

The following bullets, by basin, present some of the more significant activities and accomplishments over the past year to achieve the goals of the Basinwide Planning Program. The program had one of four basin planner positions vacant for much of this reporting period due to inability to fill the position.

Broad River –

- Held implementation/pre-sample meetings in two regional offices (Asheville and Mooresville) to review information pertinent to the upcoming Broad River plan.
- Presented basinwide information to the Soil and Water Conservation Districts (SWCDs) during the Spring 2005 Area Meeting. This provided the basin planners an opportunity to meet SWCD supervisors and staff and provide information related to the expanded interim review process.
- Provided comments to the U.S. Army Corps of Engineers and the DWQ Section 401 Unit related to a proposed dam on the First Broad River (August 2005). Comments included information gathered during the last basinwide planning process and comments from the TMDL Modeling Unit and the Environmental Sciences Section-Lakes Assessment Unit.

Cape Fear River –

- Continued to work with the Basin Discharger Coalitions in development of projects and coordination with basinwide planning efforts.
- Participate in modeling and Total Maximum Daily Load (TMDL) meetings with stakeholders in lower Cape Fear, Haw River/Jordan Reservoir and Durham.
- Participated in Cape Fear River Assembly and Division of Water Resources hydrologic model update.

Catawba River –

- Participate in quarterly meetings of the Catawba River Bi-State Task Force, often providing a presentation on status of Catawba River Basinwide issues.
- Provide input to the Catawba River Bi-State Task Force by serving on the Executive Committee.
- Participating in monthly meetings with DENR agency staff and other stakeholders and Duke Power representatives to continue to develop a Federal Energy Regulatory Commission (FERC) relicensing settlement agreement. Program supervisor and basin planner participate in the Water Quality Resource Committee and State Relicensing Team. Staff works with the agencies and Duke Power to assess the impacts of hydropower operations on water quality, wetlands and aquatic habitat. Studies are completed and reports are forthcoming. A 401 Certificate is required by DWQ and the FERC for renewing the expiring hydropower license. The new license will be a 30 or 40-year license.
- Began process to develop strategy to reverse impairment to Lake Rhodhiss. Parties involved include Western Piedmont Council of Government, Carolina Land and Lakes RC&D, SWCD, DENR, etc. Funding for the project was secured from Section 319 in 2005. Project will begin in spring 2006.
- Serve as technical advisor to Ecosystem Enhancement Program (EEP) led restoration project in Lower Creek in Caldwell County. Also consulted on community television program designed to advertise and explain the project to Caldwell County citizens.
- Provide coordination between EEP Lower Creek restoration project and Western Piedmont COG Rhodhiss Watershed Project.
- Serve on the grant selection committee for the Catawba River Conservation Easement Fund, funded by Crescent Resources.

French Broad River –

- Met with several watershed groups, local resource agency staff and the council of governments to review draft language and use support. This allowed the local groups and staff an opportunity to comment on the basinwide water quality plan prior to the public review and comment period. Because of this expanded interim review, the plan was more inclusive with more specific information and management strategies for a particular stream or watershed.
- Met with and obtained information from four of the eight county SWCDs. Information included: specific watershed and county water quality problems; water quality monitoring and management objectives; types and amount of funding

provided from the NC Agricultural Cost Share Program (NCACSP) and the NRCS Environmental Quality Improvement Program (EQIP).

- Attended the Fall 2004 and Spring 2005 SWCD Area Meetings to be introduced to the French Broad Coalition SWCD initiative and objectives. Basin planner is working with the Division of Soil and Water Conservation to begin working with the Coalition in the development of the French Broad River Implementation Plan.
- Three watersheds in this basin have been identified by the EPA Watershed Management Office as high priority watersheds. The basin planner is working with representatives from the EPA, DWQ and local resource agency staff in implementing watershed plans to improve and remove these watersheds from the 303(d) list of Impaired waters by the year 2012.

Hiwassee –

- Serving on the Technical Advisory board for Hiawassee River Watershed Coalition (HRWC).
- Active member on the Hiwassee Interagency Team. The team is working to enhance communication and coordination between States, hydropower operations, and watershed associations.
- Technical advisor to EEP and HRWC as they develop a restoration plan for the Hiwassee River Basin.
- Assisted DWQ biologists in determination of sample locations for the first comprehensive fish community sampling effort in the Hiwassee River basin by NC.
- Attend regular meetings with DWSC and the local district staff to coordinate planning efforts.
- Served as instructor in a Clean Water Contractors course hosted by HRWC.

Little Tennessee River –

- Coordinating Nonpoint Source Team of local, state, Indian, and federal agencies and local watershed organizations to conduct education and demonstration projects in the basin.
- In cooperation with the Nonpoint Source Team, hosting a mountain region water quality conference to kickoff the 2007 revision of the Basinwide Water Quality Plans.
- Serving on the technical advisory board for the Little Tennessee Watershed Association, Tuckasegee Watershed Association and Upper Cullasaja Watershed Association.
- Work with Watershed Association of the Tuckasegee River to develop a community based restoration effort on Greens and Savannah Creeks. Funds were secured through the Section 319 program and a special technical assistance grant from EPA's central office.
- Assisting three volunteer watershed associations to develop local watershed action plans for stream restoration.
- Attend regular meetings with DWSC and the local district staff to coordinate planning efforts.

Lumber River –

- Coordinated with the Lumber River Council of Governments regarding raising public awareness and identifying appropriate groups and agencies to aid in this effort.

Neuse River –

- Participated in Upper Neuse River Basin Association technical advisory committee for stream mapping protocols and Watershed Evaluation Tool to be used by local governments.

New River –

- Met with several of the watershed groups, local resource agency staff and the council of governments to review draft language and use support. This allowed the local groups and staff an opportunity to comment on the basinwide water quality plan prior to the public review and comment period. Because of this expanded interim review, the plan was more inclusive with more specific information and management strategies for a particular stream or watershed.
- Met with each of the three county SWCDs in the river basin. The basin planner reviewed use support methodologies, use support ratings and draft language with each of the Districts. The basin planner then received information from each of the Districts related to specific watershed best management practices that were installed with NCACSP or EQIP funds; water quality concerns; and special resources in each subbasin.
- Upon request by the High Country Council of Governments, DWQ presented the draft basinwide water quality plan to the public through a Public Information Session (August 2005). DWQ presentations included: information related to the basinwide planning process; use support methodology and water quality in the New River basin; NPDES permitting; classifications and standards; and stormwater management. Presentations were also given by two local watershed groups and the NRCS District Conservationist. The thirty-five people attending included a mix of resource agency staff, state and local government officials, water and land conservation groups, consulting agencie, and local citizens.
- Presented the draft *New River Basinwide Water Quality Plan* to the Soil and Water Conservation Commission during their annual District Employee's Conservation Workshop to showcase how DWQ and the SWCDs worked together to draft language for the plan.

Roanoke River –

- Participating heavily in Army Corps of Engineers (ACE) Section 216 study for the John H. Kerr Reservoir. Responsibilities include representation on several technical task groups including team leadership at meetings with multiple state and federal agencies and interest groups. Tasks have also included development of a Scope of Work for the Water Quality Task Group for monitoring and modeling efforts. The Section 216 is a collaborative study with the States of NC and VA and the ACE to conduct a comprehensive evaluation on impacts to the Roanoke River downstream from the Roanoke Rapids Dam. The study is composed of three phases. Phase One, the feasibility phase, is composed of several tasks such as gathering and evaluating

existing relevant data, identifying gaps in the existing relevant data, and identifying and evaluating existing methods and tools for study of the subject. Phase One, scheduled for twelve months, is near completion. Phase Two, the design phase, will begin after the feasibility phase and is scheduled for 24-36 months. Phase Three, the construction phase, will begin after the design phase and is scheduled for 24 months.

- Representation on weekly communications with the ACE and relevant agencies regarding flood control releases and subsequent flow reductions from J.H. Kerr Reservoir as they pertain to dissolved oxygen levels on the Roanoke River.
- Conducted one Implementation Meeting with DWQ staff.

Tar-Pamlico River–

- Participated in Upper Tar River collaboration effort with the Division of Soil and Water Conservation, National Resources Conservation Service, Conservation REP, Division of Forest Resources, Wildlife Resources Commission and Tar River Land Conservancy to identify and coordinate water quality target project areas and resources.
- Advised Wildlife Resources Commission, National Heritage Program, and US Fish and Wildlife Service staff in development of endangered species management plans for watersheds in the upper portion of the basin and the lower Swift Creek Watershed.

Watauga River –

- Participated in Nonpoint Source Management Team meeting. Group worked to identify problem areas, concerns and on-going voluntary actions.
- Provided information regarding the goals and objectives of basinwide planning to the Watershed Education Coordinator with the NC Cooperative Extension Service. The information is to be included in a documentary related to stormwater management in the Watauga River basin.
- Working with the SWCD and NC Cooperative Extension Service to plan a Watauga Roundtable Planning Session to review draft use support and management strategies in the river basin (November 2005). Discussion will involve the work and concerns of the local resource agency staff.

White Oak River –

- Presented and participated in water quality restoration strategies with the New River Round Table including the City of Jacksonville, MCB Camp Lejeune, Division of Soil and Water Conservation, Natural Resource Conservation Service, Cooperative Extension Service, and UNC-Wilmington.
- Conducted one Implementation Meeting with DWQ staff.

Yadkin-Pee Dee River –

- Participating in monthly meetings with DENR agency staff and other stakeholders, along with Progress Energy and Yadkin, Inc. (APGI) representatives to continue to develop a Federal Energy Regulatory Commission (FERC) relicensing settlement agreement and license application for both licensees. Program supervisor participates in both relicensing processes, working with the agencies and licensees to assess the impacts of hydropower operations on water quality, wetlands and aquatic habitat.

Studies are completed and reports are forthcoming. A 401 Certificate is required by DWQ and the FERC for renewing the expiring hydropower license. The new licenses will be 30 or 40-year licenses.

- Assist with stakeholder education for the High Rock Lake TMDL development processs
- Attend regular meetings with DWSC and the local district staff to coordinate planning efforts.
- Assisted Rowan County Soil & Water Conservation District with developing a project to address water quality concerns in Second Creek, a tributary to High Rock Lake. The project received a grant from the Section 319 program.

Incentives to Increase the Use of Alternative-Fueled Vehicles in Privately Owned Fleets in North Carolina

2005 Report to the Environmental Review Commission N.C. General Assembly

North Carolina Department of Environment and Natural Resources
Division of Air Quality

Legislative Background

Section 4.5 of Session Law 1999-328 (Senate Bill 953) states:

"The Department of Transportation, the Department of Commerce, and the Department of Environment and Natural Resources shall jointly develop recommendations for incentives to increase the use of alternative-fueled and low emission light duty cars and trucks in privately owned fleets. The Department of Environment and Natural Resources shall submit these recommendations to the Environmental Review Commission on or before 1 February 2000. The Department of Environment and Natural Resources shall report on progress in increasing the use of alternative-fueled and low emission light duty cars and trucks in privately owned fleets to the Environmental Review Commission on or before 1 October of each year beginning 1 October 2001."

2005 Report

The following discussion highlights the Alternative Fueled Vehicle and Fuel activities since the 2004 report.

National Energy Policy Act

- The 2006 FY budget calls for new consumer tax credits for energy-efficient hybrid, clean-diesel, and fuel-cell vehicles. The energy bill will provide up to $3,400 per vehicle in tax credits to consumers for purchase of these cars, based on their fuel savings potential.

- A small agri-biodiesel producer tax credit establishes a $.10/gallon tax credit for agri-biodiesel producers. This credit is applicable up to 15 million gallons of agri-biodiesel produced and limited to producers under 60 million gallons of annual production.

- The bill creates a credit for alternative fuel refueling installations that dispenses biodiesel-blended fuel (B20 minimum).

Federal Tax Incentives

The American Jobs Creation Act of 2004 (JOBS Bill) became law on October 22, 2004 and effective January 1, 2005. It includes excise tax provisions for E85 and many other important tax provisions for biofuels.

- The biodiesel excise tax credit was extended through December 2008 which provides an incentive to fuel distributors to blend biodiesel into diesel fuel and helps reduce the cost to consumers. The credit amounts to a dollar per gallon for "agri-biodiesel," and 50 cents per gallon for biodiesel made from recycled cooking oil. Both on-road (dyed) and off-road (undyed) fuels qualify for the tax credit.

- The Volumetric Ethanol Excise Tax Credit (VEETC) is extended for using ethanol-blended gasoline until 2010. A $0.51 per gallon of ethanol blended with gasoline credit is given up to an E85 blend (85% ethanol + 15% gasoline).

2005 North Carolina State Legislation:

Several significant bills were filed in the N.C. General Assembly to promote the use of alternative fuels during the 2004-2005 session and are assigned to the different committees as this document is being prepared. Worth noting from the 2004 report, S.L. 2004-153 provides two new income or franchise tax credits for construction of renewable fuel facilities effective beginning in 2005. The sunset for these two new credits is 2008. This act became effective for taxable years beginning on or after January 1, 2005.

S1149 passed the legislature toward the end of the 2005 session and is now state law, **SL 2005-413 Energy Credit Banking/Selling Program/Fund.** This is an act to allow the State Energy Office to sell excess Energy Policy Act (EPAct) credits, known as Alternative Fuel Vehicle (AFV) credits, to generate funds for state alternative fuel use. The funds generated will be distributed across state agencies in proportion to the number of credits each agency generates through alternative fuel use. How it works: an alternative fuel revolving fund is created and may be used to pay for the incremental costs of purchasing ethanol and biodiesel fuels, alternative fuel vehicles and related refueling infrastructure. The State currently has 1,110 AFV credits banked, at a value of $800 to $1,000 each. North Carolina will benefit by:

- Generating funds to increase the use of alternative fuels by the state fleet;
- Expanding the use of alternative fuels, which will improve air quality, facilitate economic development and support environmental enhancement goals;
- Making alternative fuel use easy to implement and administer.

Renewable Fuels Motor Fuels Tax Exemption (S1150/H1296), sponsored by Senator Jenkins and Representative Hackney, is an act to exempt biodiesel and ethanol from state motor fuel excise tax. This would create an incentive to use alternative fuels, help reduce dependence on imported petroleum, and improve air quality. Eliminating this tax would have a minimal fiscal impact because there is very little private sector use of these fuels in North Carolina. Neither bill moved during the legislative session.

Mobile Source Emission Reduction Program (S1038/H1595), sponsored by Senator Jenkins and Representatives Alexander and Tolson, is an act to establish a mobile source emissions reduction program funded by an emission-based surcharge on vehicle registration fees. It would require a varying motor vehicle registration surcharge of $2 to $14, based on an EPA score derived from fuel economy and emissions. All vehicles over 8,500 pounds would automatically be charged $14; therefore vehicles that pollute more, pay more. The money raised would fund projects around the state to reduce emissions

and stimulate the use of advanced technologies. Neither bill moved during the legislative session.

Alternative Fuel Vehicle Tax Credit (S1015/H1766), sponsored by Senator Jenkins and Representatives Martin and Harrison, is an act to create a tax credit for the purchase or lease of alternative fuel vehicles. The current federal clean fuel vehicle deduction decreases to $500 next year and then be phased out. This bill would be effective whenever the federal clean fuel vehicle deduction phases out, providing a $2,000 credit for purchases of hybrid electric or other alternative fueled vehicles. Neither bill moved during the legislative session.

State Use of Alternative Fuel Vehicles S1148, sponsored by Senators Jenkins and Albertson, is an act to require that the state fleet use 2 million gallons of biodiesel and ethanol by 2006, 5 million gallons by 2008 and 10 million gallons by 2010. A one and a half gallon credit is awarded for each gallon of renewable fuel used from in-state fuel production. S1148 gives the state an option to purchase hybrid electric vehicles (HEV), instead of using renewable fuels, and get 6,000 gallons of fuel use credits. S1148 establishes a system of credits to monitor achievement of the renewable fuel requirement. The bill did not move during the legislative session. North Carolina would benefit by:

- Reducing pollution from state vehicles, including greenhouse gas emissions;
- Keeping funds in state, supporting economic development through the purchase of renewable fuels produced in-state;
- Encouraging cooperation and planning across state agencies.

Each year, the N.C. Dept. of Transportation (DOT) uses 11 million gallons of diesel fuel and 11 million gallons of gasoline. Currently, state renewable fuel use amounts to 500,000 gallons of 100% Biodiesel (B100). In the Triangle region, the state uses about 200,000 gallons of 85% ethanol (E85) mixed with 15% gasoline, and 700,000 gallons of 10% ethanol (E10). DOT's Motor Fleet Management owns 76 HEVs.

Advanced Vehicle Research Center Incentive S684/H625, sponsored by Senator Holliman and Representative Allen, is an act to provide an investment incentive and an appropriation for an Advanced Vehicle Research Center (AVRC) and automotive proving ground in Northampton County. The bill would provide direct appropriation of $7.5 million for the next two fiscal years for construction and operation of the center, as well as a tax credit equal to the value of private contributions up to $7.5 million in each calendar year. This provision would expire in 2008. Neither bill moved during the legislative session.

Triangle Clean Cities Coalition

In 1999, the state Department of Commerce's Energy Division asked the Triangle J Council of Governments (TJCOG) to coordinate a Clean Cities program in the Triangle. The U.S. Department of Energy (USDOE) Clean Cities Program officially designated the Triangle Clean Cities Coalition (TCCC) as the 80th U.S. Clean Cities Coalition on March

19, 2001. Since that time the coalition has grown to over 70 members, including private companies, municipalities, and private citizens. TCCC has been very successful in securing grants to create incentives and to undertake a public relations campaign. With a grant from N.C. Department of Environment and Natural Resources, it developed a media campaign that included billboards, radio ads, network and cable TV ads, and Internet banners. Listed below are highlights of the TCCC accomplishments in 2004-2005.

- The Environmental and Energy Study Institute recognized Durham Public Schools as a National Clean Bus Leader for establishing a fleet solely operating on B20.

- Refueling America workshop and luncheon was sponsored by TCCC. The workshop informed public officials, fuel providers, fleet managers, and the public on alternative fuel applications and incentives, hybrid vehicle technology, idle reduction equipment and policies, and air quality topics.

- N.C. Biodiesel Education Outreach Program was launched through a grant made possible by the National Clean Cities, Inc., U.S. DOE, and United Soybean Board. The program provides biodiesel experts to give presentations throughout the state with the purpose of stimulating interest in the alternative fuel.

- TJCOG was presented the Sustainable North Carolina Award for the Triangle Clean Cities Biofuels Rebate Program.

- The Triangle Region boosts public biodiesel stations in the following municipalities: Garner, Cary, Durham, Moncure and Mebane. Biodiesel infrastructure exists for Duke University, N.C. State University, Raleigh-Durham International Airport, and Chapel Hill, Carrboro, Cary, and Wake County local governments. NCDOT continues to use B20 in the operation of their on and off-road diesel equipment.

- Two new CNG (compressed natural gas) stations are open to the public in Raleigh and Hillsborough while E85 pumps are available in Durham County and for National Institute of Environmental Health and Safety's (NIEHS) fleet of cars.

- Triangle Region's 2005 annual B20 usage is estimated to be roughly 4.6 million gallons. This number does not include the 1.5 million gallons annually consumed by the City of Greensboro (a member of TCCC).

2005 Biofuels Rebate Program

The Triangle Clean Cities' Biofuels Rebate Program was completed in September. In 2005, the program participants used more than 245,000 gallons of B20 and more than 1,000 gallons of E-85. This resulted in over 50,000 gallons of petroleum displaced. This year was the first year that the program had any ethanol programs. Durham County

installed an E85 pump and Wake County partnered with Motor Fleet Management to share their E85 pump. Over three years, the program participants have used well over 1.3 million gallons of biofuels resulting in more than 280,000 gallons of petroleum displaced. The emissions benefits of this program are being calculated and will be available by the end of 2005. The participants contributed $224,000 in cost share for the project.

Municipalities represent the biggest user of alternative fuels in the Triangle region, although private fleets do sustain the necessary demand for B20 fuel at three commercial biodiesel stations. The following are a few of the private fleets utilizing B20: Shimar Recycling, Connex TCT (NCSU Wolfline buses), and Duke University.

2004 Alternative Fuel Vehicle Incentive Grant

The AFV Incentive project, administered by the Triangle Clean Cities Program, was completed in 2005. This project was funded through a grant from the Department of Administration's State Energy Office. Five projects received awards ranging from $8,550 to $49,000 to help buy down the incremental costs of the fuel, vehicle purchase, or to construct an alternative refueling site. The project goal was to displace petroleum use through the use of alternative fuels as well as to educate the public about the benefits of these fuels and technologies. This project generated more than $248,000 in cost share.

Project profiles:

- The City of Raleigh purchased three dedicated CNG vehicles as well as 1,542 gallons of E85 for their expanding fleet of E85 capable flex-fuel vehicles (FFVs). The city made arrangements with the state's Motor Fleet Management Division to purchase E85 at their downtown Peace and Person Street station and at their Blueridge Road site. Fuel keys will be issued to the city's FFV drivers that will only allow refueling with E85.

- Duke University Facilities Management Division purchased seven GEM Neighborhood Electric Vehicles for use on campus. These zero emission vehicles replaced gasoline vehicles and are easily recharged using 110v outlets. The university installed two new 110v outlets at its Facility Center and provided mechanic training for the new vehicles.

- Orange County is installing a Fuel Maker CNG fast-fill fueling station. With a location between two major interstate corridors, I-40 and I-85, this publicly accessible station will add another link in a chain of CNG stations growing across the state.

- The Department of Public Instruction helped offset a portion of the incremental cost of purchasing biodiesel for Chatham Public School's fleet of 100 buses during the 2004-2005 school year. The fleet covers about 1.2 million miles each year and tested a low blend of the fuel before switching to B20.

- Piedmont Biofuels, Inc. has purchased five 500-gallon tanks, pumps and fuel filters to be leased at no cost to various businesses and organizations in the region for on-site biodiesel fueling. Tanks were sited in Moncure, Pittsboro, Carrboro, Mebane, and Durham. The tanks are filled by Piedmont Biofuels, which recently purchased a 1,600- gallon tanker truck for biodiesel distribution. Piedmont Biofuels also supported the project by providing educational outreach and murals or signs on the refueling tanks.

Centralina Clean Cities Program

The USDOE's National Clean Cities Program designated the Centralina Clean Fuels Coalition (CCFC) program on October 15, 2004. The Centralina Council of Governments (COG) supports the CCFC for the past four years. Its new Web site is http://www.4cleanfuels.com.

CCFC stakeholders include local governments and state agencies as well as businesses such as major fuel providers and vehicle manufacturers. The following are just some of the current regional initiatives underway:

- The City of Salisbury received a $25,000 Mobile Source Emissions Reduction Grant (MSERG) for the installation of a B20 pump at Superior Oil Company's Penn Mart Station. More than 75 diesel-powered vehicles operated by the city are refueled on the cleaner-burning biofuel.

- Thomas Petroleum Company has opened five retail multi-biofuel pump in Shelby and Charlotte. Drivers owning flexible-fuel vehicles, such as the Dodge minivans and Ford Tauruses, are able to purchase E-85 now. B20 is the other alternative fuel available at the pump.

- Homer's Truck Stop in Statesville, just off Exit 146 on I-40, has six B20 pumps and sells both E85 and E10.

- The City of Charlotte, Mecklenburg County, Centralina Clean Fuels Coalition and N.C. Air Awareness hosted a "Try & Drive Day" on June 10, 2005 to connect fleet managers, purchasing personnel and air quality experts with a broad range of alternative fuel and vehicle vendors. More than 16 vendors and 100 city, county and area participants came to the event and were able to test drive hybrid and alternative fueled vehicles as well as gather information on advanced technologies. The City of Charlotte continues to push toward hybrid technology and soon will have a fleet of 19 hybrids vehicles.

Sustainable Environment and Quality of Life (SEQL)

Centralina Council of Governments was awarded a $100,000 grant from the U.S. Environmental Protection Agency to assist in funding a truck stop electrification project at Derrick's Travel Plaza off Interstate 85 in Salisbury. Extended truck idling

significantly impacts local air quality when truck drivers stop for the 10-hours/day mandatory rest period. IdleAire Technologies Corp. produces the Advanced Travel Center Electrification system that offers a solution for air conditioning, heat and power for on-board appliances and satellite television and Internet service.

Land-of-Sky Clean Vehicles Coalition

In 2004, the Land-of-Sky Regional Council coordinated efforts to obtain USDOE Clean Cities designation for a five county region around Asheville (Buncombe, Haywood, Henderson, Madison and Transylvania counties). Steady progress has been achieved with enthusiasm for alternative fuels and advanced technology vehicles in the region. Specific accomplishments include:

- Held the Clean Cities Project Kickoff Event in Asheville on April 8, 2004. Fifty-five stakeholders attended while the event showcased a propane-powered school bus on a national tour.

- Established a diverse Clean Vehicles Coalition (CVC) with meetings schedule throughout 2005. The goal was to increase awareness of AFVs and to plan coalition activities.

- Developed and implemented a comprehensive alternative fuels/Clean Cities education and outreach program working in partnership with the Regional Clean Air Campaign and other groups.

- Distributed four CVC E-Newsletters to over 300 stakeholders, city/county officials and community leaders.

- Developed a CVC Web site and gave presentations to groups representing business, environmental, local government, and transportation planning.

- Promoted AFVs through public events including the Bele Chere Festival, Clean Air Car Fair and Energy Expo, Earth Day events, and Ozone Kickoff Event. Over 100 participants attended the Clean Vehicles for Clean Cities Workshop on September 22, 2005 in Asheville featuring speakers from across the United States.

- Implemented a Honda Civic Compressed Natural Gas (CNG) Vehicle Demonstration Program. Seven organizations borrowed and test-drove the CNG fueled vehicle during the year. The City of Asheville will open a CNG Fueling Station in October 2005.

- Assisted stakeholders in securing funds for their alternative fuel projects. The N.C. Solar Center and N.C. Div. of Air Quality Mobile Source Emissions Reduction Grants Program awarded grants to several Western North Carolina partners.

- Completed a regional inventory with approximately 200 AFVs. Clean Cities designation requires a minimum of 400 vehicles. The following organizations currently operate either AFVs or advanced technology vehicles:
  - Metropolitan Sewerage District
  - City of Asheville
  - Buncombe County
  - Town of Waynesville
  - Hart Distributing
  - WNC Regional Air Quality Agency
  - Warren Wilson College
  - Blue Ridge Biofuels
  - Pisgah Inn
  - DAQ Regional Office
  - Blue Ridge Parkway
  - Swann's
  - Home Energy Partners
  - Blossman Gas
  - Public Service of NC

- Blue Ridge Biofuels opened the region's first public biodiesel pump in Asheville on July 2005, and Grace Fuel Company sells biodiesel in the region.

The Council expects a substantial increase in the use of biodiesel and expects to reach 400 vehicles within the next 12 months.

Mobile Source Emissions Reduction Grant Program

The purpose of the Mobile Source Emissions Reduction Grants (MSERG) is to achieve actual reductions from mobile source related emissions in North Carolina to assist the state in maintaining the National Air Quality Standards for primarily ozone and carbon monoxide. In 1993, the North Carolina General Assembly passed clean air legislation, which provided that beginning on January 1, 1995, certain portions of those taxes on the sale of gasoline in North Carolina would be used to fund portions of the state air quality program. Funding for these grants is provided by a tax of 1/64 of a cent per gallon of gasoline sold, which currently generates about $800,000 annually.

Grants are awarded by DENR with the assistance of a grant review committee. Each year the committee selects a focus for the upcoming grant year. The goal for the 2005 grants is to reduce emissions from diesel engines. Projects can achieve such reductions through retrofit technology and alternative fuels. The following applications were awarded funds in 2005 to retrofit school buses, expand the use of biodiesel and to purchase hybrid electric school buses and vehicles:

- Advanced Energy, Wake County, $140,000 to purchase two hybrid electric school buses;

- Asheville Public Works Dept., Buncombe County, $12,000 for purchasing electric vehicles;
- Blue Ridge Biofuels, Buncombe County, $25,000 for biodiesel collection and distribution equipment;
- Charlotte/Mecklenburg County Schools $100,000 for school bus retrofits;
- Charlotte/Mecklenburg County, $100,000 for retrofitting solid waste vehicles;
- Filter Specialty Inc., Sampson County, $24,370 to expand use of biodiesel fuel;
- Henderson County Public Schools, $100,000 for school bus retrofits;
- North Carolina Zoo, Randolph County, $23,000 for equipment to produce biodiesel fuel;
- Rowan County School District, $73,150 for school bus retrofits;
- Wake County Public Schools, $100,000 for school bus retrofits.

Southeast Alternative Fuels Task Force

In 2001, the Governors of Georgia, North Carolina, South Carolina and Tennessee entered into a Southern Air Principles agreement, which recognized that regional air quality problems must be addressed through regional approaches. The Southeastern Alternative Fuels Task Force (SEAFTF) was organized with three work groups – Infrastructure, Outreach, and Vehicles/Fleets – that have representatives from state agencies and the private sector. Near-term 2010 goals are to have strategically located public accessible fueling facilities for biodiesel and ethanol fuels along major interstate highways, which will allow the use of these fuels between major destinations across the four states. SEAFTF focus is on biofuels because there are a large number of vehicles already on the road that can use these fuels as well as the relatively low cost of infrastructure development.

Guided by the steering committee, the Outreach committee hosted the 2005 Southeast Biofuels Workshop held in Gatlinburg, Tennessee on June 6-7, 2005. The intent of the workshop was to address key barriers and questions to the supply and use of biofuels. The event drew over 200 people with nearly a quarter traveling from North Carolina. The SEAFTF and work groups continue to meet on a monthly basis via conference calls.

North Carolina Solar Center Alternative Fuels Incentive Program

In 2004 the State Energy Office awarded $175,000 to the North Carolina Solar Center (NCSC) for the Alternative Fuel Incentive Project (AFIP), providing funding for initiatives around the state to increase the use of alternative fuels. An estimated 89,463 kilograms of emissions will be reduced throughout the life of the projects, while 207,427 gallons of B20 biodiesel fuel was purchased through the grant program.

- Superior Oil Company's Penn Mart station in Salisbury was able to sell B20 for the same price as petroleum diesel.
- Blue Ridge Biofuels, LLC purchased a fuel dispenser and storage tanks for biodiesel fuel. The new pump at The Gas Up in West Asheville is the first fully commercial location to provide B99 in western NC.
- Forsyth County and the City of Greensboro used AFIP funds to purchase B20 to fuel fleet vehicles. Funds were also used to help purchase B20 for Greensboro's landfill fueling site, which dispenses 250,000 gallons of fuel per year.
- The NC Zoo (Asheboro) purchased B100, blending its own B20 to fuel the buses and trams that carry over 700,000 visitors annually. The Zoo is currently in the process of constructing a mobile biofuel processor previously funded through a $23,000 MSERG awarded in March 2005. The process will provide 12,000 gallons per year of B20.
- Pitt County Memorial Hospital's AFIP grant went toward the purchase of B20 for the hospital's diesel vehicles, including ambulances. PCMH recently became the first hospital in the nation to install its own biodiesel fueling station.
- UNC-Charlotte and Wilson Technical Community College used grant funds to purchase Global Electric Motorcars, replacing older gas-powered vehicles. Both schools are committed to becoming more energy efficient, with the purchase of more GEMs at UNCC and the installation of a solar charging station at Wilson Tech.
- The Western N.C. Regional Air Quality Agency purchased a 2005 Chevy Astro van with a Compressed Natural Gas conversion kit, and Buncombe County is building a centrally located biodiesel-fueling center where fleet vehicles will have convenient access to B20.

NCSC coordinates the N.C. Alternative Fuels consortium with the State Energy Office. This past year NCSC organized a teleconference for all state university and colleges to educate about alternative fuel options for state fleets required to meet Energy Policy Act requirements.

NCSC also worked with state legislators, Energy Policy Council, Clean Cities Coalitions and other stakeholders on proposed state alternative fuels related legislation.

The Refueling America workshop and luncheon held at the McKimmon Center on September 21, 2005, was hosted by NCSC and attracted over 250 participants from the commercial truck owners/operators, fuel providers, and fleet managers sectors. The event was part of a weeklong Energy Independence Days series and the luncheon keynote speaker Paul Roberts, the author of The End of Oil, spoke to 320 attendees. More than 20 sponsors supported both events.

North Carolina State Energy Office

The N.C. State Energy Office (SEO) is the lead agency for energy programs and serves as the official source of energy information and assistance for consumers, businesses, government agencies, and policy makers. The SEO also administers several programs related to alternative fuels and vehicles and education and outreach. Listed below are highlights of some funded projects:

Three requests for proposals were awarded by the SEO:

- **Blue Ridge Biofuels**, located in Asheville, was awarded funds to increase their production of biodiesel to produce at least 200,000 gallons of biodiesel annually.

- **Filter Specialty Inc.**, whose primary business is the recycling of used oil filters and the collection of waste oil, was awarded funds to design, construct and operate a 500,000 gallon per year biodiesel facility. The design of the facility will allow expansion to the ultimate goal of 1.6 million gallons per year. They are located in Autryville.

- **Piedmont Biofuels Industrial, LLC**, in Moncure was awarded funds to open a commercial-scale, 1,000,000 gallon per year biodiesel production plant in Pittsboro.

The **Alternative Fuel Demonstration Center** opened at the North Carolina Solar Center. The center's garage has integrated photovoltaic roof panels, which use solar energy to charge electric car batteries. It also has a demonstration ethanol distillery and biodiesel reactor. Biodiesel burns cleaner than regular diesel and can be produced from traditional agricultural feedstocks such as soybeans. Even waste oil can be converted to usable biodiesel. The SEO has helped support publicly accessible pumps in Garner, Cary, Durham and Salisbury.

The SEO coordinated the 2nd annual **Sustainable Energy Conference** on March 22, 2005 where more than 600 attended representing state government, universities, business, and industry, schools and nonprofits. Energy Leadership Awards were presented. Among those recognized for their efforts were:

- **N.C. Department of Transportation, Equipment Unit** for leading the development of a statewide purchasing contract for B-20 that facilitates the fuel use by other state and local government fleets. NC DOT uses nearly 2 million

gallons of B20 annually in their diesel equipment for on and off-road work in 23 counties.

- **The N.C. Department of Administration, Motor Fleet Management Division** for leading in purchases of alternative fuel vehicles and other vehicles that produce less air pollutants.

Piedmont Triad Early Action Compact

In December 2002 eleven Piedmont Triad counties and twenty municipalities formed the Triad Early Action Compact (EAC). The EAC is voluntary commitment to adopt and implement ozone emissions-reducing strategies. In return for this action, EPA will defer designating the region as nonattainment for the 8-hour ozone standard until December 31, 2007. The Triad EAC has working partnerships with:

- The Piedmont Triad Council of Governments and the Northwest Piedmont Council of Governments;
- 11 counties and 20 municipal participants in the EAC;
- Piedmont Authority for Regional Transportation;
- Forsyth County Environmental Affairs Department;
- Triad Air Awareness Program;
- 4 metropolitan planning organizations and 2 rural planning organizations in the region;
- Alternative Fuels Program at the N.C. Solar Center.

A strong regional coalition headed by a stakeholders group developed an array of strategies aimed at lowering ozone-causing emissions. Increased use of alternative fuel vehicles (AFVs) is a key mobile source strategy. The table below summarizes AFVs purchased by local governments in the past year.

Jurisdiction	Type of Vehicle or Equipment	Number of Vehicles	Model Year	Type of Alternative Fuel Used (if applicable)
Greensboro	¾ Ton Pickups/Vans	7	2005	Biodiesel
	1 Ton Pickups/Vans	6	2005	Biodiesel
	Med/Heavy Trucks	10	2005	Biodiesel
	Garbage Trucks	15	2005	Biodiesel
	Vactor Truck	1	2005	Biodiesel
Forsyth County	Hybrid Honda Civic	2	2005	Gas/Electric Hybrid
Winston-Salem	Misc staff cars	10		Natural gas
	Buses	2	2005	Gas/electric hybrid
Davidson County	Natural Gas Vehicle	2	2005	Natural gas
Lexington	Natural Gas Vehicle	2	2005	Natural gas

Greensboro continues to be a biodiesel leader in the state, using B-20 in all city diesel vehicles, approximately 1.5 million gallons per year. In addition, it sells biodiesel for use in all diesel vehicles and equipment at the University of North Carolina at Greensboro, North Carolina A & T State University, and Guilford County.

Grant funds are being used to purchase biodiesel fuel for the city's landfill fueling site, which dispenses an average of about 250,000 gallons of fuel per year. B20 fuel from this site powers the more than 80 refuse trucks and off-road vehicles used for landfill maintenance. The availability of B20 at the landfill fueling site has allowed two local universities, UNC-Greensboro and N.C. A&T, to purchase biodiesel fuel from the city to power their own diesel vehicles.

The City of Greensboro has been recognized by the U.S. Department of Energy for its dedication to the use of alternative fuels as the recipient of a National Partner Award.

As of January 2005, Forsyth County has begun to use biodiesel in the county's 25-truck fleet. A $5000 state grant helps buy down the cost of the fuel. Officials plan to make use of biodiesel in lieu of petroleum diesel a permanent change. Forsyth County uses an average of 72,000 gallons of diesel fuel every year.

The North Carolina Zoo (Randolph County) received a $23,000 Mobile Source Emission Reduction Grant in March 2005 for design and construction of a biofuel processor capable of converting used vegetable oil from the zoo's food operations into a clean-burning, renewable B20 biodiesel. The process will provide 12,000 gallons per year of B20. This will fuel a majority of the zoo's trams, buses and other equipment.

Education Efforts - In April 2004, the Triad EAC, Piedmont Triad COG, Northwest Piedmont COG and Triangle Clean Cities Coalition co-sponsored the *Alternative Vehicles Road Show* at the Greensboro Coliseum Special Events Center. This event involved local elected officials and staff and stimulated much interest. This has been translated into introduction of biodiesel in Forsyth County, area universities, and further use at the N.C. Zoo.

Beginning in September 2005 an Introduction to Biofuels class will be taught at Guilford Technical College. The intent is to stimulate interest and encourage demand for retail sale of biodiesel in the area.

In September 2005, the Piedmont Triad Council of Governments co-hosted a session with the Alternative Fuels Program at the N.C. Solar Center for Triad area petroleum marketers. The session featured Dr. Richard Nelson of Kansas State University and the National Biodiesel Board. The meeting will focus on biodiesel use, distribution and storage in the region.

Fayetteville Metropolitan Statistical Area Early Action Compact

Through a stakeholders' and public involvement process, the Fayetteville Metropolitan Statistical Area Early Action Compact (Fayetteville MSA-EAC) submitted to all of the County's jurisdictions and Fort Bragg a list of proposed strategies to implement in the effort to decrease NOx and VOC emissions. Included in the strategies are alternative fuels and alternative fueled vehicles. Fort Bragg, a stakeholder, has developed a plan to convert its nontactical fleet to B20. Fort Bragg estimates its FY05 usage to be 30,000 gallons. This project also includes an E85 refueling station where a fleet of 185 flexible fuel vehicles will use approximately 55,000 gallons per year. This strategy is expected to reduce volatile organic compounds (VOCs), hazardous air pollutants (HAPs), NOx and particulate matter.

Advanced Energy Hybrid Electric School Bus Project

Hybrid vehicle technology has proven air quality benefits and fuel efficiency improvements in passenger cars. School bus manufacturers do not currently offer this technology. The Hybrid Electric School Bus (HESB) Project is an effort to change the school bus market and introduce plug-in hybrid school buses. The project has several phases that include feasibility studies, initial product specification, and fleet deployment. Advanced Energy, a non-profit located in Raleigh, is leading a team of school districts, environmental organizations, local utilities and energy efficiency advocates in this effort.

Phase I of the HESB Project included several feasibility studies. The Technical Feasibility used computer software to predict the performance of hybrid school buses. Inputs to the program included the vehicle drive cycle, engine size, battery type, electric motor characteristics and emission controls. The model predicted fuel economy and emissions for a baseline bus and several hybrid drivetrain configurations. It showed that plug-in hybrid school buses would have significantly improved performance over the baseline bus as well as standard hybrid technology. The Business Feasibility Study addressed the economics from the perspective of a school district. It evaluated the impact of initial cost, fuel economy, emissions value and operating costs on the life-cycle cost of the vehicle. This study showed that plug-in hybrid electric school buses have a lower life-cycle cost than conventional diesel school buses. This portion of the project was funded in part by Duke Power, Progress Energy, and the N.C. State Energy Office.

Phase II of the HESB Project was to organize a group purchase of plug-in hybrid buses. The Buyers' Consortium is a group of school districts that have committed funding to purchase a hybrid school bus when it becomes available. This group includes districts from North Carolina, South Carolina, Florida, New York, California, Iowa, Washington, Arkansas and Pennsylvania. This group is seeking grant funding to cover the anticipated incremental cost for the hybrid over a conventional school bus. They will also issue a vehicle specification for the manufacturers that includes fuel economy and stringent emission limits.

DENR's Division of Air Quality awarded a Mobile Source Emission Reduction Grant to the HESB Project in the amount of $140,000. This funding will help cover the incremental cost for two hybrid school buses purchased by the N.C. Department of Public Instruction.

Later phases of the project include larger fleet deployment and eventual full market penetration. Advanced Energy plans to collect performance data on the buses as they operate in the field and use this information to verify the initial simulations performed under the Technical Feasibility Study. The long-term benefits of this project include reduced fuel consumption, lower operating costs for our school districts and improved air quality for our nation's children.

North Carolina Fuel Cell Alliance & Hydrogen Economy Roadmap

The North Carolina Fuel Cell Alliance (NCFCA) is an informal public-private partnership composed of industry, academia, and government stakeholders in the fuel cell industry. The alliance was established in the summer of 2004 by the Appalachian State University Energy Center at the direction of the N.C. Energy Policy Council during the implementation phase of the N.C. State Energy Plan (the State Energy Plan is a project of the State Energy Office, N.C. Department of Administration). Currently, the alliance is an open organization with no formal membership requirements. Participants have collaborated on a number of initiatives thus far including, drafting a letter of support for interconnection standards for connecting fuel cells to the electricity grid and providing research and other support for a distributed generation technology manufacturers' tax credit.

The NCFCA is industry-focused and receives active participation from a variety of fuel cell companies including DuPont, Microcell, Porvair, INI Power, John Deere, and Scribner & Associates. University & community college participants include Appalachian State, N.C. A&T, N.C. State, and Wake Technical and Cape Fear community colleges. The alliance has recently embarked on an initiative to draft a Hydrogen Economy Roadmap for the state that will derive a strategy for North Carolina to pursue further development of the fuel cell industry from a series of public meetings and stakeholder interviews.

Other activities ongoing in the state related to hydrogen and fuel cells include a citizen-led initiative called the Hydrogen Economy Advancement Team, or HEAT. HEAT began in the Mooresville Chamber of Commerce and has recently established a Charlotte team; both teams are composed entirely of volunteers. The HEAT teams' first success was the production of the First International Hydrail Conference in Charlotte. This conference featured presentations from Japan, Canada, Denmark and the United Kingdom, and has been featured in several prominent fuel cell industry publications. The HEAT teams are currently pursuing hydrogen demonstration projects at several sites in the state, planning a second International Hydrail Conference, and outreach and awareness programs.

The Advanced Vehicle Research Center of North Carolina (AVRC)

The AVRC is a planned 630-acre independent non-profit automotive proving ground. It has been planned since 2001, and as demonstrated by the Transportation Research Center Inc. in Ohio, the AVRC will be a catalyst for investment and job creation in North Carolina and will be a transforming project for the eastern region of the state.

The center will be the first independent automotive test center in the US with on-site hydrogen refueling capabilities that will encourage hydrogen and fuel cell development in North Carolina as well as serve as a resource for research activities conducted by many companies in the eastern United States. AVRC is partnering with North Carolina State University and other educational institutions in the state on future educational and applied research opportunities.

In 2005, the N.C. General Assembly approved $7.5 million dollars for the AVRC. In October, Lotus Engineering and the AVRC made a joint announcement at the Detroit Automotive Testing and Measurement Expo. Lotus has committed to do the track design and specification work at no charge to the AVRC. The first stage of this design work is now about 50% complete.

A federal earmark appropriation was approved for the AVRC to complete work on a hydrogen refueling station to be located at the AVRC site. It will be constructed with the help of the NCSU Solar Center. The grant will also allow for the outfitting of a fuel cell lab on-site at the AVRC.

The AVRC, Lotus Engineering, and faculty from NCSU will undertake a project to convert a conventional gasoline powered automobile to a bi-fuel gasoline/hydrogen using a super cooled charge technology developed by Lotus. The technology will allow for near-zero emissions from the hydrogen fueled internal combustion engine.

Initially, the center will include:

- A two and a half mile test track.
- Working garages, equipped as needed, that may be leased by the day, the month, or the year.
- Dynamometers and emissions testing equipment.
- Offices, conference and training center for clients/members.
- Special testing and refueling facilities for alternative fuel vehicles using fuels such as bio-diesel and hydrogen.

Energy independence is a critical national issue and will continue to grow in importance. A national effort for automotive research on energy efficient transportation is needed. The AVRC can be a cornerstone of any national effort by providing the needed resource for smaller research and development companies.

Students Fueling the Future - Fuel Cell Technology

Students Fueling the Future, a nonprofit organization, was funded by the State Energy Office to expand the fuel cell educational program to students throughout the state into twenty schools. Middle school and high school students ages 11- 18 learned about renewable energy, alternate fuels, and built model fuel cell cars for two statewide competitions. Four students from Chapel Hill were invited to participate in the U.S. Department of Energy Middle School Science Bowl at NREL in Golden, Colorado in June 2005, and they took first place honors in the nation with their fuel cell model car design. The North Carolina pilot fuel cell educational program laid a solid foundation for national expansion in 2006.

2006 Model Year AFV/Advanced Technology Vehicles

Alternative fuel vehicles are widely available for public and fleet purchase. For more details on the availability as well as information related to these vehicles, go to the Alternative Fuel Data Center Web site:
http://www.eere.energy.gov/afdc/afv/afvehicles.html

The list of 2006 model year AFVs is available at
http://www.eere.energy.gov/afdc/afv/models.html

For additional information related to this report, contact DAQ's Vicki Chandler at ***vicki.chandler@ncmail.net*** *or 919-715-0972.*

EXHIBIT F

Report on Implementation of Senate Bill 953
North Carolina Department of Transportation
Statewide Transportation Demand Management Plan
February 14, 2006

The General Assembly passed Senate Bill 953, Ambient Air Quality Improvement Action of 1999, requiring the Departments of Transportation, Environment and Natural Resources, and the Office of State Personnel to develop a plan that would address reducing the number of expected growth in vehicle miles traveled for both public and private sector employees, and NOx (Nitrogen Oxide) emissions by 25% by the year 2009.

Secretary Tippett announced the completion of the Statewide Transportation Demand Management Program in April 2004. The plan was the culmination of work guided by a panel of 16 representatives appointed by Governor Easley. Transportation Demand Management (TDM) strategies influence travel behavior by mode, time of day, cost, frequency and other related activities to reduce traffic congestion, enhance mobility, and improve air quality. The panel consisted of existing representatives of TDM programs, local elected officials, developers, major employers in the state, marketing professionals and federal and state environmental agencies to guide the development of the statewide TDM plan. The work involved an analysis of the existing rideshare/TDM programs, and an evaluation of comparable program efforts in locations such as California, Washington, Maryland, Florida and Connecticut.

From this work, a series of guidelines were developed for the North Carolina Department of Transportation (NCDOT). The guidelines, further refined by the consultant, NCDOT and panel, include 20 action items that could be undertaken by NCDOT and local TDM programs in several areas to improve TDM statewide. The Panel prioritized the guidelines and developed a three-year action plan, including the establishment of a Commuter Assistance Program within the NCDOT, that would focus on demand management techniques and TDM initiatives for North Carolina.

Activities and accomplishments during the past year are summarized below.

1. Activity: <u>Statewide Best Workplaces for Commuters Program</u>

Established several years ago by the US Environmental Protection Agency (EPA) and the US Department of Transportation (DOT) to publicly recognize employers whose commuter benefits reach the *National Standard of Excellence* (www.bwc.gov), the Best Workplaces for Commuters[SM] (BWC) program highlights the efforts of many top employers to help get employees to work safely, on time, and free of commute-related stress. US EPA believes that providing commuter benefits helps employers address limited or expensive parking, reduce traffic congestion, improve employee recruiting and retention, and minimize the environmental impacts associated with drive-alone commuting. Participating companies earn the designation "Best Workplaces for Commuters[SM]"—a mark of excellence for environmentally and employee-friendly organizations.

Accomplishment: <u>The Second Annual List of Triangle Best Workplaces for Commuters[SM] was announced and employers recognized at a Campaign Celebration at the American Tobacco Complex in Durham in November 2005.</u>

- Seven new Triangle area employers that provide outstanding commuter benefits to their employees were designated by US EPA, representing about 1,350 employees The 2005 list includes 2Plus, Inc, EMC Corporation, First Environment, News and Observer, NC League of Municipalities, The Redwoods Group, and Sygenta Biotechnology, Inc.
- A total of 31 Triangle area employers have been designated as BWC organizations representing a combined total of approximately 71,350 employees.
- The NC Department of Administration recently received its BWC designation.

2. Activity: <u>Commuter Choice Professional Development Training Program</u>

The Center for Urban Transportation Research (CUTR) at the University of South Florida has expanded its Commuter Choice Professional Development Training Program to include NCDOT transportation professionals. The goal is to improve the effectiveness of transportation professionals in North Carolina by providing training and technology transfer related to transportation demand management strategies.

Accomplishment: <u>NCDOT arranged with CUTR to provide a training session entitled Developing A Long Range Transportation Demand Management (TDM) Plan. This web-based training was held in January 2005 and TDM planners from across the State participated in the session.</u>

- The purpose of the course was to identify the reasons for developing a long-range TDM plan and the use of EPA's Commuter Model to quantify the impacts of TDM Programs for long range planning. The course examined reasons why TDM strategies and programs should be included in long range transportation plans, and the steps of developing a long range TDM plan. It also discussed developing TDM scenarios at countywide, activity center, and employer levels. Using EPA's Commuter Model, it was demonstrated how one can quantify and forecast the impacts of TDM Programs on mode share, vehicle trips, vehicle miles traveled, and auto emissions. Finally, the course showed how TDM related goals can be incorporated into objectives and policies of long range transportation plans and Comprehensive Plans.
- As a result of this training session, the two Metropolitan Planning Organizations (MPO's) in the Triangle area are discussing budgeting money in their 2007 work plans for development of a Long Range TDM Plan.
- Five courses have been held since 2004 for local TDM program staff and MPO planners.

3. Activity: <u>Expansion of Local TDM Programs</u>

The Statewide TDM Plan recommended establishing a local TDM program in Asheville, focused primarily on smart growth and air quality goals.

Accomplishment: New TDM Program Implemented in Asheville

- Asheville hired a TDM Planner in August 2005, with financial assistance from NCDOT, to develop and implement a local program.
- The TDM Planner has developed an emergency ride home proposal for the City of Asheville and has geo-coded employee home addresses for Mission Hospital to investigate potential vanpool opportunities.
- The program has registered 434 persons in the statewide ridematching program database, ShareTheRideNC.org.

4. Activity: Fare Free Transit

In September 2003, the North Carolina Department of Administration entered into agreement with Capital Area Transit (CAT) that would allow state employees to use transit services at no cost to the employee. Program marketing and enhancement opportunities were identified and implemented.

AppalCART, the transit system that serves the Town of Boone, including Appalachian State University, began offering fare free transit this fiscal year on it fixed route buses.

Accomplishments: Utilization of this outstanding commuter benefit for Raleigh-based state employees continues to increase. The program was expanded to include Triangle Transit Authority (TTA), effective October 2005. NCDOT increased its marketing and outreach efforts.

- Ridership on CAT has increased since inception of the program by 77%, with over 13,000 trips per month, on average, by Raleigh-area based state employees. The highest ridership was in September 2005 with 17,243 passenger trips made by state employees.
- State employee *GoPass* ridership on TTA for October, 2005 was 1,705 (81 boardings per day), November ridership was 1,749 (87 boardings per day), and December ridership was 1,511 (75 boardings per day). This compares very favorably with the contract estimate of 62 boardings per day. The TTA service includes 2 express routes from downtown Durham and Chapel Hill.
- The total cost of the service for the current fiscal year is $70,650 and is funded by the North Carolina Department of Administration with revenue from state employee parking fees.
- *GoPass* transit passes replaced the use of state agency employee identification cards to ride CAT and TTA in October 2005. The *GoPass* cards, which are swiped in the farebox of the buses, identify the cardholder as a state government employee and the actual bus route.
- A web-based database is being established for the parking coordinators to enter data about state employees that are issued a *GoPass*. This has the advantage of developing a database of users that can be utilized for planning and marketing purposes.
- A meeting was held in September 2005 with all of the state agency parking coordinators to provide an overview of the program and solicit feedback in marketing the program.
- To date, approximately 1,800 *GoPass* cards have been distributed to Triangle-based state employees.

- NCDOT designed and funded the printing of *GoPass* posters that are placed in participating state agency office buildings and inside of CAT and TTA buses to notify eligible state employees about the program and how to obtain a *GoPass* card.

5. Activity: Expand the Triangle Area SmartCommute Challenge

The annual SmartCommute Challenge was held during August and September 2005. The challenge, sponsored in part by NCDOT, was expanded to include all employees of Wake, Durham, and Orange Counties. The goal of the campaign was to increase awareness of the benefits using commute alternatives and encourage employees to try telecommuting, carpooling, vanpooling, taking the bus, biking or walking for at least one day between August 15 to September 30, 2005.

Accomplishment: There were 12, 071 persons who took the challenge.

- Resulted in 668,000 vehicle miles of travel reduced and 750 kg of NOx reduced in the Triangle area over a 45-day period.
- 27,800 gallons of gas were saved.
- There were 92 participating employers, including NCDOT.
- Staff from NCDOT held informational sessions during the SmartCommute Challenge at the Highway Building, Century Center, and the Division of Motor Vehicles on New Bern Avenue.
- Follow up surveys of the participants showed that 40% of new alternative commuters are still using that alternative mode.

6. Activity: Increase Awareness of Web-based Rideshare Matching Software

NCDOT funded the implementation of a web-based rideshare matching software program, ShareTheRideNC.org. This program allows individuals to enter information online regarding their address and work location/hours and to instantly receive a list of persons who might be potential matches for carpooling, vanpooling or biking. The software also links to transit services in the area and allows local TDM programs to generate reports.

Accomplishment: A total of 9,172 persons have registered in the ShareTheRideNC database (as of 12/31/05). The software assumes that 20% of the successful match reports result in a rideshare arrangement. The annualized benefits are based on the number of assumed successful matches.

- Carpool matches attempted: 5,018
- Vanpool matches attempted: 3,985
- Bike matches attempted: 272

Annualized Benefits:

- Reduction in vehicle miles of travel: 23,256,391 miles
- Reduction in tons of nitrogen oxides (NOx): 57.9 tons
- Reduction in commuting cost: $5,581,422

- Reduction in required parking spaces: 2,261

- Information was prepared for the State Budget Officer in September 2005 for transmittal to all state agencies advising employees of commute alternatives.
- A news release was prepared by NCDOT regarding the web-based ridematching software.

7. **Activity: Employee Commuter Survey**

Best Workplaces for Commuters[SM] requires that designated employers certify that at least 14% of their employees are using an alternate form of commuting within 18 months of receiving their designation.

Accomplishment: During the fall of 2004 and the spring of 2005, many employers in the Triangle area participated in employee commuter surveys. The web-based, survey conducted by TTA, asked questions about commuting patterns such as length of commute and type of mode used. It also asked for vehicle type and age to quantify air quality impacts.

- This survey revealed that 16.9% of NCDOT employees use some form of alternate commuting. Of this number, 10.4% carpool, 4% vanpool, 1.1% ride the bus. Other commuting alternatives included walking and biking to work.
- The survey also revealed that NCDOT employees travel long distances to work. Of the employees surveyed, 28.4% live more than 25 miles from their worksite and travel more than 40 minutes to work.
- The top two advantages that employees gave for not driving alone were that it saves money and reduces maintenance/wear and tear on their vehicle. The next three advantages in order of importance were that it reduces traffic congestion, reduces air pollution, and reduces stress.

8. **Activity: Expand Statewide Rural Vanpool Program**

The N.C. Rural Vanpool Program was originally designed to provide transportation for low-income individuals and citizens without reliable transportation to travel to work. USDOT Federal Transit Administration and state funds, along with passenger fares and employer contributions, support the service.

Accomplishment: The program experienced substantial growth during the past year, nearly doubling the number of rural vanpools in operation in northeastern and southeastern areas of the state. The program recently expanded into western North Carolina counties.

- 30 vanpools are currently in operation, transporting nearly 200 low-income people daily to employment sites

9. Activity: Creation of Office of Commuter Assistance

One of the recommendations of the Statewide TDM Plan was the creation of a new position within the NCDOT to staff and manage the Office of Commuter Assistance. The creation of this full time position will improve the department's oversight of the eight local TDM programs and the rural vanpool program, and enable greater technical assistance to other state agencies and local programs.

Accomplishment: The Public Transportation Division of NCDOT received approval for a Congestion Mitigation Air Quality (CMAQ) grant to create a Commuter Assistance Program Manager position.

- The grant will provide 80% federal funding to be matched with 20% state funds from the Public Transportation Division for the next three years.
- Grant funds will also support a statewide commuter assistance and transit awareness marketing campaign.

10. Activity: 2005 Total Transportation Demand Management and Urban Transit System Reductions in Vehicle Miles Traveled (VMT) and Nitrogen Oxide (NOx) Emissions

Accomplishment: Transit usage statewide continues to grow as transit continues to play an increasing role in providing access to jobs, educational opportunities and health care. The NCDOT has developed a methodology to calculate the estimated reductions in both vehicle miles traveled and nitrogen oxide emissions due to vanpooling, carpooling and transit usage in urban areas.

- Transit ridership statewide has increased 29% since 1999, with over 51 million passenger trips provided annually.
- The total estimated reduction in VMT during the period July 1, 2004-June 30, 2005 is estimated at 157,036,117 miles, representing approximately a 7% reduction in the expected growth of VMT in the state.
- This resulted in an estimated 391-ton reduction in NOx emissions.

11. Activity: Introduction of alternative fuel vehicles into transit system vehicle fleets.

Accomplishment: Chapel Hill Transit and the Durham Area Transit Authority are scheduled to purchase hybrid electric buses over the next several years. Chapel Hill will purchase 3 buses, while Durham will purchase 5 hybrid buses.

One North Carolina Naturally

North Carolina Division of Water Quality
Annual Report of Fish Kill Events
2005

Division of Water Quality
Environmental Sciences Section
Raleigh, NC

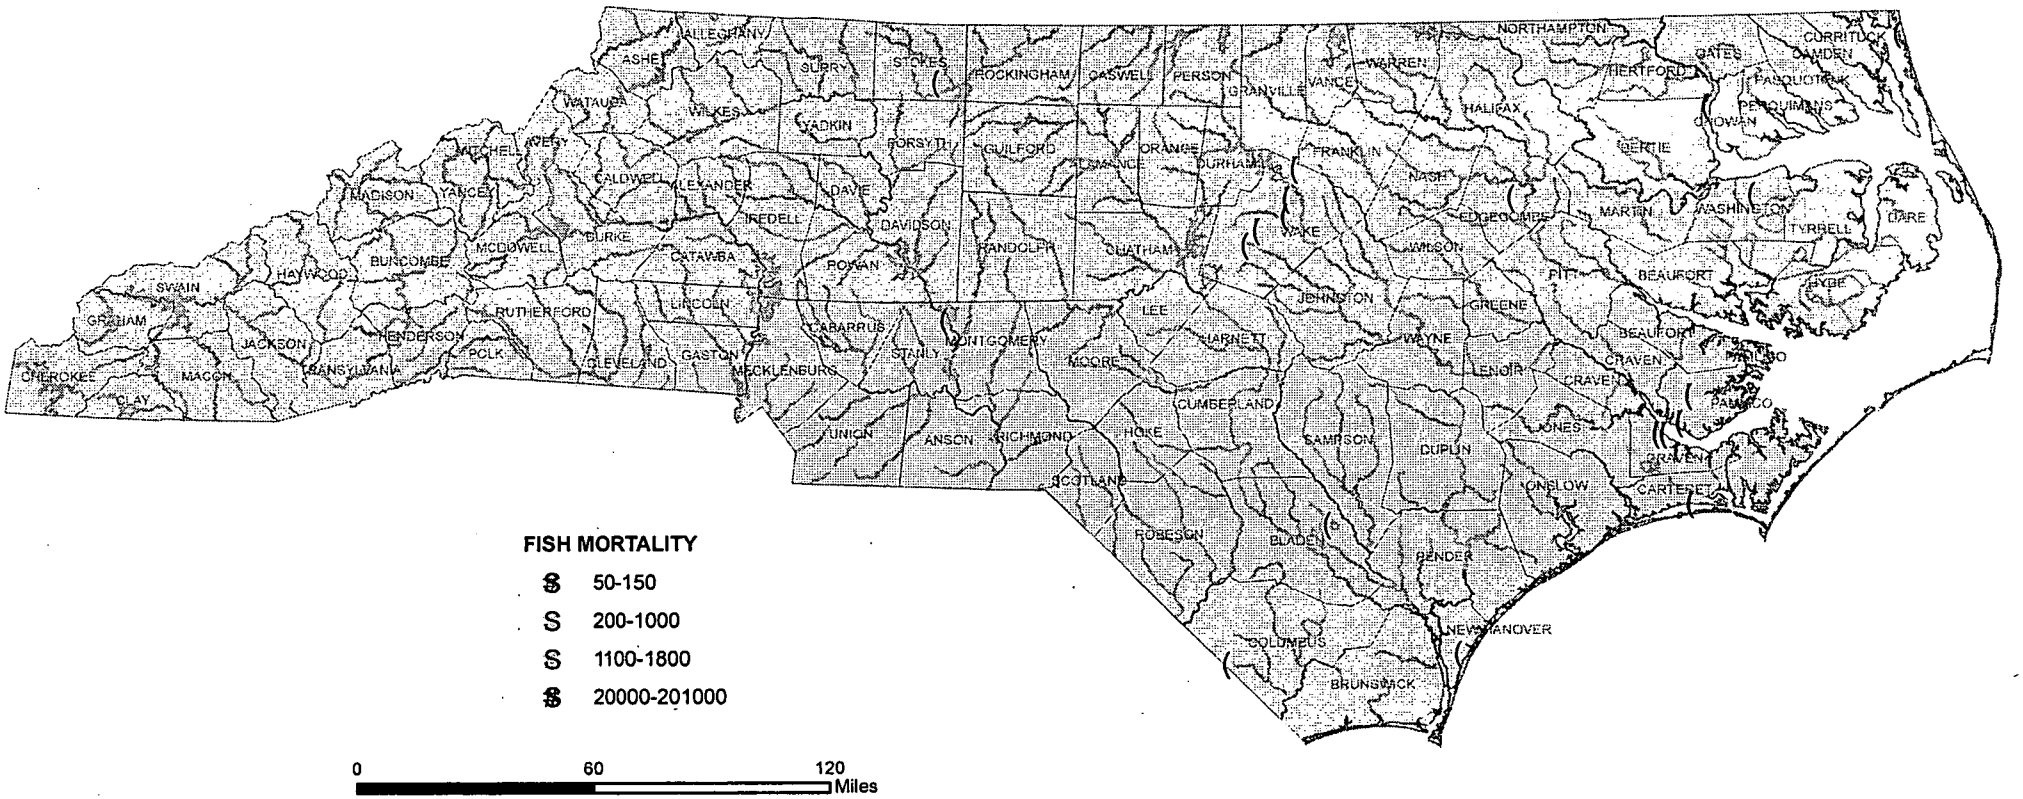
December 2005

Introduction

The investigation of fish kill activity across North Carolina currently involves protocols established by the North Carolina Division of Water Quality (DWQ) in 1996. The protocols were developed with assistance from DWQ Regional Office staff, North Carolina Wildlife Resources Commission biologists, and Division of Marine Fisheries personnel as a means to improve the tracking and reporting of fish kill events throughout the state. Fish kill and fish health investigation data are recorded on a standardized form and sent to the Division's Environmental Sciences Section (ESS) where the data are reviewed and compiled. Data from fish kill investigation forms, laboratory test results and supplemental information sent to the ESS are entered into a central database where the information can be managed, queried and reported. The procedure also requires the notification of appropriate state officials and scientists associated with the investigation of such events. In addition, reported kill information is updated weekly on the ESS website at: **http://h2o.enr.state.nc.us/esb/Fishkill/fishkillmain.htm**.

DWQ fish kill protocols have proven successful in standardizing the methods for investigations and enhancing the quality and quantity of information reported from kill events. Meaningful conclusions about where and why fish kills occur across North Carolina demand accurate and timely data. It is the intent of DWQ to generate accurate information through the current investigation process.

This document is a summary of fish kill events reported to the DWQ from January to mid December, 2005. The report is mandated under Section 4 of Chapter 633 of the 1995 North Carolina General Assembly Session Laws.



2005 Fish Kill Summary

Field investigators reported 19 fish kill events from January to December, 2005. Kill events were reported from coastal waters westward to the Piedmont as far as Stokes County. Kill activity was documented during the year in 9 of the state's 17 major river basins. The ESS tracks fish kill events when at least 25 fish are affected and the event is confirmed by trained investigators.

The cumulative fish mortality for all 2005 reports was 258,927. This figure represents a continued downward trend in total annual fish mortality reported since 2003. Mortality counts for individual events ranged from 50 to 201,000 with a median mortality of 510. The majority of events were observed in fresh waterbodies, however, the three largest events for the year occurred in estuarine waters. One event was observed in the Atlantic Ocean.

• **Total Kill Events for 2005**	**19**
• **Cumulative Mortality for 2005**	**258,927**
▪ *Estuarine*	*250,670*
▪ *Freshwater*	*6,657*
▪ *Ocean*	*1,600*
• **Report Mortality Range**	**50 to 201,000**
• **Report Median Mortality**	**510**
• **Basins with Activity**	**9 (of 17)**
• **Freshwater Kills**	**14**
• **Estuarine Kills**	**4**
• **Ocean Kills**	**1**

Figure 1 : Fish Kill Events and Observed Mortality Reported to NCDWQ During 2005

Basin Activity

Investigators reported fish kill events in 9 of the state's 17 major river basins during 2005 (Figure 1, Table 1). Nearly one-half of the year's kills occurred in the Neuse Basin with the year's largest events occurring below New Bern in the Neuse River estuary. This area has been historically plagued by adverse environmental factors such as low dissolved oxygen, high water temperatures, and fluctuating salinities. Activity in other river basins across the state remained light throughout the season although a sizable event was reported at Badin Lake in the Yadkin basin. Since 1996 annual totals of statewide events peaked in 2001 with 77 reports but have decreased and remained relatively low during the last four years (Table1).

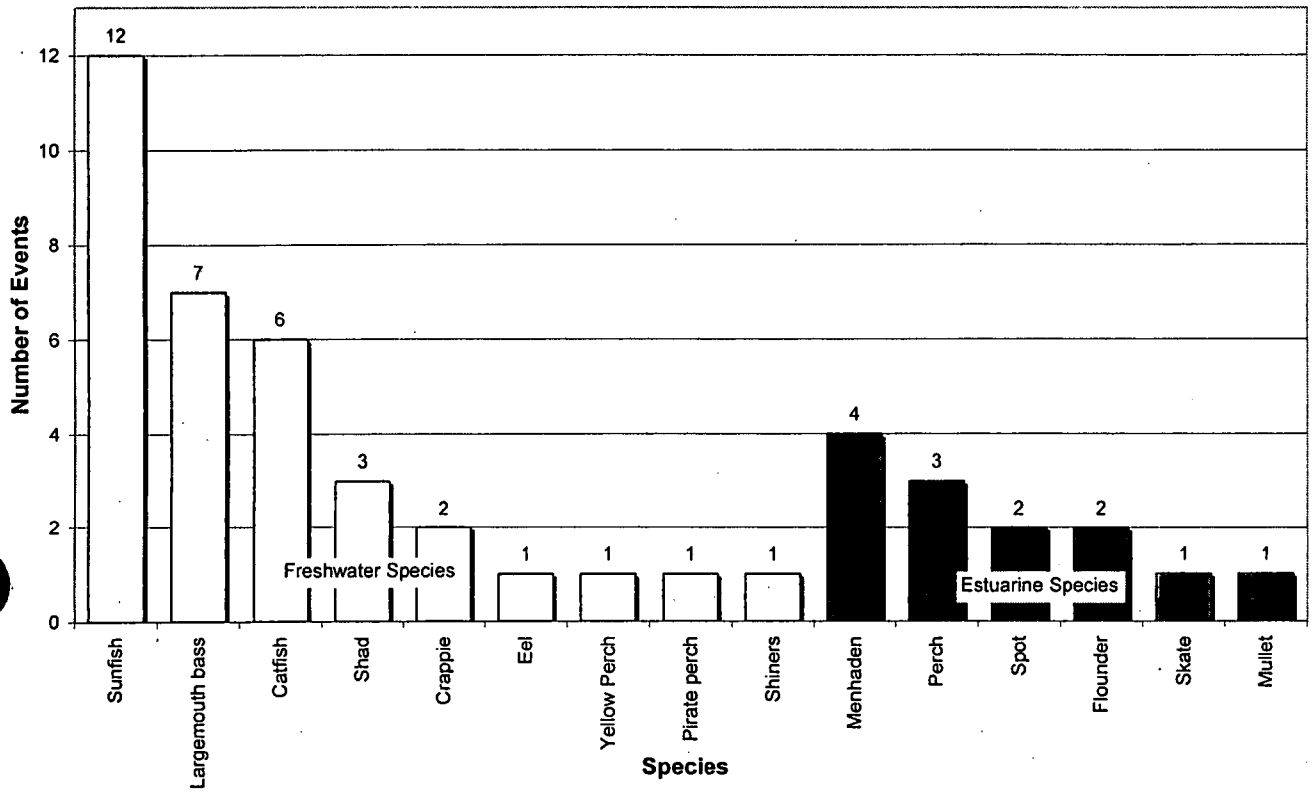
** No fish kill reports have been received from the Hiwassee, Little Tennessee., and Savannah basins since 1996.*

Fish Mortality

The 2005 season produced a cumulative fish mortality of just over one quarter million individuals (Figure 2). The majority of the year's total was reported from two events in the lower Neuse River near Flanner's Beach. The 2005 total represents the lowest count observed since 1997. Fish mortality figures on 2005 reports ranged from 50 to 201,000 with a median mortality count of 510 fish.

Figure 2: Reported annual fish kill events and mortality, 1996 to 2005



Finfish and Other Species Reported

Fish kill events in 2004 involved 15 different species of fish in both estuarine and fresh waters (Figure 3). Freshwater species most commonly identified during investigations included sunfishes, largemouth bass, and catfish. Estuarine species most commonly reported included menhaden and perch. Atlantic menhaden have historically been involved in a majority of estuarine kill events and have exhibited stress and disease in conjunction with fish kills.

Reports of non-finfish species involved in fish kills were infrequent during 2005. Over 3000 blue crab were included in one of the year's large events on the lower Neuse River. Other species appearing on reports included turtles and tadpoles.

Figure 3: Finfish observed during 2005 fish kill events

Suspected Causes of 2005 Events

Specific causes of fish kill events may or may not be obvious to investigators depending on a number of factors. Causes are often identified, but others remain unconfirmed or unclear due to an investigation occurring hours or days after the actual event. Kill events often result from many environmental factors, and sorting out the major reason(s) why a fish kill occurs is frequently a difficult and often subjective task. Investigators generally monitor environmental conditions surrounding an event and are encouraged to submit suspected causes on reports along with supporting information. This information aids in evaluating potential water quality trends and problems, and assist scientists and decision-makers with formulating future courses of action. Reported causes should not be viewed as a definitive label for a particular event.

Reported causes of 2004 kill events included dissolved oxygen (DO) depletion, sewage and chlorine spills, and suspected bycatch from fishing operations. Those events where no specific causes could be determined were reported as "unknown" (Table 2).

Table 2: Major causes reported for 2005 fish kill events

Reported Cause	Number of Events
Unknown	8
Dissolved Oxygen Depletion	6
Spills	3
Bycatch	2
Algae Blooms	None

Unknown Causes: Causes for kill events are reported as unknown when investigators fail to cite specific reasons for an event. Investigations may not provide definitive causes when they are conducted too long after an event and no clear factors are determined, or when causes are suspected but not confirmed. Investigators failed to cite or confirm causes for eight of the year's events. Events with unknown causes were reported mainly from freshwater ponds or lakes during 2005. Often the investigations yielded few clues and water quality measurements appeared normal.

Dissolved Oxygen Depletion: Low dissolved oxygen was cited as a factor in six kill events during 2004. DO depletion was reported as a factor in the year's largest fish kills observed in the lower Neuse estuary during July and September (see Notable Events). Events in the lower Neuse were associated with upwelling of hypoxic water from the river bottom or depletion of DO in warm shallow areas.

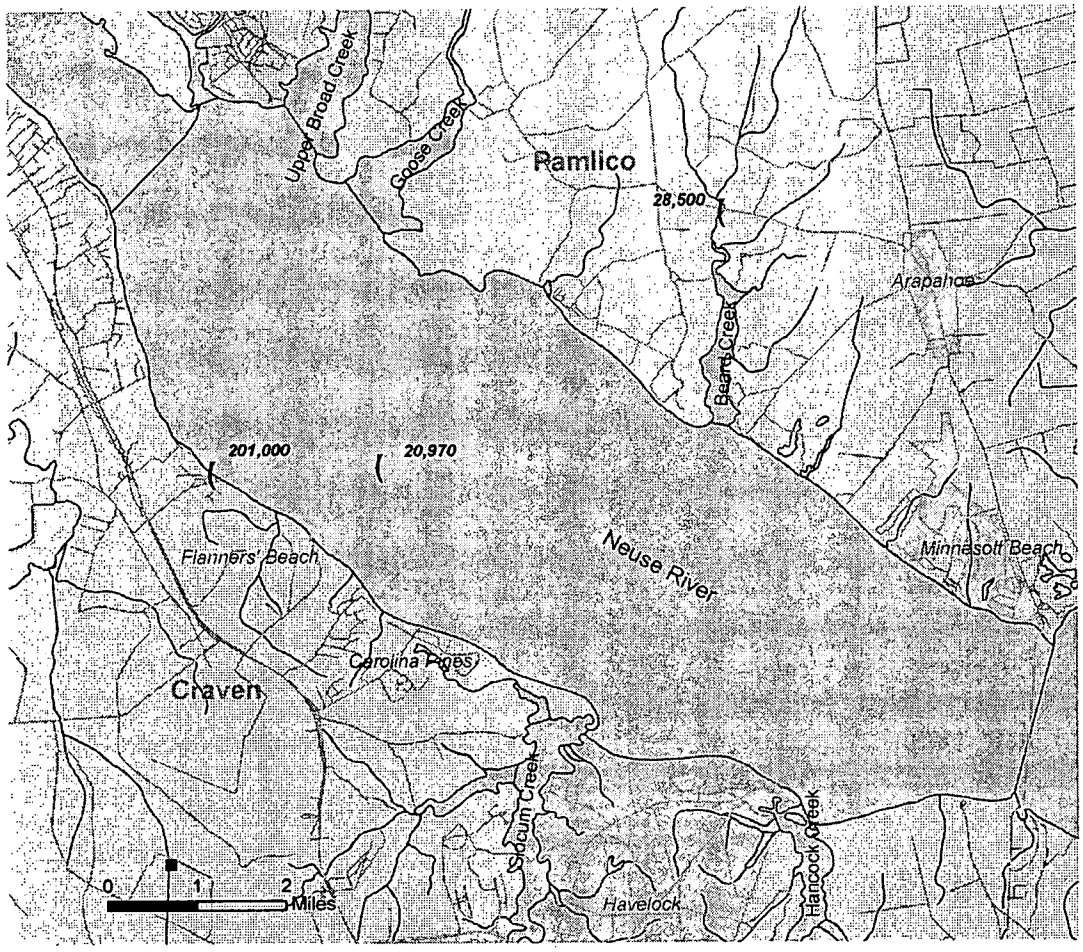
Spills: Toxic spills may deplete DO levels in receiving streams or induce kills outright through physical or chemical toxicity. During 2005 investigators reported a large sewage spill into Hewletts Creek in Wilmington. An estimated 3 million gallons of raw sewage flowed into the middle branch of the creek causing a kill of at least 200 fish. Investigators suspected many more fish were affected but could not be counted due to access difficulties within the watershed. An additional sewage spill was reported during the year in Pamlico County near Grantsboro as well as a chlorinated water line break in Wake County at Perry Creek. Both events together involved about 200 fish.

Bycatch: Discarded fish from nearby fishing operations was reported as a cause in two kill events during the year. A relatively large event involving mainly spot in the Atlantic Ocean (Currituck County) was linked to a seine net dump. Spot were observed scattered over a three-mile section of beach near the Currnitck National Wildlife Refuge. A second suspected bycatch event was documented on the Chowan River near Arrowhead

Beach (Chowan County). Investigators observed catfish with lesions and noted some fishing activity in the area.

Harmful Algae: Although there were no reports of harmful algae being a factor in 2005 fish kill events, ESS staff routinely examine water samples associated with kills for the presence of harmful species. Algal samples that contain significant amounts of Pfiesteria-likes or other potentially harmful algae are often sent to research laboratories throughout the state. The Center for Applied Aquatic Ecology in Raleigh has the ability to examine samples under scanning electron microscopy. Laboratories at the University of North Carolina at Greensboro and the National Oceanic and Atmospheric Administration laboratory in Beaufort can examine samples with molecular probes. Laboratories at UNC-Chapel Hill and UNC-Wilmington provide valuable taxonomic expertise. Algal samples and results are collected, exchanged, and discussed between DWQ and research laboratories as a professional courtesy.

Notable Events



Neuse River and Beard Creek, July and September (Figure 4): The lower Neuse River below New Bern has historically been a trouble spot for fish kill activity. During July 2005, the Neuse River Response Team (NRRT) investigated two large fish kill events near Flanners Beach (Craven County). Together the events involved at least 221,970 individuals comprised mainly of atlantic menhaden and represented over 85% of the fish mortality reported statewide for the year.

Prior to the two events, data from US Geological Survey monitoring equipment in the area indicated a drop in DO levels and associated hypoxia in the water column. Hypoxic conditions have historically occurred in North Carolina's estuaries as nutrient and organic loading coupled with water column stratification deplete DO levels during warm months. Sudden shifts in wind direction and velocity when these conditions are present can cause mixing of the water column or an upwelling of the hypoxic layers.

During September, NRRT members also documented a large menhaden kill in Beard Creek, a tributary on the north side of the Neuse River near Arapahoe. Effects from Hurricane Ophelia were blamed for the event. Investigators reported that in the wake of the storm water from surrounding wetlands drained into the creek and depleted DO levels to a point that triggered a kill of over 28,000 fish.

Badin Lake, August: Badin Lake (Montgomery County) has experienced significant fish kills in recent years and the trend continued in 2005 with investigators reporting a kill of at least 1500 largemouth bass, and sunfish. Factors surrounding this year's event are similar to observations made at previous events on Badin, namely rapid water column destratification and anoxic conditions that squeeze adequate physical habitat for the lake's fish populations.

Figure 4: Large fish kill events and fish mortality reported on lower Neuse River and Beard Creek – July and September, 2005

2005 Summary

Investigators reported fish kill events in 9 of the state's major river basins during 2005. In general, kill activity in basins across the state was light when compared to yearly activity reported since 1996. The number of fish kills reported during 2005 totaled 19, on par with the lowest count of 17 reported in 2004. Reported fish mortality also remained at the lowest level since 1997 with just over one quarter million fish killed. The vast majority of the year's mortality (85%) occurred during two events in the lower Neuse River.

Notable events included the familiar phenomenon of fish kills in the Neuse River near Flanners Beach. This area continued to exhibit the water column stratification and subsequent hypoxia that plague shallow, poorly flushed estuaries. As a result, investigators documented large and events in the area during July. Hurricane Ophelia produced only one event, a menhaden kill in Beard Creek (Pamlico County) as a result of wetland drainage in the aftermath of the storm.

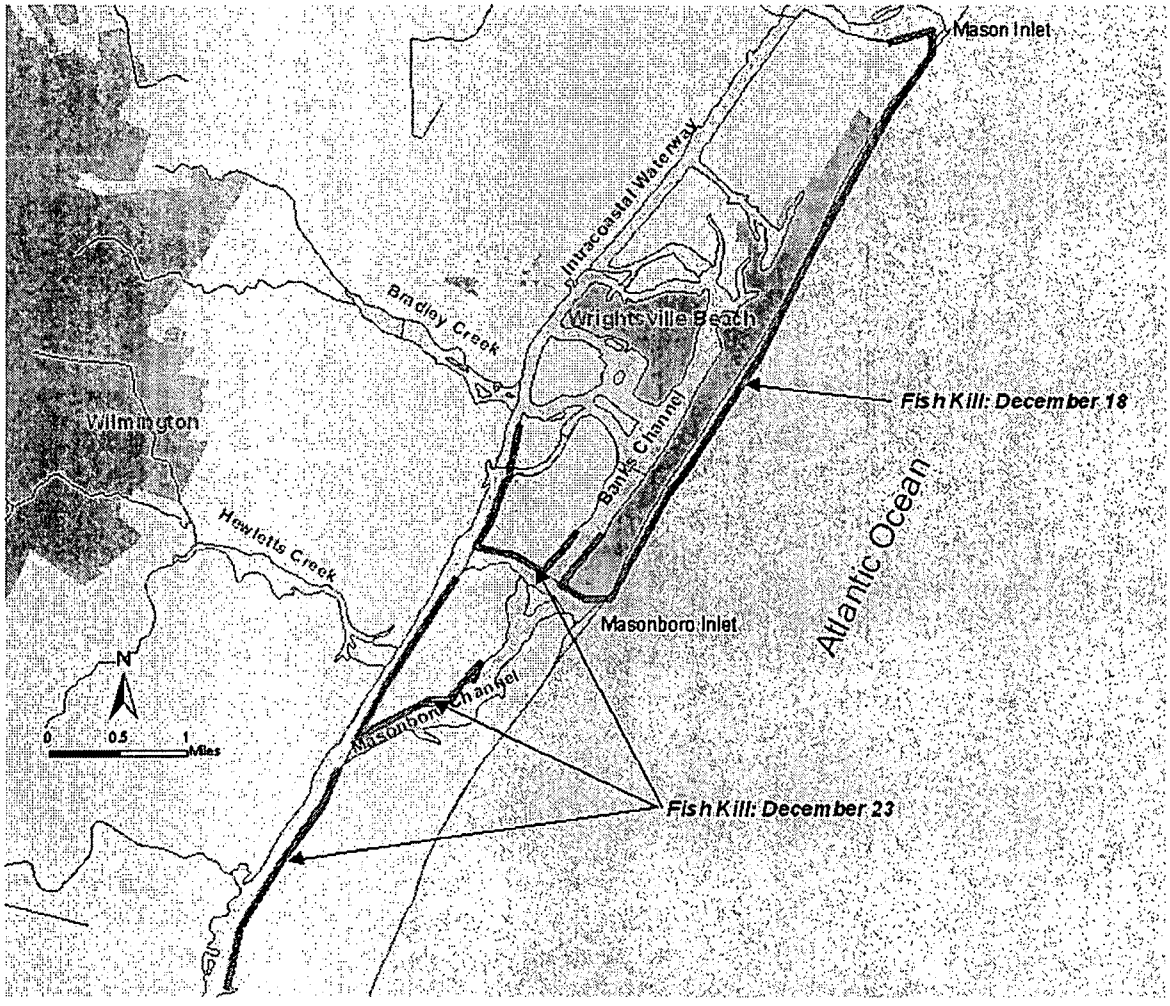
Since fish kills may represent the endpoint of a myriad of environmental factors, reasons for the drop in both mortality and kill events during 2004, and again in 2005, remain unclear. More favorable environmental conditions (ie: weather, hydrology, water chemistry) have been documented during periods of low fish kill activity, especially in the states coastal waters. Determining if a decrease in fish kill reports reflects natural changes or is the result of improved water quality requires continued long term monitoring and research.

Addendum - Division of Water Quality Annual Report of Fish Kill Events December, 2005

This addendum summarizes several large menhaden kill events along the North Carolina coast that occurred last December after finalization of the annual report. The events occurred from December 18 to 26 and were among the largest of the 2005 calendar year, affecting over 2 million fish. Counting these additional events, 2005 produced 23 fish kill events (reported to DWQ) and a cumulative mortality of over 2.25 million fish.

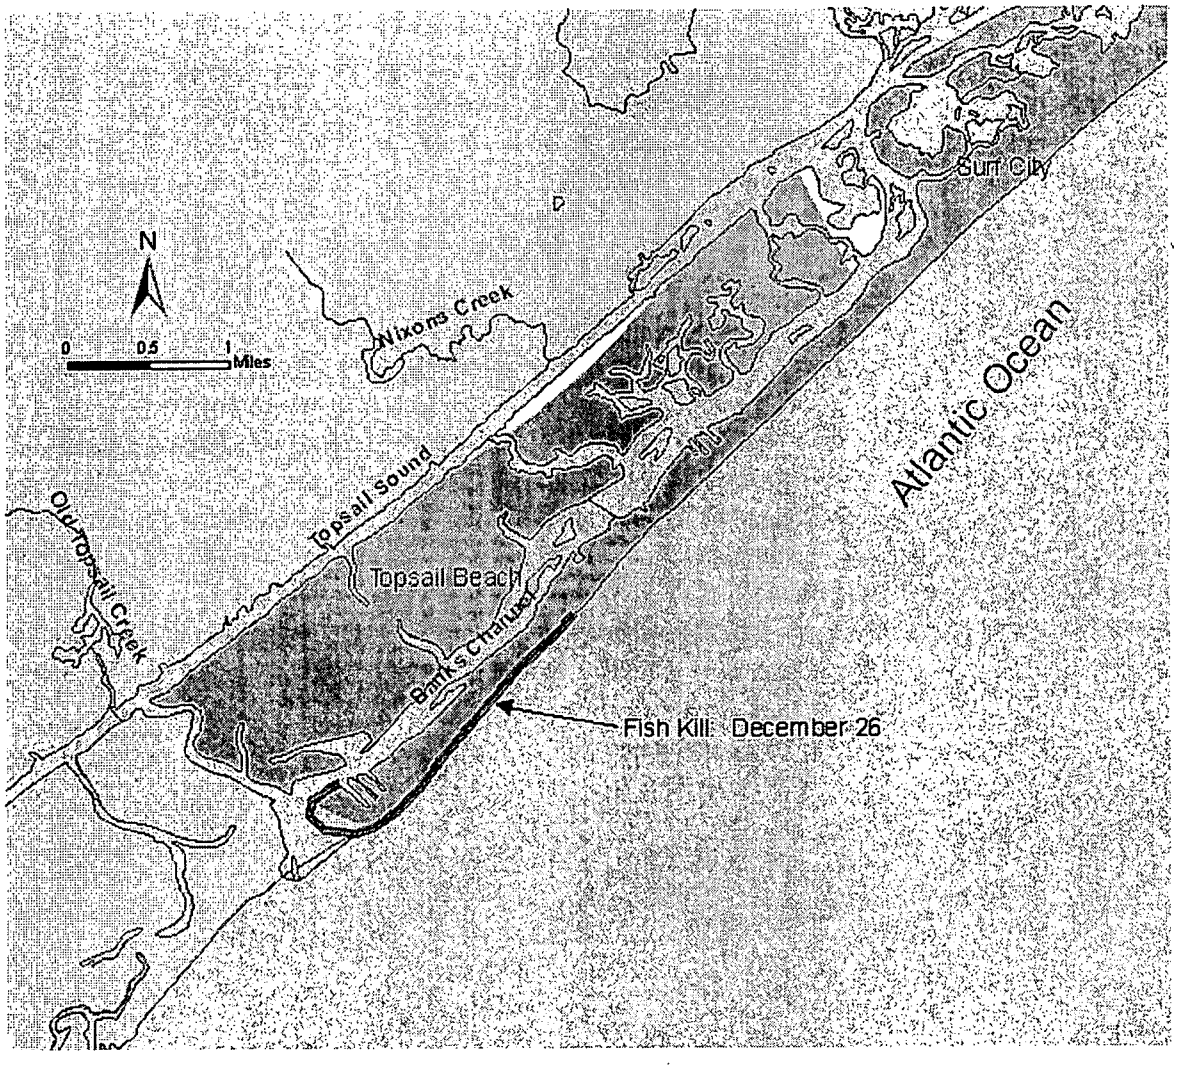
Notable Events

Wrightsville Beach, December 18, 2005: Division of Water Quality and Division of Marine Fisheries investigators reported a kill at Wrightsville Beach (New Hanover County) where a large number of small (4-5 inches in length) menhaden were observed on the beach side. Dead fish were observed down the entire length of Wrightsville Beach a distance of four miles. Further investigation revealed an extremely heavy concentration of dead menhaden in the old Mason's Inlet Channel behind Shell Island on the north end of Wrightsville Beach (Map 1). This area was completely blanketed by dead fish at low tide with additional fish in the water below the low water line. Investigators suspected that large schools of menhaden were migrating south down the beach and a portion of the school entered Mason's Inlet and became entrapped in the small water body behind Shell Island. These fish died of suffocation either from a lack of oxygen or being physically stranded on the banks. The next falling tide carried some of these fish back into the ocean and down Wrightsville Beach although it was presumed that some of the fish on the beach side could have died in the ocean as well. The fish did not have the sores or lesions historically associated with fish health events. Samples of menhaden and water from the kill site were sent to Dr. Carm Tomas at UNCW for analyses of harmful components. Results of all samples were negative for toxins and harmful algae species associated with fish kill events. Investigators estimated that at least two million menhaden were involved in the Wrightsville Beach event.



Masonboro Island, December 23, 2005: Division of Marine Fisheries investigators observed dead and dying menhaden in Old Masonboro Channel, the Intracoastal Waterway, Shinn Creek and Banks Channel in New Hanover County (Map 1). The fish were observed dead either on the bottom or along the shorelines. Fish were also seen alive but in distress exhibiting behavior that has been associated with "spinning disease", a viral infection that acts to disorient fish so that they swim in circles. The kill was composed entirely of very young menhaden. Water temperature, salinity and dissolved oxygen readings collected at the location of the kills were all within the range expected at that time of year. Investigators speculated that the kill involved tens of thousands of fish, however, it is possible that these fish were actually part of a larger school that entered Masonboro Inlet and that many more fish may have died in the ocean.

Topsail Island, Lea and Hutaff Islands, December 26, 2005: A fish kill was reported December 26 on the south end of Topsail Beach in Pender County. Marine patrol officers indicated that the fish were on a three mile stretch of the ocean beach in significant numbers and extended around the southern end of the island and a short distance up Bank's Channel (Map 2) . Fish were also reported by citizens on the ocean side of Lea and Hutaff islands south of Topsail indicating that the kill may have occurred off Topsail Beach and spread down the coast. Only 4-5 inch menhaden were observed and the number of fish involved was estimated to be in the tens of thousands.



The menhaden kills reported in December around Wrightsville Beach and Topsail Island were linked to extremely high densities of small menhaden as they migrated down the coast. Bycatch from fishing operations was ruled out since the two known fishing companies, Beaufort Fisheries and Omega Protein, had not fished in the southern portion of North Carolina since the Spring. There was no evidence of harmful dinoflagellates or toxic algae nor was there any indication of pollutants that could cause such massive mortalities. No other species other than a few spiny dogfish were seen in association with the menhaden and is evidence that agents toxic to multiple fish species were not present.

Scientific literature describes an incident in 1997 that has many similarities to the December menhaden kills. The 1997 kill was attributed to suffocation of 4-5 inch menhaden as they migrated down the coast in dense schools. Suffocation, either by lack of oxygen or sheer physical stress, was linked to the extreme density of the fish. Similarly, fisheries experts reported a very strong 2005 menhaden year class along the entire east coast. Concentrations similar to those observed in 1997 were reported in the area of the fish kills by fishermen and surfers. Observers reported large schools of apparently healthy menhaden seen under dead fish on the surface. The number of fish involved in the December kills is probably much higher than those actually reported as some of the fish were never stranded on the beaches and banks.

Map 2: Menhaden fish kill location near Topsail Island – December 26, 2005

Short Tutorial on Federal Tier II and CA LEV Vehicle Standards

Environmental Review Commission

February 14, 2006

Brock M. Nicholson, P.E.
Deputy Director
Division of Air Quality

DIVISION OF AIR QUALITY

EXHIBIT H

Vehicle Emissions Standards in the US

- **Federal – Currently "Tier II"**
  - Adopted in 1999
  - Phased in 2004 – 2009
  - Covers all States
  - Federal Clean Air Act (CAA) Section 209(a) "preempts" states from establishing separate standards

- **California – Currently "CA LEV – II"**
  - CAA Section 209(b) exempts California from the Sec 209(a) preemption
  - However, CA must obtain a waiver from EPA for state standards to be effective
    - CA standards must be equal to or more stringent than the Federal standards

Features of the Federal Tier II Standards

- Emissions certified in 8 Categories ("BINS") – NOx limits at 120,000 miles Range from 0.20 to 0.00
- Manufacturers must meet a fleet average for NOx of 0.07 grams per mile – compliance determined at time of Certification with Manufacturer
- Warranty - 8 years / 80,000 miles – emissions components

What are the Components and Features of the CA Vehicle Standards?

- **LEV–II: "Low Emitting Vehicles"**
  - Reduces "Criteria" and Precursors to Address Ambient Air Quality
  - Phased in Between MY 2004 and 2010
  - Sec 209 Waiver Granted

- **"Pavley": Standards**
  - Address CO2 and other Green House Gases (GHG) from Vehicles
  - Sec 209 Waiver Applied for in December 2005 – Not yet Granted
  - Not Effective Until Waiver Granted
  - Originally Hoped to be Effective with MY 2009 – Currently can not be any Earlier than MY 2010
  - Several Law Suits Filed – No Stays in Effect

Components and Features of the CA Vehicle Standards Cont'd

- **LEV**
  - Technology Classifications – LEV II, ULEV, SULEV, ZEV, PZEV, ATPZEV
  - Cars Plus Medium Duty up to 14,000 pounds
  - Required Statewide Fleet Average for Hydrocarbons (NMOG in CA)
  - Enforceable at the State Level
  - Warranty – 3 years / 50,000 miles – 7 years / 70,000 miles
- **"Zero Emitting Vehicles" (ZEV)**
  - Phased in MY 2005 – MY 2018
  - Can be True ZEVs or ZEV Equivalents
    - PZEVs – Very Low emissions and Zero Evaporative Emissions
      - 15 years / 150,000 mile warranty
    - ATPZEVs – Advanced Technology – Hybrids and True ZEVs
- **PAVLEY**
  - Regulates CO2, Methane, Nitrous Oxide, HFC (R 134a)
  - Phased in MY 200? – MY 2016
  - Cars / light Duty – to 8500 pounds – Medium Duty to 10,000 pounds

How Can Other States Adopt CA Standards?

- Section 177 of CAA Allows States to Adopt CA Standards
- Most States Can Adopt the CA Standards If:
  - EPA has Granted CA a Waiver und Sec 209
  - The Adoption Does Not Create a "Third Vehicle" Requirement
- Does a State Have to Adopt All of the CA Program?
  - Some Debate on This Issue
  - It Depends
  - Hinges on Whether a "Third Vehicle" Requirement is Created
- Does the Pavley Provision Bring up the Issue of a Third Vehicle? – Yes
  - If Pavley Prevails, States must have Pavley
  - If Pavley Fails to Become Part of the CA Program, State Cannot Adopt it

State Program Options

Option	Program Type	Program Description
1	Federal Tier 2	■Default Program ■No legislation required
2	California LEVII – (a)	■All MY 2010 and later vehicles sold or registered
3	California LEVII – (b)	■All MY 2010 and later vehicles sold or registered ■Fleet average requirement to maximize emission reductions
Add on to option 2 / option 3	California LEVII & ZEV	■ZEV (Zero Emission) ■PZEV (5 PZEV = 1 ZEV ■AT-PZEV (~2.5 AT-PZEV = 1 ZEV)

Consideration of the CA - Pavley Standards in NC

- **Adopt LEV Standard as Outlined Above – Without Pavley**
  - If Pavley Waiver is Not Granted and No Court Overturns EPA Decision – No Further Action by Legislature
  - If Pavley Become Effective, Legislature Must Add Pavley to NC Standards
- **Adopt LEV Standard as Outlined Above – With Pavley**
  - If Pavley Waiver is Not Granted and No Court Overturns EPA Decision –Action by Legislature to Remove Pavley is Required
  - If Pavley Become Effective, No Further Action by Legislature
- **Perhaps an Escape Clause in the Legislation would Prevent Having to Return to Legislature to "Correct" the Pavley portion**

EXHIBIT I

Legal Issues Pertaining to the Adoption of California Auto Emission Standards (Including GHG Standards) by Other States

Prepared by:

David Bookbinder, Sierra Club

January 3, 2006

This memo briefly describes how other states can adopt California's auto emission standards under Section 177 of the Clean Air Act, including discussion of the impact of California's proposed regulations adding greenhouse gas ("GHG") limits to the current "LEV II" standards.

California's authority to set its own vehicle emission standards.

Section 209(a) of the Clean Air Act prohibits any state from establishing motor vehicle emission standards. However, Section 209(b) exempts California from this preemption, allowing it to adopt vehicle emission standards that are more stringent than the federal ones. (The current federal emissions standards are called the "Tier 2" standards.) When California does so, it must apply to EPA for a "waiver of preemption." EPA may deny this waiver only in very limited circumstances, and has never yet done so.

Which states can adopt California's automobile emission standards?

Section 177 of the Act allows any state that either (a) currently does not meet any of the National Ambient Air Quality Standards ("NAAQS"), or (b) was out of compliance but now meets a NAAQS, to adopt California's auto emission standards. NAAQS exist for six "criteria" pollutants: carbon monoxide, nitrogen dioxide, ozone, lead, sulfur dioxide and particulate matter ("PM").[1]

Currently, almost every state (except Florida, Hawaii, Iowa, Kansas, Mississippi, Nebraska, North Dakota and South Dakota) is eligible to adopt California's standards because at least part of each such state is in "nonattainment" of one or more of these NAAQS (EPA Greenbook (www.epa.gov/oar/oaqps/greenbk), as of September 29, 2005), or has recently come into "attainment" of the NAAQS and so remains eligible to adopt California's standards. For purposes of this memo, "177 State" means any state that is eligible to adopt California's standards.

It is important to note that EPA approval is not needed for any 177 State to adopt California's standards. Furthermore, EPA regulations also allow auto dealers in any state that borders a 177 State that has adopted California standards to sell California-certified cars as well.

What are the air-quality benefits of adopting California's emission standards?

---

[1] Specifically, Section 177 allows states with an approved State Implementation Plan ("SIP") – *i.e.,* a plan to achieve or maintain compliance with a NAAQS – to adopt California's standards. Vermont may also adopt California standards even though it is in attainment of all NAAQS because it is part of an "ozone transport region" established under Section 184 of the Act.

For a variety of technical reasons, there is no simple answer to this question, and results will vary depending on the composition of each state's vehicle fleet. However, these benefits can be estimated by looking at the analysis that was done for three states that have already adopted the LEV II standards, New York, Massachusetts and Vermont. The results ("HC" is hydrocarbons) are as follows:

Annual Emissions Benefits of the LEV II Program in 2020

State	HC reduced (tons)	% HC reduction Over Tier 2	Toxics reduced (tons)	% Toxics Reduction Over Tier 2
NY	10,020	15%	502	25% for each toxin
MA	3,300	17%	185	25% for each toxin
VT	510	14%	29	19% for each toxin
Total	13,830	Average reduction 15.3%	716	Average reduction 23%

May a 177 State adopt only a single California emission standard, e.g., for NOx or GHGs?

No. A 177 State must adopt *all* of California's emissions standards as a package. Section 177 is based on the idea that automakers will not have to cope with more than two sets of emissions standards, *i.e.,* federal standards and California standards. If a 177 State were to adopt California's NOx standard but not the rest of the California standards, this would result in what Section 177 calls a "third vehicle", a car which would have to meet California's standards for some pollutants, but federal standards as to other ones. Section 177 guarantees the automakers that they will not have to meet more than two regulatory regimes by explicitly prohibiting any requirements that result in such "third vehicles".

What is the status of California's Greenhouse Gas ("GHG") standards?

California has completed its GHG rulemaking, and on December 27, 2005 submitted its proposed regulations to EPA for review under Section 209(b) of the Clean Air Act. Although the regulations contemplate becoming effective as of Model Year 2009, this date is somewhat unrealistic. It will take a considerable amount of time for EPA to complete its review, and whatever EPA's decision is, it will almost certainly be appealed to the U.S. Court of Appeals for the District of Columbia Circuit. Unlike previous regulations, the auto industry maintains that the GHG regulations are illegal and will not comply with them until EPA -- or the D.C. Circuit -- approves them. In addition, the industry has sued CARB over the GHG regulations in federal court in California, and that case is still pending.

May a 177 State adopt California's emissions standards, but not the Zero Emission Vehicle ("ZEV") sales mandate?

Legally, the answer is probably not, because two courts have held that the ZEV sales mandate is an "emission standard" under Section 177; as such, a state must adopt it along with the rest of California's standards. *AAMA VI*, 208 F.3d 1, 6-7 (1st Cir. 2000); *MVMA VII*, 152 F.2d 196, 200-201 (2d Cir. 1998). As a practical matter, however, EPA has taken the position that a state can adopt California's standards without the ZEV mandate (60 FR 4728-29), and some 177 States (e.g., Vermont prior to 2004, and Maine) have done so. The auto industry has not been willing to sue these states for excluding the ZEV sales mandate, and environmental groups are unwilling to risk losing the LEV II standards on the basis that they are incomplete without the ZEV mandate. It is also difficult to imagine how the auto industry could show how they are injured (necessary for Constitutional standing purposes) by the absence of the ZEV mandate.

May a 177 State adopt California's emissions standards, but without the "fleet average" provision?

Certain LEV II standards (*e.g.*, the "NMOG" standard covering non-methane hydrocarbons) are set in the form of a sales-weighted average to be met across a manufacturer's entire fleet, and it is clear that a 177 State may adopt these fleet average standards. The question is whether a 177 State may ignore the fleet average and simply elect to require that any vehicle sold within its borders must be a vehicle certified for sale in California. This approach may be more attractive in states that have a significantly different mix of vehicle models than California, and it is also the easiest statute to implement and administer.

States have done both; for example, Massachusetts did not adopt the NMOG fleet average, but New York did. Adopting LEV II standards without California's fleet averaging provisions probably violates Section 177's requirement that a 177 State adopt standards "identical" to California's[2], although it is highly unlikely that either side would litigate this issue. On the other hand, the auto industry has grumbled about other states adopting a California fleet average, on the grounds that CARB established the fleet average figure for the California vehicle market, and requiring auto makers to meet this same figure in markets that are both smaller and demographically different from California is unfair. More to the point, when Vermont revised its standards in 2005 to include California's newly-adopted greenhouse gas (GHG) limits, the auto industry sued

[2] While this issue has not been litigated, this conclusion follows from the reasoning that both the First and Second Circuits used to decide that the ZEV sales mandate is an emission standard that 177 States are required to adopt. *MVMA VII*, 152 F.2d at 200; *AAMA V*, 163 F.3d at 84; *AAMA VI*, 208 F.3d at 7.

and claimed -- among other things -- that for these reasons the GHG fleet average violated a provision of Section 177.

May a 177 State adopt California's emissions standards for one class of vehicles but not another?

There are several sets of LEV II standards, one for passenger cars and "light" light duty trucks (up to 3,750 lbs), one for "medium light duty" trucks (3,751-8,500 lbs) medium duty trucks (8,501-10,000 lbs) and heavier medium duty trucks (10,001-14,000 lbs). (Note: Terminology about truck weight classes can be confusing; the best way to refer to these standards is by the actual weight figures.)

Some states have just adopted the passenger car/LDT standards up to 8,500 lbs (e.g., Connecticut, New Jersey); others (Massachusetts, Maine and Vermont) have adopted all of them. The issue has never been litigated, and it would appear that the automakers do not object to a state not adopting the heavier set of standards.

May a 177 State permit, but not mandate, California-certified vehicles?

Yes, but the air-quality benefits will be almost impossible to predict, and thus the state will almost certainly not get any SIP credits from EPA for doing so.

May the 9 states that agreed not to adopt California standards as part of the National Low Emission Vehicle Program now adopt the LEV II standards?

Yes. These nine states (Connecticut, Delaware, Pennsylvania, Maryland, New Hampshire, New Jersey, Rhode Island, Virginia and the District of Columbia) agreed to forebear from adopting California standards only through Model Year 2006 (63 Fed. Reg. 931 (January 7, 1998)). They are free to adopt LEV II for any model year after MY 2006, and four of them (Connecticut, New Jersey, Pennsylvania and Rhode Island) have already done so. The Connecticut and Rhode Island programs are scheduled to be in effect as of Model Year 2008, New Jersey as of MY 2009, and Pennsylvania MY 2011.

When may a 177 State adopt California standards?

177 States may adopt California's emission standards as soon as the California Air Resources Board ("CARB") promulgates them. However, Section 177's "leadtime" requirement bars states from enforcing such standards until Model Years beginning two years after the date of adoption. *MVMA III*, 17 F.3d 521, 533-534 (2d Cir. 1994).

"Model year" has a specific technical meaning under Section 177; a given model year actually begins on January 2 of the *previous* calendar year. In other

words, in order for a 177 State to adopt California standards for model year 2009, the 177 State must adopt those standards 2 years before January 2, 2008, in other words before January 2, 2006. 40 C.F.R. 85.2301-2304.

In which 177 States does current law already authorize adoption of California's standards? In which would additional legislation be needed?

State statutes range from those requiring the state's executive branch to adopt California standards, to laws permitting adoption, to laws forbidding any such action without new legislation.

It is important to note that because each of the four states that currently implement California standards (Maine, Massachusetts, New York and Vermont) adopted those standards as of a specific date, each will have to administratively adopt CARB's proposed GHG limits in order to remain consistent with the California standards.

a. Mandatory adoption

Massachusetts law (Mass. Gen. Laws c. 111 s. 142K), mandates that the state Department of Environmental Protection:

> adopt motor vehicle emissions standards based on the California's duly promulgated motor vehicle emissions standards of the state of California unless, after a public hearing, the department establishes, based on substantial evidence, that said emissions standards and a compliance program similar to the state of California's will not achieve, in the aggregate, greater motor vehicle pollution reductions than the federal standards and compliance program for any such model year.

Likewise, **Connecticut** law (2004 Conn. Pub. Acts. 84) requires "the Commissioner of Environmental Protection ... to implement the light duty motor vehicles emissions standards of the state of California."

b. Specifically authorizing adoption

Other states have specifically "authorized" their environmental agencies to opt-in to the California programs. In **Maine**, for example, the legislature stated that the "Board may adopt and enforce standards that meet the requirements of the federal Clean Air Act, Section 177." 38 Maine Rev. Stat. Ann. 585-D. Maine then used this authority in adopting LEV II.

c. Permitting adoption

Most states have delegated broad authority to the state environmental agency that would allow the agency to adopt the California standards. For

example, **Alabama** law provides ADEM (here referred to as "the commission") with such authority:

> As the state of knowledge and technology relating to the control of emissions from motor vehicles may permit or make appropriate, and in furtherance of the purposes of this chapter, the commission may provide by rules and regulations for the control of emissions from any class or classes of motor vehicles. Al. Code 22-28-12(a).

It is worth noting that several states that have adopted LEV II administratively have used such broad statutory authorization. For example, **Vermont** DEQ adopted LEV under a law providing that DEQ "may provide rules for the control of emissions from motor vehicles." 10 Vermont Stat. Ann. § 567.

Delaware law gives DENREQ extremely broad authority to adopt auto emission standards, and new legislation would not be needed (Del. C. Title 7, § 6703):

> The Department shall have the power to formulate and promulgate, amend and repeal codes, rules and regulations establishing standards and requirements for the control of air contaminants from motor vehicles.

North Carolina authorizes the Environmental Management Commission "to adopt motor vehicle emission standards" (NC Gen. Stat. 143-215.107(a)(6). (N.B.: it is possible to read this authorization as only applying to "standards" used in connection with a vehicle inspection and maintenance program.)

South Carolina appears to give very broad authority to DHEC, which "shall develop and enforce standards as may be necessary governing emissions or discharges into the air, streams, lakes, or coastal waters of the State, including waste water discharges." SC Code 48-1-100(B). While this does not explicitly reference motor vehicle emissions, presumably such emissions are included within "emissions . . . into the air."

Mississippi's statutory language is similar to South Carolina's; the Commission on Environmental Quality may "adopt, modify or repeal and promulgate . . . emission standards for the state under such conditions as the commission may prescribe for the prevention, control and abatement of pollution." Miss. Code Title 17, § 49-17-17(h).

d. Permitting adoption in certain circumstances

Maryland law delegates broad authority to MDE to "adopt rules and regulations for the control of air pollution in this State." Maryland Code Environment Title, § 2-301. However, in 1993 the legislature authorized MDE to adopt California auto emission standards only if one of two contingencies is

satisfied: either (a) four of five states (Delaware, District of Columbia, New Jersey, Pennsylvania and Virginia) have adopted the LEV standards, or (b) enough other states within the Ozone Transport Region have adopted the LEV standards such that 60% or more of new car registrations within the OTR were subject to them, plus at least two of four states (Delaware, District of Columbia, Pennsylvania and Virginia) have done so as well. Id. § 2-703.

At the same time, Maryland also provided that if EPA established Tier II emission standards, then this statutory authorization and any program established thereunder would automatically terminate. Acts 1993, c. 201, Section 2. (Because EPA has done so, this legislation is no longer relevant except to show that despite the broad grant of authority in § 2-301, MDE would probably seek specific authorizing legislation to adopt LEV II.)

Rhode Island takes the approach of generally empowering its agencies to adopt "regulations . . . relating to emission standards for new motor vehicles and new motor vehicle engines" and requires that such regulations "shall not be more stringent than the mandatory standards established by federal law or regulation." However, the agency is specifically empowered to go beyond the federal standard if "the regulations are needed for the attainment or maintenance of air quality standards." RI Gen. Laws 23-23-5 (22). Such a determination was used when Rhode Island adopted the original LEV program and LEV II standards.

e. Prohibiting adoption

Georgia law (Ga. Code 12-9-46(a)(3)) provides that the state Natural Resources Board may "prescribe by rule or regulation emission standards or emission limitations limiting the amounts of allowable exhaust emissions of hydrocarbons, nitrogen oxides, and carbon monoxide and evaporative emissions of hydrocarbons from responsible motor vehicles as defined in this article." Nevertheless:

> In no event shall the emission limitations be stricter than those required by the USEPA pursuant to the federal Clean Air Act, as amended, for the particular vehicle to which such limitations apply.

In other words, forget it.

Louisiana has a similar statute (RS 30:2054(B)(8)), which authorizes DEQ:

> To establish and implement a program for the control and abatement of motor vehicle emissions in accordance with R.S. 30:2060 and other applicable state and federal laws, particularly the Clean Air Act as amended, but not to exceed the requirements provided in such Act unless specifically authorized.

In 2003, the **New Hampshire** legislature removed the ability of the Department of Environmental Services to adopt LEV II or any other California auto emissions regulations without specific legislation; New Hampshire state agencies are not permitted to "propose or adopt a rule . . . that incorporates by reference any code, rule, or document from another state government without specific authority in the authorizing legislation or specific legislative approval for such a rule." New Hampshire Revised Statutes Annotated 541-A:3-b.

Virginia law (Virginia Code Title 10.1 §1307(b)) limits the State Air Pollution Control Board to adopting only certain authorized measures, which in turn are limited to I/M standards. Virginia Code Title 46.2 §§ 1176 et seq.

California Lev-II and EPA Tier 2 Standards

Kay Prince
US EPA Region 4
February 14, 2006

EXHIBIT J

General Requirements for Adopting a "CA Car" Program

- States can adopt anytime, but can only enforce once waiver issued to CA
  - Issued for LEV II
  - Not issued for Pavley Bill (Greenhouse Gas Provision)
- A two year lead time must be provided
- No "third vehicle"

Must also:

- State must commit to enforcement
- Any SIP credit must be modeled appropriately

State Program Options

Option	Program Type	Program Description
1	Federal Tier 2	•Default Program •No legislation required
2	California LEVII – (a)	•All vehicles sold or registered
3	California LEVII – (b)	•All vehicles sold or registered •Distribution requirement to maximize emission reductions
4	California LEVII & ZEV	•ZEV (Zero Emission) •PZEV (5 PZEV = 1 ZEV) •AT-PZEV (~2.5 AT-PZEVs = 1 ZEV)

California LEV II/EPA TIER 2 Comparison

	California Lev II	***EPA Tier 2***
Control Focus	*Hydrocarbon (HC)*	*Nitrogen Oxides (NOx)*
Control Achievement	*Declining Annual Fleet Average for 2 Light Duty (LD) Vehicle Categories*	*Phase In to Average NOx Standard for 2 Light Duty (LD) Vehicle Categories*
Timing	*Average Decline Annually from 2004 to 2010*	*NOx Standard Met:* *2007 – Cars& LD Trucks* *2009 – SUVs & Heavier Trucks*
Mileage Basis	*50,000 Miles*	*120,000 Miles*

California LEV II/EPA TIER 2 Comparison

The California LEV II program sets the fleet HC (NMOG) standards and fleet-wide NOX levels result from the implementation of the program. Average NOX levels are not specified.

The EPA Tier 2 program sets the fleet NOx standards and fleet-wide VOC levels result from the implementation of the program. Average VOC levels are not set.

NOTE: Comparing VOC emissions between programs is difficult because of varying assumptions on fleet mix. The same is true for a comparison of NOx.

Overview of Northeast State Low Emission Vehicle Programs

Environmental Review Commission
North Carolina General Assembly
Raleigh, North Carolina
February 14, 2006

Coralie Cooper
Transportation Program Manager
NESCAUM
ccooper@nescaum.org

NESCAUM

About NESCAUM

- Northeast States For Coordinated Air Use Management formed in 1967 by the region's Governors.
- Nonprofit association of air pollution control agencies in the 6 New England States, New York & New Jersey.
- Provide technical assistance and policy guidance to member states on air pollution issues of regional concern.

NESCAUM

LEV Overview

- Section 209 of Clean Air Act allows CA special dispensation to regulate vehicles; other states pre-empted.
- Section 177 lets other states copy CA.
- How: Implementation issues surmountable.
- Why: Greater emission reductions; consumer benefits.
- Seven NESCAUM states have adopted.

NESCAUM

LEV Implementation Dates

- **MA, NY,** and **VT** have had the LEV program since the 1990's; will have the ZEV mandate in place for MY 2007.
- **ME** has had LEV in place since 2001 without ZEV; has just adopted ZEV effective MY 2009.
- **RI** and **CT** will have LEV/ZEV in place for MY 2008.
- **NJ** expected to have LEV/ZEV in place for MY 2009.
- All states will have ZEV in place by 2009.

NESCAUM

State Authority to Adopt LEV

- **NY, VT** have broad authority; did not require legislation to adopt LEV.
- **MA, ME** passed legislation requiring state to adopt LEV.
- **CT** has legislation requiring state to adopt LEV and to maintain the same schedule as CA.
- **NJ** has legislation requiring state to adopt LEV.
- **RI** adopted via Executive Order; did not require legislation.
- Some states choose legislative approach even when not strictly required.

NESCAUM

Zero Emission Vehicle Flexibility

- Manufacturers can comply with ZEV mandate exactly as they do in CA.
- But, Northeast states also give automakers more flexibility (as requested by the manufacturers).
- Two flexibility programs:
  - Alternative Compliance Plan (ACP) – "Ramp up"
  - Proportional Credits – "Bank" of credits; same %'s
- **NY, MA, & VT** use ACP.
- **CT, RI, ME,** and **NJ** will use proportional credits.

NESCAUM

Alternative Compliance Plan

- Manufacturers have been allowed to bank credits beginning in 2002.
- A credit multiplier (extra credit) is applied to all advanced technology vehicles through 2008.
- The programs will be equivalent to CA in 2009 in terms of percentage requirements.
- In New York, 6 of 7 manufacturers chose the alternative compliance plan.

NESCAUM

Proportional Credits

- In NJ, CT, RI, and ME the states are providing manufacturers with a credit bank as a gradual ramp-up to the full ZEV mandate.
- Manufacturers are given a bank of credit calculated on the amount of credit banked in California.
- A ratio of sales in CA and in NJ, CT, RI, and ME is used to calculate actual credits.

NESCAUM

Enforcement of the Standards

- A number of states have provided flexibility to manufacturers in meeting the fleet emissions standards (NMOG).
- A three year grace period for meeting the fleet average standard has been typical.
- All states in the region will enforce the fleet average by 2010.
- A regional enforcement program is being considered.

NESCAUM

LEV Incentives

- **MA, VT**: None
- **NY**: Up to $5,000 rebate for pure electric vehicles. Lower sales tax for pure electrics & hybrids. Proposed budget has $2,000 tax credit for hybrids.
- **ME** – Lower sales tax for hybrids and clean fuel.
- **NJ** – No sales tax for pure electric vehicles
- **CT** – None now; some for alternative fueled.
- **CA** – State & some cities offer various incentives.

NESCAUM

Other Program Aspects of LEV

- **Enforcement** – Most states use registration denial as enforcement mechanism.
- **NMOG Curve** – States discussing possible regional NMOG curve for all Northeast states to replace the NMOG curve requirement in each state.
- **Warranty** – Most states use CA's warranty, often incorporated by reference.
- **Certification** – Most states use CARB executive orders, some incorporated by reference.

NESCAUM

LEV Benefits in the Northeast 2010 - 2025

Year	NOx Benefit*	VOC Benefit*	Region-wide NOx +VOC tons per day
2010	0.5%	3.0%	37
2015	3.9%	7.5%	45
2020	9.1%	11.6%	50
2025	13.2%	14.3%	56

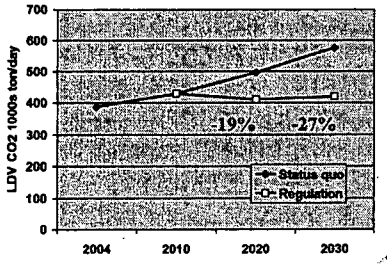
* Representative of states that adopted in 2004 or 2005

A reasonable assessment:

Post-2010 changes to CA LEV could increase its stringency, whereas Tier 2 not likely to change soon.

NESCAUM

Cost History - Auto Emission Controls (incremental per vehicle)



NESCAUM

Northeast LEV Provides GHG Reductions

- NESCAUM Study: GHG reductions of 12-54% possible.
- 25% reduction achievable with current & near-term technologies.
- 54% reduction achievable with advanced technologies.
- Reductions up to 47% achievable with cost ***savings*** to consumers (even at $1.58 per gallon).

NESCAUM

Regulation Reduces Greenhouse Gas Emissions

NESCAUM

Net Savings for Vehicle Purchaser

NESCAUM

Northeast LEV Future

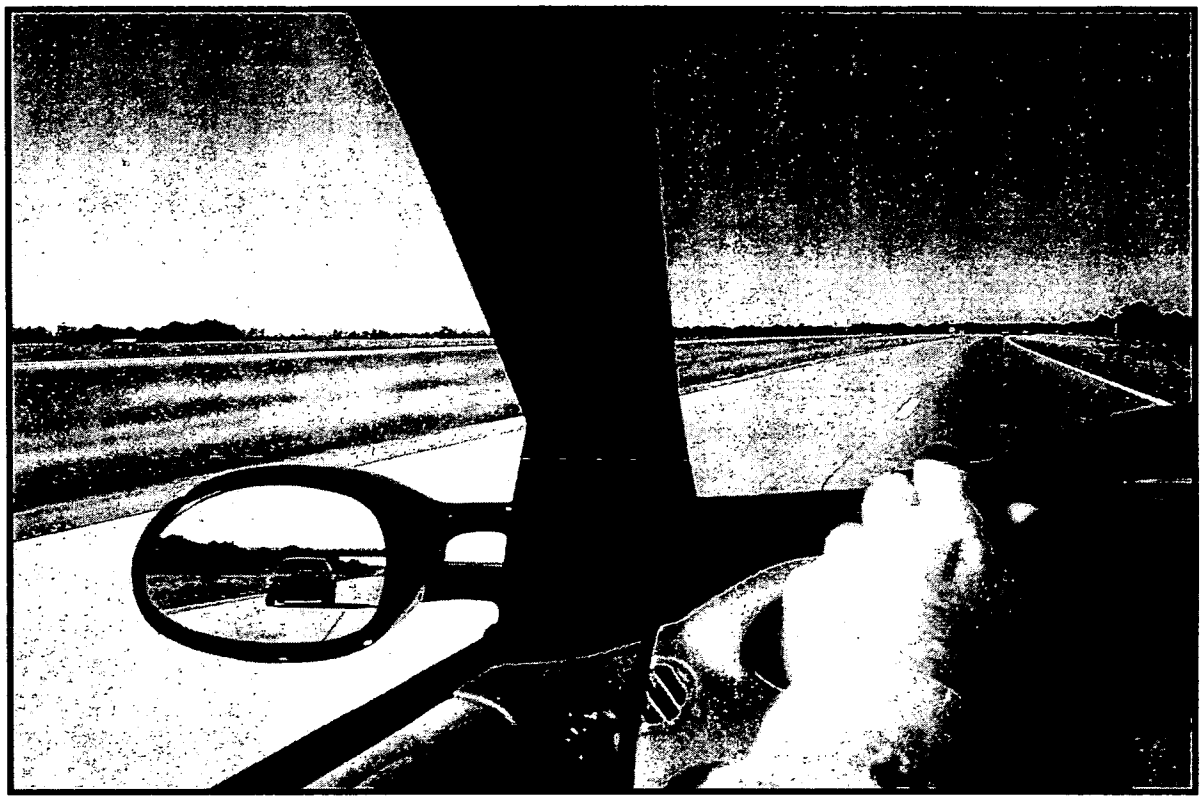
- In 2009 the LEV program will be implemented in the seven NESCAUM LEV states.
- This includes: ZEV requirement, GHG standards, NMOG requirements.
- All seven states will require the same percentages of advanced technology vehicles as CA.
- A regional NMOG curve may be implemented in that year.

NESCAUM

Thank you for your time and attention!

NESCAUM

Cost History - Auto Emission Controls (incremental per vehicle)



Class	CARB '94	AAMA '94	Actual
TLEV	$72	$298-487	$35
LEV	$120	$911-1343	$83
ULEV	$227	$1666-4005	$251

NESCAUM

Net Savings for Vehicle Purchaser

	Near Term (2012)	Mid Term (2016)
Monthly Payment Increase	$7	$20
Monthly Operating Cost Savings	$18	$23
Monthly Net Savings	**$11**	**$3**

SIERRA CLUB

FOUNDED 1892

State Clean Car Standards

- The 1990 Clean Air Act Amendments Gave the State of California Authority to Establish Vehicle Emissions Standards that are More Stringent than the Federal Standards.

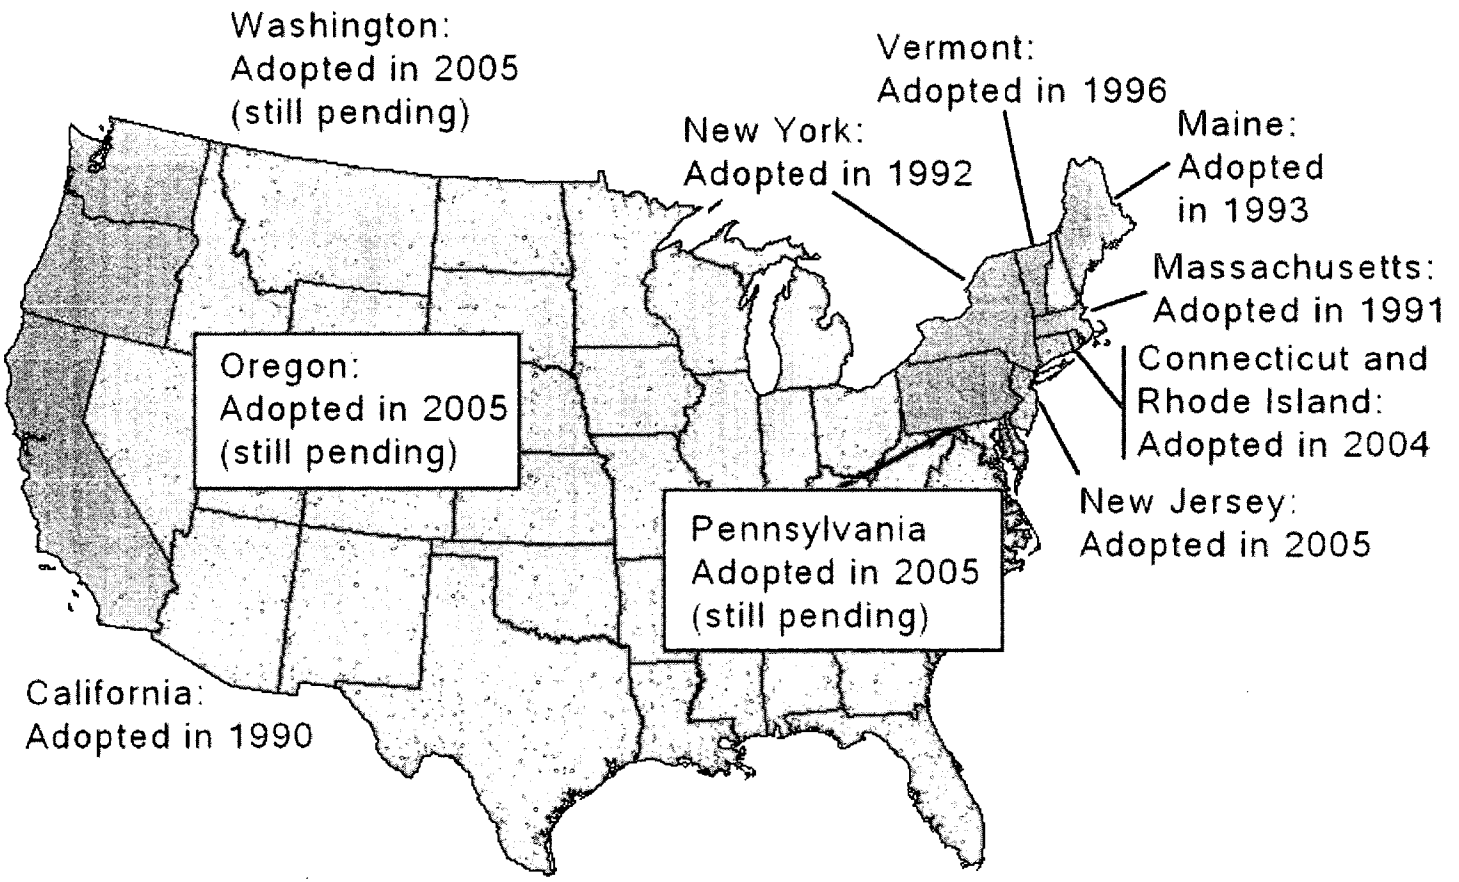
- Based Upon California's History of Leadership on Reducing Vehicle Emissions

- Congress Recognized that California and Other States Needed Additional Tools to Improve Air Quality

- California Must Apply to EPA in Order to Change its Emissions Standards. To Date a Waiver Has Never Been Denied.

Adopting the Clean Car Standards

- Any State Can Adopt the Clean Car Standards if it Does Not Meet Any of the National Ambient Air Quality Standards (NAAQS) - *Section 177 of the Clean Air Act*



- To Date, Eleven States Nationwide Have Adopted the Clean Car Standards. Many States Have Followed the Standards for Over 10 Years

- EPA Approval is NOT Needed for a Qualified State to Adopt the Standards

Clean Cars Around the Country

Eleven States Nationwide Follow California Standards

CA – WA – OR – ME – VT – MA - CT – RI – NY – NJ – PA

Accounting for 34% of All New Vehicles Sold in the U.S.

How Does North Carolina Compare?

North Carolina Has a Similar Sales Mix of Cars and Light Trucks With Other Clean Car States

How do Clean Car Standards Work?

Low Emissions Vehicle (LEV II) Standards

- Adopted in 1998, the Standards Came into Effect in 2004. Replaced the Previous Low Emissions Vehicle (LEV) Standards.

- Emissions Standards Are Based Upon a Manufacturer's Fleetwide Average.

- Eliminates Separate and Less Stringent Standards for Light Trucks (SUVs, Pickups, Minivans)

How do Clean Car Standards Work?

- **LEV II Standards Are Based Upon a Series of 'Bin' Classifications**
- **Starting in 2004, fleet average emissions must be reduced each through 2010.**
- **The Bin system provides the implementation system for the Clean Car Standards.**

California LEV II Emissions Standards (g/mi) for Light-Duty Vehicles (<8,500-lbs GVWR)

Category	5 Years / 50,000 miles					11 Years / 120,000 miles				
	NMOG	CO	NOx	PM	HCHO	NMOG	CO	NOx	PM	HCHO
LEV	0.075	3.4	0.05	-	0.015	0.090	4.2	0.07	0.01	0.018
ULEV	0.040	1.7	0.05	-	0.008	0.055	2.1	0.07	0.01	0.011

Clean Car Standards

- **Zero Emissions Vehicle (ZEV) Standards**
  - Program Has Changed Due to Auto Industry Litigation
  - Allows for Alternative Compliance With Ultra Clean Conventional Vehicles and Advanced Technology Vehicles Like Hybrids
  - Some 177 States Have Adopted ZEV, Some Have Not
- **Greenhouse Gas Emissions Standards**
  - Standards are Not Yet Implemented
  - EPA Has Not Granted the Waiver
  - The Auto Industry is Suing the State of California to Block Implementation of the Standards

State Clean Car Standards:

Proven Air Quality Improvements

Clean Air Benefits: LEV II vs. Tier 2

- Current Clean Car States Are Realizing Substantial Emissions Benefits from LEV II Standards.
- New Modeling Will Be Necessary to Determine North Carolina Specific Emissions Reductions

Table 1: Annual Emissions Benefits of the LEV II Program in 2020

State	HC reduced (tons)	% HC Reduction Over Tier 2	Toxics[14] reduced (tons)	% Toxics Reduction Over Tier 2	CO_2 reduced (tons)	% CO_2 reduced
NY	10,020	15%	502	25% for each toxin	2,500,000	2.25%
MA	3,300	17%	185	25% for each toxin	900,000	2.25%
VT	510	14%	29	19% for each toxin	120,000	2.25%
Total	**13,830**	**Average Reduction 15.3%**	**716**	**Average Reduction 23%**	**3,520,000**	**Average Reduction 2.25%**

Source: Northeast States for Coordinated Air Use Management. *Comparing the Emissions Reductions of the LEV II Program to the Tier 2 Program.* October, 2003.

Clean Air Benefits: LEV II vs. Tier 2

- LEV II requires lower overall emissions. In addition, the three weakest 'bins' in Tier 2 allow for greater emissions than any category in LEV II.

- LEV II Has Tighter Standards for Evaporative Emissions and particulate matter (PM) – also known as soot.

- LEV II Continues to Reduce Emissions Past the Date Where Tier 2 Levels Out.

- LEV II Standards Are More Likely to Be Strengthened as New Technology Comes on the Market.

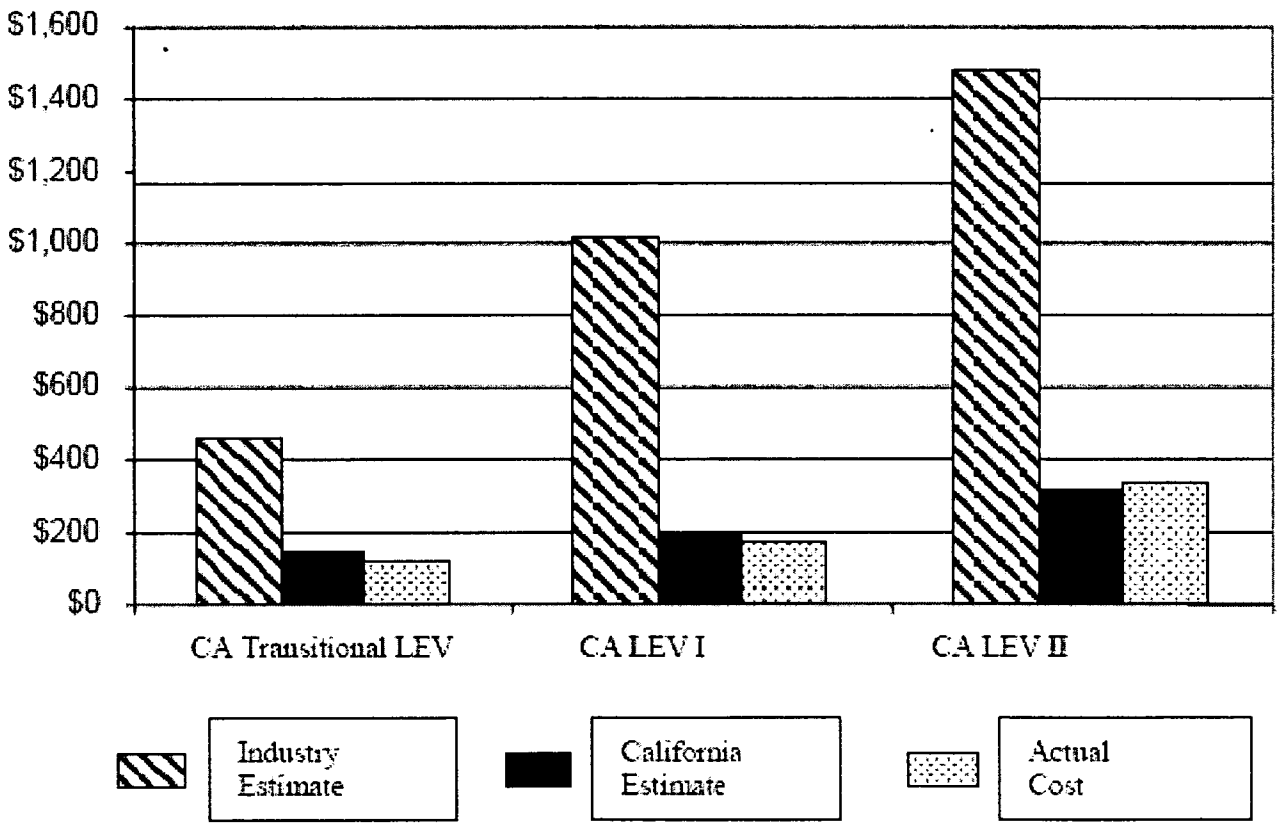
2006 Toyota Tundra Pickup V-8 4WD

State Clean Car Standards:

A Cost-Effective Tool To Protect Public Health

Clean Car Standards: Cost Estimates

Low Emissions Vehicle (LEV II) Standards



- In General, States that Have Adopted the LEV II Standards Have Experienced Increased Retail Costs of $100-$300 Per Vehicle.
- Actual Cost Will Vary By State

Federal Tier 2 Standards

- EPA Estimates that the additional retail cost for vehicles meeting the proposed Tier 2 emission standards to be $50-$220.
- Additional Costs to North Carolina Consumers Are Negligible

Clean Car Standards: Cost Estimates

- The California Air Resources Board (CARB) Has Routinely Made Accurate Cost Estimates While the Auto Industry Has Grossly Overestimated Compliance Costs

Clean Car Standards: Fact vs. Fiction

- The Auto Industry Has Claimed in the Past that Cutting Emissions Will Destroy the Industry. Those Claims Did Not Come True.

"If GM is forced to introduce catalytic converter systems across-the-board on 1975 models, the prospect of an unreasonable risk of business catastrophe and massive difficulties with these vehicles must be faced. It is conceivable that complete stoppage of the entire production could occur, with the obvious tremendous loss to the company, shareholders, employees, suppliers, and communities. Short of that ultimate risk, there is a distinct possibility of varying degrees of interruption, with sizeable dislocations."

- Former General Motors VP Ernest Starkman, in testimony to a 1972 U.S. Senate committee.

Clean Car Standards: Fact vs. Fiction

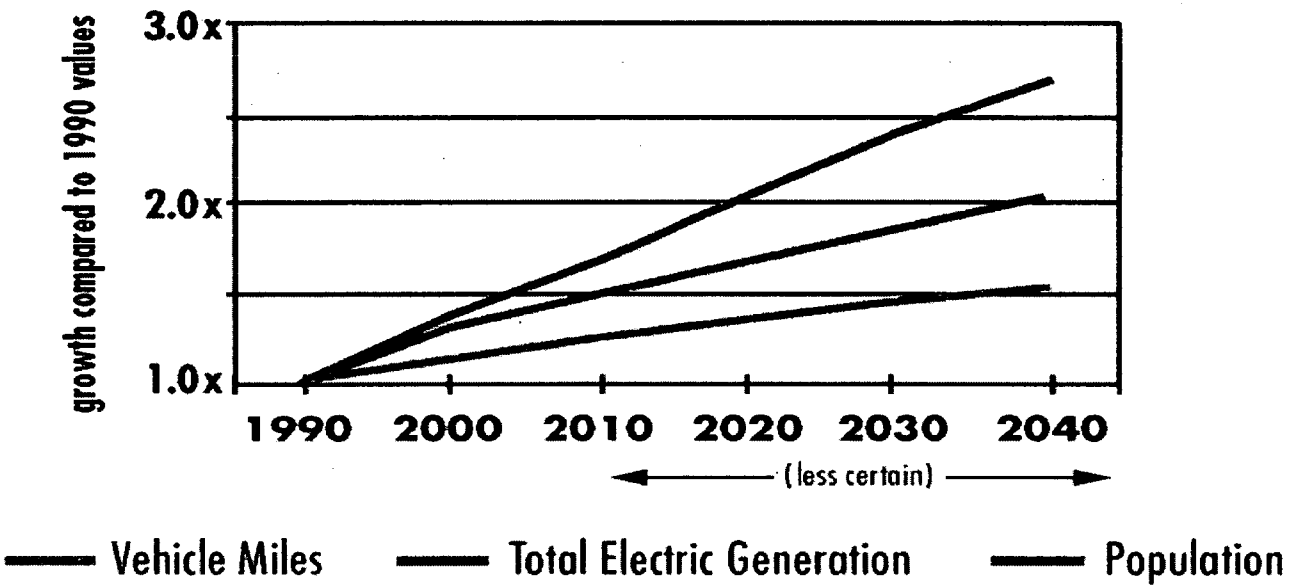
- Consumers can still buy the same vehicles as they do today – including trucks and SUVs.
- Large pickup trucks and other work vehicles are not prohibited by the clean car standards. A less stringent emissions standards applies to vehicles over 8,500 pounds Gross Vehicle Weight Rating (GVWR).
- A handful of diesel vehicles under 8,500 pounds – such as the Jeep Liberty diesel and Mercedes diesel E class – currently do not meet Clean Car emissions standards.

"Federal fuel economy standards will result in a product line consisting of either all sub-Pinto-sized vehicles or some mix of vehicles ranging from a sub-sub-compact to perhaps a Maverick."

- Helen Petrauskas, Ford Spokeswoman, in testimony to Congress in 1974

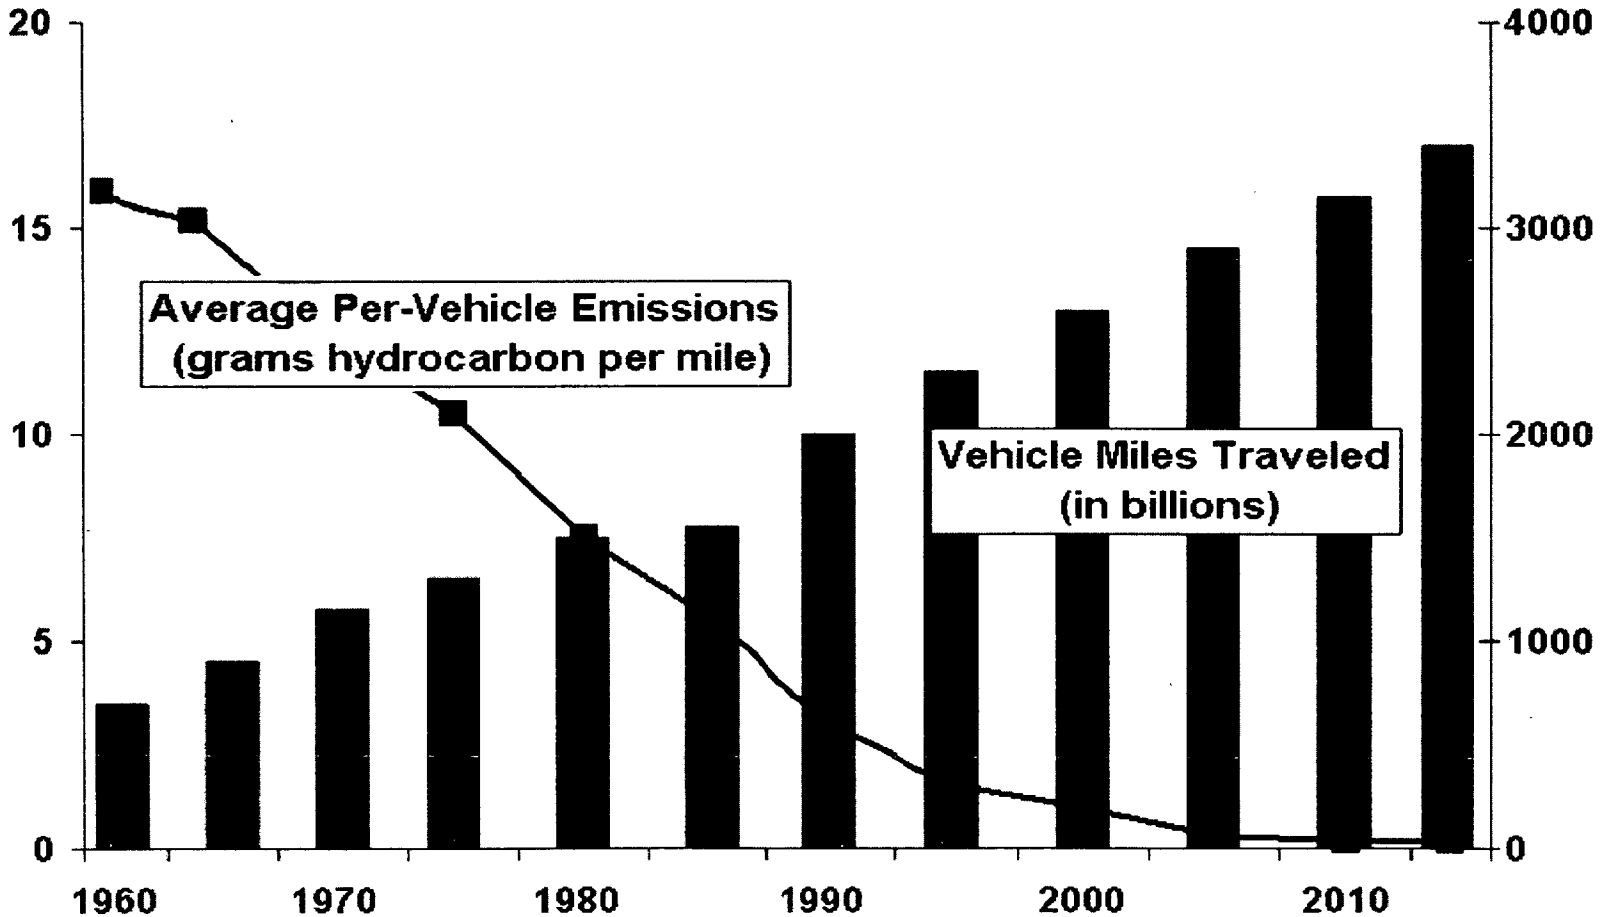
State Clean Car Standards: The Right Choice

- State Clean Car Standards Provide Proven Clean Air Benefits
- The Clean Air Act Purposefully Provides States Order to Provide Provides States with the Opportunity to Adopt these Standards as Another Tool to Improve Air Quality
- Improving Air Quality Will Reduce Health Care Costs for North Carolina and Protect Federal Funding Sources Dependent Upon Attainment Status
- The Clean Car Standards Achieve Substantial Clean Air Benefits for a Marginal Increase in the Retail Cost of New Vehicles.
- Consumers Will Still Have the Ability to Purchase SUVs, Pickup Trucks, and Other Large Vehicles.



