Duke Energy's Carolinas' operations include nuclear, coal-fired, natural gas and hydroelectric generation. That diverse fuel mix provides nearly 21,000 megawatts of safe, reliable and competitively priced electricity to more than 2.3 million electric customers in a 24,000-square-mile service area of North Carolina and South Carolina.

Duke Energy, one of the largest electric power companies in the United States, supplies and delivers energy to approximately 4 million U.S. customers. The company has approximately 37,000 megawatts of electric generating capacity in the Midwest and the Carolinas, and natural gas distribution services in Ohio and Kentucky. In addition, Duke Energy has more than 4,000 megawatts of electric generation in Latin America, and is a joint-venture partner in a U.S. real estate company.

Headquartered in Charlotte, N.C., Duke Energy is a Fortune 500 company traded on the New York Stock Exchange under the symbol DUK. More information about the company is available on the Internet at: www.duke-energy.com.

###

Drought Update – Duke Energy Carolinas/Catawba Wateree Project

- Over a period of many years, Duke Energy built a system of lakes and reservoirs on the Catawba Wateree system to provide vital electricity for its 2.2 million customers in the Carolinas.

- Hydroelectric, coal and nuclear plants on the Catawba lakes generate 9,000 megawatts of electricity used by Duke's customers in the Carolinas.

- Duke Energy is committed to being a good steward of the lakes it built. Although built originally for power production, the lakes also provide other essential services in the region, including water supplies and drought management, water for industrial uses, protection of aquatic life and recreation.

- A key benefit of the reservoirs on the river system is their ability to buffer the effects of drought. In the Catawba-Wateree River basin, we're fortunate to have 11 dams to help manage the flow of water. Many free flowing creeks and streams have dried up.

- On Oct. 5, 2007, the United States Drought Monitor declared the region in an exceptional drought condition, the highest drought classification. Year to date, the area has only received 57% of long-term average rainfall, resulting in a 16-inch deficit for this time of year.

- We are in a more severe rainfall deficit this year than any of the years during the drought of record -- 1998 – 2002. Our current remaining usable storage (40%) is lower than the lowest point (47%) we saw during the 1998 – 2002 drought.

- Duke Energy has established a Catawba-Wateree Drought Management Advisory Group (CW-DMAG) which communicates at least weekly via conference call or meeting and more frequently via e-mails and phone calls. This group includes Duke Energy and 24 major public water system operators along the river system. This regional approach has resulted in more than 20% water savings through conservation efforts compared to normal use.

- During the week of Oct. 26, 2007, rainfall resulted in a 3% increase in useable storage in the basin. This was the first increase we have seen in months. Last week Duke reported that available storage was around 37%. Target for this time of year is about 70.5%.

- Weather forecasts indicate little or no rainfall in the near term, and meteorologists are predicting continued dry conditions. If these forecasts are right, lake levels will continue to decline – and stricter water restrictions will be necessary.

- Duke Energy is evaluating power plant operations and power purchase options to ensure we can provide uninterrupted electrical service for as long as possible.

- Although stringent water management and public conservation have delayed the need for additional water restrictions, Duke Energy estimates that without additional widespread rainfall, the triggers will be met in the basin for more restricted water use (Stage 4) in mid-Dec to mid-Jan.

- Stage 4 does not mean we'll be out of water – it means it is time to enact further water use restrictions to conserve water in the river for essential uses.

- In this stage, additional water use restrictions are implemented by public water utilities and would likely include restrictions for businesses and commercial users of water.

- Entering Stage 4 does mean that less time is remaining until the usable supply of water in the basin is depleted (i.e., when the most shallow intakes become uncovered.)

- Beginning, Oct. 30, 2007, Duke Energy plans to provide weekly updated estimates for Stage 4 timeframe. Although highly unlikely to occur, Duke Energy will announce worst case scenario for estimated range of days for the remaining usable storage in the Catawba-Wateree River basin on 10/30/07.

- By reducing our individual water use we can help buy more time until needed rainfall can arrive in the region. Since power plants use water in their operations, it's important to conserve both water and electricity.

- Duke Energy and major public water suppliers are developing contingency plans in the event that declining lake levels begin to uncover intakes. The plans are designed to mitigate effects to the region's drinking water and electricity supply.

- Continued conservation by communities and individuals is essential. We must all work together to get through this.

- Visit Duke Energy's Carolinas Drought Information website -- https://www.duke-energy.com/lakes/carolinas-drought-info.asp -- for the latest information about water and energy conservation tips, lake levels and boat ramp closings. Those with watercraft in the lakes who haven't taken appropriate action for storage should consider doing so. Extreme caution should be used if on Catawba-area lakes.

From Michael Thompson
Manager State Affairs, NC
Dominion

As the NC drought conditions relate to Dominion:

Low stream flows and water levels in the Kerr Reservoir affect Dominion's Lake Gaston and Roanoke Rapids Lake hydroelectric stations. Dominion is maintaining stream flows with minimum release at the present time.

Note New E-mail: Michael.Thompson@dom.com

2007

ENVIRONMENTAL REVIEW COMMISSION

NOVEMBER 27, 2007

MINUTES

MINUTES
ENVIRONMENTAL REVIEW COMMISSION
November 27, 2007

The Environmental Review Commission met Wednesday, November 27, 2008 at 9:30 a.m. in Room 544 of the Legislative Office Building. Co-Chairperson Lucy Allen presided.

Members present were Co-Chairperson Lucy Allen, Co-Chairperson Dan Clodfelter, Co-Chairperson Charlie Albertson, Co-Co-Chairperson Pryor Gibson, Senator Stan Bingham, Senator Katie Dorsett, Senator James Forrester, Representative Jim Harrell, Representative Carolyn Justice, Representative Pricey Harrison, Senator Eleanor Kinnaird, Representative Ruth Samuelson, Representative Edith Warren and Rep. Larry Womble. Staff members present were Commission Counsel George Givens, Assistant Counsel Jeffery Hudson, Assistant Counsel Jennifer McGinnis, Commission Analyst Jennifer Mundt, Research Assistant Mariah Matheson and Commission Clerk Jessica Kozma Bennett.

A meeting notice was distributed to staff, members and outside parties via regular mail and electronically and is included as an attachment in these minutes as **Exhibit A**. A reminder was sent electronically on November 26. The meeting agenda and visitor's registration sheets are attachments to these minutes and referred as **Exhibit B** and **Exhibit C**.

Rep. Allen called the meeting to order shortly after 9:30 a.m. and recognized her co-chairs Senator Albertson, Co-Chairperson Clodfelter and Representative Gibson. She then recognized Commission Counsel George Givens and asked for comments from co-chairs. Co-Chairman Clodfelter noted that the day's agenda was long. A new member, Representative Larry Womble, was recognized by Co-Chairwoman Allen and he introduced himself from District 71 in Winston-Salem. Co-Chairwoman Allen then reiterated the length of the meeting agenda and asked members to hold questions until after the meeting, if possible.

Mr. Givens thanked Chairwoman Allen and asked members to note a packet of "read only" reports distributed to members. These are included the minutes as **Exhibit D.** One report, "Annual report on the status of leaking underground storage tanks, the State cleanup funds and the Groundwater Protection Loan Fund, was included in the read only reports but was mistakenly recorded. Mr. Givens noted that the "leaking underground storage tanks" report was listed but indeed the physical report was not included in the "read only" packet.

Mr. Givens noted that on the agenda there was a presentation concerning the drought that followed after an extensive series of drought presentations at the October meeting. He continued saying that one speaker on today's agenda, Mr. Marc Thigpen, was invited on behalf of a request by Co-Chair Albertson (Agenda Item 6). He continued noting that there were three water reports on the day's agenda, and asked members to pay

attention to the last report for Item 7, an update on the implementation of the Lagoon Conversion Program and the Swine Methane Capture Pilot Program, adding that the program was authorized by Senate Bill 1465.

Mr. Givens noted several other items on the agenda including item 8, a report on the Catawba/Wateree River Basin Advisory Commission. He told members that there are two other river bi-state commissions and that there is a need simplify the membership selection process and gaining funding for public members, allowing the commissions to function more effectively. Continuing, he noted Item 9 of the agenda regarding pervious pavement legislation mandated in the 2007 Appropriations Act. Mr. Givens said that effective date was not until August 2008 and that discussion of the legislation would continue over several meetings. Mr. Givens then explained that Item 10 of the agenda, the Ecosystem Enhancement Program was added due to a fee increase. This increase, he added, was approved by the Rules Review Commission but received ten letters of objection and as a result will probably come before the 2008 Regular Session.

Mr. Givens continued to explain the agenda noting each item. He then told the Commission that as was authorized at the October ERC meeting, scoping sessions for a proposed water allocation study have been scheduled. At the time of this meeting, three cities, Charlotte, Asheville and Greenville were selected and dates also selected. He added that a meeting in Raleigh was likely as well as a meeting in Wilmington. The meetings are planned for public response to a draft contract between the State and the University of North Carolina at Chapel Hill School of Government. A meeting concerning the construction of artificial slopes follows the Asheville scoping session and is scheduled for January 10.

He continued explaining the agenda and noted for the record that a planning meeting was held at 10 a.m., Thursday, November 15 in room 605 of the Legislative Office Building.

Closing his comments, Co-Chair Allen thanked Counsel and recognized that Rep. Edith Warren was now in attendance. Rep. Samuelson asked if locations were selected for the scoping sessions in Charlotte, Greenville and Asheville. Mr. Givens replied that specific locations had not been decided upon but it was expected that locations would be selected within the upcoming week. Co-Chair Allen then called on the next item, newly appointed staff with the North Carolina Department of Natural Resources, and recognized DENR Secretary William G. Ross.

Mr. Ross thanked Co-Chair began introducing Richard Rogers, who recently was promoted to head the Clean Water Management Trust Fund. He previously worked as Assistant Secretary of Natural Resources. Replacing Rogers is Manly Wilder, who previously worked as director for the Department's Division of Soil and Water Conservation. And replacing him, he continued, is Pat Harris, who was promoted within the Department. He said that his new appointees represented a "wealth of experience and leadership." After discussing his appointees a bit more, the Chairperson moved to Item Five, an update on current drought conditions and recognized Thomas C. Fransen, Chief of the River Basin Management Section with the DENR Division of Water Resources. A copy of his presentation is included in the attachments and is labeled **Exhibit E.**

Co-Chairperson Allen thanked Mr. Ross for his comments and then recognized Mr. Thomas Fransen, Chief of the River Basin Management Section with the Division of Water Resources (DENR) to address the Commission on current drought conditions. Mr.

Fransen began his presentation by noting that his primary job this year was to coordinate with reservoir operators. He then said he would report previous and current drought conditions.

Showing a map from January 2007, Mr. Fransen pointed out that there was no drought. By August 21, however, the entire State had some level of drought, he continued, and added that October 23 had the worst levels. Water levels for the last 30 days were at 77 percent of normal capacity. For a 180-day perspective, the State has lower water levels than a previous drought in 1954. Mr. Fransen continued saying that he participated in a conference call every week to determine a national drought map and that he had been in discussion with officials from public water systems. His office is tracking 628 water systems, he said, and then showed consumption levels following the Governor's request for residents to conserve water. Water use had dropped, however, a recent rain created a backslide in consumption, a backslide created through false hopes that the drought had indeed ended. Drought conditions would continue through the next quarter, he said, adding that there would be rain, but not enough to stabilize water levels.

Mr. Fransen concluded his presentation and Co-Chairperson Allen thanked him. Robin Smith, Assistant Secretary for Environment with DENR was then recognized by the Co-Chairperson. Ms. Smith began saying that she would update the Commission on activities since the last ERC meeting. Her office is largely working with water systems categorized as Tier 1, the most vulnerable water supply systems. Health and Water Resources officials are meeting with staff from each public water system to determine what alternative supplies may be available. She continued saying that her office had specifically worked with some systems to expedite permitting and funding of water-related infrastructure projects, noting projects in Siler City, Sanford, Rocky Mount and Goldsboro. The expediting has allowed Siler City to connect with Chatham County water lines, Goldsboro into the Wayne County public system, and Rocky Mount into the City of Wilson system. She then noted that the City of Raleigh is reducing its water consumption from Falls Lake and is supplementing the deficit with water from Lake Wheeler and Lake Benson.

Moving to her next topic, Ms. Smith said that at the last meeting she discussed gaps in drought management. One gap she has recently discovered, she continued, is the "obvious lack of current information of water use" from public water systems. Until the Governor's call to conserve water, systems had no requirements to report usage.

To remedy this, Ms. Smith suggested creating and maintaining an electronic system and database that could receive all usage information. She said that one was not put in place before because there had been no regulatory concern to do so.

In calling for questions from Commission members, Co-Chairperson Clodfelter asked about oversight of intake construction and levels, and cited high intakes on the Catawba River. Sen. Clodfelter then asked if the State needed "assist or compel" the relocation of intakes. Mr. Fransen said a pending study would look at that issue. Ms. Smith added that many impoundments are often licensed for energy uses or managed by the Army Corps of Engineers, in such impoundments federal approval is needed for any changes. Co-Chairperson Clodfelter followed up saying that the State "need(s) to leave impoundments on the table." Mr. Givens added that placement of intakes is a matter of regulatory concern. Ms Smith replied that she was not sure of the answer but would

assume that Mr. Givens comment is correct. Mr. Givens then added that there would later be legal and engineering considerations.

Senator Forrester asked Ms. Smith if DENR had guidelines for restructured well water. Ms. Smith replied that private wells were a current issue for DENR because of the State's lack of regulatory authority, Co-Chairperson Allen asked about car washes using well water and if the State had any authority over such businesses. Co-Chairperson Gibson then said he would like to meet with staff and added that he felt that during the upcoming 2008 session, legislators will deal with the issue of regulating drinking wells.

Co-Chairperson Gibson noted that he was concerned with the economic impact that drought will have. Representative Harrison asked about the PCS Phosphate Plant in Aurora and if the State had yet addressed a water rights issue. Ms. Smith replied that she did not know. Representative Samuelson asked if using a private well impacted other surface waters, of which Ms. Smith replied it did. Representative Allen thanked Mr. Fransen and Ms. Smith.

Mr. Marc Thigpen was then recognized by Co-Chairperson Allen. Mr. Thigpen is owner of Thigpen Farms in Duplin County and is an advocate of global positioning systems used in fertilizing farms and golf courses. Mr. Thigpen opened saying he was here to "educate the committee" on the potential of nutrient management in global agriculture. He said that water quality was essential for the future of farming. When Mr. Thigpen began using nutrient management on his farm, he witnessed a 30 percent reduction in fertilizer costs after the first year, and was one of possibly only five growers using nutrient management across the State. Mr. Thigpen also noted higher yields because of nutrient management.

He continued saying he realized that he could take nutrient management to a higher level: golf courses. At this point in his presentation Mr. Thigpen showed a series of golf course photos. His presentation is included in the minutes as **Exhibit F.** He noted that benefits for both golf courses and farms include optimum growth performance and good environmental stewardship. He continued and discussed his business' successful projects using nutrient management the State.

As his slide presentation continued, he showed a slide of Eagle Point Golf Course and application maps from 2004. Ending his presentation, Mr. Thigpen said "precision farming is the future ... it will be worldwide ... it will be global." Lastly, Mr. Thigpen noted that Co-Chairperson Albertson's farm was now under nutrient management.

Co-Chairperson Allen then called on Mr. Manly Wilder, Assistant Secretary for Natural Resources from DENR to discuss precision farming under the Agriculture Cost Share Program. Mr. Wilder began noting the precision farming would be agriculture's future.

Mr. Manly's office determined a need to look at precision farming a few years before and DENR sat up experiment station in Eastern North Carolina. Three conservation districts, Beaufort, Hyde and Pitt have asked to participate in the program, he said, and said that nutrient management was much more applicable in the larger fields of Eastern North Carolina.

Co-Chairperson Albertson thanked Mr. Thigpen and Mr. Wilder. She then recognized Mr. Paul E. Rawls to discuss an annual report on water quality law compliance and enforcement for water discharging facilities. Mr. Rawls is Chief of the

Surface Water Protection Section with the Division of Water Quality (DENR). A copy of his presentation is included in the minutes as **Exhibit G.**

Opening his presentation Mr. Rawls noted that there are 1319 individual permitted facilities in North Carolina. Of those, 296 are municipal facilities and 1023 are private. Some communities had interconnecting facilities, he said, adding that the number of facilities declined especially because of closings in the textile industry. As for inspecting these facilities, in 2007 there were 1293 inspections with 613 various enforcements. Total civil penalties levied were $844,181, with $587,144 collected.

In showing a slide with penalty assessment, Mr. Rawls said that assessment trends remained steady and his office had a 93 percent compliance rate.

For the future, a letter was mailed May 31 to all collection systems. The letter informed facility managers that as of June 1, oversight would be "ramped up," including more frequent notices of violation.

Mr. Todd A. Bennett was then recognized to present to the Commission an "Animal Feeding Operations Compliance and Inspection Report." A copy of this report is included in the minutes as **Exhibit H.** Mr. Bennett began his presentation noting permitting actions during the past fiscal year of 2006-2007, including 46 swine permits, nine cattle permits, one poultry permit and zero horse permits. He added that most permits were issued because of "changes of ownership and operations," and seldom are there permits for new operations or expansions.

In addressing the number of inspections, he said required inspections slightly dropped from 2500 to 2486. Closing operations and rescinding permits add to the drop, he said, and began discussing what issues were determined from inspections. The most noted issues among inspections were inadequate freeboard and evidence of over-applications. This accounted for a majority of violations, some 187 and 143 respectively.

Mr. Wilder and Patricia K. Harris, Director of the Division of Soil and Water Conservation (DENR) were recognized by the Co-Chairperson to give an update on the implementation of the Lagoon Conversion Program and the Swine Methane Capture Pilot Program (**Exhibit I**). Mr. Wilder's title is noted previously in these minutes.

Mr. Wilder began saying that authorizing legislation for the program was "landmark legislation for its impact on the environment." He said he was pleased with the cooperation among participating parties, the State, environmental groups, North Carolina State University and others, and noted that the program was a "tremendous effort" and "making excellent progress."

Ms. Harris confirmed Mr. Wilder's comments by saying that the program was making good progress and that the proposed rule could be adopted in early 2009. She then directed Commission members to look at a flow chart included in Exhibit J describing the process of program application, selection, funding and implementation. Tax credits and markets for value added products are currently being looked at, she said.

Representative Justice thanked Senator Albertson for bringing such legislation forward, saying that the program was something for the General Assembly to be proud of.

Mr. Fransen was then again recognized by Co-Chairperson Allen to discuss a report on the Catawba/Wateree River Basin Advisory Commission. Mr. Fransen's title is given previously in the minutes. Mr. Fransen began saying that he was happy to discuss something other than the drought.

The advisory commission, he said, was very active and leading the State in managing resources. He then reviewed a handout included in the minutes as **Exhibit J.** At the commission's January 5, 2007 meeting, a report was given on water use permitting legislation currently under consideration in the South Carolina General Assembly. The commission also adopted a resolution urging the North Carolina Environmental Management Commission to delay action on a proposed interbasin transfer from the Catawba basin as a water source for Concord and Kannapolis. At a second meeting held April 27, 2007, the commission reviewed the status of water management bill at both general assemblies. During that same meeting the commission discussed relicensing Duke Energy reservoirs in the basin. At their last meeting October 5, 2007 the commission updated members of a bill being considered in South Carolina to establish a statewide water use permitting system.

Co-Chairperson Clodfelter said that the next meeting, to be held in January, will focus on establishing parameters for interstate water allocation. He added that there is a good interest in reaching consensus agreement and that his personal hope is for recommendations that make a possible outline. All working with the river basin commission hope for resolution rather than litigation, he said.

Mr. Thomas A. Reeder was then recognized to present and comment on the use of pervious pavement for vehicle parking. This is required from Section 6.22 of Session Law 2007-323. A copy of his presentation is included in the minutes as **Exhibit K.** Mr. Reeder began noting that the legislation applies statewide and affects all new uncovered residential and commercial parking areas. Its requirements include that 20 percent of parking areas must be permeable pavement or the runoff from 20 percent of that area must go into a stormwater management system. He then gave an example of a depleted stream near a shopping center to show the impact of impervious pavement.

Mr. Reeder noted that gravel was not considered permeable because it can become compacted. He then explained that permeable pavement included either porous asphalt or porous concrete and ended his comments saying that permeable pavement could help reduce impacts from the drought.

Speaking of her concerns with the legislation, Ms. Elizabeth Dalton, director of government relations for the North Carolina Retail Merchants Association was recognized. Ms. Dalton began saying she understood the need to reduce stormwater runoff, but that she did not see any reason why the legislation should not apply to churches, schools, day cares and other facilities considered neither commercial or residential. She continued saying that there could be limitations for use, particularly with stores that have deliveries and stores with people loading purchases into vehicles. Also of concern, she noted is that there are very few contractors in the State qualified to install such pavement.

Mr. Duane Coen, Engineering Manager for Lowe's Companies was then recognized. He began saying that "Lowe's is committed to being a responsible corporate citizen." His company implements stormwater prevention programs at their stores in the western hemisphere. Stores control and treat runoff by using lots of standard systems and some surface retention. In limited areas stores have rainwater harvesting and reuse, and in some other areas green roofs are included in construction plans. He also noted that to his knowledge there were only two or three contractors qualified to install such pavement.

A last speaker on the subject, Mr. Todd Simmons of Freeland and Kauffman was recognized. Mr. Simmons said he works with national retailers and now better understands the legislation. His concerns included water quality and inconsistent application of the regulation. He added that he was glad officials at DENR would allow alternative suggestions. Co-Chairperson Allen asked for questions.

Representative Samuelson asked Mr. Coen if Lowe's stormwater management systems are meeting the 20 percent reduction in runoff. Mr. Coen said they were not. Representative Gibson said that an immediate workgroup of building code professionals, residents from East and West need to meet. He followed saying he wanted to know "where rule making is going with this."

Senator Dorsett asked if existing parking areas were grandfathered. Mr. Reeder replied that they were. Monitoring, enforcement and implementation were currently the most relevant issues, he said, and his division was working to come up with a methodology allowing outreach with local governments.

Senator Dorsett asked if cooperation will begin October 1, 2008. Mr. Reeder replied that he hoped to work with local governments during the summer. Co-Chairperson Clodfelter asked about areas with heavy clay such as Charlotte, in areas of which permeable pavement cannot be installed.

Mr. Reeder was thanked by the Co-Chairperson. Mr. William D. Gilmore, director of the Ecosystem Enhancement Program (EEP) (DENR) and Mr. Wilder were recognized to present a report on the EEP program and discuss an in-lieu fee for the program. Mr. Wilder presented two other items on the day's agenda.

Mr. Gilmore began saying that the program was "receiving accomplishments" including national and state recognition, participation in the Top 50 Innovative Government Program through Harvard University's Kennedy School of Government, a year of mitigation with the Department of Transportation, and being named the state Natural Resources Agency of the Year. He thanked fellow employees and began to explain the program. The EEP report is included in the minutes as **Exhibit L.** Mr. Gilmore discussed the EEP's four programs, the Memorandum of Agreement (MOA) Stream and Wetland Program for NCDOT, the MOU Stream and Wetland Program, the Riparian Buffer Program and the Nutrient Offset program. He then reviewed funds included on pages three and four of his report. He then covered his Executive Summary found on pages I and II of his report.

Mr. Manly told Commission members that the in-lieu fee program allows military bases, school systems and the like to pay EEP. EEP, in turn satisfies the responsibility of mitigation, allowing development to ensue. As a totally fee-based program, costs for stream restoration ran seventy dollars more than what fees charged ($223 per linear foot charge compared to a $293 actual cost). Program costs have increased, he said, because of increases in design, land and construction costs. EMC approved a two-tier fee process, but the approval will come before the legislature for review as has received more than 10 objections.

Mr. Manly concluded that the EMC and the program are taking a guarded approach in accepting new mitigation.

Co-Chairperson Allen recognized Mr. William E. Holman, Emeritus Chair of the State Water Infrastructure Commission to present a report by that commission on its activities and findings.

Mr. Holman began with "quick refreshers" noting that the commission was created in 2005, and the commission's purpose is to identify the State's water infrastructure needs and develop a plan to meet needs as well as monitor implementation of that plan. He also noted federal funding for State infrastructure projects.

In 2007, the commission decided to focus efforts on regional collaboration and partnerships, and found that although there is some general encouragement, there is no state policy to make that happen. A copy of Mr. Holman's report is included in the minutes as **Exhibit M.**

Continuing to discuss regional collaborations, Mr. Holman noted that most regional efforts organize in response to local needs and that state funding is the only way to recognize the value of regional collaborations. Mr. Holman then reviewed water and sewer regionalization, included in Exhibit N. For water, 48 percent produce for own use, purchase none and sell none and 26 percent purchase all water. For sewer, 71 percent treat either their own sewage or treat their own and other systems sewage and 29 percent have sewage treated by others.

Mr. Holman reviewed benefits of regional collaborations, including reducing the numbers of treatment plants regulated by the State, making better tolerance of emergencies. Barriers included funding and higher per unit costs in smaller regions, "emotional" barriers and regulatory barriers.

Other barriers include imperfections in systems, such as lots of leaks or a lack of sound fiscal management. Also, he noted, are systems unable to collaborate due to topography and distance between systems.

Mr. Holman then reviewed nine recommendations included in Exhibit N and concluded his discussion noting the importance of working through drought issues.

Senator Kinnaird commented that some years ago another senator filed a collaboration bill that provoked "emotional" issues between systems.

Jean Crews-Klein, commission staff, said the commission had discussed the relationship between regional water planning and the Interbasin Transfer Act.

Co-Chairperson Allen recognized Co-Chairperson Clodfelter. Co-Chairperson Clodfelter asked to read a finding by the North Carolina General Assembly. In reading, he read "findings by the North Carolina General Assembly (show) the existing pattern of public water supply development in North Carolina is dominated by small systems serving few customers. Of the 1782 public water systems on record, according to the Department of Health and Human Services, 80 percent were serving less than 1000 people each. These systems are underfinanced, inadequately designed and maintained, difficult to coordinate with regional systems and in general inferior to larger systems serving larger communities."

Senator Clodfelter continued reading the findings that called for county-wide or regional systems for better quality and drought control. He then stopped reading and gave the date of the report: 1971. Senator Clodfelter continued saying that the recommendations he heard at the meeting were "tepid after 36 years." A time for encouragement, education and explaining had long since passed, and that the General Assembly did recognize a need and had not yet addressed it. He ended saying he hoped to get more aggressive about recommendations.

Due to time constraints, Item 12 was moved from the agenda and will be taken up at the December meeting.

The meeting was adjourned at 1:42 p.m.

Schedule of Future Meetings
Meetings of Interested Parties (605 Working Groups)
Additional Information

COMMISSION MEETING:

The Environmental Review Commission (Commission) will meet at 9:30 a.m. Tuesday 27 November 2007 in Room 544 of the Legislative Office Building in Raleigh.

At this meeting, the Commission will begin or continue studies for which the Commission is responsible, hear reports from State agencies, discuss topics to be considered at future meetings, and attend to other matters. Listed below are potential agenda topics for this meeting and for future meetings. More specific information regarding the agenda for the 27 November meeting of the Commission will be developed at the staff planning meeting discussed below. Commission Staff may publish a revised notice/draft agenda following the staff planning meeting if circumstances permit.

STUDIES

1) Issues related to the franchise of solid waste management facilities by units of local government. (S.L. 2007-550, Sec. 18)

2) Issues related to the transportation of solid waste by rail or barge, including the extent to which regulation of the transportation of solid waste by rail or barge may be preempted by federal law. (S.L. 2007-550, Sec. 18)

3) Issues related to the use of pervious surfaces for vehicle parking areas, including associated costs, impact to the environment of stormwater runoff, and practices of other states with regard to stormwater best management practices. (S.L. 2007-323, Sec. 6.22.(b))

4) Allocation of surface water resources and their availability and maintenance in the State, including issues related to the transfer of water from one river basin to another, the withdrawal of water for consumptive use, and the accuracy and tolerance of equipment used to measure the flow of water transferred from one river basin to another river basin. (S.L. 2007-518, Sec. 1.(a))

5) Preparation of a revised map entitled "Major River Basins and Sub-basins in North Carolina" as a recommended replacement for the map referenced in G.S. 143-215.22G. The revised map shall define the extent to which any river basin that encompasses any river that flows from another state into North Carolina or that flows from North Carolina into another state extends into an adjacent state. (S.L. 2007-518, Sec. 1.(b))

REPORTS *(Report due dates are indicated in parentheses)*

General/Miscellaneous:

6) Annual report on the One-Stop Permit Assistance Program on the number of environmental permits that took more than 90 days to issue or deny, types of permits, reasons for extended processing time, and how the time used to issue or deny the permits compared with projected time provided to the applicant by DENR. (143B-279.12(e)) *(1 October)*

7) Annual report on the findings and recommendations on the success of the express permit and certification review program. (G.S. 143B-279.13(c)) *(1 March)*

8) Annual report on litter enforcement, prevention, and removal efforts. (G.S. 147-12(b)) *(1 March)*

9) Annual report on the evaluation and adjustment of the boundaries of the area served by each Metropolitan Planning Organization. (G.S. 136-202(d)) *(1 November)*

10) Annual report on the cost of the State's environmental permitting program (G.S. 143-215.3A(c)) *(1 November)*

Air Quality:

11) Annual report on the cost of the Title V program. (G.S. 143-215.3A(c)) *(1 November)*

12) Annual report on implementation of S.L. 2002-4 (Clean Smokestacks Act). (S.L. 2002-4, Sec. 14) *(1 June)*

13) Annual report on the desirability of requiring and feasibility of obtaining reductions in emissions of NOx and SO2 beyond those required by the Clean Smokestacks Act. (S.L. 2002-4, Sec. 11) *(1 September)*

Coastal Management:

14) Annual report on the progress in developing and implementing the Coastal Habitat Protection Plans and reports on the completion or substantial revision of each draft Coastal Habitat Protection Plan. (G.S. 143B-279.8(e) and G.S. 143B-279.8(f)) *(1 September)*

15) Annual report by the Coastal Resources Commission evaluating the impacts on water quality and other environmental impacts from new urban waterfront area development. (S.L. 2004-117, Sec. 4) *(1 October)*

Hazardous Waste Management:

16) Annual report on the Inactive Hazardous Sites Program. (G.S. 130A-310.10) *(1 October)*

17) Annual report on implementation of the Resident Inspectors Program at commercial hazardous waste facilities. (G.S. 130A-295.02(m)) *(1 October)*

18) Report of Superfund cost share fund expenditures for cleanup of sites on the National Priorities List. (S.L. 1999-237(15.6)(b)) *(Floating, within 30 days of expenditure)*

19) Annual report on the North Carolina Hazardous Waste Management Plan. (G.S. 130A-294(i)) *(1 October)*

20) Annual report on the Effectiveness of the Brownfields Property Reuse Act. (G.S. 130A-310.40) *(1 October)*

Parks and Recreation / Land Conservation:

21) Parks and Recreation Trust Fund Annual Report, Fiscal Year 2003-2004. (G.S. 113-44.15(c)) *(1 October)*

22) North Carolina Natural Heritage Trust Fund Award Report, Fiscal Year 2005-2006. (G.S. 113-77.9(e)) *(Semi-annually, within 30 days of each revision)*

23) Annual report on progress towards attaining the State's goal of protecting one million acres of farmland, open space, and conservation lands. (G.S. 113A-241(c)) *(1 October)*

24) Annual report on implementation of the Conservation Easements Program and inventory of all conservation easements held by DENR. (G.S. 113A-235(c)) *(1 October)*

25) Annual report on the activities of the North Carolina Agricultural Development and Farmland Preservation Trust Fund and Advisory Committee, the agriculture easements purchased, and agricultural projects funded during the previous year. (S.L. 2007-495, Sec. 23 *(May 1)*

Water Quality:

26) Interim report on the pilot program to streamline the process for the issuance of an improvement permit or an authorization to construct for an on-site subsurface wastewater system in certain counties by authorizing local health departments, authorized agents of DENR, and licensed soil scientists to complete soil and site evaluations in participating counties. (S.L. 2006-136, Sec. 3) *(October 1)*

27) Annual report on permitting and inspecting animal waste management systems/Animal Waste Compliance Report. (G.S. 143-215.10M) *(1 October)*

28) Semiannual report on the pilot program for inspection of animal waste management systems including a comparison of the costs of conducting operations reviews and inspections under the pilot program with the costs of conducting operations and inspections under G.S. 143-215.10D and G.S. 143-215.10F. *(15 October)*

29) Annual report on the compliance/enforcement of water quality laws for facilities that discharge into surface waters. (G.S. 143-215.9A) *(1 October)*

30) Annual report on the Wastewater Discharge Elimination Program. (S.L. 2001-452, Sec. 2.9) *(15 October)*

31) Annual report on Basinwide Water Quality Management Plans. (G.S. 143-215.8B) *(1 October)*

32) Annual report on the Dry-Cleaning Solvent Cleanup Program. (G.S. 143-215.104U) *(1 October)*

33) Annual report on the status of leaking petroleum underground storage tanks, the State cleanup funds, and the Groundwater Protection Loan Fund. (G.S. 143-215.94M) *(1 September)*

34) Annual report by the Roanoke River Basin Bi-State Commission. (G.S. 77-98) *(1 October)*

35) Annual report by the Yadkin-Pee Dee River Basin Advisory Commission. (G.S. 77-117) *(1 October)*

36) Annual report by the Catawba/Wateree River Basin Advisory Commission and the Yadkin/Pee Dee River Basin Advisory Commission. (G.S. 77-117) *(1 October)*

37) Implementation of the Ecosystem Enhancement Program and use of the Ecosystem Enhancement Fund, including inventory of property and easements. (G.S. 143-214.13) *(1 November)*

Water Quantity:

38) Annual report by the State Water Infrastructure Commission on its activities and findings, includes any recommendations of the Commission that require action by the General Assembly to implement. (G.S. 159G-67) *(1 November)*

PLANNING MEETING:

To facilitate development of the agenda for the 27 November meeting of the Commission, to begin planning for subsequent meetings of the Commission, and to receive input from interested persons regarding the work of the Commission, the Commission Counsel will hold an informal planning meeting at **10:00 a.m. on Thursday 15 November 2007 in Room 605 of the Legislative Office Building**. Persons who wish to participate in the development of the agenda for meetings of the Commission, or who are interested in any matter before the Commission, are invited to attend.

SCHEDULE OF FUTURE MEETINGS:

Below is a schedule of meetings of the Environmental Review Commission for December 2007 through May 2008. **This schedule is tentative and subject to adjustment.** For planning purposes, however, please reserve these dates. This schedule may be modified to allow for out-of-town business meetings or site visits and in the event that it becomes necessary to cancel a scheduled meeting due to hazardous weather conditions.

Please note the following:

1. Meetings of the Commission normally begin at 9:30 a.m., include a lunch break, and run until mid-afternoon. Please plan on meeting from 9:30 a.m. until at least 3:30 p.m. Meetings of the Commission are open to the public.

2. Staff planning meetings normally begin at 10:00 a.m. and adjourn by noon. Staff planning meetings are informal and are open to the public. Commission members are not expected to attend these meetings.

3. The 2008 Regular Session is scheduled to begin at 12:00 noon on Tuesday 13 May 2008. The Commission may meet shortly after the beginning of the session to complete ongoing work and to consider any legislative proposals and recommendations and may meet at other times during the legislative session.

Commission Meeting	Location	Staff Planning Meeting	Location
Wednesday 19 December 2007	544 LOB	Wednesday 5 December 2007	605 LOB
Wednesday 23 January 2008	544 LOB	Friday 11 January 2008	605 LOB
Thursday 14 February 2008	544 LOB	Tuesday 5 February 2008	605 LOB
Tuesday 18 March 2008	544 LOB	Friday 7 March 2008	605 LOB
Thursday 10 April 2008	544 LOB	Friday 28 March 2008	605 LOB
Friday 9 May 2008	544 LOB	Tuesday 29 April 2008	605 LOB
Wednesday 14 May 2008	544 LOB		

MEETINGS OF INTERESTED PARTIES (605 WORKING GROUPS):

The Commission Counsel will hold meetings of interested parties on specific topics as indicated below:

Underground Storage Tank Working Group
2:00 p.m. Monday 17 December 2007 – 605 Legislative Office Building

ADDITIONAL INFORMATION:

If you have questions related to the Commission, please feel free to contact the Commission Counsel or other Commission staff at (919) 733-2578.

AGENDA

9:30 a.m. Tuesday 27 November 2007
Room 544 Legislative Office Building
Raleigh, North Carolina

1. Call to order
   Representative Lucy T. Allen, Presiding

2. Introductory remarks by Cochairs *(5 minutes)*
   Representative Lucy T. Allen
   Representative Pryor A. Gibson
   Senator Charles W. Albertson
   Senator Daniel G. Clodfelter

3. Report to the Commission and explanation of agenda items *(10 minutes)*
   George F. Givens, Commission Counsel

4. Introduction of newly appointed staff in the Department of Environment and Natural Resources *(5 minutes)*
   William G. Ross, Jr., Secretary
   DENR

5. Update on current drought conditions in light of conservation efforts and recent rain events; process for development of recommendations to improve future responses to drought conditions *(30 minutes)*
   Thomas C. Fransen, Chief
   River Basin Management Section, Division of Water Resources, DENR

   Robin W. Smith, Assistant Secretary for Environment
   DENR

Duane A. Coen, Engineering Manager *(10 minutes)*
Lowe's Companies, Inc.

Todd Simmons, PE *(10 minutes)*
Freeland & Kauffman, Inc.

10. Report on the Implementation of the Ecosystem Enhancement Program and use of the Ecosystem Enhancement Fund, including inventory of property and easements and a discussion of the in-lieu fee program (G.S. 143-214.13) (*20 minutes*)
    William D. Gilmore, Director
    Ecosystem Enhancement Program, DENR

    Manly S. Wilder, Assistant Secretary for Natural Resources
    DENR

11. Annual report by the State Water Infrastructure Commission on its activities and findings, including any recommendations of the Commission that require action by the General Assembly to implement (G.S. 159G-67) (*20 minutes*)
    William E. Holman, Emeritus Chair
    State Water Infrastructure Commission

12. Hazardous waste management (*30 minutes*)
    Annual report on the implementation of the resident inspectors program for commercial hazardous waste facilities including implementation of the amendments to the program made by S.L. 2007-107 (G.S. 130A-295.02(m)) *(10 minutes)*
    Elizabeth W. Cannon, Chief
    Hazardous Waste Section
    Division of Waste Management, DENR

    Annual report on the Inactive Hazardous Sites Program including discussion of the reorganization of contaminated sites program in the Department (G.S. 130A-310.10) *(10 minutes)*
    Dexter R. Matthews, Director
    Division of Waste Management, DENR

    Report on the effectiveness of the Brownfields Property Reuse Act (G.S. 130A-310.40) *(10 minutes)*
    Dexter R. Matthews, Director
    Division of Waste Management, DENR

13. Commission discussion and announcements

14. Adjourn

6. Discussion of precision farming using the Global Positioning Systems (GPS) to control the application of fertilizers *(30 minutes)*

   Marc Thigpen, Owner
   Thigpen Farms, Duplin County

   Discussion of precision farming using GPS under the Agriculture Cost Share Program

   Manly S. Wilder, Assistant Secretary for Natural Resources
   DENR

7. Water quality reports *(30 minutes)*

   Annual report on compliance with and enforcement of water quality laws for facilities that discharge into surface waters (G.S. 143-215.9A) *(10 minutes)*

   Paul E. Rawls, Chief
   Surface Water Protection Section, Division of Water Quality, DENR

   Annual report on permitting and inspecting animal waste management systems (Animal Waste Compliance Report) (G.S. 143-215.10M) *(10 minutes)*

   Todd A. Bennett, Supervisor
   Animal Feeding Operation Unit, Aquifer Protection Section,
   Division of Water Quality, DENR

   Update on the implementation of the Lagoon Conversion Program and the Swine Farm Methane Capture Pilot Program (Section 2 and Section 4 of S.L. 2007-523) *(10 minutes)*

   Manly S. Wilder, Assistant Secretary for Natural Resources
   DENR

   Patricia K. Harris, Director
   Division of Soil and Water Conservation, DENR

8. Report on the Catawba/Wateree River Basin Advisory Commission (G.S. 77-117) *(10 minutes)*

   Thomas C. Fransen, Chief
   River Basin Management Section, Division of Water Resources, DENR

9. Presentation and comment on the use of pervious pavement for vehicle parking areas as required by Section 6.22.(a) of S.L. 2007-323 *(35 minutes)*

   Thomas A. Reeder, Chief *(10 minutes)*
   Wetlands and Stormwater Branch, Surface Water Quality Section,
   Division of Water Quality, DENR

   Elizabeth Dalton, Director *(5 minutes)*
   Government Relations, North Carolina Retail Merchants Association

MEMORANDUM

To: Members of the Environmental Review Commission
From: Jennifer Mundt, Commission Analyst
Re: Reports to the Commission

The following reports have been submitted by the Department of Environment and Natural Resources (DENR) to the Environmental Review Commission (Commission) since the last reports distribution on 31 October 2007. These reports are designated as read only and are attached to this memorandum:

1) Annual report on the implementation of S.L. 2002-4 (Clean Smokestacks Act). 1 June 2007. Authority: S.L. 2002-4, Sec. 14.

2) Annual report on the desirability of requiring and feasibility of obtaining reductions in emissions of NO_x and SO_2 beyond those required by the Clean Smokestacks Act. 1 September 2007. Authority: S.L. 2002-4, Sec. 11.

3) Annual report on the North Carolina Hazardous Waste Management Plan. 1 October 2007. Statutory Authority: G.S. 130A-294(i).

4) Semiannual reports on the pilot program for inspection of animal waste management systems. 15 April 2007 and 15 October 2007. Authority: S.L. 2007-536, Sec. 2.(a).

The following reports have been submitted by the Department of Environment and Natural Resources to the Commission and will be distributed in connection with today's agenda as follows:

1) Annual report on the compliance/enforcement of water quality laws for facilities that discharge into surface waters. 1 October 2007. Statutory Authority: G.S. 143-215.9A. ***Agenda Item #7***

2) Annual report on permitting and inspecting animal waste management systems/Animal Waste Compliance Report. 1 October 2007. Statutory Authority: G.S. 143-215.10M. ***Agenda Item #7***

3) Annual report on the implementation of the Ecosystem Enhancement Program and the use of the Ecosystem Enhancement Fund, including inventory of property and easements. 1 November 2007. Statutory Authority: G.S. 143-214.13. ***Agenda Item #10***

4) Annual report on the implementation of the resident inspectors program at commercial hazardous waste facilities. 1 October 2007. Statutory Authority: G.S. 130A-295.02(m)). ***Agenda Item #12***

5) Annual report on the Inactive Hazardous Sites Program. 1 October 2007. Statutory Authority: G.S. 130A-310.10. ***Agenda Item #12***

6) Annual report on the effectiveness of the Brownfields Property Reuse Act. 1 October 2007. Statutory Authority: G.S. 130A-310.40. ***Agenda Item #12***

The following report has been submitted by the State Water Infrastructure Commission (SWIC) and is being distributed in connection with today's ***Agenda Item #11*** as follows:

1) Annual report the activities and findings of the SWIC, including any recommendations of the Commission that require action by the General Assembly to implement. 1 November 2007. Statutory Authority: G.S. 159G-67.

The following reports have been received and are being held for distribution either as read-only or for presentation at a future meeting of the Commission. If you would like a copy of one of these reports in advance of the next meeting, please contact Jennifer Mundt at (919) 733-2578 or jennifermu@ncleg.net for assistance.

1) *Annual report on the Parks and Recreation Trust Fund, Fiscal Year 2006-2007.* 1 October. Statutory Authority: G.S. 113-44.15(c).

2) *Annual Report and Recommendations on the One-Stop Permit Assistance Program.* 1 October 2006. Statutory Authority: G.S. 143B-279.12.

3) *Annual Report on Litter Enforcement, Prevention, and Removal Efforts.* 1 March 2007. S.L. 2006-79, Sec. 15.

4) *2006 Annual Report NC Million Acre Initiative.* 1 October 2007. Statutory Authority: G.S. 113A-241(c)).

5) *Annual report on the status of leaking underground storage tanks, the State cleanup funds and the Groundwater Protection Loan Fund.* 1 September 2007. Statutory Authority: G.S. 143-215.94M.

Please contact George Givens, Jeff Hudson, Jennifer McGinnis, Jennifer Mundt, or Mariah Matheson at (919) 733-2578 if you have any questions or comments.

The Honorable Pryor A. Gibson, Co-Chair
Environmental Review Commission

Subject: Emissions Reductions Beyond the Clean Smokestacks Act

Dear Senator Albertson, Senator Clodfelter, Representative Allen, Representative Gibson:

SL2002-4 Section 11 (attached) requires the Environmental Management Commission study the desirability of requiring and the feasibility of obtaining reductions in emissions of oxides of nitrogen (NO_x) and sulfur dioxide (SO_2) beyond those required by the Clean Smokestacks Act. It also requires the EMC to report its findings and recommendations to the General Assembly and the Environmental Review Commission annually.

Since the Clean Smokestacks Act was passed in June 2002, significant Federal regulatory changes have occurred. Specifically, the Clean Air Interstate Rule (CAIR) requires North Carolina's neighboring states to achieve major reductions in NO_x and SO_2 -- reductions that require installation of state-of-the-art control equipment. Although there may be questions about the timing and emissions reductions of CAIR, the Division of Air Quality (DAQ) believes CAIR will ultimately provide major benefits to North Carolina's air quality.

The Clean Smokestacks Act already required that state-of-the-art control equipment be installed on many units in North Carolina. CAIR annual NO_x and SO_2 emissions budgets are even lower than those set by the Clean Smokestacks Act. This could result in even more units in North Carolina having state-of-the-art control equipment applied.

Given the recent action by the Federal government regarding power plant emissions, it is recommended that the study as to whether or not further State action is required be deferred until an evaluation is made of the progress of North Carolina and its neighbors in complying with CAIR. The EMC would propose that the reporting begin on December 1, 2013. This will give the

specified electric generation facilities in North Carolina time to implement their control strategies and will also give the DAQ time to quantify the air quality impacts. Requiring reporting prior to the complete implementation of these control strategies will provide little new or beneficial information. Furthermore, the evolution of new control technologies is fairly long term and it is recommended that the frequency of the reporting thereafter be on a three-year basis.

Sincerely,

David Moreau, PhD.
Chair, EMC

GENERAL ASSEMBLY OF NORTH CAROLINA

SESSION 2001

SESSION LAW 2002-4
SENATE BILL 1078

AN ACT TO IMPROVE AIR QUALITY IN THE STATE BY IMPOSING LIMITS ON THE EMISSION OF CERTAIN POLLUTANTS FROM CERTAIN FACILITIES THAT BURN COAL TO GENERATE ELECTRICITY AND TO PROVIDE FOR RECOVERY BY ELECTRIC UTILITIES OF THE COSTS OF ACHIEVING COMPLIANCE WITH THOSE LIMITS.

The General Assembly of North Carolina enacts: ...

SECTION 11. The Environmental Management Commission shall study the desirability of requiring and the feasibility of obtaining reductions in emissions of oxides of nitrogen (NOx) and sulfur dioxide (SO2) beyond those required by G.S. 143-215.107D, as enacted by Section 1 of this act. The Environmental Management Commission shall consider the availability of emissions reduction technologies, increased cost to consumers of electric power, reliability of electric power supply, actions to reduce emissions of oxides of nitrogen (NOx) and sulfur dioxide (SO2) taken by states and other entities whose emissions negatively impact air quality in North Carolina or whose failure to achieve comparable reductions would place the economy of North Carolina at a competitive disadvantage, and the effects that these reductions would have on public health, the environment, and natural resources, including visibility. In its conduct of this study, the Environmental Management Commission may consult with the Utilities Commission and the Public Staff. The Environmental Management Commission shall report its findings and recommendations to the General Assembly and the Environmental Review Commission annually beginning 1 September 2005. ...

In the General Assembly read three times and ratified this the 19th day of June, 2002.

(Note: The initial reporting date was changed to 1 September 2007 by Senate Bill 1590, Section 12, Session 2005.)

INTRODUCTION

The State of North Carolina requires that the Department of Environment and Natural Resources (DENR) develop a comprehensive hazardous waste management plan every two years. The first plan was completed in July 1, 1990; the latest plan was completed in 2006. Beginning October 1, 2003, the Department was also required to submit an annual report on the hazardous waste management plan per GS 130A – 294(i). This report includes an evaluation of hazardous waste management in North Carolina and identifies DENR's activities and recommendations in the following areas: improving waste management, cleaning up of hazardous waste, reducing the amount of waste generated, minimizing the amount of hazardous waste which must be disposed, and maximizing resource recovery, reuse, and conservation.

This report includes North Carolina data from the Environmental Protection Agency's (EPA) 2005 "Biennial Report of Hazardous Waste Generation" (2005 BR). Large Quantity Generators (LQGs) and Treatment, Storage, and Disposal Facilities (TSDFs) are required to provide EPA with information on their waste management activities on a biennial basis. The 2005 BR was posted to the website in early 2006 and can be found at http://www.epa.gov/epaoswer/hazwaste/data/br05/index.htm. Data for the 2007 BR will be due by April 1, 2008.

NORTH CAROLINA HAZARDOUS WASTE SECTION

The Hazardous Waste Section was authorized by EPA in 1980 to implement the Resource Conservation and Recovery Act (RCRA) in North Carolina in lieu of the EPA. Continuing developments in the hazardous waste program nationwide have required the Section to continually apply for authorization in program areas, such as case development audits (criminal and administrative investigations), corrective action, and alternatives to permitting and emission monitoring. The Hazardous Waste Section (HWS) has a staff of 51 people working in three branches: Compliance Branch, Facility Management Branch and Programs Branch. Collectively, the duties include, but are not limited to, the following areas:

- Regulate the management of hazardous waste by generators, transporters, treatment, storage, disposal and recyclers facilities;
- Educate the hazardous waste community by providing technical assistance through individual consultations and seminars that encourage waste reduction, sound recycling, safe management practices and proper disposal (as a last resort);
- Issue permits specifying requirements that each hazardous waste treatment, storage, recycling or disposal facility must meet;
- Provide a continuing compliance presence at commercial hazardous waste management facilities through the HWS Resident Inspector Program;

- Conduct compliance inspections and, in coordination with the North Carolina Office of the Attorney General, take enforcement actions against violators;
- Require groundwater assessments, facility investigations and corrective measures at facilities where hazardous wastes have been released into the environment and
- Ensure section staff receives necessary training and professional development opportunities to continually improve their job performance.

Information on most of the activities above is captured in the national hazardous waste database, Resource Conservation and Recovery Act Information (RCRAInfo). The database is managed by the EPA, and most of the data is entered by authorized state programs. RCRAInfo contains comprehensive information on all facilities that generate or manage hazardous waste within a state, as well as all the HWS activities affecting these facilities. Data from RCRAInfo will be used to provide information to the Department's Facility Identification Template for States database (FITS) and the Departmental Decision Support System.

To view regulatory information for specific hazardous waste sites, visit http://www.epa.gov/enviro/. For details about the Division of Waste Management and the Hazardous Waste Section, visit http://www.wastenotnc.org/.

HAZARDOUS WASTE GENERATION, MANAGEMENT AND CLEANUP

In 2005, 431 North Carolina large quantity generators (LQGs)[1] reported generating 373,208 tons of hazardous waste[2]. Of the 431 LQGs, the top 10 facilities generated 369,600 tons, or 99 percent, of the total quantity of hazardous waste generated by North Carolina's large quantity generators. In 2003, 439 LQGs generated 78,817 tons of hazardous waste, while the top 10 facilities generated 43,610 tons.

Although only LQGs and TSDFs are required to report their hazardous waste generation and management amounts, it is important to note that North Carolina also has 1,823 small quantity generators and 4,498 conditionally exempt small quantity generators[3]. These facilities are not required to report the amount of hazardous waste they generate because they are typically small businesses for whom periodic reporting could be overly burdensome. However, these facilities collectively generate a significant amount of hazardous waste that must be

[1] Large Quantity Generators are defined as facilities that generate 1,000 kg (2,200 lbs.) or more of hazardous waste in a calendar month.

[2] The large increase in waste generated in 2005 was due to a change in reporting procedures by a single generator.

[3] Small Quantity Generators are defined as facilities that generate between 100 kg and 1,000 kg (220 lbs. to 2,200 lbs.) per calendar month. Conditionally Exempt Small Quantity Generators generate less than 100 kg (220 lbs. per calendar month.

managed properly and in compliance with all applicable rules. Significant resources are devoted to compliance and enforcement activities, technical assistance and outreach at these facilities.

Between October 2006 and September 2007, approximately 402 tons and 22,000 gallons of mismanaged hazardous waste were brought into compliance or properly disposed through the Compliance Program.

North Carolina has 31 facilities in the permitting workload universe and 60 facilities in the post-closure workload universe. Approximately 93 percent of these facilities are permitted, under an order or other approved control for management or remediation of their hazardous waste. There are 109 facilities that are subject to RCRA Corrective Action. Progress in the Corrective Action Program is tracked through environmental indicators. Currently, 100 percent of high priority corrective action sites have human exposures under control and 82 percent of high priority corrective action sites have groundwater migration under control.

NORTH CAROLINA HAZARDOUS WASTE REDUCTION INITIATIVES

HAZARDOUS WASTE REDUCTION INITIATIVES

A. Commitment to Hazardous Waste Minimization

The HWS continues to work with EPA Region 4 to solicit participants in the National Partnership for Environmental Priorities. This voluntary program fosters partnerships between government and industry to reduce hazardous waste -- especially waste containing any of the 30 chemicals known to be highly toxic. Partners who make significant progress in waste reduction receive national recognition for their achievements.

The North Carolina Hazardous Waste Section has also committed to the following:

- Incorporate pollution prevention training (based on targeted priority chemical waste streams) into annual generator workshops, industry meetings and enforcement settlement negotiations;
- Review facility requests for alternative management practices for hazardous waste (use/reuse, substitution, reclassification and delisting), and
- Support intervention projects to reduce/eliminate the presence of priority chemicals via partnerships with other agencies.

B. Environmental Stewardship Initiative

DENR's Environmental Stewardship Initiative promotes and encourages superior

environmental performance by North Carolina's regulated community. This voluntary program stimulates the development and implementation of programs that use pollution prevention and innovative approaches to meet and exceed regulatory requirements. There are three levels of participation. "Environmental Partners" is for organizations interested in developing a systematic approach to improving their environmental performance. The "Rising Steward" level is designed for those organizations that have a mature environmental management program. The "Environmental Steward" level is for organizations that already display a commitment to exemplary environmental performance beyond what is required by law. All participants must set environmental performance goals that include pollution prevention and are required to report annually on progress towards these goals and net pollution reductions.

This important program not only recognizes outstanding environmental performance at the "Steward" level, but provides encouragement and assistance to foster improved environmental performance by North Carolina organizations. Coaches (technical staff) are assigned to each participant to provide technical assistance on pollution prevention and develop an environmental management system. Networking opportunities allow participants to learn from each other and share success stories. This program seeks to reduce the impact on the environment beyond measures required by any permit or rule, producing a better environment, conserving natural resources and resulting in long-term economic benefits.

For more information about the program, visit http://www.p2pays.org/esi/.