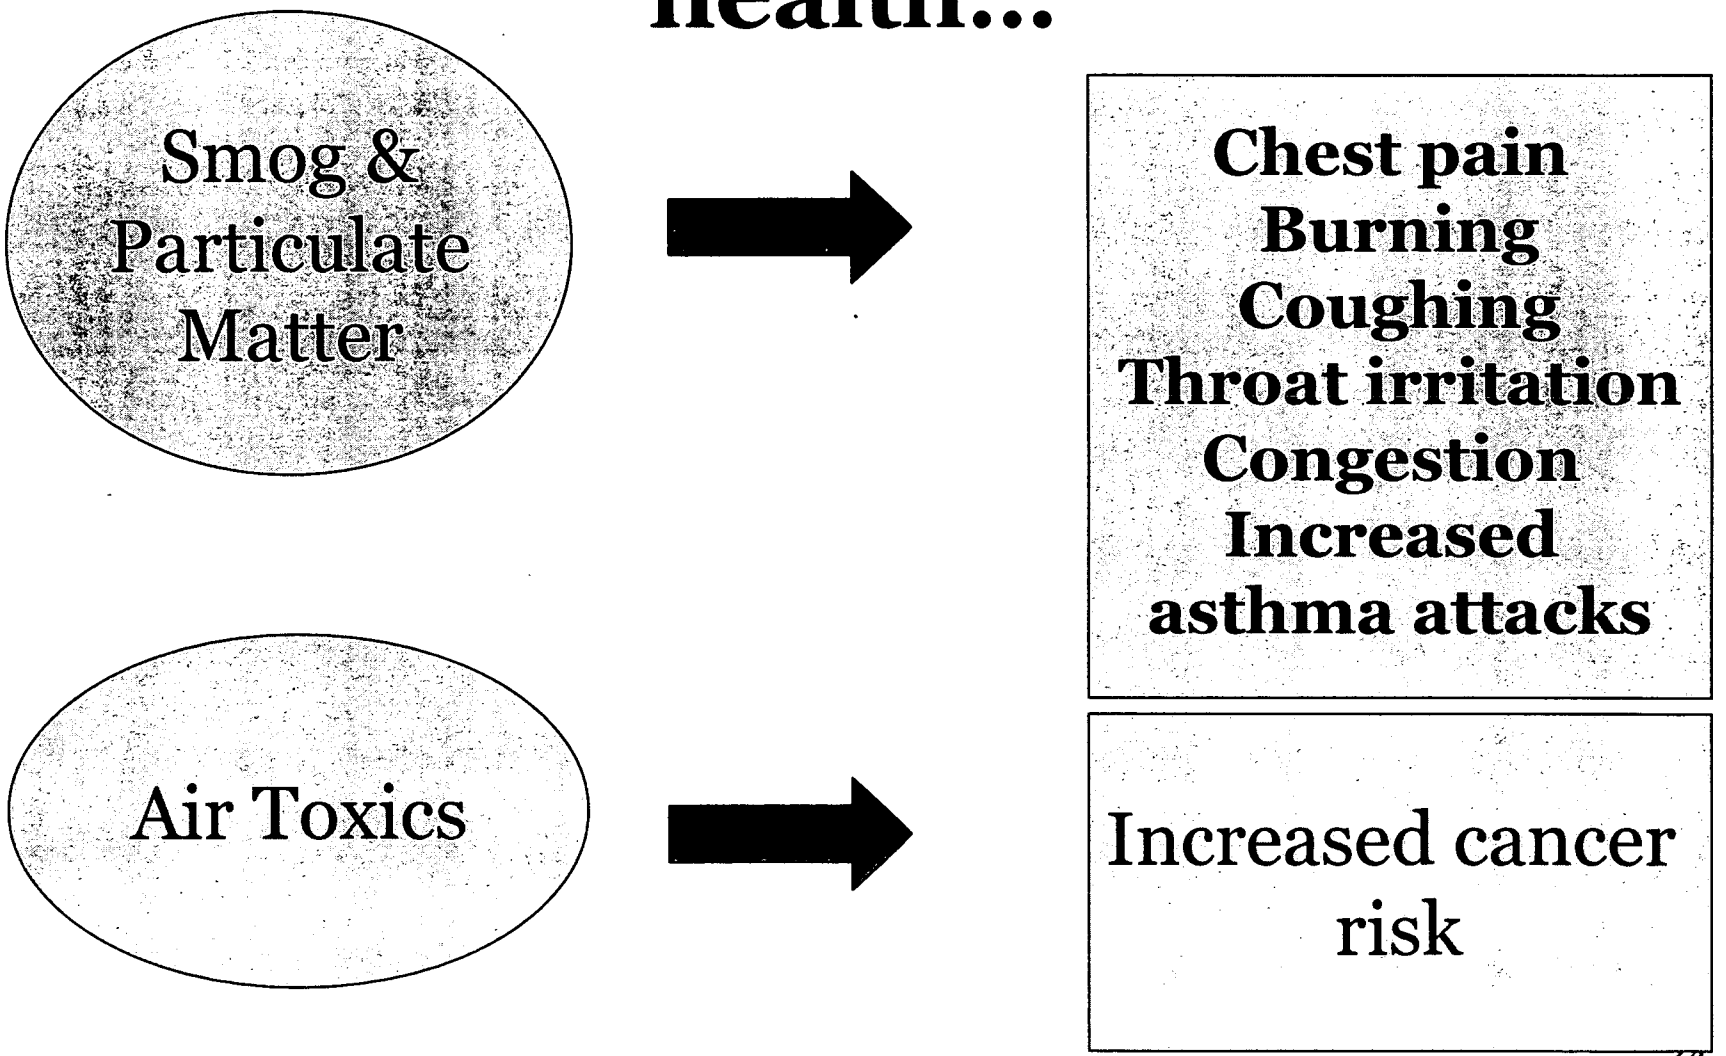
What our citizens deserve...

- **To take the next step for clean healthy air in North Carolina**
- **The cleanest, most efficient cars available on the market.**



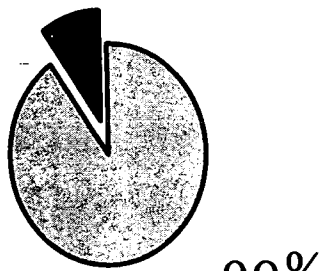
Our growing challenge...

North Carolina is expected to be the 7th most populous state in the nation by the year 2030. Vehicle miles of travel will outpace population growth.

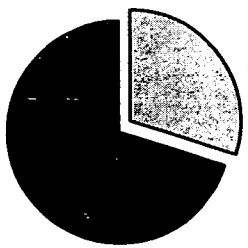


Our growing challenge...

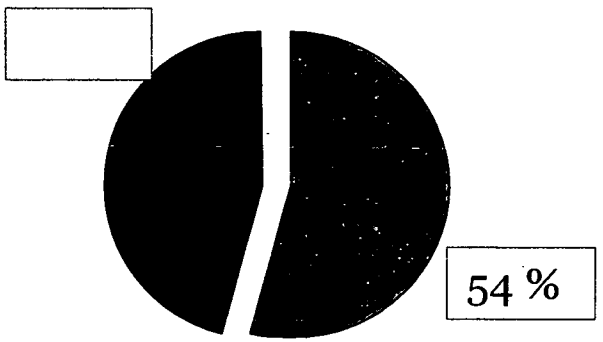
Cars are getting cleaner, but people are driving more, offsetting progress in ozone pollution control



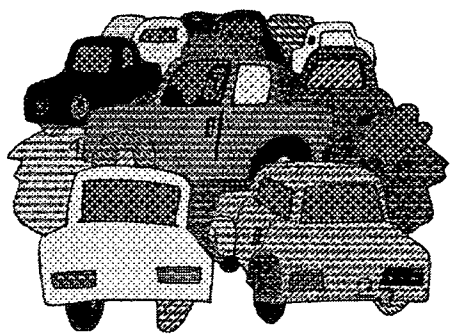
Despite recent gains, air pollution still threatens public health...



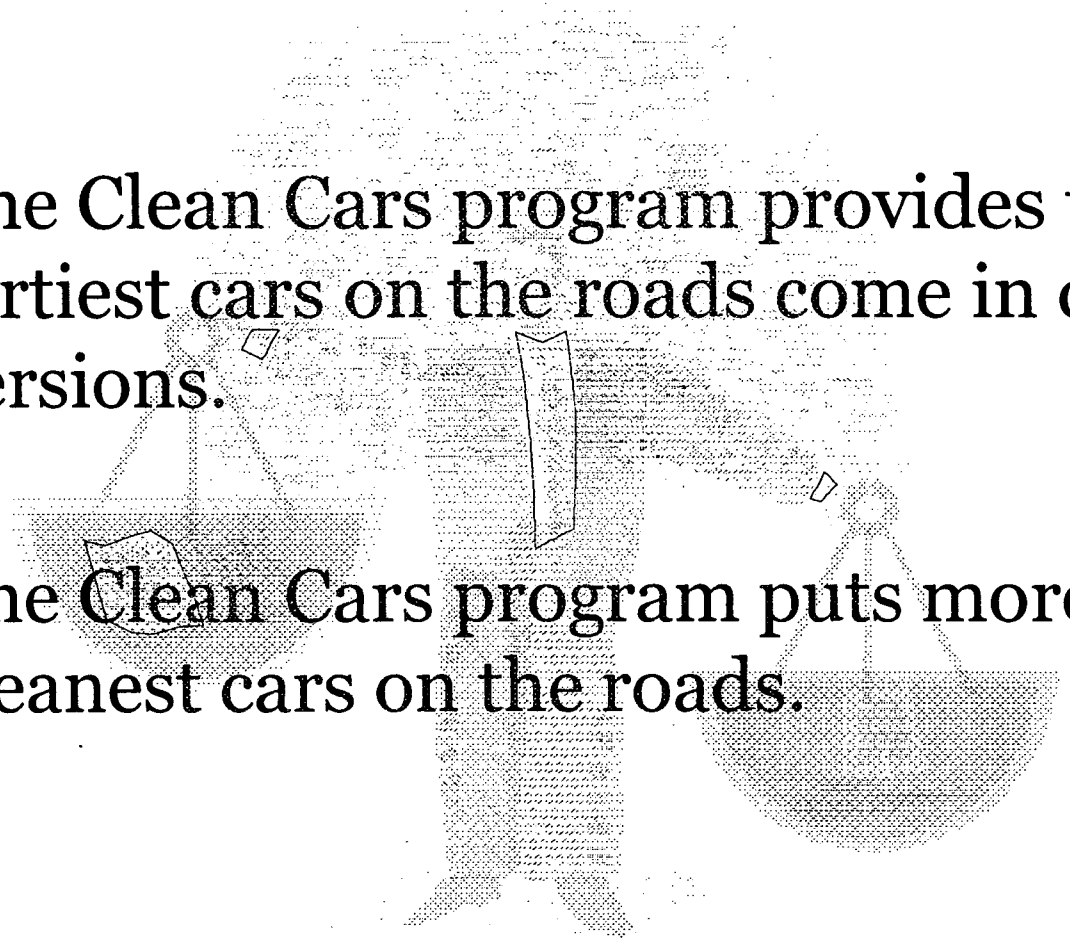
Cars contribute to air pollution..



Smog Pollution in Urban Areas



Smog Pollution Statewide



Toxic Pollution Statewide

Data Sources: U.S EPA, NC Division of Air Quality & Mecklenburg County

Cleaner Cars

- The Clean Cars program provides that the dirtiest cars on the roads come in cleaner versions.

- The Clean Cars program puts more of the cleanest cars on the roads.

Advanced Technology Vehicles

- Innovative technologies for conventional gasoline burning cars mean more efficient cars and less air pollution. The Ford Fusion is just one example.
- Increasing availability of popular hybrid electric cars, like the Toyota Prius, on the state's roads will reduce air pollution and promote innovation.

Popular NC Cars

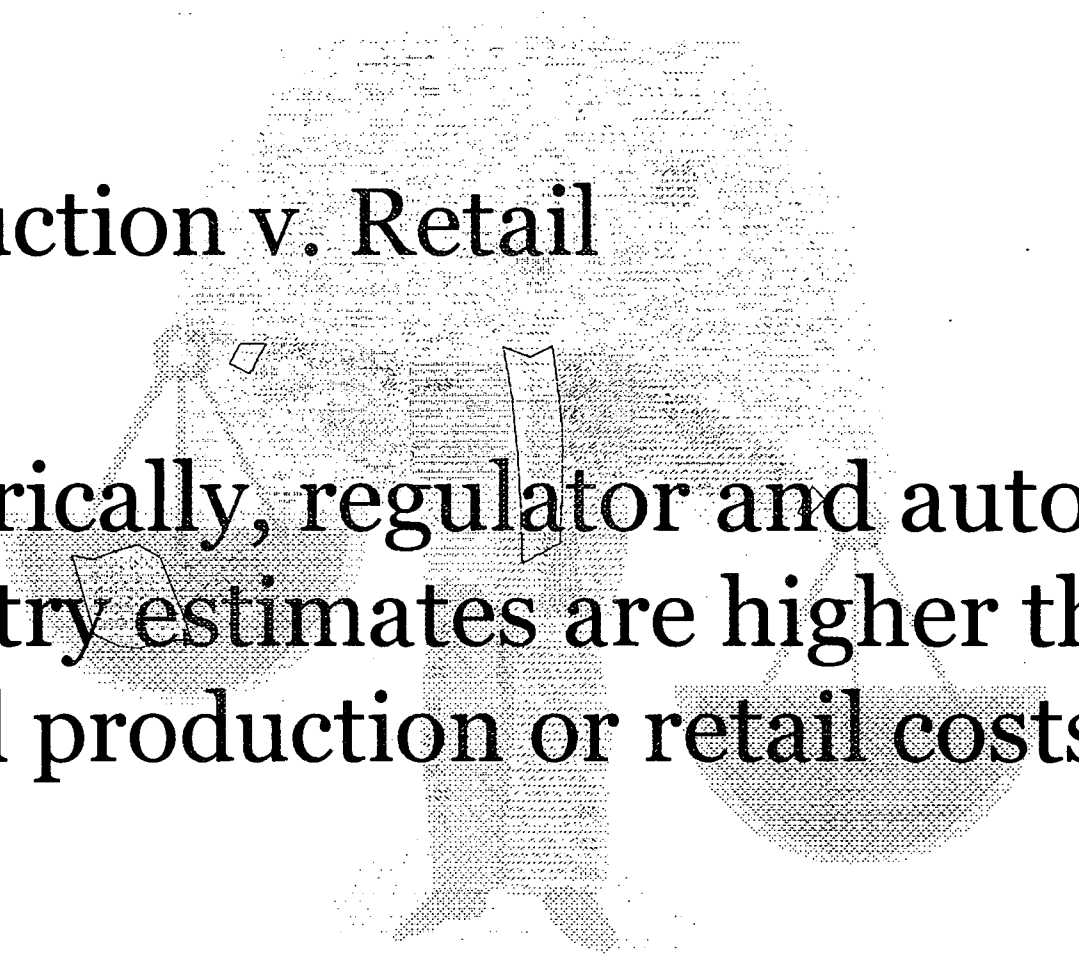
Toyota

Honda

Ford

Chevrolet

Nissan



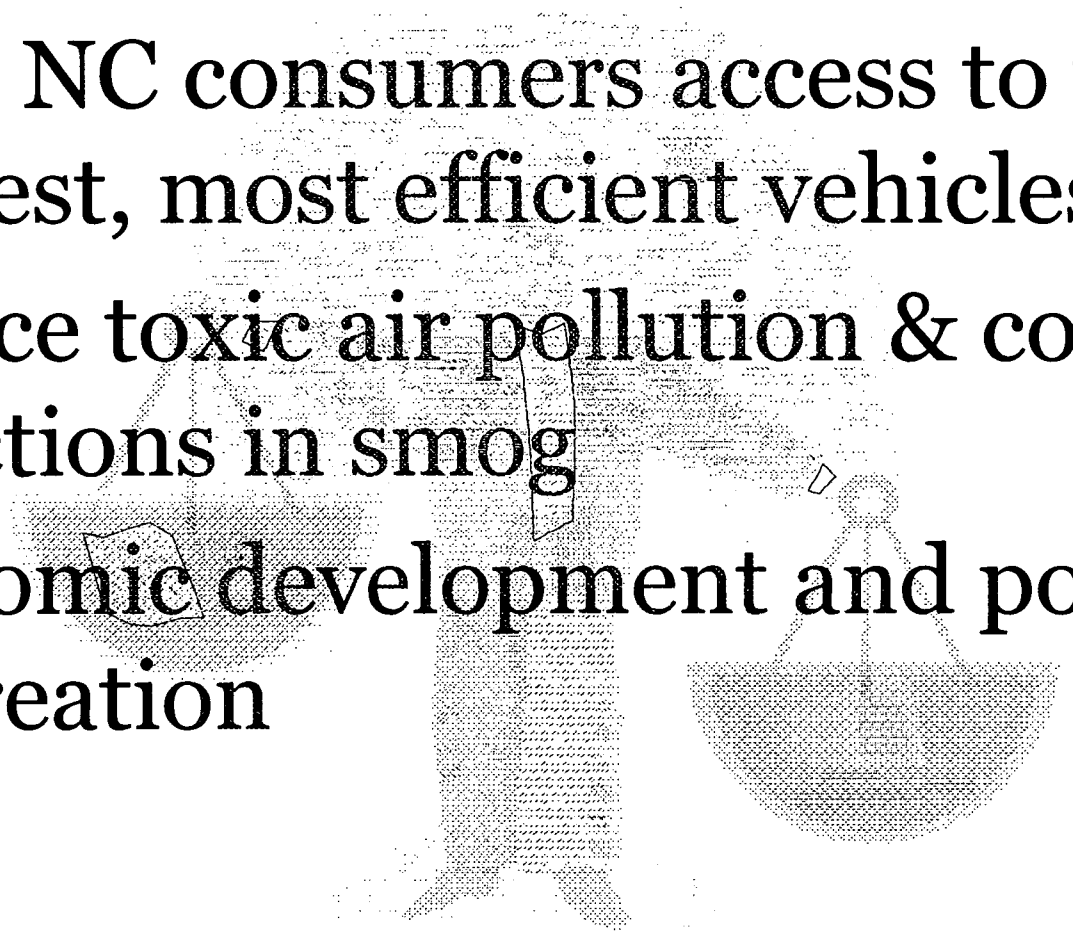
Pontiac

Dodge

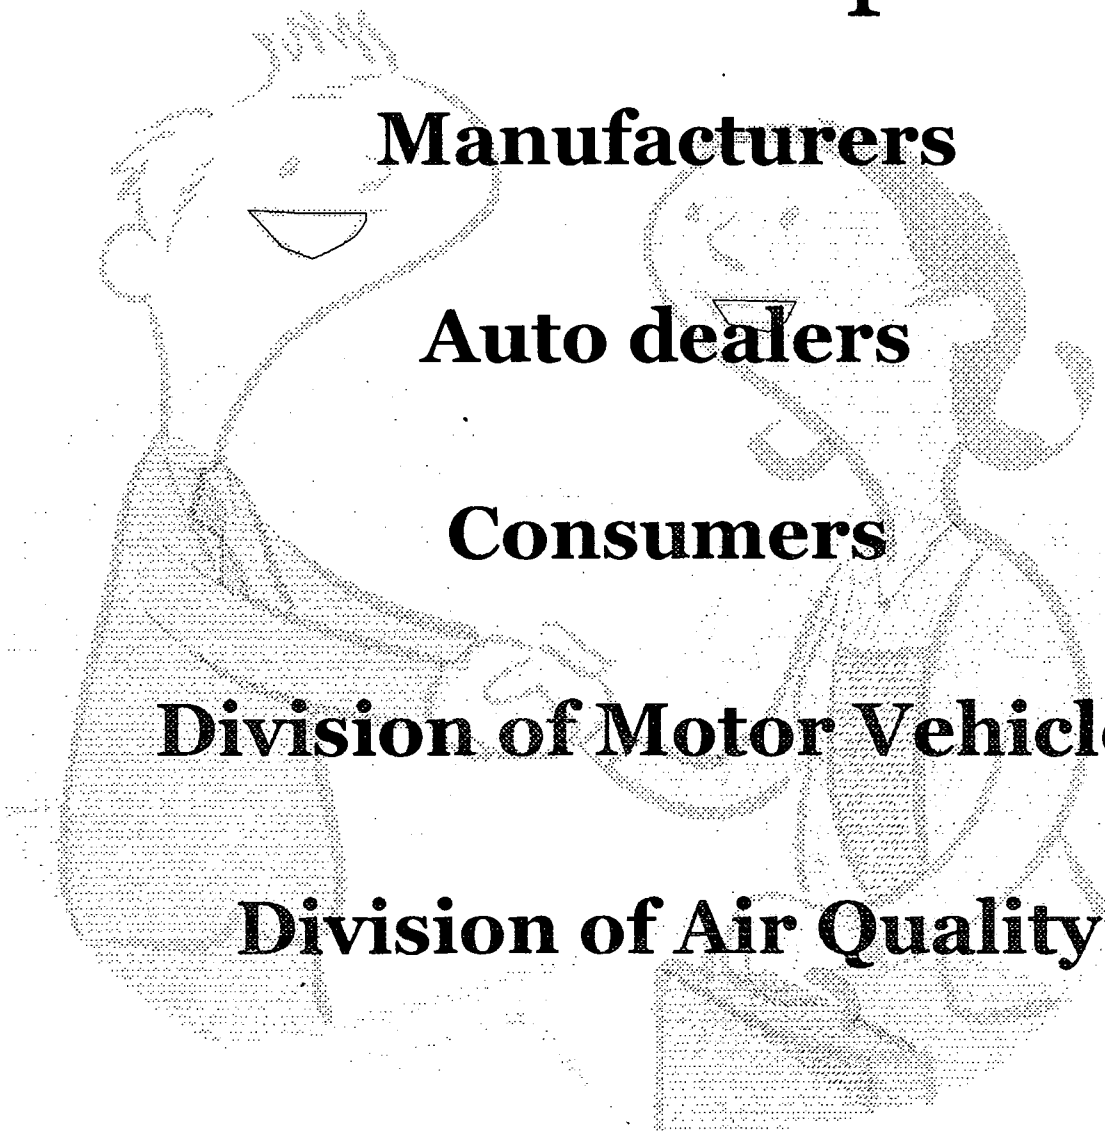
The Costs

	Estimated % of new cars sold in 2009	Estimated Differential Cost Per Vehicle
Clean Conventional Cars	95%	~$100-$300
Advanced Technology Cars (i.e. hybrids)	5%	$1000-$3000 (same as today)

The Costs



- Production v. Retail



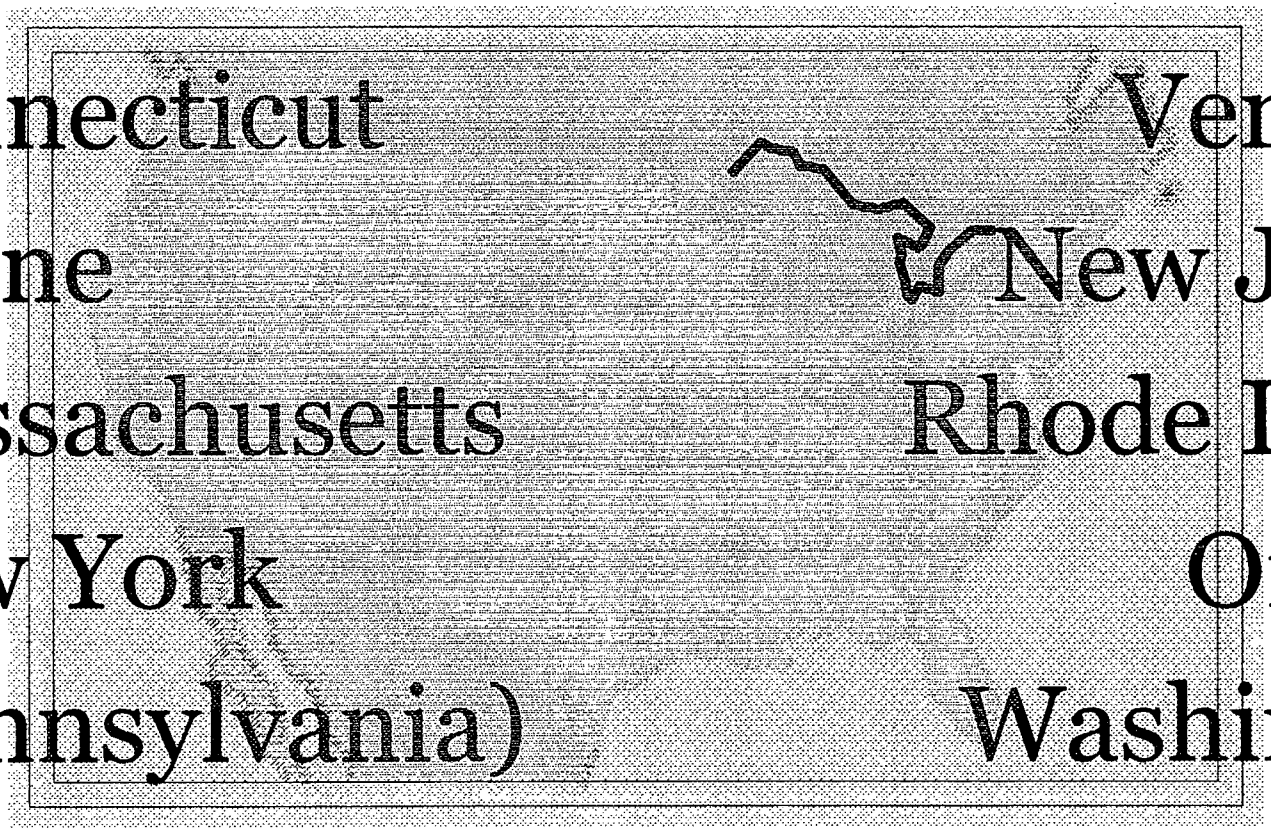
- Historically, regulator and auto industry estimates are higher than actual production or retail costs

The Benefits...

- ✓Gives NC consumers access to the cleanest, most efficient vehicles
- ✓Reduce toxic air pollution & continue reductions in smog
- ✓Economic development and potential job creation

Responsibilities

Manufacturers



Auto dealers

Consumers

Division of Motor Vehicles

Division of Air Quality

Joining 1/3 of the nation's fleet...

Connecticut

Maine

Massachusetts

New York

(Pennsylvania)

Vermont

New Jersey

Rhode Island

Oregon

Washington

Concerns?

Q: Will the Clean Car Standards ban pickups and SUVs?

A: No, all types of cars and trucks will remain on the market, just in cleaner versions

Q: Will consumers be able to buy non compliant vehicles from neighboring states?

A: No, the bill will ensure that uncertified cars cannot be registered in NC

Conclusion

- Reduce toxic and smog pollution
- North Carolinians deserve the same consumer choices being offered elsewhere in the nation
- Shift the cars and trucks on NC's roads towards cleaner, more efficient vehicles
- NC led the South with clean smokestacks and now has the opportunity to lead again.

Driving towards clean air...

...and a healthy environment!

Clean Car testimony on behalf of
North Carolina health organizations

Given By:
Susan King Cope
American Lung Association of North Carolina

North Carolina Environmental Review Commission
February 14, 2006
Raleigh, NC

revisions have been sitd- will send another copy if needed.

I. Introduction:

Hello, my name is Susan King Cope and I represent the American Lung Association of North Carolina. I am here on behalf of several health organizations and the Clean Car Coalition.

II. Health Professionals Urge Strong Support For Greenhouse Gas Controls

I am here to convey strong support for the Clean Car legislation being proposed in North Carolina. We support these regulations because they are an integral part of our statewide strategy to achieve cleaner air and improved public health in North Carolina.

III. Proposed Greenhouse Gas Controls Will Protect Public Health

~~The draft legislation is well researched and represents a solid scientific~~ proposal ~~for reducing global warming pollution~~. The reductions achieved by the proposal, approximately a 10% reduction in nitrogen oxides, would be an important step forward in the effort to curb global warming pollution and improve air quality in North Carolina. Motor vehicles are one of the prime culprits behind air pollution in North Carolina. Passenger cars and light trucks make up 30% of the state's smog pollution. Some areas – like charlotte, 90%.

~~Slowing the rate of global warming is vital to~~ improving air quality is vital to improving and public health. Several North Carolina communities continually rank in the top 10 for the worst air quality in the country – with more than 4 million North Carolinians in 32 counties living in areas that experience unsafe levels of ozone during the summer months. And bad air takes a huge toll on public health.

Increasing temperatures from global warming will make smog problems worse, in part by increasing ozone formation. This would mean more pollution-related asthma attacks, illnesses, hospital admissions and premature deaths.

Increased air pollution leads to more deaths, more hospitalizations, more emergency room visits, and more school and work absences. In study after study, air pollution has been shown to increase problems with heart and lung disease, impair quality of life, and decrease life expectancy.

Sensitive groups, including seniors, people with heart or lung disease, children and infants are the most vulnerable to the harmful effects of air pollution. One such group is those with asthma. More than 808,000 North Carolinians have asthma. Ozone is both a cause of asthma and a trigger of its flare-ups. Asthma not only affects the health of children, it affects their ability to sleep through the night, to learn, and to participate in sports activities. It affects their entire quality of life.

188,000 NC

While asthma is a problem Nationwide, North Carolina bears a particularly high burden. In fact, the asthma death rate in North Carolina among children 14 and under is over 3 times the national average. 27% of 7th and 8th grade students have asthma or asthma-like symptoms.

As a health advocate, I hear many stories from concerned parents about the effects of air pollution on children in our community. There are more emergency room visits for asthma flare-ups and other respiratory illnesses on unhealthy air days. Patients with asthma and other lung diseases tell me of more breathing problems when air quality is poor.

Children are not only affected in their growing years, they are harmed for life by exposure to air pollution. Research has shown that air pollution impairs lung growth and development. The lungs of children in highly polluted areas actually have less reserve capacity, making them more vulnerable to the onset of lung illnesses or chronic respiratory disease.

Low income communities and communities of color are also especially vulnerable to pollution-0related health impacts due to multiple pollution sources located in these communities – and their often limited access to health care.

On behalf of health organizations across North Carolina, I urge you to move forward to adopt the proposed regulations. The regulations are scientifically sound, cost-effective, readily available, and most importantly they are health protective. North Carolina has an obligation to address ~~the global warming problem~~ air quality to protect the air we breathe, to reduce the suffering of adults and children with asthma and other lung illnesses, and to help children grow up with healthy lungs.

FACT SHEET

Air Quality and Health Impacts of Greenhouse Gas Emissions and Global Warming

Global warming is well recognized by scientists around the world as a serious public health and environmental concern. As atmospheric concentrations of greenhouse gases rise globally, temperatures on earth are increasing. While the greenhouse effect has been beneficial to maintain global temperatures compatible to human life, recent increases in average temperatures due to human activities are causing great alarm. Hotter temperatures due to global warming are expected to lead to increased weather extremes including heat waves and worsening of air quality.

How Does Global Warming Affect Air Quality?
More than 4 million North Carolinians in 32 counties experience unsafe levels of ozone during the summer months.

***Hotter Days Facilitate Ozone Formation*:** Higher temperatures, strong sunlight and a stable air mass are ideal for formation of ground level ozone. Ozone (O3) is an extremely reactive gas that essentially attacks lung tissue by reacting chemically with it. It is the primary ingredient of smog air pollution and very harmful to breathe. EPA studies and other studies designed to examine the impacts of increased temperatures from global warming have determined that global warming will likely lead to an increase in peak ozone levels. In addition, the National Research Council of the National Academies has linked global warming to increased ozone levels in two recent reports.

***Hotter Days Lead To More Smog Emissions*:** Hotter summer weather leads to increased emissions of ozone precursors, particulate matter and toxic air contaminants from increased energy production, electricity use, fuel evaporation and other sources. During hot summer days, air conditioners are utilized more frequently, leading to increased demand for electric power production and associated increases in smog-forming pollutants, such as nitrogen oxide (NOx) and hydrocarbons. Increased mobile air conditioning usage also leads to higher pollution emissions.

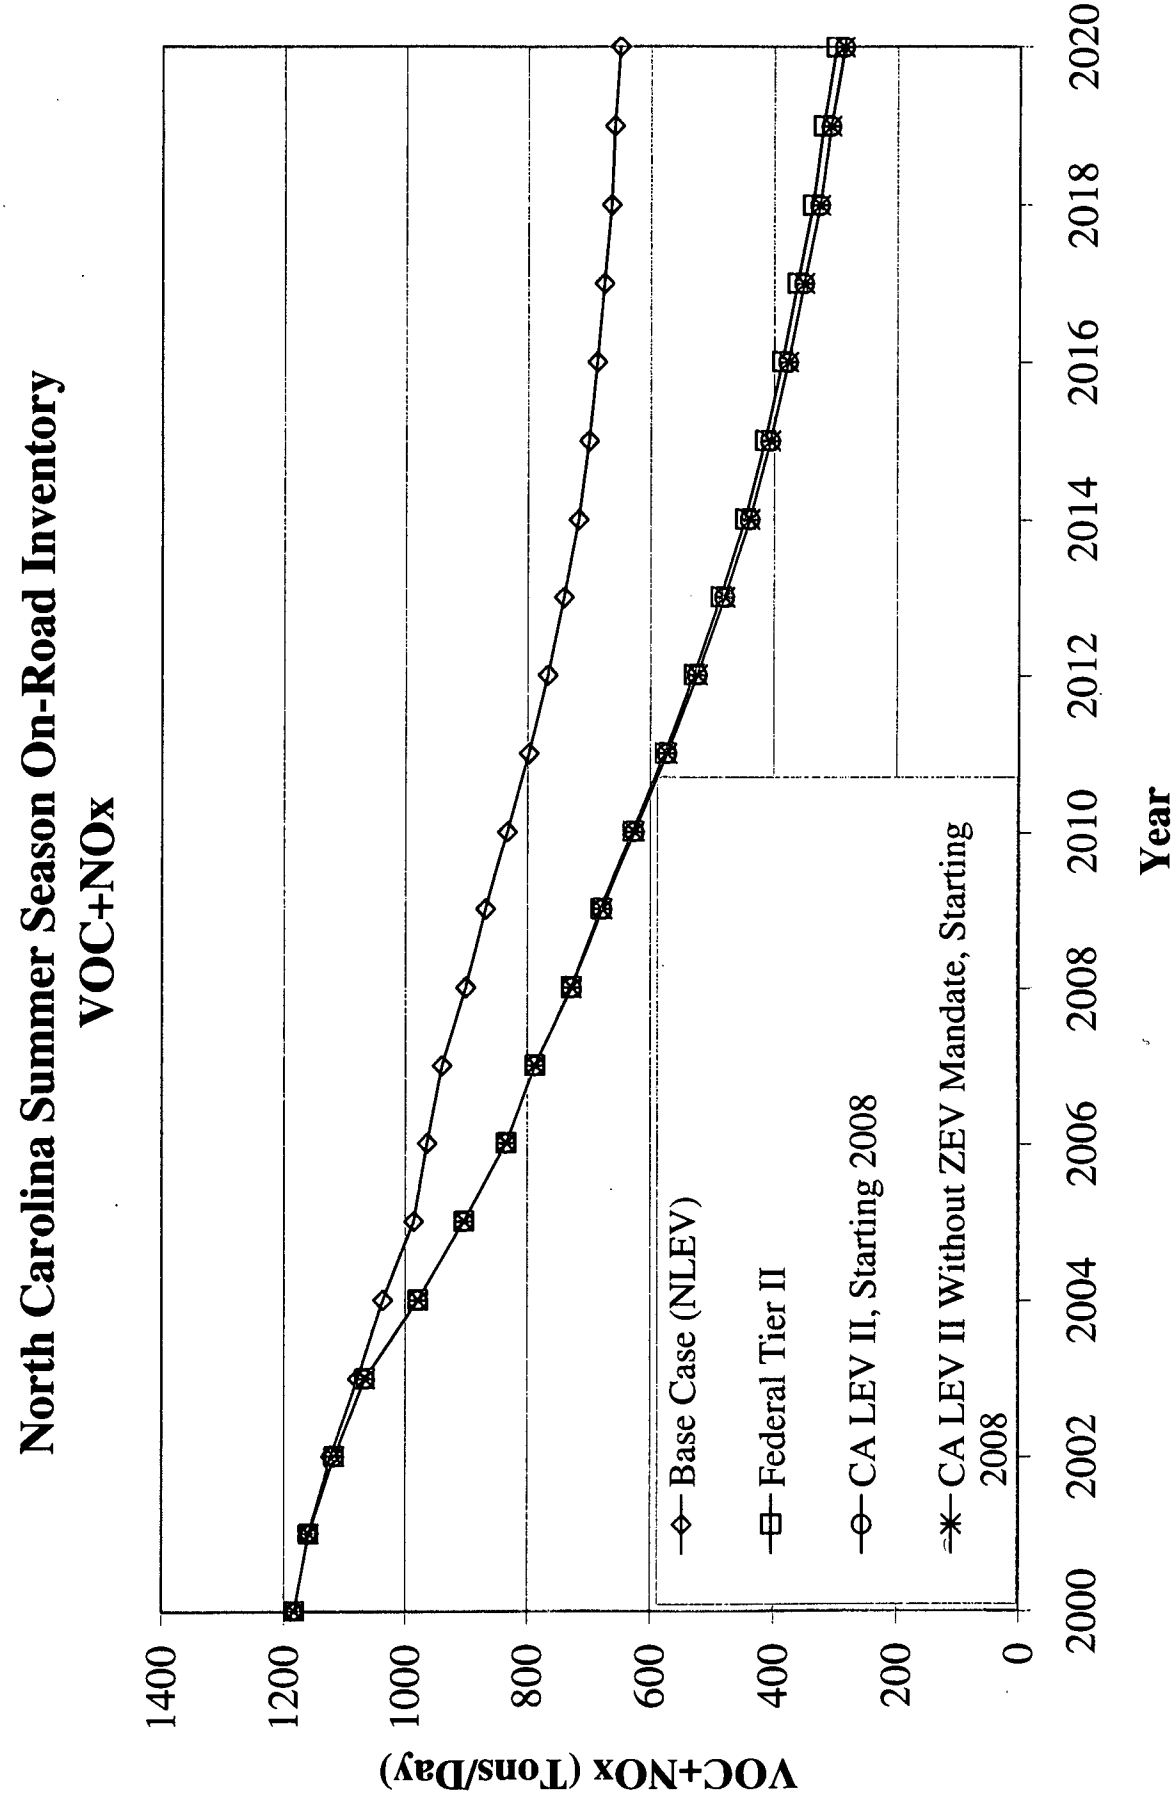
Heat Waves And Public Health: The heat waves in Europe in summer, 2003 provide a case study of heat-related ozone impacts on public health. During the heat waves thousands of excess deaths occurred above the average recorded for that time of year. Epidemiological studies of deaths during the heat waves suggest that a substantial portion of the mortality could be attributed to elevated ozone and particulate levels that occurred during the heat waves. Two studies suggest that 20 percent to 50 percent of the total excess deaths were due to elevated ozone and particle levels.

What are the Health Effects of Air Pollution?
Sensitive groups, including seniors, people with heart or lung disease, children and infants are the most vulnerable to the harmful effects of air pollution. Low-income communities and communities of color are also especially vulnerable to pollution-related health impacts due to the multiple pollution sources located in these communities and their often limited access to health care.

North Carolina's Clean Car legislation will:

Reduce Toxic Air Pollution. Clean Car Standards are predicted to reduce by 10% or more air toxics such as benzene, acetaldehyde, 1,3, butadiene, and formaldehyde-- all carcinogens that threaten public health.

Increase Consumer Choice. Cars like Ford's Hybrid Escape and the Toyota Prius are increasingly popular, especially in the face of rising gas prices. Today, automakers must prioritize selling these cars in the ten states that have adopted Clean Car programs, while some North Carolina consumers wait as long as six months to purchase these advanced technology vehicles. Bringing the Clean Cars program to North Carolina can make these cars more readily available, increasing consumer choice.



Pave the Way for Less Global Warming Pollution. Advanced vehicle technologies can reduce global warming pollution in North Carolina. By creating additional demand for innovative, super clean vehicles like hybrids, Clean Car standards can pave the way for a new fleet of cars that produce less and less of the pollution that is warming the planet. At the same time, Clean Car standards will take 800,000 tons of global warming pollution out of the state's air.

Tip the Scales for the Nation. Close to a third of the nation's fleet is already subject to Clean Car Standards. North Carolina's adoption of Clean Car standards can be a tipping point that leads the fleet of cars sold nationally towards cleaner standards and helps pave the way for the nation to transition to advanced technology, low-polluting vehicles.

Lead the Southeast. North Carolina has a proud history of leading the Southeast in clean air legislation. By becoming the first in the Southeast to adopt clean cars legislation, we can help spur the introduction of these same cars in South Carolina, Georgia, and Tennessee. With one third of the nation's fleet already becoming cleaner, North Carolina should be ahead of the clean car wave in the region.

Continue Reductions in Smog. Largely due to the Clean Smokestacks Act, North Carolina is predicted, in the long-term, to have significantly fewer high ozone days. But the job is not yet done. Approximately 442,000 adults and 188,000 children statewide still suffer from asthma, and for them, even a single high ozone day is too many. Clean car standards are estimated to reduce emissions of nitrogen oxides by roughly 10%, making a substantial reduction in the pollution that causes ozone. These reductions may also create more flexibility for economic growth in counties that struggle to remain in attainment with federal air quality standards.

Costs of California Greenhouse Gas Requirements

For the 2016 standards for passenger cars, CARB estimates that these requirements will cost $1,064.

CARB made numerous errors in their cost estimates – The Alliance believes that the true cost for meeting these standards in 2016 is over $3,000.

These significantly higher costs will result in no net savings for consumers as claimed in the CARB regulations.

Some of the reasons for the CARB errors are listed below:

- The prices of passenger cars in the 2009 baseline (no regulation) case is inflated by unrealistic assumptions about expensive technology changes that will be made in the absence of a regulation.
- CARB vehicle cost estimates are based on unrealistic 40% markup factor to vendor-supplied parts prices, which is less than half of the markup required to account for manufacturer costs for research, development, engineering, warranty, overhead, sales and marketing, profit and dealer margin.
- CARB failed to account for the integration costs of certain vendor-supplied components that cannot merely be added without other design changes.
- Cost estimates for technology changes provided by a contractor were arbitrarily discounted by 30% to account for "unforeseen innovations in design and manufacturing."
- Credit was claimed for significant reductions in aerodynamic drag and rolling resistance despite evidence that consumers will not accept such changes and despite the fact that consumers do not routinely use OEM replacement tires.
- CARB assumed that technologies that simultaneously **reduce** vehicle price and **improve** fuel economy will be used only if a regulation is adopted.
- CARB failed to account for California's average 8% sales tax in doing its calculations of net lifetime costs of technology changes.
- The fuel economy benefits of automatic transmission improvements were inadvertently assigned to both manual transmissions and automatic transmissions.
- Fuel cost savings are estimated using a single set of driving cycles and without considering the impact of the relevant technologies based on driving cycles that more accurately represent the way that Californians drive.
- Fuel cost savings were based on inflated estimates of vehicle service life resulting from an obvious mathematical error in CARB's analysis of odometer data from the State's vehicle inspection and maintenance program.
- The fuel savings calculated for light-duty trucks is substantially overstated by CARB's failure to account for the fuel economy improvements required under the 2007 Federal standards and by CARB's failure to account for the effect of minivans on baseline fuel economy.
- Estimated fuel cost savings ignore the "rebound effect," which is the well-documented increase in travel associated with reductions in vehicle fuel costs.

Commitments and Partnerships

- BMW, DaimlerChrysler and GM announced a partnership to develop hybrid vehicle technology.
- Ford, Mercury and Lincoln will offer hybrid drive trains on half of all products by 2010.
- Porsche and Volkswagen agreed to the joint development of hybrid gasoline-electrics engines.
- Toyota plans to offer hybrid drive trains on many of its products in the future and has set a goal of selling 1 million hybrids annually by 2010.

The information above is all publicly available. For more information, see www.autoalliance.org/innovation

EXHIBIT R

September 15, 2005

CO2/Fuel Economy Key Points

I. GLOBAL CLIMATE: We recognize the concerns and are addressing them in our plants and products.

- In our auto manufacturing plants, automakers have committed to **reducing greenhouse gas intensity by 10%** by 2012.
- Regarding our products, automakers are **investing millions of dollars each year in many different types of fuel-efficient technologies**. Burning fuel creates CO2, so the only ways to reduce CO2 from autos are to reduce the size of the U.S. vehicle fleet, to drive less or to use less fuel in vehicles.
- CA's AB 1493 regulation will have **no measurable effect on global climate**. Even if the California regulation could be achieved in all 50 states (which is not realistic), it would not change the climate in the U.S. because CO2 would only be reduced by about 1% globally.
- **Carbon dioxide is not smog**. Smog is formed by emissions like NOx and HC—not by CO2. Automakers have already reduced smog-forming emissions from autos by 99% since the 1970s. Unlike smog, carbon dioxide poses no health risk. Nonetheless, individual vehicle CO2 emissions have declined 56% from cars and 44% from light trucks during that time.

II. FUEL ECONOMY: Fuel-efficiency is already increasing, today and in the future.

- Automakers sell more than **100 models that achieve more than 30 MPG** on the highway, according to EPA estimates.
- All models on sale today are **available with fuel-efficient technologies**, such as cylinder deactivation, variable valve timing, continuously variable transmissions and more.
- More than 50 models of **advanced technology vehicles** are in development or on sale, including hybrid-electric vehicles, clean diesel, hydrogen internal combustion engines and fuel cells.
- The 2005 Energy Bill includes **consumer tax incentives** to help increase the number of advanced technology vehicles on our roadways. States have adopted their own consumer incentives to further accelerate the introduction of advanced technology autos.
- The federal government is in the process of **increasing nationwide fuel economy standards** for light trucks for seven years in a row (2005-2011).

III. CONSUMERS: It is important to preserve an affordable range of automobiles for families and businesses.

- Under CA's AB 1493 regulation, consumers would **pay an average of at least $3,000** more for a new auto.

- more -

CONSUMERS (continued)

- Only a handful of today's models could meet the CA regulation if it were in effect now, so consumers could expect to see **fewer models to choose from** under the CA regulation
- In 2004, 58% of new vehicle sales were minivans, SUVs and pickups, demonstrating that **consumers favor light trucks**.
- The CA regulation will **hurt those people who depend most on large cars, pickups, SUVs and minivans**, including farmers, trades people, large families and small business owners.

IV. NATIONAL POLICY: We need a consistent national policy for fuel economy, and this nationwide policy cannot be written by a single state or group of states.

- Federal laws exist to avoid a confusing and conflicting mix of state laws. There would be **marketplace chaos** if states mandated which products could be sold within their boundaries. Consumers would suffer higher prices and severely restricted choice of automobiles if each state were deciding for itself which new vehicles can be sold.
- **NHTSA has sole authority to set a uniform, national fuel economy standard**. NHTSA underscored this fact when issuing its notice of CAFE reform on August 23, 2005.
- When setting "maximum feasible" fuel economy standards for the nation, NHTSA considers **technological feasibility, safety, affordability, emissions, consumer choice and effects on American jobs**. By contrast, California did not adequately consider any of these factors. A consistent national policy makes most sense to avoid such policy oversights.
- The **federal Clean Air Act only allows California to regulate specific air pollutants,** such as NOx and HC, in order to address unique pollution challenges found in parts of CA. Carbon dioxide is not a pollutant, not a smog-forming emission and not regulated under the Clean Air Act.

V. ENVIRONMENT: Addressing carbon dioxide should not harm air quality.

- CA's AB 1493 regulation will have the **unintended consequence of resulting in more smog** than would otherwise exist. Because new autos will be more costly under the CA regulation, consumers will hold on to older, higher emitting autos longer, thereby slowing the trend of declining smog-forming pollutants.
- Unintended consequences, such as the negative impact on smog, underscores why a **consistent nationwide policy is needed**. Individual states should defer to the federal government to implement a comprehensive, nationwide energy policy, instead of a patchwork of ineffectual GHG requirements.

MINUTES
ENVIRONMENTAL REVIEW COMMISSION
8 MARCH 2006

The Environmental Review Commission (ERC) met on Wednesday 8 March 2006 at 9:30 a.m. in Room 544 of the Legislative Office Building. Senator Albertson presided.

The following members were present: Senators Albertson, Forrester, Kinnaird, and Weinstein; and Representatives Gibson, Harrell, Harrison, Hunter, Justice, and McComas. Mr. George Givens, Commission Counsel; Mr. Jeffrey Hudson, Assistant Commission Counsel; Ms. Jennifer McGinnis, Assistant Commission Counsel; Ms. Susan Iddings, Assistant Commission Counsel: Mr. Tim Dodge, Commission Analyst; and Ms. Dot Waugaman, Commission Clerk, were also present.

On 17 February 2006, notice was sent to members and interested parties via e-mail and regular mail. A copy of the notice is included in the attachments to these minutes as **Exhibit A**. Copies of the agenda for the meeting and visitor registration sheets are included in the attachments as **Exhibits B** and **C**.

Senator Albertson called the meeting to order and asked Mr. Givens to comment on the agenda. Mr. Givens noted for the record that the planning meeting for this meeting was held on Thursday 2 March. He announced that a package of reports received since the previous meeting was distributed to each member at their desk. The first three reports related to today's agenda (Items 4, 5 and 6, respectively), and eight reports are read only. Three additional reports were received and will be held for future presentations (see **Exhibit D** for a memorandum dated 8 March 2006 describing and attaching the reports numbered D-1 through D-11). Mr. Givens mentioned that the full report of the Development of Environmentally Superior Technologies was over 1,000 pages. It will not be distributed to members because it is too expensive to reproduce. A 65-page summary is included in the package of materials distributed at members' desks as Exhibit D-1, and the complete report will be incorporated into the records of the Commission. He noted with gratitude that Representative McComas had sent a publication, "2000 Emissions: Choosing the Right Technology" to all members as a follow-up to the previous meeting on air quality.

Mr. Givens noted other meetings of interest. The Risk-Based/Limited Liability for Environmental Cleanup Working Group met Monday 6 March. Additional meetings are scheduled as indicated on the agenda for today's meeting. Slow but steady progress is being made in the group. The first meeting of the Phase II Stormwater Issues was held on Wednesday 1 March. Three additional meetings are scheduled as noted on the agenda. He said he is hopeful a resolution will be reached for the Commission's consideration before the short session. He announced that the next meeting of the Commission will be held at the North Carolina Zoological Park in Asheboro. The business meeting will begin at 1:00 p.m. on Tuesday 14 March. Representative Gibson was recognized to explain the extra activities surrounding the meeting at the zoo.

Senator Albertson recognized Dr. Mike Williams, Agreements' Designee, Associate Professor, College of Agriculture and Life Sciences, North Carolina State University (NCSU), to present the findings of the evaluation of alternative animal waste management technologies to determine whether these technologies are environmentally superior and economically feasible.

Dr. Williams expressed his appreciation to Senator Albertson, Senator Clodfelter and Representative Gibson, and Counselor Givens for their cooperation in postponing his presentation from the February meeting so that the final report could be completed (see **Exhibit E** for a copy of his PowerPoint presentation). The report will be on the University website in its entirety by the end of the day. He gave some background to explain how the study came to be. In July 2000, Smithfield Foods entered into an agreement with the North Carolina Attorney General to provide $15 million for the development of "Environmentally Superior Technologies" (ESTs). Two months later, Premium Standard Farms (PSF) entered into an almost identical agreement that provided an additional $2.3 million, also for

the development of ESTs. In addition to the monies for EST development, the agreements also provided monies for environmental enhancement activities, separate from the monies targeted for the EST development. The budget for the development of ESTs was $17.3 million.

In March of 2002, the organization Frontline Farmers entered into an agreement with the State Attorney General so they could have a seat at the table in the EST development process. They agreed to "use their best efforts and influence to encourage their members to convert to economically feasible, environmentally superior technologies." Dr. Williams said the definition of "environmentally superior technology" requires that the technologies meet economically feasible criteria as well as environmental performance criteria.

Through the efforts of researchers at NCSU, the agreements' designee (Dr. Williams) is responsible for making the technology determinations. These determinations are a written report that describes the findings relative to the definition "environmentally superior technology." Thus far there have been three technology determination reports issued and presented to the ERC. The first report was issued in July of 2004. Of the technologies under the umbrella, the researchers had completed the technical performance verification and other research and development for a total of eight of the technologies. The technologies are covered in the July 2004 report, which also includes a definition of the environmental performance standards. The standards are very important relative to the economic feasibility of the technology.

The July 2004 report findings showed there were two of the eight technologies determined to be contingent ESTs, the contingency being that if the two technologies met the economic feasibility criteria. The environmental performance standards had been defined, but at that time, economic feasibility had not been. Developers of one of the technologies (the Super Soils Technology), referred to as the Generation 1 Super Soils Technology, proposed to develop a second generation at a lower cost. The proposal was agreed to. When redesigned, one contingency for the Super Soil 2 Generation Technology was that they would still meet the environmental performance standards as with the first generation technology.

A second technology that was made contingent is the ORBIT High Solids Anaerobic Digester Technology. The contingency is associated with the technology in the report were that (1) the technology would be subject to the economic feasibility findings (when defined), and (2) there was some concern regarding the treatment of a swine waste stream at a steady state operation for the technical performance findings. This technology was required to meet the performance standards for a longer operational time. The economic contingencies still stand with the two technologies.

In July 2005, an additional seven technologies were reported on in the so-called Phase 2 technology determination report. That report included extensive data on the economic cost and returns for the technologies previously covered in the July 2004 report. One of the mandates of the project was to determine the cost and return for each of the technologies. Secondly, the research group was mandated to make a determination on the impact of the implementation of these technologies in relation to the competitiveness of the swine industry in the State. In addition to the cost and returns data on four of the original eight technologies in the Phase 1 technology report, the industry impact economic report is also included in the Phase 2 report. The Phase 1 report is about 1,000 pages; the Phase 2 report is about 1,400 pages. The complete reports are on NCSU's website. The Phase 2 technology determination report findings added three contingent ESTs, bringing the total to five. The economic feasibility criteria were still not defined. Because two of the technologies use a combustion-type process to burn the solids from the waste, issues arose about air quality permitting. Until this time, all the permitting issues of the studied ESTs concerned water quality, and the project had worked with the Division of Water Quality to address those issues.

The Phase 3 report includes detailed findings for two additional technologies to the original eight technologies in the July 2004 report, and the seven in the July 2005 report. They are referenced as the AgriClean Technology and the Environmental Technologies. The report contained an overview of the

remaining 15 technologies relative to the findings for ESTs, including a definition, a rationale, and data behind the determination for economic feasibility.

Dr. Williams said ESTs are defined as "permittable by the appropriate governmental authority; determined to be technically, operationally, and economically feasible for identified categories of farms; and meet the following performance standards." Performance standards are referenced both as technical standards and environmental standards. The technical performance standards are verbatim in the agreements as described in House Bill 1480, General Assembly Session 1997. The five environmental criteria are:

- Eliminate the discharge of animal waste to surface waters and groundwater through direct discharge, seepage, or runoff;
- Substantially eliminate atmospheric emissions of ammonia;
- Substantially eliminate the emission of odor that is detectable beyond the boundaries of the parcel of land on which the swine farm is located;
- Substantially eliminate the release of disease-transmitting vectors and airborne pathogens; and
- Substantially eliminate nutrient and heavy metal contamination of soil and groundwater.

In July of 2004, Dr. Williams recognized that the performance standards would have to be quantified.

The agreements also included a mandate that economic feasibility would be determined. The determination would include the criteria mandated by the agreements:

- The projected ten-year annualized cost of the technology (including capital, operation and maintenance) per 1000 pounds steady state live weight for each category of farm system;
- The cost compared to and determined for the permitted lagoon and spray-field system;
- Any projected revenues, including income from byproducts;
- Available cost-share monies or other financial assistance from federal, state or other public sources; and
- The impact that the adoption of the technology might have on the competitiveness of the state's pork industry.

In addition, based on input from an advisory panel, Dr. Williams agreed to add the following two criteria to the economic feasibility determination:

- ID/quantification (if possible) of emissions to environmental media from each category of farm system implementing the technology as compared to lagoon and spray-field system; and
- Estimate of the economic benefits to North Carolina households arising from the changes in emissions to environmental media resulting from implementation of the technology

Dr. Williams told the Commission he had contracted with RTI International to make a determination on monetizing the benefits of incorporating the technologies to the citizens of the state. That process was not mandated by the original agreements.

In July of 2000, when he was contacted to be the agreements' designee and after it was determined by NCSU that it was appropriate for him to take the responsibility for leadership of the project, Dr. Williams requested that the Office of Attorney General to let him appoint an advisory panel to the process. He designed the advisory panel to be made up of representatives from government, environmental interests, community interests, the parties to the agreement, and individuals with expertise in animal waste management, environmental science and public health, economics, and business management. He appointed a 23-member advisory panel (see list in Exhibit E, page 13 for names of members and their affiliation).

In the fall of 2000, a process began that over the next several years led to the competitive selection from proposals, resulting in 17 technologies being studied in the state as possible ESTs. Most of the technologies were sited on commercial swine-producing facilities. There are a few in the Wake County area on North Carolina State University research stations. Two efforts went on out of state; however, neither of them was supported with funds from the agreements. Each of the two swine producing parties to the agreement has significant efforts in other states in which they are developing environmental technology. One is the biofuel from manure project in Utah (Smithfield Foods); the other is a fertilizer from manure project in the state of Missouri (PSF). Both of the companies in the process indicated they are interested in developing North Carolina models for these technologies. With the consensus of the advisory panel, the two out of state projects were put under the umbrella of the initiative. They are ongoing, and not in the Phase 3 report.

Dr. Williams provided a list of the principal investigators (PI) on the project (see **Exhibit E**, page 16). The comprehensiveness, quality and objectivity of the science and economics conducted during the process has been phenomenal, even among the individuals and stakeholders associated with the swine industry. He stressed the objectivity of the work that has been reported.

Dr. Williams described the process he led. The decisions he made have been based on data that have been measured. The data requirements for all the projects included a project PI report focusing on the treatment system components, including the conversion or removal of solids and organics and the operational feasibility; OPEN team report focusing on emission of odor, pathogens, and ammonia; and ECON team report focusing on technology unit costs/returns and industry impact. The technical environmental feasibility requirements were spelled out in the agreements; operational feasibility requirements were not. The technology determination process is described on Exhibit 3, page 18. The quantification of the performance standards is described in detail in the July 2004 report.

The approach taken by Dr. Williams was to appoint a subcommittee made up of the engineers on the advisory panel. The panel was charged with quantifying the technical performance standards. Paul Sherman, Environmental Engineer, Division of Water Quality, DENR, was chair of the subcommittee. The committee developed ways to quantify the performance standards (see Exhibit E, pages 21-29). He highlighted how the odor standard was quantified. One example was to "substantially eliminate the emission of odor that is detectable beyond the boundaries of the parcel or tract of land on which the swine farm is located." The quantifiable standard is, "odor intensity levels, measured using an index scale from 0-8, should not exceed the established metric of 2 (or equivalent) at a property line on which the swine farm is located." The Eulerian-Lagrangian model, developed by a Duke University researcher, enables a quantification of odor dispersion to be measured from the source at a distance (see **Exhibit E**, page 24). The technology being studied is a covered in-ground ambient anaerobic digester. The waste from the barn is treated on site. The odor shown on page 24 of Exhibit E is from within the building. Per the criteria, the technology would meet the standard of 2 or less at the property line. Because all the swine operations are permitted, based on the knowledge available for odor dispersion with the technologies, the odor at a given distance can be predicted.

Public health representatives on the advisory panel, and other public health experts that have seen the information since it has been published, have consistently made a point that the bar may be set too high on the elimination of the release of disease-transmitting vectors and airborne pathogens. Therefore, it is likely that there will be some changes as the report is discussed beyond the researchers

and advisory panel. However, Dr. Williams said he is confident that there are five technologies that have met the pathogen criteria.

In the July 2004 report, using the economic feasibility determination, the Super Soils contingent EST was determined to cost approximately $400. The cost for a lagoon-spray field system constructed in the year 2004 is approximately $87, less than ¼ of the Super Soils EST. The cost of the second generation Super Soils technology, which the researchers brought to Dr. Williams and the advisory panel in July of 2004, is approximately $100. Dr. Williams said it is logically possible to cut the cost in one-quarter because the environmental performance criteria have been identified. It is not necessary for technology to have the high level of reduction the first generation of the Super Soils technology has. When the process is re-engineered to reduce the level from 99 percent to 80 or 75 percent, it can have a dramatic impact on the cost. Dr. Williams believes it is possible to drastically reduce the cost for two reasons: the criteria to target have now been identified, and the engineers have learned a lot of pertinent information during the research process.

The economists collected invoices, tracked the costs, modeled the impacts, and took the unit costs and put the data into an equilibrium displacement model to measure what the impact would be on the competitiveness of the industry in North Carolina if producers were required to adopt a new technology. The July 2004 report was 1,400 pages because of the report on the economic modeling. Page 33 of Exhibit E shows the annualized incremental cost of the studied technologies and the baseline lagoon and spray-field technology ($87). Dr. Williams pointed out the results of the economic model showing the impact of incremental costs on the industry if a total conversion was implemented. He used the model of the incremental cost of $88.18 to show a 12.5 percent reduction or 12 percent reduction in herd size of marketed hogs in the state, on an annual basis. The dollar amount the remaining producers would incur would be $118,936,000. The economic data is of extreme importance.

The Generation 1 Super Soils cost was approximately $400. The long term impact of adopting the technology state-wide would be that the state would lose approximately 60 percent of the inventory per year in the state.

Dr. Williams said he knew determining a quantifiable definition of economic feasibility would be the most challenging part of the initiative. He appointed an economic advisory panel (subcommittee) with representation from the same groups as the engineer advisory panel (see page 36 of Exhibit E for a list of members). The panel was unable to come to consensus. Dr. Williams requested the subcommittee consider information provided in the costs-returns and market impacts reports, quantitative recommendations relative to mandated economic feasibility requirements, and assessment of how the EST implementation schedule impacts "determination of economic feasibility."

The 11 member economic subcommittee reached consensus on the following points:

- The designee should consider economic versus financial points of view regarding feasibility—e.g. in addition to the financial consequences which focus on payments made by farmers, the Agreements require attention to the true economic consequences, including non-monetized commitment of resources.

- The economic models used to determine the costs-returns and predicted impact on the competitiveness of the industry when utilizing the determined EST costs are well reasoned and well justified and thoroughly conducted, but include uncertainty and many assumptions (the same conclusions were derived by external ad hoc reviewers). Dr. Williams said there was no reason to discount their findings.

- In consideration of who makes up the North Carolina pork industry, the Designee should consider any and all business entities physically located in the state that generate their income from either the production of live swine or the meat packing of pork. Dr. Williams agreed.

- It is economically appropriate to implement the EST in phases, allowing pilot testing and refinement of the technologies before they are adopted industry wide. New farm categories and company-owned farms are appropriate and obvious candidates for this approach. Dr. Williams strongly agrees.

- The time frame for adoption of ESTs is important relative to the time value of money and assessing economic feasibility, e.g. additional time for implementation reduces the economic impacts on the North Carolina swine herd size.

The members of the economic advisory panel did not reach consensus on the following points although a majority of panel members accepted them:

- Competitiveness does not mean maintaining the present North Carolina hog inventory size and it does not mean avoiding any net increase in waste handling costs. The designee should consider that implementation of an EST with a predicted economic consequence of reducing the North Carolina swine herd by 12% would be economically feasible. More than half the members of the panel agreed with this. Their justification is in part based on findings of the General Assembly's adoption of the .0200 Rules, in which there was a predicted result that 12 percent of the state's swine operations not remaining in business. There was an intense level of debate in trying to come to consensus.

- Institutional considerations should be studied in consideration of EST implementation planning. There should be an institution created to oversee the technology transition. A majority of the advisory panel agreed they should consider tradable permits to ensure widespread conversion occurs in the most economically feasible manner possible.

There were three points a minority of panel members agreed with:

- The Agreements did not seek to close farms or otherwise reduce herd size in North Carolina.

- A hog production entity becomes non-competitive when its inability to fund production results in lost market share, and an EST is economically feasible if and only if the commercial application of the technology in only North Carolina has no adverse effect, e.g., there is no net increase in cost to the producer or reduction in herd size

- By-product revenue from an EST must exist to offset any higher operating and capital costs of the EST, and the best opportunity for the candidate ESTs studied is fossil fuel substitutes.

Dr. Williams said he decided on a definition of economic feasibility in relation to ESTs:

Economic feasibility defined: A technology may be economically feasible even though it would impose incremental cost increases on the North Carolina swine industry and potentially result in a reduction in swine herd size in North Carolina. Technologies will be considered candidates for EST determinations only if the maximum predicted reduction in herd size resulting form implementation would not exceed 12 percent. The reason Dr. Williams accepts the 12 percent reduction is the uncertainty associated with the models; however, he is not willing for the uncertainty in the models to push the reduction beyond 12 percent.

The Phase 3 report will reflect the following findings: There are five ESTs for new farm categories. A new farm category is described as farms using ESTs on sites that have not been used previously for the production of swine (greenfields); construction of new swine facilities using the EST on farms which previously housed swine, but which are no longer permitted for that purpose; and expansions (for purposes of increasing permitted herd size) of existing swine farms using the EST to treat waste for new construction on such existing swine farms. In the case of expansions, this determination applies only to the waste generated from the expansion. For existing farm categories, contingent ESTs, as described

in the July 2004 and 2005 technology determination reports, have not (based on Dr. Williams' determination) at the current time met economic feasibility conditions. Some of them have efforts in progress to try to arrive at economic feasibility, but the burden of making an EST economically feasiblt lies outside the parameters of the study.

There are several technologies (five—or components of these would make up four of the five) that are very close to being considered environmentally superior. However, Dr. Williams said he cannot move the standards to allow them to be considered as ESTs. Some of the technologies cost significantly less to operate than the five that have been determined to be ESTs. It would be unwise to not pursue mechanisms so that the technologies can be further considered.

Dr. Williams said a case has been made by certain members of the advisory panel that in looking at the uncertainties, the numbers relative to the impact on the competitiveness may be 40 percent lower or approximately 40 percent higher. If all the factors are taken into consideration, including the impact across all categories of farms, the 12 percent figure at $88 may be as low as 8 percent. At 12 percent, the unit cost number is no longer approximately $88, it goes up to $133. It is a very complex process.

Dr. Williams made the following recommendations:

- Continue, as expeditiously as possible, current efforts by targeted technology suppliers and researchers to improve the treatment processes to reduce the costs of their respective treatment systems, and get the costs to the economic standard.

- Establish a framework or process by which additional technologies may be considered viable ESTs. Since the economic and performance standards have been identified, there are a lot of entrepreneurs interested in pursuing new technologies. There should be a mechanism in place to encourage such entrepreneurship.

- Identify potential institutional incentives, public policies, and markets related to the sale of byproducts (with priority on energy production) that will reward farmers for utilizing technologies identified by this process that are shown to yield improvements and environmental benefits over the current lagoon spray-field system. The optimal method of achieving net cost reductions and even positive revenue flows from alternative technologies is to install targeted technologies on a sufficient number of farms to facilitate engineering improvements, value-added product market development, and other cost-reduction methods.

Dr. Williams said he has seen the recommendations by the Environmental Defense Fund and the Front Line Farmer organization relative to a potential approach to do this. He said he has read the press release and he agrees with the approach the group is recommending.

In summary, after more than five years, five ESTs have been identified. Each meets environmental standards established by the state and each has been quantified during the study. Economic feasibility has been defined. A process for developing and verifying ESTs has been documented. Additional technologies have been verified that with some modification might be capable of meeting EST standards. A process for implementing ESTs has been proposed.

Senator Albertson said the Commission would not be taking any public comment on the report today. Mr. Givens asked the interested parties to let him know if they wish to comment on the report at the April meeting, and encouraged them to attend the public planning meeting on Monday 3 April.

Representative Harrison asked about the external costs above the $87 associated with the lagoon and spray method of getting rid of animal waste. Dr. Williams replied that RTI International conducted the cost benefit analysis. He added that the analysis showed that the major benefit would arise from the reduction of ammonia emissions and the lagoon system does not impact the groundwater. Dr. Williams said he felt obligated to follow the requirements incorporated in the agreements, so he said he did not make the cost considerations. He went on to say that it would be appropriate in looking at the

various technologies, if they found some that met all the criteria and all else was equal, based on the findings of the cost benefit analysis, it would be appropriate to give more weight to one that would reduce the ammonia emissions because of those findings.

Representative Harrison referred to the Missouri consent agreement and asked if there are any other states working on this problem. Dr. Williams said the Missouri process is a completely independent process, but because PSF came into North Carolina, after they had their Missouri process and consent agreement, it was felt it would make sense for them to follow the process. Dr. Williams commented that he is not aware of any other program outside the Missouri (PSF), Utah (Smithfield), and North Carolina initiatives. There are some types of the approach being implemented elsewhere, but nothing of this scale that he is aware of.

Representative Harrison asked if energy was counted as a by product of any of the processes. Dr. Williams replied that some of the technologies do generate electricity from the biogas produced through the technology process. The numbers used by the economists are the numbers the producers would get for a return using the North Carolina rate structure.

Senator Forrester asked, of the five superior technologies, do any of them use the lagoon/spray system in the final phase or during some phase of the system, or are they entirely different? Dr. Williams said they do not use the lagoon spray system at all. Of the five, there is only one that treats the liquid waste stream, the Super Soils Technology. All the remaining four concentrate on the solid treatment system. With the technologies there will still be a liquid waste stream. With the Super Soils technology, the waste is treated in a series of tanks instead of in an earthen structure. If same process could be done in an earthen structure, it would reduce the cost.

Senator Forrester asked about the future funding source for evaluation of how the programs will work. Dr. Williams replied that the $17.3 million is expended. The environmental enhancement monies he has referenced would have to be made available by a decision of the Attorney General and the parties to the agreements. He is not aware of any state monies available.

Representative Justice asked if the advisory panel members have any recommendations of how to implement the technologies in real situations. Dr. Williams said he believed that is beyond the actual scope of the agreement; however, he is aware that those discussions have begun.

In answer to a question from Senator Kinnaird, Dr. Williams said the economists correctly interpreted that this scale of research would not occur in any other state. Some members of the advisory panel have been adamant that they may not have used a logical assumption. If it turns out it is not and there are conversions in other states, it will have an impact on the potential of what the competitiveness would be in this state. Professor Whisnant stated in the recommendation document from the economic subcommittee that the industry should include technology suppliers, and revenues generated from them. Dr. Williams said that he does not feel we are in a crisis with our current system relative to environment and health issues; however, there are legitimate concerns related to the health issues that need to be considered. He believes the technologies will evolve. Change will not be seen on a large scale in the near future, but over the next decade it will begin if the industry is to be viable in the state as well as in the nation.

Representative Gibson asked to have full size documents of the PowerPoint presentation for members of the Commission. He publicly thanked the Department on behalf of farmers for helping them improvement the environment. He further asked to have the people who have been working on this project to bring concurrent investigation they are conducting to improve the animal waste management situation. There are other technologies and developments by the industry and by science that the ERC needs to hear about to be sure the constructive environment is headed the right way. Representative Gibson ended his comments with a commendation for Dr. Williams and others involved for the work they have done. Senator Albertson agreed with his remarks.

The Commission recognized those in the audience who had worked on the project and gave them a round of applause.

Representative McComas said Dr. Williams' method of working with advisory panels composed of people from different perspectives has brought credibility to the process, and he commended him for the objectivity of the study and his leadership.

Senator Albertson recognized Mr. Paul Sherman, Environmental Engineer, DWQ, DENR, to present the annual report on permitting and inspecting animal waste management systems (see **Exhibit F** for a copy of his PowerPoint presentation). Permitting actions include renewals, changes of ownership, major or minor modifications, and some new permits. The State Non-Discharge General Permit, renewed in 2004, makes up the vast majority of the permits reported on. The Division issues two broad categories of permits for animal operations: the State Non-Discharge Permit (began in 1996), and the National Pollutant Discharge Elimination System (NPDES) (an EPA-delegated permit) for larger facilities. The NPDES permit is set to expire in 2007, so in the next few months the Division will be working with stakeholders to develop the next version of the permit. There are a total of 2,524 permitted facilities in the state. Mr. Sherman showed a graph that demonstrates a downward trend in numbers of violations, but in a year with heavy rainfall, there was a large number of violations. Heavy rainfall years do have a large impact on compliance rates.

Senator Forrester asked about the low number of poultry permits. Mr. Sherman commented that they only permitted operations are those with liquid waste management systems. Poultry usually uses dry litter systems, which are permitted by regulation.

Representative Justice asked if there are more farms being inspected by the Division of Water Quality (DWQ) than there are by Soil and Water Conservation (DSWC). Mr. Sherman said there is just a small difference. The DWQ inspects all the permitted facilities. Some have gone below the threshold as listed in the General Statutes. Some of the differences in the numbers would be because DWQ is responsible for complaint calls and when there are non-compliant inspections, they do the follow up. Representative Justice said she had sat in on a meeting where Soil and Water was doing inspections In Pender County that was added to Columbus and Brunswick Counties. She said their visits were to check for problems, but they were there more to help farmers. Mr. Sherman said he had intentionally omitted mention of the pilot programs in some counties for the Division of Soil and Water part of the report because they provide a separate report for the pilot counties. Representative Justice asked for a reproduction of the graph showing violations with the amount of rainfall indicated for each year.

Mr. Givens asked what percentage of the total permitted farms is covered by the pilot program. Mr. Sherman said he would get the answer and report it back to the Commission. He added that the report on the pilot program was in the package of reports as a Read Only report (see **Exhibit D-10**).

Senator Albertson recognized Mr. Paul Rawls, Chief, Surface Water Protection Section, DWQ, DENR, to present an annual report on the compliance/enforcement of water quality laws for facilities that discharge into surface waters (see **Exhibit G** for a copy of his PowerPoint presentation). The data include 1 July 2004 through 30 June 2005. He told the Commission that there were 308 NPDES permits issued. He added that for the first time in years, their backlog is less than 10 percent, a level that Region IV EPA recognizes as acceptable. The group is actually leading the nation in some categories of permitting. The 300 other inspections include audits, bioassays (dealing with whole effluent toxicity), and operation and maintenance. The staff increased efforts in inspection and compliance oversight of spills in 2005. The additional effort resulted fines of almost $245,000, a substantial increase from the previous year. During the last year, the staff completed issuing 300 operation and maintenance permits for the municipalities. They are complex permits that include reporting requirements, capital improvement plans, operation and maintenance criteria. Education to permittees was increased through site visits. They also increased education of staff in what to look for and how to deal with issues. Mr. Rawls reported that the Greensboro Special Order of Consent (SOC) has about $60 million of work spent to address sanitary sewer overflows there. The High Point SOC projected cost is $36.6 million, and High Point has spent an additional $46 million over the past 10 years prior to the SOC.

Representative Justice said she was aware that some municipalities operate their sewer systems as enterprise funds, and that on occasion, some government bodies take some of the proceeds of those funds into their general fund. She asked if there would be a way the legislature could enact a law to prevent them from doing that. She said she believes many of the systems are not being maintained as they need to be, and it could be because the governing body is taking funds out of the enterprise fund into their general fund. Mr. Givens said he would look into that question.

In response to a question from Representative Harrison, Mr. Rawls said a lot of the infrastructure issues have resulted from construction techniques and decisions made back in the 1920s.

Senator Albertson recognized Mr. Manley Wilder, new Director of the Division of Soil and Water Conservation (DSWC), DENR, for a report on the programs, activities, and priorities of the Division. Mr. Wilder gave a brief explanation of his background: native of Nash County, graduate of NC State University, spent 35 years with the Natural Resources Conservation Service (NRCS), working in Nash, Greene and Wayne counties in North Carolina. He also spent some time in Pennsylvania, Virginia and Washington, DC, before retiring to the home farm in Nash County in the mid-1990s.

Mr. Wilder shared some observations and challenges with the Commission. The urbanization, population growth, loss of farmland, tobacco buyout, and niche farming present challenges and opportunities for the Division and those working in soil and water conservation on private agricultural lands. He stressed conservation partnerships at all levels of government and the private sector—NRCS, the Division, the Association of Soil and Water Conservation Districts, the State Soil and Water Conservation Commission, and organizations such as the Farm Bureau, the Environmental Defense Fund, and others. The theme of the NC Association of Soil and Water Conservation Districts for this year is "private land, public benefits: achieving a balance to meet the needs of society and the environment."

One of the challenges is community conservation. There are a lot of soil and conservation water districts that are getting extremely interested and active in community conservation: a holistic program dealing with education, information, technical assistance, and cost sharing as it begins to address the non-agricultural residential part of the state. A few weeks ago he attended a forum in New Hanover County concerning stewardship development with developers. Developers were being recognized and rewarded for developing environmentally friendly projects. The Division has a proposal in to the Clean Water Management Fund for $500,000 for a pilot program to work in 16 Soil and Water Conservation districts on community conservation. There is an opportunity to develop legislation tailored on the order of the agriculture cost share program to allow us to work with soil and water conservation districts.

Another challenge is the animal waste problem. The Division is working on the marketing of byproducts of animal waste management. He met with the Environmental Defense Fund as they work on a conservation innovation grant with NRCS, front-line farmers and supersoils on how the process can move forward.

In the agriculture cost-share program, the Division wants to be on the cutting edge of developing innovative BMPs (best management practices) for farming.

Mr. Wilder told the Commission he had attended a series of meetings in the western part of the state, and a number of conservation districts and others began talking about carbon sequestration. Power companies want to partner with farmers to get carbon credits and carbon sequestration.

In closing, Mr. Wilder said he had been surprised in the amount of interest in farmland preservation.

Senator Albertson recognized Mr. Marc Thigpen, President of Nutec Soils, Inc., to discuss the environmental benefits of utilizing Geographic Information Systems (GIS) technology for precision agricultural practices. Mr. Thigpen explained the use of GIS technology in his farming operation to

maximize his profits. He showed how he increased his return on 185 acres of land and decreased his costs. He realized more cotton with less fertility, less inputs and more profit.

GPS is a way to micromanage a farm. The fields are broken up into small grids and samples of the soil are taken from each grid to determine what needs to be done to the soil to generate the greatest return. The reports let them know how much of what nutrient needs to be applied in exactly what area. It is far superior to a straight rate application. A computer on his picker monitors the yield by GPS as the picker harvests the crop. The data is converted into a map so he can see where the greatest yield with the least use of added product came from.

Mr. Thigpen showed several examples of how he uses this technique in a new business he developed (Nutec Soil). He uses the technology to get optimum turf growth in an environmentally friendly way for less money for golf courses. Benefits are optimum growth, friendly to the environment, complete management, cost savings, reduction of diseases, knowing exactly what you have and where it is, precision technology for uniform growth, precision applications. Mr. Thigpen is able to accomplish this by taking soil samples and reference them to GPS. Then Mr. Thigpen takes the data from the State laboratory and determines what is needed where. He had several before and after photographs to demonstrate how his technique worked on golf courses. Results show quality, production, and uniformity by getting the ingredients to work in harmony. He stressed that the technology does work, now the word needs to be spread so that more farmers will use it. It is a win, win situation—good for saving money for farmers and owners, and good for the environment.

Mr. Thigpen said he saved $30,000 on potash the first year he used the technology. The second year he cut fertilizer by 45 percent. There are several components required to make the technology work: a GPS receiver, the data processor, and the applicator. The truck itself costs $100,000.

Senator Albertson recognized Mr. David Williams, Chief, Non-point Source Program Section, DSWC, DENR to further discuss the environmental benefits of utilizing precision farming in the North Carolina Agricultural Cost Share Program (see **Exhibit I** for a copy of his PowerPoint presentation). In addition to the production benefits and the opportunity to make yields uniform across the whole field, there is a great benefit from a water quality standpoint in taking advantage of the technology because when a crop is growing at its optimum potential, it has the ability to process the applied nutrients for crop production rather than to have the nutrients remain behind and make their way into the surface and groundwaters. Cost-share practices are brought before a technical review committee (TRC). If the TRC looks at a practice and determines there is merit to the technology, a subcommittee will be formed to develop the implementation policies and the framework under which they would provide cost share assistance. A workgroup has been formed to look at precision farming. It has been meeting for several months. Once the workgroup brings a recommendation to the TRC, and it receives favorable consideration, it will go to the Soil and Water Commission for approval as a cost-sharable practice. Precision farming is an incentive practice.

Mr. Givens announced the itinerary for the 14 and 15 March meeting to be held in Asheboro had been handed out. He suggested Commission members keep 11 and 12 April open for a two-day meeting of the Commission to finish its business prior to the beginning of the 2006 session..

The meeting adjourned at 12:40 p.m.

Senator Charlie Albertson, Co-Chair
Presiding

Senator Daniel Clodfelter, Co-Chair

Dot Waugaman, Commission Assistant

Representative Pryor Gibson, Co-Chair

RE: **Commission Meetings**
Planning Meeting

COMMISSION MEETING – 8 March 2006

The Environmental Review Commission (Commission) will meet at 9:30 a.m. Wednesday 8 March 2006 in Room 544 of the Legislative Office Building in Raleigh. At the 8 March meeting, the Commission will hear a report on issues related to the evaluation of alternative animal waste management technologies to determine whether those technologies are environmentally superior and economically feasible, as well as reports from State agencies related to water quality and animal waste management. A formal meeting notice will be forthcoming.

COMMISSION MEETING – 14 and 15 March 2006

The Commission will meet at the North Carolina Zoological Park in Asheboro, North Carolina, on Tuesday 14 March and Wednesday 15 March 2006. This meeting will focus primarily on various matters related to parks and recreation, land conservation, and open space preservation and will be held in connection with a tour of the Zoological Park and other site visits in the area on those days. A formal meeting notice, including a detailed itinerary for the meeting and site visits will be forthcoming. For planning purposes, the Commission Clerk will be contacting members of the Commission over the next week to determine their availability for the meeting and site visits. Information on accommodations will also be forthcoming.

PLANNING MEETING:

To facilitate development of the agenda for the 8 March and the 14 and 15 March meetings of the Commission, to plan for subsequent meetings of the Commission, and to receive input from interested persons regarding the work of the Commission, the Commission Counsel will hold an informal planning meeting at **10:00 a.m. on Thursday 2 March 2006 in Room 605 of the Legislative Office Building**. Persons who wish to participate in the development of the agenda for meetings of the Commission, or who are interested in any matter before the Commission, are invited to attend.

ADDITIONAL INFORMATION:

If you have questions related to the Commission, please feel free to contact the Commission Counsel or other Commission staff at (919) 733-2578.

AGENDA
9:30 a.m. Wednesday 8 March 2006
Room 544 Legislative Office Building

1. Call to order
   Senator Charles W. Albertson, Presiding

2. Introductory remarks by Cochairs
   Senator Charles W. Albertson
   Senator Daniel G. Clodfelter
   Representative Pryor A. Gibson

3. Report to the Commission and explanation of agenda items
   George F. Givens, Commission Counsel

4. Report on the findings of the evaluation of alternative animal waste management technologies to determine whether those technologies are environmentally superior and economically feasible
   Charles M. "Mike" Williams, Agreements' Designee;
   Associate Professor, College of Agriculture & Life Sciences,
   North Carolina State University

5. Annual report on permitting and inspecting animal waste management systems/Animal Waste Compliance Report (G.S. 143-215.10M)
   M. Paul Sherman, Environmental Engineer
   Division of Water Quality, Department of Environment and Natural Resources (DENR)

6. Annual report on the compliance/enforcement of water quality laws for facilities that discharge into surface waters (G.S. 143-215.9A)
   Paul E. Rawls, Chief
   Surface Water Protection Section, Division of Water Quality, DENR

7. Report on the programs, activities, and priorities of the Division of Soil and Water Conservation

   Manly S. Wilder, Director
   Division of Soil and Water Conservation, DENR

8. Discussion of the environmental benefits of utilizing Geographic Information Systems (GIS) technology for precision agricultural practices

   Marc Thigpen, President
   Nutec Soils, Inc.

   David B. Williams, Chief
   Non-point Source Program Section, Division of Soil and Water Conservation, DENR

9. Commission discussion and announcements

10. Adjourn

SCHEDULE OF FUTURE MEETINGS:

Below is a schedule of meetings of the Commission for March 2006 through May 2006. This schedule is tentative and subject to adjustment. To facilitate development of the agenda for meetings of the Commission and to receive input from interested persons regarding the future work of the Commission, the Commission Counsel holds informal planning meetings for staff and interested parties. The schedule of these public Commission staff planning meetings is also set out below.

1:00 p.m. Tuesday 14 March 2006

Location: Multi-Purpose Conference Room, North Carolina Zoological Park, Asheboro, North Carolina. *The Commission meeting will include a tour of the Zoological Park on Wednesday 15 March 2006 and other site visits in the area on Tuesday and Wednesday. Further information on the site visits will be forthcoming.*

9:30 a.m. Tuesday 11 April and Wednesday 12 April 2006

Location: 544 LOB
Staff Planning Meeting: 2:00 p.m. Monday 3 April 2006 – 605 LOB

Wednesday 3 May 2006

Location: 544 LOB
Staff Planning Meeting: 10:00 a.m. Thursday 27 April 2006 – 605 LOB (This meeting will also serve as the Commission staff planning meeting for the Commission meeting scheduled for 8 May 2006.)

Monday 8 May 2006

Location: 544 LOB

OTHER MEETINGS:

The Commission Counsel will hold meetings of interested parties on specific topics as indicated below:

Phase II Stormwater Management Working Group

10:00 a.m. Friday 10 March 2006 – 605 Legislative Office Building
10:00 a.m. Wednesday 22 March 2006 – 605 Legislative Office Building
10:00 a.m. Monday 3 April 2006 – 605 Legislative Office Building

Risk-Based/Limit Liability for Environmental Cleanups Working Group (HB 1778/HB 1099/SB 1121)

2:00 p.m. Friday 17 March 2006 – 605 Legislative Office Building
2:00 p.m. Monday 10 April 2006 – 605 Legislative Office Building

ADDITIONAL INFORMATION:

Persons having questions about the Commission meeting or other matters related to the Commission may contact Commission Counsel or other Commission staff at (919) 733-2578.

MEMORANDUM

To: Members of the Environmental Review Commission
From: Tim Dodge, Commission Analyst
Re: Reports to the Commission

This memorandum lists reports that have been submitted to the Environmental Review Commission by State agencies since the last reports distribution on 14 February 2006.

A. REPORTS RELATED TO TODAY'S AGENDA

The following reports are attached to this memorandum. These reports may be referenced during the course of the 8 March 2006 Commission meeting.

Water Quality:

1. *Development of Environmentally Superior Technologies: Phase 3 Report for Technology Determinations per Agreements Between the Attorney General of North Carolina and Smithfield Foods, Premium Standard Farms, and Frontline Farmers.* Animal and Poultry Waste Management Center, North Carolina State University. 8 March 2006.

2. *Annual report on permitting and inspecting animal waste management systems/Animal Waste Compliance Report.* Division of Water Quality, DENR. 15 October 2005. Statutory Authority: G.S. 143-215.10M.

3. *Annual report on the compliance/enforcement of water quality laws for facilities that discharge into surface waters.* DENR. 1 September 2005. Statutory Authority: G.S. 143-215.9A.

B. READ-ONLY REPORTS

The following reports are attached to this memorandum. These reports are not scheduled for oral presentation.

Air Quality:

4. *Annual report on the cost of the Title V Program.* Division of Air Quality, DENR. 1 November 2005. Statutory Authority: G.S. 143-215.3A(c).

Parks and Recreation / Land Conservation:

5. *Report on the feasibility and desirability of acquiring land and establishing a State Recreation Area at Blewett Falls Lake, including an estimate of the cost of developing the proposed recreation area.* Division of Parks and Recreation, DENR. 1 December 2005. Statutory Authority: S.L. 2004-24, Sec. 2.
6. *Report on vehicle use at Fort Fisher State Recreation Area.* DENR. 1 March 2005. Statutory Authority: S.L. 2004-124, Sec. 12.3(b).

Solid Waste Management:

7. *Annual report on recycling efforts of public schools in the State.* Department of Public Instruction. 15 December 2005. Statutory Authority: S.L. 2001-512, Sec. 11.

Water Quality:

8. *Annual Report on Progress in Implementing Coastal Habitat Protection Plans.* Coastal Resources Commission, Environmental Management Commission, and Marine Fisheries Commission. 3 February 2006. Statutory Authority: G.S. 143B-279.8(e).
9. *Interim report on the study of the feasibility and advantages of a coordinated regional approach for the phaseout of methyl tertiary butyl ether (MTBE) as an additive to motor fuel in the southeast region of the United States, and on progress in developing a coordinated regional approach to the phaseout of methyl tertiary butyl ether (MTBE) as an additive to motor fuel.* Secretary of Environment and Natural Resources and the Commissioner of Agriculture. 1 March 2006. Statutory Authority: S.L. 2005-93, Sec. 4.
10. *Report on whether to continue or expand the pilot program to inspect animal waste management systems by the Division of Soil and Water Conservation.* DENR. 15 October 2005. Statutory Authority: S.L. 2005-276, Sec. 12.7(c)).
11. *Annual report on the effectiveness of projects funded under the Agriculture Cost-Share Program for Nonpoint Source Pollution Control.* Soil and Water Conservation Commission. 1 March 2006. Statutory Authority: G.S. 143-215.74(e).

C. REPORTS HELD FOR FUTURE PRESENTATIONS

The following reports are being held for distribution in conjunction with a potential agenda item at 14 March 2006 meeting of the Commission at the North Carolina Zoological Park in Asheboro.

Parks and Recreation / Land Conservation:

12. *Parks and Recreation Trust Fund Annual Report, Fiscal Year 2004-2005.* Division of Parks and Recreation, DENR. 1 October 2005. Statutory Authority: G.S. 113-44.15(c).
13. *North Carolina Natural Heritage Trust Fund Award Report, Calendar Year 2004.* Division of Parks and Recreation, DENR. 1 September 2005. Statutory Authority: G.S. 113-77.9(e).
14. *Annual report on progress towards attaining the State's goal of protecting one million acres of farmland, open space, and conservation lands.* DENR. 1 October 2005. Statutory Authority: G.S. 113A-241(c).

Please contact George Givens, Jeff Hudson, Jennifer McGinnis, or Tim Dodge at (919) 733-2578 if you have any questions or comments.

TO ALL INTERESTED PARTIES:

This report was compiled pursuant to Sections III.B.5 and III.B.6 of Agreements, dated July 25, 2000 and September 30, 2000 between the Attorney General of North Carolina and Smithfield Foods, Inc. and Premium Standard Farms, Inc., respectively.

Copies of this report are transmitted on this date to the North Carolina Attorney General, Smithfield Foods, Premium Standard Farms, and Frontline Farmers. A copy is also transmitted to the North Carolina Environmental Review Commission. A full copy of this report is on file in the North Carolina State University (NCSU) Animal & Poultry Waste Management Center (APWMC) administrative office located in room 134 Scott Hall on the NCSU north campus.

A complete electronic copy of this report will be posted on the NCSU College of Agriculture and Life Sciences Waste Management Programs web site http://www.cals.ncsu.edu/waste_mgt/ within 30 business days of today's date.

Respectfully submitted,

C.M. (Mike) Williams, Ph.D.
Agreements' Designee

PREFACE

This report comprises the third in a series of technology determinations for candidate Environmentally Superior Technologies made by the Designee as described and mandated by agreements between the Attorney General of North Carolina, Smithfield Foods, Premium Standard Farms, and Frontline Farmers. Phase 1 and 2 technology determination reports were previously published.[1]

The determinations reported are based on environmental performance data and economic feasibility analyses. Research teams comprised of faculty and staff from North Carolina State University, the University of North Carolina – Chapel Hill, Duke University, University of Georgia, and the United States Department of Agriculture conducted the studies reported and referenced herein. A full-service environmental and agricultural engineering firm, Cavanaugh & Associates, P.A., served as Project Technical Manager, with responsibility of permit and construction management for the candidate technologies located on commercial-scale farms.

An advisory panel appointed by the Designee has provided invaluable input and review to this process. Their participation and oversight has contributed significantly to decisions made by the Designee regarding the technology determinations. The panel is made up of individuals with expertise in animal waste management as well as individuals with an interest in the development of Environmentally Superior Technologies. The panel's representation is comprised of academic research scientists, engineers, public health and public law experts, and economists. In addition, individuals representing community interests, environmental interests, North Carolina Department of Environment and Natural Resources, United States Environmental Protection Agency, agribusiness, farm owners and swine contract growers (Frontline Farmers), and the companies (Smithfield Foods and Premium Standard Farms) are on the appointed panel.

The following abbreviations and acronyms are used frequently throughout this report:

- Agreements – Agreements between the Attorney General of North Carolina and Smithfield Foods, Premium Standard Farms, and Frontline Farmers
- EST – Environmentally Superior Technologies
- Designee – C.M. (Mike) Williams, as appointed per the Agreements
- NCDENR – North Carolina Department of Environment and Natural Resources
- PSF – Premium Standard Farms
- Smithfield – Smithfield Foods and Subsidiaries

---

[1] Development of Environmentally Superior Technologies. 2004. Phase 1 Technology Determination Report, published by NCSU College of Agriculture and Life Sciences, 941 pgs, on file with NCSU Animal and Poultry Waste Management Center (July 26, 2004). Also available at www.cals.ncsu.edu/waste_mgt/

Development of Environmentally Superior Technologies. 2005. Phase 2 Technology Determination Report, published by NCSU College of Agriculture and Life Sciences, 1,428 pgs, on file with NCSU Animal and Poultry Waste Management Center (July 25, 2005). Also available at www.cals.ncsu.edu/waste_mgt/

Summary

Efforts to identify and implement "Environmentally Superior Technologies" (EST) onto swine farms in North Carolina were initiated in 2000 by the Attorney General of North Carolina through agreements with Smithfield Foods (SF) and Premium Standard Farms PSF). A third and related agreement was established with Frontline Farmers in 2002. This report documents the "Technology Determinations" as described in the Agreements: a written determination by the Agreements' Designee that contains findings relative to a technology or combination of technologies as an EST.

Considerations for EST, which were mandated by the Agreements, included technical, operational, and economic criteria. Technical (Environmental) performance standards (previously established by the North Carolina General Assembly) targeted the discharge of animal waste to surface waters and groundwater, emission of ammonia, emission of odor, release of disease-transmitting vectors and airborne pathogens, and nutrient and heavy metal contamination of soil and groundwater. The determination of economic feasibility included consideration of technology costs and the estimated impact that the adoption of EST could have on the competitiveness of the North Carolina pork industry. A cost-benefit analysis was also conducted; this was done to compare the relative advantages of the different candidate technologies but was not included in the determination of economic feasibility.

An advisory panel appointed by the Designee provided input and oversight to this initiative. The panel was composed of academic research scientists, engineers, public health and public law experts, and economists. In addition, individuals representing community interests, environmental interests, North Carolina Department of Environment and Natural Resources, U.S. Environmental Protection Agency (USEPA), agribusiness, farm owners and swine contract growers (Frontline Farmers), and the companies (SF and PSF) were represented.

Candidate technologies studied in North Carolina included a covered in-ground anaerobic digester with biological trickling filters and greenhouse vegetable production system, a sequencing batch reactor system, two belt manure removal systems, several solids separation systems, a constructed wetland system, a reciprocating wetland system, an upflow biological aerated filter system, a gasification system, a fluidized bed combustion system, an insect biomass conversion system, mesophilic and thermophilic anaerobic digesters, a water reuse system, permeable lagoon covers with aerobic blanket system, a nitrification and denitrification soluble phosphorus removal system, a centralized composting system, and a closed loop chemical treatment system. In addition to these systems, technologies not funded directly by this initiative but under development by SF in Utah (bio-diesel fuel from manure project), PSF in Missouri (manure to fertilizer project and several other technologies per a consent agreement between PSF and the state of Missouri and USEPA) are under consideration as candidate EST.

Analyses and review of economic data compiled for all candidate EST showed the projected additional annualized (10 years) costs of retrofitting existing lagoon spray field farms with EST for a complete treatment system (liquid and solids treatment) ranges between approximately $90 to over $400 per 1,000 lbs. steady state live weight per year. This compares to a predicted approximate cost of $85 per 1,000 lbs. steady state live

weight per year for constructing a permitted lagoon spray field system in North Carolina in 2004. The economic analysis also showed that adopting candidate EST may result in annual reductions in the North Carolina inventory of pork. In addition, the study concluded that sources of financial support, including cost share programs to help finance the additional costs may be available in the future, with the most promising opportunities for technologies that generate energy; however, no significant sources of such support are currently available.

Following extensive review of the economic data and associated issues, discussion, debate, and input by the referenced advisory panel (documented herein), economic feasibility was defined by the Designee as follows: *A technology may be economically feasible even though it would impose incremental cost increases on the North Carolina swine industry and potentially result in a reduction in swine herd size in North Carolina. Technologies will be considered candidates for EST Determinations only if the maximum predicted reduction in herd size resulting from implementation would not exceed 12 percent. The Designee will be responsible for determining whether the predicted herd size reduction that would result from the implementation of a technology is sufficiently accurate to consider it a candidate for determination as an EST. The Designee will also be responsible for determining, and limiting his determination and implementation recommendations to a category, or categories of farms, to ensure that an EST Determination would not result in unintended negative impacts and consequences for other farms which are dependent on the EST farms for their ongoing supply of production animals.*

Based on the criteria for the technical and economic standards, review of all available data, and advisory panel inputs, the following Technology Determinations are made at this time:

New farm category: Designee concludes that the solids separation / nitrification–denitrification / soluble phosphorus removal system ("Super Soils" technology as described in a previously published {July 26, 2004} technology determination report) in combination with any one of the following four solids treatment systems: the high solids anaerobic digester ("ORBIT" technology as described in the July 26, 2004 report); "Super Soil Systems" centralized composting system; gasification for elimination of swine waste solids with recovery of value-added products system; and "BEST" – fluidized bed combustion of solids system (the latter 3 systems as described in a previously published {July 25, 2005} technology determination report) comprise an unconditional Environmentally Superior Technology for new farms which are permitted and constructed for the first time after the date of this report. This determination is limited to the following types of farms: farms using EST on sites that have not been used previously for the production of swine ("Greenfields"); construction of new swine facilities using the EST on farms which previously housed swine, but which are no longer permitted for that purpose; and expansions (for purposes of increasing permitted herd size) of existing swine farms using the EST to treat waste for new construction on such existing swine farms. In the case of expansions, this determination applies only to the waste generated from the expansion.

Existing farm categories: Designee concludes that contingent EST, as described in the July 2004 and 2005 technology determination reports, have not at the current time met economic feasibility conditions required for unconditional EST to be implemented onto existing farm categories in North Carolina.

The scope of the Technology Determinations herein is considered final and inclusive of the candidate technologies described in this report. Any subsequent Technology Determinations, including contingent determinations that have been described in the referenced July 2004 and July 2005 reports, and also including technologies under development by parties to the Agreements that were referenced in those reports, that may be made by the Designee will be based on available data and appropriate outside critical review and inputs resulting from efforts that go beyond those described in this report.

The results reported herein collectively show that this initiative has resulted in a combination of 5 technologies that meet environmental performance standards that have been established by the North Carolina General Assembly. The data also show that with technical modifications and improvements (some of which may only be minor), several of the additional technologies considered in this initiative may meet the environmental performance criteria. However, the technologies studied which have been shown to meet the environmental performance standards and would be required for a complete liquid and solids treatment system currently exceed the threshold cost for economic feasibility as defined herein for existing categories of farms.

Based on these findings the following next steps are recommended:

Continue, as expeditiously as possible, current efforts by targeted technology suppliers and researchers to improve upon their treatment processes to reduce the costs of their respective treatment systems.

Establish a framework or process by which additional technologies may be considered viable Environmentally Superior Technologies. This would include technologies that can be improved upon (technically and / or operationally and / or economically) as a result of information derived from this initiative, as well as technologies that were not part of this funded initiative.

Identify potential institutional incentives, public policies, and markets related to the sale of byproducts (with priority on energy production) that will reward farmers for utilizing technologies identified by this process that are shown to yield improvements and environmental benefits over the current lagoon spray field system. The optimal method of achieving net cost reductions and even positive revenue flows from alternative technologies is to install targeted technologies on a sufficient number of farms to facilitate engineering improvements, value-added product market development, and other cost reduction methods.

1.0 Introduction and Overview

Agreements: Efforts to identify and implement "Environmentally Superior Technologies" (EST) onto swine farms in North Carolina were initiated in July 2000 by the Attorney General of North Carolina by an agreement with Smithfield Foods and its subsidiaries and a similar agreement (in September 2000) with Premium Standard Farms. A third and related agreement was established with Frontline Farmers in 2002.[2]

Performance standards and economic feasibility: Technical environmental performance standards defined in the Agreements and previously established by the North Carolina General Assembly[3] mandate that successful EST address the discharge of animal waste to surface waters and groundwater; emission of ammonia; emission of odor; release of disease-transmitting vectors and airborne pathogens; and nutrient and heavy metal contamination of soil and groundwater. Although not a component of the referenced Session Law 1998-188, House Bill 1480, comprehensive determinations of economic feasibility are mandated by the terms and conditions of the Agreements. Targeted economic variables include projected 10-year annualized costs and returns analysis for each technology; projected revenues from byproduct utilization; consideration of available cost-share monies; and the impact that the adoption of the EST may have on the competitiveness of the North Carolina pork industry as compared to the pork industry in other states.

Advisory panel: The Agreements mandate that an advisory panel provides input and peer review of this overall initiative. The panel is made up of individuals with expertise in animal waste management as well as individuals with an interest in the development of Environmentally Superior Technologies. The panel's representation is comprised of academic research scientists, engineers, public health and public law experts, and economists. In addition, individuals representing community interests, environmental interests, North Carolina Department of Environment and Natural Resources, U.S. Environmental Protection Agency, agribusiness, farm owners and swine contract growers (Frontline Farmers), and the companies (Smithfield Foods and Premium Standard Farms) are on the appointed panel (see Appendix E for names and affiliations of panel members).

Candidate technologies: Beginning in 2000 candidate EST technologies were competitively selected. They included solids separation systems, a covered in-ground anaerobic digester with biological trickling filters and greenhouse vegetable production, mesophilic and thermophilic anaerobic digesters, a sequencing batch reactor, an upflow biological aerated filter system, a gasification system, belt manure removal systems, and wetland systems. In addition to these systems, technologies not funded directly by this initiative but under development by Smithfield Foods in Utah (biodiesel fuel from manure project), Premium Standard Farms in Missouri (manure to fertilizer project and several other technologies per a consent decree between Premium Standard Farms and

[2] See Agreements between Attorney General of North Carolina and SF, PSF, and Frontline Farmers (North Carolina Department of Justice, on file with Ryke Longest, 2000 & 2002). Also available at www.cals.ncsu.edu/waste_mgt/

[3] See General Assembly of North Carolina, Session 1997, Session Law 1998-188, House Bill 1480

the state of Missouri and USEPA), Sustainable North Carolina and Frontline Farmers (closed-loop swine waste management system located in Eastern North Carolina) are considered candidate EST. Table 1 shows the technology names and status of the environmental and economic studies. Technical and economic data procurement for all of the projects located in North Carolina and funded under the initial July 2000 Agreements and has been completed to date.

Detail progress reports describing the EST initiative between the dates of July 25, 2000 and July 25, 2003 have been published.[4] In July 2004 and July 2005 Technology Determination Reports were issued.[5] These reports comprised written determinations relative to a technology's or combination of technologies' candidacy as an EST. The July 2004 report focused on eight of the candidate EST, and two were shown to be capable of meeting the Agreements' technical performance standards and were declared to be contingent EST. Those technologies were: 1) the solids separation/nitrification–denitrification/soluble phosphorus removal system ("Super Soils" technology) and 2) the high solids anaerobic digester system ("ORBIT" technology). The July 2005 report focused on an additional eight funded technology candidates not covered in the July 2004 report and showed that three of those technologies also met the identified technical performance standards and were declared to be contingent EST; those technologies were: 1) "Super Soil Systems" centralized composting system, 2) gasification for elimination of swine waste solids with recovery of value-added products system, and 3) "BEST" – fluidized bed combustion of solids system. It is noted that these latter three technologies as well as the "ORBIT" technology described in the 2004 report are specific for the treatment of swine manure solids only. Each of these technologies must be combined with a system that successfully removes solids and also successfully treats (meets EST technical performance criteria) the liquid components of the waste stream (urine and/or flushed manure slurry).

Some of the candidate technologies studied as part of both the Phase 1 and Phase 2 determinations met many of the technical feasibility performance criteria. For these technologies it is possible that making technology modifications and/or combining treatment unit processes between other candidate EST may enable them to meet all of the EST technical feasibility performance criteria. An Engineering Subcommittee made up of nine of the above referenced panel members carefully studied the possible combination of candidate EST technology treatment unit processes for the purpose of making a

Development of Environmentally Superior Technologies. 2005. Phase 2 Technology Determination Report, published by NCSU College of Agriculture and Life Sciences, 1428 pgs, on file with NCSU Animal and Poultry Waste Management Center (July 25, 2005). Also available at www.cals.ncsu.edu/waste_mgt/

determination of an EST; their Recommendation Document is contained herein as Appendix C.

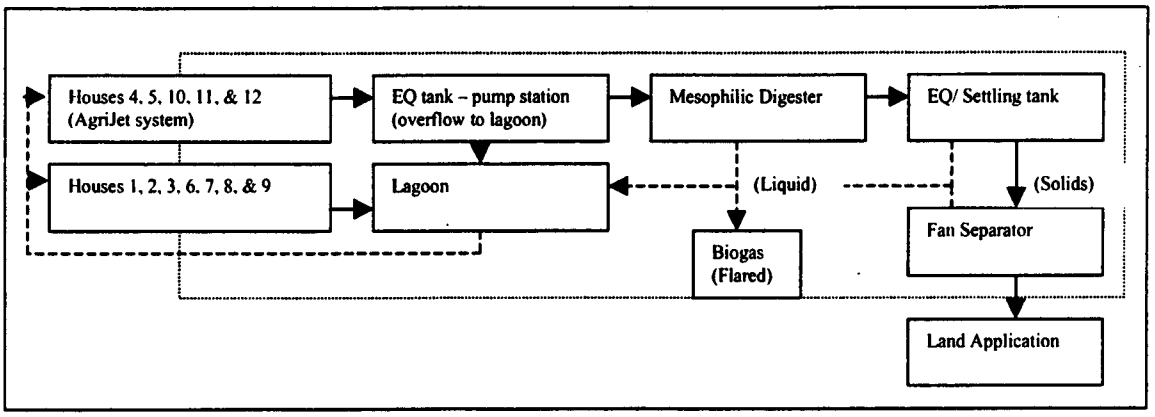
Economic feasibility: For the mandated economic analysis, projected costs of retrofitting existing lagoon spray-field systems have been estimated for the candidate technologies and are collectively provided herein and in the referenced July 2005 report (see Appendix B.1 of the July 2005 report). The impacts of adopting EST technologies on the competitiveness of the N.C. pork industry were reported in detail in the July 2005 report (see Appendix B.2 of the July 2005 report). An Economics Subcommittee comprised of 10 appointed members of the above referenced advisory panel reviewed these data and the methods utilized to derive them. Reports from this subcommittee are provided herein as Appendix D.

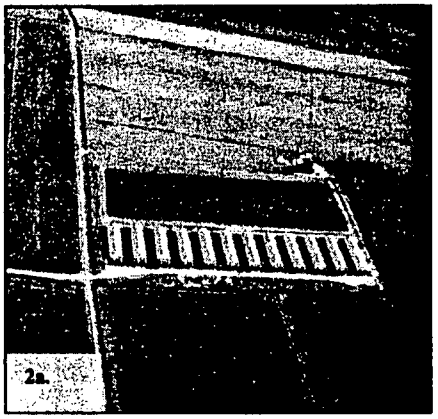
Phase 3 technology determinations: The report herein provides technical data for two technologies that were not included in the Phase 1 and 2, July 2004 and 2005 reports. Economic costs and returns data are provided for all candidate technologies for which that information was not reported in the July 2004 report. This report, however, summarizes technical (see report summary data that follow this section) and economic feasibility data (see referenced Tables in Section 3.0) for all technologies studied to date that were funded under the initial July 2000 Agreements. EST status for all of these referenced candidate technologies and next step recommendations as determined by the Designee are provided.

2.0 Candidate Environmentally Superior Technology Descriptions

Concise descriptions, schematics, and figures for each of the Phase 3 candidate EST follow. Additional information related to the farm or experimental sites where the technologies were evaluated is provided in Table 2.

"AgriClean" Mesophilic digester and "AgriJet" flush system – Bobby Ray Harris Farm, Belvoir, NC – 11520 head finisher





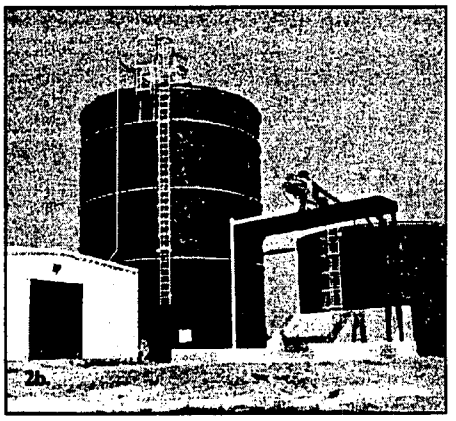


Figure 1. Process flow diagram for AgriClean technology.

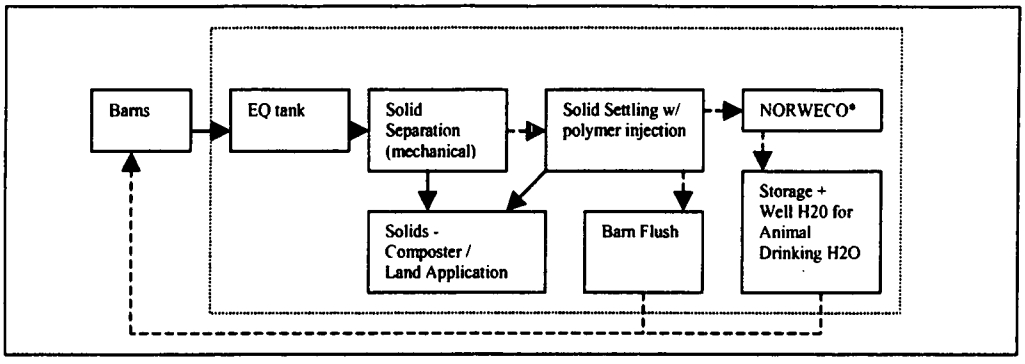
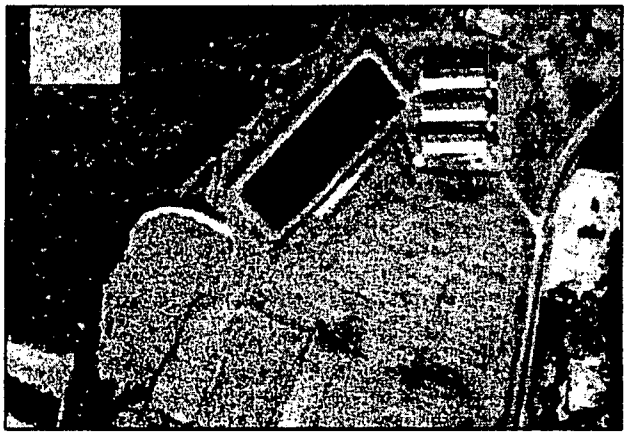
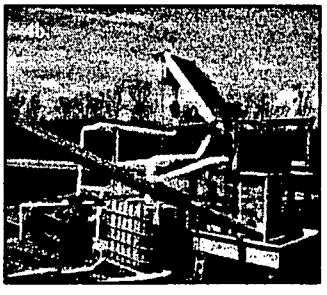
Figures 2a and b. Aerial view of BR Harris Farm and image of fixed – film mesophilic digester with settling tank and fan separator.

The AgriClean technology consists of an EQ tank/pump station, a fixed-film mesophilic anaerobic digester, a setting tank and a Fan separator, with the system receiving waste from five of the 12 finishing houses. The five test houses housed a pressure flush style waste removal system (AgriJet system - not funded through the EST candidate process). Approximately 13,000 gallons of wastewater was delivered daily to the 255,000-gallon mesophilic digester, which was mixed and recirculated through a heat exchanger to provide the target digester temperature of 95°F. Both undigested and settled solids were transferred to a settling/EQ tank, which was designed to deliver the solids through a Fan separator for additional solid separation. Biogas produced as a result of the digestion process was to be utilized as a heat source for the mesophilic digester (heat exchanger). All processed liquid was returned to the existing lagoon.

Environmental Technologies – Red Hill Farm, Ayden, NC – 3,700 head finisher







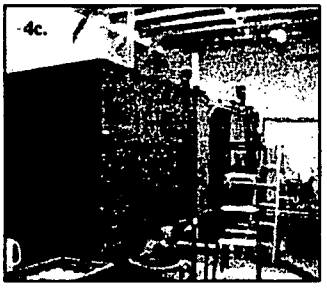


Figure 3. Process flow diagram for Environmental Technologies technology.
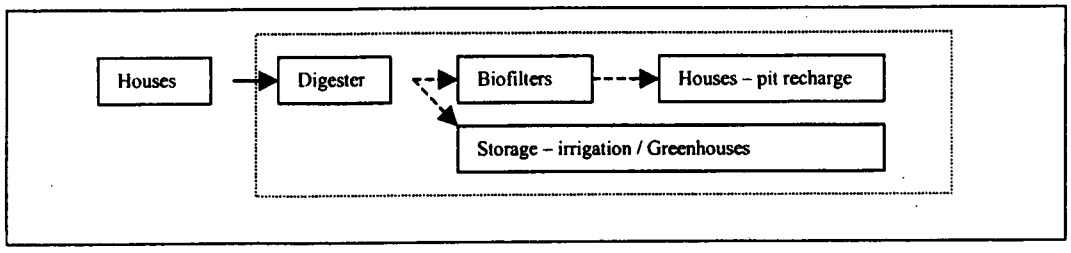
* NORWECO - This system provides a tertiary treatment to water that will be used as animal drinking water through filtration and aeration.



Figures 4 a, b, c and d. Aerial image of Red Hill Farm, solid separation components and NORWECO filtration component of Environmental Technologies technology.

The Environmental Technologies (ET) technology components include an EQ tank, solid separation (mechanical - screen) (4a & b), polymer injection with additional solid separation (settling tank) (4c), and aeration filtration (NORWECO) (4d). Solids separated with the mechanical solid separator were land applied; however, an additional treatment of the solids through mechanical composting was offered as an alternate option. The NORWECO filtration system provides drinking water (with the addition of well water) for the animals housed on the farm.

2.1 Process flow Diagrams and Technical Performance Summaries for all EST Candidates

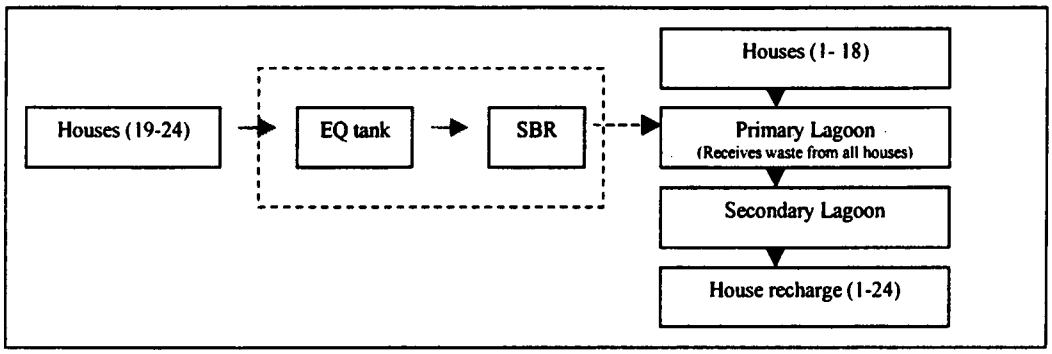
The following diagrams and summary tables are provided as a concise overview and do not provide all of the details that were considered by the Designee and the Advisory Panel needed to evaluate the candidate technologies. Readers are strongly encouraged to refer to the appendices herein as well as in the referenced July 2004 and July 2005 Technology Determination reports for the details of candidate EST.

Ambient Temperature Anaerobic Digester and Greenhouse for Swine Waste Treatment and Bioresource Recovery at "Barham Farm"

Report Summary:

Parameter						
Emissions						
Odor [1]	**200 m day**	**200 m night**	**400 m day**	**400 m night**		
	1.5 / 1.2	4.2 / 3.6	.64 / .46	3.4 / 3.1		
Pathogen[2]	**Fecal coliforms**	**E. coli**	**Enterococci**	**Cl. perfringens**	**Coliphage**	**Salmonella**
Log_{10} Microbial Reductions	4.1	5.2	4.9	2.8	3.7	4.8
NH_3 % Reduction[3]	**Water holding Structures**		**Barn Emissions**		**Total Emissions @ Technology site**	
	Warm Season	**Cool Season**	**Warm Season**	**Cool Season**	**Warm Season**	**Cool Season**
	-66.4	58.8	13.8	-21.5	-11.9	2.5
Nutrients[4] % Reduction	**TKN**	**NH4-N**	**TP**	**Cu**	**Zn**	
Anaerobic Digester	28	+3	81	89	87	
Biofilters	21 (29 trickling biofilters[5])	21	11	33	7	

[1] From Table 4, Executive Summary , page 53. Environmentally Superior Technology candidate projects demonstrated performance for odor reduction. Values shown are approximate average odor intensity ratings at 200 and 400 meters from the odor source during the day and night where 0=none at all; 1=very weak, 2=weak; 3=moderately weak; 4=moderate; 5=moderately strong; 6=strong; 7=very strong; and 8=maximal. The first value represents whole farm odor emissions / the second value represents partitioned emissions from the technology treatment components targeted in the experiment.



[2] From Table 5, Executive Summary, page 54. Environmentally Superior Technology candidate projects demonstrated performance for reductions in pathogenic microorganisms. Values shown are approximate Log_{10} reductions in liquid or solid waste (based on waste stream focus of technology)

[3] From Table 6, Executive Summary, page 55. Environmentally Superior Technology performance for ammonia reduction. Values shown are % reductions as compared to ammonia emissions from comparable conventional technology sites (positive values indicate reductions in emissions, negative values indicate enhancement of emissions).

[4] From Table 3, Executive Summary, page 51. Environmentally Superior Technology candidate projects demonstrated performance for solids, organic matter and nutrients. Values shown are percent reductions and/or recovery.

[5] Value reflects nitrification efficiency of biofilters and also represents annual average. Summer season was reported to be approximately 90% nitrification efficiency.

"ANT" Sequencing batch reactor system

Report Summary:

Parameter

Nutrients[4] % Reduction	TKN	NH4-N	P	Cu	Zn	
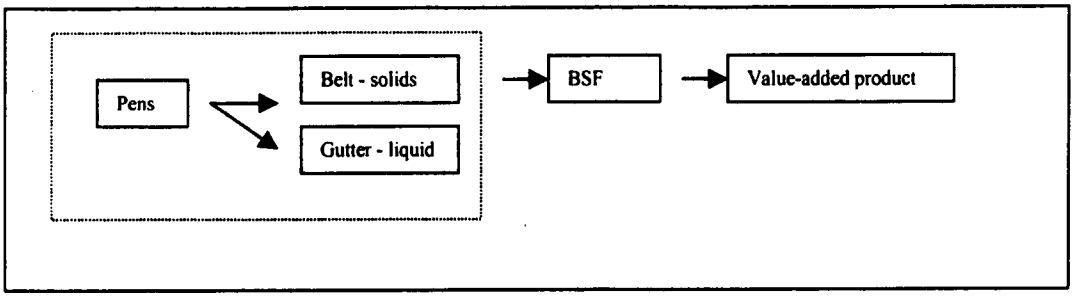
	-	-	-	-	-	



[1] From Table 4, Executive Summary , page 53. Environmentally Superior Technology candidate projects demonstrated performance for odor reduction. Values shown are approximate average odor intensity ratings at 200 and 400 meters from the odor source during the day and night where 0=none at all; 1=very weak, 2=weak; 3=moderately weak; 4=moderate; 5=moderately strong; 6=strong; 7=very strong; and 8=maximal. The first value represents whole farm odor emissions / the second value represents partitioned emissions from the technology treatment components targeted in the experiment.

[2] From Table 5, Executive Summary, page 54. Environmentally Superior Technology candidate projects demonstrated performance for reductions in pathogenic microorganisms. Values shown are approximate Log_{10} reductions in liquid or solid waste (based on waste stream focus of technology)

[3] From Table 6, Executive Summary, page 55. Environmentally Superior Technology performance for ammonia reduction. Values shown are % reductions as compared to ammonia emissions from comparable conventional technology sites (positive values indicate reductions in emissions, negative values indicate enhancement of emissions). This technology did not include animal housing or a lagoon; calculations for ammonia emissions are available in Appendix A.9a – Addendum, Phase 2 Report, Development of Environmentally Superior Technologies, July 25, 2005.

[4] From Table 3, Executive Summary, page 51. Environmentally Superior Technology candidate projects demonstrated performance for solids, organic matter and nutrients. Values shown are percent reductions and/or recovery. This is a system component.

Insect Biomass from Solids (Belt System for Manure Removal - LWFL)

Report Summary:

	-	-	99+ [5] Recovery	99+ Recovery	99+ Recovery	

[1] From Table 4, Executive Summary , page 53. Environmentally Superior Technology candidate projects demonstrated performance for odor reduction. Values shown are approximate average odor intensity ratings at 200 and 400 meters from the odor source during the day and night where 0=none at all; 1=very weak, 2=weak; 3=moderately weak; 4=moderate; 5=moderately strong; 6=strong; 7=very strong; and 8=maximal. The first value represents whole farm odor emissions / the second value represents partitioned emissions from the technology treatment components targeted in the experiment.

[2] From Table 5, Executive Summary, page 54. Environmentally Superior Technology candidate projects demonstrated performance for reductions in pathogenic microorganisms. Values shown are approximate Log_{10} reductions in liquid or solid waste (based on waste stream focus of technology)

[3] From Table 6, Executive Summary, page 55. Environmentally Superior Technology performance for ammonia reduction. Values shown are % reductions as compared to ammonia emissions from comparable conventional technology sites (positive values indicate reductions in emissions, negative values indicate enhancement of emissions).

[4] From Table 3, Executive Summary, page 51. Environmentally Superior Technology candidate projects demonstrated performance for solids, organic matter and nutrients. Values shown are percent reductions and/or recovery.

[5] As currently operated, the only pathway by which solids, COD, BOD, TP, Cu and Zn are removed from the system is in the form of separated and settled solids, which are exported off-farm to the composting operation. With the exception of the Norweco tertiary treatment system (which represents a small fraction of the overall volume of wastewater treated), none of the unit processes that constitute this system are designed to reduce the above species. Therefore, differences between influent and effluent concentrations in these species for a given unit process (and for the system as a whole) are assumed to represent sampling and/or measurement error. It is expected that some nitrogen will be lost from the system due to ammonia volatilization and that some solids, COD, and BOD will be lost due to microbial activity in this aerobic process, but the majority of these species will be exported off-farm with the separated and settled solids to the composting operation. Measurements were not sensitive enough to determine the magnitude of these nitrogen, solids, COD and BOD losses during treatment. Virtually all phosphorous, copper and zinc will be recovered if the system is operated as planned because these species are not volatile and will only leave the system through the separated and settled solids.

3.0 Determination of Technical Performance and Standards

Process: The 15-step systematic process for the competitive selection, site location determination, permitting, construction, and study of the candidate EST per the terms and conditions of the Agreements was previously described.[1] Experimental site location information for each candidate technology studied is shown in Table 2. Technology descriptions and process flow diagrams are shown in Section 2.0 and elsewhere in this report. Each candidate technology was assessed for technical, operational, and economic feasibility. This section of the report focuses on the technical performance standards.

Technical performance standards: The Agreements specify that a successful EST must meet the following performance standards:

1. "Eliminate the discharge of animal waste to surface waters and groundwater through direct discharge, seepage, or runoff;
2. Substantially eliminate atmospheric emissions of ammonia;
3. Substantially eliminate the emission of odor that is detectable beyond the boundaries of the parcel or tract of land on which the swine farm is located;
4. Substantially eliminate the release of disease-transmitting vectors and airborne pathogens; and
5. Substantially eliminate nutrient and heavy metal contamination of soil and groundwater."

These performance standards were established by the North Carolina General Assembly[2] and used as the basis for technical environmental performance standards in the Agreements. An Engineering Subcommittee comprised of appointed members of the advisory panel referenced in Section 1.0 of this report compiled a recommendation document that served as the basis of further defining and quantifying the five technical performance criteria outlined above.[3] Interpretation and conclusions regarding the Engineering Subcommittee recommendations are discussed in Section 3.0 of the referenced July 26, 2004 report. In brief they are as follows:

Eliminate the discharge of animal waste to surface waters and groundwater through direct discharge, seepage, or runoff.

All wastewater-holding structures must have a mechanism for containing the flow rate of the largest pump in the system for the maximum amount of time that an operator will not be on-site. Technologies should contain less than the volume equivalent of one month of

flow in concentrated waste prior to complete treatment. Any earthen structures should be designed and constructed to current Natural Resource Conservation Service (NRCS) standards and have a maximum hydraulic conductivity of 1.25×10^{-6} cm/sec. Structures other than earthen should be designed and constructed using proper engineering practices to eliminate seepage. Solids storage structures should meet current NRCS design standards. Land application of treated wastewater or solids should be based on realistic crop yield expectations, land application setbacks, buffers, and hydraulic loading rates that at a minimum maintain compliance with current NRCS, local, state, and federal standards and/or requirements.

Substantially eliminate atmospheric emissions of ammonia.

An approximately 80% reduction of ammonia emissions from waste storage/treatment components and land application areas is required as compared to a typical swine farm. The system must also target reduction of ammonia from the barns.

Substantially eliminate the emission of odor that is detectable beyond the boundaries of the parcel or tract of land on which the swine farm is located.

Odor intensity levels, measured using an index scale from 0-8, should not exceed the established metric of 2 (or equivalent) at a property line on which the swine farm is located (see Table 4 and Appendix A.3 of report herein for specific description of index scale).

Substantially eliminate the release of disease-transmitting vectors and airborne pathogens.

Approximately 4 log reductions of pathogens (microorganisms documented to be of human health concern) are required in the treated liquid and solid waste stream, as compared to concentrations of the pathogens in raw manure. All components of the waste management system (technology treatment, fate of farm generated solids, method and location of land application of liquid and/or solids, etc.) are considered factors for pathogen reductions.

Substantially eliminate nutrient and heavy metal contamination of soil and groundwater.

The system should reduce total nitrogen mass by 75% and total phosphorus, copper, and zinc mass by 50% from influent levels for the whole farm. Current N.C. NRCS Nutrient Management Standard 590 must be met, including added considerations of current realistic yield expectations, individual plant-available nitrogen calculations, N.C. Phosphorus Loss Assessment Tool (PLAT) evaluation to determine phosphorus loss and application rates, and metal soil index threshold warnings. Where on-farm resources (i.e., available land) are not sufficient to meet these described standards, reductions may be met by transporting the nutrients off the farm and/or animal diet modification.

Technical data analysis: The data considered for the technical analysis involved the candidate waste treatment systems' performance in terms of: 1) partitioning, conversion or removal of the waste stream solids and organic matter, nutrients (primarily nitrogen and phosphorus), and metals (copper and zinc); and 2) reducing emissions of odor, pathogens, and emissions of ammonia. The methods and results, relevant to the technical environmental performance data, are provided in the project investigator final reports (Appendix A of this report and Appendix A in both the referenced July 2004 and July 2005 reports). Data from these reports relative to the technical feasibility determinations are summarized in Tables 3-6 of this report.

In addition to technical feasibility, operation feasibility was also mandated by the Agreements. Although specific factors for determining operational feasibility are not described in the Agreements, inputs from the project investigators involved with the technical data collection and analysis of the candidate waste treatment systems as well as input from the technology suppliers were considered. Parameters such as: operator hours required per week; system inspection needs; maintenance of "moving parts," required skills; trouble shooting pumps, equipment, and electrical controls, etc. were considered. In addition, NCDENR was consulted regarding operator certification and license requirements. Operational feasibility information for the Phase 2 targeted technologies is provided in Table 7.

4.0 Technology Permittability and Category or Categories of Farms

Permittability: The Agreements specify that any technology or combination of technologies that meet unconditional EST status must be "permittable by the appropriate governmental authority." In North Carolina the Department of Environment and Natural Resources (NCDENR) and its Division of Water Quality, Division of Air Quality, and Division of Waste Management are specifically involved with the permitting and regulatory aspects of the EST projects. NCDENR is represented (with two members) on the Agreements appointed advisory panel (see Appendix E).

Category or Categories of Farms:[1] The Agreements reference, in several sections, EST for identified "category or categories of farms." Further, the Agreements specify, "the categories may be determined based on farm size, geographic location, the geographic concentration of the hog population, the type of farm, and any other factors the Designee deems appropriate."

For the objectives related to the EST determinations, categories of farms are based on the types of North Carolina swine farms and the distribution of weight across these farms. This is based on input and study by the investigators conducting the economic feasibility analysis needed to partition the representative swine farms for the economic modeling of farm sizes to compute cost estimates and industry impact of adoption for all candidate EST technologies. The category distribution used and as described by the economic team investigators (see Appendix B.1) is summarized as follows.

The production process for market hogs is comprised of three primary stages — farrow-to-wean, wean-to-feeder, and feeder-to-finish. Farrow-to-wean farms house sows during their breeding, gestation, farrowing, and nursing stages. Sows nurse newborn pigs until weaning, which typically occurs 18 to 23 days after a litter of pigs is born. The pigs may weigh 10-12 pounds at weaning. The weaned pigs are moved to a nursery facility to begin the second stage of the production process. Pigs will remain in the nursery (also called wean-to-feeder stage) for 7-10 weeks, enabling them to reach a weight of 45-55 pounds. Finally, the pigs are moved to another facility to enter the feeder-to-finish stage. In this stage, pigs will add approximately 200 pounds of bodyweight over a period of 16 weeks. At a live weight of approximately 260 pounds and an age of about six months, the pigs will be marketed for slaughter. Thus, the three primary stages of the hog production process can be combined to form five types of hog farming operations: 1) farrow-to-wean, 2) farrow-to-feeder, 3) farrow-to-finish, 4) wean-to-feeder, and 5) feeder-to-finish. The majority of North Carolina's hog farms concentrate on one stage of production, but some include two (farrow-to-feeder) or three (farrow-to-finish) stages.

Farms with inventories of greater than 250 hogs are required to obtain a permit through the NCDENR. Data recorded in the permit database include the permitted capacity of the farm in number of head of each type of pig (breeding animals, nursery pigs, and feeder to finish pigs) and the associated steady state live weight (SSLW). By partitioning the farm

[1] Information in this section compiled, in part, from reports submitted by the project investigators conducting the economic feasibility determinations.

size into categories of 0-500 SSLW, 500-1,000 SSLW, 1,000-1,500 SSLW, 1,500-2,000 SSLW, and >2,000 SSLW, and using the five types of hog farming operations described above, 25 possible combinations of farm size and type of operation result. These 25 possible combinations include all permitted hog farms in the state and are used as the basis for "category or categories of farms" as applicable to the Agreements.

In addition to these categories, an additional category of farm, "new farms" relative to the permitting and construction of new swine farms in North Carolina, is also considered by the Designee.

5.0 Determination of Economic Feasibility

The Agreements specify, "In determining whether it is economically feasible to construct and operate a particular alternative technology for a category of farms, the Designee will consider all relevant information including but not limited to the following factors:

1) the projected 10-year annualized cost (including capital, operational and maintenance costs) of each alternative technology expressed as a cost per 1000 pounds of steady state live weight for each category of farm system;
2) the projected 10-year annualized cost (including capital, operational and maintenance costs) per 1000 pounds of steady state live weight for each category of farm system of a lagoon and sprayfield system that is designed, constructed and operated in accordance with current laws, regulations, and standards, including NRCS design, construction and waste utilization standards;
3) projected revenues, including income from waste treatment byproduct utilization, together with any cost savings from the new technology;
4) available cost-share monies or other financial or technical assistance from federal, state or other public sources, including tax incentives or credits; and
5) the impact that the adoption of alternative technologies may have on the competitiveness of the North Carolina pork industry as compared to the pork industry in other states."

Data analysis: Pursuant to factors 1-4, the project investigators conducting this work compiled extensive costs and returns data for each candidate EST. The cost and returns analysis, collectively reported in the July 2005 report as Appendices B.1a. – B.1.i, and herein as Appendices B.1 – B.11, and summarized for all technologies as Table 8a, predicts the estimated costs of retrofitting North Carolina swine farms with candidate EST. The costs are projected as incremental costs, e.g. additional costs to the existing lagoon and spray field system on a farm site. Projected revenues from by-products plus avoided costs in operating the lagoon and spray field system are considered in each case estimate. As mandated by the Agreements, the net costs are reported based on the following metric: $ per 1000 pounds steady state live-weight per year ($ / 1,000 lbs. SSLW / year) over a 10 year economic life. Table 8a is organized to show results for on farm complete systems and separated solids treatment systems ("add on" treatment components). Table 8b shows a sensitivity analysis on solids treatment systems focusing on the impact of solids separation rate and moisture content of solids on the annualized incremental costs metric ($ / 1,000 lbs. SSLW / year). Table 8c is a sensitivity analysis showing the effect in varying assumed interest rates, expected economic life, and overhead rates for the on-farm systems; Table 8d shows the same for the "add-on" treatment components.

Pursuant to factor 5, this cost data was subsequently utilized to predict the impacts of adopting EST technologies on the competitiveness of the NC pork industry, (methodology and analysis data previously reported in detail in the July 2005 report as Appendix B.2) and summarized herein in Table 9. An equilibrium displacement model was used to estimate the economic impacts for different types of producers across farm

operational size (farm categories) relative to prices and quantities of animals produced as projected for implementation of the candidate EST. Table 9 is organized to show the predicted percent change in the inventory of North Carolina hogs (reported in quantities of 1,000 lbs. of weight) in the short, intermediate, and long runs for selected incremental costs as determined by the referenced displacement model.

In brief the collective economic data, regarding the above referenced factors 1-5 indicates:

1) the projected additional costs of retrofitting existing lagoon sprayfield farms with candidate EST for a complete treatment system (liquid and solids treatment) ranges between approximately $90 to over $400 per unit cost ($ per 1,000 lbs. steady state live weight per year) (see Table 8a); this compares to approximately $85, utilizing the same costs metric, for the predicted costs of constructing a permitted lagoon spray field system in North Carolina in 2004 (see Appendix B.1, July 2005 report) ; these values, however, can be significantly impacted by assumptions relative to interest rates, expected economic life of the technology, and overhead rates,
2) long term impacts on adopting candidate EST may result in annual reductions in the North Carolina inventory of pork; at present there is considerable uncertainty in the predicted magnitude of this impact, the values range between a low of 8% to the *entire herd inventory* to greater than 50% of *market quantities* of pork (see Table 9),
3) various sources of financial support, including cost share programs, may be available in the future with the most promising opportunities for technologies that generate energy, however, no significant sources of such support are currently available.

In addition to the Agreement mandated factors enumerated above, the Designee expanded the scope of the economic feasibility to also include the following factors:

1) identify and quantify the pathways by which the adoption of new waste management technologies changes pollutant emissions to air and water and affects environmental quality; and,
2) estimate the monetized benefits to North Carolina households of the changes in environmental quality achieved by implementing alternative waste management technologies.

RTI International (RTI) conducted this scope of work (see Appendix C, July 2004 report). The benefits analyses information will be utilized for distinguishing among technologies that qualify as EST such that the maximum benefits are realized for the citizens of North Carolina. However, as noted by RTI in the report, the information was developed using the best available methods and data available but the estimates should not be interpreted as complete or precise monetized estimates of the total benefits of reducing swine-related environmental residuals in the state of North Carolina (see Section 1.2.2, pages 1-11 and 1-12 of the RTI report).

Recommendations for economic feasibility determinations: Quantitatively defining "economic feasibility" relative to requirements for unconditional EST has been one of the more challenging, and controversial, tasks for this initiative. To provide guidance and recommendations on this subject, the Designee appointed a 10 member Economics Subcommittee, made up of all appointed panel members with economics experience. In addition, panel members representing North Carolina Environmental Defense, Smithfield, PSF, and Frontline Farmers were also represented; Richard Whisnant, Associate Professor of Public Law and Government, School of Government, UNC-Chapel Hill, was appointed chair.

After much deliberation most of the 10 subcommittee members were in agreement on many aspects of a recommended methodology for making economic feasibility determinations, summarized as follows:

- Designee should consider economic versus financial points of view regarding feasibility – e.g. in addition to the financial consequences which focus on payments made by farmers, the Agreements require attention to the true economic consequences, including non-monetized commitment of resources.
- The economic models used to determine the costs-returns and predicted impact on the competitiveness of the industry when utilizing the determined EST costs are well reasoned and well justified and thoroughly conducted but include uncertainty and many assumptions (the same conclusions were derived by external ad hoc reviewers).
- In consideration of who makes up the North Carolina pork industry, Designee should consider any and all business entities physically located in North Carolina that generate their income from either the production of live swine or the meat packing of pork.
- It is economically appropriate to implement EST in phases, allowing pilot testing and refinement of the technologies before they are adopted industry wide. New farm categories and company owned farms are appropriate and obvious candidates for this approach.
- The time frame for adoption of EST is important relative to the time value of money and assessing economic feasibility, e.g. additional time for implementation reduces the economic impacts on North Carolina swine herd size.

However, on the issue of threshold for "competitiveness" (Agreements mandated factor 5 discussed above), as well as on the issues of creating an institution to oversee technology transition, and consideration of social costs-benefits (social costs resulting from external effects from ammonia emissions, odors and water pollution), the committee members were divided and unable to reach consensus as reflected in two competing reports that were submitted to the Designee and presented herein as Appendix D. In brief, salient non-consensus components of the two reports can be summarized as follows.

From report (dated December 1, 2005) submitted by Chair Richard Whisnant and 5 additional subcommittee members

- Competitiveness does not mean maintaining the present North Carolina hog inventory size and does not mean avoiding any net increase in waste handling costs. Designee should consider that implementation of EST that has a predicted economic consequence of reducing the North Carolina swine herd by 12% economically feasible. This is, in part, justified based on precedent established by the North Carolina General Assembly upon adoption in 1993 of the so called ".0200 Rules", which were predicted to result in 12% of the State's swine operations not remaining in business.
- Institutional considerations should be studied in consideration of EST implementation planning, e.g. an institution created to oversee technology transition, tradable permits, etc. would ensure that widespread conversion occurs in the most economically feasible manner possible.

From report (dated December 2, 2005) submitted by 4 subcommittee members

- The Agreements did not seek to close farms or otherwise reduce herd size in North Carolina.
- A hog production entity becomes non-competitive when its inability to fund production results in lost market share and an EST is economically feasible if and only if the commercial application of the technology in only North Carolina has no adverse affect, e.g. no net increase in cost or reduction in herd size, on the fiscal competitiveness of North Carolina operations as compared to pork operations in all other states.
- Byproduct revenue from EST must exist to offset any higher operating and capital costs of the EST and the best opportunity for the candidate EST studied is fossil fuel substitutes.

The Designee considers that both reports make several valid arguments and has carefully considered both reports as well as inputs from the full Advisory Panel regarding both reports. Based on those considerations the Designee makes the following economic feasibility determination with the understanding that it is not to be viewed as a fixed standard or cost metric for economic feasibility:

A technology may be economically feasible even though it would impose incremental cost increases on the North Carolina swine industry and potentially result in a reduction in swine herd size in North Carolina. Technologies will be considered candidates for EST Determinations only if the maximum predicted reduction in herd size resulting from implementation would not exceed 12 percent. The Designee will be responsible for determining whether the predicted herd size reduction that would result from the implementation of a technology is sufficiently accurate to consider it a candidate for determination as an EST. The Designee will also be responsible for determining, and limiting his determination and implementation recommendations to a category, or categories of farms, to ensure that an EST Determination would not result in unintended

negative impacts and consequences for other farms which are dependent on the EST farms for their ongoing supply of production animals.

The rationale for this economic feasibility determination is based largely on the following factors and concerns.

It is not logical to accept the suggestion that adoption of state specific cost differences, for any commodity, that has any impact at all on raising costs for that commodity is economically infeasible. The December 1, 2005 subcommittee report and its attachments make clear and defensible arguments to support this determination.

There is no compelling advantage at this time to establish a fixed cost metric for economic feasibility. Candidate ESTs for a complete treatment system (liquid and solids) that have been shown to meet the technical performance standards greatly exceed, at the current time, costs that would result in a prediction of 12 percent reduction of herd size in North Carolina. Work is already in progress, and proposed herein, for reducing those costs. Establishment of a fixed cost metric at this time may adversely affect those initiatives. Further, Designee does not believe that at this time, with the available information, it is possible to establish a sufficiently small margin of error around a predicted reduction in herd size. Therefore, the Designee feels that the probability of greatly exceeding the predicted 12 percent herd size reduction at costs associated with that estimate in the referenced economic model is unacceptable at the present time and I am currently not willing to mandate an effect that could potentially be that significant.

It is also noted that the incremental cost metric predicting a 12 percent reduction in herd size may be low when farrow to feeder and farrow to wean pig costs are considered along with market hog costs (this is based on information submitted by the authors of the "Majority" subcommittee report subsequent to December 1, 2005).

The estimates of economic impact on the North Carolina pork industry do not take into account the potential positive effects that investment in environmentally superior waste technology will have on the part of the North Carolina pork industry devoted to producing and servicing the waste technology itself.

Designee considers that these collective uncertainties and factors associated with the predicted impacts on the industry are substantial. All these factors suggest that a specific fixed cost metric for "economic feasibility" would be very premature at this time.

And finally, Designee feels that the subcommittee reports made valuable arguments regarding institutional and political approaches to addressing the economic feasibility issues. Relative to those arguments and next steps recommended herein, I have serious concerns that adoption of a fixed economic cost metric at this time will adversely influence future public policy related to byproduct valuation (especially energy) for candidate EST.

6.0 Environmentally Superior Technology Determinations

Technology Determinations: Based on responsibilities as described in the Agreements, review of project investigator reported performance and economic data, economic models, and Advisory Panel inputs, the following technology determinations are made at this time:

New farm category

Designee concludes that the solids separation / nitrification–denitrification / soluble phosphorus removal system ("Super Soils" technology as described in the July 26, 2004 report[1]) in combination with any one of the following four solids treatment systems: the high solids anaerobic digester ("ORBIT" technology as described in the July 26, 2004 report); "Super Soil Systems" centralized composting system; gasification for elimination of swine waste solids with recovery of value-added products system; and "BEST" – fluidized bed combustion of solids system (the latter 3 systems as described in the July 25, 2005 report[2]) comprise an unconditional Environmentally Superior Technology for new farms which are permitted and constructed for the first time after the date of this report. This determination is limited to the following types of farms: farms using EST on sites that have not been used previously for the production of swine ("Greenfields"); construction of new swine facilities using the EST on farms which previously housed swine, but which are no longer permitted for that purpose; and expansions (for purposes of increasing permitted herd size) of existing swine farms using the EST to treat waste for new construction on such existing swine farms. In the case of expansions, this determination applies only to the waste generated from the expansion.

It is recognized by the Designee that, as shown through this series of studies including the comprehensive economic analyses, any combinations of these technologies comprise significant costs and producers are encouraged to carefully take into account the available economic data when considering implementation of these technologies. It is also noted that the data show that any of the referenced technology combinations produce wastewater and solids that will need to be managed in accordance with applicable state and federal regulations. However, given the transparency of this data, and the recommendations contained within the December 1, 2005 Economics Subcommittee report (see Appendix D, page 12-13) regarding the advantages of phased implementation beginning on new farms, Designee concurs with the Economics Subcommittee findings on this matter and considers this determination well justified. Further, each of these technologies have been documented to meet environmental performance standards established by the Agreements and the North Carolina General Assembly (per the

[1] See Development of Environmentally Superior Technologies: Phase 1 Technology Determination Report, published by NCSU College of Agriculture and Life Sciences, 941 pgs, on file with NCSU Animal and Poultry Waste Management Center (July 26, 2004). Also available at www.cals.ncsu.edu/waste_mgt/

[2] See Development of Environmentally Superior Technologies. 2005. Phase 2 Technology Determination Report, published by NCSU College of Agriculture and Life Sciences, 1428 pgs, on file with NCSU Animal and Poultry Waste Management Center (July 25, 2005). Also available at www.cals.ncsu.edu/waste_mgt/

Innovative Technologies clause of the moratorium legislation[3]) and their non-mandated implementation (e.g. onto new or expanding farms) should be encouraged for reasons described herein.

Existing farm categories

Designee concludes that contingent EST, as described in the above referenced July 2004 and 2005 reports, have not at the current time met economic feasibility conditions required for unconditional EST to be implemented onto existing farm categories in North Carolina.

Scope of Technology Determinations

The scope of the technology determinations herein is considered final and inclusive of the candidate technologies described in Table 1 of this report and all categories of farms as described in Section 4.0 of the above referenced July 26, 2004 Phase 1 report. Any subsequent technology determinations, including contingent determinations that have been described in the referenced July 2004 and July 2005 reports, and also including technologies under development by parties to the Agreements that were referenced in those reports, that may be made by Designee will be based on available data and appropriate outside critical review and inputs resulting from efforts that go beyond those described in this report.

It has been noted herein as well as in the previously issued Technology Determination reports that several of the candidate technologies studied under this initiative have significant potential. Recommendations regarding those technologies are discussed in Section 7.0 of this report.

[3] See General Assembly of North Carolina, Session 1997, Session Law 1998-188, House Bill 1480

7.0 Recommended Next Steps

The findings provided herein, and in the previously issued (July 2004 and 2005 Phase 1 and 2 Technology Determination Reports) represent a comprehensive and unprecedented effort to develop and determine the costs and effects of implementing innovative waste treatment technology onto swine farms in North Carolina. Collectively, the results show:

- A combination of 5 technologies meet technical performance standards that have been established by the North Carolina General Assembly and parties to the Agreements that define Environmentally Superior Technology,

- With technical modifications and improvements (some of which may need to only be minor), several of the additional technologies considered in this initiative may meet the technical performance criteria,

- The technologies studied which have been shown to meet the technical performance standards and would be required for a complete liquid and solids treatment system significantly exceed the threshold cost metric for determination of economic feasibility as recommended by an appointed Economics Subcommittee (see "Majority Report", Appendix D).

Based on these findings and the Technology Determination described in Section 6.0 of this report, the recommended next steps are proposed:

- Continue, as expeditiously as possible, current efforts by targeted technology suppliers and researchers to improve upon their treatment processes to reduce the costs of their respective treatment systems.

- Establish a framework or process by which additional technologies may be considered viable Environmentally Superior Technologies. This would include technologies that can be improved upon (technically and / or operationally and / or economically) as a result of information derived from this initiative, as well as technologies that were not part of this funded initiative.

- Identify potential institutional incentives, public policies, and markets related to the sale of byproducts (with priority on energy production) that will reward farmers for utilizing technologies identified by this process that are shown to yield improvements and environmental benefits over the current lagoon spray field system. The optimal method of achieving net cost reductions and even positive revenue flows from alternative technologies is to install targeted technologies on a sufficient number of farms to facilitate engineering improvements, value-added product market development, and other cost reduction methods.

ACKNOWLEDGEMENTS

Acknowledgement and sincere appreciation are expressed to the following: Advisory Panel members; all project principal investigators, co-investigators, and collaborators; farm property owners and operators; technology suppliers; construction and permit on site project technical managers; Animal and Poultry Waste Management Center staff; North Carolina Department of Environment and Natural Resources; North Carolina Department of Justice; North Carolina State University administration; and, finally the companies that entered into the Agreements (Smithfield, PSF, and Frontline Farmers).

Without the resources, inputs, and support of these individuals, agencies, and organizations, the findings noted in this report would not have been possible.

Appreciation is also expressed to the NCSU College of Agriculture and Life Sciences Communication Services for assistance with format and web copy compilation of this report.

C.M. Williams, Agreements' Designee

[1] Values derived primarily from Project Investigator Final Reports. Full reports are available at http://www.cals.ncsu.edu/waste_mgt/ or upon request from the NCSU Animal and Poultry Waste Management Center, on file with C.M. Williams. Some values reflect concentration reductions / recoveries due to nature of waste stream.
[2] TAN = Total Ammonia Nitrogen
[3] TKN = Total Kjeldahl Nitrogen
[4] Solids = Type reported, e.g. suspended, total, volatile noted within each table cell
[5] COD = Chemical Oxygen Demand
[6] BOD = Biochemical Oxygen Demand (5-d)
[7] TP = Total Phosphorus
[8] Values reflect reductions from house effluent (pre digester) through digester unless otherwise noted.
[9] Value reflects nitrification efficiency of biofilters and also represents annual average. Summer season was reported to be approximately 90% nitrification efficiency.
[10] NR = not reported
[11] LWRFL = NCSU Lake Wheeler Road Field Laboratory.
[12] Values reflect reductions from FAN® or Filtramat™ influents (pre-separation) through TFS effluents. Note: project was comprised of two solids/liquid separation systems; a screw-press separator (FAN® Separator) followed by tangential flow gravity-settling tanks (TFS System) located on Farm Site 1; and a screen and hydraulic press separator (Filtramat™) followed by the TFS System located on Farm Site 2. The separated solids for each of the 2 systems (FAN and Filtramat) averaged approximately 30% dry matter. For explanation of the reported negative nutrient recovery values related to the total systems (FAN or Filtramat combined with the TFS System) see page 10 of the Project Investigator Final Report.

[13] Values reflect reductions from EQ tank (post solids separation) through biofilter treatment of 2nd stage. Range and (mean) reductions for monthly averages (2/25/03 – 6/27/03) for Biofilters series A and B.
[14] Based on values in Table 1, page 18 of Project Investigator Final report.
[15] Based on values in Table A-4, page 31 of Project Investigator Final Report.
[16] Based on values in Table A-11, page 35 of Project Investigator Final Report.
[17] Based on values in Table A-17, page 36 of Project Investigator Final Report.
[18] Based on values in Table A-18, page 37 of Project Investigator Final Report.
[19] Values reflect reductions noted for primary technology only; water reuse not included
[20] Values reflect reductions from digester feedstock and post digestion.
[21] Values reflect reduction from Cell 1 influent (post solids separation) through Cell 2.
[22] Values reflect reduction from house effluent (pre solids separation) through P removal unit.
[23] Virtually all P, Cu, and Zn are recovered if the system is operated as planned because these species are not volatile and will only leave the system through the separated and settled solids.

Table 4. Environmentally Superior Technology candidate projects demonstrated odor reduction performance. Values shown are approximate average odor intensity ratings at 200 and 400 meters from odor source during the day and night where 0=none at all; 1=very weak, 2=weak; 3=moderately weak; 4=moderate; 5=moderately strong; 6=strong; 7=very strong; and 8=maximal. First value represents whole farm odor emissions; second value represents partitioned emissions from the technology treatment components targeted in the experiment.[1]

[1] Values derived from Project Investigator Final Report.

Table 6. Environmentally Superior Technology performance for ammonia reduction. Values shown are % reductions as compared to ammonia emissions from comparable conventional technology sites[1] (positive values indicate reductions in emissions, negative values indicate enhancement of emissions). (Table derived from project investigators report, see Appendix A. 9).
Note: Some of these values represent combined whole farm site emissions that are outside of the candidate EST unit process. For determination of EST for ammonia emissions, partitioned data regarding performance of the unit process was considered when possible.

[1]Conventional technology sites included a primary anaerobic lagoon and either tunnel (Moore Brothers farm) or naturally (Stokes farm) ventilated houses.
[2]Percent reductions in water holding structures are based against average lagoon ammonia emissions measured at both conventional farm sites for the respective season. Percent reductions in barn emissions are based against the conventional technology using the corresponding housing ventilation technique.
[3]Percent emission reduction figures are calculated using a precise algorithm that is documented in the respective reports for each technology. The summary numbers provided in this table should not be averaged or combined in any fashion across components of the technologies or across season.
[4]Unless otherwise noted, percent reduction in emissions from water holding structures means emissions from all measured structures at a technology were combined together for a single season to arrive at the single percetn reduction figure.
[5] This technology had no accompanying water holding structures or animal barns. This was due to the configuration and location of the technology.
[6] Right hand box represents the warm season evaluation of Harrell's with the irrigation system. The total emissions were not calculated for this evaluation as no barn measurements were taken at this time

Table 6 (continued)						
Technology	**% Reduction in Emissions from Water Holding Structures[2]**		**% Reduction in Barn Emissions**		**Total % Emission Reduction at Technology site[3,4]**

Table 7. [redacted]vironmentally Superior Technology candidate project operational feasibility information.

Technology	Operator hours/week	Operator skills	Operator certification / license requirements
Conventional (Stokes)	10	Record keeping, irrigation equipment operation and maintenance. All aspects of planting, harvesting crops receiving lagoon effluent.	Licensed "Operator in Charge" per NCDENR requirements.
Conventional (Moore Bros.)	10	Record keeping, irrigation equipment operation and maintenance. All aspects of planting, harvesting crops receiving lagoon effluent.	Licensed "Operator in Charge" per NCDENR requirements.
Ambient Temperature Anaerobic Digester and Greenhouse for Swine Waste Treatment and Bioresource Recovery at "Barham Farm"	2.5 hours/week (for anaerobic digester, engine, generator, and nitrification biofilters only)	Trouble-shooting pumps, blower, and piping.	TBD[1]
"ANT" sequencing batch reactor system	< 20	HS education or higher with mechanical and electrical skills – working knowledge of physical and chemical lab tests – computer knowledge – capable of troubleshooting pumps and pipes	TBD – on-site training for 1 month
BELT (Grinnells lab)			TBD
BELT (LWR site)	1.0 (belt system to remove solids and liquid from barn only)	Trouble-shoot mechanical systems (motors and drive unit)	TBD
"BEST" Site 1 (FAN® + TFS)	14	Trouble-shooting pumps, equipment and electrical controls	TBD
"BEST" Site 2 (Filtramat™ + TFS)	16	Trouble-shooting pumps, equipment and electrical controls	TBD
Constructed wetlands / Solids separation	7	HS education and mechanical skills	None.
"EKOKAN"	20	Trouble-shooting pumps, equipment, electrical controls and computer controls. Knowledge of system operation and principles of nitrificaton treatment in order to make changes in operation if needed.	TBD
Gasification of Solids / Belt System	15 (farm) 40(centralized)	Record keeping, knowledge of gasification process, mechanical skills / more specialized for centralized facility	TBD
"ISSUES"- Aerobic blanket	5	HS education and mechanical skills– capable of troubleshooting pumps, pipes, and nozzles.	None.
"ISSUES" – Permeable cover	5	HS education and mechanical skills–capable of troubleshooting pumps, and pipes	None.
"ISSUES" – mesophilic digester/ microturbine/ water reuse system	30 - 40	HS education or higher with mechanical and electrical skills – computer knowledge – capable of trouble-shooting pumps and pipes	TBD (microturbine)
ORBIT	40	Mixes feedstocks, feeds digesters, performs lab tests, keeps records, operates forklift, maintains equipment, repairs equipment	TBD
"RECIP"	0.75 (ReCip Cells w/o solid separation only)	Trouble-shoot pumps and electrical controls	TBD
SUPER SOILS	20	Simple trouble-shooting, identification and reporting of problems, automation controls	TBD
"Super Soils" Compost System	13.3	HS education and mechanical skills	None. Operator receives 1-week training by company
"AgriClean" Mesophilic digester and "AgriJet" flush system	5	HS education and mechanical skills– capable of troubleshooting pumps, pipes, and nozzles.	
"Environmental Technologies" - Sustainable NC and Frontline Farmers project / Composter	20 - 30	HS education or higher with mechanical and electrical skills – computer knowledge – capable of trouble-shooting pumps and pipes	

[1] TBD = To be determined. Information provided by NCDENR indicated that currently the Water Pollution Control System Operators Certification Commission (WPCSOCC) is taking no action on classifying any of these systems until final determinations have been made. After determinations are made, it has been discussed that specific classifications will be made for each type of system using training materials developed by the technology providers and approved by the Division. The classifications will be specific to the technology and the certified operator must follow the training developed for the specific technology. All technology providers are required by their permit to develop and submit a comprehensive operator training program for approval if the system is to remain operational. The WPCSOCC rules allow for this type of classification based on treatment processes that are sufficiently different from the conventional treatment process (15A NCAC 8G .0308).

Table 8a. Predicted Annualized Incremental Costs[1] (Task 1) of the EST Candidate Technologies

Technology	Annualized Cost[1] ($ / 1,000 lbs. SSLW / year)
Baseline (lagoon and sprayfield)	$86.81
On-Farm Complete Systems	**Annualized Incremental Cost[1] ($ /1,000 lbs. SSLW / year)**
AgriClean	Insufficient data
ANT Sequencing Batch Reactor (SBR)	$221.43
Barham Farm	$89.17
Belt System	$89.39
BEST (FAN + TFS)	$114.56
BEST (Filtramat + TFS)	$146.50
Constructed Wetlands	$168.05
EKOKAN	$342.26
Environmental Technologies (Sustainable NC-Frontline Farmers)	$136.70
ISSUES Aerobic Blanket System (ABS)	$95.02
ISSUES Permeable Cover System (PCS)	$114.52
ISSUES RENEW	$125.93
Re-Cip	$143.21
Super Soils	$399.71
Separated Solids Treatment Systems (Add-On Technologies)[2,3] (assumes 0.43 dry tons of solids collected / 1,000 lbs. SSLW / year)	**Annualized Incremental Cost[1] ($ / 1,000 lbs. SSLW / year)**
BEST Idaho (centralized fluidized bed combustion facility)	$255.68
Gasifier (RE-Cycle)	$76.33
High Solids Anaerobic Digester (ORBIT)	$373.22
Insect Biomass from Solids (black soldier fly)	Insufficient data
Super Soils Composting Facility	$83.27

[1] Annualized costs as shown in this table are calculated for a 4,320-head finishing farm using a pit-recharge system of manure removal and nitrogen-based land application to forages.

[2] The annualized incremental costs for the solids treatment technologies include the avoided cost of on-farm land application of solids. That is, ($ / 1,000 lbs. SSLW / yr.) = ($ / dry ton technology cost - $ / dry ton avoided land application cost) * (dry tons of solids / 1,000 lbs. SSLW / yr.). By accounting for avoided land application costs, the incremental annualized costs for the solids treatment systems can be added directly to the incremental annualized costs for complete on-farm systems (which include the cost of land applying solids).

[3] See separate technology reports for additional analysis of break even prices for product sales.

Table 8b. Sensitivity Analysis on Solids Treatment Systems: The Impact of Solids Separation Rate on Annualized Incremental Costs ($ / 1,000 lbs. SSLW / year)

Technology	Moisture Content of Solids[1]	$ / Dry Ton[2] Treated/Processed	Low Separation Rate[3]	Medium Separation Rate[4]	High Separation Rate[5]
			(0.15 dry tons of solids / 1,000 lbs. SSLW / yr.)	(0.43 dry tons of solids / 1,000 lbs. SSLW / yr.)	(1.14 dry tons of solids / 1,000 lbs. SSLW / yr.)
	(%)	($ / dry ton)		$ / 1,000 lbs. SSLW / yr.	
BEST Idaho	70%	$597.38	$89.31	**$255.68**	$680.42
Gasifier	50%	$178.35	$26.75	**$76.33**	$203.14
ORBIT HSAD	70%	$872.15	$130.82	**$373.28**	$993.38
Super Soils composting facility	83%	$194.56	$29.18	**$83.27**	$221.60

Note: These costs are based on demonstrated performance and cost data (usually from pilot-scale or prototype systems). Solids treatment technology providers have proposed steps to reduce the costs of these systems in future generations of their technologies. All of these solids treatment technologies also have an associated proposed by-product revenue stream. If product revenue exceeds breakeven prices for solids treatment, the incremental cost of solids treatment could become negative; that is, a net revenue. See the Task 1 Final Reports for these technologies for detailed breakeven analyses, a discussion of potential revenue streams, and the costs and returns of proposed next-generation solids treatment systems

Note: The numbers in bold face (medium separation rate) represent the numbers that are reported in the Task 1 summary table for solids treatment technologies.

[1] Moisture content of separated solids has a significant effect on the cost per dry ton of solids treatment systems. The costs reported in this table assume the moisture content that is listed in this column. Changing this assumption changes the predicted costs reported in this table.

[2] The costs in this column reflect the per-dry-ton technology cost minus the avoided per-dry-ton cost of on-farm land application of solids.

[3] Low separation rate corresponds to performance data collected from the BEST FAN + TFS separator as operated at Corbett Farm #1. Among the EST separators, the EKOKAN separator had the lowest modeled separation rate at 90 dry lbs. of solids (0.045 dry tons) / 1,000 lbs. SSLW / yr.

[4] Medium separation rate corresponds to performance data collected from the Environmental Technologies, Inc. separator as operated at Chuck Stokes Farm.

[5] High separation rate corresponds to performance data collected from the Super Soils separator as operated at Goshen Ridge Farm. Among the EST separators, the belt system had the highest modeled separation rate at 2,990 dry lbs. of solids (1.495 dry tons) / 1,000 lbs. SSLW / yr.

Table 8c. Effect of Changes in Assumed Interest Rate, Expected Economic Life, and Overhead Rate on Predicted Annualized Direct Construction and Overhead Costs for the EST Candidate Technologies: On-Farm Systems

Technology	6% Interest Rate, 15-Year Life, 20% Overhead Rate	8% Interest Rate, 10-Year Life, 43.1% Overhead Rate	10% Interest Rate, 7-Year Life, 43.1% Overhead Rate
		$ / 1,000 lbs. SSLW / yr.[1]	
Baseline (lagoon and sprayfield)	$30.09 (-41.6%)	$51.52	$70.79 (+37.4%)
AgriClean	Insufficient data	Insufficient data	Insufficient data
ANT Sequencing Batch Reactor (SBR)	$106.25 (-31.8%)	$155.71	$198.42 (+27.4%)
Barham Farm	$30.66 (-41.4%)	$52.34	$71.49 (+36.6%)
Belt System	$38.90 (-31.4%)	$56.71	$71.04 (+25.3%)
BEST (FAN + TFS)	$53.51 (-36.5%)	$84.29	$111.92 (+32.8%)
BEST (Filtramat + TFS)	$69.90 (-35.3%)	$108.12	$141.69 (+31.0%)
Constructed Wetlands	$85.31 (-42.1%)	$147.25	$202.96 (+37.8%)
EKOKAN	$114.14 (-37.7%)	$183.31	$245.70 (+34.0%)
Environmental Technologies Closed-Loop System	$50.04 (-36.3%)	$78.58	$103.73 (+32.0%)
ISSUES Aerobic Blanket System (ABS)	$44.19 (-40.3%)	$74.00	$100.67 (+36.0%)
ISSUES Permeable Cover System (PCS)	$53.16 (-39.5%)	$87.86	$118.83 (+35.2%)
ISSUES RENEW	$62.95 (-34.4%)	$95.95	$124.88 (30.2%)
Re-Cip	$65.42 (-42.5%)	$113.71	$158.36 (+39.3%)
Super Soils	$157.80 (-40.2%)	$263.78	$362.47 (+37.4%)

Note: The numbers in parenthesis represent the percent change from the standard assumptions used in the individual technology reports and cited in Appendix A of the Combined Appendices Report (8% interest rate, 10-year economic life, 43.1% overhead rate).

[1] Annual construction and overhead costs as shown in this table are calculated for a standardized 4,320-head finishing farm using a pit-recharge system of manure removal. These cost estimates include only direct construction and overhead costs. They exclude operating costs, change in land application costs, and returns. Expected economic life is the minimum of the technical useful life of the device (e.g. lagoon, pump, et cetera), the period for which the pig farm remains in production, the period until the device is rendered obsolete (by changes in regulations or technology or prices or other factors), or any other period that ends with the technology no longer being used to produce pigs. Note that this sensitivity analysis is not intended to propose alternative costs and returns estimates. It is solely intended to illustrate the sensitivity of the predicted results to changes in parameter values.

Table 8d. Effect of Changes in Assumed Interest Rate, Expected Economic Life, and Overhead Rate on Predicted Annualized Direct Construction and Overhead Costs for the EST Candidate Technologies: Separated Solids Treatment (Add-On) Systems

Technology	6% Interest Rate, 15-Year Life, 20% Overhead Rate	8% Interest Rate, 10-Year Life, 43.1% Overhead Rate	10% Interest Rate, 7-Year Life, 43.1% Overhead Rate
	$ / 1,000 lbs. SSLW / yr.[1,2]		
BEST Idaho (centralized fluidized bed combustion facility)	$63.60 (-42.1%)	$109.86	$151.41 (+37.8%)
Gasifier (RE-Cycle)	$6.83 (-42.1%)	$11.79	$16.25 (+37.9%)
High Solids Anaerobic Digester (ORBIT)	$155.83 (-42.1%)	$269.13	$370.94 (+37.8%)
Insect Biomass from Solids (black soldier fly)	Insufficient data	Insufficient data	Insufficient data
Super Soils Composting Facility	$41.59 (-32.3%)	$61.42	$78.17 (+27.3%)

Note: The numbers in parenthesis represent the percent change from the standard assumptions used in the individual technology reports and cited in Appendix A of the Combined Appendices Report (8% interest rate, 10-year economic life, 43.1% overhead rate).

[1] Annual construction and overhead costs as shown in this table are calculated for a 4,320-head finishing farm using a pit-recharge system of manure removal. These cost estimates include only direct construction and overhead costs. They exclude operating costs, change in land application costs, and returns. Expected economic life is the minimum of: the technical useful life of the device (e.g. lagoon, pump, et cetera), the period for which the pig farm remains in production, the period until the device is rendered obsolete (by changes in regulations or technology or prices or other factors), or any other period that ends with the technology no longer being used to produce pigs. Note that this sensitivity analysis is not intended to propose alternative costs and returns estimates. It is solely intended to illustrate the sensitivity of the predicted results to changes in parameter values.

[2] The annual cost estimates reported in this table were calculated using a solids collection rate of 0.43 dry tons of solids collected per 1,000 pounds of SSLW per year. This is referred to as 'medium separation rate' in the table "Sensitivity Analysis on Solids Treatment Systems: The Impact of Solids Separation Rate on Annualized Incremental Costs." Please refer to this table for additional analyses of the solids treatment systems.

Table 9. Percent Change[1] in Predicted North Carolina Market Quantities (1,000 lbs. of weight marketed) in the Short, Intermediate, and Long Runs for Selected Incremental Costs

Incremental Cost[2]	Predicted Short Run Reduction	Predicted Intermediate Run Reduction	Predicted Long Run Reduction	Predicted Annual Cost Incurred by Remaining Producers[3]
$ /1,000 pounds SSLW / year	% reduction in North Carolina market quantities (1,000 pounds of weight marketed per year)			$ / year
$440.89	15.5%	49.1%	62.7%	$384,662,000
$396.80	14.0%	44.2%	56.4%	$366,763,000
$352.71	12.4%	39.3%	50.2%	$345,338,000
$308.62	10.9%	34.4%	43.9%	$319,953,000
$264.53	9.3%	29.5%	37.6%	$290,743,000
$220.45	7.8%	24.6%	31.3%	$256,475,000
$176.36	6.2%	19.7%	25.1%	$215,841,000
$132.27	4.7%	14.7%	18.8%	$170,141,000
$88.18	3.1%	9.8%	12.5%	$118,936,000
$44.09	1.6%	4.9%	6.3%	$62,224,000

1. Percent reductions are calculated using the Task 2 software model (Swine Waste Management Simulator). Incremental costs are calculated using the actual predicted (Task 1) cost distribution for the Super Soils technology on representative farms, assuming implementation by all North Carolina farms (see Table SS.94 in the Task 1 Super Soils Final Report). Refer to Tables VI.66-VI.78 in the Final Task 2 Report (Wohlgenant) for a detailed breakdown of percent reductions across type/size combinations for the Super Soils technology. The numbers in Tables VI.68-VI.78 will correspond to the numbers in row 1 ($440.89) of the above table. If assuming a different technology (and thus a different cost function/distribution of costs across types/sizes) or implementation by company-owned farms only, the predicted percent reductions will differ from those reported in the above table.
2. Incremental costs in this column represent the annualized cost of constructing and operating the Super Soils technology on a 5,280-head finishing farm using a pit-recharge system for manure removal and N-based land application to forages.
3. The annual cost ($ / year) incurred by remaining North Carolina producers is calculated as the summed products of incremental costs ($ / 1,000 pounds SSLW / year) and remaining inventories (1,000 pounds SSLW) across 21 type/size combinations. These calculations can be replicated using the Task 2 software model (Swine Waste Management Simulator).

STATUS OF PERMITTING AND INSPECTING ANIMAL WASTE MANAGEMENT SYSTEMS

ANIMAL WASTE COMPLIANCE REPORT

JULY 1, 2004 – JUNE 30, 2005

REFERENCE:
G.S. 143-215.10M

Status of permitting and inspecting animal waste management systems/Animal Waste Compliance Report for Period Beginning July 1, 2004 and Ending June 30, 2005

SUMMARY

Pursuant to G.S. 143-215.10M, the Department of Environment and Natural Resources submits the subject annual report.

This report details the inspections and operational reviews completed in North Carolina during the fiscal year 2004 for both the Division of Water Quality and the Division of Soil and Water Conservation. The tables show the type of inspection and the number of inspections completed. The Pilot Project conducted by the Division of Soil and Water Conservation is still in effect for 2004.

The tables show the number of permits issued by region and statewide for the fiscal year 2004. The tables also show permits issued by type of operation: swine, cattle, and poultry.

The report details the number and type of violations identified during inspections. The tables show the number of facilities receiving a notice of deficiency or violation, and the number of enforcement actions initiated during fiscal year 2004. The violation data is broken down by region and by type of operation.

The enclosed tables list totals for each of the Department's Regional Offices as well as state totals. The Regional Offices are noted as follows: ARO – Asheville Regional Office, FRO – Fayetteville Regional Office, MRO – Mooresville Regional Office, RRO – Raleigh Regional Office, WARO – Washington Regional Office, WIRO – Wilmington Regional Office, and WSRO – Winston-Salem Regional Office.

Historical trends are included at the end of the report for reference.

If there is a need for any additional information or clarification, please do not hesitate to contact us.

For Period Beginning July 1, 2004 and Ending June 30, 2005*

	ARO	FRO	MRO	RRO	WARO	WIRO	WSRO	State Totals
Total number of Animal Operations Requiring Inspections and Operation Reviews during 2004	30	763	106	265	568	687	105	2524

Follow-up of previous review	0	3	0	0	6	4	0	13
Response to DWQ Referral	0	0	0	0	0	1	0	1
Other inspections	0	0	0	1	22	2	0	25
Other Agency Total number of operation reviews completed***	7	0	6	50	11	75	0	149
Routine operation reviews	7	0	6	50	11	67	0	141
Technical Assistance	0	0	0	0	0	8	0	8

*Numbers are reported as of 9/30/05 and may vary from actual due to delays in data entry and continued refinements to database.

** Pilot Project. Compliance Inspections will only be conducted in Brunswick, Columbus, and Jones County by DSWC. Operation reviews are normally conducted in the Pilot Counties in the spring and compliance inspections are conducted in the fall. As of July 1, 1999, Brunswick County became part of the Pilot Project.

***Other Agencies include Soil and Water Conservation Districts and NRCS.

For Period Beginning July 1, 2004 and Ending June 30, 2005

	ARO	FRO	MRO	RRO	WARO	WIRO	WSRO	State Totals
Number of Permits Issued to Animal Operations	20	380	115	184	282	364	103	1448
Swine	1	375	12	143	278	364	19	1192

Poultry	0	1	1	3	1	0	1	7

For Period Beginning July 1, 2004 and Ending June 30, 2005

	ARO	FRO	MRO	RRO	WARO	WIRO	WSRO	State Totals
Deficiencies and Violations[1] found during DSWC operation reviews and DWQ inspections*	10	120	9	49	80	67	14	349
Number of facilities receiving a deficiency or violation from inspections	15	52	11	19	40	23	10	170
Enforcement actions initiated for violations noted during this quarter**	1	18	0	6	5	5	4	39

*Violation totals include violations noted during both operation reviews and compliance inspections and may include multiple violations at a single facility.

**Enforcement actions being developed by the regional staff are normally not shown as actions initiated during that quarter. These actions will be included in the next year to date totals.

For Period Beginning July 1, 2004 and Ending June 30, 2005

Deficiencies and Violations Identified[1]	Total number of inspections with identified problem	Percent of total problems identified	Percent of total inspections completed (4,859)
Discharges from Animal Waste Management System	71	20.3	1.5
Of the total discharges identified, the number of discharges that reached surface waters of the state	(29)***	(8.3)	(0.6)
Inadequate Freeboard (Certified Farms)	82	23.5	1.7
Of the total inspections identified with inadequate freeboard, the number of inspections with freeboard noted at less than 1 foot	(23)	(6.6)	(0.5)
No Certified Operator in Charge	16	4.6	0.3
Evidence of over application	120	34.4	2.5
Does not meet setbacks	6	1.7	0.1
Inadequate land	2	0.6	0.1
Crop differs from that stated in Certified Animal Waste Management Plan	52	14.9	1.1
Totals	349****	100	

***Of the 29 discharges to surface waters, 26 were from swine operations, 2 were from poultry operations, and 1 was from a cattle operation.

**** 4,859 inspections and reviews were conducted. There were 7 potential problems evaluated on each report. Therefore the total possible deficiencies and violations that could have been noted was 34,013. The 349 problems identified represents 1.03% of the total potential number.

For Period Beginning July 1, 2004 and Ending June 30, 2005

One North Carolina Naturally

Status Report on Individually Permitted Discharging Systems For the Period Beginning July 1, 2004 and Ending June 30, 2005.

Summary

North Carolina General Statute (N.C.G.S.) 143-215.9A requires the Department of Environment and Natural Resources to report to the Environmental Review Commission and the Fiscal Research Division on the status of facilities discharging into surface waters during the previous fiscal year. Facilities discharging into surface waters are required by N.C.G.S. 143-215.1 to first apply for and secure a permit from the Environmental Management Commission. As a result, the data provided within this fiscal report is captured for those facilities individually permitted with National Pollutant Discharge Elimination System (NPDES) permits.

The enclosed report details the inspections completed and the enforcement actions taken in North Carolina during fiscal year 2004-2005 by the Division of Water Quality. In addition, information on Special Orders by Consent is included. The report also includes a table showing the number of permits issued by region.

The enclosed tables list totals for each of the Department's regional offices as well as State totals. The regional offices are noted as follows:

- ARO – Asheville Regional Office
- FRO – Fayetteville Regional Office
- MRO – Mooresville Regional Office
- RRO – Raleigh Regional Office
- WARO – Washington Regional Office
- WIRO – Wilmington Regional Office
- WSRO – Winston-Salem Regional Office

If any additional information or clarification is needed, please contact Vanessa Manuel at 919/733-5083, extension 532.

EXECUTIVE SUMMARY

The Clean Air Act Amendments of 1970, reviewed and amended by Congress in 1977 and 1990 formed the basis of the federal air pollution control currently in place. Health-based national ambient air quality standards are the strategic basis of the Clean Air Act. The standards were to be met through the application of control technology that would reduce emissions continuously and result in improved air quality. Costs of technological capability were to be subordinated to public health protection requirements. Also, all requirements were to be national, with no facility having a competitive edge by having to meet less stringent controls. The Environmental Protection Agency (EPA) is responsible for carrying out the program.

Prior to the 1990 Clean Air Amendments, EPA set two kinds of National Ambient Air Quality Standards (NAAQS) specifying maximum acceptable levels of pollutants for outdoor air. Primary standards set limits that protect human health; secondary standards provide welfare protection (i.e. plants, animals, aesthetics and materials). EPA set primary and secondary standards for six criteria pollutants: carbon monoxide, nitrogen dioxide, lead, sulfur dioxide, ozone and particulates. Eight substances were listed as hazardous air pollutants: asbestos, beryllium, mercury, vinyl chloride, radionuclides, inorganic arsenic, benzene, and coke oven emissions. National Emissions Standards for Hazardous Pollutants (NESHAPS) were promulgated for sources of seven of these pollutants.

Most air pollution comes from either stationary sources, such as factories, power plants and smelters, or mobile sources such as cars, trucks and airplanes. To limit mobile source pollution, controls were established for automobile emissions. EPA also set standards that applied to new industrial plants and existing ones that were substantially modified. Additionally, state governments were required to draw up State Implementation Plans (SIP's) that set out other measures to achieve acceptable air quality.

Under the Federal Clean Air Act Amendments of 1990 Congress mandated the Title V Permit Program primarily for regulating major air pollution sources; that is, sources with greater than 100 tons per year of the six criteria air pollutants and/or greater than 10 tons per year of any of the 189 Hazardous Air Pollutants (HAPs) or 25 tons per year of combined HAPs. The North Carolina Environmental Management Commission (EMC) established the state Title V Permit Program in 1994 in accordance with state and federal laws and with guidance from the N.C. Clean Air Act Advisory Council. The state Division of Air Quality (DAQ) carries out the program, which received interim approval from the U.S. Environmental Protection Agency (EPA) on December 15, 1995 and final approval in October 2001.

The DAQ in implementing the program was required to issue permits to existing major stationary facilities. The DAQ issued all permits to all existing facilities by the end of 2004 (meeting a goal described in earlier reports). The DAQ is also required to issue permits to new sources. There are a total of 81 new facilities identified at this time of which 62 have received permits.

A national authority has succinctly described both the background and three fundamental purposes of the Title V program as follows:

"During the legislative debates preceding the passage of the CAA Amendments of 1990, Congress confronted the problem most facilities, state regulators, and concerned citizens had with the then existing state air quality permitting programs. The myriad of both federal and state requirements, including emission standards, monitoring standards, record keeping, and reporting requirements were difficult to reconcile, properly apply, and difficult to enforce. Congress looked to the existing federal permitting program authorized under the Clean Water Act ("CWA") when crafting a solution but added some fundamental changes. First, the permit would be a stand-alone comprehensive document to which all parties could look to determine a facility's CAA obligations. Second, the permit would be designed with compliance as its primary goal. To that end, Congress included sufficient authority to empower state agencies to include monitoring and record keeping sufficient to determine compliance with the emissions standards. Finally, the program would require Title V permit holders to certify compliance with the terms and conditions of the permit so their legal exposure would be sufficiently severe to motivate compliance with their requirements. Enforcement provisions were added to achieve this goal."

The Clean Air Act requires that permit fees cover the entire cost of the Title V Program. The fees consist of a base fee and a fee derived from the actual annual emissions of each Title V source in the state. Currently emission fees, last set in 2001, are $17.42 per ton. In North Carolina, the revenue raised from Title V permit fees is close to the estimated cost of the program. This is true even though the total fees collected are only about 67 percent of the minimum fees presumed necessary to run the program under the Federal Clean Air Act. Many other states charge the minimum presumptive fee, which is $38.29 per ton.

The permanent staff size for carrying out North Carolina's Title V program will be reevaluated considering the current number of permit applications, the known program requirements, and the DAQ's experience with the program. Contract personnel were, until December 2002, used to assist in the completion of the work on the initial round of permit applications. Now that the initial Title V permits have been issued and experience has been gained, a workload analysis to assess staff resources will be developed. (Refer to the "Accomplishments and Goals" section).

The following additional points are provided to clarify/highlight the information provided in this report:

- The issuance of initial permits is now complete. The staff is now directing their attention to other additional program requirements. The modifications and renewals and the implementation of additional programmatic requirements are more difficult than anticipated.

- The division has been able to run a fiscally sound program collecting less in fees than was authorized by the oversight committee at the start of the program.

- The break down of staff between the central office and the regional offices has apparently been adequate to cover the needs of the division to date; however, the current staff distribution will be reviewed. Now that issuance of the initial Title V Permits is complete, the Title V permitting staff is concentrating on permit renewals, permit modifications, and permits for new sources. The increasing complexity of the program is proving to be much more time intensive for the Title V permitting staff than originally anticipated.

INTRODUCTION

This Accountability Report describes the Title V Permit Program in North Carolina as carried out by the Division of Air Quality, Department of Environment and Natural Resources. The report focuses on funding and staffing issues. It does not cover Title V permit programs under the jurisdiction of local air pollution control programs in Buncombe, Forsyth, and Mecklenburg counties.

Congress established the Title V Permit Program under the Federal Clean Air Act (1990 Amendments), primarily as a way to regulate major air pollution sources. Under the Clean Air Act, Title V Permits are required for certain industry groups as designated by the EPA as well as facilities that emit at least:

- 100 tons per year of regulated pollutants; or
- 10 tons per year of any hazardous air pollutant; or
- 25 tons per year of any combination of hazardous air pollutants.

In North Carolina, the General Assembly enacted laws in 1991 and 1993 authorizing the Title V program. The legislature also established the North Carolina Clean Air Act Advisory Council to develop the programs needed to comply with the Clean Air Act, including the structure of the Title V permit fees. The Clean Air Act Advisory Council issued a final report in August 1992, and the Environmental Management Commission followed the council's recommendations in adopting rules for the state Title V Permit Program in 1994. The EPA gave interim approval to North Carolina's Title V Permit Program on December 15, 1995, with final approval pending certain rules changes, which have been submitted to EPA. EPA gave final approval, in October 2001.The Clean Air Act as well as the N.C. General Assembly, the EPA, the EMC and the Clean Air Act Advisory Council all required or recommended accountability measures for the state Title V program. This Accountability Report includes:

- A discussion of program accomplishments and goals;
- A detailed description of the Title V permit fee structure for calendar year 2004;
- A detailed, line-item budget for state fiscal year 2004;
- An organizational chart for total staff in the Division of Air Quality and Title V related positions; and
- An account of Title V receipts and expenditures from state fiscal years 1992 to 2005;

The Division of Air Quality started receiving Title V permit applications after EPA's interim approval of the program on December 15, 1995. Facilities were given until December 1996 to submit their applications or they would be considered in violation of the permitting rules. Applications received during the aforementioned timeframe were called "Initial Title V Applications" and all other Title V applications received after December 1996 were called "First Time Title V Applications." By January 1998, DAQ had 475 Title V applications under review. Since program approval, the DAQ has processed a total of 3,430 applications to date. By the end of 2004 the DAQ issued all but one initial Title V permit. The issuance of the last permit was delayed by the need for a public hearing and comments by the permit applicant. All initial Title V permits have now been issued.

One hundred and eight of the initial Title V applications have been withdrawn due to reclassification or closure. To date DAQ has issued 61of the First Time Title V permits and is currently reviewing 193 applications. Currently, DAQ has 373 operating facilities classified as Title V facilities.

Questions about this Accountability Report or request for copies should be directed to Charles Valrie, Division of Air Quality, Department of Environment and Natural Resources, 1641 Mail Service Center, Raleigh, NC 27699-1641; telephone (919) 715-6281; email: Charles.Valrie@ncmail.net.

ACCOMPLISHMENTS AND GOALS

The Division of Air Quality (DAQ), the Department of Environment and Natural Resources (DENR), and the North Carolina Environmental Management Commission (EMC) have accomplished the following measures in developing and carrying out a Title V Permit Program in North Carolina. Goals are included where applicable.

1. The DAQ has established a Title V Permit Program based on rules adopted by the EMC (15A NCAC 2Q .0500). The program meets the requirements of state law (N.C.G.S. §§143-215.3 and 143-215.108) that authorized the program in North Carolina and set up the North Carolina Clean Air Act Advisory Council. The EPA gave interim approval to the program in 1995, and following the DAQ's revision to the Title V regulations; EPA gave final program approval in October of 2001.
2. In 2002 the DAQ revised the Title V application forms including the development of special forms for the renewal of Title V permits. These revised forms are intended to facilitate the application process, and they have been placed on the Division's website (http://daq.state.nc.us).
3. The DAQ has developed a permit fee schedule that generates an appropriate amount of revenue to carry out the Title V permitting program. The Federal Clean Air Act requires that Title V permit holders pay fees sufficient to cover the cost to administer the permitting program. The DAQ will continue to evaluate the fee structure to ensure that the necessary fees are collected.

4. The DAQ has hired approximately 139 staff members to operate the Title V program since it started in 1992. The total staff size is still smaller than the projected size from the Final Report of the Clean Air Act Advisory Council and has remained constant for several years. There are no plans to increase the number of positions funded by the Title V fees above the current level.

5. DENR has established a Small Business Assistance Program, hired a Small Business Ombudsman, and appointed a Compliance Advisory Panel to conduct citizen overview of small business activity.

6. The DAQ continues to hold meetings, including quarterly Outside Involvement Committee meetings, to provide citizens and the regulated community the opportunity for input into DAQ's permitting and planning procedures.

7. DAQ provided and continues to provide a range of options to qualify facilities as Non-Title V facilities. Many facilities have taken advantage of these options, which is one of the reasons why the number of Title V facilities is much less than initial estimates; that is, 373 operating Title V facilities now versus the 2000 estimated in the Clean Air Act Advisory Council's Final Report. For example, the DAQ established the synthetic minor program so facilities could avoid the Title V permitting program by taking permitted emission limits and/or operating restrictions. Also, the EMC adopted and EPA approved exclusionary rules to allow reasonable potential emission calculations in cases where standard methods would produce

unreasonably high potential emissions thus subjecting such facilities to Title V. **Goal:** The DAQ will continue to issue appropriate permits to qualified facilities that wish to remain non-Title V facilities.

8. In 1994 DAQ conducted its first comprehensive emissions inventory for all facilities in North Carolina. This comprehensive inventory process has been repeated every three years for all non-Title V facilities. In January 2003 the inventory requirement was changed to every five years for non-Title V facilities.
   Title V facilities continue to be required to submit an inventory annually. This emission information is stored on a computer database that DAQ uses to calculate fees and for use in regulatory planning. The DAQ has developed an electronic on-line inventory system. This system has been available to permittees since 2003.

9. There have been many unanticipated programmatic developments for the Title V permitting engineering staff including:

- Renewals of permits are much more time complex than anticipated requiring the permit engineer to devote a comparable amount of time as that required during the issuance of initial Title V permits.
- Additional programmatic requirements include addressing of Maximum Available Control Technology (MACT) and Compliance Assurance Monitoring (CAM) regulations; permit appeals, and administrative requirements include updating the emission source modules for the database supporting the emissions inventory.
- Title V permit modifications continue to expand in breadth and complexity as other programmatic demands impede permit issuance (includes; ozone and particulate matter Non-Attainment Area reviews, state zoning consistency requirements).
- Increased complexity leads to staff time devoted to projects being uneven and unpredictable requiring frequent conference with management and peers to determine the proper approach.
- Enforcement and compliance problems are frequently addressed by the efforts of the Title V permit engineering staff and management.
- EPA reviews are becoming more rigorous. EPA frequently comments on significant modifications and renewals of the permits. EPA comments are more prevalent.
- The implementation of the MACT permitting program including assuring compliance with the state air toxics program is largely a duty of the Title V permitting staff.

Goal: Develop a workload analysis to assess current and project for 4 years the future staff resources for the entire program. This FTE analysis shall consider the following elements of program and the FTEs required for: Temporary help such as contractors used to enhance the program;
Issuing Title V permit modifications;
Compliance and enforcement functions;
Emissions inventory; and
Other program elements such as legal staff outside of the DAQ

Goal: Title V permit engineering staff must be supported to maintain high product quality and customer service. Product quality translates into preventing violations, possible enforcement, and a sustainable business climate for the state.

CALENDAR YEAR 2004 PERMIT FEES TABLE

NOTES AND EXPLANATION

The federal Clean Air Act requires that the entire cost of the Title V Permit Program, including both direct and related expenses, be funded by facilities' permit fees and that Title V permit fees be used only for this purpose. The Clean Air Act also set a presumptive minimum for total fees at $25 per ton of air pollutant emissions in 1990 dollars, with a cost-of-living escalator that has raised this minimum to $8.29 in 2005 dollars. The Title V permit fees schedule for North Carolina now yields only 78 percent of the presumptive minimum. However, DAQ considers this amount adequate to run the program as long as all other funding sources for DAQ remain unchanged. The Title V permit fees are required by federal statutes and DAQ rules to be adjusted each January 1st by an official cost-of-living factor from the U.S. Environmental Protection Agency.

The Clean Air Act Advisory Council established by the General Assembly recommended in 1992 that the Title V permit fees should total $25 per ton of emission (adjusted annually for cost-of-living from the 1990 base), rather than the $36.45 per ton shown by the workload analysis in the council's final report. The council recommended this level so North Carolina could remain competitive with neighboring states — most of which were expected to use the $25/ton plus inflation presumptive minimum — and because of the many uncertainties in the program at that time.

The advisory council also considered the fairness of basing fees entirely on the amount of pollutants emitted, rather than on the amount of work required to administer Title V permits for various types of facilities. Because a certain amount of work is required to issue every Title V permit, regardless of the facility's emissions, the council recommended that half of the total Title V permit fees come from an applications fee (an annual flat fee for each permit) and the other half of the revenues come from annual per-ton charges.

A major uncertainty during the advisory council's work was the number of facilities that would be required to hold Title V permits and their emissions levels. This existed because a comprehensive emission inventory had never been required for all facilities. Since the council concluded its work, the EPA has issued many regulations, policies, clarifications, and changes to the Title V program, and the state has responded accordingly.

The state also has shown flexibility in the Title V program by using size exclusions for some industry groups (such as service stations, grain elevators, dry cleaners and emergency generators) and by allowing facilities to adopt permit limits that reduce their potential emissions below the Title V thresholds (known as synthetic minor sources). As a result, the number of Title V facilities has decreased from an estimated 2,000 in the Clean Air Act Advisory Council's Final Report, to 850 when the Title V permit fees schedule was adopted effective March 8, 1994, to about 373 operating facilities today. The total amount of emissions has changed little since the council's final report.

In Table I, "non-attainment" refers to permits issued under special rules applicable in areas that are in non-attainment with federal standards for criteria air pollutants such as ozone or particles. "PSD"

refers to permits issued under federal Prevention of Significant Deterioration rules. "NSR/NAA" refers to permits issued under special rules for New Source Review in Non-attainment Areas.

Another feature of the fee schedule that should be noted is that no permit application fee is charged for a simple renewal of a permit. In addition, no permit application fee is charged when the reason for the change is initiated by the director of the Division of Air Quality or the Environmental Management Commission, e.g., new control equipment required by a new rule or even the initial Title V permits for existing permitted sources.

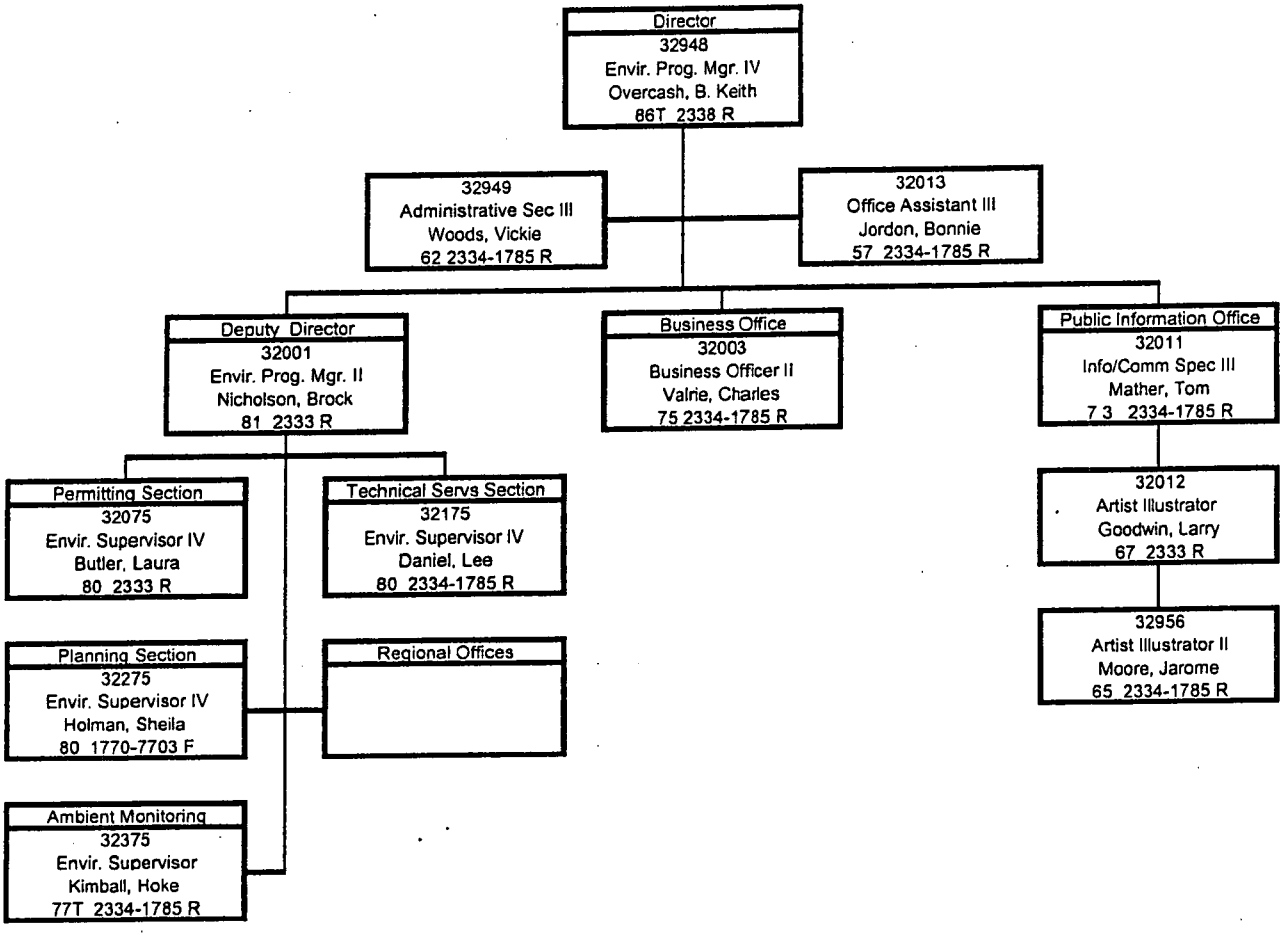
HISTORY
TITLE V FEES/ASSESSMENTS AND EXPENDITURES
EXPLANATION

DENR collected Title V assessments until the Environmental Management Commission adopted rules setting the permit fees schedule in 1994, as specified by the General Assembly in House Bill 551(N.C.G.S. 143-215.3 and 143-215.108). The rule adoption process occurred after the North Carolina Clean Air Act Advisory Council issued its final report in 1992, as specified by the legislature. Assessments were collected in state fiscal years 1992 (starting July 1, 1991) 1993, and 1994. The Title V permit fees set by rule were collected beginning in state fiscal year 1995 (starting July 1, 1994).

In 1997, facilities received a partial refund of Title V fees. This was accomplished by sending the facility a check, valued at 21 percent of the permit fees paid in 1997. This refund was to reduce the budgeted carry forward as of July 1, 1998.



The Division of Air Quality, based on an analysis of variability in fuel tax revenue, decided that it is prudent to have a carry forward of about 35 percent. The 35 percent is well within the statutory limitation that allows a state's Title V program to carry forward 100 percent of the expected cost of the Title V program for the next year. By terms of the Federal Clean Air Act, the entire cost of the Title V program must be paid with Title V permit fees, and Title V permit fees can only be used for this purpose.

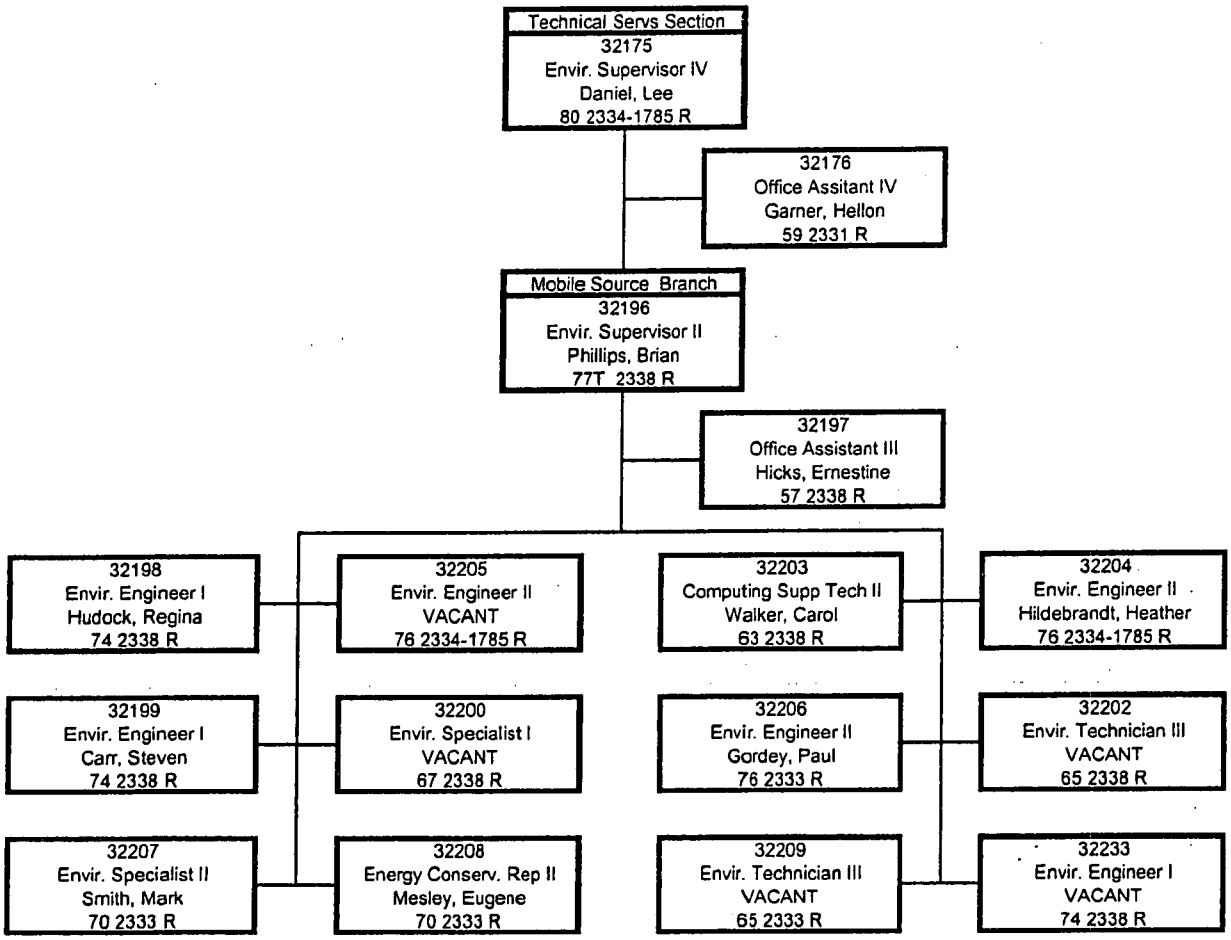
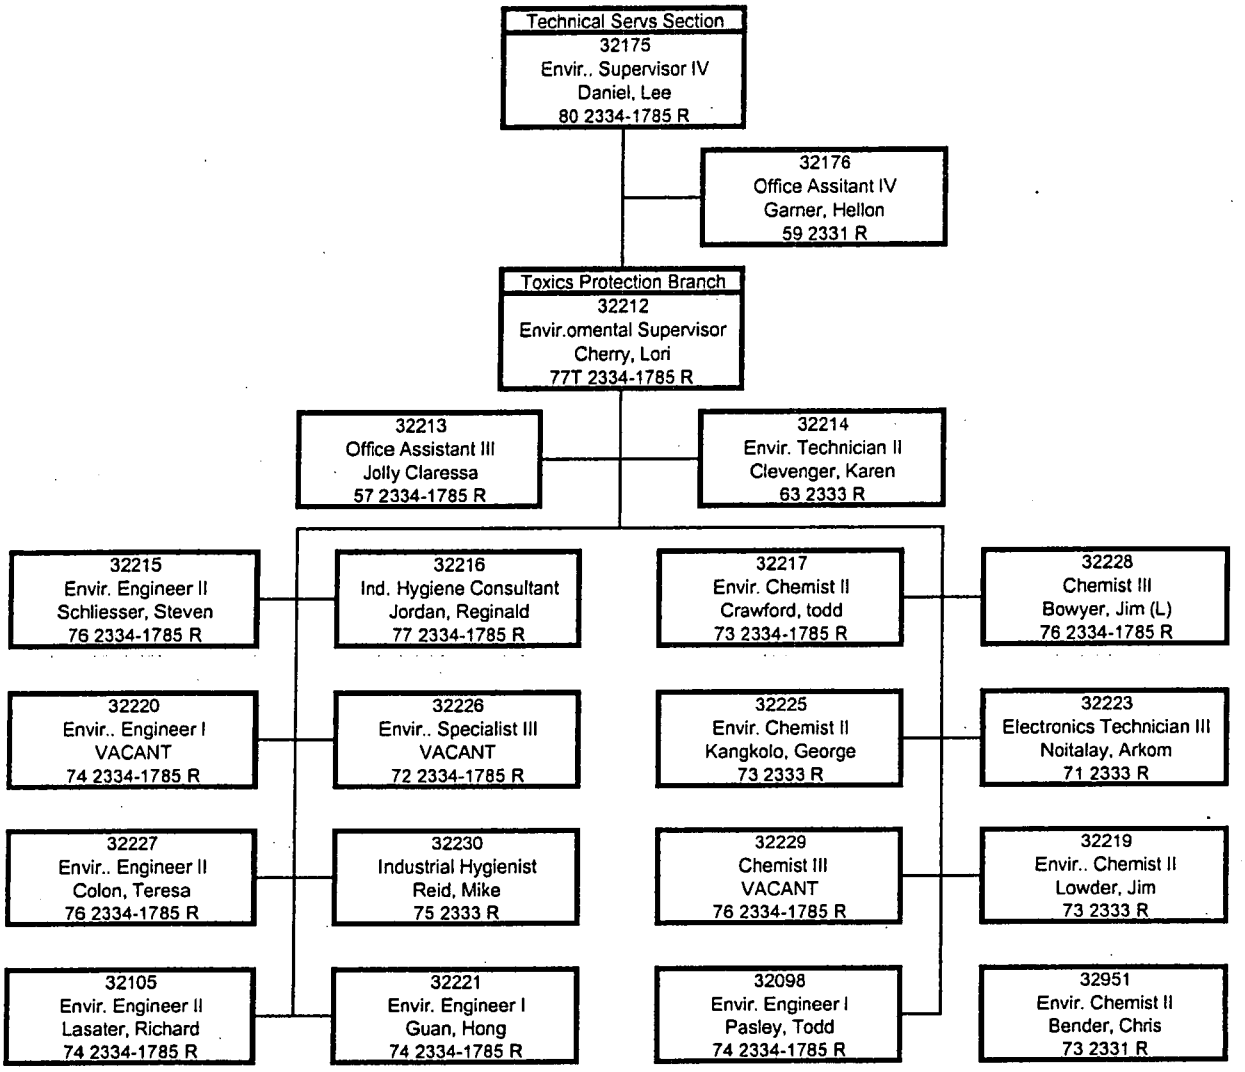
ORGANIZATION CHART EXPLANATION



The organization chart shown in this document lists all the positions authorized by State Personnel for the Division of Air Quality. Positions that are funded using Title V fees are listed with a funding designation of 2333R. Additionally, positions outside the Division of Air Quality that are funded through the transfer of Title V funds are listed separately.



Director
32948
Envir. Prog. Mgr. IV
Overcash, B. Keith
86T 2338 R
32949

Executive Summary

In 2003, the Division of Parks and Recreation (DPR) identified Blewett Falls Lake, located in Anson and Richmond counties, as an area that might have the potential to become a state recreation area. The 2570-acre lake with its relatively undeveloped shoreline appeared to offer the potential for a lakeside park that would allow access to and use of public waters, sufficient acreage for land-based recreational facilities, and protection of some rare biological resources identified by the North Carolina Natural Heritage Program. For these reasons, it was included in a list of 47 sites – called *New Parks for a New Century* – that named areas of the state that were priorities for investigation for possible additions to the state parks system.

Although a 2,570-acre lake was considered to have the potential to support a wide range of water-based activities, during the feasibility study authorized by the General Assembly, Division of Parks and Recreation staff identified several characteristics of the lake that severely limit the potential for boating and other water sports at Blewett Falls Lake. When the timber was cut and the lake impounded, the tree stumps were not removed from the land that would be submerged. Numerous stump fields are just under or just above the water surface at normal lake levels. This condition creates a hazard for boating and water-related sports, particularly motor boating at the lake.

The lake is shallow with an average depth of only 10.8 feet. In addition, the normal operation of the hydroelectric plant causes the lake level to fluctuate about 2-3 feet each day during the summer. This fluctuation makes the first two conditions – submerged stump fields and shallow water – more acute.

The lake and all Progress Energy lands surrounding the lake are designated as the Pee Dee River state game land except for a safety zone around the dam and boat ramp. Hunting on the game land has been a traditional use of the lake for many years. Hunting on the lake as well as the surrounding lands would create conflicts between hunters and park visitors as well as present potential safety issues.

Given these factors, the establishment of a state park or recreation area at Blewett Falls Lake is not recommended. The lake is better suited to continue as a state game land than become a state recreation area. The Wildlife Resources Commission (WRC) is currently working to expand the Pee Dee River Game Land at Blewett Falls Lake by acquiring property adjacent to the lake. An increased presence at the lake will enable the WRC to support the traditional uses that include hunting, boating and fishing; to expand public access by increasing the amount of public land around the lake; and to protect the significant natural resources of the area.

Introduction

The 2003 Session of the General Assembly of North Carolina passed a bill (Session Law 2004-24, House Bill 1574) that directed the Division of Parks and Recreation to study the feasibility and desirability of establishing a state recreation area at Blewett Falls Lake. The Act directs that the study include the feasibility and desirability of acquiring land and estimates of the cost of development. The study's finding and recommendations are due to the Environmental Review Commission on or before December 1, 2005. A copy of the Act is contained in Appendix A.

This study report has been completed to comply with the Act's directives. The report also addresses requirements of the 1987 State Parks Act (G.S. 113-44.7 through 113-44.14). The State Parks Act stipulates that new parks added to the State Parks System "*shall be consistent with and shall address the needs of the State Parks System as described in the [Systemwide] Plan.*" Additions are to be authorized by the General Assembly and must be accompanied by adequate "... *appropriations for land acquisition, development, and operations.*"

The State Parks Act defines the policy and the purpose of the State Parks System. The system is to consist of parks that include representative examples of " *unique archaeologic, geologic, biological, scenic, and recreation resources.*" These resources are the heritage of the people of North Carolina, and they are to be preserved and managed for use by the people, their visitors, and descendents. Park lands are to be used *"...to promote understanding of and pride in the natural heritage of this state.*" The 2000-2005 Systemwide Plan for the North Carolina State Parks System, mandated by the State Parks Act, guides the Division of Parks and Recreation (DPR) as it evaluates proposed new state park units and makes progress toward achieving its mission and purposes described in the State Parks Act.

To study the feasibility of a state park or recreation area at Blewett Falls Lake, numerous visits to the site were conducted by DPR planners, biologists, trails specialists and field operations staff. DPR staff discussed ideas and alternatives with county officials, Progress Energy personnel, Wildlife Resources Commission staff, local land owners, and others knowledgeable about the lake and the region. A public meeting was conducted to gather input from the general public and a mail survey was conducted. Additional information about these efforts is available upon request.

New Parks for a New Century

In 2003, the Division of Parks and Recreation identified Blewett Falls Lake, located in Anson and Richmond counties, as an area that should be evaluated to determine if it should become a state recreation area. The 2,570-acre lake with its relatively undeveloped shoreline appeared to have the potential for a lakeside park that would allow access to and use of public waters, offer sufficient land for recreational facilities, and protect some high quality biological resources identified by the North Carolina Natural Heritage Program. For these reasons, it was included in a list of 47 sites called *New Parks for a New Century* – that named areas of the state that were priorities for investigation for possible additions to the state parks system.

Why New State Parks System Units are Needed

The state parks system includes some of North Carolina's most beautiful scenery and significant natural resources, but it is far from complete. While substantial financial resources are needed to complete land acquisition and development envisioned in approved plans for the existing parks and recreation areas, the addition of new units to the system will be important in coming years for reasons that include:

- The State Parks Act directs the system to include representative examples of North Carolina's archaeological, geological, biological, scenic and recreational resources. Under those categories, specific examples of the state's natural diversity are considered resource themes — such as mountain bog, spruce-fir forest, tidal wetlands, etc. Of 108 resource themes identified in the state, only 29 are adequately represented in the parks system now. Thirteen resource themes have little representation in any geographic region, and four are not represented at all.
- The state parks experienced record visitation of 13.2 million in 2002. By 2030, North Carolina's population is projected to be nearly 12.5 million, 54 percent higher than 2000. More state park units are needed to meet the demands of a growing population. As population increases and becomes more urbanized, more state parks will see visitation at capacity more often. Increased public use can result in damage to sensitive natural resources in the parks and a decrease in visitors' enjoyment of their experiences due to overcrowding. Adding acreage to existing parks can help to address these problems, but more parks will also be needed to meet future demand.
- Concomitant with population growth, development will decrease the land available for outdoor recreation. For example, between 1992 and 1997, 781,500 acres were developed statewide and the pace of development is increasing (Brookings Institute. July, 2000).
- Wildlife habitat is becoming further fragmented and many species of plants and animals are dwindling in number. High-quality examples of the state's great diversity of natural communities are being damaged every day as population growth and development infringe on important natural areas.

Carefully selected new state park units will conserve and protect North Carolina's natural heritage and will enhance the value of the system as a whole. These new units will help the system fulfill its statutory obligations for future generations.

Types of Units in the State Parks System

Potential new park units include state parks, state recreation areas and state natural areas. As described in the State Parks Act, the system includes six types of units:

State parks, such as Hanging Rock State Park in Stokes County, are expected to possess at least state significant natural resource values and to provide high quality recreational opportunities. State parks are expected to offer developed facilities, but the extent of that development may vary depending on what can be provided without damage to the scenic or natural features. The establishment of any new state park would include the expectation that the park would eventually be open to the public and with some level of recreational and support facilities provided.

State recreation areas, such as Kerr Lake in Vance and Warren counties, are sites where the primary purpose is natural resource-based outdoor recreation rather than preservation. There is often more intensive development of facilities than in state parks. Protection and enjoyment of the natural resources are still important, and the sites are expected to contain scenic and attractive natural features.

State natural areas, such as Theodore Roosevelt State Natural Area in Carteret County, are intended to preserve and protect areas of scientific, aesthetic or ecological value. Long-term management objectives for a natural area may include little or no public facilities or access. Generally, recreational activities such as camping, swimming or picnicking are not allowed, although some natural areas offer trails and interpretive programming.

State lakes, such as Lake Waccamaw in Columbus County, were placed under the management of the Department of Conservation and Development (currently the Department of Environment and Natural Resources) in 1929 and later became units of the parks system. Most of these are administered as part of an adjoining state park.

State trails, such as the Yadkin River State Trail, are established in accordance with the North Carolina Trails System Act of 1973 to help provide for the state's outdoor recreation needs and to promote public access to natural and scenic areas.

State rivers, such as the New River in Ashe and Alleghany counties, are components of the North Carolina Natural and Scenic Rivers System

created by the 1971 General Assembly to preserve and protect certain free-flowing rivers, their water quality and their adjacent lands.

Criteria for New State Park Units

Enlarging the parks system is important, but potential new units must be selected carefully to make sure they fulfill the purposes of the system and that they justify the considerable public investment in acquisition, development and long-term management. The Division of Parks and Recreation developed criteria to identify potential new units. This provides a system for ranking potential sites as well as a way to remove unsuitable sites from consideration. Each of the following criteria is used to evaluate the suitability of a proposed site.

- Statewide significance of resource themes represented.
- Size — sufficient acreage to protect principal resources and provide appropriate facilities with minimal impacts on those resources.
- Absence of incompatible features such as roads, intrusive development, incompatible vistas and air, water and noise pollution.
- Sufficient access for management and public use.

Sites that do not meet these basic requirements are removed from consideration.

Significance of the Lower Pee Dee River / Blewett Falls Lake Area

The staff evaluation of the Lower Pee Dee River, which includes Blewett Falls Lake, identified significant natural resources that are not adequately represented in the state parks system. Acquiring these biological, geological, and scenic resources would help meet the State Parks Act mandate. The lake was selected for investigation as a state recreation area because it appeared to have the potential to provide swimming, boating and fishing opportunities. Few large lakes in North Carolina still have extensive undeveloped land along the lakeshore. However, additional information about the lake's potential for water-based recreation was needed from site visits to the area.

The Lower Pee Dee River area includes approximately thirty miles of the Anson County/ Richmond County boundary. The primary area that was studied as a potential state recreation area surrounds Blewett Falls Lake and encompasses about 8,000 acres (Figure 1). The area appeared to have potential for water and land-based outdoor recreation facilities.

State significant natural resources are located in a corridor that stretches about 18 miles along the Pee Dee River and within the river itself, both north and south of Blewett Falls Lake. Fifteen rare plants and animals including the shortnose sturgeon (Acipsenser

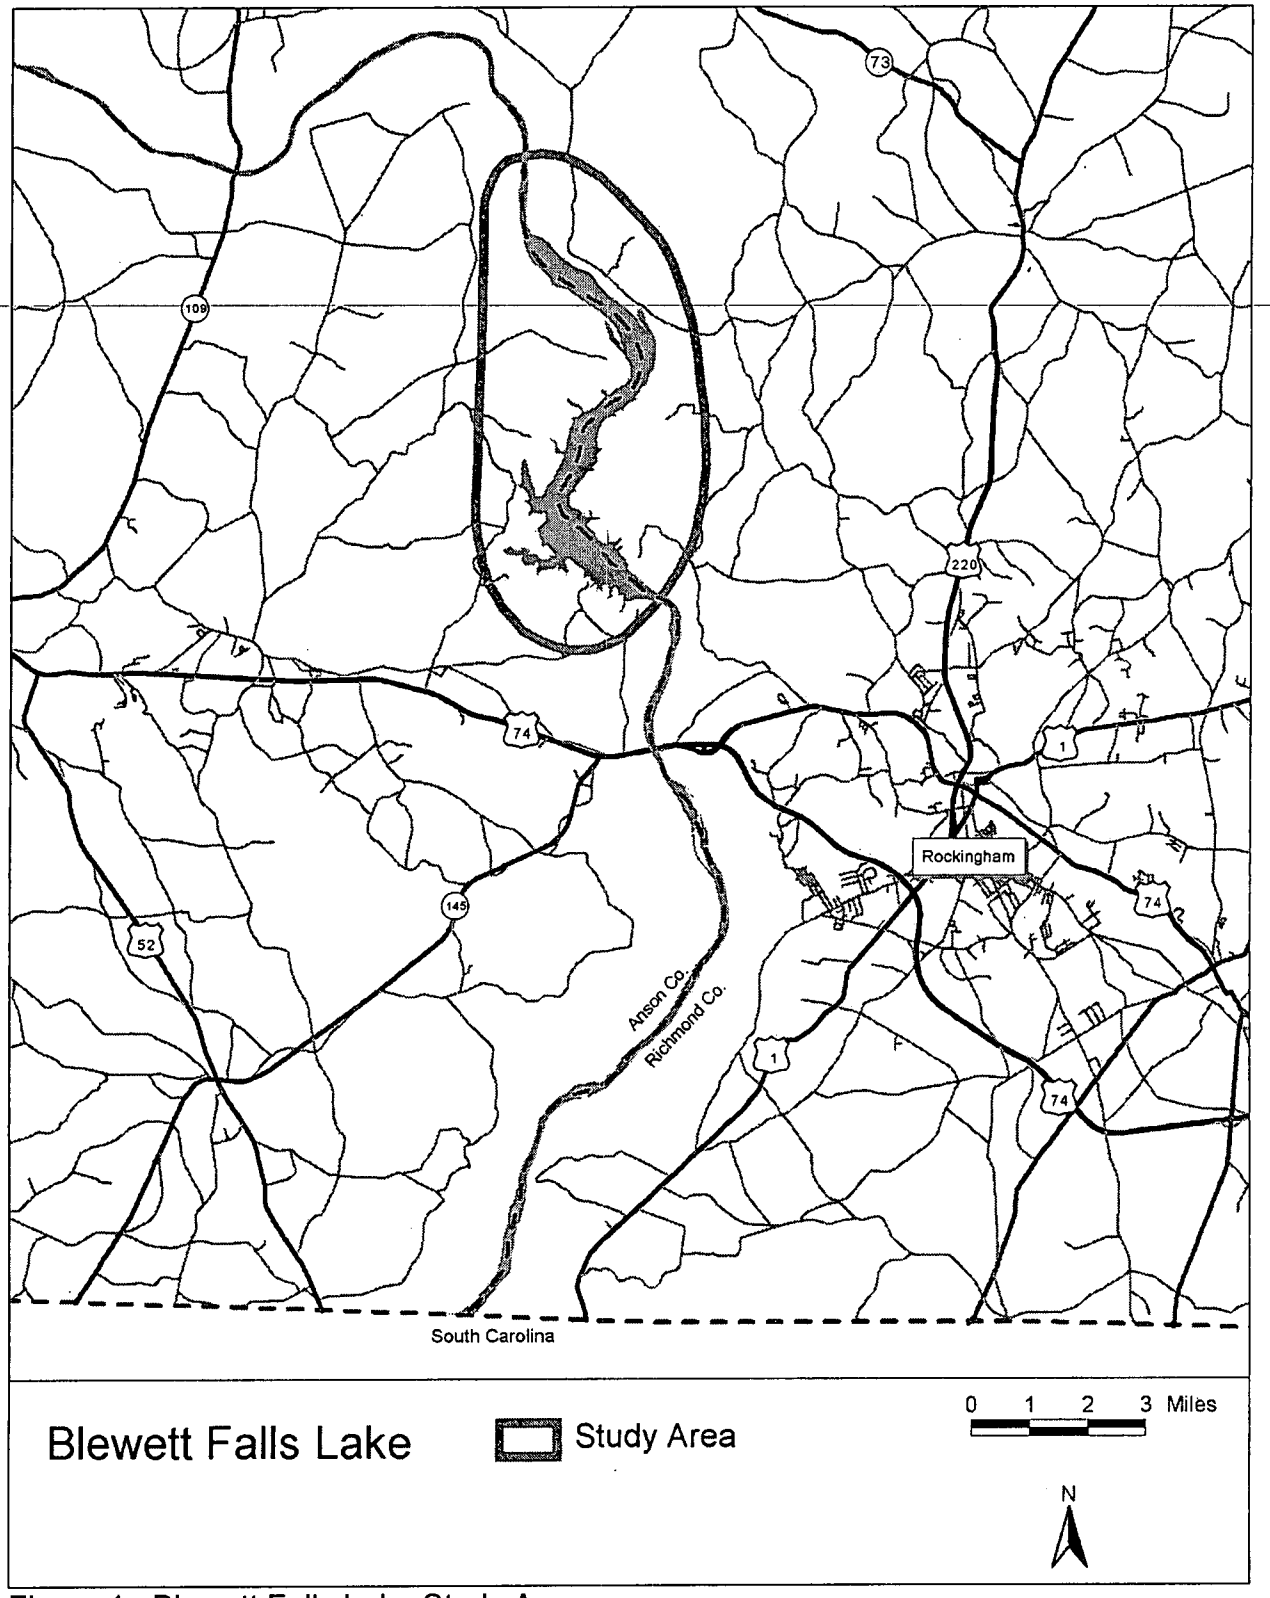

Figure 1. Blewett Falls Lake Study Area

brevirostrum) and Bald Eagle are found among the area's four significant natural communities: piedmont and coastal plain mesic forests, piedmont and coastal plain oak forests, piedmont and mountain floodplains and riverine aquatic communities. Three natural heritage sites (Hitchcock Creek / Pee Dee River slopes, Pee Dee River Fall Zone and Pee Dee Gabbro Slopes) occur along the river. A state recreation area at the lake, however, would not protect these resources because they are located along the river both north and south of the lake.

There are four geologic themes of statewide significance in the area: dissected uplands, faults and joints, fluvial deposition features, and intrusions. The scenic features located in the area are forests, islands, reservoirs, rivers, and scenic vistas.

Characteristics of the Region

Population of the Region

The surrounding counties are Anson, Moore, Montgomery, Richmond, Scotland, Stanly, and Union. The area is largely rural, with a total population about 435,000 in 2005. The population density for these counties ranges from about 50 to 100 people per square mile. These figures are below the state average of about 175 people per square mile and are indicative of the rural character of the region. Population growth is projected to also be below the state average. Most of these county populations will grow at less than six percent between 2000 and 2010 while North Carolina's population grows 15 percent. Union County is the exception as its population will grow in concert with the growth of the Charlotte – Mecklenburg area (North Carolina State Data Center).

Units of the State Parks System

Three units of the North Carolina State Parks System are located in the region: Morrow Mountain State Park in Stanly County, Weymouth Woods Sandhills Nature Preserve in Moore County, and Lumber River State Park in Scotland County (Figure 2).

Morrow Mountain State Park is a 4,500 acre park located adjacent to Lake Tillery, in the ancient Uwharrie Mountains. Now worn down to rounded ridges that average less than 1,000 feet in elevation, these pinnacles are the remains of one of the oldest mountain ranges in the eastern United States. Morrow Mountain is the highest peak at an elevation of 936 feet. The park provides visitors a variety of recreational opportunities including hiking, camping, canoeing, picnicking, swimming, fishing, and horseback riding.

Weymouth Woods Sandhills Nature Preserve is a state natural area consisting of three areas totaling 900 acres. As a state natural area, Weymouth Woods is different from a state park. The area serves to preserve and portray the natural features unique to its region. Weymouth Woods contains longleaf pine forests that are managed with controlled fires. The site is also home to rare and endangered species—the red-cockaded woodpecker, the pine barrens tree frog and the bog spicebush.

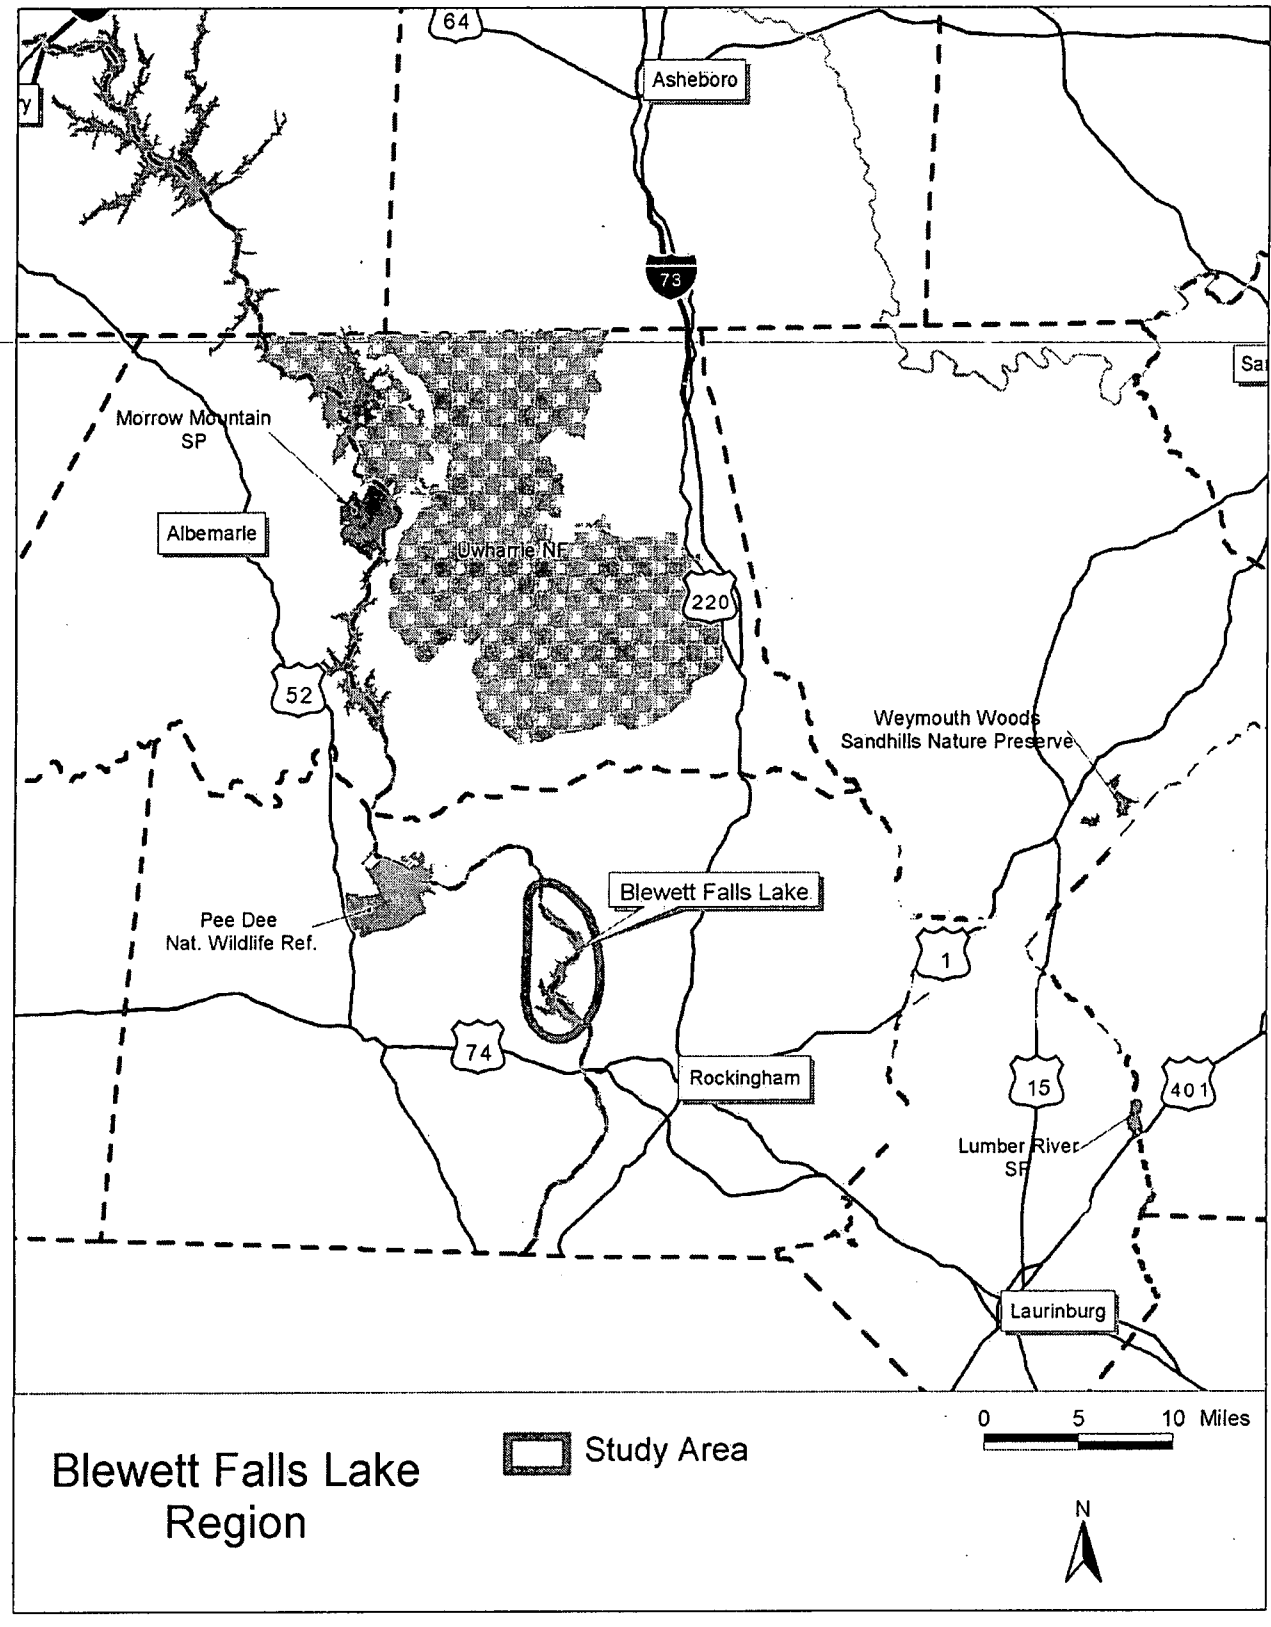

Figure 2. Blewett Falls Lake Region

The Lumber River flows through the south-central portion of the state. The river's headwaters are in Montgomery, Moore and Scotland counties where the waterway is known as Drowning Creek. The Lumber River starts at SR 1412/1203 along the Scotland-Hoke county line, and its waters flow into South Carolina, eventually joining the Little Pee Dee River. Lumber River State Park contains 7,936 acres of land and 115 miles of state natural and scenic waters, 81 miles of which are also designated national wild and scenic waters. The Chalk Banks area, near Wagram in Scotland County, currently offers primitive camping and will eventually become the park's northern headquarters. The park's office and recreational facilities activities are currently centered at the Princess Ann Access in Robeson County.

Federal Forests and Refuges

The Pee Dee River National Wildlife Refuge is located a few miles north of Blewett Falls Lake in Anson County. The wildlife refuge, which is nearly 8,500 acres, was established to protect habitat for migratory birds. It provides visitors with opportunities to fish, hike, tour the refuge by car, and observe wildlife as well as hunt by permit. A canoe access area on the Pee Dee River is also located in the refuge.

The Uwharrie National Forest in Montgomery County consists of over 50,000 acres. It is named for the Uwharrie Mountains, some of the oldest in North America. According to geologists, the Uwharries were created from an ancient chain of volcanoes. The 1,000-foot hills of today were once 20,000-foot peaks. The Uwharrie is located at the crossroads of prehistoric settlement resulting in a large concentration of archeological sites.

The national forest provides a wide variety of recreational activities. These include boating, fishing, and swimming at Badin Lake as well as an extensive trail system for hikers, bicyclists, equestrians, and off-highway vehicle driving. Campgrounds are available for tent and trailer camping as well as sites to accommodate groups and equestrians. (Both the Pee Dee River National Wildlife Refuge and the Uwharrie National Forest as shown on Figure 2)

Game Lands

The Pee Dee River Game Land consists of three areas along the river including Blewett Falls Lake, and is managed by the North Carolina Wildlife Resources Commission (WRC). The gameland at Blewett Falls Lake includes the 2,570-acre lake as well as land surrounding the lake owned by Progress Energy (Figure 3). The activities on the game land are primarily hunting, boating and fishing. The WRC also manages the three access areas on the lake. There are two boat ramps, one near the dam and one at Grassy Island, as well as a tailrace fishing area below the dam. During hunting season, hunters can use the area six days per week, Monday through Saturday. In addition, several primitive campsites accessible by boat are available along the shoreline.

- Wildlife Resources Commission Boating Access Area

Description of the Blewett Falls Lake Area

Blewett Falls Lake is an impoundment of the Pee Dee River bordering Anson and Richmond counties, north of U.S Highway 74. It is one of a series of impoundments on the Yadkin / Pee Dee River which also include High Rock Lake, Badin Lake, and Lake Tillery, all located upstream of Blewett Falls Lake. Blewett Falls Lake is the smallest of these lakes, with about 2,570 acres of surface water, which is about half the size of Lake Tillery and Badin Lake. High Rock Lake is the largest lake on the river at over 15,000 acres.

Blewett Falls Lake is a long, shallow lake. Shallow lakes tend to be more biologically productive than deeper lakes because they have a large area of bottom sediments relative to the volume of water. Large, shallow areas along the lake perimeter can be colonized by rooted and floating macrophytes.

The land cover in the surrounding area is either forested or used as agricultural lands. Nearly 80 percent of the area is forested and nearly 20 percent is either cultivated or used as pasture land. About two percent of the land cover in the region is water, primarily Blewett Falls Lake and the Pee Dee River. Urban areas account for less than 0.5 percent of the land. (Division of Water Quality, Yadkin / Pee Dee River Subbasin Plan, 2003)

Access

The west side of the lake is accessible using State Roads 1744, 1748, 1747, and 1759. The primary boating access area is located near the dam on State Road 1759. On the east side, the lake area is accessible via State Roads 1144 and 1141. A second boat ramp area is located on Grassy Island Road. Both boat ramps are located on land owned by Progress Energy and operated for public use by the Wildlife Resources Commission.

Uses of Adjacent Land

All lands along the shoreline of the lake are owned by Progress Energy as part of the hydropower project at the lake. The primary land use in Richmond County within two miles of the lakeshore is forest land. The land ownership patterns consist of large tracts, and many of the landowners allow hunting through agreements with private hunting clubs. In Anson County, the land uses within two miles of the lakeshore include forest land, agriculture, and residential. New residential developments are being developed near the lakeshore, off Clark Mountain Road as well as Grassy Island Extension Road.

Limitations of Blewett Falls Lake for Water-Based Recreation

Site visits by DPR staff and discussions with knowledgeable individuals revealed significant constraints to the use of the lake for recreation.

Submerged Stump Fields

During the feasibility study, Division staff identified several characteristics of the lake that severely limit the potential for boating and swimming at Blewett Falls Lake. Prior to the creation of the lake in 1912, the tree stumps were not removed from the land that would be submerged leaving stump fields. These stump fields are just under or just above the water surface at a normal lake levels. The condition creates a hazard for boating, particularly motor boating and other water sports that are usually associated with state recreation areas.

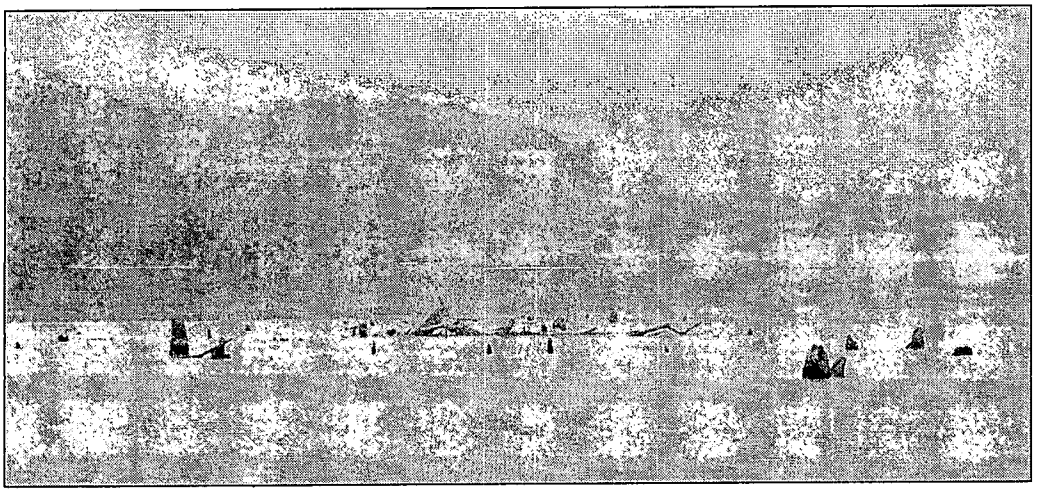

Figure 4 - Example of stumps fields at Blewett Falls Lake

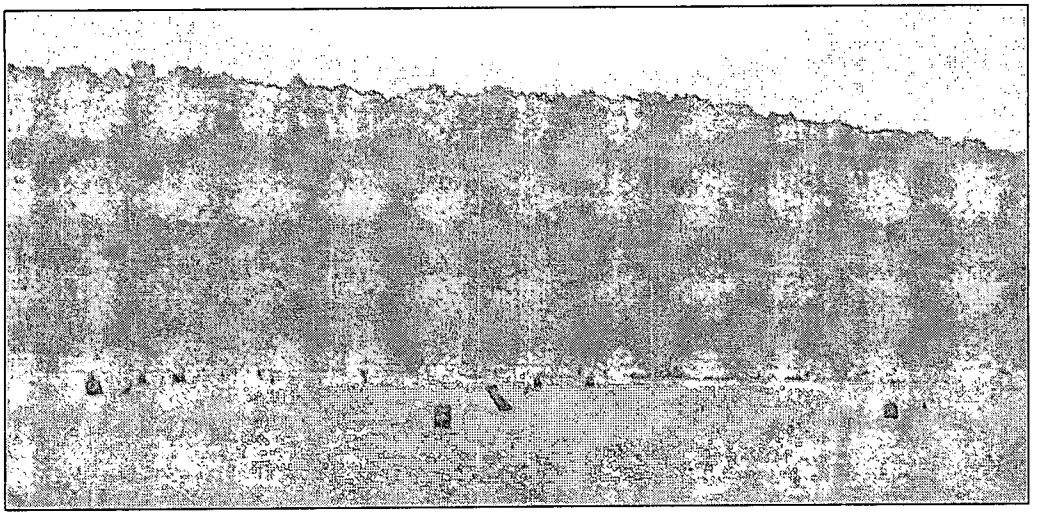

Figure 5 - Example of stumps fields at Blewett Falls Lake

Shallow Water

Although the lake has a maximum depth of more than 50 feet, the lake overall is very shallow with an average depth of 10.8 feet (NC Div. of Water Quality, Yadkin-Pee Dee Basinwide Water Quality Plan, 2003). The lake is deeper than 15 feet within one mile of the dam and becomes more shallow further north traveling upstream. Near the Grassy Creek boat ramp, much of the lake is less than five feet deep (Progress Energy Elevation and Bathymetry Map, Survey Date: 2001).

Daily Fluctuation of Lake Levels

The normal operation of the hydroelectric plant causes the lake level to fluctuate between two and three feet each day during the summer (Progress Energy, Initial Document, Pee Dee Yadkin River Project, Feb. 2003), when visitor use is usually greatest. This fluctuation makes the first two conditions – submerged stump fields and shallow water – more acute. Because of the fluctuating water levels, stump fields, and shallow water in much of the lake, the areas of the 2,570 lake suitable for recreational use is much smaller than the entire lake.

Potential Conflicts Between Park Visitors and Hunters

Hunting on the lake as well as the surrounding lands would conflict with potential park visitors and present potential safety issues. At Blewett Falls Lake, the lake and all Progress Energy lands surrounding the lake are designated as the Pee Dee River Game Land (excluding a safety zone around the dam and boat ramp). If a similar safety zone were established around a large state recreation area and water of the lake, the game land would be reduced in size significantly. Although the lake is large in surface area, the configuration follows the river to create a long, narrow lake. The distance across the lake at the widest section is about one mile.

The game land has been a traditional use of the lake for many years. The lake and surrounding game land already function as a recreation area managed by the Wildlife Resources Commission, with a focus on hunting and fishing. In addition, the WRC is currently purchasing land that borders Blewett Falls Lake in order to expand the game land. Additional opportunities for hunters would probably bring more conflicts between hunters and other visitors.

Public Comment

Mail Survey

Surveys attempting to gauge the desirability of a new state park unit at Blewett Falls Lake were mailed to a random sample of Anson and Richmond County residents in November 2004. Responses received by the Division of Parks and Recreation in favor of a potential new unit were roughly 10:1 of the total 302 responses. Some of the most

popular requests and currently participated in activities were picnicking, fishing, viewing scenery and motorized boating. Copies of the survey and accompanying cover letter are included in Appendix B.

Public Meeting

A public meeting was held on November 30, 2004 at Lilesville Elementary School in Anson County which provided a public venue central to both Anson and Richmond counties. Approximately 100 individuals from the surrounding areas attended the meeting. Forms were available for attendees to share any comments, suggestions or ideas regarding a potential state park unit at Blewett Falls Lake. The forms were handed out as attendees entered the meeting and collected as they left. Responses in favor of a potential new unit were roughly 5:1 over responses not in favor. This contingent not in favor of a potential new state park unit was very vocal during the meeting, taking a great amount of time to discuss with Division staff the reasons for opposition.

Some of the strongest arguments against a new unit revolved around changes that would occur to historic, traditional uses such as hunting, fishing and boating. Duck and deer hunting are existing viable and popular uses at Blewett Falls Lake and the surrounding lands. The ideas shared at the meeting were that a State Park would alter existing patterns of use or, in the case of hunting, eliminate them completely since hunting is not permitted in state park units.

Additional written and verbal comments not in favor of a new state park unit at Blewett Falls Lake were received. These repeatedly focused on the poor suitability of the lake itself, including factors such as shallowness, small size, stump fields, and relatively high fluctuations in water level. Boaters using the lake stressed that one needed to be familiar with the lake and its hazards. A copy of the informational packet including the comment sheet handed out at the public meeting is included in the Appendix C.

Conclusion

Blewett Falls Lake was selected as a possible site for a state recreation area because of the size of the reservoir and its relatively undeveloped shoreline. Upon further investigation including site visits, several factors have been identified that limit the lake's potential for outdoor recreation. The lake is more shallow than anticipated and there are stump fields within the lake that are the remnants of timber that which was not removed before the lake was impounded. These two limitations are made more severe by daily fluctuations in the lake level caused by the production of hydropower. These conditions cause the lake to be poorly suited for a state recreation area that would draw people from across the state and out-of-state visitors. In addition, a traditional use of the Blewett Falls Lake has been hunting and the lake continues to be a game land.

Given these factors, the establishment of a state park or recreation area at Blewett Falls Lake is not recommended. The lake is better suited to continue as a state game land

than a state recreation area. The Wildlife Resources Commission is currently working to expand the Pee Dee River Game Land at Blewett Falls Lake by acquiring adjacent property. An increased presence at the lake will enable the WRC to support the traditional uses; to expand public access and recreational use of the lake by increasing the amount of public land around the lake; and to protect the significant natural resources of the area which tend to border on and exist within the river.

Establishing a state recreation area at the lake has the potential to create confusion for the public. There would be conflicts, and perhaps safety concerns, for park visitors and hunters who are both using the lake. Finally, establishing a state park at the lake could cause a change in the use of the Pee Dee River Game Land because state park regulations prohibit hunting and carrying loaded weapons. Consequently, it appears to be more beneficial to the public to have the Wildlife Resources Commission play an expanded role at Blewett Falls Lake by acquiring additional land for public use.

Appendix A

SESSION LAW 2004-24

GENERAL ASSEMBLY OF NORTH CAROLINA
SESSION 2003
SESSION LAW 2004-24
HOUSE BILL 1574

AN ACT to authorize the addition of the lower haw river state Natural Area to the state parks system, AS RECOMMENDED BY THE ENVIRONMENTAL REVIEW COMMISSION, and to direct the division of parks and recreation of the department of environment and natural resources to study the feasibility and desirability of establishing a state RECREATION AREA at Blewett Falls Lake.

Whereas, Section 5 of Article XIV of the Constitution of North Carolina states that it shall be a proper function of the State of North Carolina to acquire and preserve park, recreational, and scenic areas, and in every other appropriate way to preserve as a part of the common heritage of this State, its open lands and places of beauty; and

Whereas, the 1987 General Assembly enacted the State Parks Act, which declares that the State of North Carolina offers unique archaeological, geologic, biological, scenic, and recreational resources, and that these resources are part of the heritage of the people of the State, which should be preserved and managed by the people for their use and for the use of their visitors and descendants; and

Whereas, the Lower Haw River in Chatham County is considered nationally significant for its biological resources, including several rare species and possesses biological, scenic, and recreational resources of statewide significance; and

Whereas, the Division of Parks and Recreation of the Department of Environment and Natural Resources has identified the Lower Pee Dee, which includes Blewett Falls Lake, as the highest ranked candidate for establishment of a State Recreation Area; Now, therefore, the General Assembly of North Carolina enacts:

SECTION 1. The General Assembly authorizes the Department of Environment and Natural Resources to add the Lower Haw River State Natural Area to the State Parks System as provided by G.S. 113-44.14(b).

SECTION 2. The Division of Parks and Recreation of the Department of Environment and Natural Resources shall study the feasibility and the desirability of acquiring land and establishing a State Recreation Area at Blewett Falls Lake. The study shall include estimates of the cost of developing the proposed recreation area. The Division shall report its findings and recommendations, including any legislative proposals, to the Environmental Review Commission on or before 1 December 2005.

SECTION 3. This act is effective when it becomes law.

In the General Assembly read three times and ratified this the 17th day of June, 2004.

Division of Parks and Recreation Blewett Falls Lake Area Survey Questions:

1. Would you be in favor of a new state park unit at Blewett Falls Lake? (Circle one)
   a. Yes
   b. No

2. Which of the following do you currently participate in at Blewett Falls Lake? (Circle all that apply)
   a. Camping
   b. Motorized Boating
   c. Canoeing/Kayaking
   d. Fishing
   e. Trail Hiking
   f. Picnicking
   g. Nature/Wildlife Study
   h. Swimming
   i. Viewing Scenery
   j. None
   k. Other – please specify: _____

3. If a state park unit were created at Blewett Falls Lake, which of the following activities would you be interested in participating in? (Circle all that apply)
   a. Camping
   b. Motorized Boating
   c. Canoeing/Kayaking
   d. Fishing
   e. Trail Hiking
   f. Picnicking
   g. Nature/Wildlife Study
   h. Swimming
   i. Viewing Scenery
   j. None
   k. Other – please specify: _____

4. Additional comments you would like to add:

_____
_____
_____
_____
_____
_____
_____

Thank you again for completing this survey. Please return it in the accompanying postage-paid envelope prior to November 19, 2004.

Summary of Results

Would you be in favor of a new state park unit at Blewett Falls Lake?

Public Meeting Information Packet

Introduction

Blewett Falls Lake Study Area Public Meeting
November 30, 2004

Division of Parks and Recreation Mission Statement

The North Carolina State Parks System exists for the enjoyment, education, health and inspiration of all our citizens and visitors. The mission of the state parks system is to conserve and protect representative examples of the natural beauty, ecological features and recreational resources of statewide significance; to provide outdoor recreational opportunities in a safe and healthy environment; and to provide environmental education opportunities that promote stewardship of the state's natural heritage.

Blewett Falls Lake Study Area Narrative

This study area focuses on the 2,570 acre Blewett Falls Lake owned by Progress Energy. It is located on the lower Pee Dee River along the border between Anson and Richmond counties, just above the North Carolina/South Carolina border. The area has good potential for water and land based outdoor recreation and is located in a region with a high demand for state facilities. Land immediately surrounding the lake contains floodplains, pine plantations, hardwood and mixed forests, and private development. Within or close to the study area are four significant natural communities (piedmont and coastal plain mesic forests, piedmont and coastal plain oak forests, piedmont and mountain floodplains and riverine aquatic communities), as well as fifteen rare plants and animals, including the shortnose sturgeon and Bald Eagle.

Potential recreational activities for this park would include fishing, camping, picnicking, visiting natural areas, hiking, viewing scenery, nature study, open area use, swimming, motorized boating and canoeing/kayaking.

Comment Sheet

Blewett Falls Lake Study Area Public Meeting
November 30, 2004

Please share with us any comments, suggestions or ideas you may have regarding a potential state park unit at Blewett Falls Lake:

Please check one:

- ☐ YES – I am in favor of a new state park unit at Blewett Falls Lake.
- ☐ NO – I am not in favor of a new state park unit at Blewett Falls Lake.

OPTIONAL – Your contact information (name, address, phone, email, etc):

Comments may be continued on the back of this sheet. Please return completed comments to NC Division of Parks and Recreation staff members at the meeting. Additional comments may be mailed to:

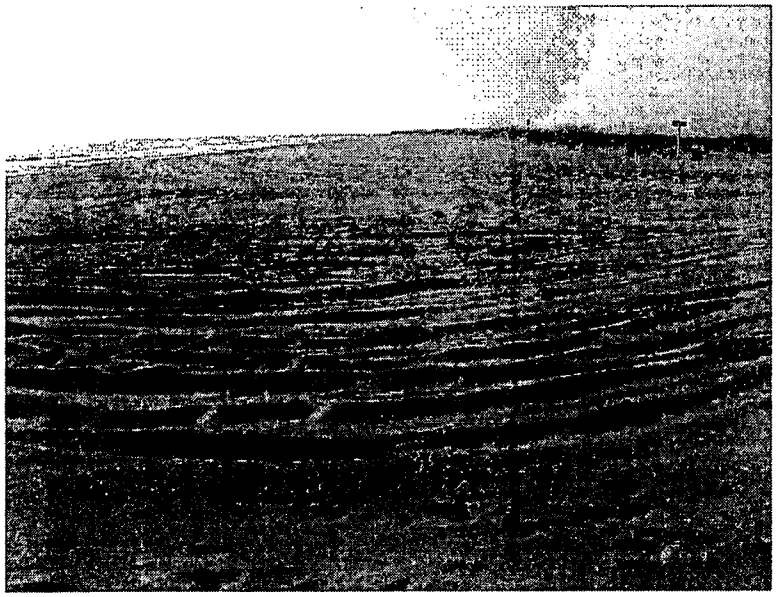
Access Gate for Beach Vehicles

Executive Summary



In response to ongoing public concerns, the FY 2005 North Carolina budget bill directed approximately $25,000 to fund a study of vehicular beach use and associated effects at the Fort Fisher State Recreation Area (FOFI) located near Kure Beach, NC. Faculty members at the University of North Carolina at Wilmington were contracted by the N.C. Department of Environment and Natural Resources (DENR) to investigate access demand, biological impacts of ocean beach vehicular use and economic impact analysis of use restriction. Duration of the three studies was from August 15, 2004, to December 15, 2004, with submission of final reports to DENR/Division of Parks and Recreation (DPR) by December 31, 2004. Public input was solicited by a public meeting held on October 11, 2004, in Wilmington and by subsequent opportunity to submit written comments directly to DPR.

Results of the **access demand** study (see pp. 3-21) by Drs. James Herstine, Jeffery Hill and Robert Buerger found that among surveyed users and vehicles counted at the access gate, the majority of ocean beach vehicular use at FOFI involved one or two persons per vehicle and occurred during the daytime: "...During the September—February time period, 73% of the users were exclusively daytime users, and during the March—August time period, the figure increases to 79%. This finding indicates that nighttime use of the ocean beach at FOFI is not significant. This is confirmed by the four-wheel drive vehicular access counts which indicate that 75% of the users entered during the daytime hours. Therefore, limiting ocean beach vehicular access to FOFI during the nighttime hours would impact a relatively small percentage of users." Also, spot surveys indicated that nighttime use during the March – August period involved more driving along the beach strand, as opposed to staying in one location, that could negatively impact ocean beach-dependent species such as nesting sea turtles and water birds. However, the authors recommended that a final management decision should be made only after a longer (i.e., two-year) investigation to obtain seasonally accurate data beyond the three-month scope of this study.

Biological impacts of vehicles on protected species were assessed by Dr. Wm. David Webster (see pp. 22-44). He found that FOFI is home to 10 species of federal or state significance. The site is used throughout the year by one or more of these listed species; the majority present during the spring through fall months. Off-road vehicle (ORV) lights and tire ruts negatively affect nesting/hatchling sea turtles. Young seabeach amaranth plants are destroyed by traffic and unable to set seed. ORV traffic in the beachfront and in marsh intertidal areas compacts soil, thereby rendering it unsuitable for worms and other invertebrates used as forage by shorebirds. Recommendations included: 1. synchronize dates used in management decisions affecting listed species, 2. there is no basis to close FOFI to ORV traffic for three nights around the full moon, 3. either: a.)suspend <u>all</u> ORV traffic during April 1 through November 15 --or-- b.) permanently prohibit <u>all</u> ORV traffic from the southernmost two miles of FOFI, 4. institute weekly shorebird and colonial waterbird surveys for three years and 5. develop and implement an outcomes assessment document (i.e., after the three-year period) to determine if ORV restrictions have had a positive effect on protected species; revise use policies accordingly.

An **economic impact analysis** (see pp. 45-66) of ocean beach vehicular access scenarios was performed by Dr. Chris Dumas. Input-output analysis, based on vehicular counts and spot surveys conducted as part of the access demand investigation, was employed to derive economic impacts for comparison of: 24-hour

access, daytime only access and complete discontinuation of ocean beach driving. Using the best available information for unrestricted access as a baseline, an estimated 28,884 trips/yr. onto the FOFI four-wheel drive access area support $21.6 million in annual regional sales, 382 regional jobs and $3.7 million in combined governmental tax revenues. Daytime only driving -- throughout the year -- would reduce these figures to $19.6 million in regional sales, 348 regional jobs and $3.4 million in tax revenues. (note: Presumably the effect on regional sales, regional jobs and tax revenues is less pronounced under the current management plan, which limits nighttime access for only six months. However, this cannot be extrapolated using available data.) Complete elimination of vehicular beach access would reduce the level of economic activity supported to $10.6 million in regional sales, 191 regional jobs and $1.8 million in tax revenues. The analysis accounts for those users (i.e., not all users) who would continue to visit the local area and purchase goods/services even if vehicular access were totally banned at FOFI. Also, economic impacts of access restriction will be affected by policies at other regional beach areas (e.g., north end of Carolina Beach). Dr. Dumas recommended that further study was needed, particularly relative to determining impacts of restriction during the spring and summer seasons, because of the limited project timeframe.

Ocean Beach at First Public Dune Crossover (1/8/05)

DENR Recommendation

The Department of Environment and Natural Resources (DENR) finds that the UNCW study provides the best information possible for vehicular access demand, biological impacts and economic impacts within the timeline specified by the General Assembly. Further research concerning various topics could be pursued, but general trends described herein are not likely to change: nighttime use is a relatively small component of overall vehicular activity, rare species at FOFI must be protected and the local economy will be affected to a minor degree by nighttime restriction during March 15 – September 15. For these reasons, the DENR concludes that the current Ft. Fisher State Recreation Area management policy is affirmed by the results of this report.

Introduction

Ocean beach vehicular access has been a controversy at Fort Fisher State Recreation Area (FOFI) for a number of years. Concerns have been voiced by local fisherman and residents who wish to have access to the site at all times. However, other users and state park staff feel that protection of federal/state listed species (e.g., nesting loggerhead sea turtles and water birds) from vehicular impacts on the oceanfront plus staffing limitations during March through September should require a schedule typical of state park properties. To provide focused information on this matter, the North Carolina General Assembly included the following language in the FY 2005 budget bill:

TWENTY-FOUR-HOUR ACCESS TO FORT FISHER STATE RECREATION AREA DURING THE FALL AND WINTER/ FUNDS FOR DEPARTMENT STUDY/ACTIVITIES AT FORT FISHER

SECTION 12.3.(a) G.S. 113 – 35 is amended by adding a new subsection to read: "(b1) Members of the public who pay a fee under subsection (b) of this section for access to Fort Fisher State Recreation Area may have 24-hour access to Fort Fisher State Recreation Area from September 15 through March 15 of each year."

SECTION 12.3.(b) The Department of Environment and Natural Resources shall conduct a study of vehicle use at Fort Fisher State Recreation Area. In preparing the study, the Department shall consult with experts in the fields pertinent to this study at the University of North Carolina at Wilmington. This study shall consider and determine in its findings the demand for vehicle access to the beach at Fort Fisher State Recreation Area during different times of the year. This study also shall include a review of scientific studies on the impact of vehicle use on sea turtles and nesting seabirds and shorebirds. This study shall provide an opportunity for comment from interested citizens. This study shall include in its report its finding on sea turtle and bird nesting activity at Fort Fisher State Recreation Area as compared with nesting activity on the adjoining beach that is managed by Bald Head Conservancy and on Masonboro Island and an analysis of the economic impact of restricting 24-hour vehicle access to the beach at Fort Fisher State Recreation Area. No later than February 1, 2005, the Department shall report its findings under this subsection, any other pertinent findings, and any recommendations or legislative proposals to the Environmental Review Commission.

SECTION 12.3.(c) Of the funds appropriated to the Department of Environment and Natural Resources for the 2004 – 2005 fiscal year, the sum of twenty-five thousand dollars ($25,000) shall be used for the costs to the Department of conducting the study under subsection (b) of this section and for education, conservation, and enforcement activities by the Department at Fort Fisher State Recreation Area.

(House Bill 1414-Ratified)

As mentioned in the above bill, expertise to perform these studies was available at the University of North Carolina at Wilmington (UNCW). In August 2004 the N.C. Department of Environment and Natural Resources (DENR) contracted selected researchers to investigate the specified tasks of access demand, biological impacts of vehicles and economic impacts of access restriction.

Faculty in the university departments of Health and Applied Human Sciences/Environmental Studies (Drs. Robert Buerger, James Herstine and Jeffrey Hill), Biology (Dr. Wm. David Webster) and Economics and Finance (Dr. Chris Dumas) were

chosen to perform the work. Drs. Buerger, Herstine and Hill have completed human dimension studies (e.g., principle investigators on a long-term study of visitor use impacts on nearby Masonboro Island and Zeke's Island, both managed by the DENR/Division of Coastal Management) plus Dr. Herstine is a member of the Fort Fisher Park Advisory Committee. Dr. Webster has performed multi-year studies of nesting sea turtles at Masonboro Island and the Bald Head Island complex and assisted with monitoring of local nesting water bird populations. Dr. Dumas has completed various economic impact studies relating to environmental issues.

Contracts between DENR and UNCW were developed for each of the three study areas. Work was performed during August 15 through December 15, 2004, with final reports submitted to DENR/Division of Parks and Recreation (DPR) on December 31.

A public forum was held on October 11, 2004, at the UNCW Center for Marine Science in Wilmington to receive verbal and written comments on all ocean beach vehicular access-related issues. DENR/DPR staff and contracted faculty discussed the proposed research with the audience. UNCW investigators took notes on verbal public input that evening. All letters received by the DPR following the meeting were forwarded to university researchers.

I. FOFI Vehicular Access Demand

University of North Carolina Wilmington

Abstract

The ocean beach vehicular access study at Fort Fisher State Recreation Area (FOFI) was conducted between August 15, 2004, and December 15, 2004. A total of 10,545 vehicles entered FOFI during this period. Of the total, 5,555 would be considered daytime users (entered the area between sun-up and sun-down) and 1,841 nighttime users (entered the area between sun-down and sun-up). Three thousand one hundred and forty-nine (3,149) vehicles entered FOFI between August 15th and September 14th, but were not differentiated as daytime and nighttime users by the photoelectric cell system in place during this period. No counts were made between September 15th and September 23rd due to a malfunctioning of the electronic counting system.

A total of 181 spot surveys were administered to vehicles entering FOFI between September 15th and December 15th. Of these, 127 were valid surveys, for a response rate of over 71%*.

Background

This document has been prepared in partial fulfillment of a contract to the University of North Carolina Wilmington (UNCW) for an Ocean Beach Vehicular Access Study at FOFI located near Kure Beach, North Carolina **Appendix A—Map of Fort Fisher State Recreation Area**). This study was authorized under the 2004 North Carolina House Bill 1414, Section 12.3(b).

Scope of Work

Demand Analysis: Drs. Robert Buerger, Jim Herstine and Jeffery Hill will determine from available past and present data the demand for ocean beach vehicular access throughout the year with emphasis on assessing nighttime use. This will be derived from vehicular counts taken at FOFI plus spot surveys performed to determine the geographic distribution of users and likely frequency of use.

Deliverables

The deliverables consist of a summary report that encompasses a record of the number of vehicles utilizing FOFI during the study period, any relevant prior data and results of spot surveys of users.

Methodology

The methodology for this study consisted of two (2) components: 1) electronic counts of vehicles entering FOFI (**Appendix B—Four-Wheel Drive Vehicle Access Count**); and, 2) spot surveys administered to individuals in vehicles entering FOFI (**Appendix C—Ocean Beach Vehicular Access Survey**).

Electronic counts: The electronic counts of vehicles entering FOFI were taken by FOFI staff using two different methodologies. Initially, the counts were taken utilizing a photoelectric cell system which registered whenever the beam between the units was interrupted. This system was utilized from July 2nd through October 31st. However, no electronic counts are available between September 15th and September 23rd due to a malfunction of the photoelectric cell system. A gate system with an access keypad was installed and utilized to record the number of vehicles entering FOFI from November 1st through December 15th.

Spot surveys: A survey instrument was developed in conjunction with the economist contracted for this project (**Appendix C—Ocean Beach Vehicular Access Survey**). Once the instrument was finalized, a training session was held with the 10 survey administrators. The spot surveys were administered on twenty-seven (27) different dates at varied times and days between September 15th and December 15th (**Appendix D—Survey Schedule**). Dates and times were selected using purposive sampling in order to gain representative data from users throughout the weekdays and weekends, as well as to ensure that data were gathered from time periods throughout both the daytime and nighttime. Survey administrators were located at the entrance to the four-wheel drive access trail. They were specifically instructed to approach and stop all vehicles entering or exiting the four-wheel drive access trail, identify themselves, and ask whether the users would be willing to participate in a voluntary survey of ocean beach vehicular access to FOFI. If the user refused or had previously participated, the survey administrator was instructed to note this on the survey form, thank them and terminate the interview. If the user provided any justification for not participating in the survey, this was recorded. Additionally, if the

survey administrator was able to determine the number of users in the vehicle, this was recorded as well. If the user agreed, the survey was administered.

Electronic Count Results

Frequency of Visitation by Time of Day

Electronic counts (**Appendix B—Four-Wheel Drive Vehicle Access Count**) were intended to provide data regarding total daily visitation as well as differentiation of visitation by time of day. During the July 2nd through December 15th time period, 15,883 vehicles were recorded passing through the FOFI ocean beach vehicular access entrance. As anticipated, total visitation declined during this period, with the exception of the month of October when the surf fishing tournament was held (**Table 1—Monthly FOFI Four-Wheel Drive Vehicle Access Count**).

Month	Count	Percentage	Mitigating Factors
July	3,848	24%	
August	3,390	21%	Closed August 14th for Hurricane Charlie
September	2,347	15%	Counter malfunction September 15th-23rd
October	4,850	31%	Surf fishing tournament October 1st-3rd
November	1,280	8%	
December	168	1%	Counts ended December 15th
Total	15,883	100%	

Table 1—Monthly FOFI Four-Wheel Drive Vehicle Access Count

After September 23rd, a differentiation was made between daytime and nighttime vehicular entrance into the FOFI ocean beach. The results indicate that the majority of vehicles (75%) entered during the daytime hours (**Table 2—Four-Wheel Drive Vehicle Access Count Differentiating Between Daytime and Nighttime Entrance**).

Month	Daytime Count	Daytime Percentage	Nighttime Count	Nighttime Percentage
September	855	79%	231	21%
October	3,552	73%	1,298	27%
November	992	78%	288	22%
December	156	93%	12	7%
Total	5,555	75%	1,829	25%

Table 2—Monthly FOFI Four-Wheel Drive Vehicle Access Count Differentiating Between Daytime and Nighttime Usage

Spot Survey Results

The FOFI Ocean Beach Vehicular Access Survey contained eight questions (**Appendix C—Ocean Beach Vehicular Access Survey**). Of these, Question 1 was a qualifying question to determine whether the respondent was of majority age. Only those individuals of majority age were asked to complete the survey. Questions 2, 3 and 4 focused upon the demand for ocean beach vehicular access throughout the year. As such, the data from these questions comprise the results of the ocean beach vehicular access demand component of the study. The remaining questions focus upon deriving data for an economic impact analysis of restricting 24-hour access to the ocean beach at FOFI. The analysis of these questions will be completed by an economist specifically addressing the resultant data.

Number of Users Per Vehicle

The number of individuals in the surveyed vehicles driving on the FOFI ocean beach ranged from 1 to 5, with the majority of vehicles (78%) containing either 1 or 2 individuals (**Figure 1—Number of People per Vehicle in Surveyed Vehicles Driving on the FOFI Ocean Beach**).

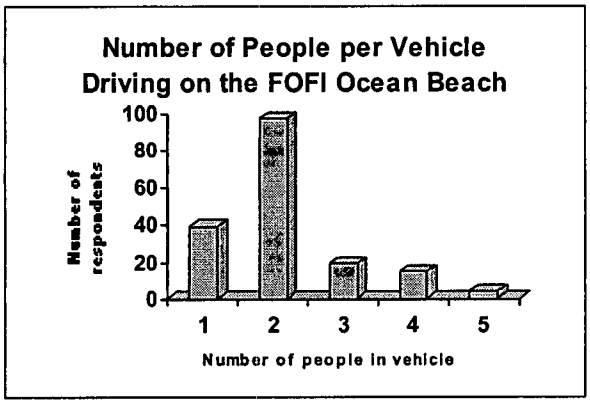

Figure 1—Number of People per Vehicle in Surveyed Vehicles Driving on the FOFI Ocean Beach

Distribution of Visitation by Season

Results of the analysis of demand data indicate that 90 of the 127 respondents (71%) drove on the FOFI ocean beach during the months of March—August during the previous 12 months. Conversely, 37 of the 127 respondents (29%) reported that they had never driven their vehicle on the ocean beach at FOFI during the months of March—August during the previous 12 months (**Figure 2—Percentage of Respondents Who Indicated They Drove Their Vehicle on the Ocean Beach at FOFI Between March and August**).

On the other hand, 120 of the 127 respondents (94%) drove on the FOFI ocean beach during the months of September—February during the previous 12 months. Only 7 of the 127 respondents (6%) reported that they had never driven their vehicle on the ocean beach at FOFI during the months of September—February during the

previous 12 months (**Figure 3—Percentages of Respondents Who Indicated They Drove Their Vehicle on the Ocean Beach at FOFI Between September and February**).

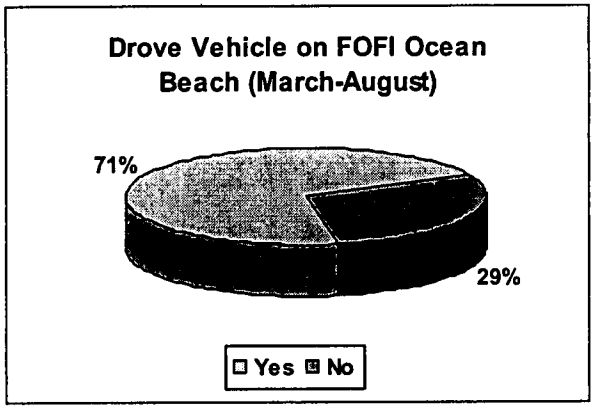

Figure 2—Percentages of Respondents Who Indicated They Drove Their Vehicle on the Ocean Beach at FOFI Between March and August

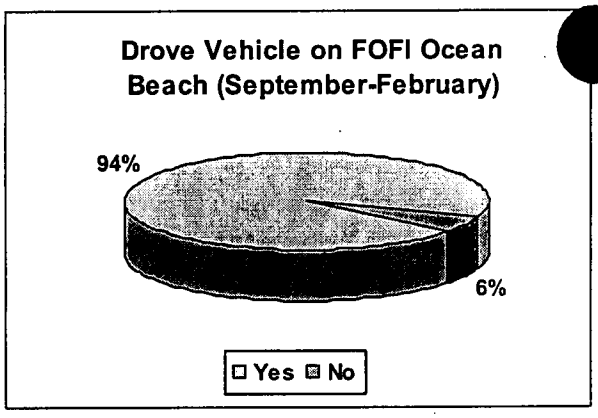

Figure 3—Percentages of Respondents Who Indicated They Drove Their Vehicle on the Ocean Beach at FOFI Between September and February

Frequency of Visitation by Season

Forty-one (41) of the 127 respondents (32%) reported that they drove their vehicle on the ocean beach at FOFI during March—August between 1 and 10 times during the previous 12 months. The majority of such users, 67 of the 127 respondents (53%), indicated that they drove their vehicle on the ocean beach at FOFI during March—August between 1 and 30 times during the previous 12 months (**Figure 4—Number of Times During the Previous 12 Months Respondents Drove Their Vehicle on the Ocean Beach at FOFI Between March and August**).

However, 68 of the 127 respondents (54%) reported that they drove their vehicle on the ocean beach at FOFI during September—February between 1 and 10 times during the previous 12 months, which comprise the majority of respondents (**Figure 5—Number of Times During the Previous 12 Months Respondents Drove Their Vehicle on the Ocean Beach at FOFI Between September and February**).

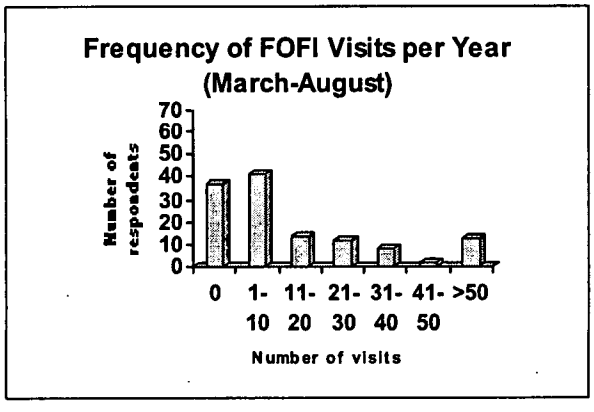

Figure 4—Number of Times During the Previous 12 Months Respondents Drove Their Vehicle on the Ocean Beach at FOFI Between March and August

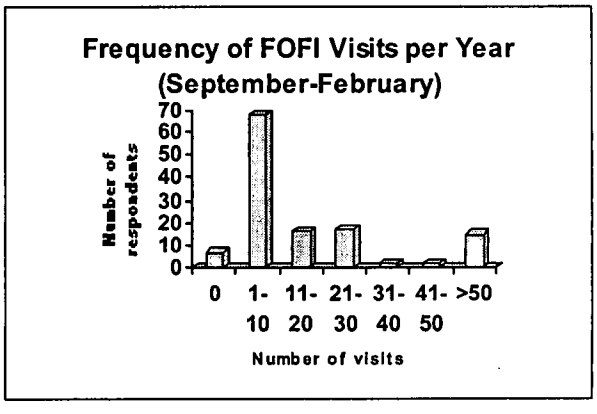

Figure 5—Number of Times During the Previous 12 Months Respondents Drove Their Vehicle on the Ocean Beach at FOFI Between September and February

Frequency of Visitation by Time of Day

Of the 127 respondents, only 27 (21%) included some nighttime driving on the ocean beach during the months of March—August during the previous 12 months. Only 17 of the 127 respondents (13%) indicated that some of their trips were exclusively nighttime driving during the months of March—August during the previous 12 months (**Figure 6—Percentages of Respondents Who Indicated They Drove Their Vehicle at Night on the Ocean Beach at FOFI Between March and August**).

However, 36 of the 127 respondents (27%) included some nighttime driving on the ocean beach during the months of September—February during the previous 12 months. Only 29 of the 127 respondents (23%) indicated that their trips were exclusively nighttime driving during the months of September—February during the previous 12 months (**Figure 7—Percentages of Respondents Who Indicated They Drove Their Vehicle at Night on the Ocean Beach at FOFI Between September and February**).

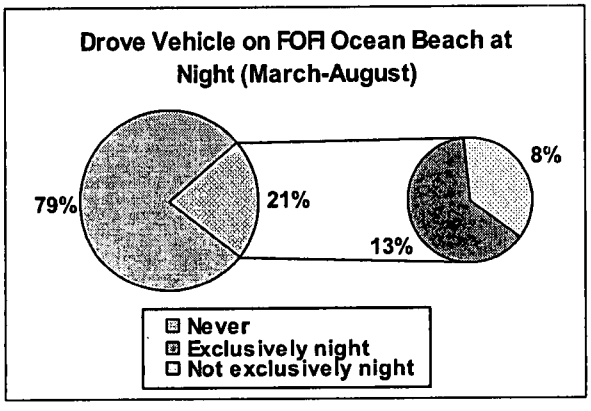

Figure 6—Percentages of Respondents Who Indicated They Drove Their Vehicle at Night on the Ocean Beach at FOFI Between March and August

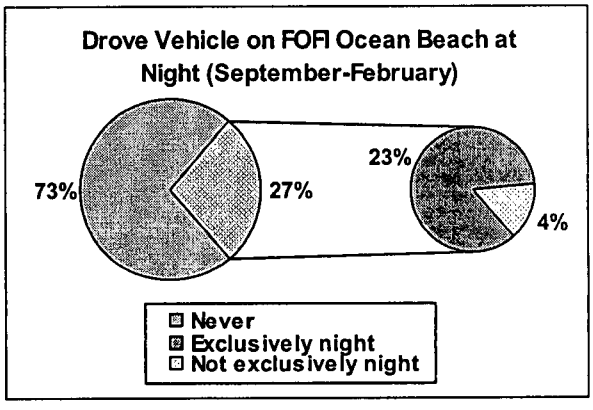

Figure 7—Percentages of Respondents Who Indicated They Drove Their Vehicle at Night on the Ocean Beach at FOFI Between September and February

In all instances, not only did nighttime driving on the ocean beach at FOFI comprise a marginal amount of overall use, but the number of nighttime driving trips was limited as well. Only 20 of the 127 total respondents (16%) reported that they drove their vehicle at nighttime on the ocean beach at FOFI during March—August between 1 and 10 times during the previous 12 months. Nonetheless, this proved to be the majority of that group who drove their vehicle at nighttime on the ocean beach at FOFI during March—August during the previous 12 months (74%) (**Figure 8—Number of Times During the Previous 12 Months Respondents Drove Their Vehicle at Night on the Ocean Beach at FOFI Between March and August**).

Only 17 of the 127 total respondents (16%) reported that they drove their vehicle at nighttime on the ocean beach at FOFI during September—February between 1 and 10 times during the previous 12 months. The majority of those users who drove their vehicle at nighttime on the ocean beach at FOFI during September—February during the previous 12 months, 25 of the 36 respondents (69%), indicated that they did so

between 1 and 20 times during this period (**Figure 9—Number of Times During the Previous 12 Months Respondents Drove Their Vehicle at Night on the Ocean Beach at FOFI Between September and February**).

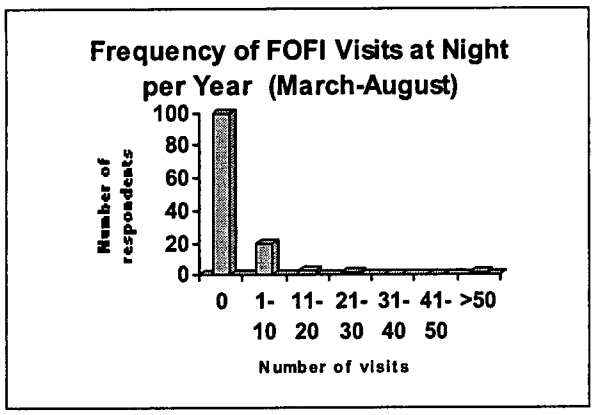

Figure 8—Number of Times During the Previous 12 Months Respondents Drove Their Vehicle at Night on the Ocean Beach at FOFI Between March and August

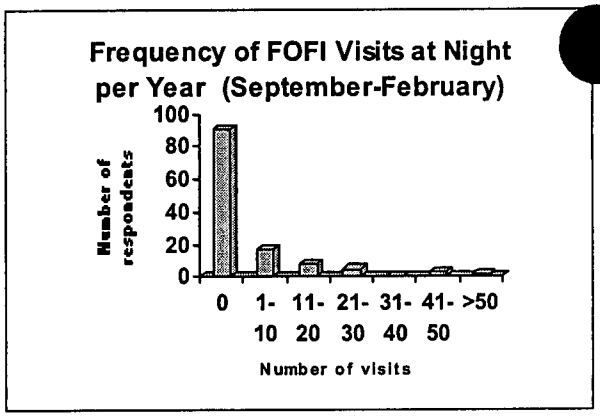

Figure 9—Number of Times During the Previous 12 Months Respondents Drove Their Vehicle at Night on the Ocean Beach at FOFI Between September and February

Physical Distribution of Visitation

Eighty-three (83) of the 128 respondents (65%) indicated that they do not normally drive their vehicle to a specific spot on the beach, stop and remain in that location for the duration of their visit. The remaining 45 respondents (35%) indicated that they normally do drive their vehicle to a specific spot on the beach, stop and remain in that location for the duration of their visit (**Figure 10—Percentages of Respondents Who Indicated They Drove Their Vehicle to a Specific Spot on the Ocean Beach at FOFI, Stopped and Remained in that Location for the Duration of Their Visit**). However, those locations where individuals drive their vehicle to a specific spot on the beach, stop and remain in that location for the duration of their visit are minimally clustered, yet widely dispersed along the ocean beach at FOFI (**Appendix E—Distribution of Stationary FOFI Ocean Beach Vehicular Users**).

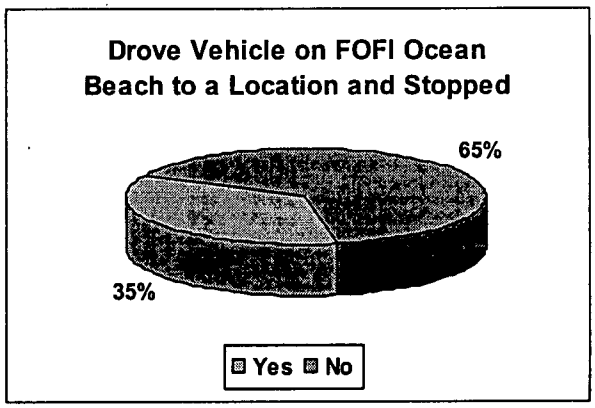

Figure 10—Percentages of Respondents Who Indicated They Drove Their Vehicle to a Specific Spot on the Ocean Beach at FOFI, Stopped and Remained in that Location for the Duration of Their Visit

Those indicating driving on the FOFI ocean beach reported minor differences in their intent to drive their vehicle to a specific spot on the beach, stop and remain in that location for the duration of their visit between the March—August (**Figure 11—Percentages of Respondents Who Indicated They Drove Their Vehicle to a Specific Spot on the Ocean Beach at FOFI, Stopped and Remained in that Location for the Duration of Their Visit Between March and August**) and September—February (**Figure 12—Percentages of Respondents Who Indicated They Drove Their Vehicle to a Specific Spot on the Ocean Beach at FOFI, Stopped and Remained in that Location for the Duration of Their Visit Between September and February**) time periods. Those driving on the FOFI ocean beach in the September—February time period were slightly more inclined not to remain stationary, and in both cases, this group was the majority (57% and 64% respectively).

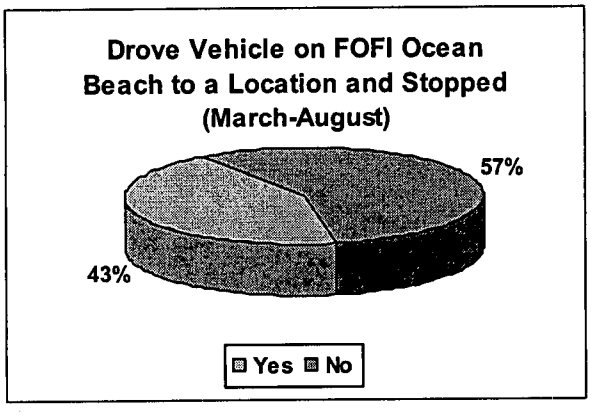

Figure 11—Percentages of Respondents Who Indicated They Drove Their Vehicle to a Specific Spot on the Ocean Beach at FOFI, Stopped and Remained in that Location for the Duration of Their Visit Between March and August

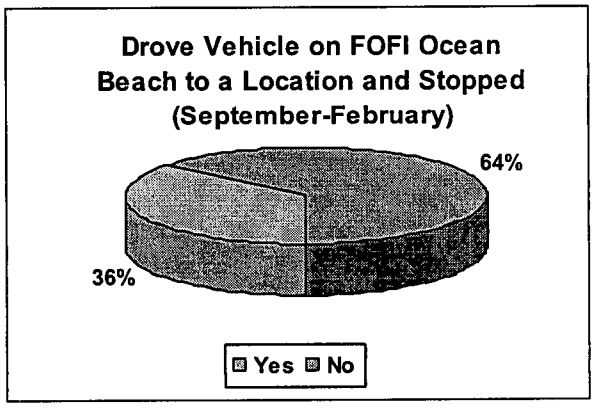

Figure 12—Percentages of Respondents Who Indicated They Drove Their Vehicle to a Specific Spot on the Ocean Beach at FOFI, Stopped and Remained in that Location for the Duration of Their Visit Between September and February

However, even though those users who indicated driving at nighttime on the FOFI ocean beach were a minority, these groups did report differences in their intent to drive their vehicle to a specific spot on the beach, stop and remain in that location for the duration of their visit between the March—August (**Figure 13—Percentages of Respondents Who Indicated They Drove Their Vehicle at Night to a Specific Spot on the Ocean Beach at FOFI, Stopped and Remained in that Location for the Duration of Their Visit Between March and August**) and September—February (**Figure 14—Percentages of Respondents Who Indicated They Drove Their Vehicle at Night to a Specific Spot on the Ocean Beach at FOFI, Stopped and Remained in that Location for the Duration of Their Visit Between September and February**) time periods. Those driving at nighttime on the FOFI ocean beach in the March—August time period were significantly more inclined not to remain stationary (70%) than those in the September—February time period (47%), and more consistent with the respondent pool as a whole (65%). In conflict with the overall respondent trend, those individuals who reported driving at nighttime on the ocean beach at FOFI during the September—February time period were significantly more inclined to drive their vehicle to a specific spot on the beach, stop and remain in that location for the duration of their visit (53%) than either those in the March—August time period (30%) or the respondent pool as a whole (35%).

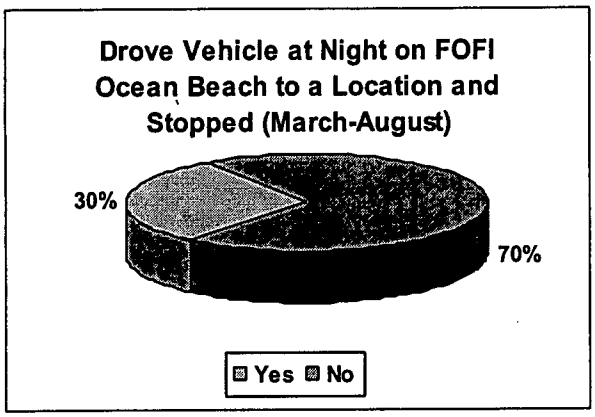

Figure 13—Percentages of Respondents Who Indicated They Drove Their Vehicle at Night to a Specific Spot on the Ocean Beach at FOFI, Stopped and Remained in that Location for the Duration of Their Visit Between March and August

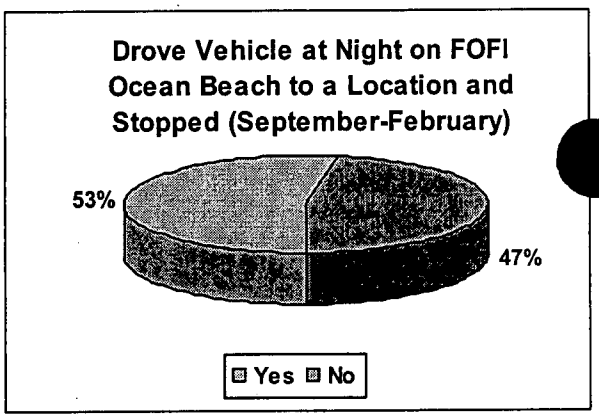

Figure 14—Percentages of Respondents Who Indicated They Drove Their Vehicle at Night to a Specific Spot on the Ocean Beach at FOFI, Stopped and Remained in that Location for the Duration of Their Visit Between September and February

Study Limitations

The results must be viewed in context of a full understanding of the parameters of the study defined by the scope of work as authorized under *North Carolina House Bill 1414-Ratified* (see prior Background section of this document). The intent of this particular phase of the study is to ascertain the demand for ocean beach vehicular access at FOFI throughout the year. However, the defining legislation limited the study to the months of August—December 2004. This had the effect of significantly restricting both the number and type of respondents from whom data could be derived. Although vehicular counts dating from July 2nd to December 15th exist, there are no vehicular counts prior to this time period. In addition, given the imposed time constraints of the study, critical survey data could only be collected from respondents between September 15th and December 15th.

These limitations confound the analysis of data in several ways. First, the overall number of actual respondents is severely limited since neither the vehicular counts nor surveys took place over an extended period of time (i.e. a two-year period). Second, given that the survey responses were only generated from users who came to the ocean beach at FOFI during the early fall through winter months (September 15th through December 15th), the question of whether the sample truly represents the population of FOFI users throughout the year arises. Individuals who use the ocean beach at FOFI exclusively during the spring and summer months were not included in the sample pool.

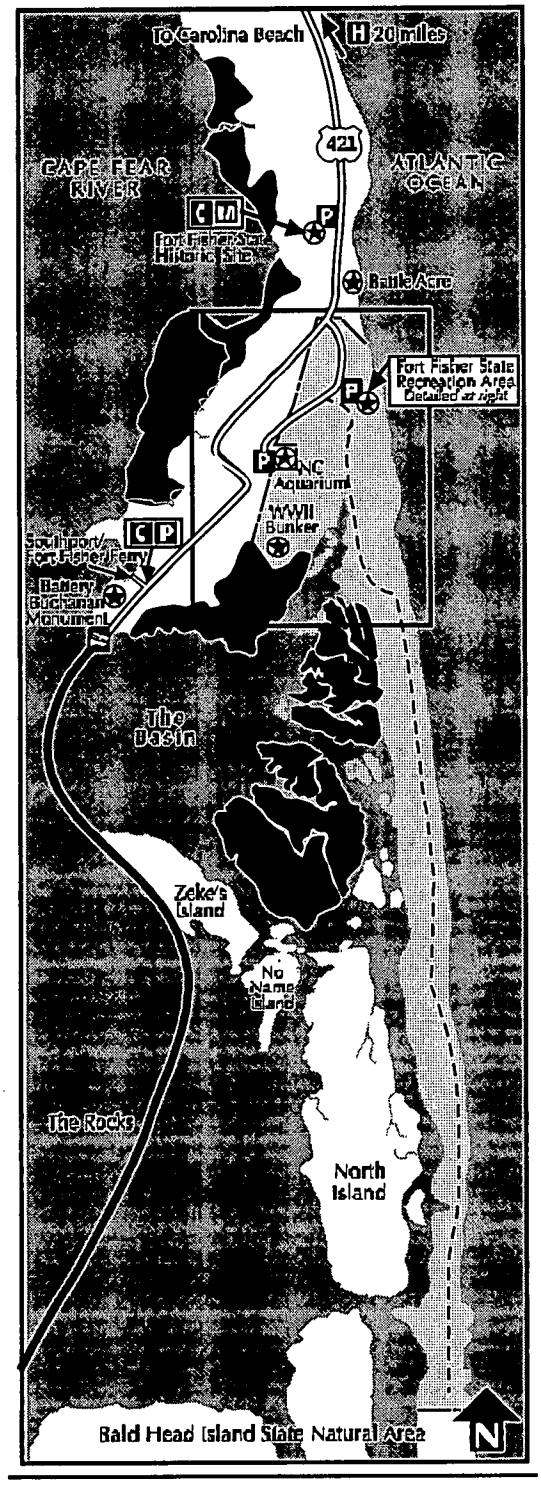
Therefore, given the above limitations, any conclusions that may be derived from analysis of this data can only be generalized to vehicular users of the ocean beach at FOFI during the early fall through winter months.

Discussion and Conclusions

Although the results of this study cannot be generalized to the entire population of ocean beach vehicular users at FOFI throughout the year, certain conclusions can be reached regarding early fall through winter users.

The majority of ocean beach vehicular users at FOFI arrive in vehicles with only one or two individuals. Larger groups are infrequent. This would indicate that FOFI is not utilized as a location for large social gatherings. This is reinforced by the wide distribution of users across the oceanfront beach.

Conclusions regarding the distribution of visitation by season are the most problematic to derive. This is due to the fact that survey data was only collected between September 15th and December 15th.



Perhaps the most relevant finding of this study is that the majority of ocean beach vehicular users at FOFI visit exclusively during the daytime hours (sunup to sundown). During the September—February time period, 73% of the users were exclusively daytime users, and during the March—August time period, the figure increases to 79%. This finding indicates that nighttime use of the ocean beach at FOFI is not significant. This is confirmed by the four-wheel drive vehicular access counts which indicate that 75% of the users entered during the daytime hours. Therefore, limiting ocean beach vehicular access to FOFI during the nighttime hours would impact a relatively small percentage of users.

Also of interest is the finding that the majority (70%) of nighttime ocean beach vehicular users at FOFI during March—August do not drive their vehicle to a specific spot on the beach, stop and remain in that location for the duration of their visit as compared to 47% of the September—February users. This would indicate that the nighttime users during March—August may be impacting critical nighttime biological functions associated with nesting sea turtles and colonial nesting water birds. However, given the inherent limitations consistent with the size and composition of the sample, this finding warrants additional investigation.

Recommendations

It would appear, based upon the available limited data, that restricting nighttime ocean beach vehicular access to FOFI would have minimal negative impact upon visitor usage and demand since the majority are daytime users. However, it would be premature to make definitive management decisions regarding ocean beach vehicular access at FOFI based upon the results of this study given the study's inherent limitations (see prior Limitations section of this document). Therefore, it is further recommended that this study be continued to cover a full two-year period. This would provide a more reliable dataset that would mitigate such limitations, and thereby support sound management decisions regarding ocean beach vehicular access at FOFI.