C. Mercury Switch Removal

The HWS implemented a program which encourages the removal and recycling of mercury-containing convenience light switches from scrap automobiles known as "end of life" vehicles. Initially enacted in 2005 and revised and updated in 2007 by the General Assembly, this program requires auto recyclers and scrap metal processors to remove the switches before the vehicles are crushed, shredded, and recycled into the manufacture of steel. The vehicle recyclers and scrap metal processors will receive $5.00 for each switch that is removed, collected, and sent for recycling. Removal of the switches prior to recycling greatly reduces mercury emissions during the steel-making process.

D. North Carolina School Chemical Cleanout and Maintenance Project

The HWS has received a grant from EPA for a pilot program to remove chemicals from public schools throughout North Carolina and to provide technical assistance, training and educational guidance on proper chemical management. Training materials will be developed for school personnel in the areas of progressive laboratory and maintenance chemical management, GreenChemistry, MicroChemistry and other preventative approaches for future

chemical management. Workshops will be provided in strategic locations in the state to allow for the best attendance.

E. Other Activities

The HWS will continue to support safe hazardous waste management in North Carolina by:

- Supporting opportunities for waste minimization and recycling and supporting annual generator workshops that help educate the largest generators on hazardous waste regulations and the expectations of hazardous waste inspectors;
- Seeking to establish a hazardous waste generator security deposit to fund the cleanup of abandoned generator sites that do not meet acceptable environmental standards;
- Continuing to seek EPA authorization to maintain HWS's authority to implement newly promulgated regulations and standards;
- Improving the quality of hazardous waste data for hazardous waste trend analysis and sound decision-making; and
- Participating in EPA's rulemaking projects such as those involving standards for the recycling of used industrial rags and wipes, tailored waste management requirements for academic laboratories, revisions to the regulatory standards for materials that are recycled, and other regulatory proposals.

The 2007 North Carolina State Legislature enacted House Bill 36 which creates additional notification and regulatory requirements primarily for North Carolina Commercial TSDFs. It also requires North Carolina Transfer Facilities to register with the Department to obtain a hazardous waste Transfer Facility identification number and requires that Transfer Facilities notify the Department of every hazardous waste transporter that makes use of its facility. A report is due to the Environmental Review Commission on February 15, 2008, on whether further regulation of these facilities is warranted.

APPENDIX 14

EXECUTIVE SUMMARY

From 1999 through 2006, the pilot program has collected data from 2,720 documented site visit reports to 167 permitted animal operations in Brunswick, Columbus, Jones and Pender Counties. The Division of Soil and Water Conservation (DSWC) staff has used this data to study and better understand the factors that influence compliance and affect the potential for environmental impact by animal waste management systems. For 2006, DSWC experienced or observed the following:

- Weather had a significant negative influence on overall compliance by pilot farms in the second half of 2006. (p. 9, p.11)
- The percentage of pilot farms categorized into the potential *low impact* category decreased from 96% in 2005 to 92% in 2006. (Fig. B, p.10)
- A higher percentage of noncompliance incidents were noted on pilot farms versus non-pilot farms in the 28 eastern counties of North Carolina. (p. 8)
- Pilot farms are more likely to report noncompliance. (p. 8)
- Overall, the percentage of farms documented with "immediate threat" problems such as waste discharges to state surface waters and waste levels within structural freeboard is greater for pilot farms versus non-pilot farms in the 28 eastern counties. (p. 9)
- Fourteen farms were categorized as potential high impact to the environment due to documented noncompliance performance. Eight of these farms are new to the program and located in Pender County. Five of the six remaining farms had documented non-compliance histories as potential high impact farms prior to 2006. (p. 10)
- DSWC *per-visit* costs continue to be less for pilot farms when compared to non-pilot farms. (Tab. 4, p.12)
- DSWC *per-farm* costs are higher for pilot farms than non-pilot farms due to increased frequency of site visits. (Tab. 4, p.12)

BACKGROUND

The objective of the Animal Waste Management Inspection Pilot (hereinafter the pilot), and in accordance with Section 12.7(b) of S.L. 2005-276, is to determine how DSWC staff can respond more quickly and effectively, with technical assistance, to complaints and problems to help farms achieve compliance with environmental regulations. In addition, the program allows Department of Environment and Natural Resources (DENR) staff to test approaches for earlier identification of problems, and to target DENR's resources for expediting corrective actions.

The pilot differs from the state's traditional animal inspections program in that DSWC staff conducts annual *routine* compliance inspections, in addition to performing *routine* operation reviews of all permitted livestock operations in Brunswick, Columbus, Jones and Pender counties. DWQ staff provides regulatory oversight, performs compliance audits with DSWC staff of "targeted" potential high environmental impact farms, responds to DSWC referrals and conducts additional compliance inspections for further investigation and enforcement actions as warranted.

Currently there are 166 swine farms and one horse farm in the pilot area with 95 farms operating under a National Pollutant Discharge Elimination System (NPDES) general permit and 72 farms operating under a State Non-discharge (State) general permit. This number of farms in the pilot area increased by 37% from 2005, due to the inclusion of Pender County into the program.

The pilot program is currently scheduled to end September 1, 2007.

Precipitation

As stated in earlier pilot reports, annual precipitation amounts and events have the biggest impact on compliance performance by farms in the pilot program area. Animal waste management systems, including anaerobic lagoons and waste storage ponds, are generally designed to store one 25-year, 24-hour storm event (ranges 7 to 8 inches in pilot area); 180 days of excess rainfall over evaporation based on historical averages; wash water and animal waste. Heavy precipitation amounts greater than historical average, and/or periods of prolonged precipitation can drastically decrease the storage capacity of the waste system. In addition, the waste system's capacity to land apply waste to receiving crops is also diminished due to wet or frozen soil conditions, wind, and/or availability of adequate crops to utilize the nutrients in the waste.

2006 proved challenging for pilot farms in the coastal counties because precipitation during the first half of the year was 4¾ inches *below* normal, while precipitation during the second half was 10½ inches *above* normal. Overall, pilot counties received two-thirds of its annual precipitation amount from July through December. Based on

historical averages, the pilot area would expect to receive only 55% of its annual precipitation during the second half of the calendar year.

Figure A reflects the uneven monthly precipitation distribution for 2006 within the pilot counties. (See the ***Appendix*** at the end of the report for monthly and annual climate data results.) Higher than normal precipitation received in September was a direct result of Tropical Storm Ernesto as reported in the *2006 Semiannual ERC Report.* Otherwise, North Carolina was fortunate in that the state did not experience a direct hit from a hurricane in 2006, despite earlier predictions.

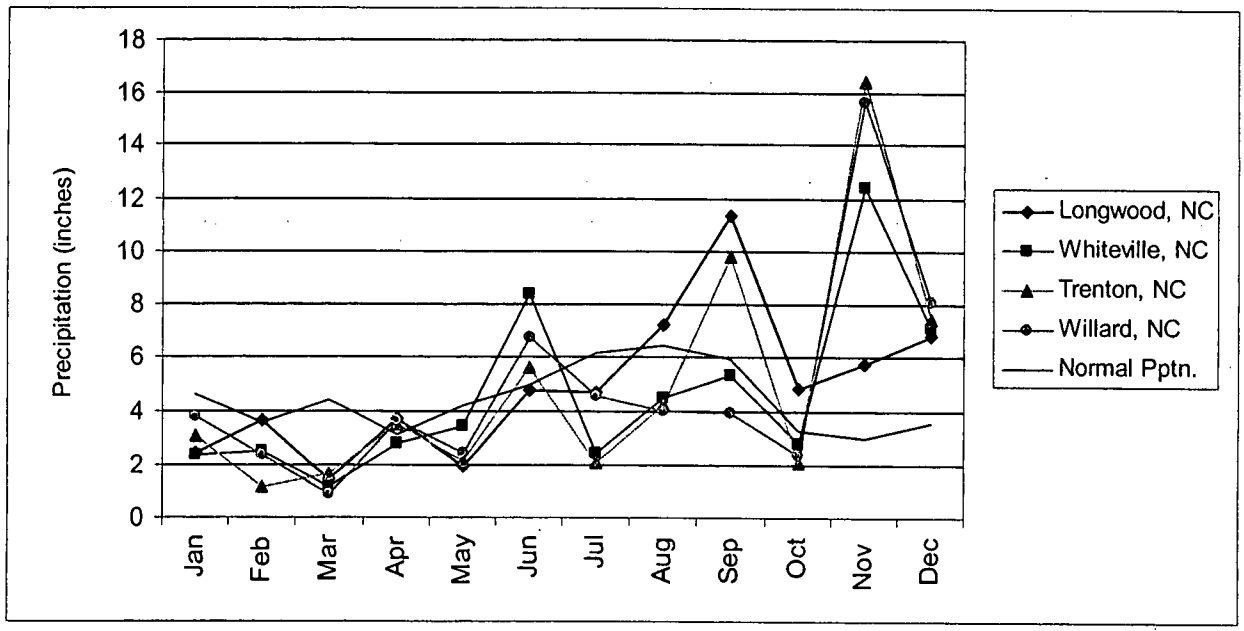

Figure A. 2006 monthly precipitation amounts measured at weather stations located within the four pilot counties. The normal monthly precipitation for the these weather stations is a statistically adjusted 30-year average officially published by the National Oceanic and Atmospheric Administration every ten years. *Source: State Climate Office of North Carolina.*

Based on earlier pilot reports, one could anticipate noncompliance trends of specific operational indicators would increase during the second half of 2006, based on climatic conditions and precipitation amounts.

Categorizing Farms into Environmental Impact Groups

For 2006, DSWC staff continued to use the environmental scale, first described in the May 21, 2002 Addendum ERC Report, and modified in 2005 (due to implementation of the DWQ's *Basinwide Implementation Management System* database known as BIMS) to separate pilot animal operations based on their compliance performance and relative potential for environmental impact. DSWC, DWQ and Soil and Water Conservation District (SWCD) field staff continued to use one standard inspection form with the

collected data entered into BIMS. The pilot's operational indicators and problem parameters were queried and assessed from these documented site visits.

Table 1 lists the operational indicators used to assess animal waste management systems' performance on the pilot farms, with assigned points to reflect the degree of "immediate" or "potential" threat a specific compliance deficiency would have to the environment. The 15 indicators and relative point values remain unchanged from last annual pilot program report.

Operational Indicators	Point Value
Offsite discharge	20
Structural integrity compromised	18
Waste in structural freeboard range	16
Hydraulic overloading	15
Nitrogen over-applied ≥ 10%	12
Waste level in storm storage	11
Irrigation system maintenance deficiency	11
Structural maintenance deficiency	10
Receiving crop inconsistent with waste plan	10
Irrigation records deficient	10
Lagoon level records deficient	9
Nitrogen over-applied <10%	8
Receiving crop/sprayfield needs improvement	8
Waste analysis deficient	8
Soil analysis deficient	7

Table 1. Operational indicators observed and recorded by DSWC and DWQ staff during site inspections. Items in italics represent "immediate threat" indicators.

As in previous years, pilot farms were scored by the noncompliance points received for those operational indicators noted during each site visit, and ranked by the total points received for all site visits in 2006. The farms were then categorized into three potential impact groupings based on their total noncompliance scores. See ***Table 2.*** Point ranges for these groupings were determined from farm performance in 2000, and remains unchanged through 2006.

Potential Impact Group	Noncompliance points
Low environmental impact	0 – 12 points per year
Medium environmental impact	13 – 30 points per year
High environmental impact	31 or more points per year

Table 2. Potential environmental impact groupings and corresponding noncompliance point ranges.

Using the pilot's established inspection protocol, farms in the low and medium environmental impact groups were determined to be responsive to technical assistance and subject to continued *routine* operation reviews and compliance inspections by DSWC staff in 2007. Farms scoring in the high impact group are subject to a joint audit by DSWC and DWQ staff for more comprehensive evaluations. If an audit reveals that the farm is noncompliant with regulations and poses a high potential for environmental impact, DWQ staff assumes full responsibility for the routine inspection of this operation until an acceptable level of compliance is achieved.

DSWC staff feels this is the best approach to inspection because both divisions can apply their respective technical and regulatory resources more effectively and efficiently based on lessons learned from the pilot program. By working together in the pilot, DSWC and DWQ staff has improved communications between the divisions and between DENR and individual livestock producers. Participants continue to voice support for the program and cite consistency, improved communication and focused technical assistance as program benefits needed for compliance.

2006 PROGRAM FINDINGS

Base Data for Pilot

2006 activity, both in and out of the pilot area, is reflected in the following data queried from BIMS:

- Statewide, 2,496 animal operations were subject to permitting and inspection.
- Statewide, DENR staff conducted 5,059 site visits (2,631 by DSWC & SWCD and 2,428 by DWQ).
- In the pilot area of Brunswick, Columbus, Jones and Pender counties, 167 animal operations were subject to permitting and inspection.
- In the pilot area, DENR staff conducted 413 site visits (385 by DSWC and 28 by DWQ).

Compliance Trends

For this report, DSWC examined various reporting tools to determine if pilot farms have better compliance trends than for all farms located within the 28 eastern counties covered by DENR's Washington and Wilmington regional staff.

First, DSWC queried all incident reports logged into the BIMS database between January 1, 2006 through December 31, 2006 for all farms located within DENR's Washington and Wilmington regions. A total of 294 incident reports for animal operations were logged with 28% of the reports originating from pilot farms primarily in Jones and Pender Counties. DSWC staff feels the higher percentage of incidents in the pilot counties is not caused by increased noncompliance but by a combination of the following:

- Direct rainfall and flooding impacts of Tropical Storm Ernesto on August 31 and September 1. (See 2006 Semiannual Pilot Program Report to ERC.)
- Consistency of information and expectations between producers and DSWC staff. Pilot farms are more likely to report noncompliance (82% of the 2006 pilot farm incidents were in the "reported noncompliance" category).
- Better awareness of potential problems by DSWC staff due to increased site visits.
- Heightened surveillance by DSWC staff in pilot area.
- Improved, consistent and uniform approach by DSWC and DWQ staff when dealing with noncompliance performance.

81% of the 294 incident reports in the DENR's Washington and Wilmington regions noted noncompliance started during the second half of 2006, and directly correlates with the 2006 precipitation distribution pattern.

Next, DSWC compared 2006 site visit findings between pilot and non-pilot farms located within the DENR Washington and Wilmington regions. Based on site visit reports in BIMS and the DWQ Year-To-Date Data Report dated 3.7.07, the following items were observed:

- Onsite discharges noted in 1% of pilot farm reports versus 0.4% of non-pilot farm reports.
- Discharges reaching surface waters noted in 1% of pilot farm reports versus 0.1% of non-pilot farm reports.
- Inadequate freeboard noted in 15% of pilot farm reports versus 3% of non-pilot farm reports.
- Freeboard noted less than one foot (within structural freeboard) noted in 4% of pilot farm reports versus 0.8% of non-pilot farm reports.

It should be noted that duplications are included in the pilot area site visit findings because when DSWC and DWQ staff inspects a farm jointly, each division is required to enter a report into BIMS for the same site visit. This double reporting causes noted deficiencies to be counted and scored twice, thus increasing the rate of occurrence for any given operational indictor.

Farm Performance Within the Pilot Program Area

In ***Figure B***, pilot farms are grouped by their environmental impact scores, and shown as a percentage of the total number of pilot farms in operation within a given year.

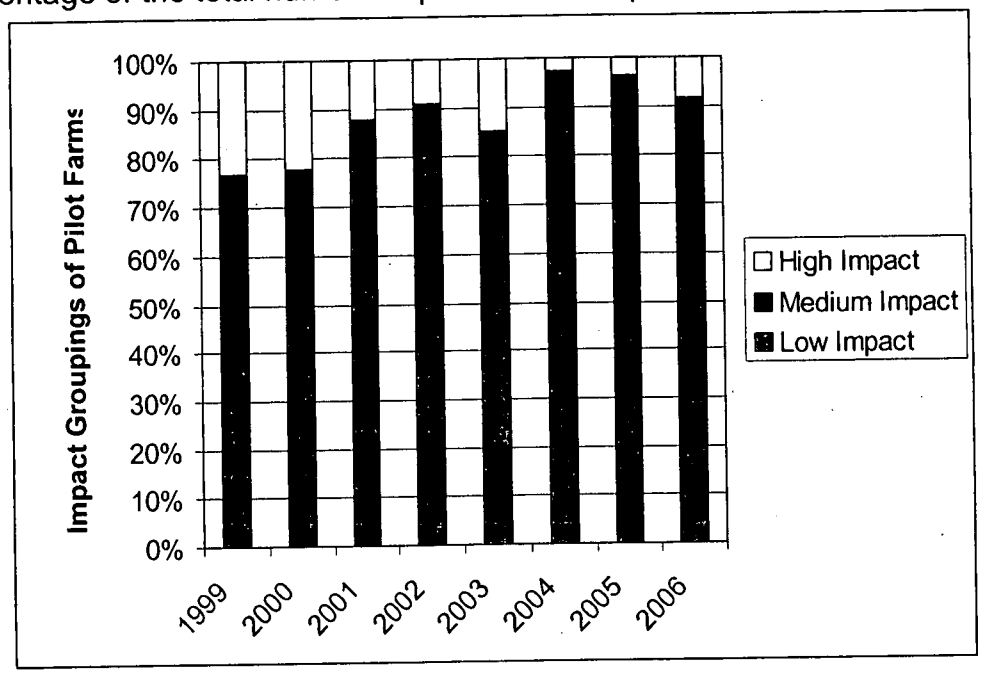

Figure B. Pilot farms grouped into environmental impact categories.

In 2006, 92% of the pilot farms were categorized in either the low or medium impact groups. This is a 4% decrease from 2005 findings and is contributed to the addition of Pender County and above-average precipitation amounts ranging from 3+ inches in Brunswick to almost 6 inches in Jones County. See appendix for additional precipitation information.

Based on 2006 compliance performance, 14 farms were identified as potential high impact farms. Of the six farms identified in Columbus and Jones counties, five farms had been identified as potential high impact in previous years. The remaining eight farms are located in Pender County and do not have previous environmental impact ratings within the pilot program. The 14 potential high impact farms are scheduled for compliance audits by DSWC and DWQ staff during the first half of 2007.

As previously mentioned, noncompliance trends were noted primarily in the second half of 2006 due to climatic impacts. This observation is evident in several "immediate threat" and "potential threat" operational indicators listed in Table 3 comparing the "Frequency of Occurrence" for a DENR inspector to find a specific operational indicator during a site visit to a pilot farm.

Operational Indicator	Jan-June	July-Dec
Offsite discharge	0	1%
Structural integrity compromised	0	3%
Waste in structural freeboard range	0	4%
Hydraulic overloading or ponding	0	3%
Nitrogen over-applied ≥ 10%	0	0
Waste level in storm storage	2%	9%
Irrigation system maintenance deficiency	0	0
Structural maintenance deficiency	3%	3%
Receiving crop inconsistent with waste plan	0.5%	0.5%
Irrigation records deficient	0.2%	0.2%
Waste level records deficient	1%	3%
Receiving crop/application field deficient	3%	4%
Waste analysis deficient	0.5%	0
Soil analysis deficient	1%	0

Table 3. "Frequency of Occurrence" for finding an operational indicator on a pilot farm during either the first or second half of the 2006 calendar year. Items in italics represent "immediate threat" indicators.

Focus Group Activities

Local Focus Groups did not meet during the 2006 calendar year. DSWC resources were redirected towards implementing the pilot program in Pender County while maintaining the program in Brunswick, Columbus and Jones counties. DSWC employed and provided training for an additional Environmental Specialist to work with the livestock producers in Pender County. This employee is a technical specialist designated by the Soil and Water Conservation Commission as required by § 143-215.10D.

COST & LABOR COMPARISONS

Cost and labor comparisons are reported for DSWC operation review staff only and based on an operating cost of $28.15 per hour in 2006, up from the 2005 cost of $26.93 per hour. DSWC's hourly operating cost is the same for pilot and non-pilot farms alike. As previously reported, differences between pilot versus non-pilot costs arise as a result of the frequency and duration of site visits.

Table 4 reflects key cost and labor comparisons. The DSWC's *per-visit costs continue to remain less* for pilot farms than non-pilot farms. Conversely, DSWC's *per-farm costs continue to be higher* in the pilot program, and are a direct function of the higher frequency of site visits made to pilot farms.

Pilot Farms	Non-pilot farms
$162 per DSWC visit	$210 per DSWC visit
2.3 visits per farm	1 visit per farm
13.3 hours total per farm	7.6 hours total per farm
$375 per farm	$214 per farm

Table 4. Key Comparisons for 2006

REPORT TO THE ENVIRONMENTAL REVIEW COMMISSIONAND FISCAL RESEARCH DIVISION OF THE NORTH CAROLINA GENERAL ASSEMBLY ON THE PILOT PROGRAM FOR INSPECTIONS OF ANIMAL WASTE MANAGEMENT SYSTEMS

SEMIANNUAL REPORT FOR CALENDAR YEAR 2007

INTRODUCTION

In accordance with Section 12.7(b) of S.L. 2005-276, the objective of the Animal Waste Management Inspection Pilot (hereinafter referred to as the pilot) is to determine how Division of Soil and Water Conservation (DSWC) staff can respond to complaints and problems more quickly and effectively with technical assistance to help farms achieve compliance with environmental regulations. In addition, the program allows the Department of Environment and Natural Resources (DENR) staff to test approaches for earlier identification of problems and to target DENR's resources for expediting corrective actions.

The pilot program started in 1997 with Columbus and Jones counties. It was expanded in 1999 to include Brunswick County and in 2005 to include Pender County. Through House Bill 810, the General Assembly this year extended the pilot program to a termination date of Sept. 1, 2009.

The pilot differs from the state's traditional animal inspections program in that DSWC staff conducts annual *routine* compliance inspections, in addition to performing *routine* operation reviews of all permitted livestock operations in the pilot counties. Division of Water Quality (DWQ) staff provides regulatory oversight, performs compliance audits with DSWC staff of "targeted" potential high environmental impact farms, responds to DSWC referrals and conducts additional compliance inspections for further investigation and enforcement actions as warranted.

There are 166 active swine farms and one horse farm in the pilot area of Brunswick, Columbus, Jones and Pender counties. Previously, it was reported that 95 of these farms were operating with coverage under National Pollutant Discharge Elimination System (NPDES) permits. In response to the 2005 2nd-Circuit Court of Appeals ruling in *Waterkeeper et al. v. the Environmental Protection Agency (EPA),* the federal agency began revising its NPDES regulations. Based on the ruling and guidance from EPA, DWQ allowed producers with expiring NPDES permits to choose between NPDES permits or State Non-Discharge General permits. This caused the number of pilot farms operating under NPDES permits to drop from 95 to one in 2007. The remaining 166 farms will operate under State Non-Discharge General permits.

PRECIPITATION

Annual precipitation amounts and events have the biggest impact on compliance performance by farms in the Pilot Program area. Animal waste management systems, including anaerobic lagoons and waste storage ponds, are generally designed to store one 25-year, 24-hour storm event (ranges 7 to 8 inches in pilot area); 180 days of excess rainfall over evaporation based on historical averages; wash water and animal waste. Heavy precipitation amounts greater than historical average and/or periods of prolonged precipitation can drastically decrease the storage capacity of the waste system. In addition, a system's capacity to land-apply waste to receiving crops is also diminished due to wet or frozen soil conditions, wind, and/or limited availability of adequate crops to utilize the nutrients in the waste.

Despite the fact that the pilot area received two-thirds of its actual annual precipitation during the last half of 2006, the first half of 2007 was fairly uneventful based on actual versus normal precipitation amounts recorded at selected weather stations as reflected in ***Figure A***.

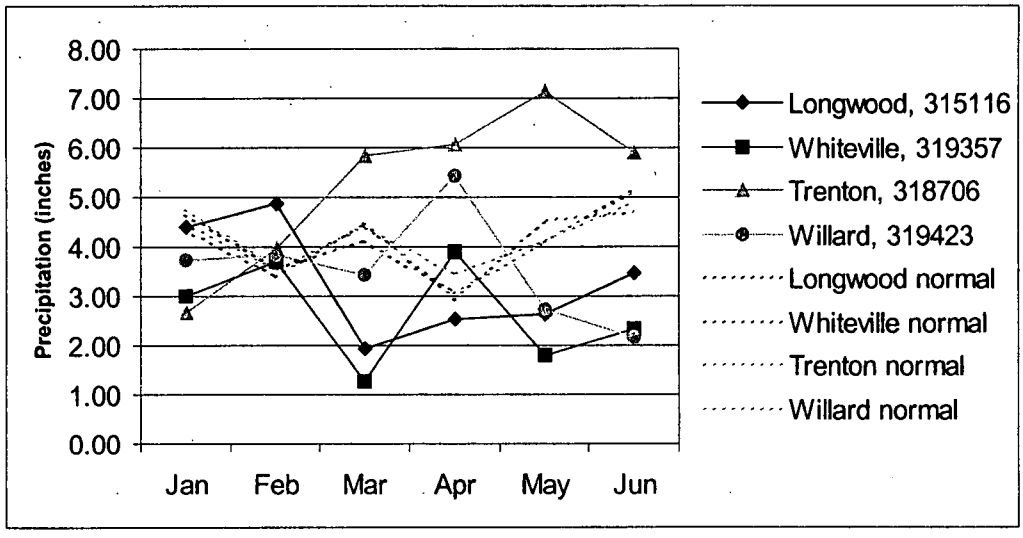

Figure A. January - June 2007 monthly normal and actual precipitation amounts measured at weather stations located within the four pilot counties. *Source: North Carolina State Climate Office - CRONOS Database.*

ENVIROMENTAL IMPACT GROUPS

DSWC staff continued to use the environmental scale first described in the May 21, 2002 Addendum ERC Report to separate pilot animal operations based on compliance performance and relative potential for environmental impact. Data was gathered through DENR's standard inspection form and entered into DWQ's Basinwide Implementation Management Systems (BIMS) database. The pilot's operational indicators and problem parameters were then queried and assessed from these documented site visits.

Table 1 lists the operational indicators used to assess animal waste management systems' performance on the pilot farms, with assigned points to reflect the degree of "immediate" or "potential" threat a specific compliance deficiency would have to the environment. The program is based on the following 15 indicators with relative point values remaining constant since 2002.

Operational Indicators	Point Value
Offsite discharge	20
Structural integrity compromised	18
Waste in structural freeboard range	16
Hydraulic overloading	15
Nitrogen over-applied ≥ 10%	12
Waste level in storm storage	11
Irrigation system maintenance deficiency	11
Structural maintenance deficiency	10
Receiving crop inconsistent with waste plan	10
Irrigation records deficient	10
Lagoon level records deficient	9
Nitrogen over-applied <10%	8
Receiving crop/sprayfield needs improvement	8
Waste analysis deficient	8
Soil analysis deficient	7

Table 1. Operational indicators and related point values used by DENR staff to evaluate farm's potential impact to environment. Items in italics represent "immediate threat" indicators.

Pilot farms were scored by the noncompliance points received for those operational indicators noted during each site visit and ranked by the total points received for all site visits in 2006. The farms were then categorized into three potential impact groupings based on their total noncompliance scores. (See ***Table 2.***) Point ranges for these groupings were initially determined from farm performance in 2000 and remained unchanged through 2006.

Potential Impact Group	Noncompliance points
Low environmental impact	0 – 12 points per year
Medium environmental impact	13 – 30 points per year
High environmental impact	31 or more points per year

Table 2. Potential environmental impact groupings and corresponding noncompliance point ranges.

Farms in the low and medium environmental impact groups were determined to be responsive to technical assistance and subject to continued *routine* operation reviews and compliance inspections by DSWC staff in 2007. Farms scoring in

the high impact group were subject to a joint audit by DSWC and DWQ staff for more comprehensive evaluations. As in previous years, if an audit reveals that the farm is noncompliant with regulations and poses a high potential for environmental impact, DWQ staff assumes full responsibility for the routine inspection of this operation until an acceptable level of compliance is achieved.

At the end of 2006, 14 farms were determined to have gross scores of 31 or more points, thus placing them in the high environmental impact group. Scores were then adjusted to reflect the removal of duplicate points for identical operational parameters noted in more than one site visit, a thorough review of each farm's compliance history and noted compliance trends of concern. The remaining12 farms were "targeted" for compliance audits by DENR teams of DSWC and DWQ field staff during the first half of 2007. These farms were located in Jones and Pender counties.

The audits revealed some problems with the facilities, notably high waste levels in January 2007 caused by the above normal rainfall received in November 2006. Three of the six freeboard violations noted waste levels within the structural freeboard of the waste structures. Other noted deficiencies included five receiving crops needing improvement (due to wet conditions in 2006), three missing soils reports, one minor onsite discharge and one structural maintenance deficiency. After the audits, the DENR teams evaluated the findings and agreed that the "targeted" farms had made the necessary improvements to return to routine operation reviews and compliance inspections by DSWC staff.

2007 PROGRAM FINDINGS

Pilot Base Data

2007 activity from January 1 through June 30, both in and out of the pilot area, is reflected in the following data that was either queried from DWQ's Basinwide Implementation Management Systems (BIMS) database or presented in DWQ's Quarterly Data Reports:

- Statewide, 2,486 animal operations were subject to permitting and inspection.
- Statewide, DENR staff conducted 2,141 site visits (1,136 by DSWC and Soil and Water Conservation Districts, and 1,005 by DWQ).
- Within the pilot area, 167 animal operations were subject to permitting and inspection.
- Within the pilot area, DENR staff conducted 201 site visits (184 by DSWC and 17 by DWQ).

Farm Performance

Within the pilot area, the frequency of occurrence for several of the program's operational indicators were considerably higher during the first half of 2007 when compared to the first half of 2006. We believe this to be a direct result of the above normal precipitation in November of 2006. (See ***Table 2.***) Increases in indicators such as *waste in structural freeboard range*, *waste level in storm storage* and *receiving crop/application field deficient* all substantiate this claim.

Operational Indicator (%) for Jan-June	2006	2007
Offsite discharge	0	0.5
Structural integrity compromised	0	0
Waste in structural freeboard range	0	1.5
Hydraulic overloading or ponding	0	0.5
Nitrogen over-applied ≥ 10%	0	0
Waste level in storm storage	2	5.5
Irrigation system maintenance deficiency	0	0
Structural maintenance deficiency	3	1
Receiving crop inconsistent with waste plan	0.5	0.5
Irrigation records deficient	0.2	0.5
Waste level records deficient	1	2.5
Receiving crop/application field deficient	3	**10**
Waste analysis deficient	0.5	2
Soil analysis deficient	1	7

Table 2. "Frequency of Occurrence" as a percentage for finding an operational indicator on a pilot farm during the first half of 2006 and the first half of 2007. Items in italics represent "immediate threat" indicators.

It should be noted that duplications are included in the pilot area site visit findings because when DSWC and DWQ staff inspects a farm jointly, each division is required to enter a report into BIMS for the same site visit. This double reporting causes noted deficiencies to be counted and scored twice, thus increasing the rate of occurrence for any given operational indicator.

Producer Surveys

DSWC staff feels the Pilot Program continues to be well received by the producers in the pilot counties despite the higher intensity of scrutiny. Earlier Pilot Reports included comments such as:

- *"Evaluations from both the operation reviews and compliance inspections were very positive with 94% of the total responses either strongly agreeing or agreeing that working with one agency would help minimize confusion and increase compliance..."* - 1998 Final ERC Pilot Report
- *"It was noted that anecdotal testimony from some participating farmers suggests a favorable reception to the Pilot Program..."* - 2005 Annual ERC Pilot Report
- *"...over 75% of the producers expressed their support."* (for expansion of the Pilot Program into Pender County) - 2006 Annual ERC Pilot Report

To better determine the effectiveness of the overall DSWC's operation review program, as well as the impact of the pilot on livestock producers, DSWC conducted a "snap shot" survey of all producers located within the pilot area and all producers located in non-pilot counties that received a routine operation review during the period of July 16 through Aug. 17, 2007. The survey is attached as ***Appendix A***.

At the end of August 2007, 177 surveys were completed and returned with 80 completed by producers located in pilot counties and 97 from other counties. Independent and contract producers completed 84% of the total number of surveys. Survey results are as follow:

I. Producer evaluation of the DSWC inspector, both in and out of the pilot area, reveals very high marks for field staff's thoroughness, knowledge, professionalism and timely response to requests. The following percentages are combined for "agree" or "strongly agree" responses:

a. Conducted thorough operations review/compliance inspection - 99%
b. Provided adequate time for inspection, questions an assistance - 99%
c. Good working knowledge of rules, regulations and permit requirements - 100%
d. Good working knowledge of managing lagoon and waste system - 100%
e. Good working knowledge of the irrigation and land applications system - 99%
f. Good working knowledge of crop, hay and pasture management - 98%
g. Conducted himself/herself in a professional and courteous manner - 99%
h. Responded to requests in a timely manner - 96%

II. The impact of the statewide operation review program on producers, both in and out of the pilot area, indicate DSWC site visits are meeting the overall program objective of providing technical assistance. This is reflected in items a-e listed below. Items f and g are separated into *pilot* and *other* due to the range of responses between survey groups. The following percentages are combined for "agree" or "strongly agree" responses:

a. Producer has better understanding of rules, regulations and permit requirements - 94%
b. Program helped producer to better manage animal waste system - 92%
c. Program helped producer to achieve compliance with rules & regulations - 92%
d. Producer more comfortable communicating with DENR staff because of program - 92%
e. Producer able to address problems before they become violations because of program - 97%
f. There is no difference between a DWQ & Soil and Water inspection (pilot) - 42%
g. There is no difference between a DWQ & Soil and Water inspection (other) - 68%

III. Producers in the pilot area expressed a strong desire for the continuation of the Pilot Program through the survey. The following percentages are for producers located in the pilot area only:

a. Producer would like the pilot program to continue in their respective county - 99% agree/strongly agree, with 85% responding as strongly agree.
b. Producer would like pilot program to expand into other counties - 81% agree/strongly agree.
c. Producer thinks pilot program should end - 95% disagree/strongly disagree.

IV. Producers, both in and out of the pilot area, show an interest in new technologies for animal waste management that do not use anaerobic lagoons and sprayfields. The following percentages are combined for "agree" or "strongly agree" responses:

a. Producer would like to learn more about new waste management systems that do not use anaerobic lagoons and sprayfields - 76%
b. Producer would like more information on financial assistance to convert to new waste management technology - 69%
c. Producer not interested in converting to new technology - 23% agree/strongly agree however 34% had no opinion

V. Less than half of the producers, both in and out of the pilot area, utilize computers and the Internet for record-keeping needs. The following percentages are combined for "agree" or "strongly agree" responses:

a. Producer uses computerized record keeping on a regular basis - 39%
b. Producer uses the Internet to download waste and soils reports - 47%
c. Producer uses the Internet to download record-keeping forms - 48%
d. Producer would like more training on computers for record-keeping needs - 46%

VI. Producers give DSWC's overall program an "A." Based on a grade point average (GPA) of "A" equals 4 points, producers rated the following:

a. Producers give Pilot Program an "A" with a 3.64 GPA
b. Producers give DSWC's Operation Review Program a "B" with a 2.68 GPA

VII. General comments about the Pilot Program have been very positive. Based on comments received from producers located within the pilot area, DSWC is responding quickly and effectively with technical assistance to help producers identify problems earlier and to achieve compliance with environmental regulations. Comments include:

a. "My (DSWC) inspector has been very helpful in helping me identify and correct potential problems before they become violations."
b. "I like the consistency of having one agency doing my inspections."

c. *"(DSWC) and the other specialists have done a great job helping us... everyone has been very professional, and has worked within guidelines to give us 'common-sense' and 'attainable' solutions that have, and are having, a great positive impact on my farm. Keep up the good work and we'll keep learning."*
d. *"Program has been a great guide for managing and improving my farm. Inspectors are very knowledgeable and helpful. I have been greatly educated and hope to continue working with program and inspectors."*
e. *"Inspector is always helpful, answers my questions we may have, and conducts inspections with an eye to helping correct anything we may need and praising a good job done."*
f. *"Soil and Water has put forth a very strong effort to ensure that potential problems are identified before they become problems and to follow up..."*
g. *"They [DSWC] have helped me stay more abreast of issues before they become problems, which helps me to get--and stay--in compliance."*
h. *Very good program. Soil and Water personnel are more knowledgeable and solution-oriented... [They] offer ways to head off problems..."*
i. *"I like the Soil and Water inspection better... [They] communicate easier when you are used to working with the same inspector."*
j. *"...[the] communication line is open for follow-up assistance immediately when I need it."*
k. *"I appreciate the survey.... The program works very well and it would be a shame to discontinue it. The Soil and Water personnel that visit my farm and conduct inspections are knowledgeable and solution oriented."*

VIII. Additional training needs were compiled from the survey and attached as ***Appendix B.*** This information will be shared with various agency personnel to provide needed educational materials and opportunities for improved animal waste management.

CONCLUSIONS

From 1999 through June 30, 2007, the Pilot Program has collected data from 2,921 documented site visits to 167 permitted animal operations in Brunswick, Columbus, Jones and Pender counties. DSWC staff continues to use the data to study and better understand the factors that influence compliance and affect the potential for environmental impact by conventional animal waste management systems. For the first half of 2007, DSWC experienced or observed the following:

- Through House Bill 810, the General Assembly this year extended the Pilot Program to a termination date of Sept. 1, 2009.

- The number of pilot farms operating under NPDES permits dropped from 95 to one in 2007, with the remaining 166 farms currently operating under state Non-Discharge General permits.

- The first half of 2007 was fairly uneventful based on actual versus normal precipitation amounts recorded at selected weather stations within the pilot counties.

- Twelve farms were identified as having a high potential for environmental impact and were "targeted" for compliance audits by DENR teams of DSWC and DWQ field staff during the first half of 2007.

- The frequency of occurrence for several of the program's operational indicators were considerably higher during the first half of 2007 when compared to the first half of 2006. This is believed to be a direct result of the above normal precipitation received in November of 2006.

- The producer survey reveals very high marks for the DSWC field staff's inspection thoroughness, knowledge, professionalism and timely response to requests.

- The impact of the statewide operation review program on producers, both in and out of the pilot area, indicate DSWC site visits are meeting the overall program objective of providing technical assistance.

- Producers in the pilot area expressed a strong desire for the continuation of the Pilot Program.

- Producers, both in and out of the pilot area, show an interest in new technologies for animal waste management that do not use anaerobic lagoons and sprayfields.

- Based on survey responses, less than half of the producers, both in and out of the pilot area, utilize computers and the Internet for record keeping needs.

- Overall, producers give the Pilot Program an "A."

- Based on survey comments received from producers located within the pilot area, DSWC is responding quickly and effectively with technical assistance to help producers identify problems earlier and to achieve compliance with environmental regulations.

APPENDIX A

PRODUCER SURVEY - SOIL & WATER CONSERVATION'S PILOT AND OPERATION REVIEW PROGRAMS

Thank you for completing form and returning to David Harrison, DSWC, 1614 Mail Service Center, Raleigh NC 27699-1614

My livestock operation(s) is located in (circle county): Brunswick Columbus Jones Pender Other

My farm's corporate structure is (circle): Company Farm Contract Grower Independent

Soil and Water Inspector	Strongly Disagree	Disagree	No Opinion	Agree	Strongly Agree	Not Applicable
Conducted thorough operation reviews and compliance inspections.	1	2	3	4	5	NA
Provided adequate time for inspection, questions and assistance.	1	2	3	4	5	NA
Has a good working knowledge of rules, regulations and permit requirements.	1	2	3	4	5	NA
Has a good working knowledge of managing the lagoon and waste system.	1	2	3	4	5	NA
Has a good working knowledge of the irrigation/waste application system	1	2	3	4	5	NA
Has a good working knowledge of crop, hay and pasture management.	1	2	3	4	5	NA
Conducted himself/herself in a professional and courteous manner.	1	2	3	4	5	NA
Responded to requests in a timely manner	1	2	3	4	5	NA

Meeting Overall Program Objectives						
I have a better understanding of rules, regulations and permit requirements because of the program.	1	2	3	4	5	NA
The program has helped me to better manage my farm's animal waste management system.	1	2	3	4	5	NA
The program helped me to achieve compliance with rules and regulations.	1	2	3	4	5	NA
I feel more comfortable communicating with Soil & Water, DWQ and other agency staff because of this program.	1	2	3	4	5	NA
I've been able to address problems before they became violations through this program.	1	2	3	4	5	NA
There is no difference between a DWQ and Soil & Water Conservation inspection.	1	2	3	4	5	NA

Future of the Pilot Program (Brunswick, Columbus, Jones & Pender Counties)						
I would like for the program to continue in my county.	1	2	3	4	5	NA
I think the program should be expanded into other counties.	1	2	3	4	5	NA
I think the program should end.	1	2	3	4	5	NA

More on Back

APPENDIX A

New Technologies for Animal Waste Management	Strongly Disagree	Disagree	No Opinion	Agree	Strongly Agree	Not Applicable
I would like to learn more about the new animal waste management technologies that do not use anaerobic lagoons and sprayfields.	1	2	3	4	5	NA
I would like more information on possible financial assistance to convert to a new technology.	1	2	3	4	5	NA
I am not interested in converting to a new technology.	1	2	3	4	5	NA

Computers and the Internet						
I use computerized recordkeeping on a regular basis.	1	2	3	4	5	NA
I use the Internet to download my waste and soils reports.	1	2	3	4	5	NA
I use the Internet to download record keeping forms.	1	2	3	4	5	NA
I would like more training on using the computer for my record keeping needs.	1	2	3	4	5	NA

Overall Program Rating - I would give the program the following grade:	A	B	C	D	F

Comments:

I would like additional training in the following areas (circle):

Managing a healthy lagoon Lagoon additives - do they work? Marker calibration Partial/full lagoon covers Managing mortality (e.g. composting)

Sludge removal/lagoon closure Sludge management techniques Performing sludge surveys New improved seeded Bermuda varieties

Calibrating land application equipment Irrigation design/installation Irrigation operating improvement Hose drag systems (e.g. Aerways)

Organizing records Computerizing records Basic waste application recordkeeping Environmental Management Systems (EMS)

Balancing phosphorus Carbon credit trading Restoring riparian areas/wetlands Restoring/preserving wildlife habitat Farmland Preservation

Crop management Forage management Weed management Pasture management Water management (surface/subsurface drainage)

Water conservation practices (in house) Swine Buyout Program in Floodplain Conservation Easement programs Vermicycling

Meetings of Interested Parties (605 Working Groups)
Additional Information

COMMISSION MEETING:

You are reminded that the Environmental Review Commission (Commission) will meet at 9:30 a.m. Tuesday 27 November 2007 in Room 544 of the Legislative Office Building in Raleigh.

The agenda for this meeting shall consist of:

1. Introduction of newly appointed staff in the Department of Environment and Natural Resources *(5 minutes)*

2. Update on current drought conditions in light of conservation efforts and recent rain events; process for development of recommendations to improve future responses to drought conditions *(30 minutes)*

3. Discussion of precision farming using the Global Positioning Systems (GPS) to control the application of fertilizers *(30 minutes)*

4. Annual report on compliance with and enforcement of water quality laws for facilities that discharge into surface waters (G.S. 143-215.9A) (*10 minutes*)

5. Annual report on permitting and inspecting animal waste management systems (Animal Waste Compliance Report) (G.S. 143-215.10M) *(10 minutes)*

6. Update on the implementation of the Lagoon Conversion Program and the Swine Farm Methane Capture Pilot Program (Section 2 and Section 4 of S.L. 2007-523) *(10 minutes)*

7. Annual report by the Catawba/Wateree River Basin Advisory Commission (G.S. 77-117) *(10 minutes)*

8. Presentation and comment on the use of pervious pavement for vehicle parking areas as required by Section 6.22.(a) of S.L. 2007-323 (*35 minutes*)

9. Report on the Implementation of the Ecosystem Enhancement Program and use of the Ecosystem Enhancement Fund, including inventory of property and easements and a discussion of the in-lieu fee program (G.S. 143-214.13) (*20 minutes*)

10. Annual report by the State Water Infrastructure Commission on its activities and findings, including any recommendations of the Commission that require action by the General Assembly to implement (G.S. 159G-67) (*20 minutes*)

11. Annual report on the implementation of the resident inspectors program for commercial hazardous waste facilities including implementation of the amendments to the program made by S.L. 2007-107 (G.S. 130A-295.02(m)) *(10 minutes)*

12. Annual report on the Inactive Hazardous Sites Program including discussion of the reorganization of contaminated sites program in the Department (G.S. 130A-310.10) *(10 minutes)*

13. Report on the effectiveness of the Brownfields Property Reuse Act (G.S. 130A-310.40) *(10 minutes)*

SCHEDULE OF FUTURE MEETINGS:

Below is a schedule of meetings of the Commission for December 2007 through May 2008. **This schedule is tentative and subject to adjustment.** In particular, the March meeting may take place over two days at a location outside Raleigh in order to focus on parks and recreation matters.

To facilitate development of the agenda for meetings of the Commission and to receive input from interested persons regarding the future work of the Commission, the Commission Counsel holds informal public planning meetings for staff and interested parties. The schedule of these meetings is also set out below.

Commission Meeting	Location	Staff Planning Meeting	Location
Wednesday 19 December 2007	544 LOB	Wednesday 5 December 2007	605 LOB
Wednesday 23 January 2008	544 LOB	Friday 11 January 2008	605 LOB
Thursday 14 February 2008	544 LOB	Tuesday 5 February 2008	605 LOB
Tuesday 18 March 2008	544 LOB	Friday 7 March 2008	605 LOB
Thursday 10 April 2008	544 LOB	Friday 28 March 2008	605 LOB
Friday 9 May 2008	544 LOB	Tuesday 29 April 2008	605 LOB
Wednesday 14 May 2008	544 LOB		

MEETINGS OF INTERESTED PARTIES:

The Commission Counsel will hold meetings of interested parties on specific topics as indicated below:

Underground Storage Tank Working Group

2:00 p.m. Monday 17 December 2007 – 605 Legislative Office Building

Public meetings on the scope and direction of the study of allocation of water resources

4:00 p.m. to 7:00 p.m. Thursday 20 December 2007 – Charlotte
4:00 p.m. to 7:00 p.m. Friday 4 January 2008 – Greenville
4:00 p.m. to 7:00 p.m. Wednesday 9 January 2008 – Asheville

Public meeting on the study of issues related to construction on artificial slopes

4:00 p.m. to 7:00 p.m. Thursday 10 January 2008 – Asheville

ADDITIONAL INFORMATION:

Persons having questions about the Commission meeting or other matters related to the Commission may contact Commission Counsel or other Commission staff at (919) 733-2578 or may visit the Commission's website at:
http://www.ncleg.net/gascripts/DocumentSites/browseDocSite.asp?nID=12

COMMISSION ASSISTANT

JESSICA BENNETT
COMMISSION CLERK

9 November 2007

TO: Members of the Environmental Review Commission
Interested Parties

FROM: George F. Givens, Commission Counsel
Jessica Bennett, Commission Clerk

RE: **Notice of Commission Meeting**
Notice of Planning Meeting
Schedule of Future Meetings
Meetings of Interested Parties (605 Working Groups)
Additional Information

COMMISSION MEETING:

The Environmental Review Commission (Commission) will meet at 9:30 a.m. Tuesday 27 November 2007 in Room 544 of the Legislative Office Building in Raleigh.

At this meeting, the Commission will begin or continue studies for which the Commission is responsible, hear reports from State agencies, discuss topics to be considered at future meetings, and attend to other matters. Listed below are potential agenda topics for this meeting and for future meetings. More specific information regarding the agenda for the 27 November meeting of the Commission will be developed at the staff planning meeting discussed below. Commission Staff may publish a revised notice/draft agenda following the staff planning meeting if circumstances permit.

STUDIES

1) Issues related to the franchise of solid waste management facilities by units of local government. (S.L. 2007-550, Sec. 18) *Deferred until January.*

2) Issues related to the transportation of solid waste by rail or barge, including the extent to which regulation of the transportation of solid waste by rail or barge may be preempted by federal law. (S.L. 2007-550, Sec. 18) *Deferred until January.*

3) Issues related to the use of pervious surfaces for vehicle parking areas, including associated costs, impact to the environment of stormwater runoff, and practices of other states with regard to stormwater best management practices. (S.L. 2007-323, Sec. 6.22.(b)) *May have in November, will have comments from homebuilders and retailers.*

4) Allocation of surface water resources and their availability and maintenance in the State, including issues related to the transfer of water from one river basin to another, the withdrawal of water for consumptive use, and the accuracy and tolerance of equipment used to measure the flow of water transferred from one river basin to another river basin. (S.L. 2007-518, Sec. 1.(a))

Currently planning how to succeed. Plan to contract with the School of Government for several aspects of the study. Want to have as much input as possible including a series of scoping meetings. There may be opportunity for comments at the November or December meeting if can prepare in time.

5) Preparation of a revised map entitled "Major River Basins and Sub-basins in North Carolina" as a recommended replacement for the map referenced in G.S. 143-215.22G. The revised map shall define the extent to which any river basin that encompasses any river that flows from another state into North Carolina or that flows from North Carolina into another state extends into an adjacent state. (S.L. 2007-518, Sec. 1.(b)) *Ready in November.*

REPORTS *(Report due dates are indicated in parentheses)*

General/Miscellaneous:

6) Annual report on the One-Stop Permit Assistance Program on the number of environmental permits that took more than 90 days to issue or deny, types of permits, reasons for extended processing time, and how the time used to issue or deny the permits compared with projected time provided to the applicant by DENR. (143B-279.12(e)) *(1 October) Reported in conjunction with Item 7. Deferred due to illness.*

7) Annual report on the findings and recommendations on the success of the express permit and certification review program. (G.S. 143B-279.13(c)) *(1 March) See item Six.*

8) Annual report on litter enforcement, prevention, and removal efforts. (G.S. 147-12(b)) *(1 March) Report is in. Deferred until January.*

9) Annual report on the evaluation and adjustment of the boundaries of the area served by each Metropolitan Planning Organization. (G.S. 136-202(d)) *(1 November) No reports filed since 2000.*

10) Annual report on the cost of the State's environmental permitting program (G.S. 143-215.3A(c)) *(1 November) Deferred until December.*

Air Quality:

11) Annual report on the cost of the Title V program. (G.S. 143-215.3A(c)) *(1 November)*

12) Annual report on implementation of S.L. 2002-4 (Clean Smokestacks Act). (S.L. 2002-4, Sec. 14) *(1 June) Read only.*

13) Annual report on the desirability of requiring and feasibility of obtaining reductions in emissions of NOx and SO2 beyond those required by the Clean Smokestacks Act. (S.L. 2002-4, Sec. 11) *(1 September) Deferred.*

Coastal Management:

14) Annual report on the progress in developing and implementing the Coastal Habitat Protection Plans and reports on the completion or substantial revision of each draft Coastal Habitat Protection Plan. (G.S. 143B-279.8(e) and G.S. 143B-279.8(f)) *(1 September) Deferred. Jennifer Mundt to review.*

15) Annual report by the Coastal Resources Commission evaluating the impacts on water quality and other environmental impacts from new urban waterfront area development. (S.L. 2004-117, Sec. 4) *(1 October) Deferred*

Hazardous Waste Management:

16) Annual report on the Inactive Hazardous Sites Program. (G.S. 130A-310.10) *(1 October) Report done last year. Oral report. 30 minutes.*

17) Annual report on implementation of the Resident Inspectors Program at commercial hazardous waste facilities. (G.S. 130A-295.02(m)) *(1 October) Scheduled for November meeting. Oral. Part of Item 16.*

18) Report of Superfund cost share fund expenditures for cleanup of sites on the National Priorities List. (S.L. 1999-237(15.6)(b)) *(Floating, within 30 days of expenditure) Nothing.*

19) Annual report on the North Carolina Hazardous Waste Management Plan. (G.S. 130A-294(i)) *(1 October) Read only.*

20) Annual report on the Effectiveness of the Brownfields Property Reuse Act. (G.S. 130A-310.40) *(1 October) Oral report.*

Parks and Recreation / Land Conservation:

Items 21 through 25: Need to figure when to have Parks and Recreation people to the meeting. Deferred tentatively until March.

21) Parks and Recreation Trust Fund Annual Report, Fiscal Year 2003-2004. (G.S. 113-44.15(c)) *(1 October)*

22) North Carolina Natural Heritage Trust Fund Award Report, Fiscal Year 2005-2006. (G.S. 113-77.9(e)) *(Semi-annually, within 30 days of each revision)*

23) Annual report on progress towards attaining the State's goal of protecting one million acres of farmland, open space, and conservation lands. (G.S. 113A-241(c)) *(1 October)*

24) Annual report on implementation of the Conservation Easements Program and inventory of all conservation easements held by DENR. (G.S. 113A-235(c)) *(1 October)*

25) Annual report on the activities of the North Carolina Agricultural Development and Farmland Preservation Trust Fund and Advisory Committee, the agriculture easements purchased, and agricultural projects funded during the previous year. (S.L. 2007-495, Sec. 23 *(May 1)*

Water Quality:

26) Interim report on the pilot program to streamline the process for the issuance of an improvement permit or an authorization to construct for an on-site subsurface wastewater system in certain counties by authorizing local health departments, authorized agents of DENR, and licensed soil scientists to complete soil and site evaluations in participating counties. (S.L. 2006-136, Sec. 3) *(October 1) Deferred until December. Both reports ready. Deferred because of manger's retreat.*

27) Annual report on permitting and inspecting animal waste management systems/Animal Waste Compliance Report. (G.S. 143-215.10M) *(1 October) Items 27 and 30 to be presented in November. 20 minutes needed for both items.*

28) Semiannual report on the pilot program for inspection of animal waste management systems including a comparison of the costs of conducting operations reviews and inspections under the pilot program with the costs of conducting operations and inspections under G.S. 143-215.10D and G.S. 143-215.10F. *(15 October) Read only.*

29) Annual report on the compliance/enforcement of water quality laws for facilities that discharge into surface waters. (G.S. 143-215.9A) *(1 October) Scheduled for November.*

30) Annual report on the Wastewater Discharge Elimination Program. (S.L. 2001-452, Sec. 2.9) *(15 October) Deferred until December. Will also want to hear an update on House Bill 1465.*

31) Annual report on Basinwide Water Quality Management Plans. (G.S. 143-215.8B) *(1 October) Reports are ready but hold until ready to hear more.*

32) Annual report on the Dry-Cleaning Solvent Cleanup Program. (G.S. 143-215.104U) *(1 October) Hold. New rules implemented this year.*

33) Annual report on the status of leaking petroleum underground storage tanks, the State cleanup funds, and the Groundwater Protection Loan Fund. (G.S. 143-215.94M) *(1 September) Read only.*

34) Annual report by the Roanoke River Basin Bi-State Commission. (G.S. 77-98) *(*

35) Annual report by the Yadkin-Pee Dee River Basin Advisory Commission. (G.S. 77-117) *(1 October) Does not think there is a report.*

36) Annual report by the Catawba/Wateree River Basin Advisory Commission and the Yadkin/Pee Dee River Basin Advisory Commission. (G.S. 77-117) *(1 October) Oral report. 10 minutes. No written report.*

37) Implementation of the Ecosystem Enhancement Program and use of the Ecosystem Enhancement Fund, including inventory of property and easements. (G.S. 143-214.13) *(1 November) 20 minute presentation. Mainly policy.*

Water Quantity:

38) Annual report by the State Water Infrastructure Commission on its activities and findings, includes any recommendations of the Commission that require action by the General Assembly to implement. (G.S. 159G-67) *(1 November)*

PLANNING MEETING:

To facilitate development of the agenda for the 27 November meeting of the Commission, to begin planning for subsequent meetings of the Commission, and to receive input from interested persons regarding the work of the Commission, the Commission Counsel will hold an informal planning meeting at **10:00 a.m. on Thursday 15 November 2007 in Room 605 of the Legislative Office Building**. Persons who wish to participate in the development of the agenda for meetings of the Commission, or who are interested in any matter before the Commission, are invited to attend.

SCHEDULE OF FUTURE MEETINGS:

Below is a schedule of meetings of the Environmental Review Commission for December 2007 through May 2008. **This schedule is tentative and subject to adjustment.** For planning purposes, however, please reserve these dates. This schedule may be modified to allow for out-of-town business meetings or site visits and in the event that it becomes necessary to cancel a scheduled meeting due to hazardous weather conditions.

Please note the following:

1. Meetings of the Commission normally begin at 9:30 a.m., include a lunch break, and run until mid-afternoon. Please plan on meeting from 9:30 a.m. until at least 3:30 p.m. Meetings of the Commission are open to the public.

2. Staff planning meetings normally begin at 10:00 a.m. and adjourn by noon. Staff planning meetings are informal and are open to the public. Commission members are not expected to attend these meetings.

3. The 2008 Regular Session is scheduled to begin at 12:00 noon on Tuesday 13 May 2008. The Commission may meet shortly after the beginning of the session to complete ongoing work and to consider any legislative proposals and recommendations and may meet at other times during the legislative session.

Commission Meeting	Location	Staff Planning Meeting	Location
Wednesday 19 December 2007	544 LOB	Wednesday 5 December 2007	605 LOB
Wednesday 23 January 2008	544 LOB	Friday 11 January 2008	605 LOB
Thursday 14 February 2008	544 LOB	Tuesday 5 February 2008	605 LOB
Tuesday 18 March 2008	544 LOB	Friday 7 March 2008	605 LOB
Thursday 10 April 2008	544 LOB	Friday 28 March 2008	605 LOB
Friday 9 May 2008	544 LOB	Tuesday 29 April 2008	605 LOB
Wednesday 14 May 2008	544 LOB		

MEETINGS OF INTERESTED PARTIES (605 WORKING GROUPS):

The Commission Counsel will hold meetings of interested parties on specific topics as indicated below:

Underground Storage Tank Working Group
2:00 p.m. Monday 17 December 2007 – 605 Legislative Office Building

ADDITIONAL INFORMATION:

If you have questions related to the Commission, please feel free to contact the Commission Counsel or other Commission staff at (919) 733-2578.

2007-2008 Interim

Studies to be Conducted by the Environmental Review Commission

Organized by topics: air quality, coastal issues, environmental health, fishing, general, hazardous substances, land quality, parks and conservation, solid waste, water quality, water quantity, wetlands

Solid Waste

ERC (with the assistance of the Dept of Justice)	Report To/ Authority	Report Due
Shall study issues related to the franchise of solid waste management facilities by units of local govt and (with DOJ) study issues related to transportation of solid waste by rail or barge	General Assembly S.L. 2007-550, Sec. 18	2008 Regular Session

Water Quality

ERC	Report To/ Authority	Report Due
May study issues related to use of pervious surfaces for vehicle parking areas, including associated costs, impact of stormwater runoff, practices of other states	2008 General Assembly SL 2007-323, Sec 6.22.(b)	upon its reconvening

Water resources

Division of Water Resources, DENR in consultation with ERC	Report To/ Authority	Report Due
Shall, in consultation with the ERC, prepare a revised map entitled "Major River Basins and Sub-basins in NC" as a replacement for the map referenced in G.S. 143-215.22G. ERC shall recommend a revised map and amended definition of "river basin"	General Assembly S.L. 2007-518, Sec. 1.(b)	2008 Regular Session

ERC, with assistance from DENR	Report To/ Authority	Report Due
Shall study the allocation of surface water resources and their availablity and maintenance in the State	2008 General Assembly 2007-518, Sec. 1.(a)	Interim: may (2008 General Assembly) Final: shall (2009 General Assembly)

* "oral" indicates oral report was given to ERC or S+A; "mail" indicates the report was mailed to members; "in" indicates that the report has been received but not yet distributed.

2007 Studies Bill HOUSE VERSION

GENERAL ASSEMBLY OF NORTH CAROLINA

SESSION 2007

S 4

SENATE BILL 1256

Rules and Operations of the Senate Committee Substitute Adopted 8/1/07
Third Edition Engrossed 8/1/07
House Committee Substitute Favorable 8/2/07

Short Title: 2007 Studies Bill. (Public)

Sponsors:

Referred to:

March 26, 2007

A BILL TO BE ENTITLED

AN ACT TO PROVIDE FOR STUDIES BY THE LEGISLATIVE RESEARCH COMMISSION, STATUTORY OVERSIGHT COMMITTEES AND COMMISSIONS, AND OTHER AGENCIES, COMMITTEES, AND COMMISSIONS.

The General Assembly of North Carolina enacts:

PART I. TITLE

SECTION 1. This act shall be known as "The Studies Act of 2007."

PART II. LEGISLATIVE RESEARCH COMMISSION

SECTION 2.1. The Legislative Research Commission may study the topics listed below. When applicable, the bill or resolution that originally proposed the issue or study and the name of the sponsor are listed. Unless otherwise specified, the listed bill or resolution refers to the measure introduced in the 2007 General Assembly. The Commission may consider the original bill or resolution in determining the nature, scope, and aspects of the study. The following groupings are for reference only:

(1) Criminal Law Issues:
  a. Grand Juries (S.B. 1130 – Clodfelter)
  b. Littering (S.B. 1202 – Jacumin)
  c. Expunctions (H.B. 88 – Moore)
  d. Sex offender registration (H.B. 224 – Goforth, Ray)
  e. Prerelease HIV Testing of All DOC Inmates (H. B. 1898 – Farmer-Butterfield, Wright, Womble)
  f. Illegal drug use (H.B. 2005 – Stam, Allred)

(2) State/Local Government Employee Issues:

(9) How the combined occupancy and sales tax rates in North Carolina compare with rates in other states that have a comparably ranked tourism industry.

(10) The advantages and disadvantages of establishing a uniform system for occupancy taxes and whether that system, in whole or in part, should be incorporated into the statutes.

SECTION 7.7. Sale and Use Tax and Out of State Purchases (H.B. 1994 – Stam, Allred) – The Committee may study and examine, with the appropriate agencies of neighboring states and taxpayer groups, issues associated with cross-border transactions where property is purchased in one state and used in another state. The Committee may examine the economic effects on retailers in North Carolina that make cross-border deliveries of merchandise and may recommend possible actions that might be taken to address the avoidance of sales and use tax by retailers and purchasers located near State lines and to improve compliance with, or recommend changes to, existing State laws. The Committee may also consider changes that would ease the burden on retailers that deal with cross-border issues and ways to ensure that North Carolina retailers are not placed at a disadvantage in comparison to retailers in surrounding states.

SECTION 7.8. Franchise Laws for Farm and Industrial Equipment Dealers (Cotham, Lewis) – The Committee may study issues related to franchise laws for farm and industrial equipment dealers.

SECTION 7.9. Property Tax Exclusion for Disabled Veterans (H.B. 486-McGee, Holliman, J. Harrell, Pate) – The Committee may study issues related to the granting a property tax exclusion for disabled veterans.

SECTION 7.10. Renewable Energy Tax Credit – The Committee may study issues related to the implementation of G.S. 105-129.16G – Credit for donating funds to a nonprofit organization to enable the nonprofit to acquire renewable energy property.

PART VIII. ENVIRONMENTAL REVIEW COMMISSION STUDIES

SECTION 8.1. The Environmental Review Commission may study the topics listed in this Part and report its findings, together with any recommended legislation, to the 2008 Regular Session of the 2007 General Assembly upon its convening.

SECTION 8.2. North Carolina Petroleum Underground Storage Tank Program (S.B. 1146 – Hoyle) – The Commission may study the North Carolina petroleum underground storage tank program and the problems of returning to use sites impacted by leaking underground storage tanks. If the Committee undertakes the study, the following issues shall be examined:

(1) The role of "risk-based corrective action" in protecting both public health and the environment.

(2) An assessment of whether DENR has fully utilized risk-based corrective action in the program to date and whether implements could be made to fully utilize existing financial resources in the future.

(3) An assessment of the pace of cleanup "closures", and the DENR's experience with issuing letters of "no further action required" including whether contamination is being addressed promptly and impacted parcels being made eligible for desired commercial transactions that follow appropriate remediation.

(4) An assessment of fair and equitable funding needs facing the State and the tank owning segment with an examination of solvency issues experienced in the present or expected in the future.

(5) An examination and survey of other states to determine "model solutions" to address the challenges of financing environmental cleanups following a tank release and the expedited return of impacted parcels to needed and normal real estate commerce.

SECTION 8.3. Interstate Compact To Mediate Water Supply Issues (S.B. 1360 – Allran; H.B. 960 – Gillespie, Church, Hilton, R. Warren) – The Committee may study the need to negotiate an interstate compact with adjoining states that have a river basin that drains into or from North Carolina to mediate and cooperatively resolve water supply disputes that may arise from interbasin transfers and consumptive water uses in river basins that are shared by North Carolina and those states.

SECTION 8.4. Mountain Resources (Queen) – The Committee may study:

(1) Threats to important mountain resources, such as the Great Smoky Mountains National Park, the Blue Ridge Parkway, the Appalachian Trail, Mt. Mitchell, Lake James, Hickory Nut Gorge, and Gorges State Park, and the consequences to those resources of present trends and land-use practices in the mountains.

(2) Research and information from North Carolina and other states and jurisdictions regarding state and regional approaches to coordinating provision of infrastructure for the protection of mountain resources, and the efforts to encourage quality growth to protect those resources.

(3) Strategies or tools that would be helpful to address pressures on important mountain resources and whether and how those strategies and tools should be implemented to protect important mountain resources.

(4) Determine whether tools and strategies that could be used to protect important mountain resources could be applied to protect other resources in the mountains of North Carolina, including, but not limited to, groundwater, mountain streams, steep slopes and ridgelines, natural heritage areas, recognized historic areas or sites, and farmland.

SECTION 8.5. Replacement of Incandescent Lamps (H.B. 838 – Harrison, Fisher) – The Commission shall study the feasibility and desirability of phasing out the use of various types of general service incandescent lamps and replacing them with more energy efficient forms of lighting. As a part of this study, the Commission shall consider the extent to which practical and cost-effective alternative forms of lighting, including energy efficient incandescent lighting, are available and the short- and long-term costs and benefits of replacing general service incandescent lamps with more

energy efficient forms of lighting. The Commission shall report its findings and recommendations, including any legislative proposals, to the 2008 Regular Session of the General Assembly.

SECTION 8.6. Far mers "Cap-and-Trade" Program For Greenhouse Gas (GHG) Emissions (H.B. 962 – Faison, Hill) – The Commission may study the feasibility and advisability of extending credits to the business of farming in the same manner that credits are extended to other businesses in the event North Carolina enacts or adopts by rule a market-based "Cap-and-Trade" program for greenhouse gas (GHG) emissions. As used in this section, a "Cap-and-Trade" program is any program that places a limit, the cap, on the total amount of GHG emissions that is allowed under the specific target for GHG emissions set by the State, allocates GHG emissions as credits to individual businesses so that the total credits allocated equal the cap, and allows businesses to bank credits for the future or to buy and sell credits based on whether a particular business reduced or increased its GHG emissions in a given year and the value of the credits in the marketplace. In its study, the Commission may consider all of the following:

(1) How farmers can monitor GHG emissions.

(2) What the anticipated costs are to farmers to participate in a "Cap-and-Trade" program for GHG emissions, including the costs of monitoring GHG emissions, satisfying reporting requirements, and any other costs.

(3) How farmers can reduce GHG emissions on a farm.

(4) How farmers can increase their farms' ability to act as "carbon sinks," that is, utilize the carbon-absorbing abilities of plants and trees to remove carbon dioxide from the atmosphere.

(5) If farms can act as "carbon sinks" under subdivision (4) of this section, whether the removal of carbon dioxide from the atmosphere should receive some market value under the State's "Cap-and-Trade" program.

(6) How much farmers are likely to increase their annual incomes by participating as businesses in a "Cap-and-Trade" program for GHG emissions.

(7) Any other issues the Commission considers relevant to this topic.

SECTION 8.7. Increase The Recycling Of Glass And Plastic Containers. (H.B. 1394 – Tolson, Wray, Crawford, Farmer-Butterfield) – The Commission may study ways in which the recycling of glass and plastic containers can be increased and ways in which the availability of recycled glass or plastic containers can be increased for use as batch material for the manufacturing of glass and plastic containers, and the Commission may include in this study an evaluation of the effectiveness of North Carolina recycling practices for glass and plastic and compare them to the recycling practices of other states. In its study, the Commission also may consider all of the following:

(1) Whether any businesses in North Carolina use recycled glass or plastic containers as batch material for the manufacturing of glass or plastic containers.

(2) Whether any businesses identified under subdivision (1) of this section receive adequate supplies of recycled glass or plastic containers for their manufacturing processes.

(3) Where the recycled glass or plastic containers used by any businesses identified under subdivision (1) of this section come from and how far the recycled glass or plastic containers are transported to the businesses.

(4) Whether glass and plastic containers that are discarded in North Carolina are processed and recycled so as to benefit North Carolina businesses.

(5) Whether glass and plastic containers that are discarded in North Carolina are processed and recycled in keeping with the State's solid waste management policy and the forty percent (40%) municipal solid waste reduction goal established by the State under G.S. 130A-309.04.

(6) Any other issues the Commission considers relevant to this topic.

SECTION 8.8. Study Methods Of Disposing Of Wastewater At Municipal Wastewater Treatment Systems (H.B. 1809 – Tucker, Grady, Cleveland) – The Commission may study current methods of disposing of wastewater at municipal wastewater treatment facilities, as defined in G.S. 143-215.6D, and may study the feasibility and desirability of municipal wastewater treatment facilities employing other methods of disposing of wastewater. In its study, the Commission may consider all of the following:

(1) Whether the current practice of land application of wastewater at any municipal wastewater treatment facilities requires too much land to be practicable in the long term.

(2) Whether the current practice of land application of wastewater at municipal wastewater treatment facilities is better suited to certain parts of the State or to areas of certain geological or topographical conditions.

(3) Whether there are any alternative methods of disposing of wastewater at municipal wastewater treatment systems and the costs and benefits of employing any such alternative methods either on a statewide basis or in any specific area of the State.

(4) Subject to Section 2 of this act, any other issues the Commission considers relevant to this topic.

(5) The study authorized by this section shall not address any issues regarding animal waste management systems, as defined in G.S. 143-215.10B, at swine farms, as defined in G.S. 106-802, or the land application of wastewater associated with animal waste, as defined in G.S. 143-215.10B.

SECTION 8.9. Study Use of State Gamelands along Northeast Cape Fear River and Burgaw Creek for Education and Recreation (S.B. 780 – Soles; H.B. 926 – Justice) –The Commission may study issues related to the desirability and feasibility of adapting the use of a tract of State-owned land, located in the Southeastern part of the

State on the Northeast Cape Fear River and the Burgaw Creek that is currently State gamelands, to showcase the natural environment of Southeastern North Carolina, provide environmental education opportunities for youth and adults, and provide recreational opportunities for outdoor enthusiasts. This tract is approximately 776 acres located approximately three miles east of the Town of Burgaw and consists of creek swamp, ridges, and a planted pine plantation. In particular, the Commission may consider:

(1) The desirability and feasibility of establishing hiking trails on this land.

(2) The desirability and feasibility of constructing a launch site on this land that fronts the Burgaw Creek for canoes and kayaks, thereby providing a venue for canoeing and kayaking on the Cape Fear River and Burgaw Creek for the public.

(3) The environmental educational opportunities that are available for the public at the bottomland swamps, pine plantation, and other wetlands located on this land.

(4) The potential for developing at the pineland plantation a demonstration forest to showcase best forest management practices.

(5) The potential for restricting the current use of this land as State gamelands so that the use as gamelands would be compatible with recreational, educational, and environmental uses.

(6) The potential for paying the costs, in whole or in part, of adapting the use of this land to recreational, educational, and environmental uses from the sale of timber from the pine plantation located on this land.

(7) Other possible funding sources than the funding source under subdivision (6) of this section for the costs of adapting the use of this land to recreational, educational, and environmental uses.

(8) Any other issues the Commission considers to be pertinent to its study.

SECTION 8.10. Artificial Slope Construction in Mountainous Areas (H.B. 1756 – Rapp, Haire, Fisher) – The Commission with the assistance of the Department of Environment and Natural Resources, may study issues related to safe artificial slope construction in mountainous areas. The Commission may specifically study the need for and advisability of establishing minimum statewide management requirements for safe artificial slope construction in mountainous areas of the State. The Commission may also consider issues related to the recordation of natural hazards; environmental permit conditions and limitations and land-use restrictions associated with real property located in mountainous and other areas of the State; and disclosure to prospective purchasers of real property of those hazards, conditions, and restrictions. If the Commission undertakes this study, it shall hold at least two meetings related to this in the western region of the State.

SECTION 8.11. Discarded Consumer Electronics (H.B. 1777 – Gibson) – The Commission may study issues surrounding the management of discarded consumers' desktop and notebook computers, computer monitors, computer display devices, and televisions for which a manufacturer cannot be identified or for which the

manufacturer is no longer in business and has no successor in interest. When conducting this study, the Commission may ascertain, by number of units, weight, or volume, how much of this consumer computer and television equipment has been discarded in North Carolina and may determine the threat to the environment these components of the waste stream pose. No later than May 1, 2008, the Commission shall report its findings and recommendations, including any administrative or legislative proposals, on the most efficient and economically practicable means of recovering, reusing, recycling, or disposing of these components of the waste stream.

SECTION 8.12. Ban Use of DECA Flame Retardant (Harrison) – The Commission may study issues related to banning the use of DECA flame retardant.

SECTION 8.13. Wind Permitting (Harrison) – The Commission may study methods for implementing a state level permitting system and siting requirements for commercial-scale wind energy systems that will ensure that wind energy systems are sited in an orderly manner compatible with environmental preservation, sustainable development, and the efficient use of resources. In undertaking the study, the Commission may consider procedures for environmental review of commercial-scale wind energy systems, and standards necessary to minimize impacts in the following areas: noise, visual, environmental, sensitive habitats, wildlife, public health, safety. The Commission may form a technical advisory committee to include representatives from various stakeholder groups to assist in conducting this study.

SECTION 8.14. Phase Out Lagoon and Sprayfield Systems (H.B. 1822 – Jones, Harrison) – The Commission may study issues related to phasing out lagoon and sprayfield systems.

SECTION 8.15. Hazard Disclosures in Coastal Real Estate Transactions (H.B. 1628) – The Commission may study issues related to hazard disclosures in coastal real estate transactions.

SECTION 8.16. No Mining Sand From Tidal Inlet/Delta. (H.B. 1832 – Harrison) – The Commission may study issues related to mining sand from tidal inlets and delta areas.

SECTION 8.17. Energy, Job Creation, and Venture Capital (H.B. 2028 – Brubaker, Wainwright, Daughtridge) – The Commission may study issued related to energy, job creation, and venture capital.

PART IX. JOINT LEGISLATIVE OVERSIGHT COMMITTEE ON MENTAL HEALTH, DEVELOPMENTAL DISABILITIES, AND SUBSTANCE ABUSE SERVICES STUDIES

SECTION 9.1. The Joint Legislative Oversight Committee on Mental Health, Developmental Disabilities, and Substance Abuse Services may study the topics listed in this Part and report its findings, together with any recommended legislation, to the 2008 Regular Session of the 2007 General Assembly upon its convening.

SECTION 9.2. Facilities That Provide Housing For Adults With Mental Illness In The Same Location With Adults Without Mental Illness (S.B. 1266 – Nesbitt; H.B. 691 – Insko) – The Committee may study and identify rules and laws that are

SECTION 97. The listing of the original bill or resolution in this act is for reference purposes only and shall not be deemed to have incorporated by reference any of the substantive provisions contained in the original bill or resolution.

PART XCVIII. EFFECTIVE DATE AND APPLICABILITY

SECTION 98. Except as otherwise specifically provided, this act is effective when it becomes law. If a study is authorized both in this act and in the Current Operations and Capital Improvements Appropriations Act of 2007, the study shall be implemented in accordance with the Current Operations and Capital Improvements Appropriations Act of 2007 as ratified.

2007 Studies Bill SENATE VERSION

GENERAL ASSEMBLY OF NORTH CAROLINA

SESSION 2007

S 3

SENATE BILL 1256

Rules and Operations of the Senate Committee Substitute Adopted 8/1/07
Third Edition Engrossed 8/1/07

Short Title: 2007 Studies Bill. (Public)

Sponsors:

Referred to:

March 26, 2007

A BILL TO BE ENTITLED

AN ACT TO PROVIDE FOR STUDIES BY THE LEGISLATIVE RESEARCH COMMISSION, STATUTORY OVERSIGHT COMMITTEES AND COMMISSIONS, AND OTHER AGENCIES, COMMITTEES, AND COMMISSIONS.

The General Assembly of North Carolina enacts:

PART I. TITLE

SECTION 1. This act shall be known as "The Studies Act of 2007."

PART II. LEGISLATIVE RESEARCH COMMISSION

SECTION 2.1. The Legislative Research Commission may study the topics listed below. When applicable, the bill or resolution that originally proposed the issue or study and the name of the sponsor are listed. Unless otherwise specified, the listed bill or resolution refers to the measure introduced in the 2007 General Assembly. The Commission may consider the original bill or resolution in determining the nature, scope, and aspects of the study. The following groupings are for reference only:

(1) Criminal Law Issues:
  a. Grand Juries (S.B.1130 – Clodfelter)
  b. Execution/Severely Mentally Disabled Defendants (S.B. 1075 – Kinnaird)
  c. Littering (S.B. 1202 – Jacumin)

(2) State/Local Government Employee Issues:
  a. Expenses and Financing of Parking Decks for State Employees (Rand)

(3) Health and Human Services Issues:
  a. Store-Based Retail Health Clinics (Forrester)

(3) Any other item the Committee finds relevant to this study.

SECTION 7.5. New Market Tax Credit (S.B. 1160 – Hoyle) – The Committee may study a State new market tax credit to complement the federal tax credit.

SECTION 7.6. Earned Income Tax Credit – The Committee may study earned income tax credit participation rates in North Carolina and other states.

PART VIII. ENVIRONMENTAL REVIEW COMMISSION STUDIES

SECTION 8.1. The Environmental Review Commission may study the topics listed in this Part and report its findings, together with any recommended legislation, to the 2008 Session of the General Assembly upon its convening.

SECTION 8.2. North Carolina Petroleum Underground Storage Tank Program (S.B. 1146 – Hoyle) – The Commission may study the North Carolina petroleum underground storage tank program and the problems of returning to use sites impacted by leaking underground storage tanks. If the Committee undertakes the study, the following issues shall be examined:

(1) The role of "risk-based corrective action" in protecting both public health and the environment.

(2) An assessment of whether DENR has fully utilized risk-based corrective action in the program to date and whether implements could be made to fully utilize existing financial resources in the future.

(3) An assessment of the pace of cleanup "closures", and the DENR's experience with issuing letters of "no further action required" including whether contamination is being addressed promptly and impacted parcels being made eligible for desired commercial transactions that follow appropriate remediation.

(4) An assessment of fair and equitable funding needs facing the State and the tank owning segment with an examination of solvency issues experienced in the present or expected in the future.

(5) An examination and survey of other states to determine "model solutions" to address the challenges of financing environmental cleanups following a tank release and the expedited return of impacted parcels to needed and normal real estate commerce.

SECTION 8.3. Deep River State Trail/State Parks System (S.B. 1431 – Atwater) – The Commission may study the desirability and feasibility of adding the Deep River State Trail to the State Parks System.

SECTION 8.4. Interstate Compact To Mediate Water Supply Issues (S.B. 1360 – Allran) – The Committee may study the need to negotiate an interstate compact with adjoining states that have a river basin that drains into or from North Carolina to mediate and cooperatively resolve water supply disputes that may arise from interbasin transfers and consumptive water uses in river basins that are shared by North Carolina and those states.

SECTION 8.5. State-Owned Land On Cape Fear River/Burgaw Creek (S.B. 780 – Soles) – The Committee may study issues related to the desirability and feasibility of adapting the use of a tract of State-owned land, located in the southeastern part of the State on the Northeast Cape Fear River and the Burgaw Creek that is currently State gamelands, to showcase the natural environment of Southeastern North Carolina, provide environmental education opportunities for youth and adults, and provide recreational opportunities for outdoor enthusiasts.

SECTION 8.6. Mountain Resources (Queen) – The Committee may study:

(1) Threats to important mountain resources, such as the Great Smoky Mountains National Park, the Blue Ridge Parkway, the Appalachian Trail, Mt. Mitchell, Lake James, Hickory Nut Gorge, and Gorges State Park, and the consequences to those resources of present trends and land-use practices in the mountains.

(2) Research and information from North Carolina and other states and jurisdictions regarding state and regional approaches to coordinating provision of infrastructure for the protection of mountain resources, and the efforts to encourage quality growth to protect those resources.

(3) Strategies or tools that would be helpful to address pressures on important mountain resources and whether and how those strategies and tools should be implemented to protect important mountain resources.

(4) Determine whether tools and strategies that could be used to protect important mountain resources could be applied to protect other resources in the mountains of North Carolina, including, but not limited to, groundwater, mountain streams, steep slopes and ridgelines, natural heritage areas, recognized historic areas or sites, and farmland.

PART IX. JOINT LEGISLATIVE OVERSIGHT COMMITTEE ON MENTAL HEALTH, DEVELOPMENTAL DISABILITIES, AND SUBSTANCE ABUSE SERVICES STUDIES

SECTION 9.1. The Joint Legislative Oversight Committee on Mental Health, Developmental Disabilities, and Substance Abuse Services may study the topics listed in this Part and report its findings, together with any recommended legislation, to the 2008 Regular Session of the 2007 General Assembly upon its convening.

SECTION 9.2. Facilities That Provide Housing For Adults With Mental Illness In The Same Location With Adults Without Mental Illness (S.B. 1266 – Nesbitt) – The Committee may study and identify rules and laws that are necessary to regulate facilities that provide housing for adults with mental illness in the same location with adults without mental illness.

SECTION 9.3. Effectiveness Of The 1915(b) Medicaid Waiver And Of Those LMEs Operating Under A Waiver (S.B. 1266 – Nesbitt) – The Committee may study the effectiveness of the 1915(b) Medicaid waiver and of those LMEs operating under a waiver.

SECTION 34. For legislative studies authorized by this act, out-of-state travel must be authorized by the President Pro Tempore of the Senate or the Speaker of the House of Representatives, as appropriate.

PART XXXV. BILL AND RESOLUTION REFERENCES

SECTION 35. The listing of the original bill or resolution in this act is for reference purposes only and shall not be deemed to have incorporated by reference any of the substantive provisions contained in the original bill or resolution.

PART XXXVI. EFFECTIVE DATE AND APPLICABILITY

SECTION 36. Except as otherwise specifically provided, this act is effective when it becomes law. If a study is authorized both in this act and in the Current Operations and Capital Improvements Appropriations Act of 2007, the study shall be implemented in accordance with the Current Operations and Capital Improvements Appropriations Act of 2007 as ratified.

Status of Reports to the ERC Required by Law

Organized by topics: air quality, coastal issues, env. health, fishing, general, hazardous substances, land resources, parks and conservation, solid waste, water quality, water quantity, wetlands

Air Quality

DAQ (DENR)	Report To/ Authority	Report Due	Status*
Shall study the costs and benefits of reducing emissions of oxides of nitrogen, particulate matter, and greenhouse gases from motor vehicles in this State. Shall also consider standards adopted in other states.	ERC, LCGCC S.L. 2006-248, Sec. 43	Interim : 15 Jan 2007 Final; 1 April 2007	Jan 07, distrib 1/17/07 Apr 07 Final Report distrib 10/31/07

DENR	Report To/ Authority	Report Due	Status*
Shall report on the pilot program to retrofit certain school buses in nonattainment areas	ERC, DPI, and DOT 2007-465, Sec. 4.(b)	1 Sept 2008 and 1 Sept 2009	
Cost of the Title V program	ERC, Fiscal Research GS 143-215.3A(c)	Annually (1 Nov)	Mar 00 mail 3/29/00 May 02 oral 5/21/02 Jan 04 distrib 2/24/04 Nov 04 oral 11/19/04 Nov 05 distrib 3/8/06 Dec 06 distrib 12/13/06

DENR, Utilities Commission	Report To/ Authority	Report Due	Status*
Implementation of SL 2002-4 (Clean Smokestacks)	ERC, Joint Legislative Utility Review Committee S.L. 2002-4, Section 14	Annually (1 Jun 2003)	28 Jan 03 30 May 03 distrib 2/24/04 June 04 oral 11/19/04 June 05 distrib 11/05 June 06 distrib 10/09/06 June 07

Department of Transportation (DOT)	Report To/ Authority	Report Due	Status*
Evaluation/ adjustment of region served by each Metropolitan Planning Organization	ERC, Joint Legislative Transportation Oversight Committee GS 136-202(d)	Nov 1 of each year regions evaluated and adjusted (every 5 years, including year following federal census)	Oct 04 oral 11/19/04 Jan 07 dist 1/17/07
Plan developed with DOA, Commerce, DENR to reduce VMT & vehicle emissions from private sector employee travel.	ERC, Joint Legislative Transportation Oversight Committee GS 143-215.107C(e)	Annually (Oct 1)	02/02/04 distrib 3/25/04 Included in TDM Program Oral 1/13/05 Jan 06 distrib 2/14/06 Nov 06 oral 11/15/06 Oct 07 distrib 10/31/07

* "oral" indicates oral report was given to ERC or S+A; "mail" indicates the report was mailed to members; "in" indicates that the report has been received but not yet distributed.

DOT	Report To/ Authority	Report Due	Status*
Plan developed with DOA, DOT, DENR to reduce VMT & vehicle emissions from State employee travel.	ERC, Joint Legislative Transportation Oversight Committee SL 1999-328(4.6) G.S. 143-215.107C(d)	Annually (Oct 1)	Mar 02 Distrib 5/21/02 Letter distrib 02/24/04 Oral 1/13/05 Jan 06 distrib 2/14/06 Nov 06 oral 11/15/06 Oct 07 distrib 10/31/07

EMC	Report To/ Authority	Report Due	Status*
Desirability of requiring and the feasibility of obtaining reductions in emissions of oxides of nitrogen (Nox) and sulfur dioxide (SO2) beyond those required by G.S. 143-215.107D.	ERC, General Assembly SL 2002-4, Section 11; S.L. 2006-79	Annually, starting 2007 (Sep 1)	Mar 06 distrib 4/11/06

climate change

Joint Legislative Commission on Climate Change	Report To/ Authority	Report Due	Status*
Report of findings and recommendations by the Commission	General Assembly and ERC S.L. 2005-442, Sec. 11; S.L. 2006- 73, Sec. 1	Interim: 15 Jan 2007 Final: 15 April 2008	

coastal issues

CRC	Report To/ Authority	Report Due	Status*
Evaluate the impacts on water quality and other environmental impacts from the new urban waterfront area development authorized by this act and evaluate the costs and benefits from the development to the area in which the development is located.	ERC S.L. 2004-117, Sec. 4	Annually (beginning 1 Oct 05). Final report due 1 Oct 2010.	

fishing

CRC, EMC, and MFC	Report To/ Authority	Report Due	Status*

DENR (Secretary)	Report To/ Authority	Report Due	Status*
State of the Environment Report	General Assembly,ERC GS 143B-279.5(a)	Feb 15 of each odd-numbered year	Feb 1, 2000

* "oral" indicates oral report was given to ERC or S+A; "mail" indicates the report was mailed to members; "in" indicates that the report has been received but not yet distributed.

DENR and Utilities Commission	Report To/ Authority	Report Due	Status*
Shall jointly report on the implementation of the Swine Farm Methane Capture Pilot Program including a program evaluation, and legislative proposals	ERC, Joint Legislative Utility Review Committee S.L. 2007-523, Sec. 4.(g)	Annually, beginning January 1, 2009	

Department of Administration	Report To/ Authority	Report Due	Status*
Shall submit a consolidated report on the implementation of the Sustainable Energy Efficient Buildings Program and make recommendations regarding ongoing implementation	ERC, Chairs of the Gov Ops Subcommittees, and Joint Leg Com. on S.L. 2007-546, Sec. 1.(c)	annually, November 1 beginning in 2008	
Shall monitor the development of construction or other energy efficiency standards to determine whether there is a standard that would better fulfill the intent of the Sustainable Energy Efficient Buildings Program	ERC, Chairs of the Gov Ops Subcommittees, and Joint Leg Com. on S.L. 2007-546, Sec. 1.(f)	January 1, 2009 and January 1, 2010	
Shall report its findings of the performance review of the Sustainable Energy Efficient Buildings Program	ERC, Chairs of the Gov Ops Subcommittees, and Joint Leg Com. on S.L. 2007-546, Sec. 1.(h)	Preliminary report: December 1, 2010 Final Report: December 1, 2011	
Shall report on its plan to implement an energy conservation measures program and development or revision of architectural or engineering stds consistent with an energy conservation measures program.	ERC, Joint Leg Com. On Gov Ops S.L. 2007-546, Sec. 2.1.(c)	February 1, 2008	

EMC	Report To/ Authority	Report Due	Status*
EMC operation, activities, programs, and progress (see also other reports with "EMC Quarterly Report" noted at the end of the topic line)	ERC GS 143B-282(b)	Quarterly (Jan 15, Apr 15, Jul 15, Oct 15); upon request	Jan, April 06 oral 4/11/06 June, Oct 06 oral 10/9/06 Jan 07, oral 1/17/07 Apr, Jul, Oct 07, Oral 10/31/07

North Carolina Building Code Council	Report To/ Authority	Report Due	Status*
Shall study the extent to which hot waterlines should be insulated to achieve greater energy efficiency and shall amend the State Building Code as necessary to achieve those ends.	ERC and the 2008 Regular Session of the General Assembly S.L. 2007-542, Sec. 2	April 1, 2008	

Soil and Water Conservation Commission (DENR)	Report To/ Authority	Report Due	Status*
Report on the Community Conservation Assistance Program, including asummary of projects that received State funding pursuant to the Program, the results of the evaluation conducted pursuant to, and a summary of the effectiveness of the Program.	ERC, FRD G.S. 143-215.74M(e)	Annually (beginning 31 January 2007)	

* "oral" indicates oral report was given to ERC or S+A; "mail" indicates the report was mailed to members; "in" indicates that the report has been received but not yet distributed.

State Water Infrastructure Commission	Report To/ Authority	Report Due	Status*
Recommendations by the Commission	General Assembly and ERC G.S. 159G-67	Annually (1 November)	Nov 06 oral 11/15/06 Nov 07

Utilities Commission	Report To/ Authority	Report Due	Status*
Shall report on the actual costs of the costs allocations established pursuant to G.S. 62-133.7(h), G.S. 62-133.8(e), G.S. 62-133.8(f), G.S. 62-133.2(a2), and G.S. 62-133.2(a3) during the preceding two fiscal years	ERC, Joint Legislative Utility Review Committee, Governor S.L. 2007-397, Sec. 14	On or before 1 October in odd-numbered years beginning in October 2009.	
Shall prepare an analysis of whether rate structures, policies, and measures, including decoupling in other places should be implemented in NC.	ERC, Joint Legislative Utility Review Committee, Governor S.L. 2007-397, Sec. 4.(c)	1 September 2008	

Utilities Commission in consultation with DENR	Report To/ Authority	Report Due	Status*
Shall report on the activities taken by the Commission to implement and by the electric utilities to comply with the requirements of the REPS/EE including environmental impacts	ERC, Joint Legislative Utility Review Committee, Governor S.L. 2007-397, Sec. 2.(a)(j)	Annually (1 October) beginning in 2008	

hazardous substances

DENR	Report To/ Authority	Report Due	Status*
Implementation of the Resident Inspectors Program at commercial hazardous waste facilities	ERC GS 130A-295.02(m); SL 2006-79	Annually (Oct 1)	Oct 2002 (distrib 1/16/03) Sep 03 distrib 02/24/04 Sep 04 distrib 10/21/04 Jan 06 distrib 1/24/06 Nov 06 distrib 11/15/06
Evaluation of effectiveness of Brownfields Property Reuse Act	ERC GS 130A-310.40	Annually (Oct 1)	Feb 02 oral 2/21/02 Jan 03 oral 1/28/03 Jan 04 oral 2/24/04 Oct 04 distrib 10/21/04 Jan 06 oral 1/24/06 Dec 06 oral 1/23/07

DENR (Division of Waste Management)	Report To/ Authority	Report Due	Status*
Implementation of comprehensive hazardous waste management plan; implementation of the comprehensive hazardous waste plan, including an evaluation of how well the State and private parties are managing and cleaning up hazardous waste.	ERC GS 130A-294(i) SL 2002-148, Sec. 4	Annually (1 Oct)	5 Oct 03 distrib 02/24/04 July 04 distrib 10/21/04 Jan 06 distrib 1/24/06 Nov 06 oral 11/15/06

* "oral" indicates oral report was given to ERC or S+A; "mail" indicates the report was mailed to members; "in" indicates that the report has been received but not yet distributed.

DENR (Secretary)	Report To/ Authority	Report Due	Status*
Inactive Hazardous Waste Sites Program	ERC GS 130A-310.10	Annually (Oct 1)	Jan 03 oral 1/28/03 Sep 03 oral 2/24/04 Oct 04 distrib 10/21/04 Jan 06 oral 1/24/06 Nov 06 distrib 11/15/06

DENR, Office of State Budget and Management	Report To/ Authority	Report Due	Status*
Amount and source of available funds used for 10% cost share required for Superfund cleanup of NPL sites, the o&m costs associated w/ these cleanups, and the cleanup of priority inactive hazardous substance or waste sites	ERC, Gov Ops SL 1999-237(15.6)(b)	30 days after spend Superfund/ Inactive Haz Sites funds	Sep 03 distrib 2/24/04 June 04 distrib 10/21/04 May 05 distrib 11/22/05 Aug 05 distrib 11/22/05 Jan 06 oral 1/24/06

Hazardous Waste

DENR	Report To/ Authority	Report Due	Status*
Shall study the need for further regulation of hazardous waste transfer facilities, including whether to require these facilities to obtain a permit, pay permit fees, provide contingency plans, and demonstrate financial responsibility.	ERC SL 2007-107, Sec 1.8.(d)	on or before 1 Feb 2008	

Office of the Governor	Report To/ Authority	Report Due	Status*
Shall report on its efforts in seeking the advice of units of local government to determine if the criteria considered to determine whether or to what extent to preempt local ordinances pursuant to 130A-293 as amended should be further amended.	ERC SL 2007-107, Sec 1.10.(b)	on or before 1 March 2008	

Regulation of Hazardous Materials Facilities Task Force	Report To/ Authority	Report Due	Status*
Shall study issues related to TSD of haz materials and review all current fire code regs regarding the commerical TSD of haz materials to ensure the Code addresses the needs and safety of citizens.	ERC, NC Building Code Council SL 2007-107, Sec 4.1.(j)	on or before 1 April 2008	

land resources

DENR	Report To/ Authority	Report Due	Status*
Annual report and analysis of how the implementation of SPCA is affecting activities that contribute to the sedimentation of streams, rivers, lakes, and other waters of the State; shall also review effectiveness of local programs	ERC G.S. 113A-67; S.L. 2004-195, Sec. 2.1	Annually (beginning 1 Oct 05)	Dec 05 oral 12/20/05 Dec 06 oral 1/17/07 Oct 07 oral 10/31/07

* "oral" indicates oral report was given to ERC or S+A; "mail" indicates the report was mailed to members; "in" indicates that the report has been received but not yet distributed.

Onsite wastewater

DENR	Report To/ Authority	Report Due	Status*
Shall evaluate whether: (i) the program resulted in a reduction in the length of time improvement permits or authorizations to construct are pending in the participating counties	ERC S.L. 2006-136, Sec. 3	Annually (beginning 1 October 2007)	

parks and conservation

DENR	Report To/ Authority	Report Due	Status*
Report on the conservation easement program + inventory of all conservation easements held by DENR	ERC GS 113A-235(c) SL 2004-195, Sec. 2.2	Annually (Oct 1)	Jan 03 oral 1/16/03 Dec 03 oral 4/22/04 Oct 04 oral 1/13/05 Mar 06 oral 3/14/06 Jan 07 oral 1/23/07

MEMORANDUM

To: Environmental Review Commission Members

From: William G. Ross, Jr.

Subject: Status Report on Individually Permitted Discharging Systems
Beginning July 1, 2006 and Ending June 30, 2007
Fiscal Year 2006-2007

Pursuant to General Statutes 143-215.9A, the Department of Environment and Natural Resources submits the subject fiscal year report.

If any additional information or clarification is needed, please contact Vanessa Manuel at 919/733-5083, extension 532.

Status Report on Individually Permitted Discharging Systems For the Period Beginning July 1, 2006 and Ending June 30, 2007.

Summary

North Carolina General Statute (N.C.G.S.) 143-215.9A requires the Department of Environment and Natural Resources to report to the Environmental Review Commission and the Fiscal Research Division on the status of facilities discharging into surface waters during the previous fiscal year. Facilities discharging into surface waters are required by N.C.G.S. 143-215.1 to first apply for and secure a permit from the Environmental Management Commission. As a result, the data provided within this fiscal report is captured for those facilities individually permitted with National Pollutant Discharge Elimination System (NPDES) permits.

The enclosed report details the inspections completed and the enforcement actions taken in North Carolina during fiscal year 2006-2007 by the Division of Water Quality. In addition, information on Special Orders by Consent is included. The report also includes a table showing the number of permits issued by region and the names and locations of the individually permitted discharging facilities.

The enclosed tables list totals for each of the Department's regional offices as well as State totals. The regional offices are noted as follows:

- ARO – Asheville Regional Office
- FRO – Fayetteville Regional Office
- MRO – Mooresville Regional Office
- RRO – Raleigh Regional Office
- WARO – Washington Regional Office
- WIRO – Wilmington Regional Office
- WSRO – Winston-Salem Regional Office

If any additional information or clarification is needed, please contact Vanessa Manuel at 919/733-5083, extension 532.

CONTENTS

Table 1 Enforcement actions taken, Civil Penalties assessed and collected, and Remissions Requested from July 1, 2006, through June 30, 2007.

Table 2 Permits Issued and Inspections completed from July 1, 2006, through June 30, 2007.

Table 3 Special Orders by Consent (SOCs) active and pending from July 1, 2006, through June 30, 2007.

Table 4 Names and locations of individually permitted discharging facilities as of August 13, 2007.

ADDENDUM

The following is provided to support the information in the above status report.

- The Division of Water Quality does not have the data or management system in place to currently track information on the number of violations found during each inspection, the date of the violation, or the nature of the violation. A Basinwide Information Management System is, however, under development to address these needs. Funding has been allocated for the initial development phase. Completion of the system will require further funding. Therefore, at this time, the Division is unable to provide such information as requested in the amended G.S. 143-215.9A(a)(3).
- As found in Table 2, "Other Inspections" include:
  - **Audit Inspections**, a comprehensive review of all elements of a municipal's pretreatment program including a records review & an inspection of an industrial facility conducted once every 5 years;
  - **Bioassay Compliance Inspections**, evaluates the biological effect of a permittee's effluent discharge on test organisms using acute and chronic toxicity testing;
  - **Compliance Sampling Inspections**, a sampling inspection designed to verify the permittee's compliance with applicable permit self-monitoring requirements -- analytical results from representative samples collected during the inspection are used to evaluate the permittee's compliance;
  - **Diagnostic Inspections**, focuses on Publicly Owned Treatment Works that have not achieved permit compliance – the purpose is to identify the causes of noncompliance, suggest immediate remedies, and support current or future enforcement action;
  - **Operation & Maintenance Inspections**, focuses on the operation and maintenance aspect of a facility;
  - **Performance Audit Inspections**, inspections that include actual observation of the permittee performing the self-monitoring process from sample collection and flow measurements through laboratory analyses, data work-up and reporting;
  - **Pre-Treatment Inspections**, an annual inspection of a municipal's pretreatment program; and
  - **Toxicity Sampling Inspections**, same as CSI – however, increased emphasis is placed on toxic substances regulated by the NPDES Permit.
- Effective July 1, 1998, the Director of the Division of Water Quality delegated each Regional Water Quality Supervisor the authority to sign all Civil Penalty Assessments for fast-track enforcement actions for violations of NPDES Permit effluent limits and/or monitoring frequencies in accordance with NCGS 143-215.6A.
- As found in Table 1, "Other Permit Condition Violations" may include
  - discharge violations (resulting from collection system overflows);
  - submitting late Discharge Monitoring Reports;
  - submitting late Toxicity Tests; and
  - permit condition violations (examples, violations of pre-treatment program, improper operation & maintenance of treatment works, or by-pass of treatment works)
- Due to the length of the post assessment process, total civil penalties assessed and total civil penalties collected will not coincide.

RE: Annual Report on Pilot Program for Inspections of Animal Waste Management Systems

SECTION 12.7. (b) Section 3.3 of S.L. 1999-329, as amended by Section 6 of S.L. 2001-254, Section 1.2 of S.L. 2002-176, and Section 6.2 of S.L. 2003-340, requires the Department of Environment and Natural Resources, in consultation with both the Division of Water Quality and the Division of Soil and Water Conservation, to submit semiannual interim reports no later than April 15 and October 15 of each year beginning October 15, 1999, to the Environmental Review Commission, the Fiscal Research Division, and the Appropriations Subcommittees on Natural and Economic Resources in both the Senate and the House of Representatives.

If you have any questions regarding this report, please contact Patricia Harris, technical engineer with the N.C. Division of Soil and Water Conservation's Operation Review Team, at (252) 946-6481.

APPENDIX 14

EXECUTIVE SUMMARY

From 1999 through 2006, the pilot program has collected data from 2,720 documented site visit reports to 167 permitted animal operations in Brunswick, Columbus, Jones and Pender Counties. The Division of Soil and Water Conservation (DSWC) staff has used this data to study and better understand the factors that influence compliance and affect the potential for environmental impact by animal waste management systems. For 2006, DSWC experienced or observed the following:

- Weather had a significant negative influence on overall compliance by pilot farms in the second half of 2006. (p. 9, p.11)
- The percentage of pilot farms categorized into the potential *low impact* category decreased from 96% in 2005 to 92% in 2006. (Fig. B, p.10)
- A higher percentage of noncompliance incidents were noted on pilot farms versus non-pilot farms in the 28 eastern counties of North Carolina. (p. 8)
- Pilot farms are more likely to report noncompliance. (p. 8)
- Overall, the percentage of farms documented with "immediate threat" problems such as waste discharges to state surface waters and waste levels within structural freeboard is greater for pilot farms versus non-pilot farms in the 28 eastern counties. (p. 9)
- Fourteen farms were categorized as potential high impact to the environment due to documented noncompliance performance. Eight of these farms are new to the program and located in Pender County. Five of the six remaining farms had documented non-compliance histories as potential high impact farms prior to 2006. (p. 10)
- DSWC *per-visit* costs continue to be less for pilot farms when compared to non-pilot farms. (Tab. 4, p.12)
- DSWC *per-farm* costs are higher for pilot farms than non-pilot farms due to increased frequency of site visits. (Tab. 4, p.12)

BACKGROUND

The objective of the Animal Waste Management Inspection Pilot (hereinafter the pilot), and in accordance with Section 12.7(b) of S.L. 2005-276, is to determine how DSWC staff can respond more quickly and effectively, with technical assistance, to complaints and problems to help farms achieve compliance with environmental regulations. In addition, the program allows Department of Environment and Natural Resources (DENR) staff to test approaches for earlier identification of problems, and to target DENR's resources for expediting corrective actions.

The pilot differs from the state's traditional animal inspections program in that DSWC staff conducts annual *routine* compliance inspections, in addition to performing *routine* operation reviews of all permitted livestock operations in Brunswick, Columbus, Jones and Pender counties. DWQ staff provides regulatory oversight, performs compliance audits with DSWC staff of "targeted" potential high environmental impact farms, responds to DSWC referrals and conducts additional compliance inspections for further investigation and enforcement actions as warranted.

Currently there are 166 swine farms and one horse farm in the pilot area with 95 farms operating under a National Pollutant Discharge Elimination System (NPDES) general permit and 72 farms operating under a State Non-discharge (State) general permit. This number of farms in the pilot area increased by 37% from 2005, due to the inclusion of Pender County into the program.

The pilot program is currently scheduled to end September 1, 2007.

Precipitation

As stated in earlier pilot reports, annual precipitation amounts and events have the biggest impact on compliance performance by farms in the pilot program area. Animal waste management systems, including anaerobic lagoons and waste storage ponds, are generally designed to store one 25-year, 24-hour storm event (ranges 7 to 8 inches in pilot area); 180 days of excess rainfall over evaporation based on historical averages; wash water and animal waste. Heavy precipitation amounts greater than historical average, and/or periods of prolonged precipitation can drastically decrease the storage capacity of the waste system. In addition, the waste system's capacity to land apply waste to receiving crops is also diminished due to wet or frozen soil conditions, wind, and/or availability of adequate crops to utilize the nutrients in the waste.

2006 proved challenging for pilot farms in the coastal counties because precipitation during the first half of the year was 4¾ inches *below* normal, while precipitation during the second half was 10½ inches *above* normal. Overall, pilot counties received two-thirds of its annual precipitation amount from July through December. Based on

historical averages, the pilot area would expect to receive only 55% of its annual precipitation during the second half of the calendar year.

Figure A reflects the uneven monthly precipitation distribution for 2006 within the pilot counties. (See the ***Appendix*** at the end of the report for monthly and annual climate data results.) Higher than normal precipitation received in September was a direct result of Tropical Storm Ernesto as reported in the *2006 Semiannual ERC Report.* Otherwise, North Carolina was fortunate in that the state did not experience a direct hit from a hurricane in 2006, despite earlier predictions.

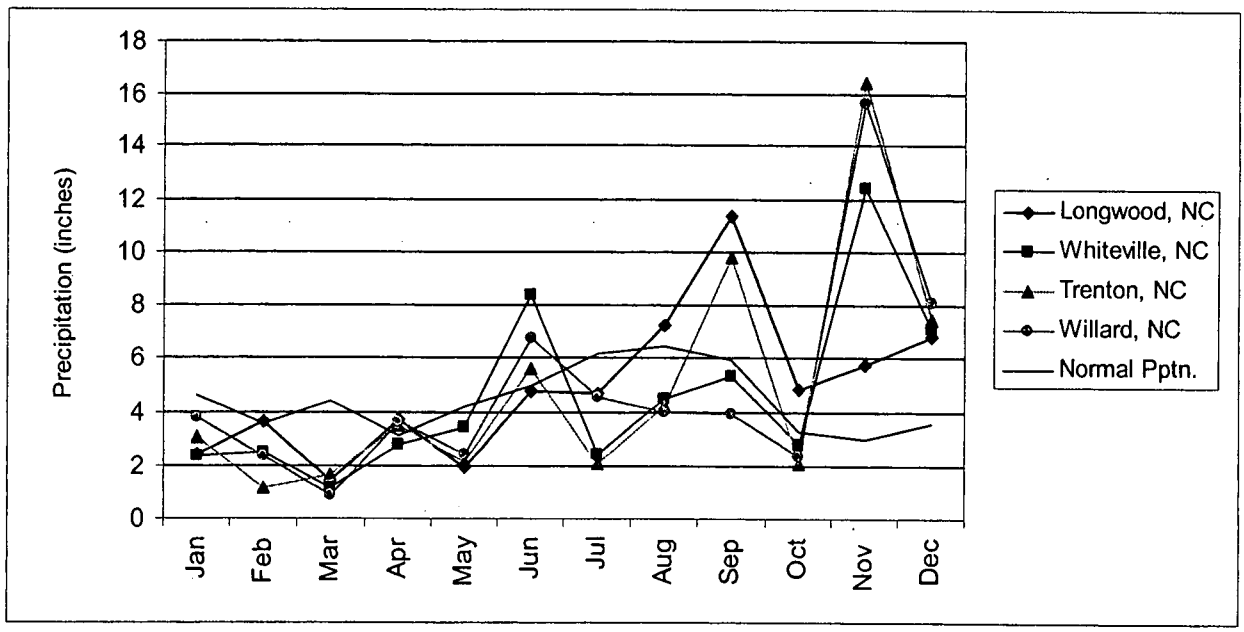

Figure A. 2006 monthly precipitation amounts measured at weather stations located within the four pilot counties. The normal monthly precipitation for the these weather stations is a statistically adjusted 30-year average officially published by the National Oceanic and Atmospheric Administration every ten years. *Source: State Climate Office of North Carolina.*

Based on earlier pilot reports, one could anticipate noncompliance trends of specific operational indicators would increase during the second half of 2006, based on climatic conditions and precipitation amounts.

Categorizing Farms into Environmental Impact Groups

For 2006, DSWC staff continued to use the environmental scale, first described in the May 21, 2002 Addendum ERC Report, and modified in 2005 (due to implementation of the DWQ's *Basinwide Implementation Management System* database known as BIMS) to separate pilot animal operations based on their compliance performance and relative potential for environmental impact. DSWC, DWQ and Soil and Water Conservation District (SWCD) field staff continued to use one standard inspection form with the

collected data entered into BIMS. The pilot's operational indicators and problem parameters were queried and assessed from these documented site visits.

Table 1 lists the operational indicators used to assess animal waste management systems' performance on the pilot farms, with assigned points to reflect the degree of "immediate" or "potential" threat a specific compliance deficiency would have to the environment. The 15 indicators and relative point values remain unchanged from last annual pilot program report.

Operational Indicators	Point Value
Offsite discharge	20
Structural integrity compromised	18
Waste in structural freeboard range	16
Hydraulic overloading	15
Nitrogen over-applied ≥ 10%	12
Waste level in storm storage	11
Irrigation system maintenance deficiency	11
Structural maintenance deficiency	10
Receiving crop inconsistent with waste plan	10
Irrigation records deficient	10
Lagoon level records deficient	9
Nitrogen over-applied <10%	8
Receiving crop/sprayfield needs improvement	8
Waste analysis deficient	8
Soil analysis deficient	7

Table 1. Operational indicators observed and recorded by DSWC and DWQ staff during site inspections. Items in italics represent "immediate threat" indicators.

As in previous years, pilot farms were scored by the noncompliance points received for those operational indicators noted during each site visit, and ranked by the total points received for all site visits in 2006. The farms were then categorized into three potential impact groupings based on their total noncompliance scores. See ***Table 2.*** Point ranges for these groupings were determined from farm performance in 2000, and remains unchanged through 2006.

Potential Impact Group	Noncompliance points
Low environmental impact	0 – 12 points per year
Medium environmental impact	13 – 30 points per year
High environmental impact	31 or more points per year

Table 2. Potential environmental impact groupings and corresponding noncompliance point ranges.