Ocean Beach Vehicular Access Survey—Fort Fisher State Recreation Area

Hello, I'm_____ from the University of North Carolina at Wilmington and we are conducting an Ocean Beach Vehicular Access study at the Fort Fisher State Recreation Area. I would appreciate your answering a few questions about your vehicular use of the Fort Fisher State Recreation Area. Your participation in this survey is entirely voluntary and will likely take less than two minutes. All answers will be kept confidential. Would you be willing to answer a few questions? (If they respond YES, go to Question #1. If they respond NO, thank them for their time and terminate the interview)

Date of Interview: _____ Time of Interview: _____

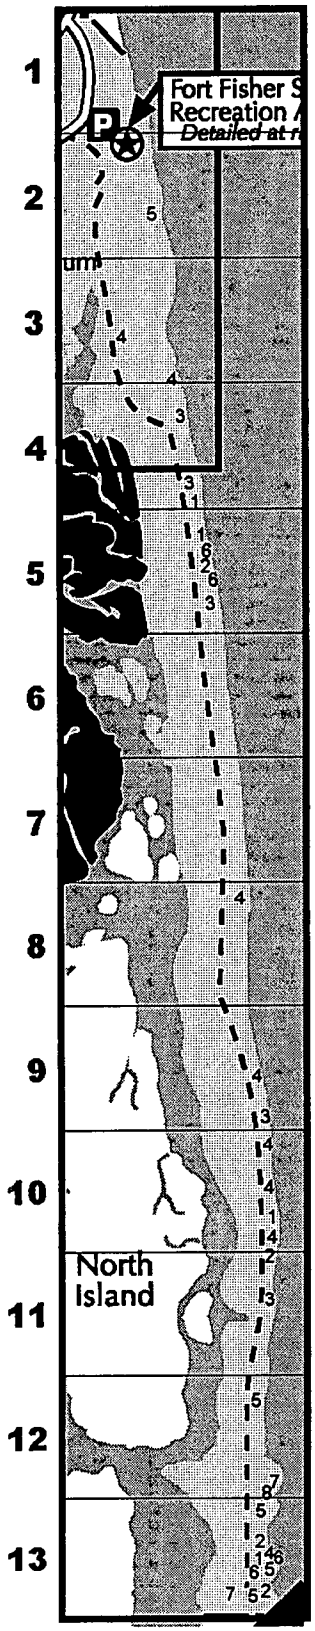
1. Are you 18 years of age or older?
   a. _____ Yes (Proceed to Question #2)
   b. _____ No (TERMINATE INTERVIEW and thank them)
2. Including today/tonight, approximately how many times during the previous 12 months have you driven your vehicle on the ocean beach here at the Fort Fisher State Recreation Area:
   _____ in the spring and summer (March – August)?
   _____ how many of these spring and summer trips included night driving on the beach?
   _____ how many of these night driving trips were EXCLUSIVELY night driving (no day driving at all on the beach)?
   _____ how about in the fall and winter (September – February)?
   _____ how many of these fall and winter trips included night driving on the beach?
   _____ how many of these night driving trips were EXCLUSIVELY night driving (no day driving at all on the beach)?
3. When you come to the Fort Fisher State Recreation Area, do you normally drive your vehicle to a specific spot on the beach, stop and remain in that one location?
   _____Yes → go to Question #4
   _____No → go to Question #5
4. Would you please identify on this map the spot that you normally drive your vehicle to on the beach? (Mark the response on the map)
5. What is your zip code? _____
6. What is your primary occupation (job)? _____
7. How much money do you typically spend on a typical trip, PER PERSON, in the Carolina Beach/Kure Beach area on the following things?

Hotel/Motel	_____ ($ per person)
Restaurants and Bars	_____ ($ per person)
Other Food and Beverages (Groceries)	_____ ($ per person)
Fishing and Beach Supplies	_____ ($ per person)
Gasoline	_____ ($ per person)

8. If this beach had been closed today/tonight, what would you have done instead? _____

_____

_____



Thank you very much for your time.

Record: 1 - Male 2 – Female
Record: Number of individuals in the vehicle _____
Record: (If you encounter a vehicle that refuses to answer the survey) Number of individuals in the vehicle_____

Appendix D—Survey Schedule

Date	Time	Number of Surveys
Wednesday, September 15th	5:00 pm – 8:00 pm	8
Saturday, September 18th	11:00 pm – 2:00 am	2
Wednesday, October 13th	9:00 am – 12 noon	4
Friday, October 15th	9:00 pm – 12 midnight	3
Monday, October 18th	1:00 pm – 4:00 pm	23
Thursday, October 21st	11:00 pm – 2:00 am	2
Sunday, October 24th	2:00 pm – 5:00 pm	32
Tuesday, October 26th	8:00 pm – 11:00 pm	3
Saturday, October 30th	11:00 am – 2:00 pm	48
Sunday, October 31st	6:00 pm – 9:00 pm	4
Monday, November 8th	10:00 pm – 1:00 am	0
Saturday, November 13th	1:00 pm – 4:00 pm	24
Saturday, November 13th	11:00 pm – 2:00 am	0
Wednesday, November 17th	9:00 pm – 12 midnight	0
Sunday, November 21st	8:00 am – 11:00 am	8
Tuesday, November 23rd	4:00 pm – 7:00 pm	0
Monday, November 29th	9:00 am – 12 noon	0
Saturday, December 4th	10:00 am – 1:00 pm	8
Thursday, December 9th	2:00 pm – 5:00 pm	0
Friday, December 10th	9:00 am – 12 noon	3
Friday, December 10th	4:00 pm – 7:00 pm	0
Saturday, December 11th	10:00 am – 1:00 pm	7
Sunday, December 12th	9:00 am – 12 noon	0
Monday, December 13th	6:00 pm – 9:00 pm	1
Tuesday, December 14th	9:00 am – 12 noon	1
Wednesday, December 15th	2:00 pm – 5:00 pm	0

Appendix E—Distribution of Stationary FOFI Ocean Beach Vehicular Users

Reference Number	Survey Date and Time Period
1	September 15, 2004 5:00-8:00pm

INTRODUCTION AND SCOPE OF WORK

The purpose of this investigation is to use the best available data to determine the direct and indirect effects of vehicular access on Endangered, Threatened, and Significantly Rare species that use the Fort Fisher State Recreation Area (FOFI), as directed by 2004 N.C. House Bill 1414, Section 12.3(b).

PAST BIOLOGICAL STUDIES IN THE FORT FISHER REGION

In the late 1970's and early 1980's, personnel at the University of North Carolina at Wilmington (Paul Hosier, Tom Eaton, Medha Kochhar, Paul Thayer, and I) conducted a series of broad-based studies at FOFI and the north end of Bald Head Island to examine the impact of off-road vehicles (ORVs) on flora and fauna in the region. We used FOFI as our disturbed, experimental site and the north end of Bald Head Island as our undisturbed, control site—the study sites were separated by an inlet in those days, so there was no corridor for dispersal between the islands. One study found reduced plant diversity and abundance at FOFI compared to that on the north end of Bald Head Island (Hosier and Eaton, 1980). Another study determined that ORV tracks prevented hatchling sea turtles from reaching the ocean (Hosier et al., 1980). The final study found that mammalian community structure was altered by chronic ORV use, as small mammal populations were three times greater on FOFI than on the north end of Bald Head Island due to a dearth of predators (snakes, foxes, and many raptors) that were present on the north end of Bald Head Island (Webster et al., 1980). It should be mentioned that ORV drivers regularly drove over dunes and into the salt marsh at that time and that the landscape was much more disturbed than it is today.

In addition, there has been extensive survey work on the barrier beaches adjacent to FOFI during the last 25 years. The Bald Head Island Conservancy (BHIC) and the University of North Carolina at Wilmington (UNCW) have monitored nesting sea turtles on Bald Head Island since the early 1980s and they also have monitored shorebird and colonial waterbird populations on Bald Head Island on occasion. Personnel with the N.C. Wildlife Resources Commission (NCWRC) have assisted with sea turtle monitoring throughout the region (they organize volunteers to patrol beaches for nesting sea turtles) and they have attempted to conduct annual surveys for breeding, migrating, and resident birds throughout the region. My graduate students and I also have monitored sea turtles on Masonboro Island and Wrightsville

Beach irregularly since 1984, and we have monitored Figure Eight Island and the north end of Wrightsville Beach for all Endangered, Threatened, and Significantly Rare species since 1999. Charlie Baker has been monitoring Figure Eight Island for sea turtles since the early 1980s and he continues to participate in the UNCW study now. Personnel at the Fort Fisher Aquarium, National Audubon Society, Carolina Beach State Park (now Fort Fisher State Recreation Area), U.S. Fish and Wildlife Service, U.S. Army Corps of Engineers, and several graduate students at UNCW also have participated in an impressive number of floral and faunal surveys in the region.

All told, a tremendous amount of research has been conducted on the Endangered, Threatened, and Significantly Rare species in the Fort Fisher area. Therefore, there is a wealth of biological information that documents the importance of barrier island communities to Endangered, Threatened, and Significantly Rare species in southeastern North Carolina, and there are a significant number of studies that directly and indirectly document how ORV use affects the Endangered, Threatened, and Significantly Rare species that frequent FOFI. This study incorporates approximately 25 years of data but focuses on the last five years of data to ascertain the effects of ORVs on Endangered, Threatened, and Significantly Rare species at Fort Fisher State Recreation Area.

DESCRIPTION OF HABITAT TYPES IMPORTANT TO THIS INVESTIGATION

Biological data were collected for Endangered, Threatened, and Significantly Rare species for a five-year period from 2000-2004, focusing on five "islands" in southeastern North Carolina. The focal species were sea turtles (both loggerheads and greens), nesting and migrating shorebirds (Piping Plover, Wilson's Plover, American Oystercatcher, Willet), nesting and migrating colonial waterbirds (Black Skimmer, Least Tern, Common Tern), and seabeach amaranth (an annual plant endemic to the Upper Beach Community of Schafale and Weakley, 1990). The five islands included in this investigation are, from north to south, Figure Eight Island, Wrightsville Beach, Masonboro Island, Fort Fisher State Recreation Area, and Bald Head Island.

"Islands" is a vague term in this investigation because inlets open and close, sometimes in the course of only a few days. Inlets also migrate, which is important in this investigation because the constant shifting of sand in inlet areas maintains a wider array of habitat types, particularly large expanses of sandbars and mudflats isolated by channels and sloughs. Thus, inlet areas have the greatest amount of habitat diversity of any coastal system. Moreover, because this assortment of habitat types is in close proximity, inlet areas are important foraging, socializing, and resting areas for colonial waterbirds and shorebirds, including Piping Plovers, Wilson's Plovers, American Oystercatchers, Willets, Least Terns, Common Terns, and Black Skimmers. In addition, seabeach amaranth germinates in sandy open areas in inlet areas. Therefore, management measures designed to safeguard one species in the inlet community invariably safeguard many.

Ocean-facing beachfront habitat, the Upper Beach Community (Schafale and Weakley, 1990), is another coastal habitat that is important to this investigation. Compared to the inlet area, the Upper Beach Community is relatively stable and there is less habitat diversity. Although storms and water can cause pronounced erosion and accretion of sand at times, the continued long-term effect of wind and salt are the primary agents in determining community structure. The Upper Beach Community is characterized by widely to moderately scattered plants, such as sea oats, that are tolerant of these conditions. These pioneer plants trap sand and dunes eventually grow, provided storms do not sweep the beach clean and start the dune-building process anew. The Upper Beach Community is used by nesting and incubating sea turtles, nesting and migrating shorebirds, and seabeach amaranth. Again, management programs that protect one species in the beachfront community invariably protect many.

Proceeding landward from the beachfront community, the dune community has more vertical relief than other barrier beach communities, thereby marking the division between ocean-facing and marsh-facing communities. Community structure behind the dunes is more variable and directly dependent on dune height and inversely dependent on the amount of salt spray affecting its vegetation (i.e., wide islands with tall dunes have more floristic and faunistic diversity than do narrow islands with low dunes). Sea turtles frequently nest on the seaward side of dunes and shorebirds nest in the dune and open hind-dune communities as well.

Another characteristic habitat of barrier islands is formed when storms breech dune lines, developing sandy washover fans that extend into the salt marsh. These barren sandflats are important nesting habitat for several species of shorebirds and colonial waterbirds and they sometimes are colonized by seabeach amaranth. In addition, diamond-backed terrapins traverse these washover fans as they search for nesting sites on adjacent uplands.

Salt marshes are another important habitat used by shorebirds and colonial waterbirds. Tidally exposed mudflats are critical foraging habitat for shorebirds, and sandbars are important areas for loafing and socializing shorebirds and colonial waterbirds. Tidally exposed mudflats also are critically important staging areas where migrating shorebirds and colonial waterbirds forage, rest, and prepare for the next leg of their journey. Other barrier island habitats, such as maritime forests and freshwater ponds, are not included herein because they are not the focus of this investigation.

METHODS

Biological data used in this investigation were compiled by personnel in the Department of Biological Sciences at the University of North Carolina at Wilmington, N.C. Wildlife Resources Commission, Fort Fisher State Recreation Area, and Bald Head Island Conservancy (BHIC). Survey methods and survey effort differed among agencies, as described in the individual species accounts below. Despite these differences, it is possible to rank the results and compare the data relative to survey effort. Furthermore, the species in question are distributed more or less continuously

along the narrow coastal zone in the southeastern United States, so a lack of presence data typically reflects a lack of survey effort rather than an aversion by a particular species to a particular island. In cases where comparisons could not be made, I have suggested some recommendations that would provide information in a cost-effective and expeditious manner.

In addition, nine letters were submitted by eight persons interested in the issue at hand and one public forum was held in order for interested parties to have an opportunity to provide comments. All written comments, save for one, were submitted by individuals who spoke at the forum and largely redundant in content. Several additional people spoke at the forum but did not submit letters. In general, the written and oral comments were constructive but sometimes lacking in biological acumen. Overall, about 80% of the oral and written comments were critical of the changes proposed and 20% were in favor of the compromise plan to restrict ORV access during night-time hours during the period from March 15 through September 15.

In the paragraphs below, I provide a brief description of each species and why it is considered to be endangered, threatened, or significantly rare, followed by comments about the status of that species in the study area based on the best available data and some concluding anecdotal remarks when warranted.

Loggerhead Sea Turtle

Loggerhead sea turtles nest on subtropical sandy beaches throughout the world, including the entire region included in this investigation. Females begin to come ashore in May and lay nests, each containing about 120 eggs, which incubate for approximately 66 days in southeastern North Carolina. Females nest at two-week intervals until late August, but nests continue to incubate until mid-November. Some females are extremely specific in where they nest, and they return to the same beach over time; others, however, roam north and south and nest at different beaches each time they come ashore. Given this prodigious reproductive effort, it has been estimated that only one in 10,000 hatchlings reach sexual maturity or else the oceans would be full of sea turtles. All species of sea turtles have been decimated over the last two centuries from the harvest of eggs, loss of nesting habitat, drowning of adults in fishing gear, and the detrimental effects of beachfront lighting. All species of sea turtles are afforded protection under the Endangered Species Act (ESA)—the loggerhead is listed federally as Threatened (LeGrand et al., 2004).

Sea turtle nesting data have been collected on a daily basis from Figure Eight Island, Wrightsville Beach, FOFI, and Bald Head Island from 2000-2004. Data from Masonboro Island is largely lacking from the latter half of this period, as explained beyond. Nesting data were collected by personnel at UNCW (Figure Eight Island), volunteers organized by the NCWRC (Wrightsville Beach), FOFI (Fort Fisher State Recreation Area), and BHIC (Bald Head Island). UNCW personnel also collected nesting data on a daily basis from Masonboro Island in 2000 and 2001, but surveys were pared to alternate days in 2002, and the island was not surveyed in 2003 or 2004. Nonetheless, reports of nests were received for both 2003 and 2004 from locals that frequented Masonboro Island during the nesting season.

Female loggerheads nested on all five islands in the study area during all five years (Table 1). The most conspicuous trend in the nesting data is a subtle north-to-south increase in the nesting density from Figure Eight Island to Bald Head Island. However, this trend is obscured by low nest densities on Wrightsville Beach, where beachfront lighting is most pronounced. Beachfront development at Bald Head Island appears to be having a negative effect on its nesting sea turtles as well, when recent nesting data is compared to that from the 1980's. Despite this decline, loggerhead nesting densities at FOFI are intermediate between those at Masonboro Island and Bald Head Island.

ORV traffic apparently has had a minimal effect on nesting females at FOFI, although some females might be scared off by vehicle lights, flashlights, and other human disturbance. Sea turtle biologists use the term 'false crawl' to refer to a nesting female that comes ashore but then returns to the ocean without nesting. As nesting density declines at Bald Head Island and ostensibly Kure Beach as well, FOFI would be the closest undisturbed beach for females that false crawl there. Therefore, FOFI is an important nesting beach for resident females that regularly return there to nest and it is an important secondary nesting site for those females that relocate there from adjacent beaches where they have false crawled.

ORV traffic has profound negative affects on hatchling sea turtles. Hatchlings emerge at night so as to avoid daytime predators and the heat of the day. ORV drivers likely would not see hatchlings crawling toward the ocean at night, so without intervention by management personnel hatchlings would be crushed during night-time ORV activity. Moreover, as mentioned above, ORV tire tracks obstructed hatchlings from reaching the ocean (Hosier et al., 1980). This incompatible situation can be remedied in one of three ways—by restricting night-time ORV activity, by relocating sea turtles nests out of ORV-use zones, or by costly and time-consuming intervention by management personnel.

FOFI has a long-standing policy that prohibits night-time ORV traffic during a three-day period around the full moon (one day before, the day of, and one day after). Local legend mistakenly alleges that sea turtles nest during the full moon. I believe this legend originates from people walking on the beach at night during a full moon, when they can see farther and more likely see a nesting sea turtle. In reality, sea turtles nest at any time during the month, and lunar periodicity has no influence on sea turtle nesting patterns. Therefore, prohibiting nighttime traffic only during the full moon affords little protection to nesting turtles.

Green sea turtle

The green sea turtle is considered to be Endangered under the ESA (LeGrand et al., 2004). Nesting green sea turtles have not been reported from FOFI, but they have been reported on rare occasions from Masonboro Island and Bald Head Island (Woodson and Webster, 1999). It is therefore likely that female green sea turtles occasionally nest at FOFI.

Diamond-backed terrapin

The diamonded-backed terrapin is widely distributed in estuarine marshes in the study area; however, it is relatively uncommon and population numbers are depleted, owing to excessive harvest for the culinary trade. Therefore, it is listed as a species of Special Concern (LeGrand et al., 2004). Few terrapin studies have been conducted in the Fort Fisher region, but declines in other parts of its range have been attributed to the plethora of active and abandoned crab traps in estuarine waters. It is included herein because nesting individuals leave the salt marsh and move onto the barrier island uplands to lay eggs.

Piping Plover

Piping Plovers breed along the East Coast of North America from the Carolinas northward into the maritime provinces of Canada. Breeding pairs nest on bare sand, primarily near inlets. Nests frequently are lost to high tides and predators, nesting success is low, and the number of nesting pairs has diminished dramatically in the last century. More recently, much of the bird's nesting habitat has been altered directly by beach-front development and indirectly as barren unstable inlets areas become densely vegetated following inlet stabilization practices. In addition, Piping Plovers are unable to spend adequate time foraging at sites with even moderate amounts of human disturbance (Burger, 1994). The East Coast Piping Plover population is listed federally as Threatened because of declining numbers and loss of habitat (LeGrand et al., 2004).

Piping Plovers are present in southeastern North Carolina almost year round; however, different groups of birds are here at different times of the year. Breeding pairs are found in southeastern North Carolina from late April until late July. Pairs that breed farther north migrate through southeastern North Carolina, beginning in July and continuing through November, as they move southward to Florida and the Bahamas. The northernmost nesting Piping Plovers, those from the Canadian maritime provinces, arrive in southeastern North Carolina in December and stay here as winter residents until February, at which time they begin their northward spring migration. Spring migration continues throughout March and April as birds from Florida and the Bahamas move northward. Thus, four groups of Piping Plovers occur in southeastern North Carolina throughout the year: breeding pairs, fall migrants, winter residents, and spring migrants.

Piping Plover surveys (Table 2) have been conducted during the last five years (2000-2004) by UNCW (Figure Eight Island and the north end of Wrightsville Beach) and NCWRC (Masonboro Island, FOFI, and Bald Head Island) personnel. Surveys at Figure Eight Island and the north end of Wrightsville Beach have been conducted at least weekly since 2000, so these data are most reliable. Fall migrants, winter residents, and spring migrants have been observed on both islands, but breeding pairs have not been seen on either island save for a single observation of one breeding pair on Figure Eight in 2004 that likely nested on Hutaff Island, the next island to the north. Surveys for breeding Piping Plovers on Masonboro Island, FOFI, and Bald Head Island have occurred annually during the five-year study period. One breeding pair was observed at FOFI on 1 July 2002, a single adult was observed on

the north end of Bald Head Island on 1 July 2000, a lone adult was observed on 4 June 2004 at FOFI, and an adult female was observed on the south end of Masonboro Island on 2 June 2004. Surveys for autumnal and spring migrants and winter residents have occurred less frequently on Masonboro Island, FOFI, and Bald Head Island, but migrants have been observed every time there was a survey and winter residents were observed on every survey except one. Fall migrants, winter residents, and spring migrants certainly inhabit these three islands and breeding adults appear there sporadically.

Wilson's Plover

Wilson's Plovers nest on sandy beaches with scant vegetation, choosing what little vegetation is present as cover for their widely spaced nests. They have low reproductive success since they construct nests in dynamic inlet and beach-front habitats where overwash and shifting sands are relatively common. Currently, they also suffer from the direct and permanent loss of habitat and the modification of remaining habitat after beach stabilization practices. The Wilson's Plover is considered to be Significantly Rare (LeGrand et al., 2004).

Surveys for breeding Wilson's Plovers have been conducted during the 2000-2004 period by personnel at UNCW (Figure Eight Island and the north end of Wrightsville Beach) and personnel at NCWRC (Masonboro Island, FOFI, and Bald Head Island). Surveys at Figure Eight Island and the north end of Wrightsville Beach have been conducted at least weekly since 2000, and nests discovered on Wrightsville Beach have been followed every 2-3 days throughout incubation to determine reproductive success. Surveys on Masonboro Island, FOFI, and Bald Head Island for breeding pairs have occurred each year during the five-year study period, but sometimes only once a year per island. Wilson's Plovers migrate southward out of our area in the winter, so management agencies do not conduct surveys for fall and spring migrants or winter residents.

Despite obvious gaps in the data, surveys indicate that Wilson's Plovers nest on all five islands included in this investigation (Table 3). Additional survey work is needed during the breeding season to better document the number of nests on Masonboro Island, FOFI, and Bald Head Island, where it undoubtedly occurs. However, given the bird's predilection to nest in sparsely vegetated sandy habitat, which at FOFI is associated with the outer perimeter of the roped areas, additional work is needed to determine if reproductive success at FOFI is significantly different from that on adjacent islands due to a pronounced rather than a subtle edge effect with adjacent dunes and with adjacent unvegetated, greatly disturbed areas.

American Oystercatcher

American Oystercatchers lay widely spaced nests on sandy beaches with scant vegetation. Because they breed in dynamic inlet and beach-front habitats where overwash and shifting sands easily can destroy their nests, they have low reproductive success. In addition, they suffer from loss of habitat and the increase in vegetative biomass after beach stabilization practices. American Oystercatchers also nest in salt marsh habitats when inlet and beach-front habitats become

unsuitable, but reproductive success in marshes is less than that in inlet and beach-front habitats (Lauro and Burger, 1989). The American Oystercatcher is considered to be Significantly Rare (LeGrand et al, 2004).

Personnel from UNCW monitored Figure Eight Island and the north end of Wrightsville Beach and personnel from the NCWRC monitored Masonboro Island, FOFI, and Bald Head Island during the period from 2000-2004 (Table 3). Surveys at Figure Eight Island and the north end of Wrightsville Beach have been conducted at least weekly since 2000, and nests discovered on both islands have been followed every 2-3 days throughout incubation to determine reproductive success. Surveys on Masonboro Island, FOFI, and Bald Head Island for breeding pairs have occurred annually during the five-year study period, but occasionally only once a year per island. Since American Oystercatchers migrate southward out of our area in the winter, management agencies typically do not conduct surveys for fall and spring migrants or winter residents.

Surveys indicate that American Oystercatchers nest on all five islands included in this investigation, despite gaps in the data that reflect a lack of widespread survey effort on some islands (nests are laid far apart, so it takes an entire day to survey several miles of beach). Additional survey work during the breeding season will better document the number of nests on Masonboro Island, FOFI, and Bald Head Island and determine if reproductive success at FOFI is significantly different from that on adjacent islands.

Willet

The Willet is a year-round resident of southeastern North Carolina that nests in moderate to thick barrier island vegetation, typically along dunes and in the hind-dune habitats. Relatively little is known about its reproduction because its nests are difficult to locate, and management personnel generally spend more time in open areas with the other protected shorebirds and colonial waterbirds included in this report. The Willet currently is not listed at the federal or state level, but it is of concern to management agencies and it has received increased attention in the last few years. It is included herein for the sake of completeness.

Willet nests have been found on every island in this investigation, including FOFI, although on many surveys Willets were not the focus of attention (Table 3). It is not possible to determine nesting density based on the nesting data available, but this secretive species is more abundant than the limited information indicates.

Least Tern

The Least Tern is a colonial nesting waterbird, meaning that its nests typically are concentrated in relatively small areas of suitable habitat. Colony size ranges to as many as 400 nests, depending on the amount of suitable habitat, which consists of barren sand near inlets, washover fans, and dredge material islands (Parnell and Soots, 1979). Least Tern colonies are prone to disturbance by predators and humans (Erwin, 1980, 1989; Massey and Fancher, 1989; Erwin et al., 2001), and they are prone to being completely destroyed by harsh weather (Cowgill, 1989) and

high tides (Parnell and Soots, 1979). The Least Tern was almost completely exterminated from North Carolina in the late 1800's by plume hunters, but the species recovered slowly during the early 1900's when hunting laws were passed, demand ceased, and profits crashed. The number of nests in North Carolina has declined from 2,276 in 1977 to a low of 597 in 1989; 882 nests were counted in 1997. Therefore, the Least Tern is considered to be a species of Special Concern (LeGrand et al., 2004)

UNCW personnel monitored Figure Eight Island and the north end of Wrightsville Beach and NCWRC personnel monitored Masonboro Island, FOFI, and Bald Head Island for Least Tern nests during the period from 2000-2004 (Table 4). Surveys at Figure Eight Island and the north end of Wrightsville Beach have been conducted at least weekly since 2000, and nests discovered on both islands have been examined every 2-3 days throughout incubation to determine reproductive success. Surveys on Masonboro Island, FOFI, and Bald Head Island for breeding Least Tern pairs have occurred annually during the five-year study period, but occasionally only once a year per island. Least Terns migrate southward out of our area in the winter, so management agencies typically do not conduct surveys for fall and spring migrants or winter residents.

Based on the best available data, Least Terns nesting apparently do not nest on all islands included in this study; however, survey effort varied both among years and islands. Least Terns nested on the south end of Figure Eight Island in 2000, although nest numbers were not determined, and they laid approximately 50 nests there in 2001. Least Terns laid five nests on the north end of Figure Eight Island in 2002, they did not nest on either end of Figure Eight Island in 2003, and they laid 12 nests on the north end in 2004. Least Terns did not nest on the north end of Wrightsville Beach in 2000, 2001, or 2002, but they nested there in 2003 and 2004, laying 202 and 369 nests, respectively. Changes in nest numbers between the south end of Figure Eight Island 2000 and 2001 and the north end of Wrightsville Beach in 2003 and 2004 are an artifact of the Mason Inlet Relocation Project. Least Terns did not nest on either side of Mason Inlet in 2002 when the area was heavily disturbed by construction equipment and human disturbance.

Least Terns have nested on Masonboro Island more or less continually since colonial waterbird surveys began in 1977, including each year included in this investigation. A total of 327 nests was laid on Masonboro Island in 1977, an unspecified number were laid in 2000, 99 were laid in 2001, 150 were laid in 2002, 115 were laid in 2003, and an unspecified number were laid in 2004. Due to its low relief, Masonboro Island has an extensive number of young to old washover fans that have been used by Least Terns. As these fans become overgrown with vegetation, Least Terns move to newer, unvegetated fans. Nest numbers therefore reflect the amount of barren sand available for nesting.

At FOFI, Least Terns were prevalent when colonial waterbird surveys were begun. For example, 22 nests were laid at New Inlet in 1977 (Parnell and Soots, 1979). However, ORV traffic has rendered this site inhospitable for Least Terns and they seldom nest there now. Three nests were laid in 2001, but otherwise no nests were

laid at FOFI in 2000, 2002, 2003, or 2004. Least Terns apparently did not nest at Bald Head Island any time during the study period.

Since it prefers large open sandy beaches and washover fans for nesting activities, the Least Tern would benefit greatly if ORV access at FOFI was prohibited. In fact, Least Terns apparently avoid beaches impacted by ORV traffic and then return once ORV traffic is prohibited (Gochfeld, 1983). Human and predator disturbance also has a negative effect on nesting success, so roping off large expanses of foredune and dune-break areas will be necessary to attain this goal (Erwin, 1980, 1989; Erwin et al., 2001; Rimmer and Deblinger, 1992).

Common Tern

Common Terns are much less common than Least Terns in the study area. They suffer from the same perils mentioned above, but are much more susceptible to disturbance and therefore are considered to be a species of Special Concern (LeGrand et al., 2004). The total number of Common Tern nests in North Carolina has steadily declined from 4,885 in 1977, when NCWRC surveys began, to 1,699 in 1995 (Parnell et al., 1997) and then to 952 in 1997, primarily due to the loss of nesting habitat and colony disturbance. Individual colonies can have as many as 500 nests.

UNCW personnel have conducted weekly surveys on Figure Eight Island and the north end of Wrightsville Beach (Table 4), where Common Tern nests were followed every 2-3 days throughout incubation to determine reproductive success. NCWRC personnel annually monitored Masonboro Island, FOFI, and Bald Head Island for breeding pairs during the period from 2000-2004, although sometimes only once a year per island (Table 4).

Although nest numbers were not counted, my field notes indicate that Common Terns nested on the south end of Figure Eight Island in 2000. Common Terns laid approximately 20 nests on the south end of Figure Eight Island in 2001 but they did not nest there in 2002, 2003, or 2004, as the southern end of the island by that time had been added to the north end of Wrightsville Beach as a result of the Mason Inlet Relocation Project. There were no Common Tern nests on the north end of Wrightsville Beach in 2000, 2001, or 2002, but there were two Common Tern nests on the north end of Wrightsville Beach in 2003 and four nests there in 2004. Seventeen Common Tern nests were found on the north end of Masonboro Island in 1977 (Parnell and Soots, 1979), one nest was found on Masonboro Island in 1997, and three nests were found on Masonboro Island in 2001. Common Tern nests were not found throughout the remainder of the study area during the study period.

Common Terns suffer from two primary threats during their nesting season: ORV and pedestrian traffic and predation by gulls, raccoons, foxes, and rats (Parnell and Soots, 1979; Erwin, 1989; Erwin et al., 2001; O'Connell and Beck, 2003) and gull density increases proportionately with human density, causing Common Tern reproductive success to plummet (Erwin, 1980). It is likely that Common Terns nested throughout the region, including FOFI, prior to coastal development. They require large expanses of undisturbed sparsely vegetated sandflats in which to nest

successfully, and this habitat currently does not exist at FOFI. Reclamation of areas used by ORVs would likely result in the re-establishment of Common Tern nesting colonies at FOFI.

Black Skimmer

Black Skimmers typically nest in the same type of habitat that is used by Common Terns—open to sparsely vegetated sandy areas near inlets and on dredge-spoil islands (Parnell and Soots, 1979), although hatching success is higher on natural beaches (Mallach and Leberg, 1999). Black Skimmers nest in concentrations as large as 250 nests or so. They suffer primarily on the breeding grounds due to predation (O'Connell and Beck, 2003) and high tides, which can wash out entire colonies (Parnell and Soots, 1979). In particular, gull predation is more pronounced in areas with higher human densities (Erwin, 1980) and reproductive success in Black Skimmers is inversely correlated with human disturbance (Safina and Burger, 1983; Erwin, 1989). Because of these problems, the Black Skimmer is considered to be a species of Special Concern (LeGrand et al., 2004).

Surveys for breeding Black Skimmer pairs (Table 4) have been conducted during the last five years (2000-2004) by personnel at UNCW (Figure Eight Island and the north end of Wrightsville Beach) and at NCWRC (Masonboro Island, FOFI, and Bald Head Island). Surveys at Figure Eight Island and the north end of Wrightsville Beach have been conducted at least weekly since 2000, where nests were followed every 2-3 days throughout incubation to determine reproductive success. Black Skimmer colonies at Masonboro Island, FOFI, and Bald Head Island have been surveyed each year during the five-year study period, but sometimes only once a year per island. In addition, NCWRC personnel surveyed Masonboro Island and FOFI in 1997 and 1999 for nesting colonial waterbirds, and those results are mentioned here as well. Although Black Skimmers are year-round residents in southeastern North Carolina, management agencies typically do not conduct surveys for fall and spring migrants or winter residents.

Black Skimmers laid nests on Figure Eight Island in 2000, but the number of nests was not recorded, and they laid approximately 40 nests there in 2001. Black Skimmers did not nest on Figure Eight Island in 2002, 2003, or 2004 because the southern end of the island, the site used in 2000 and 2001, had been added by that time to the north end of Wrightsville Beach as a result of the Mason Inlet Relocation Project. There were no Black Skimmer nests at the north end of Wrightsville Beach in 2000 or 2001, but there were four nests at the north end of Wrightsville Beach in 2002, 166 nests there in 2003, and 64 nests there in 2004. Black Skimmer nests have been recorded on Masonboro Island—57 nests in 1977 (Parnell and Soots, 1979), 1 nest in 1997, 12 nests in 1999, and 41 nests in 2001. At FOFI, 59 Black Skimmer nests were recorded in 1977 (Parnell and Soots, 1979), 16 were recorded in 1997, and 41 were recorded in 1999. Otherwise, Black Skimmer nests were not found throughout the remainder of the study area during the study period.

The Black Skimmer nests throughout the region in question, but nest numbers differ from year to year and from island to island based upon which island has the largest amount of open to sparely vegetated sandy areas in that year. Large colonies

nested on Masonboro Island in the 1970's, 1980's, and 1990's and it is likely that large colonies would nest at FOFI if ORV traffic was prohibited.

Seabeach Amaranth

Seabeach amaranth is a rare denizen of barrier island beaches along the East Coast of North America. It colonizes highly dynamic beachfront and inlet habitats that are characterized by shifting sands and a dearth of vascular vegetation, especially wide, exposed sandy areas such as overwash fans, accreting ends of islands, and supratidal dunefront areas, or the Upper Beach Community of Schafale and Weakley (1990). It is a low-growing annual plant that typically begins to germinate in late spring and therefore serves as an important pioneer in ecological succession by trapping windblown sand and providing temporary stability to ocean-facing beaches during the summer and autumn months (Weakley and Bucher, 1992). Seabeach amaranth is considered to be a 'fugitive species' because its spatial distribution is unpredictable and an artifact of three factors: it is an annual that dies at the end of each growing season; it lives in a highly dynamic environment that changes rapidly over time; and it depends on tides, storms, and hurricanes for long-distance dispersal (Mangels, 1991). As such, its distribution and abundance varies dramatically over time and space (Weakley et al., 1996).

Amaranthus pumilus has become extirpated throughout much of its historic range. It once occurred widely in nine states from Massachusetts southward to South Carolina, but it now occurs in relatively small, isolated pockets of remaining suitable habitat in New York, New Jersey, Delaware, Maryland, Virginia, North Carolina, and South Carolina (Belden, 2000; Lea, 1999; McAvoy, 2002; Murdock, 1993; Radis, 2002). Declines throughout its range in both the number of populations and the total number of individuals have been attributed to beachfront development, beach stabilization efforts, off-road vehicles, and herbivory by webworms. *Amaranthus pumilus* was listed as Threatened by the U.S. Fish and Wildlife Service (USFWS) on 7 April 1993 (Murdock, 1993), and its recovery plan was approved by USFWS on 12 November 1996 (Weakley et al., 1996). Delisting will be considered when seabeach amaranth populations inhabit at least 75% of sites with suitable habitat in six of nine historically occupied states for a period of 10 consecutive years (Weakley et al., 1996).

Seabeach amaranth surveys have been conducted on an irregular basis in the FOFI study area (Weakley and Bucher, 1992; Webster, 2005). An average of 698 (range 3-2949) plants was found at Figure Eight Island in 1987, 1988, 1990, 2002, 2003, and 2004. An average of 488 (range 0-2935) plants was found at Wrightsville Beach in 1979, 1985, 1986, 1987, 1988, 1990, 2002, 2003, and 2004. An average of 218 (range 118-317) plants was found at Masonboro Island in 1988 and 1990. An average of 1 plant (range 0-3) was found at FOFI in 1987, 1988, and 1990. An average of 6 plants was found on the east beach of Bald Head Island in 1987, 1988, and 1990. These population sizes were categorized as good (Figure Eight Island, Wrightsville Beach, Masonboro Island) and poor (FOFI, Bald Head Island) by Weakley and Bucher (1992).

ORV traffic has mixed effects on seabeach amaranth, depending on the season. ORV traffic during the dormant season generally has little effect on seeds, unless it causes "massive physical erosion and degradation of the site, such as can be seen at the northern end of Carolina Beach" (Weakley et al., 1996:16). However, some ORV traffic during the dormant season might be beneficial to seabeach amaranth since it prevents the widespread establishment of perennial grasses and shrubs, but only if those areas are closed to ORV traffic during the growing season. "The brittle, fleshy stems are easily broken, and growing plants do not generally survive a single pass by a truck tire" (Weakley et al., 1996:17). Although seabeach amaranth should occur in the Upper Beach Community at FOFI, it is doubtful that it has been successful in dealing with decades of ORV traffic.

RESPONSE TO COMMENTS BY THE PUBLIC

I have responded to comments submitted by the public where appropriate in the species accounts above, save for three that are discussed here. One person questioned if ORV traffic exacerbated erosion rates at Rams Gate Road. This question is beyond the scope this investigation and well beyond my field of expertise, so it is not pursued here.

The second comment that has not received attention above posed the question, and I paraphrase here, if heavy ORV traffic was beneficial to protected species by keeping predators away from FOFI. It is true that predators were largely lacking at FOFI when we conducted our broad-based studies in the late 1970's and early 1980's and that they are present throughout the region today. It is therefore likely that predation pressure is greater today than it was when those studies were conducted. However, it is important to stress that ORV traffic was not regulated in the late 1970's and early 1980's and there was little, if any, reproductive success in the few Endangered, Threatened, and Significantly Rare species that existed at FOFI at that time. The number of Endangered, Threatened, and Significantly Rare species increased after ORV traffic was prohibited from the dune community and some of the salt marsh community, so reproductive success increased perforce. This portends that reproductive success in Endangered, Threatened, and Significantly Rare species will increase even more if ORV traffic is completely prohibited at FOFI and be similar to reproductive success rates observed at other state and national parks in North Carolina (e.g., Hammock's Beach State Park, Cape Hatteras National Seashore, and Cape Lookout National Seashore).

The final comment dealt with the rationale used to close parts of FOFI to ORV traffic, especially salt marsh areas. ORV traffic compresses soils in intertidal areas, both on the ocean and sound sides of barrier islands, rendering it unsuitable for invertebrates such as bloodworms and clamworms (Weber and Haig, 1996). These invertebrates are the primary forage species for a variety of shorebirds, including those Endangered, Threatened, and Significantly Rare shorebird species mentioned above. Barrier islands consist of a variety of habitats for nesting, foraging, resting, loafing, and socializing shorebirds and colonial waterbirds. If any one habitat is degraded, by any means, then the entire system becomes unsuitable for these protected species. For example, newborn chicks that can't yet fly will starve if

foraging habitat is unavailable, irrespective of how much nesting habitat is available. Therefore, the prohibition of ORV traffic in intertidal marsh areas is critical for the survival of these species.

CONCLUSIONS

- Dates used at Fort Fisher State Recreation Area (FOFI) do not coincide with those used by the U.S. Fish and Wildlife Service, NC Wildlife Resources Commission, or US Army Corps of Engineers in management decisions affecting endangered, threatened, and significantly rare species, although dates used by the latter three agencies do agree—this creates confusion and ambiguity.

- The loggerhead sea turtle, listed federally as Threatened under the Endangered Species Act (ESA), regularly nests at FOFI in densities proportionate the length of park's beachfront nesting habitat, and the green sea turtle, listed as Endangered under the ESA, has nested both north (Masonboro Island) and south (Bald Head Island) of FOFI and likely nests at FOFI on rare occasions.

- Off-road vehicle (ORV) lights and tire ruts negatively affect nesting and hatchling sea turtles.

- Sea turtles nest approximately every two weeks, independent of the lunar cycle; therefore, the previous management decision to close FOFI for three nights around the full moon appeals to local legend but does not reflect the nesting biology of sea turtles.

- The Piping Plover, listed as Threatened under the ESA, uses FOFI at all times of the year; it is common during fall and spring migration, uncommon in the winter, and rare during the breeding season.

- FOFI is an important site (especially during the breeding season) for three species of shorebirds (Wilson's Plovers, American Oystercatchers, and Willets) that are

considered to be Significantly Rare or of Special Concern; Wilson's Plovers and American Oystercatchers nest in undisturbed sparsely vegetated beachfront habitats, while Willets nest in undisturbed densely vegetated habitats; all three species utilize a variety of foraging and resting habitats.

- Colonial waterbirds (Least Terns, Common Terns, and Black Skimmers, all of which are considered to be species of Special Concern) seldom use FOFI, although each species uses other islands in this investigation; each species requires large tracts of undisturbed open to sparsely vegetated habitat in which to nest, which at FOFI has been designated for ORV traffic.

- ORV traffic in the beachfront and marsh intertidal areas compacts soil, thereby rendering it unsuitable for worms and other invertebrates used as forage by shorebirds and other consumers.

- Seabeach amaranth, a small fleshy annual plant that is listed federally as Threatened under the ESA, exists only in the Upper Beach Community, which at FOFI is open to ORV traffic that destroys young tender plants and prevents them from setting seed.

- The patchwork of open and closed areas in dune and marsh areas of FOFI effectively eliminates both as important foraging and resting habitat for migrating birds, which is noteworthy because FOFI serves as an important cross-over site during migration.

- FOFI is used throughout the year by at least one Endangered, Threatened, or Significantly Rare species; overall, however, more protected species are at FOFI during the spring and summer months, when the park's diverse assemblage of barrier beach habitats serve as critical breeding, foraging, and loafing habitat, and during the fall and spring months, when migrating shorebirds and colonial waterbirds utilize critical foraging, resting, and staging habitat.

- Personnel employed by federal and state agencies, including FOFI, are legislatively mandated to manage for the protection of Endangered, Threatened, and Significantly Rare species.

- ORV traffic disproportionately increases the amount of time that park personnel must devote to protected species management.

- Closing the entire beach throughout the year to ORV traffic is the only mechanism that would benefit all Endangered, Threatened, and Significantly Rare species at FOFI; allowing restricted ORV access does little to protect these species (i.e. any ORV traffic is too much traffic).

RECOMMENDATIONS

- Synchronize dates used in management decisions affecting endangered, threatened, and significantly rare species with dates used by other federal and state management agencies: 1 May-31 August for nesting sea turtles, continued

throughout 15 November as necessary (sea turtle nests take about 66 days to hatch in southeastern North Carolina) and 1 April-31 August for nesting shorebirds and colonial waterbirds.

- There is no scientific basis to close FOFI to off-road vehicle (ORV) traffic for three nights around the full moon; terminate this restriction, regardless of other actions.

- However, because sea turtles nest continuously throughout the nesting season, *and* because ORV lights and tire ruts disorient and delay nesting and hatchling sea turtles, *and* because Piping Plovers use FOFI throughout the year, *and* because other protected shorebirds and colonial waterbirds also use FOFI, especially during the breeding season, *and* because seabeach amaranth only grows in the Upper Beach Community, either:

  Option 1—Suspend <u>all</u> ORV traffic from FOFI during the period from 1 April until 15 November (ORV traffic would continue to be allowed throughout FOFI during the period from 16 November to 31 March), *or*

  Option 2—Permanently prohibit <u>all</u> ORV traffic from the southernmost two miles of FOFI; institute a sea turtle nest relocation project and move all nests to this area; institute a habitat management policy that encourages mixed use by shorebirds, colonial waterbirds, and seabeach amaranth in this area (ORV traffic would continue to be allowed along the northernmost two miles throughout the year).

- Institute weekly shorebird and colonial waterbird surveys for three years to assess importance of FOFI for migrating, wintering, and nesting shorebirds and colonial waterbirds and to assess changing use patterns by shorebirds and colonial waterbirds after ORV traffic is limited; institute surveys every 2-3 days during the breeding season to determine if reproductive success for shorebirds and colonial waterbirds nesting at Fort Fisher State Recreation Area differs from that on adjacent beaches; and institute seabeach amaranth surveys 2-3 times each growing season (June through October) to assess re-colonization in ORV restricted areas.

- Develop and implement an outcomes assessment document such that, after a period of three years, all biological data can be assessed to determine if restrictions to ORV traffic have had a positive effect on protected species; revise ORV-use restrictions as warranted.

Table 1.—Survey results for nesting loggerhead sea turtles (# nests, if known) in southeastern North Carolina during the five-year period from 2000-2004. Surveys were conducted daily unless indicated otherwise.

Island area	2000	2001	2002	2003	2004
Figure Eight Island	yes (6)	yes (5)	yes (9)	yes (31)	yes (9)
Wrightsville Beach	yes (3)	yes (7)	yes (6)	yes (1)	yes (1)
Masonboro Island	yes (14)	yes (26)	yes (9+)[1]	yes[2] (1+)	yes[2] (1+)
Fort Fisher	yes (9)	yes (18)	yes (13)	yes (6)	yes (7)
Bald Head Island	yes (44)	yes (77)	yes (72)	yes (75)	yes (41)

[1] Surveys conducted every other day

[2] Regular monitoring suspended

Table 2.—Survey results for Piping Plover breeding pairs (# nests, if known), fall migrants, winter residents, and spring migrants in southeastern North Carolina during the five-year period from 2000-2004.

Island area	Year	Breeding pairs	Fall migrants	Winter residents	Spring migrants

III. Economic Impact Analysis

Submitted by:

Dr. Chris Dumas, Ph.D.
Associate Professor
Department of Economics and Finance
University of North Carolina Wilmington
dumasc@uncw.edu
910.962-4026

Abstract

The North Carolina Legislature appropriated funds in the 2004/05 budget bill (2004 North Carolina House Bill 1414, Section 12.3(b)) to study vehicular access demand, associated biological effects, and potential economic impacts of vehicle access restriction at Fort Fisher State Recreation Area (FOFI), located in New Hanover county, North Carolina. This document presents results of an economic impact analysis of current vehicle trips to FOFI and possible vehicle access restrictions. The baseline number of annual beach vehicle trips, 28,884 trips/yr., supports an estimated $21.6 million in annual regional sales, 382 regional jobs, and $3.7 million in annual combined Federal, state and local tax revenue. Complete discontinuation of vehicular access to FOFI would result in the estimated loss of $11.0 million/yr. in regional sales, 191 regional jobs, and $1.9 million/yr. in tax revenues. A less restrictive policy allowing daytime-only vehicular access to FOFI would result in the estimated loss of $2.0 million/yr. in regional sales, 34 regional jobs, and $0.3 million/yr. in tax revenues. (These estimates include the economic impacts of those who currently make vehicular beach trips to FOFI and who would continue to make recreational beach trips to the local area even without vehicle access to FOFI.)

Introduction

Ocean beach vehicular access has been a controversy at Fort Fisher State Recreation Area (FOFI) in New Hanover County, North Carolina, for a number of years. Concerns have been voiced by local beach fishermen and residents who wish to have vehicle access to the site at all times. Other site users and park staff feel that protection of Federal/state listed species (e.g., nesting loggerhead sea turtle and water birds) from vehicular impacts on the oceanfront and staffing limitations during evening hours require a more limited access schedule typical of other state park properties. To provide additional information to help resolve the issue, the North Carolina Legislature appropriated funds in the 2004/05 budget bill (2004 North Carolina House Bill 1414, Section 12.3(b)) to study FOFI vehicular access demand, associated biological effects, and potential economic impacts of vehicle access restriction.

This document has been prepared in partial fulfillment of a contract to the University of North Carolina Wilmington (UNCW) for an Ocean Beach Vehicular Access Study at FOFI located near Kure Beach, North Carolina. The study was conducted by

UNC-Wilmington faculty between August 15, 2004 and December 31, 2004. This document presents results of an economic impact analysis of current vehicle trips to FOFI and possible vehicle access restrictions. Companion UNCW reports present results concerning FOFI vehicular access demand and associated biological effects.

Scope of Work

Economic Impact Analysis: Dr. Chris Dumas will perform an economic impact analysis of restricting 24-hour access. This will be achieved by using data from the demand analysis described in the companion report by Drs. Robert Buerger, Jim Herstine and Jeffery Hill of UNC-Wilmington and relevant literature to develop a model that will compare valuations of different use scenarios.

Deliverables

An economic impact analysis comparing 24-hour vehicular ocean beach access to: 1. daytime-only access, 2. going to another 24-hour vehicular-accessible beach, or 3. complete discontinuation of vehicular beach access. However, because only 2 of 120 survey respondents indicated that they would travel to beaches outside New Hanover county if vehicular access to FOFI beaches were restricted, item 2 was judged insignificant, and the present report focuses on items 1 and 3.

Methods

Input-output analysis is used to estimate economic impacts. Input-output analysis is an economic modeling methodology used to estimate the full economic impacts of a given, initial change in spending in a regional economy. Input-output analysis tracks the flow of dollars between and among businesses, consumers, workers, and government agencies in a study region. See Miller and Blair (1985) for additional information on input-output analysis.

IMPLAN Professional® Input-Output Analysis computer software (Minnesota IMPLAN Group, Inc. 1999) is used in this study to conduct input-output analysis. IMPLAN Pro is a leading input-output modeling software package used by university researchers, government agencies, and consultants nationwide. The IMPLAN software tracks 525 commercial and industry sectors, and local, state and Federal government sectors, on a county-by-county basis.

Input-output analysis requires a defined study region. The study region for this project is defined as New Hanover County, North Carolina. Although the direct economic impacts considered in this study will occur largely in the Ft. Fisher/Kure Beach/Carolina Beach portion of the county, this portion of the county is tied economically to New Hanover county as a whole, especially the city of Wilmington. A full assessment of economic impacts requires that the county as a whole be considered in the analysis.

Input-output analysis requires two types of data: baseline industry structure data, and data describing the initial, "direct" economic impacts. Industry structure data describe the input purchases (materials, energy, employee labor, etc.) that must be made by each industry in order to produce its product. Industry structure data for 1999 were obtained from Minnesota IMPLAN Group, Inc. as part of the database accompanying the IMPLAN analysis software (i.e., the 1999 IMPLAN structural matrix was used in the analysis). Minnesota IMPLAN Group, Inc., constructs the industry structure database from government surveys of businesses and consumers. Data on the initial, "direct" economic impacts are derived from the survey data collected as part of the present study (see Table 2 below).

Economic impact results are presented in terms of: (1) changes in New Hanover county employment, (2) changes in annual business sales by industry sector, and (3) changes in the primary components of annual tax receipts at the Federal, state and local level. The reported impacts on employment and sales have three components: (1) initial, "direct" impacts, (2) indirect, "ripple" effects on supplying businesses, and (3) induced, household-spending "feedback" effects. Components (2) and (3) together are sometimes called "economic multiplier effects." Employment impacts include both full-time and part-time jobs (the data are not sufficient to distinguish full-time from part-time jobs). The reported tax impacts include all multiplier effects.

The economic impact analysis compares three management scenarios. The first scenario is the "baseline" scenario. Under the baseline scenario, the existing beach access fee at FOFI is assumed to be in place, but there are no additional restrictions on vehicle access. The second scenario, "complete discontinuation of vehicle access," prohibits all vehicle access to FOFI. The third scenario, "daytime-only vehicle access," prohibits vehicle access to FOFI at night but allows daytime access. Under all scenarios, pedestrian access to FOFI is allowed. The scenarios differ from one another in terms of the number of vehicle beach trips to FOFI. Survey data (described below) are used to determine the regional economic impact per vehicle trip, and economic impacts across scenarios differ according to differences in the number of vehicle beach trips across scenarios. Allowance is made for the economic impact of those who would continue to make recreational beach trips to the local area even without vehicle access to FOFI.

Survey Data

The companion report "Ocean Beach Vehicular Access Study at Fort Fisher State Recreation Area," authored by Drs. Robert Buerger, Jim Herstine and Jeffery Hill of UNC-Wilmington, describes the research methodology used to collect the survey data analyzed in this report. Two types of data were collected: (1) electronic counts of vehicles entering FOFI and (2) spot surveys administered to individuals in vehicles entering FOFI. During the July 2nd through December 15th time period, the electronic counter recorded 15,883 vehicles passing through the FOFI ocean beach vehicular access entrance. A total of 181 spot surveys were administered to vehicles entering FOFI between September 15th and December 15th to collect information on park use, visitor demographics, and economics. Of the 181 spot surveys, 127 were valid surveys, for a survey response rate of over 71%. Of the 127 valid surveys, 120 provided full monetary expenditure data, and 117 provided data on substitute

recreational activities (i.e., alternative recreational activities that would be pursued if vehicle access were restricted).

Estimated Number of Beach Vehicle Trips

We have actual vehicle trip count data for both day and night for the fall/winter 2004 season. We have survey respondent *estimates* of their day and night vehicle trips for both the fall/winter 2004 season and the spring/summer 2004 season.

The vehicle count data indicate that approximately 25% of beach vehicle trips were night trips during the fall/winter 2004 season (September 15 through December 15). Survey respondents *estimated* that approximately 33% of beach vehicle trips were night trips during the fall/winter 2004 season. Several possibilities may account for the differences between the vehicle count night trip percentage estimate and the survey data night trip percentage estimate: (1) the survey may not be a perfectly random (representative) sample of the vehicle trip population, and/or (2) survey respondents may be either under-estimating day trips, over-estimating night trips, or some combination of both.

For the purposes of this study, we use an estimate of 8,500 vehicle trips made during the 92 fall/winter days from September 15 through December 15, 2004. This figure is based on the actual vehicle count data. We define the fall/winter season as September 15 through March 15 (approximately 183 days). To estimate the number of vehicle trips occurring from December 16 through March 15, the colder portion of the season, we use the average number of vehicle trips per day in the colder sampled months, November and December, or 32 trips per day, multiplied by 91 days, or 2,912 trips. Adding 8,500 trips and 2,912 trips yields an estimate of **11,412 vehicle trips per fall/winter season** (September 15 through March 15). Assuming that 25% of these trips are night trips (based on the actual vehicle count data) produces an estimate of **2,853 *night* trips per fall/winter season**.

We define the spring/summer season as March 16 through September 14 (approximately 182 days). The 120 survey respondents who provided expenditure data estimate that they take 2,184 vehicle trips in the spring/summer season vs. 2,264 vehicle trips in the fall/winter season, or 0.96 spring/summer trip per fall/winter trip. Multiplying the estimate of the number of fall/winter trips (11,412) by 0.96 spring/summer trip per fall/winter trip produces an estimate of 10,956 vehicle trips per spring/summer season. This estimate is equivalent to an average number of trips per day of 10,956 trips / 182 days = 60 trips/day during the spring/summer season. However, this estimate may underestimate the number of trips if the population of spring/summer beach trippers is different from the population of fall/winter beach trippers, and the spring/summer population takes a larger number of spring/summer beach trips per day relative to the fall/winter population (e.g., there may be sample selection bias that biases downward the estimate of spring/summer trips per day). In support of this possibility, partial vehicle count data for a portion of the spring/summer season (from July 2 through August 31, 2004) indicate an average of 131 vehicles/day during this portion of the spring/summer season. On the other hand, the colder March-May months of the spring/summer season may have vehicle counts much lower than the 131 vehicles/day value. In the absence of better data, we take

the average of the 60 trips/day and 131 trips/day values to produce an average estimate of 96 trips/day in the spring/summer season. Multiplying 96 trips/day by 182 days in the spring/summer season produces a final estimate of **17,472 vehicle trips per spring/summer season**.

Survey respondents estimated that 12.9% of their spring/summer trips were night trips. Unfortunately, the partial vehicle count data available for July 2 through August 31, 2004 do not distinguish between day trips and night trips, so there is no estimate of the percentage of night trips based on vehicle count data with which to compare the 12.9% survey estimate. In the absence of additional data, we multiply the estimated 17,472 vehicle trips per spring/summer season by the survey estimate of the percentage of night trips, or 12.9%, to produce an estimate of **2,253 *night* vehicle trips per spring/summer season**.

Estimated Monetary Expenditures per Beach Vehicle Trip

The final sample of survey respondents provided full monetary expenditure data for 120 vehicle trips (total day and night trips combined) from September 15 to December 15. The number of people per vehicle ranged from 1 to 5, with a median of 2 and a mean of 2.12. Expenditures per expenditure category on a per person basis and total expenditures for all 120 vehicle trips providing full expenditure data are presented in Table 1.

Baseline Economic Activity Supported by Beach Vehicle Trip Expenditures

The "baseline" scenario is defined as the estimated total number of vehicle trips occurring per year in the absence of beach access closure but with existing beach access fees in place. The baseline number of beach vehicle trips per year is the sum of estimated fall/winter season trips (11,412 vehicle trips) and spring/summer season trips (17,472 vehicle trips), for a total of 28,884 trips. Each baseline scenario beach vehicle trip is assumed to result in direct monetary expenditures as presented in the right-most column of Table 1. Multiplying each of these per vehicle trip expenditure values by 28,884 trips per year produces estimates of total annual direct expenditures under the baseline scenario as presented in Table 2.

The regional economic activity supported by the annual, baseline, direct expenditures presented in Table 2 is estimated using a regional economic input-output model (as described above). Model estimates are presented (Tables 3, 4, and 5) in the Results section below.

Estimated Economic Impact of Complete Discontinuation of Vehicular Access

To examine the economic impact of complete discontinuation of vehicular access to the Ft. Fisher State Recreation Area, we eliminate all vehicle access trips. However, when these trips are eliminated, some beachgoers will continue to make beach trips that do not require vehicular beach access, whereas others will choose to stay at home and forego beach trips altogether. Those who continue to make beach trips to/within the local area continue to make expenditures that support the local area

economy, whereas those who stay home withdraw their expenditures from the local area economy.

Of the 120 survey respondents who provided monetary expenditure data, 117 provided data on substitute recreational activities. That is, 117 respondents provided an answer to the survey question, "If this beach had been closed today/tonight, what would you have done instead?" Of the 117 answers to this question, 42 (or 36%) indicated that the survey respondent would have stayed home and taken no beach trip of any kind, 61 (or 52%) indicated that the respondent would have gone to the north end of Carolina Beach or would have engaged in a non-vehicular beach activity in either the Ft. Fisher area or elsewhere in the Carolina/Kure Beach area, and 14 (or 12%) indicated that the respondent would have gone to another beach outside the Carolina/Kure Beach area. Based on these survey results, we estimate that complete discontinuation of vehicular access at Ft. Fisher State Recreation Area would result in a 48% (36% plus 12%) reduction in beach trips to the Carolina/Kure Beach area that formerly made use of vehicle access, while 52% of the former vehicle access beach trips would continue to be made in the Carolina/Kure beach area, but these trips would be made without driving vehicles on the beach. Such trips would include, for example, beach trips where vehicles are parked in public lots or parking spaces, trips to fishing piers, and trips to the Ft. Fisher aquarium (note: these activities were mentioned by survey respondents). In cases where beach trips continue to occur (but without driving vehicles on the beach), we assume that trip expenditures remain the same, except that gasoline expenditures are reduced by 25%.

The annual, regional economic impacts of complete discontinuation of vehicular access to Ft. Fisher State Recreation Area are estimated using a regional economic input-output model (as described above). Model estimates are presented (Tables 6, 7, and 8) in the Results section below.

Estimated Economic Impact of Daytime-Only Vehicular Access

To examine the economic impact of allowing daytime-only vehicular access to Ft. Fisher State Recreation Area, we eliminate night vehicle trips only. When these night trips are eliminated, some nighttime beachgoers will continue to make night beach trips that do not require vehicular beach access, whereas others will choose to stay home and forego beach trips altogether. Using the data on substitute trip activities described in the section above, we estimate that 48% of the individuals formerly making night vehicle trips would choose to stay home and make no trip, whereas 52% of the individuals formerly making night vehicle trips would continue to make beach trips to the Carolina/Kure beach area that would not involve driving vehicles on the beach (for example, night pier fishing trips, night walks on the beach, night kayak/canoe trips, etc.).

The annual, regional economic impacts of allowing daytime-only vehicular access to Ft. Fisher State Recreation Area are estimated using a regional economic input-output model (as described above). Model estimates are presented (Tables 9, 10, and 11) in the Results section below.

Results

Baseline Economic Activity Supported by Beach Vehicle Trip Expenditures

Table 3 presents the regional sales activity supported by the baseline annual direct expenditures presented in Table 2. The first column of Table 3 presents the direct economic impacts, which are simply the baseline expenditures from Table 2. The second column of Table 3 gives the indirect economic impacts, or economic "ripple effects," of the direct economic impacts on supplying industries in the region. The third column of Table 3 gives the induced economic impacts, the "feedback effects" of the direct and indirect impacts on subsequent spending by the employees and owners of the businesses affected by the direct and indirect impacts. Together, the indirect and induced impacts measure the economic "multiplier effect." Finally, the fourth column of Table 3 gives the total economic impact of baseline expenditures, the combined direct, indirect and induced impacts. The totals at the bottom of Table 3 indicate that $11,223,168/yr. of estimated baseline direct expenditures produce an estimated $1,903,489/yr. in indirect impacts and $8,543,064/yr. in induced impacts, for an estimated total economic impact of $21,669,721/yr. This value is an estimate of the regional sales activity supported by the baseline annual direct expenditures presented in Table 2, before any restrictions occur on beach vehicle trips.

Table 4 presents estimates of the regional employment supported by the baseline annual direct expenditures presented in Table 2. The first column of Table 4 presents the direct employment impacts, the jobs supported directly by the baseline expenditures from Table 2. The second column of Table 4 gives the indirect employment impacts, the "ripple effect" of baseline expenditures on employment in supplying industries. The third column of Table 4 gives the induced employment impacts, the "feedback effects" of baseline expenditures on employment due to the spending of employees and owners of the businesses affected by the direct and indirect impacts. Together, the indirect and induced employment impacts measure the economic "multiplier effect" on employment. Finally, the fourth column of Table 4 gives the total employment impact, the total of the direct, indirect and induced employment impacts. The totals at the bottom of Table 4 indicate that an estimated 245 jobs are supported by baseline direct expenditures, with an additional 137 jobs supported by the indirect and induced multiplier effects, for an estimated total of 382 jobs supported in the study region of New Hanover County, NC.

Table 5 presents estimates of the tax revenues received by Federal, state, and local governments as a result of the total economic impacts presented in Table 3. Estimated Federal personal income tax revenues are $772,395/yr., Federal corporate profit taxes are $277,104/yr., and Federal payroll taxes are $1,036,237/yr. Estimated North Carolina state personal income tax revenues are $242,166/yr., state corporate profit taxes are $51,765/yr., and state payroll taxes are $11,795/yr. Local business property taxes are $487,122/yr., and combined state and local sales taxes are $866,101/yr. Total tax revenues accruing to all levels of government are an estimated $3,744,686/yr.

Estimated Economic Impact of Complete Discontinuation of Vehicular Access

Table 6 presents estimates of the impact of a complete discontinuation of vehicular access at Ft. Fisher on regional sales activity. The first column of Table 6 indicates that direct sales fall by an estimated $5,699,944/yr. with complete discontinuation of vehicular access. Direct sales do not fall by the full $11,223,168/yr. of baseline direct sales because, as described above, a significant number of recreational beach trips to Ft. Fisher/Kure Beach/Carolina Beach continue to occur under discontinuation of vehicular beach access, although these trips do not include driving on the beach as part of the experience. The second and third columns of Table 6 give the indirect and induced economic multiplier effects on regional sales activity resulting from the initial drop in direct sales. These multiplier effects total -$5,320,184. Finally, the fourth column of Table 6 gives the estimated total economic impact of a complete discontinuation of vehicular access on regional sales activity: -$11,020,127/yr.

Table 7 presents estimates of the impact of a complete discontinuation of vehicular access at Ft. Fisher on regional employment. The first column of Table 7 indicates that direct employment falls by an estimated 121 jobs under complete discontinuation of vehicular access. The second and third columns of Table 7 give the indirect and induced economic multiplier effects on regional employment. These multiplier effects result in an additional 70 jobs lost. Finally, the fourth column of Table 7 gives the estimated total economic impact of a complete discontinuation of vehicular access on regional employment: 191 jobs lost in the study region of New Hanover County, NC.

Table 8 presents estimates of the tax revenues lost by Federal, state, and local governments as a result of a complete discontinuation of vehicular access at Ft. Fisher. Federal personal income tax revenues fall by an estimated $393,405/yr., Federal corporate profit taxes fall $141,298/yr., and Federal payroll taxes fall $526,719/yr. North Carolina state personal income tax revenues fall $123,336/yr., state corporate profit taxes fall $26,369/yr., and state payroll taxes fall $5,996/yr. Local government property taxes fall $251,025/yr., and local sales taxes fall $446,322/yr. Total tax revenues accruing to all levels of government fall by an estimated $1,914,497/yr.

Estimated Economic Impact of Daytime-Only Vehicular Access

Table 9 presents estimates of the impacts of allowing daytime-only vehicular access at Ft. Fisher on regional sales activity. The first column of Table 9 indicates that direct sales fall by an estimated $1,009,314/yr. under daytime-only vehicular access. Direct sales do not fall by the full $11,223,168/yr. of baseline direct sales because daytime vehicular trips continue to be made, and a significant proportion of night recreational beach trips (pier fishing, etc.) continue to occur, although these night trips do not include driving on the beach. The second and third columns of Table 9 give the indirect and induced economic multiplier effects on regional sales activity. Together, these multiplier effects total -$942,067/yr. Finally, the fourth column of Table 9 gives the estimated total impact on regional sales activity of allowing daytime-only vehicular access: -$1,951,381/yr.

Table 10 presents estimates of the impacts of allowing daytime-only vehicular access at Ft. Fisher on regional employment. The first column of Table 10 indicates that direct employment falls by an estimated 22 jobs under daytime-only vehicular access. The second and third columns of Table 10 give the indirect and induced economic multiplier effects on regional employment. These multiplier effects result in an additional 12 jobs lost. Finally, the fourth column of Table 10 gives the estimated total economic impact of daytime-only vehicular access on regional employment: 34 jobs lost in the study region of New Hanover County, NC.

Table 11 presents estimates of the tax revenues lost by Federal, state, and local governments as a result of daytime-only vehicular access at Ft. Fisher. Federal personal income tax revenues fall by an estimated $69,662/yr., Federal corporate profit taxes fall $25,020/yr., and Federal payroll taxes fall $93,268/yr. North Carolina state personal income tax revenues fall $21,839/yr., state corporate profit taxes fall $4,674/yr., and state payroll taxes fall $1,062/yr. Local government property taxes fall $44,449/yr., and local sales taxes fall $79,032/yr. Total tax revenues accruing to all levels of government fall by an estimated $339,007/yr.

Conclusions and Discussion

This document presents the results of an economic impact analysis of recreational vehicle trips to the beach located in Fort Fisher State Recreation Area (FOFI), New Hanover county, North Carolina, and possible restrictions to vehicular beach access. The estimated baseline number of annual beach vehicle trips, 28,884 trips/yr. in 2004, supports an estimated $21.6 million (2004 $'s) in annual regional sales, 382 regional jobs, and $3.7 million in annual combined Federal, state and local tax revenue. Complete discontinuation of vehicular access to FOFI would result in the estimated loss of $11.0 million/yr. in regional sales, 191 regional jobs, and $1.9 million/yr. in tax revenues. A less restrictive policy allowing daytime-only vehicular access to FOFI would result in the estimated loss of $2.0 million/yr. in regional sales, 34 regional jobs, and $0.3 million/yr. in tax revenues. (Note: These estimates include the economic impacts of individuals who currently make vehicular beach trips to FOFI and who would continue to make recreational beach trips to the local area even without vehicle access to FOFI.)

The economic impact results reported here should be interpreted as tentative results based on limited data. A limited project budget and accelerated timeline restricted the data collection effort to September 15--December 15, 2004. Given that the survey responses were only generated from users who came to the ocean beach at FOFI during the early fall through winter months, the question arises of whether the sample truly represents the population of FOFI users throughout the year. Individuals who use the ocean beach at FOFI exclusively during the spring and summer months were not included in the sample pool. However, fall and winter survey respondents were asked questions about their spring and summer beach trip behavior, and estimates of spring and summer beach trip activity and associated economic impacts were made based on their responses. Still, the number of spring and summer vehicular beach trips, the magnitude of associated total expenditures, and the

distribution of expenditures across types of goods and services may differ for the spring and summer season.

Other aspects of the survey data may impart some bias to the economic impact results (although some biases working in opposite directions likely counter-act one another to some extent). First, although survey respondents were asked for expenditure values on a per person basis, some respondents may have provided expenditure values for the entire group of persons in the vehicle rather than the requested per person values. To the extent that this occurred, the true economic impacts of vehicular restrictions would be somewhat smaller than those reported here, because the reported values were multiplied by the number of persons in each vehicle.

Second, survey respondents were asked to report monetary expenditure data on a "per vehicle beach trip" basis. However, some survey respondents may not have listened carefully to survey questions and may have provided expenditure values on a "per spending occasion" basis, instead. For example, respondents may have answered that they typically spend $25 per person per visit to a restaurant in Carolina Beach, whether or not they actually visit a restaurant on *every* vehicle beach trip. To the extent that expenditures were mistakenly reported by survey respondents on a "per spending occasion basis," the true economic impacts of vehicular restrictions would be somewhat smaller than those reported here.

Third, if vehicular beach access were restricted, some survey respondents indicated that they would stay at home and make no trips to the beach, while others indicated that they would make non-vehicular trips to the beach or engage in some other type of recreational activity. Although the results presented in this report reflect best estimates of the regional economic impacts of changes in the number and types of beach trips, the results do not capture the full change in economic value accruing to the recreationists themselves. For example, suppose an individual who formerly took a vehicular beach trip decides to take a non-vehicular trip to the beach after vehicle access is discontinued, and suppose further that the individual spends exactly the same amount of money on exactly the same items. While there would be no recorded economic impact on the region (because the individual's expenditures remain the same), the individual herself might very well suffer a reduction in *personal satisfaction* from the trip if she *enjoyed* a vehicle beach trip more than a non-vehicle beach trip. Economists term the economic value of such lost satisfaction "consumer surplus." Due to budget and timeline limitations, the present study makes no attempt to measure consumer surplus. To the extent that consumer surplus is significant the true economic impacts of vehicular restrictions would be somewhat larger than those reported here. (Note: Methods exist to estimate consumer surplus values based on the analysis of appropriate survey data.)

Fourth, those survey respondents who indicated that they would "stay home" if vehicular beach access were discontinued may still spend some money on substitute activities, such as ordering pizza for home delivery, renting VCR movies, etc. However, the impact estimates presented in this report assume that the individuals who choose to "stay home" would fully withdraw the money they would have spent on a vehicular beach trip from the regional economy. To the extent that those who

choose to remain "home alone" make unreported expenditures, the true economic impacts of vehicular restrictions would be somewhat smaller than those reported here.

Fifth, the economic impact estimates presented here assume no other changes in regional beach access policy. This caveat is especially important when trying to estimate the economic impacts of substitute activities under a vehicular access closure at FOFI. For example, consider the 61 survey respondents (out of the 120 who provided full monetary expenditure data) who said that they would continue to make a beach trip to the study region even if vehicular access to FOFI were restricted. Of these 61 respondents, 38 indicated that they would go to the "North End" area of Carolina Beach, an area where vehicular beach access is currently allowed. If vehicle access to the North End of Carolina Beach were to be restricted, then the economic impacts of vehicular restrictions at FOFI would likely be somewhat larger than those reported here. The point here is that the economic impacts of a change in vehicle access policy at FOFI depend on the beach access policies in place at nearby, substitute beaches.

Table 1. Beach Vehicle Trip Expenditure Data Summary

Expenditure Category	Mean[1] Expenditures Per person Per vehicle trip	Median[2] Expenditures Per person Per vehicle trip	Total Expenditures[3] By All Persons In All 120 Surveyed Vehicle Trips	Mean Expenditures Per Surveyed Vehicle Trip[4]
Hotel/Motel	$38.14	$00.00	$10,283.00	$85.69
Restaurants/Bars	$45.76	$17.50	$11,685.00	$97.38
Other Food and Beverage (Groceries)	$26.41	$10.00	$6,634.00	$55.28
Fishing and Beach Supplies	$32.82	$15.00	$8,028.00	$66.90
Gasoline	$41.20	$30.00	$9,997.20	$83.31

Table 1. notes:
[1] For each expenditure category, mean expenditure is the mathematical average expenditure per person in the sample.
[2] Median expenditures reflect *typical* expenditures per person in the sample. That is, for each expenditure category, fifty percent of the sampled individuals reported values higher than the median, and fifty percent reported values lower than the median. Compared with mean values, median values are less influenced by unusually large or small values in the sample.
[3] Total expenditures are derived by multiplying the expenditure values per person in each vehicle by the number of people in the vehicle and then adding the resulting values across all vehicles in the sample.
[4] For each expenditure category, mean expenditures per surveyed vehicle trip are calculated by dividing the total expenditures of all persons in all 120 surveyed vehicles by 120 vehicle trips.

Table 2. Baseline Scenario Annual Direct Expenditures

Expenditure Category	Annual Direct Expenditures Under Baseline Scenario (28,884 vehicle trips/yr)
Hotel/Motel	$2,475,118
Restaurants/Bars	$2,812,580
Other Food and Beverage (Groceries)	$1,596,804
Fishing and Beach Supplies	$1,932,340
Gasoline	$2,406,326
Totals	$11,223,168

2005 RECYCLING SURVEY

In September and October, 2005, the School Planning Section in the Department of Public Instruction conducted a survey to assess the recycling efforts of each school system in North Carolina. This survey is in response to Senate Bill 1014[1], which directs the State Board of Education to report on the recycling efforts on a yearly basis. Out of the 115 individual school systems in NC (LEAs), all 115 systems[2] responded to the survey, for a response rate of 100%.

Survey results will be sent to, and used by the Joint Legislative Oversight Committee and The Environmental Review Commission to determine recycling status and trends from year to year. Results will be tabulated annually through the year 2007, for an accurate longitudinal assessment of the recycling program in North Carolina Public Schools.

Results

Does your LEA have a recycling program?

	# Recycle (2005)	% 2005	% 2004
Yes	107	93.0	85.2
No	8[3]	7.0	14.8
Total	115	100.0	100.0

Is the recycling program organized at the school or LEA level?

	# Recycle (2005)	% 2005	% 2004
LEA	40	34.8	27.8
School	37	32.2	25.2
Both	30	26.1	32.2
None	8	7.0	14.8
Total	115	100.0	100.0

When asked if a recycling program is in place within the 115 school systems the response was overwhelmingly positive, with almost all (93%) of LEAs having a program in all or at least some of the schools in their system. This resulted in a percent increase of 9.2% from 2004/2005. Additionally, the vast majority of *individual schools* in the North Carolina School System (81% or 1,832 schools)[4] report they recycle at least one item.

---

[1] **SECTION 11**: The State Board of Education shall report to the Joint Legislative Education Oversight Committee and the Environmental Review Commission by December 15 of the years 2003 through 2007, on the recycling efforts of the public schools in the State. These reports shall include information provided by local school administrative units on the number of public schools that have recycling programs and the types of recyclable materials that are collected. If the Joint Legislative Education Oversight Committee or the Environmental Review Commission determines that sufficient progress in establishing recycling programs in the public schools of the State has not been made by January 1, 2008, the Committee or Commission shall recommend legislation to the 2008 Regular Session of the 2007 General Assembly to continue the reporting requirement established by this section.

[2] North Carolina Charter Schools are not included in this assessment.

[3] This figure represents counties with no recycling efforts, and refer to Anson, Bladen, Hyde, Jackson, Madison, Montgomery, Sampson, and Warren Counties.

[4] Please note: This percentage may be greater because not all school systems reported the exact number of participating schools.

Summary of Recycled Items

What items does your school system recycle?

	# Recycle (2005)	% 2005	% 2004
Cardboard	85	73.9	73.9
Cans	83	72.2	74.8
Motor oil	82	71.3	68.7
Paper	78	67.8	61.7
Newspapers	77	67.0	61.7
Tires	75	65.2	60.9
Cooking oil	62	53.9	53.9
Computer hard drives	57	49.6	56.5
Computer keyboards	54	47.0	47.8
Printers	51	44.4	36.5
Plastic bottles	51	44.4	43.5
CRT monitors	47	40.9	40.0
Fax/printer ink cartridges	44	38.3	36.0
Glass bottles	27	23.5	25.2
Plastic cafeteria plates and cups	13	11.3	10.4
Plastic cafeteria utensils	11	9.6	4.3
Other glass containers	17	14.8	17.4
Other[5]	48	41.7	47.8

Approximately three-fourths (74%) of LEAs recycle cardboard, making it the most recycled item. Cans and motor oil also rank high, with seven out of ten (72% and 71%) school systems recycling these items. The least recycled items reported are plastic cafeteria utensils (10%) and plastic plates and cups (11%).

Although plastic cafeteria utensils ranked lowest, the recycling of these items more than doubled—from 4% in 2004 to 10% in 2005. Other items with a significant increase include recycled printers, ink cartridges, and paper, with percent increases of 21%, 10%, and 10% from 2004 to 2005.

Only eight school systems have no recycling program intact. These are Anson, Bladen, Hyde, Jackson, Madison, Montgomery, Sampson, and Warren Counties. These school systems are all smaller than average and list cost, reliance on other counties, and manpower as huge factors and for the lack of a recycling system in their county. However most of these systems are currently in the process of trying to implement a recycling program.[6]

[5] Examples include: Cell phones, antifreeze, oil filters, and batteries. For a complete listing, see Appendix.
[6] For complete listing, see Appendix

Appendix – Written Comments

PLEASE LIST ANY OTHER ITEMS RECYCLED BY THE LEA

- Computers are reused for parts; Central office recycles paper (not included in school count above) - Ashe County Schools (050)
- Batteries, Cell phones - Brunswick County Schools (100)
- Batteries from Buses – Cabarrus County Schools (130)
- #10 cans from cafeteria – Catawba County Schools (180)
- Batteries (1), catalogs/magazines (5) - Hickory Public Schools (181)
- Old phones - Cherokee County (200)
- Light bulbs and ballast - Columbus County Schools (240)
- Antifreeze, Styrofoam, misc. metals, used kitchen equipment, used lawn/power equipment, used audio visual equipment, used furniture/student desks, used plumbing/electrical fixtures – Dare County Schools (280)
- Antifreeze, Paint - Durham Public Schools (320)
- Batteries - Edgecombe County Public Schools (330)
- Scrap metal - Gaston County Schools (360)
- Cell Phones, batteries, brake shoes - Granville County Schools (390)
- Magazines, computer print outs - Halifax County Schools (420)
- Scrap metal – Roanoke Rapids City Schools (421)
- Batteries, tires, wire, all metal, etc. - Harnett County Public Schools (430)
- Cell phones, digital cameras, PDA's – Haywood County Schools (440)
- Antifreeze, oil filters, grease, beverage tabs, cell phones, pagers - Henderson County Public Schools (450)
- None that we are given of - Hoke County Schools (470)
- Eyeglasses, used computers, other hardware to be refurbished by a group of students, to be given to needy students. – Iredell – Statesville Schools (490)
- Wooden pallets, cell phones (1) - Mooresville Graded Schools (491)
- Cell phones (3), Magazines (2) - Johnston County Schools (510)
- Batteries and core's on bus parts where applicable - Jones County Schools (520)
- Some computer components (plastic) - Lenoir County Public Schools (540)
- Some construction debris - Macon County Public Schools (560)
- Ink cartridges in all 11 schools, Refrigerants - McDowell County Schools (590)
- Phone books, Magazines, Catalogs, Brochures, post-it notes, file folders, colored paper, stapled paper, junk mail, blueprints, and legal pads. - Charlotte-Mecklenburg School System (600)
- Antifreeze, paint thinner, oil filters - Moore County Schools (630)
- All Computer parts - Nash-Rocky Mount Schools (640)
- Aluminum Foil, Cell phones, kitchen equipment, iron - Nash-Rocky Mount Schools (640)
- Batteries (4), aluminum(1), phone directories (1), scrap metal (2), cell phones (3), and printer cartridges (22). – New Hanover County Schools (650)
- Rechargeable batteries, phone books - Onslow County Schools (670)
- Antifreeze, batteries, plastic containers - Orange County Schools (680)
- Magazines, phone directories - Elizabeth City - Pasquotank County Schools (700)
- Oil Filters - Perquimans County Schools (720)
- Desks, lockers, water coolers. Our Facilities Services Department recycles old, used equipment (holds auctions several times a year). – Pitt County Schools (740)
- Antifreeze, used oil filters, magazines, catalogs, phonebooks – Randolph County Schools (760)
- Magazines (1), Plastic bags (1), Catalogs (1) - Asheboro City Schools (761)

- Richmond County has a contract with Montgomery County to receive all waste and to separate it for recyclables. – Richmond County Schools (770)
- Scrap metal, scrap iron, nuts and bolts - Robeson County Public Schools (780)
- 1 Magazines, 1 school publications, 1 cell phones - Rockingham County Schools (790)
- Computer equipment - Stanly County Schools (840)
- Cell phones, textbooks - Stokes County (850)
- CPUs are recycled but the hard drive is removed first. We also recycle toner and printer cartridges, as well as phone directories. - Surry County Schools (860)
- Batteries - Elkin City Schools (861)
- Some aluminum - Transylvania County Schools (880)
- Cell phones (7) Metal/steel (1) - Union County Public Schools (900)
- Antifreeze, ballasts, batteries, bricks, carpet, compressors, contaminated refrigerant, curb and paving materials, fluorescent tubes, gypsum, light bulbs, metal, polystyrene, printer cartridges, sheet rock, stone – Wake County Schools (920)
- Antifreeze - Wilkes County Schools (970)
- Magazines, catalogs - Yancey County Schools (995)

EXPLAIN PROBLEMS WITH RECYCLING PROGRAM

- We do not have a program the schools collect and recycle some items. - Anson County Schools (040)
- No one was ever given this project by the Supt. - Bertie County (080)
- Program has not been implemented. - Bladen County Schools (090)
- Other plans are in the works at individual schools. High Fuel costs may hamper short term recycling. - Brunswick County Schools (100)
- Local government has no way to handle recycled materials. Neither does waste management. - Columbus County Schools (240)
- We had an extensive program but the county government did away with the county recycling program. It has cost us over $23,000 in additional dumping fees for the past 6 months. - Davie County Schools (300)
- It would cost the system approximately $300/mo extra to rent additional receptacles for separate pickup. This cost is for each school. - Edgecombe County Public Schools (330)
- The recycling program begins with the actions of the LEA. The LEA provides every school 3 different solid waste large containers properly labeled. The containers are for general trash, cardboard and mixed paper. Each school has the responsibility to organize and ensure the proper waste is placed in the appropriate containers. The system has the responsibility to contract with a company to have the different waste types removed appropriately. Some individual schools are recycling other items other than paper and cardboard. - Henderson County Public Schools (450)
- I am looking into other items that we can recycle. I called Mr. Ben Matthews and he has emailed me some information. - Hertford County (460)
- We need additional funds and guidelines to implement based on state requests. We also need plastic containers and each school needs a list of vendors who want recycled products after use. - Hoke County Schools (470)
- Currently, there is no district-wide recycling program. Over the past several years, several programs have been tried by none have been successful. - Hyde County Schools (480)
- New schools have not had time to plan for recycling. No space, not enough room. Not essential and no one to pick-up. Cost the school to have recycling program. – Iredell-Statesville Schools (490)

- We are working with our waste management company to provide recycling containers closer to our schools. Currently, we don't have storage or personnel to do recycling. - Jackson County Schools (500)
- Due to our county being small and rural, we contract with a surrounding County for garbage pick up. At this time, they do not offer a recycling program. – Madison County Schools (570)
- Several schools have not organized recycling programs. Others have new administrators who plan to start recycling efforts in their schools. Collection space is an issue at several schools and cost of an additional dumpster is an issue at another school. – New Hanover County Schools (650)
- I am unsure if the LEA has a recycling program at the LEA level. - Onslow County Schools (670)
- Bell Forks custodians collect cans to recycle. - Onslow County Schools (670)
- Although our recycling program is organized at the school level, schools cite a lack of space as the primary hindrance to recycling. - Onslow County Schools (670)
- 1)space 2)health regulations, cleanliness 3) manpower to supervise - Onslow County Schools (670)
- All tires are delivered to the county recycling center - Pender County Schools (710)
- Computers and cartridges are recycled but there is no organized recycling program. - Polk County Public Schools (750)
- This LEA has a total of 25 schools. We do not have a system-wide recycle program due to the expanse of our County. One Municipality within the County offers recycle pickup of which six schools are eligible to participate in. Sixteen schools participate in a recycling program within their school. Only 3 schools do not recycle due to location from recycle center. Our technology dept participates in the Dell Asset Recovery Program; our Transportation Dept. participates in a program that will pick up motor oil and tires; our School Food Service recycles cooking oil. The District office recycles cans and contracts with a business by the name of "Shred It" that picks up paper. The district office also recycles toner cartridges and printer cartridges as do three of our schools. - Rockingham County Schools (790)
- While we do not have a recycling program, Sampson County Schools does purchase several items thru out our school system that has been recycled. We feel this compares favorably to having the recycling program itself. - Sampson County Schools (820)
- We stopped our recycling of the other items because we could not find anyone to take the items. It was too expensive to transport them. - Vance County Schools (910)
- Manpower - Warren County Schools (930)
- Our county does not offer a recycling program so we would have to transport recycled items and that doesn't seem reasonable to do. – Washington County Schools (940)
- Has never really been discussed as an LEA. Schools use this as an educational piece. - Yancey County Schools (995)

EXHIBIT D-8

COASTAL HABITAT PROTECTION PLAN PROGRAM

2004 - 2005

ANNUAL REPORT

TO THE

JOINT LEGISLATIVE COMMISSION ON SEAFOOD AND AQUACULTURE

AND

ENVIRONMENTAL REVIEW COMMISSION

OF THE

NORTH CAROLINA GENERAL ASSEMBLY

FROM

NORTH CAROLINA MARINE FISHERIES COMMISSION,
NORTH CAROLINA COASTAL RESOURCES COMMISSION, AND
NORTH CAROLINA ENVIRONMENTAL MANAGEMENT COMMISSION

September 2005

Summary

September 2004 – August 2005 Accomplishments

- The North Carolina Environmental Management, Coastal Resources, and Marine Fisheries Commissions adopted the North Carolina Coastal Habitat Protection Plan (CHPP) in December 2004 by unanimous vote of each Commission
- The Chairmen of the Environmental Management, Coastal Resources, and Marine Fisheries Commissions and the Secretary of the Department of Environment and Natural Resources (DENR) formally signed the North Carolina Coastal Habitat Protection Plan in a ceremony in Morehead City on February 11, 2005.
- The three Commissions adopted their implementation plans in June and July, 2005
- Public outreach efforts continued with talks on the CHPP at various local government, State and federal government agency, and interest group meetings, as well as an enhanced web site at (http://www.ncdmf.net/habitat/index.html) that includes the following:
    - Complete North Carolina Coastal Habitat Protection Plan
    - CHPP Implementation Plan for all three regulatory Commissions, their administrative agencies (Divisions of Water Quality, Coastal Management, and Marine Fisheries), and DENR
    - Report on research needs identified in the CHPP
- All three Commissions, their divisions, and DENR have begun implementing the CHPP
- Elizabeth City State University continued its federally funded work to support the CHPP Program. Mapping of sea grass in the Albemarle-Pamlico system is underway.

September 2005 – August 2006 Planned Actions

- The Marine Fisheries Commission and Division of Marine Fisheries will
    - Enhance several existing oyster reef sanctuaries in Pamlico Sound, as well as establish several new sanctuaries
    - Develop guidelines for identification and management of Strategic Habitat Areas
    - Further protect fish habitat by closing additional areas to trawling through implementation of the Shrimp Fishery Management Plan.
- The Coastal Resources Commission and Division of Coastal Management will
    - Enhance habitat education through the "Estuary Live" web-based learning program and new displays at public meetings
    - Consider new rules to define beach nourishment sediment compatibility as developed by the Commission's Science Panel on Coastal Hazards
    - Obtain a new set of coastal aerial photographs to aid in permit management and mapping of coastal fish habitats
    - The DCM coastal engineer will work with other agencies in development of improved management of effects of marinas and docks on fish habitats
- The Environmental Management Commission and Division of Water Quality will
    - Conduct on-site inspections for all stormwater permit renewals managed by its Wilmington Regional Office staff
    - Revise stormwater management procedures based on comments received through circulation of its draft Universal Stormwater Management proposal in 2005
    - Use CHPP recommendations as criteria for its Section 319 grants

Introduction

Fisheries Reform Act

The North Carolina General Assembly established the Coastal Habitat Protection Plan program within the North Carolina Department of Environment and Natural Resources (DENR) with passage of the Fisheries Reform Act of 1997. The Act (General Statute or G.S. 143B-279.8) requires preparation of Coastal Habitat Protection Plans (CHPPs) for critical fisheries habitats in the coastal area. The Act states "[t]he goal of the Plans shall be the long-term enhancement of coastal fisheries associated with each coastal habitat." The Divisions of the Marine Fisheries, Water Quality, and Coastal Management are designated as the lead agencies for the CHPP program. The plans will:

1. Describe fisheries habitats and their biological systems;
2. Evaluate the functions, fisheries' values, status, and trends in the habitats;
3. Identify existing and potential threats, to the habitats and impacts on coastal fishing; and
4. Recommend actions to protect and restore the habitats.

Role of the Commissions

The Coastal Resources, Environmental Management, and Marine Fisheries commissions must each adopt the plans for them to become effective. Once the plans are adopted, rule making and policy actions taken by all three commissions are to comply "to the maximum extent practicable" with the plans.

The three commissions are to report by 1 September each year to the Joint Legislative Commission on Seafood and Aquaculture and the Environmental Review Commission on progress in developing and implementing the plans. This document reports on progress made on Coastal Habitat Protection Plans during September 2004 – August 2005

Recent Progress

North Carolina Coastal Habitat Protection Plan (CHPP)

The CHPP is complete, and the Coastal Resources, Environmental Management, and Marine Fisheries Commissions adopted it by unanimous votes at meetings in December 2004.

The CHPP focuses on six basic fish habitat: water column, shell bottom, submerged aquatic vegetation (SAV), wetlands, soft bottoms, and ocean hard bottom. A chapter is devoted to each type. Each of the habitat chapters is organized to provide the information specified in the Act:

- Description and distribution of the habitat,
- Ecological role and function,
- Status and trends,
- Threats, and
- Recommended management actions to deal with the threats.

The CHPP describes the functions of habitats necessary for production of economically important fish stocks and the links between those habitats and various life history stages of the fish. The CHPP also discusses the various types of threats to the habitats upon which productive coastal fisheries depend. Moreover, the plan summarizes the institutional structures for management of fisheries habitat, water quality, and fisheries in eastern North Carolina. Finally, the plan includes 19 management recommendations for the Coastal Resources, Environmental Management, and Marine Fisheries Commissions, DENR (primarily the divisions of Water Quality, Coastal Management, and Marine Fisheries), and others to implement in order to address the identified threats.

The Intercommission Review Committee (IRC), two members each from the Environmental Management, Coastal Resources, and Marine Fisheries commissions, took a very active role in the CHPP development process. Members of the IRC met frequently with senior DENR officials and technical staff from DENR divisions and the Wildlife Resources Commission (CHPP Development Team) to review each chapter in detail and develop the final management recommendations.

Attachment 1 lists the members of the IRC during 2004 – 05.

Meetings, Products, and Public Outreach

The most important meeting took place in September 2004, when the draft CHPP was formally conveyed by the Department to the Coastal Resources, Environmental Management, and Marine Fisheries Commissions for their consideration. The Department and Commissions received public comments and discussed the draft until December, made several changes in the recommendations, and adopted the CHPP by unanimous votes in December 2004. The DENR report "Caring For Our Fisheries" included with this annual report, contains the 19 CHPP recommendations as adopted.

The CHPP Development Team, including staff from the divisions of Marine Fisheries (DMF), Coastal Management, Water Quality, Environmental Health (Shellfish Sanitation and Recreational Water Quality Section), and the Wildlife Resources Commission, assisted DMF staff with writing and editing the CHPP. The Team reviewed all plan chapters to ensure technical accuracy. Progress reports were provided throughout the process to all three Commissions, the Intercommission Review Committee, and senior DENR staff. The September 2004 draft CHPP and final approved CHPP were placed on the CHPP web site to facilitate public access.

Once the Commissions adopted the CHPP, they and their administrative divisions began preparation of Implementation Plans detailing the specific steps they would take during the 2005/06 – 2006/07 fiscal years to implement the CHPP recommendations. The Department and Commissions received public comments and approved Implementation Plans during June and July 2005. The draft and approved Implementation Plans were placed on the CHPP web site to facilitate public review. (See http://www.ncdmf.net/habitat/index.html). Attachment 2 is the combined CHPP Implementation Plan for the three Commissions, their administrative divisions, and DENR.

The CHPP also identified more than 90 research needs. The CHPP Team summarized those needs in a report placed on the CHPP web site and distributed to the academic, and state and federal agency research community.

Team members gave numerous CHPP presentations at various meetings concerning coastal issues: DENR, the Commissions, Coastal Resources Advisory Council, North Carolina Sea Grant Program, Albemarle-Pamlico National Estuary Program, Outer Banks Association of Realtors, local governments, and several local civic clubs.

Implementation during July – August 2005

- The Marine Fisheries Commission established a Strategic Habitat Area Advisory Committee to assist in developing guidelines for identification and management of Strategic Habitat Areas, and the committee held its initial meeting.
- The Department initiated quarterly meetings among the state and federal permitting and review agencies that manage development in the coastal area.
- The Division of Marine Fisheries enhanced several oyster reef sanctuaries and collected oyster shells from the public to serve as cultch material for additional oyster reefs.
- The Division of Water Quality used CHPP recommendations as criteria in awarding Clean Water Act Section 319 grants.
- The Sea Grant College Program, under a grant from the Division of Coastal Management, initiated a multi-agency project to address management issues associated with siting and operation of marinas and docks in coastal waters.
- A CHPP presentation was given to the Sedimentation Control Commission.
- The divisions of Coastal Management and Marine Fisheries established an agreement under which Marine Fisheries aircraft regularly take Coastal Management personnel aloft to survey the status of coastal development projects.

Future Actions

CHPP Implementation

Work during 2005 – 06 will focus on implementing the CHPP recommendations, as provided in the Implementation Plan (Attachment 3).

Other Accomplishments

With assistance from the divisions of Coastal Management and Marine Fisheries, Elizabeth City State University (ECSU) continued to operate a remote sensing program and laboratory. Much of the justification for the grant was based on the need to obtain and analyze remotely sensed data (including satellite imagery and aerial photography) to aid in preparation of the CHPP. Under this program, ECSU staff is mapping seagrass beds in eastern North Carolina.

ATTACHMENT 1.

INTERCOMMISSION REVIEW COMMITTEE MEMBERS, 2004 – 2005

MARINE FISHERIES COMMISSION

Dr. Barbara Garrity-Blake	Gloucester	252-729-8021
Dr. B. J. Copeland	Pittsboro	919-837-5024

ENVIRONMENTAL MANAGEMENT COMMISSION

Will Fowler	Newport	252-393-2699
Dr. Charles H. Peterson	Morehead City	252-726-6841

COASTAL RESOURCES COMMISSION

Lee Wynns	Colerain	252-356-4684
Pricey Taylor Harrison	Beaufort	252-728-1287

In addition to the Commissioners specifically listed above, Bob Emory (CRC) and Tom Ellis (EMC) made important contributions to development of the final CHPP recommendations.

ATTACHMENT 2.

NORTH CAROLINA COASTAL HABITAT PROTECTION PLAN

IMPLEMENTATION PLAN

North Carolina has a number of programs in place to manage coastal fisheries and the natural resources that support them. The Coastal Habitat Protection Plan (CHPP) has identified gaps in the protection provided for important fish habitats under these programs, and also notes that these habitats would benefit from stronger enforcement of existing rules and better coordination among agencies. The focus of the CHPP, per the Fisheries Reform Act of 1997, is on activities regulated by the Marine Fisheries, Coastal Resources and Environmental Management Commissions. In 2005, each commission and the Department of Environment and Natural Resources (DENR) adopted plans to implement the recommendations found in the CHPP, with a focus on actions that could be taken based on existing resources and within the 2005-2007 budget cycle. Some actions are already underway, and most will be completed before the update of this plan in 2010. This document merges the four Implementation Plans together in a single, comprehensive statement. There is also an understanding among agencies that all recommendations and their associated actions will be supported regardless of lead agency.

DEPARTMENT OF ENVIRONMENT AND NATURAL RESOURCES

DENR is the lead stewardship agency for the preservation and protection of North Carolina' outstanding natural resources. The organization, which has offices from the mountains to the coast, administers regulatory programs designed to protect air quality, water quality, and the public's health. Through its natural resource divisions, DENR works to protect fish, wildlife and wilderness areas. The DENR implementation plan focuses on coordination among the Commissions and the Department, as well as ensuring that all DENR Divisions are taking actions consistent with the goals and recommendations of the CHPP.

MARINE FISHERIES COMMISSION and DIVISION OF MARINE FISHERIES

The Marine Fisheries Commission (MFC) and Division of Marine Fisheries (DMF) manage the commercial and recreational fisheries in North Carolina's estuarine and ocean waters. These waters, including their specific physical habitats (water column, wetlands, sea grasses, soft and hard bottoms, and shell bottoms), produce the finfish, shrimp, crabs, oysters, and other economically important species sought by fishermen, as well as the forage base that supports them. The Division implements the Commission's rules and Department initiatives. The

Division's mission is to ensure sustainable marine and estuarine fisheries for the benefit of the people of North Carolina. Division staff drafted the CHPP, and they will staff many of the groups working on implementation actions. Staff in DMF district offices will also utilize CHPP information to review potential impacts of coastal development projects.

ENVIRONMENTAL MANAGEMENT COMMISSION and DIVISION OF WATER QUALITY

The Environmental Management Commission (EMC) is responsible for adopting rules for the protection, preservation and enhancement of the State's air and water resources. The Commission oversees and adopts rules for several divisions of DENR, including the Divisions of Air Quality, Water Resources, and Water Quality. The goal of the Division of Water Quality (DWQ) is to maintain or restore and improve the aquatic environment and to ensure compliance with state and federal water quality standards. In coordination with the CRC and MFC, and their respective staffs, the EMC and DWQ have developed the actions shown below in blue to begin implementation of the CHPP recommendations.

COASTAL RESOURCES COMMISSION and DIVISION OF COASTAL MANAGEMENT

The Coastal Resources Commission (CRC) establishes policies for North Carolina's Coastal Management Program and adopts implementing rules for both the N.C. Coastal Area Management Act (CAMA) and the N.C. Dredge and Fill Law. The commission designates areas of environmental concern, adopts rules and policies for coastal development within those areas, and certifies local land-use plans. The Division of Coastal Management (DCM) serves as staff to the CRC and works to protect, conserve, and manage North Carolina's coastal resources through an integrated program of planning, permitting, education and research. With jurisdictional authority at the interface of many of the habitats identified in the CHPP, the CRC and DCM take actions to compliment those of the MFC/DMF and EMC/DWQ.

Commission actions are shown below in *italics*. Commissions and agencies responsible for the actions below are indicated in parentheses following the action.

GOAL 1

IMPROVE EFFECTIVENESS OF EXISTING RULES AND PROGRAMS PROTECTING COASTAL FISH HABITATS

Recommendation 1.1 Enhance enforcement of, and compliance with, Coastal Resources Commission (CRC), Environmental Management Commission (EMC), and Marine Fisheries Commission (MFC) rules and permit conditions.

- Strengthen enforcement programs by seeking legislation that will raise maximum Coastal Area Management Act penalties to $1,000 for a minor development violation and $10,000 for a major development violation. Time frame: Legislation introduced in 2005 General Assembly session. (DENR)

- The Department will evaluate the need to seek funding for additional compliance positions in appropriate programs. Time frame: Ongoing (DENR)

- Cross train Marine Patrol officers to take note of and report violations of CRC and EMC rules in Coastal Waters to appropriate agencies and educate the public on what this involves and why it is needed. Time frame: Plan in FY 2005-06; train in 2006-07; implement following training. (MFC/DMF)

- Enhance DMF habitat alteration permit review capability by establishing dedicated staff positions. Time frame: Seek grant funding in 2005-06; continue long-term.

- Design an effective Inspection Program to focus more resources on areas that are critical to coastal habitat protection. Time frame: July 2005 – December 2007 (EMC/DWQ)
  - Organize a DENR interagency inspection task force to examine the issue and develop a system to accomplish the objective;
  - Produce a report with proposed new inspection regime and list of additional resources necessary to execute the plan;
  - Begin implementing the plan

- Conduct on-site evaluation of Wilmington Regional Office Coastal Stormwater Permits prior to renewal. Time frame: 2005 (EMC/DWQ)

- Provide funds to local governments for educating citizen in their jurisdictions about DWQ's Neuse and Tar-Pamlico riparian buffer rules. Time frame: January 2005-December 2006 (EMC/DWQ)

- Coordinate with DENR's SEPA/CSI guidance project to prevent piece meal development. Time frame: Ongoing (CRC/DCM)

Recommendation 1.2 Coordinate and enhance water quality, physical habitat and fisheries resource monitoring (including data management) from headwaters to the nearshore ocean.

- Enhance dependable water quality monitoring by investing in Neuse Estuary MODMON and FerryMon. Time frame: Budget request made in 2005 General Assembly session. (DENR)

- The Department, through the Division of Environmental Health, will develop a data system for monitoring data and mapping of the closure of shellfishing waters to enhance the sharing of information among Departmental Divisions. Time frame: End of 2005 (DENR)

- The Department, through the Division of Environmental Health, will continue to refine and expand the data gathered in shoreline surveys to more effectively assess pollution impacts to shellfish growing areas. The new surveys will be tested and implemented in four pilot growing areas and will be evaluated for expansion. Time frame: complete pilot area surveys by end of 2006. (DENR)

- The Department, through the Albemarle-Pamlico National Estuary Program (APNEP), will develop a comprehensive monitoring plan for the estuarine system. Time frame: End of 2007 (DENR)

- Develop a suite of indicators of estuarine and nearshore coastal health. Begin monitoring coastwide for these indicators. Time frame: Start in 2006-07; complete development by Dec 2008. (MFC/DMF)

- Host Forum for Coordinating Water Related Monitoring among Government Agencies, Universities, and Local Governments. Time frame: 2007 (EMC/DWQ)

- Integrate as appropriate, N.C. National Estuarine Research Reserve System-wide Monitoring Program (SWMP) with DWQ, APNEP and DMF monitoring efforts. Time frame: Complete July 2007 (CRC/DCM)

Recommendation 1.3 Enhance and expand educational outreach on the value of fish habitat, threats from human activities, effects of non-native species, and reasons for management measures.

- The Department, through the Office of Environmental Education, will conduct an inventory of Departmental education programs that address fish habitat and the ocean ecosystem. Time frame: Complete by end of 2005. (DENR)

- The Department, through the Public Information Office, will coordinate the publication and release of Commissions' activities related to the CHPP through newsletters, news releases, the Web site and other publications where appropriate. Time frame: Ongoing (DENR)

- The Department, through the Public Information Office and the Office of Environmental Education, will coordinate with the Zoo, Aquariums, Museum of Natural Sciences, State Parks, Educational State Forests and Environmental Education Centers to integrate the

relevant components of the CHPP into exhibits and programs. Time frame: Ongoing (DENR)

- The Department, through the Museum of Natural Sciences, will work in partnerships with local universities to obtain grant funding for the purpose of studying how students most effectively learn science. Time frame: Ongoing (DENR)

- Complete expanded DMF Habitat Information web pages. Time frame: Ongoing; complete by Dec 2005. (DMF)

- Incorporate CHPP materials into current DMF outreach activities. Time frame: Start July 2005. (DMF)

- Develop education specialist position to carry out CHPP educational activities. Use existing educational staff until that position is established. Time frame: Ongoing. (MFC/DMF)

- N. C. NERR will include a segment of E-Live to focus on fish habitat. Time frame: Complete September 2005 (CRC/DCM)

- North Carolina's Clean Marina Program and Clean Vessel Act activities will emphasize the threats to fish habitat and benefits of BMPs. Time frame: Complete September 2005 (CRC/DCM)

- The DCM display will be enhanced to specifically address CHPP. Time frame: Complete December 2005 (DCM)

- DCM will approach N.C. Sea Grant about incorporating CHPP into their research and education efforts. Time frame: Complete July 2006 (DCM)

Recommendation 1.4 Coordinate rulemaking and enforcement among regulatory commissions and agencies.

- The Department will hold quarterly meetings on proposed projects and enforcement cases that are or may be subject to the permitting or enforcement jurisdiction of the programs of more than one division and invite other state and federal agencies to participate as appropriate. Divisions and agencies that will participate in meetings include Division of Coastal Management, Division of Water Quality, Division of Marine Fisheries, Division of Land Resources, Division of Environmental Health, Wildlife Resources Commission and U.S. Army Corps of Engineers. Time frame: Initial meetings held in March 2005; ongoing. (DENR)

- The Department will establish an Intercommission Advisory Committee to meet on a regular basis to strengthen coordination among the Commissions and review progress of the implementation plans. Time frame: Summer of 2005 (DENR)

- Provide updates to the EMC on the activities of other commissions, including presentations and reports. Time frame: Beginning April 2005 (DWQ)

- CRC meetings will include updates on the activities of other commissions, presentations, Executive Secretary Report, standing agenda item. Time frame: Begin by April 2005 (DCM)

- *CRC will continue to participate in intercommission coordination. Time frame: Ongoing (CRC)*

- Participate in DENR meetings regarding proposed projects and enforcement cases that are or may be subject to the permitting or enforcement jurisdiction of more than one agency. Include SEPA/NEPA coordination. Time frame: Ongoing (CRC/DCM)

GOAL 2

IDENTIFY, DESIGNATE AND PROTECT STRATEGIC HABITAT AREAS

Recommendation 2.1 Evaluate potential Strategic Habitat Areas by a) coordinating, completing, and maintaining baseline habitat mapping (including seagrass, shellbottom, and other bottom types) using the most appropriate technology; b) selective monitoring of the status of those habitats; and c) assessing effects of land use and human activities on those habitats.

- Continue mapping of Submerged Aquatic Vegetation (SAV) in coastal North Carolina. The mapping will be coordinated through the Albemarle-Pamlico National Estuary Program (APNEP), in partnership with the Division of Marine Fisheries, Division of Coastal Management, Division of Water Quality, Elizabeth City State University, U.S. Fish and Wildlife Service and National Oceanographic and Atmospheric Administration. Time frame: Ongoing (DENR)

- Seek funding from the General Assembly to expedite the completion of SAV mapping for the entire coast. Time frame: Budget request made in 2005 General Assembly session. (DENR)

- Seek funding from the General Assembly for shellfish bottom mapping in Brunswick County. Time frame: Budget request made in 2005 General Assembly session. (DENR)

- The Department will coordinate the implementation of the Recreational Saltwater Fishing License program with the identification and protection of Strategic Habitat Areas. Time frame: Begin in fall of 2005. (DENR)

- *The MFC will establish a scientific advisory committee to assist DMF staff in: 1) developing a standard process and criteria to identify and designate SHAs, and 2) developing research priorities to identify SHAs, including chronological order of needed tasks. This action should start the SHA process. Time frame: Start summer 2005; 1 yr to complete (MFC)*

- Continue mapping of all shallow shell bottom and begin mapping deep shell bottom. Acceleration of mapping will require assessing and modifying, as necessary: methodology for shallow, deep and turbid areas, staff, materials, and equipment needs, and associated funding. Time frame: Ongoing; complete in approx. 10 yr with current resources or 5 yr with additional funding for staff and equipment. (MFC/DMF)

- Continue mapping of all SAV in coastal North Carolina by supporting and participating with DENR, universities, and the Cooperative SAV Program to map SAV in rotational phases using remote sensing, field ground truthing, and digitization of imagery. Priority in mapping should be given to low salinity SAV beds and areas previously unmapped. Time frame: Ongoing; complete in approximately 5-7 yr, but dedicated state appropriated funds needed to match federal funds. (MFC/DMF)

- Conduct research on the effects of current dock siting practices on SAV and determine design modifications that would minimize impacts (possible federal aid research project). Time frame: Start in 2006; complete by 2008. (MFC/DMF)

- DCM will provide staff support to the APNEP SAV Mapping Work Group. Time frame: Ongoing. (DCM)

- N.C. NERR will map SAV within reserve boundaries. Time frame: Complete December 2006. (CRC/EMC)

- Data acquisition will be coordinated with DMF. Time frame: Complete 2006 (CRC/EMC)

- DCM aerial photography will be made available to DMF. Time frame: Complete December 2005 (DCM)

- DCM and N.C.NERR will work with Sea Grant water quality specialist and DWQ to further develop a conference intended to provide better water quality data to planners and consultants and begin to make some linkages between land use and water quality in CAMA land use plans. Time frame: Scheduled by June 2007 (DCM)

Recommendation 2.2. Identify and designate Strategic Habitat Areas using ecologically based criteria, analyze existing rules and enact measures needed to protect Strategic Habitat Areas, and improve programs for conservation (including voluntary actions) and acquisition of areas supporting Strategic Habitat Areas.

- Using criteria developed by SHA workgroup, develop list of candidate sites for designation using existing data and information (habitat committee of BRT, other interested DMF biologists, CHPP staff, WRC, Natural Heritage, NOAA, and possibly

NGOs). Time frame: Start by July 2006; continue through SHA designations. (MFC/DMF)

- MFC should begin designation of SHAs where criteria are adequate. Time frame: Start by fall 2005. (DMF)

- Integrate resulting criteria and information from SHA committee into DENR Divisions' guidelines, policies, and rulemaking. Time Frame: Start by July 2006; continue through SHA designations. (MFC/DMF)

- Study the feasibility and benefits of developing an SAV Mitigation Program. Time frame: July 2005 – December 2006 (DWQ)

GOAL 3

ENHANCE HABITAT AND PROTECT IT FROM PHYSICAL IMPACTS

Recommendation 3.1 Greatly expand habitat restoration, including:

a) creation of subtidal oyster reef no-take sanctuaries,

- Implement an ongoing subtidal oyster sanctuary program with dedicated funding, including construction of oyster sanctuaries as well as research and monitoring to determine habitat and water quality enhancement. Time frame: Starting 2005; long-term (MFC/DMF)

- Expand Oyster Shell Recycling Program with dedicated funding to increase oyster cultch supply, support subtidal oyster sanctuary program, and increase public awareness of habitat value. Time frame: Starting 2005; long-term (MFC/DMF)

- Monitor all oyster sanctuaries for 1) survival, growth, and oyster recruitment, 2) fish/invertebrate use, and 3) effect on water quality. University research is necessary. Time frame: Starting 2005; long-term DMF monitoring for oyster survival, growth, and recruitment; additional funding or university assistance needed to monitor fish use and water quality (DMF)

- Ensure that CRC rules are consistent with the MFC effort to establish oyster reefs. Time frame: Complete April 2006 (DCM)

- Continue staff support for the Oyster Restoration Task Force. Time frame: Ongoing (CRC/DCM)

b) and reestablishment of riparian wetlands and stream hydrology.

- Work with the Corps of Engineers and the Department of Transportation on innovative mitigation projects and an appropriate crediting system for them under the Ecosystem Enhancement Program (EEP). Such projects may include the protection and restoration of SAV and the removal of certain dams. EEP has established a process through the Program Assessment and Consistency Group to work with coastal partners on the delivery of compensatory mitigation in the coastal environment. Time frame: Ongoing (DENR)

- DENR review of state agency requests to the Natural Heritage Trust Fund will place a priority on those proposals that would further the protection and restoration of critical fisheries habitats. Time frame: Ongoing (DENR)

- Make protection and restoration of critical fisheries habitats a priority part of the One North Carolina Naturally initiative, such as the development of conservation plans for the twenty coastal counties that will identify potential conservation focus areas. Time frame: Seek funding for the potential acquisition of these areas in 2006. (DENR)

- The Department, through the Division of Water Resources, will participate in a study of the Neuse Basin with federal partners to identify opportunities for environmental restoration. Time frame: complete study by 2007 (DENR)

- The Department will assist coastal local governments in identifying navigation and stream restoration projects of particular importance to the fishing industry for grants from the State-Local projects program of the Division of Water Resources. Time frame: Ongoing (DENR)

- Evaluate wetland and stream mitigation requirements to determine if restoration includes fisheries benefits. Time frame: March 2006 (EMC/DWQ)

- Continue to make DCM wetland data/expertise available to EEP. Time frame: Ongoing (CRC/DCM)

Recommendation 3.2 Prepare and implement a comprehensive beach and inlet management plan that addresses ecologically based guidelines, socio-economic concerns and fish habitat.

- Seek funding from the General Assembly for a beach nourishment database, which will allow State and local governments to better plan beach nourishment projects. Time frame: Budget request was made in the 2005 session. (DENR)

- Completion of Sediment Criteria. Time frame: Complete July 2006 (CRC/DCM)

- Develop minimum criteria for monitoring beach nourishment projects. Time frame: Complete July 2007 (CRC/DCM)

- Convene stakeholder group to identify data gaps, funding needs, and framework, and develop a timeline. Time frame: Complete January 2006 (CRC/DCM)

- CRC will be provided with the results of beach nourishment monitoring project (Presentations). Time frame: Complete July 2006 (DCM)

- DCM will serve as a clearinghouse for beach nourishment monitoring data. This will be addressed in the new CZMA Sec 309 Enhancement Grant. Time frame: Complete June 2007 (DCM)

- DCM will hire a coastal engineer. Time frame: Complete July 2005 (DCM)

Recommendation 3.3: Protect Submerged Aquatic Vegetation (SAV), shell bottom, and hard bottom areas from fishing gear effects through improved enforcement, establishment of protective buffers around habitats, and further restriction of mechanical shellfish harvesting.

- Identify areas on maps where allowed use of bottom disturbing fishing gear does or could overlap areas with sensitive benthic habitats. Determine current size of buffers between bottom disturbing fishing gear and benthic habitats, based on proclamation lines and habitat occurrence. Time frame: Ongoing; complete by Fall 2005. (MFC/DMF)

- Modify clam kicking and hydraulic dredging areas by proclamation to clearly avoid all SAV and oyster beds and allow a buffer of 50-100 ft between mechanical shellfish gear and SAV and shell bottom. The size of the buffer may be modified if supported by scientific studies. Time frame: Begin implementation in Dec 2005. (MFC/DMF)

- *The MFC will consider modifying shrimp trawling areas through the current Shrimp FMP process to restrict trawling over or immediately adjacent to shell bottom, SAV, or nursery areas and maintain an adequate buffer. Time frame: Start once shrimp FMP approved, expected by Dec 2005; complete by Dec 2006. (MFC/DMF)*

Recommendation 3.4: Protect fish habitat by revising estuarine and public trust shoreline stabilization rules using best available information, considering estuarine erosion rates, and the development and promotion of incentives for use of alternatives to vertical shoreline stabilization measures.

- Continue providing staff support for the Oyster Restoration and Protection Plan Steering Committee. Time frame: Ongoing (EMC/DWQ)

- Refine rule 15A NCAC 07H .2700 GP for Marsh Sills. Time frame: Complete July 2007 (CRC/DCM)

- Establish a CRC/CRAC Estuarine Shoreline Stabilization Subcommittee. Time frame: Complete January 2006 (CRC/DCM)

- Encourage alternatives to vertical shoreline stabilization methods through permit requirements and fees. Time frame: Complete July 2007 (CRC/DCM)

- Continue participation as a Technical Advisory Committee member in NOAA's new research-sponsored program "Ecological Effects of Sea Level Rise" to develop information/tools to better forecast and manage landscape responses of critical natural resources relative to sea level rise. Time frame: Ongoing (CRC/DCM)

- Support/promote efforts to develop shoreline stabilization demonstration projects along non-ocean shorelines. Time frame: Complete July 2006 (CRC/DCM)

- Pursue and provide financial support for shoreline stabilization demonstration projects and studies. Time frame: Complete June 2007 (CRC/DCM)

Recommendation 3.5 Protect and enhance habitat for anadromous fishes by: a) incorporating the water quality and quantity needs of fish in surface water use planning and rule making and b) eliminating obstructions to fish movements, such as dams, locks and road fills.

- The Department, through the Division of Water Resources, will participate in a 216 study of Kerr Lake with federal partners. The study will include the evaluation of modifying releases from the dam to benefit anadromous fish in the Roanoke River. Time frame: Complete study by 2007 (DENR)

- The Department, through the Division of Water Resources and the Ecosystem Enhancement Program, will pursue dam removal projects where appropriate. Time frame: Ongoing (DENR)

- Continue working closely with the Army Corps (ACE) and other entities to ensure protection of anadromous and catadromous fisheries resources in dam operations. Time frame: Ongoing (EMC/DWQ)

- Modify Dam Removal Policy with ACE. Time frame: March 2005 – October 2005 (EMC/DWQ)

GOAL 4

ENHANCE AND PROTECT WATER QUALITY

Recommendation 4.1 Reduce point source pollution from wastewater by:

a) increasing inspections of wastewater treatment facilities, collection infrastructure, and land disposal sites, and

b) providing incentives for upgrading all types of wastewater treatment systems.

- Pursue legislative authority for the wastewater loan program to allow a reduced interest rate for applicants. Time frame: Legislation introduced in 2005 session. (DENR)

- Evaluate 15A NCAC 2H .0400 and 2B .0500 regulations for opportunities to provide incentives for upgrading all types of wastewater treatment systems and make recommendation to EMC. Time frame: Start 2007 (EMC/DWQ)

Recommendation 4.2. Adopt or modify rules or statutes to prohibit ocean wastewater discharges.

- Evaluate 15A NCAC 2H .0400 rules as they apply to ocean wastewater treatment systems and make recommendation to the EMC regarding modifications. Time frame: Start 2007 (EMC/DWQ)

Recommendation 4.3 Prohibit new or expanded stormwater outfalls to coastal beaches and to coastal shellfishing waters (EMC surface water classifications SA and SB) except during times of emergency when public safety and health are threatened, and continue to phase-out existing outfalls by implementing alternative stormwater management strategies.

- Work with DOT to prioritize stormwater outfall mapping efforts on areas near critical fisheries habitats through the implementation of DOT's Stormwater Pilot Project on new and innovative technologies to clean up discharges from NC DOT outfalls and associated outlets. Time frame: Ongoing (DENR)

- Develop a plan to phase out municipal stormwater outfalls to sounds. (EMC/DWQ)
    - Locate existing municipal stormwater discharges to sounds;
    - Review available technologies to treat or remove the discharges;
    - Prioritize existing outfalls for removal/treatment and develop long term implementation plan

- Support planning efforts in Manteo to remove stormwater discharges to Shallowbag Bay. Time frame: Complete by July 2005. (EMC/DWQ)

- Actively seek research of innovative technology to treat stormwater outfalls with 319 grant funding. Time frame: 2005-2006 (EMC/DWQ)

Recommendation 4.4 Enhance coordination with, and financial/technical support for, local government actions to better manage stormwater and wastewater.

- Pursue legislative authority to allow local governments to use revolving loan fund at a reduced rate of interest for stormwater pollution control projects. Time frame: Legislation introduced in 2005 session. (DENR)

- Provide stormwater educational & technical assistance to local governments through the DENR Runoff Pollution Campaign and through partnerships with the Division of

Community Assistance and Institute of Government. Time frame: Ongoing (EMC/DWQ)

- Fund position at NC Sea Grant to provide stormwater educational & technical assistance to local governments focused on land use planning and policies. Time frame: Ongoing through December 2006. (EMC/DWQ)

- Develop an optional plan that local governments could undertake to meet multiple stormwater regulatory requirements. Time frame: July 2005 through July 2007 (EMC/DWQ)

- Consider & develop as appropriate a blanket contract for research needs to improve assessment and development of the most efficient and effective alternatives for NPS management. Time frame: 2006 (EMC/DWQ)

Recommendation 4.5 Improve land-based strategies throughout the river basins to reduce non-point pollution and minimize cumulative losses to wetlands and streams through voluntary actions, assistance, and incentives, including:

a) improved methods to reduce sediment pollution from construction sites, agriculture, and forestry;

- The Department, through the Division of Forest Resources, will purchase steel bridge mats for use across the coastal plain by loggers to make temporary stream crossings during harvesting activities. Bridge mats for stream or ditch crossings have been shown to provide better protection of water quality than traditional culvert crossings. These steel mats will be available in the Chowan, Roanoke, lower Neuse, Lumber, and Cape Fear river basins. Time frame: End of 2005 (DENR)

- Seek legislation that will reduce non-point source pollution by requiring that ground cover be established within a shorter time period, creating incentives for local governments to establish sedimentation programs and raising the maximum civil penalties for first day violations of the Sedimentation and Pollution Control Act. Time frame: Legislation introduced in 2005 session. (DENR)

- Update DWQ Stormwater BMP Manual, Division of Land Resources' Sedimentation and Erosion Control Design Manual, and the N.C. DOT's BMPs for Construction and Maintenance Activities Manual. Time frame: 2005-2006 (EMC/DWQ)

- Enhance DCM education efforts such as the N.C. NERR Septic Systems Workshops. Time frame: Complete April 2005 through June 2007. (CRC/DCM)

b) increased on-site filtration of stormwater;

- Seek legislation that will allow increased flexibility for the use of the buffer restoration fund. Time frame: Legislation introduced in 2005 session. (DENR)

c) documentation and monitoring of small but cumulative impacts to wetlands and streams from approved, un-mitigated activities;

- Coordinate with Wetland Functional Assessment Team to determine wetland status and trends. Time frame: January 2007. (EMC/DWQ)
- DCM will incorporate small but cumulative impacts to wetlands into Coastal Development Activity and Impact Tracking System (CDAITS). Time frame: Complete July 2006. (DCM)

d) incentives for low-impact development;

- Implement five on-the-ground projects to increase understanding of the effectiveness of low impact development in coastal and piedmont North Carolina in meeting water quality goals, develop guidance for design considerations, and provide educational opportunities. Time frame: Ongoing through December 2010. (EMC/DWQ)

e) increased inspections of onsite wastewater treatment facilities; and

f) increased water re-use and recycling.

g) Other

- Establish three new water quality forester positions in the Division of Forest Resources. The positions will be responsible for preventing and controlling water quality degradation by forestry operations through the implementation of forestry best management practices. Time frame: Budget request made in 2005 session. (DENR)
- To enhance field training and education opportunities, the Division of Forest Resources will produce two training and educational videos for loggers and foresters on proper stream crossings for forestry activities. Time frame: Fall 2005 (DENR)
- Through the Division of Land Resources (DLR), work with the Sedimentation Control Commission (SCC) to include CHPP presentations on the Commission agenda and to include information on CHPP actions in SCC and DLR publications. Time frame: Begin in 2005 (DENR)

Recommendation 4.6. Improve land-based strategies throughout the river basins to reduce non-point pollution and minimize cumulative losses to wetlands and streams through rule making, including

a) increased use of effective vegetated buffers,

- Implement rule NCAC 7H .2600 General Permit for Construction of Wetland, Stream and/or Buffer Mitigation Sites by the North Carolina Ecosystem Enhancement Program. Time frame: Ongoing (CRC/DCM)

b) reduction of impervious surfaces where feasible and reduction of the level of impervious surface allowable in the absence of engineered stormwater controls,

- *CRC will request the General Assembly to establish a coastal stormwater utility to facilitate the inspection and monitoring of engineered stormwater treatment systems. Time frame: Complete June 2007 (CRC)*

c) expansion of CAMA Areas of Environmental Concern (AECs) upstream and landward, and

- Time frame: Proposed for 2007-2009 (CRC/DCM)

d) consideration of erosion rates as an additional factor in the siting of structures along estuarine and public trust shorelines.

- Time frame: Proposed for 2007-2009 (CRC/DCM)

e) Other

- Evaluate stormwater pollution control mechanisms and cumulative wetland and stream losses in the Cape Fear and White Oak River basins to determine if additional regulatory controls are needed and present findings to the EMC. Time frame: Begin May 2007 (EMC/DWQ)

- Develop a mitigation policy for intermittent streams. Time frame: April 2005-June 2006 (EMC/DWQ)

Recommendation 4.7 Develop and implement a comprehensive coastal marina and dock management plan and policy for the protection of shellfish harvest waters and fish habitat.

- Seek funding for completion of a pier and dock inventory, which will be used to create a baseline of information on pier and dock construction. Time frame: Budget request made in 2005 legislative session. (DENR)

- Incorporate EMC's prohibition of marinas in ORWs into CRC rules. Time frame: Complete January 2007. (CRC/DCM)

- Evaluate marina development standards (rule NCAC 7H .0208(b)(5)). Time frame: Complete January 2007. (CRC/DCM)

- Inventory docks and piers in the 20 coastal counties. Time frame: Complete January 2007 (CRC/DCM)

- Participate in Sea Grant Marina Siting Workgroup. Time frame: Ongoing (CRC/DCM)

Recommendation 4.8 Reduce non-point source pollution from large-scale animal operations by the following actions: a) support early implementation of environmentally superior alternatives to the current lagoon and sprayfield systems as identified under the Smithfield Agreement and continue the moratorium on new/expanded swine operations until alternative waste treatment technology is implemented; b) seek additional funding to phase-out large-scale animal operations in sensitive areas and relocate operations from sensitive areas; and c) use improved siting criteria to protect fish habitat.

- The Department, through the Division of Pollution Prevention and Environmental Assistance, will provide contract and independent swine farms with the technical assistance and training needed to implement effective Environmental Management Systems. Time frame: Ongoing (DENR)

- Provide staff support and participate in the Smithfield Technology Advisory Panel to identify environmentally superior technologies for swine operations. Time frame: Ongoing (DENR)

- Provide support needed for the continuation of the voluntary Swine Buy-Out to remove high-risk swine operations from the 100-year floodplain. The program is conducted through the Division of Soil and Water Conservation with funding from the Clean Water Management Trust Fund. DSWC and CWMTF have agreed to a third phase with approximate funding of $3 million. Time frame: Fall 2005 (DENR)

EXHIBIT D-9

Interim Report to the
Environmental Review Commission

A Regional Approach to the Phaseout of MTBE in the Southeast

March 1, 2006

North Carolina Department of Agriculture and Consumer Services

North Carolina Department of Environment and Natural Resources

Background

MTBE (methyl tertiary-butyl ether) is used as a fuel additive in gasoline and is designed to raise the content of oxygen is gasoline. MTBE has been used in U.S. gasoline at low levels since 1979 to replace lead as an octane enhancer or anti-knocking agent. Oxygen helps gasoline burn more completely, reducing tailpipe emissions from cars and trucks.

Air Quality Benefits

In 1990 Congress passed the Clean Air Act Amendments which set oxygenate requirements for areas with high levels of pollution. Although, the Clean Air Act doesn't require MTBE, many refiners have chosen to use MTBE over other oxygenates because of its blending characteristics and for financial reasons. The oil industry relied heavily on MTBE to meet the oxygenate requirements, rather than invest in the other primary alternative at the time, ethanol. Unlike ethanol, MTBE can be shipped through existing pipelines. Ethanol is not shipped in pipelines, in part, because ethanol absorbs water and impurities found in pipelines.

MTBE and ethanol are used in certain areas of the country as an oxygenate in either a winter oxyfuel program or a year-round Federal reformulated gasoline (RFG) program. North Carolina does not require either of these programs.

Counties in North Carolina designated as non-attainment for the 8-hour ozone standard are required to use lower Reid vapor pressure (RVP) gasoline in the summer months. This program is intended to reduce emissions of volatile organic compounds during the ozone season. However, this program does not specifically require MTBE.

Groundwater Concerns

In recent years MTBE has been detected in groundwater throughout the country. Some of these incidents of MTBE contamination have impacted drinking water supplies. These incidents of contamination have caused concerns because MTBE can make water undrinkable due to its offensive taste and odor. While health-related research on MTBE has been conducted results have not been definitive. According to EPA, independent expert review groups have not made a determination as to whether MTBE poses an imminent threat to public health. EPA's Office of Water has concluded that available data are not adequate to estimate the potential health risks of MTBE at low level exposure levels in drinking water. However, EPA does conclude that the data does demonstrate that MTBE is a potential human carcinogen at high doses.

Growing health concerns, in addition to a large number of lawsuits related to MTBE contamination have focused attention on MTBE. A number of states have had water systems contaminated by MTBE. In some instances, these incidents have resulted in lawsuits. For example, in 2003 eighteen petroleum companies settled a suit brought by Santa Monica, California, agreeing to spend at least $200 million on a filtration system to remove MTBE from the city's water supply.

In North Carolina, MTBE contamination of groundwater is a growing concern. According to the Underground Storage Tank (UST) Section there are approximately 8955 active Underground Storage Tank incidents. The UST Section reports that over 2000 of the releases have had MTBE impacts to groundwater. It should be noted that the UST Section only recently started specifically documenting MTBE contamination from UST releases. Consequently, it is safe to assume that the actual number of UST releases with MTBE impacts to groundwater is higher than 2000.

The Aquifer Protection Section in the Division of Water Quality has overseen approximately 721 gasoline contamination incidents, most of which were either caused by surface spills or above ground storage tanks. Of these incidents, over 400 involved groundwater contamination and seventy-nine private drinking water wells and eight public wells have been impacted from this contamination. Many of these gasoline contamination incidents from surface spills and above ground storage tanks include MTBE contamination.

In many instances, it is difficult to identify whether a petroleum spill contains MTBE. MTBE will move farthest and fastest and it requires significant monitoring to find out how it actually gets dispersed. The current groundwater standard in North Carolina for MTBE is 200 parts per billion.

Much like the incident mentioned above in which the city of Santa Monica's water supply was impacted, North Carolina citizens have also had to deal with the serious consequences of MTBE contamination. In Wrightsboro, a small town outside of Wilmington in New Hanover County, an apparent gas leak from a gas station located near a couple of trailer parks contaminated the drinking water for approximately 180 people. The gas station had leaked gasoline containing MTBE. In court, a toxicologist testified that the persons exposed to the contaminated drinking water had compromised immune systems due to the contamination. A settlement between the parties was reached for a reported $36 million.

North Carolina Petroleum Information

In 2003, there were 4,385,162,000 gallons of gasoline sold at retail in North Carolina according the North Carolina Petroleum Marketers Association (NCPMA). Data from the U.S. Energy Information Administration (EIA) shows a decline in the use of premium and midgrade over the last 5-10 years while there has been an increase in the use of regular unleaded over the same period.

In 2005, sales by grade were approximately 85% Regular Unleaded, 10% Premium and 5% midgrade based on EIA data.

Gasoline samples were tested by the N.C. Motor Fuels Lab for MTBE in April, May and September of 2005:

MTBE Content in N.C. Gasoline

Grade	Range	Average
Premium Unleaded	2--10%	5%
Regular Unleaded	0--2%	0.5%
Midgrade Unleaded	0.7%--4.6%	2%

It should be noted that many locations use blend pumps for selling midgrade unleaded gasoline. These types of locations have storage tanks for premium and regular unleaded gasolines. Midgrade gasoline is being blended on demand from these two products (usually 35% premium and 65% regular) in the dispenser as it is delivered to the customer. Therefore, the MTBE results from these types of locations is dependent on the MTBE content of the base fuels and the blend ratio used. The N.C. Motor Fuels Lab estimates over half of midgrade gasoline sold is through a blend pump.

MTBE bans

As a result of concerns raised about its public health impact, twenty-six states have banned MTBE, including seven states that passed MTBE bans in 2005 (see the attached map). Some of these bans are characterized by EPA as partial bans, such as North Carolina's law which allows up to .5% by volume, while other states have passed complete bans.

Most recently at the federal level, Congress has discussed and debated banning MTBE. In early versions of H.R. 6, the Energy Policy Act of 2005, the legislation would have banned MTBE beginning in 2014. The final version of H.R. 6 that was approved by Congress and signed by the President did not ban MTBE.

Activity in other Southeastern States

As required by Session Law 2005-93, staff from the Department of Environment and Natural Resources and the Department of Agriculture consulted with our colleagues in other southeastern states. The session law identified the following states to be contacted: Alabama, Georgia, Kentucky, Mississippi, South Carolina, Tennessee, and Virginia. Of these states identified in the legislation, all but Kentucky rely largely on the pipelines for the transport and supply of gasoline (see the attached map).

Alabama

State officials with the Alabama Department of Environmental Management indicate that there has been no legislative discussion about banning MTBE.

Georgia

In the current legislative session, a bill has been introduced in the Georgia House of Representatives that would ban MTBE. House Bill 983 is similar to North Carolina's ban in that it makes it unlawful to distribute or sell any gasoline containing more than one-half of one percent MTBE by volume. The bill does not prohibit the transport of gasoline containing MTBE through Georgia. The bill does not contain a date that the ban would begin, but rather the ban would be effective upon ratification.

On February 14, 2006 the House Committee on Agriculture and Consumer Affairs approved a substitute version of this bill. The substitute bill would ban MTBE and other gasoline additives by January 1, 2008. On February 21, 2006 the full Georgia House unanimously approved this legislation. The bill has been referred to the Senate.

Kentucky

In 2002 Kentucky passed legislation that banned MTBE beginning on January 1, 2006. The bill did allow for trace amounts of MTBE, not to exceed one-half of one percent by volume. The bill cited the state's reliance on groundwater for drinking water and for industrial and agricultural purposes, to conclude that "the continued use of MTBE poses an unacceptable threat to public health." As noted above, Kentucky does not rely on the pipelines for its gasoline supply as other Southeastern states do. Consequently, the experiences of Kentucky's transition to an MTBE ban would not be the best indicator of the potential impacts of transition in North Carolina.

Mississippi

Staff with the Underground Storage Tank Section of the Mississippi Department of Environmental Quality does report seeing MTBE in some releases from USTs. The Mississippi Department of Health has been conducting some testing in public water supply wells for MTBE and at this point has not found any contamination. There has been no legislation introduced related to an MTBE ban.

South Carolina

Staff with the South Carolina Department of Health and Environmental Control indicated that there have been discussions about banning MTBE. On February 23, 2006 a bill to ban MTBE was introduced in the South Carolina House. This bill, H 4713, would ban MTBE and certain other oxygenates. The bill has been referred to Committee on Agriculture, Natural Resources and Environmental Affairs. H 4713 is very similar to the legislation in Georgia and would ban MTBE beginning in 2008. The state's Underground Storage Tank Section continues to see incidents of MTBE contamination from UST spills and they continue to monitor the issue.

Tennessee

Tennessee does not currently have a ban on MTBE. State officials with the Tennessee Department of Environment and Conservation cite the recent testing of gasoline content as one factor in the state's decision not to ban MTBE. Testing demonstrates very low concentrations of MTBE in the gasoline, often below two or three percent. Another factor cited by state officials is that Tennessee has not had any municipal drinking water systems impacted by MTBE contamination.

Although there are no current plans to ban MTBE, this issue has been considered by the Tennessee legislature in recent years. In the 2001 session several legislative proposals were introduced related to MTBE. These bills ranged from developing a timetable to phase out MTBE, studying a ban of MTBE and using funds from the underground storage tank fund to help offset the costs of implementing an MTBE ban. None of these bills were approved by the legislature. However, the Tennessee legislature in 2001 did approve House Joint Resolution 228, a resolution urging Congress to ban MTBE as a fuel additive. The resolution noted that MTBE had been detected in 47 water supplies within the state. The resolution cited the impact of MTBE on drinking water supplies in other parts of the country and its threat to the groundwater and drinking water supply of Tennessee. The resolution also addressed the gasoline supply issue by stating that MTBE would not significantly effect the supply of gasoline. Copies of the resolution were sent to the Tennessee congressional delegation.

Virginia

According to officials with the Virginia Department of Environmental Quality the state legislature has not taken action to ban MTBE and action is not likely in the next couple of years.

While no ban has been enacted in Virginia, the state did pass legislation in 2000 which requires every public water supply operator to test public water supplies at least quarterly for the presence of MTBE. The locality must maintain a record of the testing and, if the results of any test, indicate the presence of MTBE in excess of 15 parts per billion (ppb), the locality must immediately notify the Departments of Environmental Quality and Health. During 2004 there were two notifications of where public water supplies detected MTBE at levels greater than 15 ppb.

Other Considerations

The session law required consultation with representatives of the petroleum industry, such as refiners, suppliers, distributors, transporters, retailers of motor fuel and liquid pipeline operators. In addition, the law required consultation with consumer, environmental and other public interest groups. On January 18, 2006 DENR and the Department of Agriculture held a stakeholder meeting to discuss the legislation and gather information. Representatives from state agencies, manufacturers of MTBE, petroleum marketers, and environmental organizations attended the meeting. In some cases, interested parties provided information and data that has been incorporated into this Interim Report.

The Department of Agriculture and DENR continue to review the information we have received from stakeholders and other Southeastern states on a regional approach to an MTBE ban. There are many issues where further examination is needed in preparation for the Final Report on this matter, which is due in 2007. These issues include:

- continued collaboration and discussion with other states in the Southeast on progress in moving toward a regional ban on MTBE;
- information on potential price increases to consumers as a result of the MTBE ban in North Carolina;
- information from the pipelines and refiners on potential supply disruptions and the logistics of providing North Carolina with gasoline that does not contain MTBE;
- an examination of potential alternatives to MTBE, such as ethanol or other ethers, and the availability and cost of these alternatives in North Carolina;

- a review of whether alternatives to MTBE have environmental impacts that need to be considered; and

- information related to the impact on independent marketers and their ability to purchase gasoline.

Conclusion

To date, other states in the Southeast have not followed the lead of North Carolina in banning MTBE. However, in a couple of states legislation has been introduced similar to the bill approved by the North Carolina General Assembly. Groundwater contamination from MTBE and its impact on public health and the environment continues to be a concern. Despite these concerns, there are many significant issues related to an MTBE ban that must be addressed to ensure that North Carolina's consumers are not affected by price surges and supply disruptions. These issues will be addressed as the Department of Agriculture and DENR prepare the Final Report, with findings and recommendations, as required by Session Law 2005-93.

State MTBE Bans

Bans in Place or Enacted as of 12/31/04:
19 states + Washoe County, Nevada

States Enacting Bans in 2005:
7 states: Montana, New Hampshire, New Jersey, North Carolina, North Dakota, Rhode Island and Vermont.

Subject: Pilot Animal Waste Inspection Program Report

S.L. 2005-276 requires the Department of Environment and Natural Resources semiannually to submit to the Environmental Review Commission a report on the pilot program for inspection of animal waste management systems. The session law also required DENR to make recommendations to the ERC on the continuation of this program. The attached report meets both requirements. If you have any questions, please contact Manly Wilder at 919-733-2302.

EXECUTIVE SUMMARY

The six years of data from the animal waste management pilot program provides better insight and feedback of DENR's efforts to improve overall compliance at swine farms. Wide fluctuations in rainfall from 1999 – 2004, combined with weather's natural influence on compliance, compounded the difficulties in interpreting results.

The Division of Soil and Water Conservation (DSWC) can confidently assert a number of observations and conclusions about the pilot.

- The program generated a significant shift of farms from high to low potential environmental impact classifications. (Fig. B, p.8)
- It offers "smart" delivery of DENR resources that make the impact shift possible. (p.9)
- The pilot shows measurable compliance improvements in selected potential threat operational indicators compared to non-pilot farms. (Figs. D and G, pp.10 and 12)
- DENR staff is more likely to identify immediate threat problems on pilot farms. (Fig. E, p.11)
- It reduced staff availability for non-pilot assistance. (p.13)
- DSWC per-*visit* costs for pilot farms are less than non-pilot. (Tab. 3, p.14)
- DSWC per-*farm* costs are more for pilot farms than non-pilot. (Tab. 3, p.14)
- The DSWC cost of pilot-related site visits declines over time through efficiency gains. (Tab. 3, p.14)

DSWC supports the pilot's inspection model, provided support remains strong among farmers and other stakeholders, and that DSWC's ability to provide technical assistance to non-pilot farmers isn't sacrificed to make expansion possible.

BACKGROUND

The objective of the Animal Waste Management Inspection Pilot (hereinafter the pilot), as inferred from Section 12.7(b) of S.L. 2005-276, is to determine if operation reviews and inspections conducted by the DSWC staff can improve compliance performance in waste management when used to replace Division of Water Quality (DWQ) routine inspection processes. Even more importantly, the program serves as a test bed to try inspection approaches that may be more effective; improve response times to discharges, complaints and reported problems; identify violations and take corrective actions earlier; and improve communications between farmers and DENR employees. This report comprises six years of data collected at 108 pilot farms in Brunswick, Columbus and Jones counties.

Several factors are relevant in assessing the pilot's effectiveness at this or any point in time. They represent variables outside human control as well as changes reflecting the refinement of pilot administration. They include:

- annual variations in precipitation;
- changes in data collection;
- introduction of environmental "impact" categories.

Precipitation

Precipitation has an unavoidable effect on livestock waste management. Most notably, it contributes to the volume of a lagoon's contents. But it also influences the timing and frequency at which waste can be applied to receiving crops. If significant rainfall occurs at critical stages during a receiving crop's growth cycle, interrupting or delaying the application of the waste to the crop, then the window of opportunity to fully utilize the waste's nutrient value (principally, nitrogen and phosphorous) may be lost. And poor synchronization between receiving crop growth cycles and waste application may ultimately result in the discharge of nutrients to surface and ground waters.

Conversely, less precipitation usually allows more days for waste application. These facts lead to an inverse relationship between precipitation and compliance with waste management rules. As precipitation increases, compliance declines; the reverse being that compliance improves as rainfall drops off. The relationship influences numerous factors in the performance standards, but most especially in those that pose the greatest threat to the environment.

Figure A shows available precipitation data at weather stations in or adjacent to pilot program counties for the years 1999 through 2004. Precipitation measured at each station fell below the annual average during 2001, 2002 and 2004, providing generally favorable weather conditions for animal waste management.

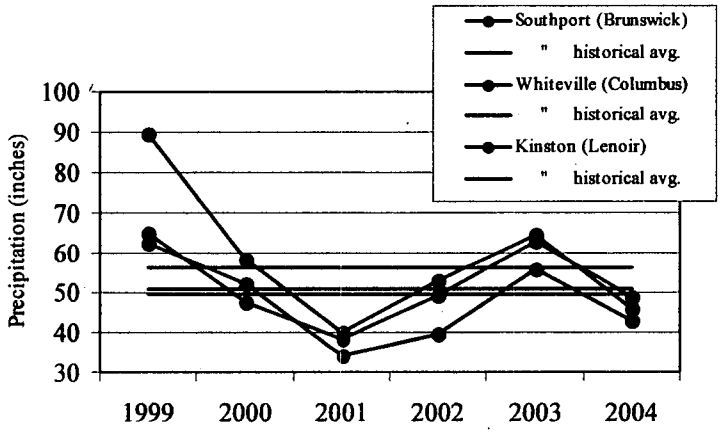

Figure A. Annual precipitation measured at weather stations in or adjacent to the three pilot counties. *Source: State Climate Office, annual figures; Southeast Regional Climate Center, Columbia, S.C., historical averages.*

Data handling

Based on lessons learned during earlier years of the pilot program, DSWC has refined the sorts of data it gathers during reviews and inspections. These process improvements enable DSWC and DWQ to more effectively target technical assistance and regulatory resources to swine producers.

"Impact" categories

Formulating inspection protocols during the early years of the pilot program, DSWC and DWQ developed a list of operational indicators to objectively score waste management compliance. Then, starting in 2001, DSWC further refined the process by introducing additional distinctions between farms falling within different ranges of compliance scores. This latter step allowed for even more systematic, prioritized delivery of regulatory and technical assistance where it was most needed.

Table 1 lists the operational indicators used to assess animal waste management system on the pilot farms, with points assigned to each commensurate with the degree of threat any compliance deficiencies would pose to the environment. The 17 indicators identified are ranked here in descending order according to relative point values. For reporting and assessment purposes, twelve of the items have been further grouped into "immediate threat" and "potential threat" rankings. This table is the basis for distinguishing the three potential impact categories within which farms might fall.

Operational Indicators	Point Value
Offsite discharge	20
Structural integrity compromised	18
Structural freeboard levels	16
Hydraulic overloading	15
Nitrogen over-applied ≥ 10%	12
Waste spill contained on site	12
Storm storage levels	11
Irrigation system maintenance deficiency	11
Structural maintenance deficiency	10
Receiving crop inconsistent with waste plan	10
Irrigation records deficient	10
Sprayfield conditions	9
Lagoon level records deficient	9
Nitrogen over-applied <10%	8
Receiving crop inadequate	8
Waste analysis deficient	8
Soil analysis deficient	7

Table 1. Operational indicators observed and recorded by DSWC and DWQ during inspection of animal operations. Items in italics represent "immediate threat" indicators.

Table 2 presents the point ranges that define the three impact categories. Each range represents points totaled for deficiencies in any operational indicator for a farm over the course of its annual inspection history.

Potential Impact Group	Noncompliance points
Low impact farms	0 – 12 points per year
Medium impact farms	13 – 30 points per year
High impact farms	31 or more points per year

Table 2. Low, medium, and high farm potential impact categories listed with their corresponding noncompliance point ranges.