Using the pilot's established inspection protocol, farms in the low and medium environmental impact groups were determined to be responsive to technical assistance and subject to continued *routine* operation reviews and compliance inspections by DSWC staff in 2007. Farms scoring in the high impact group are subject to a joint audit by DSWC and DWQ staff for more comprehensive evaluations. If an audit reveals that the farm is noncompliant with regulations and poses a high potential for environmental impact, DWQ staff assumes full responsibility for the routine inspection of this operation until an acceptable level of compliance is achieved.

DSWC staff feels this is the best approach to inspection because both divisions can apply their respective technical and regulatory resources more effectively and efficiently based on lessons learned from the pilot program. By working together in the pilot, DSWC and DWQ staff has improved communications between the divisions and between DENR and individual livestock producers. Participants continue to voice support for the program and cite consistency, improved communication and focused technical assistance as program benefits needed for compliance.

2006 PROGRAM FINDINGS

Base Data for Pilot

2006 activity, both in and out of the pilot area, is reflected in the following data queried from BIMS:

- Statewide, 2,496 animal operations were subject to permitting and inspection.
- Statewide, DENR staff conducted 5,059 site visits (2,631 by DSWC & SWCD and 2,428 by DWQ).
- In the pilot area of Brunswick, Columbus, Jones and Pender counties, 167 animal operations were subject to permitting and inspection.
- In the pilot area, DENR staff conducted 413 site visits (385 by DSWC and 28 by DWQ).

Compliance Trends

For this report, DSWC examined various reporting tools to determine if pilot farms have better compliance trends than for all farms located within the 28 eastern counties covered by DENR's Washington and Wilmington regional staff.

First, DSWC queried all incident reports logged into the BIMS database between January 1, 2006 through December 31, 2006 for all farms located within DENR's Washington and Wilmington regions. A total of 294 incident reports for animal operations were logged with 28% of the reports originating from pilot farms primarily in Jones and Pender Counties. DSWC staff feels the higher percentage of incidents in the pilot counties is not caused by increased noncompliance but by a combination of the following:

- Direct rainfall and flooding impacts of Tropical Storm Ernesto on August 31 and September 1. (See 2006 Semiannual Pilot Program Report to ERC.)
- Consistency of information and expectations between producers and DSWC staff. Pilot farms are more likely to report noncompliance (82% of the 2006 pilot farm incidents were in the "reported noncompliance" category).
- Better awareness of potential problems by DSWC staff due to increased site visits.
- Heightened surveillance by DSWC staff in pilot area.
- Improved, consistent and uniform approach by DSWC and DWQ staff when dealing with noncompliance performance.

81% of the 294 incident reports in the DENR's Washington and Wilmington regions noted noncompliance started during the second half of 2006, and directly correlates with the 2006 precipitation distribution pattern.

Next, DSWC compared 2006 site visit findings between pilot and non-pilot farms located within the DENR Washington and Wilmington regions. Based on site visit reports in BIMS and the DWQ Year-To-Date Data Report dated 3.7.07, the following items were observed:

- Onsite discharges noted in 1% of pilot farm reports versus 0.4% of non-pilot farm reports.
- Discharges reaching surface waters noted in 1% of pilot farm reports versus 0.1% of non-pilot farm reports.
- Inadequate freeboard noted in 15% of pilot farm reports versus 3% of non-pilot farm reports.
- Freeboard noted less than one foot (within structural freeboard) noted in 4% of pilot farm reports versus 0.8% of non-pilot farm reports.

It should be noted that duplications are included in the pilot area site visit findings because when DSWC and DWQ staff inspects a farm jointly, each division is required to enter a report into BIMS for the same site visit. This double reporting causes noted deficiencies to be counted and scored twice, thus increasing the rate of occurrence for any given operational indictor.

Farm Performance Within the Pilot Program Area

In ***Figure B***, pilot farms are grouped by their environmental impact scores, and shown as a percentage of the total number of pilot farms in operation within a given year.

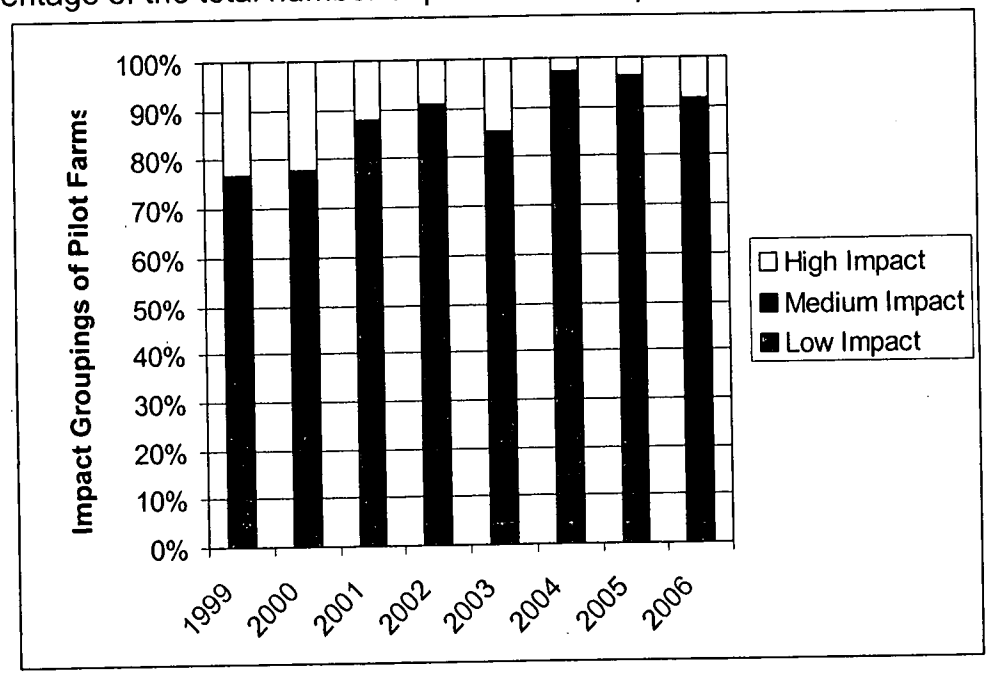

Figure B. Pilot farms grouped into environmental impact categories.

In 2006, 92% of the pilot farms were categorized in either the low or medium impact groups. This is a 4% decrease from 2005 findings and is contributed to the addition of Pender County and above-average precipitation amounts ranging from 3+ inches in Brunswick to almost 6 inches in Jones County. See appendix for additional precipitation information.

Based on 2006 compliance performance, 14 farms were identified as potential high impact farms. Of the six farms identified in Columbus and Jones counties, five farms had been identified as potential high impact in previous years. The remaining eight farms are located in Pender County and do not have previous environmental impact ratings within the pilot program. The 14 potential high impact farms are scheduled for compliance audits by DSWC and DWQ staff during the first half of 2007.

As previously mentioned, noncompliance trends were noted primarily in the second half of 2006 due to climatic impacts. This observation is evident in several "immediate threat" and "potential threat" operational indicators listed in Table 3 comparing the "Frequency of Occurrence" for a DENR inspector to find a specific operational indicator during a site visit to a pilot farm.

Operational Indicator	Jan-June	July-Dec
Offsite discharge	0	1%
Structural integrity compromised	0	3%
Waste in structural freeboard range	0	4%
Hydraulic overloading or ponding	0	3%
Nitrogen over-applied ≥ 10%	0	0
Waste level in storm storage	2%	9%
Irrigation system maintenance deficiency	0	0
Structural maintenance deficiency	3%	3%
Receiving crop inconsistent with waste plan	0.5%	0.5%
Irrigation records deficient	0.2%	0.2%
Waste level records deficient	1%	3%
Receiving crop/application field deficient	3%	4%
Waste analysis deficient	0.5%	0
Soil analysis deficient	1%	0

Table 3. "Frequency of Occurrence" for finding an operational indicator on a pilot farm during either the first or second half of the 2006 calendar year. Items in italics represent "immediate threat" indicators.

Focus Group Activities

Local Focus Groups did not meet during the 2006 calendar year. DSWC resources were redirected towards implementing the pilot program in Pender County while maintaining the program in Brunswick, Columbus and Jones counties. DSWC employed and provided training for an additional Environmental Specialist to work with the livestock producers in Pender County. This employee is a technical specialist designated by the Soil and Water Conservation Commission as required by § 143-215.10D.

COST & LABOR COMPARISONS

Cost and labor comparisons are reported for DSWC operation review staff only and based on an operating cost of $28.15 per hour in 2006, up from the 2005 cost of $26.93 per hour. DSWC's hourly operating cost is the same for pilot and non-pilot farms alike. As previously reported, differences between pilot versus non-pilot costs arise as a result of the frequency and duration of site visits.

Table 4 reflects key cost and labor comparisons. The DSWC's *per-visit costs continue to remain less* for pilot farms than non-pilot farms. Conversely, DSWC's *per-farm costs continue to be higher* in the pilot program, and are a direct function of the higher frequency of site visits made to pilot farms.

Pilot Farms	Non-pilot farms
$162 per DSWC visit	$210 per DSWC visit
2.3 visits per farm	1 visit per farm
13.3 hours total per farm	7.6 hours total per farm
$375 per farm	$214 per farm

Environmental Review Commission
Nov. 27, 2007

S1465 Activity Update
2007 Animal Waste Management Initiative

Lagoon Conversion Program

The Division of Soil and Water Conservation was charged with the responsibility of administering S1465's Lagoon Conversion Program (LCP) through the N.C. Agriculture Cost Share Program for Nonpoint Source Pollution Control. In August 2007, Division Director Manly Wilder appointed staff to oversee the program. He also hosted three in-house planning sessions with DENR and N.C. State University staff for input, coordination of efforts and identification of any issues that may prevent successful implementation of the program.

Division staff has met with several technology vendors and conducted site tours of nearly all those technologies that either meet, or are close to meeting, the performance standards as established in the "Development of Environmentally Superior Technologies – Phase 3 Report."

The LCP is intended to be *technology-neutral.* However, until the S1465 performance standards are made permanent through rulemaking, approved technologies for the first round of funding must be consistent with the Phase 3 Report.

LCP Advisory Committee

Director Wilder established the LCP Advisory Committee in early October 2007. The committee has met three times to develop the program's selection process and criteria. The next meeting is scheduled for December 14, 2007. Committee members are:

- Mary Combs, State Conservationist, Natural Resources Conservation Service/USDA
- Molly Diggins, State Director, N.C. Sierra Club
- Lamont Futrell, President, Frontline Farmers; Swine Producer
- Dewitt Hardee, Environmental Program Manager, N.C. Dept. of Agriculture and Consumer Services
- Heather Jacobs, Riverkeeper, Tar-Pamlico River Foundation
- Deborah Johnson, Chief Executive Officer, N.C. Pork Council
- Dr. Joe Rudek, Senior Scientist, Environmental Defense
- Coleen Sullins, Director, Division of Water Quality/NCDENR
- Dr. Mike Williams, Director, Animal Poultry Waste Mgmt. Center, N.C. State University

Application, Selection, Funding and Implementation Process – Round 1
Two million dollars was appropriated for Round 1 of the LCP. With guidance from the LCP Advisory Committee, the following timelines were established (see attached draft flow chart updated for more detailed information):

- Request for applications – Feb. 1, 2008
- Deadline for Round 1 applications – March 17, 2008
- Approval of selected applications – May 5, 2008
- Approval of cost share contracts – July 11, 2008
- Division of Water Quality issues permit no later than Sept. 30, 2008
- New waste system online – July 1, 2009

Web Site
The division is currently developing a website devoted exclusively to providing information on LCP: http://www.enr.state.nc.us/DSWC/pages/animal_waste.html
The site is expected to be up and running by January 2008.

Are Swine Producers Interested?
Division field staff conducted a "snapshot" survey of swine producers from mid-July to mid-August 2007 with 177 surveys completed and returned. As part of the survey, producers were asked about their interest in new animal waste management technologies that do not use anaerobic lagoons and sprayfields. Responses were as follow:

- 76% of the producers would like to learn more about the new technologies.
- 69% of the producers would like more information on financial assistance to convert to new waste management technology.

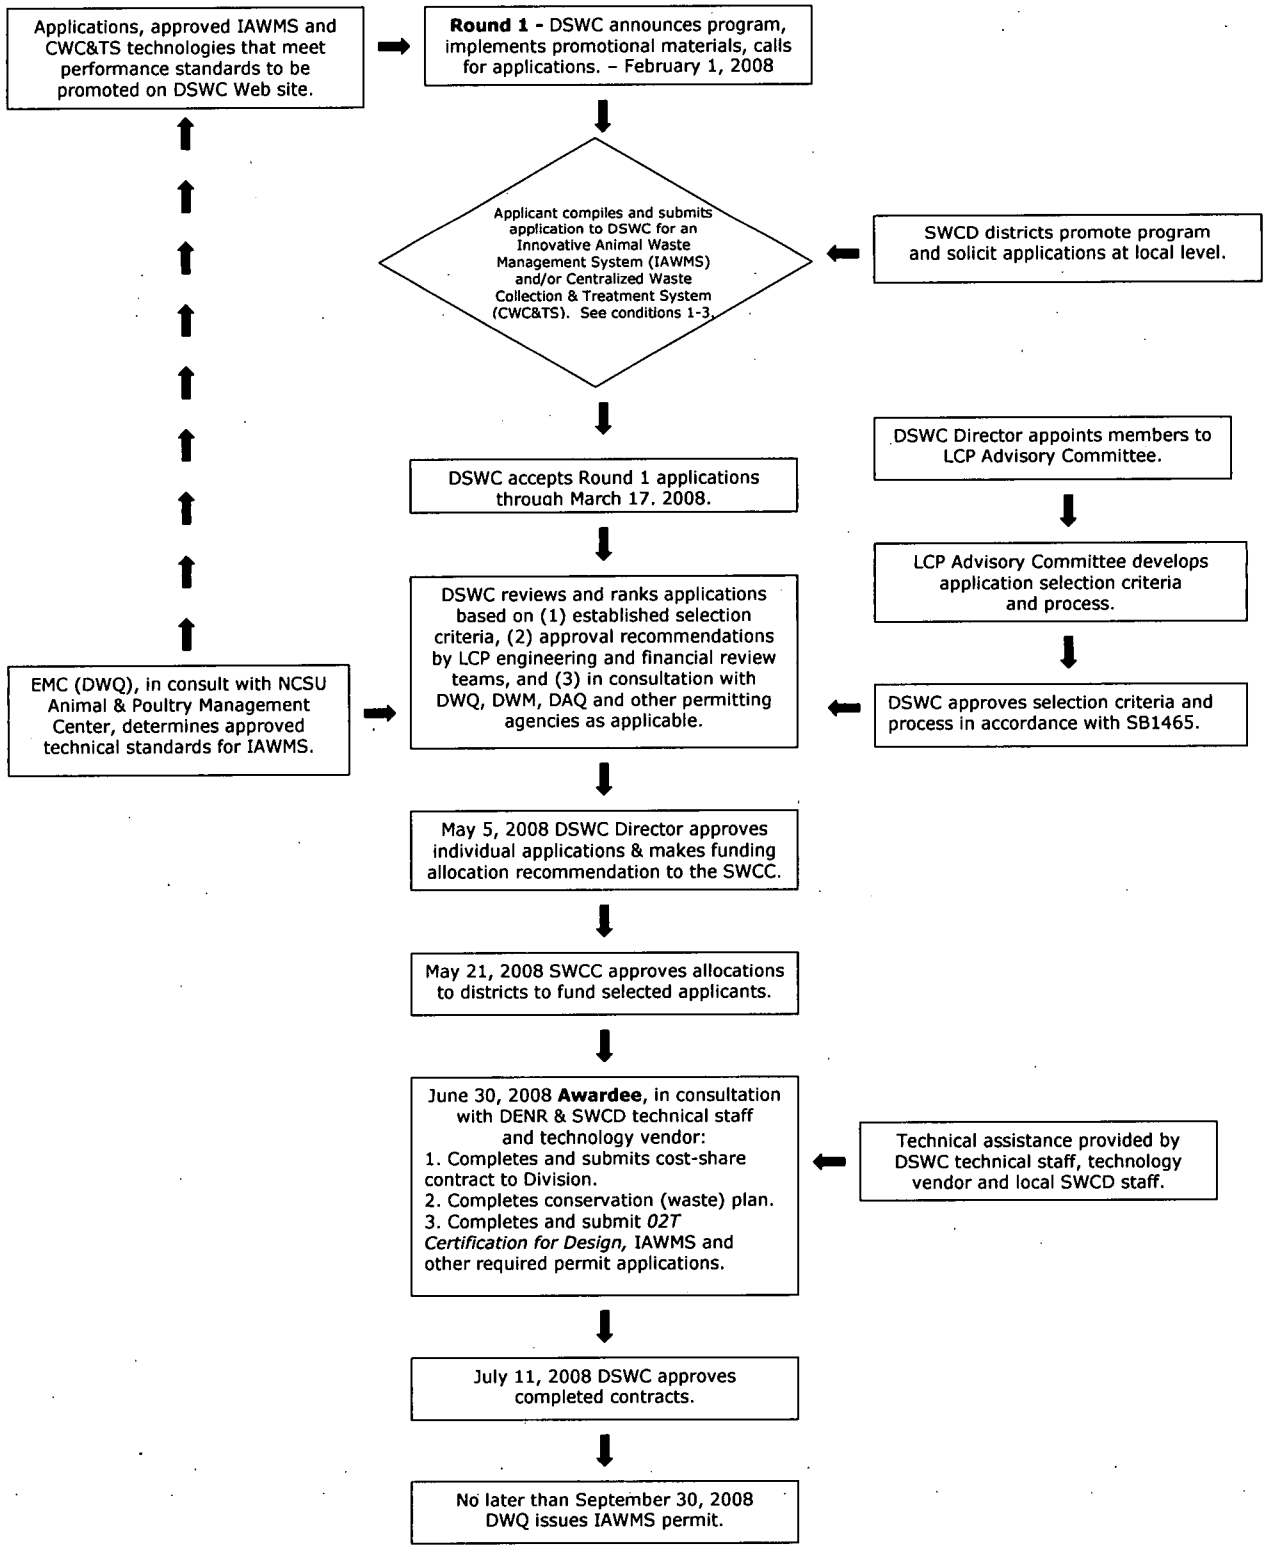
Recently, staff presented S1465 information at both the Southeast and Wilson Regional Pork Conferences. The attached fact sheets were distributed to approximately 190 swine producers in attendance.

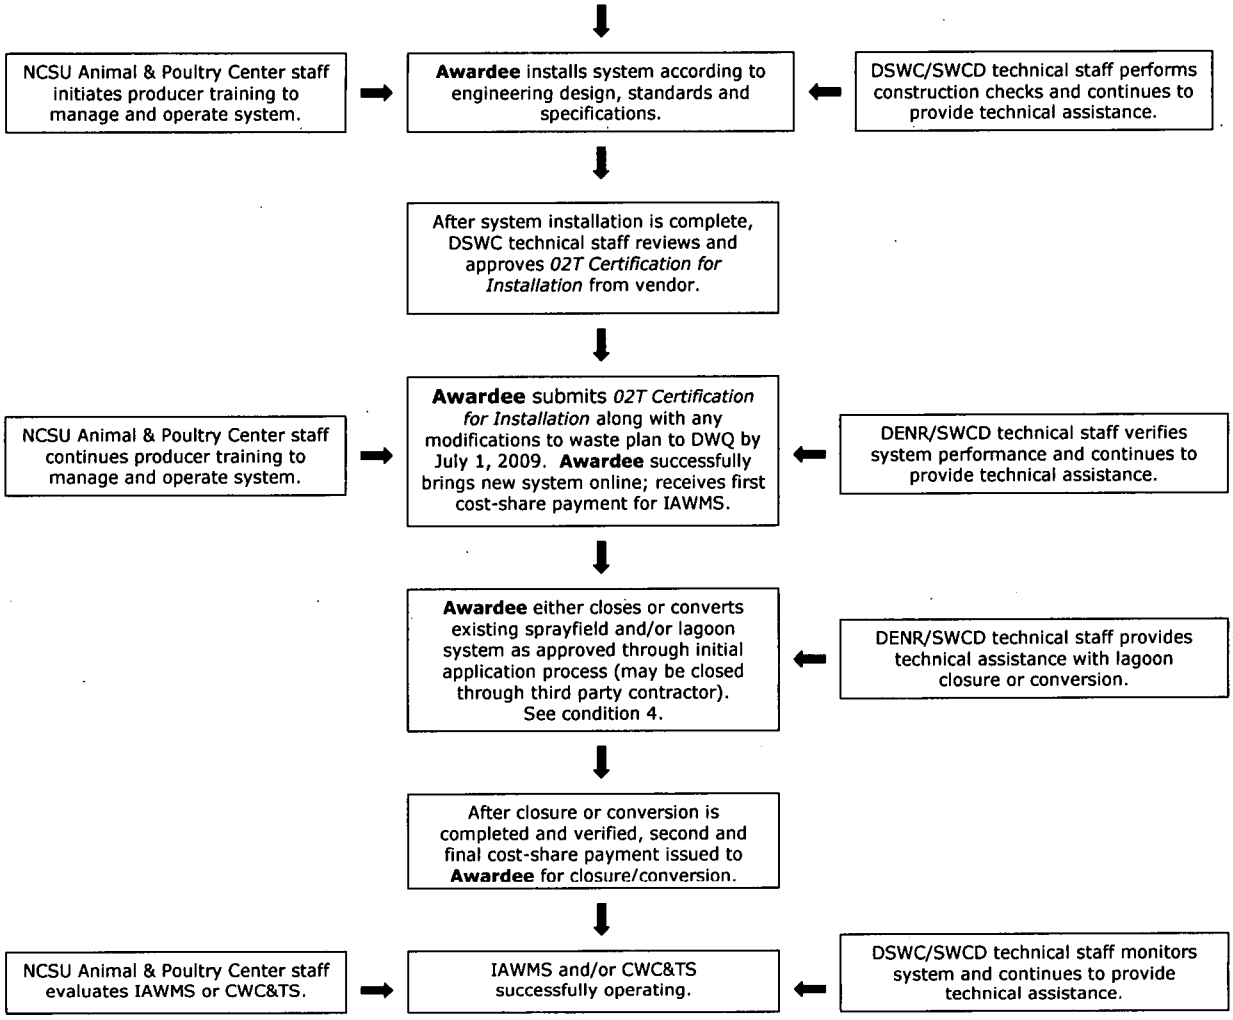
Making S1465 Performance Standards Permanent
The Environmental Management Commission (EMC) must go to rulemaking in order to make the performance standards permanent as listed in S1465. In November 2007, the Division of Water Quality staff hosted two stakeholders' meetings for comments on the draft rules. A stakeholders subcommittee will continue work on the proposed rules, which will be presented to the EMC at their March 2008 meeting. The earliest anticipated date for adoption of the proposed rules is January 2009.

Swine Farm Methane Capture Pilot Program
Discussions are currently underway between the Utilities Commission and the Governor's Office. The Division of Soil and Water Conservation will administer the program. More information will be shared as soon as it becomes available.

N.C. Lagoon Conversion Program
Round 1 Application, Selection, Funding and Implementation Process
Updated November 26, 2007

ACRONYMS:
CWC&TS – Centralized Waste Collection & Treatment System
DAQ – Division of Air Quality
DENR – Department of Environment & Natural Resources
DSWC – Division of Soil & Water Conservation
DWM – Division of Waste Management
DWQ – Division of Water Quality
EMC – Environmental Management Commission
IAWMS – Innovative Animal Waste Management System
LCP – Lagoon Conversion Program
NCSU – North Carolina State University
NRCS – Natural Resources Conservation Service
SWCC – Soil & Water Conservation Commission
SWCD – Soil & Water Conservation District





Conditions:

[1] An application that does not include a total IAWMS that addresses all performance standards either entirely on the farm or partially on the farm with a contractual agreement with a CWC&TS to provide further processing of waste, will not be eligible for LCP cost-sharing.

[2] An application for a CWC&TS must include proof of contractual agreements with one or more existing swine farms that either have coverage or proposed to have coverage under IAWMS permits. This requirement is needed to determine if the proposed CWC&TS provides environmental benefits by addressing *existing* swine-related water quality issues as required by the NC Agriculture Cost-Share Program.

[3] An application to expand the capacity of an existing CWC&TS is eligible for LCP cost-sharing as long as condition 2 is met.

[4] In order for an anaerobic lagoon to be converted to a "waste storage" or "waste holding" pond in accordance with NRCS standard code # 313 – *Waste Storage Facility*, the solids and sludge must be removed, and only treated wastewater containing no solids or sludge may be reintroduced back into the structure. In addition, the liquid level within the structure may not be pumped below the seasonal high water table elevation. The waste storage pond may also be used as emergency back-up system to the IAWMS.

N.C. Division of Soil & Water Conservation November 2007

NORTH CAROLINA SOIL & WATER CONSERVATION

Fact Sheet

2007 Animal Waste Management Initiative

NCDENR North Carolina Department of Environment and Natural Resources

Program Overview

During its 2007 session, the N.C. General Assembly passed S1465 in an effort to reduce environmental hazards posed by conventional animal waste management systems and to turn waste into value-added byproducts. There are four main components of the new law, including initiatives to:

- Make performance standards permanent.
- Replace lagoons that are an imminent hazard.
- Establish a lagoon conversion program.
- Establish a methane capture pilot program.

While many details of the new programs are still being finalized, the Division of Soil and Water Conservation wishes to provide as much information as possible to producers at this time. Below are brief summaries on each component of S1465, including all information that is currently available.

Permanent Performance Standards

Under S1465, the Division of Water Quality cannot issue or modify a permit to authorize construction, operation or expansion of a swine farm animal waste management system that employs an anaerobic lagoon as the primary method of treatment and sprayfields as the primary method of waste disposal. The swine farm animal waste management system performance standards, enacted by the General Assembly in 1998 and adopted as part of the Smithfield Agreement, now apply to all future construction or expansion of swine farms. The performance standards include:

- Eliminate direct discharge, seepage or runoff to surface and groundwaters.
- Substantially eliminate ammonia emissions.
- Substantially eliminate odor beyond property boundaries.
- Substantially eliminate disease-transmitting vectors and pathogens.
- Substantially eliminate nutrient and heavy metals in soils and groundwater.

Lagoon Replacement

In addition to a good compliance history, a permit holder must meet the following criteria to quality for lagoon replacement:

- Lagoon poses or will pose an imminent hazard.
- Repair does not abate the imminent hazard.
- Replacement will abate the imminent hazard.
- Replacement meets current standards and rules.
- Replacement is not located in the 100-year floodplain.
- Replacement does not increase steady state live weight.
- Existing lagoon is closed according to standards.

Lagoon Conversion
The Lagoon Conversion Program (LCP) is a *voluntary* agricultural cost share program designed specifically to meet the needs of North Carolina's swine farmers. It is modeled after the highly successful Agriculture Cost Share Program. Under LCP, swine farmers may be eligible for up to 90% cost share for converting existing swine lagoon and sprayfield systems to innovative animal waste management systems. LCP will help to establish centralized waste collection and treatment systems to serve existing swine waste management systems that employ the new technology.

At this time, the following innovative animal waste management systems have met performance standards in accordance with *The Development of Environmentally Superior Technologies March 8, 2006 Phase 3 Report*:

- Super Soils centralized composting system for solids.
- ORBIT – high solids high temperature anaerobic digester system.
- Gasification of solids system.
- BEST fluidized bed combustion solids system (Idaho).
- Super Soils "liquid" system (solids separation/nitrification — denitrification/ soluble phosphorus removal) *in conjunction with one of the above.*

N.C. State University's College of Agriculture and Life Sciences has done extensive work evaluating and determining these "Environmentally Superior Technologies." A great deal of information on these waste management innovations may be found at their web site: http://www.cals.ncsu.edu/waste_mgt/

Methane Capture Pilot
This component of the initiative is currently under review. More information will be shared as soon as it becomes available.

Projected Timeline for Initiative
Before the new animal waste management initiatives are finalized, the Environmental Management Commission (EMC) must go to rulemaking. The projected timeline for this process is:

- Stakeholders Meetings — November 2007
- EMC Animal Waste Issues Meeting — February 2008
- Proposed Rules to EMC — March 2008
- Earliest anticipated adoption of Proposed Rules — January 2009

For More Information
The division is currently developing a Web site devoted exclusively to providing information on the programs of S1465. The site will be up and running by January 2008 and can be found at: http://www.enr.state.nc.us/DSWC/pages/animal_waste.html

For more information in the interim, contact Vernon Cox, chief of the Technical Services Section with the Division of Soil and Water Conservation, at (919) 715-6109 or vernon.cox@ncmail.net.

North Carolina Department of Environment and Natural Resources

Michael F. Easley, Governor

William G. Ross Jr., Secretary
John Morris, Director

North Carolina-South Carolina Catawba-Wateree River Basin Advisory Commission
Report on Activities in 2007
November 27, 2007

The Commission was created by parallel action of the North Carolina and South Carolina General Assemblies to investigate water management issues in the Catawba-Wateree basin of concern to both states and to make recommendations on improvements in water management. The Commission met first on October 21, 2005 and has met since that time at approximately quarterly intervals. Early in the work of the Commission and after extensive discussion, the Commission determined to put their first priority on issues related to long range water supply and water allocation in the Catawba-Wateree basin.

The Commission met on January 5, 2007. Donna Lisenby, the Catawba Riverkeeper, and Nick Stegall, of the City of Rock Hill, reported on water use permitting legislation under consideration at that time in the South Carolina General Assembly. John Morris of the North Carolina Division of Water Resources reported on how North Carolina uses the Water Use Act to resolve problems of non-sustainable water use. Dr. David Moreau of the North Carolina Water Resources Research Institute and Dr. Jeffrey S. Allen of the South Carolina Water Resources Center led a discussion of the history of river basin planning in the United States and of options available to North Carolina to improve the cooperative management of the Catawba-Wateree basin, including the creation of an interstate compact.

The Commission adopted a resolution urging the North Carolina Environmental Management Commission to delay action on a proposed interbasin transfer from the Catawba basin to provide a water supply source for Concord and Kannapolis.

An Equal Opportunity / Affirmative Action Employer - 50 % Recycled \ 10 % Post Consumer Paper

One NorthCarolina Naturally

The Commission met on April 27, 2007. The Commission reviewed the status of water management bills active in the North Carolina and South Carolina General Assemblies, particularly a bill for statewide water use permitting in South Carolina and revisions to the statute on interbasin transfers in North Carolina. David Baize of the South Carolina Bureau of Water and John Morris of the North Carolina Division of Water Resources reviewed potential approaches to increased coordination and cooperation between the two states for management of the resources of the Catawba-Wateree basin. Barry Gullet of Charlotte-Mecklenburg Utilities discussed the planning and approval of a wastewater treatment plant as an example of how an interstate water quality issue was resolved.

The Commission had given continuing attention to relicensing of the Duke Energy reservoirs in the Catawba-Wateree basin. The operation of these eleven reservoirs is the dominant factor in the management of the water resources of the basin. Under federal law, the Federal Energy Regulatory Commission issues licenses for these projects, which govern lake levels, minimum releases for water quality and aquatic habitat, and management of the basin during drought conditions. Barry Gullet of Charlotte-Mecklenburg Utilities reported on the formation of the Water Management Group, which grew out of the stakeholder consultation process associated with relicensing. This group, which includes all of the major municipal water users in the basin, will be a continuing entity to coordinate water supply management and to fund projects to improve water quality and protect water resources.

The Commission met on October 5, 2007. Tom Fransen of the North Carolina Division of Water Resources summarized a statute, enacted by the North Carolina General Assembly, which revises the process for consideration of interbasin transfers. David Baize of the South Carolina Bureau of Water provided an update on a bill being considered in South Carolina to establish a statewide water use permitting system. David Baize facilitated a discussion of the severe drought affecting South Carolina and North Carolina and the response actions being taken in both states. The Commission discussed plans for the next meeting, scheduled for early 2008. The agenda for this meeting will include a workshop on available methods of resolving interstate water conflicts, including litigation and the formation of interstate compacts. This issue is current, given the suit filed in the US Supreme Court by South Carolina against North Carolina about the future allocation of the basin's water resources.

Section 6.22 of SL 2007-323: Limit Impervious Surfaces for Vehicle Parking

Environmental Review Commission

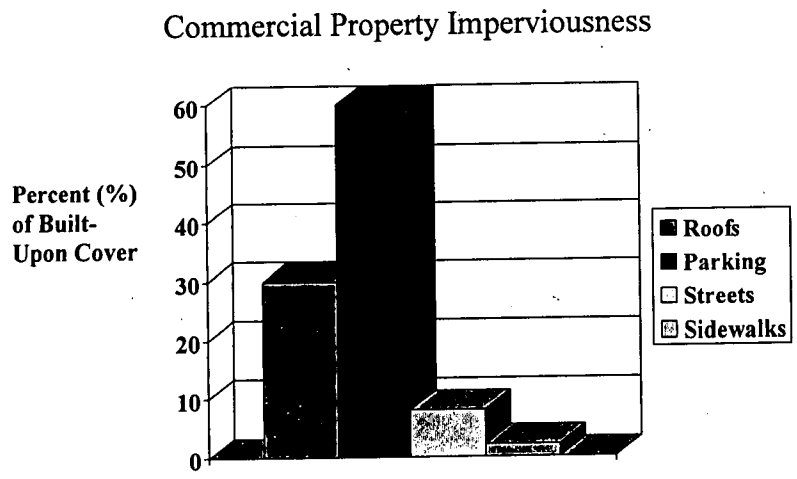
November 27, 2007

Section 6.22 of 2007 Budget Bill

- Statewide application.
- Affects all new uncovered vehicle parking areas:
  - Commercial
  - Residential
- Requires:
  - 20% of parking area to be permeable pavement, or
  - Runoff from 20% of area to go to s/w management
- Effective date: October 1, 2008

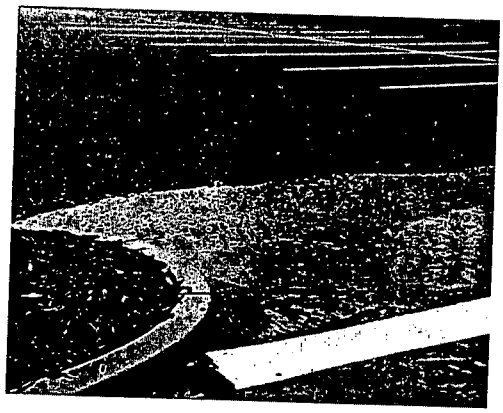
Why control stormwater runoff from parking areas?

Why parking areas?

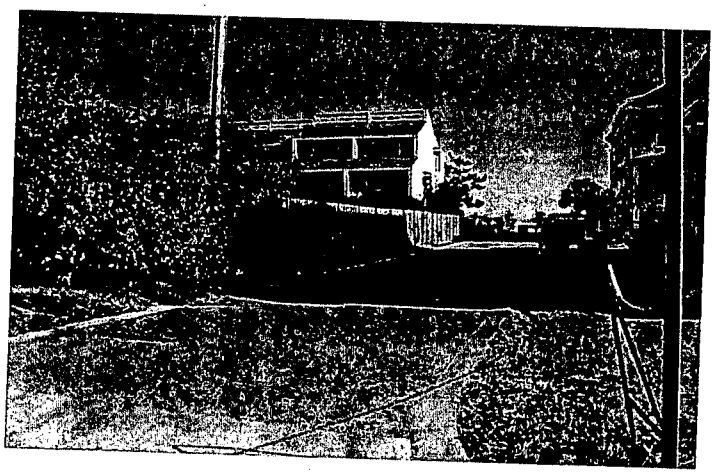


What is Permeable Pavement?

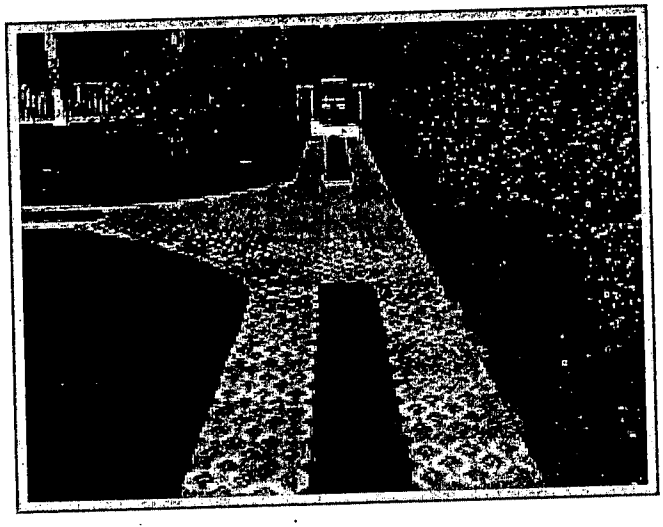
Paving material that allow stormwater to infiltrate



Porous asphalt



Porous concrete

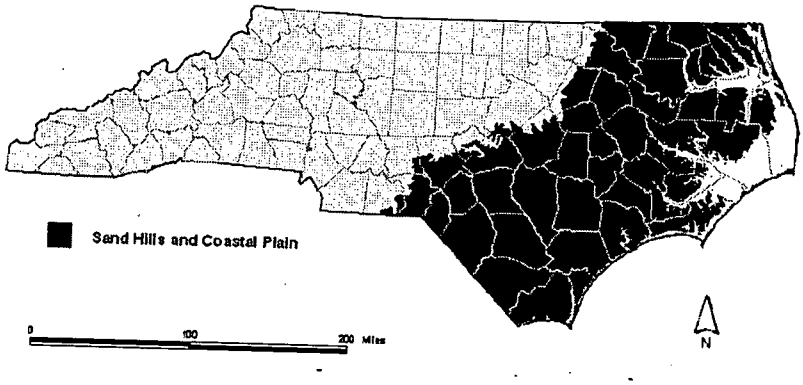


Concrete pavers

This is <u>not</u> permeable pavement.

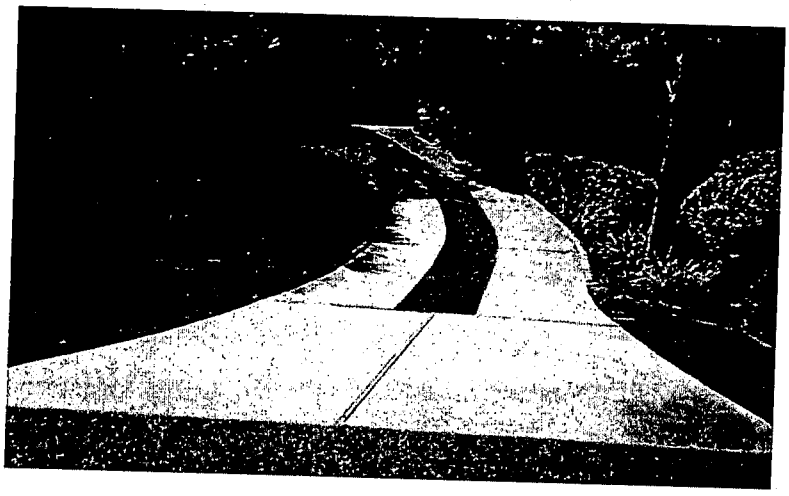
Compacted gravel in <u>not</u> considered permeable.

Where do soils support permeable pavement installation?

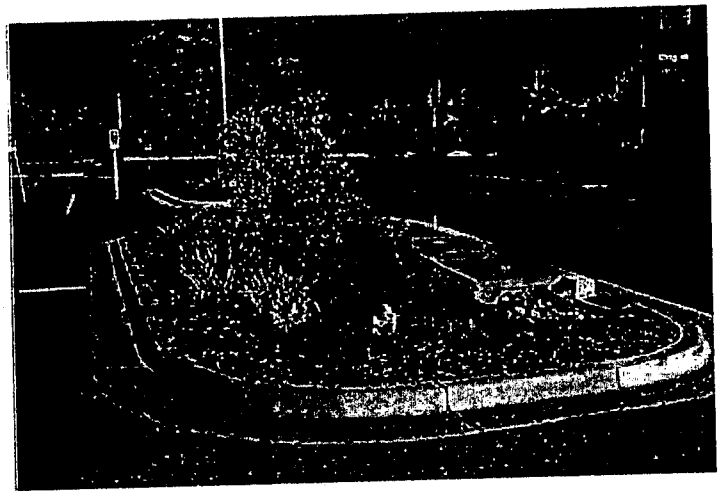


Outside of sand hills and coast other procedures could be used.

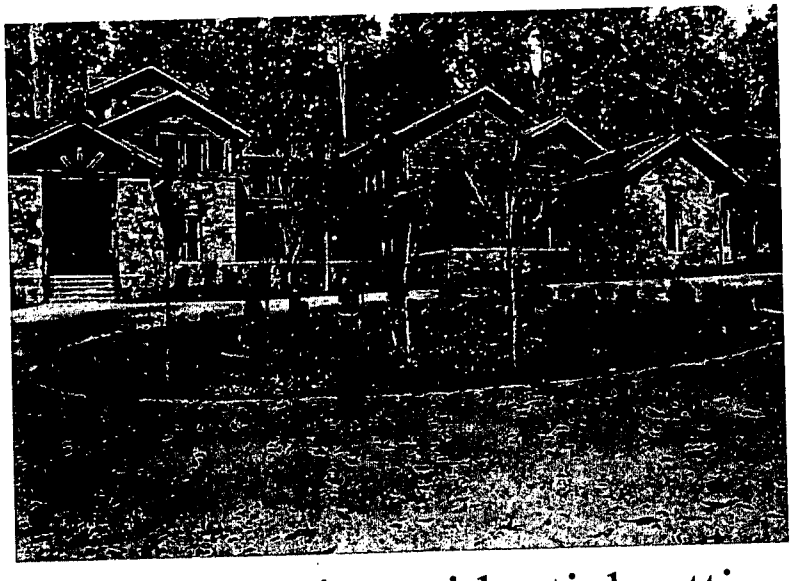
This system would work.



Uncompacted grass.



Rain garden in parking lot island.



Rain garden in residential setting.

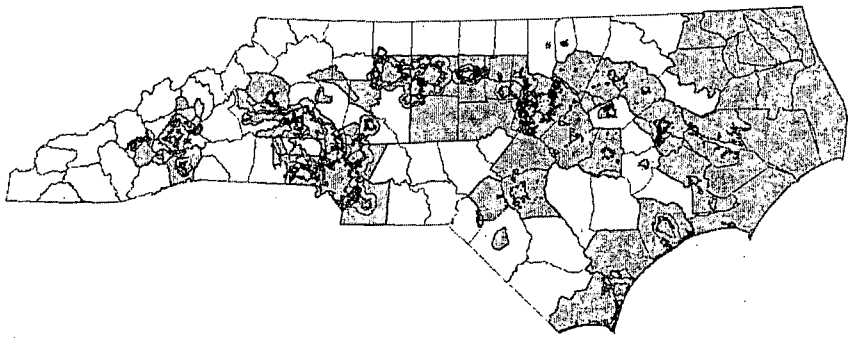
Rain Water Cistern for Reuse

What will this cost?

- Permeable Pavement
  - Pervious concrete - $45.00 per square yard
  - Traditional concrete - $33.50 per square yard
- Cistern – Water harvesting
  - Approx. $3500 per acre of parking area
- Rain Garden
  - Approx. $4.00 per square foot.

Where could this have the biggest impact?

Areas that do not implement stormwater controls.



Unshaded areas on map have limited experience with stormwater controls

Items to consider in future discussions

- Limitation of applicability to 20% of area.
- Opportunities to promote water reuse.
- How best to implement.

LIMIT IMPERVIOUS SURFACES FOR VEHICLE PARKING

SECTION 6.22.(a) G.S. 143-214.7 is amended by adding a new subsection to read:

"(d2) Any area designed for use as a vehicle parking area, except for covered vehicle parking areas or multilevel vehicle parking areas, shall not exceed eighty percent (80%) built-upon area, as defined in S.L. 2006-246. The remaining area designed for use as a vehicle parking area shall meet:

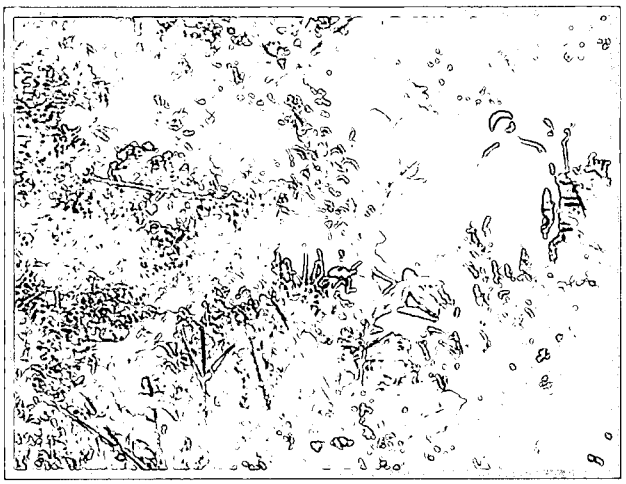
(1) The design requirements for a permeable pavement system, as determined in guidance documents prepared by the Department or

(2) Other design requirements for stormwater management approved by the Department, including, but not limited to, the use of (i) grass and other pervious surfaces and (ii) bioretention ponds, cisterns, and other water retention devices."

SECTION 6.22.(b) The Environmental Review Commission may study issues related to the use of pervious surfaces for vehicle parking areas, including the costs associated with the use of pervious surfaces, the impact to the environment of stormwater runoff, and the practices of other states with regard to stormwater best management practices. The Commission may report its findings and recommendations, including any legislative proposals, to the 2007 Regular Session of the General Assembly when it reconvenes in 2008.

Of the funds appropriated to the General Assembly, the Legislative Services Commission shall allocate twenty-five thousand dollars ($25,000) to conduct this study.

SECTION 6.22.(c) Subsection (a) of this section becomes effective October 1, 2008, and applies to any area designed to be used for vehicular parking for which an application for a building permit, a request for a zoning reclassification, or a subdivision plat is filed in the county or city in which the area is located on or after that date. The remainder of this section is effective when this act becomes law.



Ecosystem Enhancement Program

2006–2007 Annual Report

Restoring... Enhancing... Protecting Our State

State of North Carolina
Michael F. Easley, Governor

A Partnership of:

North Carolina Department of Transportation

U.S. Army Corps of Engineers, Wilmington District

North Carolina Department of Environment and Natural Resources

Ecosystem Enhancement PROGRAM

MISSION

The mission of the Ecosystem Enhancement Program (EEP) is to restore, enhance, preserve and protect the functions associated with wetlands, streams and riparian areas, including but not limited to those necessary for the restoration, maintenance and protection of water quality and riparian habitats throughout North Carolina.

Ecosystem Enhancement PROGRAM

- H: FY 2006-07 Projects Submitted for Close-out

Executive Summary

In its fourth year of operation, the N.C. Ecosystem Enhancement Program (EEP) registered fresh successes in meeting its goals of producing compensatory mitigation in advance of permitted impacts, and continues to provide high-quality restoration and enhancement projects that will improve our state's natural resources for future generations. However the program is facing important challenges that require appropriate action to support continued service to the state.

The first significant challenge is related to the fees assessed by EEP for the voluntary service of providing compensatory mitigation for the regulated community. EEP has proposed revisions to existing fees for wetland and stream mitigation so that revenues more accurately reflect the costs incurred by the program in delivering restoration projects to meet mitigation commitments. EEP's average per unit costs for restoration projects in this past fiscal year were: $293 per linear foot for streams; $38,629 per acre for riparian wetlands and $17,437 for non-riparian wetlands. Current fees are less than the average expenditures and are $245 per linear foot for streams, $29,351 per acre for riparian wetlands; and $14, 676 per acre for non-riparian wetlands. Many factors have contributed to increased restoration costs including (but not limited to) increasing land values, escalating construction costs, and an increase in the cost of professional and contracting services.

EEP formally proposed revisions to existing fees through the rule-making process beginning in mid-2006. Revisions have been adopted by the Environmental Management Commission and approved by the Rules Review Commission. However, the Rules Review Commission was in receipt of a sufficient number of letters requesting legislative review of the rules so that any effective date for the revisions will be delayed until after the legislature acts during the 2008 session. This represents a significant delay to the anticipated effective date of Nov. 1, 2007. In order to preserve the program's fiscal stability, EEP is carefully considering each mitigation request submitted and will not accept mitigation requirements that cannot be met within existing fees. Program staff look forward to working with members of the General Assembly and other stakeholders to secure a revised fee that will allow continued service to EEP's customers, including private developers, school districts, municipalities and military bases.

The second challenge relates to proposed federal rules for compensatory mitigation, which could change the operation of all in-lieu fee programs nationwide. In support of the EEP, the Governor's office provided a coordinated state response to argue that innovative and successful in-lieu fee programs such as EEP should remain as a viable tool to meet requirements of the Clean Water Act. EEP and DENR have had continuing dialogue with the EPA, U.S. Army Corps of Engineers (USACE), and the U.S. Office of Management and Budget concerning the proposed changes. The rules are expected to be promulgated sometime before the spring of 2008.

A third challenge that will be addressed over time involves joint NCDENR, NCDOT and USACE program adjustments to address surplus mitigation assets. Directed into action by the NCDENR and NCDOT secretaries and the commander of USACE, Wilmington District, this initiative will seek increased flexibility by USACE, NCDENR and NCDOT to utilize surplus assets more effectively. Actions to date have reduced immediate mitigation costs of at least $6 million in a single watershed. We believe that other opportunities will surface in the near future and EEP will adjust procurement strategies accordingly.

Reflecting on the 2006-07 fiscal year, the Environmental Review Commission and the Joint Legislative Transportation Oversight Committee directed a joint study on merging the Clean Water Management Trust Fund with EEP. The study, undertaken by Dye Management Group, was structured to find synergies between the programs, consider overlapping missions and opportunities for non-traditional mitigation alternatives.

While the report did not recommend the merger, citing the regulatory nature of EEP's mission and the positive and flexible nature of CWMTF grants, some of the key findings included:

- Confirmation that the EEP model has been successful toward solving NCDOT permit delays and has saved at least $6.5 million in costs to NCDOT.
- Recognition that EEP is a national model for mitigation, while acknowledging that proposed federal mitigation banking rules are a threat to in-lieu fee programs and confirming that EEP is supported in general by the regulatory community.
- A need to formalize EEP's watershed planning process with the CWMTF grant process to facilitate tactical plans to concentrate effectiveness of both programs. This formalization process has begun and will evolve over the remainder of this fiscal year.
- Suggestions on how to address surplus mitigation assets. Many of these suggestions are being incorporated in a Joint Task Force with NCDOT and USACE.

Also this past year, EEP increased implementation of projects based on local watershed planning. Between January and September 2007, 76.5 percent of EEP-initiated design-bid-build projects were located in Targeted Local Watershed with 64 percent of these projects coming out of Local Watershed Plans (see Section V of this report). In addition, the program saw an increase in the number of full-delivery projects located in Targeted Local Watersheds.

A statewide summary of both MOA and MOU mitigation inventory shows that EEP has 1,555,769 linear feet of stream assets, and 13,233.53 acres of wetland assets. Existing mitigation credits have been established in advance of anticipated permit requirements for NCDOT and mitigation is ready for application to those permit requirements as transportation projects move through the permitting process.

EEP continued to carry out its mission without a single transportation-project delay from the lack of mitigation since the initiative became operational in 2003. Further, EEP's mitigation efforts have helped to move forward more than $3.7 billion in road building in North Carolina, with an investment of less than five percent of the construction cost of those projects.

Ecosystem performance, sustainability and needs continue to evolve through a better understanding of emerging science. EEP remains adaptive and successful in assisting NCDOT and the general public in meeting the requirements of the state and the Clean Water Act. The remaining sections in this report describe the current program status. This report is intended to satisfy all reporting requirements as defined in G.S. 143-214.13 and agreements with the USACE and NCDOT.

William D. Gilmore, PE, Director

Nov. 16, 2007

Additional information on items mentioned above can be found on our website:
Proposed fee revisions: www.nceep.net/pages/Announcement_of_RePub%20v2_3_15_07.pdf
Surplus Assets: www.nceep.net/pages/BOT_Sept52007_Excessive_Surplus_Mitigation_v4.ppt
Dye Management Report: www.nceep.net/pages/DYE_2007_EEP_CWMTF_Study_Final_Report.pdf

EEP manages four mitigation programs:

1) MOA Stream and Wetland Program for NCDOT
2) MOU Stream and Wetland Program
3) Riparian Buffer Program
4) Nutrient Offset Program

Eligibility to participate in an EEP program is a joint decision made by the EEP and the regulatory agencies. Each of these programs operate as an In-Lieu Fee (ILF) program in which applicants make payments to EEP in lieu of providing mitigation themselves or by other means. Upon payment, EEP assumes the full legal responsibility for planning, developing and implementing the required types and amounts of mitigation. After successful payment, applicants are no longer liable for the mitigation associated with their payment.

MOA Program:

The 2003 Memorandum of Agreement (MOA) among the NCDENR, NCDOT, and the USACE outlines the procedures for the NCDOT to utilize the EEP as ILF program for NCDOT's offsite stream and wetland mitigation needs and specifies performance metrics for EEP. In February of each year, NCDOT provides EEP with its mitigation request in the form of impact projections for the seven-year Transportation Improvement Program (TIP) list. EEP secures this mitigation following protocols outlined in the Tri-Party MOA. EEP uses Fund 2984 to track payments and expenditures of this program.

MOU Program:

The MOU Stream and Wetland Program provides applicants of Section 404 Permits, Section 401 Water Quality Certifications, and/or Coastal Area Management Act permits the option to satisfy compensatory-mitigation requirements for wetland and stream impacts in all 17 North Carolina river basins through payment into EEP's ILF program. Payments made into the Stream and Wetland ILF Program are deposited into Fund 2981.

In FY 2006-07, 192 customers made payments into the MOU Program. Stream and Wetland ILF payments totaled $13,023,860.01. Of this total150 customers had requirements from both USACE (404)and DWQ (401), 35 customers had requirements from USACE only, and eight customers had requirements from DWQ only.

Buffer Program:

The Riparian Buffer Program is an option to meet compensatory-mitigation requirements associated with riparian-buffer impacts in the Neuse, Tar-Pamlico and Catawba River basins, and the Randleman Reservoir watershed in the Upper Cape Fear River basin. Payments are made to the Riparian Buffer Restoration Fund (Fund 2982) according to the regulatory schedules for buffers.

In Fiscal Year 2006-07, the EEP received payments for 759,622 square feet or 17.0 acres of buffer mitigation. At the close of the fiscal year, EEP had accepted responsibility for 477.22 buffer acre requirements cumulatively since the program's inception in the Cape Fear, Catawba, Neuse and Tar-Pamlico River basins.

Nutrient Offset Program:

The Nutrient Offset Program is an option to meet compensatory mitigation requirements associated with nutrient offset requirements in the Neuse and Tar-Pamlico River basins. Payments made into the Nutrient Offset ILF Program are deposited into Fund 2981-9819.

During FY 2006-07, Nutrient Offset payments were made by 340 customers located in the counties of Durham, Franklin, Johnston, Nash, Pitt, Wake and Wayne, and the municipalities of Cary, Durham, Garner, Goldsboro, Greenville, Havelock, Kinston, New Bern, Raleigh, Rocky Mount, Tarboro, Washington and Wilson. EEP also received one payment originating from the DWQ. During FY 2006-07, EEP received payment for 294,849 pounds of nitrogen nutrient reduction and 903 pounds of phosphorus nutrient reduction.

Appendices A1, A2, and A3 lists the individual payments and requirements, payment date, payment amount, USACE identification and DWQ Permit numbers associated with the MOU ILF Stream and Wetland Program, the Riparian Buffer Program, and the Nutrient Offset Program.

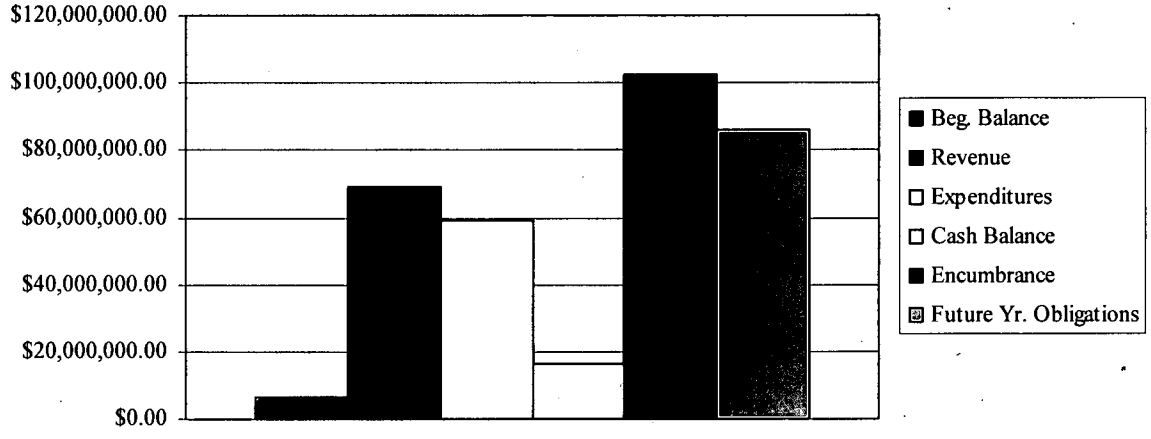
REVENUE, EXPENDITURES, AND ENCUMBRANCES

The figures and tables below depict expenditures and end-of-year balances for the MOA and MOU Stream and Wetland mitigation programs, with an accounting of beginning balances, revenues, expenditures, cash balances, encumbrances and unencumbered balances.

Fund 2984: MOA Program

Figure 1 provides an accounting of the NCDOT MOA Stream and Wetland mitigation program fund. Mitigation production and payments are programmed on a cash-flow basis and reflect the amount paid into the account, the amount encumbered and future year obligations.

Figure 1: MOA Fund 2984 Fiscal Year 2006-2007



FUND	2984
Beg. Balance	$6,311,712.40
Revenue	$69,089,935.38
Expenditures	$59,302,527.10
Cash Balance	$16,099,120.68
Encumbrance	$102,277,111.71
Future Yr. Obligations	$86,177,991.03

The cash-flow accounting method is in place at the request of NCDOT and is consistent with NCDOT's method of managing Transportation Improvement Program project costs. EEP invoices NCDOT on a quarterly basis and secures only those funds required to pay operating costs for the upcoming quarter. Future year obligations are guaranteed to be paid in accordance with a Memorandum of Agreement between NCDOT and NCDENR. This information is reported quarterly during routine invoicing processes. Also, EEP has been audited quarterly with no findings, by the NCDOT External Auditing Branch, and we are anticipating that the Federal Highway Administration (FHWA) will produce a report soon from an audit conducted in the summer of 2007.

MOU In-Lieu-Fee (ILF) Program, Wetlands Trust Fund, Buffer and Nutrient Offset Program Funds

Figure 2 below provides an accounting of funds for the MOU ILF (2981), the Wetlands Trust Fund (2980), the Buffer Program (2982) and the Nutrient Offset Program (2982-9829).

Figure 2: Funds 2981, 2980, 2982, 2982-9829 Fiscal Year 2006—2007

	2981	2980	2982	2982-9829
Beg. Balance	$18,753,441.36	$1,697,493.04	$13,309,732.40	$5,305,207.39
Revenue	$27,997,777.03	$25,976.84	$3,502,804.09	$3,594,538.74
Expenditures	$15,329,428.25	$1,538,378.31	$14,194,879.52	$3,514,488.18
Cash Balance	$31,421,790.14	$185,091.57	$2,617,656.97	$5,385,257.95
Encumbrance	$19,893,433.28	$184,433.00	$1,591,439.88	$1,245,882.46
Unencumbered Balance	$11,528,356.86	$658.57	$1,026,217.09	$4,139,375.49

Fund 2981, MOU ILF Program, is a voluntary, statewide receipt-based ILF program. Land disturbing activities that require Section 404 or Section 401 permits often require compensatory mitigation as specified by the USACE or the N.C. Division of Water Quality (DWQ). The general public, commercial and residential developers, as well as non-NCDOT governmental agencies including municipalities and military installations, may request mitigation from EEP. Upon acceptance and payment, EEP provides the off-site compensatory mitigation to satisfy regulatory requirements. This fund helps the general public by providing a service that often saves money and streamlines development and permitting processes.

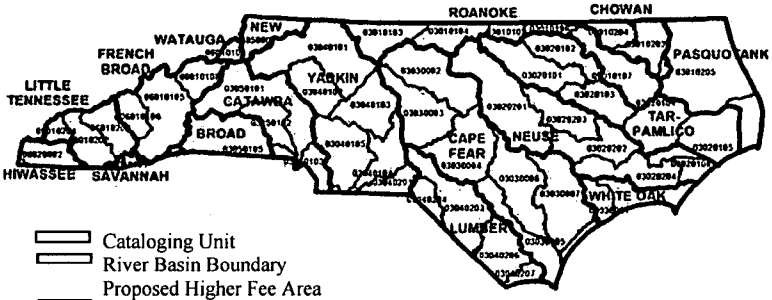
During the last five years, requests to use this service program have increased substantially. EEP's average cost in FY 2006-07 was $293 per linear foot for stream mitigation, $38,629 per acre of for riparian wetlands and $17,437 for non-riparian wetland. Current fees are below average at $245 per linear foot for stream, $29,351 per acre for riparian wetland and $14,676 per acre for non-riparian wetland. Many factors have contributed to increased project costs, including price of land, particularly in urban areas; complexity of site production resulting from better science or new regulatory requirements; accelerated demand resulting in increased cost of supply, and an increase in the cost of professional and contracting services.

Last year, EEP reported that the program was seeking a fee–schedule revision to reflect results of a study undertaken by UNC-Wilmington and Clemson University and other program data. The findings of that study confirmed that costs of projects had increased over and above the existing fee schedule. For that reason, EEP initiated an adjustment through the rule-making process. A short synopsis of activities follows:

- May 2006, EEP begins fee increase petition through the rule-making process.
- December 2006, fee schedule revision published in the North Carolina Register under a tier-based system on county boundaries.
- January 2007, public hearings held New Bern, Raleigh, and Morganton.
- March 2007, two new alternatives published based on comments received during the hearing process.
- September 2007, EMC adopts a two-tier fee defined by hydrologic units.
- October 2007, Rules Review Commission approves rule, but received sufficient public comments to trigger a legislative review.

The proposed two-tier fee schedule is shown in the map and chart below.

Proposed Fee Areas



Proposed Fees

	Proposed High Cost Areas	Proposed Low Cost Areas
Stream	$323	$244
Riparian Wetland	$59,600	$33,696
Non-riparian Wetland	$43,000	$22,113

EEP has taken measures to control costs, particularly in regard to the contracting industry. Some successes have been achieved through training sessions for contractors and engineers, with an objective to educate and introduce potential new contractors to wetland and stream construction techniques. This action has increased the contractor pool and may provide increased competition. EEP has worked with the regulatory agencies, with some success, to find new methods of providing mitigation that meet regulatory requirement at reduced costs, and has implemented some projects with significant cost savings. In addition, engineering services are secured under professional services contracts and construction is awarded based on competitive bidding through the Department of Administration. However, these initiatives and procedures have not been significant enough to alter the need for a fee revision.

EEP acknowledges support from the EMC hearing officers who worked diligently to assist EEP in securing appropriate fees. New fees were anticipated to be in place by November 2007; however, public comments were of a sufficient volume to trigger a decision and possible final determination in the 2008 legislative session. Therefore, EEP will need to be more selective in the acceptance of mitigation requests, in order to continue to be fiscally responsible.

Fund 2980, Wetlands Restoration Program (WRP) Trust Fund, was established by the General Assembly in 1997 as an initial trust fund for the former Wetlands Restoration Program (WRP) to provide funds for watershed planning and long-term maintenance and management of WRP projects. Remaining encumbrances for this fund will be paid this year and this fund will be closed out sometime in the next fiscal year.

Fund 2982, Buffer Fund, is the repository for monies related to the state's buffer-mitigation program that applies to the Neuse, Tar-Pamlico, and parts of the Catawba and Cape Fear River basins.

Fund 2982-9829, Nutrient Offset, is the repository for funds of the Nutrient Offset Program. This program has been in place for the Neuse River basin since 1998. In March 2006, the Tar-Pamlico River Basin was added. House Bill 859, ratified Aug. 1, 2007 and effective Sept. 1, 2007 now requires nutrient-reduction projects to be in the same eight-digit Cataloging Unit (CU), as designated by the U.S. Geological Survey, in which the associated nutrient runoff takes place.

House Bill 859 established the following revised fee schedule for nutrient-offset payments to EEP:

River Basin	Nitrogen	Phosphorus
Neuse	$28.35 / lb	n/a
Tar-Pamlico	$21.67 / lb	$28.62 / 0.1 lb

The per-pound rate in the table above is multiplied by the total number of pounds of offset required for the total area of the development for a 30-year period. In the Tar-Pamlico basin, if a development project has both nitrogen and phosphorus reduction requirements, the offset-requirement and payment-amount calculations are performed for both nutrients, and only the higher amount is required to be paid.

COST DATA

EEP Project Costs for FY 06- 07

EEP produces mitigation sites through two contracting methods: Design-Bid-Build (DBB) and Full Delivery (FD). Average per-unit costs of project implementation are calculated by examining both types of contracts.

In FY 2005 –06 the EEP obtained:

- 106,845 total stream mitigation units at an average of $293 per unit
- 100.22 total riparian wetlands mitigation units at an average of $38,629 per unit
- 72.1 total non-riparian wetlands mitigation units at an average of $17,437* per unit
- 32.44 total buffer mitigation units at an average of $42,000 per unit

(*$17,437 is not reflective of estimated costs for non-riparian wetlands. Additional program data shows that anticipated costs for this mitigation type could be as high as $75,882 per unit.)

Cost Analysis of Private Mitigation Banks

Reporting requirements of G.S. 143 require EEP to compare the cost of wetlands restoration on a per acre basis between the state's Wetlands Restoration Program and private mitigation banks.
To obtain the data necessary to accomplish this task, an electronic Web-based survey requesting restoration cost information was sent to the sponsor of each approved bank in North Carolina. Appendix B includes a listing of banks who were requested to respond, and a copy of the survey is included.

There were no responses from private mitigation banks for FY 2006-07.

Stream Projects Cost Study

EEP initiated a contract with UNC-Wilmington to conduct a stream project cost-analysis study that incorporates both biophysical and economic variables. The final study, due in December 2007, will provide a methodology to compare project costs with the fee schedule. This tool will be used to develop regional project cost estimates and aid in calculating yearly budgets. The study will also look at how variables, such as length, width, location and construction technique, affect total project cost. Early study results were presented at the N.C. Stream Restoration Institute Stream Conference in October 2006.

The study was based on analysis of 26 rural stream projects and 19 urban stream projects that had construction completed by January 2005. The average cost per foot for these projects was $255, ($316 per foot for urban projects and $226 per foot for rural projects). The model encompassing biophysical and economic variables will be used to determine costs in both rural and highly-urbanizing areas.

CONTRACTS

Full Delivery Program

The FD Program procures compensatory mitigation by issuing requests for proposals (RFPs) through the state Department of Administration. Each RFP specifies the river basin and cataloging unit within which mitigation is being sought, and the amount and type of mitigation needed (i.e., buffer, stream and/or wetland). Offerors are required to submit both a technical proposal and a cost proposal for each prospective submittal. The technical proposal details: 1) the experience, qualifications and financial stability of the firm submitting the proposal; 2) the geomorphologic features of the site that make it suitable for restoration; and 3) the conceptual plan for restoring the site to a more natural, stable

condition, both physically and biologically. The cost proposal provides a buffer, stream, and/or wetland unit cost for the submittal. Qualifying proposals are evaluated based on the technical merits of the proposed restoration and the overall per-unit cost. Firms associated with selected proposals enter into a contract with EEP to convey a conservation easement on the project area to the state, develop and implement a restoration plan, and monitor the project for five years to verify that the restoration meets established success criteria.

There are currently 21 firms under FDP contracts with EEP, indicating widespread participation by the environmental consulting/mitigation community. In FY 2006-2007, EEP entered into seven new FDP contracts (with five different full delivery providers) for 33,993 Stream Mitigation Units and 18.3 Riparian Wetland Mitigation Units, at a cost of $10,356,915.00. Appendix C1 lists all active FDP contracts.

Design-Bid-Build Program

The DBB Program operates by contracting with private design and consulting firms for professional services for all stages of project development including: watershed planning, environmental resource investigations, restoration site design and construction management, and post-construction monitoring. EEP contracts with professional consulting and engineering services through State Building Commission designer and consultant selection policy as described in the NC Administrative Code (see 01 NCAC 30D). Upon completion of design projects are advertised for competitive construction bids and construction contracts are awarded to the lowest responsible bidder.

This Fiscal Year the State Building Commission granted EEP a two-year authorization to contract with 31 On-call Design and Consulting firms. Since 2002, the State Building Commission has granted four on-call authorizations to EEP as described in the table below:

NC Ecosystem Enhancement Program On-call Authorizations

Date effective	# of Firms Authorized	Total Authorization
4/18/02 - 4/17/04	15	$10,500,000
4/1/04 - 3/31/06	22	$15,400,000
8/23/-05 – 8/22/07	21	$14,700,000
12/12/06 – 12/11/08	31	$21,700,000

Design and Construction

From July 1, 2006 through June 30, 2007, 44 new design and construction contracts were awarded. The total value of new design and construction contracts was $12,752,311. Appendix C2 lists design and construction contracts awarded in FY 2006–07.

Design and Construction
Fiscal Year July 1, 2006 through June 30, 2007

Total Design Services (26)	$5,499,796.00
Total Construction Services (18)	$7,252,515.26
Total (44)	**$12,752,311.26**

Maintenance and Repair

The science of natural-systems restoration has advanced considerably over the past decade. Design firms have evolved design philosophies and approaches in response to changes in industry and EEP's philosophy, as well as observation and measurement of post-construction design performance. At times, it is necessary to maintain or repair portions of projects that have been damaged or failed as a result of drought, tropical storms and other causes. Maintenance and repair design and construction contracts are implemented using the same contracting methods as described previously.

In FY 2006-07, one new maintenance design contract was awarded. The total value of maintenance design contracts awarded was $9,530.

In FY 2006-07, three maintenance construction contracts were awarded. The total value of maintenance construction contracts awarded was $417,333.14.

Maintenance and Repair
Fiscal Year July 1, 2006 through June 30, 2007

Total Maintenance Design Services (1)	$9,530.00
Total Maintenance Construction Awards (3)	$417,333.14
Total (4)	**$426,863.14**

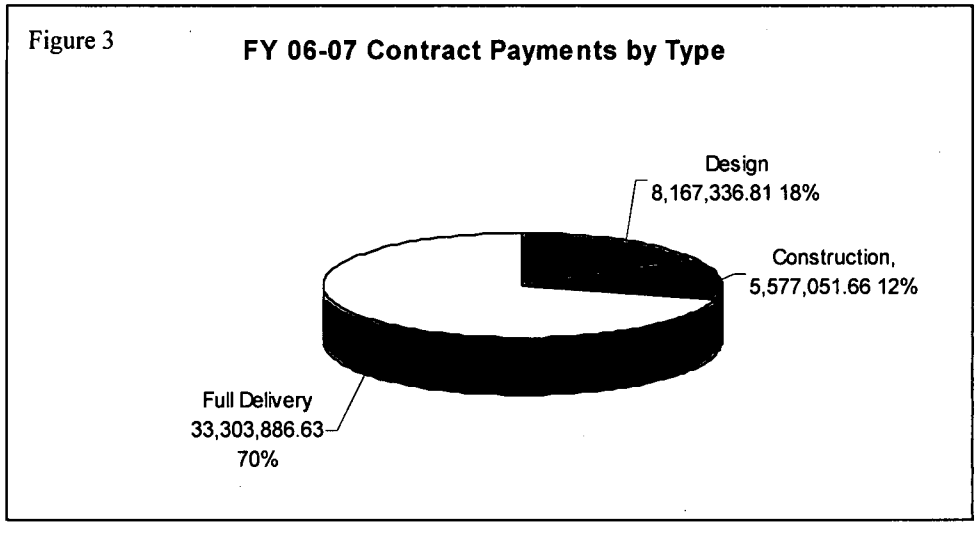
Project Name	Design Firm	Contract Amount
Sandy Creek Repair	Ward Consulting	$9,530.00
	Total Maintenance Design Services	**$9,530.00**

Project Name	Construction Firm	Contract Amount
Stone Mountain Repair	Shamrock	$179,468.00
Brush/Little Pine Repair	NCWRC	$109,451.64
County Line Creek	Land Mechanic	$128,413.50
	Total Maintenance Construction Awards	**$417,333.14**

Fiscal Year 2006-07 Payments to Vendors

Payments to vendors totaled $47,048,275.10 for FY 2006-07 . Figure 3 illustrates payments by contract type: Full Delivery, Design and Construction, but does not include any costs for property acquisition. Appendix D provides a listing of payments by contract type and vendor.

Figure 3



PROPERTY ACQUISITION

In FY 2006-07, the State Property Office closed on 114 parcels associated with preservation and restoration projects, totaling more than 3,300 acres. Four of the acquisitions were outright purchases and 108 were acquisitions of conservation easements. Two of the acquisitions were construction easements. Restoration and preservation properties that closed between July 1, 2005 and July 22, 2006 are shown in Appendix E: Properties Closed. Acreages are included for sites that have been surveyed to date. Landowners have formally agreed to give EEP the right to acquire an easement or property for all sites listed in Appendix F: Properties Optioned.

A cumulative inventory of all properties acquired since the inception of the Wetlands Restoration Program are presented in Appendix G: Cumulative Properties. More than 45,300 acres have been purchased or donated.

This section provides detailed tables and charts regarding production. EEP tracks and is accountable for mitigation production in 17 river basins, 54 CUs, and for 15 mitigation types.

RESTORATION AND PRESERVATION INVENTORY

At the end of FY 2006-07, EEP had produced or inherited 1,539,391 linear feet of stream and 21,608 acres of wetland mitigation, in addition to HQP assets. The table below is a summary of mitigation production assets by river basin and type.

Table 1: EEP Total Assets FY 06 –07

River Basin	Stream Restoration	Stream Enhancement I	Stream Enhancement II	Stream Preservation	Riparian Restoration	Riparian Creation	Riparian Enhancement	Riparian Preservation	Nonriparian Restoration	Nonriparian Creation	Nonriparian Enhancement	Nonriparian Preservation	Coastal Marsh Restoration	Coastal Marsh Creation	Coastal Marsh Enhancement	Coastal Marsh Preservation	Stream Buffer

Note: EEP's mitigation assets and requirements are accounted for on a cataloging-unit (CU) basis, not by river basin. This table, along with Table 2, is intended as a summary. A complete listing of these tables by river basin CU can be found in the EEP's Fourth Quarterly Report, located on the EEP Web site at: http://www.nceep.net/news/eeppublications.htm.

Current Inventory of Asset Credits

Table 2 lists net-asset credits by river basin for FY 2006-07. These are the current inventory assets after application of credits to compensatory-mitigation requirements. Remaining asset credits are also summarized by credit amounts in the MOA and MOU programs. Assets in this table have been converted to restoration and restoration-equivalent credits. HQP gross and net assets are summarized in the next section.

At the end of FY 2006–07, EEP had inventory assets of both restoration and restoration equivalent of:

- Stream: 938,419 credits
- Riparian: 4,595 credits
- Nonriparian: 7,185 credits
- Coastal marsh: 115 credits

Inventory assets are the sum of Table 2: Inventory of Asset Credits below and Table 4: HQP Net Asset Summary.

These inventory assets represent progress that EEP has achieved to produce mitigation in advance of permits. These mitigation assets are available to offset future permit requirements. Figures 4 and 5 (on pages 15 and 16) show the existing net assets, outstanding requirements, and projected future mitigation needs.

Table 2: EEP Inventory of Asset Credits, FY 06-07

River Basin	Stream Restoration	Stream Restoration Equivalent	Riparian Restoration	Riparian Restoration Equivalent	Nonriparian Restoration	Nonriparian Restoration Equivalent	Coastal Marsh Restoration	Coastal Marsh Restoration Equivalent

High Quality Preservation (HQP) Assets

At the end of FY 2006-07, EEP had acquired more than 250 miles of HQP stream assets and 8,694 acres of wetlands. HQP assets were secured in order to fulfill requirements under the Tri-Party MOA transition strategy. A complete breakdown of the total HQP acquired and remaining HQP assets as of the end of FY 2006-07 are listed in the tables on the next page. Through the partnership with local land trusts, 113 high quality preservation parcels have been permanently protected by outright purchase or by purchase of conservation easements since the inception of EEP. Approximately $47 million worth of property was protected through this partnership. Other state agencies will manage 18 of the parcels. In addition, state agencies cooperated to broker the purchase of additional properties. The total expenditure for the HQP land and conservation easements is approximately $75 million for the acquisition of 128 parcels statewide.

EEP Gross HQP Assets

Table 3 summarizes gross HQP assets. All HQP assets are MOA assets. Gross stream and wetland feet or acreages are subject to correction as additional survey work is completed on these sites.

EEP Net HQP Assets

Table 4 lists the net remaining HQP assets available for future debits by ecoregion. Gross stream and wetland feet or acreages are subject to change as additional survey work is completed on sites.

The February 2006 NCDOT impact projections indicate that most of these net HQP mitigation units will be fully utilized for compliance deadlines based on the projected Transportation Improvement Program (TIP) list.

Since the inception of EEP, more than $75 million has been spent to purchase these conservation lands. Across the state, EEP has net HQP assets of 870,190 feet (164 miles) of stream, 6,563 acres of riverine wetlands and 1,214 acres of non-riverine wetland. EEP assisted in funding nearly 40,000 acres of conservation land. Twenty-four of these parcels will be managed by government agencies for public recreation activities that are compatible with protective restrictions.

To accomplish the goal of no net loss of aquatic resources, utilization of these preservation sites for compensatory mitigation credits will be accompanied by restoration-type mitigation projects within the same watershed where impacts occur.

Table 3: HQP Gross Asset Summary by Ecoregion

Ecoregion	Beginning Balances		
	Stream (feet)	Riparian Wetland (acres)	Non-Riparian Wetland (acres)
Central Piedmont	476,981.50	544.170	62.440
Northern Inner Coastal Plain	74,528.00	651.200	0.000

TOTAL HQP Remaining Balance in Credits (5:1 ratio)	**174,038.00**	**1,312.664**	**242.852**

Statewide Status of MOU and MOA Stream and Wetland Programs

The graphs below and on the next page provide a statewide summary status of the stream and wetland ILF Programs at the end of FY 2006-07. The graphs depict EEP current gross assets, the mitigation requirements, outstanding mitigation requirements, and the projected future mitigation needs that EEP expects over the next two years. Please note that the EEP tracks credits and credit requirements by program (MOU or MOA), by impact type, and by watershed cataloging unit. All mitigation credits are applied within mitigation type, within CU of impact, and within program unless the regulatory agencies have approved otherwise. These graphs reflect the statewide picture of EEP's programmatic gains (credits) and estimated losses (requirements). (Since mitigation requirements are typically twice as large as actual permitted impacts, the actual losses are approximately one-half the magnitude of requirements shown.)

Figure 4

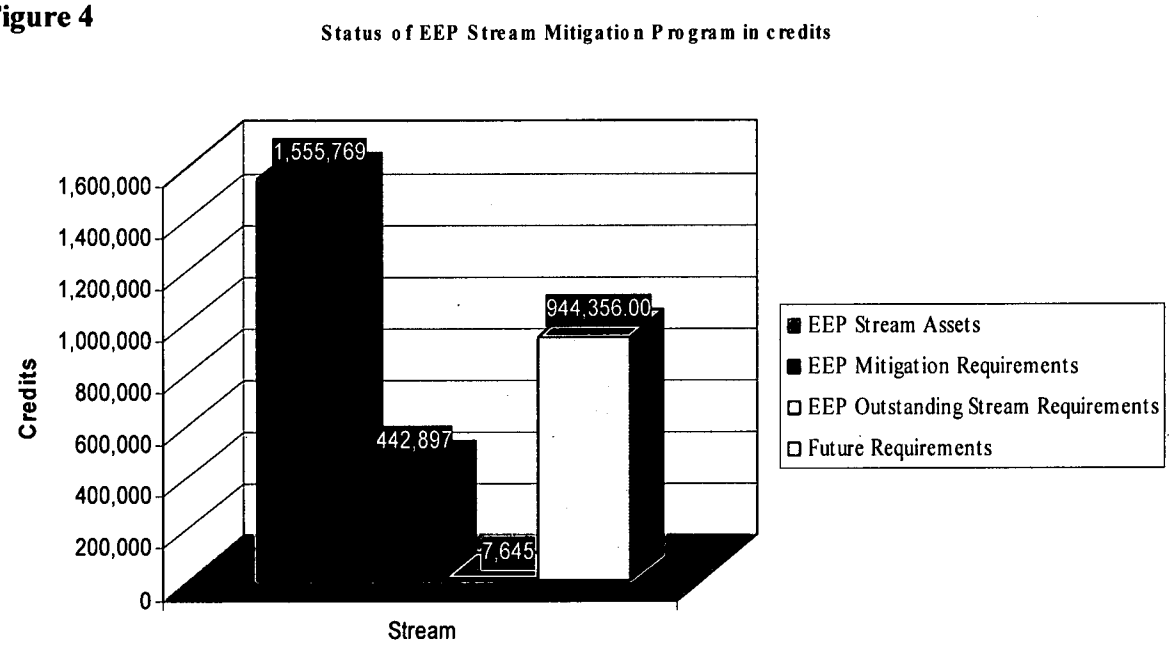

Figure 4 displays the status of stream requirements and assets produced (for both the MOU and MOA programs). Currently EEP has instituted 1,555,769 credits of stream mitigation and accepted mitigation requirements of 442,897 credits — three and one half times as much as required. Excess mitigation is planned to be allocated to future needs as per agreements. Outstanding requirements equal 9,148 credits.

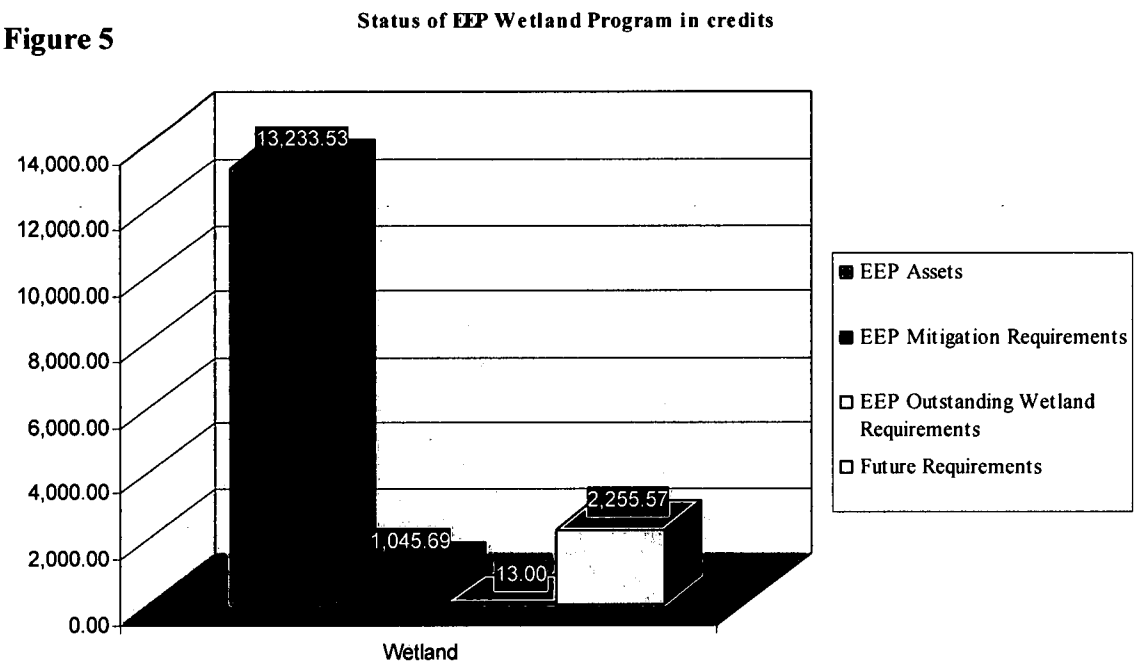
The generation of mitigation credits in advance of mitigation requirements is a founding principle of the MOA In-Lieu Fee Program for NCDOT. The surplus mitigation currently available in the program is evidence that EEP is succeeding on this front. However, future mitigation demand is expected to be very high over the next five years. As shown in the Figure 4, NCDOT and EEP are projecting mitigation needs of 944,356 stream credits over the next five years. The majority of this mitigation needs is due to NCDOT's mitigation needs and the advancement schedule outlined in the MOA.

Outstanding requirements represent mitigation needs that do not match (type or CU location) inventoried assets. EEP has strategies in place to provide for the outstanding requirements which are detailed in EEP's quarterly reports at www.nceep.net. Section III of this report contains additional compliance information.

Figure 5 displays the status of the wetland requirements and assets produced (MOU and MOA programs). Currently EEP is managing instituted assets of 13,233.53 wetland credits with current requirements equaling 1,045.69 credits. Most of these wetland assets (over 7,000 credits) originated from the NCDOT mitigation program that existed prior to EEP's formation. These unused assets were transferred to EEP to be managed within the EEP MOA mitigation program for NCDOT's future mitigation needs. Currently, outstanding requirements equal 13 wetland credits. As shown in the graph, NCDOT and EEP are projecting additional mitigation needs of 2,255.57 credits over the next five years. On a statewide level, EEP has achieved success for advanced mitigation. However, much of the current advanced mitigation is focused in particular CUs, whereas the mitigation needs are spread more evenly across the state. Thus, while some CUs have already achieved advanced mitigation, others will require additional wetland credit development over the coming years.

Figure 5



Statewide Status of Riparian Buffer and Nutrient Offset Programs

The status of the Riparian Buffer Program is illustrated in the table on the right. This program has provided all currently required buffer mitigation except for 2.03 acre credits in Tar-Pamlico 03020105. Note that though 2.03 acre credits are outstanding, EEP has 59.41 acre credits of advanced buffer credits upstream in the Tar-Pamlico basin..

Riparian Buffer ILF Program Status FY 06—07

	Cape Fear	Catawba	Neuse	Tar Pamlico
Mitigation Due	61.56	0.27	353.01	44.99
Mitigation Instituted	91.64	23.4	459.79	104.4

The status of the Nutrient Offset Program is shown in the table below. Nutrient reductions were met in the Tar-Pamlico basin for nitrogen and phosphorus, but not in the Neuse River basin. In FY 2006-07, all new procurement of nutrient offset mitigation projects were placed on hold due to a legislative study on the Nutrient Offset fee schedules. In 2006, a revised increased fee schedule was authorized via rulemaking by the Environmental Management Commission. The revised fee schedule was, however, reverted by the General Assembly while they completed a cost study. During this period of time, EEP suspended procurement of new nutrient-offset mitigation sites. The suspension was necessary because collected fees during FY 2005-06 through FY 2006-07 were below the projected costs of implementing storm water wetland and riparian buffer nutrient offset projects. Implementing projects during this time could have resulted in the complete depletion of the funds within this program without satisfying the required reduction in nutrients. This problem was magnified during FY 2006-07 as nearly 30 percent of the program's total historical requirements were paid during FY 2006-07 at below cost fees. Currently, a revised fee has been passed by the N.C. legislature. These fees, while lower than previously authorized by the EMC, are sufficient to begin procuring nutrient-offset reduction projects. EEP believes that most BMP-type [e.g. stormwater BMP's, constructed wetlands, etc.] nutrient reduction projects will not be fundable under the current fee schedule, particularly since past payments were below cost of BMPs or riparian-buffer restoration projects. Consequently, EEP expects that most new projects will be composed of riparian buffer projects with a few select stormwater BMPs and constructed wetlands.

Nutrient Offset ILF Program Status FY 06—07

	Neuse Nitrogen	Tar Pamlico Nitrogen	Tar Pamlico Phosphorus
Mitigation Due	721,281.36	554.53	0.00
Mitigation Instituted	532,979.68	840.00	840.00
Future Requirements	287,656.30	7,185.49	903.43

Example of a completed stream project–
Clear Creek, French Broad River Basin, Henderson County

MOA Stream and Wetland Compliance

At the close of FY 2006-07, the MOA program had achieved tremendous success in establishing advanced mitigation as prescribed by the Tri-Party MOA program. The amount of advanced mitigation credits established within the program are summarized in the table below.

The MOA Stream compliance was 98.99 percent, Riparian Wetlands compliance was 98.14 percent, Nonriparian Wetlands compliance was 100 percent and Coastal Marsh Wetlands compliance was 100 percent representing increased compliance in each of these mitigation categories from the previous year. Table 5 displays requirements in credits, credits applied, and compliance.

Outstanding requirements represent mitigation needs that do not match (type or CU location) inventoried assets. The magnitude of outstanding stream mitigation was 2,261.6 credits. The magnitude of outstanding riparian-wetland mitigation was 2.4 credits. Seven permits needed additional mitigation. The Tri-Party MOA also specifies that assets utilized for permits achieve a specified completion or phase status. For FY 2006-07 permits, assets were required to meet "Begin Construction" status for most permits. The table below summarizes the mitigation compliance, phase compliance, the percentage of assets utilized that exceeded phase, and amount of advanced mitigation.

A complete listing of the MOA permits and requirements not in full compliance and the corresponding EEP CU Action Strategies can be found in the EEP's Fourth Quarterly Report located on the EEP Web site.

Table 5: MOA Program Compliance

MOA Program	Stream (credits)	Riparian Wetlands (credits)	Nonriparian Wetlands (credits)	Coastal Marsh Wetlands (credits)	Total Wetlands (credits)
Mitigation Due	224,111.2	128.5	409.4	1.8	539.7
Mitigation Met	221,849.6	126.1	409.4	1.8	537.3
Mitigation Used	223,928.0	191.6	349.2	1.8	542.6
Mitigation Not Met	2,261.6	2.4	0	0	2.4
Compliance	98.99%	98.14%	100.00%	100.00%	99.56%
Compliance considering Phase	97.95%	92.01%	99.93%	100.00%	98.04%
Percentage of Mitigation Used Meeting Phase	98.96%	95.89%	99.91%	100.00%	98.49%
Percentage of Mitigation Used Exceeding Phase(Monitoring+)	58.88%	86.12%	80.66%	96.59%	82.64%
Total Advanced Mitigation (Undebited)	871,316.9	4,430.7	7,081.6	111.4	11,623.7

MOU Stream and Wetland Compliance

The MOU program experienced a similar degree of success during FY 2006-07. As of June 30, 2007, the MOU program had 753 total requirements. Of these, 735 are in full compliance, five have partial compliance and 13 are in non-compliance. Therefore the EEP has 97.6 percent of all MOU requirements in compliance, 0.7 percent in partial compliance and 1.7 percent in non-compliance. Of these non-compliant requirements, 14 were related to wetland requirements, and four were related to stream requirements. As in the MOA program, outstanding requirements represent mitigation needs that do not match (type or CU location) inventoried assets.

Table 6 below summarizes the MOU program's mitigation due, mitigation met, mitigation not met, compliance and advanced mitigation amounts:

Table 6: MOU Program Compliance

MOU Program	Stream (credits)	Riparian Wetlands (credits)	Nonriparian Wetlands (credits)	Coastal Marsh Wetlands (credits)	Total Wetlands (credits)
Mitigation Due	218,785.9	339.8	166.0	0.2	506.0
Mitigation Met	211,899.6	330.5	164.9	0.0	495.4
Mitigation Not Met	6,886.3	9.3	1.1	0.2	10.6
Compliance	96.85%	97.26%	99.33%	0.00%	97.90%
Advanced Mitigation (Undebited)	48,723.6	152.9	101.0	3.8	257.7

A complete listing of the MOA permits and requirements not in full compliance and the corresponding EEP CU Action Strategies can be found in the EEP's Fourth Quarterly Report located on the EEP Web site.

Intentional blank page.

V: Watershed Planning and Project Implementation

An important focus of EEP is the implementation of restoration projects based on environmental needs identified through watershed planning. This is accomplished through high-level and detailed planning initiatives and the coordination of project implementation in accordance with planning outcomes. EEP conducts two main types of watershed planning:

- River Basin Restoration Priority Planning (high-level—river basin/ eight-digit CU scale)
- Local Watershed Planning (detailed level—small watershed scale)

The products of EEP's planning efforts are used to direct mitigation resources to areas of need. EEP's goal is to implement all program projects (both FD and DBB) in targeted watersheds. FD technical rating methods encourage providers to locate projects in targeted watersheds. Many DBB projects are developed based on detailed watershed plans. This section describes the status of EEP watershed planning methods and assesses how well the program's project implementation lines up with watershed priorities.

WATERSHED PLANNING

The purpose of watershed planning is to determine the best locations for watershed-restoration projects based on analysis of watersheds needs for restoration and protection. This is done by conducting two types of planning- River Basin Restoration Priority Planning and Local Watershed Planning.

River Basin Restoration Priority Plans

River Basin Restoration Priority Planning is conducted in each of the 17 river basins in North Carolina. The purpose is to identify local watersheds within each river basin where ecological restoration or protection is most needed—for instance, watersheds that include streams with impaired water quality and degraded habitat are often targeted.

In the summer of 2007, EEP began updating River Basin Restoration Priority (RBRP) plans. The RBRPs identify watersheds for EEP project implementation, or Targeted Local Watersheds (TLWs), in the State's 17 river basins and outline the basin's restoration and preservation needs. In anticipation of DWQ's new, compressed two-year basinwide planning cycle, EEP staff is working to complete RBRP updates for all river basins by the summer of 2009. The RBRP plans incorporate water quality information from DWQ Basinwide Assessment Reports and Water Quality Plans as well as input from local resource-agency professionals and the location of existing or planned watershed projects. The updating of the RBRPs also takes advantage of newly acquired watershed datasets produced by the N.C. Center for Geographic Information and Analysis (CGIA) that profile the assets, problems and baseline conditions of hydrologic units statewide. As they are completed, updated RBRP documents will be posted on the EEP Web site (http://www.nceep.net/services/restplans/watershedplans.html).

Completed River Basin Restoration Priority Plans

This past fiscal year, EEP completed an update of the Lower Catawba River Basin RBRP plan. The document identifies priority watersheds (i.e., TLWs) for implementation of EEP projects and goals for conservation and restoration in the Catawba River basin.

New River Basin Restoration Priority Initiatives

EEP has performed GIS based analysis, conducted fieldwork, and solicited input from stakeholder groups through multiple workshops in order to select TLWs in the Lower Yadkin-Pee Dee River Basin specifically in Yadkin 03040105 and 03040202. A draft RBRP document has been developed for these CUs. A final version of this document is in progress and work to evaluate the remaining CUs within the Lower Yadkin-Pee Dee basin will be completed in late 2007/early 2008.

EEP has also initiated CU screening to develop updated RBRPs for the Chowan River Basin and for a portion of the Roanoke River basin (CU 06).

Local Watershed Plans

Local Watershed Planning merges identified RBRPs with projected impacts from road development to determine where future mitigation investments can provide the greatest benefit for the State of North Carolina. The development of Local Watershed Plans (LWPs) is typically a four-phase process: Preliminary Watershed Characterization (Phase I), Detailed Assessment (Phase II), Development of a Watershed Management Plan including identification of potential project sites within a Project Atlas (Phase III), and Implementation of the Plan (Phase IV). However, rapid or abbreviated plans are also utilized when either the mitigation compliance timeline is compressed, the mitigation needs value for the CU (based on fee schedule) does not justify an extensive planning investment, or detailed analyses are not necessary to identify the most ecologically beneficial projects.

Detailed watershed evaluations are conducted through the use of internal and external resources. External resources include private environmental planning and engineering firms, the N.C. Division of Water Quality, the CGIA, and various not-for-profit organizations.

EEP watershed planners have responsibility for all planning products. For products produced internally, planners generate maps, tables, reports, and budgets. They also work on the development of new assessment methods, alternative mitigation options, and strategies to obtain mitigation within priority watershed areas. They develop a network of contacts in natural-resource agencies, local governments, and local communities and keep local governments informed of EEP projects through meetings and public presentations. They work with local stakeholders to implement plan recommendations and review mitigation projects proposed by EEP staff and external firms.

For products generated externally, planners are responsible for development of contracts, review of products, invoice processing, development of technical methods with contractors, and oversight of all field and mapping work. They also coordinate the work performed by contractors with local stakeholders and related efforts by local, state, and federal agencies.

EEP staff is continuing work on LWPs all across the state. Currently, eight plans are underway and in various stages of development and expected to be completed later in 2007 or in 2008. Appendix H presents a summary of ongoing Local Watershed Plans; these are efforts that haven't yet resulted in a final Watershed Management Plan or Project Atlas (listing of identified restoration opportunities), but will do so within the next six to 18 months.

Completed Local Watershed Plans

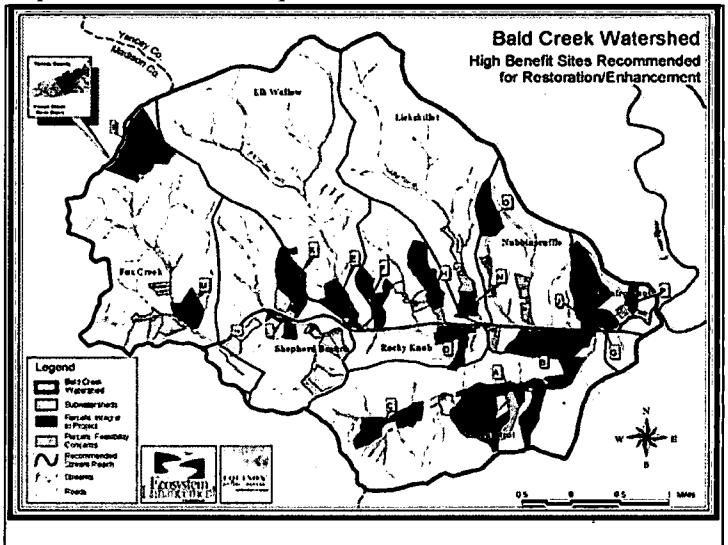
EEP completed a number of local watershed planning efforts in FY 2006-07 as described below. Appendix I presents a summary of Local Watershed Plans completed through Phase III. In many cases, Landowner Outreach and Project Implementation (Phase IV) is ongoing.

- Completed Phase IV implementation effort for two LWPs in Cape Fear 02; Morgan and Little creeks; and Troublesome and Little Troublesome creeks. EEP staff worked with Stantec to visit and gauge the restoration potential of sites identified in both LWPs. EEP is pursuing several of the sites identified in these LWPs as potential mitigation projects, including three that are on property managed by the University of North Carolina at Chapel Hill.

- Completed Phase III of the Little Lick Creek LWP. EEP presented the plan to public officials and the public at an evening forum held in the watershed. The plan can be found online (see http://www.nceep.net/services/lwps/little_lick/Little_Lick.pdf). A Phase IV implementation effort is planned.

- Phase IV was completed in the Stoney Creek watershed, including landowner education, materials development and distribution, presentations, and public question-and-answer opportunities. The final Stoney Creek LWP was presented to the Wayne County Board of Commissioners and to the Goldsboro City Council.

- Completed Phase III of the Little River and Brush Creek LWP (New 05050001) –During FY 2006-07, EEP completed the Little River and Brush Creek LWP (located within the New River basin of Alleghany County). The focus of this planning effort was the Bledsoe Creek watershed, a 6.5-square mile area comprised of two sub-watersheds identified as priority areas during earlier phases of assessment work. A Technical Advisory Committee (TAC) consisting of key local stakeholders contributed significantly to completion of the final *Bledsoe Creek Watershed Management Plan* (June 2007). The plan identifies key local watershed stressors and presents recommended management strategies and watershed projects (including stream/buffer restoration and storm water BMPs) to address these stressors. The TAC



LWP data example: From spring 2006 through June 2007, the EEP/Equinox watershed team conducted landowner outreach and project site evaluation in order to implement priority stream and wetlands restoration projects in the Bald Creek watershed *and adjacent hydrologic units*. This "Phase IV" expanded effort has resulted in production of an Ecological Conditions Summary Report (August 2006), a Preservation Site Atlas (August 2006), and a Restoration Site Atlas (January 2007).

has evolved into the Bledsoe Creek Advisory Team (BCAT) – including representatives from the Town of Sparta, Alleghany County, the High Country COG, the Blue Ridge RC&D, Alleghany Cooperative Extension and DWQ. A major goal of the BCAT is to use the *Bledsoe Creek Watershed Management Plan* to help leverage funding for the implementation of local stormwater BMP projects and the development of a local watershed education program.

- Completed Phase IV of the Bald Creek LWP (French Broad 06010108) – In July 2007, EEP staff and Equinox Environmental completed a year-long effort to conduct site evaluations and landowner outreach for high-priority stream and wetland restoration projects within the 77-square mile expanded Bald Creek study area in Yancey County. This effort proved to be a major challenge due to local topographic and land-use constraints. In spite of these challenges, several stream-restoration project sites are moving forward with willing landowners.

New Local Watershed Planning Initiatives

EEP identified four new Local Watershed Planning initiatives based on forecasted NCDOT mitigation needs and an environmental analysis of affected catalog units. LWPs are needed in the Catawba 02/03, Little Tennessee 02/04, Yadkin 01 and Yadkin 05 in FY 2007-2008.

EEP watershed planning staff is using the results of the Catawba RBRP update to identify watersheds in the Catawba 03 Service Area to initiate watershed-based planning. Details on where to start the plan and the plan activities are still being developed. Once initiated, one of the goals of this plan is to contribute wetland restoration projects that will help meet the mitigation needs of Catawba 03.

A watershed-assessment effort in the Yadkin 01 CU is necessary in order to develop finding stream-mitigation projects within high-priority local watersheds in the upper Yadkin River basin. The Surry County Natural Resource Conservation Service (NRCS) and the Soil and Water Conservation District (SWCD) will act as local partners in this effort, and the field assessment and site identification will focus on stream reaches within the Fisher River and Ararat River watersheds. The effort is tentatively scheduled to begin by early 2008 and to finish by December 2008.

Based upon preliminary fieldwork and watershed analysis, EEP intends to develop a Local Watershed Plan in the Lower Yadkin Basin (Yadkin 05) that will focus on the Goose Creek and Crooked Creek watersheds, which are in adjacent HUs and flow to the Rocky River in the Yadkin basin. Goose Creek is on the state list of impaired waters due to high fecal coliform levels, and serves as habitat for the Carolina heelsplitter (*Lasmigona decorata*), a federally endangered freshwater mussel. Crooked Creek is also impaired due to poor biological health and has experienced problems with flooding and stormwater runoff. This Local Watershed Planning effort will build upon prior planning efforts and work to improve water quality and the biological conditions in these watersheds, while generating mitigation credit to meet the needs of NCDOT.

In response to increasing mitigation needs and high priority aquatic resources, EEP intends to

initiate a LWP in Little Tennessee 02. This is largest CU in the Little Tennessee River basin, and it is habitat for numerous endangered, threatened, and rare aquatic species. Recently, drastic declines in two federally listed species—the Appalachian elktoe (*Alasmidonta raveneliana*), a freshwater mussel, and the spotfin chub (*Cyprinella monacha*), a fish —have been noted. The basin is undergoing drastic change in land use, from timber and agricultural uses to residential use. The N.C. Wildlife Resource Commission (WRC) and U.S. Fish and Wildlife Service (USFWS) are also focusing efforts within LT02 and have made the 23-mile section of the Little Tennessee River that stretches from Lake Emory in Franklin to Lake Fontana a high priority for research and conservation. EEP is collaborating with USFWS to assess aquatic organism barriers and develop a prioritized list of culverts, fords, and other crossings in need of repair or replacement. EEP will propose the repair or replacement of barriers for non-traditional mitigation. These partnerships and research efforts will support the larger local watershed planning effort and help identify mitigation opportunities within the CU.

PROJECT IMPLEMENTATION

A primary purpose of EEP is to produce watershed-restoration projects (stream, wetland, stormwater and other BMPs) that meet regulatory mitigation requirements with respect to type, quality and compliance schedule in the most cost-effective way, while maximizing environmental return for North Carolina. The maximization of environmental returns from implemented projects is achieved through the watershed approach.

EEP utilizes DBB and FD contracting methods to realize projects. Both of these project delivery methods have been, and continue to be, critical to EEP's success in meeting mitigation needs throughout the state.

Design-Bid-Build

When DBB projects are used to meet mitigation needs through watershed planning, EEP staff are charged with implementing projects identified and listed in the LWP project atlas. In areas where Local Watershed Plans have not been completed but mitigation needs exist, EEP implementation and planning staff team to implement projects that are consistent with the RBRP Plan.

A typical DBB project requires development and staff oversight of GIS research, landowner outreach, technical site-assessment review, project-budget development, property owner negotiations, design scoping, environmental resource technical report review and approval, draft restoration plan review and approval, final restoration plan review and approval, pre-construction bid monitoring, construction award participation, invoice approval, change- order approval, construction site visits and inspection, initial construction walkthrough, final construction walk-through and acceptance, monitoring-report review, monitoring field visits, maintenance field visits and inspection, regulatory-review coordination, database management, and product-delivery schedule adherence.

Full Delivery

In areas where FD procurement is used to meet program mitigation needs, providers are encouraged through the project technical-rating system to locate restoration activities in watersheds targeted through the RBRP process. FD projects require that EEP staff review technical proposal evaluations, conduct field-site assessment of proposals, review and comment on restoration plans, and conduct multiple on-site construction reviews, monitoring report review and field verification. EEP staff responsibilities for oversight and review of FD projects have increased in the last fiscal year in response to regulatory agency requests that EEP provide greater assurances regarding project selection and implementation.

SYNERGIES BETWEEN WATERSHED PLANNING AND PROJECT IMPLEMENTATION

The foundation of comprehensive watershed restoration and protection is watershed planning. As EEP matures, more and more of the program's restoration projects are correlated to watershed goals. While a large amount of the mitigation credits currently managed by EEP are reflective of watershed plans and targets, not all of the projects in the program are synchronized in this manner due to a number of factors. The following project characteristics contribute to the existence of projects outside of watershed targets:

Projects Developed Pre-EEP: Twenty-eight percent of projects that EEP is managing were partially developed or initiated by NCDOT prior to the establishment of the program and were not based on the program's watershed approach.

Advanced Mitigation MOA Timeline Requirement: The Tri-Party MOA required the advancement of mitigation based on aggressive compliance deadlines which did not allow time for identification of watershed priorities prior to implementation of restoration projects. Developing watershed plans for all target areas would have resulted in permitting delays for NCDOT transportation projects, and resulted in non-compliance with MOA requirements.

Reduction in MOA Program Targets: NCDOT reduced mitigation impact projections in a number of areas where EEP had begun project identification based on watershed planning. The reductions were due to improved forecasting methods, use of on-site mitigation in lieu of off-site mitigation included in NCDOT's mitigation order, and decreased funding for road projects resulting in transportation projects being delayed beyond the projection timeline. The combination of these factors has resulted in some watershed plans being placed on hold until mitigation is needed in these areas.

Project Trends in Relation to Watershed Priorities

Through careful strategic planning, EEP has increased and will continue to increase the number of EEP projects developed through watershed based plans. Factors supporting the increase in planning-based projects include the following:

1. The initial demand rush, based on the original MOA, has been met and more time is available to conduct planning in advance of compliance timing requirements.
2. The MOA has been amended and the new timelines allow more time for planning;

3. Many watershed plans are now in place and will be utilized over the next 10 years;
4. NCDOT has refined its projections such that plans are unlikely to be developed in areas where there will be major reductions in mitigation needs;
5. LWPs have been refined to deliver better projects;
6. EEP was restructured to better integrate planning and implementation which resulted in more efficient project development.

As shown by the trend analysis below, statistics demonstrate an increasing congruence between watershed planning and project implementation. Through careful strategic planning, EEP will continue to promote increases in planning derived projects. Based on operational strategic planning, EEP forecasts that approximately 70 percent of the projects implemented by DBB in the next fiscal year will be derived from LWPs. In areas where program reliance is on FD procurement or other initiatives EEP will continue to seek greater congruence with RBRP targets.

Figure 6 displays the percentage of *total* EEP projects (NCDOT, WRP and EEP initiated) derived from the watershed-based planning process.

Figure 6
Planning Derived Projects as a Percentage of Total EEP Projects

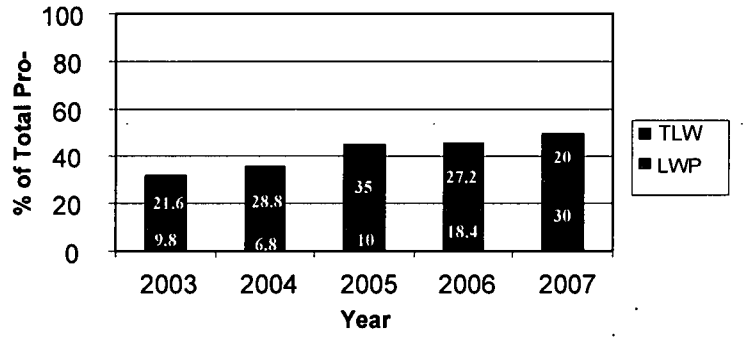


Figure 5 displays the percentage of EEP and WRP initiated (EEP Source) projects derived from the watershed-based planning process.

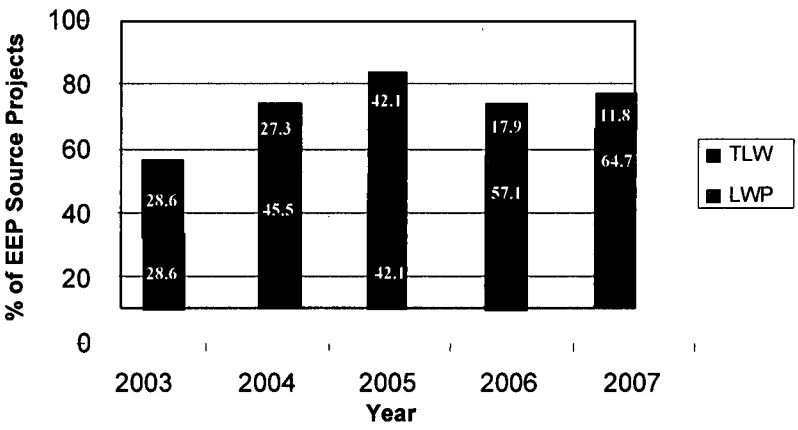
Figure 5
Planning Derived Projects as a Percentage of EEP Source Projects



Project Implementation

Statistics by Mitigation Type

EEP is currently providing management and oversight for 464 watershed restoration and enhancement projects (excluding HQP). These projects include those that were partially developed or initiated by NCDOT and the Wetlands Restoration Program (WRP), and transferred to EEP, along with projects that were generated by EEP since it's inception in 2003. The distribution of projects in the program is as follows:

- NCDOT transferred 107 DBB projects and 23 FD projects (130 projects total). Forty of these projects required additional implementation and development (i.e., feasibility, conceptual to final restoration plan, site acquisition). The remainder of the projects were transferred at some stage of monitoring.