As previously mentioned, these groupings guided the development and implementation of inspection protocols. Farms demonstrating scores consistently in the low and medium potential impact groups are subject to routine site visits by DSWC. When a farm receives high scores, the protocol directs DSWC to notify DWQ, and joint compliance audits by both divisions commence. If that same facility continues to score in the high range, DWQ assumes full responsibility for routine inspections, while DSWC's role falls back solely to technical assistance when requested. The consequence of these protocols is that both divisions apply their respective technical and regulatory resources more appropriately, as indicated by the particular compliance and environmental considerations of the waste handling operation. It should be noted that DWQ continues to retain its enforcement authority in the pilot counties and may conduct additional compliance inspections of any farm at any time, regardless of its potential impact rating.

PILOT ASSESSMENT

Evaluation of pilot outcomes is organized here under three overlapping topics:

- effectiveness of the operation review and inspection processes;
- waste management compliance;
- other consequences of pilot administration.

Inspection efficacy

Because weather is the single greatest independent influence upon waste handling in swine operations, DSWC staff has proven themselves especially qualified to quickly provide farmers onsite technical assistance for managing its challenges. Whereas compliance data, considered in isolation, might suggest weaker performance in pilot farms during 2003, the trends in distribution of farms across the relative impact categories described above may be a better indicator of this technical assistance advantage.

Figure B combines compliance performance data based on operational indicators for 108 pilot farms over a six-year period, in order to illustrate trends in the distribution of farms among the three impact categories. The chart indicates a noticeable shift away from the number of farms categorized as high impact to those with a low impact rating.

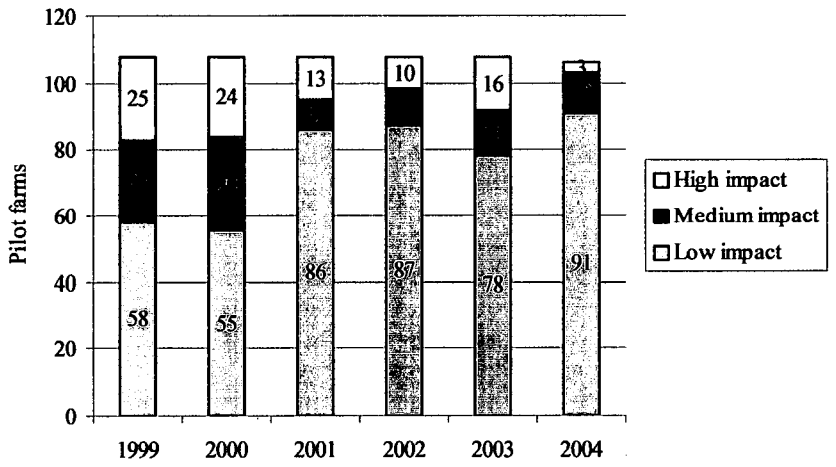

Figure B. Distribution of all 108 pilot farms within low, medium, and high impact category rankings based upon individual waste management performance. *Note: three farms were combined into one resulting in a total of 106 pilot farms in 2004*

During 2004, DSWC and DWQ targeted high potential impact farms for joint compliance auditing while transferring routine inspection responsibility from DSWC to DWQ for farms with chronic noncompliance. The low potential impact group reached its greatest size in 2004, and of that number, 67 received perfect compliance scores of zero. This significant shift is due, in part, to the favorable weather conditions that year. But the trend's origins are also surely rooted in prioritized delivery of department resources that, while unable to alter the vagaries of weather, appear to provide long-term mitigation of impact where it is most effective.

The data presented in ***Figure B*** offer an illustration of this strategic "return on investment." DSWC staff attribute the similar rate of compliance during the relatively wet year 2003, as compared to an average rainfall year like 2000, to farm improvements and greater waste management knowledge arising from the technical assistance provided to farmers through the pilot.

Another by-product of DSWC's technical assistance process, collected through its *Technical Assistance Site Visit Reporting Form* ***(Appendix III)***, is a more precise understanding of the waste compliance issues confronting swine producers. The details of ***Appendix I*** (*Top 10 Technical Assistance Needs*) may be useful in guiding future improvements in waste management performance.

In assessing effectiveness, it is fair to conclude that the context of the pilot study has created an organizational environment conducive to this "smart" delivery of departmental resources for improved management of livestock waste. Indeed, this validates one of the underlying premises that gave rise to the pilot program at its conception.

Compliance

The pilot's performance in waste management compliance is assessed here in several ways:

- trends in compliance across key indicators;
- pilot farm compliance versus non-pilot compliance;
- trends in farm movement from high to low impact categories.

Figure C *(see next page)* displays compliance deficiencies for "immediate" threat indicators from 1999 through 2004. Compared to the previous year, 2004 showed considerable improvements in four of five immediate environmental threats. However, most of this improvement is directly attributable to precipitation. In that context, generalizations about trends within the most serious environmental threats become increasingly elusive.

Figure D *(see next page)* displays compliance deficiencies for five "potential" threat indicators from 1999 through 2004. In this case, the data does reflect a noticeable trend toward improvement in these indicators.

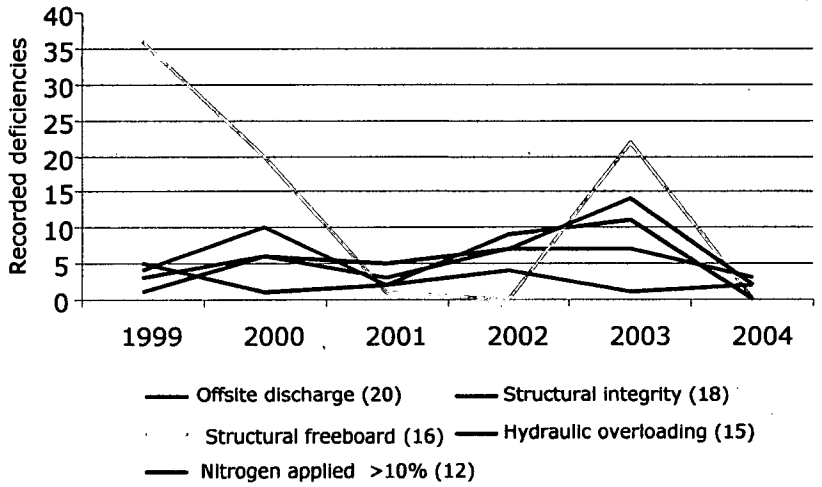

Figure C. Waste management performance of all pilot farms for "immediate" environmental threats. Numbers in parentheses are the operational indicator values. *Note: data may include duplication because of joint DSWC / DWQ reporting requirements.*

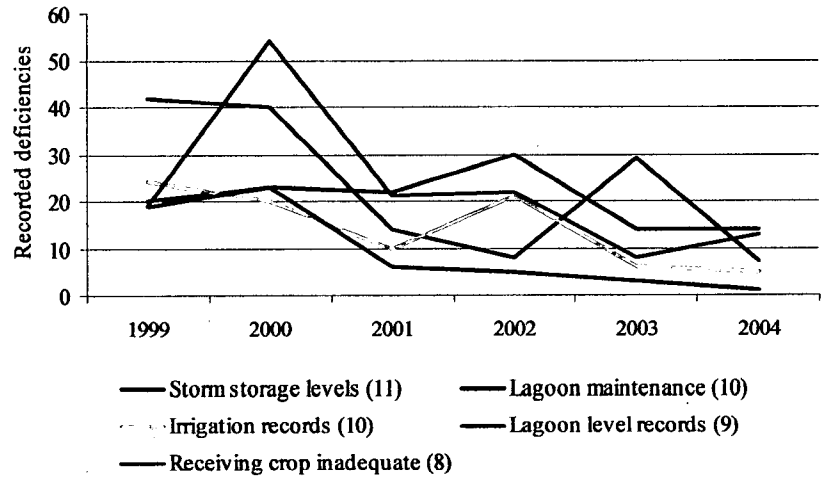

Figure D. Waste management performance of all pilot farms for "potential" environmental threats. Numbers in parentheses are the operational indicator values. *Note: data may include duplication because of joint DSWC / DWQ reporting requirements.*

Further assessment was made by comparing waste management performance on pilot farms with those across the state. The *DSWC Technical Assistance Site Visit Reporting Form* was implemented in 2003/04 to allow for better comparisons between pilot and non-pilot farms. ***Figure E*** compiles data for the frequency of occurrence of immediate threats during 2003/04. Frequencies were calculated for three different groups: combined DSWC/DWQ inspection of pilot farms, DSWC inspections statewide including pilot farms, and DWQ inspections statewide including pilot farms.

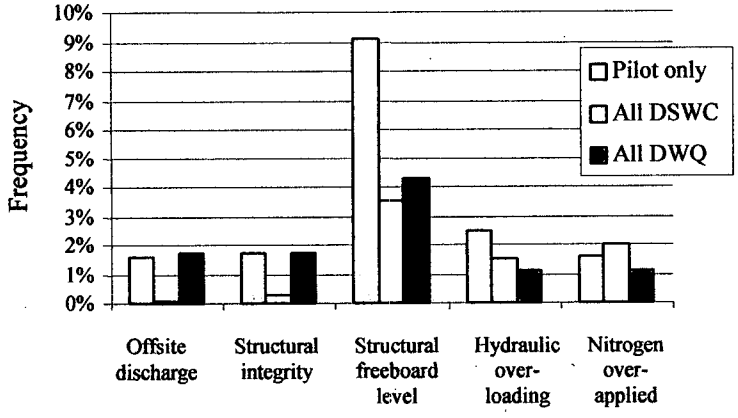

Figure E. Comparison of pilot and non-pilot noncompliance rates for five "immediate" threat indicators during 2003/04.

With respect to the three most serious threat indicators, DSWC is consistently more likely to identify noncompliance on pilot farms than elsewhere because of DSWC's increased familiarity with the farms and its ability to identify problems that lead to noncompliance. For DWQ, the likelihood of differences between inspection findings on pilot versus non-pilot farms is more remote, with waste levels being the main exception due to self-reporting requirements of the farms' permits.

Figures F and ***G*** *(see next page)* are based on data generated from the *Technical Assistance Site Visit Reporting Form*, allowing for more detailed segregation of information. ***Figure F*** *(see next page)* compiles data for the frequency of occurrence of four selected operational indicators during 2003/04. Frequencies were calculated for only two different groups here: pilot farms receiving DSWC operation reviews and compliance inspections and all farms receiving DSWC site visits. Pilot participants tend to perform slightly better than non-pilot ones on these indicators.

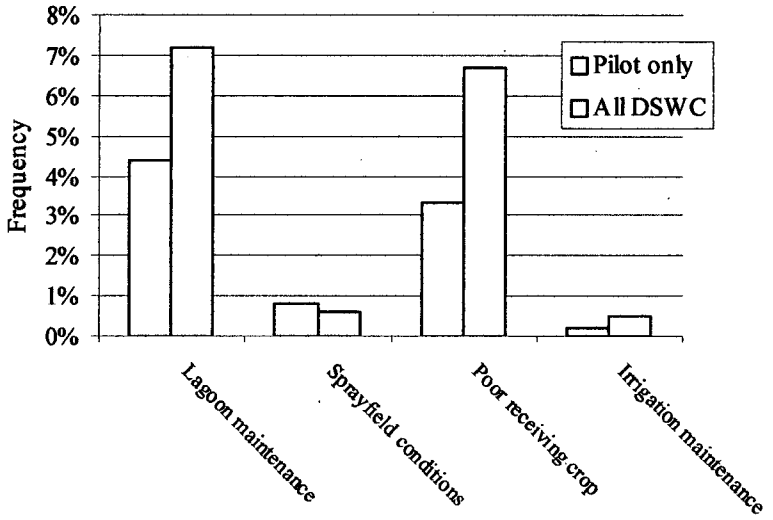

Figure F. Comparison of pilot and non-pilot noncompliance rates for four potential threat indicators during 2003/04.

Figure G compiles data for the frequency of occurrence of four records-related deficiencies during 2003/04. Again, frequencies were calculated for two intersecting data sets: pilot farms receiving DSWC operation reviews and compliance inspections and *all* farms (including pilot farms) receiving DSWC site visits. This data shows that pilot participants do a better job of maintaining records than other farms.

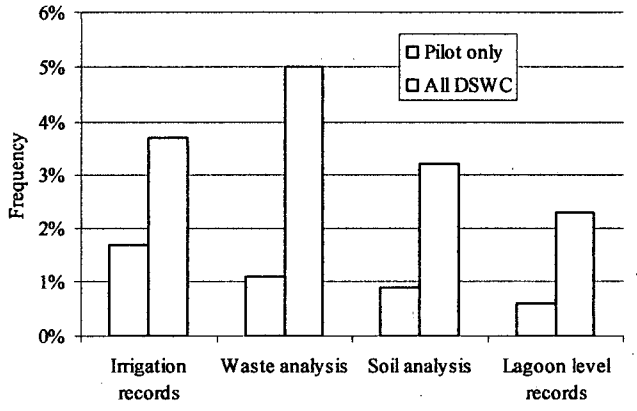

Figure G. Comparison of pilot and non-pilot noncompliance rates for four records-related indicators during 2003/04.

Other consequences

Chief among the pilot's impacts is that swine producers in the region are generally more experienced and knowledgeable about waste management and compliance expectations. In similar fashion, DSWC personnel have gained valuable insights concerning the management of existing waste handling systems, which can enhance their effectiveness as technical specialists.

The pilot has afforded DSWC the opportunity to test and improve reporting methods that facilitate more robust performance assessment of livestock operations across the state. In turn, DSWC staff is sharing these advancements with other local and federal technical specialists through special training sessions.

One negative effect of the pilot program arises from the fact that, prior to 2005, no additional resources were allocated to DSWC for the pilot's administration. The increased attention given to waste operations in pilot counties necessarily diverts time that field staff would otherwise devote to providing similar services in non-pilot counties.

COST & LABOR COMPARISONS

DSWC's hourly operating cost for site visits ($26 per hour unit cost and rising) is the same for pilot and non-pilot farms alike. Instead, differences between pilot versus non-pilot costs arise as a result of the frequency and duration of visits.

Table 3 shows key cost and labor comparisons. The division's *per-visit costs are less* for pilot farms than non-pilot, a fact offset by the *greater per-farm cost* due to a higher frequency of visits to pilot farms.

Key Comparisons (2004)	
Pilot Farms	Non-pilot Farms
$132 per DSWC visit	$200 per DSWC visit
2.4 visits per farm	1 visit per farm
12 hours total per farm	7.9 hours total per farm
$316 per farm	$208 per farm

Interestingly, DSWC's average per-visit costs for pilot farms have declined since 2001. The same holds true of its annual costs per pilot farm, which have declined by 19 percent. This is a direct result of efficiency gains as review staff become more familiar with each operation's waste system and compliance challenges, and spend less time per visit on orientation and evaluation of compliance history. In fact, DSWC has *reduced by 25 percent the average time it spends visiting pilot farms* now as compared with 2001.

RECOMMENDATIONS

While the data presented here is inconclusive on the question of whether the pilot program can increase the overall animal waste management compliance of swine producers, it does show increasing compliance with animal waste management plans and permit conditions. Anecdotal testimony from some participating farmers suggests a favorable reception. The pilot has also forged more effective coordination among producers and DENR personnel, and fostered dialogue towards constructive cooperation in a number of compliance areas—outcomes all supported by the available data.

Without a doubt, the pilot has demonstrated the success of a framework that enhances the delivery of DENR's resources: the means to achieve compliance primarily through DSWC's technical assistance, with the use of DWQ's enforcement tools as needed. Although it can't offer a guarantee against the vagaries of nature, the data offer convincing evidence that the pilot model can improve compliance and reduce environmental risks, and do it in an increasingly cost-effective manner based on DSWC's operating costs.

In accordance with Section 12.7(c) of S.L. 2005-276, DENR recommends the pilot program be continued in Brunswick, Columbus, Jones and Pender counties. Further expansion of the pilot program should only occur in conjunction with additional personnel and resources to expand the program.

Appendix I

Glossary

CAWMP, Certified Animal Waste Management Plan, the farm's plan, as approved by a designated technical specialist, for the proper collection, storage, treatment and land application of animal waste.

freeboard, the top zone in the waste structure that must be maintained clear of waste to ensure structural integrity and adequate storm storage.

hydraulic overloading, the application of animal waste to a sprayfield in excess of the limits prescribed in the CAWMP, or results in excessive ponding or surface runoff of waste.

nitrogen over-application, , application of animal waste in excess of the agronomic rates prescribed in the CAWMP.

receiving crop, a crop or forage designated to receive and utilize waste nutrients.

sprayfield, a field or pasture designated to receive animal waste

storm storage, the required storage within the waste structure to contain one 25-year, 24-hour rainfall event as defined by the National Weather Service. Structures, designed after September 1996, must have the storage capacity to contain two 25-year, 24-hour rainfall events.

structural freeboard, measured from the top of the dike elevation to the top of the storm storage elevation that must be maintained clear of waste to ensure structural integrity.

Appendix II

Top Ten Technical Assistance Needs

What follows is a list of the most important technical assistance needs as determined by DSWC staff through 2003–2004 site visits for pilot and non-pilot farms.

1) Waste operator education
2) Assistance with waste plan revisions or amendments
3) Irrigation recordkeeping assistance
4) Evaluation and/or recheck of wettable acre determination
5) Identification and gathering of missing components in farm records
6) Crop evaluation and/or improvement recommendations
7) General recordkeeping education
8) Review and evaluation of waste plan with producer
9) Irrigation system calibration
10) Soil and/or waste sampling education

Re: 2005 Annual Report on the Agriculture Cost Share Program

This memo transmits the 2005 Annual Report on the Agriculture Cost Share Program for Nonpoint Source Pollution Control as required by General Statute 143-215.74. The statute requires the Soil and Water Conservation Commission to provide annual reports to the Environmental Review Commission and the Fiscal Research Division that include a list of projects that received State funding pursuant to the program, the results of the water quality evaluations conducted pursuant to subdivision (7) of subsection (b), findings regarding the effectiveness of each of these projects to accomplish its primary purpose, and any recommendations to assure that State funding is used in the most cost-effective manner and accomplishes the greatest improvement in water quality.

If you have any questions or need additional information, please contact Manly Wilder, Director of the Division of Soil and Water Conservation at 715-6097 or by email at Manly.Wilder@ncmail.net.

Sincerely,

James M. Ferguson,
Chairman

REPORT TO THE ENVIRONMENTAL REVIEW COMMISSION AND FISCAL RESEARCH DIVISION OF THE NORTH CAROLINA GENERAL ASSEMBLY
ON
WATER QUALITY ACCOUNTABILITY FOR THE AGRICULTURE COST SHARE PROGRAM FISCAL YEAR 2005

INTRODUCTION

In 1983 the North Carolina Agriculture Cost Share Program (ACSP) was authorized by the General Assembly to improve water quality associated with agriculture in three nutrient sensitive areas of the state covering 16 counties. It was expanded in 1990 to include all 96 Soil and Water Conservation Districts covering all 100 counties.

While the Soil and Water Conservation Commission (Commission) has the statutory responsibility to create, implement and supervise the Cost Share program, it is delivered at the local level by 492 elected and appointed soil and water conservation district supervisors who are assisted by their staff and partners in natural resource conservation. These partners include technical and professional employees of the U.S. Department of Agriculture's Natural Resources Conservation Service (NRCS), the District or county, the Division of Soil and Water Conservation (Division), the Cooperative Extension Service, and the North Carolina Department of Agriculture and Consumer Services.

In this very popular program, participating farmers receive up to 75 percent of the average cost of an installed best management practice (BMP) with the remaining 25 percent paid by the farmer directly or through in-kind contributions (e.g., labor). When complete cost information is not available, the farmer is required to submit invoices and is paid at 75 percent of actual cost rather than average cost. Cost Share payments cannot exceed $75,000 per year per applicant.

The Commission continues to adapt the program to respond to changing needs and technology. For Program Year 2005, there were 50 approved BMPs grouped under 48 definitions in the ACSP. BMPs include both short-term and

long-term practices. The definitions of approved BMPs for the Cost Share program are provided in the Detailed Implementation Plan (Attachment A).

For a BMP to be approved by the Commission for the ACSP, there must be 1) an NRCS technical standard addressing that BMP, and 2) sufficient cost information to determine the appropriate cost share amount. Occasionally, BMPs are approved on a limited scale for evaluation purposes (District BMPs).

For most practices, the amount provided in cost share is based on 75% of a predetermined average cost for the practice. However, some practices are cost shared on 75% of actual cost due to the variable nature of the practice. (In the 2003-04 Budget Bill, the General Assembly approved a special budget provision that modified N.C.G.S 143-215.74(b) to allow beginning farmers and limited resource farmers to receive up to 90% cost share beginning in the 2004 program year.) The Commission conducts a wholesale review of its cost share rates every three years, but it can make necessary mid-course corrections when presented with information that one of its predetermined costs is inaccurate.

Districts spot check a minimum of 5% of randomly selected active contracts each year to ensure that practices are being maintained properly. Division and NRCS also spot check contracts as part of regular reviews of district office implementation of the ACSP. Spot checks have shown excellent compliance with maintenance requirements by participating farmers. When practices are discovered to need additional maintenance, the district is usually able to assist the cooperator to restore the practice.

PROGRAM ACCOMPLISHMENTS

Since the first Cost Share contracts were issued in 1984, there have been 45,241 contracts for installing BMPs (through the end of program year 2005, which ended on June 30, 2005). Most BMPs have a life expectancy of ten years, which is how long participating farmers must agree to maintain the practices.

Early in the program, the major factor used for determining success was tons of soil saved because the program funded predominantly sediment and erosion control practices. It is estimated that an average of 7.22 million tons of soil have been saved annually during the life of the program. Since the mid-1990s, while continuing its attention on minimizing soil loss and erosion, the program has increased its attention on reducing and managing nutrients from cropland and livestock production. Part of the impetus for this new attention was the promulgation of the 15A NCAC 2H.0200 animal waste management rules and the nutrient sensitive waters strategies for the Neuse and Tar-Pamlico River Basins.

Highlights of additional accomplishments include the following:

- Nearly 117,000 acres of marginal or environmentally sensitive cropland have been converted to trees, grass, or wildlife habitat
- 3,446 waste management structures have been constructed to properly store and manage dry and wet animal waste
- 3,805 water control structures have been installed improving water management on and reducing nutrient loss from approximately 292,500 acres
- Over 912 miles of fencing have been erected, in combination with other practices (e.g., watering sources) to exclude livestock from streams
- Over 601,898 acres of cropland acres have been converted to no-till or conservation tillage to reduce sediment loss associated with traditional practices
- Over 195 miles of forested riparian buffer have been established to reduce nutrient loss from approximately 15,287 acres of cropland
- 113 structures have been built for the proper handling and storage of agricultural chemicals (pesticides and fertilizers)

REPORTING REQUIREMENTS

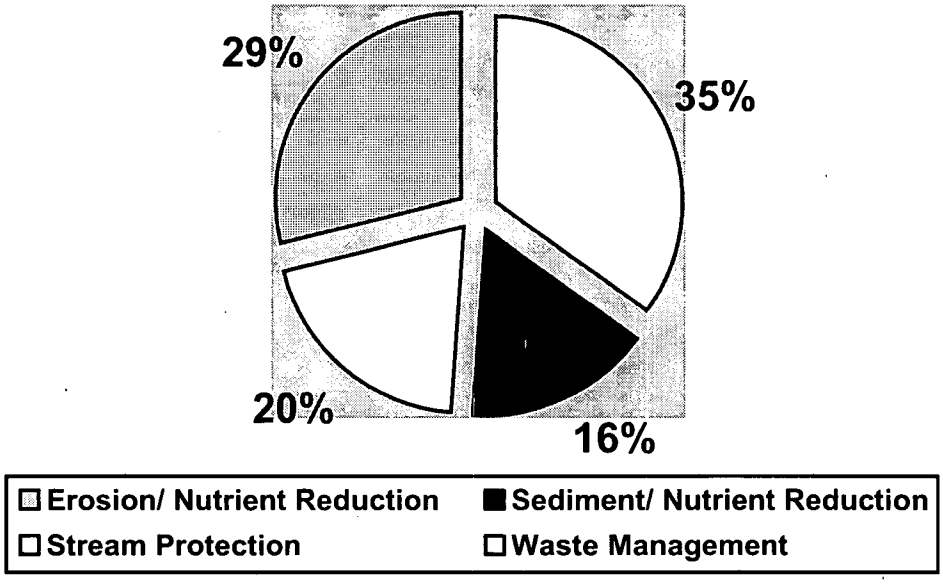
Projects Receiving State Funds

Participating farmers have up to three years to complete the work included in ACSP contracts. Therefore, cost share payments made each year may be for contracts written in the current fiscal year or in the two previous fiscal years. For this reason the fund balance for the program will always exceed the amount appropriated in a given year.

Each contract is considered a "project." Each project may include only one BMP or a system of practices that include several BMPs. Cost share payments are made only when installation of the BMP is completed and certified to be in accordance with current NRCS or Commission standards.

Cost Share payments were applied to 939 projects statewide between July 1, 2004 and June 30, 2005. These contracts received total payments of $5,959,344. A list of individual contracts to which Cost Share funds were applied in Program Year 2005 is available upon request.

New Contracts for Fiscal Year 2005



The General Assembly appropriated $5,244,897 in recurring general funds for BMP installation. For Fiscal Year 2005 soil and water conservation districts requested $24,713,695 to address identified water quality needs. Current appropriations do not enable districts to meet demand for financial assistance for installing BMPs to protect water quality in North Carolina.

For Fiscal Year 2005, the Commission allocated $7,700,398 to districts. In addition to the 2005 appropriation, the Commission also had available for allocation: 1) funds allocated to districts in 2004 which districts were unable to execute contracts with farmers prior to the end of the fiscal year, and 2) funds recovered from completed and expired contracts from Program Years 2002 through 2004. Despite the Commission's actions to improve efficiency of the cost share program (discussed on pp. 7-8), districts still must turn away three out of every five farmers requesting cost share assistance.

In Fiscal Year 2005 districts obligated $7,473,798 to 1,532 new contracts with farmers.

As shown in Figure 1, 35% of the 2005 funds were directed toward erosion and nutrient-reducing BMPs (e.g., conservation tillage, cropland conversion to grass or trees), 20% were directed toward stream protection systems (e.g., livestock exclusion from streams), 16% were directed toward sediment and nutrient-reducing BMPs (e.g., riparian buffers, field borders, grassed waterways), 29% were directed toward animal operations for waste management BMPs (e.g., poultry litter storage structures, closure of inactive lagoons, livestock feeding/waste storage structures).

Figure 1: Breakdown of 2005 ACSP Contracts by BMP Type

Attachment B is a chart displaying a summary of contracts initiated during the 2005 program year (July 1, 2004 - June 30, 2005). This chart shows the planned as well as installed BMPs. The most-used single BMP from a financial and acres affected standpoint (over $523,966 affecting over 6,266 acres) was the 3-year conservation tillage incentive. . Attachment C presents the number and value of 2005 contracts by soil and water conservation district and each district's allocation of cost share funds for 2005.

Estimated Water Quality Benefits of ACSP Contracts Initiated in 2005

N.C.G.S 143-215.74(b)(7) requires that each project's benefits to water quality be estimated before funding is awarded. To meet this requirement, the Commission chose three indicators of water quality benefits: tons of soil saved, pounds of nitrogen saved or managed, and pounds of phosphorus saved or managed. Soil savings estimates have been required on all Cost Share contracts since the beginning of the program. Beginning with the 1997 program year, estimates of nitrogen and phosphorus savings were required to be reported. The Division continues to work with the Division of Water Quality, NRCS, and North Carolina State University to improve and refine our method to estimate and account for nutrient reductions.

These estimates have been very useful to help track progress by agriculture relative to the nutrient reduction requirements in the Neuse and Tar-Pamlico Nutrient Reduction Rules for agriculture. The ACSP is playing a key role in helping farmers achieve the 30% nutrient reduction required by these rules.

Local soil and water conservation districts determine which projects are eligible for funding in their districts according to a required priority ranking process, tailored to each district's water quality concerns. The water quality evaluations on each project are carried out at the district level, and the water quality benefit estimates are provided to the Division on each contract form. The data are entered from the contract form into the Division's cost share database and tracked by Division staff. The estimated sediment and nutrient reduction benefits for program years 2003-2005 are summarized in Table 1.

Some BMPs standing alone will not directly result in sediment or erosion reductions or nitrogen or phosphorus savings, but are used in conjunction with other practices. These BMPs are called "facilitating practices" and are necessary to facilitate and ensure that other practices in the BMP system are effective at reducing nutrient or sediment loading to a water resource. Therefore, their reduction credit is linked to the facilitated practice. An example of a facilitating practice is a water tank, which must be installed for livestock drinking water purposes before fencing can be put up to keep livestock out of a stream.

Table 1: Sediment and Nutrient Reduction Benefits for Program Years 2003 through 2005.

	2003	2004	2005
Number of Contracts	1,819	2,053	1,532
Acres Affected	89,436 acres	76,255 acres	67,621 acres
Soil Saved	290,065 tons	277,556 tons	172,378 tons
Nitrogen Saved	1,359,918 pounds	1,717,092 pounds	1,392,754 pounds
Phosphorus Saved	741,691 pounds	626,600 pounds	262,404 pounds
Waste Nitrogen Managed	4,406,982 pounds	24,923,721 pounds	3,709,391 pounds
Waste Phosphorus Managed	4,572,177 pounds	5,219,734 pounds	3,483,287 pounds

Effectiveness of Each Project to Accomplish Its Primary Purpose

The statutory purpose of the program and each project is to improve water quality by reducing the input of agricultural non-point source pollution into the water courses of the state. Each BMP approved for the Cost Share program is designed for at least one of five major purposes to protect the water resources of the state:

1) sediment/nutrient delivery reduction through reduction of applied nutrients, reduction of soil loss, or interception of nutrients from fields;
2) erosion reduction/nutrient loss reduction in fields through reduction of applied nutrients or prevention of soil detachment;
3) prevention of agricultural chemical pollution of ground or surface water from improper handling or accidents;
4) reduction of nutrient loading through proper management of animal waste; and
5) stream protection measures to reduce the delivery of sediment and nutrients by animals and stabilize streambanks to minimize further erosion and sediment contribution.

Attachment D is a chart showing the approved BMPs in these categories and their relationship to water quality improvement.

Staff of the Division, soil and water conservation districts, and NRCS has verified every project for which program funds have been expended to have been installed in accordance with program standards and to be accomplishing its primary purpose.

TARGETING ACSP FUNDS TO WATERSHEDS OF IMPAIRED WATERS

The Commission continues to exercise leadership in allocating ACSP resources to local districts containing impaired waters and in encouraging district supervisors to use ACSP funds to address impaired waters. This is best illustrated by the fact that the Commission targeted $160,270 of funds available in 2005 for the specific purpose of installing erosion and sediment-reducing best management practices into watersheds of waters listed on the State's 303(d) list of waters as impaired due to sediment from sources including agriculture in 14 counties.

Historically, about 30% of ACSP funds have been used to implement BMPs in watersheds of impaired waters. Considering that only 3% of North Carolina's stream miles are attributed to being impaired by agricultural sources, this demonstrates that the ACSP funds are being significantly targeted toward improving streams that do not fully meet their uses.

Approximately 27% of funds contracted in Program Year 2005 were contracted with farmers in the Neuse and Tar-Pamlico River Basins to help them achieve the required 30 percent reduction in agricultural nitrogen losses. Districts in the Neuse and Tar-Pamlico Basins will continue to use ACSP to sustain the reductions already achieved and to attain further voluntary reductions in these nutrient sensitive watersheds. ACSP funds are also being used to reduce phosphorus losses from agriculture to help achieve the goal of no net increase in phosphorus loading to the Tar-Pamlico Basin. Participating farmers continue to assess phosphorus losses using the Phosphorus Loss Assessment Tool (PLAT).

The Commission also targeted $119,003 of Program Year 2005 funds to 22 districts to assist with implementation of riparian buffers in nutrient sensitive watersheds under the Conservation Reserve Enhancement Program.

NEW PROGRAM ENHANCEMENTS TO IMPROVE EFFICIENCY AND PROGRAM DELIVERY

Because of the need to continually improve the program's cost effectiveness, and because of recurring budget reductions in the program's appropriation, the Commission is moving forward on several enhancements for the 2005 program year. These enhancements were designed to improve the efficiency by which program funds are used by agricultural cooperators to install best management practices and to improve the responsiveness of the program to state and local water quality priorities.

One efficiency improvement was to initiate an upgrade to the existing ACSP database. The Division has worked with the DENR Information Technology Services Division to upgrade the current ACSP database. Funding for the new database is being provided by Clean Water Act Section 319 grant funds administered by the Division of Water Quality (DWQ). The proposed upgraded system will utilize the DENR-Integrated Build Environment for Application Management (IBEAM) approach to permit more efficient on-line contracting and contract approval to eliminate duplicative data entry and to shorten contract review and approval time. The proposed system will also include mechanisms to attach GPS and GIS information and digital photographs to better present the benefits and outcomes associated with BMP implementation. The proposed system will also better coordinate with the federal Pro-Tracks system to permit a more complete accounting for agricultural BMP implementation and progress reporting in North Carolina.

This database will provide real-time 24 hours a day, seven days a week ACSP information that can easily be updated by the Division, DENR Regional Office and local Soil & Water Conservation District staff, with minimal errors, and be used to generate standard reports on program use and water quality benefits. Non-sensitive information will be accessible for public view on the internet (read-only format).

The database upgrade will streamline data entry and management for all aspects of the agriculture cost share program. Contracts, request for payments, water quality benefits and compliance letters will all be generated and tracked from one system statewide. This will eliminate repetitive data entry and standardize documentation statewide. The non-point source planning program and others will be able to geographically display agricultural BMPs and view pictures and obtain water quality benefits per practice. Detailed data and summary statistics will be readily available for use by the Division , Division of Land Resources (DLR), DWQ, Environmental Protection Agency (EPA) and NRCS.

The Commission also established a policy in 2005 relating District Strategy Plans to the DWQ's Basinwide Water Quality Plans. The Commission is now requiring that all district strategy plans for ACSP include a section describing waters listed as impaired or with notable water quality problems and concerns as documented in the most recent applicable basinwide water quality plan(s), and for which agriculture is a potential source or stressor. The District should also list any waters of local concern that has been identified by the district, and for which agriculture is a potential source or stressor. The section of the strategy plan shall also describe how the district intends to address agricultural nonpoint source problems impacting these waters. This policy shall become effective for Program Year 2007.

COST-EFFECTIVENESS CONSIDERATIONS

The ACSP is a cost-effective program from both a state expenditure perspective and the farmer's perspective. This program has been credited with helping the state to achieve considerable success in protecting and improving water quality. Many farmers could not afford to implement BMPs (many of which are required by regulations) without cost share assistance. Because a farmer must invest at least 25% of the cost for BMPs, the farmer has ownership in the practice and is more likely to maintain it. The educational value of local farmers participating the program is substantial in helping to change local practices.

Use of ACSP to Leverage Additional BMP Implementation Funds From Other Sources

The Commission's 2005 allocation to districts included $160,270 for the intended purpose of installing BMPs in watersheds of streams on the state list of impaired waters due to sediment from agricultural sources. Because of this targeted allocation the Division of Soil and Water Conservation and districts were able to obtain $1,000,000 in grant funds from the Clean Water Management Trust Fund and $700,497 from the US Environmental Protection Agency 319 (EPA-319) program to implement sediment reducing BMPs in these watersheds. The Division has also entered into a cooperative agreement with the United States Geological Survey who will provide an additional $150,000 of water quality monitoring services to document reduction in sediment loading.

ACSP funds are an essential part of the state match for the Conservation Reserve Enhancement Program (CREP), a federal/state partnership. ACSP and other state programs (CWMTF, NC Wetlands Restoration Program) are providing a total of $54 million over eight years to match $221 million in federal payments to North Carolina landowners participating in CREP.

ACSP funds for BMP implementation and technical assistance also provide the required state match for three EPA-319 grants for accelerating BMP implementation in the Neuse and Tar-Pamlico river basins. The total of the three grants is $1,419,180.

Whenever possible, the districts use the ACSP in conjunction with other programs, such as the federal Environmental Quality Incentive Program and the Conservation Reserve Enhancement Program, to stretch scarce resources as far as possible. Districts also partner to meet the needs of cooperating producers and landowners.

Leveraging of Local and Federal Resources for Technical Assistance and Local Delivery

This program is delivered locally by 492 elected and appointed volunteer Soil and Water Conservation District Supervisors and by over 400 local staff of districts and NRCS. District supervisors receive no state salary, yet are responsible for seeing that state funds are spent where they are most needed to improve water quality. District supervisors are required to develop a prioritization ranking system for administering the ACSP in their respective district to maximize the water quality benefits of the program. Applications to each district are evaluated and prioritized according to this system. District supervisors also must inspect at least five percent of all cost share contracts in their district every year to ensure the BMPs are properly maintained.

The ACSP is heavily dependent on the technical resources of the local soil and water conservation districts and the NRCS. District and federal employees develop conservation plans, design BMPs, and provide engineering assistance for water quality improvements at no cost to the farmers whose applications are accepted for cost share assistance. These staff also assist farmers and other landowners in implementing water quality projects using other funding sources such as the USDA's Environmental Quality Incentives Program and Conservation Reserve Enhancement Program, the U.S. Environmental Protection Agency's Section 319 Non-Point Source Program, and North Carolina's Clean Water Management Trust Fund.

A critical portion of the General Assembly's appropriation for ACSP provides a state match for salaries for many of these district technical employees and for their operating expenses to carry out the cost share program. For 2005, the General Assembly appropriated $1,875,000 in recurring funds for cost sharing technical assistance positions in local districts and directed DENR to continue to transfer $240,000 from BMP assistance to support technical assistance. County commissions provide more than 50% match for salaries and operating expenses, including office space and administrative support for these technical assistance positions. In program year 2005 the cost share technical assistance program cost shared on 122 technical positions in 90 counties to assist farmers in designing and installing BMPs. These state technical assistance cost share funds maintain a local conservation infrastructure and are critical to sustain local county support and funding for local delivery of the program.

NRCS engineers and conservation specialists are also available to each district. These federal employees carry out a portion of the cost share work support without cost to the state, and they provide additional technical resources and expertise to ensure that cost-shared practices are properly installed and maintained for the expected life of the practice.

In addition, NRCS allows district staff to use federal vehicles for use on state cost share work. NRCS also provides computers and sophisticated natural resources materials and computer software in all 100 county field offices, and develops the technical standards for most of the BMPs used in the cost share program. This state program leverages a much greater amount of federal funding for water quality improvements in North Carolina.

PROGRAM MANAGEMENT

Attachment E is an overview of the funding and compliance process used for implementing the Agriculture Cost Share Program.

A Division program staff of four FTEs reviews approximately 2,000 contracts annually and processes about 2,500 requests for payment each year. The Division also maintains the ACSP Manual, trains local personnel, provides daily technical assistance to the districts, and conducts oversight through district program reviews to ensure proper record keeping and BMP maintenance for continued water quality protection.

Because the state specifies that the purpose of the program is to assist agricultural operations in addressing an existing water quality problem, the program does not assist new operations to go into business. It is the policy of the Commission that new producers or companies constructing new agricultural operations should be aware of the existing environmental requirements and technical standards and should be prepared to meet them without state funding assistance. This is especially important when existing operations are struggling to comply with new requirements that were not in place when they began operating. Therefore, the Commission has restricted eligibility for Cost Share funds to those operations, which have been in existence for three years prior to the date of cost share application (i.e., 15A NCAC 2H.0200). Operations that were not in existence for three years prior to application date may still be eligible for cost-share if changes in environmental statutes or regulations create new requirements that could, without assistance, make the facility out of compliance. These exceptions require Commission approval.

For detailed information about 2005 BMP project locations refer to Attachment F (BMP project locations within NC River Basins) and Attachment G (BMP project locations 2005).

IMPACT OF BUDGET REDUCTIONS OVER THE PAST 5 YEARS

For Fiscal Year 2001 the Department was directed to transfer $240,000 appropriated for BMP assistance to overcome a projected shortfall of funds for cost sharing for essential technical assistance staff in local soil and water conservation districts. This transfer represented a 3.4 percent reduction in the

funding available for assisting farmers with costs to install best management practices for Fiscal Year 2002.

The 2002 budget bill made the transfer for technical assistance permanent. Further, for 2002 the recurring appropriation for the Agriculture Cost Share Program was reduced by another $1,000,000. In 2003, the recurring appropriation for ACSP funding was further reduced by $400,000. The net effect of the reductions and diversions is that for Fiscal Year 2005 the funding available for assisting farmers to install best management practices was reduced by $1,640,000 (23.7%) relative to the Fiscal Year 2000 funding level.

This recurring loss of funds for the ACSP has had several negative consequences. These include:

- Reducing the number of agricultural producers assisted, turning away an estimated 250-300 additional producers per year.
- Diminishing the local impact of the ACSP to the point that it may weaken local governments' support (match) for soil and water conservation district technicians who provide technical assistance (BMP design and installation oversight) to agricultural producers. The Soil and Water Conservation Commission has worked diligently over a number of years to build local support for district technical assistance. A reduction of local support would jeopardize the state's ability to maintain technical support for conservation programs.
- Further threatening the state's ability to provide the required 20% match for the $221 million in federal funds for the Conservation Reserve Enhancement Program (CREP). The non-federal match for CREP relies on $8.84 million of ACSP funds over 5 years used to establish riparian buffers on agricultural land enrolled in CREP. DENR may be forced to seek additional legislative appropriations or other non-federal revenue sources (e.g., Tobacco Trust Fund Commission) or risk termination of the State's CREP agreement by USDA. In FY-2005, the Commission allocated over $119,003 to be used toward the match for CREP.
- Further restricting funding available to allow soil and water conservation districts to provide additional cost share to new farmers and limited resource farmers in response to the statutory revision enacted in the 2003 Legislative Session.
- Limiting the ability of districts to provide additional cost share to farmers participating in Enhanced Voluntary Agricultural Districts as authorized by the General Assembly in HB 607 in the 2005 Legislative Session.
- Reducing the financial assistance available to assist livestock and poultry producers to respond to new phosphorus management requirements resulting from modification to the NRCS Nutrient Management Standard.

- Further reducing funding available for installing conservation practices on private working lands, a major provision of the One North Carolina Naturally Initiative.
- Significantly diminishing the financial assistance available to assist agricultural producers in the Neuse and Tar-Pamlico river basins to implement BMPs and achieve and maintain 30% nutrient reduction requirements.
- Reducing funds available for installing BMPs in watersheds of streams impaired by sediment from agricultural sources. The Agricultural Sediment Initiative is a priority for the Soil and Water Conservation Commission and the Sediment Control Commission. The Commission allocated $160,270 for this purpose in FY-2005.
- Reducing available funding for installing riparian buffers and protecting streams from impacts from livestock and cropland. DENR wants to rely on voluntary approaches to protect buffers, and the ACSP is a valuable tool for this purpose.

CONCLUSIONS AND RECOMMENDATIONS

Based on the above considerations, the Commission believes the ACSP is being administered very cost-effectively and that considerable water quality benefits are being realized for the investment made with state funds. The program aids agricultural operations in making essential water quality improvements, the cost of which cannot be passed on to the consumer in the price of the food or fiber product, and thereby contributes both to water quality and to sustaining a strong state agricultural economy. The Commission continues to emphasize prioritizing, targeting, accountability, leveraging, and adaptability in managing these public funds to further improve the water quality benefits intended by the General Assembly.

The Commission believes that budget reductions have impacted the program's effectiveness and local support to a serious degree. The Commission has taken actions to improve program efficiencies that have helped to partly offset these impacts in the short-term. The ACSP continues to play a vital role in assisting farmers and ranchers with voluntary water quality protection and with compliance with state and federal regulatory requirements. The program is our state's cornerstone in efforts to support private working lands stewardship for the benefit of water quality and all the citizens of North Carolina.

The Commission will establish a group to provide a programmatic review and to evaluate the effectiveness of the ACSP with special emphasis on ensuring the program and cost shared BMPs are meeting the conservation needs on the private working agricultural lands of North Carolina.

Attachment A
DETAILED IMPLEMENTATION PLAN
September 2005 (Revised)

Definition of Practices

(1) An agrichemical handling facility means a permanent structure that provides an environmentally safe means of mixing agrichemicals and filling tanks with agrichemicals for application and storage to improve water quality. Benefits may include prevention of accidental degradation of surface and ground water. Cost share for this practice is limited to $25,000 per facility.

(2) Agricultural road repair/stabilization means repair or stabilization of existing access roads utilized for agricultural operations, including roads to existing crop fields, pastures, and barns.

(3) A fertigation or chemigation backflow prevention system means a system for preventing backflow of fertilizers or chemicals from contaminating water sources in fertigation and or chemigation applications. It can include retrofitting or installing injection equipment, check valves, gauges, drains, and vacuum breakers. It does not include items unrelated to backflow prevention (e.g., tanks, mixers, or filters). Cost share for this practice is limited to $1,500 per system.

(4) A Christmas Tree Conservation Cover practice means to establish and maintain a conservation cover of grass, legumes, or other approved plantings on fields previously with no groundcover established, to reduce soil erosion and improve water quality. Other benefits may include reduced offsite sedimentation and pollution from dissolved and sediment-attached substances.

(5) A three-year conservation tillage system means any tillage and planting system in which at least (60) sixty percent of the soil surface is covered by plant residue for the same fields for three consecutive years to improve water quality. Benefits may include reduction of soil erosion, sedimentation and pollution from dissolved and sediment-attached substances. The three-year conservation tillage incentive is broken down into two categories depending on the crop(s) to be grown:

a. Grain crops and cotton
b. Vegetables, Tobacco, Peanuts, and Sweet Corn

Cost share for each category of this practice is limited to $15,000 per cooperator in a lifetime.

(6) A critical area planting means an area of highly erodible land that cannot be stabilized by ordinary conservation treatment on which permanent perennial vegetative cover is established and protected to improve water quality. Benefits may include reduced soil erosion and sedimentation.

(7) A cropland conversion practice means to establish and maintain a conservation cover of grasses, trees, or wildlife plantings on fields previously used for crop production to improve water quality. Benefits may include reduced soil erosion, sedimentation and pollution from dissolved and sediment-attached substances.

(8) A diversion means a channel constructed across a slope with a supporting ridge on the lower side to control drainage by diverting excess water from an area to improve water quality. Benefits may include reduced soil erosion, sedimentation and pollution from dissolved and sediment-attached substances.

A field border means a strip of perennial vegetation established at the edge of the field that provides a stabilized outlet for row water to improve water quality. Benefits may include reduced soil erosion, sedimentation and pollution from dissolved and sediment-attached substances.

(10) A filter strip means an area of permanent perennial vegetation for removing sediment, organic matter, and other pollutants from runoff and waste water to improve water quality. Benefits may include reduced soil erosion, sedimentation, pathogen contamination and pollution from dissolved, particulate, and sediment-attached substances.

(11) A grade stabilization structure means a structure (earth embankment, mechanical spillway, detention-type, etc.) used to control the grade and head cutting in natural or artificial channels to improve water quality. Benefits may include reduced soil erosion and sedimentation.

(12) A grassed waterway means a natural or constructed channel that is shaped or graded to required dimensions and established in suitable vegetation for the stable conveyance of runoff to improve water quality. Benefits may include reduced soil erosion, sedimentation and pollution from dissolved and sediment-attached substances.

(13) A heavy use area protection means an area used frequently and intensively by animals, which must be stabilized by surfacing with suitable materials to improve water quality. Benefits may include reduced soil erosion, sedimentation and pollution from dissolved, particulate, and sediment-attached substances.

(14) A land smoothing practice means reshaping the surface of agricultural land to planned grades for the purpose of improving water quality.

(15) A livestock feeding area is a sized concrete pad where feeders are located, surrounded by a Heavy Use Area. The Livestock Feeding Area is designed for the purpose of improving the lifespan of the heavy use area and to reduce the runoff of nutrients and fecal coliform to adjacent water bodies. The practice is to be used to address water quality concerns where livestock feeding areas are in close proximity to streams and where relocation or rotation of feeding areas is infeasible due to physical limitations (e.g., slope) and where other stream protection measures are insufficient to protect water quality. Cost share for the concrete pad for this practice is limited to $3,000.

(16) A livestock exclusion system means a system of permanent fencing (board or barbed, high tensile or electric wire) installed to exclude livestock from streams and critical areas not intended for grazing to improve water quality. Benefits may include reduced soil erosion, sedimentation, pathogen contamination and pollution from dissolved, particulate, and sediment-attached substances.

(17) A long- term no-till practice means planting all crops for five consecutive years with at least 80 percent plant residue from preceding crops to improve water quality. Benefits may include reduced soil erosion, sedimentation and pollution from dissolved and sediment-attached substances. Cost share for this incentive or this incentive combined with 3-year conservation tillage for grain and cotton is limited to $25,000 per cooperator in a lifetime.

(18) A nutrient management practice means a definitive plan to manage the amount, form, placement, and timing of applications of nutrients to minimize entry of nutrients to surface and groundwater and improve water quality.

(19) A nutrient scavenger cover crop means a crop of small grain grown primarily as a seasonal nutrient scavenger. The purpose is to scavenge and cycle plant nutrients, add organic matter to the soil, improve infiltration, aeration and tilth, improve soil quality, reduce soil crusting, provide residue for conservation tillage and sequester carbon. Benefits may include reduction of soil erosion, sedimentation and pollution from dissolved and sediment-attached substances. Cost share for this incentive practice is limited to $25,000 per cooperator in a lifetime. (DIP)

(20) A pastureland conversion practice means establishing trees or perennial wildlife plantings on excessively eroding land with a visible sediment delivery problem to the waters of the state used for pasture that is too steep to mow or maintain with conventional equipment to improve water quality. Benefits may include reduced soil erosion and sedimentation.

(21) A rock-lined outlet means a waterway having an erosion-resistant lining of concrete, stone or other permanent material where an unlined or grassed waterway would be inadequate to improve water quality. Benefits may include safe disposal of runoff, reduced erosion and sedimentation.

(22) A sediment control basin means a basin constructed to trap and store waterborne sediment where physical conditions or land ownership preclude treatment of a sediment source by the installation of other erosion control measures to improve water quality.

(23) A sod-based rotation practice means an adapted sequence of crops, grasses and legumes or a mixture thereof established and maintained for a definite number of years as part of a conservation cropping system which is designed to provide adequate organic residue for maintenance or improvement of soil tilth to improve water quality. Benefits may include reduced soil erosion, sedimentation and pollution from dissolved and sediment-attached substances. Cost share for this incentive practice is limited to $25,000 per cooperator in a lifetime.

(24) A stock trail or walkway means to provide a stable area used frequently and intensively for livestock movement by surfacing with suitable material to improve water quality. Benefits may include reduced soil erosion, sedimentation and pollution from dissolved, particulate, and sediment-attached substances.

(25) A stream protection system means a planned system for protecting streams and stream banks that eliminates the need for livestock to be in streams by providing an alternative-watering source for livestock to improve water quality. Benefits may include reduced soil erosion, sedimentation, pathogen contamination, and pollution from dissolved, particulate and sediment-attached substances. System components may include:

(A) A spring development means improving springs and seeps by excavating, cleaning, capping or providing collection and storage facilities.

(B) A stream crossing means a trail constructed across a stream to allow livestock to cross without disturbing the bottom or causing soil erosion on the banks.

(C) A trough or tank means devices installed to provide drinking water for livestock at a stabilized location.

(D) A well means constructing a drilled, driven or dug well to supply water from an underground source.

(E) A windmill means erecting or constructing a mill operated by the wind's rotation of large vanes and is used as a source of power for pumping water.

(26) A Streambank Stabilization system means the use of bioengineering practices, native material revetments, channel stability structures, and/or the restoration or management of riparian corridors in order to protect upland BMPs, restore the natural function of the stream corridor and improve water quality by reducing sedimentation to streams from streambank erosion and decreasing the delivery of nitrogen, phosphorus and other pollutants to the stream from adjacent pasture or cropland. Cost share for this practice is limited to $25,000 per cooperator per year.

(27) A stripcropping practice means to grow crops and sod in a systematic arrangement of alternating strips or bands on the contour to improve water quality. Benefits may include reduced soil erosion, sedimentation, and pollution from dissolved and sediment-attached substances. The crops are arranged so that a strip of grass or close-growing crop is alternated with a strip of clean-tilled crop, fallow, or no-till crop, or a strip of grass is alternated with a close-growing crop.

(28) A riparian buffer means an area adjacent to solid blue line streams as shown on 7.5 minute USGS maps where a permanent, long-lived vegetative cover (sod, shrubs, trees, or a combination of vegetation types) is established to improve water quality. Benefits may include reduced soil erosion, sedimentation, pathogen contamination and pollution from dissolved, particulate and sediment-attached substances.

(29) A terrace means an earth embankment, a channel, or a combination ridge and channel constructed across the slope to improve water quality. Benefits may include reduced soil erosion, sedimentation and pollution from dissolved and sediment-attached substances.

(30) A waste management system means a planned system in which all necessary components are installed for managing liquid and solid waste to prevent or minimize degradation of soil and ground and surface water resources. System components may include:

(A) A Closure of Abandoned Waste Impoundment means the safe removal of existing waste and waste water and the application of this waste on land in an environmentally safe manner. Cost share for this practice is limited to $75,000 per cooperator.

(B) A constructed wetland for land application practice means an artificial wetland area into which liquid animal waste from a waste storage pond or lagoon is dispersed over time to lower the nutrient content of the liquid animal waste.

(C) A controlled livestock lounging area means a planned, stabilized and vegetated area in which livestock are kept for a short duration.

(D) A drystack means a fabricated structure for temporary storage of animal waste. Cost share for drystacks for poultry and non-.0200 animal operations are limited to $30,000 per structure.

(E) A feeding/waste storage structure means a fabricated structure for the combined purpose of animal feeding and temporary storage of animal waste. Cost share for this practice is limited to $25,000 per structure.

(F) An insect control system means a practice or combination of practices (planting windbreaks, pre-charging structures, incorporation of waste into soil, etc.) which manages or controls insects from confined animal operations, waste treatment and storage structures, and waste applied to agricultural land.

(G) A livestock mortality management system is a facility for managing livestock mortalities such as to minimize water quality impacts or to produce a material that can be recycled as a soil amendment and fertilizer substitute. Cost shareable mortality management system components include: composter, rotary drum composter, forced aeration static pile composter, mortality freezer, and mortality incinerator.

(H) An odor control management system means a practice or combination of practices (planting windbreaks, pre-charging structures, incorporation of waste into soil, etc.) which manages or controls odors from confined animal operations, waste treatment and storage structures and waste applied to agricultural land.

(I) An offsite or an alternative poultry dry litter waste utilization means applying, processing and/or transporting poultry dry litter such that it is properly utilized to reduce nutrient impacts. Payments for this incentive shall be limited to $15,000 per farm per year for no more than 3 years.

(J) A Retrofit of On-Going Animal Operations means modification of structures to increase storage or to correct design flaws to meet current standards. This practice may also be used to close waste impoundments on on-going operations, including the safe removal of existing waste and waste water and the application of this waste on land in an environmentally safe manner. .

(K) A storm water management system means a system of collection and diversion practices (guttering, collection boxes, diversions, etc.) to prevent unpolluted storm water from flowing across concentrated waste areas on animal operations.

(L) A waste application system means an environmentally safe system (such as solid set, dry hydrant, mobile irrigation equipment, etc.) for the conveyance and distribution of animal wastes from waste treatment and storage structures to agricultural fields as part of an irrigation and waste utilization plan. Cost share for this practice is limited to $25,000 per cooperator in a lifetime.

(M) A waste storage pond means an impoundment made by excavation or earthfill for temporary storage of animal waste, waste water and polluted runoff.

(N) A waste treatment lagoon means an impoundment made by excavation or earthfill for biological treatment and storage of animal waste.

(27) A water control structure means a permanent structure placed in farm canals and ditches, which provides control of surface and subsurface drainage to improve water quality. The primary benefit is to reduce nutrient pollution. Other benefits may include reduced pollution from other dissolved and sediment-attached substances, reduced sedimentation and reduced stormwater surges of fresh water into estuarine areas.

(28) A wetland restoration system means a system of practices designed to restore the natural hydrology of an area that had been drained and cropped.

Attachment B

NC Agriculture Cost Share Program
Practice Log Summary

Year : 2005
Program : CS, SE, CE

Best Management	Planned Units	Msr.	Cost	Implemented Units	Msr.	Cost
Erosion/Nutrient Reduction						
Conservation Tillage (3 Yr.)	7,134.96	Acre	$610,735	6,266.08	Acre	$523,966
Long Term No-Till	2,471.30	Acre	$290,459	1,805.41	Acre	$213,742
Sod-Based Rotation	1,394.35	Acre	$215,324	1,140.95	Acre	$170,952
Cropland Conversion - Grass	3,023.93	Acre	$694,717	2,062.36	Acre	$468,763
Cropland Conversion - Trees	1,014.66	Acre	$78,341	809.46	Acre	$60,910
Christmas Tree Conservation Cover	208.70	Acre	$23,137	106.40	Acre	$11,965
Critical Area Planting	59.85	Acre	$117,733	29.03	Acre	$57,873
Diversion	20,998.04	Feet	$25,946	10,759.04	Feet	$18,053
Land Smoothing	1,363.35	Acre	$151,658	846.80	Acre	$89,223
Terraces	28,955.00	Feet	$29,284	18,665.00	Feet	$17,555
Pastureland Conversion To Trees	33.54	Acre	$2,137	31.24	Acre	$1,964
Stripcropping	23.00	Acre	$3,375	7.00	Acre	$1,575
Nutrient Scavenger Crop	1,785.37	Acre	$40,773	1,785.37	Acre	$25,742
Ag Road Repair-Stabilization	18.38	Acre	$175,981	8.60	Acre	$72,291
Conservation Tillage	43.20	Acre	$5,400	0.00	Acre	$0
Sediment/Nutrient Reduction						
sed Waterway	156.87	Acre	$314,450	72.22	Acre	$144,697
Border	148.82	Acre	$223,765	84.31	Acre	$121,497
ter Strip	56.50	Acre	$8,127	54.70	Acre	$6,590
Riparian Buffer	1,693.85	Acre	$150,737	1,240.98	Acre	$88,097
Water Control Structure	50.00	Units	$80,174	28.00	Units	$26,094
Nutrient Management	7,999.90	Acre	$139,282	3,610.10	Acre	$56,707
Rock-Lined Outlet	15.00	Units	$9,562	12.00	Units	$2,188
Streambank Stabilization	2,070.00	Feet	$103,784	540.00	Feet	$12,582
Grade Stabilization Structure	101.00	Units	$62,360	19.00	Units	$30,296
Wetlands Restoration System	1.00	Units	$10,057	0.00	Units	$0

NC STATE UNIVERSITY

Development of Environmentally Superior Technologies - NC Attorney General Agreements with Smithfield Foods, Premium Standard Farms, and Frontline Farmers

Findings Reported to the North Carolina Environmental Review Commission – March 8, 2006

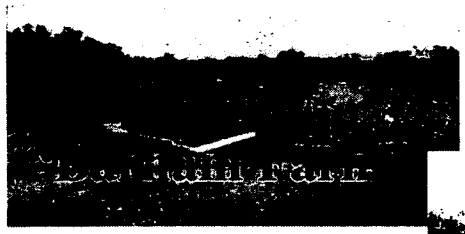
C.M. (Mike) Williams, Ph.D.

Agreements' Designee

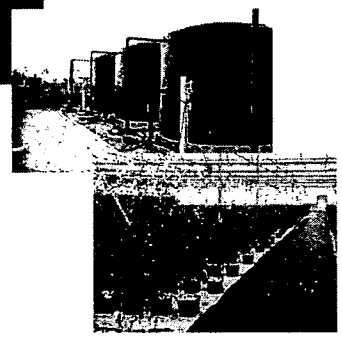
College of Agriculture and Life Sciences

North Carolina State University

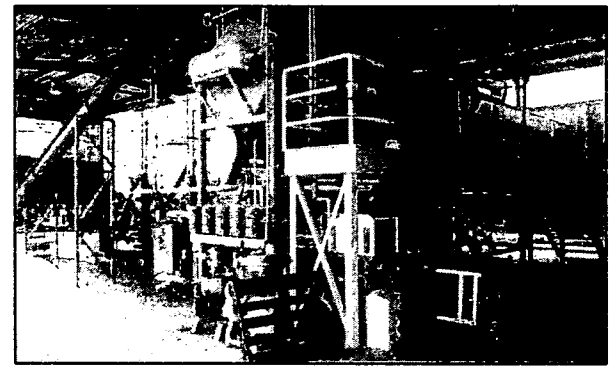
EXHIBIT E



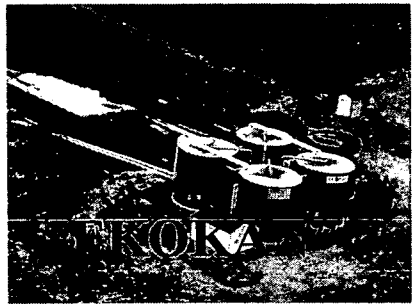
NC STATE UNIVERSITY



Agreements - Background

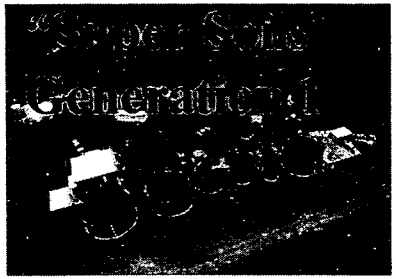


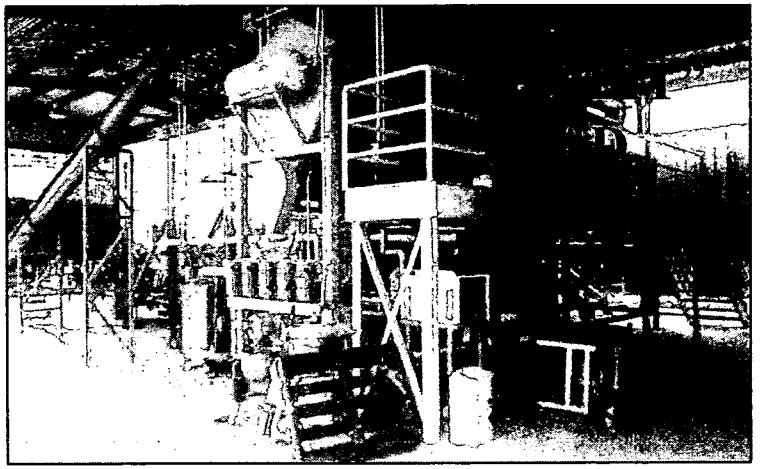
- **Smithfield Foods (July 2000) - $15 million for development of "Environmentally Superior Technologies" (EST); $50 million for "environmental enhancement" activities**
- **Premium Standard Farms (September 2000) – $2.5 million ($2.3 for EST)**
- **Frontline Farmers (March 2002) - "use its best efforts and influence to encourage its members to convert to economically feasible EST"**
- **Agreements' "Designee" responsible for "Technology Determinations" – a written determination re findings relative to EST**



NC STATE UNIVERSITY

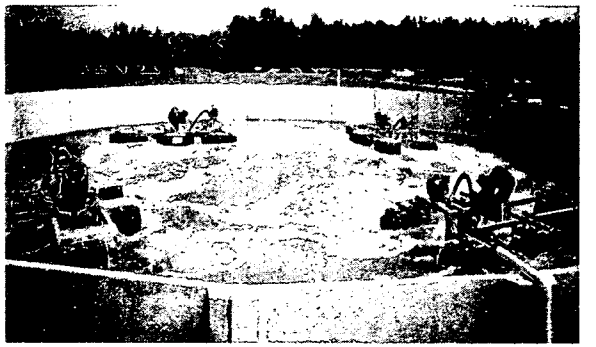
Phase 1 Technology Determination Rpt. issued July 2004 (8 technologies covered); also included quantification of environmental standards





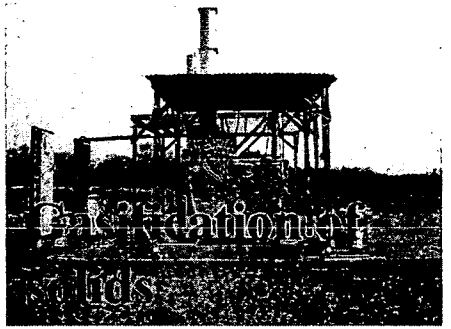
NC STATE UNIVERSITY

Phase 1 (July 2004) Technology Determination findings: 2 Contingent EST



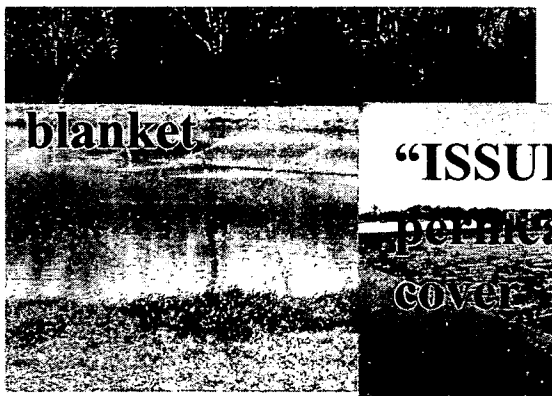
Contingencies

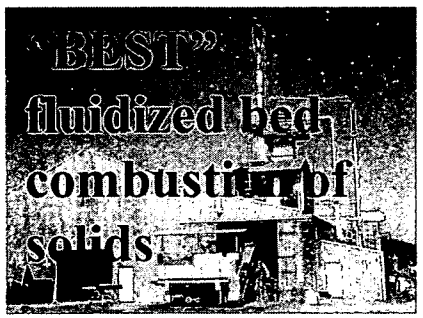
- Economics
- Environmental performance re 2nd generations and steady state operations

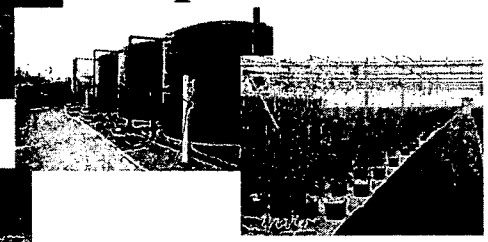


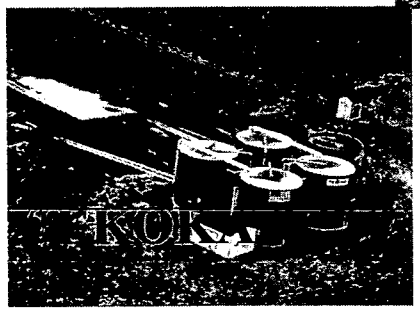
NC STATE UNIVERSITY

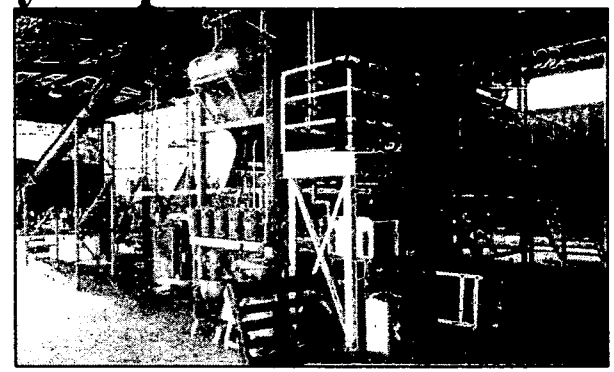
Phase 2 Technology Determination Report July 2005 (7 technologies covered)



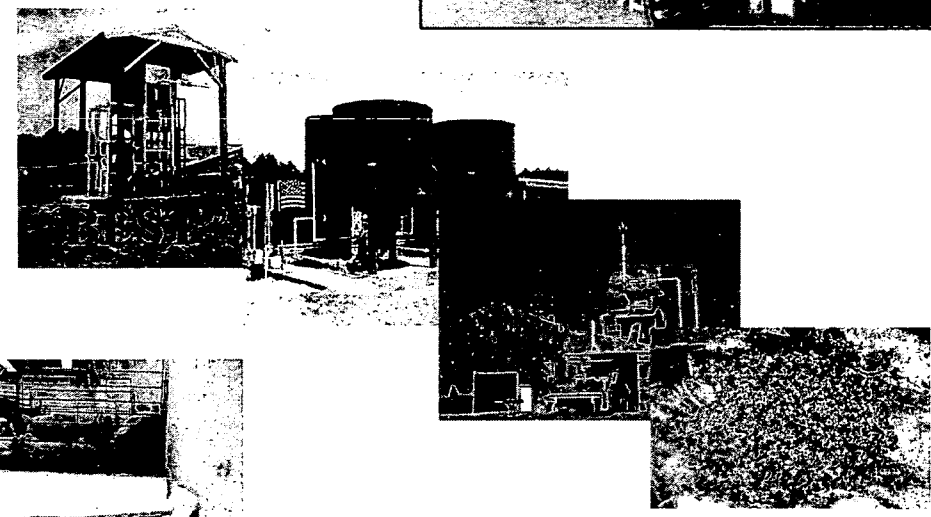




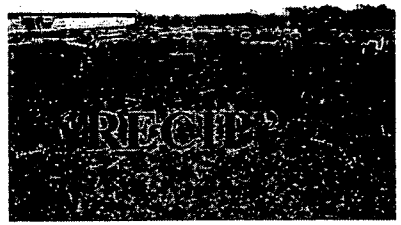


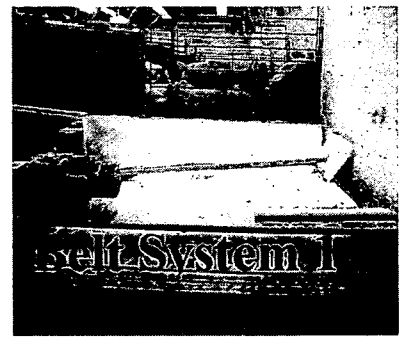


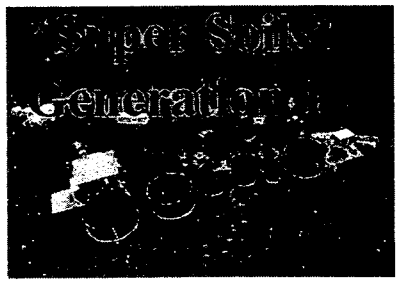
NC STATE UNIVERSITY

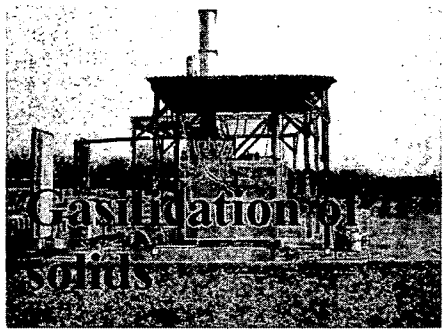


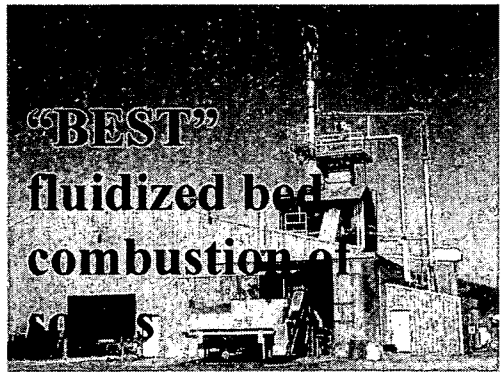
Phase 2 Technology Determination Report also included costs-returns data for original 8 technologies and industry impact economic report





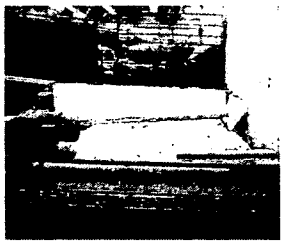


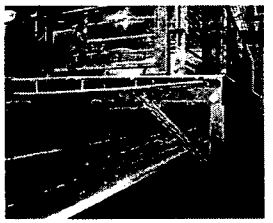


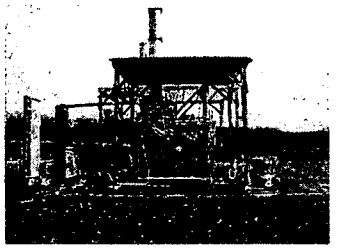


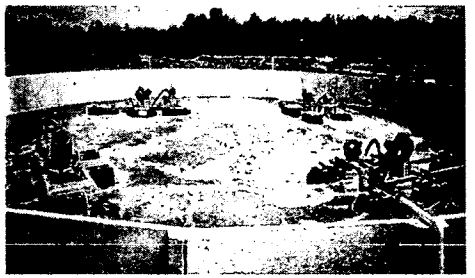
NC STATE UNIVERSITY

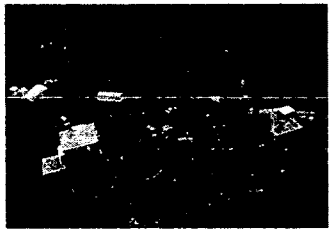
Phase 2 Technology Determination findings: 3 additional contingent EST

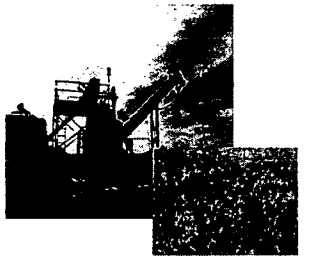


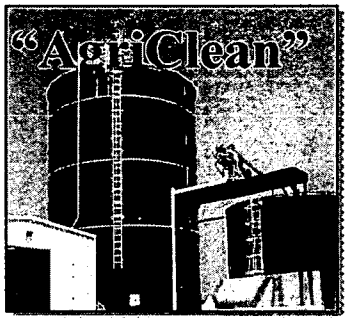




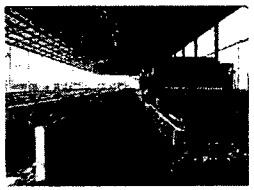




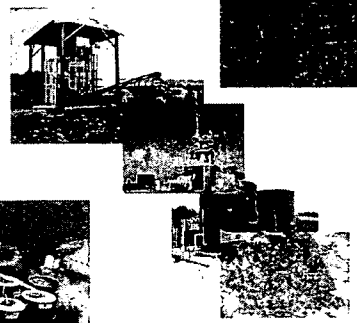




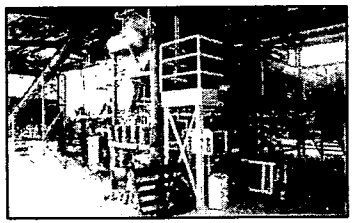
Contingencies



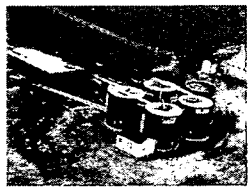
- Economics
- Permits



NC STATE UNIVERSITY



March 8, 2006 Phase 3 Technology Determination Report includes detail findings for 2 additional technologies and overview of all technologies and findings relative to EST standards.



NC STATE UNIVERSITY

Environmentally Superior Technologies defined:

- **"permittable by the appropriate governmental authority**
- **determined to be technically, operationally, and economically feasible for identified categories of farms**
- **meets the following performance standards…"**

NC STATE UNIVERSITY

Performance Standards (Ref: General Assembly of North Carolina, Session 1997, Session Law 1998-188, House Bill 1480)

- "Eliminate the discharge of animal waste to surface waters and groundwater through direct discharge, seepage, or runoff;
- Substantially eliminate atmospheric emissions of ammonia;
- Substantially eliminate the emission of odor that is detectable beyond the boundaries of the parcel of land on which the swine farm is located;
- Substantially eliminate the release of disease-transmitting vectors and airborne pathogens;
- Substantially eliminate nutrient and heavy metal contamination of soil and groundwater"

NC STATE UNIVERSITY

Economic Feasibility Determination

- **Projected 10 year annualized cost of the technology (including capital, operation and maintenance) per 1000 # steady state live weight for each category of farm system**
- **Compared to lagoon and spray-field system**
- **Projected revenues, including income from byproducts**
- **Available cost-share monies or other financial assistance from federal, state or other public sources**
- **Impact that the adoption of the technology may have on the competitiveness of the NC pork industry**
- ***ID/quantification (if possible) of emissions to environmental media from each category of farm system implementing the technology as compared to lagoon and spray-field system***
- ***Estimate of the economic benefits to NC households arising from the changes in emissions to environmental media resulting from implementation of the technology***

(not mandated in Agreements)

NC STATE UNIVERSITY

Technology Determination: data requirements

Performance Data

- Project PI report
- OPEN team report
- ECON team report

Project PI report focus is on treatment system unit components

- Partitioning and fate (conversion or removal) of: solids, organics, N, P, Cu, Zn
- Operational feasibility (problems encountered, trained operator requirement, frequency and duration of operator on site, etc.)

OPEN team report focus is on emissions of:

- odor
- pathogens
- ammonia

ECON team report focus is on technology unit costs/returns and industry impact

NC STATE UNIVERSITY

Technology Determination: process

1. Draft reports from Project Investigators, OPEN, ECON teams
2. Draft review by panel and technology supplier
3. Investigators consider review input and finalize reports
4. Panel review / discussion
5. Designee prepares Technology Determination Draft
6. Panel review / discussion
7. Technology Determination Final Reports (Phase 1, 2, 3)

NC STATE UNIVERSITY

Performance Standards (Ref: General Assembly of North Carolina, Session 1997, Session Law 1998-188, House Bill 1480)

Engineering Subcommittee
Chair: Paul Sherman

NC STATE UNIVERSITY

Eliminate the discharge of animal waste to surface waters and groundwater through direct discharge, seepage, or runoff.

All wastewater-holding structures must have a mechanism for containing the flow rate of the largest pump in the system for the maximum amount of time that an operator will not be on-site.

Technologies should contain less than the volume equivalent of one month of flow in concentrated waste prior to complete treatment.

Any earthen structures should be designed and constructed to current Natural Resource Conservation Service (NRCS) standards and have a maximum hydraulic conductivity of 1.25×10^{-6} cm/sec.

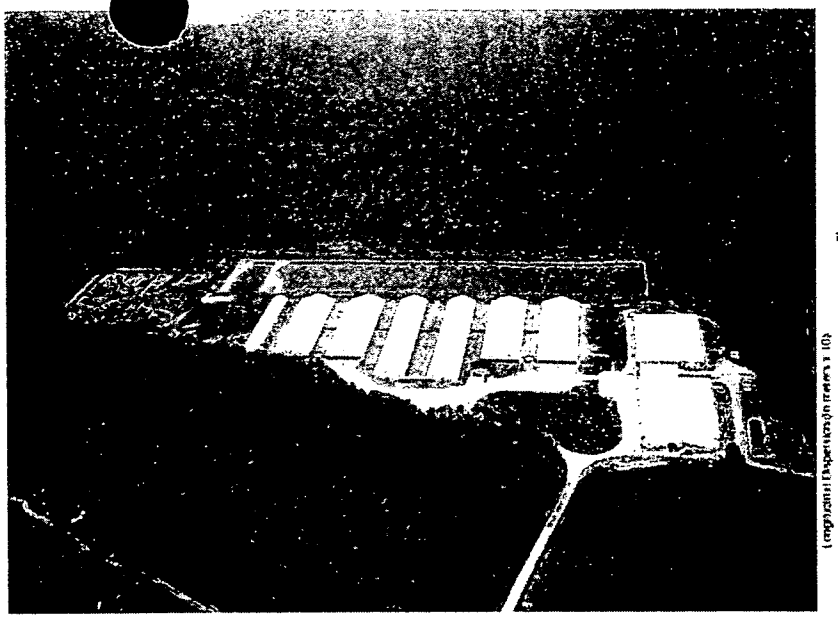
Structures, other than earthen, should be designed and constructed using proper engineering practices to eliminate seepage. Solids storage structures should meet current NRCS design standards.

Land application of treated wastewater or solids should be based on realistic crop yield expectations, land application setbacks, buffers, and hydraulic loading rates that at a minimum maintain compliance with current NRCS, Local, State, and Federal standards and/or requirements.

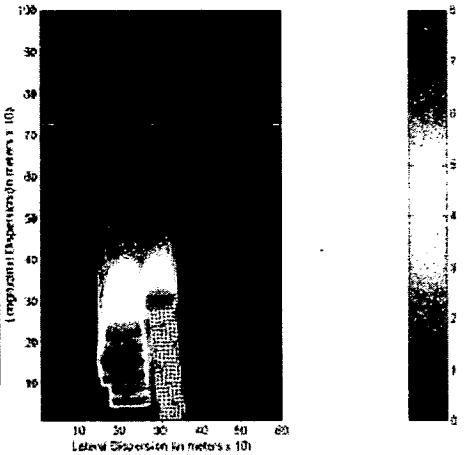
NC STATE UNIVERSITY

Substantially eliminate atmospheric emissions of ammonia.

Approximately 80% reduction, as compared to a typical swine farm, of ammonia emissions from waste storage/treatment components and land application areas.

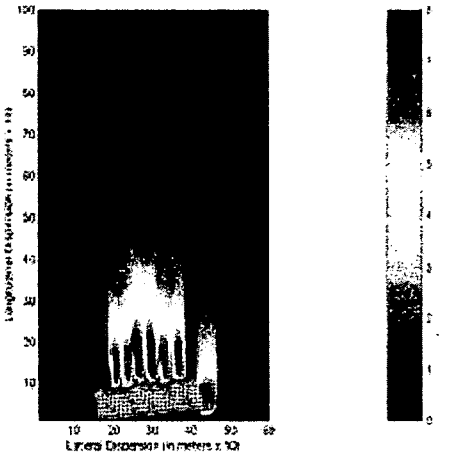


System must also target reduction of ammonia from the barns.



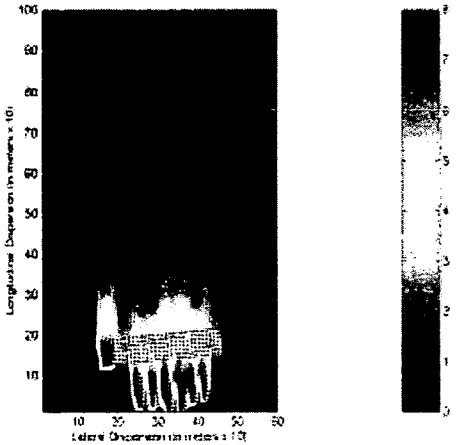
NC STATE UNIVERSITY

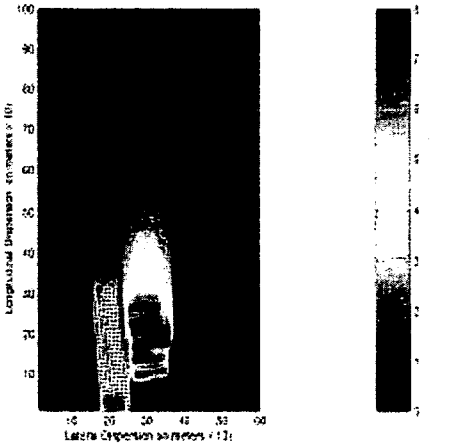
Substantially eliminate the emission of odor that is detectable beyond the boundaries of the parcel or tract of land on which the swine farm is located.



Odor intensity levels, measured using an index scale from 0-8, should not exceed the established metric of 2 (or equivalent) at a property line on which the swine farm is located.

NC STATE UNIVERSITY





East

North

South

West

Spatial distribution of odor and odorants downwind from Barham farm during daytime

Eulerian- Lagrangian model to simulate odor dispersion

$y = 33.546\ e^{x}$

x = odor intensity (0-8)

Duke UNIVERSITY

NC STATE UNIVERSITY

Substantially eliminate the release of disease-transmitting vectors and airborne pathogens.

Approximately 4 log reductions of pathogens (microorganisms documented to be of human health concern) in the treated liquid and solid waste stream, as compared to concentrations of the pathogens in raw manure.

All components of the waste management system (technology treatment, fate of farm generated solids, method and location of land application of liquid and/or solids, etc.) are considered factors for pathogen reductions.

NC STATE UNIVERSITY

Pathogens and Indicators Measured on Candidate EST and Conventional Farm Sites

Waste Stream (liquid/solids) and Environmental Samples

- Fecal Coliform bacteria
- *E. coli*
- *Enterococci*
- Total coliphage (viruses)
- *Clostridium perfringens* spores
- *Salmonella*

Air Samples

- Fecal Coliform bacteria
- *E. coli*
- Total coliphage (viruses)
- *Clostridium perfringens* spores
- *Salmonella*
- Total aerobic bacteria
- Total fungi
- Bacterial endotoxins

* contracted to Peter Thorne, University of Iowa

UNC SCHOOL OF PUBLIC HEALTH

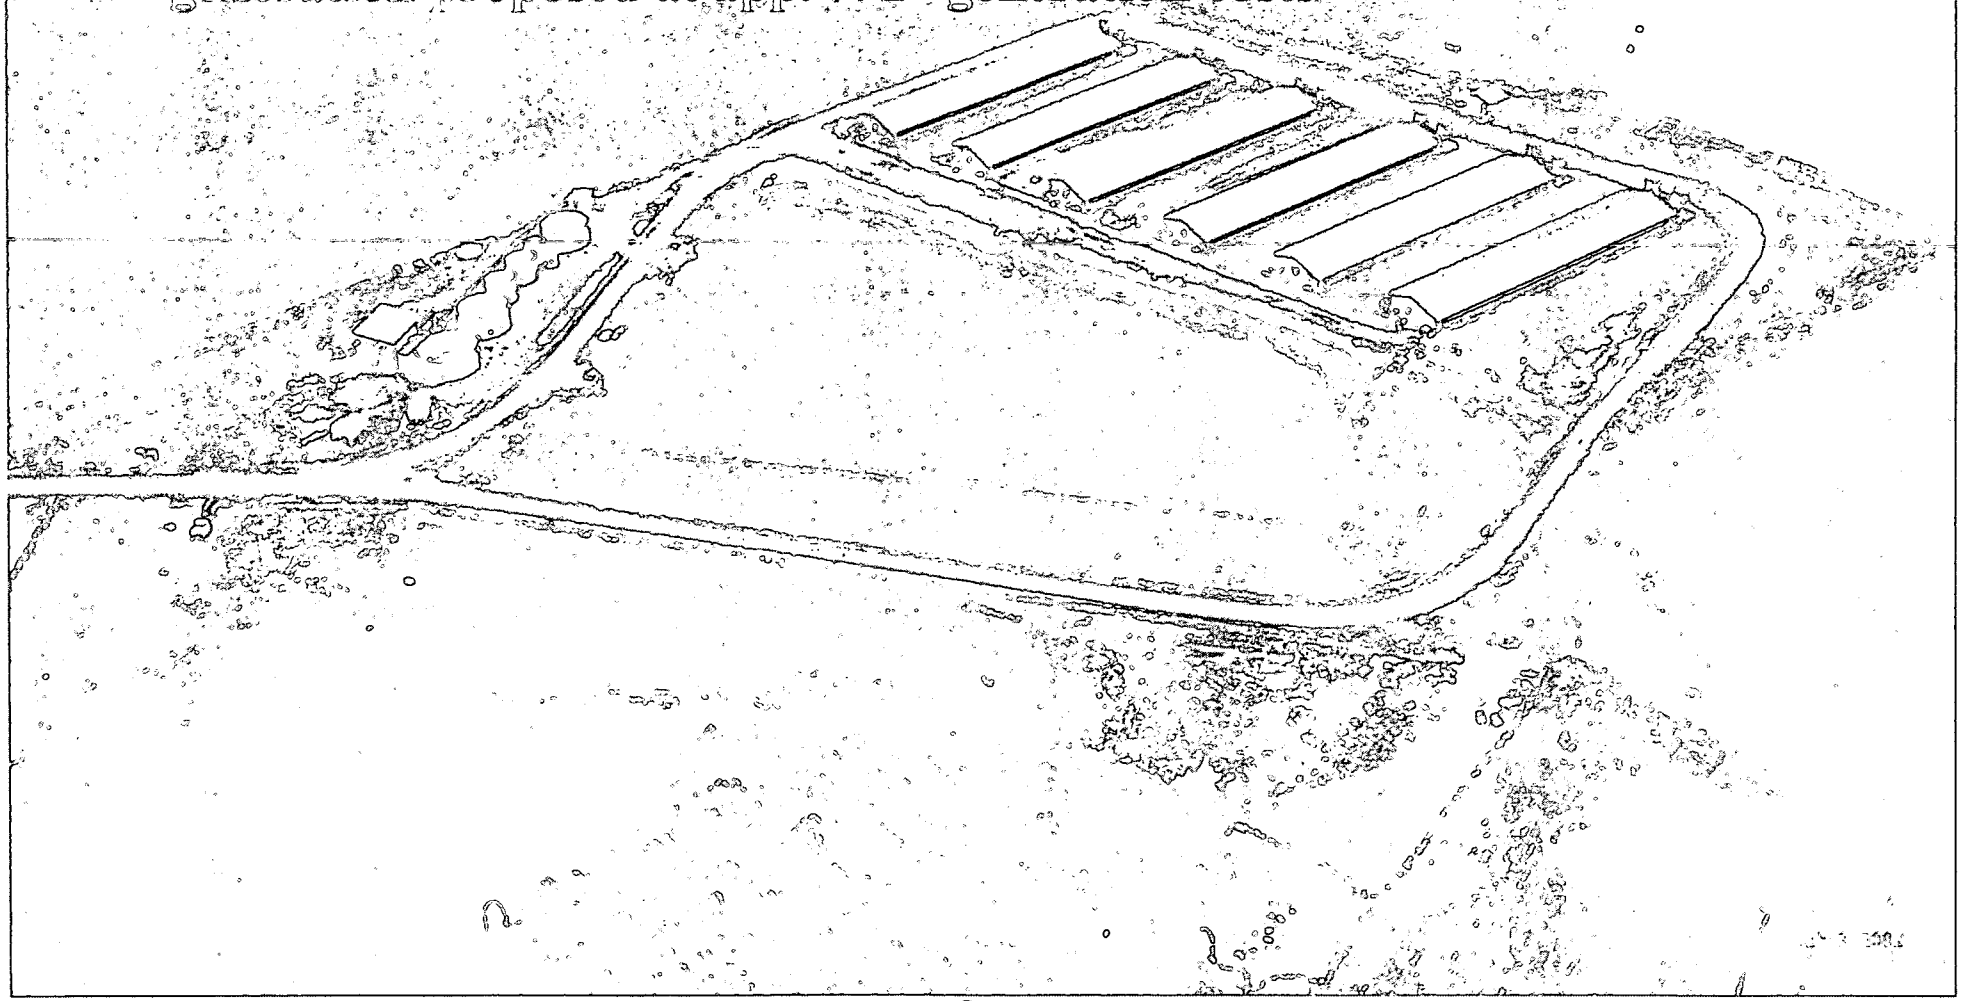
NC STATE UNIVERSITY

Substantially eliminate nutrient and heavy metal contamination of soil and groundwater.

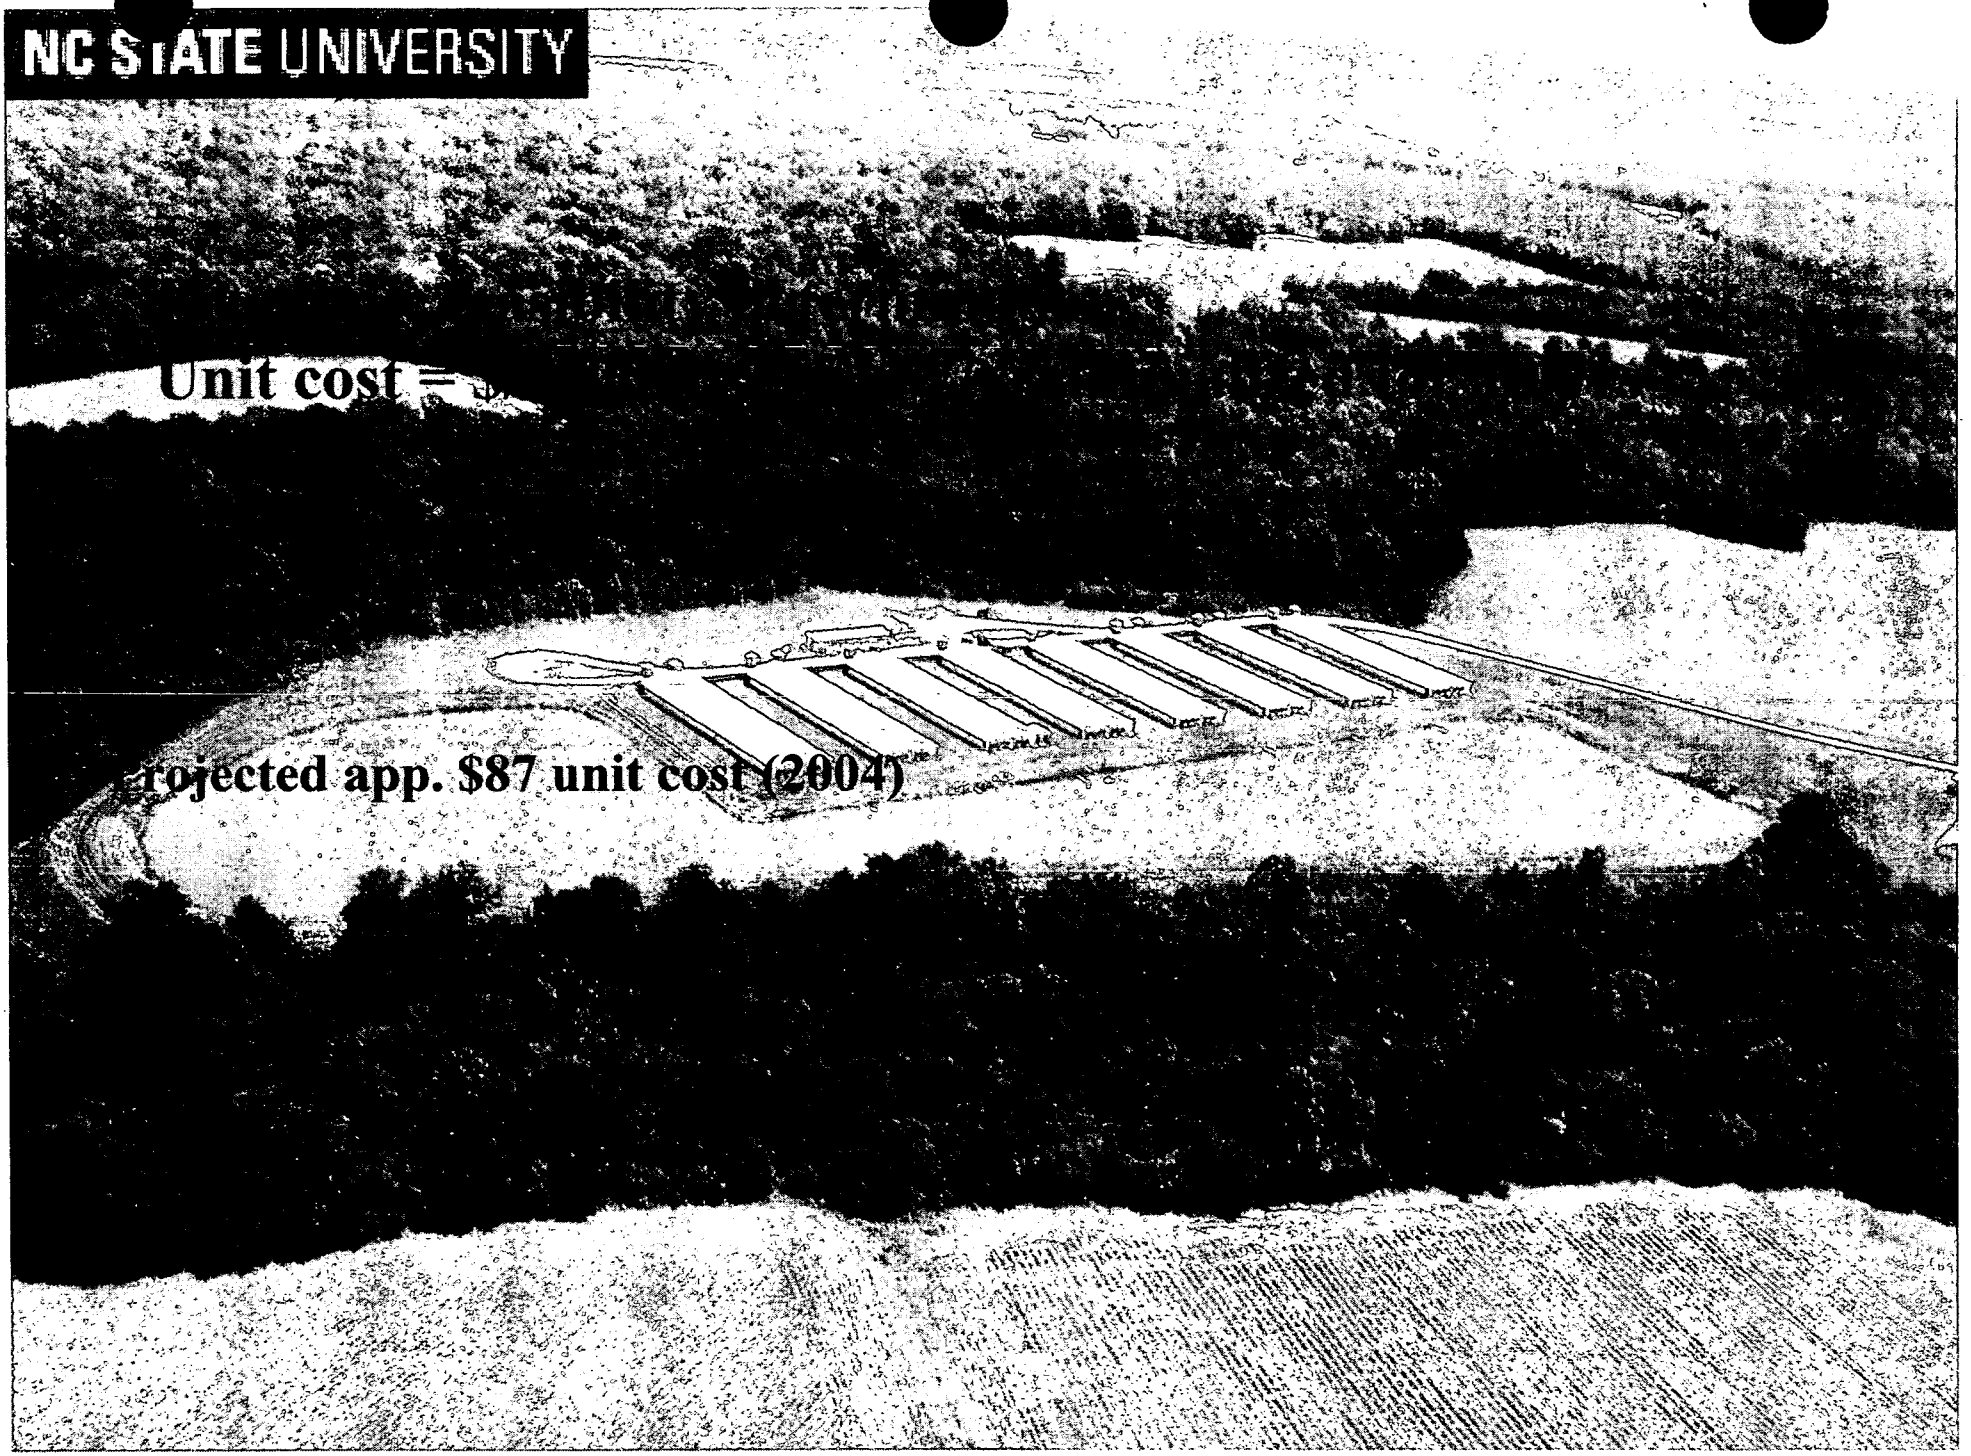
System should reduce total nitrogen mass by 75% and total phosphorus, copper and zinc mass by 50% from influent levels for the whole farm.

Current NC NRCS Nutrient Management Standard 590 must be met, including added considerations of current realistic yield expectations, individual plant available nitrogen calculations, NC Phosphorus Loss Assessment Tool (PLAT) evaluation to determine phosphorus loss and application rates, and metal soil index threshold warnings.

Where on-farm resources (i.e. available land) are not sufficient to meet these described standards, reductions may be met by transporting the nutrients off the farm, and/or animal diet modification.



NC STATE UNIVERSITY



Economic feasibility determination

Unit cost = $/1000 lbs. SSLW/yr/annualized for 10 yrs

1st generation measured costs-returns ~ $400

2nd generation proposed at app. ¼ 1st generation costs

NC STATE UNIVERSITY
Unit cost =
rojected app. $87 unit cost (2004)

NC STATE UNIVERSITY

"Super Soils": Finishing operation, 4,000 head, 6 houses, 10,000 gal/d waste stream flow. 1st generation data

Parameter	Environmental data values
COD	97% reduction
Solids	98-99% reduction
Ammonia	99% reduction
Phosphorus	95% reduction
Pathogens	1.4-4.4 Log10 reductions
Odor – 200m from source	2.1 of 8 intensity (8=max)
Odor – 400m from source	1.3 of 8 intensity (8=max)

NC STATE UNIVERSITY

Economic Feasibility Determination

- **Projected 10 year annualized cost of the technology (including capital, operation and maintenance) per 1000 # steady state live weight for each category of farm system**
- **Compared to lagoon and spray-field system**
- **Projected revenues, including income from byproducts**
- **Available cost-share monies or other financial assistance from federal, state or other public sources**
- **Impact that the adoption of the technology may have on the competitiveness of the NC pork industry**

Economics Subcommittee
Chair: Richard Whisnant

NC STATE UNIVERSITY

Requests to Econ. Subcommittee

- Consideration of information provided in the costs-returns and market impacts reports
- Quantitative recommendations relative to mandated economic feasibility requirements
- Assessment of how EST implementation schedule impacts "determination of economic feasibility'

NC STATE UNIVERSITY

Economics Subcommittee Consensus Findings

- Designee should **consider economic versus financial points of view regarding feasibility** – e.g. in addition to the financial consequences which focus on payments made by farmers, the Agreements require attention to the true economic consequences, including non-monetized commitment of resources.
- **The economic models** used to determine the costs-returns and predicted impact on the competitiveness of the industry when utilizing the determined EST costs **are well reasoned and well justified and thoroughly conducted** but **include uncertainty and many assumptions** (the same conclusions were derived by external ad hoc reviewers).
- In consideration of **who makes up the North Carolina pork industry**, Designee should consider **any and all business entities physically located in North Carolina that generate their income from either the production of live swine or the meat packing of pork**.
- It is economically appropriate to **implement EST in phases, allowing pilot testing and refinement of the technologies before they are adopted industry wide. New farm categories and company owned farms are appropriate and obvious candidates** for this approach.
- The **time frame for adoption of EST is important relative to the time value of money and assessing economic feasibility,** e.g. additional time for implementation reduces the economic impacts on North Carolina swine herd size.

NC STATE UNIVERSITY

Economics Subcommittee Non-Consensus Findings

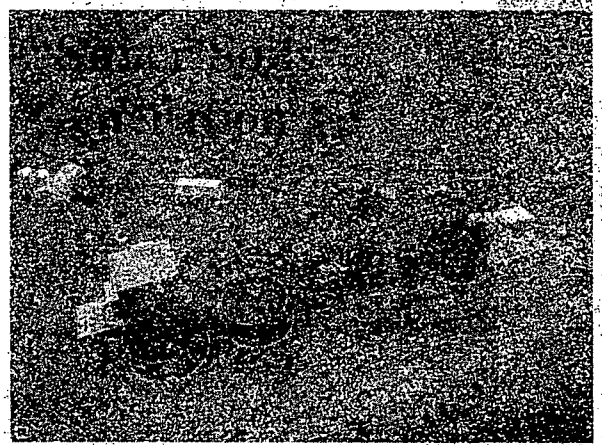
- **Competitiveness does not mean maintaining the present North Carolina hog inventory size** and **does not mean avoiding any net increase in waste handling costs. Designee should consider** that implementation of EST that has **a predicted economic consequence of reducing the North Carolina swine herd by 12% economically feasible.** This is, in part, justified based on precedent established by the North Carolina General Assembly upon adoption in 1993 of the so called ".0200 Rules", which were predicted to result in 12% of the State's swine operations not remaining in business.
- **Institutional considerations should be studied in consideration of EST implementation planning**, e.g. **an institution created to oversee technology transition**, tradable permits, etc. would ensure that widespread conversion occurs in the most economically feasible manner possible.

NC STATE UNIVERSITY

Economics Subcommittee Non-Consensus Findings

- The **Agreements did not seek to close farms or otherwise reduce herd size** in North Carolina.
- A hog production entity **becomes non-competitive** when its inability to fund **production results in lost market share** and an **EST is economically feasible if and only if the commercial application of the technology in only North Carolina has no adverse affect, e.g. no net increase in cost or reduction in herd size**, on the fiscal competitiveness of North Carolina operations as compared to pork operations in all other states.
- **Byproduct revenue** from EST **must exist to offset any higher operating and capital costs** of the EST and the best opportunity for the candidate EST studied is fossil fuel substitutes.

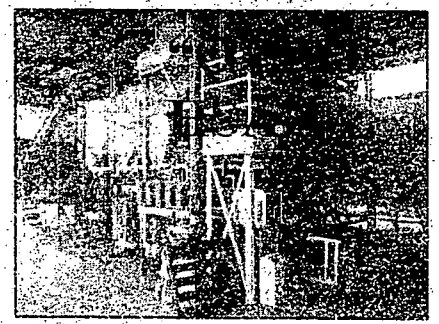
NC STATE UNIVERSITY



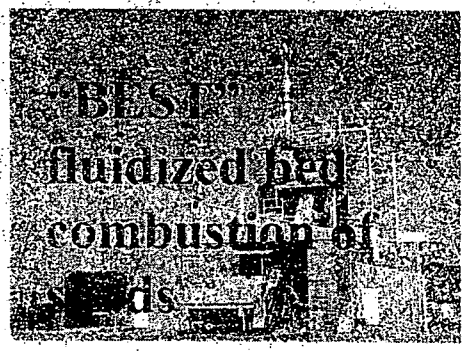
EST Economic Feasibility defined by Designee:

A technology may be economically feasible even though it would impose incremental cost increases on the North Carolina swine industry and potentially result in a reduction in swine herd size in North Carolina. Technologies will be considered candidates for EST Determinations only if the maximum predicted reduction in herd size resulting from implementation would not exceed 12 percent.

The Designee will be responsible for determining whether the predicted herd size reduction that would result from the implementation of a technology is sufficiently accurate to consider it a candidate for determination as an EST. The Designee will also be responsible for determining, and limiting his determination and implementation recommendations to a category, or categories of farms, to ensure that an EST Determination would not result in unintended negative impacts and consequences for other farms which are dependent on the EST farms for their ongoing supply of production animals.



NC STATE UNIVERSITY



Phase 3 Technology Determination findings: 5 EST for new farm categories

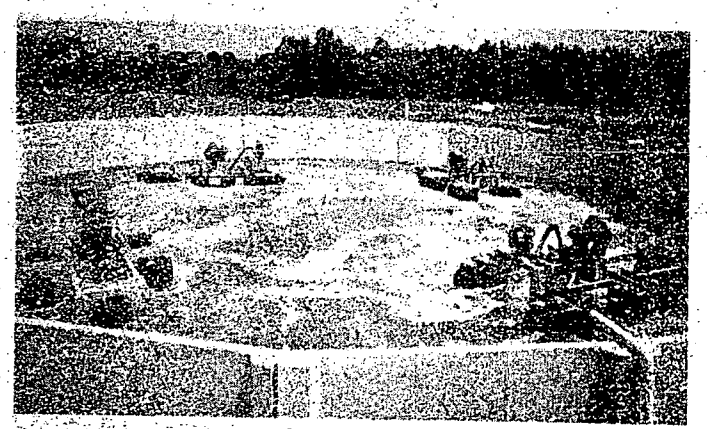
NC STATE UNIVERSITY

Farm categories

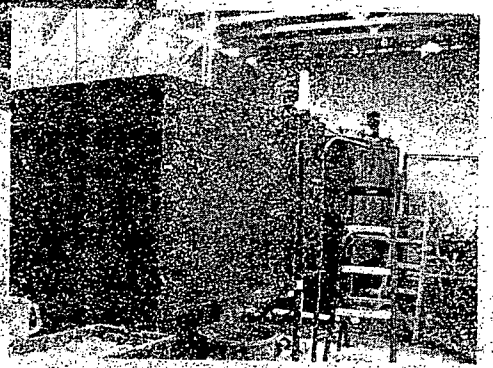
New farm category: farms using EST on sites that have not been used previously for the production of swine ("Greenfields"); construction of new swine facilities using the EST on farms which previously housed swine, but which are no longer permitted for that purpose; and expansions (for purposes of increasing permitted herd size) of existing swine farms using the EST to treat waste for new construction on such existing swine farms. In the case of expansions, this determination applies only to the waste generated from the expansion.

NC STATE UNIVERSITY

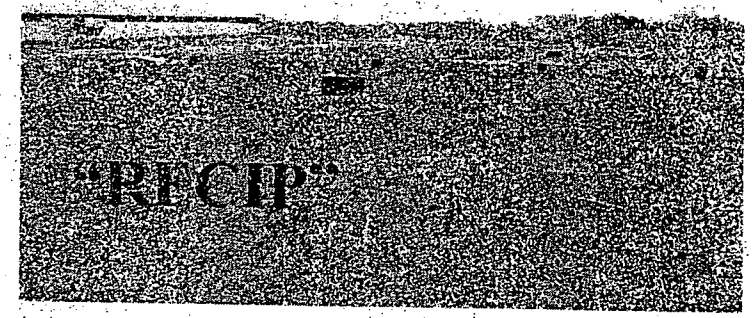
Farm categories



Existing farm categories: Contingent EST, as described in the July 2004 and 2005 technology determination reports, have not at the current time met economic feasibility conditions required for unconditional EST to be implemented onto existing farm categories in North Carolina.



NC STATE UNIVERSITY



Technologies "on the bubble" of qualifying as EST

NC STATE UNIVERSITY

Industry impacts: alternative assessment by some members of Economics Subcommittee

Incremental Cost	Predicted Short Run Reduction	Predicted Intermediate Run Reduction	Predicted Long Run Reduction	Predicted Long Term Revenue Reduction
$/1,000 pounds SSLW/year	% reduction in North Carolina hog inventory (1,000 pounds SSLW)			% reduction from current revenue
$440.89	9.6	30.4	38.0	26
$396.80	8.6	27.3	34.5	23
$352.71	7.7	24.3	31.0	21
$308.62	6.7	21.3	27.1	18
$264.53	5.8	18.2	23.2	15
$220.45	4.8	15.2	19.4	12
$176.36	3.8	12.2	15.5	10
$132.27	2.9	9.1	11.6	7
$88.18	1.9	6.1	7.8	5
$44.09	1.0	3.0	3.9	2

NC STATE UNIVERSITY

Recommendations

- Continue, as expeditiously as possible, current efforts by targeted technology suppliers and researchers to improve upon their treatment processes to reduce the costs of their respective treatment systems.

- Establish a framework or process by which additional technologies may be considered viable Environmentally Superior Technologies. This would include technologies that can be improved upon (technically and / or operationally and / or economically) as a result of information derived from this initiative, as well as technologies that were not part of this funded initiative.

- Identify potential institutional incentives, public policies, and markets related to the sale of byproducts (with priority on energy production) that will reward farmers for utilizing technologies identified by this process that are shown to yield improvements and environmental benefits over the current lagoon spray field system. The optimal method of achieving net cost reductions and even positive revenue flows from alternative technologies is to install targeted technologies on a sufficient number of farms to facilitate engineering improvements, value-added product market development, and other cost reduction methods.

NC STATE UNIVERSITY

Summary

1. 5 Environmentally Superior Technologies identified that,

2. Meet environmental standards established by the state of North Carolina (and quantified through this process).

3. Economic feasibility has been defined.

4. Process for development and verification of EST documented.

5. Additional technologies have been verified that some modification are capable of meeting EST standards.

6. Process for implementation of EST proposed.

NCDENR

NORTH CAROLINA SOIL & WATER CONSERVATION

EXHIBIT I

Adding New Practices to the Agriculture Cost Share Program

- Soil and Water Conservation Commission is constantly adapting the ACSP to include new technologies and techniques for protecting water quality
- Presently 49 practices approved for cost share
- Request to Technical Review Committee
  - Subcommittee is formed to research practice and develop implementation policy and average costs
- Approval by Commission

Cost Share Incentive Payments

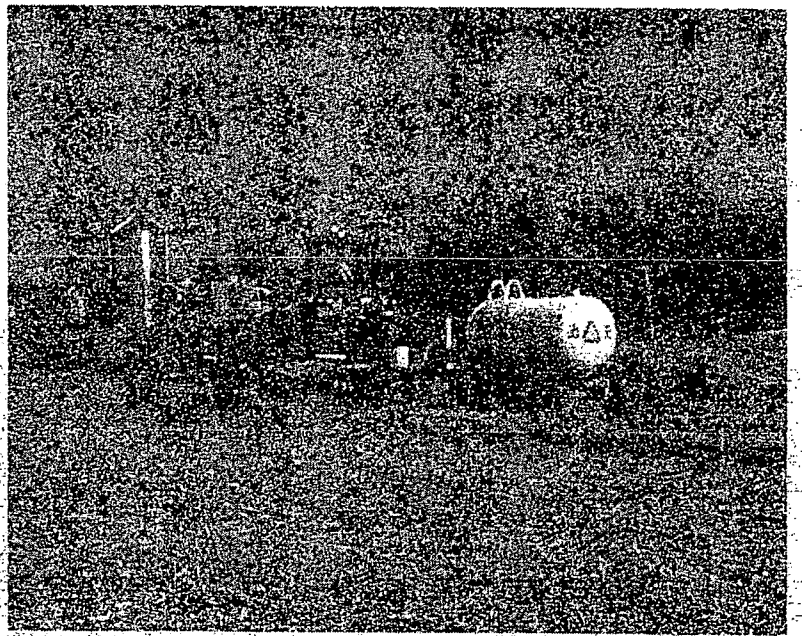
- A predetermined fixed annual payments paid to an applicant for implementing a BMP in lieu of full 75% cost share

Examples:

- Long term No-till
- Nutrient Management
- Sod Based Rotation

Average Cost Payments

- Payments of 75% of the average costs directly associated with the installation of a BMP.

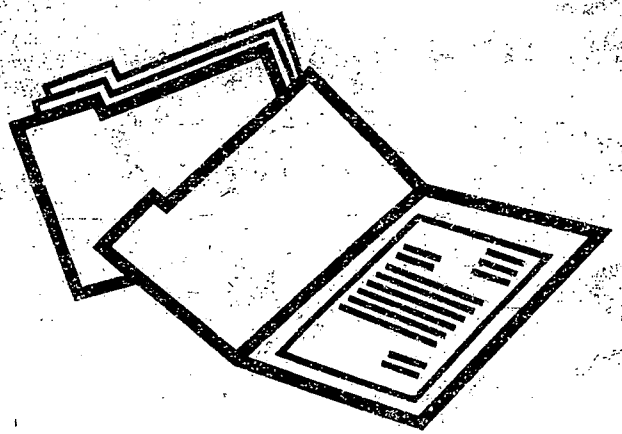


Examples include:

Water Control Structures
Livestock Exclusion
Riparian Buffers

Precision Farming Workgroup

- Began meeting in June 2005
- Workgroup Participants
  - Two NCSU Professors
    - Department of Soil Science
    - Bio. and Ag. Engineering
  - NCDA - Agronomist
  - NC Cooperative Extension Service
  - USDA-NRCS District Conservationists (2)
  - Soil and Water Conservation District Representative
  - Farmers

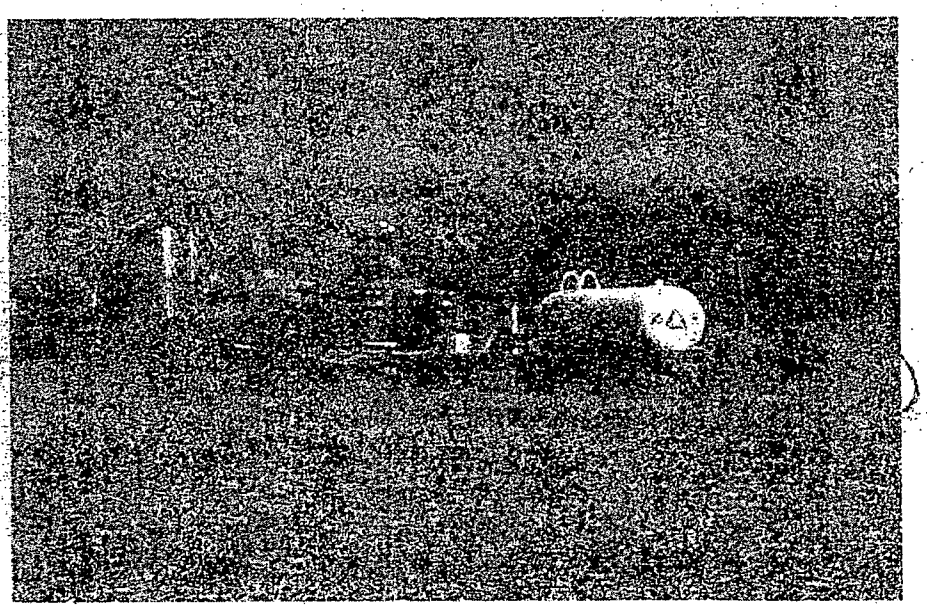


Proposed Tiered Nutrient Management Incentive

- Similar to Virginia's Multi-Layered Nutrient Management Approach
- Tier I - Nutrient Management Plans
- Tier II - Nutrient Management Plans
  + Grid Soil Sampling
  + Variable Rate Application
- Tier III – Nutrient Management Plans
  + Grid Soil Sampling
  + Variable Rate Application
  + Yield Monitoring

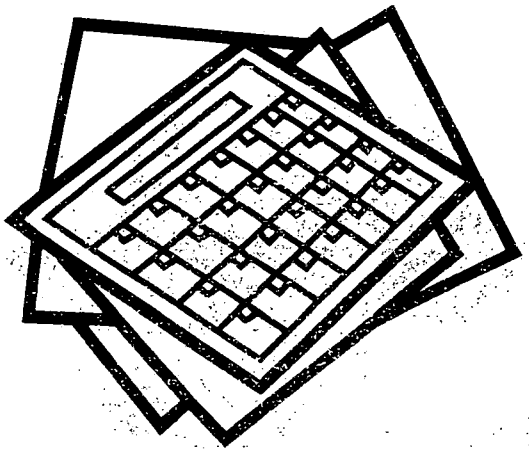
Proposed Tiered Nutrient Management Incentive

- Tier I – Nutrient Management Plans
  - Currently being implemented
  - Written plan based on realistic yield expectations, soil types and crops planted
  - Generic in terms of taking the predominant soil type of each field.



Proposed Tiered Nutrient Management Incentive

Tier II – Nutrient Management Plans
+ Grid Soil Sampling
+ Variable Rate Nutrient Application



– GPS-based grid soil sampling will provide an accurate representation of the field

–Variable rate application of nitrogen and phosphorus will further reduce excess nutrients from entering surface waters.

Proposed Tiered Nutrient Management Incentive

- Tier III – Nutrient Management Plans
  + Grid Soil Sampling
  + Variable Rate Application and
  + Yield Monitoring
  - GPS-based yield monitoring records will enable the farmer to adjust precision nutrient application plans based on the actual production of the fields instead of general recommendations based on soil type.

Next Steps

- March - Workgroup will meet again to finalize incentive cost payments
- May - Present to the Technical Review Committee
- May - Request approval by the Soil and Water Commission
- July - Available to offer to farmers
  Conduct Education and Outreach

Current TRC Workgroups

- Controlled Drainage for Tile Drains
- Water Conservation for Animal Operations
- Offsite Poultry Litter Utilization
- Abandoned Well Decommissioning
- Aquaculture BMPs
- Nursery BMPs/Integrated Pest Mgmt.
- Tailwater Recycling
- Conservation Tillage

§ 120-70.41. Commission established.

The Environmental Review Commission is hereby established.

§ 120-70.42. Membership; cochairs; vacancies; quorum.

(a) The Environmental Review Commission shall consist of six Senators appointed by the President Pro Tempore of the Senate, six Representatives appointed by the Speaker of the House of Representatives, who shall serve at the pleasure of their appointing officer, the Chair or a Cochair of the Senate Committee on Agriculture, Environment, and Natural Resources or the equivalent committee, the Chair or a Cochair of the House of Representatives Committee on Environment and Natural Resources or the equivalent committee, the Chair or a Cochair of the Senate Committee on Appropriations – Natural and Economic Resources or the equivalent committee, and the Chair or a Cochair of the House of Representatives Committee on Appropriations – Natural and Economic Resources or the equivalent committee.

(b) The President Pro Tempore of the Senate shall designate one Senator to serve as cochair and the Speaker of the House of Representatives shall designate one Representative to serve as cochair.

(c) Except as otherwise provided in this subsection, a member of the Commission shall continue to serve for so long as the member remains a member of the General Assembly and no successor has been appointed. A member of the Commission who does not seek reelection or is not reelected to the General Assembly may complete a term of service on the Commission until the day on which a new General Assembly convenes. A member of the Commission who resigns or is removed from service in the General Assembly shall be deemed to have resigned or been removed from service on the Commission. Any vacancy that occurs on the Environmental Review Commission shall be filled in the same manner as the original appointment.

(d) A quorum of the Environmental Review Commission shall consist of nine members.

§ 120-70.43. Powers and duties.

(a) The Environmental Review Commission shall have the following powers and duties:

(1) To evaluate actions of all boards, commissions, departments, and other agencies of the State and local governments as such actions relate to the environment or protection of the environment, including but not limited to an evaluation of:

a. Benefits of each program relative to costs;

b. Achievement of program goals;

c. Use of measures by which the success or failure of a program can be measured; and
d. Conformity with legislative intent;

(2) To study on a continuing basis the organization of State government as it relates to the environment or to the protection of public health and the environment, including but not limited to:
a. Improvements in administrative structure, practices, and procedures;
b. Increased integration and coordination of programs and functions;
c. Increased efficiency in budgeting and use of resources;
d. Efficient administration of licensing, permitting, and grant programs;
e. Prompt, effective response to environmental emergencies;
f. Opportunities for effective citizen participation; and
g. Broadening of career opportunities for professional staff;

(3) To make any recommendations it deems appropriate regarding the reorganization and consolidation of environmental regulatory agencies and the recodification of statutes relating to the environment, including but not limited to:
a. Ways in which agencies may operate more efficiently and economically;
b. Ways in which agencies can provide better services to the State and to the people; and
c. Instances in which functions of agencies are duplicative, overlapping, incomplete in scope or coverage, fail to accomplish legislative objectives, or for any other reason should be redefined or redistributed;

(4) To review and evaluate changes in federal law and regulations, relevant court decisions, and changes in technology affecting the environment or protection of the environment;

(5) To review existing and proposed State law and rules affecting the environment or protection of the environment and to determine whether any modification of law or rules is in the public interest;

(6) To make reports and recommendations, including draft legislation, to the General Assembly from time to time as to any matter relating to the powers and duties set out in this section; and

(7) To undertake such additional studies as it deems appropriate or as may from time to time be requested by the President Pro Tempore of the Senate, the Speaker of the House of Representatives, either house of the General Assembly, the Legislative Research Commission, the Joint Legislative Commission on Governmental Operations, the Joint Legislative Utility Review Committee, or the Joint Select Committee on

Low-Level Radioactive Waste and to make such reports and recommendations to the General Assembly regarding such studies as it deems appropriate; provided that the Environmental Review Commission shall not undertake any study which the General Assembly has assigned to another legislative commission or committee.

(b) The Environmental Review Commission may continue the study of environmental agency consolidation and reorganization. The study of environmental agency consolidation shall include, but is not limited to:

(1) Monitoring the implementation of Session Laws 1989, c. 727;

(2) Evaluation of the organization, programs, and operation of the Department of Environment and Natural Resources;

(3) Evaluation of the organization, functions, powers, and duties of the components of the Department of Environment and Natural Resources, including boards, commissions, councils, and regional offices; and

(4) Recodification of the General Statutes relating to the environment and environmental agencies.

(c) In addition to its general powers and duties, the Environmental Review Commission shall have the following powers and duties with respect to hazardous waste management:

(1) To study the current and projected need for hazardous waste treatment, storage, and disposal capacity in the State in light of anticipated generation of hazardous waste and alternatives for hazardous waste treatment and disposal;

(2) To evaluate the potential for the development of additional hazardous waste treatment, storage, and disposal capacity by the private sector;

(3) To study the necessity for and scope of hazardous waste treatment, storage, and disposal facilities which are sited, owned, or operated by the State;

(4) To review progress in securing a volunteer county to host a hazardous waste treatment facility;

(5) To study incentives and compensation for the community which hosts, either voluntarily or involuntarily, a hazardous waste treatment facility, including any additional incentives and compensation which may be needed, whether there should be differential compensation for a volunteer county, options for use of funds by local governments, distribution of compensation among local governments, and methods of providing flexibility in the development of an incentives and compensation package for a particular local community;

(6) To review progress in developing interstate agreements for the treatment, storage, and disposal of hazardous waste;

(7) To assist in the development of cooperative, comprehensive regional approach to hazardous waste treatment and disposal;

(8),(9) Repealed by Session Laws 2001-474, s. 12.

(10) To study the capacity assurance requirement under the Comprehensive Environmental Response, Compensation and Liability Act of 1980, Pub. L. No. 96-510, 94 Stat. 2767, 42 U.S.C. 9601 et seq., as amended, and the Superfund Amendments and Reauthorization Act of 1986, Pub. L. No. 99-499, 100 Stat. 1613, as amended as it relates to the continued eligibility of North Carolina for remedial actions under Superfund;

(11) To study alternatives available to the State for dealing with hazardous waste and the ramifications of those alternatives; and

(12) To receive and evaluate reports of every State agency, board, and commission which has any power or duty with respect to hazardous waste management.

§ 120-70.44. Additional powers.

The Environmental Review Commission, while in the discharge of official duties, may exercise all the powers provided for under the provisions of G.S. 120-19, and G.S. 120-19.1 through G.S. 120-19.4. The Environmental Review Commission may meet at any time upon the call of either cochairman, whether or not the General Assembly is in session. The Environmental Review Commission may meet in the Legislative Building or the Legislative Office Building upon the approval of the Legislative Services Commission.

Notwithstanding any rule or resolution to the contrary, proposed legislation to implement any recommendation of the Environmental Review Commission regarding any study the Environmental Review Commission is authorized to undertake or any report authorized or required to be made by or to the Environmental Review Commission may be introduced and considered during any session of the General Assembly.

§ 120-70.45. Compensation and expenses of members.

Members of the Environmental Review Commission shall receive subsistence and travel expenses at the rates set forth in G.S. 120-3.1.

§ 120-70.46. Staffing.

The Legislative Services Officer shall assign as staff to the Environmental Review Commission professional employees of the General Assembly, as approved by the Legislative Services Commission. Clerical staff shall be assigned to the Environmental Review Commission through the offices of the Supervisor of Clerks of the Senate and Supervisor of Clerks of the House of Representatives. The expenses of employment of clerical staff shall be borne by the Environmental Review Commission.

§ 120-70.47. Funding.

From funds available to the General Assembly, the Legislative Services Commission shall allocate monies to fund the work of the Environmental Review Commission.

MINUTES
ENVIRONMENTAL REVIEW COMMISSION
14 AND 15 MARCH 2006

The Environmental Review Commission (ERC) met on Tuesday 14 March 2006 at 1:00 p.m. in the Multi-Purpose Conference Room of the Education Building of the North Carolina Zoological Park south of Asheboro, North Carolina. Representative Gibson presided. In addition to the formal meeting, field trips to sites in Montgomery County were included on 14 March and a tour of the zoo on Wednesday 15 March.

The following members were present: Senators Albertson, Forrester, and Dorsett; and Representatives Gibson, Hackney, Harrison, and Warren. In addition, Representative Laura Wiley and Senator Stan Bingham attended as invited guests. Mr. George Givens, Commission Counsel; Mr. Jeffrey Hudson, Assistant Commission Counsel; Mr. Tim Dodge, Commission Analyst; and Ms. Dot Waugaman, Commission Clerk, were also present.

On 17 February 2006, notice was sent to members and interested parties via e-mail and regular mail. A copy of the notice and a copy of the Itinerary for the two day meeting are included in the attachments to these minutes as **Exhibit A**. Copies of the agenda for the meeting and visitor registration sheets are included in the attachments as **Exhibits B** and **C**.

During lunch, which preceded the formal meeting, the members of the Commission heard remarks by Dr. David M. Jones, Director of the North Carolina Zoological Park (see **Exhibit D** for a copy of his speech). Dr. Jones mentioned that the zoo sees about 20 percent of all 2- to 12-year-old children living in North Carolina every year. The zoo plans a major center focusing on the young child, to give them a range of outdoor experiences in a safe setting. He said the zoo would request a $1.5 million capital appropriation for the $3 million cost of the center. One of the other points he stressed is that the zoo is a peculiar organization within state government, and many of the procedures for procurement, while helpful to most of state government, hinder their ability to make the kind of arrangements and purchases needed. He suggested it might be more appropriate to make the zoo a satellite operation, following state rules closely in terms of administrative processes, but under its own board of governance and reporting once a year on the way state granted funds were spent.

After a short break, Representative Gibson welcomed the members and audience to the formal meeting of the ERC. He recognized Mr. Givens for his comments. Mr. Givens reported that the planning meeting for this meeting was held on Thursday 2 March. He indicated to members there was a packet of reports at their tables. All reports refer to the meeting's agenda items (see **Exhibit E** and **E-1** through **E-4**). He referred to the scheduled working group meetings on the Agenda. He announced the next meeting of the ERC will be Tuesday 11 April and Wednesday 12 April in Room 544 of the Legislative Office Building. Among the agenda items will be responses to the report by Dr. Williams made on Wednesday 8 March about animal waste management, the Water 2030 Initiative, several reports on mercury drycleaning, litter, the EMC quarterly report, and the new Drinking Water Reservoir Act. Two agenda items were deleted from the notice for today's meeting: a report on agriculture development and farmland preservation, and a report on the Dorothea Dix campus.

Representative Gibson announced the events to be held following the formal meeting. There will be a nature walk in the Roy Maness Nature Preserve, a visit to Montgomery Community College, and dinner at the Blair House Bed and Breakfast. The tour of the zoo tomorrow morning will be special.

Representative Gibson recognized Mr. Lewis Ledford, Director, Division of Parks and Recreation, Department of Environment and Natural Resources (DENR) to give the annual report on allocations from the Parks and Recreation Trust Fund (see **Exhibit E-1**). Mr. Ledford reported that 13 million visitors come to State Parks in a year. There are over 185,000 acres of land in the park system. The Parks Authority is composed of an 11-member board, chaired by the former Secretary of DENR, Mr. Jonathan Howes.

Representative Hackney asked about the acquisition of the Summit Center. Mr. Ledford replied the Council of State had approved the acquisition. The facility was acquired to provide a place to conduct environmental education. The Center is a former Episcopal retreat center north of Brown Summit.

Representative Gibson recognized Ms. Lisa Riegel, Executive Director of the North Carolina Natural Heritage Trust Fund, DENR, to present the annual report on allocation from the Natural Heritage Trust Fund for the prior fiscal year (see **Exhibit E-2** for a copy of the annual report and **Exhibit F** for a copy of her PowerPoint presentation). The difference between the revenue of $21 million in income and the $28 million in occurred because of two factors. The first is that there were $2.8 million in grants from a previous year that were returned because the land sales were not completed, and the second is certificates of participation in the amount of $5.8 million were used on military buffer game land. The Fund partners with many different entities to expand the utility of the dollars in the fund.

Representative Gibson recognized Mr. William Holman, Executive Director of the Clean Water Management Trust Fund (CWMTF), to present the annual report on the implementation of the CWMTF and options for stewardship of permanent conservation easements acquired by the Fund (see **Exhibit G** for a copy of the Trust Fund's 2005 Annual Report, **Exhibit G-1** for a fact sheet on the CWMTF, **Exhibit G-2** for an annual report brochure, and **Exhibit H** for a copy of his PowerPoint presentation). Representative Gibson asked Mr. Holman to explain the coordination between the CWMTF and other trust funds. Mr. Holman replied that boards of trustees and staff of the three trust funds (Parks and Recreation, Natural Heritage, and Clean Water Management) and the Wildlife Commission and some of their partners had met on 2 and 3 March to look for ways to improve their communication, cooperation and coordination. There is a high degree of communication between the staffs of the three trust funds; however, they agreed it is important to involve the boards of trustees in that communication as well. They are planning another similar conference next year to keep the lines of communication working well.

In the 2005 session, House Bill 1095 was passed to set some common criteria for state investments in wastewater and stormwater projects. It abolished the old State Infrastructure Commission and created a new State Water Infrastructure Commission. The CWMTF board is requesting a one year postponement in implementation of the legislation as it applies to the CWMTF because of the timing of preparation of requests for funds. The information about applying for grant funds on the CWMTF website could not reflect the new legislation before time to prepare requests. Mr. Holman said he would be coming to the General Assembly in the 2006 session to request the postponement.

Mr. Holman told Commission members the CWMTF Board of Trustees had adopted a resolution endorsing the Land for Tomorrow initiative. Jean Crews-Klein, Vice President of the Rural Center, spoke to the CWMTF board of trustees about the Rural Center's Water 2030 project, which concerns the water/ wastewater/stormwater infrastructure in the State. Mr. Holman commented that the CWMTF has interests in both land conservation and water infrastructure. A final issue is with local government wastewater projects to get the benefits for the unit to have the power to require parties to connect to water or sewer sservice. Most municipalities have that power, but some do not. He said the CWMTF would like to work with the General Assembly and those municipalities to clarify their situations.

Mr. Holman also discussed the stewardship of conservation easements. He mentioned that Governor Easley has appointed Mr. Phil Baddour to the CWMTF board. Mr. Baddour is very interested in the military protection issue, and has also taken an interest in the stewardship of conservation easements. In acquiring a conservation easement, a private land owner earns a fee, and although they maintain some of their rights over the property, they sell their development or timber rights to the State. That area is then used to become a riparian buffer for water quality purposes. The private land trusts bring projects to the CWMTF, but it is the land trust that has the relationship with the landowner to acquire easements on behalf of the State. The land trust assumes a perpetual responsibility to assure the property is maintained as required by the easement. The question is what is the best way to pay for the maintenance? In the past, the CWMTF process has been to require the easement to provide a lump sum to the land trust to be put in a permanent account and to use the interest from the account to pay for the monitoring. The CWMTF, after wrestling with the issue for two years, has developed six strategies, listed

on page 10 of Exhibit G. At the January meeting, the Board decided they would prefer to continue to pay for stewardship at closing. The Board also wants to be sure the land trust does not have control of the money so some third party would be available if the land trust failed to live up to its responsibility.

Representative Gibson reminded presenters to have any legislative proposals they wanted discussed in the short session to staff before the beginning of May for staff to prepare drafts for consideration at a meeting prior to the beginning of session.

Mr. Givens asked if HB 1095 applied to the Rural Center as well as the CWMTF. Mr. Holman replied it applied to DENR and CWMTF, but not to the Rural Center. The money appropriated for the Rural Center is for economic development. The money that is similar to CWMTF's and DENR's funds is in supplemental accounts. Mr. Givens also asked if other programs have the same issues with stewardship programs. Mr. Holman replied that others do, naming specifically the One North Carolina Naturally program.

Representative Gibson recognized Mr. Richard Rogers, Director, Office of Conservation and Community Affairs, DENR, to present the annual report on implementation of the Conservation Easements Program and inventory of all conservation easements held by DENR (see **Rchibit E**-3 for the Million Acre Report, **Exhibit E**-4 for the Conservation Easement Report, Exhibit **I** for a copy of his PowerPoint presentation and **Exhibit J** for a brochure about the program). Mr. Rogers told the Commission members the one of the responsibilities of the Office is to develop an innovative coordinated conservation plan for North Carolina. Their main effort has been to develop a conservation map to enable a look at all focused conservation efforts and funding possibilities across the State. Focus areas are determined from the resource agencies such as Wildlife Resources Commission, the Natural Heritage Program, the Parks and Recreation Program, and the Forestry Department. Members of his staff have also spoken with people in several regions in the state about their interest in the type of conservation they want: agricultural land, park land, trails or greenways. The information has been digitized and placed on a map. There is also an interactive map on the Office of Conservation and Community Affairs website at http://www.onencnaturally.org/pages/mapviewer.html for use by regional and local government planners.

The Conservation Grant Fund was given $1 million through Senate Bill 1117 for the protection of military encroachment areas around military bases, not to purchase land itself, but can to facilitate the acquisition of land by paying for transaction costs, surveys, and the like, the costs of which might be barriers to making acquisition deals.

Mr. Rogers reiterated the point made previously by Mr. Holman that there needs to be a program implemented to manage the easements the State has acquired. Other programs that could be combined into an easement management program include the Conservation Reserve Enhancement Program (CREP), the Conservation Tax Credit Program (CTCP), and Ecosystem Enhancement Program (EEP).

Senator Albertson asked if the program has any funds for easement maintenance and enforcement at this time. Mr. Rogers replied his Office has set up a memorandum of agreement (MOA) with EEP Fund's 67 properties in which they set aside $17,000 per property for management of the property in perpetuity. The Office will invest that money and use 5 percent from the investment for management.

Mr. Rogers asked to have Senate Bill 521 passed during the 2006 session and requests that the ERC endorse the bill. The provision for pass-through entities for corporate donations is scheduled to sunset at $250,000 for each individual in an S corporation or partnership in January of 2007. The Office requests the amount be changed to a cap of $500,000 per entity. He would like to expand the corporate incentive to donate by expanding it from income tax to include franchise tax as well. He commented that many people who would like to participate by giving land for conservation do not have the tax liability to utilize a tax credit; therefore they would like the tax credit to be refunded to them in cash.

Senator Forrester asked how Florida is doing on their million acre plan. Mr. Holman said that Florida invests about $300 million a year. They have met their first million acre goal and are starting on the second.

Mr. Rogers commented there are many pressures on farmers to leave farming, including the tobacco buyout and the aging of the farmers. He said the Farm Bureau is working on a farm land transition program. Mr. Rogers added that his office has a working lands program, the focus of which is to look at programs to help farmers sustain themselves and stay on the land—such as the Agriculture Cost Share Program, expansion of the CREP Program, and the Forest Development Program. He said the State will not have to match the development programs 100 percent, because the farmers want to stay on the land if the State can give them a reasonable opportunity to take advantage of the programs.

Representative Hackney commented that he is concerned about the request for refundability, particularly if it is not accompanied by more selective criteria. Mr. Rogers replied that the property is reviewed by the Tax Credit Program to see if it meets the criteria of the Program, so the State will not be buying land that does not fit the criteria. He added that the donors would have six years to utilize the tax credit which is 25 percent of the value of the land. In the last three years the 50 percent of the unused credit of 25 percent of the land's value would be refunded.

Representative Wiley (visitor) asked if North Carolina is giving tax incentives to developers to make conservation neighborhoods. Mr. Rogers said the conservation tax credit could apply to that situation. Senator Bingham (visitor) asked about the match of the corporate income tax deductions with the individual deductions. Mr. Rogers replied that there is a pass through entity established for S Corporations and partnerships in which each partner could take the maximum individual deduction. He added that there is legislation in place that will limit that to $250,000 per partnership or S Corporation. He believes it is more appropriate to give the $500,000 deduction to each entity, no matter how many partners involved in the business. Senator Bingham asked if that approximates what other states are doing. Mr. Rogers replied that North Carolina's tax credit program is out in front of other statesand our program is used as a model for other states.

Mr. Givens asked how many different state programs are in the business of acquiring permanent easements for conservation. Mr. Rogers replied that all the resource management agencies have the authority to acquire them (Forest Service, Wildlife Resources, Soil and Water, CREP, and the CTCP). Mr. Givens asked Mr. Rogers if anyone is looking at a centralized mechanism to enforce easements. Mr. Rogers replied his office is trying to build a program that can expand to include other State programs, so all the easements will be managed from one location. He said the State Property Office gets to see all the easements the state acquires because they are involved in the process, and they have a database to track them. The Office of Conservation and Community Affairs is working with the State Property Office to assure they have all the information they would need to manage all the State's easements..

Representative Gibson recognized Mr. Abdul Sm Rasheed, Chief Officer, NC Community Development Initiative, and Steering Committee Member, Land for Tomorrow, to discuss how land conservation and historic preservation can support economic and community development (see **Exhibit K** for a copy of his PowerPoint presentation, **Exhibit L** for a sheet describing the mission and program of Land for Tomorrow, **Exhibit M** for an executive summary of the five-year plan for investing in North Carolina's land, water, history and future, and **Exhibit N** for a brochure, entitled "Saving the Goodliest Land." He reported that the coalition of Land for Tomorrow advocates giving the public a chance to vote for additional state funding of $200 million per year for five years to protect the places that matter to North Carolina's citizens and communities.

Mr. Rasheed highlighted a new initiative called "Landing Jobs", and asked to have Dr. Nancy Gottovi, Executive Director of the Yadkin-Pee Dee Lakes Project, a partnering organization in Land for Tomorrow, speak about a program the Landing Jobs initiative could support called the Central Park of North Carolina (see **Exhibit O** for a brochure of FAQ's, **Exhibit P** for a brochure on the Uwharrie Lakes Byway in the proposed Central Park, **Exhibit Q** for a strategy flow chart for the Central Park Strategy, **Exhibit R** for an information sheet on the Central Park, and **Exhibit S** for the Yadkin Pee-Dee Lakes

Project annual report for 2005). Dr. Gottovi said rural economic development is closely tied to the national economic structure, but ultimately the work of rural economic development is a local issue. Strategies for developing rural areas have included incentives to entice new industry and small business incubators. Newer ideas in rural economic development have focused on cluster business development, businesses that produce similar kinds of products and share a common market. More recently, economic development has been focusing on the development of small business entrepreneurs. Businesses that have 10 or fewer employees create more jobs across the United States than any other kind of business. The successful strategies focus more on long term solutions rather than just the number of jobs created. They take into account the quality of the area's environment, the sustainability to keep productive working lands working, and even social equity, rather than just numbers of jobs created within a given time period. Studies of rural business sector development have shown there is no single formula for success. What works is having a well thought out strategy.

The Yadkin-Pee Dee Lakes Project has created such an innovative strategy. The Project is working with the University of North Carolina at Charlotte's Belk School of Business and Appalachian State's Tourism and Outdoor Recreation Program to develop North Carolina's Central Park. The seven counties comprising the park include Anson, Montgomery, Davidson, Richmond, Rowan, Randolph and Stanly. The project will develop a rural green area of farmland, mountains, rivers and lakes within an easy drive of nearly 5 million urban residents of the State. It will create a new economy based on the natural and cultural resources of the area. The UNC-Charlotte Belk School of Business said that if the creation of the park is a success, by the year 2025, 25,000 new jobs will have been created above the number that would be expected to be created. The economic impact would be $2 billion annually. It means not bringing any more tourists to the region; it means making it possible and desirable for the tourists who are coming already to spend the night in the region.

Dr. Gottovi told the members there is a funding bill for the Central Park, House Bill 1577, sponsored by Representatives Melanie Goodwin, Arlie Culp and Pryor Gibson. She asked for Commission members to support their funding request.

Representative Gibson recognized Mr. David Knight, from the Nature Conservancy, one of the members of the Steering Committee of Land for Tomorrow to explain the legislative request of Lane for Tomorrow. Because of the great need for funds to protect the environment through the various programs discussed during the meeting, Land for Tomorrow supports the requested legislation that would put a bond referendum on the ballot this November to provide funds in the amount of $1 billion ($200 million a year for five years) for "saving the goodliest land."

Representative Hackney asked about how Land for Tomorrow would see the State paying for service on the bonds. Mr. Knight said they recommend having a line item for debt service in the budget as has been done for education and transportation bonds in the past. However, they are open to working with the General Assembly to figure out how to do it if there is another way they prefer.

Representative Gibson recognized Mr. Reid Wilson, Executive Director, Conservation Trust of North Carolina, to comment on open space preservation needs and opportunities for the 23 land trust across the state (see **Exhibit T** for a copy of his PowerPoint presentation). The land trusts have worked with willing landowners to protect over 200,000 acres of forests, wetlands, farms, streams, scenic views, and more. The Conservation Trust is a resource center to the local land trusts to enable them to protect more land in the communities they serve. The land trusts in North Carolina are very sophisticated and well thought of nationally. The money made available to the trusts by the General Assembly is well spent. The EEP is managed by the Conservation Trust. It was created two years ago to help the Department of Transportation (DOT) obtain mitigation credits for damage done to streams and wetlands during road construction. North Carolina uses the preservation of high quality areas to compensate for road construction damage. Most other states use only the restoration of other damaged places to compensate for road construction damages. In less than two years, the land trusts have protected properties that border 190 miles of streams and include 2,000 acres of wetlands. He pointed out **Exhibit U**, a report on the preservation partnership between the State and the land trusts.