- EEP has initiated and instituted nearly 160 projects (excluding HQP) through the DBB program. An additional 77 DBB projects were inherited from the WRP.

- In addition to the 23 NCDOT FD projects that EEP is managing, EEP has instituted another 99 FD projects.

A summary of the distribution of wetland and stream credits (i.e. restoration, enhancement or preservation) for EEP Tier 1 projects (instituted and designer assigned) is presented in Figures 8-11. These data are presented separately for the DBB and FD components of the mitigation program and provide the percentage of projects that have resulted from the watershed planning process.

The figures exclude projects that were transferred from NCDOT and do not include HQP sites since these projects were identified outside of the watershed-planning process based on Ecoregion service areas.

Figures 8 and 9 show the distribution of DBB Projects throughout the state and demonstrate that 76 percent of stream credits and 65 percent of wetland credits have been implemented in EEP planning areas. This is a three-percent increase for stream credits from 2006 and a decrease of seven percent for wetland credits.

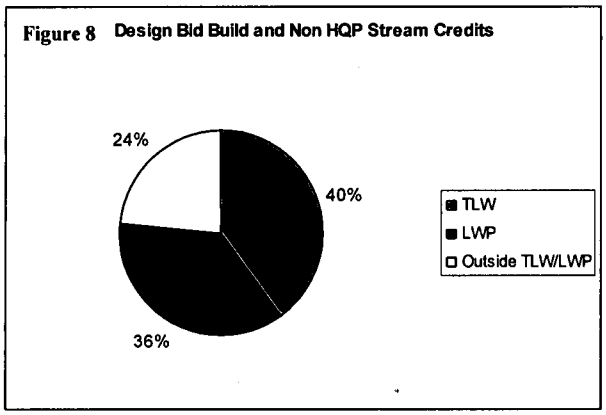


Figure 8. Distribution of Stream Credits derived from DBB Projects.

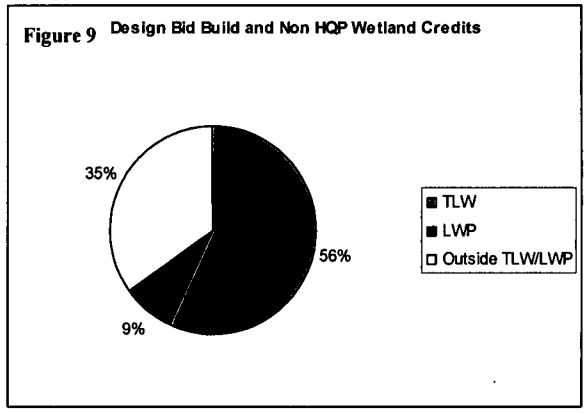

Figure 9. Distribution of Wetland Credits derived from DBB Projects.

Figures 10 and 11 represent the distribution of FD stream and wetland credits. These figures indicate that 38 percent of stream credits and 44 percent of wetland credits have been implemented in EEP planning areas. This represents an increase of six percent for planning-derived stream credits and reflects EEP's efforts to better align FD projects with the watershed-planning process. The percentage wetland credits developed within targeted watersheds did not change since last fiscal year.

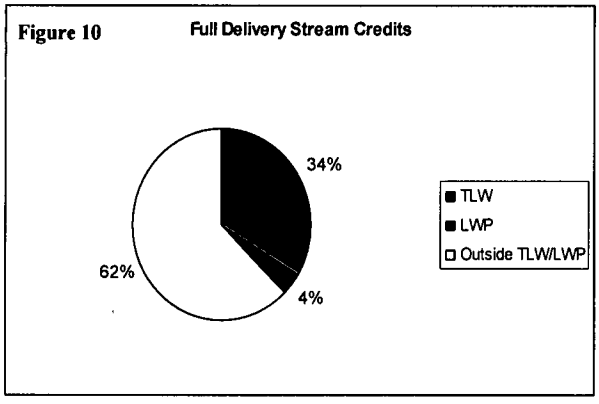

Figure 10. Distribution of Stream Credits derived from FD Projects.

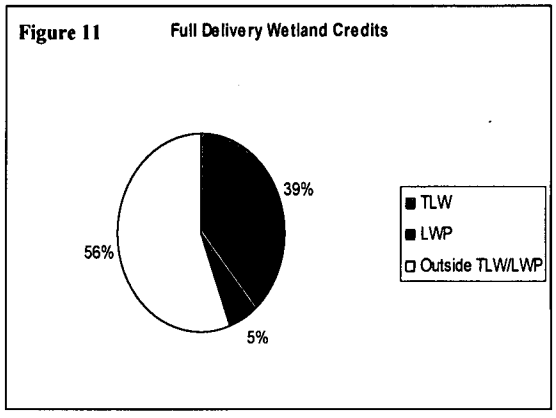

Figure 11. Distribution of Wetland Credits derived from FD Projects.

Additional Watershed Management Synergies Generated Through Planning

Benefits of watershed planning reach beyond compensatory-mitigation requirements. By sharing the plans, others can use the information contained within the plans to increase environmental benefits and assist in local decision-making. The following information highlights areas where EEP's planning efforts have resulted in actions beyond the implementation of restoration for mitigation credit.

- A local planning group consisting of representatives from Chapel Hill, Carrboro and the DWQ Nonpoint Source Program are focusing on management of stormwater in one of the priority areas identified in the Bolin Creek LWP. Through a Clean Water Management Trust Fund grant to the partners, additional fieldwork was completed to assess impacts on streams. The group is seeking additional grant funding to implement projects, such as stormwater BMPs to eliminate impairments to the stream.

- Watershed Education for Communities and Officials (NCSU) partnered with EEP on two stakeholder initiatives and a BMP demonstration field trip to Craven County.

- The Upper Neuse River Basin Association (UNRBA) completed Phases I-III of the Lick Creek watershed plan with funding from an EPA grant. EEP is now contracting with a private consultant to develop the Project Atlas based upon UNRBA's planning efforts, and is contracting with UNRBA to conduct landowner outreach.

- The Lower Creek Advisory Team (LCAT) has formed a partnership with stakeholders to carry out activities to restore and protect Lower Creek and its tributaries, implementing recommendations named in the Lower Creek Watershed Management Plan. In March 2007, the LCAT applied to the Clean Water Management Trust Fund for $310,000 to construct a stormwater wetland in Lenoir; this grant bid was successful, and the City of Lenoir, N.C. State University and the LCAT are working together to implement this project. In addition, EEP has presented the Lower Creek Watershed Management Plan recommendations for county and local government ordinance and programs to the Burke and Caldwell County Commissions, the Lenoir City Council, and the Gamewell Town Council. Each governing body voted unanimously to endorse these recommendations as guidance for future rule-making and program development.

- For the Peachtree-Martins Creek LWP effort, EEP has been modeling changes in land use and resulting pollutant loads. Local stakeholders identified ordinances that are not currently in place but are needed to protect the rich natural and cultural resources of eastern Cherokee County. Data generated as part of the LWP effort will be used by local stakeholders to educate local government decision-makers about actions they can take to protect local resources.

- In Brunswick County, the N.C. Coastal Federation partnered with EEP to address water quality issues in the Lockwoods Folly River. Using data, water quality models and build-out predictors from the Lockwoods Folly River LWP, the group was able to support recommendations to improve water quality in Brunswick County. Eight strategies were presented to the Brunswick County commissioners, who voted to implement the strategies and hire a water quality specialist to carry out the stakeholder's recommendations.

- EEP continues to pursue non-traditional wetland mitigation credit in the Catawba 03050103 CU. The effort will update work previously completed and will result in several pilot site opportunities. The purpose of this study is to present for consideration a flexible mitigation approach that would allow EEP to receive credit for implementing BMPs that could provide similar benefits of a natural wetland in a watershed where traditional wetland restoration opportunities are severely limited.

- CGIA completed a study to assess methods to measure impervious surfaces using remote sensing techniques to estimate impervious surface cover at six locations in the State. CGIA provided EEP with a report on the findings. Three different methods were compared, providing different degrees of quality corresponding to different levels of costs. The study demonstrated ways in which lower-cost methods might be substituted for higher-cost methods to provide useful measures of an important indicator of priorities for restoration, as well as an important consideration for restoration design.

- In the spring of 2007, EEP partnered with USFWS, WRC, NCDOT and others to perform a collaborative study on fish passage in the Needmore area of the Little Tennessee River Basin. This study will identify culverts, fords and other stream crossings that block the movement of fish. From this study, a prioritized list of crossings that should be replaced or repaired will be developed. EEP will develop recommendations to use the replacement

of barriers to fish passage as non-traditional mitigation.

- EEP adopted an MOU developed by the Wetlands Unit of DWQ and EEP Watershed Planning, resulting in wetland identification and classification in two LWP areas (Lockwoods Folly and Fishing Creek). An EPA grant was provided to DWQ for the identification.

Intentional blank page.

MONITORING

The EEP Monitoring Section is focused on four primary areas: 1) oversight of annual monitoring for all restoration projects; 2) assistance to the Design/Construction Section with maintenance for all restoration projects; 3) data management and analysis; and 4) project and program improvement.

For FY 2006-07 EEP monitored 143 (both DBB and FD) restoration and enhancement projects (Appendix K). There were 27 wetland restoration projects and 66 stream restoration projects; 32 projects contained both wetland and stream components; and there were 18 riparian-buffer restoration projects. These projects totaled 6,701 acres of wetland restoration, enhancement and preservation, 678,584 linear feet of stream restoration, enhancement, and preservation, and 867.8 acres of riparian-buffer restoration.

Monitoring reports are located on the EEP Web site.

Monitoring Results and Trends

In FY 2006-07, the EEP monitoring group reviewed and edited annual Monitoring Reports for 50 projects with stream-restoration components. This is approximately double the number of stream-project reports that were reviewed in FY 2005-06.

Annual geomorphic data of four types was reviewed and evaluated: channel dimension (cross-sections), profile (thalweg surveys), substrate (particle size distributions), and engineered structure stability. The assessment of overall channel "success" was based on the consideration of these four metrics. However, it is important to keep in mind that natural stream systems are dynamic, and likely ever-changing, even if at slow rates or in "fits and starts" due to major storms or droughts. As such, any annual determination of channel "success" is a difficult one.

For FY 2006-07, 88 percent (44 of 50) stream projects were determined to be "currently successful." This compares with 83 percent (19 of 23) projects in FY 2005-06. Of the remaining six projects that were "currently unsuccessful," three have been repaired as of this reporting, and repair planning has begun on the other three.

Reports have also indicated a 20-percent increase in success of vegetative criteria. In the FY 2005-06, vegetative success was reported approximately at 61 percent, while for FY 2006-07 (2006 growing season) vegetative success is at 81 percent.

Project Closeout Activity

Once the required monitoring period is complete and a project is deemed successful, EEP staff submit a summary report to the Program Assessment and Consistency Group-Technical Committee (PACG-TC) for review. The summary report is a synthesis and distillation of seven years worth of project data designed to provide an overall performance summary and rationale for close-out. The purpose of close-out is to lock in project credit yield with the regulatory agencies. Eleven projects were submitted and approved for regulatory close-out by the monitoring unit during this fiscal year, including the program's first stream project (Appendix K). The 11 projects accounted for 9,372 linear feet of stream restoration, enhancement and preservation; 1,723.7 acres of wetland restoration, enhancement and preservation; and 36.3 acres of riparian buffer restoration.

Project Improvement Activities and Initiatives Related to the Stream Restoration

The EEP Monitoring section has initiated the following improvements concerning the assessment and maintenance of stream projects:

- Advancing standardization of data collection and reporting
  Through the creation and revision of process documents and guidance documents (templates) for mitigation plans and monitoring reports, EEP has continued to make advances in the standardization of data collection. These initiatives are providing a concentrated data format that favors tabular and graphical representations of project data over narratives. This has included significant development of policy and procedures documents that are designed to redefine the transition from construction to monitoring, whereby monitoring contractors are introduced earlier in the process to collect the projects baseline data, maximizing temporal consistency. Staff has also initiated the development of draft decision framework for monitoring of restoration projects. The framework provides information that leads to targeted, more cost-effective monitoring.

- Continued development of visual stream-assessment protocol for EEP monitoring
  EEP monitoring staff has continued to refine the methods, criteria and plan-view depiction of stream condition during the monitoring phase, and is working toward an analogous approach for pre-construction phases of EEP projects for the purpose of contrasting and comparing project conditions through time.

- Continued construction of electronic data histories for EEP project inventory
  Approximately 160 documents, document components and data deliverables spanning multiple formats have been identified to comprise the electronic file history of each EEP project. This electronic document and data inventory has been formulated with many essential applications and many end users in mind, including monitoring, analysis (project and program scale), research, regulatory close-out, and project stewardship. Prior to the introduction of recent standards documents by EEP's Monitoring and Design and Construction units, certain data were not provided during project development or were not provided in formats compatible with end-user needs. The population of this data inventory/matrix through acquisition and integration of data in electronic formats from earlier EEP projects has been a continuing time-intensive, yet essential, effort.

- Technical review of program plan documents and reports
  EEP stream-monitoring personnel conducted detailed technical reviews of approximately 50 design plan documents and approximately 60 monitoring reports for stream-related components.

- Initial development of project maintenance thresholds
  The EEP Monitoring section has assisted in the development of a project maintenance matrix to track project condition across the major categories of channel, vegetation and property. During the review of annual Monitoring reports, channel maintenance needs (or potential needs) are documented. Subsequently, monitoring staff made a series of site visits to validate reporting, and to determine if repair thresholds had been exceeded. This work has been done in close cooperation with EEP's maintenance engineer.

- Committee involvement for addressing specific program needs
  Stream-monitoring personnel have participated in the ongoing development of protocols and solutions for specific program needs including:

  ◊ Functional currency approaches to compare BMPs and natural-systems restoration for the purpose of developing a stream-BMP crediting system.
  ◊ Participated in the development of assessment approaches and standards to better ensure that organism passage is protected as part of restoration efforts, and to examine passage augmentation independent of stream-restoration projects as a potential source of alternative mitigation.
  ◊ Participated in the development of a multi-agency stream-functional-assessment method for the purpose of categorizing stream impacts for mitigation purposes.

- Contractor orientation and training
  Monitoring personnel presented information and guidance to members of the consulting community eligible for contracting under EEP's DBB program.

Vegetation Success.
Vegetation success is paramount to ensuring project success. EEP has taken the following efforts to improve documentation and provide guidance for monitoring and reporting vegetation success.

- Vegetation Template Revision:
  As part of an ongoing effort to improve project documentation and success, the vegetation portion of several project document templates have been updated, including: Environmental Resources Technical Report (ERTR), Mitigation Plan, Restoration Plan, Final Design, and Monitoring Report documents. Collectively, the revised documents will complement each other by building on a base of information that begins at project inception and continues through the project close-out phase. Forthcoming revisions will not only improve the functionality of each document, but will also eliminate redundancy of format and effort on the part of EEP contractors.

- Vegetation Management/Easement Maintenance
  Efforts have been initiated by Monitoring staff to produce a new EEP guidance document that will outline program requirements for easement maintenance. Contracts for vegetation-driven maintenance are becoming increasingly necessary due to a number of issues associated primarily with easement-encroachment, low planted stem survival rates, and exotic invasive plant infestations. Once implemented, the new guidance will serve as a basis for easement management agreements between EEP and various entities already involved in ongoing vegetation maintenance adjacent to the program's mitigation projects, such as parks, golf courses, and greenways. The new document will also become an integral part of a novel approach toward maintenance contracts intended to correct various vegetation problems that may result in credit reduction. This approach differs from traditional EEP maintenance contracts by incorporating relatively small amounts of preventative measures at numerous project sites into one contract. The new contract may include: replanting, installation of easement boundary markers, herbicide treatments, installation/removal of tree shelters, and pruning.

- Vegetation Monitoring
  Implementation of the Carolina Vegetation Survey-EEP Protocol for Recording Vegetation (Lee, et al., 2006), has continued under an EEP requirement for all new projects to utilize the new method as outlined in the EEP Mitigation Plan template. To facilitate this transition from numerous uncoordinated vegetation-monitoring methods to a refined data management system that complies with current scientific and pending federal guidelines, a workshop focused on vegetation monitoring was conducted by CVS and EEP staff in June 2007. During this two day workshop, all active On-call firms and FD providers were given comprehensive training necessary for all aspects of applying the protocol, from mitigation-plan development to data delivery. Consequently, an increasing percentage of all the 2007 EEP projects will have vegetation monitoring data that is processed, summarized, and delivered in an efficient automated manner.

PROJECT AND PROGRAM IMPROVEMENT RESEARCH

During the FY 2006-07, EEP has continued the research program begun in FY 2005-06. The goal of the research program is to improve EEP effectiveness by helping to increase project success and reduce costs by:

- Improving cost-effective selection among project alternatives and design options within a watershed context;
- Increasing project success;
- Reducing maintenance costs;
- Improving mitigation ratios; and
- Reducing monitoring costs through use of functional methods and other programmatic improvements.

EEP research works through partnerships with state, local and federal agencies and universities. The research program encompasses three broad focus areas: functional assessment, catchment studies and restoration methods.

Functional Assessment

Functional-assessment research projects focus on methods to improve the assessment of stream and wetland condition at both project and watershed scales, and will be usable in assessing both the need for and success of restoration.

Ongoing or new projects in this area include:

- Carolina vegetation survey (UNC, R. Peet and NCSU, T. Wentworth)
- Stream geomorphology reference database (NCSU, G. Jennings)
- Multivariate evaluation of vegetation success (ECU, R. Rheinhardt; part of a cooperative agreement with EPA Region IV)

Projects completed during FY 2006-07 include:

- Urban stream nitrogen uptake study (Duke, E. Bernhardt)
- Biogeochemical function of restored coastal wetlands (Duke, E. Bernhardt)
- Five Mile Branch herpetological survey, Iredell County (M. Dorcas, Davidson College)
- Urban stream reference and outer coastal plain assessment (ECU, M. Brinson).

Catchment Studies

Catchment studies include projects that demonstrate the effects that restoration projects have on water quality, habitat and hydrology at large scales. These studies will help in the selection among project alternatives to better meet programmatic watershed improvement goals. During FY 2006-07, EEP began catchment studies of:

- Big Harris Creek, Cleveland County (NCSU, G. Jennings and DWQ);
- Survey of macrobenthos in restored coastal plain streams (NCSU, G. Jennings);
- Heath Dairy, Randolph County (NCSU, G. Jennings, and DWQ); and
- Unnamed tributary to Crab Creek, Alleghany County (DWQ).

Restoration Methods

By studying restoration methods, EEP will be able to improve the success of restoration projects, limit the need for maintenance, and improve cost-effectiveness.

Ongoing or new projects in this area include:

- Carolina Vegetation Survey (UNC, R. Peet and NCSU, T. Wentworth);
- North River Farms Phase II monitoring, Carteret County (NCSU, R. Evans);
- Ripshin Creek, Ashe County (NCSU, G. Jennings); and
  Dye Branch BMP and stream-restoration study, Mooresville, Iredell County (NCSU, B. Hunt and G. Jennings, and DWQ).

Projects completed during FY 06-07 include:

- North River Farms Phase II construction, Carteret County (N.C. Coastal Federation); and Sand Bed Streams Sediment Study (Buck Engineering; part of a cooperative agreement with EPA Region IV).

EEP is also collaborating with regulatory agencies to develop innovative approaches to mitigation and to develop and implement functional assessment methods. Projects include:

- White Oak LWP (with WPPI and ECU, M. Brinson);
- aquatic organism passage study (with US F&WS);
- wetlands functional assessment (NC WAM) implementation (with DWQ, DCM, USACE and EPA)
- stream functional assessment development (with DWQ and other NCDENR agencies, USACE and EPA).

In addition, monitoring staff are also coordinating with in-state academic institutions related to stream functional assessment on the following activities:

- Collaboration with North Carolina State University to develop a stream restoration reference reach database. Numerous channel reference reaches have been identified, surveyed, and utilized in restoration designs in North Carolina. These data should be compiled and available for query, analysis, and for future design work. Additionally, the success of completed projects should be measured by comparing against statistics from reference reaches.

- Collaboration with Western Carolina University (Jerry Miller) on a study to identify Geomorphically Suitable Sites for Stream Restoration. The study will focus on the

Southern Appalachian and Piedmont Physiographic provinces and will produce a rubric-type model to identify stream segments that are likely to be highly unstable, and thus not good candidates for restoration projects.

- Collaboration with the University of North Carolina (Joel Sholtes) on a study to document effects of stream restoration projects on hydrologic function (flood attenuation).

Additional research goals for the FY 2007-08 include:

- Develop grant applications with researchers in academia and sister agencies to broaden project scope to reduce burden of research costs and increase partnerships.
- Continue to establish linkages and improve collaboration and cooperation between the DOT Research and Analysis Branch and the EEP research program; and
- Continue to develop and assess new approaches for non-traditional mitigation; and continue to define ways in which EEP will meet its commitment to implement the N.C. Division of Marine Fisheries Coastal Habitat Protection Plan.

For further information on EEP research, contact Kevin H. Miller, EEP Research and Grants Coordinator (kevin.miller@ncmail.net or 252-916-6576).

High Quality Preservation Partnerships

Following through on MOA transition requirements, in FY 2006-07 partnerships between local land trusts, state agencies and EEP protected more than 2,300 acres of land on 29 HQP sites throughout the state. These sites focused on conservation of stream corridors bordering designated significant aquatic habitats in the Upper Tar, Uwharrie, and Deep River watersheds of the Piedmont. In addition to more common aquatic species, the Tar spiny mussel, Cape Fear Shiner, and dwarf wedge mussel live in the waters of these tracts.

- The Natural Heritage Trust Fund partnered with EEP and the Plant Conservation Program to fund the purchase of land harboring rare plant and animal populations in the Eno, Fisher, and Green River watersheds. The Uwharrie River Bingham acquisition protected nearly eight miles of nationally significant aquatic habitat along the river and its tributaries. The Land Trust for Central North Carolina received a donation from private donors to fund acquisition of the adjacent uplands. This purchase protected seven species of globally rare mussels as well as scenic views along this popular canoe route. The site was identified in the Uwharrie River Corridor Plan.

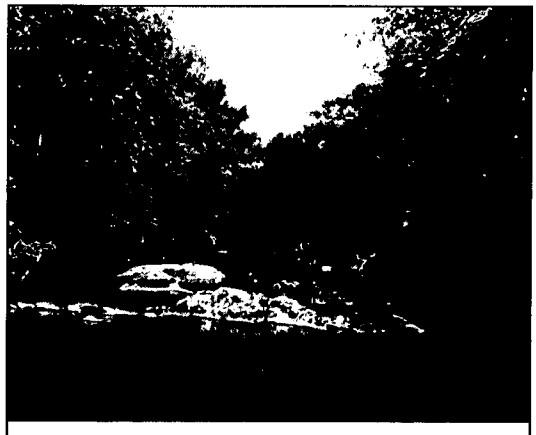

Photo courtesy Tar River Land Conservancy

- Private landowners agreed to permanently protect 11 additional tracts in the Upper Tar River watershed.

- The Fisher River / Fisher Peak acquisition protected water supplies and a natural area of state significance in the Fisher River watershed.

Photo courtesy Sandhills Area Land Trust

- Five parcels along the Deep River and Drowning Creek drainages were placed in permanent conservation easement. The Deep River harbors the Federally Endangered Cape Fear Shiner. Tributaries to Drowning Creek are designated as Water Supply II waters.

(Note: There were no responses to this survey in FY 06—07)

Private Mitigation Banking Survey Questions

List of HU's in which credits can be utilized:

This Bank produces: (select all that apply)
What is the total cost per acre?
What is the cost/acre of Land purchase?
What is the cost/acre of Pre-Monitoring?
What is the cost/acre of Design?
What is the cost/acre of Construction?

What is the cost/acre of Hydrological Modifications (includes cost of structures)?
What is the cost/acre of Planting?
What is the cost/acre of Post Monitoring?
What is the cost/acre of Long-Term Management?
What is the total cost per linear foot?
What is the cost/linear foot of Land purchase?
What is the cost/linear foot of Pre-Monitoring?
What is the cost/linear foot of Design?
What is the cost/linear foot of Construction?
What is the cost/linear foot of Hydrological Modifications (includes cost of structures)?
What is the cost/linear foot of Planting?
What is the cost/linear foot of Post-Monitoring?
What is the cost/linear foot of Long-Term Management?
How many acres of RESTORATION?
How many acres of ENHANCEMENT?
How many acres of CREATION?
How many acres of PRESERVATION?

Please list the total number of credits (that the bank started with) by credit type. For example: 20 non-riparian restoration credits 10 non-riparian enhancement credits etc.
How many credits of each type have been sold?
How many credits of each type are remaining?

What is the cost of one Salt-water wetland credit in your bank? (What you charge to sell 1 credit)

What is the cost of one Riparian wetland credit in your bank? (What you charge to sell 1 credit)
What is the cost of one non-riparian wetland credit in your bank? (What you charge to sell 1 credit)

What is the cost of one Stream credit in your bank? (What you charge to sell 1 credit)

Appendix C2: Design and Construction Contracts Awarded FY 06-07

Design Services

From July 1, 2006 through June 30, 2007, 26 new design and consulting contracts were awarded. Total value of new design contracts awarded was $5,499,796.

Project Name	Design Firm	Contract Amount
Little Alamance Creek	Arcadis	$266,305.00
Greenbrier Creek	Biohabitats	$322,947.00
Glade Creek	Biohabitats	$159,996.00
Mill Creek	Baker	$175,051.00
Jumping Run	Baker	$225,310.00
South Muddy Creek	Baker	$320,769.00
Helms Site	EcoScience	$74,767.00
Dutch Buffalo Creek	Jordan, Jones, & Goulding	$229,845.00
Lewis Creek	Jordan, Jones, & Goulding	$103,720.00
Little Troublesome	KCI	$167,618.00
UT to Crab Creek	KCI	$247,434.00
Lower Creek	Kimley-Horn & Associates	$267,480.00
Moore Property	Kimley-Horn & Associates	$140,000.00
Little Lick Creek	Ko & Associates	$235,479.00
UT to Bear Creek	Ko & Associates	$194,870.00
Adkin Branch	Ko & Associates	$669,064.00
Branson Creek	Mulkey, Inc	$169,997.00
Meadowbranch	Natural Systems Engineering	$214,210.00
Little River J Bar	Stantec	$83,519.00
Jacksonville CC	Stantec	$152,260.00
UT to Hendircks Creek	Sungate	$104,762.00
Wayne Community College	TetraTech, Inc	$54,866.00
Newfound Creek	URS Corporation	$284,851.00
Bowman & Cox Sites	Ward Consulting	$242,159.00
McKee Creek	Withers & Ravenel	$228,351.00
Jenny's Gut	WK Dickson	$164,166.00
	Total Design Services	**$5,499,796.00**

Construction Services

For Fiscal Year July 1, 2006 through June 30, 2007, 18 new construction contracts were awarded. Total value of new construction contracts awarded was $7,252,515.

Project Name	Construction Firm	Contract Amount
Ritter Field Stormwater BMP	Peter Rollins & Assoc	$28,975.00
Norwood Gainey	Carolina Silvics	$119,960.00
Bold Run Creek	Vaughn	$295,150.50
McIntyre Creek	United	$585,873.00
South Fork Cane Creek	Osborne	$499,166.80
Naked Creek	Fluvial Solutions	$348,717.08
UT to Sandy Creek (Rising Meadows)	Shamrock	$352,603.00
Roquist	Sawyer	$440,889.50
UT to Pembroke Creek Farm Mgt	Atlantic Dewatering	$98,450.00
Meredell Farm	Riverworks	$597,451.00
Goose Creek	Shamrock	$578,792.00
Briles Site	L-J, Inc.	$279,615.00
Johnson Site	Quartermaster	$331,795.00
Valley Field Farms	NorthState	$1,246,534.00
UT to Little Coharrie (Roseboro)	Shamrock	$377,917.00
UT to Pembroke Creek	Osborne	$357,205.00
Little Grassy	Riverworks	$71,790.00
Dye Branch	ITSI	$641,631.38
	Total Construction Awards	**$7,252,515.26**

Appendix H. LWPs – Ongoing (Phases I – III) as of July 1, 2007

River Basin [EEP Region]	8-digit CU	14-digit HU(s) (6-digit suffix)	Local Watershed Name [approx. total area in sq. miles]	Initiation Date	Status/Comments	Plan (Phase III) Completion Date [Consultant]
Hiwassee [West]	06020002	090020, 100040, 100050, and 170010	Hiwassee River [39 sq. mi.]	June 2005	- Phase III in progress - Working with Hiwassee River Watershed Coalition	December 2007 [Equinox]
Broad [West]	03050105	040040, 040060, and 040050	Cove Ck. [80 sq. mi.]	May 2006	- Fast track LWP in order to identify and acquire cold/cool stream mitigation needs will be pursued	July 2007 [EarthTech]
Upper Cape Fear [Central]	03030002	030010, and 040110	Travis, Tickle, & Little Alamance [51 sq. mi.]	Summer 2006	- Phase II underway - Fieldwork Complete - Demonstration projects identified	May 2008 [Piedmont Triad Council of Government]
Lower Yadkin [Central]	03040104	010010 and 010020	Mountain & Jacobs Cks. [68 sq. mi.]	Fall 2003	- Phase I tasks 100% complete - Final Phase I report from HDR delivered spring 2004	On hold; will re-evaluate. Possible re-start in 2007
Middle Yadkin [Central]	03040103	050010, 050020, and 050040	Upper Uwharrie [3 HUs; ~ 135 sq. mi.]	Apr. 2005	- Phase I 100% complete - LWP effort on hold per 2005 Op Strategic Plan	Phase I completed Aug. 2005 [Buck Engineering] Further planning on hold
Neuse [East]	03020204	Subwatersheds within 030020, 030050, 040010, and 050020 to 050040	Havelock [~ 60 sq. mi.]	June 2005	- Phase I activities ended Jan. 2006	On Hold [EcoScience]
Tar-Pamlico [East]	03020101	020010, 030010, and 030020	Fishing Ck. [69.7 sq. mi.]	May 2005	- Phase I completed Feb. 2006 - Phases II & III are in progress	Summer 2008 [WK Dickson]
White Oak [East]	03020106 & 03030001	Currently undetermined	White Oak	Apr. 2006	- Phases II & III in progress - Secondary focus is to develop coastal watershed-specific mitigation strategy	Summer 2008 [ECU & NCED]
					-	

Appendix I: LWP's Phase III Completed as of July 1, 2007

River Basin [EEP Region]	8-digit CU	14-digit HU(s) (6-digit suffix)	Local Watershed Name [approx. total area in sq. miles]	Initiation Date	Status/Comments	Plan (Phase III) Completion Date [Consultant]	Phase IV Completion Date and Comments (if applicable)
Lower Cape Fear [East]	0303 0007	140010	Northeast Cape Fear tributaries [80 sq. mi.]	Sept. 2000	- 100% complete - Many projects identified, including stormwater BMPs; several funded (and/or funding being sought)	Completed December 2002 [KCI]	WECO implementing BMPs through EPA grant
Upper Neuse [East]	0302 0201	060010	Lake Rogers sub-watershed [17 sq. mi.]	Jan. 2002	- 100% complete - Limited opportunities for stream restoration - Contracting with UNRBA and EcoScience to conduct site search and landowner outreach.	Dec. 2003 [No assessment consultant, but used Tetra Tech data]	October 2008
Upper Neuse [East]	0302 0201	050010	Ellerbe Creek [37 sq. mi.]	Jan. 2002	- 100% complete - Several restoration projects both initiated and completed - Contracting with UNRBA and EcoScience to develop Site Atlas and conduct landowner outreach.	Jan. 2004 [used UNRBA data for this CU]	October 2008
Upper Neuse [East]	0302 0201	110010 and 110020	Upper Swift Creek [66 sq. mi.]	Fall 2003	- Phases I - III 100% complete - 4 EEP projects underway - Contracting with UNRBA to conduct landowner outreach	June 2005 [Amec/Tetra Tech]	October 2008
Upper Neuse [East]	0302 0201	050020	Little Lick Ck. [22 sq. mi.]	Fall 2004	- Demonstration projects underway - Contracting with EcoScience to produce site Atlas and with UNRBA to do landowner outreach	Dec. 2006 [Upper Neuse River Basin Assn.]	October 2008
Upper Neuse [East]	0302 0201	050030	Lick Creek [22.8]	October 2007	- Contracting with EcoScience to develop site Atlas based on work done by UNRBA - Contracting with UNRBA to do landowner outreach	Phases I-III funded through an EPA grant	October 2008

River Basin [EEP Region]	8-digit CU	14-digit HU(s) (6-digit suffix)	Local Watershed Name [approx. total area in sq. miles]	Initiation Date	Status/Comments	Plan (Phase III) Completion Date [Consultant]	Phase IV Completion Date and Comments (if applicable)
Lower Catawba [Central]	0305 0101 and 0305 0103	03050101 – 170010 and 170020; 03050103-020020 to 020050	Charlotte-area Local Watersheds [6 HUs totaling 257 sq. mi.]	Feb. 2002	- Phases I - III 100% complete July 2003 - ID'd many stormwater BMPs/retrofits and ~50,000' stream restoration in 6 "focus areas" - 4 EEP projects underway	July 2003 [CH2M Hill]	In July of 2006 Tetra Tech completed an assessment of stormwater BMPs for non-traditional mitigation. In April of 2007 contract was initiated to revise/update work previously done for this study; work is ongoing.
Lower Yadkin [Central]	0304 0105	010010 and 010020	Upper Rocky River – Dye Branch & Clarke Creek [77 sq. mi.]	Dec. 2001	- 100% complete - Many potential projects & BMPs id'd, including ~ 80,000' stream restoration. - Several projects in acquisition.	Feb. 2004 [CDM]	
Lower Yadkin [Central]	0304 0105	03040105 – 010030 to 010050 and 020010	Upper Rocky River part 2 [4 HUs; 200 sq. mi.]	Dec. 2002	- Phases I through III are 100% complete. - NCSU/WECO has modified "Phase IV" contract to do education/outreach to landowners & local gov'ts in this LWP area [ongoing; contract ended 2/06]	Spring 2005 [Mactec]	Feb. 2006 [WECO and EEP field staff presentations to general public, landowners, town councils, and county commissions]
French Broad [West]	0601 0105	030020 to 030040	Mud Creek [3 HUs; 113 sq. mi.]	Sept. 2000	- 100% complete - Documented many non-point sources of impairment, degradation - Two EEP projects underway - 319 grant received for Ag BMPs	Jan. 2003 [No assessment consultant; relied in part on TVA IPSI work]	-Received EPA funding for local *Watershed Coordinator* to implement plan -EEP has stream restoration project on Lewis Creek in design
Pasquo-tank [East]	0301 0205	050010, 010020 and 040010	Pasquotank River [3 HUs; 370 sq. mi.]	Dec. 2001	- Final Plan development 100% complete - Some potential restoration, enhancement and preservation sites identified; BMP opportunities also identified	Feb. 2004 [DS Pro]	Resolving issue of mitigation needs associated with U.S. 64 before pursuing projects
Middle Neuse [East]	0302 0203	020040	EPA *Contentnea Grant* – Hominy Swamp Creek [16 sq. mi.]	1999	- Final plan development 100% complete - Several restoration projects & BMP sites identified.	May 2004 [No assessment consultant; some support from NCSU & ECU]	

River Basin [EEP Region]	8-digit CU	14-digit HU(s) (6-digit suffix)	Local Watershed Name [approx. total area in sq. miles]	Initiation Date	Status/Comments	Plan (Phase III) Completion Date [Consultant]	Phase IV Completion Date and Comments (if applicable)
Middle Cape Fear [East]	0303 0004	020010, 030010 and 040010	Harris Lake tributaries; Kenneth & Parkers Creeks [180 sq. mi.]	Spring 2003	- Final plan development 100% complete - Several restoration projects & BMP sites identified	Sept. 2004 [Buck Engineering]	
Middle Cape Fear [East]	0303 0004	070010 & 070020	Cranes Creek [2 HUs; 101 sq. mi.]	Dec. 2001	- Assessment tasks completed May 2005 [Blue] - Several potential projects delivered to EEP Implementation staff - Final stakeholder summary & preliminary plan completed (WECO, 2005)	WECO report completed June 2005; additional planning efforts on indefinite hold pending annual updates to Op Strategic Plan	
Upper Cape Fear [Central]	0303 0002	060100, 060070, 060080	Morgan and Little Creeks [3 HUs; 75 sq. mi.]	Nov. 2002	- Final plan development 100% complete - Many restoration projects & BMP site identified and evaluated. - Phase IV contract underway to pursue Plan identified sites	Dec. 2004 [TetraTech]	Phase IV completed in March 2007 [Stantec]. Chapel Hill and Carrboro are continuing implementation efforts.
Upper Cape Fear [Central]	0303 0002	010010 and 010030	Troublesome & Little Troublesome Creeks [69 sq. mi.]	Nov. 2001	- 100% complete - Many potential preservation, restoration, and BMP sites id'd - Phase IV contract underway to pursue Plan identified sites	February 2004 [TetraTech]	Phase IV completed in March 2007 [Stantec]
Upper Yadkin [West]	0304 0101	010080 to 010110 and 020010	K. Scott Lake – Lewis Fork & Warrior Ck. [5 HUs; 137 sq. mi.]	Nov. 2001	- 100% complete - ~ 60,000' of stream restoration id'd; negligible wetland opportunities - Ag BMPs targeted for CWMTF grant	June 2004 [TetraTech]	No current plans for formal Phase IV effort.
French Broad [West]	0601 0108	080020	Bald Creek [18 sq. mi.] + additional HUs added for Phase IV [59 sq. mi.]	Fall 2003	- Phase III (Plan & Atlas) completed - Habitat degradation and straight-piping issues	Feb. 2006 [Equinox]	July 2007 [Equinox]
French Broad [West]	0601 0105	060020	South Hominy Creek [38 sq. mi.]	Fall 2003	- Phase III completed - Sediment, nutrients are key stressors	Nov. 2005 [Buck Engineering]	-Mar. 2006 [Buck Engineering] -EEP pursuing projects identified in Phase IV
Broad [West]	0305 0105	070020	Catheys Ck. [45 sq. mi.]	June 2003	- Phases I - III are 100% complete - Contract amendment to perform fast track LWP in Cove Ck.	Sept. 2005 [Earth Tech]	Landowner outreach performed by EEP staff

River Basin [EEP Region]	8-digit CU	14-digit HU(s) (6-digit suffix)	Local Watershed Name [approx. total area in sq. miles]	Initiation Date	Status/Comments	Plan (Phase III) Completion Date [Consultant]	Phase IV Completion Date and Comments (if applicable)
Middle Tar-Pamlico [East]	0302 0103	15 sq. mi. subwatersheds with HUs: 010020, 060020, 050030, and 080010	Crisp Creek [18 sq. mi. total]	Fall 2003	- Phases I – III 100% complete - Phase IV effort on hold indefinitely	Phases I – III completed Mar. 2005	Fall 2008 [NCSI-BAE] Phase IV ongoing in Crisp Creek Watershed]
Middle to Lower Neuse [East]	0302 0202	010010, 010020 and 010021	Initial: Core Ck. Now: Stoney Ck. [3 HUs, 29.8 sq. mi. total]	Fall 2003	- Phase I on Core Ck. 100% complete [KCI] - Decision made to move LWP to Stoney Ck. HUs beginning 2004 - Stoney Ck. Phases I - III 100% complete - Phase IV effort to be completed in September 2007	Phases I through III Dec. 2005	Phase IV scheduled for completion September 2007 [KCI]
Lumber [East]	0304 0203	030010 and 050010	Bear Swamp & Lumber River [52 sq. mi.]	Fall 2003	- Phase I 100% complete [Earth Tech] - Phase II detailed assessment 100% complete - Phase III 100% complete - LWP identified project underway	Dec. 2005 [Earth Tech]	
Upper Cape Fear [Central]	0303 0003	070010, 070020 and 070050	Initial: Hasketts Ck. Now: Upper Rocky River & tribs [3 HUs; 177 sq. mi.]	Fall 2003	- Moved LWP from Hasketts Ck. (Asheboro area) to Upper Rocky River (3 HUs) in Siler City area due to great restoration opportunities and more favorable stakeholders - Phases I – III are 100% complete	June 2005 [TetraTech]	Landowner outreach being performed by EEP staff on potential riverine wetland sites.
Upper Catawba [West]	0305 0101	080010 and 080020	Lower Ck. [98 sq. mi.]	Fall 2003	- Phase III complete - Working with post-plan stakeholder group (Lower Creek Advisory Team) to implement plan recommendations - All local and county governments voted to endorse plan recommendations	July 2006 [Mactec}	Landowner outreach being performed by EEP staff; pursuing several stream restoration projects
New [West]	0505 0001	030020 and 030030	Little River [77sq.mi] + Brush Ck.[34 sq.mi.]=111mi^2 total	Fall 2003	- Phase I completed March 2004 - Phases II and III began Jan. 2006; completed Spring 2007 - Final Project Atlas and Bledsoe Creek plan produced June 2007	June 2007 [WK Dickson]	No plans for a formal Phase IV process, but local group has formed the Bledsoe Creek Advisory Team

River Basin [EEP Region]	8-digit CU	14-digit HU(s) (6-digit suffix)	Local Watershed Name [approx. total area in sq. miles]	Initiation Date	Status/Comments	Plan (Phase III) Completion Date [Consultant]	Phase IV Completion Date and Comments (if applicable)
Lumber [East]	0304 0207	020010, 020020, 020030, 020040, and 020050	Lockwoods Folly [~ 50 sq. mi.]	June 2005	- Phase I was 100% complete Dec. 2005 - Phase II 100% complete - Final Management Plan complete	July 2007 [Stantec]	Landowner outreach being conducted by EEP staff

State Water Infrastructure Commission:

2007 Report and Recommendations on Regional Collaborations for Infrastructure

Presentation to the ERC

November 27, 2007

Exhibit M

State Water Infrastructure Commission

- Created by the North Carolina General Assembly in 2005.

- The purposes of the Commission are to
  - identify the State's water infrastructure needs,
  - develop a plan to meet those needs, and
  - monitor implementation of the plan.

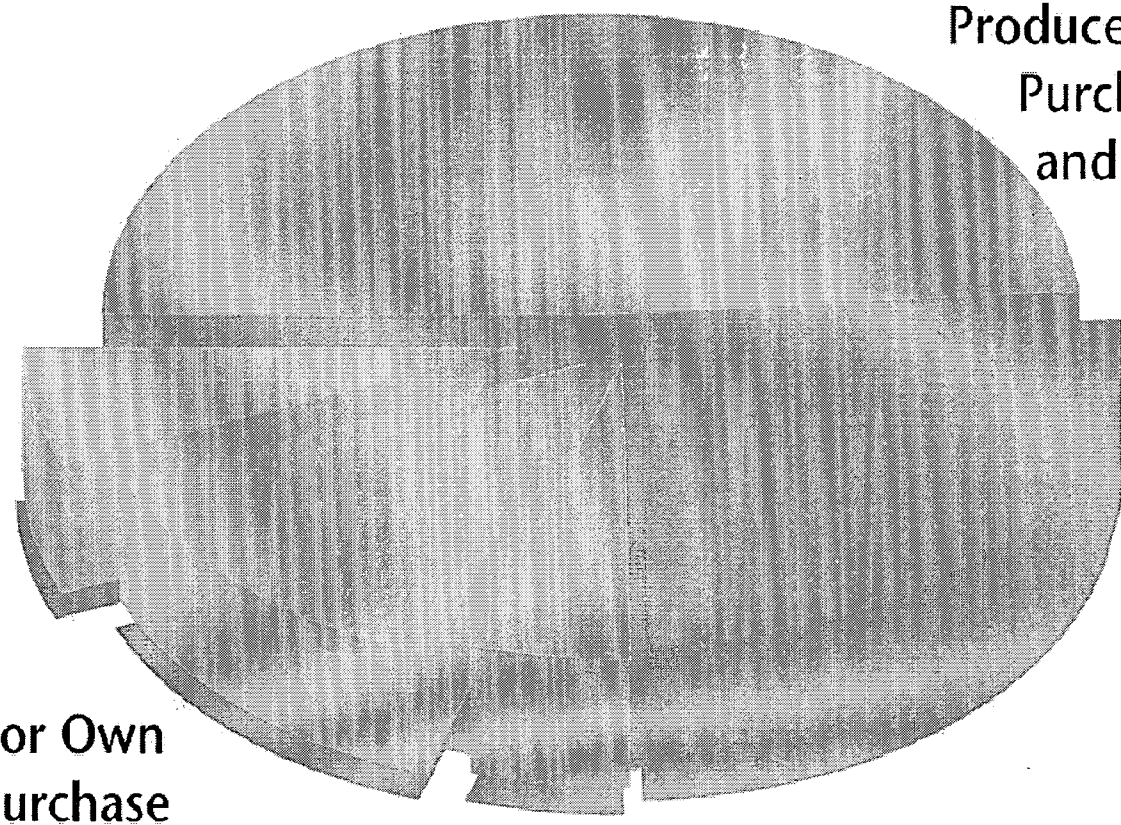
Regional Collaborations and Partnerships

- How does the State currently address regional infrastructure?
- What can we do we maintain that which works? What can change where needed?

Regional Collaborations and Partnerships

- There is no uniform State policy regarding regional infrastructure
- Regional efforts originate locally in response to local needs/opportunities
- State funding is the only way we currently recognize the value of regional collaborations
- Funding is not predictable year to year; each funder has it's own points formula

Water Regionalization



Produce for Own Use, Purchase None and Sell None
48%

Produce for Own Use, Purchase and Sell to Others
7%

Purchase all Water
26%

Produce for Own Use and Purchase from Others
14%

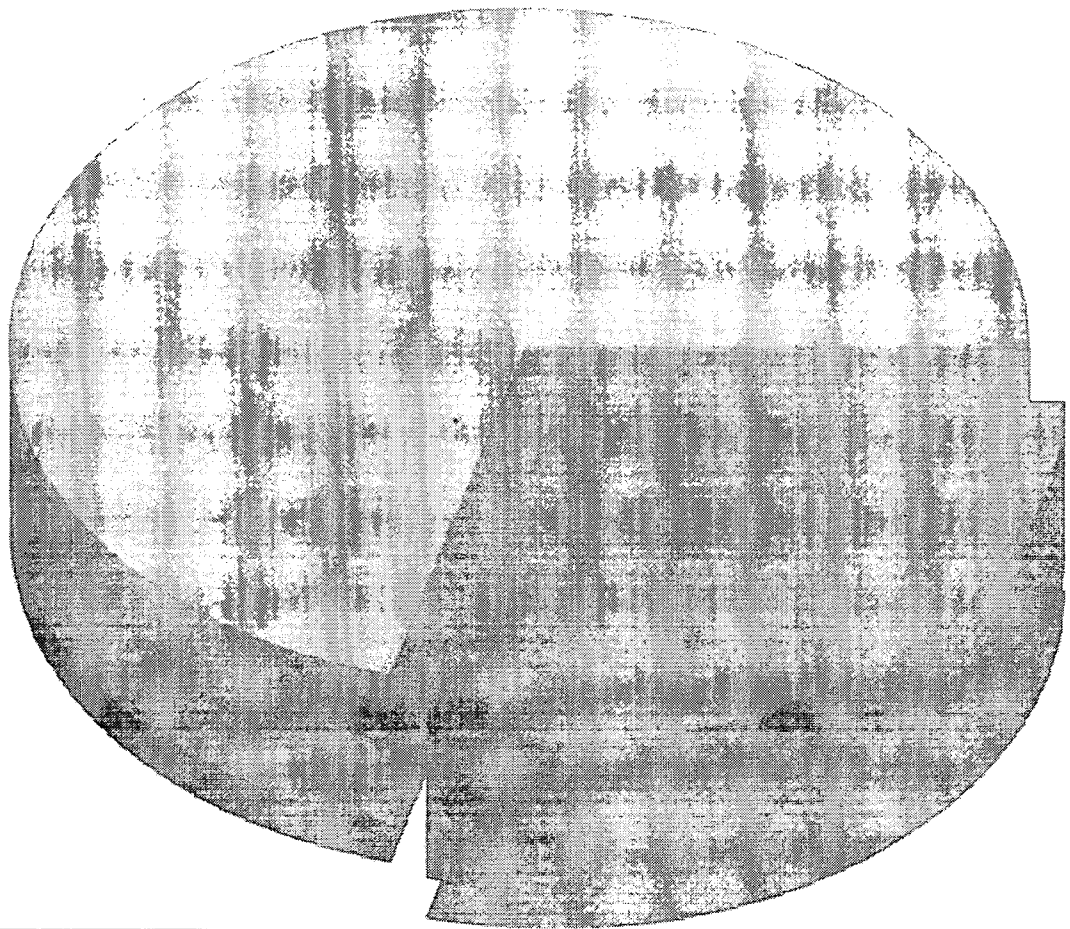
Sewer Regionalization

Treat Own Sewage or Treat Own and Others 71%



Sewage Treated by Others 29%

Source: NC Rural Center Water 2030

Benefits of Regional Collaborations

Whether physical connections or shared management and administrative efforts, regional collaborations provide many benefits:

- Reduce number if treatment plants under State regulatory supervision
- Economy of Scale
- Strategic deployment of funding resources
- Regional networks provide needed backups
- Support regional economic development

Barriers to Regional Collaborations

- Start-up funds very limited
- Costs are higher for small and rural systems
- "Emotional" barriers
- Regulatory and legal barriers

Regional Collaborations and Partnerships

Some systems in North Carolina are not ready to participate in regional collaborations:

- imperfections in the system
- lack of sound fiscal management for the system

Regional Collaborations and Partnerships

Some systems in North Carolina cannot participate in regional collaborations due to distance between systems and topography

Regional Collaborations and Partnerships

SWIC Recommendations

Regional Collaborations and Partnerships

1. Identify and remove existing barriers legal, regulatory and policy barriers to regional collaborations and provide a set of inducements that will promote regional thinking.

Regional Collaborations and Partnerships

2. Develop and implement a set of criteria for evaluating system "readiness" for regionalization.

This may prevent bringing systems that are not ready i.e., not yet managing their systems efficiently and effectively, into a regional configuration where they cannot participate as an equal.

Regional Collaborations and Partnerships

3. State funders of infrastructure should develop a "Cooperation Alternatives Analysis" process.

This will ensure that systems seeking State funds have analyzed all regional alternatives available.

Regional Collaborations and Partnerships

4. Federal and State funders of infrastructure should execute a Memorandum of Understanding to support funding collaboration on regional projects.

Regional Collaborations and Partnerships

5. Conduct a study to identify the most promising regions for water regionalization.

   Using existing geospatial data we can identify systems that represent potential regional networks.

Regional Collaborations and Partnerships

6. Increase funding for the strategic development of regional collaborations.

A predictable revenue stream would allow for strategic development of regional systems.

Regional Collaborations and Partnerships

7. System regionalization should also allow for cooperation between private and public water entities.

Regional Collaborations and Partnerships

8. Encourage the State Division of Water Resources to explore and employ water resource management strategies that compliment regionalization.

Continue and expand work on new strategies that ensure sustainable water capacity for future use.

Regional Collaborations and Partnerships

9. System owner education on fiscal management and its relationship to regional partnerships is necessary and needed.

Educational materials are also need for the consuming public on the value of regionalization as a tool for managing the state's water resources.

Annual Report

and

Recommendations:

Regional Infrastructure Collaborations and Partnerships

The North Carolina
State Water Infrastructure Commission

To

Governor Michael F. Easley
and Members of the General Assembly of North Carolina

November 1, 2007

The State Water Infrastructure Commission was created by act of the North Carolina General Assembly in 2005. The purpose of the Commission is to identify the State's water infrastructure needs, develop a plan to meet those needs, and monitor implementation of the plan. The Commission is comprised of 13 members representing State agencies and non-profits, organizations representing North Carolina local governments and members of the water infrastructure and water resources professions.

Report Author: Jean Crews-Klein, Staff to Commission

Contributor: Jeff Hughes, UNC Environmental Finance Center

Regions rarely work unless everybody gains, the planning process works and funding works.

-David Thompson, Executive Director of the North Carolina Association of County Commissioners

Members of the State Water Infrastructure Commission

Standing Members

Dudley Watts, Chairman, also Forsyth County Manager and Governor's Appointee

William Laxton, Deputy-Assistant Secretary, NC Department of Commerce

Vacant, NC Department of Environment and Natural Resources

Billy Ray Hall, President, NC Rural Economic Development Center

Ellis Hankins, Executive Director, NC League of Municipalities

Vance Holloman, Deputy State Treasurer, Office of State Treasurer

David Thompson, Executive Director, NC Association of County Commissioners

Richard Rogers, Executive Director, Clean Water Management Trust Fund

Appointed Members: Serving two-year terms

Dr. Downey Brill, Professor, NC State University (Chancellor's Appointee)

Steve Cavanaugh, P.E., Cavanaugh Associates (American Council of Engineering Companies Appointee)

Harold Herring, Executive Director, Neuse Regional Water and Sewer Authority (Appointee of Speaker Pro Tem)

The Honorable Bill Owens, NC House of Representatives (Appointee of House Speaker)

Richard Whisnant, Associate Professor, UNC School of Government (Appointee of Water Resources Research Institute)

Introduction

In the United States and abroad, regional cooperation among utility providers is used to increase efficiency of system operations, join systems together to enjoy economies of scale that otherwise might not be enjoyed by those members, and to provide service to areas that would not otherwise receive service. Regionalization, regional collaborations and partnerships take many forms and provide a variety of services to North Carolina drinking water and wastewater systems.

In keeping with its charge to provide recommendations on the role of the State government in the development and funding of wastewater, drinking water, and storm water infrastructure, the State Water Infrastructure Commission (SWIC) has examined the concept and practice of regionalization in North Carolina this year. In so doing, SWIC members have determined that further refinement of our collective understanding of regionalization, its benefits and the barriers to regional cooperation, will serve to improve the use of and targeting of State resources for needed infrastructure development.

As North Carolina continues to experience record population growth and concentration of that population coupled with increases in water consumption spurred by our perception North Carolina as a "water rich" state, efficient use of water resources and strategic infrastructure development through regional collaborations and partnerships makes sense.

The SWIC members heard from a variety of presenters including those that fund infrastructure in North Carolina and owners/operators of several of our largest regional systems. Without exception, funders and those that manage these regional systems see regional collaboration as an essential component of our State's strategy for enhanced resource management. How we, as a State, support new and existing collaborations will benefit from this examination.

Background on the State Water Infrastructure Commission

The State Water Infrastructure Commission was created through passage of House Bill 1095 during the 2005 Session of the North Carolina General Assembly. Passage of this bill was led by The Honorable John Kerr of the NC Senate and The Honorable Pryor Gibson of the NC House of Representatives and supported widely by members of the General Assembly. The bill is codified as Session Law 2005-454, "An Act to Establish Uniform Criteria for Drinking Water, Wastewater and Stormwater Loans and Grants, to Clarify and Revise the Procedures that Apply to These Loans and Grants to Reflect the Exhaustion of the 1998 Clean Water Bond Proceeds, and to Provide for Greater Coordination Among Agencies that Make Loans and Grants for Water Projects by Establishing the Water Infrastructure Commission."

The creation of the Commission and the modifications to the State's existing water and wastewater finance law were the product of a collaborative effort between major State funders of infrastructure including the Department of Environment and Natural Resources, the Clean Water Management Trust Fund and the Rural Economic Development Center. These three entities have served as the agents of the State in making important water, wastewater and storm water investments that have protected public health and the environment and created opportunities for economic growth and development.

Together with other State and Federal funders of water infrastructure and North Carolina local governments, the purpose of the efforts was two-fold: 1) to make certain that the State's policies governing infrastructure financing were refined and updated to better align with current trends, and 2) to define the role of the State in providing financial resources for needed infrastructure investments. This focus contributed to the creation of the State Water Infrastructure Commission in 2005.

Specifics of the Legislation

The legislation offered numerous modifications to Section 159G. Previously called the North Carolina Clean Water Revolving Loan and Grant Act of 1987, the new section title is simply and inclusively, *Water Infrastructure*. This decision, as others in this revision to existing law, symbolized the intent of the drafters to create a more cohesive set of guidelines for management of State funding resources for infrastructure improvements and focus for those investments. Water Infrastructure, in this case, refers inclusively to drinking water, wastewater and stormwater infrastructure.

The newly adopted version made a number of technical corrections, consolidating the existing State water and wastewater funds into one fund- the Water Infrastructure Funds - where the accounts for the Clean Water State Revolving Fund and the Drinking Water Revolving Fund would now be housed. Along with these accounts, the Drinking Water Reserve and the Wastewater Reserve accounts were established for the purpose of receiving State funds for loans and grants. The new version also established a set of common criteria upon which certain points in applications reviewed would be determined.

Article 4 established the State Water Infrastructure Commission. The purpose of the Commission as set out in the law is to identify the State's water infrastructure needs, develop a plan to meet those needs, and monitor the implementation of these plans. The Commission consists of both appointed (6) and standing (7) members.

Appointments were completed in May 2006 and the Commission held its first meeting that month. Specific duties of the Commission include:

1. To assess and make recommendations on the role of the State in the development and funding of wastewater, drinking water, and storm water infrastructure in the State.

2. To analyze the adequacy of projected funding to meet projected needs over the next five years.

3. To propose State priorities for funding.

4. To make recommendations on ways to maximize the use of current funding resources, whether federal, State, or local, and to ensure that funds are used in a coordinated manner.

5. To review the application of management practices in wastewater, drinking water, and stormwater utilities and determine the best practices.

6. To assess the role of public-private partnerships in the future provision of utility service.

7. To assess the application of the river basin approach to utility planning and management.

8. To assess the need for a "troubled system" protocol.

Commission Makes Seven Recommendations in 2006 to the Governor and Members of the General Assembly

Completing its first year of activity, the Commission submitted its 2006 report to the Governor and the members of the General Assembly offering seven recommendations. These recommendations focused on refining the State's role in the development, regulation and funding of drinking water, wastewater and stormwater infrastructure. The report ncluded both short-term and long-term suggestions. Briefly, the seven recommendations were:

1. Establish new and stable State funding for water, wastewater and stormwater improvements;

2. Provide $50 million in the 2007-2008 State Budget to address critical needs;

3. Establish conditions on State funding that ensure financial, technical and managerial efficiency of operation to ensure support of sustainable infrastructure investments;

4. Support efforts to improve operation and maintenance of water, wastewater and stormwater systems;

5. Provide for Regular Updates to the State Water and Wastewater Data Layers;

6. Establish State Funding for North Carolina Stream Mapping Project: Phase II;

7. Provide continuation funding for the State Water Infrastructure Commission.

Following submittal of that report in November 2006, the Commission set out on its second year of activity with two primary goals in mind: 1) to provide educational support for the efforts to secure needed funding for infrastructure improvements, and 2) to more closely examine the concept and practice of regionalization in North Carolina in order to deliver in its 2007 report a set of recommendations on how the state might further support the practice of regional collaboration.

Commission members and staff, at the request of organizations and various committees, made numerous presentations to further the public's education on the profile of the infrastructure capital needs and the work of the Commission.

$100 Million Funds Secured for Critical Needs Improvements

The 2007-2008 Long Session of the General Assembly was notable for the state's infrastructure systems. In a landmark effort, a broad coalition of interests joined together to bring attention to the condition of the state's infrastructure systems and the needs for improving those systems. The group, The Partnership for North Carolina's Future, includes advocates for public schools, land and water conservation, transportation, water and sewer, affordable housing, cities and counties. The common concern is that North Carolina is not making the necessary investments to keep pace with our growth and development and that there is no plan in place to address these needs. (quote)

At the close of the session in August 2007, the General Assembly had allocated $100 million for critical drinking water and wastewater needs. In light of numerous competing needs, the State was unable to act on the recommendation for dedication of a permanent source of revenue for water and sewer infrastructure improvements. In the face of at least $16.6 Billion in capital needs to improve the state's drinking water, wastewater and stormwater infrastructure, the $100 million appropriated must be carefully allocated toward projects. The funds will be administered through the Rural Economic Development Center in two grant rounds starting in December 2007.

> North Carolina is in the midst of a monumental change. Each hour adds 21 new North Carolinians to our state's population; each day another 504 persons.
>
> -*Reality Check for North Carolina*, The Partnership for North Carolina's Future. July 2007.

Reflecting the recommendations of the State Water Infrastructure Commission, these funds will address several new state priorities for funding. Units of local governments qualifying for funds will be required to adjust their monthly water and sewer rates to at least 1.5 percent of the median household income of the local government unit. This amount has been deemed by the State to be a reasonable level of financial support from customers of the State's systems. Also notable with this funding is the cooperation of the infrastructure funders in the State. Both federal and State-level funders will collaborate in review of the potential projects represented by the applications to the Rural Center in order to ensure that the State utilizes all funding effectively.

Regionalization, Regional Collaboration and Partnerships

Simultaneous to its work on funding education, the Commission established a series of monthly presentations to foster discussion on the concept of regionalization and its practice in North Carolina. Both in this country and abroad, regional cooperation among utility providers is seen as a method to increase efficiency of system operations, to join systems together to enjoy economies of scale that otherwise might not be enjoyed by those members, and to provide service to areas that would not otherwise receive service. Regionalization was chosen as the concept/practice on which to focus the Commission's efforts because there is opportunity in the State for enhanced collaboration. This collaboration among systems, and between systems and funders, can enable sustainable public investment and yield needed protection for the environment, public health and economic prosperity.

Commission members, through their own experiences, recognize that regionalization in water infrastructure (which is inclusive of drinking water, wastewater and stormwater), was being initiated at the local level across North Carolina and was sometimes funded through State sources. It appeared, however, that there was no common definition of what comprised a "regional" effort, though these regional efforts among systems appeared to require some significant change in the way participating systems were organized and conducted business. Additionally, there was some concern by Commission members that if regionalization was to be funded by the State, we be clear about what the existing incentive (funding) system was encouraging and discouraging and examine barriers, if any, to further regional cooperation.

If regional collaborations were to be funded by the State, the Commission believed that we needed to be clear about what the existing incentive (funding) system was encouraging or discouraging, and examine barriers, if any, to further regional collaborations.

Regionalization: Why Do It?

Regionalism in the water infrastructure world has been held up as a solution to many challenges facing those that provide the service (system owners and operators) and those responsible for developing and implementing state and national infrastructure policy. With few exceptions, "regionalization" has meant a physical connection between systems and an organizational change in management. Regionalization through these physical connections has been routinely encouraged between smaller systems challenged by keeping pace with regulations and smaller customer bases over which to spread costs, and larger systems with more financial, technical and managerial resources. "Since the Safe Drinking Water Act was first passed by Congress in 1974, a frequently suggested strategy for facilitating and reducing the costs of compliance for small systems has been to restructure them through regional consolidation or cooperation with other systems. Consolidation — whether by physical interconnection or a shared management strategy — would reduce unit costs by reducing duplication of effort and taking advantage of economies of scale". [1]

In a national review of literature on regionalization conducted for the National Regulatory Research Institute, the consensus was that regionalization is held out as a challenging but beneficial practice. "Taken as a whole, the studies in the literature find much agreement over the technical and economic benefits of regionalization, but frustration with the institutional context of implementation". [2]

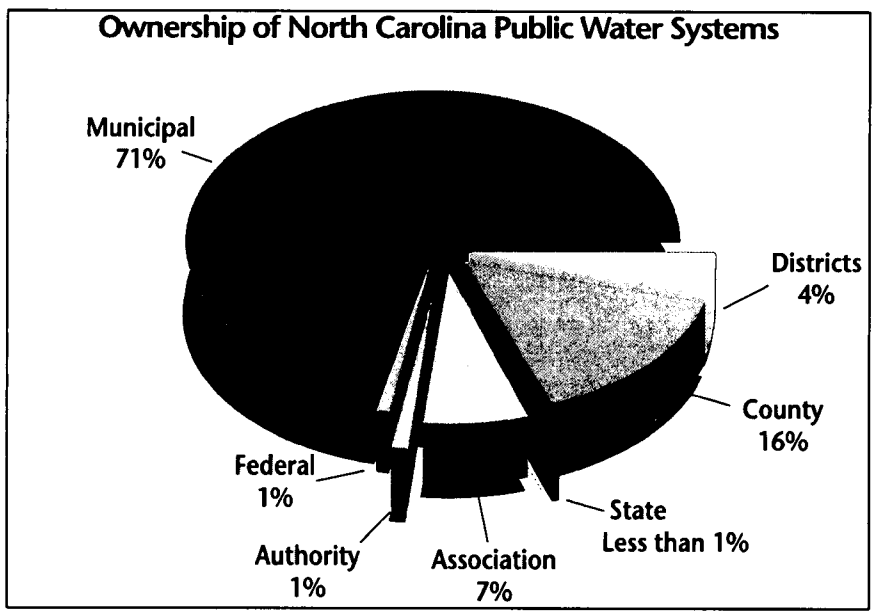
Given the confluence of factors placing pressure on the safe operation of our state's infrastructure systems and highlighting our need for water resource planning and management statewide, the Commission saw regional collaboration as an important strategy/practice that may offer near-term benefit to the State.

Following in this report is a summary of findings by the Commission on regional collaboration and a series of recommendations by which the State might refine its support of these collaborations.

Regional Cooperation in North Carolina: Organizational Structures

There are ten organizational structures through which water and sewer service can be provided in North Carolina. According to the Water 2030 Study, the overwhelming majority of both water (71 percent) and wastewater (86 percent) service is provided by cities (municipalities) operating as independent systems. [3]

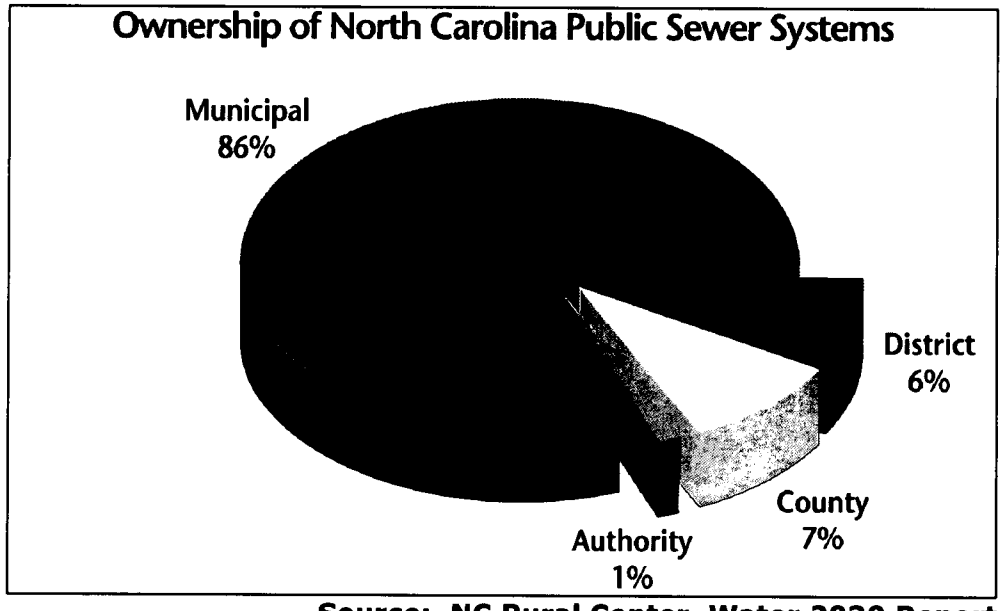
Figure 1:



Source: NC Rural Center, Water 2030 Report

Multi-jurisdictional authority is available through Interlocal Agreements, Joint Management Agencies, County Service Districts, Sanitary Districts, Water and Sewer Authorities, Metropolitan Water Districts, Metropolitan Sewerage Districts, and County Water and Sewer Districts. These are, thus far, the least sought after institutional arrangements for delivery of water and sewer service in the state. Most regional utilities are actually county systems or town systems with inter-local agreements. Private Nonprofit Associations also provide a regional structure for operation.

Figure 2:



Source: NC Rural Center, Water 2030 Report

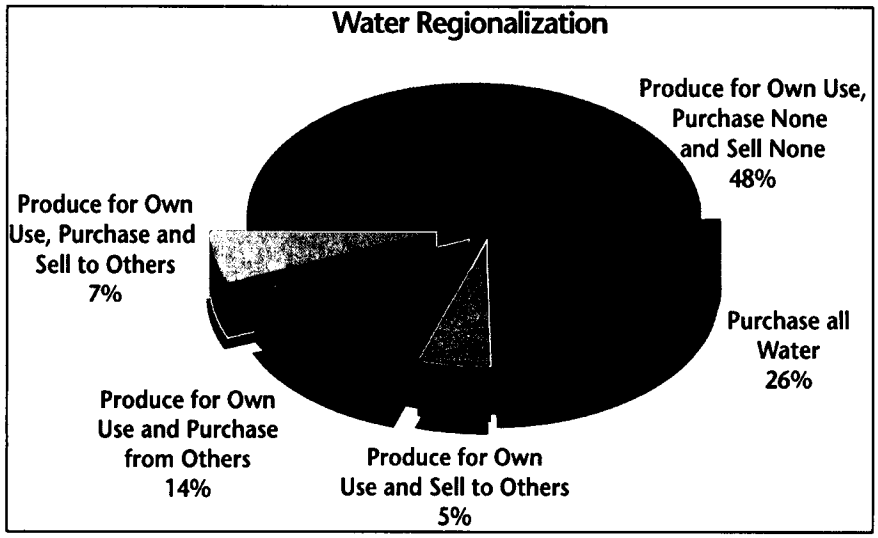
Within these organizational structures there are a variety of arrangements between partners

The degree of regional cooperation varies across systems we would consider to be "regional". On the light end of the scale, arrangements such as those for billing and operations and maintenance support are common. On the heavy end of the scale, systems are physically connected and ownership may vest with an authority. Even when physically connected the degrees of cooperation vary. Buying and selling of water through a contractual arrangement – the light end of the scale- generally allows for the systems each to maintain their autonomy and a business transaction to be their connection. In contrast, an authority arrangement often combines existing assets of the participants, such as main distribution lines, and then jointly develops new treatment and/or distribution assets. [4]

Seen through the diagrams below, the degree of regional cooperation among water suppliers and distributors is much greater than that on the wastewater side. According to the Water 2030 data, about 52 percent of all water systems were

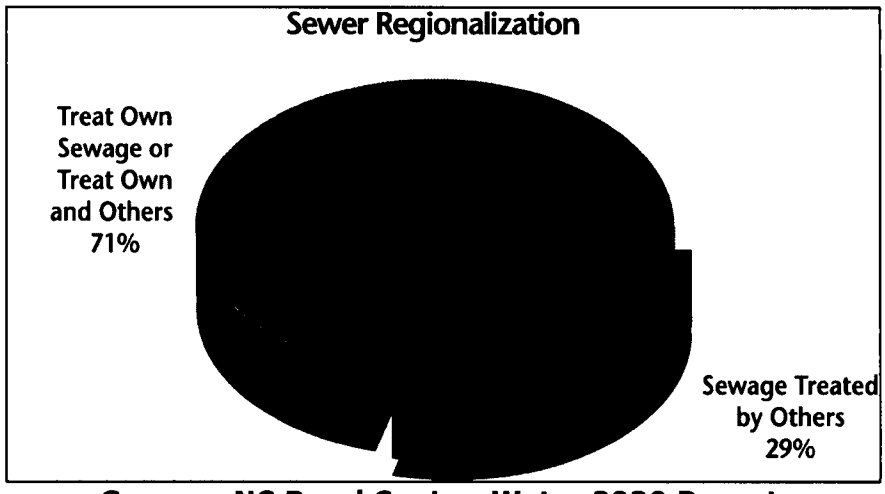
involved in some regional arrangement compared to 30 percent of wastewater systems.

Figure 3:



Source: NC Rural Center, Water 2030 Report

Figure 4:



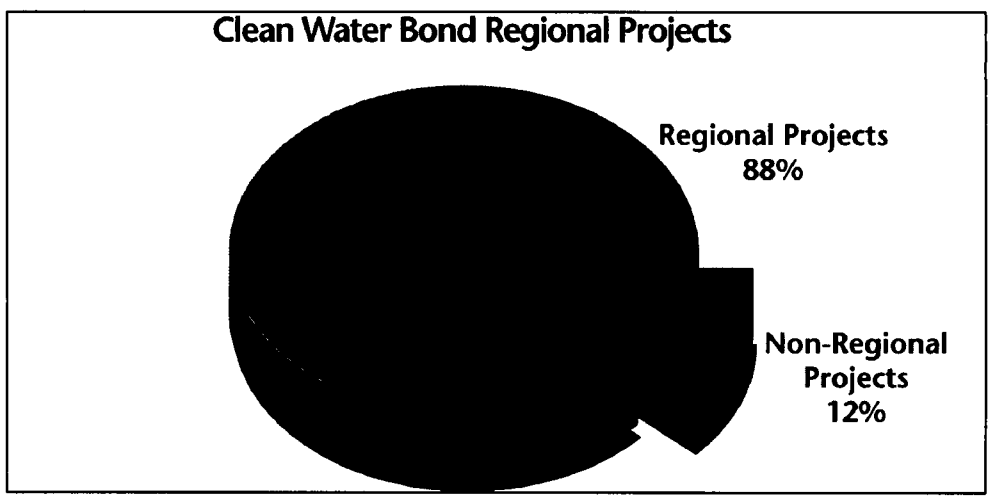
Source: NC Rural Center, Water 2030 Report

The impetus for regionalization/cooperation has been primarily local as funding incentives only recently moved toward encouraging regional cooperation

Though this practice of regionalization involving a physical connection between systems was first financially supported through the Safe Drinking Water Act of 1974, it was not until the 1998 North Carolina Clean Water Bond that the number of "regional" systems grew significantly in the State. In the interim, regional systems developed in North Carolina as a response to local concerns and needs. Regional projects were funded through the available sources – State Revolving Loan Fund programs and USDA being the primary funders of infrastructure in this period – simply on the merits of the project, but not because they were regional in nature. [5]

The 1998 North Carolina Clean Water Bond injected $800 million of water and wastewater infrastructure funding into the financing system for water and sewer projects. At that time, this was the single largest bond effort in the State and it was a significant boost in resources to address failing infrastructure statewide. This Clean Water Bond allocated infrastructure funding to the State's Department of Environment and Natural Resources through both the drinking water and wastewater programs funded by State bonds. Funding was also allocated to the Rural Economic Development Center, Inc. to capitalize a program for drinking water and wastewater grants. This State-directed incentive required that "significant additional points" be allocated to projects that met a set of criteria, including creating regional systems, set out in the law. In the final accounting of projects funded through this significant State investment, 88 percent of projects funded were regional in nature.

Figure 5:



Source: NC Rural Center, Water 2030 Report

Regional Collaborations in Other States

Often, when deciding whether or not to take a particular action as a state to address a challenge or opportunity, we look to how other states have dealt with that same challenge or opportunity that is facing us. A summary of data on individual state practices is found below.

It is clear from this review that efforts that the most focused and comprehensive regionalization efforts are State-led and do not depend on federal funding or regulation as their driver. Each of these State-led efforts had a policy connection point – a specific act passed by the legislature or Executive Order by the Governor or reflected state priority already established in State infrastructure regulations.

Three Ways to Encourage Regional Collaborations

Our review of individual state programs revealed three basic methods by which regional collaborations are supported. [6] These collaborations can be supported through:

1) Points in a rating system
2) A check off system - "it's this or nothing"
3) Favorable terms when you make a certain action

Providing points in a rating system for regional collaborations tends to work only when the supply of funds is inadequate to meet the demand. In this instance, allocating a certain number of points in a rating scheme works to provide an advantage for those projects with a regional aspect. In cases where the supply of funds is greater than the demand, points in a rating system simply do not provide sufficient incentive.

A check-off system provides a means to contrast between those projects which are regional in nature and those that are not. Use of the check-off system implies that a priority has been established for regional collaborations and projects must fit this priority or risk not being funded.

The favorable terms approach is typically utilized in states that have a steady stream of funding available, either from the state or from state and federal resources combined. Under this method, projects are submitted for funding and if they meet certain established criteria that reflect a state priority (in this case regionalization), then the project is provided with more favorable financing terms than those that do not meet the state priority. This treatment can take the form of grant over loan or loans at more favorable terms.

Infrastructure funding programs were examined in states that share a border with North Carolina – to see what our "neighbors" are doing to address regionalization- and in state's from across the country that have exceptional regional programs.

Virginia

In Virginia, the State government has made a firm commitment to statewide water supply planning through creation of a state grant program to fund the development of local or regional water supply plans. Local governments must submit their plans for approval by the State Water Control Board according to a schedule based on population. The first plans are due in 2008 and the last in 2011. Localities have received a total of more than $1 million in grants from the Commonwealth of Virginia since 2006 to support the development of local and regional water supply plans.

This regulation was developed to implement the mandate of Senate Bill 1221 (2003, c.227, SB1221). The purpose of this regulation is to protect the health, safety and welfare of citizens by requiring local and regional water supply planning. The goal of this regulation is to establish a basic set of criteria that each local or regional water supply plan must contain so that they may plan for and provide adequate water to their citizens in a manner that balances the need for environmental protection and future growth.

Through the Drinking Water Revolving Loan Program, the state of Virginia does recognize regional systems as applicants but does not provide any additional bonus points or other incentives for regional infrastructure projects through their State Revolving Fund. The same is true of the Clean Water State Revolving Fund Program, with no encouragements or rewards for regional systems. See http://www.deq.state.va.us/watersupplyplanning/. [7]

South Carolina

The State of South Carolina has no specific State funding provided for infrastructure development that rewards regional systems or collaborations. The State relies on the EPA Revolving Loan Program to fund most infrastructure improvements.

The manner in which the State has complied with federal directive from EPA through the State's Drinking Water State Revolving Fund (DWSRF) is, however, notable. The Drinking Water Program has recently undergone revision and the State has developed an initiative to encourage and facilitate the consolidation or regionalization of public water systems. South Carolina uses a regionalization/consolidation criterion for drinking water projects only.

In general, eligible Drinking Water SRF projects are first grouped into categories according to their relative importance with respect to SDWA requirements. Within

categories, the projects are evaluated according to regionalization/consolidation considerations, affordability, and size of community. Regional projects receive 5 points in a ranking system total of 115 maximum possible points.

The DWSRF may provide assistance to an eligible public water system to consolidate/connect with another public water system(s) only if the assistance will ensure that the system returns to and maintains compliance with SDWA requirements.

If the system does not have the technical, managerial, and/or financial capability to ensure compliance, or is in significant noncompliance, the system may receive assistance only if (1) the assistance will ensure compliance, or (2) the owner or operator of the system agrees to undertake appropriate changes in operations. These changes include consolidation or management changes that will ensure that the system has the technical, managerial, and financial capability to ensure and maintain compliance with SDWA requirements. The State may require the submission of a business plan as part of the preliminary engineering report for a project. [8]

Tennessee

Through the Drinking Water Revolving Loan Program, the state of Tennessee does recognize regional systems as applicants but does not provide any additional bonus points or other incentives for regional infrastructure projects through their State Revolving Fund. The same is true of the Clean Water State Revolving Fund Program, with no encouragements or rewards for regional systems.

Tennessee does, however, maintain an awareness of statewide infrastructure needs through related policy that does recognize the value of regional collaborations. Recognizing the state's rate of growth and land development activities, Tennessee's General Assembly created a framework for development of sound growth policy in 1998 by enacting Public Chapter 1101, the Growth Policy Act, which has come to be known simply as "PC1101", the Tennessee Growth Policy Act (Public Chapter 1101, Act of 1998). [9]

PC1101 required local officials within each of the ninety-two non-metropolitan counties to work together to shape growth policy through the development of 20-year growth plans. The Act did not impose a single, statewide solution. It did, however, include five statements of legislative intent:

1. To eliminate annexation or incorporation out of fear.
2. To establish incentives to annex or incorporate where appropriate.

3. To more closely match the timing of development to the provision of public services.
4. To stabilize each county's education funding base and establish an incentive for each county legislative body to be more interested in education matters.
5. To minimize urban sprawl.

Beginning in 1996, the State was required to compile and maintain inventories of the infrastructure needs of Tennessee's counties (Public Chapter 817, Acts of 1996). The inventory obtains information on new and planned, as well as prospectively needed, public infrastructure, which is defined as "capital facilities and land assets under public ownership or operated or maintained for the public benefit."

The General Assembly assigned responsibility for monitoring the implementation of PC1101 to the Tennessee Advisory Commission on Intergovernmental Relations (TACIR). A series of TACIR's reports on PC1101 can be found at www.state.tn.us/tacir/publications.htm. [10]

Kentucky

The Kentucky Infrastructure Authority (KIA) was created in 1988 to provide the mechanism for funding construction of local public works projects. KIA is continually growing and expanding its services. Through the various programs currently offered, KIA has become the answer for local financing needs. [11]

The Kentucky Infrastructure Authority developed a deliberate program to reduce the number of public water systems in the state. State Statutes were developed directing the Authority to establish an incentive program that allocates funds from their 2020 water service account in a manner that encourages the regionalization, merger, and consolidation of water systems and elimination of structural and administrative duplication. Both government-owned and private systems are eligible to participate.

The incentive program targeted water systems that have high debt, inadequate operational and maintenance resources, high maintenance costs, old and inadequately maintained treatment works, a history of violations of the Division of Water's statutes and administrative regulations due to inadequate operational and maintenance resources, or insufficient financial resources to extend system service to unserved or underserved areas.

As a result of this program, the number of water systems in the state has been significantly reduced. See KIA website for further information: http://kia.ky.gov/.

Non-Contiguous States

Other states across the country that have advanced state policy on regionalization and regional collaborations include Texas, Florida and New Mexico. These three states have been grappling with water resource constraints and have developed management strategies focused on sustaining the resource and maximizing the efficiencies of infrastructure systems.

Texas

In 1997, the State of Texas passed Senate Bill 1. This established the statutory authority for the implementation of a program of infrastructure regionalization in the State through the Texas Commission on Environmental Quality. Regulations subsequently developed enable the State to examine both existing water and wastewater systems and new systems to ensure they are optimizing the use of existing financial, managerial and technical resources. This policy is implemented by requiring that each system operating in the state obtain a Certificate of Convenience and Necessity (CNN) that requires regionalization unless the system can demonstrate it meets one of three exceptions. The State has clearly articulated a preference for regional collaborations because they see regionalization as a means to protect the health, safety and welfare of Texans by ensuring a long-term supply of safe water at affordable rates and by maintaining the quality of water in the state. The ultimate goal of regionalization is to provide timely and cost-effective solutions for achieving quality service in the face of ever-increasing costs of compliance.

A contract with the University of New Mexico's Environmental Finance Center exists to develop a baseline of water system costs for a good system under the Safe Drinking Water Act, but does not include regionalization economic issues. This contract has been expanded to include development of an economic module, which includes regionalization parameters that relate to reasonableness of certain sized systems to distance of service. Staff of TCEQ has also been directed to estimate the resource burden to accomplish this task. For additional information on TCEQ, see http://www.tceq.state.tx.us/subject/subject_water.html. [12]

Florida

Florida has managed its water infrastructure and water resources through a district system for over 55 years. This was enabled through the State Constitution which created five Water Management Districts. The Florida Department of Environmental Protection is involved in managing the quality and quantity of water through its relationship with the state's five water management districts: Northwest Florida Water Management District, Suwannee River Water Management District, St. Johns River Water Management District, South Florida Water Management District and Southwest Florida Water Management District.

Originally established as single-purpose districts, they now must balance a four-part mission: 1) flood control and floodplain management, 2) water supply, 3) water quality, and 4) natural systems. In balancing this four part mission, the districts avoid the unintended consequences that managing for a single purpose can create.. The districts also develop water management plans for water shortages in times of drought and to acquire and manage lands for water management purposes under the Save Our Rivers program. Regulatory programs delegated to the districts include programs to manage the consumptive use of water, aquifer recharge, well construction and surface water management. As part of their surface water management programs, the districts administer the Department's stormwater management program. This increases the districts' contacts with local governments by directing the districts to help with the development of the water elements in local government comprehensive plans. For further information, see http://www.dep.state.fl.us/secretary/watman/ for further information. [13]

New Mexico

Recognizing that water systems in New Mexico were facing serious challenges related to inadequate or deteriorating infrastructure, declining aquifers, reduced water supply, and inability to meet new water quality regulations and prepare for drought conditions, the State developed the Collaborative Area-Wide Management Project. The purpose of the project is to help communities identify the available water supply and demand characteristics and reach mutual agreement on ways to acquire, produce, deliver, conserve, or reuse water more efficiently in New Mexico. This project is funded by the Governor and State Legislature of New Mexico through the Department of Finance and Administration and the Office of the State Engineer. The Office of the State Engineer is charged with administering the state's water resources. The State Engineer has power over the supervision, measurement, appropriation, and distribution of all surface and groundwater in New Mexico, including streams and rivers that cross state boundaries.

Benefits to the project include:

1) Promotion of collaboration and coordination among water systems drawing from the same water source, and assistance for troubled water systems affected by depleted water sources during periods of drought.
2) Establishment of mutual agreements between communities, neighbors, municipalities and water systems for planning and implementation of water projects to ensure current and future drinking water needs.
3) Increasing funding opportunities through collaborative solutions by combining planning, technical and engineering studies for water projects.
4) Improving the efficiency of water system operation and management through cooperation.
5) Ensuring that water conservation measures are implemented effectively to protect a shared water resource.

The initial project piloted this approach for three areas across the State. The current project is assisting nine regional areas within the state. Potential collaborations are reviewed on a scale from "light" to "heavy" regional collaboration as follows:

1) Agree on an effective planning document together.
2) Agree to a limited working relationship within the group to provide one another assistance in times of emergency.
3) Agree to share inventory or equipment with one another.
4) Agree to share an operator with another system or systems.
5) Agree to some type of joint management of the system: could include one management entity over several systems, bookkeeping or billing together.
6) Agree to interconnect system for emergency purposes only.
7) Agree to share water rights or water resources without actually completely tying systems together.
8) Agree to tie systems together, but have separate operations.
9) Agree to tie systems together, dissolve current systems and form a new entity.

For information on the New Mexico model http://nmcollaborations.nmt.edu/. [14]

Support for Regional Collaborations by North Carolina Funders

During this process of investigation, the Commission heard presentations from the major funders of water and wastewater infrastructure in North Carolina. These included the State Department of Environment and Natural Resources (DENR) – Drinking Water and Clean Water Program, the Clean Water Management Trust Fund and the Rural Economic Development Center, Inc. as the major State-supported funders. The Commission also heard from the USDA Rural Development Office, Water and Wastewater Programs as USDA has historically been the second largest funder of water and sewer infrastructure in the State behind DENR (refer to Table 1 below).

Table 1:

North Carolina's Major Public Infrastructure Funders

1995-2005

US Department of Agriculture	$738,395,576	26%
DENR – Clean Water(Wastewater)	$870,220,602	30%
DENR – Drinking Water	$403,347,039	14%
Clean Water Management Trust Fund	$119,609,039	4%
Rural Economic Development Center, Inc.	$263,859,532	9%
All Other Public Sources (Federal and State)	$478,899,896	17%
Total	**$2,874,331,684**	**100%**

Source: NC Rural Center, Water 2030 Report

The Commission was quickly able to determine that regional collaborations have been supported only through additional points in a rating system by these funders. This has been a successful method to encourage regional collaborations since the State has such significant water and wastewater infrastructure needs. For example, allocating points for regional efforts does seem to have elevated these projects so that a significant number of them, about 88 percent, of those presented for consideration were funded. The table below outlines the sources of funds and rating allocations.

Table 2:

Funding Incentives for Regional Projects

Major North Carolina Funders

Funder	Method	Allocation	Source of Funds
DENR- Water Quality – Clean Water State Revolving Fund	None	2 of 27 total points	Federal (EPA) with State match
DENR – Water Quality – State Bond Fund(recycled State Loan Funds)	Points	2 of 55 total points	State Bond Funds, earned interest, repaid principal and interest on loans
DENR – Public Water Supply - Drinking Water State Revolving Fund	Points	2 of 43 total points	Federal (EPA) with State match
DENR – Public Water Supply- State Program	Points	2 of 39 total points	State Bond Funds, earned interest, repaid principal and interest on loans
Clean Water Management Trust Fund (wastewater only)	Points	18 of 165 total points	State Appropriation
Rural Economic Development Center, Inc. – Supplemental Program	Points	25 of 420 total points	State Appropriation
Rural Economic Development Center, Inc. – Capacity Building Program	Points	25 of 285 total points	State Appropriation
USDA – Rural Utilities – Water and Wastewater Programs	Points	15 of 150	Federal Appropriation

Some Systems are Not Ready for Regional Collaborations

During its period of investigation, the Commission also heard from every presenter that there are drinking water and wastewater systems in the State that are not ready to take part in a regional effort. This lack of "being ready" is attributable to technical, financial and managerial challenges within the system.

First, many of the State's smaller systems do not have sound, functional infrastructure networks. Wastewater collection systems are plagued by Inflow and Infiltration which causes the wastewater system to process groundwater and stormwater runoff, sometimes in excessive quantities, rather than normal wastewater discharged from its customers. In cases where this Inflow and Infiltration problem is not remedied before a physical connection to a regional system is made, these systems are charged for this extraneous flow. Regional systems set a certain charge per gallon (typically per thousand gallon or "x" cubic feet) to process wastewater from a connecting system. There is no differentiation that can be made between true wastewater flow and extraneous flow; therefore, every unit of extraneous flow represents a charge for service to the connecting system.

A similar dynamic exists on drinking water systems. In this case, connecting systems that have not made structural improvements in their water distribution systems to correct for leaks will find that they are paying for water service that simply leaks into the ground.

In both of these situations, the challenge for the connecting system is that it is not collecting revenue through billable sales to account for the wastewater inflow and infiltration or the water leaks. Yet, the connecting system is responsible, regardless, for payment of the bill to the regional system.

Secondly, a major impediment to successful participation in a regional collaboration is the lack of sound fiscal management practices on part of the connecting system. This is evident through water and wastewater customer rates insufficient to cover the expenses of operating the systems. According to the Local Government Commission Staff in the Office of the State Treasurer, the instance of revenues through rates and fees being insufficient to cover operating costs is growing significantly, especially among the state's smaller systems. The negative financial impact to systems failing to operate their water and wastewater systems as true enterprises (business) is also evident in low cash flows at year end, failure to fund depreciation and the absence of a capital reserve through which to make needed improvements to the systems over time.

These fiscal challenges are significant for small systems, particularly those in economically distressed areas. Smaller systems must rely on fewer customers to carry the operations of the utility. Since most water and wastewater system upgrades are costly, this means fewer customers over which to rate base those costs. This has led to a reliance on grant monies for improvements and on deferring need projects which only serves to exacerbate the condition of an already compromised system.

Other Systems Too Distant for Cost-Effective Interconnection

For many systems in State, regional projects that include a physical connection between systems are not cost-effective. Distance between systems, mountainous terrain and sharp contrasts in elevation all make physical connections impractical in the face of costs for pumps and lines. This is certainly true in the western portion of North Carolina. There are many smaller to medium sized systems that would possibly look at regional connections in their futures, but for the costs of doing so. This challenge has been the subject of much research and writing, especially in the face of the move by the Environmental Protection Agency to encourage regionalization and consolidation of small water systems as part of the revisions to the Safe Drinking Water Act adopted in 1996. One such research effort on restructuring small systems using geographical location and other data, undertaken by the research arm of the American Water Works Association concluded, that there may be significant potential for small systems to share management and technical resources, but that the cost to physically link systems is prohibitive in almost all cases in most states. [15]

In a more recent effort, the National Rural Water Association studied small and rural systems nationally. The 2003 study concluded that significant differences exist between small water systems in rural areas and those in urban areas and that these costs may pose a more significant barrier to consolidation than suggested by previous research efforts.

For example, more than 50% of urban small systems are 5 miles or less from a larger system, but much fewer than 25% of rural systems are that close to a potential partner system. Since rural systems tend to be located much farther from a larger system than do small systems in urban areas, rural system costs for regional approaches probably will tend to be relatively high. [16]

The study also found that rural systems were more likely to have a difficult time financing regional solutions that involved regional interconnections. The study noted that the household income of the populations served by rural small and very small community water systems is generally much lower and the poverty rate is higher than the urban populations served by small systems. [17]

When comparing North Carolina systems included in the study with the derived national averages, both our State's small and very small systems have further connection distances than the average. The financial difficulty in connecting regionally is also compounded by median household incomes that are lower than the national average and poverty rates that are higher than the national average in the study. Refer to Table 3 below.

Table 3:

Comparison of Key Statistics for Small and Very Small Water Systems

In Rural and Urban Areas

National Rural Water Association Research Study, 2003

System Type	Sample Size	Median Distance to Nearest Medium, Large or Very Large Facility	No. of Service Connects	2000 Median HH Income	2000 Percent in Poverty
North Carolina :Very Small Systems (25 to 500 Persons served)					
Metro areas	884	5.91 miles	58	$45,967	9.95%
Rural areas	523	9.79 miles	53	$36,741	13.32%
All	1,407	6.82 miles	56	$42,537	11.20%
National – Very Small Systems (25 to 500 Persons served)					
Metro Areas	8,406	4.11 miles	57	$46,706	10.01%
Rural Areas	7,975	9.90 miles	65	$37,770	11.95%
All	16,381	6.16 miles	61	$42,356	10.95%
North Carolina : Small Systems (501 to 3,300 Persons served)					
Metro areas	160	7.96 miles	367	$50,022	9.22%
Rural areas	189	11.66 miles	630	$35,043	14.80%
All	1,349	10.59 miles	509	$41,910	12.24%
National –Small Systems (501 to 3,300 Persons served)					
Metro Areas	2,271	3.91 miles	1,376	$46,703	10.04%
Rural Areas	3,854	10.37 miles	1,343	$36,440	12.71%
All	6,125	7.52 miles	1,356	$40,245	11.72%

What are the Benefits of Regional Collaboration?

Regional collaborations and partnerships, when founded on a principal of equity and fairness among partners, can provide a means for each participating system to deliver safe and affordable service to its customers. The advantages to regional collaboration, whether through actual interconnection of system, or whether through collaboration in management or administration, include the ability to achieve an economy of scale unachievable alone, enhanced environmental protection, and a safeguard against loss of service due to natural disaster. Regional collaborations can also support regional economic development effectively by providing service in locations where it may not be cost-effective for a single system to do so alone. These advantages and benefits are further examined below:

1. To achieve an economy of scale together that is not readily attainable alone.

Regional collaborations, whether they involve a physical connection between systems or a managerial or administrative connection, can provide an economy of scale that systems operating alone cannot achieve. Many of the costs associated with constructing infrastructure are fixed costs – planning, permitting, and engineering- that will not increase significantly by adding another partner.

These economies of scale can be seen in the improved quality of delivery, improved ability to keep pace with regulatory changes and demands including attracting and maintaining qualified staff.

2. Reduction in the number of treatment plants and discharges to the environment.

Regional collaboration involving a physical connection between systems can reduce the need for establishing new treatment facilities by requiring connection to an existing regional facility with available capacity. Reducing the number of plants in operation can lessen operations and maintenance costs and duplication of service.

3. Uncertainty around the availability of federal and state dollars for infrastructure improvements forces local systems to look beyond their borders for potential partners since infrastructure investments are so costly.

As the federal investment in infrastructure continues to decline and change form from grant to loan, more emphasis is being placed on State and local resources to fund needed improvements. States across the country are grappling with defining their role in infrastructure funding. Locally, system owners are challenged to maintain rates at levels that demonstrate their customers are paying "their fair share". Working in a regional collaboration may offer a better way to face increasing costs of replacement and new infrastructure and operation and maintenance.

4. Regional systems provide a vehicle for securing needed financing that a single system may be qualified to receive.

In today's environment of scarce financial resources and looming capital needs for infrastructure improvements, funders may provide priority to regional systems as a more cost-effective investment of the funding resource.

5. Regional collaborations can help systems address climate and weather changes.

Establishing a network of regional infrastructure systems can provide needed assurance for backup supplies in emergency situations such as those caused by hurricanes, flooding and drought. Health risks often associated with these emergency situations can be mitigated through regional collaboration.

6. Economic development occurs regionally, infrastructure on regional approach needed to support this.

In order to be successful in the global economy, local governments and states are challenged to think about economic development on a regional basis, evaluating and capitalizing on regional assets. In today's environment, this may be the only way to ensure that their regions are efficient and competitive. Water infrastructure is a essential support for economic development. Safe and vital regional infrastructure networks must be in place to support future economic development.

What are the Barriers to Regionalization?

Regional systems are founded on cooperation. This requires system owners to be visionary, to see beyond the immediate challenge to a future several years hence. It also requires system owners to come together without fear of loss of identity and control – a tall order for most of us. Local politics, whether we like it or not, play a major role in whether regions develop or not.

In today's environment, it also requires that these collaborations finance all the upfront costs associated with studies, preliminary engineering and permitting. This is exceptionally challenging for smaller systems that may see the benefit of regional collaboration, but have limited capital to contribute. These barriers to regional collaborations and partnerships are examined further below:

1. Lack of Start-Up Funds

Regional projects are by their nature large and involve more complex institutional arrangements that single-entity ownership and management. Planning and development of these systems may extend over several years. Funding to cover the start-up costs (planning, meetings, investigations, preliminary engineering, draft permitting) is not available in the amounts needed in North Carolina. A predictable flow of funds from the state would allow strategic development of regional facilities. Multi-year, predictable public investment needed.

2. Costs are Higher for Rural, Small Systems

Cost Barriers, especially for small and rural systems, are significant. The distance between systems and the relatively small number of users per system limit the financial ability of the system to operate efficiently as an independent entity. This also represents a significant and often insurmountable barrier to regional cooperation in the form of actual connection to a regional system. The ability to pay for their share of the needed upfront costs (planning and engineering, land acquisition, permitting) as well as the actual cement and pipe connections cannot be borne by a small number of users in communities with distressed economies.

3. "Emotional" Barriers are Real

North Carolinians have long been noted for their fierce attitude of independence. That "I'll do it on my own" mentality helped to build and shape the economy of our State. It is also a way of life that created the leaders who established North Carolina's most significant public institutions and infrastructure – our universities, hospitals, roads, water/sewer and telecommunications.

Surviving in today's global economy requires that we as people and the systems we use operate efficiently and be adaptive to change. For water and wastewater infrastructure, this requires the local political leaders make difficult decisions – often politically unpopular decisions such as raising rates or joining a regional effort- to ensure that their infrastructure systems deliver the service they must, in compliance with the laws and regulations that govern those services. Too often, it is the case that personal and political obstacles, *emotional barriers*, are permitted to stand in the way of sound decision-making. While collaborating regionally may make financial and environmental sense, fear of loss of control and local power struggles can prevent these collaborations from forming.

4. Regulatory or Legal Barriers Do Exist

As growth pressures and climate change continue to impact our water resources and infrastructure systems, the need for enhanced management of natural and financial resources is heightened. North Carolina, as a "water rich" state along the eastern seaboard has based its legal and regulatory systems on riparian law. Riparian law presupposes an abundant supply of water with little to no conflict resulting from competing uses. Growth pressures and climate change highlight the inadequacy of our state's legal and regulatory systems as they exist to address today's challenges. For instance, regulatory and legal conflicts exist in a system that supports regional infrastructure development and Interbasin Transfer under its current configuration. The State should examine such regulatory and legal barriers in order to define a strategic path forward to best manage growth pressures and climate changes.

Refining State Support for Regional Collaborations and Partnerships: Our Recommendations

Regional collaborations, whether they involve an actual physical connection between systems or a management or administrative connection such as sharing operators and equipment, provide an important service to the State. These collaborations, initiated on the local level and many without state financial support, strengthen the infrastructure system in North Carolina. Through these systems, residents and business well outside the reach of an individual system can be served more cost-effectively. Regional drinking water networks are established that move drinking water from areas of availability to areas of scarcity. These regional networks are essential during times of emergencies.

Thinking regionally is thinking collaboratively. Working together to address our States infrastructure and water management challenges, especially in an environment of scarce financial resources and demanding political accountability, makes sense. How we do that in North Carolina can be improved. Following is a set of recommendations by the State Water Infrastructure Commission on enhancing the State's approach to and support of regional collaborations and partnerships.

1. Remove existing barriers to regional cooperation

Regionalization is more than two or more systems coming together through a physical system connection. An alternate view of regional cooperation proposed by the Commission is one that recognizes regional cooperation can also occur in administration, procurement and operation of systems. True regional cooperation, partnership and collaboration takes many forms and we know from experience that it can create many benefits for those involved. The role of the State should be in identifying and removing existing legal, regulatory and other policy barriers to enhanced regional collaboration and to offer a set of inducements that will encourage regional thinking and actions. sThis will provide local drinking water, wastewater and stormwater systems with more options by which to create and sustain partnerships and collaborative efforts that enhance the delivery of utility service to the customers, protect the environment and public health, and effectively manage the state's water resources.

> If a water, sewer or stormwater system is facing problems in operations or management and needs to secure funding for improvements, what we want is a funding and regulatory system that encourages you to pause and think, "Do I need to continue doing this on my own or is there a partnership arrangement that will work?"
>
> -Richard Whisnant, Commission Member

2. Develop and implement a set of criteria for evaluating system "readiness" for regionalization. This may prevent bringing systems that are not ready i.e., not yet managing their systems efficiently and effectively, into a regional configuration where they cannot participate as an equal.

Representatives of the Department of Environment and Natural Resources, the Local Government Commission, funders of infrastructure improvements in the State, the League of Municipalities, the Association of County Commissioners should develop a set of criteria that can be applied to all regionalizing systems.

3. State funders of infrastructure should develop a "Cooperation Alternatives Analysis" process and documentation as a way to ensure that systems seeking State funds have analyzed all regional alternatives available.

Before State funds are obligated to an infrastructure project, a "Cooperation Alternatives Analysis" should be completed by the applicant for funds. This analysis will review all available regional configurations/options available and ensure that careful attention has been given by the applicant system to partnership arrangements before funds for a stand-alone infrastructure project are obligated.

4. Federal and State funders of infrastructure should execute a Memorandum of Understanding to support funding collaboration on regional projects.

Regional projects, by their nature, are often costly and require significant planning and investment by the entities funding the projects. Such an agreement between state and federal funders would allow for maximization of all financial resources for these projects.

5. Fund a study to identify the most promising regions for water regionalization that could then inform local decision makers, funders and the public.

Using data available, including both tabular data and spatial data, identify geographic regions of the state where it makes sense to develop regional water networks.

6. Start-up funds for regional efforts should be made available for strategic investment in regional collaborations.

The costs involved in planning for, funding and constructing regional systems are significant. Currently there is minimal State financial support for start-up, the most critical stage of regional project development. The lack of upfront money from state and federal resources was a real hindrance to getting started and the costs involved in going regional are not small.

7. System regionalization should also allow for cooperation between private and public water entities.

Cooperation between private-for-profit and public water systems should be supported where practicable.

8. Encourage the state Division of Water Resources to explore and employ water resource management strategies that compliment regionalization such as allowing communities to bank the excess water capacity for future use.

For example, the NRWASA provides a safe and dependable alternative for the future. While they will be withdrawing water from the Neuse River, there will also be a total of 61 groundwater wells that will still remain available for use. These can be used to supplement the water from the plant to meet total demand. This joint use reduces the reliance on either source.

9. System owner education on fiscal management and its relationship to regional partnerships is necessary and needed. Educational materials are also need for the consuming public on the value of regionalization as a tool for managing the state's water resources.

System regionalization may be the key tool to survival, especially for smaller systems in the State. But, regionalization is a good tool only when the systems are ready to regionalize. In order to be a functional regional partner, small systems must effectively manage their own systems before regionalization. Sound fiscal management and good system structural integrity are keys to survival in a regional system.

Further education of the consuming public on the merits of regionalization is needed. Regionalization will be best supported when there is mutual agreement between participating parties on the end goal and its benefits. That means folks that are consumers will need to be better educated on why tools such as regionalization are important to the State as we seek to manage our water resources more effectively.

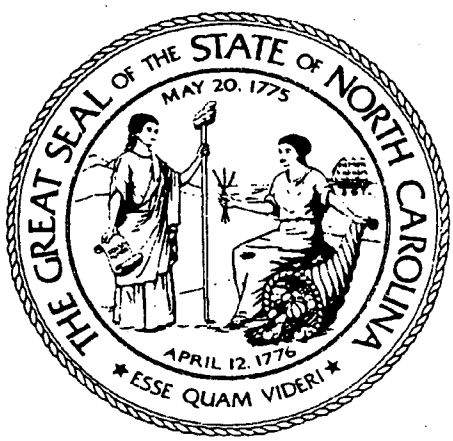
Implementation of the "Clean Smokestacks Act"

A Report to the Environmental Review Commission and the Joint Legislative Utility Review Committee

Submitted by the North Carolina Department of Environment and Natural Resources and the North Carolina Utilities Commission

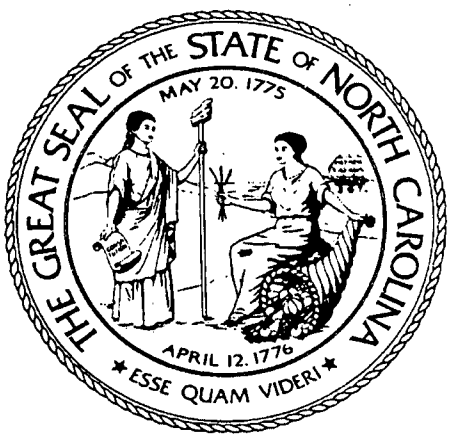


June 1, 2007

Implementation of the "Clean Smokestacks Act"

A Report to the Environmental Review Commission and the Joint Legislative Utility Review Committee

Submitted by the North Carolina Department of Environment and Natural Resources and the North Carolina Utilities Commission



June 1, 2007

Implementation of the "Clean Smokestacks Act"

A Report to the Environmental Review Commission and the Joint Legislative Utility Review Committee

Submitted by the North Carolina Department of Environment and Natural Resources and the North Carolina Utilities Commission

This report is submitted pursuant to the requirement of Section 14 of Session Law 2002-4, Senate Bill 1078 enacted June 20, 2002. The actions taken to date by Progress Energy Carolinas, Inc. and Duke Energy Carolinas, LLC appear to be in accordance with the provisions and requirements of the Clean Smokestacks Act.

William G. Ross, Jr., Secretary
Department of Environment and Natural Resources

Signed: _____

Edward S. Finley, Jr., Chairman
North Carolina Utilities Commission

June 1, 2007

Implementation of the "Clean Smokestacks Act"

A Report to the
Environmental Review Commission and the
Joint Legislative Utility Review Committee

June 1, 2007

The General Assembly of North Carolina, Session 2001, passed Session Law 2002-4, also known as Senate Bill 1078. This legislation is titled "*An Act to Improve Air Quality in the State by Imposing Limits on the Emission of Certain Pollutants from Certain Facilities that Burn Coal to Generate Electricity and to Provide for Recovery by Electric Utilities of the Costs of Achieving Compliance with Those Limits*" ("the Clean Smokestacks Act" or "the Act"). The Clean Smokestacks Act, in Section 14, requires the Department of Environment and Natural Resources ("DENR") and the Utilities Commission ("Commission") to report annually, i.e., by June 1 of each year, on the implementation of the Act to the Environmental Review Commission and the Joint Legislative Utility Review Committee.

The Act, in Section 9, requires Duke Energy Carolinas, LLC ("Duke Energy"), and Progress Energy Carolinas, Inc. ("Progress Energy"), to submit annual reports to DENR and the Commission containing certain specified information. Duke Energy and Progress Energy filed reports, with DENR and the Commission, by cover letters dated March 30, 2007. Specifically, such reports were submitted in compliance with the requirements of G.S. 62-133.6(i). Duke Energy's and Progress Energy's reports are attached, and made part of this report, as Attachments A and B, respectively.

Additionally, by letter dated May 9, 2007, the Secretary of DENR wrote to the Commission stating that, pursuant to G.S. 62-133.6 (j), DENR has reviewed the information provided and determined that the submittals comply with the Act. The Secretary further stated that the plans and schedules of the Companies appear adequate to achieve the emission limitations set out in G.S. 143-215.107D.

This report is presented to meet the reporting requirement of the Act pertaining to DENR and the Commission, as discussed above, and is submitted jointly by DENR and the Commission. The report is structured to address the various actions that have occurred pursuant to the provisions of Sections 9, 10, 11, 12, and 13 of the Act. Reports of actions under these Sections describe the extent of implementation of the Act to this date.

I. Section 9(c) of the Act, Codified as Section 62-133.6(c) of the North Carolina General Statutes

G.S. 62-133.6(c) provides: *The investor-owned public utilities shall file their compliance plans, including initial cost estimates, with the Commission and the Department of Environment and Natural Resources not later than 10 days after the date on which this section becomes effective. The Commission shall consult with the Secretary of Environment and Natural Resources and shall consider the advice of the Secretary as to whether an investor-owned public utility's proposed compliance plan is adequate to achieve the emissions limitations set out in G.S. 143-215.107D.*

Status: North Carolina's investor-owned electric utilities, Progress Energy and Duke Energy, filed their initial compliance plans as required in June and July of 2002, respectively, in accordance with G.S. 62-133.6(c), Section 9(c) of Session Laws 2002-4, the Clean Smokestacks Act. DENR reviewed this information and determined that the submittals comply with the Act and, as proposed, appear adequate to achieve the emission limitations set out in G.S. 143-215.107D.

II. Section 9(i) of the Act, Codified as Section 62-133.6(i) of the North Carolina General Statutes

G.S. 62-133.6(i) provides: *An investor-owned public utility that is subject to the emissions limitations set out in G.S. 143-215.107D shall submit to the Commission and to the Department of Environment and Natural Resources on or before 1 April of each year a verified statement that contains all of the following [specified information]:*

The following are the eleven subsections of G.S. 62-133.6(i) and the related responses from Progress Energy and Duke Energy for each subsection:

1. **G.S. 62-133.6(i)(1) requires:** *A detailed report on the investor-owned public utility's plans for meeting the emissions limitations set out in G.S. 143-215.107D.*

Progress Energy Response: "The initial plan for Progress Energy Carolinas, Inc. was submitted on July 29, 2002. Appendix A [of the attached Progress Energy submittal dated March 30, 2007, i.e., Attachment B] contains an updated version of this plan, effective April 1, 2007."