A number of land trusts have applied to the Natural Heritage Trust Fund through different State agencies. The Farmland Preservation Trust Fund is currently not funded, although over a four to five year period, the fund spent a little over $2.5 million to put conservation easements on 33 farms in North Carolina, totaling over 4400 acres. That process leveraged $26 million either in funding from other government programs or in value of donated conservation easements on those farms. The Tobacco Trust Fund Commission has become more involved in conservation efforts by funding the purchase of easements and by funding ten land trusts to provide outreach to tobacco buyout participants.

When there is an easement on property, it is usually co-held by CMWTF and the local land trust. The land trusts take their responsibility to monitor the properties every year very seriously to be sure the conservation value is intact. They are also serious about taking enforcement steps if easements are violated. They are pleased to be working with Mr. Rogers and others at DENR to put together a stewardship enforcement management program for all the easements they have. It is also important to know that the National Land Trust Alliance is conducting an accreditation process for all land trusts. An important piece of the accreditation is being sure the land trusts are monitoring and enforcing easements.

The highest priority of the land trusts this year is passage of legislation to put the Land for Tomorrow bond referendum on the ballot in November of this year. There is a great need for land protection funding and the land trusts believe bonds are the best way to get it. The longer it takes to raise the money, the more expensive the land will be. The land trusts are very involved at the local level organizing a grass roots campaign for the bonds. Their second priority is full funding of the existing trust funds.

The land trusts appreciate the General Assembly's efforts two years ago to fend off attempts to alter with the funding mechanism for the Natural Heritage Trust Fund and the Parks and Recreation Trust Fund. Mr. Wilson thanked Representative Harrison for her leadership in securing funding for starting up a new advisory committee for the Farmland Preservation Trust Fund. He commented that providing some conservation options for farmers may be a way to help them hold onto their farm.

The third legislative priority concerns present use value. The land trusts support House Bill 1722, introduced by Representatives Hackney, Brubaker, Gibson and Harrison. The purpose of the present use value tax program is to allow landowners to put a conservation easement on their property to remain in the present use value tax program. However, because the Department of Revenue has determined in order for someone to be eligible for the present use value tax program, 100 percent of the easement must be donated. Mr. Reid said that was never the intent of the authorizing legislation, so the land trusts are trying to get the issue clarified such that eligibility for an easement begins with 25 percent. The land trusts also want to set up a new category of present use value for wildlife and conservation purposes. Finally, they want to maintain the property tax exemption for land trusts on conservation properties they own. They have found that some local governments exempt properties for science and research, but not other benefits such as conservation.

Their fourth priority concerns conservation tax credits. The first would authorize some limited refundability as described by Mr. Rogers and establish the maximum tax credit taken by a pass through entity to be $500,000, again as Mr. Rogers described above. Mr. Reid said he would get the proposal to staff before the last ERC meeting prior to session.

Senator Albertson commented he would like to have a discussion about finding ways to better coordinate the land trusts.

Representative Gibson recognized Mr. Derb Carter, Director of the Carolinas Office, Southern Environmental Law Center, and congratulated him on his new appointment as Director. Mr. Carter discussed the proposed sale by the U. S. Forest Service of lands in the National Forest System as part of the Secure Rural Schools Forest Service FY 2007 initiative, including the proposed sale of 9,828 acres of Forest Service lands in North Carolina.

The program originated almost 100 years ago when Congress passed a law to provide payments to counties with national forests. The payment was 25 percent of the timber receipts and it was to be used for rural schools and roads. The idea arose because the national forests do not pay local taxes, and this was the federal government's way of replacing that source of revenue. The program remained in its current form until 2000. In the 1980s and 1990s, timber sales from national forests fluctuated greatly, raising a concern about the unsteady source of income for schools. In 2000, Congress passed the Secure Rural Schools Program to provide for a guaranteed amount of income to those counties based on the highest three-year average from the preceding 15 years trying to stabilize funding for rural schools and roads.

The new budget proposal put out by the Bush Administration a few weeks ago, proposes to phase out the guaranteed payment program over five years. The proposal is to sell a third of a million acres of national forest land to create money to fund the phase-out. It would mean a sale totaling almost 10,000 acres in North Carolina from in each of our four national forests (see **Exhibit V** for maps of North Carolina showing the parcels of land that would be sold, along with some general information about editorial response to the idea and a list of states, acres for sale, and 2006 allocations (in millions of dollars). There is strong opposition to the program from both political parties. The amount to be paid to North Carolina is miniscule in comparison with what other states would get. The Nantahala National Forest would lose 3835 acres, the Pisgah National Forest would lose 2780 acres, the Uwharrie National Forest would lose 2317 acres, and the Croatan National Forest would lose 895 acres.

When national forests were created, the land in North Carolina was not withdrawn in its entirety from the public domain as occurred in the West where there were large contiguous blocks of land. In the East, boundaries of the national forests were drawn and the federal government has spent decades buying land to build the forest to the boundaries. Page 2 of Exhibit V has a report of the acres proposed to be sold in each state, and the amount of money to be allocated to each state. A comparison with Oregon shows Oregon has just over 10,000 acres to be sold; North Carolina has just under 10,000 acres to be sold. In return, North Carolina would get $1, 010,791; Oregon would get $162, 825,661. Not only would that set back the effort to protect land and build on the national forest base in North Carolina, but North Carolina is getting short-changed significantly in terms of the money that would be generated once the land is sold.

Representative Gibson recognized Mary Joan Pugh, Chief of Staff, North Carolina Zoological Park, DENR, and Member, Greater Uwharrie Conservation Partnership, also to speak on the proposed sale by the U. S. Forest Service of lands in our national forest, specifically in Uwharrie National Forest (see **Exhibit W** for a copy of her speech). Randolph County gets $12,500 in fees in lieu of taxes from the national forest and about $12,500 for rural schools. Montgomery County gets about $100,000 total. Even the staff of the Forest Service from Asheville had no idea about sale of the forest lands. Part of the Uwharrie National Forest was part of the Piedmont Ecoregion, an area from Maryland to Alabama developed by The Nature Conservancy. The North Carolina portion of the ecoregion is the heart of it because of the high biodiversity on the land. Ms. Pugh said it is hard to manage widely scattered parts of the forest, but instead of selling some of it off, land should continue to be purchased.

Senator Forrester moved that the Commission send a letter to North Carolina's congressional delegation, the President, and the Secretarys of the Interior and Agriculture in opposition to the proposal. Senator Albertson seconded the motion. The motion carried. Senator Dorsett suggested the letter include information about the uniqueness of each of the forests.

The formal meeting adjourned at 4:00 p.m. At the conclusion of the formal meeting, Commission members and staff boarded buses for a trip to Troy in Montgomery County to walk along a path following the Denson Creek. The creekside land has been preserved for several miles. A series of dams on the creek has created the water supply for the town of Troy. The walk ended in an area to be developed as the Roy Maness Nature Park. We then boarded the buses to drive to Montgomery Community College where we learned about pottery making from Mr. Mike Ferree and some of his pottery students. Some threw pots; the rest decorated and glazed pots using the Raku technique. We boarded the buses again and drove to Troy to the Blair House Bed and Breakfast for a delicious catered dinner in a beautiful

setting. After dinner, we returned to the College, watched some of the pots coming out of the kiln, picked up our pot or pots and cleaned the ashes from them. We were then driven back to the Zoo parking lot, and left for our hotels.

The next morning at 8:30, we gathered once again at the Zoo for a behind the scenes tour (see **Exhibit X** for a briefing document on zoo plans). We visited the picnic area (developed ecologically to meet zoo needs), the temporary Australian exhibit that will be removed the end of this year and replaced with an exhibit for children to discover nature and play, experienced the 4-D Simex Theatre called "Deep Sea", examined the Carousel, had a snack at a food stop, visited the workshops where exhibits are created and repaired, visited the old rhinoceros and elephant house and the construction of the new elephant habitat, all the while looking at the animals along the way. The tour and our Commission site visit ended shortly before noon.

See **Exhibit Y** for a pictorial and short written report of our visit to Montgomery County from the 22 March 2006 edition of the *Montgomery Herald.*

RE: **Commission Meetings**
Planning Meeting

COMMISSION MEETING – 8 March 2006

The Environmental Review Commission (Commission) will meet at 9:30 a.m. Wednesday 8 March 2006 in Room 544 of the Legislative Office Building in Raleigh. At the 8 March meeting, the Commission will hear a report on issues related to the evaluation of alternative animal waste management technologies to determine whether those technologies are environmentally superior and economically feasible, as well as reports from State agencies related to water quality and animal waste management. A formal meeting notice will be forthcoming.

COMMISSION MEETING – 14 and 15 March 2006

The Commission will meet at the North Carolina Zoological Park in Asheboro, North Carolina, on Tuesday 14 March and Wednesday 15 March 2006. This meeting will focus primarily on various matters related to parks and recreation, land conservation, and open space preservation and will be held in connection with a tour of the Zoological Park and other site visits in the area on those days. A formal meeting notice, including a detailed itinerary for the meeting and site visits will be forthcoming. For planning purposes, the Commission Clerk will be contacting members of the Commission over the next week to determine their availability for the meeting and site visits. Information on accommodations will also be forthcoming.

PLANNING MEETING:

To facilitate development of the agenda for the 8 March and the 14 and 15 March meetings of the Commission, to plan for subsequent meetings of the Commission, and to receive input from interested persons regarding the work of the Commission, the Commission Counsel will hold an informal planning meeting at **10:00 a.m. on Thursday 2 March 2006 in Room 605 of the Legislative Office Building**. Persons who wish to participate in the development of the agenda for meetings of the Commission, or who are interested in any matter before the Commission, are invited to attend.

ADDITIONAL INFORMATION:

If you have questions related to the Commission, please feel free to contact the Commission Counsel or other Commission staff at (919) 733-2578.

ENVIRONMENTAL REVIEW COMMISSION
NORTH CAROLINA ZOOLOGICAL PARK MEETING AND SITE VISITS
TUESDAY 14 AND WEDNESDAY 15 MARCH 2006

ITINERARY

Meeting location: The Multi-Purpose Conference Room at the North Carolina Zoological Park in Asheboro, North Carolina. Directions to the Multi-Purpose Conference Room are provided at the end of this document.

Tuesday 14 March 2006

Lunch in the Multi-Purpose Conference Room — **12:00 p.m. to 1:00 p.m.**
with Remarks by Dr. David M. Jones,
Director of the North Carolina Zoological Park
(General Assembly members and staff)
Hosted by the North Carolina Zoological Society

Commission business meeting – Multi-Purpose Conference Room — **1:00 p.m. to 4:00 p.m.**

Site Visit to Roy Maness Nature Preserve — **4:00 p.m. to 5:30 p.m.**
(General Assembly members and staff)
Hosted by Roy Maness, Mayor of Troy, NC
(Buses will be provided for transportation to the site
courtesy of Montgomery County Schools and
Robert Gilman, Executive Director Auxiliary/Student Support Services)

Field Trip to Montgomery Community College (MCC) — **5:30 p.m. to 6:30 p.m.**
for Earthenware Demonstration
(General Assembly members and staff)
Hosted by Gelynda T. Capel, Chairman, MCC Board of Trustees
Mike Ferree, Pottery Director

Dinner at the Blair House Bed and Breakfast — **6:30 p.m. to 8:00 p.m.**
(General Assembly members and staff)
Hosted by Roy Maness, Mayor,
Greg Zephir, Town Manager,
and others from Troy, NC

Return to MCC for Pottery Kiln Opening — **8:00 p.m. to 9:00 p.m.**
(General Assembly members and staff)
(Buses will be provided for transportation
to return to the Zoo Parking Lot
courtesy of Montgomery County Schools and Robert Gilman)

Wednesday 15 March 2006

Breakfast at Holiday Inn -- (General Assembly members and staff) — **7:30 a.m. to 8:30 a.m.**
(On your own)

Tour of Zoological Park -- (General Assembly members and staff) — **8:30 a.m. to 12:00 p.m.**

Other Information:

Dress for the Commission's business meeting, site visits, and dinner on 14 March will be casual.

Dress comfortably and wear comfortable shoes for the site visits on 14 March and the tour of the Zoological Park on 15 March. Also, remember to bring sunglasses and sunscreen.

Please notify Commission staff in advance if you will be accompanied by a spouse, companion, or children, and if you have any special dietary needs.

Directions to the Multi-Purpose Conference Room at the North Carolina Zoological Park:

The Multi-Purpose Conference Room is located within the W. David Stedman Education Center/Zoo Society and Offices at the North American Entrance to the Zoo.

Directions to the Holiday Inn Express Hotel & Suites, Asheboro:

From the Zoological Park, exit the Zoo and return to Interstate 64. At Interstate 64 (E. Dixie Drive) turn right and proceed approximately .4 miles.

Hotel Information:
Holiday Inn Express Hotel & Suites
1113 E. Dixie Drive, Asheboro, 27203

AGENDA

1:00 p.m. Tuesday 14 March 2006
Multi- Purpose Conference Room
North Carolina Zoological Park
Asheboro, North Carolina

1. Call to order
   Representative Pryor A. Gibson, Presiding

2. Introductory remarks by Cochairs
   Representative Pryor A. Gibson
   Senator Charles W. Albertson
   Senator Daniel G. Clodfelter

3. Report to the Commission and explanation of agenda items
   George F. Givens, Commission Counsel

4. Annual report on allocations from the Parks and Recreation Trust Fund from the prior fiscal year (G.S. 113-44.15(c))
   Lewis R. Ledford, Director
   Division of Parks and Recreation, Department of Environment and Natural Resources (DENR)

5. Annual report on allocations from the Natural Heritage Trust Fund from the prior fiscal year (G.S. 113-77.9(e))
   Lisa D. Riegel, Executive Director
   North Carolina Natural Heritage Trust Funds, DENR

6. Annual Report on implementation of the Clean Water Management Trust Fund (G.S. 113-145.6A(a))
   William E. Holman, Executive Director
   Clean Water Management Trust Fund

7. Options for Stewardship of Permanent Conservation Easements Acquired by the Clean Water Management Trust Fund
   William E. Holman, Executive Director
   Clean Water Management Trust Fund

8. Report on the One North Carolina Naturally conservation initiative
   Annual report on implementation of the Conservation Easements Program and inventory of all conservation easements held by DENR (G.S. 113A-235(c))
   Richard E. Rogers, Jr., Director
   Office of Conservation & Community Affairs, DENR

   Annual report on progress towards attaining the State's goal of protecting one million acres of farmland, open space, and conservation lands (G.S. 113A-241(c))
   Richard E. Rogers, Jr., Director
   Office of Conservation & Community Affairs, DENR

9. Presentation by Land for Tomorrow on how land conservation and historic preservation can support economic and community development
   Abdul Sm Rasheed, Chief Executive Officer
   NC Community Development Initiative; Steering Committee Member, Land for Tomorrow

   Nancy C. Gottovi, Executive Director
   Yadkin-Pee Dee Lakes Project

10. Comments by the Conservation Trust of North Carolina on open space preservation needs and opportunities
    Reid Wilson, Executive Director
    Conservation Trust of North Carolina

11. Discussion of the proposed sale by the U.S. Forest Service of lands in the National Forest System as part of the Secure Rural Schools Forest Service FY 2007 Initiative, including the proposed sale of 9,828 acres of Forest Service lands in North Carolina
    Mary Joan Pugh, Chief of Staff
    North Carolina Zoological Park, DENR;
    Member, Greater Uwharries Conservation Partnership

    Derb S. Carter, Jr., Director, Carolinas Office
    Southern Environmental Law Center

12. Commission discussion and announcements

13. Adjourn

SCHEDULE OF FUTURE MEETINGS:

Below is a schedule of meetings of the Commission for March 2006 through May 2006. This schedule is tentative and subject to adjustment. To facilitate development of the agenda for meetings of the Commission and to receive input from interested persons regarding the future work of the Commission, the Commission Counsel holds informal planning meetings for staff and interested parties. The schedule of these public Commission staff planning meetings is also set out below.

Wednesday 15 March 2006 – Tour of Zoological Park
Time: 8:30 a.m.

Tuesday 11 April and Wednesday 12 April 2006
Location: 544 LOB / To be determined
Staff Planning Meeting: 2:00 p.m. Monday 3 April 2006 – 605 LOB

Wednesday 3 May 2006
Location: 544 LOB
Staff Planning Meeting: 10:00 a.m. Thursday 27 April 2006 – 605 LOB (This meeting will also serve as the Commission staff planning meeting for the Commission meeting scheduled for 8 May 2006.)

Monday 8 May 2006
Location: 544 LOB

OTHER MEETINGS:

The Commission Counsel will hold meetings of interested parties on specific topics as indicated below:

Phase II Stormwater Management Working Group
10:00 a.m. Friday 10 March 2006 – 605 Legislative Office Building
10:00 a.m. Wednesday 22 March 2006 – 605 Legislative Office Building
10:00 a.m. Monday 3 April 2006 – 605 Legislative Office Building

Risk-Based/Limit Liability for Environmental Cleanups Working Group (HB 1778/HB 1099/SB 1121)
2:00 p.m. Friday 17 March 2006 – 605 Legislative Office Building
2:00 p.m. Monday 10 April 2006 – 605 Legislative Office Building

ADDITIONAL INFORMATION:

Persons having questions about the Commission meeting or other matters related to the Commission may contact Commission Counsel or other Commission staff at (919) 733-2578.

Presentation to the Environmental Resources Commission
March 14, 2006

Speech

Ladies and Gentlemen, a very warm welcome to the Zoo. We are pleased and honored that you are here. While recognizing that you have much on your agenda today, the meeting gives me an opportunity to tell you a little of what we are doing at the Zoo, some of our recent achievements and at the same time, tell you about some of the challenges that we face and how you can help us.

To an outside observer, the siting of the Zoo in Asheboro in the late 60s might have seemed an odd decision. After all most sizeable Zoos in the country reside in city center parks and often within half an hour's travel of several million people. However, if we look at the current growth patterns around the State- with a 50% rise in population predicted by the middle of the century, mainly in the 150-mile urban arc from Charlotte to Raleigh, you begin to see that this central rural position with 1500 acres was in fact a very wise move. Our relative remoteness is still something of an issue because of the travel drive times, but the Zoo is in a position where most people in the state can get to it now in under two hours. We see approximately 700,000 visitors a year, about a third from the Triad as you might expect, about a quarter from the Raleigh/Durham area, about 15% from Charlotte and its surroundings and about that same number from out of state.

Perhaps though the most important statistic that I need to remind you about is the fact that within 20 years at least three-quarters of our children will be growing up in these urban areas. What we are already seeing in children of all ages, is a detachment from their grandparental roots, a poor understanding of the importance of nature and especially a lack of knowledge of where their food comes from. This is something that has recently been described as "nature deficiency syndrome". If we look at the world economic picture, particularly that in relation to global food and energy production, it is very clear that North Carolina's agricultural and forestry industries are likely to rebound in terms of their economic importance to us. As more people urbanize, the greater the demand will also be to maintain our wild spaces for recreation and escape, but above all for the natural services that our rural areas provide, especially in terms of clean air, clean water and productive soils.

I mention all that to put the Zoo into clear context in relation to the state's key emerging issues. The sheer numbers of visitors we see and the potential impact we have on them puts this institution easily at the top of the list in relation to day-visitor natural science facilities. What is particularly important is that we see about 20% (1 in 5) of all 2 to 12 year-olds living in North Carolina every year, either in school groups or with their families.

Our next major project, after we have completed the Elephant and Rhino exhibit, which you will hear more about tomorrow, is a major center focusing entirely on the young child. The intent here is to give that age group of children, most of them coming from our

cities, a range of outdoor 'nature' experiences in a safe setting. This will have them turning over rocks in a creek, playing with natural materials, handling small critters, thinking about trees and food and hopefully stimulating that excitement that will then foster an understanding and an interest in the protection and stewardship of our natural world. Recent research shows clearly what I'm sure most of you already know intuitively and that is that the young child, up to 12 years old builds a sense of curiosity and excitement about the world around them through what they can see, feel, touch, smell, hear and experiment with. It's the sensory stimulation and emotional attachment of those early years that triggers an interest in and concern for the more detailed connections of clean air, clean water, agriculture and economics that we want them to understand in early adulthood. We are probably not going to have much impression on many of them in their teens and certainly the research bears that out, but if we give them the opportunity to take an interest in their early years, there is a good chance that that will be built on from the age of 18 onwards. It is on that basis that we at the Zoo look at what our role is and should be.

We have, of course, a major recreational as well as educational responsibility and indeed without that- the draw of the live animals, you are unlikely to get many people to pay attention to some of the deeper messages. At virtually every exhibit here today, either with written or graphic interpretives and through volunteers and staff, we try to relate the animals and plants that people are seeing to one or more of our key environmental stewardship needs. Approximately 100,000 children are coming in school groups and whether it is in that setting, or where children are coming with their families, our Education Department have a major presence in the Park interacting with them, particularly at the busier times of the year. There is an increasing demand for overnight Zoo Snoozes, birthday parties (of course with an animal theme) and for a range of other child-oriented activities. We also cater particularly for the needs of teacher training in environmental education. Outside the Park, we are very much involved in discussions about the region's future and especially the relationship between economic development and environmental stewardship in the Piedmont. I Chair the main non-Governmental rural development agency for the region and many of our staff are involved on the Boards of Land Trusts, regional environmental partnerships, City and County planning groups and statewide organizations such as Audubon and Environmental Defense. We play an active role in species conservation management, relating to plants and animals in the region, often working alongside our DENR colleagues and of course with university partners. The Zoo is very active with the American Zoo and Aquarium Association and we hold the national studbooks for animals such as Chimpanzee and Hamadryas Baboon. You are going to see a selection, not only representing our very best exhibits, but also some of the challenges that face us in terms of long-term maintenance, transportation around the Park and capital for new construction.

We are probably the most advanced zoo in the country in terms of our green practices and the ways we showcase those. The only zoo in the U.S. with ISO14001 certification (indeed the only institution in State Government with this), we use biofuels in our vehicles, recycle almost everything that is recyclable, save $100,000 a year through our composting unit and are about to build one of the State's largest solar generating units.

It may surprise you to know that despite the development work that we have been able to do in recent years, the Zoo has actually had no capital money from State Appropriations in 14 years. Everything that we have been able to do- improvements to the two entrances, a completely new chimp and lion exhibit, the temporary Australia exhibit and now the new Elephant and Rhino complex has been done almost entirely with private money, supplemented by funds from time to time when they were available from the State Repair and Renovation Fund. During the period when the Zoo was building first the Africa and then the North America continents, about three-quarters of all the capital funding came from State sources. I know only too well the current pressures on the Legislature in terms of funding. We are trying hard to earn more ourselves on a day to day basis and again you will see some examples of that, but also, through the Zoo Society, we have raised considerable capital monies for development. A place like this will only maintain its quality and level of visitation if it has something new to offer the visitor at regular intervals. I recognize that a three or four to one ratio of government money to private money that we have seen in the past is probably untenable, but I don't think it is possible for us to raise all the capital money that we need for that continued repair, improvement and expression of our full potential. We will drain the Society coffers fairly significantly with the ongoing elephant/rhino project. I would suggest that a realistic figure we should aim for for the future would be a 50/50 mix. In other words, for the new children's facility, which we estimate will cost around $3 million, I think it is possible for us to raise $1.5 million for that and expect appropriations of the same sum. That is for new development. However, when it comes to repair and infrastructure improvements, and we are going to show you some of the needs there, fundraising is much more difficult on a private basis. Thankfully the figures are not as high as they are for new exhibits, but in these cases, costs will have to be covered from State funds alone.

I would like to finish by just mentioning governance. The Zoo is a peculiar organization within State Government. It has to be both a serious educational facility and an organization that we try to run as a commercial business. Usually in business matters one has to be fairly 'fleet of foot' in making decisions swiftly and acting on them promptly. The pressure is on us, rightly, to try to generate as much income as possible. The principal way to do that is by satisfying our customers and getting them back again. Another way is to look for potential partnerships that can help you reach those business objectives. For example, our partnership with Sodexho in providing all our food services and increasingly our special events and evening catering is a good example. Because so many of the contracts and services that we get involved in are so peculiar to the Zoo- wheel chairs, strollers, a specialized wildlife pathologist on contract, purchase of the new Carousel, the catering contract just mentioned, the State, beyond these premises, has little experience of dealing with such things. The standard centralized process of purchase and contract may work well for 95% of State Government because of the commonality of those services and goods, but in our case, many of those contracts are unique and have more to do with maximum income generation than supply of goods or a standard service. Frequently there are only one or two suppliers in the country and most of the time we and only we are in the best position to judge what is most appropriate to our needs. All this to say that I think we ("we" being our Zoo team and you who are ultimately responsible for

us) need to look at whether it wouldn't be better to make the Zoo a satellite operation of State Government, pretty well independent in its functions, following State rules closely in terms of the administrative processes, but under its own board of governance and reporting back once a year as appropriate on the way that State granted funds are spent. I would go so far as to say that I think there are other organizations in the State, such as our museums and aquariums that would probably benefit from a similar sort of approach. Most of us have the human resources, financial controls and other administrative mechanisms to handle all of that on site. There is always going to be a need for some referral and advisory input from, in our case DENR and occasionally the State budget and human resources, but at the moment the process is very burdensome and limiting in where we might go with the Zoo. I have already mentioned this to some of our local Legislators and will continue to do the rounds there, but I float this today because in considering the future of the Zoo, as you go around and see some aspects of our work, it is something we need to bring to the table.

Once again, it is a delight to welcome you here. I think you have reason to be very proud of this facility. There is really nothing quite like it in the country and it is very much the envy of many communities elsewhere.

MEMORANDUM

To: Members of the Environmental Review Commission
From: Tim Dodge, Commission Analyst
Re: Reports to the Commission

This memorandum lists reports that have been submitted to the Environmental Review Commission by State agencies since the last reports distribution on 8 March 2006.

A. REPORTS RELATED TO TODAY'S AGENDA

The following reports are attached to this memorandum. These reports may be referenced during the course of the 14 March 2006 Commission meeting.

Parks and Recreation / Land Conservation:

1. *Parks and Recreation Trust Fund Annual Report, Fiscal Year 2004-2005.* Division of Parks and Recreation, DENR. 1 October 2005. Statutory Authority: G.S. 113-44.15(c).

2. *North Carolina Natural Heritage Trust Fund Award Report, Calendar Year 2004.* Division of Parks and Recreation, DENR. 1 September 2005. Statutory Authority: G.S. 113-77.9(e).

3. *Annual report on progress towards attaining the State's goal of protecting one million acres of farmland, open space, and conservation lands.* DENR. 1 October 2005. Statutory Authority: G.S. 113A-241(c).

4. *Annual report on implementation of the Conservation Easements Program.* DENR. 1 November 2005. Statutory Authority: GS 113A-235(c).

Please contact George Givens, Jeff Hudson, Jennifer McGinnis, or Tim Dodge at (919) 733-2578 if you have any questions or comments.

RESEARCH DIVISION

The Honorable Michael F. Easley
Governor of North Carolina
State Capitol
116 West Jones Street
Raleigh, North Carolina 27603-8001

Dear Governor Easley:

The Parks and Recreation Trust Fund (PARTF) continues to be the most important funding source for park and recreation opportunities for the citizens of North Carolina. As chair of the North Carolina Parks and Recreation Authority, I am pleased to submit the 2004-2005 Parks and Recreation Trust Fund Annual Report.

We have accomplished much in the past year. Eighty-five local governments requested $24.9 million in PARTF assistance. The Authority awarded over $13 million in matching grants to 50 local governments for the acquisition, development and renovation of public recreation areas. Recreational programs, local parks, and open space are essential to the strength of our communities and families. PARTF grants will help communities give citizens safe and healthy places to play and to learn about the environment.

In addition, PARTF has allowed the state to address the tremendous needs in North Carolina's state parks system. This year, the Authority approved $28.9 million for land acquisitions, emergency repairs, renovations and capital improvement projects.

This has been an outstanding year for parks and recreation in the state of North Carolina. It is a legacy of which all North Carolinians can be proud.

Sincerely,

Jonathan B. Howes

1.0 Introduction

The North Carolina General Assembly established the North Carolina Parks and Recreation Trust Fund (PARTF) on July 16, 1994. The General Assembly made an initial appropriation of $1 million to PARTF to fund improvements in state parks, to fund grants for local governments and to increase public access to the state's beaches. In 1995, the General Assembly dedicated funds from the excise stamp tax to the trust fund starting in FY 1996-97. The Parks and Recreation Authority, an eleven-member board, was also created to allocate funds from PARTF to projects in state parks and to grants for local governments.

The excise tax is the primary funding source for PARTF. The tax is levied on each "deed, instrument, or writing by which interest in real property is conveyed to another person." The tax is levied at the rate of one dollar on each $500 of the interest or property conveyed. Each county remits one-half of the proceeds, less the county's allowance for administrative expenses, to the state. Effective July 1996, the General Assembly (G.S. 105-228.30) stipulated that part of the state's share would be allocated to PARTF. Of the funds remitted, the Department of Revenue credits 75% to the Parks and Recreation Trust Fund and 25% to the Natural Heritage Trust Fund.

Pursuant to G.S. 113-44.15, the money from the Parks and Recreation Trust Fund are to be allocated as follows:

(1) Sixty-five percent (65%) for the State Parks System for capital projects, repairs and renovations of facilities and to land acquire land.

(2) Thirty percent (30%) to provide grants to local governments on a dollar-for-dollar basis to create or improve parks and recreational projects.

(3) Five percent (5%) for the Coastal and Estuarine Water Beach Access Program.

(4) No more than three percent (3%) may be used by the Department of Environment and Natural Resources (DENR) for the operating expenses associated with managing capital improvements projects, acquiring land, and administering the grants program for local governments.

2.0 North Carolina Parks and Recreation Authority

The North Carolina Parks and Recreation Authority, an 11-member board that oversees the Parks and Recreation Trust Fund, was created by the General Assembly with the Authority's powers and duties becoming effective July 1, 1996. The Governor appoints three members, including the chairperson. The General Assembly appoints four members upon the recommendation of the President Pro Tempore of the Senate. The General Assembly appoints four members upon the recommendation of the Speaker of the House.

The Authority is charged with six powers and duties: to receive public and private donations and funds for deposit into the trust fund; to allocate funds for land acquisition; to allocate funds for capital projects; to solicit financial and material support; to develop effective support for parks and recreation; and to advise the Secretary of DENR on any matter he may refer to the body.

Members are appointed for three-year terms and may serve no more than two consecutive three-year terms. After serving two consecutive three-year terms, a member is not eligible for appointment to the Authority for at least one year after the expiration of the member's last term. The Parks and Recreation Authority held four meetings during fiscal year 2004-2005.

The 2004-2005 Parks and Recreation Authority members were:

Jonathan Howes

3.0 Parks and Recreation Trust Fund Summary

The Parks and Recreation Trust Fund (PARTF) is housed within the Division of Parks and Recreation, which operates the North Carolina State Parks System. The Parks and Recreation Authority allocates PARTF to the state parks capital improvement and land acquisition projects. This board also selects the recipients of the grants to local governments to create or improve parks and recreational projects. The Division of Parks and Recreation, under Lewis Ledford, Division Director, develops priorities for the state parks system and recommends projects for the board's approval. Once the board has allocated the PARTF funds, the Division manages the projects for state parks and for the grants program.

The Division of Parks and Recreation transfers 5% of PARTF to the Division of Division of Coastal Management (DCM) for the Coastal and Estuarine Water Beach Access Program. The Division of Coastal Management, under the direction of Charles Jones, administers these funds and offers matching grants to local governments throughout the 20 coastal counties.

Table 3-1 shows the revenues received into the Parks and Recreation Trust Fund and the allocation of revenues by program for fiscal year 2004-2005.

4.0 Grants Program for Local Governments

4.1 Program Description

The Parks and Recreation Trust Fund (PARTF) program provides dollar-for-dollar grants to local governments. All counties, incorporated municipalities and public authorities (as defined in N.C.G.S. 159-7) are eligible for funding. Two or more local governments may apply jointly. Recipients can acquire land to use for public recreation or to protect the natural or scenic resources of the property. Recipients can also use a grant to build or renovate recreational and support facilities. All facilities must serve the general public.

In September, the Division of Parks and Recreation (DPR) mails a description of the PARTF program and a schedule to local governmental officials and parks and recreation directors. A local government can request a maximum grant amount of $500,000 in PARTF assistance with its grant application. The approved value of land that is donated to a local governmental unit or public authority may be applied to the 50% matching requirement.

The DPR provides assistance to local governments in several ways. In October, the PARTF staff conducts a workshop where local governments can learn about the program and how to complete an application. The workshop is presented simultaneously at University of North Carolina video conference sites. The DPR has a contract with Recreation Resources Service (RRS) at North Carolina State University. The staff of RRS can provide technical assistance to local governments who request help in planning projects and preparing grant applications. RRS has six consultants in regional offices across the state.

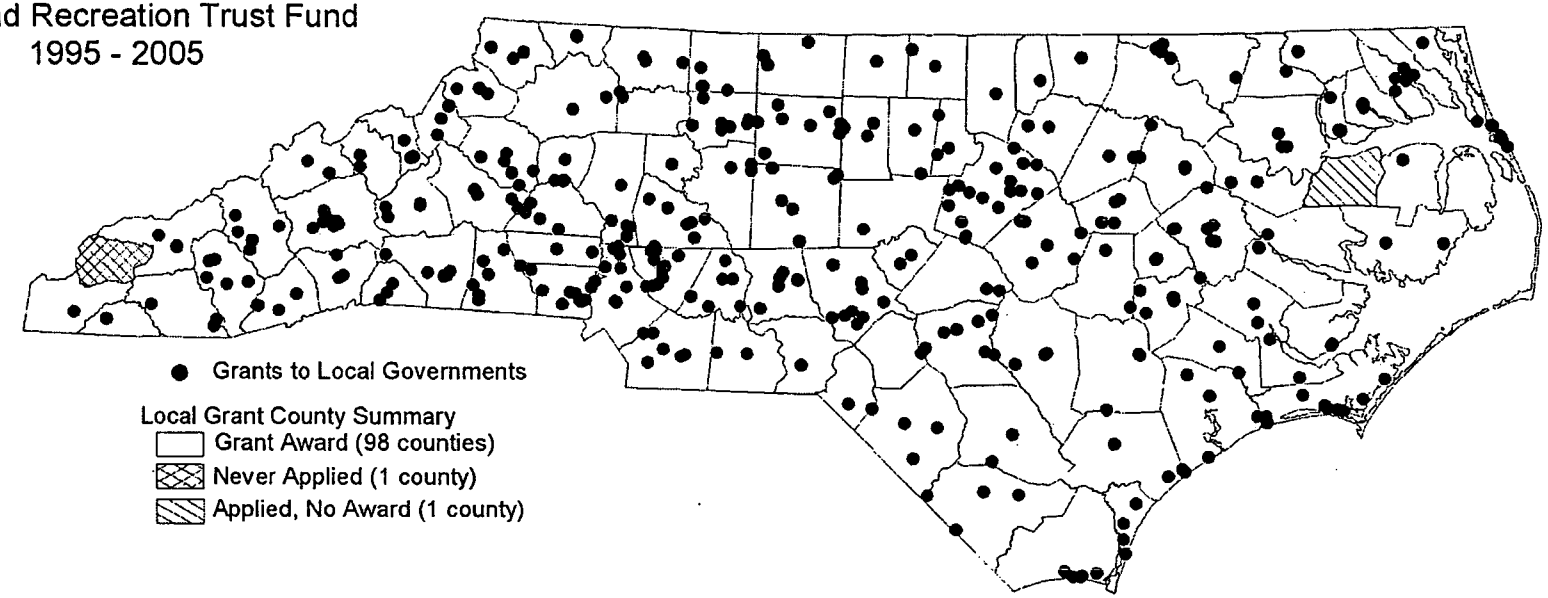
The members of the Parks and Recreation Authority select which applicants will receive a grant. The factors considered by the Authority as it selects recipients include, but are not limited to, the criteria contained in the PARTF scoring system, the population of the applicant, the geographic distribution of projects across the state, the presence or absence of other funding sources and compliance with prior grant agreements.

Applications are due January 31. The Parks and Recreation Authority meets in May to select recipients from PARTF revenues received for the first three-quarters of the fiscal year. The Authority meets in early July to select grant recipients from PARTF revenues received during the fourth quarter of the fiscal year.

4.2 Description of Applications and Grants

The PARTF revenues for fiscal year 2004-2005 were $13,338,847. Eighty-five units of local government submitted PARTF applications requesting a total of $24.9 million in PARTF assistance. The Authority awarded 50 grants for $13,950,359. The difference between the amount awarded and the fiscal year revenues is $611,512. The additional funds are: $249,650 returned from the Town of Erwin; $206,501 returned from Anson County; $9,244 from the Town of Marion that completed its project under budget; $189,485 from fiscal year 2003-04 unspent administrative funds; $244 other funds returned from grantees. Table 4-1 on the following page is a list of the projects approved for fiscal year 2004-2005. The table is organized alphabetically by recipient.

There is a balance of $43,612 in unspent funds for fiscal year 2004-2005. The Parks and Recreation Authority will allocate these funds in the future.



4.3 Geographic Distribution of Grants

The members of the Parks and Recreation Authority consider the geographic distribution of funds across the state as one of the factors used in selecting grant recipients. After nine funding cycles, the Authority has awarded over $73 million in PARTF grants to 432 projects in 98 counties across North Carolina.

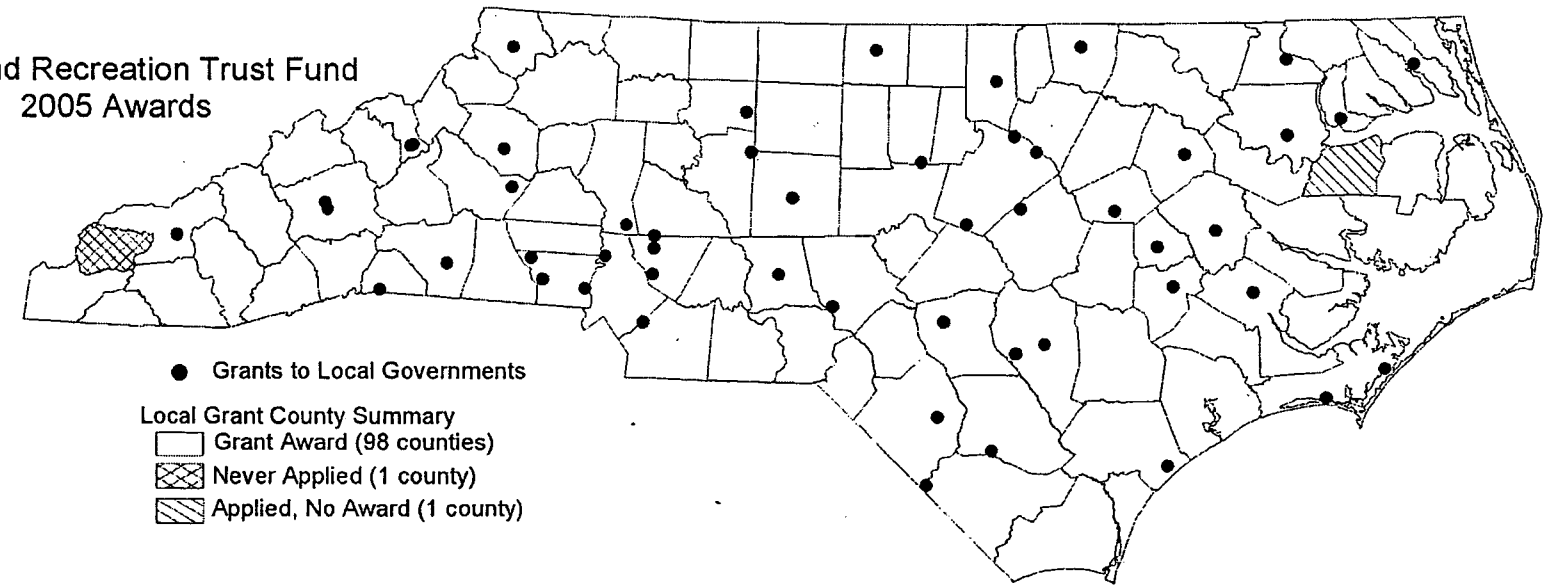


Figure 4-1 (page 7) is a map showing the distribution of PARTF grants by county across North Carolina from 1995-2005.

Table 4-1 N.C. Parks and Recreation Trust Fund Grants Awarded in Fiscal Year 2004-05			
Applicant	**Project**	**County**	**Grant**
Bessemer City	City Pool Expansion and Renovation	Gaston	$500,000

Parks and Recreation Trust Fund
1995 - 2005

Parks and Recreation Trust Fund
2005 Awards

5.0 State Parks Program

5.1 Land Acquisition

For fiscal year 2004-2005, the Parks and Recreation Authority approved $14,450,417 for land acquisition projects in the state parks system (Table 5-1). These projects will help address the need for additional acreage at 16 state parks. However, it will cost an estimated $176 million to purchase the 43,752 acres needed to complete all of the current state park units. Additionally, through its "New Parks for a New Century" initiative, the Division of Parks and Recreation has identified over 40 sites across the state that could be added as potential state park units. These areas are some of the most treasured and threatened natural resources in North Carolina and have been identified as high priority acquisitions to the state parks system. To purchase these new units will require an estimated $454 million to acquire 113,625 acres.

Table 5-1
North Carolina Parks and Recreation Trust Fund
Land Acquisition Projects Approved for FY 2004 – 2005

Unit	Acres	Description	Amount
Crowders Mountain State Park	35	Property along the state line to increase the width of the connection between the state park and the parks in South Carolina.	$140,000
Elk Knob State Natural Area	433	Property on the slopes of Elk Knob and at an ecologically important area known as the Peak.	$1,000,000
Gorges State Park	13	Property, with structures that will be used as ranger residences, on a tributary to Frozen Creek.	$350,000
Hanging Rock State Park	60	Property on the slopes of Hanging Rock Ridge to protect the view from Hanging Rock and the natural communities on the slopes.	$360,000
Haw River State Park	210	Purchase of The Summit Center - a conference center to be used as an environmental education facility and acquisition of multiple tracts along the Haw River for the establishment of this recently authorized state park.	$2,742,353
Hickory Nut Gorge State Park	110	Acquisition of initial tracts for this new park authorized by the General Assembly in 2005. The projects are located in the Rumbling Bald and World's Edge areas.	$1,123,064
Lake James State Park	2,915	To assist in the major expansion of the state park on the north side of Lake James. The total cost of the acquisition was $18.3 million with major funding from Certificates of Participation and the CWMTF.	$450,000
Lake Norman State Park	39	Property to provide additional land for trails within the state park.	$785,000

Table 5-1 North Carolina Parks and Recreation Trust Fund Land Acquisition Projects Approved for FY 2004 – 2005			
Unit	**Acres**	**Description**	**Amount**
Lake Waccamaw State Park	3,333	The upland portions of multiple tracts for the protection of natural communities and water quality.	$850,000
Lumber River State Park	945	The upland portion of land for the protection of natural communities and water quality and to provide land for the development of access facilities near the Town of Fair Bluff.	$400,000
Mayo River State Park	902	Multiple tracts along the Mayo River for the establishment of this newly authorized state park.	$2,555,000
New River State Park	57	Multiple tracts along the State and National Scenic River for the protection of water quality and natural communities.	$350,000
Pettigrew State Park	146	Tracts along the Scuppernong River for scenic and natural resource protection. The Division will seek CWMTF assistance for the wetland portions of these tracts.	$275,000
South Mountains State Park	135	One tract in the Henry Fork watershed and one tract in the Jacobs Fork watershed for resource and water quality protection.	$600,000
Stone Mountain State Park	50	One tract on Big Sandy Creek, which flows into the park and over Stone Mountain Falls.	$320,000
William B. Umstead State Park	40	A tract on the northwest side of the park to protect the existing forest natural communities. Other funding from Clean Water Management Trust Fund and Wake County.	$2,150,000
Total	**9,423**		**$14,450,417**

5.1.1 Special Financing for Projects in State Parks

The General Assembly passed House Bill 1264 in July 2004. Governor Easley signed the bill on August 5, 2004. The law authorizes the State to use special indebtedness, commonly referred to as "certificates of participation" or COPS, to finance land acquisitions for conservation purposes. The law also authorized the use of COPS to finance health and education projects in the University of North Carolina system and for youth development centers.

Specifically, the law authorizes the State to issue or incur special indebtedness to finance the acquisition of property for three programs:

- The **Parks and Recreation Trust Fund** - to buy land and build park facilities for the State Parks System;

- The **Natural Heritage Trust Fund** - to acquire land that represents the ecological diversity of the state and land for state parks, wildlife areas, and similar public purposes;

- The **Clean Water Management Trust Fund** - to acquire buffers that help to conserve surface water and drinking water supplies as well as to restore wetlands.

The law authorizes the governing body of each fund to allocate a portion of its stream of income for debt service on debt incurred to acquire property. The three trust funds must work together to keep the total debt below the maximum dollar amounts for the authorized projects. The authorization is limited to a total of $45 million as follows:

- $20 million to acquire up to 17,000 acres near North Carolina military bases in order to prevent encroachment by incompatible development.

- $25 million to acquire up to 6,000 acres to expand an existing state park, provide game lands to help protect North Carolina's rivers, provide two new state parks along North Carolina's rivers and to provide capital improvements to an existing state park as part of its expansion.

The Parks and Recreation Authority may allocate up to 50% of the portion of the Parks and Recreation Trust Fund dedicated for projects in state parks to repay the debt. The PARTF revenue designated for grants to local governments cannot be used to repay debt.

5.1.2 Expansion of Lake James State Park

Using the special financing tools approved in House Bill 1264, the governing boards for the Parks and Recreation and the Clean Water Management trust funds approved financing towards the acquisition of 2,909 acres on the northern shore of Lake James to expand Lake James State Park. Crescent Resources, Inc., agreed to sell the property for $18.3 million – 40% below the appraised value of $30.6 million. At a ceremony in August 2004, Governor Mike Easley announced the agreement for the Lake James sale, the culmination of years of negotiations among officials from the state parks system, Burke County and Crescent Resources.

At their October 25, 2004 meeting, the members of the Parks and Recreation Authority approved a resolution to support the purchase of the 2,909-acre tract of land at Lake James and authorized borrowing up to $11.5 million for the purchase the property to be financed using COPS. The project has closed and the total PARTF amount needed for the purchase is $11,381,000. Payment for debt service on $11,381,000 borrowed as COPS will be approximately $895,000 per year.

Lake James State Park is located in Burke and McDowell Counties. At 605 acres, the park was one of the smallest in the state, yet attracted more than 250,000 visitors a year. The acquisition not only expanded the park, but also protected more than 30 miles of the lake's shoreline and the water supply for nearly a million people.

5.0 State Parks Program

5.2 Construction and Renovation: During fiscal year 2004-2005, the Parks and Recreation Authority approved state park construction and renovation projects totaling $14,450,417 (Table 5-2). With PARTF funds, the Division continues to address a lengthy backlog of construction and renovation projects in the state parks system. However, approximately $334.5 million is required to meet all of the needs for new construction and renovation for state parks.

Table 5-2
North Carolina Parks and Recreation Trust Fund
Capital Improvement Projects for Fiscal Year 2004-2005

Park	Project	Amount
Dismal Swamp State Park*	Visitor's Center	$624,716
Elk Knob State Natural Area	Interim Development and Facilities	$313,000
Gorges State Park	Phase I -Roads, Parking lots, Underground utilities along roadways	$2,960,500
Hanging Rock State Park	Moore's Knob Trail Renovations	$281,083
Kerr Lake State Recreation Area	Nutbush Fee Stations (2)	$405,000
Kerr Lake State Recreation Area	Nutbush Boat Ramp (Design Only)	$240,000
Lake James State Park	Master Plan and Aerial Topographic Services	$145,000
Lake Norman State Park	Boat Ramp Repair	$150,000
Mayo River State Park	Interim Development and Facilities Design and Partial Construction	$568,000
Merchants Millpond State Park	Visitor's Center	$3,131,742
Pilot Mountain State Park	Ledge Springs Trail Improvements	$1,200,000
Raven Rock State Park	Campbell Creek Pedestrian Bridge	$177,984
Stone Mountain State Park	Design for Loop/Big Sandy Trail	$150,000
Stone Mountain State Park	Loop /Big Sandy Trail Project	$623,064
Park System	Major Maintenance Funds	$1,200,000
Park System	Trail Maintenance Funds	$500,000
Park System	Demolition Fund	$150,000
Park System	Exhibit Repair Fund	$85,000
Park System	Emergency Dam Repairs	$800,000
	Construction Reserve	$745,328
	Total	**$14,450,417**

* At the March 2005 meeting, the Parks and Recreation Authority approved $1,476,589 for the Dismal Swamp Visitor's Center. The board allocated $851,873 to the visitor's center from projects approved in earlier fiscal years that have been completed under budget and from projects that have been postponed as follows: FY03-04 Falls Lake State Recreation Area ($76,873) - delayed Sandling Beach Floating Dock; FY1999-2000 Kerr Lake State Recreation Area ($450,000) - project completed under budget; Umstead State Park ($325,000) Whispering Pines Shower Houses - rescheduled the start of the project.

6.0 Public Beach and Coastal Waterfront Program

6.1 Program Description

North Carolina's Public Beach and Coastal Waterfront Access Program was established by the General Assembly in 1981. In fiscal year 1996-97, the program began receiving 5% of the revenues from the Parks and Recreation Trust Fund. The programs enabling legislation (GS 113A-134.1) states that public purpose would be served by providing increased access to coastal waters, public parking facilities, or other related public uses.

The program provides matching grants to local governments for low-cost capital projects designed to improve pedestrian access to the state's beaches and waterways. The program, administered by the Division of Coastal Management (DCM), offers matching grant funds to local governments throughout the 20 coastal counties. Since 1981, over 300 public access sites have been constructed at a cost of over $24 million ($14 million state/federal and $10 million local funds). Local governments are responsible for construction, operation and long-term maintenance of the facilities. While most of the early projects were located along the oceanfront, more and more projects are now designed to improve access to estuarine shorelines, coastal rivers, and urban waterfronts.

The Division of Coastal Management sends requests for proposals to local governments in the 20 coastal counties in March of each year. The division uses criteria developed by the Coastal Resources Commission to select grant recipients. Local governments are required to match at least 25% of the project costs. Recipients are usually selected in July and contracts are awarded in between September and January. Grant recipients have one year to complete their projects. However, extensions are granted for un-foreseen events and delays such as hurricanes.

6.2 Types of Projects Funded

Communities can apply for five different types of water access sites: local, neighborhood, regional, multi-regional and urban waterfront redevelopment projects.

- Local access sites include public access points, which offer minimal, or no facilities. Pedestrians who reside within a few hundred yards of the site primarily use them. Generally, these access ways are a minimum of ten feet in width and provide only a dune crossover or pier, if needed, litter receptacles and public access signs. Vehicle parking is generally not available at these access sites. However, bicycle racks may be provided.

- Neighborhood access sites are public access areas offering parking, usually for five to twenty-five vehicles, a dune crossover or pier, litter receptacles and public access signs. Such accesses are typically 40 to 60 feet in width and are primarily used by individuals within the immediate subdivision or vicinity of the site. Restroom facilities may be installed.

- Regional access sites serve the public throughout an island or community including day visitors. These sites normally provide parking for 25 to 80 vehicles, restrooms, a dune crossover, pier, foot showers, litter receptacles and public access signs. Where possible, one-half acre of open space in addition to all required setback areas should be provided for buffering, day use, nature study or similar purposes.

- Multi-regional access sites are generally larger than regional accessways but smaller than state parks. Multi-regional facilities provide parking for 80 to 200 cars, restrooms with indoor showers and changing rooms, and concession.

- Urban waterfront redevelopment projects improve public access to utilized urban waterfronts. Such projects include the establishment or rehabilitation of boardwalk areas, shoreline stabilization measures such as the installation or rehabilitation of bulkheads, and the placement or removal of pilings for the purpose of public safety and/or increased access and use of the urban waterfront.

6.3 PARTF Revenues and Grants Awards Based On Fiscal Year 2004-2005

The beach access program grants are funded on a calendar year cycle. Historically, DCM has solicited pre-application proposals from coastal communities in March of every year. Invited final applicants proposals are usually due in June and prioritized requests are awarded contracts to begin sometime between October and the end of January. Annually, DCM pre-determines funds available, by using PARTF revenues from the last quarter of the previous fiscal year (2003-04), and the first three quarters of the more current (2004-05) fiscal year. The actual amount transferred from the PARTF fund to DCM during fiscal year 2004-2005 was $2,256,866, however only the first three quarters of these funds ($1,739,059) are considered available plus the last quarter of previous 2003-2004 fiscal years deposit ($442,688). Additionally, any monies from the previous year, due to cancelled projects or projects that came under budget, are also incorporated into the available budget for grant awards. For this fiscal years' report the total funds available was $2,902,559. (see Table 6-1).

DCM has prioritized $1,505,500 for grant contracts to begin in January of 2006 for the local governments listed in Table 6-2. The balance of $1,163,605 will be reserved for fiscal year 2005-2006. The large reserve balance will allow DCM to move up both the application and the actual

award date by six (6) months to more closely parallel funds received during the 2005-2006 fiscal year.

The DCM received 30 pre-applications from 17 local governments requesting $1,646,825. DCM reviewed 21 final applications from 15 local governments with the requests originally totaling $1,317,653. Table 6-2 is the list of local governments prioritized to receive funding. It can be noted that intended awarded funding amounts are greater for some communities than originally requested based on adjustments determined necessary due to significant material costs resulting from hurricane Katrina.

Table 6-1
Division of Coastal Management
Distribution of PARTF Revenues for Fiscal Year 2004-2005

Item	Amount
PARTF revenues received in first three quarters of fiscal year 2004-2005	$1,739,054
Fiscal year 2003-04 (4th quarter PARTF revenues) and a reserve from canceled projects and projects completed under budget	$442,688 $720,917 $1,163,605
Total available for fiscal year 2004-2005 grants	$2,902,659
Grants Prioritized fiscal year 2004-05	**$1,505,500**
Reserve and carryover for grants to be awarded in fiscal year 2005- 2006	$1,397,159
PARTIF 4th quarter 2004-2005 received and reserved for 2005-06 fiscal year. *	$517,812
Minimum funds available for next 2005-2006 fiscal year:	$1,914,971

* Annual funding cycle is based on PARTF revenues for the first three quarters of fiscal year 2004-2005 and any reserve from the previous fiscal years including the fourth quarter revenues. The balance of $1,397,159 will be added to upcoming PARTF deposits and used to fund projects based on the fiscal year 2005-06 funds. Beginning in 2006, DCM will be moving up both the application and award cycle to more closely parallel the fiscal cycle.

Table 6-2 Public Beach and Coastal Waterfront Access Program Grant Priorities Based on Fiscal Year 2004-05 PARTF Funds			
Local Government	**Project Description**	**Projected Grant**	**Total Cost w/Match**
Ahoskie	Ahoskie Creek Access – gravel parking for 20-25 vehicles, restrooms, benches, landscaping	$45,000	$60,000
Carteret County	Parking & walkway improvements to Radio Island Access	$37,500	$50,000
Caswell Beach	601 Caswell Beach Rd. beach access walkway replacement	$27,500	$36,500
Caswell Beach	203 Caswell Beach Rd. beach access walkway replacement	$22,000	$28,000
Emerald Isle	Viewing platform improvements to Eastern Access	$54,000	$71,500
Emerald Isle	Viewing platform (500 sq. ft.) improvements to Western Access	$67,000	$89,500
Holden Beach	Jordan Blvd. Project – fishing pier, dock, covered deck	$103,000	$159,500
Hyde County	Swan Quarter Waterfront Access Park – picnic shelter, overlook, boardwalk, parking, benches	$95,500	$141,000
Kill Devil Hills	East Ocean Bay Blvd Regional Bathhouse – w/restrooms & showers & dune crossover	$122,500	$162,000
Kitty Hawk	East Lillian St. Neighborhood Access – pave traffic aisle for 20 parking spaces; also foot & shower tower	$80,500	$106,500
Kure Beach	Regional Access – restrooms and public parking improvements	$50,500	$66,500
Nags Head	Albatross Street Neighborhood Access – replace existing walkway and stairs	$21,000	$41,000
Nags Head	Baltic Street Neighborhood Access – reconstruct parking lot & provide walkway to top of dune w/stairs to beach	$75,000	$140,000
Nags Head	Barnes Street Neighborhood Access – replace existing walkway and stairs	$11,000	$22,000
Navassa	Davis Creek Access – replace existing boardwalk, pier & gazebo; w/kayak access	$99,500	$126,000
New Hanover Co.	Middle Sound Park –10 parking spaces, trail improvements& pier	$73,000	$97,000
New Hanover Co.	Spike Property Land Acquisition – w/parking on waterfront parcel	$75,000	$100,000
North Topsail Beach	212 Topsail Road Access – 5 gravel parking spaces, dune crossover & trash receptacles	$27,500	$36,500
North Topsail Beach	Carver Street Access Parking – 19 paved parking spaces	$12,500	$16,500
Pine Knoll Shores	Lease and improvements @ Knollwood Ave. – lease agreement, dune crossover, w/parking	$31,000	$43,000
Topsail Beach	Topsail Sound Access Land Acquisition of existing private site w/boardwalk, dock, parking	$375,000	$2,090,500
	TOTAL	**$1,505,500**	**$3,723,500**

* These projects are prioritized for funding base on revenues from the 4th quarter of 2003-2004 and the first 3 quarters of fiscal year 2004-2005. Though prioritized for funding, they are not expected to be under State contract until mid January 2006. Typical contract cycles are based on the calendar year and not the fiscal year. Figures are projections due to formal contracts yet to be finalized which will recognize increases in materials costs due to recent hurricanes.

February 22, 2006

MEMORANDUM

TO: Representative Howard Hunter, Jr., Representative Edith Warren, Senator David Weinstein

FROM: William G. Ross, Secretary, Department of Environment and Natural Resources

SUBJECT: Natural Heritage Trust Fund 2004-2005 Fiscal Year Report and Fall 2005 Grant Award List

As required by G.S. 113-77.9(e), we are pleased to present to the Appropriations Subcommittee on Natural and Economic Resources the fiscal year 2004-2005 grant award report for the N.C. Natural Heritage Trust Fund. During the fiscal year, the Board of Trustees for the Natural Heritage Trust Fund awarded $19,184,013 in grants to 23 projects to help preserve 23,775 acres of land with outstanding natural and/or cultural heritage value.

In addition, we have included the list of grant awards from the most recent cycle (Fall 2005.)

If you have any questions, please feel free to contact the Natural Heritage Trust Fund's Executive Director, Lisa Riegel, at (919) 715-8014.

N.C. Department of Environment
and Natural Resources

J. Robert Gordon, Chairman
Board of Trustees
NC Natural Heritage Trust Fund

NORTH CAROLINA
NATURAL HERITAGE TRUST FUND
AWARD REPORT
Fiscal Year 2004/05

Origins and Mission

The North Carolina Natural Heritage Trust Fund (NHTF) was established by the 1987 General Assembly (G.S. 113-77, effective July 1, 1987) as a supplemental funding source for state agencies to acquire lands and to pay for the inventory of natural areas by the North Carolina Natural Heritage Program. A twelve-member board of trustees administers the Trust Fund.

Board of Trustees

NHTF is delegated the authority to grant funds to eligible state agencies pursuant to applications which meet statutory criteria and board guidelines. The governing authority for the Trust Fund is a 12 member board of Trustees. This number was increased from nine members during the 2001 legislative session. Four members are appointed by the Governor who also designates the chairman. Eight members are appointed by the General Assembly with four recommended by the President Pro-Tempore of the Senate and four recommended by the Speaker of the House. Appointments are made effective January 1 and are for staggered six year terms. Persons appointed are to be knowledgeable in the acquisition and management of natural areas.

2005 Board of Trustees

Governor Appointees	Senate Appointees	House Appointees
Charles E. Clement Watauga County 2002-2008	J. Robert Gordon, Chairman Scotland County 2002-2007	Alan D. Briggs Wake County 2000-2005
Thomas D. "Bud" Hunter Henderson County 2004-2009	*George Richards Wake County 1998-2003	William Joslin Wake County 2002-2007
R. Michael Leonard Forsyth County 2000-2005	**James E. Sponenberg, III Caldwell County 2000-2005	Henry L. Kitchin Richmond County 2002-2007

*Replaced by Lois McIver Winstead effective September 2005
**To be replaced by Portia Hawes effective January 2006

Natural Heritage Trust Fund Staff

The Board is now supported by an Executive Director, effective September 30, 2005:

Lisa D. Riegel, Executive Director
521 N. Salisbury St., MSC 1601
Raleigh, NC 27699-1601
(919) 715-8014
lisa.riegel@ncmail.net

Funding Sources

Since 1987, and as of June 30, 2005, NHTF has received $139 million dollars including an initial appropriation of $275,000 (Table 1). The Trust Fund acquired a continuing source of funding in 1989 when a part of the receipts from the sale of personalized license plates was designated as income. The General Assembly in 1991 increased the state's deed stamp tax to $2 per $1000 value and set aside 15% of the state's share of this additional money as income for the Trust Fund. The 1995 General Assembly increased the Trust Fund's portion of the deed stamp tax from 15% to 25% effective July, 1996. Monies not expended remain in the interest-accumulating Natural Heritage Trust Fund account and do not revert to the General Fund. The 2003 General Assembly increased the fee for special license plates by $10, with $5 of the additional fee designated for the Natural Heritage Trust Fund. In the fiscal year July 1, 2004 – June 30, 2005, approximately $19 million was received from all funding sources (Table 1).

In 2004 the General Assembly authorized NHTF to allocate up to 50% of the annual receipts for debt service, referred to as Certificates of Participation (COPs), on debt incurred to acquire property. COPs can be used for projects to expand or provide capital improvements for existing state parks, to purchase or expand game lands which protect North Carolina rivers, or to create two (2) new state parks along North Carolina rivers. In the fall of 2004, $2,019,000 was awarded to the Linville River/Lake James project using COPs funding (Table 2).

Projects and Agencies

Grants are awarded for the purposes of acquiring lands that represent the state's ecological diversity to ensure their preservation and conservation for recreation, scientific, education, cultural and aesthetic purposes; for additions to the system of parks, state trails, aesthetic forests, wild and scenic rivers, fish and wildlife management areas; to develop a balanced state program of historic properties; and for other beneficial use and enjoyment of the public. Funds are also allocated to the N.C. Natural Heritage Program for natural area inventories and conservation and protection planning of natural areas. State agencies authorized to apply for grant awards are the Department of Environment and Natural Resources, the Wildlife Resources Commission, the Department of Cultural Resources and the Department of Agriculture and Consumer Services. Priority consideration is given to protection of land having outstanding natural or cultural heritage values. Land with outstanding natural heritage values is land that is

identified by the N.C. Natural Heritage Program as having state or national significance. Land with outstanding cultural heritage value is land that is identified, inventories or evaluated by the Department of Cultural Resources. Since 1987, and as of June 30, 2005, NHTF has contributed to the protection of over 217,000 acres (Table 3).

During Fiscal Year 2004/05, NHTF awarded 23 grants totaling $19,184,013 which contributed to the protection of 23,775 acres (Table 4). Due to insufficient funds, the NHTF Board was unable to fund an additional $19,180,964 in requests (about 50% of the requests) from eligible applicants for high quality projects. Detailed summaries of the Fall 2004 grant awards and the Spring 2005 grant awards are included as Tables 5 and 6 respectively. Project locations are shown in Figure 1 (Fall 2004 projects) and Figure 2 (Spring 2005 projects).

DENR - Department of Environment & Natural Services
DPR – Division of Parks & Recreation
WRC - Wildlife Resources Commission

Dept.	Project Name	County	Acres	Award	Description
DAg	Penny's Bend/ Eno River Diabase Sill: Phase II (Stevens and Harrelson Tracts)	Durham	79	$630,000	The Harrelson tract supports the largest unprotected population of Smooth Coneflower in NC. The Stevens tract is the largest remaining undivided tract within the project area.
DCR	Historic Bethania's Land Protection Initiative: Phase 4–Old Apple Orchard II and the African American School lot	Forsyth	8	$195,000	Addition to the Bethania National Historic Landmark Area, the only remaining example of a European style "open field" agricultural village in North Carolina. More than 50% of the cost of the school lot was provided by private donations.
DENR/ DPR	Deep River Conservation Land	Chatham Lee	1,641	$810,000	The project area is adjacent to the nationally significant Rocky River/Lower Deep River aquatic habitat. The Deep River is identified as a potential new state park on the "New Parks for a New Century" list.
DENR/ DPR	Gorges State Park Land Acquisition: Phase III	Transylvania	69	$860,000	Addition to Gorges State Park. Acquisition would aid in preserving two identified Significant Natural Heritage Areas and a rare temperate rainforest ecosystem.
DENR/ DPR	Bushy Lake State Natural Area – Big White Bay Project II	Cumberland	1,312	$525,000	Addition to Bushy Lake State Natural Area. Acquisition would aid in preserving an identified Significant Natural Heritage Area and a rare Carolina Bay ecosystem.

Dept.	Project Name	County	Acres	Award	Description
DENR/ DPR	Carvers Creek Conservation Land	Cumberland	797	$2,200,000	Project area is one of the largest sites of contiguous relatively undisturbed matrix of Sandhills natural communities that remains in private ownership in the Fayetteville area. Project area contains habitat for Red-cockaded woodpecker.
WRC	Bolin Knob Tract	Burke McDowell	468	$356,600	Tract borders South Mountain Game Land and is part of the total management project in the area.
WRC	Wallace Gray Tract	McDowell	820	$500,000	Tract borders Pisgah Game Land and will help ensure ecosystem integrity of this area. Part of the conservation effort being carried out in the Lake James area. Private funds providing $800,000 of the cost of the land. The tract also contains a key portion of the National Historic Over-the-Mountain-Victory Trail by which frontier patriots marched to the Battle of Kings Mountain in 1780.
WRC	GMS Tract	Tyrell	8,476	$1,000,000	Tract is within the Alligator River watershed. Tributaries of the Alligator River are identified as anadromous fish spawning areas and are designated as inland primary nursery sites. Will be managed as part of the Game Land Program.
WRC	Long Ridge Tract	Caldwell	592	$1,157,150	Tract classifies as a quality wild brown trout fishery. Acquisition would increase opportunities for management of the resources, recreation and would provide for stewardship of the resources.
WRC	Linville River Tract	Burke	1,425	$2,019,000	Tract borders Pisgah Game Land and southern end of Linville Gorge Wilderness Area. The tract will provide a key access trail for the Mountains-to-the-Sea Trail. The tract is part of the Lake James conservation area.

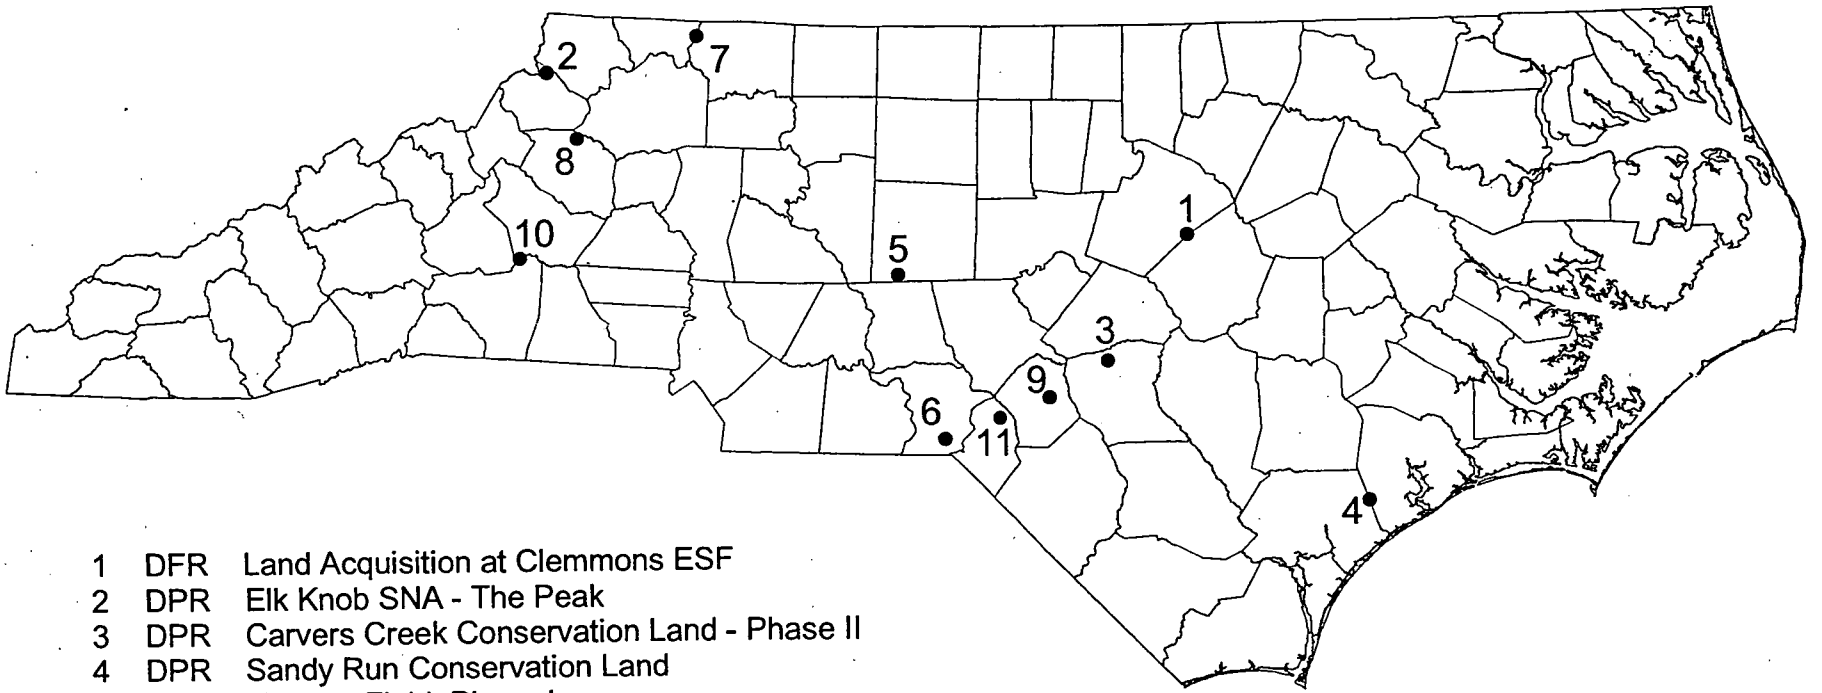
Spring 2005



Dept.	Project Name	County	Acres	Award	Description
DAg	Harvest Field Phase I	Randolph	31	$160,000	Acquisition of project area would protect Schweinitz's Sunflower, a federally and state endangered plant species. The tract also falls within the area of interest for the Uwharrie Forest Partnership.
DAg	Marks Creek	Richmond	1,318	$500,000	Project area includes a concentration of floristically rich streambed seeps with a major concentration of rare plants. The site would constitute the best population of Sandhills Lily in conservation ownership in North Carolina.
DENR/ DFR	Riparian Land Acquisition at Clemmons Educational State Forest	Wake	57	$587,500	Acquisition would expand the educational outreach mission of the existing Clemmons ESF and would support the mission of the funded NPS Training and Education Center. The City of Raleigh has pledged 50% of the purchase price to acquire the open fields on the north end of the tract.
DENR/ DPR	Elk Knob State Natural Area Land Acquisition: The Peak	Watauga	862	$1,372,000	Addition of The Peak, the highest point in Ashe County, to Elk Knob State Natural Area. The Peak is part of the Amphibolite Mountain Complex. Six high quality natural communities have been identified in the project area. CWMTF funds awarded to protect an adjoining 566 acres. TNC to donate 201 acres purchased with $451,800 in private funds. An adjoining private landowner has committed to donate a 115 acre easement.

Dept.	Project Name	County	Acres	Award	Description
DENR/ DPR	Carvers Creek Conservation Land – Phase II	Cumberland	856	$1,840,000	Project area is one of the largest sites of contiguous relatively undisturbed matrix of Sandhills natural communities that remains in private ownership in the Fayetteville area. Project area contains habitat for Red-cockaded woodpecker.
DENR/ DPR	Sandy Run Conservation Lands – Lejeune Buffer Tract	Pender Onslow	1,093	$500,000	Sandy Run lies within one of the largest, nearly contiguous natural areas in NC that lies between Camp LeJeune and Holly Shelter Game Land. Acquisition would serve to protect water quality in the Cape Fear River basin, conserve unique coastal plain habitats, and buffer Camp Lejeune.
DENR/ NHP	Continuation of County Natural Area Inventories	N/A	N/A	$627,000	Funding to continue the county natural area inventories. Funds will be used to support existing NHP staff during 2006-07, or to implement contracts with local partners.
WRC	Saddle Mountain Tract	Alleghany	252	$552,040	Addition to Game Lands. Purchase of this tract will protect views along the Blue Ridge Parkway and will protect the core/highest point in a 2,000-acre area from development. Private funds will cover $553,000 (50%) of the cost of this tract. The Piedmont Land Conservancy will donate adjoining 212-acre Wolf Creek Preserve.
WRC	Long Ridge Tract - Addition	Caldwell	373	$288,090	Tract classifies as a quality wild brown trout fishery. Acquisition would increase opportunities for resources management and recreation.
WRC	Upchurch Tract-Addition to Sandhills Game Land	Hoke	1,027	$1,217,133	Project area contains the Redwing Seeps Significant Natural Heritage Area, which supports 2 rare plants and 6 rare animal species. Provides needed buffer along Fort Bragg's southern boundary.

Dept.	Project Name	County	Acres	Award	Description
WRC	Marion Carter Tract	Burke	1,800	$1,000,000	Addition to South Mountains Game Land. Acquisition would allow for public recreational opportunity including two new access points to the game land.
WRC	Ritch Tract – Addition to Sandhills Game Land	Scotland	419	$287,500	Addition to the Sandhills Game Land which will protect and enhance foraging and expansion habitat for the Red-cockaded woodpecker. Will increase public recreational opportunities.

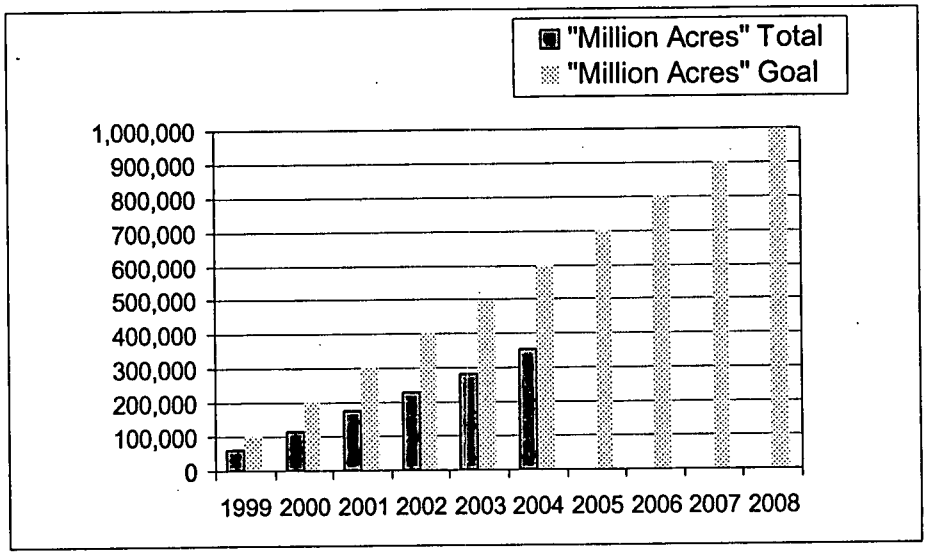
2005 Annual Report
NC Million Acre Initiative

Presented to the Governor of North Carolina and the Environmental Review Commission of the North Carolina General Assembly

Sept. 1, 2005

By the North Carolina Department of Environment and Natural Resources
Office of Conservation and Community Affairs



The Latest Numbers

At the end of the sixth full year of the North Carolina Million Acre Initiative (Jan. 1, 1999 – Dec. 31, 2004), private and public land protection partners across the state have permanently protected an additional **352,090** "Million Acre" acres. These partners reported adding **71,451** of those acres during the 2004 calendar year. This past year's activities represent an increase in the rate of land protection in North Carolina from the previous year. The Ecosystem Enhancement Program, begun in 2003, closed on 18,892 acres of permanently protected land, contributing significantly to the 2004 total. Because of the EEP emphasis on partnerships, many of those acres show up as part of other agencies' or land trusts' totals.

The table at the end of this report describes in detail the number of acres protected by sector (state government, local government, etc.), by program and by time period. Footnotes at the bottom of the page note special circumstances in some of the accounting. The end result is a conservative presentation of the totals. It is likely that the numbers presented here could be adjusted upward between 10,000 to 30,000 acres. To avoid frustration and embarrassment in the future, only official reports of new acquisitions (from surveys, interviews and questionnaires) make it into the final total. Estimations for non-respondents are not included.

It should be noted that, while our rate of land protection is encouraging, we have not yet reached an annual rate that will allow us to meet the goal of permanently protecting an additional million acres by Dec. 31, 2009 (G.S. 113A-240 and 241). The primary barrier is the availability of public and private funding for new protection projects. If we intend to meet the Million Acre goal by the end of 2009, more money for land protection must be found. The graphic below illustrates progress toward the Million Acre goal.

Table 1 Progress toward our goal of one million acres of permanently protected open space

The Program

In addition to working to increase the rate at which we are protecting land in North Carolina, the Million Acre Initiative continues to work towards making information about land protection tools and techniques more broadly available, and to encourage conservation planning. As noted in the 2004 report, because there are so many shared goals, the Million Acre Initiative has joined the One North Carolina Naturally effort. The Million Acre Initiative, in conjunction with One North Carolina Naturally and other partners, continues to slowly but steadily increase awareness among North Carolinians about the need for additional land conservation to protect our valuable natural ecosystems.

The Million Acre Initiative has identified potential focus areas for reaching the goal in a manner that maximizes benefit to biodiversity conservation. Within the N.C. Natural Heritage Program 'Macrosites' are approximately 3 million acres of unprotected land – areas that contribute to ecosystem function for clusters of natural areas and/or managed lands. These areas include undeveloped and little-degraded lands as well as farmland and revenue-generating forests that buffer natural areas. This approach helps focus protection of open space, without specifically targeting one million acres of private land. While the Million Acre Initiative has been working to identify targeted areas for conservation, other planning efforts are underway, including the

One North Carolina Naturally initiative, the Comprehensive Wildlife Conservation Strategy, and the Land for Tomorrow Coalition five-year plan.

Notable among these, the One North Carolina Naturally effort followed up on the forums held across the State and the 14 local and regional open space planning efforts encompassing 92 counties across North Carolina by compiling data and maps on existing open space resources, and highlighting regional and state priorities. These local and regional efforts also informed the update of the One North Carolina Naturally statewide conservation plan. The updated map was released at the statewide "Value$ of Conservation" conference in March. Data from each of these regional plans is incorporated into the Web-based N.C. Conservation Land Map Viewer where the data are continually updated. One NC Naturally hopes to catalyze a regional focus and provide information that provides an effective forum for decision-making about conservation in our communities. This online decision support tool can provide key information vital to successful planning efforts. Using this interactive map viewer, local and regional planners, conservation organizations and others will be able to zoom in on specific areas of their community. Selected geospatial layers reveal critical features such as habitats, water bodies and infrastructure. Future versions of our conservation map will include statewide greenway and trail data as well as canoe trails and boat access points.

The "Value$ of Conservation" conference also focused on ways we are protecting some of North Carolina's most critical economies - tourism, farm and forest lands, seafood, military bases - through conservation. Many outstanding presenters shared their perspectives on the critical relationship between conservation and a healthy North Carolina economy, of which approximately 25 percent is derived from industries and business that directly rely on our state's natural resources. Conference speakers included: former Gov. James B. Hunt Jr., Senate President Pro Tempore Marc Basnight and House of Representatives Majority Leader Joe Hackney; Secretary Carmen Hooker-Odom of the Department of Health and Human Services and Commerce Secretary Jim Fain clarified how intact natural systems support public health, economic development and tourism; William Schlesinger, dean of Duke University's Nicholas School of the Environment, spoke of the need to find economic solutions to environmental problems; Bill Medlin, executive director of the Yadkin-Pee Dee Lakes Project, an innovative

citizen-based regional strategic planning initiative for the Uwharrie Lakes Region in central North Carolina, spoke of the initiative's challenges and economic benefits; and, Dr. David Jones of the N.C. Zoo talked of the choices we need to start making now to ensure that North Carolina will be sustainable for the 22nd century.

Looking Ahead

The 71,451 acres permanently protected in 2004 was a great step forward, and it is anticipated that 2005 will also be a good year for new land protection projects. A major reason for the 2004 increase in protected acreage is the establishment of the Ecosystem Enhancement Program. In two years of the program, July 2003 - July 2005, EEP and its partners have protected more than 30,000 acres, preserving 126 miles of stream and 6,984 acres of wetlands. Acquisitions for an additional 134 miles of stream and 1,931 acres of wetlands are in progress. EEP funding contributed to the purchase of portions of large protected areas that will be open to the public and managed as state parks or game lands, including the Needmore Game Land, Buffalo Cove Game Land, Mitchell River Game Land, Haw Slopes State Natural Area and three tracts that were added to Eno River State Park. Another protected area acquired by EEP adjoins Blue Ridge Parkway lands – providing water quality and habitat benefits and protecting the view. Obviously, the EEP efforts to use preservation as a mitigation tool have provided a number of benefits, and the Million Acre Initiative would encourage North Carolina to continue this innovative and successful approach to mitigation.

The gaps in North Carolina's conservation funding remain a challenge. The FY 06/07 $17.2 billion state budget approved by the North Carolina General Assembly includes $100 million for the North Carolina Clean Water Management Trust Fund, marking the first time CWMTF has received its full level of funding. However, new applications totaled more than $ 90 million in requests for the 2005B grant cycle alone (a six-month period).

It will be difficult to meet the Million Acres goal without a working lands component that helps to maintain local production of agriculture and forest products. Of particular interest would be a dedicated source of funding for conservation of North Carolina's farms and forest lands. There

have been numerous suggestions for ways to generate funding, and it is time to examine some of these suggestions more closely.

2004 and the past several years have not shown significant federal land protection efforts. The Million Acre Initiative endorses increased spending in all programs (e.g. Wetland Reserve Program for private lands; U.S. Forest Service acquisition to fill in gaps in Uwharrie National Forest and connect recreation trails; increased money to fund U.S. Fish and Wildlife Service national wildlife refuges and conserve additional habitat for public trust wildlife; additional funding for Farm and Ranch Lands Protection Program and Forest Legacy).

On the private conservation side, Ducks Unlimited Sound CARE program is a comprehensive conservation initiative to protect, restore and enhance wetland habitat in North Carolina and the breeding areas that are most important to waterfowl wintering in North Carolina. The Sound CARE program has a five-year goal of 22,000 acres — 11,000 acres / $3 million for land protection; 3,000 acres / $3.5 million for work on public lands; and 8,000 acres / $4.5 million for work on private lands.

The upcoming year offers a chance to respond to a number of opportunities, and to think big. Notification that one of North Carolina's largest landowners, International Paper, is considering the sale of all of its land in North Carolina (more than 600,000 acres) reminds us that we need funding in place to react to such opportunities. While the state would only be interested in acquiring a fraction of the International Paper properties, and has the plan in place to identify priority parcels, there is a lack of funding to conserve a significant portion of these lands as open space for future generations. Some places, such as the Waccamaw River/Juniper Creek area, present a window of opportunity with a number of ecologically significant parcels becoming available simultaneously that would protect biodiversity habitat and provide recreation opportunities at an impressive scale. State and federal agencies and private organizations can hopefully work together to at least conserve some of the most ecologically significant areas, and the Million Acre Initiative and One NC Naturally will assist as possible.

In the coming months the Million Acre Initiative and One NC Naturally will work to implement recommendations from local public input. The One North Carolina Naturally Program continues to work with regions to determine appropriate next steps and to develop implementation strategies for the various regional plans. Specific projects will vary depending on the needs within each region. These efforts make it possible to see how individual green spaces and working landscapes across North Carolina fit together into a network of essential green infrastructure. Understanding the interrelationships among those areas will help us target our protection efforts so that we maximize the cost effectiveness and the natural protection value of our investment, and improve North Carolina's quality of life. As tens of thousands of acres each year are permanently altered from their existing natural condition for new development, increased awareness about the importance of setting aside some portion of our critical and unique lands is essential, and providing information and conservation tools is part of our job. The partners listed in the attached summary table will no doubt continue their efforts, and the One North Carolina Naturally program will look for ways to expand land conservation efforts, and make the future greener for our state.

CONSERVATION EASEMENT PROGRAM
ANNUAL REPORT
November 1, 2005

Pursuant to NC G.S. 113A-235(c), the Department of Environment and Natural Resources reports to the Environmental Review Commission each year on the implementation of Article 16, the Conservation Easement Program. This Article, 113A-230 through 113A-235, also includes enabling legislation for a program for conservation tax credit promotion/education, and enabling legislation for a conservation grant fund. The following reports on these programs.

Conservation Easement Program 113A-230. Having been established in 1997, this program is administered as part of the NC Conservation Tax Credit Program (NCCTC). The Conservation Easement (CE) program is intended to use promotion and education to increase the use of conservation easements as a tool to accomplish conservation goals, such as the Million Acre Initiative. A graph (Attachment A) of NCCTC Program Statistics shows the increasing use of conservation easements through this program, due primarily to the growing acceptance of CEs within the farming and forestry communities. Further, CEs are a key element of the Clean Water Management Trust Fund, Ecosystem Enhancement Program, Conservation Reserve Enhancement Program as the mechanism for water quality protection in most transactions. Also, CEs are held by programs such as State Parks, Coastal Reserves and Forest Legacy as a tool for accomplishing their missions.

In 2005 the Department began taking the first steps toward funding conservation easement related activity. With the increasing number of CEs generated through the Clean Water Management Trust Fund, Ecosystem Enhancement Program, Conservation Reserve Enhancement Program, and other programs, comes a growing responsibility for monitoring and effective management of their conservation values. This will begin as a centralized receipts-based program supported by any agency prepared to make payments into the Conservation Grant Fund Endowment to cover administrative/management costs. The intent is to expand this Stewardship Program incrementally until all conservation easements held by the State are assured proper monitoring and management of their public purposes and values. This program is explained in more detail in (Attachment B).

To accomplish optimum use of conservation easements and their related economic advantages by private landowners, the program needs to provide more than superficial information and guidance. While a more substantial and in-depth outreach program could greatly increase the use of conservation easements, it will also require more attention to the costs and complexities of conservation easement drafting and stewardship. By combining the CE Program with the NCCTC Program, the Department has maintained a limited CE Program in the absence of staff or line item operating budget.

Conservation Tax Credit Program 113A-231. The State's Conservation Tax Credit was established in 1983 and this Department's role was passive, to respond to donor's applications for certification of their gifts of interests in real property for conservation purposes. In 1997 the Department received the authorization to begin a non-regulatory program of education/promotion to increase the use of conservation tax credits. Over the last ten months NCCTC/CE presentations were made at six workshops organized by other groups for landowners and land related professionals, and the NCCTC display was sent to three other workshops or conferences.

Graphs (Attachments C& D) of the NCCTC Program Statistics show the acreage and value of donations over the duration of the program. Cumulatively, more than 138,000 acres valued in excess of $505 million has been donated. A table (Attachment E) of donations by County shows that there have been donations in eighty-five of the State's counties.

Over the duration of Conservation Tax Credit use, it has leveraged the donation of $165 million of excess value that was above the amount that could be used to create the maximum credit allowed (Attachments F,G, & H).

Further, when used in conjunction with bargain sales, the conservation Tax Credit (Attachments I&J) can yield substantial savings for conservation trust funds, local governments, and nonprofit organizations purchasing land. For example, in 1998 & 1999 alone, the gift portion of bargain sales to the State that qualified for the Conservation Tax Credit allowed the acquisition of conservation lands by the state at a price $23 million below appraised market value. Over the duration of the program, all grantees have saved more than $79 million through bargain sales facilitated tax credit incentive.

The Department has the statutory responsibility to protect real property and interests in real property conserved in perpetuity by State incentive programs. Fulfillment of this responsibility will require monitoring of these properties to assure that their conservation purposes are not jeopardized. The current absence of permanent, full time staff and line item budget prohibit implementation of activities to protect the public's conservation assets.

The increasing benefits from the Conservation Tax Credit Program have been derived mostly from increases in the maximum tax credit allowed. Nevertheless, steadily increasing land values reduce the incentive offered by the Conservation Tax Credit over time. Therefore, the maximum credit allowed must increase periodically to retain its effectiveness.

The Conservation Tax Credit is currently applied against State income taxes. Yet, there are landowners that cannot use this conservation incentive because they are required to pay other types of taxes. Consideration might be directed toward broadening the types of taxes to which the credit can be applied.

A more substantial and in depth outreach program could greatly increase donations of real property for conservation purposes from the use of conservation tax credits. To date the Department has provided minimum support for this function while the Conservation Tax Credit Program has operated in a limited fashion in the absence of permanent, full time staff or line item operating budget. This is a continuing limitation on the program's potential success.

Conservation Grant Fund 113A-232. Established in 1997, it was intended to stimulate the use of conservation easements, to improve the capacity of private nonprofit land trusts and agencies to successfully accomplish conservation projects, to better equip real estate related professionals to pursue opportunities for conservation, to increase private landowner participation in land and water conservation, and to provide an opportunity to leverage private or other public monies for the stewardship of conservation easements. To date the Department has not received an appropriation to actualize the complete Conservation Grant Fund and address the structural weaknesses it was intended to correct.

In 2005, actions were taken to start up two of the Conservation Grant Fund's functions. (1) The General Assembly approved one-time funding for the transaction cost function. This will be directed to the conservation of land that buffers military bases and training areas. (2) The Department began the process of creating a centralized program that assures proper monitoring and management of the conservation easements held by its agencies, as part of the stewardship cost function. The Stewardship Program is explained in more detail in (Attachment B). Both of these functions will expend their first funds during 2006.

Results from 2005 Legislative Session. Two bills were before the Legislature.

(A) SB 521, An Act To Recodify The Credit For Certain Real Property Donations And To Increase The Credit For Certain Pass-Through Entities, was introduced in 2005 as a placeholder and it carried over to the Short Session. Although it was not ratified, the needs it sought to address are still pertinent enhancements of the incentives for conservation of interests in real property in North Carolina. A Committee Substitute is prepared that incorporates the following concepts.

(1) **NCCTC For Partnerships (Pass Through Entities).** A recent amendment to Department of Revenue (DOR) statutes, governing the way all pass through entities may claim tax credits, deferred its effect on the NCCTC until 1/1/2005 and that has since been extended until 1/1/2006. At that time, partnerships and other pass through entities will be limited to a maximum allowed credit of $250,000 for donations under the NCCTC, regardless of the value of the donated interests in real property. This has the potential to be a significant disincentive on the scale of donations and gift portion of bargain sales. In response to this pending change, DENR has coordinated with the DOR to seek an approach to meeting mutual public needs. An amendment to NCCTC statutes to allow pass through entities to claim the same maximum allowed credit ($500,000) as other corporations, with each pass through recipient limited too the maximum individual

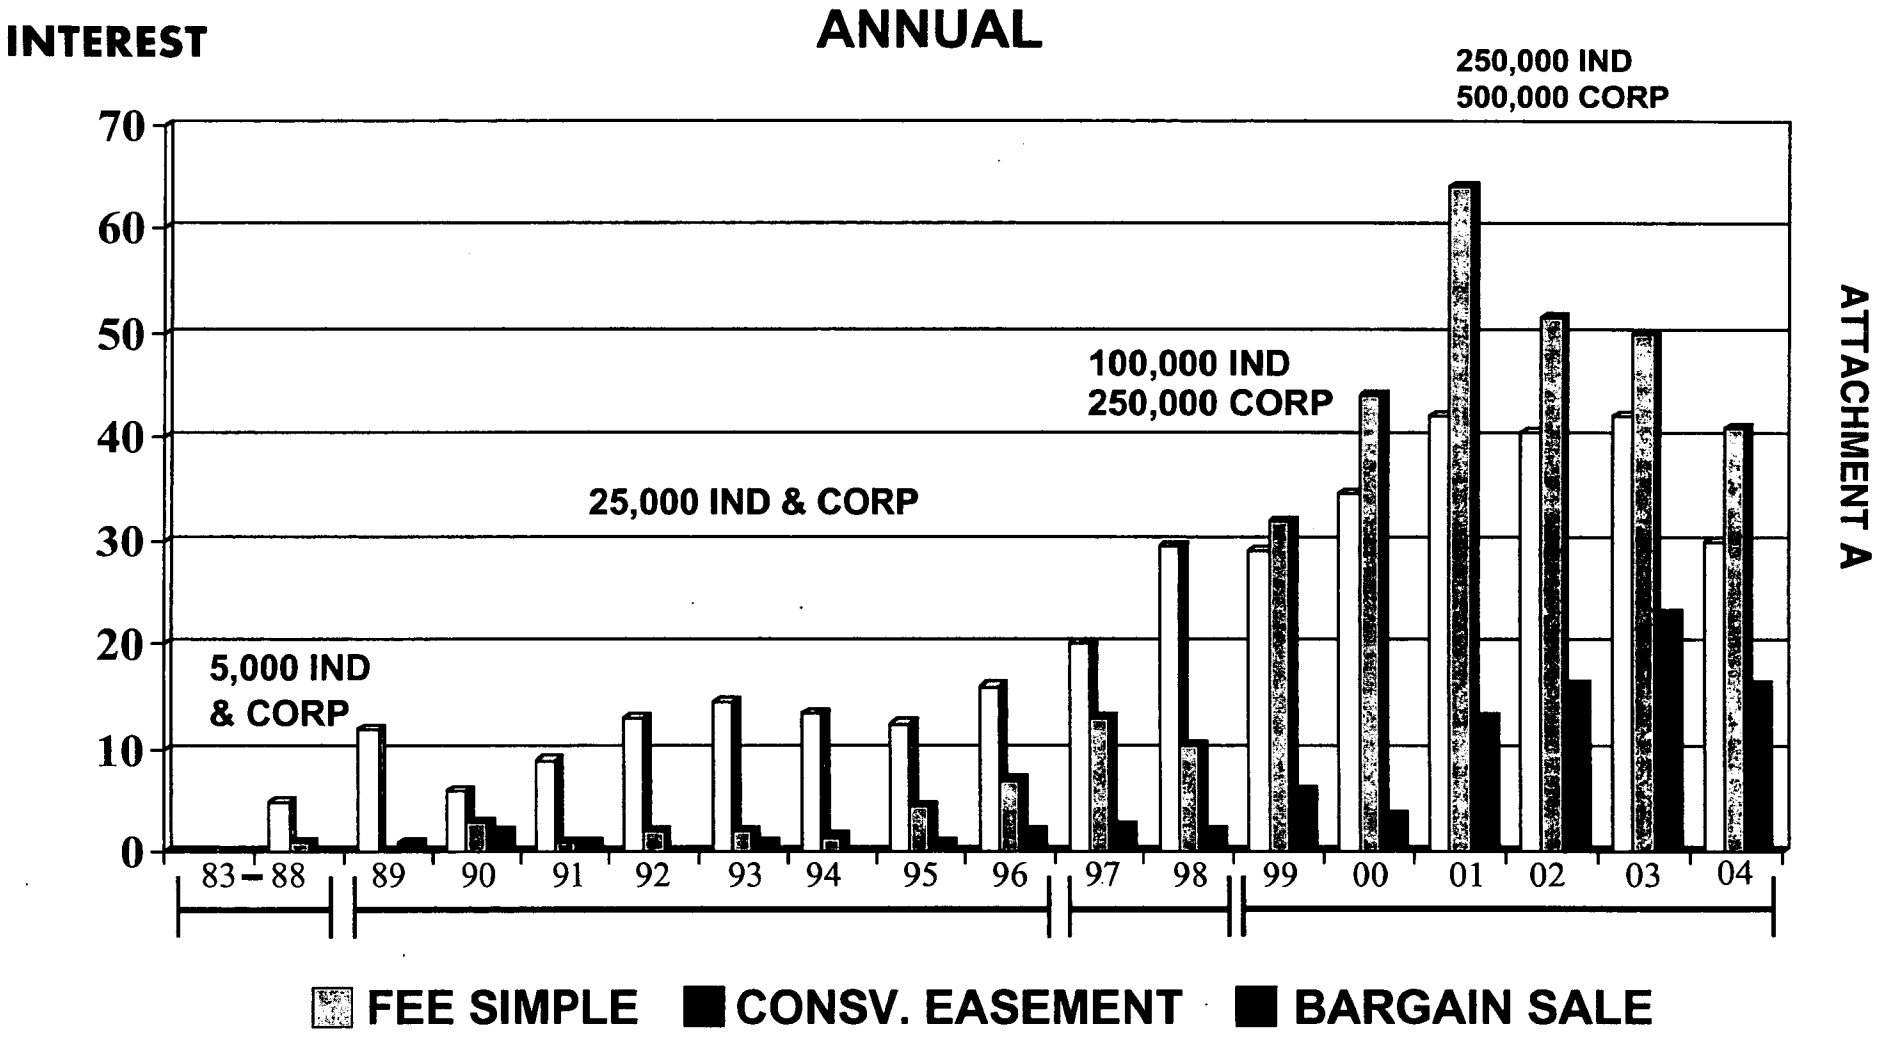
NCCTC of ($250,000) or portion thereof, would partially address the loss of incentive to the NCCTC. The effective date of such amendment should be 1/1/2006.

(2) **Corporate Incentive To Donate**. Since its creation in 1983, the NCCTC has only been applied against income taxes. With the sunset provision for how corporate passthrough entities claim tax credit, some of the incentive for conservation donations will be eliminated. One approach for regaining the breadth of NCCTC applicability would be to allow the credit to be used against Franchise Tax and Gross Premium Tax, thereby appealing to corporate landowners that may be otherwise constrained from considering the donation of real property for conservation purposes.

(3) **NCCTC Refundability.** The NCCTC was created as an incentive for landowners to donate interests in real property for conservation purposes. While the concept has been very successful and has been emulated in other states, there is still a category of landowner that finds little incentive in the program. "Land-rich and cash-poor" landowners [typically owners of working landscapes such as farms and forests] receive disproportionately low response from their conservation donation for a tax credit. Several states with more recent conservation tax credit programs have addressed this issue by authorizing "transferability" for their tax credits, but this involves a considerable administrative workload. The issue could be addressed more simply through "refundability," where those donors with larger income tax liabilities will have the option of electing a credit, while those donors with lower income tax liabilities will have the option of electing a partial refund. As proposed, a 50% refund of any remaining credit amount would be authorized after the second year of carry forward (third year including the year of donation). In this way, land-rich and cash-poor landowners would have more incentive to donate interests in real property for conservation purposes. If enacted, it would be three years before any refunds were paid.

(B) SB 1117, An Act To Enact The 2005 Soldier, Sailor, Marine, Airmen, And Guardsmen Support Act, was ratified. Among its provisions was a $1,000,000 authorization to the Conservation Grant Fund to be used for "compatible land use and conservation easement type acquisitions of land adjacent to military bases and flyways". This one-time appropriation is the first funding provided to the Conservation Grant Fund. It is targeted to part of only one of the Fund's several conservation support functions. This activity will continue until the funds are expended.

Recommendations for Substantive Legislation. General speaking, activities under Article 16 are being carried out as well as can be expected, given the limited resource commitment to these programs. The principal constraint on the promotional and educational opportunities envisioned by Article 16 is the absence of staff and operating budgets. Likewise, the principle constraint on the capacity to execute transactions and conduct conservation stewardship is the absence of a continuing appropriation to the Conservation Grant Fund. These are considerable constraints that need to be addressed,



and there are additional items that may also be considered for substantive legislation to improve existing programs.

(A) **Recurring Appropriation**. From its enactment in 1997 through 2005, the three programs under Article 16 reported they have never had a line item operating budget or prominent, full time staff. While the Conservation Grant Fund will receive funds from two sources in 2006: (i) a non-recurring appropriation for compatible land use and conservation around military training areas, and (ii) receipts based stewardship of a small fraction of the State's conservation easements, this does not address the broader conservation purposes of these three programs. For example, the Conservation Tax Credit program alone has conserved about 800 properties and another 100 are added each year, with no capacity to fulfill its statutory responsibility to monitor and assure their ongoing conservation viability. To continue the initiative to buffer military training areas, and begin to build the capacity to both conserve and manage land for conservation purposes at a rate that may come close to reaching the State's Million Acre goal, a recurring appropriation will be required. An amount in the $2-3 million range is a reasonable start up figure.

(B) **Index Credit Cap.** Since its establishment in 1983, the maximum credit allowed for the NCCTC has been raised three times (1989, 1997, and 1999). Further requests for increases are inevitable as increasing property values decrease the incentive provided by the NCCTC. These dynamics can be addressed by indexing the credit cap. The incentive to donate would then be stabilized relative to land value, and repetitive legislated increases would be avoided. As proposed, an increase equal to 75% of the Consumer Price Index (CPI) would be calculated from the last year of credit cap increase, with the cap increasing incrementally in the year following a cumulative increase of $25,000 for individuals and $50,000 for corporations. If previously enacted: since the last credit cap increase occurred in 1999, the index threshold would have been passed in 2004, would have been announced in 2005, and 2006 would be the year an automatic indexed increase took effect. Thus, a credit cap increase is due, to avoid a loss of incentive for voluntary donations of real property for conservation purposes.

(C) **Charitable Purpose Flexibility.** To be eligible for a NCCTC, the donated land must yield one or more of the required public conservation purposes. Nevertheless, minor parts of donated tracts may not contribute to the conservation purpose and may not be allowed to be converted to another purpose without conflict with the tax credit statues. While it would be inappropriate to allow wholesale or unsupervised conversion of conservation properties to other uses, there may be justification to consider allowing small parts that do not contribute to conservation purposes to be converted to another charitable purpose under a specific process of checks and balances administered by the NCCTC Program. This flexibility would be consistent with the concept of providing incentives for community based charitable activity, while allowing the integration of diverse land uses, but without jeopardizing the public conservation benefits required by the NCCTC.

REPORT ON THE ESTABLISHMENT OF A CONSERVATION EASEMENT/FEE STEWARDSHIP PROGRAM IN THE OFFICE OF CONSERVATION AND COMMUNITY AFFAIRS, DEPARTMENT OF ENVIRONMENT AND NATURAL RESOURCES

February 7, 2006

I. INTRODUCTION AND BACKGROUND

The Department of Environment and Natural Resources ("Department" or "DENR") and several related agencies have multiple programs in place which have as a part of their mission, the acquisition of property and property interests to conserve, protect and enhance the natural resources of the State of North Carolina. These programs have grown and matured over the past several years, to the point it is widely recognized that an organizational unit within the Department must be established and charged with the responsibility for the facilitation and oversight of long-term stewardship of these lands.

A Stewardship Task Force was established on April 7, 2004 under the sponsorship of the Chief Deputy Secretary of Environment and Natural Resources, in accordance with a contractual agreement between two of the important partners involved in the conservation of lands effort (the Department's Ecosystem Enhancement Program and the Conservation Trust for North Carolina), to study the full set of issues surrounding the management of the protected properties.

The charter of the Stewardship Task Force included the following mission statement:

> The North Carolina Department of Environment and Natural Resources has convened this Task Force to evaluate monitoring fees and provide recommendations for long-term management and perpetual monitoring, and to provide recommendations to the Secretary for the most cost-effective mechanisms for ensuring protection and management of land interests associated with acquired or secured properties....

It was acknowledged and agreed that the Secretary would evaluate the recommendations and establish an appropriate management and monitoring procedure. The Stewardship Task Force submitted its report to the Department on September 5, 2004.

The Department has carefully considered the Stewardship Task Force Report, and has undertaken a review of existing organizational structures and legal authorities. It has determined that a Stewardship Program will be established within its existing Office of

Conservation and Community Affairs. Staffing levels of this office will be increased over time to administer and track long-term monitoring reports, review invoices and approve payments for contracted-out monitoring efforts. Legal services, particularly for any necessary deed restriction enforcement, will be coordinated with the Department of Justice; and a process will be put in place to coordinate legal defense actions with involved non-profit land trust organizations.

Funding for both the administration and management of the Stewardship Program and for the necessary monitoring activities and enforcement has been at the heart of all of the discussions of this issue. It is expected that involved agencies will provide a to-be-determined payment to the Stewardship Program which will be protected and preserved for long-term use through the use of a non-reverting account and a Treasurer-approved Endowment fund.

The Conservation Easements Program Act, NCGS 113A-230 et seq, authorizes the establishment of a comprehensive conservation easement program within the Department, and includes as a part of its enabling authorities the creation of the Conservation Grant Fund. Grants may be made from the Conservation Grant Fund for all of the elements required of a long-term land stewardship program management activities and support, including baseline inventories-planning and correction of minor easement breaches; monitoring compliance with conservation easements; landowner communications and program education; stewardship; and administrative costs. A significant aspect of the Act is its acknowledgement of the roles of land trusts in the conservation easement stewardship effort. It is the stated intent of the General Assembly in NCGS 113A-230 "to extend the ability of the Department of Environment and Natural Resources to achieve these purposes [a conservation easements program] and to strengthen the capability of private nonprofit land trusts to participate in land and water conservation."

The purpose of this report is to outline the steps the Department will take to activate and further develop this important endeavor, in order to reach the long-term goal of a fully implemented stewardship program. All State agencies which obtain lands for conservation will be invited to participate. The initial participant will be the Department's Ecosystem Enhancement Program, but other programs with stewardship responsibilities, such as the Natural Heritage Program, Division of Parks and Recreation, Division of Forest Resources, Division of Coastal Management and Division of Soil & Water Conservation may also be involved. Included within the department umbrella will be the Conservation Credit Tax Program. It is also expected that the benefits of the program can accommodate similar lands management needs in the Clean Water Management Trust Fund, other state agencies (e.g., Department of Agriculture), and programs administered by or through the State Property Office.

The Department would like to publicly thank the Stewardship Task Force for its work. The efforts that the Task Force expended have significantly advanced the Department's knowledge and basis for decision-making on this significant matter.

Without the necessity for further extended analyses, the establishment of the Stewardship Program is proceeding quickly.

II. STEWARDSHIP TASK FORCE RECOMMENDATIONS REPORT

The Stewardship Task Force was chaired by the Ecosystem Enhancement Program, and met eleven (11) times over a 5-month period. The member organization and agency participants were the Piedmont Land Conservancy, the Nature Conservancy, the Tar River Land Conservancy, the Conservation Trust for North Carolina, the Conservation Fund, the North Carolina Coastal Land Trust, the Clean Water Management Trust Fund, the Wildlife Resources Commission, and the departmental divisions and offices with land management roles. Additional contributors to the effort included representatives of the State Property Office and the Attorney General's Office.

In the memorandum transmitting its recommendations to the Chief Deputy Secretary, the Stewardship Task Force noted that the key points of its findings and recommendations were as follows:

- The exact amount of funding needed for perpetual protection of lands is impossible to predict.
- The protection of the state's interest in properties will require a perpetual management system.
- To ensure site protection, funds must be secure for monitoring, legal action (enforcement) and biological management.
- Stewardship and fund management systems apply to a number of state agencies and boards, therefore, an umbrella management system seems practicable.

The Stewardship Task Force also established a methodology for determining appropriate long-term monitoring fees and for baseline property documentation, and drafted forms for monitoring inspection and reports, which should prove useful to the Department. The September 2005 report is attached, for ready reference, as Attachment 1.

III. ORGANIZATION OF THE STEWARDSHIP PROGRAM

The Department's Office of Conservation and Community Affairs (OCCA) is a senior management level program. The mission of the OCCA includes the development and implementation of a comprehensive statewide conservation plan involving the public, governmental agencies, private organizations and landowners. Its conservation partners already include the agencies, divisions and organizations diligently working to protect and conserve our natural resources. The One NC *Naturally* program, the NC Million Acre Initiative, the Natural Heritage Program, the Albemarle-Pamlico National Estuarine Program and the Conservation Tax Credit Program are working components within the OCCA. It is the "natural" choice as the organizational entity within the Department to serve as the managing unit for the Stewardship Program.

It is expected that a Stewardship Program manager, with stewardship and monitoring skills, will be placed within the OCCA and report to the director. The duties of this position may be generally described as follows:

- Compile a data base of all state properties that require stewardship
- Implement the applicable stewardship Procedures and Guidelines
- Implement reimbursement formula, per above guidelines
- Contract with monitoring service providers
- Maintain an inventory of qualified sites
- Compile and analyze reimbursement data
- Receive, confirm and facilitate reimbursements
- Create and maintain reports, including those to the General Assembly
- Coordinate activities with Attorney General's Office, State Property Office, Treasurer's Office, Controller, etc.

It is also expected that administrative support and a biological monitoring position will be needed to complete the full staffing of the stewardship team. The Stewardship biological monitoring technician will perform the following duties:

- Implement the applicable stewardship Procedures and Guidelines
- Review Annual Monitoring Reports prior to payment of invoices
- Compile and analyze monitoring data
- Create and maintain reports, including those to the General Assembly
- Conduct site inspections
- Coordinate with conservation easement holders

Housing the Stewardship Program within the Department will allow the Department's existing infra-structure for contracting, budget and account management, and legal services to be used. Appropriate budget codes for expenditures under the Conservation Grand Fund will be established, and personnel will be administered through existing management systems.

IV. IMPLEMENTATION COMMITTEE

The Department has obtained the assistance and advice of its land conservation partners in establishing the Stewardship Program. A Stewardship Implementation Committee has worked directly with the OCCA to determine a) whether any supplemental tasks needed to be addressed as a follow-up to the work of the original Stewardship Task Force; b) any impediments to the establishment of the conservation easement/fee stewardship program as outlined herein; c) the initial group of agencies and entities to be involved; d) an appropriate budgeting framework for, and mission charge to, the OCCA; and e) the basic outline of the needed enforcement procedures, including consultation opportunities for state agencies and involved land trusts.

The Stewardship Implementation Committee has operated as an advisory "team" under the guidance of the director of the OCCA, and will continue to serve as a sounding board for the OCCA as the Stewardship Program progresses.

The Stewardship Implementation Committee may also be asked for its assistance in developing an initial inventory of state-held property and property interests for which the stewardship/management program should be applicable.

V. ELEMENTS OF STEWARDSHIP

The Stewardship Task Force provided the Department with a useful working definition of stewardship, which obviously has many significant elements. For purposes of this report and for the initial start-up of the Stewardship Program, the Department adopts the elements described below, largely taken from the Task Force Report, as the basics of its program. A schematic chart outlining the various elements of the Stewardship Program is provided in Attachment 2.

Stewardship is defined as the protection of the ecological integrity of conservation properties, and has three major components: monitoring, legal protection and defense, and biological management activities. Landowner outreach, education, and landowner relationship maintenance are important components of monitoring and management. Management activities are specific to individual sites, and, when applicable, should be linked to a site-management plan and to the conservation easement language.

Stewardship activities include:

- Inspection of sites and boundaries
- Production of periodic monitoring reports
- Scheduled and emergency response management activities
- Notification of the state property office and the funding agency if encroachment or management issues are identified during site visits

Initially, the OCCA priorities will be focused on monitoring activities. However, steps to address each of the three major components of stewardship will be planned and implemented incrementally, to reach the long-term goal of a comprehensive and effective stewardship program. As funding resources are identified and obtained, the program will move from its start-up phase to full implementation.

A. Monitoring:

Monitoring is defined as the conducting of property visits and issuance of reports of site integrity or of breaches of easement or dedication agreements. Monitoring activities include staff time, travel, materials and overhead associated with site visits and periodic boundary re-marking.

Each site must be monitored to assess the site conditions and check for breaches of the easement or other encroachments. The frequency of site monitoring may vary, and

it will be a significant task of the OCCA to determine the desired frequency, with annual activities being the presumed target initially. Since properties are either owned by the State or have conservation easements that are assigned to the State, legal assistance will be provided by the Department of Justice, Attorney General's Office.

B. Legal Protection and defense:

The State of North Carolina has ultimate responsibility for defense of state-held property and easements. When appropriate, responsibility of easement defense may be shared with partners holding other conservation interests in the real property. Costs of "major" violations are unpredictable, but it is clear that determinations must be made about the location of funds and the amount of funding required, and should be reviewed periodically. The Stewardship Task Force has also concluded that it is not possible to accurately predict costs that may be associated with legal action in perpetuity. Enforcement of major legal violations are expected to be the responsibility of the Department of Justice, Attorney General's Office; and steps will be taken to explore how the land trusts may be fully engaged in the enforcement process.

C. Management

Management includes affirmative activities or remedial actions necessary for maintaining conservation values of the property and may also include activities designed to enhance those values. A management plan should be developed that will address the conservation values for which the property was purchased. Remedial actions which can be obtained without the need for legal assistance are classified as "minor" and are expected to be resolvable by the Stewardship Program and its partners. It may prove useful to implement a cost cap on these management activities.

<u>Management Activities</u>

1. Exercising reserved rights: includes staff time, travel, materials. Reserved rights are identified in the easement (home site development, timbering, trail or dock construction, etc.) and are not usually applicable to Ecosystem Enhancement Program easements.

2. Implementing management plans: Costs of implementing the management plan should be predictable and estimates should be included in site-specific management plan document.

3. Unplanned affirmative activities and remedial actions may become necessary as time passes. While these are unpredictable, a contingency amount should be included in the endowment estimate to cover these activities.

These costs can be estimated at the time the endowment for stewardship of a site is deposited. The endowment would hopefully provide principal to produce the interest

needed to fund management activities, but a long-term management program will require a phased approach.

VI. ACCOUNTING MECHANISMS

The Stewardship Program will be administered through the Conservation Grant Program, and will incur costs in the following areas: transaction, management, stewardship, education and capacity building. Generally, OCCA expects its funds to be placed in the accounts described below. Stewardship activities will be paid through existing DENR purchasing, budgeting and controlling infrastructure.

1. The Conservation Grant Fund general fund center (not yet established) for appropriations to DENR/OCCA. This account would hold General Assembly appropriations provided to OCCA which are specifically related to operation of the Conservation Grant Fund. GS 113A-232(b) identifies these sources as "any monies appropriated to it [the Conservation Grant Fund] by the General Assembly...." Unless legislated otherwise, these funds will be monies that will revert at the end of a fiscal year. These funds will be used for any of the purposes described in the Conservation Easements Program legislation, or for any more limited purpose set out in the appropriation. Currently, there are no funds in this general fund center.

2. The Conservation Grant Fund non-reverting account (established as Fund 2410 in Budget Code 24300), for other sources of money to DENR/OCCA. Under GS 113A-232(b), this account would hold "any monies received [by the department] from public or private sources." The purposes for which these funds can be used are also those described in the Conservation Easements Program legislation, and may be generally described as: administrative costs for the Conservation Grant Fund; conservation grants made under GS 113A-233, including stewardship; and the establishment of the Stewardship Endowment account. These funds would include monies received from departmental or other state agencies in exchange for stewardship activities performed or managed by the OCCA, and these funds "shall not revert and shall remain available for expenditures in accordance with this Article."

3. The North Carolina Conservation Lands Stewardship Endowment account (established as Principal Fund 6704 and Interest Fund 6705 in Budget Code 64307), for moneys solely dedicated to stewardship activities. GS 113A-232(d)(3) is very specific as to the department's authority to establish an endowment account for any of the purposes set out in GS 113A-233(a). One such purpose is for the stewardship of land, and that would be the responsibility of OCCA under the new stewardship program. In addition, the State Treasurer may administer such an account under GS 147-69.2(18), which provides for the investment of monies in such a specially created Fund. Once the endowment is funded the interest it draws will be used for the stewardship activities for which it was established. It is expected the interest will be drawn down periodically as needed and placed in the non-reverting account for expenditures on stewardship activities.

The use of the word "endowment" indicates a stronger intent from the General Assembly than the standard non-reverting account language that these moneys be dedicated solely to the purposes of the Endowment account, which in this case is stewardship. An endowment is the

"transfer, generally as a gift, of money or property to an institution for a particular purpose such as a gift to a hospital for medical research.... [It is] the bestowment of money as a permanent fund, the income of which is supposed to be used in the administration of a proposed work" Black's Law Dictionary, Sixth Edition (1990). An endowment-creating document will be provided by the OCCA, in consultation with the Attorney General's Office and the State Treasurer.

The DENR/OCCA will be responsible for transferring or directing public and private monies to the Stewardship Endowment account, receiving periodic reports on its investment from the State Treasurer, and for making the expenditures of the interest received from the investments.

VII. MANAGEMENT PRINCIPLES

Throughout the Task Force discussions, the internal departmental review, and the dialogue with the Implementation Committee, several guiding principles have emerged which can significantly assist the OCCA in the further development of the Stewardship Program. This listing is not intended as exhaustive, but rather is included as a summation of current agency goals and objectives for the program.

1. The OCCA will need an initial inventory of lands and acreages, the existing baseline documentation for site conditions, and the existing stewardship and management plans. It should also identify which sites have previously received payments for stewardship endowments. The initial inventory can be developed into a catalog of properties with annual updates.
2. While the OCCA will serve as the management unit for the Stewardship Program, it is recognized that land trusts, soil and water districts and other regional / local entities may be best positioned for stewardship monitoring activities. These entities will generally be qualified to perform the needed stewardship activities and may be expected to have good working relationships with landowners and donors.
3. The Stewardship Program within the OCCA must be operated consistently with the remainder of the Conservation Easement Program Act provisions, which extend beyond stewardship.
4. Initially, and until sufficient funding is received to fill the needed OCCA positions, selected functions and responsibilities may be contracted for under the provisions of G.S. 113A-234(b). Contracts should be for terms that are commensurate with long-term management goals.

VIII. ENFORCEMENT

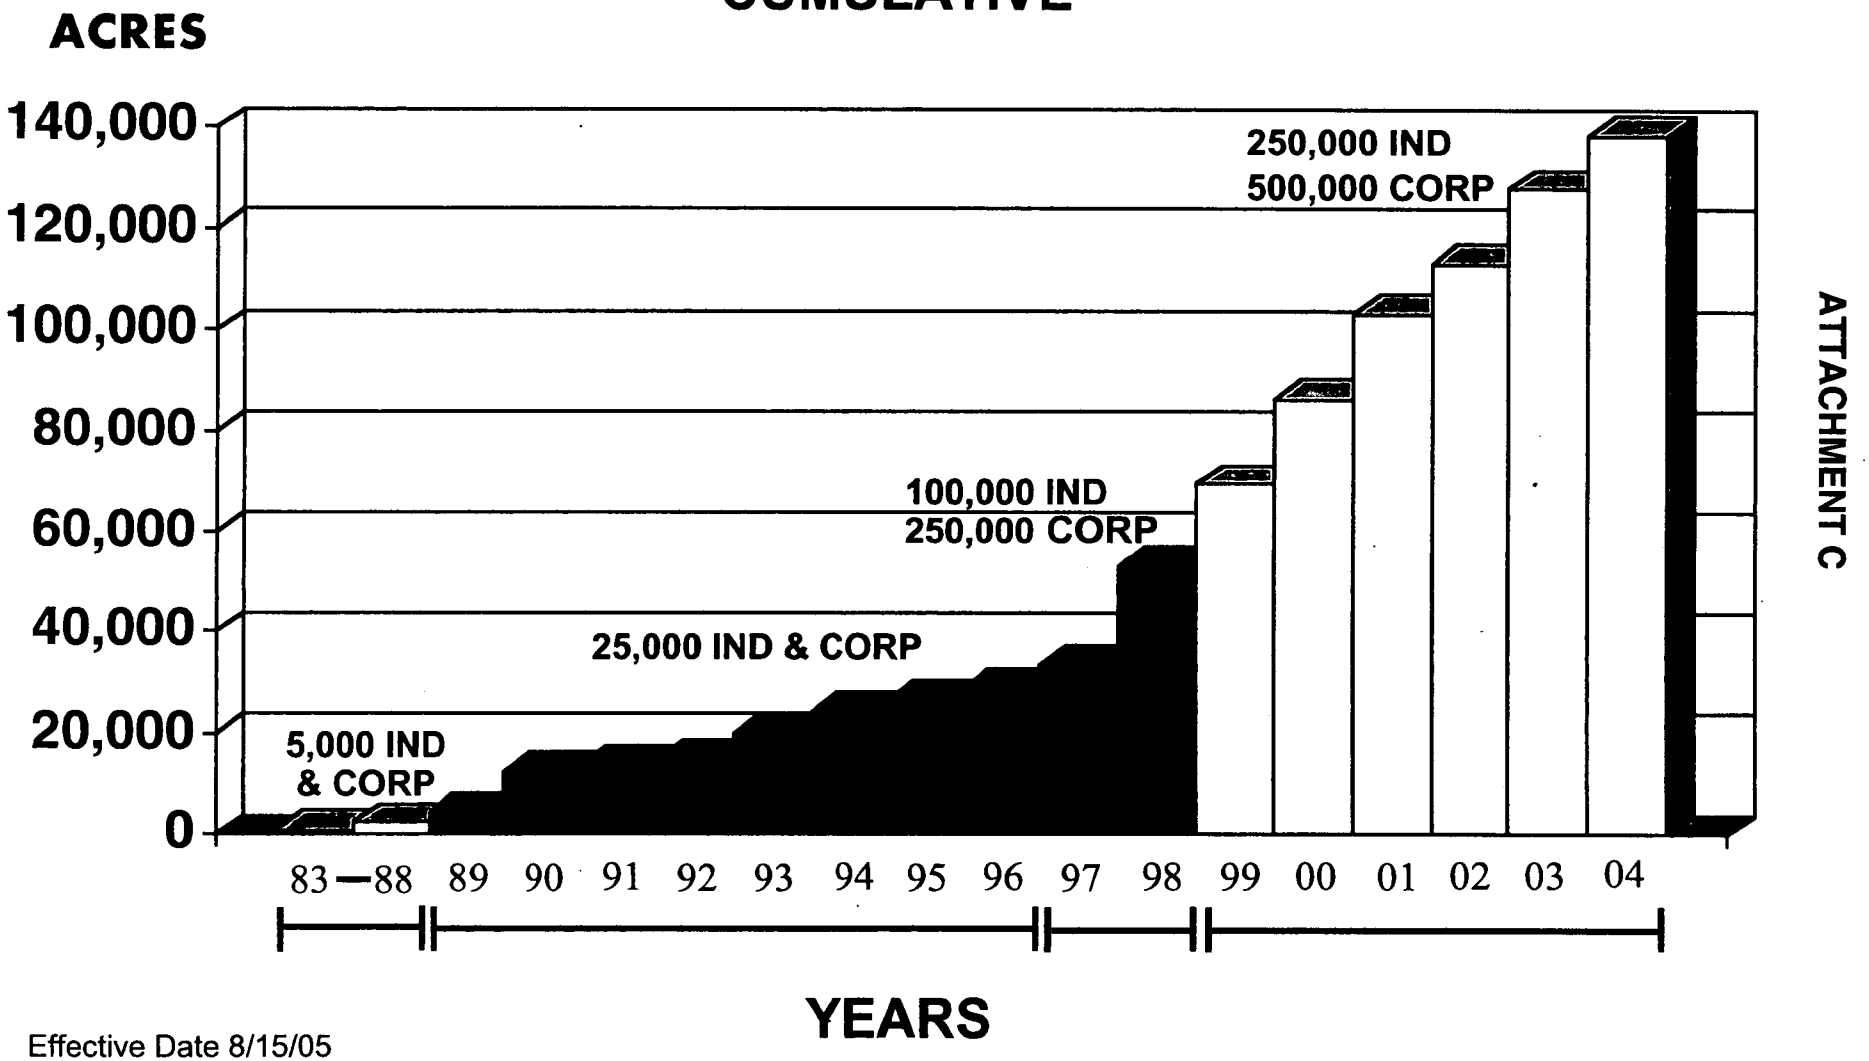
G.S. 113A-231 charges the Department with the responsibility to monitor and enforce conservation responsibilities that result from the State incentive, grant, and non-regulatory programs intended to protect land in perpetuity. The monitor/inspection

positions within the Stewardship Program will provide the first capacity and opportunity to carry out the responsibility in an organized and continuous fashion.

Funding constraints will probably lead to these new positions being filled incrementally, but their integration into the OCCA must be a consideration from the beginning in order to optimize effectiveness and efficiency.

The Attorney General's Office has roles to play, to a greater or lesser extent, in all of the Stewardship Program. Expertise in environmental, real property, and litigation will be required at various times. The Attorney General's Office must be an integral part of the Stewardship Program from the beginning, and ultimately receive funding for the level of services they provide.

Further, it is expected that the state's land trusts, through landowner contracts and their contracted monitoring and management activities, will also have roles to play in the defense of easements. Close cooperation and coordination between the state agencies and the land trust is vital.



Conservation easements protect the public's interests in environmental/natural resources and services. Conceptually, the Attorney General's Office should have a role in defending/enforcing all conservation easements. Under G.S. 113A - 231, the Attorney General's Office has a defined role to provide legal services related to conservation easements that result from State programs. The unresolved question is the full extent of the Attorney General's Office involvement with conservation easements. The Attorney General's Office has been a partner in the establishment of the OCCA Stewardship Program, and a continuing dialog among the department, the conservation community and the Attorney General's Office is planned. As our experience increases in conservation easement defense, further mechanisms for enforcement will be developed and implemented.

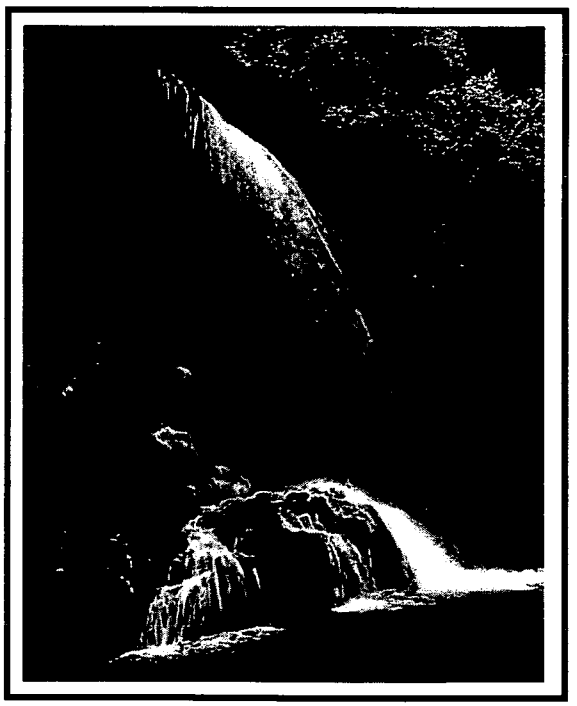
North Carolina Natural Heritage Trust Fund



2005 Report

EXHIBIT F

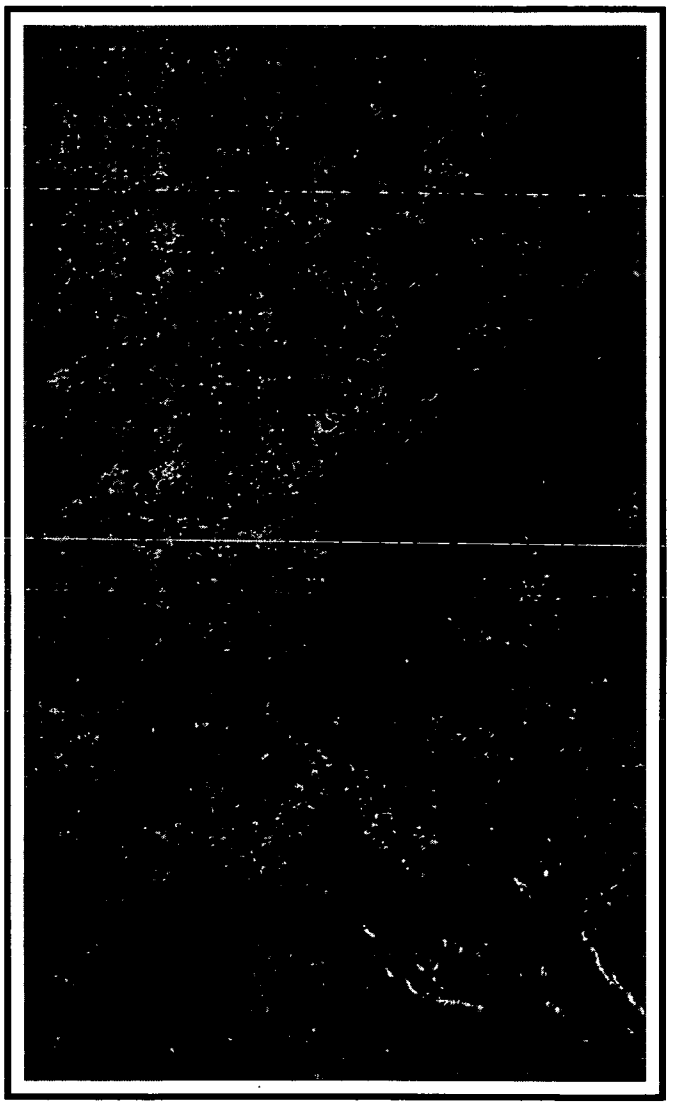
Mission

- Provides grants for acquisition of sites with significant natural and cultural heritage value.
- Also funds inventory of significant natural areas.
- 12 member citizen board
- Accepts applications from

  4 state agencies: DENR, DoACS, DCR, WRC

Partnerships

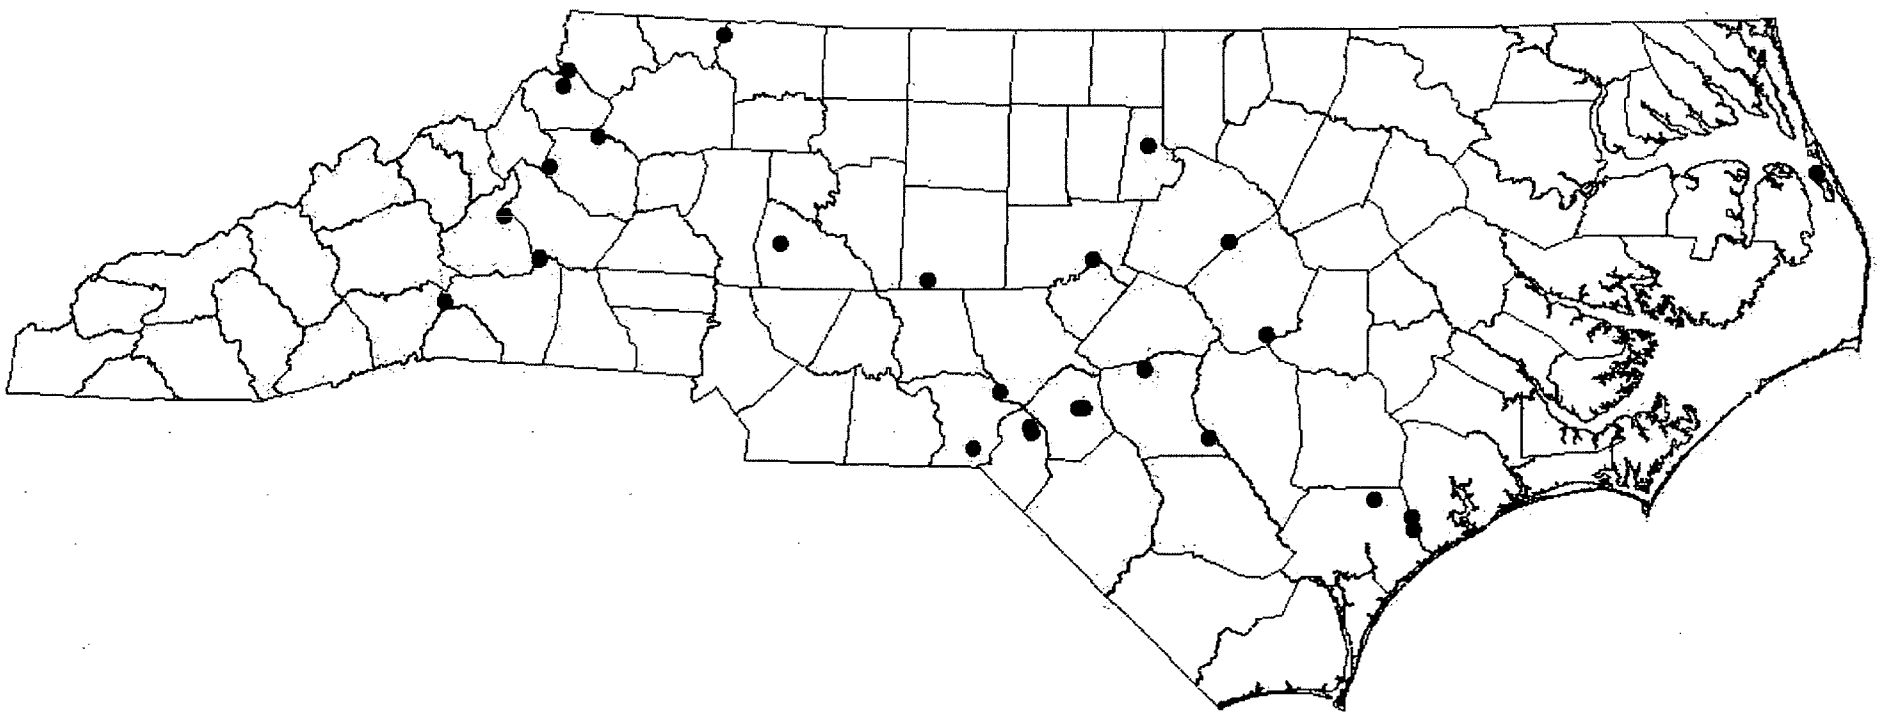
- Project coordination with Clean Water Management Trust Fund, and Park & Recreation Trust Fund



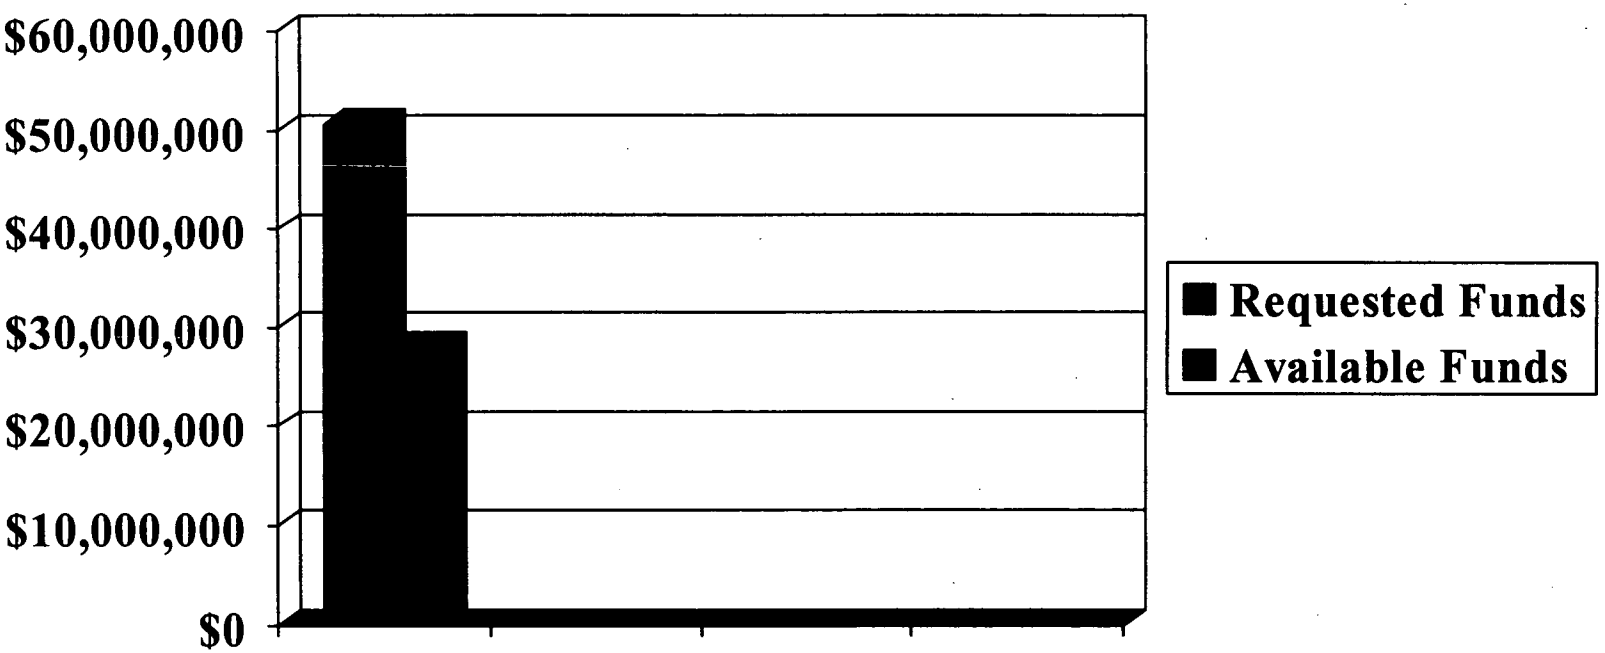
- Frequent coordination with applicant agencies and conservation groups

- Most projects have matching funds

2005 Awards



- 28 Projects
- 19,469 Acres
- $28,030,103



Income

Real Estate Tax	$15,937,416
License Plate Fee	$ 4,964,968
Interest	$ 662,851
Total	**$21,565,235**

One North Carolina Naturally

Introduction

We are writing on behalf of the Board of Trustees and staff of the Clean Water Management Trust Fund (CWMTF) to thank the members of the General Assembly of North Carolina for your continuing strong support for investments in clean water and to make our annual report to the General Assembly and the public pursuant to GS 113A-257.

We are also writing to report to the General Assembly on management and stewardship of conservation easements pursuant to Section 6.22 of Session Law 2005-276.

GS 143-15.3B requires that the General Assembly appropriate a minimum of $100,000,000 to CWMTF each year.

Session Law 2005-276, Current Operations and Capital Improvements Act of 2005 (SB 622) appropriated $100,000,000 in recurring funds to CWMTF in each year of the biennium.

Thanks to the General Assembly North Carolina continued to make progress in protecting and restoring water quality in calendar year 2005.

Background

Almost ten years ago the 1996 General Assembly created the Clean Water Management Trust Fund (CWMTF) (Chapter 113A Article 18 (GS 113A-251 et seq.)), "to clean up pollution in the state's surface waters and to protect and conserve those waters that are not yet polluted."

The CWMTF "shall be used to help finance projects that specifically address water pollution problems and focus on upgrading surface waters, eliminating pollution, and protecting and conserving unpolluted surface waters, including urban drinking water supplies" and "to build a network of riparian buffers and greenways for environmental, educational, and recreational benefit."

The CWMTF's non-regulatory, incentive-based programs complement North Carolina's environmental regulatory and educational programs and help ensure both a strong economy and healthy environment.

The CWMTF is an independent agency housed for administrative purposes in the Department of Environment and Natural Resources (DENR.) A twenty-one-member board of trustees establishes criteria, allocates funds, reviews applications, approves grants, and hires the executive director. Seven members are appointed by the Governor; seven by the General Assembly upon the recommendation of the President Pro Tempore of the Senate; and seven by the General Assembly upon the recommendation of the Speaker of the House. An advisory council composed of the Commissioner of Agriculture, Chair of the Wildlife Resources Commission, Secretary of DENR, and Secretary of Commerce or their designees advises the board of trustees.

Local governments, state agencies, and nonprofit conservation organizations, such as land trusts, may apply for grants. Deadlines for applications are June 1 and December 1 of each year.

The board of trustees typically meets ten times per year - six times across the state and four times in Raleigh. In 2005, the board met in Randolph County, Southport, Goldsboro, Raleigh, Mecklenburg County, Edenton and Wilmington. In 2006, the board plans to meet in Lake Lure, Tabor City, Davidson County, Haywood County, Raleigh, Mt. Airy, Wallace, and Washington.

Moneys from CWMTF may be used to acquire conservation easements or land in fee simple to preserve riparian buffers, wetlands, floodplains, and greenways; to restore riparian buffers, streams, and wetlands; to repair failing wastewater collection and treatment systems; to eliminate failing septic tanks and straight pipes; to prevent, reduce, collect and treat stormwater pollution; to plan water quality projects; and for administration and staff. The board works through three principal committees: acquisitions, infrastructure/wastewater, and restoration/stormwater.

CWMTF applications forms for grants, grant evaluation guidelines, enabling legislation, lists of the board of trustees, staff directory, news releases, and other reports and documents are available at www.cwmtf.net.

The executive director, deputy director, senior scientist, contracts and real estate acquisition manager, administrative officer, public information officer, and executive assistant are based in the central office in Raleigh. Five field representatives cover the coast, piedmont and mountain regions of the state. A part-time water quality advisor is home based.

The Board of Trustees adopted an annual administrative budget of up to $1,662,900 for fiscal year 2005-2006 at its August 2005 meeting.

Progress and Challenges

The CWMTF continued to make strides in reaching performance targets outlined in the state's Progress Board report entitled ***North Carolina 20/20*** Designed to significantly improve water quality throughout the state by the year 2020, the targets included increasing the percentage of water bodies fully supporting their uses, ensuring that 100 percent of all North Carolinians have access to clean and safe drinking water, protecting and permanently preserving one million acres by 2010, and improving water quality to ensure the continued viability of the state's fisheries.[1]

In addition, CWMTF is helping the state achieve its goal of preserving a million acres of open space, as set out in GS 113A-240, is helping Governor Easley implement his One

[1] North Carolina 20/20: A Report About the Future of North Carolina; N.C. Progress Board, December 2001

North Carolina Naturally initiative, and is helping the State prevent encroachment from incompatible development near our military bases.

The Numbers

In almost all the areas cited by the North Carolina 20/20 report, CWMTF grants are playing a role in reaching those performance targets. Here are some examples:

- The CWMTF and its partners have helped protect 3,612 miles of riparian buffers and preserve 317,529 acres of land, thereby ensuring streams, rivers, lakes, and shellfishing waters will be able to support their uses for drinking water, recreation, fisheries and other uses. CWMTF has invested over $338,300,000 in land and water conservation.
- The CWMTF has funded 102 riparian buffer, stream and wetland restoration projects totaling over $63,800,000 to help maintain and preserve these important ecosystems.
- CWMTF acquisition and restoration grants have been used to protect shellfishing waters, to help restore waters in areas closed to shellfishing, to restore oyster reefs and other fisheries habitat, and to provide public access to public waters.
- The CWMTF has assisted local governments with 142 wastewater improvement projects, investing over $134,400,000 to reduce discharges and more effectively treat wastewater so that fewer nutrients and other pollutants enter our rivers. (LISA- Total for ALL ww projects, including applicants other than local govts, is 148 projects for over $138,300,000.)
- CWMTF grants have funded 49 stormwater management projects totaling over $36,900,000 to reduce pollution from urban runoff and decrease flooding.

Since 1996 the board of trustees has approved 781 grants for a total of almost $595,800,000. CWMTF grants have leveraged at least $906,900,000 or 152% in private and other public funds.[2]

All of these efforts are just as important to North Carolina's economic well being as they are to the health and safety of its citizens and the environment. They enhance both the recreational and commercial fishing industries, and strengthen the quality of life.

As the Progress Board asserts in its report, "...states can and do have strong economies and simultaneously protect the environment. In fact, the states with the strongest environmental records also claim the distinction of having the best job opportunities and climate for long term economic development."

2005 Summary of Projects

The CWMTF Board of Trustees and staff reviewed 116 applications requesting $137,400,000 in the spring of 2005 (2005A Cycle) and 121 applications requesting over $114,800,000 in the fall of 2005 (2005B Cycle) for a total of 237

[2] See Appendix A: Summary of Funded Projects 1997-2005

applications requesting over $252,200,000 in 2005. This does not include 23 requests for mini-grants and donated easement grants.

Thanks to appropriations from the General Assembly and to the closing out of old grants the Board of CWMTF approved 78 water quality grants totaling over $53,700,000 through August 2005 (2005A Cycle) and approved 81 grants totaling over $58,900,000 between September and November 2005 (2005B Cycle) for a total of 159 projects for $112,700,000 in calendar year 2005.

The Board approved financing three clean water/military protection projects totaling $8,592,000 to help protect Marine Corps Air Station Cherry Point and Marine Corps Camp Lejeune/New River with special indebtedness authorized by Session Law 2004-179, Finance Vital Projects (HB 1264).

The Board approved a diverse mix of projects: 58%, acquisition, including clean water/military protection; 31%, infrastructure/wastewater; 9%, restoration/stormwater; and the remainder planning and mini-grants.

2005 Highlights

CWMTF, PARTF, and NHTF played an important role in the **State's successful efforts to prevent encroachment from incompatible development near our military bases** and to prevent any major installations from being closed during the Base Realignment and Closure Commission (BRAC) process in 2005.