Duke Energy Response: "Exhibits A and B [of the attached Duke submittal dated March 30, 2007, i.e., Attachment A, outline the updated plan as of April 1, 2007, for] . . . current unit specific technology selections, projected operational dates, expected emission rates, and the corresponding tons of emissions that demonstrate compliance with the legislative requirements to the best of Duke Energy Carolinas' knowledge at this time."

2. **G.S. 62-133.6(i)(2) requires:** *The actual environmental compliance costs incurred by the investor-owned public utility in the previous calendar year, including a description of the construction undertaken and completed during that year.*

Summary of Progress Energy Report: The actual environmental compliance costs (capital costs) incurred by Progress Energy in calendar year 2006 were $272.82 million. Progress Energy performed a significant amount of work at the Asheville and Roxboro plants. Progress Energy successfully placed the wet scrubber on Asheville Unit 2 into service in May 2006. Additionally, mechanical and electrical work for the Asheville Unit 1 selective catalytic reduction (SCR) project was completed in preparation for placing the SCR into service in the Spring of 2007. At the Roxboro plant, construction for the scrubber project continued on the four units in 2006. Specific unit construction activities included, but were not limited to: Unit 1 – completion of foundations for the absorber, recycle pump house, primary hydro cyclone tank, and electrical building; Unit 2 – completion of the recycle pump house, installation of induced draft fans and associated ducting, and installation of the hydro cyclone tank and transformers; Unit 3 – started installation of ducting from the existing stack to new induced draft fans, started construction of foundations for duct support steel, and continued installation of the absorber; Unit 4 – completed the absorber and started the erection of the recycle pump house and primary hydro cyclone tank. At the Lee plant, procurement and installation of the low-NOx burners for Unit 2 were completed in 2006. Also, construction activities associated with the Unit 3 Rotamix concluded. At the Mayo plant, engineering and design work continued in 2006 and contracts associated with the absorber tower and chimney were executed. At the Sutton plant, procurement and installation of the low-NOx burners for Unit 2 were completed in 2006.

Summary of Duke Energy Report: The actual environmental compliance costs incurred by Duke Energy in calendar year 2006 were $427.98 million. Significant construction occurred in 2006 at the Belews Creek Steam Station. Construction of the major foundations and the concrete shell for the two new chimneys for the flue gas desulfurization (FGD) system was completed. Approximately 72% of the overall project was completed (54% of the construction activities) in 2006. At the Marshall Steam Station, tie-in of the Unit 4 absorber was completed, while initial tie-in of the Unit 3 ductwork and installation of the blanking plate were completed in 2006. All ductwork, with the exception of Unit 1 and Unit 2 tie-in, was set in 2006. At Allen Steam Station, contracts were awarded for the stack construction and wastewater treatment system associated with the FGD system. Other activities included, but were not limited to: relocation of a transmission line; site clearing, grubbing and earthwork; relocation of an ash line; relocation of coal handling railroad spurs; and placing purchase orders for all major electrical and mechanical equipment.

For the remaining Steam Stations (Cliffside, Buck, Dan River, and Riverbend), the Company reported that costs were incurred for a variety of things such as detailed engineering, material procurement and delivery, equipment installations, etc.

3. **G.S. 62-133.6(i)(3) requires:** *The amount of the investor-owned public utility's environmental compliance cost amortized in the previous calendar year.*

Summary of Progress Energy and Duke Energy Reports: In 2006, Progress Energy amortized $140 million and Duke Energy amortized $225.2 million. As indicated in the June 1, 2006 report to the Environmental Review Commission and the Joint Legislative Utility Review Committee ("the June 1, 2006 report"), Progress Energy, in response to a data request submitted by the Commission, had projected - assuming certain ratable amortization - that it would amortize $87 million of environmental compliance costs in 2006. However, Progress Energy also noted that the Act grants Progress Energy the flexibility to vary the amortization schedule for 2006 and 2007 from $0 to $174 million per year. Also, as indicated in the June 1, 2006 report, Duke Energy, in response to a Commission data request, had projected that it would amortize $250 million of environmental compliance costs in 2006.

4. **G.S. 62-133.6(i)(4) requires:** *An estimate of the investor-owned public utility's environmental compliance costs and the basis for any revisions of those estimates when compared to the estimates submitted during the previous year.*

Summary of Progress Energy Report: Progress Energy reported that its total estimated net capital costs (that is, excluding the portion for which the Power Agency is responsible) are currently projected to be between $1.1 billion and $1.4 billion, with the current point estimate being $1.355 billion, a slight decrease from the 2006 cost estimate of $1.362 billion. While costs of materials and labor continue to increase according to Progress Energy, it continues to refine the compliance strategy weighing a number of factors such as system load projections, expected fuel selection, available control equipment, anticipated performance and costs of emissions controls, and knowledge of and experience with emissions control options. For example, Progress Energy continues to evaluate the potential use of Furnace Sorbent Injection (FSI) technology at the Cape Fear Plant. The FSI technology may offer a more cost-effective compliance solution for Cape Fear than the original plan to use a wet scrubber. The North Carolina Division of Air Quality (DAQ) submitted an informational request to Progress Energy on April 25, 2007. The information requested of Progress Energy, among other things, concerned the evaluation of the FSI technology and whether there would be sufficient time to pursue alternatives to the FSI if the testing does not support its installation at Cape Fear. Progress Energy responded that, "if the testing at Robinson (SC) results in a conclusion that FSI will not be used at Cape Fear, PEC will have sufficient time to pursue alternatives prior to the CSA 2013 deadline." Finally, other more cost effective compliance solutions submitted by Progress Energy include the use of a dry scrubber at Sutton Unit 3 and use of Rotamix technology with combustion optimization at Lee Unit 3 for NOx control.

Progress Energy's current cost estimate of $1.355 billion is $542 million, or 67 percent, higher than the original 2002 cost estimate of $813 million.

Summary of Duke Energy Report: Duke Energy reported that its currently expected costs are higher than the estimates provided in 2006. More specifically, in its 2007 report, the Company estimated its compliance costs to be $1.965 billion, as compared to the $1.732 billion reflected in its 2006 report, an increase of $233 million, or 13 percent (detailed in Exhibit C of Attachment A of the Duke Energy report). As stated by Duke Energy, the reasons for this increase were:

- Allen FGD Project – The Allen FGD estimate has increased since the previous 2006 filing, with this increase attributable to continued ramp up in the power generation and/or environmental retrofit construction market and continued escalation of labor and commodity costs.
- Cliffside Unit 5 FGD Project – Like Allen, the Cliffside Unit 5 FGD estimate is primarily affected by labor, commodity and market escalation and thus shows an increase in total forecasted cost as compared to the estimate included in the 2006 filing. In addition, the current estimate now includes a larger portion of the costs associated with common FGD equipment and infrastructure assuming only one new Cliffside unit is built, versus assuming two new units are built as in the previous year's plan.
- Selective Non-Catalytic Reduction (SCNR) & Burner Projects – While there has been no significant change to the scope or timing of the NOx related projects remaining to be installed, all of the current forecasts have increased as compared to the 2006 filing. In each case, these increases approach 10% as compared to prior estimates and take into account the continued escalation of labor costs and ramp up in the environmental retrofit construction market as noted for the larger projects.
- Marshall Unit 4 SNCR Project – The Marshall Unit 4 SNCR equipment was installed in late 2006 at a cost significantly less than estimated in the previous year's plan. The decision to add the SCR technology to Marshall Unit 3 allowed for this reduction in costs as selected SNCR equipment in service on Unit 3 was redeployed to Unit 4.

Duke Energy's current cost estimate of $1.965 billion is $465 million, or 31 percent, higher than the original 2002 cost estimate of $1.5 billion.

5. **G.S. 62-133.6(i)(5) requires:** *A description of all permits required in order to comply with the provisions of G.S. 143-215.107D for which the investor-owned public utility has applied and the status of those permits or permit applications.*

Summary of Progress Energy Response:

Asheville Plant

- Notified that air permit change for SO_3 mitigation system will be treated as an off permit change.
- Several erosion and sedimentation control plan updates were submitted.

Roxboro Plant

- Updates for air permit for coal handling and limestone handling were issued.
- Several erosion and sedimentation control plan updates were submitted.
- NPDES Permit - Authorization to Construct (ATC) relating to the gypsum settling pond and the bioreactor was received.

Mayo Plant

- Air permit was issued for construction of the FGD system.
- NPDES Permit modification for wastewater system received.
- Erosion and sedimentation control plan update was approved.

Lee Plant

- A prevention of significant deterioration (PSD) air permit was approved for installation of low NOx burners. Air permit approved for construction of the Rotamix System NOx control.
- NPDES permit amendment approved for Rotamix Urea Injection System on Unit 3.

Summary of Duke Energy Response:

Belews Creek

- NPDES Permit modification received.
- Landfill site suitability approved.
- Landfill construction plan – permit received.
- Air permit for FGD project received.
- Authorization to Construct (ATC) application for the wastewater treatment system was approved.
- Received permit to construct sanitary waste lagoon.
- Received permit to decommission existing sewage lagoon.
- Several soil erosion and sedimentation control plans have been approved.

Cliffside

- Air permit received for Unit 5 FGD.

Marshall

- Several soil erosion and sedimentation control plans have been approved.
- Landfill construction plan application received – Landfill (lining) permit received – Permit to operate Marshall FGD landfill received.
- Authorization to Construct (ATC) application for solids removal system was approved.
- ATC application for constructed wetlands was approved.
- Air permits received for SNCRs on Units 1-4.

Allen

- NPDES Permit modification received.
- DENR/ACOE Permit received.

- Air permit received for FGD and SNCRs on Units 2, 3, 4, and 5.
- Authorization to Construct (ATC) application for the wastewater treatment system was approved.
- Several soil erosion and sedimentation control permits have been received

Riverbend

- Air permits received for SNCRs on Units 4-7. Burner permits received for Units 5 and 6.

Dan River

- Air permits received for Burners on Units 1-3.

Buck

- Air permits received for Burners on Units 3 and 4 and for SNCRs on Units 5 and 6.

6. **G.S. 62-133.6(i)(6) requires:** *A description of the construction related to compliance with the provisions of G.S. 143-215.107D that is anticipated during the following year.*

Summary of Progress Energy Response: See Appendix C of the attached letter from Progress Energy dated March 30, 2007 (Attachment B of this report) for details of construction and installation of equipment. The Division of Air Qualify (DAQ) submitted an informational request to Progress Energy on April 25, 2007. The information requested of Progress Energy, among other things, concerned the operational date of the SCR on Asheville Unit 1 and the Rotamix at Lee Unit 3. Progress Energy responded that "Installation of the Asheville Unit 1 SCR is being completed during the current outage. The unit is expected to be back on-line on or about May 7 (2007), and the SCR is expected to be in operation on or about May 10 (2007). The Lee #3 Rotamix system is online and is operating. Initial operation of the Rotamix system began in January 2007. Initial checkout and testing of the Rotamix system continued into February and March with final tuning and normal operation occurring in March 2007."

Summary of Duke Energy Response: See attached letter from Duke Energy dated March 30, 2007 (Attachment A), for details of construction anticipated for the next year.

7. **G.S. 62-133.6(i)(7) requires:** *A description of the applications for permits required in order to comply with the provisions of G.S. 143-215.107D that are anticipated during the following year.*

Progress Energy Response:

Asheville Plant

Air Permit

- "Current opacity rules pre-date saturated gas streams from wet scrubbers and

require representative measurements where condensed water vapor is not present. We will request revisions to the permit and underlying rules for opacity monitoring to include references to current federal regulations that exempt units with wet scrubbers from continuous opacity monitoring requirements."

NPDES Permit

- "A request for Sampling Reduction at the internal Outfall 005 (treated FGD wet scrubber wastewater) was submitted January 25, 2007. A response is expected by end of first quarter."

Roxboro Plant

Air Permit

- "A permit application for the emergency fire water diesel engine was submitted in January 2007. Authorization to construct the fire water diesel engine has been received; however, the operating permit must be received to support operation of the Unit 2 scrubber during the second quarter 2007."
- "Current opacity rules pre-date saturated gas streams from wet scrubbers and require representative measurements where condensed water vapor is not present. We will request revisions to the permit and underlying rules for opacity monitoring to include references to current federal regulations that exempt units with wet scrubbers from continuous opacity monitoring requirements."

Mayo Plant

NPDES Permit

- "An ATC request for the wastewater treatment system is expected to be submitted in the first quarter with response desired by the end of the second quarter."
- "An ATC request for a new oil/water separator is expected to be submitted by the end of the first quarter with response expected by the end of the third quarter."

Erosion and Sedimentation Control Plan

- "Rev F. for the increase in disturbed land (from 35 acres to 98 acres for the flue gas desulfurization system was submitted January 29, 2007. Additional plan revisions will be necessary as construction plans are developed."

Lee Plant

- "A Title V permit application is due to be submitted in July 2007 in accordance with permit requirements associated with the low-NOx burner installation."

Duke Energy Response:

Belews Creek Steam Station FGD

- Permit to operate the FGD Residue Landfill – Submit certification report August 13, 2007, expect permit to operate by October 23, 2007.

Cliffside Steam Station Unit 5 FGD

- Authorization to Construct (ATC) application anticipated September 2007.

8. **G.S. 62-133.6(i)(8) requires:** *The results of equipment testing related to compliance with G.S. 143-215.107D.*

Summary of Progress Energy Response: Progress Energy conducted performance testing of the SO_2 scrubbers at Asheville Units 1 and 2 in 2006. The testing confirmed the scrubbers had achieved their performance guarantee of 97 percent removal efficiency.

Progress Energy also tested the low-NOx burners (LNBs) at Sutton Unit 2 and Lee Unit 2 in 2006. The testing demonstrated that the LNBs met their respective performance guarantees.

Duke Energy Response: "No additional equipment related testing occurred in 2006." Duke Energy included SNCR and SCR tests done in prior years in the 2007 report for reference.

9. **G.S. 62-133.6(i)(9) requires:** *The number of tons of oxides of nitrogen (NOx) and sulfur dioxide (SO_2) emitted during the previous calendar year from the coal-fired generating units that are subject to the emissions limitations set out in G.S. 143-215.107D.*

Progress Energy Response: "The total calendar year 2006 emissions from the affected coal-fired Progress Energy units are:

- NOx 46,501 [tons]
- SO_2 175,226 [tons]"

Summary of Duke Energy Response: In the 2006 calendar year, the following were emitted from the North Carolina based Duke Energy coal-fired units:

- NOx 54,335.5 tons
- SO_2 286,639.2 tons

10. **G.S. 62-133.6(i)(10) requires:** *The emissions allowances described in G.S. 143-215.107D(i) that are acquired by the investor-owned public utility that result from compliance with the emissions limitations set out in G.S. 143-215.107D.*

Progress Energy Response: "During 2006, PEC did not acquire any allowances as a result of compliance with the emission limitations set out in N.C. General Statute 143-215.107D."

Duke Energy Response: "No emissions allowances have been acquired by Duke Energy Carolinas resulting from compliance with the emissions limitations set out in G.S. 143-215.107D."

11. **G.S. 62-133.6(i)(11) requires:** *Any other information requested by the Commission or the Department of Environment and Natural Resources.*

Summary of DENR/DAQ Request: The DENR/DAQ submitted informational requests to Progress Energy and Duke Energy on April 25, 2007. The information requested, along with the information contained in the original March 30, 2007 submittals from Progress Energy and Duke Energy, support DENR/DAQ's conclusion that the plans and schedules of the companies appear adequate to achieve the emission limitations set out in G.S 143-215.107D.

The information requested on April 25, 2007, among other things, concerned: operational dates for control units at Progress Energy (answers outlined in Number 6 above); plan and timing if furnace sorbent injection (FSI) testing does not support the FSI installation at Cape Fear (answer outlined in Number 4 above); whether plans for maintaining NOx emissions at or below the cap(s) consider, for example, growth in energy sales; and an inquiry on how year-to-year meteorological variability affects energy demand and thus affects production from the coal-fired units and the related SO_2 and NOx emissions.

Progress Energy Response: In response to the DENR/DAQ question, "What are your plans for maintaining NOx emissions at or below the final (2007) cap considering, for example, growth in energy sales," Progress Energy noted, "PEC fully intends to comply with the annual NOx emissions cap. Planning for NOx emissions is included with planning for unit generation, fuel consumption, and fuel and operations costs. Year-to-date actual emissions with year-end projections are continuously monitored and are updated weekly to ensure annual compliance. High and low cases (energy, outages, performance, etc.) are continuously evaluated and monitored to provide PEC with a range of potential scenarios in order to prepare for additional actions to curb emissions, if needed."

In response to the DENR/DAQ question on how year-to-year meteorological variability affects energy demand and thus affects production from the coal-fired units and the related SO_2 and NOx emissions, Progress Energy noted, "PEC's base case forecast uses a weather-normalized load and energy forecast. Deviations from normal weather conditions increase or decrease system energy demand (depending on the specific deviation) and thus can result in an increase or decrease in actual emissions. For example, a hotter than normal summer would likely result in an increase in emissions while a milder summer would likely result in lower emissions."

Duke Energy Response: In response to the DENR/DAQ question, "What are your plans for maintaining NOx emissions at or below the final (2009) cap considering, for example, growth in energy sales," Duke Energy noted, "The projections above represent a system average capacity factor of 73%. To put this in perspective, the highest annual fossil system capacity factor Duke has ever achieved was 69% in 2005. The projection also includes a substantial amount of bulk power marketing (BPM) sales. If we had BPM sales at a historical high, this could increase NOx emissions in the

900 tons range to account for this load." Duke stated that they expect to have a comfortable compliance margin even with off system sales.

In response to the DENR/DAQ question on how year-to-year meteorological variability affects energy demand and thus affects production from the coal-fired units and the related SO_2 and NOx emissions, Duke Energy noted, "...we are planning to a very high system average capacity factor. Historically, we have had very hot summers and very cold winters but have never achieved the 73% annual CF we are currently planning to.

"In developing the appropriate compliance margin multiple scenarios were considered that increased NOx emissions, including forced outages at the nuclear units and units with SCR, increase in BPM sales. Through this analysis it was determined that a 1,000 to 1,500 tons compliance margin was needed going into any year. Though we are installing the Marshall 3 SCR for the Charlotte 8 hour ozone attainment demonstration, it also provides compliance margin for the North Carolina Clean Smokestack Act (NC CSA).

"The total NOx emissions and how each unit is performing is trended on a weekly basis. If the system total NOx emissions were trending above the firm NC CSA cap, we would attempt to achieve lower NOx emissions from our generation stations without consideration of performance. We would have the option to change the dispatch of units, limit BPM sales and at a last resort, purchase power and shut down the highest emitting generation units. Our plan is not to exceed the NC CSA firm cap unless under a force majeure situation."

Summary of Commission Request: The Commission submitted discovery requests to Progress Energy and Duke Energy on April 12, 2007. The information requested, among other things, concerned current projected amortization schedules over the remaining years of the seven-year accelerated cost-recovery period.

Progress Energy Response: The Act requires Progress Energy to amortize $569 million, which represents 70% of the original cost estimate of $813 million, by the end of 2007. The Company indicated that $535.2 million had been amortized as of December 31, 2006, leaving a total of $33.8 million to be amortized during 2007.

With regard to the amounts to be amortized in 2008 and 2009, Progress Energy indicated in response to the Commission's April 12, 2007 discovery request that it projected estimated amortization of $122 million per year for each of those two years. However, in a Petition filed in Docket No. E-2, Sub 900, Progress Energy, among other things, has requested that the Commission satisfy the requirements of G.S. 62-133.6(d) by allowing it to amortize a total of $244 million during calendar years 2008 and 2009, the result being that Progress Energy has requested the discretion to amortize up to $174 million in either year, as currently permitted by G.S. 62-133.6(b), according to Progress Energy.

Progress Energy stated that it currently has no plans to write off or amortize any amounts above $813 million in 2007 through 2009. Rather, Progress Energy has proposed that the environmental compliance costs incurred by Progress Energy in excess of $813 million be included in its rate base. **[DENR/COMMISSION NOTE:** As previously indicated, Progress Energy currently estimates its total net environmental compliance costs to be approximately $1.355 billion.]

Subsection (d) of G.S. 62-133.6, in pertinent part, provides as follows:

> Subject to the provisions of subsection (f) of this section, the Commission shall hold a hearing to review the environmental compliance costs set out in subsection (b) of this section. The Commission may modify and revise those costs as necessary to ensure that they are just, reasonable, and prudent based on the most recent cost information available and determine the annual cost recovery amounts that each investor-owned public utility shall be required to record and recover during calendar years 2008 and 2009. . . . The Commission shall issue an order pursuant to this subsection no later than December 31, 2007.

Commission proceedings are currently ongoing with respect to the requirements of G.S. 62-133.6(d) as highlighted above. Therefore, the Commission has not yet ruled regarding the annual amounts of environmental compliance costs to be amortized by Progress Energy in 2008 and 2009. However, the Commission will do so not later than December 31, 2007.

Duke Energy Response: The Act requires Duke Energy to amortize $1.050 billion, which represents 70% of the original cost estimate of $1.5 billion, by the end of 2007. The Company indicated that $862 million had been amortized as of December 31, 2006, leaving a total of $188 million to be amortized during 2007.

With regard to the amounts to be amortized in 2008 and 2009, Duke Energy indicated, in response to the Commission's April 12, 2007 discovery request, that such amounts were to be determined in Docket No. E-7, Sub 829. That docket was initiated by the Commission, by Order issued March 9, 2007, for the purpose of allowing the Commission to comply with the provisions of G.S. 62-133.6(d) as such statutory provisions pertain to Duke Energy.

Regarding Duke Energy's plan to write off or amortize any amounts above $1.5 billion, Duke Energy stated that it will, no later than June 1, 2007, file testimony and exhibits with the Commission setting forth the information and data supporting its position regarding recovery of the remaining clean air compliance expenditures, that is, presumably, the environmental compliance costs incurred by Duke Energy in excess of $1.5 billion. **[DENR/COMMISSION NOTE:** As previously indicated, Duke Energy currently estimates its total net environmental compliance costs to be approximately $1.965 billion.]

Commission proceedings are currently ongoing with respect to the foregoing matters. Therefore, the Commission has not yet ruled regarding the annual amounts of environmental compliance costs to be amortized by Duke Energy in 2008 and 2009. However, the Commission will do so not later than December 31, 2007.

III. Section 10 of the Act provides: *It is the intent of the General Assembly that the State use all available resources and means, including negotiation, participation in interstate compacts and multistate and interagency agreements, petitions pursuant to 42 U.S.C. § 7426, and litigation to induce other states and entities, including the Tennessee Valley Authority, to achieve reductions in emissions of oxides of nitrogen (NOx) and sulfur dioxide (SO_2) comparable to those required by G.S. 143-215.107D, as enacted by Section 1 of this act, on a comparable schedule. The State shall give particular attention to those states and other entities whose emissions negatively impact air quality in North Carolina or whose failure to achieve comparable reductions would place the economy of North Carolina at a competitive disadvantage.*

DENR/DAQ and Department of Justice (Attorney General) Activities to Implement this Section:

The State continues to pursue opportunities to carry forward the Legislature's objectives in Section 10 of the Act. The State reports the following recent activities and developments:

1) On January 30, 2006, the State, through the Attorney General, sued the Tennessee Valley Authority (TVA) in federal district court in Asheville. The suit alleges that emissions of SO_2 and NOx from TVA's fleet of coal-fired power plants are inadequately controlled and therefore create a public nuisance. The Attorney General has asked the Court to require TVA to install NOx and SO_2 controls to abate the public nuisance. In July 2006 the District Court denied TVA's motions to dismiss the case, but TVA has appealed these rulings to the U.S. Court of Appeals in Richmond, Virginia. Oral argument has not yet been scheduled and it is uncertain when the appeal will be decided. Meanwhile, the parties are continuing to prepare for and are on schedule for a trial in Asheville in October 2007. TVA has recently announced plans to install NOx and SO_2 controls on its John Sevier plant, which is the closest TVA facility to North Carolina.

2) On July 8, 2005, the Attorney General filed in the United States Court of Appeals for the District of Columbia Circuit (D.C. Circuit) a petition for review of the United States Environmental Protection Agency's (EPA) Clean Air Interstate Rule (CAIR). Among other things, the State is alleging that CAIR fails to take into account significant air quality problems in North Carolina, fails to guarantee a remedy to North Carolina because the rule relies too heavily on the trading of pollution credits, and fails to require controls to be installed expeditiously. The Court will likely hear arguments in this matter in late 2007 or early 2008.

3) Also on July 8, 2005, the Attorney General filed a petition with the EPA requesting that the EPA administratively reconsider certain aspects of CAIR. EPA

denied this petition. The Attorney General has asked the D.C. Circuit to review this action as well, and this request will be heard along with the CAIR case.

4) On March 18, 2004, the State filed a petition under §126 of the Clean Air Act requesting that EPA impose NOx and/or SO_2 controls on large coal-fired utility boilers in 13 upwind states that impact North Carolina's air quality. On March 15, 2006, the EPA denied the State's petition. The Attorney General has filed a petition in the D.C. Circuit seeking review of the denial of the petition. The matter will likely be heard by the Court in early 2008. The Attorney General also petitioned EPA for administrative reconsideration of the §126 petition.

5) Since the enactment of the Clean Smokestacks Act, the Attorney General and the Department of Environment and Natural Resources have on several occasions presented the Clean Smokestacks Act to other jurisdictions to demonstrate leadership and prompt similar actions in surrounding areas that impact North Carolina. On April 6, 2006, Governor Ehrlich of Maryland signed into law the Healthy Air Act (2006 Md. Laws 301) -- a Clean Smokestacks-type law that significantly limits emissions of SO_2 and NOx from large coal-fired utility boilers in Maryland. Maryland also is in the process of promulgating rules that will further tighten controls on large NOx and SO_2 sources.

6) The Attorney General is also seeking a prompt resolution about whether large stationary sources of NOx in Georgia must comply with the summertime NOx cap under EPA's "NOx SIP Call" rule, which is designed to help downwind States reduce ambient levels of ozone. This aspect of the NOx SIP Call has been under review by EPA and EPA has failed to resolve the issue in a timely manner.

IV. Section 11 of the Act provides: *The Environmental Management Commission shall study the desirability of requiring and the feasibility of obtaining reductions in emissions of oxides of Nitrogen (NOx) and Sulfur Dioxide (SO_2) beyond those required by G.S. 143-215.107D, as enacted by Section 1 of this act. The Environmental Management Commission shall consider the availability of emission reduction technologies, increased cost to consumers of electric power, reliability of electric power supply, actions to reduce emissions of oxides of nitrogen (NOx) and sulfur dioxide (SO_2) taken by states and other entities whose emissions negatively impact air quality in North Carolina or whose failure to achieve comparable reductions would place the economy of North Carolina at a competitive disadvantage, and the environment, and the natural resources, including visibility. In its conduct of this study, the Environmental Management Commission may consult with the Utilities Commission and the Public Staff. The Environmental Management Commission shall report its findings and recommendations to the General Assembly and the Environmental Review Commission annually beginning 1 September 2005.*

Note: Session Law 2006-79 changed the beginning date of the requirements of this Section to September 1, 2007.

Environmental Management Commission and DENR Response: A letter was submitted to the Environmental Review Commission from Dr. David Moreau, Environmental Management Commission Chairman, dated April 3, 2006, which stated the following:

> Since the Clean Smokestacks Act was passed in June 2002, significant Federal regulatory changes have occurred. Specifically, the Clean Air Interstate Rule (CAIR) requires North Carolina's neighboring states to achieve major reductions in NO_x and SO_2 -- reductions that require installation of state-of-the-art control equipment. Although there may be questions about the timing and emissions reductions of CAIR, the Division of Air Quality (DAQ) believes CAIR will ultimately require Duke Energy and Progress Energy to enhance existing or add new controls that are consistent with the latest technology.
>
> The Clean Smokestacks Act already requires that state of the art control equipment be installed on many units in North Carolina. CAIR annual NO_x and SO_2 emissions budgets are even lower than those set by the Clean Smokestacks Act and this could result in even more units in North Carolina having state of the art control equipment applied.
>
> Given the recent action by the Federal government regarding power plant emissions, it is recommended that the study as to whether or not further State action is required be extended while evaluation is made of the progress of North Carolina in complying with both the clean Smokestacks Act and CAIR.
>
> The DENR/DAQ generally believes the current compliance plans represent a suite of state-of-the-art controls, taking into consideration both emissions reductions and costs of control. The Environmental Management Commission and DENR/DAQ will continue to evaluate control options through the requirements of this section as both the Clean Smokestacks Act compliance dates and the CAIR compliance dates draw near.

V. Section 12 of the Act provides: *The General Assembly anticipates that measures implemented to achieve the reductions in emissions of oxides of nitrogen (NOx) and sulfur dioxide (SO_2) required by G.S. 143-215.107D, as enacted by Section 1 of this act, will also result in significant reductions in the emissions of mercury from coal-fired generating units. The Division of Air Quality of the Department of Environment and Natural Resources shall study issues related to monitoring emissions of mercury and the development and implementation of standards and plans to implement programs to control emissions of mercury from coal-fired generating units. The Division shall evaluate available control technologies and shall estimate the benefits and costs of alternative strategies to reduce emissions of mercury. The Division shall annually report its interim findings and recommendations to the Environmental Management*

Commission and the Environmental Review Commission beginning 1 September 2003. The Division shall report its final findings and recommendations to the Environmental Management Commission and the Environmental Review Commission no later than 1 September 2005. The costs of implementing any air quality standards and plans to reduce the emission of mercury from coal-fired generating units below the standards in effect on the date this act becomes effective, except to the extent that the emission of mercury is reduced as a result of the reductions in the emissions of oxides of nitrogen (NOx) and sulfur dioxide (SO_2) required to achieve the emissions limitations set out in G.S. 143-215.107D, as enacted by Section 1 of this act, shall not be recoverable pursuant to G.S. 62-133.6, as enacted by Section 9 of this act.

DAQ Actions to Implement this Section: The DAQ submitted reports in September of 2003, 2004, and 2005, as required by this Section. The first report primarily focused on the "state of knowledge" of the co-benefit of mercury control that will result from the control of NOx and SO_2 from coal-fired utility boilers. Also, preliminary estimates were made for this co-benefit for North Carolina utility boilers based on the initial plans submitted by Progress Energy and Duke Energy. The second report primarily focused on "definition of options". The Division has also submitted the third and final report titled Mercury Emissions and Mercury Controls for Coal-Fired Electrical Utility Boilers. In 2006, DAQ developed a state mercury rule that goes beyond the federal Clean Air Mercury Rule (CAMR) that took effect in November 2006. The North Carolina mercury rules, contained in Section 15A NCAC 02D .2500, became effective January 1, 2007. The coal-fired units of Duke Energy and Progress Energy have two sets of independent requirements that they have to meet. First, they have to satisfy the requirement set out in the EPA guideline rule, which has been incorporated into the State's mercury regulation. This requirement is that each unit's account contains enough allowances at the end of the year to equal or exceed its actual emissions for that year. Second, these units have to meet a State-only requirement. This requirement is that the emissions of mercury from each coal-fired unit at Duke Energy and Progress Energy have to be controlled to the maximum degree that is technically and economically feasible or shut down by a prescribed date. Both requirements are independent of each other. Meeting the first requirement does not relieve the company from the need to meet the second requirement. However, meeting the second requirement, the State-only requirement, will greatly aid the companies in meeting the first requirement.

VI. Section 13 of the Act provides: *The Division of Air Quality of the Department of Environment and Natural Resources shall study issues related to the development and implementation of standards and plans to implement programs to control emissions of carbon dioxide (CO_2) from coal-fired generating units and other stationary sources of air pollution. The Division shall evaluate available control technologies and shall estimate the benefits and costs of alternative strategies to reduce emissions of carbon dioxide (CO_2). The Division shall annually report its interim findings and recommendations to the Environmental Management Commission and the Environmental Review Commission beginning 1 September 2003. The Division shall report its final findings and recommendations to the Environmental Management*

Commission and the Environmental Review Commission no later than 1 September 2005. The costs of implementing any air quality standards and plans to reduce the emission of carbon dioxide (CO_2) from coal-fired generating units below the standards in effect on the date this act becomes effective, except to the extent that the emission of carbon dioxide (CO_2) is reduced as a result of the reductions in the emissions of oxides of nitrogen (NOx) and sulfur dioxide (SO_2) required to achieve the emissions limitations set out in G.S. 143-215.107D, as enacted by Section 1 of this act, shall not be recoverable pursuant to G.S. 62-133.6, as enacted by Section 9 of this act.

DENR Actions to Implement this Section: The DAQ submitted reports in September of 2003, 2004, and 2005, as required by this Section. The first report primarily focused on the "state of knowledge" and actions being taken or planned elsewhere regarding CO_2 control from coal-fired utility boilers. The second report primarily focused on "definition of options". The DAQ submitted the third and final report titled, "Carbon Dioxide (CO_2) Emission Reduction Strategies for North Carolina", to the Environmental Management Commission and the Environmental Review Commission as required. Numerous recommendations were set forth in this report, including a recommendation for a North Carolina Climate Action Plan.

The North Carolina Global Warming/Climate Change Bill (HB 1191/SB 1134) was enacted during the 2005 Session of the General Assembly. Along with the passage of the bill, the North Carolina 2005 Session of the General Assembly passed the Global Climate Change Act. This act established a Legislative Commission on Global Climate Change (LCGCC). Additionally, a formalized stakeholder group, the Climate Action Plan Advisory Group (CAPAG), was formed by DENR. The CAPAG's purpose is to evaluate, discuss, and formalize consensus-based recommendations for CO_2 and other greenhouse gas reductions through a formal stakeholder process. Determination of economic benefits to North Carolina will be assessed for each prospective recommendation. The CAPAG will work in conjunction with the LCGCC in providing periodic updates. The inaugural meeting of the CAPAG was held on February 16, 2006. The CAPAG is now in the final stages of utilizing technical workgroups. These technical workgroups contain experts in the following five sectors: 1) Agriculture, Forestry, and Waste; 2) Energy Supply; 3) Transportation and Land Use; 4) Residential, Commercial, and Industrial; and 5) Cross Cutting (for issues that cut across different sectors, such as establishing a greenhouse gas registry). The CAPAG is working diligently towards a comprehensive North Carolina Climate Action Plan, with a current target to complete it by the end of 2007.

VII. Supplementary Information: As noted in earlier reports, the Public Staff - North Carolina Utilities Commission (Public Staff) will audit the books and records of Progress Energy and Duke Energy on an ongoing basis in regard to the costs incurred and amortized in compliance with the provisions of the Act. The Public Staff has undertaken such a review, focusing on the verification of costs related to complying with the Act, the amortization of those costs, and the operating results of emission reduction equipment installed by Progress Energy and Duke Energy.

The Public Staff filed its most recent reports in the present regard with the Commission on May 25, 2007. (The report regarding PEC was subsequently revised on May 29, 2007.) Such reports, which are a continuation of the Public Staff's ongoing review, present an overview of certain work performed by the Public Staff and its findings for the 12-month period ending December 31, 2006. Attached, and made part of this report, are the Public Staff's reports for Duke Energy and Progress Energy, Attachments C and D, respectively.

VIII. Conclusions

The DENR/DAQ carefully reviewed and considered the information provided by Progress Energy and Duke Energy in their March 30, 2007 compliance plan submittals and their May 2007 supplemental submittals in response to informational requests from DENR/DAQ on April 25, 2007. The information in the submittals, including the construction undertaken and completed through the past year and consideration of the fraction of construction remaining and permits received and applied for in the past year, point toward steady progress in meeting the prescribed goals of the Clean Smokestacks Act. DENR/DAQ staff also analyzed the emissions projections and assumptions on growth in energy sales. A specific analysis of the NOx emissions relative to the 2007 cap was completed using data from the submittals along with publicly available 2006 emissions data from USEPA's Clean Air Markets Division Web Site. Similar analysis of SO_2 emissions will be possible in future reports as the first SO_2 cap in 2009 approaches. Additionally, DENR/DAQ notes that, as emission controls have come online for both Progress Energy and Duke Energy, their ability to refine the expected future year emission rates for controls yet to be installed is enhanced based on operational performance of similar technologies already put into service.

The Commission has also carefully reviewed and considered the information and data provided by the investor-owned public utilities in their 2007 Clean Smokestacks annual reports and in response to the Commission's discovery requests of April 12, 2007. Based upon such information, it appears that both Progress Energy and Duke Energy are on track to meet the statutorily imposed 70% accelerated amortization requirement during the five-year rate freeze period in the amounts of $569.1 million and $1.050 billion, respectively. Further, as required by the Act, the Commission has scheduled hearings for the purpose of (1) determining the annual cost recovery amounts that each investor-owned public utility shall be required to record and recover during calendar years 2008 and 2009; (2) reviewing the investor-owned public utilities' current estimates of total projected environmental compliance costs and revising such costs, if necessary, to ensure that they are just, reasonable, and prudent based on the most recent cost information available; and (3) consulting with the Secretary of DENR to receive advice as to whether the investor-owner public utilities' actual and proposed modifications and permitting and construction schedule are adequate to achieve the emissions limitations set out in G.S. 143-215.107D. The Commission will rule on the aforesaid matters not later than December 31, 2007.

In summary, it appears that the actions taken to date by Progress Energy and Duke Energy are in accordance with the provisions and requirements of the Clean Smokestacks Act. Further, the compliance plans and schedules proposed by Progress Energy and Duke Energy appear adequate to achieve the emissions limitations set out in G.S. 143-215.107D.

FILED
MAR 30 2007
Clerk's Office
N.C. Utilities Commission

Subject: Docket No. E-7, Sub 718
Duke Energy Carolinas, LLC NO_x and SO_2 Compliance Plan Annual Update

Record No. NC CAP 006

Dear Ms. Vance:

Duke Energy Carolinas, LLC is required by Senate Bill 1078 (the "North Carolina Clean Air Legislation") to file information on or before April 1 of each year to update the North Carolina Utilities Commission on ("Commission") of the progress to date, upcoming activities and expected plans to achieve the emissions limitations set out in G.S. 143-215.107D. Enclosed for filing are the original and thirty (30) copies of Duke Energy Carolinas' Compliance Plan Annual Update for 2007 that fully describe the Company's efforts to comply with the North Carolina Clean Air Legislation.

The current plan to meet the emission requirements for NO_x and SO_2 includes:

NO_x Control – The installation of Selective Catalytic Reduction (SCR) on Cliffside Steam Station Unit 5 and Belews Creek Steam Station Units 1&2 has been completed. Our NO_x plans continue to include the installation of Selective Non-Catalytic Reduction (SNCR) on 15 units and burner work at our remaining smaller units with the exception of Cliffside Units 1-4. With these installations, the company can demonstrate compliance with the 2007 and 2009 NO_x caps under Senate Bill 1078.

SO_2 Control – The installation of wet scrubbers on our twelve largest generating units continues to be our plan for compliance with the 2009 and 2013 SO_2 caps under the North Carolina Clean Air Legislation. The company continues to work under an accelerated schedule with respect to the Allen scrubber project to maintain design and construction continuity throughout the scrubber program and also assure compliance with the federal Clean Air Interstate Rule. Estimated costs for the scrubber projects at Cliffside Unit 5 and Plant Allen continue to rise due to escalation of labor and commodity prices as well as the continued run up of costs in the power generation and environmental retrofit construction market.

Exhibits A and B outline current unit specific technology selections, projected operational dates, expected emission rates, and the corresponding tons of emissions that demonstrate compliance with the legislative requirements to the best of Duke Energy Carolinas' knowledge at this time. The current estimate of Environmental Compliance Costs for these pollution control projects are included in Exhibit C.

Duke Energy Carolinas will continue to examine the technology selection, implementation schedule and associated costs. Annual updates will be provided to the Commission as required. If you have questions regarding any aspect of our plan, please do not hesitate to contact my office at 919-235-0955.

Sincerely,

George T. Everett

George T. Everett, Ph.D.
Director, Environmental/Legislative Affairs

VERIFICATION

I, George T. Everett, state and attest that the attached information updating the North Carolina Utilities Commission on progress to date, upcoming activities, and expected strategies to achieve the emissions limitations set out in N.C.G.S. 143-215.107.D (Annual Update) is filed on behalf of Duke Energy Carolinas, LLC; that I have reviewed said Annual Update and, in the exercise of due diligence, have made reasonable inquiry into the accuracy of the information provided therein; and that, to the best of my knowledge, information, and belief, all of the information contained therein is accurate and true, and no material information or fact has been knowing omitted or misstated therein.

George T. Everett

George T. Everett, Ph.D.

Duke Energy Carolinas, LLC

General Assembly of North Carolina Session 2001
Senate Bill 1078 – Improve Air Quality/Electric Utilities (NC Clean Air Legislation)
2007 Annual Data Submittal

1. A detailed report on the investor-owned public utility's plans for meeting the emissions limitations set out in G.S. 143-215.107D.

Exhibits A and B outline the plan as of this date for technology selections by facility and unit, projected operational dates, expected emission rates, and the corresponding tons of emissions that demonstrate compliance with the provisions of G.S. 143-215.107D. Changes to the expected plan for meeting these emissions limitations as compared to past compliance plans are described below:

NO_x Compliance

- Emission Rate Changes – Expected rates have been adjusted in this 2007 update based on 2006 operational performance:
  - Emission rates for the Allen units were adjusted based on 2006 ozone season performance of the Units 1, 3 & 4 SNCR equipment. Expected rates were increased by 0.01 for Units 1 & 2 and 0.02 for Units 3, 4 & 5.
  - The Belews Creek Unit 1 expected rate was increased by 0.01 based on 2006 operational results.
  - The Buck Units 3 & 4 expected rates in 2009 were increased by 0.01 based on operation of the similar Dan River Unit 2 with new Separated Over-fired Air (SOFA) burner equipment in early 2007. The Buck Unit 3 expected rate in 2007 was decreased by 0.02 based on the timing of the SOFA installation.
  - The Buck Units 5 & 6 expected rates were increased by 0.02 based on the early 2007 performance of the recently installed SNCR equipment.
  - Cliffside Units 1 - 4 expected rates were changed based on 2006 performance.
  - The Dan River Units 1 & 2 expected rates were increased slightly based on operations of the SOFA equipment on Unit 2 in early 2007.
  - The Marshall Units 1 - 4 expected rates were increased by 0.01 based on operation in 2006 and the effect on baseline NO_x of the coals used with the scrubber.
  - The 2009 expected rate for Marshall Unit 3 was decreased significantly based on the expected addition of SCR equipment. This SCR addition is expected to be operational in 2009 primarily in support of the 8-hour ozone attainment demonstration for the Charlotte region. Increased mercury removal in support of the federal Clean Air Mercury Rule (CAMR) and improved ability to support existing NOx emission limitations are added benefits associated with this project. Similar to other SCR additions attributed primarily to compliance with regulations other than the North Carolina Clean Air Legislation, costs associated with this Marshall Unit 3 SCR project are not "environmental compliance costs" within the meaning of that term as used in the North Carolina Clean Air Legislation.
  - The Riverbend Units 4 – 7 expected rates were changed based on 2006 and early 2007 operational results.

SO_2 Compliance

- New Pulverized Coal (PC) Unit – This 2007 update assumes the addition of one new 800 MW coal unit at the Cliffside Steam Station. The 2013 expected compliance plan includes this unit along with the corresponding retirement of Cliffside Units 1-4.
- Schedule Changes – Optimization of the 2009 scrubber tie-in outages for the Allen Units 1 – 5 has resulted in some minor changes to the expected emission rates for the 2009 year.
- Emission Rate Changes – Expected rate changes have been adjusted in this 2007 update for the Buck and Cliffside stations:
  - The Buck Units 3 – 6 expected rates were increased. These new rates assume that the use of lower sulfur Colombian coal is discontinued given that it is not cost competitive in the current market. Forecasted prices for this coal do not currently provide a cost effective solution as compared to domestic options.
  - The Cliffside Units 1 – 5 rates were adjusted based on the expected sulfur content in the coal.

2. The actual environmental compliance costs incurred by the investor-owned public utility in the previous calendar year, including a description of the construction undertaken and completed during that year.

In the 2006 calendar year, Duke Energy Carolinas spent **$427,984,400** on activities in support of compliance with the provisions of G.S. 143-215.107D. Exact amounts associated with each project are provided in Exhibit C, and a description of the associated activities is provided below:

Allen Steam Station FGD

- Provided Limited Notice to Proceed (LNTP) to EPC Contractor 4/3/06
- Provided Full Notice to Proceed (FNTP) to EPC Contractor 8/31/06
- Awarded Wastewater Treatment engineering contract 3/1/06
- Awarded Wastewater Treatment construction contract 12/22/06
- Awarded Stack construction contract 5/16/06
- Completed relocation of 230kV Transmission Line 8/1/06
- Started site clearing, grubbing and earthwork
- Completed relocation of ash line 12/22/06
- Completed relocation of coal handling railroad spurs 11/29/06
- Placed purchase orders for all major electrical and mechanical equipment

Belews Creek Steam Station FGD

- Completed construction of the major foundations for the FGD System
- Completed construction of the concrete shell for the two new chimneys
- Completed 95% of construction for the Constructed Wetlands (part of the waste water treatment system)
- Achieved a completion status of 72% on the overall project (54% of construction activities)

Cliffside Steam Station Unit 5 FGD

- Continued preliminary construction planning and development of conceptual site layout

Marshall Steam Station FGD

- Completed tie-in of the Unit 4 Absorber; began initial operations of Unit 4 and common equipment on 10/30/06; achieved substantial completion on 12/20/06
- Completed initial tie-in of the Unit 3 ductwork and installation of blanking plate
- Completed setting all ductwork with the exception of Unit 1 and Unit 2 tie-in sections
- Completed lining of FGD gypsum landfill
- Completed engineered wetlands installation
- Completed Unit 4 CEMS RATA testing and certification
- Completed NSPS testing of material handling systems per air permit

Allen Steam Station SNCR, Unit 2

- Completed detailed engineering
- Completed procurement, installation and commissioning associated with the site's reagent storage equipment

Allen Steam Station SNCR, Unit 3

- Completed remaining small close-out activities

Allen Steam Station SNCR, Unit 4

- Completed material delivery and installation of the Unit 4 SNCR equipment including supporting plant air and dilution water equipment

Allen Steam Station SNCR, Unit 5

- No significant activity completed in 2006

Buck Steam Station Burners, Unit 3

- Completed detailed engineering and material procurement in preparation for 2007 installation

Buck Steam Station Burners, Unit 4

- Completed detailed engineering and material procurement in preparation for 2007 installation

Buck Steam Station SNCR, Unit 5

- Completed detailed engineering
- Completed material delivery and installation of the Unit 5 SNCR equipment including plant air, dilution water and reagent storage equipment required for SNCR operation

Buck Steam Station SNCR, Unit 6

- Completed detailed engineering, material delivery and installation of the Unit 6 SNCR equipment

Dan River Steam Station Burners, Unit 2

- Completed installation of burners in fall of 2006

Dan River Steam Station Burners, Unit 3

- Completed installation of burners in fall of 2006

Marshall Steam Station SNCR, Unit 1

- Completed installation of the Unit 1 SNCR equipment

Marshall Steam Station SNCR, Unit 2

- Completed material procurement and delivery in preparation for 2007 installation
- Completed procurement, installation and commissioning associated with the site's reagent storage equipment

Marshall Steam Station SNCR, Unit 3

- Completed remaining small close-out activities

Marshall Steam Station SNCR, Unit 4

- Completed detailed engineering, material procurement and delivery, and installation of the Unit 4 SNCR equipment

Riverbend Steam Station SNCR, Unit 4

- Completed detailed engineering, material procurement and delivery in preparation for 2007 installation

Riverbend Steam Station SNCR, Unit 5

- Completed detailed engineering, material procurement and delivery in preparation for 2007 installation

Riverbend Steam Station SNCR, Unit 6

- Completed detailed engineering, material procurement and delivery, and installation of the Unit 6 SNCR equipment
- Completed procurement, installation and commissioning associated with the site's reagent storage equipment

Riverbend Steam Station SNCR, Unit 7

- Completed detailed engineering, material procurement and delivery, and installation of the Unit 7 SNCR equipment
- Completed installation of plant air and dilution water equipment required for SNCR operation

3. **The amount of the investor-owned public utility's environmental compliance costs amortized in the previous calendar year.**

   In the 2006 calendar year, **$225,236,000** was amortized related to construction work activity in support of compliance with the provisions of G.S. 143-215.107D. **$862,665,143** has now been amortized in total for the program through year-end 2006.

4. **An estimate of the investor-owned public utility's environmental compliance costs and the basis for any revisions of those estimates when compared to the estimates submitted during the previous year.**

   The estimated 'environmental compliance costs' as defined in G.S. 143-215.107D are provided in Exhibit C. Changes to the expected costs as compared to past compliance plans are described below:

   - Allen FGD Project – The Allen FGD estimate has increased since the previous 2006 filing and is attributable to continued ramp up in the power generation and/or environmental retrofit construction market, and continued escalation of labor and commodity costs.
   - Cliffside Unit 5 FGD Project – Like Allen, the Cliffside 5 FGD estimate is primarily affected by labor, commodity and market escalation and thus shows an increase in total forecasted cost as compared to the estimate included in the 2006 filing. In addition, the current estimate now includes a larger portion of the costs associated with common FGD equipment and infrastructure assuming only one new Cliffside unit is built, versus assuming two new units are built as in the previous year's plan.
   - SNCR & Burner Projects – While there has been no significant change to the scope or timing of the NO_x related projects remaining to be installed, all of the current forecasts have increased as compared to the 2006 filing. In each case, these increases approach 10% as compared to prior estimates and take into account the continued escalation of labor costs and ramp up in the environmental retrofit construction market as noted for the larger projects.
   - Marshall Unit 4 SNCR Project – The Marshall Unit 4 SNCR equipment was installed in late 2006 at a cost significantly less than estimated in the previous year's plan. The decision to add the SCR technology to Marshall Unit 3 allowed for this reduction in costs as selected SNCR equipment in service on Unit 3 was redeployed to Unit 4.

5. **A description of all permits required in order to comply with the provisions of G.S. 143-215.107D for which the investor-owned public utility has applied and the status of those permits or permit applications.**

   Allen Steam Station FGD

   - Request to revise NPDES Permit to include FGD wastewater – Submitted 1/24/06; received revision 9/11/06
   - Submittal to DENR/ACOE regarding stream crossing of entrance road – Received permits 5/25/06
   - Air Permit Application – Submitted 4/10/06; received Permit 6/30/06

- Authorization to Construct (ATC) application for Wastewater Treatment System – Submitted 9/14/06; received Permit to Construct 12/15/06
- NOTE: all erosion control permits are in EPC contractor's scope for the Allen FGD Project and were received in 2006 (7/13/06 and 12/18/06). EPC contractor has also applied for air permit associated with flue liner fabrication on 11/1/06 and expects to receive permit in early 2007.

Belews Creek Steam Station FGD

- Request to revise NPDES Permit to include FGD wastewater – Submitted 6/30/04; received Permit Revision 5/16/05
- Initial Erosion Control Permit – Submitted 2/4/05; received Permit 3/7/05
- Landfill Site Suitability Application – Submitted 3/30/05; received Site Suitability Approval Letter 6/19/06
- Air Permit Application for Belews Creek FGD project – Submitted 4/18/05; received Air Permit 2/6/06
- Authorization to Construct (ATC) application for Wastewater Treatment System – Submitted 7/21/05; received Permit to Construct 12/27/05
- Authorization to Construct (ATC) application for Constructed Wetlands – Submitted 7/21/05; received Permit to Construct 12/27/05
- Revised Landfill Construction Plan Application – Submitted 9/30/05; received Permit to Construct 6/29/06
- Air Permit – Notice of Intent to Construct – Submitted 10/11/05; received Permit to Construct 10/24/05
- Authorization to Construct Sanitary Waste Lagoon – Submitted 3/23/06; received Permit to Construct 9/1/06
- Existing Sewage Lagoon Approval to Decommission – Submitted 10/31/06; received permit 1/25/07
- NOTE: Revisions to Erosion Control Permit submitted on various dates; most recent revised permit received 3/30/06

Cliffside Steam Station Unit 5 FGD

- Air Permit Application – Submitted 12/16/05; received 12/15/06

Marshall Steam Station FGD

- Landfill Construction Plan Application – Submitted 4/1/04; received 2/4/05
- Sedimentation and Erosion Control Plan Permits
  - Limestone/Gypsum Conveyor – Submitted 6/17/04; received 7/9/04
  - Limestone/Gypsum Conveyor Expansion – Submitted 12/15/04; received 12/30/04
  - Constructed Wetland Treatment System – Submitted 7/26/04; received 8/18/04
  - Gypsum Landfill – Submitted 3/31/04; received 4/21/04
- Authorization to Construct (ATC) application for Solids Removal System – Submitted 11/19/04; received 12/22/04
- Authorization to Construct (ATC) application for Constructed Wetlands – Submitted 5/21/04; received 8/10/04

- Air Permit Revisions (for material handling issues) – Submitted 9/2/05; received 12/7/05
- Landfill Permit Documents (to line landfill) – Submitted 12/15/05; received 6/5/06
- Permit to Operate Marshall FGD Landfill – Submitted 10/27/06; received 11/21/06

Allen Steam Station SNCR, Unit 2
- Air Permit Application – Submitted 4/24/06; Received 6/30/06

Allen Steam Station SNCR, Unit 3
- Air Permit Application – Submitted 7/15/04; Received 2/5/05

Allen Steam Station SNCR, Unit 4
- Air Permit Application – Submitted 7/15/05; Received 1/15/06
- Building/Plumbing permit from Gaston County Building and Standards – Received 4/27/06 for municipal water tie-ins

Allen Steam Station SNCR, Unit 5

Riverbend Steam Station SNCR, Unit 7

- Air Permit Application – Submitted 11/5/05; Received 1/1/06

6. **A description of the construction related to compliance with the provisions of G.S. 143-215.107D that is anticipated during the following year.**

Allen Steam Station FGD

- Complete relocation of fuel oil tank and transfer system
- Complete construction of stack shell
- Complete construction of new access driveway
- Complete all major building foundations and steel erection
- Complete initial duct tie-in outages for Units 1-5
- Complete all major equipment foundations
- Mobilize FRP liner fabrication facility
- Complete major process equipment procurement
- Receive auxiliary transformer on site

Belews Creek Steam Station FGD

- Complete construction and commissioning of all FGD Systems
- Place new Sanitary Waste System into operation
- Achieve Unit 1 FGD Substantial Completion - Expect in February 2008

Cliffside Steam Station Unit 5 FGD

- Complete clearing and grubbing required to begin FGD construction
- Begin earthwork excavation, blasting and hauling activities

- Begin structural/foundation work for FGD equipment
- Complete Unit 5 chimney foundation

Marshall Steam Station FGD

- Complete construction, turnover and commissioning of Unit 3 FGD systems
- Complete final tie-in of Unit 3 ductwork; remove blanking plate; and begin operations, testing and tuning of Unit 3 FGD systems
- Achieve substantial completion for