CWMTF funded six clean water/military protection projects at a cost of $12,305,000 (including special indebtedness) at all four major bases in August 2005. CWMTF funded one project to help protect the Dare County bombing range at a cost of $1,025,000 in November 2005. CWMTF invested a total of $13,330,000 in clean water/military protection in 2005.

CWMTF and the NC Coastal Land Trust are working together to protect **lower Cape Fear River in Brunswick County**. CWMTF provided $1,556,000 to acquire a conservation easement on the Davis tract (CWMTF #2004B-029) and $2,612,000 on the Clarendon tract (CWMTF #2005B-026). CWMTF and NCCLT's partnership have protected 10,353 acres including much of Town Creek valued at almost $75,000,000 (in 2005) since 1997.

CWMTF provided two grants to the Carolina Mountain Lands Conservancy totaling $6,614,000 to acquire conservation easements at bargain sales on over **3784 acres to protect the headwaters of the Green River in Henderson County** (CWTMF #2004B-003 & 2004B-007).

CWMTF provided grants to State Parks to help acquire Worlds Edge, the first tract for the new **Hickory Nut Gorge State Park** (CWMTF #2005B-005); $2,270,000 to help expand **New River State Park** in Ashe County (CWMTF #2005B-028), and $720,000 to improve public access and help protect the **Haw River** in Chatham County (CWMTF #2005B-029).

The NC Wildlife Resources Commission and Foothills Conservancy are working to protect the **Johns River and the headwaters of Lake Rhodhiss in Burke and Caldwell Counties**. CWMTF funded two projects to acquire key tracts for the WRC's Game Lands Program at a cost of $3,596,000 (CWMTF #2005B-012 and 2005B-033). Lake Rhodhiss provides drinking water and is impaired.

CWMTF provided grants of $2,211,000 to **Wallace** (CWMTF #2005A-507) and $750,000 to **Greenevers** (CWMTF #2005A-601) to provide regional wastewater collection and treatment.

CWMTF continues to provide major grants to municipalities to repair and rehabilitate their leaking sewer systems, including $2,000,000 for **Elizabeth City** (CWMTF #2005B-504), $1,552,000 for **Fremont** (CWMTF #2005B-507), $1,992,000 for **Plymouth** (CWMTF #2005B-511), and $2,000,000 for **Tuckaseigee Water & Sewer Authority in Sylva** (CWMTF 2005B-515).

CWMTF provided $1,181,000 to Kinston (CWMTF #2005A-006) to buy vacant lots in the 100-year floodplain so that the city can use the **land acquired after the Fran and Floyd buyouts for stormwater treatment, restoration, and recreation.**

CWMTF continued its long partnership with Mecklenburg County to prevent and reduce pollution from stormwater runoff. CWMTF provided a grant of $639,000 to match local funds to address **stormwater in Caldwell Station Creek in the Mountain Island Lake** watershed (CWMTF #2005A-702).

CWMTF also continued its work with **Surry Soil & Water Conservation District** and the **Rutherford Soil & Water Conservation District** fencing livestock, restoring streams and cost-sharing the installation of best management practices with farmers (CWMTF #2005B-412 & CWMTF #2005B-409). CWMTF, Mt. Airy and the Resource Institute will begin an **ambitious restoration of** the Ararat River (CWMTF #2005B-407) at a cost of $1,847,000 in 2006.

CWMTF and the Division of Soil and Water Conservation (DSWC) reported to the Environmental Review Commission on implementation of the State's **Conservation Reserve Enhancement Program (CREP)** on January 13, 2005.

In November 2005 CWMTF provided a grant of $2,759,000 to DSWC until June 30, 2006 for phase III of CREP and a grant of $2,411,000 until December 31, 2006 if performance measures are met (CWMTF #2004B-040). CWMTF, DSWC, and other stakeholders have worked hard to improve the effectiveness and efficiency of CREP. DENR may request appropriations from the General Assembly to administer CREP. CWMTF does not want to fund positions at DSWC or other agencies. DSWC plans to apply for phase IV funds from CWMTF on June 1, 2006.

CWMTF provided $1,425,000 to assist land trusts with funds to match federal farm and ranchland preservation funds in 2005.

2005 Legislative Budget Action

The 2005 General Assembly continued its strong support for protecting and restoring water quality. The General Assembly appropriated $100,000,000 to the Clean Water Management Trust Fund and fully funded the Parks and Recreation and Natural Heritage Trust Funds for fiscal year 2005-2007. $50,000 was appropriated to the Farmland Preservation Trust Fund.

Key provisions of Session Law 2005-276, 2005 Appropriations Act (SB 622) are:

- Section 2.1 recognizes GS 143-15.3B and fully funds CWMTF at $100,000,000 in each year of the biennium.
- Section 2.2(h) transfers $2,000,000 from the NC Division of Water Quality's Riparian Buffer Restoration Fund to the General Fund.
- Section 6.9 further strengthens State oversight in GS 143-6.2 over the use of State funds by non-State entities. Grantees must file a conflict of interest policy with the State agency or department disbursing funds. Grantees must certify that they do not have any overdue tax debts, as defined by GS 105-243.1 at the federal, State or local level.
- Section 6.22 directs CWMTF to study management and stewardship of conservation easements and report to the Environmental Review Commission by December 1, 2005.
- Section 6.33 directs the Office of State Budget and Management to "conduct a study to determine the best methods for collecting, managing, and providing access to information about technology, water, sewer, and other modern infrastructures needed to assist communities in becoming and remaining economically viable."
- Section 13.12 appropriates $20,000,000 per year to CWMTF's partner, the NC Rural Economic Development Center for infrastructure, including $15,000,000 for drinking water and wastewater.
- Section 28.19 directs the Department of Transportation to report to the Joint Legislative Transportation Oversight Committee on its plan to clean up ocean outfalls in accordance with Section 30.20 of Session Law 2004-124.
- Section 30.3(a) appropriates $15,260,000 to the Division of Water Resources for water resources development projects, including hurricane stream restoration and oyster habitat restoration.

CWMTF has revised its contracts with non-profit organizations to require compliance with Section 6.9 of SL 2005-276. CWMTF's report on stewardship and management of conservation easements to comply with Section 6.22 is included in this report. CWMTF would like to work with the Department of

Transportation and local governments to reduce stormwater pollution as directed by Section 28.19.

Section 58 of the Natural & Economic Resources "Money Report" provides $575,000 (R) to the Division of Marine Fisheries to support four positions and oyster rehabilitation work. Section 82 appropriates $600,000 (R) to the Division of Aquariums for oyster hatchery research. Section 103 appropriates $3,889,571 (NR) to DENR to match EPA funds for the Clean Water State Revolving Loan Fund.

The General Assembly enacted SL 2005-1, Hurricane Recovery Act of 2005 (SB 7), by Senator Martin Nesbitt and others. SL 2005-7 appropriated $247,000,000 to the Disaster Relief Reserve Fund. SL 2005-1 also directed DENR to study the causes of flooding in Western North Carolina, to identify flood prevention and mitigation opportunities, and to map streams and potential landslide areas. CWMTF's work to protect watersheds and to protect riparian buffers, wetlands, and floodplains reduces damage from flooding. CWMTF was pleased that most of the stream restoration projects that it funded in the mountains held up during the floods of 2004.

2005 Legislative Action

Senator John Kerr introduced SB 1091, Clean Water Act of 2005, to provide a dedicated source of State revenues for DENR, Rural Center and CWMTF to fund drinking water, wastewater, and stormwater projects. The General Assembly removed the controversial financing provisions and enacted **Session Law 2005-474, Clarify Clean Water Funding (Senate Committee Substitute for HB 1095).**

SL 2005-474 applies common criteria and limits for grants for drinking water, wastewater treatment and stormwater projects funded by the Department of Environment and Natural Resources (DENR) and CWMTF. The common criteria set forth in GS 159G-23 are given priority over CWMTF's existing criteria in awarding grants.

SL 2005-474 amends CWMTF statutes covering the establishment and purposes of the fund, definitions and requirements for grants for wastewater treatment, wastewater collection systems, and stormwater projects. SL 2005-474 became effective on January 1, 2006.

CWMTF will begin to implement SL 2005-474 in the spring of 2006 (2006A Cycle). CWMTF will review its existing criteria and, if appropriate, modify them.

The General Assembly authorized establishment of **two new state parks at Hickory Nut Gorge/Chimney Rock in Rutherford County and Carvers Creek in Cumberland County** by passing SL 2005-26 (SB 586), by Senator Walter Dalton, Senator Tony Rand, and others. CWMTF provided a grant of $3,900,000 to the Division of Parks & Recreation to help acquire the Worlds Edge property

(CWMTF #2005B-005). PARTF and NHTF provided funds to acquire the first large tract at Carvers Creek. CWMTF clean water/military protection funds went to other projects at Camp Lejeune/New River, Cherry Point, and Seymour Johnson.

The 2005 General Assembly enacted **SL 2005-190, Drinking Water Reservoir Protection Act (SB 981),** by Senator Janet Cowell and others. CWMTF can assist local governments and others in increasing protection of drinking water supplies.

The General Assembly also enacted **SL 2005-455, Implement Coastal Recreational Fishing License (SB 1126),** by Senator Charlie Albertson and others. Coastal recreational fishing license funds will provide another important source of revenue to protect and restore oyster reefs, nursery areas, marshes, wetlands, riparian buffers, and fisheries habitats starting in 2007.

2006 Projects

The CWMTF board and staff will review 135 new applications requesting over $212,800,000 and sixteen deferred applications requesting almost $31,700,000 for a total of 151 applications requesting $244,500,000 this spring (2006A Cycle). CWMTF will also receive applications on June 1, 2006 and review them in the fall (2006B Cycle).

2006 Legislative Issues

CWMTF appreciates the General Assembly's appropriation of $100,000,000 in recurring funds for CWMTF in fiscal year 2006-2007 and will work to maintain it.

CWMTF uses maps of streams and wetlands to set priorities and to determine water quality benefits. CWMTF supports and would benefit from implementation of the "Plan to Improve the Mapping and Digital Representation of Surface Waters in North Carolina" adopted by the Geographic Information Coordinating Council (GICC) in January 2005. The 2005 General Assembly funded phase I of the plan in SL 2005-1, the Hurricane Recovery Act of 2005. CWMTF supports appropriations to fund phase 2 and other phases to improve stream maps statewide.

Most landowners who sell or donate conservation easements of conservation land in fee discount the price and take advantage of NC's Conservation Income Tax Credit Program. This stretches and leverages the funds that CWMTF and the other conservation trust funds provide. SB 521, Amend Conservation Income Tax Credit, by Senator Dan Clodfelter expands this incentive and is pending in the Senate Committee on Finance.

Property taxation of conservation easements varies by county. Landowners in some counties may face higher property taxes after they donate or sell their development, timber or other rights. CWMTF supports legislation that enables property owners in the

agricultural or forestry present use tax classification to remain taxed at that rate after they donate or sell conservation easements.

Major landowners will sell large tracts of conservation property soon, including timberlands in Eastern North Carolina, lands in the Yadkin/Pee Dee and Catawba River Basins around lakes created for hydropower, land in Hickory Nut Gorge, and other locations. The combined existing resources of CWMTF and our partners at Natural Heritage Trust Fund, Parks & Recreation Trust Fund, and the Wildlife Resources Commission may not be able to respond to all these properties. CWMTF would support one-time appropriations to respond to the once in a generation opportunities.

The Board of CWMTF debated the Land for Tomorrow Coalition's proposal to increase funding for land and water conservation and historic preservation by $200,000,000 per year at its January 2006 meeting and retreat. The Board will continue its debate at its March 12-13, 2006 meeting.

Stewardship of Conservation Easements

Section 6.22 of SL 2005-276 directed CWMTF to study the management and stewardship of conservation easements and report its findings to the Environmental Review Commission.

CWMTF has provided funds to land trusts to monitor and steward approximately 140 conservation easements since 1997. The Board has expressed concerns about whether this is the best way to insure proper stewardship of permanent conservation easements held by the State. The Board has also expressed concerns about whether CWMTF stewardship funds are being managed professionally, whether CWMTF stewardship funds are restricted to stewardship activities and are properly audited and reported to CWMTF, and whether CWMTF easements are being monitored and reported on annually.

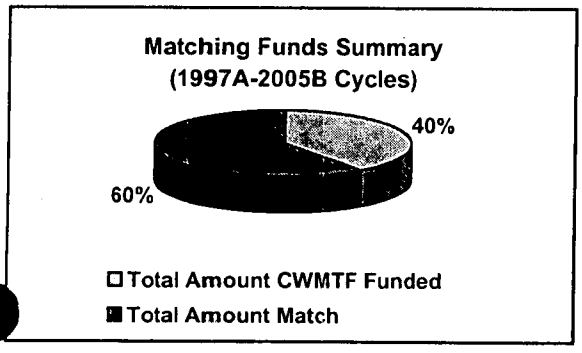
Options to address these concerns include the following:

1) Participate in the DENR's new Stewardship Program;
2) Create a CWMTF Stewardship Program;
3) Create a CWMTF Stewardship Program that includes a single contract with an outside entity that would enter into contracts with individual land trusts for stewardship;
4) Create a CWMTF Stewardship Program with funds managed by an endowment held by a third party;
5) Provide lump sum stewardship endowment funds to land trusts with additional investment, reporting, and accreditation standards; and
6) Provide lump sum stewardship endowment funds to land trusts with no additional requirements (2004 status quo).

Since 2004 CWMTF contracts have included language stating that stewardship funds will not be paid to grantees until the Board adopts a final policy on stewardship. CWMTF has funded 76 projects for which stewardship funds will be needed and that have not been paid. CWMTF is holding these funds until the Board adopts a stewardship policy. The Board is currently funding about 30 conservation easement projects per cycle that require stewardship.

The Board of CWMTF has not selected its preferred option and welcomes comments from members of the Environmental Review Commission and other legislators on their concerns. CWMTF Trustee Phil Baddour of Wayne County chairs CWMTF's stewardship committee. The Board plans to adopt a policy in 2006.

Summary Of Funded Projects (1997A-2005B Cycles)



Note: As of November 14, 2005, there were 31 projects funded for a total of $14,343,882 that were subsequently withdrawn. These projects are included in these tables in the funded amounts, but noted as "Withdrawn" in their project name.

Acquisition Summary- Riparian Buffer Totals (1997A-2005B Cycles)

CWMTF contributed to preservation of:
3,612 Miles
317,529 Acres

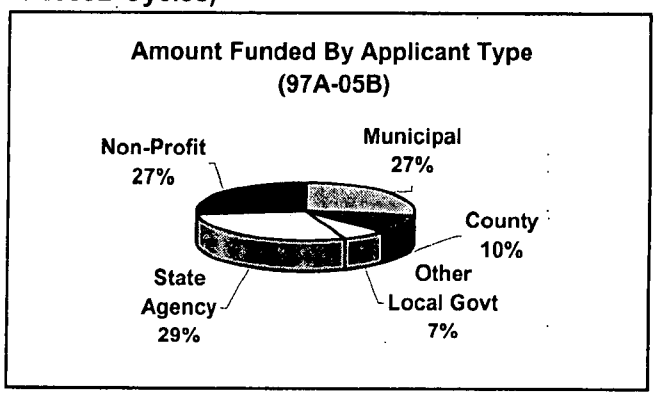
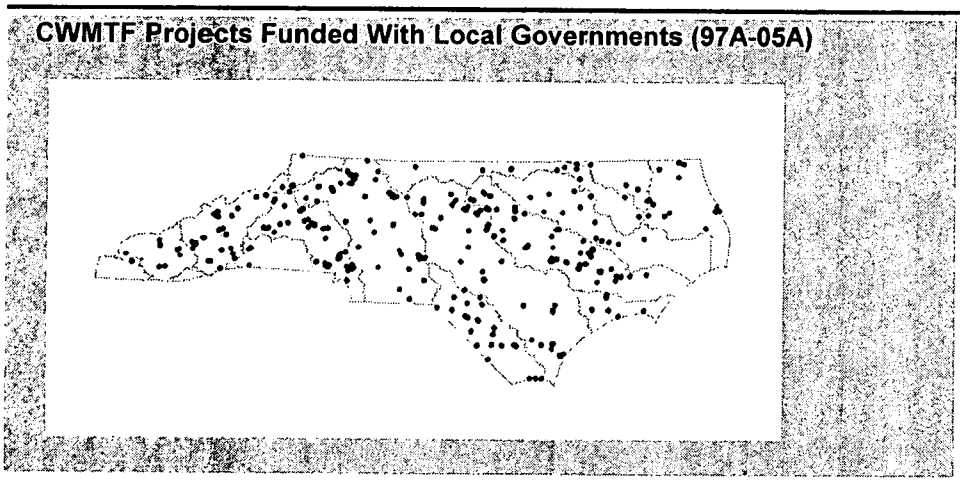
Stormwater	49	$36,944,982	
Wastewater	148	$138,320,377	
Total	781	$595,788,003	

Funded Projects Summarized by Individual Project Component (1997A-2005B Cycles)
(Takes into consideration projects with multiple purposes.)

Project Type, including multiple purposes	Number Projects
Acquisition	493
Wastewater	156
Stream Restoration	98
Stormwater	88
Planning	86
Minigrant	81
Greenway	74
Nonpoint Source	56
Coordination	3



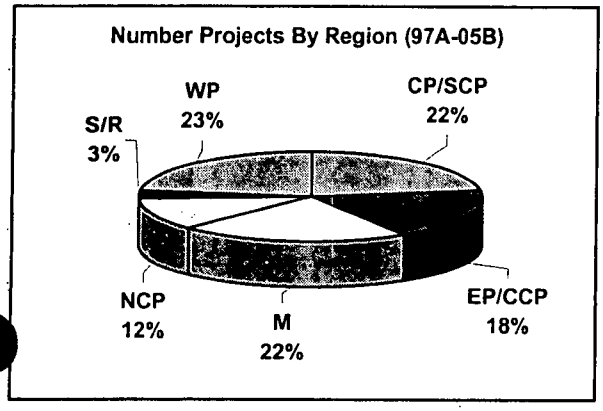
Wastewater Subcomponents (1997A-2005B Cycles)

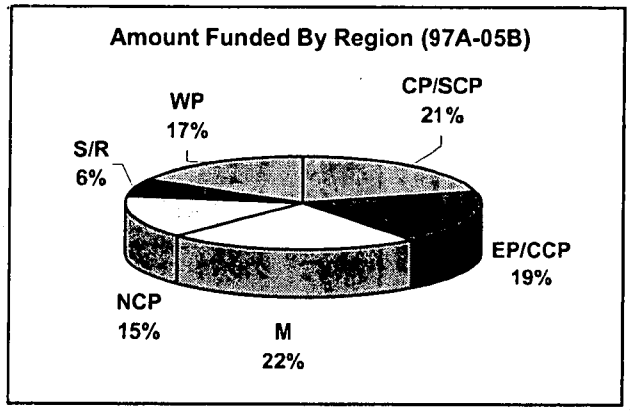


Wastewater Subcomponents	Number Projects	Wastewater Subcomponents	Number Projects
Sewer System Repair	46	Elimination of Permitted Discharge	19
Wastewater Collection System	38	Reuse	15
WWTP Repair	26	Repair Failing Septic Systems and Elimination of Straight Pipes	13
Nondischarge of Waste (incl. Land App)	23	Backup Generation	9
Decommission WWTP and Reroute Waste	21		

Funded Projects Summarized By Applicant Type (1997A-2005B Cycles)

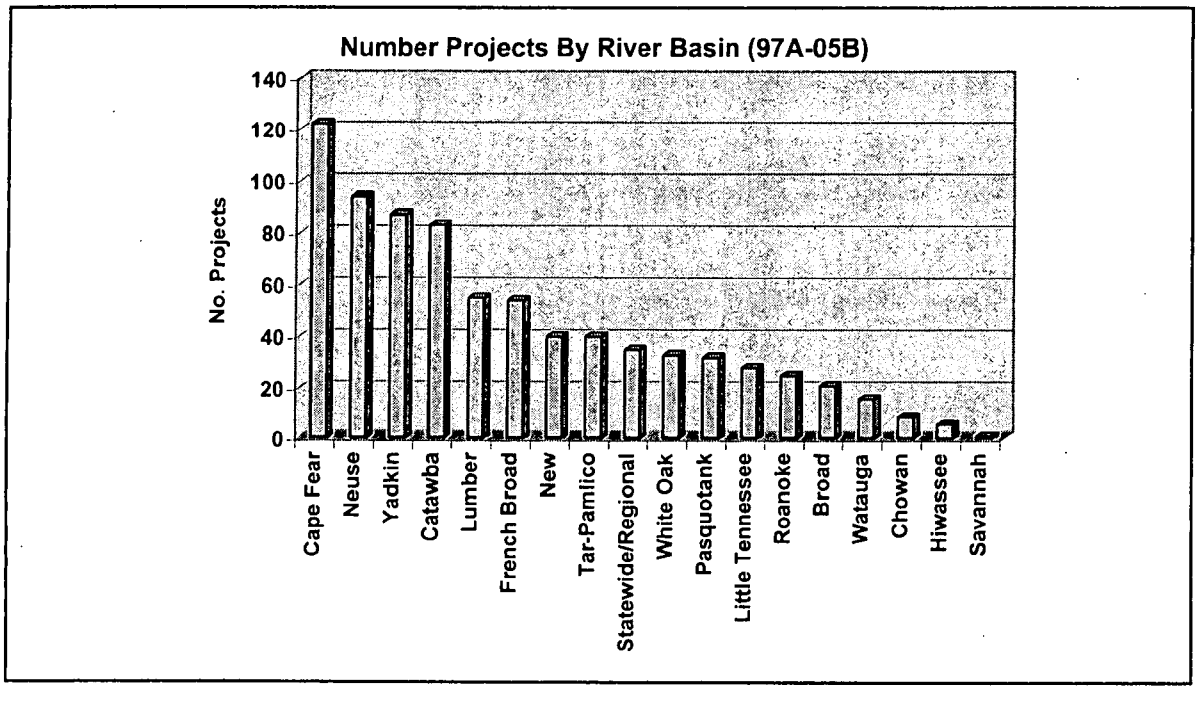
Applicant Type	Number Projects	Amount Funded
Local Government Total	373	$263,085,414
Municipal	219	$162,781,910
County	91	$60,039,300
Other Local Govt	63	$40,264,204
State Agency	111	$172,086,335
Non-Profit	297	$160,616,254
Total	781	$595,788,003



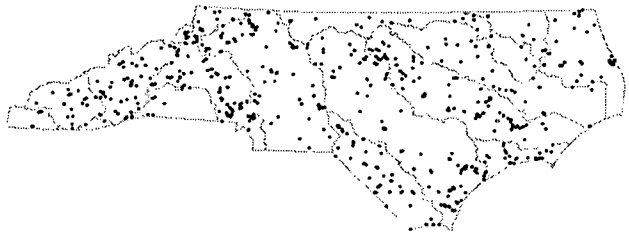


CWMTF Projects Funded With Local Governments (97A-05A)

Funded Projects Summarized By Region (1997A-2005B Cycles)



Region Name	Region Abbreviation	Number Projects	Amount Funded
Central Piedmont/Southern Coastal Plain	CP/SCP	175	$124,822,102
Eastern Piedmont/Central Coastal Plain	EP/CCP	144	$111,003,505
Mountains	M	170	$136,296,454
Northern Coastal Plain	NCP	90	$88,245,131
Statewide/Regional	S/R	23	$34,813,056
Western Piedmont	WP	179	$100,607,755
Total		781	$595,788,003



Funded Projects Summarized By River Basin (1997A-2005A Cycles)

River Basin	Number Projects	Amount Funded
Cape Fear	122	$94,687,700
Neuse	94	$74,261,170
Yadkin	87	$62,015,900
Catawba	83	$52,834,123
Lumber	55	$31,136,402
French Broad	54	$48,024,669
New	40	$11,326,632
Tar-Pamlico	40	$30,376,060
Statewide/Regional	35	$43,561,506
White Oak	33	$32,590,141
Pasquotank	32	$31,341,005
Little Tennessee	28	$25,893,967
Roanoke	25	$17,010,100
Broad	21	$19,115,890
Watauga	16	$7,533,928
Chowan	9	$9,352,810
Hiwassee	6	$3,851,000
Savannah	1	$875,000
Total	781	$595,788,003

CWMTF Funded Projects 97A-05A

Projects Funded BY CWMTF In Calendar Year 2005 By Cycle (Listed Alphabetically Within Cycle)

Funded Projects During 2005 Calendar Year

Cycle	Number New Projects	Amount Funded	Comments
Spring 2005A	56	$44,911,000	Regular Cycle
Fall 2005B	72	$57,146,000	Regular Cycle
2004M & 2005M	9	$201,600	Standard Minigrants
2004D & 2005D	14	$282,600	Donated Conservation Easement Minigrants
Phased Funding For 4 Previously Approved Projects	4	$8,313,000	
Additional Funding For 4 Previously Approved Projects	4	$1,847,000	
Total	**159**	**$112,701,200**	
Total New Projects Excluding Additional and Phased Funding	**151**	**$102,541,200**	

Spring 2005A Cycle

Application Name	Project Number	Approval Date	Amount Funded	Applicant Type	County	River Basin
Ayden, Town of - WW/ Collection System Rehabilitation, Swift Creek	2005A-501	8/8/2005	$178,000	Local Government - Municipal	Pitt	Neuse
Biscoe, Town of - WW/ Treatment Plant Upgrade, Cedar Creek	2005A-502	8/8/2005	$480,000	Local Government - Municipal	Montgomery	Yadkin
Blue Ridge Rural Land trust - Acq/ Minton and Church Tracts, Lewis Fork and Reddies Creeks	2005A-001	8/8/2005	$157,000	Non-profit	Wilkes	Yadkin

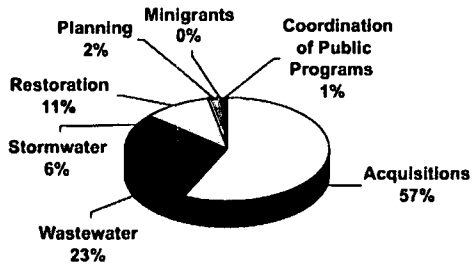
MANAGEMENT TRUST FUND

North Carolina's Clean Water Management Trust Fund

Yadkin River Basin Fact Sheet

Protecting North Carolina's Water Quality for 10 Years

The 1996 General Assembly of North Carolina established the Clean Water Management Trust Fund (CWMTF) to help local governments, state agencies and conservation non-profit groups finance projects to protect and restore surface water quality. Since 1996 -- thanks to appropriations from the General Assembly -- the CWMTF has awarded 781 grants for a total of $595.8 million. CWMTF grants have leveraged over $906 million in private and other public funds.



The CWMTF provides grants to:

- Enhance or restore degraded waters
- Protect unpolluted waters
- Contribute toward a network of riparian buffers and greenways for environmental, educational, and recreational benefits.

Who is eligible to apply?

- Local governments
- State agencies
- Conservation non-profits

Amount Funded by Primary Purpose (1997A-2005B)

CWMTF and the Yadkin River Basin A Valuable Resource

Numbers of Water Quality Grants in the Yadkin Since 1996:

- 87 grants totaling $62 million
- 12 Grants in Montgomery County totaling nearly $6.2 million
- Town of Troy: Seven grants totaling almost $2 million
- Town of Biscoe: two grants totaling $516,000

Types of Projects Funded:

- Improvements to wastewater treatment & collection systems; upgrades, decomissioning of plants, reuse
- Septic tank and straightpipe removal
- Acquisition of buffers, floodplains, wetlands, and greenways
- Repair of septic tanks and removal of straight-pipes
- Wetlands, riparian buffer and stream restoration

cleanwater
MANAGEMENT TRUST FUND

North Carolina's Clean Water Management Trust Fund

BADIN LAKE SEWER PROJECT

Project Partners:

- ***Clean Water Management Trust Fund: $3 million***
- NCDENR Construction Loans and Grants Program: $7 million
- Tap-on Fees - $2 million
- Private Market: $ 1.8 million

Total cost - $13.8 million

Project Water quality benefits:

The project will significantly improve water quality in Lake Badin by reducing the amount of pollution flowing into it from leaky septic tanks and straightpipes. It will also reduce stormwater runoff pollution from the Uwharrie Point and Badin Shores wastewater treatment facilities.

What the project involves:

- 1,200 septic tanks and straightpipes in lakefront communities from the Uwharrie Point peninsula east to the Shamrock development will be removed from use.
- Two land application wastewater treatment facilities will be closed/decommissioned.
- 50 miles of new sewer lines will be installed to serve 2,100 homes.
- Wastewater from the area will be treated by the Town of Troy.

CWMTF Quick Facts

•CWMTF is a voluntary, incentive-based water quality program.
•A 21-member Board of Trustees appointed by the Governor and General Assembly review and fund/not fund all applications for grants.
•CWMTF funds about one third of the requests that it receives.
•CWMTF funds have leveraged over $906 million in private and other public funds.
•The CWMTF has invested over $338.3 million in 331 projects to help local governments, state agencies, and land trusts acquire both conservation easements and land to protect riparian buffers, floodplains and wetlands from Lake Logan in Haywood County to Bird Island in Brunswick County.
•CWMTF grants have contributed towards the protection of more than 317,529 acres and 3,612 miles of riparian buffers.
•CWMTF's grants enhance North Carolina's quality of life and economy in addition to protecting water quality.
•CWMTF estimates that over $15 billion is needed to protect and restore water quality in North Carolina.

EXHIBIT H

CWMTF Mission – As Legislated

- Restore / enhance degraded waters
- Protect / conserve unpolluted waters
- Eliminate water pollution
- Create network of riparian buffers and greenways
- Fund innovative systems as demonstrations
- Not strictly conservation

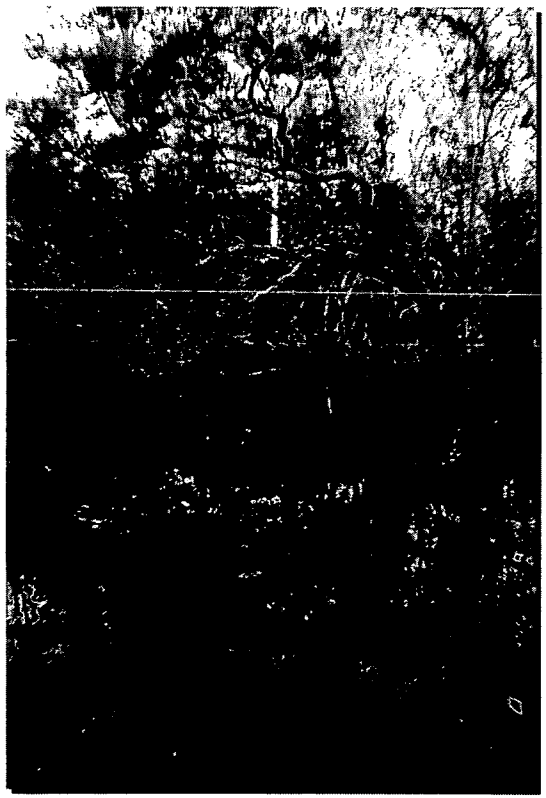
2005 Project Highlights - Military Protection

CWMTF invested a total of $12.3 million in clean water/military protection in 2005.



- August Action:
  - –Six clean water/military protection projects
  - –All four major bases

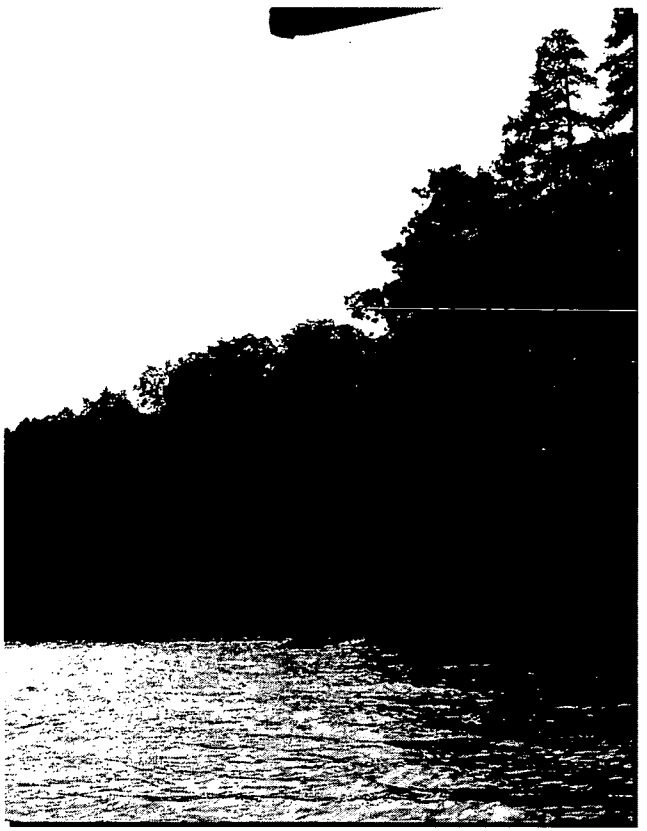
cleanwater
MANAGEMENT TRUST FUND

2005 Project Highlights - Clarendon & Davis Tracts

- Protection of **lower Cape Fear River in Brunswick County**
- $1.5 million CWMTF grant for easement on the Davis tract
- $2.6 million grant for easement on the Clarendon tract
- CWMTF and NCCLT's partnership have protected 10,353 acres including much of Town Creek valued at $74.4 million since 1997

cleanwater
MANAGEMENT TRUST FUND

2005 Project Highlights - Partnership with NCDPR



- CWMTF grants helped acquire Worlds Edge, the first tract for the new **Hickory Nut Gorge State Park**
- $2,270,000 to help expand **New River State Park** in Ashe County
- $720,000 to improve public access and help protect the **Haw River** in Chatham County

cleanwater
MANAGEMENT TRUST FUND

2005 Project Highlights - Mt. Island Lake

- $639,000 grant to match local funds to address **stormwater in Caldwell Station Creek in the Mountain Island Lake** watershed
- Continuation of long partnership with Mecklenburg Co.

cleanwater
MANAGEMENT TRUST FUND

2006 Grant Cycles

- Spring Cycle currently under review
  - 135 new applications requesting over $212.8 million
  - 16 deferred applications totaling $31.7 million
- Fall Cycle closes June 1

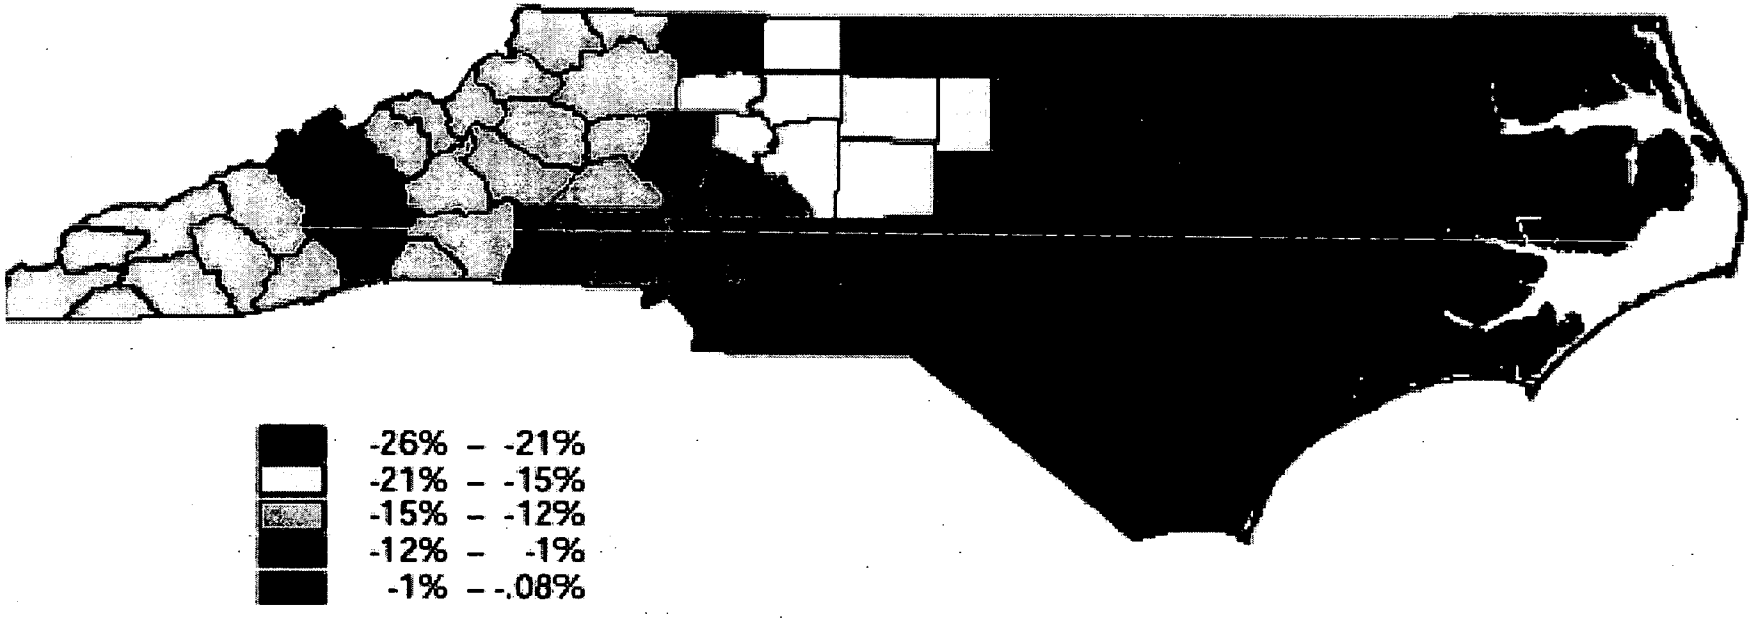
Coordinated, Focused & Effective Planning

WHY BOTHER?

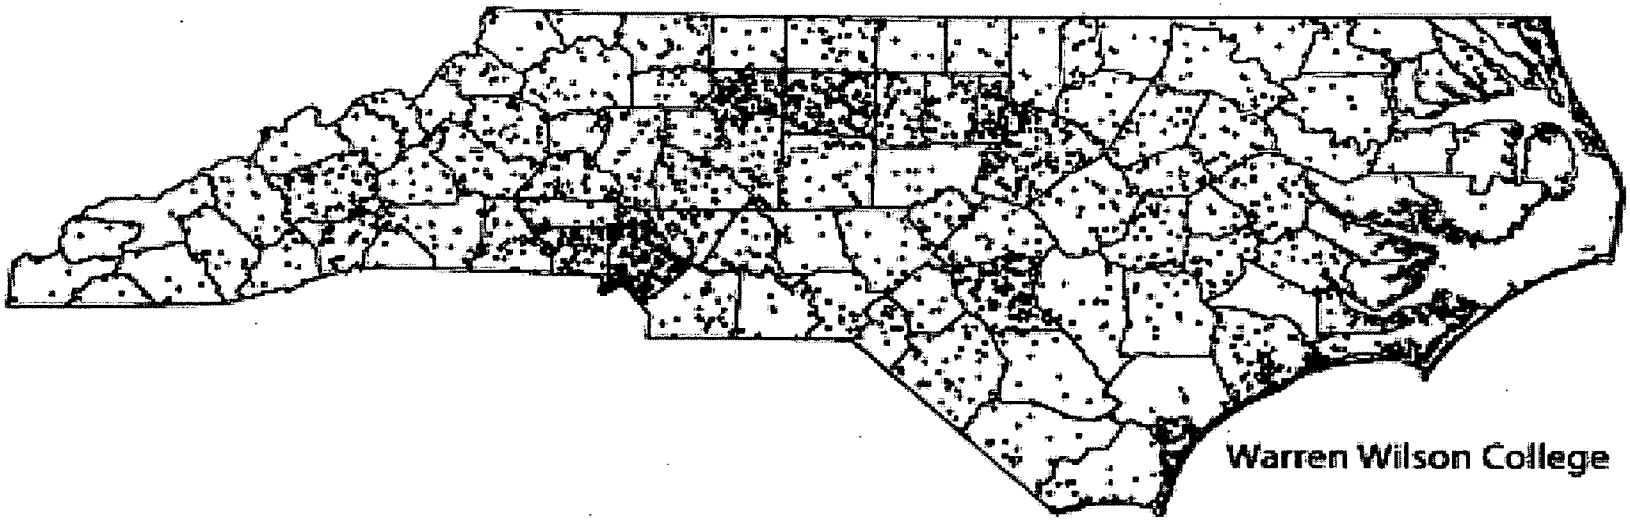
NC's Changing Landscape



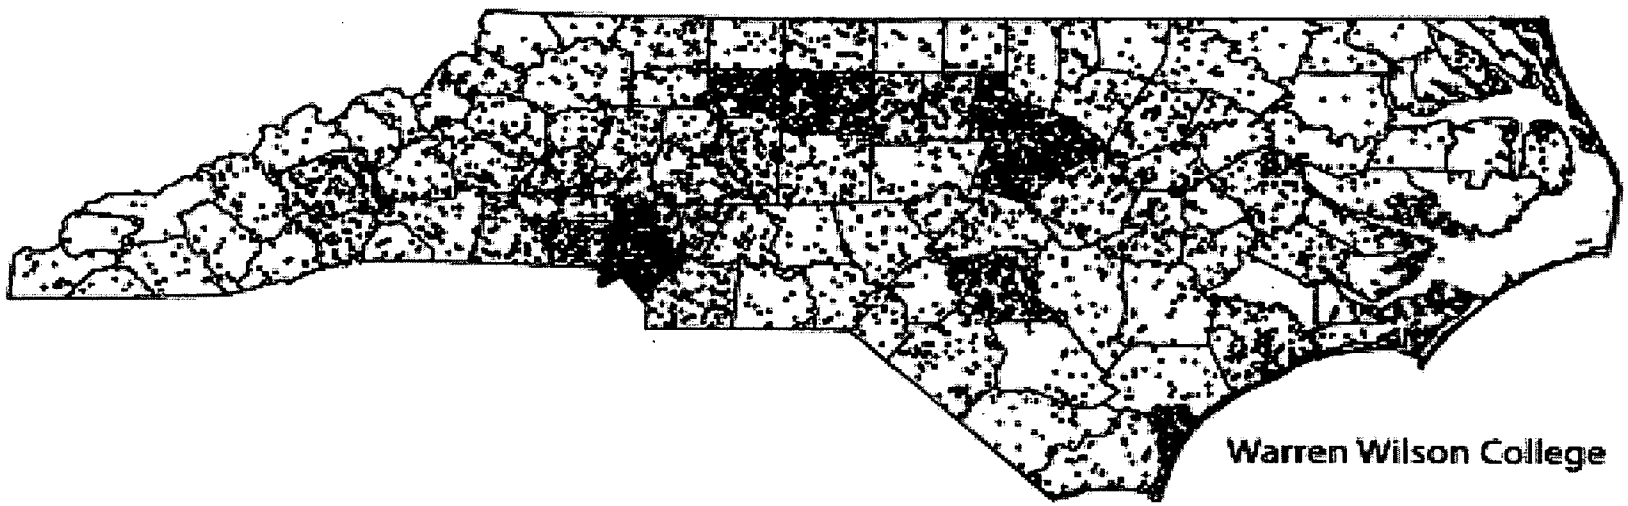
North Carolina's population will increase 50% by 2030. from 8 to 12 million

NC has one of the highest conversion rates of forest & farm land in the country. We lose 383 acres per day.

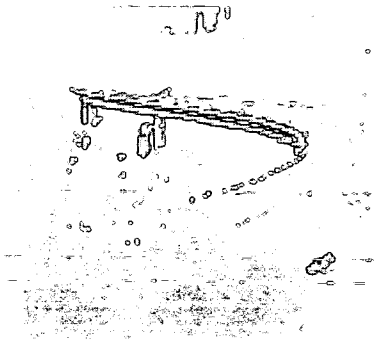
2 acres of farm and forest land is developed for every person coming to NC.



We are rapidly losing our Open Space.

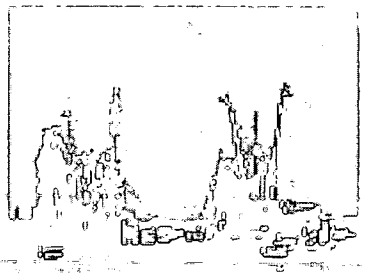


Map 1. Percent Loss of Total Crop and Forest Land, 1982-2002

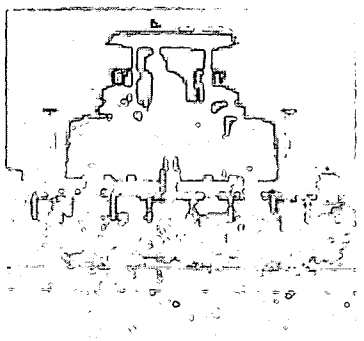


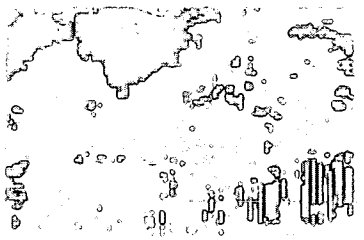
Source: NCPIRG www.ncpirg.org

North Carolina's 1980 population: 5.8 million

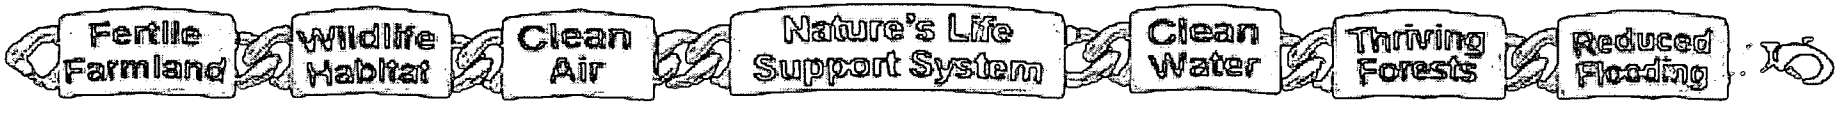


North Carolina's projected 2030 population: 12.2 million





$13 billion industry
49 million visitors, primarily for our outstanding natural resources



$1 billion industry

Conservation Planning….

- Provides the ability to view the network of natural system that will sustain us now and into the future.
  - Assist in identification of the conservation needs in the state.
  - Provides the ability to prioritize conservation
  - Provides the opportunity for resources to be spent effectively

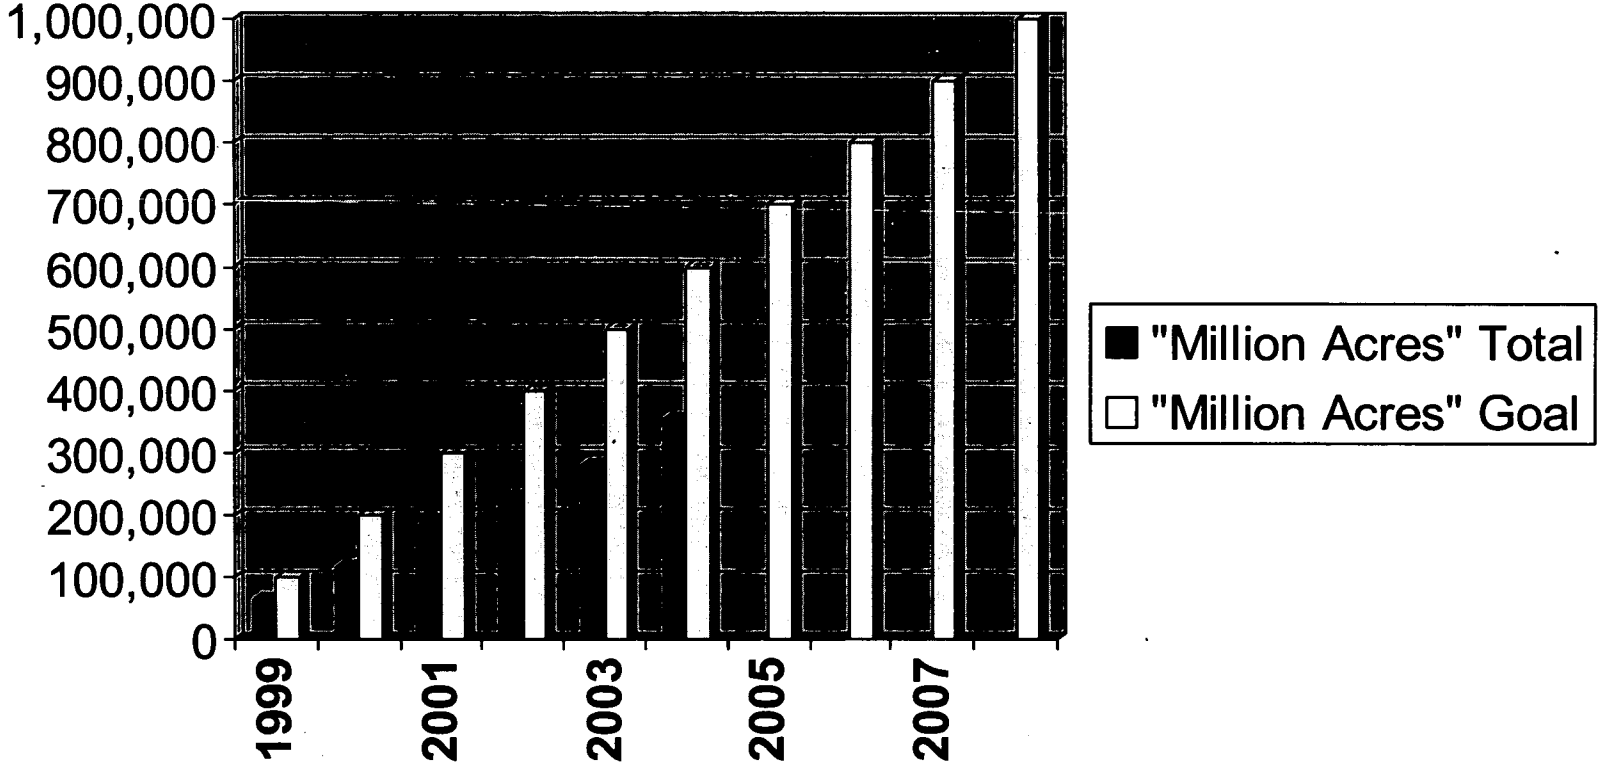
Conservation Planning...

- Provides the state the ability to take multiple plans from state agencies, local governments and NGOs.
  - Provides a resource with a large number of conservation interests captured.
- Provides mechanism to keep track of conservation

Conservation Planning...

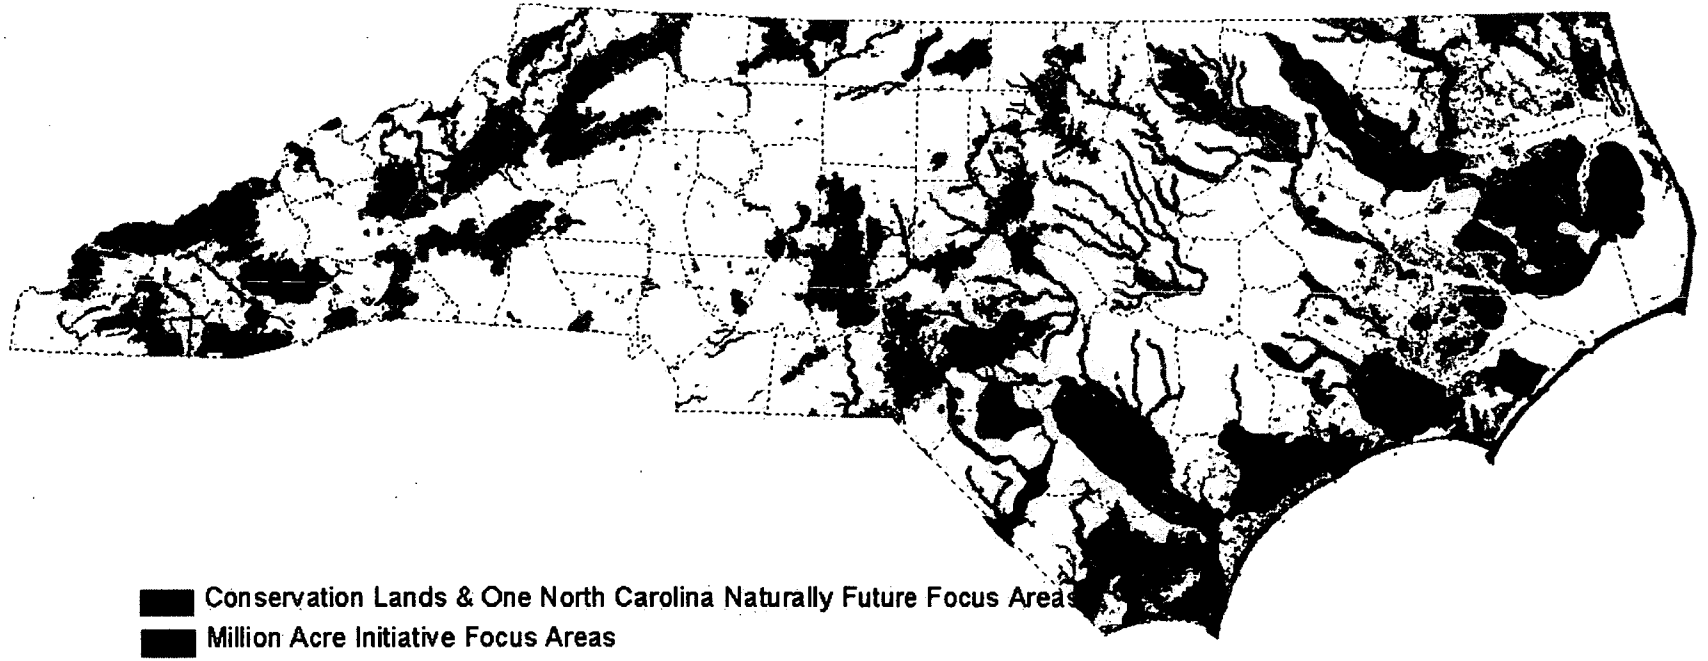
- Provides the opportunity to integrate conservation planning with development
- Provides a resource to advocate for Conservation funding at the federal, state and local levels of Government.

Million Acres Report 2005



Program Overview

- General Assembly establishes Million Acres Initiative in 1999
  - Requires permanent conservation measures
  - 10 years allowed to acquire additional million acres 1999 - 2009.



The Numbers

- 2004 Acre total 71,451 acres
- Total since January 1999 352,090 acres

Land *for* Tomorrow

A growing *partnership* of organizations and North Carolinians working to:

- Build awareness of why streams, farms, forests, parks, gamelands and historic places are critical to the future of North Carolina

- Advocate giving the public a chance to vote for additional state funding of **$200 million per year for five years** to protect these places that matter to our citizens and communities

Five-Year Goals

- 740,000 acres of land across North Carolina

including

- Protect water in 6,000 miles of rivers and streams

plus

- Build trails and facilities for state and local parks

plus

- Restore 350 historic landmarks in public use

plus

- Invest in job creation and community development activities that conserve land and historic places

Build on Current Foundation

Invest more in successful programs

- **Conservation trust funds** ($167 million (84%))
  - Clean Water Management Trust Fund
  - Natural Heritage Trust Fund
  - Parks and Recreation Trust Fund
  - Farmland Preservation Trust Fund
- **Landing Jobs** ($30 million (15%))
- **One North Carolina *Naturally*** ($ 3 million (1%))

Landing Jobs: a new initiative

Mission: Provide grants and loans to businesses, nonprofits and local governments to create and retain jobs in the following industries:

- **Tourism** that attracts visitors interested in natural beauty, culture, history and farm resources
- Specialty crop and value-added **agriculture** and **forestry**
- **Historic preservation** to serve as catalyst for revitalizing cities and towns
- **Entrepreneurial**/workforce **training**/capacity building
- **High-quality neighborhood development**

Proposed Funding: $30 million/year

EXHIBIT L

LAND *for* TOMORROW

Landing Jobs: a new initiative

Mission:

Landing Jobs is recommended as a new initiative to help small businesses, nonprofits and local governments in North Carolina diversify and build economic sectors based upon sustainable use of:

- natural land and resources (e.g., forests, unique ecosystems, birds, game and other wildlife)
- water resources, fish and other aquatic species (rivers, streams, coastal areas including working waterfronts)
- working farms and agricultural lands
- working forests, timber and other forest products
- historic buildings, downtowns, rural communities, urban neighborhoods, land and archaeological sites
- cultural and artistic resources

Places the Program Will Help Protect:

This program will focus on creation and retention of jobs and businesses that promote protection of natural, cultural, historic and community resources. All nine types of places will be protected through economic development that supports land conservation and historic preservation, and promotes a "triple bottom line" of measurable economic, social, and environmental returns-on-investment.

Program:

Landing Jobs would help create, retain and sustain jobs and businesses through grants and loans that aid in development of the following industries:

- **Tourism** that creates local and regional destinations and attracts a broad range of visitors who are interested in natural resources (water, wildlife, forests), culture (food, music, special events), history (people, events, buildings) and farm resources (pick-your-own vegetables, native plants, educational programs).
- **Agriculture** that strengthens family farms and small businesses through specialty crops (e.g., herbs, native plants, organic vegetables or pasture-fed livestock), sustainable aquaculture, value-added products (processed foods) and finding new markets for products.
- **Forestry** that supports community ownership/management of forestlands and sustainable harvest of timber, wood products and non-timber forest products (e.g., pine straw, mushrooms) and value-added processing of those products.
- Attracting, training and retaining **entrepreneurs**, artists and other individuals or corporate entities committed to sustainable economic development in North Carolina. Special emphasis will focus on diversifying the state's economy with "sectoral"economies: creative, knowledge-based, place-based, natural resource-based, and culture-based.
- Rehabilitation and re-use of **historic buildings** and downtown areas and redevelopment of previously-developed or under-utilized sites for new uses that support sustainable economic development (including workforce housing, job creation, small business development and community revitalization) and encourage entrepreneurship.
- **High-quality neighborhood development** targeted to low-wealth areas utilizing innovations and technologies consistent with environmental priorities such as land use, land conservation, water quality protection, forest cover protection, health issues related to interior air quality, and energy efficiency.

Grants and loans would be awarded in two different categories:

- **Planning Grants** would be awarded to nonprofits and local governments to develop community-based plans for supporting the creation and retention of jobs and businesses through sustainable use of their natural, historic, and cultural resources. For example, a nonprofit organization and local government might develop a plan for a youth conservation corps that would teach job skills to young adults while engaging them in building trails and boardwalks and creating or improving local park facilities. Or, several communities located along a river might apply together for a planning grant for cleaning up the river for ecotourism, or for developing and implementing attractions, events and businesses that attract tourists to visit the river and stay in their historic towns. These plans might outline infrastructure, organizational capacity, enterprise development, financial capital, marketing, timeframe and other needs to implement the vision.
- **Project Implementation Loans and Grants** would be made to small businesses, nonprofits and local governments to help communities, regions, and public-private partnerships implement their plans to build economic sectors based on their natural, agricultural, forestry, historic and cultural resources.
  - **Grants** would be available to nonprofits and local governments to build agency or organizational capacity, and to operate and implement programs that create, retain and sustain jobs and enterprises that help protect the resource base. Grants may also be made available to help construct important parts of the infrastructure of a project that are not expected to generate a profit directly (e.g., a visitor's center or a canoe launch). Grants which invest directly in job-related skill-building in the community would also be available to eligible applicants.
  - **Loans** would be available to small businesses for projects expected to generate a public benefit or private profit (e.g., renovating a historic home into a bed and breakfast, renovating a food- or forest-product processing facility, or up-fitting a downtown building as a business incubator.

Governance:

We recommend that Landing Jobs be administered as a special project of the NC Community Development Initiative (NCCDI), a highly-respected statewide nonprofit that already receives a portion of its funding through the NC Department of Commerce. The NCCDI Board of Directors would have final authority to approve recommendations about grants and loans made by an 11-member Landing Jobs Council. The Council will seek members with expertise in natural, agricultural, forestry, historic and cultural resources, and in economic development and tourism. The Council would be appointed by the NCCDI Board of Directors based on nominations:

- Two members selected from nominations by the NC Governor.
- Two members selected from nominations by the President Pro Tem of the NC Senate.
- Two members selected from nominations by the Speaker of the NC House.
- Four stakeholder organizations representing communities of low-wealth and/or historic preservation/downtown revitalization/entrepreneurship and related constituencies.
- The Chair appointed by the Board of Directors of the NCCDI (only position not based on outside nomination).

At its discretion, the Landing Jobs Council may make grants and loans to other organizations with expertise to regrant or reloan them for individual projects. We recommend that the Landing Jobs Council be authorized to spend up to 3% of its annual funding on staffing and administrative costs.

Funding Level:

- FY 2005-2006: $0
- Proposed Funding: $30 million per year for five years

LAND *for* TOMORROW

Saving the Goodliest Land:

A Five-Year Plan for Investing in North Carolina's Land, Water, History and Future

EXECUTIVE SUMMARY

JUNE 2005

In 1585, Sir Walter Raleigh sent Lieutenant Ralph Lane and a group of surveyors to establish the first English colony in the New World. Adventuring off Roanoke Island, Lane's men explored the mainland to the west and declared it "to bee the goodliest soile under the cope of heaven."

That "goodliest soile" became North Carolina. Since then the farms, forests, fields, mountains, rivers, sounds and oceans have provided livelihoods for our citizens and astonished visitors with their beauty. Lane's men were right: we truly live in the "goodliest" land.

Today, the quality of North Carolina's natural and rural lands and its water are just as important as they were 400 years ago.

- A significant amount of the state's jobs and gross product depend on quality land and water including those in tourism, agriculture, forestry, fishing and on military bases.
- Other businesses strongly consider quality of life and a healthy environment for their employees when they make decisions about where to locate.
- Public health depends on safe drinking water, clean air and places to exercise.
- Our quality of life is enhanced by the state's parks and trails, places celebrating our history and the sheer beauty of the land.
- North Carolina's geographic diversity produces a special variety of native plants and animals that makes this one of the world's ecological "hot spots."

North Carolina is a "hot spot" for people. Between 1990 and 2000 our population grew by 21% and is expected to increase by 50% by 2030. You can travel almost anywhere in North Carolina and see firsthand the pressures our population creates on the land. More than one million acres of natural and rural areas have been developed over the last decade. North Carolina lost more prime farmland between 1987 and 1997 than any other state except Ohio and Texas. And for the first time since the 1930s, forest acreage declined.

To help protect these critical areas, the General Assembly created the Clean Water Management Trust Fund, Farmland Preservation Trust Fund, Natural Heritage Trust Fund and Parks and Recreation Trust Fund. The General Assembly also set a goal of conserving one million acres of critical lands between 2000 and 2009. Significant progress has been made, but efforts have fallen short because of lack of funding. The Farmland Preservation Trust Fund has received no funding for the last two years. In 2004, the Clean Water Management Trust Fund had only $62 million in appropriations compared to $350 million in grant requests. Protecting our critical land is only going to get harder and more costly.

Because of the need to expand land and historic conservation efforts in North Carolina, several of the state's leading nonprofit organizations joined together to form Land for Tomorrow in 2003. Their goals are to:

- Build awareness of why streams, farms, forests, parks, game lands and historic places are critical to the future of North Carolina.
- Advocate for a public vote to provide additional state funding of $200 million per year for five years to protect these places that matter.

Land for Tomorrow began its work by interviewing business, government and nonprofit leaders from across the state and polling registered voters and farmland owners to learn more about what people in North Carolina think about conservation. We studied conservation finance techniques used in North Carolina and other states to develop a better understanding of options available to increase funding at the federal, state and local levels.

Based upon this information, research into land and historic properties in North Carolina and current programs to protect them, and advice from more than one hundred experts, the Coalition presents this report, *Saving the Goodliest Land: A Five-Year Plan for Investing in North Carolina's Land, History and Future*, which:

- Examines changes in land use and ownership that are creating economic, public health, ecological and quality of life challenges in urban and rural areas.
- Recommends how the state can address these challenges by increasing funding for land conservation and historic preservation.
- Recommends the following five-year conservation goals:
  - **Rivers, Wetlands, Floodplains and Coastal Waters** – 6,000 miles of stream banks and flood plains
  - **Working Farms** – 50,000 acres of productive farmland
  - **Working Forests** – 25,000 acres
  - **Local Parks and Trails** – 35,000 acres and needed trail and park facilities
  - **State Parks and Trails** – 60,000 acres and needed trails and facilities
  - **Game Lands and Other Natural Areas** – 150,000 acres
  - **Historic Places** –Restore 350 historic landmarks for public use and protect 3,000 acres of important archeological sites and land around State Historic Sites
  - **Land Visible from Scenic Highways** – 50,000 acres along the Blue Ridge Parkway and other scenic highways
  - **Urban Forests** – Increase tree canopy in areas that are not meeting air quality standards
- Estimates that the projected cost to North Carolina state government to meet these conservation goals is an additional **$200 million annually for five years** which can be used to leverage federal, local and private matching funds.
- Recommends creating one new initiative to help communities take advantage of their critical land and historic places to create sustainable jobs and a higher quality of life.
- Recommends building on the State's excellent existing conservation trust funds, One North Carolina *Naturally* program and the creative, vibrant work of local governments, nonprofits and community groups to accomplish these goals.

Land for Tomorrow presents this plan as a proposal for discussion. We hope it will be used by legislators, state agencies, citizens and organizations to craft an action plan to save North Carolina's critical land and historic places and ensure a bright future for our citizens and communities.

If we're successful in this effort, our children and grandchildren will still think of North Carolina as the "goodliest land" with:

- Clean air and water
- Sustainable jobs and vibrant communities
- Thriving farms and forests
- Places to enjoy the beauty of North Carolina, to exercise, to hunt and fish
- Places of historic significance and ecological value

In 1971, North Carolina voters approved Article XIV, Section V of the State Constitution, which mandates that we must use "every appropriate way to preserve as part of the common heritage of this State its forests, wetlands, estuaries, beaches, historical sites, openlands and places of beauty." Implementing *Saving the Goodliest Land* is the best way to follow through on that Constitutional commitment.

We must protect North Carolina's critical land and historic places now. There will be no second chance.

THE CENTRAL PARK OF NORTH CAROLINA

EXHIBIT R

WHAT IS THE CENTRAL PARK OF NORTH CAROLINA?

- A regional effort led by the Yadkin-Pee Dee Lakes Project, a 501-(c)(3) nonprofit corporation.
- Includes Anson, Davidson, Montgomery, Randolph, Richmond, Rowan, and Stanly counties.
- Creates jobs and preserves green space based on the region's outdoor recreation opportunities afforded by the Uwharrie Mountains and the many area lakes and streams.
- A green, rural, natural and cultural refuge for the nearly 5 million urban residents within a two-hour drive.

WHAT IS THE ECONOMIC IMPACT?

The seven-county region to be branded as NC's Central Park, has lost 18,000 jobs over the past five years as textile, furniture, and tobacco jobs have migrated overseas at an alarming and ever-increasing rate. Anson, Montgomery, and Richmond counties are now ranked among the most economically distressed counties in the state. **According to UNC-Charlotte's School of Business, by 2025 this project will result in:**

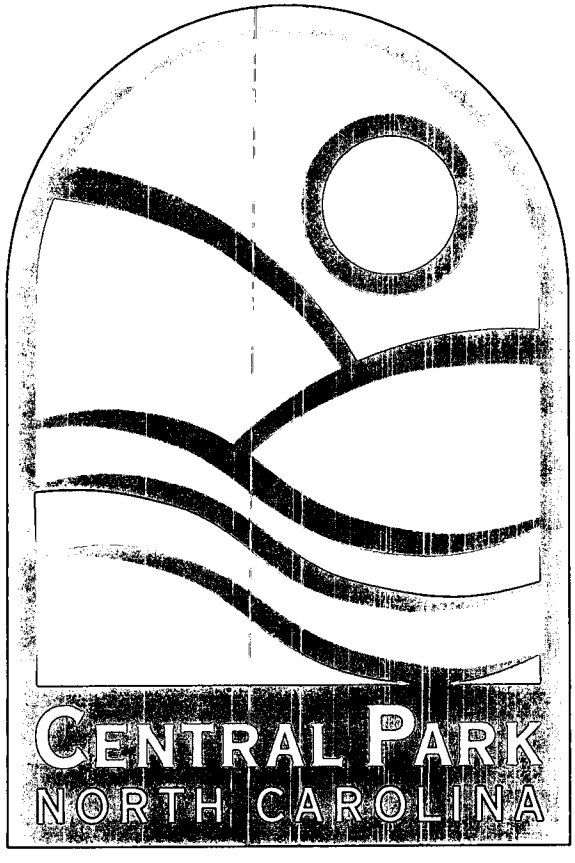
- 25,700 sustainable jobs with above average incomes
- $2 billion in annual economic impact

WHO SUPPORTS THE CENTRAL PARK?

Leaders in all seven counties in the region, USDA Rural Development, Golden LEAF Foundation, Z. Smith Reynolds, and small businesses and private individuals.

HOW MUCH WILL IT COST?

We are requesting a total appropriation of $255,000. This investment will **help leverage further investment** in the Central Park and to develop several specific Central Park projects at this pivotal period. These funds are to be allocated for the biennium as follows:



- **$85,000 for the STARworks incubator project.** The incubator will house several new businesses that will employ up to 150 persons at a time with as many as 500 jobs over a ten-year period. The expense of generating these initial 150 jobs is less than $4,000 per job. **The mill itself has been donated to the Project** through the vision and generosity of a local businessperson who strongly supports the Central Park economic development plan. ***$25,000 will provide a match for a $100,000 Kresge Green Building planning grant request that that we are preparing.*** The matching funds for the Green Building planning grant would allow us to rigorously explore and plan for what may become the largest vegetated green roof in North Carolina.

- **$60,000 will provide matching funds for a $100,000 commitment the Golden LEAF Foundation has provided for the first phase of the Central Park scenic driving and cycling routes project.** This will allow us to develop the interpretive kiosks, guides, and website to explain our unique natural heritage and to use that information as a competitive means to attractive eco-tourists to our region.

- **$85,000 for the Central Park Small Town Area Revitalization program.** We have already launched the program in three communities, and have five other small towns in the planning and preparation process. These communities will provide homes for the businesses that are being incubated at STARworks, hospitality, and visitor infrastructure that is critical to accomplishing the Central Park plan. All seven targeted communities have suffered tremendous erosion of their economic and tax base as a result of the downturn in our traditional industries.

- **$85,000 for the development of four themed Central Park heritage trails that will incorporate nine of the State's Scenic Byways** with interpretive kiosks, signage, and interactive website. These trails connect the seven revitalized communities and give visitors a reason to stay overnight and spend money locally.

- SUSTAINABLE AGRICULTURE INITIATIVE

MAJOR FUNDERS

STATEMENT OF PURPOSE

The Yadkin-Pee Dee Lakes Project was formed in 1993 by a consensus of leaders from Anson, Davidson, Montgomery, Randolph, Richmond, Rowan and Stanly Counties to develop a strategy to preserve the natural and cultural assets of central North Carolina, using them to create a sustainable local economy. In 2000, the Yadkin-Pee Dee Lakes Project published "A Strategy for North Carolina's Central Park" – a blueprint for the development of a new economy for our region based on heritage and cultural tourism development and outdoor recreation opportunities. The strategy focuses on small businesses development complementary to heritage and cultural tourism, and also developing the regional infrastructure for increasing overnight tourism. The implementation of this strategy will result in a doubling of overnight visitation to the region from 20% to 40% by focusing on scenic natural areas, driving/sightseeing, nature walks, historic sites, and zoos/wildlife observation and will create an additional 25,700 jobs above the benchmark forecast and an incremental positive net annual economic impact of $2.1 billion.

In 2002, the Yadkin-Pee Dee Lakes Project began the "Green Light" campaign to raise the necessary funds to begin the implementation of the strategy. The success of the Green Light campaign enabled the Project to develop a professional staff, obtain permanent offices, and most importantly, initiate a series of programs aimed at accomplishing the objectives set out in the Central Park strategy: Conservation and Preservation, Rural Development, Tourism Development, and Organization Development. The following report describes how the Yadkin-Pee Dee Lakes Project is working to carry out the implementation of the Central Park Strategy.

FROM THE CHAIR

The United States, as never before, must rethink its economic role in the world. Americans demand cheap food, cheap energy and a bargain on everything they buy, but this has serious economic consequences. American farmers increasingly find it more and more difficult to make a living, and have turned to nonfarm jobs to supplement their incomes. Nonfarm jobs—many in rural manufacturing—now account for more than 90 percent of farm households' incomes according to the USDA. This trend has hit North Carolina farmers doubly hard since our region has been steadily losing manufacturing jobs at an alarming rate. In fact, within one month of the lifting of textile quotas with China, imports of Chinese cotton knit shirts jumped 1,836 percent from the previous year and the United States lost 12,200 jobs in the apparel and textile industries according to the US Bureau of Labor Statistics. As a result, the next two decades will almost certainly see us constantly redefining where we fit into the global economy.

A billion people—nearly one-sixth of the world's population—live at roughly our standard of living. As another billion people, mostly in Asia, begin to move rapidly toward that same standard, they are becoming strong competitors for raw materials, food, and energy—markets in which the US has always been strongly competitive. As competition for these resources increases and prices go up, we must be far more careful and diligent about preserving our own resources because they will become much more vulnerable to exploitation. We see that already happening in the gas and steel industries, for example.

A key strategy to keeping a desirable quality of life in our region will require high quality local food production, well managed forest resources and a means to attract the most entrepreneurial business thinkers into our region and keep them here. We must plan development much more carefully to keep our working lands working. We will need to create communities that are more self supporting and more efficient to develop infrastructure and services. Such communities exist in harmony with their natural environment to maintain clean air, clean water and fertile soils.

The Central Park Strategy will create a sustainable rural economy that includes our surrounding cities, and that is not constantly vulnerable to all these global changes. It is a plan to become sustainable largely through our own resources rather than depending heavily on outside inputs. It is one that encourages new businesses to focus on the assets we have in the region to create strong, place-based businesses that will not migrate elsewhere.

Dr. David M. Jones, Chair

FROM THE EXECUTIVE DIRECTOR

Two years ago the economic downturn that had been unfolding since mid-2001 had temporarily staved off the unwanted and inappropriate development of our rural landscape – a landscape that is singularly important to the creation of North Carolina's Central Park™. Today, the urban gateways that surround us are rebounding fairly well and their future looks even more promising.

However, the situation for our rural communities is very different. The rural core of the Central Park has not only failed to rebound from the general economic downturn but is also facing fundamental restructuring of their traditional manufacturing based economies. Actual unemployment is nearly double the reported rate. Median family incomes are in decline and the gains that were being made in addressing endemic poverty in our region in prior years are now a fading memory.

The tension between the rebounding urban crescent that surrounds us and the increasing economic downturn in our rural core is being resolved in many unhealthy and unsustainable ways. Of particular concern, is that we are increasingly seeing investors from both inside and outside of our region and our state speculatively purchasing large tracts of land. These lands are critical to the development of the Central Park but they are more important to the potential revitalization of healthy and sustainable rural communities.

Never has there been a better time or greater need for the Central Park Strategy. I hope that you will embrace the virtue and wisdom of this comprehensive vision and that you will be heartened by what has been accomplished these past two years. The next year promises to be even more fulfilling as the momentum behind existing initiatives continues to build and our newer endeavors gain traction.

I look forward to continuing the good work that has been so carefully and thoughtfully nurtured in the past, and with your help, realizing the creation of North Carolina's Central Park.

MAJOR INITIATIVES AND PROGRAMS

There are three core elements to the Central Park strategy: 1) developing the necessary social capital, capacity and support in the region, 2) revitalizing many of the 30 plus small, rural towns in the region so that they can provide the necessary visitor hospitality infrastructure, and 3) creating a branded image for the region based on existing and new regional destination infrastructure. The following projects address these strategic elements:

THE 1000/100 PROJECT / THE CENTRAL PARK LEADERSHIP INSTITUTE

The 1000/100 Project is a statewide partnership with the Heritage and Cultural Tourism Partnership of NC and the NC Museums Council. In its

third year of programming, the 1000/100 Project has trained more than 150 people in 30 central North Carolina counties in heritage and cultural tourism development and marketing. In 2005, we are taking the experience we have gained from this highly successful program, and adapting it to meet the cultural tourism development needs for the Central Park. The Central Park Leadership Institute will educate participants about the Central Park strategy and equip them to effectively advocate for, and facilitate heritage and cultural tourism development within their home communities.

SMALL TOWN AREA REVITALIZATION (S.T.A.R.) AND STARWORKS INITIATIVES

In 2004, the Yadkin –Pee Dee Lakes Project began two major initiatives aimed at revitalizing our region's small towns and their surrounding farm communities.

The Small Town Area Revitalization Project (STAR) was inaugurated appropriately enough in the Montgomery town of Star. The STAR project builds on the success of HandMade in America's Small Town Renewal Program, the Center for Rural Pennsylvania's rural town revitalization program, and the National Main Street Program. But the program goes beyond these programs to emphasize creative economic restructuring strategies based on entrepreneurial development. Key to the STAR project is the creation of high-quality communities that will help buildings and business districts retain their economic vitality over time. The

STAR project will serve as a model that will be spread throughout the unique communities of our region. The STARworks Incubator is a project that serves the Central Park Strategy by providing a focused means of growing and developing creative enterprises and entrepreneurs to move into the downtowns of our small communities and to develop agricultural entrepreneurs to replace the farmers in our region who are retiring.

The Yadkin-Pee Dee Lakes Project is now undertaking the transformation of a former textile mill in Star to create STARworks Incubator, a multi-faceted entrepreneurial business development center and new home to the Yadkin-Pee Dee Lakes Project. Job creation programming at STARworks is entrepreneurial in nature, and designed to serve the creative, agricultural and tourism sectors of our regional economy.

THE CENTRAL PARK BRANDING AND IMAGING INITIATIVE

With support from the Golden LEAF Foundation, the Yadkin-Pee Dee Lakes Project is beginning a major branding and imaging campaign for the Central Park with unique linkages to each town that participates in the STAR program.

Branding and imaging will include creating a logo system for North Carolina's Central Park, developing a network of four themed heritage trails along the nine state Scenic Byways in the region with signage and interpretive stations and creating a website, guide and map to enhance the visitor experience. The interpreted scenic heritage trails will include the Settlers Trail, the Birding and Natural History Trail, the Transportation and Industry Trail, and the Agriculture Trail. These trails will physically link the historic sites and communities of the Central Park and provide a consistent image for the Central Park to visitors.

SPECIAL FOCUS PROJECTS:

In 2003, the Green Light Campaign challenged the Yadkin-Pee Dee Lakes Project to develop at least five additional publicly accessible recreational facilities, trails, festivals or attractions by 2007. To meet that challenge, we have undertaken the development of these several projects.

UWHARRIE CYCLING CENTER

Cycling is America's fastest growing active outdoor pursuit, and the creation of a major cycling center will help to leverage the road cycling and mountain biking opportunities that abound throughout North Carolina's Central Park. The project intends to develop competitive

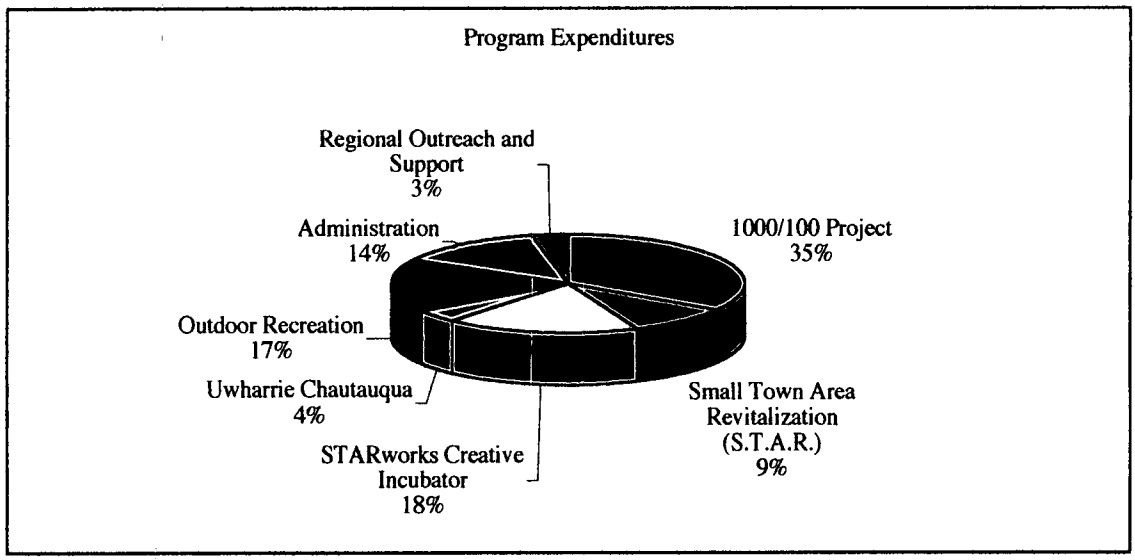
(collegiate and amateur), recreational, and tourism based cycling for the Central Park region. Early attention will be given to indoor track cycling (velodrome), BMX, road cycling, and mountain biking. These four facets of cycling represent the fastest growing subsets of what has become the fastest growing active outdoor pursuit in our country – cycling. Current forecasts are for the number of active cyclists to double over the next decade. The demographic associated with cycling is very attractive and compatible with the overall Central Park strategy.

Future development includes the Central Park Bike Map and the Central Park Cycling Center.

OUTDOOR RECREATION INITIATIVE

This initiative includes the development of projects that will enhance significantly the Central Park as a destination in North Carolina. Outdoor recreation events and destinations will include:

- The Central Park Splash! – a three-day event that will bring paddlers from around the state and southeast to the Central Park,
- An enhanced Yadkin-Pee Dee River Trail,
- The connection of the Birkhead Wilderness Trails in Randolph County to the Uwharrie Trails in Montgomery County by acquiring additional lands for the National Forest,
- A new education center that will provide exciting birding-relating activities at the Pee Dee National Wildlife Refuge in Anson and Richmond counties.



UWHARRIE CHAUTAUQUA

The Yadkin-Pee Dee Lakes Project is also working to catalyze the development of the Uwharrie Chautauqua based upon the model of the 130 year-old Chautauqua Institution in western New York state that attracts 150,000 visitors over nine weeks of programming each year. We believe that a permanent Chautauqua can provide an appropriate sustainable economic development strategy for the town of Badin and surrounding area by relying on the area's unique outdoor recreation, and heritage and cultural opportunities, and close proximity to over 3.5 million people within the urban crescent that extends from Charlotte along the major interstate corridors to Raleigh. The Uwharrie Chautauqua will be an important component of the Lakes' Project's Central Park strategy and will help to draw visitors into the region. The

Yadkin-Pee Dee Lakes Project, Inc.
Statement of Assets, Liabilities and Net Assets
As of June 30, 2005

Assets:		
Cash and Marketable Securities	15,273	
Pledges and Grants Receivable	163,298

CONSERVATION TRUST FOR NORTH CAROLINA

Saving the Places You Love

Quick Facts, Phases I - IV

- Number of conservation plans created = 41
- CWMTF planning investment = $1,123,000
- Acres protected = 30,635 (888,256 stream ft, 183 tracts)
- Acres of donated land or easements = 12501
- CWMTF acquisition funds = $23,860,653
- Funds leveraged = $37,605,110

Land Trusts' Legislative Priorities

- Land for Tomorrow
- Full Funding for Trust Funds
- Present Use Value Tax Program
- Conservation Tax Credit

Present Use Value

- HB 1722, introduced by Reps. Hackney, Brubaker, Gibson, Harrison:
- Would allow landowners who place a conservation easement on their land to remain in the PUV program
- Would clarify eligibility to 25% or more donation
- Would create new wildlife habitat/conservation category
- Would maintain property tax exemptions for land trusts on conservation properties they own

Conservation Tax Credit

- S 521, introduced by Sen. Clodfelter, would:
- Authorize limited refundability of the tax credit by making 50% of the credit remaining after two years eligible to be requested as a refund
- Establish the maximum tax credit that may be taken by a "pass-through entity" to be $500,000.

Editorial Excerpts from North Carolina ...

Asheville Citizen Times / March 4, 2006
Closer look at money trail behind public land sale plan should doom it

"Politicians and the public are beginning to line up in droves to oppose a Bush administration plan that could sell off as much as 300,000 acres of public forest nationwide, including 10,000 acres in North Carolina."

"The best arguments against this plan are the obvious ones. The land, once sold, is gone; the kids, however, will keep coming to those rural schools. The land, once sold, will pass forever out of the public realm. In some cases around here, that land has been hunted or hiked on by generations."

"This can't be shot down fast enough."

Charlotte Observer / February 16, 2006
A crazy idea: It's nuts to sell national forest lands to finance schools

"The Bush administration has announced plans to sell off 307,000 acres of national forest across the country to pay for rural schools. There's a good word for that idea: Crazy."

"President Bush's plan would reverse some of this state's hard-fought gains."

Raleigh News & Observer / March 2, 2006
Saving precious land

"Rather than looking to sell land that is part of our country's very history and character, the White House might look to more responsible budget policy that improved school funding without putting public property on the block."

Winston-Salem Journal / March 5, 2006
A Lousy Land Deal

"A government plan to sell 9,828 acres of national forest land in North Carolina is bad national policy and a lousy deal for North Carolinians."

"... North Carolina should be accumulating open, unused land so that it can meet the recreational and environmental needs of this growing state for years to come."

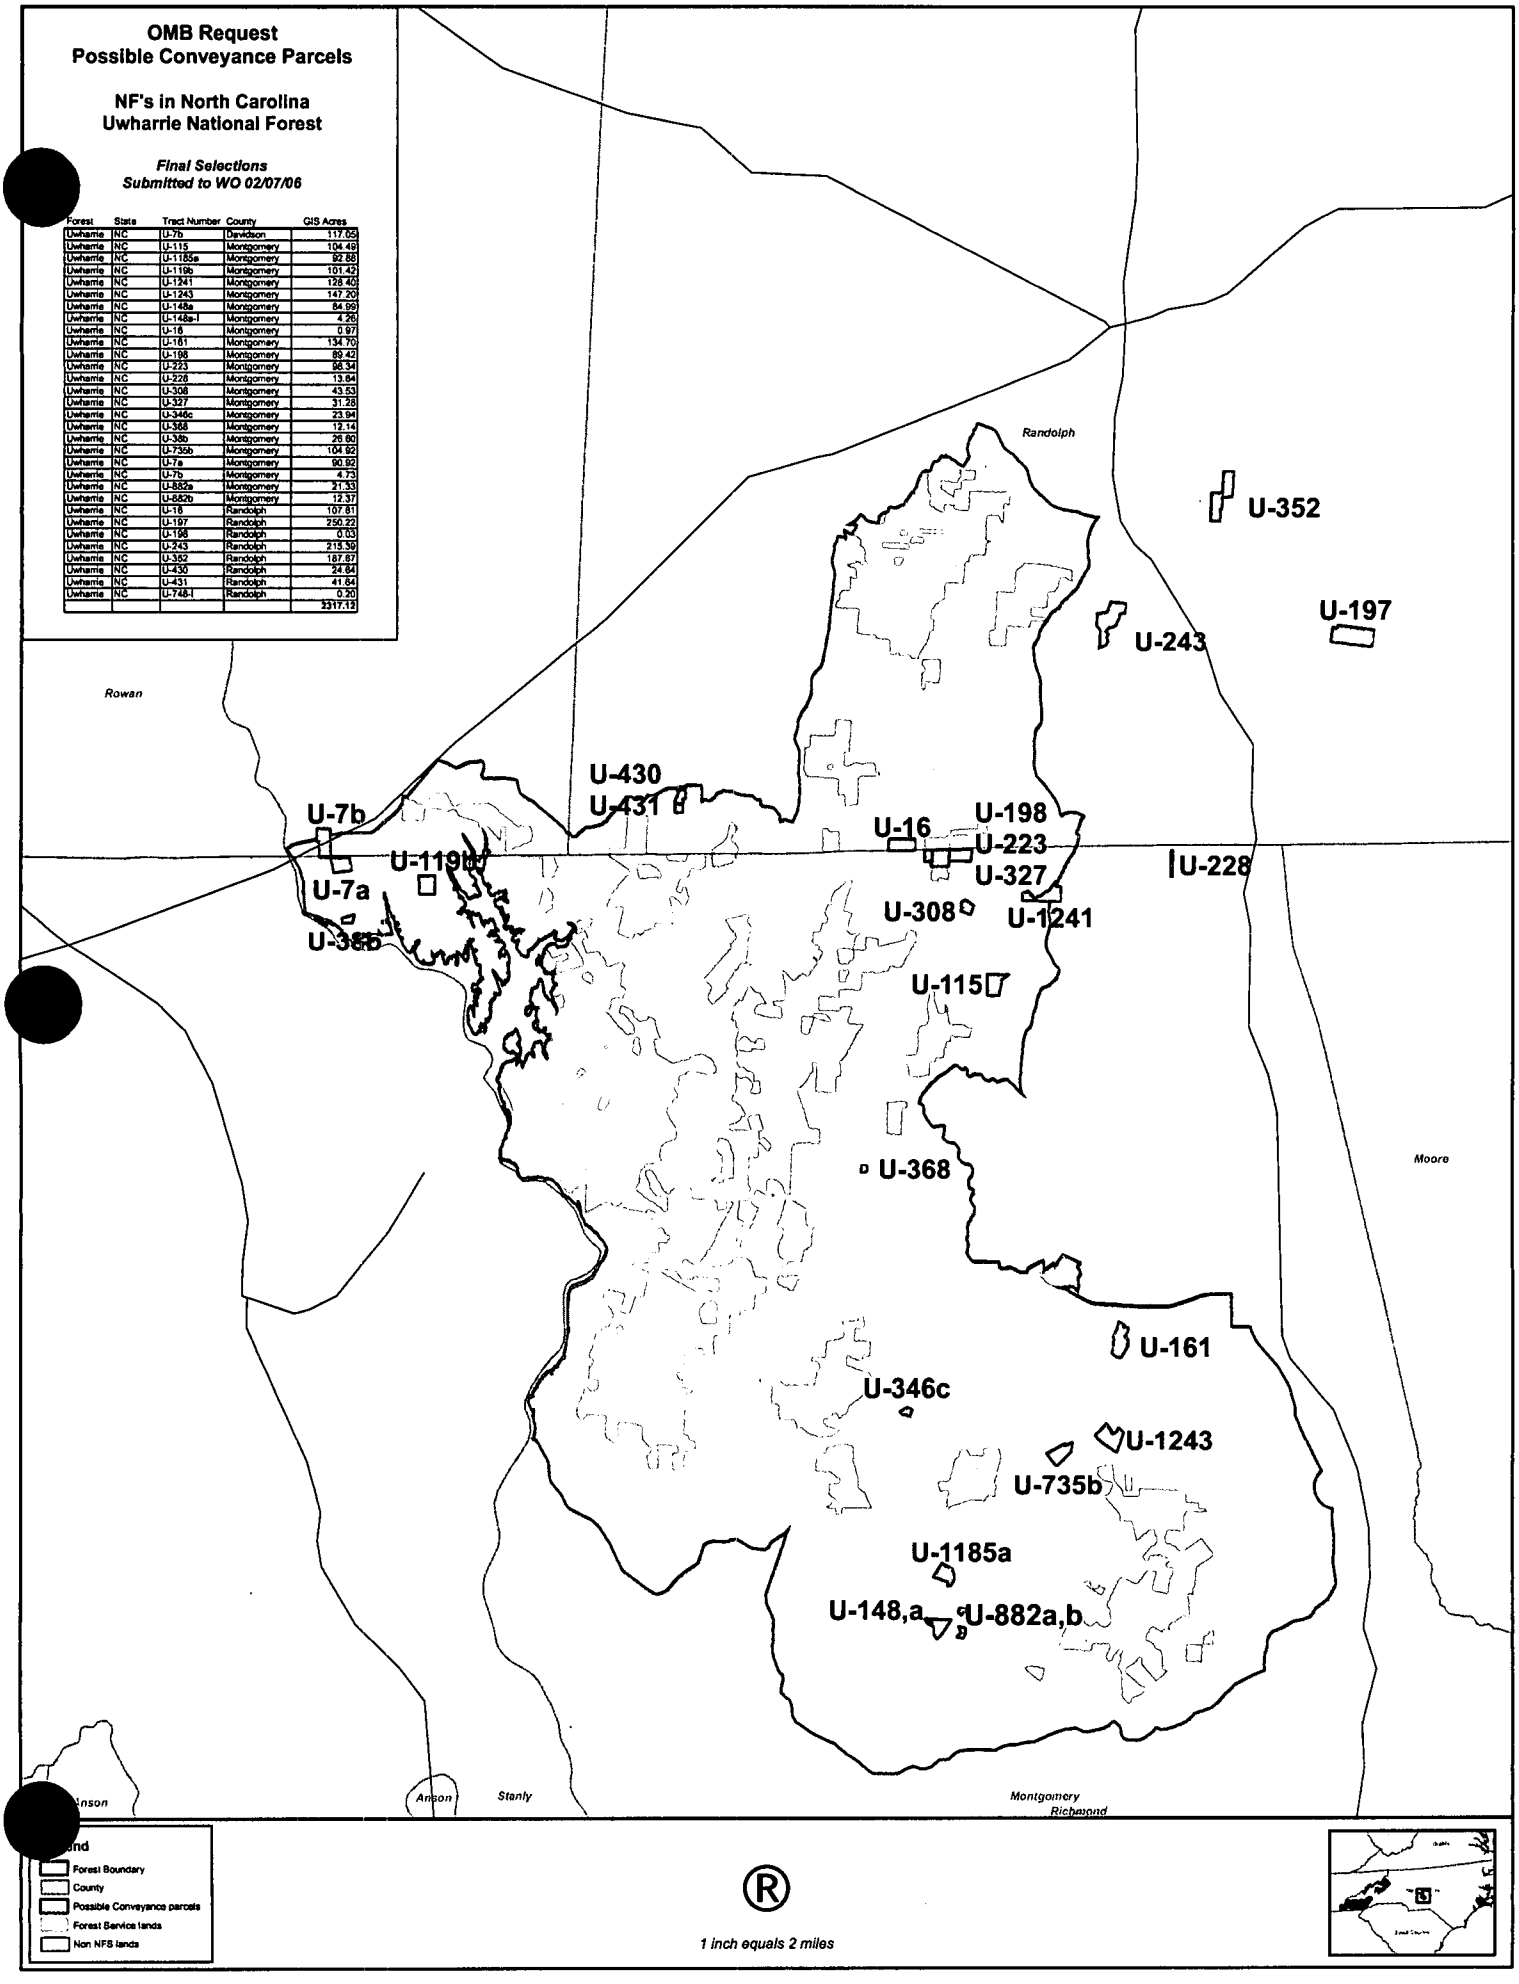
PROPOSED SALE OF UWHARRIE FOREST LANDS COMMENTS

The President's FY 2007 Budget includes a legislative proposal to fund the reauthorization of the Secure Rural Schools and Community Self-Determination Act from the sale of small isolated tracts of National Forest lands including about 2,300 acres (4.4%) of the Uwharrie National Forest's 50,189 acres. The Uwharrie National Forest is the youngest created in 1961 and the smallest National Forest encompassing only 23% of lands within the forest boundary. For this reason, it is fragmented and inaccessible in many areas. Despite its small size, the Uwharrie NF is located within a two-hour drive of over 5 million people and functions as a little island of public land in the center of North Carolina. The section of the Forest located in Montgomery County is heavily used for outdoor recreation and the demand is expected to grow.

The Uwharrie NF has significant natural resources including the Birkhead Mountains Wilderness and the historic 50-mile Uwharrie National Recreation Trail. The Randolph County's Natural Heritage Inventory completed in 1996 identified more than seven biologically significant sites owned by the US Forest Service. They include Birkhead Mountain Wilderness area, Harvey's Mountain, Cedar Rock Mountain, the Monadnock forest between Pinson and Charles Mountains and properties along the south prong of the Little River, Uwharrie River and Walker's Creek. The Uwharrie National Forest region has been identified in the NC's Wildlife Action Plan, the Nature Conservancy's Piedmont Ecoregional Plan and One North Carolina Naturally as one of the highest priority areas for conservation efforts in the Piedmont. National Forest status protects these heritage lands, rare biological communities, significant wildlife habitats and rare plant sites.

The Uwharrie National Recreation Trail is a 50-mile trail between Randolph to Montgomery counties utilized by local citizens and many civic organizations, including the Boy Scouts. Unfortunately, the trail has major gaps in Randolph County making it fragmented and inaccessible. The Randolph County Board of Commissioners passed a resolution in November 1999 requesting the US Forest Service to seek funds to acquire land from willing sellers along the Trail. For the last five years, a partnership of organizations including the NC Zoo, the Land Trust for Central NC, and Uwharrie Trail Club have worked to obtain funds to acquire land to fill the gaps along the Uwharrie Trail to provide nature-based recreation as well as protect heritage lands and rare biological communities. Through the efforts of Congressman Howard Coble, $500,000 in Land and Water Conservation Funds was appropriated in the FY 2004 Budget for land acquisition which was used to fill the first of four gaps. A request for LWCF monies in the FY 2007 Budget to acquire land for a second portion of the Trail is in process.

The partnership grew into the Greater Uwharrie Conservation Partnership composed of thirteen partner organizations including the N C Zoo, Land Trust for Central North Carolina, Piedmont Land Conservancy, North Carolina and South Carolina Chapters of The Nature Conservancy, Yadkin/Pee Dee Lakes Project, NC Department of Environment and Natural Resources, NC Plant Conservation Program, NC Wildlife Resources Commission, US Fish and Wildlife Service, USDA Natural Resources Conservation Service, NC Environmental Defense Fund and US Forest Service. GUCP was formed in recognization of the high biological diversity and natural resource based outdoor recreational opportunities in a region experiencing rapid population growth to provide a forum for coordination and collaboration of conservation efforts.



The proposed sale of tracts in the Uwharrie National Forest runs contrary to these efforts to consolidate the scattered ownership pattern through land acquisition and thereby protect the high biodiversity and nature based recreation opportunities in a region surrounded by high population centers. Attached are comments on the importance of the specific tracts proposed for sale.

INFORMATION ON UWHARRIE NATIONAL FOREST TRACTS PROPOSED FOR CONVEYANCE

Prepared by Gin Wall 3/14/06

- **U 7b:** This tract is part of the Stokes Ferry Basic Forest (Alcoa subset) Secondary Boundary which is listed in the Davidson County Natural Heritage Inventory as a biological community of regional significance. Stokes Ferry Basic Forest is a site of large high quality basic oak-hickory forests. Plant species not typically seen elsewhere in Davidson County indicate a lack of disturbance and reinforce the unique nature of this forested site. The site supports unusual assemblages of infrequently encountered and rare plants.
- **U7b & U38b & U119b :** U7b is near Tucker Town Lake (4079 feet). U38b and U119b are near Baden Lake (U38b @ 1339 feet; U119b @ 1997 feet). All three tracts are "gateway" property to the lakes and pose such issues as view-shed, tourism, development suitability, and water quality. Assessment, connections and specific parcel significance cannot be adequately addressed in the 30-day comment period. Selling it off before all criteria is assessed properly is not good business.
- **All tracts except U28b and U119b:** All tracts except U28b and U119b are in The Nature Conservancy's Piedmont Plan Corridor. U352 and U197 are in TNC's Piedmont Plan Heart of the Uwharries/ Eastern Uwharries Corridor. The rest are in Heart of Uwharries/Middle Uwharries Corridor. Heart of the Uwharries is a high priority area for North Carolina in the TNC's Plan for the Piedmont Region of the US.
- **U198, U223, U327 and U16:** These tracts except for U16 which is less than a mile away are contiguous with the Abner bog listed on Montgomery County Natural Heritage Inventory as a biological community of regional significance. There are very few of these unique wetlands in the region. The Nature Conservancy owns most of Abner Bog so as to protect this unique and significant wetland. More acquisition around Abner Bog is needed rather then selling off these NF tracts that provide protection of the bog's boundaries. These tracts have good partnership potential for the US Forest Service to develop community involvement and partnership initiatives. All four of these tracts are on Barnes Creek which is classified as a NC Outstanding Resource Water. These are in a priority watershed project area for acquisition by the US Forest Service and the Land Trust for Central North Carolina. These tracts were identified with Clean Water Management Trust Fund project monies and should not be taken lightly when determining their value or significance.
- **U16:** This tract is also in proximity to many of the Randolph County Helianthus schweintizii (a Federal listed rare plant species) sites. NC Department of Agriculture Plant Conservation Program recently acquired property within 2 miles of this site to protect and fill in gaps for better management and buffer protection of this Federal listed rare plant.
- **U352:** This tract is Harvey's Ridge Mountain which is listed in the Randolph County Natural Heritage Inventory as a biological community of county significance. It is also in the viewshed of the approach to the NC Zoo and provides a scenic view from the Zoo's Uwharrie Vision viewing area. Uwharrie Vision is an art piece dedicated to Wes Moser who loved the Zoo and the Uwharrie region. Harvey's Ridge parcel has strategic location importance for the Randolph County Parks and Recreation Master Plan as a future extension of the historic 50-mile Uwharrie Trail and as a connector between the Uwharrie Forest and the NC Zoo. This tract should be included when considering a wildlife corridor connection and land bridge for wildlife trying to cross US 220 (future I73/I74).
- **U243:** This tract is upstream from the Pisgah Covered Bridge in the head waters of Little River. The Bridge is one of only two covered bridges remaining in NC and the surrounding area is listed in the Randolph County Natural Heritage Inventory as a biological community of county significance. The water quality is essential for rare mussels that live downstream of this tract. This parcel has strategic location importance for the Randolph County Parks and Recreation Master Plan as a future extension of the historic 50-mile Uwharrie Trail and as a connector between the Uwharrie Forest and the NC Zoo.
- **U115:** This tract is in the head waters of an unnamed tributary that flows into the West Fork of the Little River and is in close proximity to the Upper Densons Creek and Abner Mountain. The Denson's Creek Macrosite is listed in the Randolph County Natural Heritage Inventory as a biological community of state significance in that it provides protective buffer to the creek waters which support four rare mussels and provide habitat for three rare plants. Abner Mountain is listed in the Randolph

County Natural Heritage Inventory as a biological community of state significance in that it provides habitat for three rare mussels and the road and power line rights-of-way support three rare plants. Selling off the headwaters for such critical habitat means the risk of pollution, increased sedimentation if developed, or any number of changed land use practices could mean increased threat or even loss of these important biological indicators.

- **U1185a and U148a:** These tracts are listed in the Montgomery County Natural Heritage Inventory as the Little River Basic Macrosite which is a biological community of state significance in that a large number of rare aquatic fauna (eight mussels, one fish and one macro-invertebrate caddisfly are found) attest to water quality, and as the Little River Buffer and Cliffs Section 1A Piedmont Mafic cliff site which is a biological community of regionally significance due to its riparian buffer, steep cliffs, and rare plants. **U882a and U822b** are in close proximity (around 1000 to 2000 feet) to both these sites.
- **U346c:** This tract is in close proximity (approximately 4090 feet) to the Rocky Creek Longleaf Pine Macrosite which is listed as a site of nationally significance in that it has a large number of the Helianthus schweintizii elemental occurrences of this federally rare plant. This tract is located between this site and the Little River Basic Macrosite. Given its location it has potential as wildlife corridor connector and buffer protection potential between these sites of rare plants and the Uwharrie Forest.

A Experiential Children's Exhibit at the North Carolina Zoological Park

What is the Treehouse?

the Treehouse: creating play experiences foster the love of nature

Project Goals

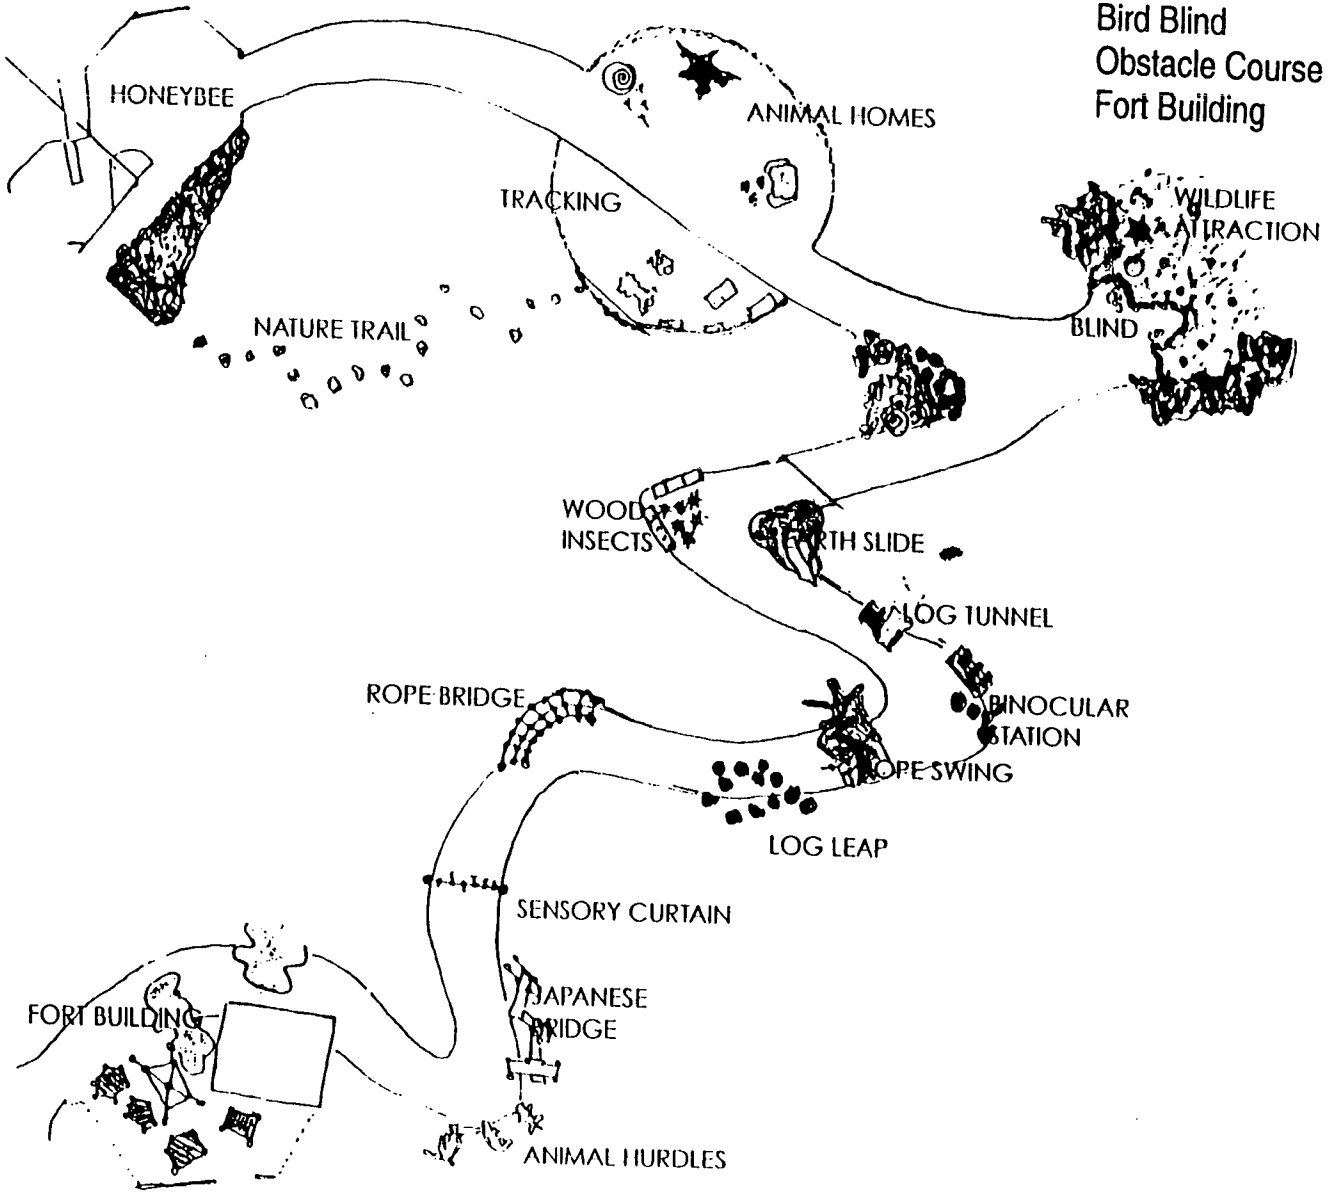
- Provide play experiences in a natural environment

- Develop empathy between the child and the natural world through experienceof a variety of sensory activities including close encounters with native animals and plants.

- Develop comfortable experiences for all visitors, with opportunities for decision-making by children

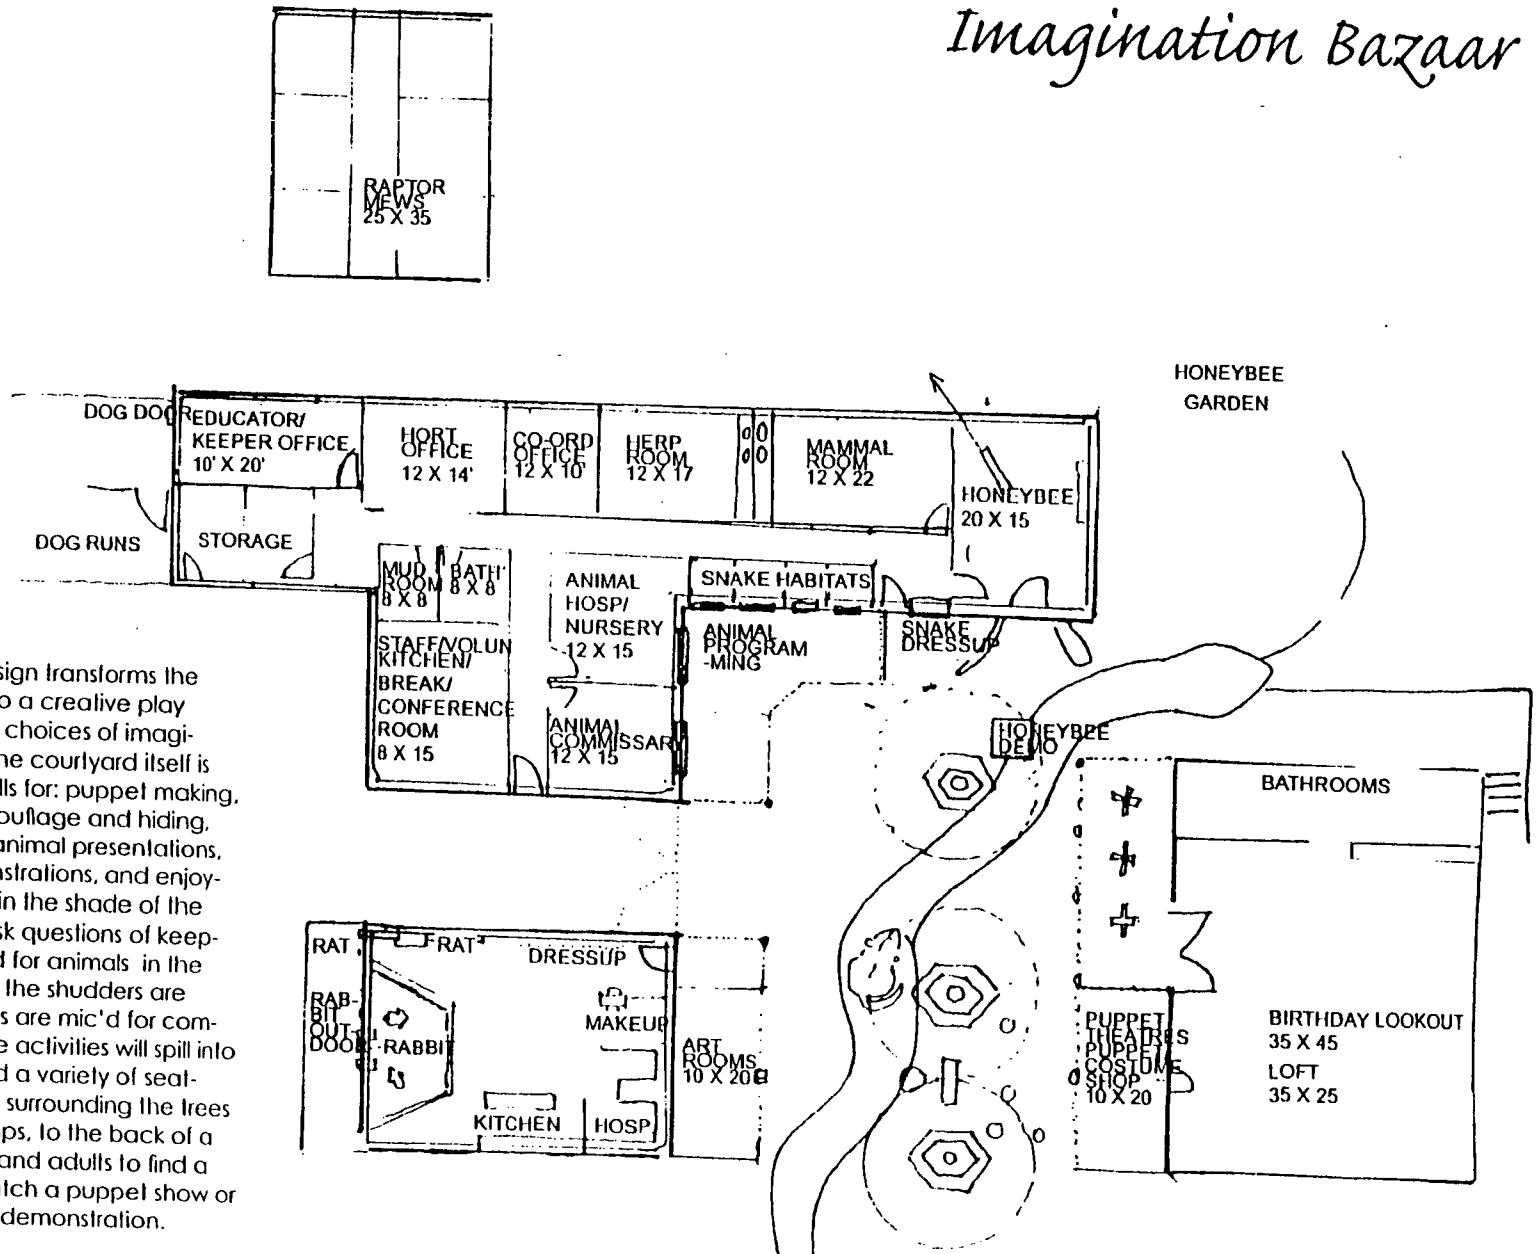
- Provide meaningful, relevant programs that the children can apply in their daily lives.

- Engage all Levels of Participation: Watching, doing, story-telling, quiet exploration, imaginative play, role-playing, empathizing, taking things apart, engaging with real people, taking charge, documenting their experience



- Engage all the Senses

- Make opportunities for use of large motor skills



- Provide clear indications for child and parent behaviorcharge, taking things apart, engaging with real people, documenting their experience

Imagination Bazaar

The Treehouse design transforms the paddock area into a creative play space, with many choices of imaginative activities. The courtyard itself is surrounded by stalls for: puppet making, art creation, camouflage and hiding, snake watching, animal presentations, honeybee demonstrations, and enjoying an ice cream in the shade of the porch. Kids can ask questions of keepers preparing food for animals in the commissary when the shudders are open. (These areas are mic'd for communication). Some activities will spill into the courtyard, and a variety of seating, from benches surrounding the trees to moveable stumps, to the back of a rat allow children and adults to find a good place to watch a puppet show or parade or animal demonstration.

North Carolina General Statutes
ARTICLE 12D.

Environmental Review Commission.

§ 120-70.41. Commission established.

The Environmental Review Commission is hereby established.

§ 120-70.42. Membership; cochairs; vacancies; quorum.

(a) The Environmental Review Commission shall consist of six Senators appointed by the President Pro Tempore of the Senate, six Representatives appointed by the Speaker of the House of Representatives, who shall serve at the pleasure of their appointing officer, the Chair or a Cochair of the Senate Committee on Agriculture, Environment, and Natural Resources or the equivalent committee, the Chair or a Cochair of the House of Representatives Committee on Environment and Natural Resources or the equivalent committee, the Chair or a Cochair of the Senate Committee on Appropriations – Natural and Economic Resources or the equivalent committee, and the Chair or a Cochair of the House of Representatives Committee on Appropriations – Natural and Economic Resources or the equivalent committee.

(b) The President Pro Tempore of the Senate shall designate one Senator to serve as cochair and the Speaker of the House of Representatives shall designate one Representative to serve as cochair.

(c) Except as otherwise provided in this subsection, a member of the Commission shall continue to serve for so long as the member remains a member of the General Assembly and no successor has been appointed. A member of the Commission who does not seek reelection or is not reelected to the General Assembly may complete a term of service on the Commission until the day on which a new General Assembly convenes. A member of the Commission who resigns or is removed from service in the General Assembly shall be deemed to have resigned or been removed from service on the Commission. Any vacancy that occurs on the Environmental Review Commission shall be filled in the same manner as the original appointment.

(d) A quorum of the Environmental Review Commission shall consist of nine members.

§ 120-70.43. Powers and duties.

(a) The Environmental Review Commission shall have the following powers and duties:

(1) To evaluate actions of all boards, commissions, departments, and other agencies of the State and local governments as such actions relate to the environment or protection of the environment, including but not limited to an evaluation of:

a. Benefits of each program relative to costs;

b. Achievement of program goals;

c. Use of measures by which the success or failure of a program can be measured; and
d. Conformity with legislative intent;

(2) To study on a continuing basis the organization of State government as it relates to the environment or to the protection of public health and the environment, including but not limited to:
a. Improvements in administrative structure, practices, and procedures;
b. Increased integration and coordination of programs and functions;
c. Increased efficiency in budgeting and use of resources;
d. Efficient administration of licensing, permitting, and grant programs;
e. Prompt, effective response to environmental emergencies;
f. Opportunities for effective citizen participation; and
g. Broadening of career opportunities for professional staff;

(3) To make any recommendations it deems appropriate regarding the reorganization and consolidation of environmental regulatory agencies and the recodification of statutes relating to the environment, including but not limited to:
a. Ways in which agencies may operate more efficiently and economically;
b. Ways in which agencies can provide better services to the State and to the people; and
c. Instances in which functions of agencies are duplicative, overlapping, incomplete in scope or coverage, fail to accomplish legislative objectives, or for any other reason should be redefined or redistributed;

(4) To review and evaluate changes in federal law and regulations, relevant court decisions, and changes in technology affecting the environment or protection of the environment;

(5) To review existing and proposed State law and rules affecting the environment or protection of the environment and to determine whether any modification of law or rules is in the public interest;

(6) To make reports and recommendations, including draft legislation, to the General Assembly from time to time as to any matter relating to the powers and duties set out in this section; and

(7) To undertake such additional studies as it deems appropriate or as may from time to time be requested by the President Pro Tempore of the Senate, the Speaker of the House of Representatives, either house of the General Assembly, the Legislative Research Commission, the Joint Legislative Commission on Governmental Operations, the Joint Legislative Utility Review Committee, or the Joint Select Committee on

Low-Level Radioactive Waste and to make such reports and recommendations to the General Assembly regarding such studies as it deems appropriate; provided that the Environmental Review Commission shall not undertake any study which the General Assembly has assigned to another legislative commission or committee.

(b) The Environmental Review Commission may continue the study of environmental agency consolidation and reorganization. The study of environmental agency consolidation shall include, but is not limited to:

(1) Monitoring the implementation of Session Laws 1989, c. 727;

(2) Evaluation of the organization, programs, and operation of the Department of Environment and Natural Resources;

(3) Evaluation of the organization, functions, powers, and duties of the components of the Department of Environment and Natural Resources, including boards, commissions, councils, and regional offices; and

(4) Recodification of the General Statutes relating to the environment and environmental agencies.

(c) In addition to its general powers and duties, the Environmental Review Commission shall have the following powers and duties with respect to hazardous waste management:

(1) To study the current and projected need for hazardous waste treatment, storage, and disposal capacity in the State in light of anticipated generation of hazardous waste and alternatives for hazardous waste treatment and disposal;

(2) To evaluate the potential for the development of additional hazardous waste treatment, storage, and disposal capacity by the private sector;

(3) To study the necessity for and scope of hazardous waste treatment, storage, and disposal facilities which are sited, owned, or operated by the State;

(4) To review progress in securing a volunteer county to host a hazardous waste treatment facility;

(5) To study incentives and compensation for the community which hosts, either voluntarily or involuntarily, a hazardous waste treatment facility, including any additional incentives and compensation which may be needed, whether there should be differential compensation for a volunteer county, options for use of funds by local governments, distribution of compensation among local governments, and methods of providing flexibility in the development of an incentives and compensation package for a particular local community;

(6) To review progress in developing interstate agreements for the treatment, storage, and disposal of hazardous waste;

(7) To assist in the development of cooperative, comprehensive regional approach to hazardous waste treatment and disposal;

(8),(9) Repealed by Session Laws 2001-474, s. 12.

(10) To study the capacity assurance requirement under the Comprehensive Environmental Response, Compensation and Liability Act of 1980, Pub. L. No. 96-510, 94 Stat. 2767, 42 U.S.C. 9601 et seq., as amended, and the Superfund Amendments and Reauthorization Act of 1986, Pub. L. No. 99-499, 100 Stat. 1613, as amended as it relates to the continued eligibility of North Carolina for remedial actions under Superfund;

(11) To study alternatives available to the State for dealing with hazardous waste and the ramifications of those alternatives; and

(12) To receive and evaluate reports of every State agency, board, and commission which has any power or duty with respect to hazardous waste management.

§ 120-70.44. Additional powers.

The Environmental Review Commission, while in the discharge of official duties, may exercise all the powers provided for under the provisions of G.S. 120-19, and G.S. 120-19.1 through G.S. 120-19.4. The Environmental Review Commission may meet at any time upon the call of either cochairman, whether or not the General Assembly is in session. The Environmental Review Commission may meet in the Legislative Building or the Legislative Office Building upon the approval of the Legislative Services Commission.

Notwithstanding any rule or resolution to the contrary, proposed legislation to implement any recommendation of the Environmental Review Commission regarding any study the Environmental Review Commission is authorized to undertake or any report authorized or required to be made by or to the Environmental Review Commission may be introduced and considered during any session of the General Assembly.

§ 120-70.45. Compensation and expenses of members.

Members of the Environmental Review Commission shall receive subsistence and travel expenses at the rates set forth in G.S. 120-3.1.

§ 120-70.46. Staffing.

The Legislative Services Officer shall assign as staff to the Environmental Review Commission professional employees of the General Assembly, as approved by the Legislative Services Commission. Clerical staff shall be assigned to the Environmental Review Commission through the offices of the Supervisor of Clerks of the Senate and Supervisor of Clerks of the House of Representatives. The expenses of employment of clerical staff shall be borne by the Environmental Review Commission.

§ 120-70.47. Funding.

From funds available to the General Assembly, the Legislative Services Commission shall allocate monies to fund the work of the Environmental Review Commission.

MINUTES
ENVIRONMENTAL REVIEW COMMISSION
11 April 2006

The Environmental Review Commission (ERC) met on Tuesday 11 April 2006 at 9:30 a.m. in Room 544 of the Legislative Office Building. Representative Gibson presided.

The following members were present: Senators Albertson, Bingham, Clodfelter, Dorsett, Forrester, Kinnaird, Swindell and Weinstein; and Representatives Gibson, Hackney, Harrell, Harrison, Hunter, Justice, and McComas. Mr. George Givens, Commission Counsel; Mr. Jeffrey Hudson, Assistant Commission Counsel; Ms. Jennifer McGinnis, Assistant Commission Counsel; Ms. Susan Iddings, Assistant Commission Counsel; Mr. Tim Dodge, Commission Analyst; and Ms. Dot Waugaman, Commission Clerk, were also present.

On 27 March 2006, notice was sent to members and interested parties via e-mail and regular mail. A copy of the notice of the meeting is included in the attachments to these minutes as **Exhibit A**. Copies of the agenda for the meeting and visitor registration sheets are included in the attachments as **Exhibits B** and **C**.

Representative Gibson welcomed the members and audience and recognized Mr. Givens for his comments. Mr. Givens reported that the planning meeting for this meeting was held on Monday 3 April. He welcomed Senator Stan Bingham to the commission as a replacement for Senator Hamilton Horton. He indicated to members there was a packet of reports at their desks. Some reports relate to the meeting's agenda items (see **Exhibit D** and **Exhibits D-1 through D-5**) including two quarterly reports from the Environmental Management Commission (EMC) (Agenda Item 4), two reports pursuant to the Drinking Water Reservoir Protection Act (Agenda Item 5), and a report related to the dry cleaning solvent cleanup program (Agenda Item 10). There is one read only report (see **Exhibit D-6**) on the desirability of acquiring and the feasibility of attaining reductions in emissions of oxides of nitrogen and sulfur dioxide beyond those required by the Clean Smokestacks Act.

Mr. Givens referred to the scheduled working group meetings on the agenda. He announced the next meeting of the ERC will be Wednesday 3 May in Room 544 of the Legislative Office Building. Three items deleted from today's agenda may or may not appear on the 3 May agenda: further discussion of animal waste management technologies, potable water from private drinking water wells, and issues related to actions available to government to respond to violations and noncompliance by licensed environmental professionals and consultants. Mr. Givens stated he hopes Commission members will look at some legislative proposals for the Commission to recommend to the 2006 session at the beginning of the next meeting. He announced that Dr. Moreau, on the agenda at Item 4, with the quarterly reports from the Environmental Management Commission, was not able to be at the meeting and the agenda item will be rescheduled. Agenda Item 8 has been presented to the Joint Legislative Commission on Seafood and Aquaculture, and because it relates directly to an important issue under discussion in the Phase 2 Stormwater Management Working Group [stormwater controls on land that drains into Class SA (shellfish) waters] it was considered important that the ERC also hear the report.

Representative Gibson recognized Ms. Dianne Reid, Environmental Supervisor, Division of Water Quality (DWQ), Department of Environment and Natural Resources (DENR), to give the Commission an update on the EMC's implementation of the Drinking Water Supply Reservoir Protection Act (Session Law 2005-190) (see **Exhibit E** for a copy of her PowerPoint presentation, and **Exhibit E1** for a copy of S.L. 2005-190). Section 2(a) of the Act requires a study of existing data to determine if North Carolina's drinking water reservoirs meet water quality standards with a report required by 1 May 2006. Section 2(b) of the law requires adoption of reservoir nutrient control criteria by May 2010 and quarterly progress reports. Section 3 requires the development and adoption of nutrient rules for specific reservoirs. Quarterly progress reports will be made and a nutrient management strategy will be completed by 1 July 2008. Section 4 permits no new or increased nutrient discharge allocations to the Jordan Reservoir until nutrient rules are effective. Ms. Reid is presenting a progress report on that Section today. The above-

referenced handout included copies of two reports designed to meet all reporting requirements for the ERC (**Exhibits D-3** and **D-4)**.

Ms. Reid reviewed some terms that relate to water quality assessment. The first, eutrophication, is human-induced increases in nutrient loading above natural levels. The next is nutrients, specifically nitrogen and phosphorus, that have a big impact on plant growth. Chlorophyll-a, a measure of the algal volume present in a water body; and pH, a measure of how acidic or basic a substance is, are what is measured to determine if the water quality standards for eutrophication are being met. When a water body experiences algal blooms, the pH will increase (become more basic) due to the increased photosynthesis that is occurring. At higher pH values, people can experience a burning sensation, which causes restrictions on the recreational uses of bodies of water. The change in pH also results in chemical reactions that can result in the release of metals and other compounds into the water, such as manganese, which can make the water taste bad and give it a bad odor.

Another measurement is turbidity. Turbidity refers to how clear the water is. Algae can make up the major portion of the turbidity in a lake. Sediment-laying runoff and stirred-up bottom sediment in shallow areas also contribute to increased turbidity.

Dissolved oxygen refers to the oxygen in the water. All living things need oxygen, and in an utrophic system (one that has too many nutrients) there is an overabundance of dissolved oxygen in the upper waters during the day when photosynthesis is occurring. However, the algae falls to the bottom as it dies and joins other organic matter resulting in low or no dissolved oxygen because the bacteria that break the algae down use oxygen for that process. At night there is more of a problem during algal blooms because the algae take up oxygen at night and the entire water body can be at a concentration that will kill fish and other aquatic species.

There are surface water quality standards for chlorophyll-a, pH, turbidity, and dissolved oxygen. These standards were used to determine if water quality was being met in the reservoirs.

DWQ did a screening level sample of 100 lakes in North Carolina that are classified as water supply. In compiling the report, they looked at the years of 1995 to 2005. During that time period the Division sampled 95 reservoirs. Five were not sampled due to lack of resources, higher priorities or water constraints. Every five years DWQ staff go to a different set of river basins and sample between 20-30 lakes. The sample time period is May through September, when the algae is in greatest bloom. If there is a lot of rain, a whole summer of data can be lost. The Intensive Surveys Unit is also responsible for other sampling to support a variety of other DENR needs such as permitting and the development of management strategies.

Thirteen lakes that do not meet eutrophication-related standards were identified. For those lakes, two types of actions were taken: either adapted management strategies have been put in place or additional sampling has been recommended. Lake Sequoyah has local management efforts underway. The city of Highlands has sedimentation and erosion control ordinances and buffers in place that were adopted in 1992 and 1994. Cedar Cliff had one low pH reading in 1999 at one station. The DWQ went back and re-sampled in 2004 and found no exceedance of any standards including the pH standard. They will sample the lake again in 2009. Additional sampling has been planned for Lake Lee and Lake Twitty because they found pH values above 9 in both lakes during the summer of 2000. In addition, the elevated pH values and dissolved oxygen concentrations were high, indicating the possibility of algal blooms. The data were insufficient to evaluate the systems, so the Division will sample them at least ten more times to be sure they do a good evaluation.

The other nine lakes have actions under way to address water quality issues. Some of the actions are in the process of being modified. There are six lakes already classified as nutrient-sensitive waters, requiring the development of a nutrient management strategy: Graham-Mebane, Jordan, McIntosh, Pittsboro, Stony Creek, and Falls of the Neuse. Graham-Mebane, McIntosh, Pittsboro, and Stony Creek are in the Jordan Lake watershed and will benefit from the updating of the Jordan nutrient management strategy, especially since there is no direct discharge to these waters. The modification of

the Jordan nutrient management strategies will include addressing non-point sources such as stormwater. Three of the water supply reservoirs have or are in the process of receiving management strategies based on total maximum daily load. When a lake reaches a level of impact where it is determined to be impaired due to a violation of surface water quality, standards or a loss of uses, defined by the water quality classification, the DWQ is required by law to develop a total maximum daily load for the pollutant of concern. That calculation is the maximum amount of a pollutant that a water body can receive and still meet water quality standards. It includes the allocation of that loading between the various sources that contribute the pollutant to the water body. The waters in the Total Maximum Daily Loads (TMDL) process now are Jordan, Pittsboro, and High Rock.

In addition, there are a couple of lakes that are being added to the impaired waters list. When a water body is found to exceed standards, or to have a loss of use, under federal law it is put on the impaired waters list. High Point and Rhodhiss are being added to the impaired waters list, due to exceedance of a chlorophyll-a standard in High Point, and exceedance of the pH standard, in Rhodhiss. Water supply users in both lakes have complained of a bad taste and odor, which relates back to algal blooms.

In addition to the findings specific to water quality standards, there are a couple of issues to be presented to Commission members. Only 30 lakes a year can be sampled based on current resources. In some cases DWQ is not able to determine whether or not a water body is or is not meeting water quality standards They look for downward trends to trigger special studies to verify what their limited amount of data seems to indicate. In some cases, the water suppliers are taking actions to address problems they are experiencing with their water supplies so that water can still meet its use as a water supply. Lake Rhodhiss and Lake Hickory have already installed activated carbon filters to remove taste and odor.

The Act requires the EMC to provide recommendations based on data review and findings. The Jordan and Falls Lake watersheds are already classified as nutrient sensitive and have management strategies in place. Data supports current actions to update the existing management strategies. DWQ is not proposing specific management strategies for Graham-Mebane, Stony Creek, McIntosh, or Pittsboro, as they are in the Jordan watershed and they do not have direct dischargers. The Jordan management strategy will address nonpoint pollutants. High Rock is another major water supply reservoir currently listed as impaired and for which continued monitoring is important and model development is required. Lake Lee and Lake Twitty will be sampled again this summer.

The next section of the Act requires EMC to look at nutrient control criteria. Ms. Reid showed two photographs using a Secchi disc to estimate water clarity by measuring how far light penetrates into the water. Light penetration can be reduced by sediment and by algae, although at mid-lake stations where samples are usually taken, algae are usually the main cause of reduced light penetration. In a low nutrient environment such as Phelps Lake, the Secchi disk is highly visible just below the surface; but in the nutrient rich Haw River arm of the Jordan reservoir, the white portion turns a greenish color, and as the disk is lowered, it becomes invisible sooner than in Phelps Lake.

There are a variety of reasons to control nutrients. You can reduce taste and odor problems because algae can give water a musty taste and a bad smell. Large blooms can change the chemistry in the reservoir so that manganese is released. Manganese stains sinks and clothing and gives water a bad taste and smell. The cost of treating drinking water can be reduced as nutrients are controlled. When activated carbon has to be added to the water, it increases the cost of treatment, but it can reduce the production of disinfectant by-products that with chlorine interact with the algae. It can protect the drinking water supply from toxins associated with blue-green algae and it can protect recreational uses. During extreme algal blooms, there can be fish kills.

In addition to the above, during regular drought periods, cities may not be able to switch to water supplies to get away from algal blooms. In a drought, alternative water supplies may dry up and the algal blooms may increase. We do not want to control nutrients to a sterile condition, but we do want to reduce

the occurrence of the blooms to make sure that drinking water supply reservoirs are usable. Clean surface water also keeps the cost of drinking water down.

There are current nutrient control standards for chlorophyll-a, pH, dissolved oxygen, and turbidity. Under an EPA approved plan, and in conjunction with the Act, DWQ is reviewing the current standards and lake data to update the nutrient control standards as necessary. The deadline for the EPA plan, and for the development of the nutrient control criteria for the lakes needing them, is 2010. DWQ expects to meet the deadlines, even in the face of some challenges.

Not only has monitoring equipment been abused or totally removed, there have been some analytical problems. In the past year, the Division lost a summer's worth of chlorophyll-a data due to laboratory problems. Steps are being taken to prevent the analytical problems and they are making their sampling equipment less of a target. Fortunately, no equipment has been lost in a reservoir targeted for nutrient control rules under Section 3. Under Section 3, the Division is required to adopt nutrient rules for certain drinking water reservoirs. Falls of the Neuse reservoir is the only lake that met the criteria laid out in the act. The requirements include no new or increased nutrient allocation until rules are effective. DWQ is required to base the rules on a calibrated nutrient response model. They can use mandatory measures to meet the goals, and they are to consider cost and effectiveness as they develop the rules by 1 July 2008.

In March of 2005 DWQ began a field study to provide additional water quality data and put together a technical advisory committee consisting of representatives of the City of Raleigh, Durham, Wake County, the Neuse Riverkeeper, DWQ staff and others. The laboratory problems of the summer make reaching the 28 July deadline difficult, and the current drought conditions do not help. If the drought continues into the summer of 2006, the DWQ may be forced to delay data collection for modeling purposes. With these situations in mind, the technical advisory committee is forming a request for the legislature to extend the current deadline by two years, to 1 July 2010.

There are requirements that no new or increased nutrient allocations are to be allowed for the Jordan Reservoir until the nutrient rules become effective. The Town of Pittsboro has requested an expansion; however, under the current act, the DWQ cannot give a go ahead for expansion. The Division began meeting in 2005 to work up the concept of the rules. When the members of the community being regulated by the rules raised concern, the EMC began delving back into their rules in their January and March meetings. They have directed staff to bring rules to them in July/September of 2006, following opportunities to meet with the interested parties. DWQ projects that EMC will move forward by the Fall of 2006 with a set of rules for public hearing with final rules approved by Summer of 2007.

Representative Hackney asked if there is any testing for organics or chemical substances. Ms. Reid said DWQ did their analysis based on nutrient enrichment as that was the focus of the act. She added that they do some sporadic sampling for organics; however, it is not done regularly for any lake. Senator Bingham asked how deep they go to sample in a lake. She replied they do depth profiles for the physical parameters for dissolved oxygen, pH, temperature and conductivity on one-meter increments from the top of the lake to the bottom. For the chemical sampling, they use the photic zone, the measure of how deep the light penetrates. In High Rock Lake, they probably get samples from two meters through the water column. As far as mercury sampling for Abbott's Creek, they have an ambient station there. There will be some sediment sampling this summer on High Rock Lake, mainly looking at oxygen consumption in the sediment and the nutrients released in the sediment. They usually take metal samples from the surface.

Senator Bingham asked if the results of their studies will have any impact on local governments. Ms. Reid said DWQ will include local governments and agencies in the process. In High Rock Lake, they have a technical advisory committee that has worked with the Division on the plan for modeling and for additional sampling. The Committee includes people who live on the lake, representatives of local governments that get water from the reservoirs, and others.

Representative Gibson asked for a layman's definition of "strategy." Ms. Reid said strategy could refer to rules that might already be in place, or rules that are being developed. She said the concept of "nutrient sensitive waters" is a form of a strategy. There are rules that determine who can discharge and how much can be discharged into the water. She said DWQ is developing an overall plan for High Rock Lake.

Representative Gibson asked if any towns other than Pittsboro are affected for expansion by the legislation. Ms. Reid said any town in the Jordan and Falls watersheds cannot expand before the new rules are in place.

Senator Albertson asked if DWQ is doing enough sampling to assure the water is safe. Ms. Reid responded if DWQ wants to do a "really good job of determining if water quality standards are being met in the lakes" they would need to do additional sampling. However, water supply facilities do test to assure good water. DWQ does not use their data because the sampling is not done for regulatory purposes, but to determine how to treat the water. The ambient program was designed to answer the question of the status of the lakes, and using the resources they have, they designed the five year rotation, choosing to sample in the summer when the worst case conditions occur. Out of 100 lakes classified as water supplies, there are quite a few that have "hits" for some of the parameters they sample for, but they don't have enough samples to confirm whether or not they are experiencing significant problems that need to be addressed.

Representative Gibson asked what resources DWQ would need to do the job the way they would like to do it. Ms. Reid replied that it would be useful to have more resources in water quality to do a better job of determining the water quality in surface waters. For public drinking water supplies there is also a need to support the surface water assessment program, where the potential problems in watersheds are being identified. Six staff members sample 160 lakes. They also support sampling for permitting purposes, conduct special studies, help regional offices respond to complaints, and perform additional samplings for the development of management strategies. Sampling of ambient lakes is all done by in-house staff.

Representative Hackney commented that DWQ samples for things that affect the appearance of the lake, the recreational quality of the lake, and turbidity, but are not in any systematic way testing for things that might give a person cancer. Ms. Reid said that is true for what DWQ does.

Representative Gibson asked if the water treatment plants are testing for the type of water quality Representative Hackney asked about. Ms. Reid said the plants do have some monitoring requirements. Representative Hackney asked what they monitor. Ms. Reid said she did not know. Representative Gibson asked staff to provide the answer for that question.

Representative Hackney said that the drinking water for people in Chatham County comes from the Haw River and the Jordan Reservoir. It comes from the effluent from Reidsville, Greensboro, Burlington, Chapel Hill and Durham. It is reasonable to think that the people who drink the water want to know what is in the water from the wastewater treatment plants. Mr. Givens said that the testing for public water systems (any system of 15 or more service connections or 25 or more people) is done under the Safe Water Treatment Act, implemented by the Division of Environmental Health (DEH). Tests are run for bacteria, for heavy metals and some other things. The testing requirements vary depending on the size of the system. At the May meeting, the ERC will hear a proposal from the Department about the testing of private wells by DEH, and the answer to this question will be added to the information we will request.

Representative Justice asked if it is up the public water system to be sure the water is safe, or does someone oversee them. Mr. Givens said there are publicly-owned and privately-owned systems. For the privately-owned systems, samples are pulled and sent to an independent laboratory. How large municipal systems assure the quality of their water will be answered at the May meeting. There is a constant tension between what is required and the costs.

Senator Kinnaird asked about the Town of Rolesville expanding into the Falls Lake area. Rolesville is directly in the Falls watershed. When the rules are adopted, the local municipalities that are trying to start new development will know whether they can or cannot. Ms. Reid replied that each permit would be individually reviewed. Once the rules are in place, DWQ can begin allowing new discharges into the watershed.

Representative Gibson recognized Dr. Linda Stroud, Consultant, Science & Safety Consulting Services, to speak about the prevalence of mercury and other hazardous substances in public schools. Dr. Stroud taught in public schools for 34 years, and now consults with school systems (see **Exhibit F** for a copy of her PowerPoint presentation). Her remarks were pre-approved by the Department of Public Instruction (DPI) and the North Carolina Division of Public Health.

Dr. Stroud had to fully retire from teaching in 2002. She had taught in a school since 1984 that had no ventilation in her office, which was located next to the chemical storage room. Near the end of 2001, began to experience health problems. By May 17, she was diagnosed with multiple sclerosis (MS). She retired in early June, and in September she learned from her neurologist that she did not have MS. In fact, her physical condition had improved. She believes the reason for her deteriorating health was because she inhaled chemicals over a period of many years. Once she left that environment, she began to get better.

Dr. Stroud made the following recommendations for public schools:

- Get rid of mercury, mercury compounds, and mercury containing instruments.
- Get rid of hazardous and unwanted chemicals.
- Require LEAs to have a comprehensive chemical management system to prevent buildup of hazardous waste.
- Require DPI and LEAs to follow the State Board of Education Policy HSP-F-017.
- Hire someone at DPI to assist LEAs in developing the program to rid the schools of chemicals.
- Provide financial support to get rid of the chemicals.
- Develop a five-year plan to bring all LEAs into compliance with OSHA laboratory standards.

There is federal money available from the Environmental Protection Agency and the Department of Homeland Security, but DPI needs to have a person who will write grants to obtain the money. DPI currently has no one with the background to lead the chemical management program.

Representative Harrison asked why the schools have not gotten rid of the hazardous chemicals. Dr. Stroud said it is because they do not have the financial means to do so. She suggested a state-wide sweep, pulling all the chemicals together so when a waste disposal company comes to an LEA, they can go to every school at the same time to minimize the cost. She added that with a chemical management program in place, the individual schools would not obtain the hazardous chemicals that they do not need and that require costly disposal.

Senator Kinnaird asked when and how superintendents and principals are informed about this situation. Dr. Stroud said schools hire her to do assessments of their facilities in regard to hazardous materials. Before she does assessments, she holds an awareness session with central office personnel, a principal and a lead science teacher from each classroom she is going to assess to make them aware of the problems and what she will be looking for when she walks through the schools. The same group meets after her walk through and prioritizes the clean up needs. Meeting some of the needs does not cost much, such as making an inventory of the chemicals. Disposing of the chemicals and adding ventilation to the schools, however, cost a lot of money.

Representative Gibson recognized Mr. Keyes McGee, Environmental Engineer, Division of Pollution Prevention and Environmental Assistance (DPPEA), DENR, to discuss measures to reduce the

quantity of mercury released into the environment that impacts natural resources and harms the public health of the citizens of the State (see **Exhibit G** for a handout on mercury education and awareness).

Common household products that contain mercury do not individually contribute significantly to the total concentration of mercury in domestic waste water (about 15 percent). Part of the remaining 85 percent comes from excreted dental amalgam mercury in human waste, improper disposal of mercury thermometers into the collection system, mercury-containing pharmaceutical formulations, and the like. Publicly owned treatment systems have been impacted by the medical sector as a contributor of elemental mercury into the sewer system.

To decrease the amount of mercury in the environment, the Division asks people to use less energy, since coal-fired electric power is the largest source of mercury emissions. The use of fluorescent lamps is encouraged, because even though they contain mercury, they use less energy. The Division also works to reduce the use of mercury-containing products to eliminate accidental release and the problems associated with responsible disposal. They encourage recycling of mercury containing products and educate people to never dispose of mercury containing products in municipal solid waste collections. They have a webpage to educate the public at www.p2pays.org.

Senator Kinnaird asked if mercury on fruits, vegetables, and grains comes from the coal fired power plants. Mr. McGee said it is possible that mercury deposition has settled onto the crops as they grow. He added that there is a theory that any time we extract material from the surface of the earth, mercury is liberated, and it is very difficult to sequester the mercury once it is liberated.

Representative Gibson recognized Ms. Fran Preston, President of the North Carolina Retail Merchants Association, to speak to issues of interest to the retail merchants in regard to mercury. She found that members of the Association were unaware that they sell articles that contain mercury. Legislation currently under consideration would authorize a civil penalty against retailers (see **Exhibit G-1** for a copy of HB 1531, Mercury Reduction and Education). Ms. Preston said she would like to include language similar to the language in a bill concerning adulterated food in which when inspectors, for instance, found baby formula past its expiration date, the inspector would notify the store and the store would be allowed to remove the out of date food from the shelves without penalty. She stated that the retail merchants are not knowingly trying to sell products with mercury. In a situation in 2004, Ms. Preston told the committee about a toy placed in boxes of Rice Krispies that contained a mercury button battery. Neither the store nor the producer knew the toy included a mercury button battery.

Representative Harrison requested Dr. Lu Ann Williams, State Toxicologist with the North Carolina Department of Health and Human Services be given a chance to speak on the issue of mercury in public schools. She reported that she had received a call from a director of a pre-K to middle school in Chapel Hill (referred to by Dr. Stroud above). The director had hired a consultant at the direction of emergency management officials after pulling a trap out of a sink and noticing there was mercury in the trap. The mercury went all over the floor and the counter, contaminating the room. Emergency crews went into the room, got it on their shoes, tracked it all the way to the door, contaminating the carpet as well.

Although the school used one of the two companies in the state that do this type of cleanup, the company they selected inappropriately used the wrong instrument to measure the mercury and actually made the problem worse. The only instrument to measure mercury effectively is the Lumex and only one person in the state, Mr. Ron Howell, has one. Mr. Howell was called in and monitored all the rooms with the Lumex. In the meantime, the children had been in the classroom for two days.

Representative Gibson asked if there is a protocol that can be distributed to all schools. Dr. Williams said the protocol is not well established. She added that she is requesting that the legislators pass HB 1531 (see **Exhibit G-1**) to require all mercury be removed from schools. She would like other hazardous chemicals to be removed from the schools as well. She added that communicating the seriousness of the problem to superintendents and principals has been difficult.

Representative Gibson recognized Dr. Courtney Hackney, Chairman of the Coastal Resources Commission, to discuss the desirability of requiring a seller of real property in a coastal hazard area to provide a prospective purchaser with a disclosure statement of coastal natural hazards prior to the sale of the property. Dr. Hackney spoke in favor of HB 1512, Coastal Hazards Disclosure (see **Exhibit H** for a draft of the disclosure form, **Exhibit I** for a copy of HB 1512, and **Exhibit I-1** for a copy of aletter to legislators requesting support for HB 1512). He said the current rules allow a coastal homeowner whose home is imminently threatened to place sandbags to protect the home while it is being moved or dismantled, or hopefully while the beach is renourished. It is a one-time allowance, and after two years, the sandbags have to be removed. Someone who would buy the home after the sandbags were gone and would go to apply for another permit would not be allowed to install the sandbags.

Representatives Justice, McComas and Harrell said they were surprised that the buyers were not aware of the prospective problems of beach homes and that banks were willing to loan money to buyers to buy homes in precarious situations. Dr. Hackney said some people buy property with cash and do not even purchase flood insurance. He also said that the hazards do not keep the appraisals' values from going up. Representative Harrison said some times the original developer has information about the hazards but does not pass it on to first-time or subsequent buyers.

Representative Gibson recognized Mr. Richard Gatlin, Chair, North Carolina Beach, Inlet, and Waterway Association, to discuss the desirability of requiring a seller of real property in a coastal hazard area to provide a prospective purchaser with a disclosure statement of coastal natural hazards prior to the sale of the property. He said his organization is a state-wide organization that grapples with solutions for the sand management problems, to keep the beaches sandy, the waterways open, and the inlets safe. The Association has 24 directors representative of geographic diversity, mayors, county commissioners, town managers, coastal engineers, realtors, resort owners, chambers of commerce representatives and concerned citizens. In July of 2005, the board of directors voted unanimously to endorse HB 1512.

Mr. Gatlin stated that North Carolina has lost its federal funding for beach renourishment, to keep the intercoastal waterway open, and to keep the shallow draft inlets that connect the ocean to the waterway safe and navigable. Any time a developed coastal area is threatened by a coastal hazard, it diverts federal and state attention away from a planned and responsible sand management approach. In addition to that, the coastal hazard problems focus negative public opinion on how North Carolina deals with our coastal resources. There was some concern if notification would dissuade someone from purchasing real estate in coastal hazard zone. It is incumbent on those who understand coastal dynamics and the problems associated with them that potential homeowners be informed of the issues. He said that some realtors and sellers are not coastal experts and they may not be aware of what is occurring. They should be able to rely on determinations readily available without having to assume any liability for the accuracy of that information.

Representative Harrison said the bill as envisioned would impose no liability on realtors. She added that there is now a significant detailed database of coastal hazards on the web. Among other things, it shows the rate of erosion at various properties. The form would list various coastal hazards and if the seller has specific knowledge of a specific permit condition or some hazard unique to the property, that information should be conveyed to the buyer. She went on to say that Sea Grant works with the Real Estate Commission to train realtors on the coast. There is also a booklet published by the Real Estate Commission about transactions at the coast.

Representative Gibson recognized Mr. James Stephenson, Program Analyst of the North Carolina Coastal Federation, to continue the discussion of coastal and natural hazards and the desirability of requiring the seller of real property in a coastal hazard area to provide a prospective purchaser with a disclosure statement of coastal natural hazards prior to the sale of the property.

Mr. Stephenson said that after Hurricanes Fran and Bertha, the state developed a North Carolina Disaster Recovery Task Force to look at what the state could do to limit its exposure to disasters in the future. In 1997, the task force released a report. Some of the recommendations of the report related directly to coastal hazards. Three of the recommendations are to enact legislation which: (1) requires full

disclosure and hazard notification to persons acquiring property on barrier islands should be enacted, (2) restricts future state subsidies and support of development in designated high hazard areas on barrier islands, and (3) establishes a state hazard area acquisition program. The easiest step is the coastal hazards disclosure. North Carolina's coasts are constantly in motion as beaches erode and inlets wigwag. As a state we have chosen to live with these natural processes rather than turning our beaches into hardened seawalls as some other east coast states have done.

Mr. Stephenson went on to say that many owners of coastal real estate are unaware of the natural hazards and of state environmental rules that have been adopted to protect the coast. As a result, some purchasers buy land not realizing that it will erode and expect that they can use the property in ways that are not permitted. The Coastal Hazards Disclosure concept in HB 1512 would require that landowners selling property on the oceanfront or near inlets tell the buyer about known hazards or environmental rules that apply to the property. The information would be provided by the Division of Coastal Management at no cost to the buyer or the seller. The bill would not prevent buyers from purchasing any property that is for sale, but it would insure that every purchaser will know what natural hazards and legal constraints the property faces.

Representative Gibson recognized Mr. Richard Zechini, Director of Regulatory Affairs, North Carolina Association of Realtors, to continue the discussion of coastal natural hazards and the desirability of requiring a seller of real property in a coastal hazard area to provide a prospective purchaser with a disclosure statement of coastal natural hazards prior to the sale of the property. He said that the Association of Realtors is very supportive of coastal issues and of the disclosure requirements under existing law. He added that they do not endorse HB 1512 for several reasons.

There are 37,000 members in the Association, and a significant number of them serve coastal communities. They work on behalf of both buyers and sellers. The Association has polled the membership on this issue, and the overwhelming result is that they see no problem that needs to be solved. They have also gone to the Real Estate Commission to ask for their counsel on the issue. The response from the Commission is that there is no need for action. There are layers of obligation in place already, beginning with the Residential Property Disclosure Statement. All real estate licensees in the state have certain duties and obligations, not only to their principal (the person they are representing), but also to anyone involved in the transaction. A listing agent has the duty to disclose material facts about the property to prospective purchasers, not just to the one they are representing. There is also a prohibition about willful or negligent misrepresentations about the property by real estate licensees. They are subject to the realtor code of ethics, which states that they have a duty to discover and disclose adverse factors about the property. Finally, Mr. Zechini said that the seller should use common sense, and common sense cannot be legislated.

The Association believes the proposed legislation would cause problems for the property owners. They would have to determine whether or not the property was subject to the requirements, and research the specific and detailed information required to be disclosed under the legislation, including erosion rates, location of vegetation lines, storm rescission estimates, flood levels and inlet movement. The obligations in the legislation would be duplicative of many of the requirements already in the Residential Property Disclosure Statement, specifically soil stability, flood zone or flood hazard information and violations of current land use law. He added that they believe vesting this type of authority in the Coastal Resources Commission is setting a bad precedent. Historically that authority has been vested exclusively with the Real Estate Commission.

Mr. Zechini said the Association would like to educate people about the issue. Currently, there is a Q and A on the issue in partnership with Sea Grant. They would like to continue and expand that approach and they encourage the Coastal Resources Commission to seek out the Association of Realtors and the Real Estate Commission as partners in coastal hazards education.

Representative McComas asked about the difference in provisions from the bill as introduced and in a draft that is being worked on. Mr. Zechini said there were some stakeholder meetings last summer that have resulted in two additional drafts. They include a provision that expands an existing requirement

to disclose land use and zoning issues. That provision would apply state-wide. Representative McComas asked if there is a due diligence provision in the contracts, so that if the buyer finds something while doing due diligence the buyer could nullify the contract. Mr. Zechini said there is a provision in the standard Offer to Purchase and Contract that provides for inspections of the property and provides the buyer the opportunity to back out of the contract should something material be discovered during the inspection.

Senator Kinnaird asked about the liability of the real estate agent. Mr. Zechini said there is a provision that mirrors the provision in the Residential Property Disclosure Statement statutes that says that if the real estate licensee describes the duties and obligations to the sellers and buyers, and if they do that, they are insulated from liability. He expressed two concerns about that provision. The first is that if a party to the deal decides to sue, they sue everyone who had anything to do with the deal. The second is that, practically speaking, the sellers depend on their agents for assistance in working on the forms, so despite the language in the legislation, there is a liability issue.

Representative Harrison said that when she was on the Coastal Resources Commission, homeowners would come to every meeting with a detrimental situation about their property that was not disclosed to them before purchase. She added that the original intent of the bill was to cover the 20 coastal counties with areas of environmental concerns. It was problematic because of the level of knowledge required, so the area covered was scaled back to include oceanfront and inlet hazard area property only. Information required by the legislation is kept on file with the Clerk of Court and on a website, and it is updated regularly.

Representative Harrison asked if transactions that do not involve real estate agents are covered by real estate regulations. Mr. Zechini said if there is not a real estate licensee involved in the transaction there is not. The Residential Property Disclosure Statement would apply if it is residential property, but the duties applicable to real estate licensees would not.

Representative Harrison asked if it would be appropriate to request a bill be drafted for consideration by the Commission because HB 1512 is not eligible for consideration during the short session. Representative Gibson said it is appropriate to ask, but he would have to consult with the co-chairs to determine if it would be made eligible.

The Commission recessed for lunch at 12:15 p.m.

The Commission reconvened at 1:05 p.m. Mr. Givens announced that a copy of a letter to Mr. Mark E. Rey, Under Secretary of the U. S. Department of Agriculture, was at each member's seat. The letter, signed by the three co-chairs of the ERC, requests that the proposal to dispose of National Forest lands in North Carolina be abandoned, and an appropriate source of revenue to fund the Secure Rural Schools program be found (see **Exhibit J)**.

Representative Gibson recognized Ms. Edythe McKinney, Director, Customer Service Center, Small Business Ombudsman, DENR, to report on the Express Permit and Certification Review Program (see **Exhibit K** for a handout for consumers on the One-Stop Permit Assistance and Coordination and Express Permit Review Programs of DENR, and **Exhibit L** for a copy of the report on the success of the Express Permit Review Program). Ms. McKinney said attention is continually paid to the program and as they learn from their experience, they perfect the program

One of the primary goals for the program was to reduce the processing time without in any way compromising the environmental quality and review. The program began in 2004 in the Wilmington Regional Office. There have been reductions in processing time from 50 to 90 percent.

Changes have been made to address several concerns that have been raised. Certain types of projects were excluded because they were not appropriate for the Express program. There were also some concerns on coastal projects. One modification made in the program was that if the project involved new dredging or if there were more than 4 boat slips for piers or docks, the project was excluded

from the Express program. Large complicated coastal permits needed to have a longer scrutiny. The other point is the question of incomplete applications. Incomplete applications have been an obstacle in the Express Permitting program, but two factors in the Program have been beneficial to address the problem. First there is the front end involvement. There is a submittal meeting at which expectations are discussed. The other is that it costs more money to go through the Express Program. If an applicant has to substantially redo their submission, the Express Program can charge them another 50 percent of the application fee. The applications that come into the Express Program have improved. The second time they come in, they are better. They are also training consultants, focusing on frequent mistakes. They have found that the training is helping get better applications the first time in their regular permitting program as well.

Representative Harrison had a copy of a letter to Secretary William Ross of DENR from the North Carolina Fisheries Commission expressing concern about the Express Permit Program handed out to Commission members (see **Exhibit M**). Ms. McKinney responded that some of the changes that had been put in place were as a result of the letter from the Fisheries Commission. Representative Harrison commented on two large projects in Brunswick County that had gone through the Express Permit Program and her concern with such large projects being fast-tracked. Ms. McKinney said she would meet with Representative Harrison to look at the specifics of the applications. She added that the applicants advertise in the normal newspapers they use to notice all CAMA permits. There have been several meetings in the Washington area where they have meetings early in the process before an application has been made, to talk about addressing some of the wider issues. Sometimes a portion of the project will go through the Express program and other portions will not.

Representative Gibson asked if there is a way to outsource part of the permit process in the Express Permit program versus the standard permitting program. Ms McKinney replied that the review of express permitting is done by people in the normal program. The only difference is that they are paid out of the receipts from the Express Permit program. The program is continuing to expand, so they are adding on new staff as needed to meet statewide goals. By gradually adding staff, they are best able to accomplish the expansion with in-house staff. The additional fees are enabling the program to adequately provide the human resources they need. Representative Gibson asked about the difference in time between the normal permitting process and the Express Permit process. Ms. McKinney replied that a permit that could be issued in 2 days under the Express program might take 20 days through the normal process.

Representative Harrison asked how the resource agencies that comment on the permit applications factor into the Express Permit program. Ms. McKinney said the review process is the same. She does not believe the resources agencies have had to hire additional staff, but communication, coordination and focus on the Express permits has intensified and perhaps improved.

Mr. Givens asked how many additional people have been hired for the Express Program. Ms. McKinney said they have 18 staff currently in the Express program. They are in the process of setting up at least three more. In addition, they need a new stormwater engineer. The people in Wilmington have 5 staff members: coastal stormwater has two, the 401 wetlands program has one, the land quality has one, and CAMA has one. In Morrisville there are two: a land quality staff member, and a 401 wetlands staff member. Mr. Givens asked if expediting some permits makes the rest of them slower. Ms. McKinney said they have not noted that result.

Representative Gibson recognized Mr. Wayne Mobley, Chief, Shellfish Sanitation and Recreational Water Quality Section, Division of Environmental Health, DENR, to report on the shoreline survey of shellfish growing areas (see **Exhibit N** for a copy of his PowerPoint presentation). The shoreline survey is a project in which surveyors walk from house to house to see if there is any type of sewage or potential pollution sources that might discharge into the coastal water and cause problems for shellfish growing areas.

Because Section staff members go door to door, they collect and share information of importance to other parts of DENR. They also work with the NC Department of Transportation (DOT) on stormwater

issues. They have seen a lot of cooperation among state agencies, using information that their shoreline survey program provides. With their GIS mapping and database reports they can share information about environmental problems with appropriate agencies.

There are 55 areas along the coast the Section has to survey every three years. They had a grant to support intensive mapping of four of the areas: the White Oak River area around Swansboro, the area around Cape Carteret and Emerald Isle, the Newport River, and the North River. The shoreline survey with the new methodology they developed has been shown nationally. The USFDA shellfish specialist has come to North Carolina, looked at the GIS mapping they have done, and has taken the program to all other shellfish states. The Section is very proud that there have not been any food-borne illnesses tied in to North Carolina shellfish.

Representative Harrison asked about the 10 slip limitation for marinas. Mr. Mobley said several agencies are looking at how to deal with the cumulative impact. It is a major issue and they are working toward finding a solution to it. Representative Harrison also asked if fish farm discharges are regulated. Mr. Mobley replied that they are somewhat, but some of the areas on the Pamlico River do deteriorate for awhile after discharges. They do not discharge during the oyster season.

Representative Gibson recognized Mr. Jonathan Powers, Head, Special Remediation Branch, Superfund Section, Division of Waste Management, DENR, to present the annual report on the Dry-Cleaning Solvent Cleanup Program (DSCP) (see **Exhibit O** for a copy of his PowerPoint presentation). The dry cleaning solvent is heavier than water, so unlike the gasoline leaks (which stay relatively near the surface), the solvent moves until it hits bedrock and it can even flow into cracks in the bedrock. The solvent plume can move great distances from the original source.

Mr. Powers presented members a picture of a dry cleaning establishment in Fayetteville that had a solvent problem and explained what happened. The federal drinking water standard for perchlorethylene (PCE) is 5 parts per billion. Although many of the residents of the area are hooked up to city water, some use private wells. At least four wells in the area exceeded the federal drinking water standard. Some have been hooked up to public water, the others are in process. In the interim, DENR is providing the affected residents with bottled water to drink. They have gone to great lengths to determine who is using groundwater in the area, although it has not been easy. Certified letters have been sent out to all residents; they have gone door to door and left flyers, and the City of Fayetteville has worked with them to identify residents who are drinking city water, but it has been a challenge to identify all the people who rely on groundwater for drinking. In the future, the Section will address the contamination plume and its potential impact. Based on the date they have, the plume is 1100 feet long.

Mr. Powers also explained their compliance efforts to enforce the minimum management practices that were mandated by the DSCA statute and subsequent rules. Within the past year, a compliance staff has been formed, consisting of a compliance coordinator and an inspector (who began work last week). They are looking for another inspector within the next six months, to end with a staff of three to do inspections and ensure compliance for dry cleaners across the state. They will be multi-media inspectors. Three different programs in DENR will inspect dry cleaners: the hazardous waste program, the air quality program and the DSCA program. They have worked out a memorandum of agreement with the air quality program to enable the DSCA inspectors to inspect for them, and they are amending their rules to give them authority to do enforcement for air quality regulations as well as hazardous waste regulations. Soon a dry cleaner with questions about compliance will be able to talk with just one of the three programs to get answers. For the first year, they will be oriented to provide compliance assistance. Early work indicates that even though the regulations have been public for awhile, many dry cleaners are not familiar with them, and there is a lot of confusion. The staff will be focusing on education, but do have the authority to do enforcement when necessary and to issue penalties.

Senator Albertson commented he is disturbed that the State is allowing the dry cleaner industry to contaminate sites. Mr. Powers assured Senator Albertson that dry cleaning establishments can be fined up to $25,000. He said in the year since their inception, they have discovered two intentional releases. Representative Gibson recognized Mr. Dexter Matthews, Director of the Division of Waste Management.

He said the PCE is a problem, but the program is just getting under way. The best management practices have been determined and can be enforced at the facilities to be sure there are no future releases. The sites mentioned above were in existence for some time, prior to regulations such as the minimum management practices that are in effect now. Mr. Powers said there are people who purchase dry cleaning businesses who have not been made aware of the environmental requirements for their business. Another problem is incidental spills or releases that are not discovered until they cause problems in the drinking water.

Mr. Givens noted the difference between the projected cost of cleanup of sites and the amount of money projected to be available when the program ends in 2010. Representative Justice asked if the additional costs could be met by extending the program beyond 2010, but suggested that additional funds would be needed in the next few years if the cleanup was to be completed earlier. Her statement presupposed that no new contamination sites would be found in the meantime. Mr. Powers said that was correct.

Representative Gibson recognized Mr. Chris Edwards, Vice President of the North Carolina Association of Launderers and Cleaners, to speak on the issues related to the Dry-Cleaning Solvent Cleanup Program (see **Exhibit P** for a copy of his PowerPoint presentation). DSCA staff have visited dry cleaning establishments to learn about the industry so they can help them be better stewards of the environment. Mr. Edwards cited examples of contamination and successful resolutions of the situations. He expressed gratitude that the industry was allowed to be part of the solution of the problem.

Senator Bingham asked if there are new cleaning products on the market. Mr. Edwards replied there are, but most of them are petroleum-based and have a flash point. The industry has gone to the State Building Code people and asked them to revise the fire code to allow some of the alternative solvents in dry cleaners. They have denied the use Class 3A or 3B solvents in retail establishments unless there is a sprinkler system, which is very expensive to retrofit. PCE does not burn, but the newly developed petroleum solvents have a 141-147 flash point, which means under certain circumstances they can ignite and burn. Senator Bingham asked if the Association had educated their members on their environmental responsibilities. Mr. Edwards said they have, but a lot of the problems occurred before the management practices were developed. He added that most of the contamination is from incidental events, not large scale releases. Senator Bingham asked if there is a better alternative for clean-up. Representative Gibson replied that many people have worked on that solution over many years.

Agenda Item 11, the semiannual report on agency litter enforcement, litter prevention and litter removal efforts, was postponed until the 3 May meeting.

Representative Gibson reminded members of the 3 May meeting. Mr. Givens said there would be a meeting on 8 May if there was draft legislation to be considered. Representative Gibson said there might also be a meeting after the beginning of session to consider draft legislation.

The meeting adjourned at 2:35 p.m.

Senator Charlie Albertson, Co-Chair

Representative Pryor Gibson, Co-Chair
Presiding

Senator Daniel Clodfelter, Co-Chair

Dot Waugaman, Commission Assistant

RE: **Notice of Commission Meeting**
Notice of Planning Meeting
Schedule of Future Meetings
Meetings of Interested Parties (605 Working Groups)
Additional Information

COMMISSION MEETING – 11 April 2006:

The Environmental Review Commission (ERC) will meet at 9:30 a.m. Tuesday 11 April 2006 in Room 544 of the Legislative Office Building in Raleigh. The Commission will not meet on Wednesday 12 April 2006.

At the 11 April meeting, the Commission will begin or continue studies for which the Commission is responsible, hear reports from State agencies, discuss topics to be considered at future meetings, and attend to other matters. Listed below are potential agenda topics for this meeting. More specific information regarding the agenda for the 11 April meeting of the Commission will be developed at the staff planning meeting discussed below.

POSSIBLE AGENDA TOPICS:

Solid and Hazardous Waste Management:

1) Discussion of measures to reduce the quantity of mercury that is released into the environment that impacts natural resources and that harms the public health of the citizens of the State

2) Annual report on the mercury minimization plan prepared by DENR (G.S. 130A-310.57)

3) Annual report on the Dry-Cleaning Solvent Cleanup Program (G.S. 143-215.104U)

4) Semiannual report on agency litter enforcement, litter prevention, and litter removal efforts (G.S. 147-12(b))

Water Quality:

5) Reports required pursuant to S.L. 2005-190 (Drinking Water Reservoir Protection Act):

   a) Findings and recommendations of the study of water quality in drinking water supply reservoirs in the State to determine whether the reservoirs meet current water quality standards (S.L. 2005-190, Sec. 2(a))

   b) Findings on the identification and adoption of control criteria necessary to prevent excess nutrient loading in drinking water supply reservoirs; adoption of nutrient management strategies and permanent rules; and other requirements listed in S.L. 2005-190, Secs. 2.(b), 3.(e) and 3.(f)

   c) Progress in developing and implementing nutrient management strategies for drinking water supply reservoirs to which Section 4 of S.L. 2005-190 applies (S.L. 2005-190, Sec.4)

6) Discussion and comment on the findings of the evaluation of alternative animal waste management technologies to determine whether those technologies are environmentally superior and economically feasible

7) Discussion of the shoreline survey of shellfish waters by the Shellfish Sanitation & Recreational Water Quality Section of the Division of Environmental Health of the Department of Environment and Natural Resources (DENR)

8) Issues related to the safety and quality of potable water delivered from private drinking water wells in the State

General/Miscellaneous:

9) Report on the operations, activities, programs, and progress of the Environmental Management Commission (G.S. 143B-282(b))

10) Findings on the success of the Express Permit and Certification Review Program (G.S. 143B-279.13(c))

11) Discussion of coastal natural hazards and the desirability of requiring a seller of real property in a coastal hazard area to provide a prospective purchaser with a disclosure statement of coastal natural hazards prior to the sale of the property

12) Issues related to actions available to governmental agencies to respond to violations and noncompliance by licensed environmental professionals and consultants

13) Other matters related to the Commission's powers and duties under G.S. 120-10.43

PLANNING MEETING:

To facilitate development of the agenda for the 11 April meeting of the Commission, to plan for subsequent meetings of the Commission, and to receive input from interested persons regarding the work of the Commission, the Commission Counsel will hold an informal planning meeting at **2:00 p.m. on Monday 3 April 2006 in Room 605 of the Legislative Office Building**. Persons who wish to participate in the development of the agenda for meetings of the Commission, or who are interested in any matter before the Commission, are invited to attend.

SCHEDULE OF FUTURE MEETINGS:

Below is a schedule of meetings of the Environmental Review Commission for April and May 2006. This schedule is tentative and subject to adjustment. For planning purposes, however, please reserve these dates.

Commission Meeting
Tuesday 11 April 2006
Wednesday 3 May 2006
Monday 8 May 2006

Staff Planning Meeting
2:00 p.m. Monday 3 April 2006
10:00 a.m. Thursday 27 April 2006

Please note the following:

1. Commission meetings normally begin at 9:30 a.m., include a lunch break, and run until mid-afternoon. Please plan on meeting from 9:30 a.m. until at least 3:30 p.m. Unless otherwise announced, the Commission will meet in room 544 LOB.

2. To facilitate development of the agenda for meetings of the Commission and to receive input from interested persons regarding the future work of the Commission, the Commission Counsel holds informal planning meetings for staff and interested parties. Commission members are not expected to attend these meetings. Only one staff planning meeting is scheduled per month, regardless of the number of scheduled meetings of the Commission. Unless otherwise announced, public staff planning meetings will be held in room 605 LOB.

3. The 2006 Regular Session is scheduled to begin at 12:00 noon on Wednesday 9 May 2006. The Commission may meet shortly after the beginning of the session to complete work and to consider any legislative proposals and recommendations.

4. The Commission may meet while the General Assembly is in session (G.S. 120-70.44). When the Commission meets while the General Assembly is in session, written notice will not be mailed to persons on the mailing list. Rather, notice will be given at a session of the Senate and House of Representatives as provided by G.S. 143-318.12(b) and will be distributed by email, if possible. The Commission will resume a schedule of regular monthly meetings following adjournment of the 2006 Session of the General Assembly.

MEETINGS OF INTERESTED PARTIES (605 WORKING GROUPS):

The Commission Counsel will hold meetings of interested parties on specific topics as indicated below:

Phase II Stormwater Management Working Group
10:00 a.m. Monday 3 April 2006 – 605 Legislative Office Building
2:00 p.m. Monday 17 April 2006 – 605 Legislative Office Building

Risk-Based/Limit Liability for Environmental Cleanups Working Group
2:00 p.m. Monday 10 April 2006 – 605 Legislative Office Building

ADDITIONAL INFORMATION:

If you have questions related to the Commission, please feel free to contact the Commission Counsel or other Commission staff at (919) 733-2578.

AGENDA
9:30 a.m. Tuesday 11 April 2006
Room 544 Legislative Office Building
Raleigh, North Carolina

1. Call to order
   Senator Daniel G. Clodfelter, Presiding

2. Introductory remarks by Cochairs
   Senator Daniel G. Clodfelter
   Senator Charles W. Albertson
   Representative Pryor A. Gibson

3. Report to the Commission and explanation of agenda items
   George F. Givens, Commission Counsel

4. Quarterly reports by the Environmental Management Commission (EMC) as to its operations, activities, programs, and progress for the period of October 2005 through April 2006 (G.S. 143B-282(b))
   Dr. David H. Moreau, Chairman
   Environmental Management Commission

5. Reports required pursuant to S.L. 2005-190 (Drinking Water Reservoir Protection Act):
   Findings and recommendations of the study of water quality in drinking water supply reservoirs in the State to determine whether the reservoirs meet current water quality standards (S.L. 2005-190, Sec. 2(a))

   Findings on the identification and adoption of control criteria necessary to prevent excess nutrient loading in drinking water supply reservoirs; adoption of nutrient management strategies and permanent rules; and other requirements listed in S.L. 2005-190, Secs. 2.(b), 3.(e) and 3.(f)

   Progress in developing and implementing nutrient management strategies for drinking water supply reservoirs to which Section 4 of S.L. 2005-190 applies (S.L. 2005-190, Sec.4)
   Dianne M. Reid, Environmental Supervisor
   Division of Water Quality, Department of Environment and Natural Resources (DENR)

6. Discussion of measures to reduce the quantity of mercury that is released into the environment that impacts natural resources and that harms the public health of the citizens of the State

Linda M. Stroud, Consultant
Science & Safety Consulting Services

T. Keyes McGee, Environmental Engineer
Division of Pollution Prevention and Environmental Assistance, DENR

Fran E. Preston, President
North Carolina Retail Merchants Association

7. Discussion of coastal natural hazards and the desirability of requiring a seller of real property in a coastal hazard area to provide a prospective purchaser with a disclosure statement of coastal natural hazards prior to the sale of the property

Courtney T. Hackney, Chairman
Coastal Resources Commission

Richard G. Catlin, Chairman
North Carolina Beach, Inlet, and Waterway Association

James H. Stephenson, Program Analyst
North Carolina Coastal Federation

Richard A. Zechini, Director of Regulatory Affairs
North Carolina Association of Realtors

LUNCH BREAK *– Estimated for 12:00 p.m. to 12:30 p.m.*

8. Report on the shoreline survey of shellfish growing areas

S. Wayne Mobley, Chief
Shellfish Sanitation and Recreational Water Quality Section, Division of Environmental Health, DENR

9. Report on the Express Permit and Certification Review Program (G.S. 143B-279.13(c))

Edythe McKinney, Director
Customer Service Center, Small Business Omsbudsman, DENR

10. Discussion of Issues related to the Dry Cleaning Solvent Cleanup Program

Annual report on the Dry-Cleaning Solvent Cleanup Program (G.S. 143-215.104U)

Jonathan A. Powers, Head
Special Remediation Branch, Superfund Section, Division of Waste Management, DENR

Comments on Dry-Cleaning Solvent Cleanup Program from interested parties

Christopher T. Edwards, Vice President
North Carolina Association of Launderers and Cleaners

11. Semiannual report on agency litter enforcement, litter prevention, and litter removal efforts (G.S. 147-12(b))

George J. Kapetanakis, Litter Programs Coordinator
Office of Beautification Programs, Department of Transportation

12. Commission discussion and announcements

13. Adjourn

SCHEDULE OF FUTURE MEETINGS:

Below is a schedule of meetings of the Commission for May 2006. This schedule is tentative and subject to adjustment. To facilitate development of the agenda for meetings of the Commission and to receive input from interested persons regarding the future work of the Commission, the Commission Counsel holds informal planning meetings for staff and interested parties. The schedule of these public Commission staff planning meetings is also set out below.

9:30 a.m. Wednesday 3 May 2006
Location: 544 LOB
Staff Planning Meeting: 10:00 a.m. Thursday 27 April 2006 – 605 LOB (This meeting will also serve as the Commission staff planning meeting for the Commission meeting scheduled for 8 May 2006.)

Monday 8 May 2006 (Time to be announced)
Location: 544 LOB

The 2006 Regular Session is scheduled to begin at 12:00 noon on Wednesday 9 May 2006. The Commission may meet shortly after the beginning of the session to complete work and to consider any legislative proposals and recommendations. The Commission may meet while the General Assembly is in session (G.S. 120-70.44). When the Commission meets while the General Assembly is in session, written notice will not be mailed to persons on the mailing list. Rather, notice will be given at a session of the Senate and House of Representatives as provided by G.S. 143-318.12(b) and will be distributed by email, if possible. The Commission will resume a schedule of regular monthly meetings following adjournment of the 2006 Session of the General Assembly

OTHER MEETINGS:

The Commission Counsel will hold meetings of interested parties on specific topics as indicated below:

Phase II Stormwater Management Working Group
2:00 p.m. Monday 17 April 2006 – 605 Legislative Office Building

Risk-Based/Limit Liability for Environmental Cleanups Working Group (HB 1778/HB 1099/SB 1121)
10:00 a.m. Tuesday 18 April 2006 – 605 Legislative Office Building

ADDITIONAL INFORMATION:

Persons having questions about the Commission meeting or other matters related to the Commission may contact Commission Counsel or other Commission staff at (919) 733-2578.

MEMORANDUM

To: Members of the Environmental Review Commission
From: Tim Dodge, Commission Analyst
Re: Reports to the Commission

This memorandum lists reports that have been submitted to the Environmental Review Commission by State agencies since the last reports distribution on 8 March 2006.

A. REPORTS RELATED TO TODAY'S AGENDA

The following reports are attached to this memorandum. These reports may be referenced during the course of the 11 April 2006 Commission meeting.

Environmental Management Commission (Agenda Item 5):

1. *Quarterly report by the Environmental Management Commission (EMC) as to its operations, activities, programs, and progress during the previous quarter (G.S. 143B-282(b)).* EMC. 1 January 2006. Statutory Authority: G.S. 143B-282(b).

2. *Quarterly report by the EMC as to its operations, activities, programs, and progress during the previous quarter (G.S. 143B-282(b)).* EMC. 1 April 2006. Statutory Authority: G.S. 143B-282(b).

Status of Nutrient Management Strategies for Drinking Water Reservoirs (Agenda Item 6):

3. *Reports required pursuant to S.L. 2005-190 (Drinking Water Reservoir Protection Act.* Division of Water Quality, Department of Environment and Natural Resources (DENR). 10 April 2006.
   a) *Findings and recommendations of the study of water quality in drinking water supply reservoirs in the State to determine whether the reservoirs meet current water quality standards (S.L. 2005-190, Sec. 2(a)).*
   b) *Findings on the identification and adoption of control criteria necessary to prevent excess nutrient loading in drinking water supply reservoirs; adoption of nutrient management strategies and permanent rules; and other requirements listed in S.L. 2005-190, Secs. 2.(b), 3.(e) and 3.(f)*
   c) *Progress in developing and implementing nutrient management strategies for drinking water supply reservoirs to which Section 4 of S.L. 2005-190 applies (S.L. 2005-190, Sec. 4.*

Dry- Cleaning Solvent Cleanup Program (Agenda Item 10):

4. *Annual report on the Dry-Cleaning Solvent Cleanup Program.* DENR. 1 April 2006. Statutory Authority: G.S. 143-215.104U.

B. READ-ONLY REPORTS

The following reports are attached to this memorandum. These reports are not scheduled for oral presentation.

Air Quality:

5. *Report on desirability of requiring and the feasibility of obtaining reductions in emissions of oxides of nitrogen (NOx) and sulfur dioxide (SO2) beyond those required by G.S. 143-215.107D.* Division of Air Quality, DENR. 1 November 2005. Statutory Authority: S.L. 2002-4, Sec. 11.

Please contact George Givens, Jeff Hudson, Jennifer McGinnis, or Tim Dodge at (919) 733-2578 if you have any questions or comments.

III. EXPECTED FUTURE AGENDA ITEMS

I. STANDING COMMITTEE MEETINGS

A. WATER ALLOCATION COMMITTEE

The Water Allocation Committee conducted business in October 2005 and November 2005.

B. WATER QUALITY COMMITTEE

The Water Quality Committee conducted business in October 2005 and November 2005.

C. GROUNDWATER COMMITTEE

The Groundwater Committee conducted business in November 2005.

D. AIR QUALITY COMMITTEE

The Air Quality Committee conducted business in October 2005 and November 2005.

E. STEERING COMMITTEE

The Steering Committee did not meet during this quarter.

F. NPDES COMMITTEE

The NPDES Committee conducted business in October 2005.

II. SUMMARIES OF ENVIRONMENTAL MANAGEMENT COMMISSION (EMC) ACTIONS

Agenda Item: Hearing Officer's Report on Banking and Trading of Emission Reduction Credits Rules and Air Toxic Rules

Explanation: On June 22, 2005, Dr. Delilah Blanks held a public hearing on proposed new regulations on banking and trading of emission reduction credits and an amendment to an air toxic rule.

A new section of rules (15A NCAC 2D .2300) is being proposed to establish a system to bank emission reduction credits for use as offsets in nonattainment areas. The rules describe the types of emission reduction credits that may be banked and how they may be used. They describe the procedures used for managing the banking systems.

The air toxic modification rule (15A NCAC 2Q .0706) is proposed to be amended to clarify when emissions of unmodified sources at an affected facility needs to be reduced to achieve compliance with the air toxic rules.

Three people commented on the proposed rules. Two of these commented on the banking rules, and one on the air toxic rule amendment. The commenter on the air toxic rule noted a cross-reference error, which has been corrected. One commenter asked if emission reductions for sulfur dioxide should be retained and if emission reductions for ammonia should be added. Emission reductions for sulfur dioxide has been retained, and emission reductions for ammonia has been added. This commenter opposed banking emission reductions from mobile sources and recommended expiring banked credits in seven years. Emission reduction credits from mobile sources would not qualify for the banking system because of size. However, to make clear that emission reductions from mobile sources may not be banked, a statement is being added noting that such emission reductions are ineligible for banking. (Emission reductions from mobile sources can be used for offsets if the applicant can show that the reductions are real, permanent, quantifiable, enforceable, and surplus.) No expiration date is being added for banked credits. This commenter asked about what happens if an emission factor changes or if a new

rule requires further control after a credit is approved and banked. Language has been added requiring the Director to adjust banked emission reduction credits to account for changes in emission factors and new regulatory requirements. This commenter asks if emission reductions in South Carolina can be banked in North Carolina. A statement has been added that emission reduction credits in other states cannot be banked in North Carolina. (However, emission reductions in South Carolina may under certain conditions be used in North Carolina.) The other commenter on the banking rules asked that the restriction of seven years on using banked emission reduction credits under the prevention of significant deterioration rule and that the restriction of using banked emission reduction credits for offsets only in the nonattainment area be removed. These restrictions have been removed; the prevention of significant deterioration rule and the nonattainment area major new source review rule contain provisions on the eligibility and use of emission reduction credits.

Recommendation: The Hearing Officer recommends that the proposed amendments and new rules as presented in Chapter II of the hearing record be adopted by the Environmental Management Commission.

EMC ACTION: The EMC adopted the proposed amendments and new rules.

Agenda Item: Hearing Officer's Report on Various Air Quality Rules

Explanation: On June 22, 2005, Dr. Delilah Blanks held a public hearing on amendments to 19 air quality regulations and a proposed new regulation.

Two definition rules (15A NCAC 2A .0101 and 2Q .0103, are proposed to be amended to add a definition of "administrator."

Three rules (15A NCAC 2D .0103 and .1905 and 2Q .0105) are proposed to be amended to update the addresses of regional offices.

An incinerator rule (15A NCAC 2D .1201) is being amended to change the order of which rules apply to incinerators.

The nitrogen oxide rule on recordkeeping, reporting, and monitoring (15A NCAC 2D .1404) is proposed to be amended to remove an unnecessary reporting requirement.

Several amendments are proposed for the open burning rules (15A NCAC 2D .1902, .1903, 1904, and .1906). The air quality forecast areas have been increased to account for the new nonattainment areas including new particulate nonattainment areas. Thus, the amendments prohibits burning in nonattainment areas on days forecast to be code orange or higher. Another amendment allows burning at permanent fire training sites on code orange or higher forecast days. The waiver to allow adding material to open burning piles between 6:00 p.m. and 8:00 a.m. is removed. Also, local program names are being updated.

The applicability rule (15A NCAC 2D .2001) of the transportation conformity rules is proposed to be amended to clarify the applicability of the transportation conformity rules.

Several permitting rules (15A NCAC 2Q .0101, .0103, and .0301) are proposed to be amended to bring them in line with recent statutory changes on construction. The general statutes now allow a

certain amount of construction to occur at a permitted facility before a permit is needed.

Two permitting rules (15A NCAC 2Q .0304 and .0305) are proposed to be amended to make the emissions inventory an integral part of the permit application package.

The Title V permit content rule (15A NCAC 2Q .0508) is proposed to be amended to incorporate recent changes in the federal requirements for annual compliance certification.

The Title V permitting rule (15A NCAC 2Q .0523) that allows certain changes to be made without a permit modification is proposed to be amended to exempt notification of trades made under the nitrogen oxide budget trading program.

The exclusionary rule for peak shaving generators (15A NCAC 2Q .0808) is proposed to be amended to change the applicability limit from electrical energy produced to fuel consumption, which is more readily accessible.

A new exclusionary rule (15A NCAC 2Q .0810) is proposed for air curtain burners.

Only one person commented on the rules in this hearing. The comment was on 15A NCAC 2D .1904, Air Curtain Burners. The commenter suggested comparing the State's rule to the proposed EPA rule. Once EPA promulgates the rule on other solid waste incineration units, 15A NCAC 2D .1904 will have to be revised to incorporate new EPA requirements.

Recommendation:

The Hearing Officer recommends that the proposed amendments and new rules as presented in Chapter II of the hearing record be adopted by the Environmental Management Commission.

EMC ACTION: The EMC adopted the proposed amendments and new rules.

Agenda Item: Request to Proceed to Public Hearing on Clean Air Interstate Rules

Explanation: The Environmental Management Commission is requested to approve one or more public hearings on proposed new clean air interstate rules.

On May 12, 2005, the EPA promulgated the requirement for States to adopt rules limiting the emissions of nitrogen oxides (NOx) and sulfur dioxide (SO_2) and guideline rules for the states to use in developing their rules. The purpose of these rules are to reduce interstate transport of precursors to fine particulate and ozone.

These rules apply to (1) any stationary, fossil-fuel-fired boiler or stationary, fossil-fuel-fired combustion turbine serving at any time, since the start-up of a unit's combustion chamber, a generator with nameplate capacity of more than 25 MWe producing electricity for sale and (2) for a unit that qualifies as a cogeneration unit during the 12-month period starting on the date that the unit first produces electricity and continues to qualify as a cogeneration unit, a cogeneration unit serving at any time a generator with nameplate capacity of more than 25 MWe and supplying in any calendar year more than one-third of the unit's potential electric output capacity or 219,000 MWh, whichever is greater, to any utility power distribution system for sale

Under the EPA rules, North Carolina has caps as follows:

1. annual NOx: 62,183 tons for 2009-2014 and 51,819 tons for 2015 and each year thereafter;
2. ozone season NOx: 28,392 tons for 2009-2014 and 23,660 tons for 2015 and each year thereafter;
3. annual SO_2: 137,341 tons for 2010-2014 and 96,319 tons for 2015 and each year thereafter.

The State's NOx allocations have been distributed among the covered facilities. EPA will determine

the SO_2 allocations, which are based on the acid rain program.

For the most part the proposed rules incorporate the model rule. The EPA model rule for definitions; permitting; monitoring, reporting, and recordkeeping; trading and banking; designated representative; opt-in provision, and new source growth are incorporated by reference.

The proposed rules require the EMC to periodically review the allocations in 2010 and every five years thereafter and to decide whether to reallocate. These rules do not preclude the EMC from adopting additional emission reduction requirements for covered sources if necessary to obtain or maintain an ambient air quality standard.

Recommendation:

The Director recommends that the Commission authorize one or more public hearings on these rules and that the Chairman appoint one or more members of the Commission to serve as hearing officers.

EMC ACTION: The EMC approved taking proposed rules to public hearing. The rules for this action are attached.

SECTION .2400 – CLEAN AIR INTERSTATE RULES

15A NCAC 02 .2401 is proposed for adoption as follows:

15A NCAC 02 .2401 PURPOSE AND APPLICABILITY

(a) Purpose. The purpose of this Section is to implement the federal Clean Air Interstate Rule and thereby reduce the interstate transportation of fine particulate matter and ozone.

(b) Applicability. This Section applies to:

(1) any stationary, fossil-fuel-fired boiler or stationary, fossil-fuel-fired combustion turbine serving at any time, since the start-up of a unit's combustion chamber, a generator with nameplate capacity of more than 25 MWe producing electricity for sale;

(2) for a unit that qualifies as a cogeneration unit during the 12-month period starting on the date that the unit first produces electricity and continues to qualify as a cogeneration unit, a cogeneration unit serving at any time a generator with nameplate capacity of more than 25 MWe and supplying in any calendar year more than one-third of the unit's potential electric output capacity or 219,000 MWh, whichever is greater, to any utility power distribution system for sale. If a unit that qualifies as a cogeneration unit during the 12-month period starting on the date the unit first produces electricity but subsequently no longer qualifies as a cogeneration unit, the unit shall be subject to Subparagraph (1) of this Paragraph starting on the day on which the unit first no longer qualifies as a cogeneration unit; or

(3) any source identified in Rules .2403, or .2405 of this Section.

(c) Retired unit exemption. Any unit that is permanently retired and is not a opt-in unit under Rule .2411 of this Section shall be exempted from the annual trading program for:

(1) nitrogen oxides if it complies with the provisions of 40 CFR 96.105,

(2) sulfur dioxide if it complies with the provisions of 96.205, or

(3) ozone season nitrogen oxide if it complies with the provisions of 40 CFR 96.305.

(d) Effect on other authorities. No provision of this Section, any application submitted or any permit issued pursuant to Rule .2406 of this Section, or any exemption under 40 CFR 96.105, 96.205, or 96.305 shall be construed as exempting any source or facility covered under this Section or the owner or operator or designated representative of any source or facility covered under this Section from complying with any other requirements of this Subchapter or Subchapter 15A NCAC 2Q. The Environmental Management Commission may specify through rulemaking a specific emission limit

lower than that established under this Rule for a specific source if compliance with the lower emission limit is required to attain or maintain the ambient air quality standard for ozone or fine particulate (PM2.5) or any other ambient air quality standard in Section 15A NCAC 2D .0400.

History Note: *Authority G.S. 143-215.3(a); 143-215.107(a)(5), (10);*
Eff.

15A NCAC 02 .2402 is proposed for adoption as follows:

15A NCAC 02D .2402 DEFINITIONS

(a) For the purpose of this Section, the definitions in 40 CFR 96.102, 96.202 and 96.302 shall apply.

(b) For the purpose of this Section, the abbreviations and acronyms listed in 40 CFR 96.103, 96.203, 96.302 shall apply.

History Note: *Authority G.S. 143-215.3(a); 143-215.107(a)(5), (10);*
Eff.

15A NCAC 02 .2403 is proposed for adoption as follows:

15A NCAC 02D .2403 NITROGEN OXIDE EMISSIONS

(a) Allocations. The annual allocation of nitrogen oxide allowances are:

FACILITY	ALLOCATON FOR 2009-2014 (TONS)	ALLOCATIONS FOR 2015 AND LATER (TONS)
Butler-Warner Generation Plant	81	67
Duke Energy, Belews Creek	11407	9506
Duke Energy, Buck	1426	1188
Duke Energy, Cliffside	3087	2572
Duke Energy, Dan River	833	694
Duke Energy, G.G. Allen	4566	3805
Duke Energy, Lincoln	242	202
Duke Energy, Marshall	10175	8480
Duke Energy, Riverbend	1799	1499
Dwane Colier Battle Cogeneration Facility	850	708
Dynergy-Rockingham Power	204	170
Elizabethtown Power	91	76
Lumberton Power	127	106

FACILITY	ALLOCATON FOR 2009-2014 (TONS)	ALLOCATIONS FOR 2015 AND LATER (TONS)
NC Electric Membership Corps., Anson	7	6
NC Electric Membership Corps., Person	7	6
NC Electric Membership Corps., Richmond	7	6
NC Electric Membership Corps., Wake	7	6
Primary Energy, Roxboro	422	352
Primary Energy, Southport	173	144
Progress Energy, Asheville	2214	1845
Progress Energy, Blewett	8	7
Progress Energy, Cape Fear	1310	1091
Progress Energy, H.F. Lee	1870	1558
Progress Energy, L.V. Sutton	2259	1883
Progress Energy, Lee Wayne Co. Plant	99	82
Progress Energy, Mark's Creek Richmond Co.	394	328
Progress Energy, Mayo	4215	3512
Progress Energy, Roxboro	12188	10156
Progress Energy, Weatherspoon	709	591
Progress Energy, Woodleaf Rowan Co. Plant	27	22
Rosemary Power Station, Halifax	44	37
Westmoreland LG&E Partners Roanoke Valley I	1013	845
Westmoreland LG&E Partners Roanoke Valley II	322	269

(b) Compliance. The emissions of nitrogen oxides of a source listed in the table in Paragraph (a) of this Rule shall not exceed the number of allowances that it has in its compliance account established under Rule .2408 of this Section.

(c) Emission measurement requirements. The emissions measurements recorded and reported according to 40 CFR Part 96 Subpart HH shall be used to determine compliance by each source identified in this rule with its emissions limitation according to 40 CFR 96.106(c).

(d) Excess emission requirements. The provisions of 40 CFR 96.106(d) shall be used for excess emissions.

(e) Liability. The owner or operator of any source covered under this Section shall be subject to the provisions of 40 CFR 96.106(f).

(f) Modification and reconstruction, replacement, retirement, or change of ownership. The modification or reconstruction of a source at a facility covered under this Rule shall not make that source a "new" source. The source that is modified or reconstructed shall not change the emission allocation under Paragraph (a) of this Rule. If one or more sources at a facility covered under this Rule is replaced, the new source shall not receive an allocation under Rule .2412 of this Section, nor shall it change the allocation of the facility. If the owner of a facility changes, the emission allocations under this Rule and revised emission allocations made under Rule .2413 of this Section shall remain with the facility. If a source is retired, the owner or operator of the source shall follow the procedures in 40 CFR 96.105. The allocations of a retired source shall remain with the owner or operator of the retired source until a reallocation occurs under Rule .2413 of

this Section when the allocation shall be removed and given to other sources if the retired source is still retired using the procedure in Rule 2413 of this Section.

History Note: *Authority G.S. 143-215.3(a); 143-215.65; 143-215.66; 143-215.107(a)(5), (10);*
Eff.

15A NCAC 02 .2404 is proposed for adoption as follows:

15A NCAC 02D .2404 SULFUR DIOXIDE

(a) Applicability. This Rule applies only to facilities that meet the description in Rule .2401(a)(1) or (2) of this Section. As of January 1, 2001, these facilities included:

(1) Butler-Warner Generation Plant
(2) Cogentrix-Elizabethtown Power
(3) Cogentrix-Lumberton Power
(4) Duke Energy, Belews Creek
(5) Duke Energy, Buck
(6) Duke Energy, Cliffside
(7) Duke Energy, Dan River
(8) Duke Energy, G.G. Allen
(9) Duke Energy, Lincoln
(10) Duke Energy, Marshall
(11) Duke Energy, Riverbend
(12) Dwayne Colier Battle Cogeneration Facility
(13) Dynegy, Rockingham Power
(14) Progress Energy, Blewett
(15) Progress Energy, Cape Fear
(16) Progress Energy, Mark's Creek Richmond Co.
(17) Progress Energy, Wayne County
(18) Progress Energy, Woodleaf Rowan Co. Plant
(19) Progress, Energy, Asheville
(20) Progress, Energy, H.F. Lee
(21) Progress, Energy, L.V. Sutton
(22) Progress, Energy, Mayo
(23) Progress, Energy, Roxboro
(24) Progress, Energy, Weatherspoon
(25) Westmoreland LG&E Partners Roanoke Valley I
(26) Westmoreland LG&E Partners Roanoke Valley II

(b) Allocations. The annual allocation of sulfur dioxide allowances shall be determined by EPA. The allocations for acid rain facilities are in 40 CFR 73.10.

(c) Compliance. The emissions of sulfur dioxides of a source listed in the table in Paragraph (a) of this Rule shall not exceed the number of allowances that it has in its compliance account established under Rule .2408 of this Section.

(d) Emission measurement requirements. The emissions measurements recorded and reported according to 40 CFR Part 96 Subpart HHH shall be used to determine compliance by each source listed in this Rule with its emissions limitation according to 40 CFR 96.206(c).

(e) Excess emission requirements. The provisions of 40 CFR 96.206(d) shall be used for excess emissions.

(f) Liability. The owner or operator of any source covered under this Section shall be subject to the provisions of 40 CFR 96.206(f).

History Note: Authority G.S. 143-215.3(a); 143-215.65; 143-215.66; 143-215.107(a)(5), (10);
Eff.

15A NCAC 02 .2405 is proposed for adoption as follows:

15A NCAC 02D .2405 NITROGEN OXIDE EMISSIONS DURING OZONE SEASON

(a) Allocations. The ozone season allocation of nitrogen oxide allowances are:

(1) Facilities that meet the description in 15A NCAC 02D .2401(b)(1) or (b)(2):

FACILITY	ALLOCATON FOR 2009-2014 (TONS)	ALLOCATIONS FOR 2015 AND LATER (TONS)
Butler-Warner Generation Plant	56	46
Duke Energy, Belews Creek	5176	4314
Duke Energy, Buck	690	575
Duke Energy, Cliffside	1421	1184
Duke Energy, Dan River	459	382
Duke Energy, G.G. Allen	2207	1839
Duke Energy, Lincoln	178	148
Duke Energy, Marshall	4400	3666
Duke Energy, Riverbend	904	753
Dwane Colier Battle Cogeneration Facility	348	290
Dynergy-Rockingham Power	104	87
Elizabethtown Power	53	45
Lumberton Power	48	40

FACILITY	ALLOCATON FOR 2009-2014 (TONS)	ALLOCATIONS FOR 2015 AND LATER (TONS)
NC Electric Membership Corps., Anson	7	6
NC Electric Membership Corps., Person	7	6
NC Electric Membership Corps., Richmond	7	6
NC Electric Membership Corps., Wake	7	6
Primary Energy, Roxboro	88	73
Primary Energy, Southport	224	187
Progress Energy, Asheville	946	788
Progress Energy, Blewett	8	6
Progress Energy, Cape Fear	555	462
Progress Energy, H.F. Lee	886	738
Progress Energy, L.V. Sutton	1077	898
Progress Energy, Lee Wayne Co. Plant	67	56
Progress Energy, Mark's Creek Richmond Co.	353	294
Progress Energy, Mayo	1826	1522
Progress Energy, Roxboro	5337	4447
Progress Energy, Weatherspoon	364	304
Progress Energy, Woodleaf Rowan Co. Plant	25	21
Rosemary Power Station, Halifax	27	23
Westmoreland LG&E Partners Roanoke Valley I	407	339
Westmoreland LG&E Partners Roanoke Valley II	130	109

(2) Facilities that do not meet the description in 15A NCAC 02D .2401(b)(1) or (b)(2):

FACILITY	ALLOCATON FOR 2009-2014 (TONS)	ALLOCATIONS FOR 2015 AND LATER (TONS)
Blue Ridge Paper Products	839	839
International Paper Corp., Columbus Co.	307	307
International Paper Corp., Halifax Co.	346	346
United Cogen, Kenansville	113	113
UNC-Chapel Hill	241	241
Weyerhaeuser, New Bern Mill	193	193
Weyerhaeuser, Plymouth	404	404

(b) Ozone season defined. The ozone season is from May 1 through September 30 of each year.

(c) Change in status. If a facility named in Subparagraph (a)(2) of this Rule meets the description under Subparagraphs (b)(1) or (b)(2) of Rule .2401 of this Section, it shall lose its allocation under Subparagraph

(a)(2) of this Rule and shall receive an allocation under Rule .2412 of this Section as a new source until it receives an allocation under Rule .2413 of this Section.

(d) Compliance. The nitrogen oxide ozone season emissions of a source listed in the table in Paragraph (a) of this Rule shall not exceed the number of allowances that it has in its compliance account established under Rule .2408 of this Section.

(e) Emission measurement requirements. The emissions measurements recorded and reported according to 40 CFR Part 96 Subpart HHHH shall be used to determine compliance by each source listed in this Rule with its emissions limitation according to 40 CFR 96.306(c).

(f) Excess emission requirements. The provisions of 40 CFR 96.306(d) shall be used for excess emissions.

(g) Liability. The owner or operator of any source covered under this Section shall be subject to the provisions of 40 CFR 96.306(f).

(h) Modification and reconstruction, replacement, retirement, or change of ownership. The modification or reconstruction of a source at a facility covered under this Rule shall not make that source a "new" source. The source that is modified or reconstructed shall not change the emission allocation under Paragraph (a) of this Rule. If one or more sources at a facility covered under this Rule is replaced, the new source shall not receive an allocation under Rule .2412 of this Section, nor shall it change the allocation of the facility. If the owner of a facility changes, the emission allocations under this Rule and revised emission allocations made under Rule .2413 of this Section shall remain with the facility. If a source is retired, the owner or operator of the source shall follow the procedures in 40 CFR 96.305. The allocations of a retired source shall remain with the owner or operator of the retired source until a reallocation occurs under Rule .2413 of this Section when the allocation shall be removed and given to other sources if the retired source is still retired using the procedure in Rule 2413 of this Section.

History Note: *Authority G.S. 143-215.3(a); 143-215.65; 143-215.66; 143-215.107(a)(5), (10);*
Eff.

15A NCAC 02 .2406 is proposed for adoption as follows:

15A NCAC 02D .2406 PERMITTING

(a) The owner or operator of any source covered under this Section shall submit permits applications to comply with the requirements of this Section following the procedures and requirements in 15A NCAC 02Q .0500 (title v permitting procedures) and in:

(1) 40 CFR 96.106(a), 96121, and 96.122 for nitrogen oxide sources;

(2) 40 CFR 96.206(a), 96.221, and 96.222 for sulfur dioxide sources; and

(3) 40 CFR 96.306(a), 96,321, and 96.322 for ozone season nitrogen oxide sources.

(b) The Director shall review applications submitted under Paragraph (a) of this Rule and issue permits for compliance with this Section following the procedures and requirements in 15A NCAC 02Q .0500 (title v permitting procedures) and in:

(1) 40 CFR 96.106(a), 96.120, 96.123, and 96.124 for nitrogen oxide sources;

(2) 40 CFR 96.206(a), 96.220, 96.223, and 96.224 for sulfur dioxide sources; and

(3) 40 CFR 96.306(a), 96.320, 96.323, and 96.324 for ozone season nitrogen oxides.

History Note: *Authority G.S. 143-215.3(a); 143-215.107(a)(5), (10); 143-215.108';*
Eff.

15A NCAC 02 .2407 is proposed for adoption as follows:

15A NCAC 02D .2407 MONITORING, REPORTING, AND RECORDKEEPING

(a) The owner or operator of a source covered under this Section shall comply with the monitoring, recordkeeping, and reporting requirements in:

(1) 40 CFR 96.106(b) and (e) and in 40 CFR Part 96, Subpart HH for nitrogen oxide sources;

(2) 40 CFR 96.206(b) and (e) and in 40 CFR Part 96, Subpart HHH for sulfur dioxide sources; and

(3) 40 CFR 96.306(b) and (e) and in 40 CFR Part 96, Subpart HHHH for ozone season nitrogen oxides.

(b) To approve or disapprove monitors used to show compliance with Rules .2403, 2404, or .2405 of this Section, the Division shall follow the procedures in:

(1) 40 CFR 96.171 for nitrogen oxides,

(2) 40 CFR 96.271 for sulfur dioxides, and

(3) 40 CFR 96.371 for ozone season nitrogen oxides.

History Note: *Authority G.S. 143-215.3(a); 143-215.65; 143-215.66; 143-215.107(a)(5), (10);*
Eff.

15A NCAC 02 .2408 is proposed for adoption as follows:

15A NCAC 02D .2408 TRADING PROGRAM AND BANKING

(a) EPA to administer. The United States Environmental Protection Agency (EPA) shall administer the allowance tracking system according to the procedures in:

(1) 40 CFR Part 96, Subpart FF and Subpart GG for nitrogen oxides;

(2) 40 CFR Part 96, Subpart FFF and Subpart GGG for sulfur dioxide;

(3) 40 CFR Part 96, Subpart FFFF and Subpart GGGG for ozone season nitrogen oxides.

(b) Compliance account. The owner or operator of each source covered under this Section shall have a compliance account in the EPA administered tracking system that satisfies the requirements of:

(1) 40 CFR 96.151 for nitrogen oxides,

(2) 40 CFR 96.251 for sulfur dioxides, and

(3) 40 CFR 96.351 for ozone season nitrogen oxides.

(c) General account. Any person may apply to open a general account to hold and transfer allowances by using the procedures and meeting the requirements in:

(1) 40 CFR 96.151(b) for nitrogen oxides and may close that account using the procedures in 40 CFR 96.157,

(2) 40 CFR 96.251(b) for sulfur dioxides and may close that account using the procedures in 40 CFR 96.257, and

(3) 40 CFR 96.351(b) for ozone season nitrogen oxides and may close that account using the procedures in 40 CFR 96.357.

(d) Allowance transfers.

(1) Any person who has a compliance or general account established under 40 CFR 96.151 may transfer allowances using the procedures in 40 CFR 96.160.

(2) Any person who has a compliance or general account established under 40 CFR 96.251 may transfer allowances using the procedures in 40 CFR 96.260.

(3) Any person who has a compliance or general account established under 40 CFR 96.351 may transfer allowances using the procedures in 40 CFR 96.360.

(e) Submittal of information. Persons with accounts shall submit information to EPA following the requirement of:

(1) 40 CFR 96.152 for nitrogen oxides,

(2) 40 CFR 96.252 for sulfur dioxides, and

(3) 40 CFR 96.352 for ozone season nitrogen oxides.

(e) Banking. Any person who has a compliance account or a general account may bank allowances for future use or transfer under:

(1) 40 CFR 96.155 for nitrogen oxides,

(2) 40 CFR 96.255 for sulfur dioxides, and

(3) 40 CFR 96.355 for ozone season nitrogen oxides.

History Note: *Authority G.S. 143-215.3(a); 143-215.107(a)(5), (10);*
Eff.

15A NCAC 02 .2409 is proposed for adoption as follows:

15A NCAC 02D .2409 DESIGNATED REPRESENTATIVE

(a) Designated representative. The owner or operator of any source covered under this Section shall select a designated representative according to 40 CFR 96.110 for nitrogen oxide, 96.210 for sulfur dioxide, and .96310 for ozone season nitrogen oxides. The designated representative shall have the responsibilities and duties set out in 40 CFR 96.110 for nitrogen oxides, 96.210 for sulfur dioxide, and 96.310 for ozone season nitrogen oxides.

(b) Alternate designated representative. The owner or operator of any source covered under this Section shall select an alternate designated representative according to 40 CFR 96.111 for nitrogen oxides, 96.211 for sulfur dioxide, and 96.311 for ozone season nitrogen oxides. The alternate designated representative shall have the responsibilities and duties set out in 40 CFR 96.111 for nitrogen oxides, 96.211 for sulfur dioxide, and 96.311 for ozone season nitrogen oxides.

(c) Changing designated representative and alternate designated representative. The owner or operator of any source covered under this Section may change the designated representative or the alternate designated representative using:

(1) 40 CFR 96.112 for nitrogen oxides;

(2) 40 CFR 96.212 for sulfur dioxide; and

(3) 40 CFR 96.312 for ozone season nitrogen oxides.

(d) Changes in owners and operators. Whenever the owner or operator of a source covered under this Section changes, the following provisions shall be followed:

(1) 40 CFR 96.112(c) for nitrogen oxides;

(2) 40 CFR 96.212(c) for sulfur dioxide; and

(3) 40 CFR 96.312(c) for ozone season nitrogen oxides.

History Note: Authority G.S. 143-215.3(a); 143-215.107(a)(5), (10);
Eff.

15A NCAC 02 .2410 is proposed for adoption as follows:

15A NCAC 02D .2410 COMPUTATION OF TIME

Time periods shall be determined as described in:

(1) 40 CFR 96.107 for nitrogen oxides;

(2) 40 CFR 96.207 for sulfur dioxide, and

(3) 40 CFR 96.307 for ozone season nitrogen oxides.

History Note: *Authority G.S. 143-215.3(a); 143-215.107(a)(5), (10);*
Eff.

15A NCAC 02 .2411 is proposed for adoption as follows:

15A NCAC 02D .2411 OPT-IN PROVISIONS

(a) Opting in. The owner or operator of a source may opt into:

(1) the nitrogen oxide trading program by following the procedures in and meeting the requirements of 40 CFR Part 96 Subpart II,

(2) the sulfur dioxide trading program by following the procedures in and meeting the requirements of 40 CFR Part 96 Subpart III, and

(3) the ozone season nitrogen oxide trading program by following the procedures in and meeting the requirements of 40 CFR Part 96 Subpart IIII,

(b) Permitting. The Director shall permit opt-in sources under Paragraph (a) of this Rule according to 15A NCAC 2Q .0500 and

(1) 40 CFR 96.184 and 96.185 for nitrogen oxides and shall allocate allowances according to 40 CFR 96.188,

(2) 40 CFR 96.284 and 96.285 for nitrogen oxides and shall allocate allowances according to 40 CFR 96.288, and

(3) 40 CFR 96.384 and 96.385 for ozone season nitrogen oxides and shall allocate allowances according to 40 CFR 96.388,

(c) Withdrawing. The owner or operator of an opt-in source under Paragraph (a) of this Rule may withdraw from the trading program according to:

(1) 40 CFR 96.186 for nitrogen oxides,

(2) 40 CFR 96.286 for sulfur dioxides, and

(3) 40 CFR 96.386 for ozone season nitrogen oxides,

(d) Change in regulatory status. If an opt-in source becomes:

(1) a NOx unit under 40 CFR 96.104, then 40 CFR 96.187 shall apply,

(2) a SO_2 unit under 40 CFR 96.204, then 40 CFR 96.287 shall apply, or

(3) a ozone season NOx unit under 40 CFR 96.304, then 40 CFR 96.387 shall apply,

History Note: *Authority G.S. 143-215.3(a); 143-215.107(a)(5), (10); 143-215.108;*
Eff.

15A NCAC 02 .2412 is proposed for adoption as follows:

15A NCAC 02D .2412 NEW SOURCE GROWTH

(a) For nitrogen oxide emissions, the procedures in 40 CFR 96.142(c) shall be used to create allocations for sources that commenced operations on or after January 1, 2001 and that are not listed in the table in Rule .2503 of this Rule.

(b) For ozone season nitrogen oxides, emissions, the procedures in 40 CFR 96.342(c) shall be used to create allocations for sources that commenced operations on or after January 1, 2001 and that are not listed in the table in Rule .2505 of this Rule.

History Note: Authority G.S. 143-215.3(a); 143-215.107(a)(5), (10);
Eff.

15A NCAC 02 .2413 is proposed for adoption as follows:

15A NCAC 02D .2413 PERIODIC REVIEW AND REALLOCATIONS

In 2010 and every five years thereafter, the Environmental Management Commission shall review the emission allocations of sources covered under Rules .2403, .2404, and .2405 of this Section and decide if any revisions are needed. In making this decision the Environmental Management Commission shall consider the following:

(1) the size of the allocation pool for new source growth under Rule .2412 of this Section;

(2) the amount of emissions allocations requested by sources under Rule .2412 of this Section;

(3) the amount of emissions allocations available through the respective trading programs under Rule .2408 of this Section;

(4) the impact of reallocation on existing sources;

(5) the impact of reallocations on sources covered under Rule .2412 of this Section;

(6) impact on future growth; and

(7) other relevant information on the impacts of reallocation.

History Note: Authority G.S. 143-215.3(a); 143-215.107(a)(5), (10);
Eff.

Agenda Item:	05-33 Request for Permission to take Draft Water Conservation Rules to Public Hearing
Explanation:	The Commission is responsible for developing and implementing rules governing water conservation and water reuse during drought and water emergency situations according to HB1215, Session Law 2002-167. The rules shall establish minimum standards and practices for water conservation and water reuse for all of the following classes of water users: (1) Publicly owned and privately owned water supply systems (2) State Agencies (3) Local Governments (4) Business and industrial water users (5) Agricultural and horticultural water users The public hearing will meet public comment requirement for the draft rules.
Recommendation	Recommend approval to hold public hearing to receive comment on draft rules.

EMC ACTION: THE EMC APPROVED SENDING THE RULES TO PUBLIC HEARING.

Agenda Item: Request for Approval of the Final Cape Fear River Basinwide Water Quality Plan

Explanation: The *Cape Fear River Basinwide Water Quality Plan* is in its third cycle of basinwide water quality plans that the Division of Water Quality is preparing for all 17 river basins across the state.

In March 2005, the draft basinwide plan was approved by the Water Quality Committee (WQC) to be released for public review and comment. One public information session was held during the public review process. The Division of Water Quality received written and verbal comments from both state and local agencies, as well as comments from private landowners. Revisions were made and information was added to or clarified in the draft plan. Copies of the revised plan were sent to EMC members in the EMC package.

This Basinwide Water Quality Plan is a planning document that will guide the Division's actions in this river basin over the next five years and beyond. The management actions are based on existing rules and policies. Therefore, approval and endorsement of this plan by the Commission would affirm that the management actions set forth in this plan are consistent with the rules adopted by the Commission and with the decision-making policies under which the Division has acted in the past.

Recommendation: It is recommended that the *Cape Fear River Basinwide Water Quality Plan* be approved and endorsed by the Commission as a guide to water quality program management and implementation by the Division of Water Quality as it carries out its Water Quality Program duties and responsibilities in the Cape Fear River basin.

EMC ACTION: THE EMC APPROVED THE CAPE FEAR RIVER BASINWIDE WATER QUALITY PLAN.

Agenda Item: Request for Approval of the Final New River Basinwide Water Quality Plan

Explanation: The *New River Basinwide Water Quality Plan* is in its third cycle of basinwide water quality plans that the Division of Water Quality is preparing for all 17 river basins across the state.

In July 2005, the draft basinwide plan was approved by the Water Quality Committee (WQC) to be released for public review and comment. The draft plan included language developed during an in-depth interim review process, which involved NCDENR agencies, the Soil and Water Conservation Districts, representatives of the Natural Resources Conservation Service, the regional council of governments, and several local watershed groups. One public information session was held during the public review process. The information session was requested by the High Country Council of Governments and focused on basinwide planning, classifications and standards, general permitting process, stormwater management, and local initiatives. The Division of Water Quality received written and verbal comments from both state and local agencies, as well as comments from private landowners. Revisions were made and information was added to or clarified in the draft plan. Copies of the revised plan were sent to EMC members in the EMC package.

This Basinwide Water Quality Plan is a planning document that will guide the Division's actions in this river basin over the next five years and beyond. The management actions are based on existing rules and policies. Therefore, approval and endorsement of this plan by the Commission would affirm that the management actions set forth in this plan are consistent with the rules adopted by the Commission and with the decision-making policies under which the Division has acted in the past.

Recommendation: It is recommended that the *New River Basinwide Water Quality Plan* be approved and endorsed by the Commission as a guide to water quality program management and implementation by the Division of Water Quality as it carries out its Water Quality

Program duties and responsibilities in the New River basin.

EMC ACTION: THE EMC APPROVED THE NEW RIVER BASINWIDE WATER QUALITY PLAN.

Agenda Item: 05-38 Hearing Officer's Report on Amending Rule 15A NCAC 2L .0115(c), (n) and (o)

Explanation: On June 22, 2005 the UST Section held a public hearing on amendments to rules to modify the testing requirements set out in 15A NCAC 2L.0115 (Risk-Based Assessment and Corrective Action for Petroleum Underground Storage Tanks).

This change affects 15A NCAC 2L .0115(c), (n) and (o). Part (c) is modified to only require the installation of 3 monitoring wells at registered tank facilities, meeting the high risk classification in 15A NCAC 2L .0115 (d)(1), where a release has caused the groundwater contamination in excess of the 2L standards by a factor of 10. Currently parts (n) and (o) require the referenced analyses to be conducted on each and every sample obtained and only allow the substitution of other methods in limited circumstances. The Section proposes to modify these parts to require these analyses of soil and groundwater samples for the samples used to achieve site closure. This will allow assessment and monitoring stages of remediation to use screening procedures. Screening procedures are generally cheaper and faster than laboratory procedures. The Section also expects to modify and reduce the number of constituent specific and MADEP analyses necessary to assess the release and to monitor the corrective action. Together these changes are expected to produce a more completely delineated contaminant plume at a reduced cost. This strategy will allow the Section to address more sites with the given amount of funding that is available. One person commented at the hearing and two additional persons submitted written comments. One person simply questioned whether his constituency would be affected by the amendments. The next person requested modifications to the referenced methods, but did not address the amendments. The third person expressed a concern that the language of the presentation should not refer to 'closing' and that the environment should be protected. No changes are proposed as the result of the public comments since comments either did not address the amendments or in the case of protection of the environment the amendments

should not affect the final outcome of current remediation.

Recommendation: The hearing officer recommends that the Commission adopt the proposed amendments.

EMC ACTION: THE EMC ADOPTED THE RULE AMENDMENTS AS PROPOSED BY THE HEARING OFFICER.

Agenda Item:

Request to Proceed to Public Hearing with the Proposed Reclassification of the Entire Watersheds of All Creeks that Drain to the North Shore of Fontana Lake Between Eagle and Forney Creeks (including Eagle and Forney Creeks) in Swain County (Little Tennessee River Basin) and Request for Waiver of the EMC's 30-day By-laws Rule

Explanation:

Session Law 2005-97 (House Bill 1189) states that "The Environmental Management Commission shall initiate a rule-making proceeding...to adopt rules to reclassify the entire watersheds of all creeks that drain to the north shore of Fontana Lake between Eagle and Forney Creeks, including Eagle and Forney Creeks, as outstanding resource waters...". These waters are located in Swain County in the Little Tennessee River Basin. The Outstanding Resource Waters (ORW) supplemental classification is a designation intended to protect unique and special waters having excellent water quality and being of exceptional state or national ecological or recreational significance. Water quality studies conducted in August 2005 show that the waters proposed to be reclassified meet Class ORW criteria.

Acid-producing rock in the proposed ORW area could be a threat to water quality if waters in the area receive drainage from excavation of this rock. There are plans for development in the proposed ORW area that consist of potential federal road construction and associated visitor amenities along the northern shore of Fontana Lake. Furthermore, comments on the proposed reclassification, which were received from the Southern Environmental Law Center, support an ORW reclassification as well as suggest additional management strategies necessary to protect resource values. In October 2005, the Water Quality Committee granted approval to draft rule language to incorporate staff's recommendation concerning extra protections beyond the ORW standard management strategies for the subject waters. These extra protections consist of control of stormwater generated for and by any new development and adding conditions to any 401 water quality certification in the proposed ORW area to address runoff from excavation of acid-producing rock. In addition, please note that

the ORW standard management strategies do not allow new or expanded discharges, and NC DOT regulations for many types of road and bridge activities in ORW watersheds require use of Best Management Practices (BMPs) associated with sediment and erosion control. The proposed effective date for this reclassification is September 1, 2006.

Recommendation: The Director and staff recommend that the Environmental Management Commission grant staff permission to proceed to public hearing for the above-mentioned proposed reclassification.

EMC ACTION: THE EMC APPROVED SENDING THE DRAFT RULE LANGUAGE TO PUBLIC HEARING.

Agenda Item:	Annual Progress Reports on the Tar-Pamlico and Neuse Agriculture Rules
Explanation:	The Basin Oversight Committees (BOCs) for these two basins are required to report to the Commission each October on annual progress in implementation of the Neuse and Tar-Pamlico Agriculture Rules (15A NCAC 2B .0238 and .0256 respectively). For crop year 2004, the BOCs received and approved annual reports from 17 and 14 Local Advisory Committees (LACs) in the Neuse and Tar-Pamlico Basins respectively. The two basins report cumulative nitrogen loss reductions from baseline through 2004 of 44% and 47%, respectively. Reductions were accomplished through BMP installation, fertilizer application reduction, crop shifts, and cropland reduction. Separate report documents are provided for each basin from the respective BOCs. In the Tar-Pamlico Basin, to date the EMC has granted full approval to nine local strategies and conditional approval to five. The BOC requests the EMC grant full approval to four of these conditional strategies, leaving one as conditional. Deficiencies in the remaining plan should be addressed in the coming year.
Recommendation:	That the EMC approve the staff recommendation on the Tar-Pamlico reports. No action is required by the EMC on the Neuse report.

EMC ACTION: THE EMC APPROVED THE TAR PAMLICO REPORTS.

Agenda Item :	05-45 Request to Proceed to Public Notice and Hearing with Proposed Rules for the Universal Stormwater Management Program (USMP)
Explanation:	In October of 2005 the Water Quality Committee (WQC) authorized the Division to proceed with the proposed rule 15A NCAC 2H .1020, which establishes the Universal Stormwater Management Program. The USMP is an optional program for local governments that will provide them with the opportunity to replace the post construction stormwater requirements of 14 different stormwater programs with a single, simplified set of requirements. The Universal Program will not require the implementation of new stormwater management requirements where none currently exist.
Recommendation:	That the Environmental Management Commission approve the proposed rule 15A NCAC 2H .1020 to proceed to Public Notice and Hearings.

EMC ACTION: THE EMC APPROVED SENDING THE DRAFT RULES TO PUBLIC HEARING.

IV. EXPECTED FUTURE AGENDA ITEMS

Future Air Quality Items
Future Groundwater Items
Future Water Quality Items

Jan 07	-Permit Exemption for County Grain Elevators and Mills (325) -Revision of Portable Generator Permit Exemption (420) -Clarification of Storage Tank Permit Exemption for Ethanol-Based Fuels (422)	Adoption -Revision of AAL for Carbon Tetrachloride (376) -Distributed Power Generation Using Diesel and Oth Fuels (347) -Revise AAL for 1,3-Butadiene and Carbon Tetrachloride (299) -AAL for MDI, DI, Acrylamide, Chromium VI (124) -Boilers and Industrial Furnaces Burning Hazardous Waste (330) -Amend Definition of AApplicable Requirement@ to add reference to 2D .900,.1400, and .1200 (334)
Jan 07 cont.		-Implementation of New Authority I/M Codes (323a1) -Implementation of New Authority sales and service of analyzers (323d) -Reporting Requirements Conform with General Statutes (361) -Particulate Emissions from Spray/Finish Booths and Woodworking (21, 68) -Glass Melting Furnaces (328)
Mar 07		Hearing request -Permit Exemption for County Grain Elevators and Mills (325) -Revision of Portable Generator Permit Exemption (420) -Clarification of Storage Tank Permit Exemption for Ethanol-Based Fuels (422)
May 07	-Replacement of SIC with NAICS in the Air Toxic Rules (369) -Change Definition of ASmall Facility@ and ASynthetic Minor Facility@ -Commence Construction and Operation -Elimination of 40% Opacity (349) -Good O&M Maintenance (302) -Mercury Emissions from Combustion Sources (356) -Exempt Air Curtain Burners from Air Toxic Rules (364) -Removal of Permit Exemption for Incinerators (315) -Higher Allowable Particulate Emission Rate for Small Wood Fired Indirect Heat Exchangers (286) -Deletion of Facility-Wide Language in VOC Permit Exemption (370) -Revision of Wording of Monitoring Requirements in Several Incinerator Rules (382) -Allowing Ambient Monitoring for Air Toxic Compliance Determination (404)	Adoption -Permit Exemption for County Grain Elevators and (325) -Revision of Portable Generator Permit Exemption (420) -Clarification of Storage Tank Permit Exemption for Ethanol-Based Fuels (422)
Jul 07		Hearing Request -Replacement of SIC with NAICS in the Air Toxic Rules (369) -Change Definition of ASmall Facility@ and ASynthetic Minor Facility@ -Commence Construction and Operation -Elimination of 40% Opacity (349) -Good O&M Maintenance (302) -Mercury Emissions from Combustion Sources (356) - Exempt Air Curtain Burners from Air Toxic Rules (3 -Removal of Permit Exemption for Incinerators (315on at -Higher Allowable Particulate Emission Rate for Sma.. Wood Fired Indirect Heat Exchangers (286) -Deletion of Facility-Wide Language in VOC Permit

		Exemption (370)
Jul 07 (cont)		-Revision of Wording of Monitoring Requirements in Several Incinerator Rules (382) -Allowing Ambient Monitoring for Air Toxic Compliance Determination (404)
Dec 07		-Deletion of Facility-Wide Language in VOC Permit Exemption (370) -Revision of Wording of Monitoring Requirements in Several Incinerator Rules (382) -Allowing Ambient Monitoring for Air Toxic Compliance Determination (404)

Groundwater Committee/EMC
Possible Future Items

Oct 2005	(No items scheduled)	DWM - Request to APPROVE of Proposed Rules to Modify the Testing Requirements Under Title 15A NCAC 2L .0115.
Nov 2005	DWM- SUPERFUND SECTION ITEM Information on Rulemaking for the Dry Cleaning Solvent Cleanup Act (DSCA) Program to Include Required Minimum Management Practices in 15A NCAC 2S .0202 DWQ-GW ITEM Status of the 2L Stakeholders Group	(No items scheduled)
Jan 2006	(Meeting Canceled)	(No items scheduled)
Mar 2006	(No items scheduled at this time)	DWM- SUPERFUND SECTION ITEM Request to Proceed to Public Notice and Hearing for Implementation of New Rules From the Dry-Cleaning Solvent Cleanup Fund Program
May 2006	DWQ-GW ITEM 2L Stakeholders Group Report DWM–UST ITEM Request to do rule-making	

Water Quality Committee/EMC	WQC Agenda	EMC Agenda
Jan. 2006	• Request to Proceed to EMC for Permission to go to Public Hearings on the proposed Amendments to Water Quality Standards for the 2004-2006 Triennial Review • Consideration of Trout Waters Reclassification for a Segment of the Catawba River • Request by New Bern Development LLC for a Major Variance from the Neuse Buffer Requirements for the Sky Sail Condominium Temporary Construction Activities • Request for Approval of the Coastal Habitat Protection Plans (CHPP) Annual Report to the Environmental Review Commission (ERC) and the Joint Legislative Commission on Seafood and Aquaculture • Clarification on use of Soil Survey Map for Buffer Rules	• Discussion of Water Quality Data Issues for B. Everett Jordan Reservoir • Hearing Officer's Report on Proposed Amendments to 15A NCAC 2B .0240, the Nutrient Offset Rule • Request to Send Reclassifications to Public Hearing (Broad River, WS; Broad River ORW) • City of High Point Special Order by Consent Hearing Officer's Report
Mar 2006	• Request Approval of Reports to the ERC in Accordance to Senate Bill 981 • Consideration of Water Quality Data Issues and Nutrient Management Rules for Jordan Rules • Request for a Major Variance from the Tar-Pamlico Buffer rules for PCS Phosphate Company, Inc. •	• Request Approval of Reports to the ERC in Accordance to Senate Bill 981 • Request Permission to Go to Public Hearing on Amendments to water Quality Standards in Accordance with the Federal Triennial Review • Request to Send Trout Management Strategy Rules for a Segment of the Catawba River to Public Hearing

		• Interpretive Ruling for Stormwater rules Regarding Porous Pavement
May 2006	• Clarification on use of Soil Survey Map for Buffer Rules • Kersey Valley Landfill Randleman Variance • Impaired Waters Update • Information on Collection Systems • Information on Site-Specific Management Plans for Federally-Listed Threatened and Endangered Aquatic Species • Request Permission to Send Draft Roanoke River Basinwide Water Quality Plan to Public Review	• Request to Approve the Hearing Officer's Recommendation to Reclassify Uwharrie River to Class B • Request Adoption of NonDischarge Waste (2T) Rules • Neuse River Reclassification
July 2006	• Pitt County Delegation of Tar Pamlico/Neuse Buffer • Clarification on use of Soil Survey Map for Buffer Rules • Request to Approve Jordan rules to go to EMC • Request a Major Variance from Buffer rules for	• Request adoption of USMP draft rules • Hearing Officer's Report and Request Adoption of Jordan Reservoir Nonpoint Source Management rules • Request to Approve the Hearing Officer's Recommendation to Reclassify Yadkin River to CA
Sept 2006	• Request Permission to Send Draft White Oak River Basinwide Water Quality Plan to Public Review • Request Permission to Send Final Draft Roanoke River Basinwide Water Quality Plan to EMC for Approval • Kinnakett/Avon Sand Mine • Shotwell Landuse Variance from Neuse River	• Request to Approve the Hearing Officer's Recommendation to Reclassify Waters Draining to the North shore of Fontana Lake as ORW • Request to Approve the Hearing Officer's Recommendation to Reclassify Broad River as WS and ORW • Request to Approve Final Draft of Roanoke River Basinwide Water Quality Plan • Request to Send Jordan Rules to Public Hearing
Nov 2006	• Request Approval to Send Draft Hiwassee, Savanna, and Little Tennessee Basinwide Water Quality Plans to Public Review	•

*Dates shown are projections. Actual schedules could vary 1-3 months either direction

II. SUMMARIES OF ENVIRONMENTAL MANAGEMENT COMMISSION (EMC) ACTIONS

III. EXPECTED FUTURE AGENDA ITEMS

I. STANDING COMMITTEE MEETINGS

A. WATER ALLOCATION COMMITTEE

The Water Allocation Committee conducted business in January 2006 and March 2006.

B. WATER QUALITY COMMITTEE

The Water Quality Committee conducted business in January 2006 and March 2006.

C. GROUNDWATER COMMITTEE

The Groundwater Committee did not meet during this quarter.

D. AIR QUALITY COMMITTEE

The Air Quality Committee conducted business in January 2006, February 2006 and March 2006.

E. STEERING COMMITTEE

The Steering Committee conducted business in January 2006.

F. NPDES COMMITTEE

The NPDES Committee did not meet during this quarter.

II. SUMMARIES OF ENVIRONMENTAL MANAGEMENT COMMISSION (EMC) ACTIONS

Agenda Item: Request to Proceed to Public Hearing on Best Available Retrofit Technology Rule

Explanation: The Environmental Management Commission is requested to approve one or more public hearings on a proposed new best available retrofit technology (BART) rule.

15A NCAC 02D .0543, Best Available Retrofit Technology, is proposed for adoption to establish best available retrofit technology requirements for certain, older sources of emissions of visibility impairing pollutants impacting visibility in federal parks and wilderness Class I areas as part of efforts required region-wide to address the regional haze problem. The requirements are proposed for adoption in response to federal requirements that states address these emissions in their state implementation plan (SIP) for regional haze.

On July 6, 2005, US EPA promulgated 40 CFR Part 51 Appendix Y, Guidelines for Best Available Retrofit Technology (BART) Determinations. The proposed rule establishes a framework for making these determinations and incorporates the 40 CFR Part 51 Appendix Y guidelines by reference.

The proposed rule applies to sources that have the potential to emit 250 tons or more of a visibility impairing pollutant, were in existence on August 7, 1977 and began operation after August 7, 1962, and fall within one of the 26 industrial source categories listed in the guidance. The visibility impairing pollutants for BART purposes are sulfur dioxide (SO2), nitrogen oxides (NOx), and fine particulate matter (PM2.5).

The proposed rule allows affected sources to demonstrate in accordance with the guidelines that the source does not contribute to visibility impairment and should be exempt. Non-exempt sources are required to undergo a determination of best available retrofit technology. For sources that are not exempted, the rule establishes a deadline of September 1, 2006 for submittal of permit applications proposing best available retrofit technology. The rule requires that BART controls be installed and begin operation by June 1, 2010.

The rule also specifies that compliance with the Clean Air Interstate Rule (CAIR) by subject electric utility sources constitutes BART for such sources for sulfur dioxide and nitrogen oxides emissions. The rule does not preclude the EMC from adopting additional emission reduction requirements for covered sources if necessary to obtain or maintain an ambient air quality standard or meet other state implementation plan requirements.

Recommendation: The Director recommends that the Commission authorize one or more public hearings on this rule and that the Chairman appoint one or more members of the Commission to serve as hearing officers.

EMC ACTION: The EMC approved sending the best available retrofit (BART) rule to public hearing.

Agenda item: Request to Proceed to Public Hearing on Amendments to Various Air Quality Rules

Explanation: The Environmental Management Commission is requested to approve one or more public hearings on the adoption of rule on sales and service of I/M analyzers and amendments to, new source performance standard, maximum achievable control technology, recordkeeping and reporting, gasoline bulk terminal, gasoline truck tank, and permitting rules.

The new source performance standards (15A NCAC 2D .0524) and maximum achievable control technology (15A NCAC 2Q .1111) rules are proposed to be amended to delegate the implementation and enforcement of the NSPS and MACT requirements for drycleaners to the Division of Waste Management.

The gasoline truck tank and vapor collection rule (15A NCAC 2D .0932) is proposed to be amended to make clarifications, corrections and updates. The definitions of "bulk gasoline plant" and " bulk gasoline terminal" are corrected. References to gasoline dispensing facilities and gasoline service stations are removed because the rule does not apply to them. The pressure standard has been updated to the current Department of Transportation standard. The requirements for gasoline truck tanks and for vapor control systems have been more clearly delineated.

The general recordkeeping and reporting requirement rule (15A NCAC 2D .0605) is proposed to be amended to prohibit falsifying information and knowingly submitting falsified information.

The gasoline bulk terminal rule (15A NCAC 2D .0927 is proposed to be amended to add details on leak inspection and recordkeeping and requirements for repairing leaks.

A new rule (15A NCAC 2D .1006) is being proposed on the sales and service of analyzers used to test automobile emissions under the inspection/maintenance (I/M) program. This rule

requires vendors to sell or lease only equipment that meet the requirements for on-board diagnostic testing equipment and has the software necessary to record and transmit data required by the Divisions of Motor Vehicles and Air Quality. The rule also requires vendors to make repairs to the hardware and software in a timely manner.

The rule that identifies permits requiring public participation (15A NCAC 2Q .0306) is proposed to be amended. The amendment requires permits with conditions that exempt a source from the 20-percent opacity standard to be noticed for public comment with an opportunity for public hearing. Also, permits using alternative monitoring procedures or methodologies than those specified in the monitoring rules would be noticed for public comment with an opportunity for public hearing.

The Title V permitting definition rule (15A NCAC 2Q .0503) is proposed to be amended to revise the definition of "insignificant activities because of category." Currently the definition does not limit the size of heating unit used for human comfort that is considered insignificant. The amendment considers only those less than ten million Btu as insignificant.

The Title V permit content rule (15A NCAC 2Q .0508) is proposed to be amended to change the requirement to report excess emissions that last less than four hours from two business days to quarterly. (Excess emissions lasting for more than four hours are covered under another rule and are required to be reported by the next business day.)

The Title V administrative permit amendment rule (15A NCAC 2Q .0514) is proposed to be amended to clarify that it is not to be used for the state-enforceable only part of a Title V permit. Administrative amendments to the state-enforceable only part of a Title V permit are to be made using the non-Title V administrative amendment permitting procedures.

Recommendation:

The Director recommends that the Commission authorize a public hearing(s) on these items and that

the Chairman appoint a member(s) of the Commission to serve as hearing officer(s).

EMC ACTION: The EMC approved sending the various air quality rules to public hearing

Agenda Item: Request to Proceed to Public Hearing on Clean Air Mercury Rules

Explanation: The Environmental Management Commission is requested to approve one or more public hearings on proposed new clean air mercury rules.

On May 29, 2005, the EPA promulgated the emission guidelines to limit the emission of mercury from coal fired electrical generation units. The State plan is due November 17, 2006. The EPA will implement these rules in states that do not require affected sources to reduce emissions of mercury necessary to meet the mercury cap in its rules.

These rules apply to (1) any stationary coal-fired boiler or stationary combustion turbine fired with coal-derived fuel serving a generator with nameplate capacity of more than 25 MWe producing electricity for sale and (2) any coal-fired cogeneration unit serving at any time a generator with nameplate capacity of more than 25 MWe and supplying in any calendar year more than one-third of the unit's potential electric output capacity or 219,000 MWh, whichever is greater.

North Carolina received an allocation of 1.113 tons or 35,616 ounces for 2010-2017 and 0.447 tons or 14,304 ounces for 2018 and each year thereafter. These allocations are distributed among the affected sources.

The EPA rules contain definitions, requirements for designated representative and alternate designated representative, permitting requirements, trading and banking provisions, and monitoring and reporting requirements.

Additionally, Rule 15A NCAC 02D .2511, Mercury Emission Limits, proposes more stringent new source mercury emission limits than the EPA rules. It also proposes reductions in mercury emissions at units at Duke Power and Progress Energy that are not being controlled to meet the Clean Smokestacks Act.

15A NCAC 2D .2500 Mercury Rules For *Electrical Generators*

15A NCAC 02D .2501, Purpose and Applicability, describes the sources cover by the Section. It also incorporates by reference the retired unit exemption, which allows retired units to discontinue participation in the trading program, i.e., to cease submitting reports, etc. This Rule also states that compliance with the EPA-CAMR rules does not relieve a source from complying with any other applicable rules or prohibit the EMC from adopting additional reduction requirements for EPA-CAMR sources if necessary to obtain and maintain compliance with the ambient air quality standards for ozone, fine particulate or other ambient air quality standards.

15A NCAC 02D .2502, Definitions, incorporates by reference, the definitions in the EPA guideline rule.

15A NCAC 02D .2503, Mercury Emissions, contains the annual allocations for mercury for facilities with sources know to be covered under this Section. This Rule allows compliance to be achieved through the trading program, specifies how emissions are to be measured and reported, and the liability of covered sources. It also describes by happens to a source's allocations when that source is modified, reconstructed, replaced, retired, or changes ownership.

15A NCAC 02D .2504, Permitting, contains the permitting related obligations of the owner or operator of a source covered under this Section and obligations of the Director of the Division of Air Quality. These obligations have been incorporated by reference from the EPA guideline rule.

15A NCAC 02D .2505, Monitoring, Reporting, and Recordkeeping, incorporates by reference the subparts of the model rule specifically dealing with monitoring, reporting, and recordkeeping.

15A NCAC 02D .2506, Designated Representative, incorporates by reference the requirements and procedures to have and designating a designated representative and an alternative designated

representative. It also incorporates by reference the procedures for changing a designated and changes in owners or operators.

15A NCAC 02D .2507, Computation of Time, incorporates by reference the EPA model rule's provisions on computation of time.

15A NCAC 02D .2508, New Source Growth, incorporates by reference the EPA model rule's procedures for establishing and using allocations for new sources.

15A NCAC 02D .2509, Periodic Review and Reallocations, requires the EMC to review the allocations contained in this Section in 2010 and every five years thereafter and decide if reallocation is needed. It also contains a DAQ reporting schedule to the EMC on updated information on the regulation of mercury emissions. The three reports are to be presented in July of 2008, 2010, and 2013.

15A NCAC 02D .2510, Trading Program and Banking, identifies the EPA as the agency to administer the allowance trading system. It also incorporates by reference the requirements and procedures for establishing a compliance account, a general account, allowance transfers, submittal of information, and banking allowances.

Rule 15A NCAC 02D .2511, Mercury Emission Limits, proposes more stringent new source mercury emission limits than the EPA rules. It also proposes reductions in mercury emissions at units at Duke Power and Progress Energy that are not being controlled to meet the Clean Smokestacks Act. An option is proposed to allowing further reduce mercury emissions at controlled units in lieu of adding controls to units that are not being controlled to meet the Clean Smokestacks Act. Additionally, source testing is proposed before and after the installation of scrubbers at a minimum of four boilers at each company.

Recommendation:

The Director recommends that the Commission authorize one or more public hearings on these rules and that the Chairman appoint one or more

members of the Commission to serve as hearing officers.

EMC ACTION: The EMC approved sending the mercury rules to public hearing.

Agenda Item:	Request for Adoption of Hearing Officers' Recommendations for Amendments to 15A NCAC 2B .0240, the Nutrient Offset Payments Rule
Explanation:	In July of 2005 the Environmental Management Commission (EMC) authorized the Division to proceed to public notice and hearings with proposed amendments to 15A NCAC 2B .0240, the Nutrient Offset Payments Rule. The notice of text for these proceedings was published in the *North Carolina Register* on September 1, 2005, and public hearings were conducted in Raleigh and Rocky Mount on October 11 and October 18, 2005, respectively. Eight oral comments regarding these proposed amendments were received at the public hearings and a total of 36 written comments were received prior to the close of the comment period. Of particular interest to the Commission, the Public Notice for this rulemaking specifically solicited data that would indicate that the proposed rate increase to $57/lb of Nitrogen per year was in error. No specific data that could be used to justify a revision to the proposed rate increase was received, so no modification to this fee increase has been recommended. All of the comments and the Hearing Officers' responses to these comments are contained in the Report of Proceedings (attached). As a result of the public comments some revision of the amendments has been recommended by the Hearing Officers. The proposed revised rule is attached.
Recommendation:	That the Environmental Management Commission adopt the proposed amendments to 15A NCAC 2B .0240 as recommended by the Hearing Officers in the Report of Proceedings.

EMC ACTION: THE EMC ADOPTED THE RULE AMENDMENTS.

Agenda Item:

Request to Proceed to Public Hearing with the Proposed Reclassifications for the North Fork First Broad River in Rutherford County (Broad River Basin) to Class Outstanding Resource Waters (ORW), and Two Segments of the Broad River in Cleveland, Polk, and Rutherford Counties (Broad River Basin) to Class Water Supply IV (WS-IV) and WS-IV CA (Critical Area)

Explanation:

•**North Fork First Broad River** (Rutherford County, Broad River Basin). A request for a High Quality Waters (HQW) reclassification of the currently Class C Tr classified North Fork First Broad River was submitted by an organization known as The Concerned Citizens of Rutherford County, as well as by two individuals, Mr. and Mrs. Rob McComas. Because the requests mentioned that the area including these waters *"contains an impressive array of high quality natural communities, rare animal populations..."* and *"...several rare or unusual benthic macroinvertebrate species..."*, as well as excellent water quality as confirmed by studies conducted by DWQ in 2004 and 2005, DWQ staff determined the ORW classification to be more suitable for recognizing existing uses.

If reclassified, regulations that affect development and wastewater discharges would apply. Regulations associated with stormwater control for new development activities in ORW areas are applied if a development requires a Sedimentation and Erosion Control Plan. No new or expanded discharges are allowed in ORWs. There are no known plans for development or dischargers in the proposed ORW area with the exception of possibly one subdivision.

•**Broad River** (Rutherford and Polk Counties, Broad River Basin) McGill Associates, P.A. and the Town of Forest City have requested that portions of the Broad River be reclassified to WS-IV Critical Area (CA) and WS-IV Protected Area (PA). The reclassification is needed in order to construct a potable water supply intake. The Division of Environmental Health granted the Town of Forest City conceptual approval for use of these waters as a potable water source. The waters to be reclassified

meet water supply water standards according to 2004 DWQ studies.

If reclassified, development and discharge restrictions will apply. There are NPDES wastewater dischargers in the proposed water supply watershed, but only one of these dischargers, Dan River Wastewater Treatment Plant, may be impacted by this reclassification. There are not any known planned dischargers and developments in the entire proposed reclassification area that would be impacted by the proposed reclassification. Polk County and Rutherford County are the local governments with jurisdiction in the reclassification area, and these local governments would need to modify water supply watershed protection ordinances within 270 days after the reclassification effective date. Both counties support this reclassification.

•**Broad River** (Rutherford and Cleveland Counties, Broad River Basin) Willis Engineers and the City of Shelby have requested that portions of the Broad River be reclassified to WS-IV CA and WS-IV (PA). The reason for the reclassification is to allow for a City of Shelby "raw water supply pipe line", which is currently under construction, and intended for use in withdrawal of water from the Broad River under conditions where the current City supply of the First Broad River is inadequate." The Division of Environmental Health granted the City of Shelby approval for emergency use of this water source. The waters to be reclassified meet water supply water standards according to 2004 DWQ studies.

If reclassified, development and discharge restrictions will apply. There are facilities that hold NPDES individual wastewater discharge permits in the proposed water supply watershed, but none of these facilities will most likely be affected by the reclassification. There are no planned dischargers and no planned development in the proposed reclassification area that will likely be affected by the proposed reclassification. Boiling Springs, Mooresboro, Lattimore, Cleveland County, and Rutherford County are local governments with jurisdiction in the reclassification area. Local governments typically need to create or modify

water supply watershed protection ordinances within 270 days after the effective date of water supply reclassification. However, when a reclassification is anticipated to not become effective before waters are to be used as a potable water supply source, DWQ staff recommends that local governments create or modify water supply watershed protection ordinances before these waters are utilized as a potable water supply source. Both counties have provided support for this reclassification, and efforts are underway with the three cities to obtain support of this proposal.

The Water Quality Committee approved these requests at their November 2005 meeting. The proposed effective date for these reclassifications is November 1, 2006.

Recommendation:

The Director and staff recommend that the Environmental Management Commission grant staff permission to proceed to public hearing for the above-mentioned proposed reclassifications.

EMC ACTION: THE EMC APPROVED THE RECLASSIFICATIONS TO GO TO PUBLIC HEARING.

Agenda Item:	City of High Point Special Order by Consent Hearing Officers Report and Recommendation
Explanation:	The City of High Point has a history of Sanitary Sewer Overflows (SSO) due to failure of parts of its aging sewage collection system. The City has undertaken a dynamic program to repair and replace this failing infrastructure. They have applied under a Special Order by Consent that outlines measures to be taken, timeframes and stipulated penalties. Based on the amount of public input a public Hearing was held in October under the provisions of 15A 2H .1203. The EMC is required to take final actions on SOCs for which a Public Hearing is held.
Recommendation:	That the EMC approve the amended SOC to allow the City of High Point to continue its Collection System rehabilitation to reduce SSOs and be allowed limited new flows based on meeting milestones.

EMC ACTION: THE EMC APPROVED THE AMENDED SOC.

Agenda Item:	Request for Approval of Reports to the Environmental Review Commission in Accordance with Senate Bill 981
Explanation:	Senate Bill 981 (Session Law 2005-190) ratified July 7, 2005 was an act directing the Environmental Management Commission: (1) to study water quality in drinking water supply reservoirs in the State, (2) to adopt nutrient control criteria for drinking water supply reservoirs, (3) to develop and implement a nutrient management strategy for certain drinking water supply reservoirs that are impaired or that may become impaired within five years, (4) not to make any new or increased nutrient loading allocation to an impaired drinking water supply reservoir until rules to implement a nutrient management strategy for that reservoir become effective, and (5) to report to the Environmental Review Commission on progress in developing and implementing nutrient management strategies for drinking water supply reservoirs with impaired water quality. The Division of Water Quality requests that the Environmental Management Commission approve the enclosed reports to meet the initial reporting requirements of SB 981 (Session Law 2005-190).
Recommendation:	That the EMC approve sending the requested reports to the ERC.

EMC ACTION: THE EMC APPROVED THE REPORTS TO GO TO THE ERC.

Agenda Item :	Request to Proceed to Public Hearing with Proposed Amendments to Surface Water Quality Standards in Accordance with the Clean Water Act 2004-2006 Triennial Review
Explanation:	The Division of Water Quality is requesting that the Environmental Management Commission grant staff permission to proceed with proposed amendments to the water quality standards as part of North Carolina's 2004-2006 Triennial Review. The Triennial Review is required under the Federal Clean Water Act to review current water quality standards and classifications. Revised numerical standards (15A NCAC 02B) are being proposed to comply with federal methodology for calculating human health protection criteria. The updated methodology revises the pollutants' toxicological risk assessments, including new or revised reference doses (RfD) and cancer potency factors. These recalculations integrate an updated national default freshwater/estuarine fish consumption rate (17.5 g/day) and, where applicable, relative source contribution (RSC) values obtained from US EPA. The water quality bacteria standard for saline coastal waters will change in direct response to the Beaches Environmental Assessment and Coastal Health (BEACH) Act of 2000. Additionally, standards are proposed for revisions due to US EPA updates to Aquatic Life Water Quality Criteria and to further clarify existing standards. Existing variances to water quality standards will also be reviewed during this Triennial Review cycle (attachments enclosed).
Recommendation:	Staff requests EMC approval to proceed to public hearings and public comment period with the proposed set of rule amendments.

EMC ACTION: THE EMC APPROVED THE PROPOSED RULE AMENDMENTS TO GO TO PUBLIC HEARING.

Agenda Item:	Request to Proceed to Public Hearing with a Proposed Trout Reclassification of a Portion of the Catawba River in Burke County
Explanation:	In January 2006, the Water Quality Committee approved the attached draft rule language to reclassify a portion of the Catawba River to the trout (Tr) waters supplemental classification. The request to reclassify the waters was received in a formal petition from the Southern Environmental Law Center on behalf of the Table Rock Chapter of Trout Unlimited, the Catawba Riverkeeper Foundation and American Rivers. The formal petition included data documenting the presence of reproducing trout in a portion of the river beginning approximately one mile downstream of the Linville Dam. The trout have been enabled by stocking practices and cold water releases from the Linville Dam entering the river. Since the trout environment is an artificially created system, the proposed rule language includes additional provisions to account for natural conditions. First, the cold water released into the river does not extend into the tributaries, therefore, the proposed rule language indicates that the tributaries are not included in the trout reclassification. Second, Muddy Creek is a large tributary to the ten mile portion of the Catawba River being proposed for reclassification, is a Class C water, and contributes considerable flow to this portion of the Catawba River. Therefore, the draft rule language includes a provision to allow for the Class C standard for dissolved oxygen during the summer months. The proposed rule language is attached.
Recommendation:	That the Commission approve the staff recommendation and the Water Quality Committee's request to proceed to public hearing with the proposed reclassification.

EMC ACTION: THE EMC APPROVED THE PROPOSED RULE AMENDMENT TO GO TO PUBLIC HEARING.

Agenda Item:

Request for an Interpretive Ruling to Clarify a Component of the Stormwater Rules and Session Law 2004-163

Explanation:

In August 2004 Session Law 2004-163 (SB1210/HB1585) was signed by Governor Easley. S.L. 2004-163 included provisions for implementing the Phase II stormwater program. The Session Law established a definition of built-upon area that is different from the definition in other parts of the EMC's rules. In addition, the Phase 2 Stormwater Rules recently approved by the EMC included a similar definition. The major difference is that this language would not consider pervious or partially pervious paving material to be "built-upon area" to the extent that the material absorbs water and allows infiltration. The Division is currently working to modify our Stormwater Best Management Practices Manual and is including design information related to how/where credit will be given for the use of these pervious materials. The Session Law is written to address stormwater management in Phase II Stormwater areas. The EMC's rules for stormwater management cover a range of areas outside of Phase II communities.

Division staff is seeking an interpretation from the EMC on whether the modified definition of built-upon area found in the session law should also be considered to apply in other regulated areas of the EMC rules. If so, this would allow pervious paving materials to be given credit (in accordance with the updated manual) as pervious area in Phase II areas and in other areas regulated by the EMC's stormwater rules.

Recommendation:

Request that the EMC provide interpretation on whether the pervious pavement credit should be allowed, as appropriate, in other EMC stormwater program areas or just in the phase II areas.

EMC ACTION: THE AMC APPROVED USING THE PHASE II DEFINITION FOR PERVIOUS PAVEMENT.

Agenda Item:

Request to Confirm Recommendation To Re-appointment Four Members and Appointment of a New Chairman for the Water Pollution Control System Operators Certification Commission

Explanation:

It is recommended that Mr. John Boykin, Mr. Karl Shaffer, Mr. Troy Perkins and Mr. C. L. Gobble be reappointed as members of the Water Pollution Control System Operators Certification Commission. All current terms will expire June 30, 2006. Mr. Boykin is President of EnviroLink Inc, a contract firm, which supervises the operations of wastewater treatment facilities, collections systems, distribution systems and well systems. Mr. Boykin fills the requirements of a North Carolina commercial contract operator. Mr. Shaffer is the Director of the NCSU Land Application Training and Demonstration Center and is responsible for publication development and training for operators of land-based waste treatment systems. Mr. Shaffer is the faculty member of a four-year college or university whose major field is related to wastewater treatment which fills the requirement for this reappointment. Mr. Perkins is currently employed as the Water Resources Systems Superintendent of the Greenville Utilities Commission. He will be the representative of a collection system operator for a North Carolina municipal collection system. Mr. Gobble is currently serving as the Town Administrator for the Town of Louisburg and also serves as the Budget Officer and Personnel Officer. Mr. Gobble fills the requirement of a manager of a North Carolina municipality having a population of less than 10,000 as of the most recent federal census for the commission. Mr. Paul Rawls is recommended to replace Mr. Arthur Mouberry as Chairman of the WPCSCOC and he fills the requirement for the Chairman of the WPCSOCC to be an employee of DENR in field of water pollution control. Mr. Rawls is the Section Chief for the Division of Water Quality's Surface Water Protection Section.

Recommendation: It is recommended by the Water Pollution Control System Operators Certification Commission that the above outlined information be confirmed by the EMC.

EMC ACTION: THE EMC APPROVED THE NEW APPOINTMENTS TO THE WPCSOCC.

IV. EXPECTED FUTURE AGENDA ITEMS

Future Air Quality Items
Future Groundwater Items
Future Water Quality Items

Air Quality Committee/EMC
Possible Future Items

Oct 05	-Best Available Retrofit Technology (263a) -NOx and VOC RACT for Charlotte Ozone Nonattainment Area (431) -Delegation of Drycleaning MACT and NSPS to DWM (432) -Clean Air Inter State Rule (426)	Adoption -Definition of Administrator (406) -Permit Exemption for Asphalt Cement Storage Tanks (407) -Intent to Construct (409) -Clarify When a Modification Must Be in Compliance with the Air Toxic Rules (397) -Update Address in 2D .0103 (392) -Revision of Ranking of Incinerators in 2D .1201 (403) -Excluding Trades Under the Nitrogen Oxide Budget Trading Program from 2Q .0523 (405) -Correct Washington Regional Office Address in 2D .1905 (410) -Make Emission Inventory Part of Permit Application (411) -Open Burning (419) -Compliance Certification for Title V Permits (408) -Exclusionary Rule for Air Curtain Burners (387) -Implementation of New Authority: Banking and Trading and Credit for Early Reductions (323c) -Elimination of an Unnecessary Reporting Requirement (421) -Clarification of Transportation Conformity Rules (423) Hearing Request -Clean Air Inter State Rule (426)
Nov 05	-Best Available Retrofit Technology (263a) -NOx and VOC RACT for Charlotte Ozone Nonattainment Area (431) -Delegation of Drycleaning MACT and NSPS to DWM (432) -Clean Air Mercury Rule (427)

Water Quality Committee/EMC	WQC Agenda	EMC Agenda
Jan. 2006	• Request to Proceed to EMC for Permission to go to Public Hearings on the proposed Amendments to Water Quality Standards for the 2004-2006 Triennial Review • Consideration of Trout Waters Reclassification for a Segment of the Catawba River • Request by New Bern Development LLC for a Major Variance from the Neuse Buffer Requirements for the Sky Sail Condominium Temporary Construction Activities • Request for Approval of the Coastal Habitat Protection Plans (CHPP) Annual Report to the Environmental Review Commission (ERC) and the Joint Legislative Commission on Seafood and Aquaculture • Clarification on use of Soil Survey Map for Buffer Rules	• Discussion of Water Quality Data Issues for B. Everett Jordan Reservoir • Hearing Officer's Report on Proposed Amendments to 15A NCAC 2B .0240, the Nutrient Offset Rule • Request to Send Reclassifications to Public Hearing (Broad River, WS; Broad River ORW) • City of High Point Special Order by Consent Hearing Officer's Report
Mar 2006	• Request Approval of Reports to the ERC in Accordance to Senate Bill 981 • Consideration of Water Quality Data Issues and Nutrient Management Rules for Jordan Rules • Request for a Major Variance from the Tar-Pamlico Buffer rules for PCS Phosphate Company, Inc. •	• Request Approval of Reports to the ERC in Accordance to Senate Bill 981 • Request Permission to Go to Public Hearing on Amendments to water Quality Standards in Accordance with the Federal Triennial Review • Request to Send Trout Management Strategy Rules for a Segment of the Catawba River to Public Hearing

		• Interpretive Ruling for Stormwater rules Regarding Porous Pavement
May 2006	• Clarification on use of Soil Survey Map for Buffer Rules • Kersey Valley Landfill Randleman Variance • Impaired Waters Update • Request Approval of Water Supply Ordinance • Information on Site-Specific Management Plans for Federally-Listed Threatened and Endangered Aquatic Species • Request Permission to Send Draft Roanoke River Basinwide Water Quality Plan to Public Review	• Request to Approve the Hearing Officer's Recommendation to Reclassify Uwharrie River to Class B • Request Adoption of NonDischarge Waste (2T) Rules • Neuse River Reclassification
July 2006	• Pitt County Delegation of Tar Pamlico/Neuse Buffer • Clarification on use of Soil Survey Map for Buffer Rules • Request to Approve Jordan rules to go to EMC • Request a Major Variance from Buffer rules for	• Request adoption of USMP draft rules • Hearing Officer's Report and Request Adoption of Jordan Reservoir Nonpoint Source Management rules • Request to Approve the Hearing Officer's Recommendation to Reclassify Yadkin River to CA
Sept 2006	• Request Permission to Send Draft White Oak River Basinwide Water Quality Plan to Public Review • Request Permission to Send Final Draft Roanoke River Basinwide Water Quality Plan to EMC for Approval • Kinnakett/Avon Sand Mine • Shotwell Landuse Variance from Neuse River	• Request to Approve the Hearing Officer's Recommendation to Reclassify Waters Draining to the North shore of Fontana Lake as ORW • Request to Approve the Hearing Officer's Recommendation to Reclassify Broad River as WS and ORW • Request to Approve Final Draft of Roanoke River Basinwide Water Quality Plan • Request to Send Jordan Rules to Public Hearing
Nov 2006	• Request Approval to Send Draft Hiwassee, Savanna, and Little Tennessee Basinwide Water Quality Plans to Public Review	•

*Dates shown are projections. Actual schedules could vary 1-3 months either direction

Report to the Environmental Review Commission on the Status of Nutrient Management Strategies for Drinking Water Reservoirs Session Law 2005-190

In July 2005, the NC General Assembly adopted an act directing the NC Environmental Management Commission (EMC) to address certain aspects of water quality in drinking water reservoirs. Session Law 2005-190, also known as Senate Bill 981, also requires reports from the EMC on four sections, which are paraphrased as follows:

- **Section 2(a)**: Conduct a study to determine whether drinking water supply reservoirs in the state meet water quality standards. Report findings and recommendations to the ERC by 1 May 2006.
  - That report is provided under separate cover, entitled *Report to the Environmental Review Commission on the Status of Water Quality in Water Supply Reservoirs Sampled by the Division of Water Quality.*

- **Section 2(b)**: Identify and adopt any nutrient control criteria needed to prevent excess nutrient loading in drinking water supply reservoirs. Report progress as part of quarterly reports to the ERC.

- **Section 3**: Develop and adopt nutrient strategies for certain reservoirs. Report progress as part of quarterly reports to the ERC.

- **Section 4**: Do not make or increase nutrient loading allocations to dischargers on certain reservoirs until nutrient rules for those reservoirs become effective. Report progress on development of nutrient rules to the ERC by 1 April 2006.

The Act is provided for reference as Attachment B. This document meets progress reporting requirements for the last three items above.

Section 2(b). Identify and adopt any nutrient control criteria needed to prevent excess nutrient loading in drinking water supply reservoirs.

DWQ has in place and relies on standards for chlorophyll *a*, pH, dissolved oxygen and turbidity that address, both directly and indirectly, excess nutrient loading to surface waters. In addition, DWQ has proposed a study process that evaluates the need for additional proactive nutrient control criteria. DWQ received US EPA approval for this *Nutrient Criteria Implementation Plan* in September 2004. The study of non-flowing waters, which includes drinking water reservoirs, includes several steps: analysis of existing data from 1980's to present to identify research needs; collection of additional data; evaluation of cause-effect relationships between nitrogen and phosphorus levels, chlorophyll *a*, trophic status, and impairment of designated uses; and potential development of site-specific phytoplankton criteria.

In 2005, staff continued data collection and funded a lakes user perception study to supplement available data. An analytical error at the DWQ laboratory invalidated chlorophyll-a results for data collected between April and August 2005. As a result, DWQ proposed to EPA in October 2005 to extend commitment dates

commensurately. Staff will continue to collect additional reservoir water quality data and is working towards the legislative deadline of May 2010 for adoption of any necessary nutrient control criteria.

Section 3. Develop and adopt nutrient strategies for certain reservoirs.

Using applicability criteria given in **Section 3(a)** of the Act, the EMC has determined that Section 3 applies to the Falls of the Neuse Reservoir in the Neuse River Basin. The following table details this determination, eliminating candidate reservoirs reading from left to right. Falls of the Neuse Reservoir is located in the piedmont physiographic region of North Carolina and supplies drinking water to the City of Raleigh and its customers. The reservoir serves a population greater than 300,000 people. It is designated as a Nutrient Sensitive Water (NSW). Available water quality monitoring data indicates that water quality in the reservoir violates the chlorophyll *a* standard (see report for Section 2(a) referenced above), and the Division of Water Quality (DWQ) has not prepared or updated a calibrated nutrient response model for the reservoir since 1 July 2002.

Municipalities Evaluated (Reservoir)	Estimated 2005 Population (a)	Reservoir Serve Population >300,000?	All/Any Part of Reservoir Designated NSW?	Data Indicate Violations of Chlorophyll *a* Standard? (b)	DWQ Not Done or Updated Calibrated Nut. Response Model Since 7/1/02?
Charlotte (Mountain Island Lake)	665,643	Yes	No		
Raleigh (Falls of the Neuse Lake)	326,653	Yes	Yes	Yes	True
Greensboro (Lakes Brandt and Townsend)	279,164	No			
Durham (Lake Michie)	231,313	No			
Winston-Salem (N/A)	229,041	No			
Fayetteville (Cross & Little Cross Cr. Res.'s)	218,074	No			
Cary-Apex (B. Everett Jordan Lake)	157,813	No			
Wilmington (N/A)	153,972	No			

N/A = A reservoir does not supply drinking water to this municipality.
(a) Source: http://money.cnn.com/best/bplive/states/NC.html

Section 3(c) of Session Law 2005-190 requires the EMC to develop a nutrient management strategy for applicable waters by 1 July 2008. This strategy "shall be based on a calibrated nutrient response model...". DWQ developed a plan to determine assimilative capacity of Falls of the Neuse Reservoir in 2005. Field studies to support the development of a calibrated nutrient response model began in March of 2005. The field study plan is available on the internet at http://h2o.ehnr.state.nc.us/tmdl/documents/MonitoringPlan.pdf. A Technical Advisory Committee was formed in July of 2005 to evaluate the existing monitoring strategy and assist with the development of a modeling strategy. This group met monthly between July 2005 and February 2006. During the summer of 2005, analytical problems at the chemistry laboratory resulted in the invalidation of a portion of the field data related to chlorophyll *a*. The Technical Advisory Committee has recognized the need for extending the field study in order to have a more complete set of data on which to base the calibrated nutrient response model, and the full TAC agreed to seek a 2-year extension during the next legislative session.

Section 4. Do not make or increase nutrient loading allocations to dischargers on certain reservoirs until nutrient rules for those reservoirs become effective. Report progress on development of nutrient rules to the ERC by 1 April 2006.

Section 4 applies to water supply reservoirs for which DWQ *has* prepared or updated a calibrated nutrient response model since 1 July 2002. The EMC has determined that B. Everett Jordan Reservoir is the only water supply reservoir in the state to which this section applies. The following status report describes events since adoption of the Act pertaining to development of Jordan nutrient management strategy rules. Also, Attachment A provides several supporting items: a water quality history and chronology of Jordan Lake: a rulemaking timetable to date: stakeholder comments on a conceptual nutrient strategy and DWQ staff responses: a listing of reports and other documents describing development of nutrient loading targets: and a map of the reservoir's watershed.

In October 2005, the Water Quality Committee of the Environmental Management Commission approved sending a comprehensive set of nutrient management strategy rules to the full Commission for approval to go to public hearings. These rules were based on a calibrated nutrient response model approved by the Water Quality Committee in July 2002 and on the recommendations of a one and one half year stakeholder process that began in 2003. Had the full Commission approved the rules going to public hearing in January 2006, the estimated effective date would be August 2007.

However, in January 2006, the Commission did not take up action on the proposed rules. Instead, at the request of the Chairman, a special session of the Commission was held to hear concerns raised by a group of municipal dischargers. Attachment A provides a chronology of events, dating back to creation of the reservoir, that lead up to the January 2006 meeting. The dischargers questioned the quality of chlorophyll *a* data upon which the calibrated nutrient response model was based. The data had been collected and analyzed by the Division of Water Quality from 1997 to 2000. The dischargers contended that additional data should be collected and that a new nutrient response model should be run before nutrient reduction goals are set and put into rules. At the close of the meeting, the Commission asked the Water Quality Committee to consider the dischargers concerns further.

The Water Quality Committee took up this issue at its March 8, 2006 meeting. Following presentations from staff and discussion, the Committee accepted staff's recommendation to resolve disputed rule content issues with various parties, revise the rules and fiscal analysis, and to return in July or Sept 2006 to seek approval for public hearings. The EMC would adopt the rules in Summer 2007 and they would reach the 2008 session of the General Assembly.

It is noted that the Town of Pittsboro, which is seeking to expand its wastewater treatment plant capacity, cannot be allowed any additional nutrient loading allocation until permanent rules adopted by the Commission become effective.

ATTACHMENT A

Jordan Water Supply Nutrient Strategy and Rules

Report to the NC Environmental Management Commission from the Division of Water Quality

January 11, 2006

The proposed Jordan Lake nutrient management strategy and TMDL (Total Maximum Daily Load) is the product of many significant events and a history of water quality problems observed or anticipated dating back over the past sixty years. Regulation of point sources began in 1983. The Clean Water Responsibility Act of 1997 (CWRA of 1997) significantly expanded regulatory requirements for the lake. The proposed strategy is required to address CWRA of 1997 and TMDL mandates. This document summarizes the history of nutrient management in the lake, provides the contents of a 2004 memorandum from the Division to Orange Water and Sewer Authority (OWASA) and the City of Greensboro responding to their concerns on the development and implementation of the nutrient strategy and TMDL, provides a list of additional information available on the internet, and includes a map of the watershed and a final stakeholders' report as appendices.

History of Nutrient Concerns in Jordan Reservoir:

Early concerns for Jordan Lake

1945: Stakeholders expressed concerns for water quality and eutrophication when Jordan Lake was first proposed.

1960s: Two major streams in the watershed, Buffalo Creek and Bolin Creek, did not support fish due to sewage pollution.

1963: U.S. Congress authorized the New Hope Dam below the confluence of the Haw and New Hope rivers. Water quality concerns continued to grow.

1970s (early): Construction was delayed by legal actions including an inadequate Environmental Impact Statement as required by the National Environmental Policy Act of 1969.

1976: The U.S. Army Corps of Engineers studied the downstream impact of water being released from the dam, but did not study nutrient content or loading in Jordan Lake.

1970s: Water quality standards were frequently exceeded at most sampling locations in the watershed.

1979: A Federal Court decision allowed completion of the lake.

1982: Jordan Lake was initially filled.

Jordan Lake declines in productivity

1980s (early): Water quality research found non-point sources to be significant contributors to lake pollution.

1983: The Commission classified Jordan Lake as Nutrient Sensitive Water (NSW), which required a plan to reduce nutrient inputs from the watershed into the lake. Total phosphorus (TP) limits of 2.0 mg/L were required for National Pollutant Discharge Elimination System (NPDES) permitted wastewater facilities with permitted flows greater than 0.005 MGD. Due to special concerns in the Upper New Hope Arm of the reservoir, NPDES permitted wastewater facilities received TP limits of 0.5 mg/L during the months from April to October.

High levels of blue-green algae were detected in the Haw River and New Hope arms of Jordan Lake.

1984: Anabaena sp. and Aphanizomenon, blue-green algae species, created nuisance algal blooms.

1985: Total nutrient load showed a 55,000 lbs increase over previous years. Researchers expressed concern for the potential development of blue-green algae.

The Haw River arm experienced a surface bloom of Anacystis cyanae, a blue-green algae species, with densities of up to 157,000 cells/ml.

1986: Available nutrients in the surface waters remained high throughout the lake despite high productivity and assimilation by phytoplankton.

The pea green color seen in parts of Jordan Lake was likely caused by Merismopedia tenuissime, a blue-green algae.

1988: It became illegal to manufacture, store, sell, or distribute phosphorous-containing cleaning agents in North Carolina in attempt to control phosphorous loading in state waters.

1991: OWASA's Mason Farm wastewater treatment plant on Morgan Creek upgraded to 8.0 MGD with biological nutrient removal completed.

1992: Elevated nutrients led to periodic blooms of blue-green algae.

1996: The town of Cary, which received drinking water from Jordan Lake, received extensive complaints about the water's taste and odor.

1997: The Clean Water Responsibility Act of 1997 (often referred to as House Bill 515) included legislation to address water quality problems in NSW waters. The act set total nitrogen (TN) and TP NPDES permit limits for facilities discharging greater than 0.5 MGD into the Jordan Reservoir/Haw River watershed. A 5-year

compliance period for limits of 5.5 mg/L of TN and 2.0 mg/L of TP was established for qualifying wastewater facilities. These facilities were required to develop plans to optimize nutrient removal in their discharged water.

1998: Amendments to the 1997 Clean Water Responsibility Act (referred to as Senate Bill 1366) provided a compliance extension to the nutrient limits, with conditions. Those wastewater facilities granted a compliance extension by the Environmental Management Commission were required to develop a calibrated nutrient response model, evaluate and optimize the operation of all facilities to reduce nutrient loading, and evaluate methods to reduce nutrient mass loading to NSW waters.

1999: In April, the Commission granted the Project Partners (the municipalities of Greensboro, Mebane, Reidsville, Graham, Pittsboro, Burlington, and OWASA), a compliance extension. Facilities that did not seek compliance extensions are the City of Durham/ Durham South wastewater treatment plant (WWTP) and Durham County/ Triangle WWTP. The compliance extension schedule allowed two years for the collection of data needed to prepare a calibrated nutrient response model, a maximum of one year to prepare the calibrated nutrient response model, the amount of time that is required for the Commission to develop a nutrient management strategy and to adopt rules or to modify discharge permits to establish maximum mass loads or concentration limits based on the calibrated nutrient response model, and a maximum of three years to plan, design, finance, and construct a facility that will comply with those maximum mass loads and concentration limits. The Commission also stated that if additional time is needed to complete the construction of a facility that they would extend the compliance date by a maximum of two years at their discretion.

The Project Partners contracted Tetra Tech to develop a lake model.

2000: Each municipality developed optimization plans and submitted summaries at the July 2000 Water Quality Committee meeting.

2002: The Upper New Hope portion of Jordan Lake was placed on the state list of impaired waters, the 303(d) list, requiring a total maximum daily load (TMDL) to be developed.

In July, the Water Quality Committee approved the results of the combined hydrodynamic and water quality lake model developed by Tetra Tech.

Jordan Lake Nutrient Management Plan

2003: The Division initiated the Jordan Lake Stakeholders Project in order to solicit comprehensive input. Through this one and a half year project, 222 people of 113 stakeholder organizations representing local governments, state and federal agencies, and non-government organizations attended 21 meetings to provide input to the Jordan Lake TMDL and nutrient management strategy.

The Division worked with Tetra Tech to enhance the lake nutrient response model for use in developing a TMDL.

2005: The Cape Fear Basin plan rated all of Jordan Lake as impaired.

Jordan Lake stakeholders issued a final report of recommendations for the TMDL and nutrient management strategy.

After considering stakeholder input, the Division issued a draft nutrient management strategy and TMDL.

The Division initiated rulemaking, which is on going. Key rulemaking events are provided in Table 1.

Table 1: DWQ Rulemaking Schedule To Date

October WQC	DWQ's response to public comments, request and receive permission to present to the EMC in November.
November EMC	Information item presented
January EMC	Cancelled to accommodate a separate ad-hoc EMC meeting

August 3, 2004 Memorandum, DWQ to OWASA and City of Greensboro, Response to TMDL Implementation Comments:

OWASA and the City of Greensboro had raised concerns that the proposed targets for Jordan Lake are overly aggressive and not justified by the available science, and made recommendations based on a technical memorandum prepared for the Jordan Lake Project Partners by CH2M HILL dated July 1, 2004. These concerns are provided below:

1. *There is considerable uncertainty associated with the DWQ chlorophyll a data that were used to calibrate the JLNRM and that provided an important basis for designating the Upper New Hope Creek arm as an impaired water body on the State's 303(d) list.*

Response:

The issues raised regarding data used for the Jordan Lake Nutrient Response Model are common to most complex environmental monitoring programs and do not preclude the development of a calibrated model.

Uncorrected chlorophyll *a* (chl *a*) data were used for model calibration during years 1997 through 2000. In 2001, corrected chl *a* data are available, although they were analyzed using the fluorometric non-acidified method, which reduces pigment interference and does not actually require a "correction" step. The correction is for pheophytin pigment, which is a degradation product that can interfere with the chl *a* measurement. Note that DWQ currently uses the fluorometric non-acidified method (EPA Method 445 rev 1.2). The acidification method was used from 1981 to January 2001.

As discussed in Section 2.3 of Tetra Tech (2003), there is a high correlation between corrected and uncorrected chl *a*.[1] The ratio of uncorrected to corrected chl *a* data was close to one during July-September, increasing during other seasons. Since the nutrient reduction targets are based on model predictions in the growing season, overestimation of algal biomass due to use of uncorrected chl *a* data is minimized. In fact, considering that pheophytin represents recently deceased algae, an uncorrected measurement may actually be a reasonably good indicator of algal concentrations shortly prior to the observation time (Tetra Tech 2002).[2]

There is uncertainty associated with all test methods for chlorophyll *a*. While HPLC, the analytical method used by USGS, can be more accurate, this method is also subject to analytical uncertainty and can be costly. Because of this uncertainty, it is expected that the model and individual observations will frequently differ, even in the absence of model uncertainty. Fluorometric measurement of chlorophyll *a* is an economical and reliable method commonly used in water quality management. Further, EPA (2000) indicates that if the purpose of measuring chlorophyll is to estimate biomass, the increased accuracy obtained by HPLC may not be necessary.[3]

2. *More reliable chlorophyll a data from U.S. Geological Survey (USGS) indicate that water quality in the lake is stable, and other information indicates that water quality may actually be improving under current nutrient management strategies*

Response:

The CH2M HILL report discusses USGS water quality observations collected as part of the Triangle Area Water Supply Monitoring Project as another potential source of information for evaluation of the model. The discussion is correct in stating that these data were not directly used during model calibration. Aside from concerns about method comparability, the USGS data are quite sparse, both temporally and spatially. These differences must be carefully considered when comparing data sets.

Page 12 of the CH2M HILL report states that the USGS "data contrast very sharply with data and modeling results used for the model calibration and Jordan Lake analysis." This is not the case, and is contradicted in the next paragraph: "The modeling results are more similar to the USGS chlorophyll a data." A comparison of model results to USGS and DWQ monitoring data are presented in the attached analysis by Tetra Tech. The USGS observations are in general agreement with both the DWQ observations and model predictions. Error statistics are similar for paired observations regardless of whether the model is evaluated versus DWQ or USGS data. Therefore, the USGS observations can be construed as providing further validation of the model.

Also contrary to the CH2M HILL report, a comparison of the frequency of excursions of the 40 ug/L chl *a* criterion, indicates that USGS and paired model predictions provide results similar to one another. On an annual basis, the model usually underestimates excursion frequency when compared to observed data. On a growing season basis, for segments 1-4, the frequency predicted by the model is slightly higher than observed, but for segments 14-15 the model frequency is again lower than the observed frequency, indicating no evidence of consistent bias.

The report cites trophic state index (TSI) values for Jordan Lake. The lake has experienced hypereutrophic to eutrophic conditions since its construction in the early 1980's. The lake remains eutrophic as indicated by the TSI values and monitoring data collected throughout the lake. Existing water quality conditions in the lake have prompted DWQ to list a portion of the lake on its list of impaired waters. Management strategies including reductions in existing nutrient loads are needed to improve water quality conditions.

Finally, the report from CH2M HILL also cites a letter from the NC Wildlife Resources Commission staff dated November 20, 2003. The letter supports reductions in nutrient loading to Jordan Lake and does not conflict with the currently proposed reductions for Jordan Lake.

3. *There are significant issues regarding the application of the chlorophyll a standard to a TMDL and NMS for the lake arms (New Hope and Haw arms), including the seasonal interpretation of the standard, use of the standard in the upper portions of the lakes that are hydrologically challenged, and the adequacy of the standard as an indicator of use impairment.*

Response:

The attached letter from the US Environmental Protection Agency to DWQ dated November 23, 2003 discusses application of North Carolina's chl *a* standard to Jordan Lake. The agency concurs with our use of a growing season maximum with an exceedance frequency of 10%.

The CH2M HILL report states that during 2000 and 2001, severe and prolonged drought were experienced throughout the watershed and suggests that sampling data collected during this period may not be indicative of typical conditions. These issues are discussed Section 4.3 of Tetra Tech (2003). For Jordan Lake response, the sequence of inflows and direct precipitation is more significant than the long-term moisture deficit. An examination of meteorological and hydrological records shows that, while there were deficits in precipitation and flow over this period, the low flow conditions were not extraordinary and continuous to the extent that they represent extremely rare conditions for Jordan Lake. The current nutrient reduction targets are based on an average of these years, which include wet, dry and normal years.

4. *There is a high degree of uncertainty in the complex model developed for the lake, especially for predicting frequency of exceedances of the standard.*

Response:

We agree that there is uncertainty (in data, modeling tools, and scientific understanding) in the analysis connecting specific levels of nutrient loads to predicted frequency of chl *a* concentrations greater than 40 µg/L. However, focusing exclusively on uncertainty in model predictions of point-in-time/point-in-space chlorophyll a observations is not an appropriate test of the model. Instead, the model should be judged more on its ability to replicate longer-term spatial and temporal trends and the frequency distribution of chl *a* concentrations greater than the criterion.

The last paragraph on page 5 states "model output should be viewed as a range of potential values based on their probability density functions rather than as a precise single output number." We agree with this statement, and contend that the model provides a reasonable representation of the expected distribution of concentrations. Unfortunately, the error statistics and uncertainty analysis developed by CH2M HILL contradict this statement: all are focused on evaluation of deviations between observations and predictions for individual point-in-time/point-in-space values.

The second paragraph of page 6 in CH2M HILL states, "that the model predicts chlorophyll *a* fairly well on average", but then notes that "DWQ staff has proposed that average predictions not be used in the development of the TMDL and nutrient targets." The fact that the model predicts average concentrations well *is* one component in the prediction of the distribution. In fact, the model also does a good job of predicting frequencies of concentrations exceeding the criterion.

In general, the calibration strategy for the model was to capture broad spatial trends and fit multiple parameters simultaneously. The relationships between concentrations of multiple parameters at multiple stations are more significant than the fit to individual points at individual stations. The model fit is aimed at reproducing the central tendency of trends in time and the approximate frequency distribution, rather than replicating individual observations of chl *a*. For these purposes the model performs reasonably well.

ATTACHMENT B

GENERAL ASSEMBLY OF NORTH CAROLINA

SESSION 2005

SESSION LAW 2005-190
SENATE BILL 981

AN ACT TO DIRECT THE ENVIRONMENTAL MANAGEMENT COMMISSION: (1) TO STUDY WATER QUALITY IN DRINKING WATER SUPPLY RESERVOIRS IN THE STATE, (2) TO ADOPT NUTRIENT CONTROL CRITERIA FOR DRINKING WATER SUPPLY RESERVOIRS, (3) TO DEVELOP AND IMPLEMENT A NUTRIENT MANAGEMENT STRATEGY FOR CERTAIN DRINKING WATER SUPPLY RESERVOIRS THAT ARE IMPAIRED OR THAT MAY BECOME IMPAIRED WITHIN FIVE YEARS, (4) NOT TO MAKE ANY NEW OR INCREASED NUTRIENT LOADING ALLOCATION TO ANY IMPAIRED DRINKING WATER SUPPLY RESERVOIR UNTIL RULES TO IMPLEMENT A NUTRIENT MANAGEMENT STRATEGY FOR THAT RESERVOIR BECOME EFFECTIVE, AND (5) TO REPORT TO THE ENVIRONMENTAL REVIEW COMMISSION ON PROGRESS IN DEVELOPING AND IMPLEMENTING NUTRIENT MANAGEMENT STRATEGIES FOR DRINKING WATER SUPPLY RESERVOIRS WITH IMPAIRED WATER QUALITY.

The General Assembly of North Carolina enacts:

SECTION 1. Legislative findings. – The General Assembly finds that:

(1) Drinking water supply reservoirs are an essential source of water needed to meet municipal, industrial, and agricultural needs.

(2) Drinking water supply reservoirs provide recreational opportunities and wildlife habitat and, if properly managed, improve water quality.

(3) Management and protection of the quality and quantity of water in drinking water supply reservoirs are essential to the economic vitality of North Carolina.

(4) Excessive nutrients are a major source of impairment of water quality in drinking water supply reservoirs.

(5) It would be beneficial for the State to study the condition of drinking water supply reservoirs and to develop nutrient control criteria to prevent drinking water supply reservoirs from becoming impaired.

(6) It would be beneficial for the State to develop calibrated nutrient response models and nutrient management strategies to ensure that drinking water supply reservoirs that are showing evidence of impairment are protected, as envisioned by Part 1 of Article 21 of Chapter 143 of the General Statutes and S.L. 1997-458, the Clean Water Responsibility and Environmentally Sound Policy Act.

SECTION 2.(a) Study of drinking water supply reservoirs. – The Environmental Management Commission shall study the water quality in the drinking water supply reservoirs in the State to determine whether the reservoirs meet current water quality standards. The

Commission shall analyze existing data and report its findings and recommendations to the Environmental Review Commission by 1 May 2006.

SECTION 2.(b) Nutrient control criteria. – Based on the results of the study of drinking water supply reservoirs and an evaluation of current water quality standards, the Environmental Management Commission shall identify any nutrient control criteria necessary to prevent excess nutrient loading in each drinking water supply reservoir in order to protect public health and other designated uses by 1 January 2009. The Commission shall adopt final nutrient control criteria for each drinking water supply reservoir by 1 May 2010. If the Commission finds that the nutrient control criteria for any drinking water supply reservoir are not being achieved, the Commission shall develop and implement a plan for enhanced water quality monitoring in that drinking water supply reservoir within one year of the determination. The Commission shall report its progress in implementing this section, including its findings and recommendations, to the Environmental Review Commission as a part of each quarterly report it makes pursuant to G.S. 143B-282(b).

SECTION 3.(a) Applicability of section to certain reservoirs. – This section applies only to drinking water supply reservoirs that meet all of the following criteria as of 1 July 2005:

(1) The reservoir serves a population greater than 300,000 persons.
(2) The Environmental Management Commission has classified all or any part of the water in the reservoir as a nutrient sensitive water (NSW).
(3) Water quality monitoring data indicates that water quality in the reservoir violates the chlorophyll A standard.
(4) The Division of Water Quality of the Department of Environment and Natural Resources has not prepared or updated a calibrated nutrient response model for the reservoir since 1 July 2002.

SECTION 3.(b) Temporary limitation on increased nutrient loading. – If the Environmental Management Commission determines either that water quality in all or in any part of a drinking water supply reservoir to which this section applies does not meet current water quality standards or that it is likely that water quality will not meet water quality standards at any time prior to 1 July 2010, the Commission shall not make any new or increased nutrient loading allocation to any person who is required to obtain a permit under G.S. 143-215 for an individual wastewater discharge directly or indirectly into that reservoir. This limitation on new or increased nutrient loading allocation shall not be construed to prohibit a person who holds a permit for a wastewater discharge into a drinking water supply reservoir from purchasing a nutrient loading allocation from another person who holds a permit for a wastewater discharge into the same drinking water supply reservoir. This subsection expires with respect to a drinking water supply reservoir when permanent rules adopted by the Commission to implement the nutrient management strategy for that reservoir become effective.

SECTION 3.(c) Nutrient management strategy. – The Environmental Management Commission shall develop a nutrient management strategy for drinking water supply reservoirs to which this section applies by 1 July 2008. The nutrient management strategy shall be based on a calibrated nutrient response model that meets the requirement of G.S. 143-215.1(c5). The nutrient management strategy shall include specific mandatory measures to achieve the reduction goals. The Commission shall consider the cost of the proposed measures in relation to the effectiveness of the measures. These measures could include, but are not limited to, buffers, erosion and sedimentation control requirements, post-construction stormwater management, agricultural nutrient reduction measures, the addition of nutrient removal treatment processes to point source permitted wastewater treatment plants, the removal of point source discharging wastewater treatments through regionalization and conversion to non-discharge treatment technologies, and any other measures that the Commission determines to be necessary to meet the nutrient reduction goals. To the extent that one or more other State

programs already mandate any of these measures, the nutrient management strategy shall incorporate the mandated measures and any extension of those measures and any additional measures that may be necessary to achieve the nutrient reduction goals. In making a nutrient loading allocation to a permit holder, the Commission shall, to the extent allowed by federal and State law, give consideration to all voluntary efforts taken by the permit holder to protect water quality prior to the development of the nutrient management strategy.

SECTION 3.(d) Eligibility under the Clean Water Revolving Loan and Grant Act. – The definitions set out in G.S. 159G-3 apply to this subsection. The operator of a wastewater treatment works that is owned by an agency of the State may apply for a loan or grant under Chapter 159G of the General Statutes on the same basis as any other applicant if the operator is a local government unit and if the local government unit operates the wastewater treatment works pursuant to a contract with the State agency that contemplates that the local government unit will eventually acquire ownership of the wastewater treatment works.

SECTION 3.(e) Implementation; rulemaking. – The Environmental Management Commission shall adopt permanent rules to implement the nutrient management strategies required by this section by 1 July 2008. The rules shall require that reductions in nutrient loading from all sources begin no later than five years after the rules become effective.

SECTION 3.(f) Reports. – The Environmental Management Commission shall report its progress in implementing this section to the Environmental Review Commission as a part of each quarterly report it makes pursuant to G.S. 143B-282(b).

SECTION 4. Other drinking water supply reservoirs. – The Environmental Management Commission shall not make any new or increased nutrient loading allocation to any person who is required to obtain a permit under G.S. 143-215 for an individual wastewater discharge directly or indirectly into any drinking water supply reservoir for which the Division of Water Quality of the Department of Environment and Natural Resources has prepared or updated a calibrated nutrient response model since 1 July 2002 until permanent rules adopted by the Commission to implement the nutrient management strategy for that reservoir become effective. The Commission shall report its progress in developing and implementing nutrient management strategies for reservoirs to which this section applies to the Environmental Review Commission by 1 April 2006.

SECTION 5. Effective date. – This act is effective when it becomes law.

In the General Assembly read three times and ratified this the 7th day of July, 2005.

EXHIBIT D-4

Report to the Environmental Review Commission on the Status of Water Quality in Water Supply Reservoirs Sampled by the Division of Water Quality

April 2006

North Carolina
Environmental Management Commission

EXECUTIVE SUMMARY

Background

Under Section 2(a) of the 2005 Drinking Water Reservoir Protection Act (SB981), the Environmental Management Commission (EMC) is charged with analyzing existing water quality data for water supply reservoirs sampled by the Division of Water Quality (DWQ) and reporting its findings and recommendations to the Environmental Review Commission by May 1, 2006.

Data review was confined to January 1995 through May 2005 to provide the most recent assessment. Of the 160 lakes that DWQ monitors, data from the 95 reservoirs classified as water supplies and sampled during this time period were reviewed. These lakes are from 10 river basins and are located in the piedmont and mountain regions of North Carolina.

As the Act focused on elevated nutrients in water supplies, this analysis includes those standards regularly sampled by DWQ related to nutrient enrichment (also referred to as eutrophication): chlorophyll a, dissolved oxygen, pH and turbidity. In some cases, the discussions of individual lakes include discussions of water quality problems associated with parameters that have no standards such as aquatic weeds.

Findings:

- Fourteen percent of the water supply reservoirs (13 out of 95) sampled by DWQ during January 1995 through May 2005 did not meet all eutrophication related standards based on available data.
- Those lakes that did not meet all of the eutrophication-related standards are: Graham-Mebane Reservoir, High Point Lake, Jordan Lake, Stoney Creek Reservoir, Lake Mackintosh, Pittsboro Lake, Lake Rhodhiss, Cedar Cliff Lake, Lake Sequoyah, Falls of the Neuse Reservoir, High Rock Lake, Lake Lee, and Lake Twitty.
- Graham-Mebane, High Point, Jordan, Mackintosh, Pittsboro, Stoney Creek, Rhodhiss, Falls of the Neuse, and High Rock have strategies in place or under development to address their water quality concerns.
- Additional sampling is planned for Lakes Lee and Twitty.
- Six lakes had water quality problems (taste, odor, color) sufficient to require additional treatment either in-lake or at the treatment facility: High Point, Oak Hollow, Lucas, Twitty, Hickory and Rhodhiss.
- In addition to nutrients, aquatic weeds and sediment are problems in water supplies. Fourteen lakes, mainly in the Cape Fear and Catawba River basins, are currently infested with aquatic weeds at levels that require some treatment.

Recommendations

There was not sufficient data from DWQ's sampling program to determine with confidence if many of these reservoirs were meeting or not meeting surface water quality standards. The current ambient monitoring program is designed to provide snapshots of water quality during the period of the year when the effects of eutrophication are most noticeable. DWQ prioritizes additional monitoring based on the ambient lakes monitoring. The current monitoring program resources are insufficient to perform large-scale assessments of eutrophication in multiple reservoirs where additional monitoring has not been prioritized. Such evaluations are possible; however, a significant input of staff, equipment and laboratory support would be required to perform these evaluations on all water supply reservoirs.
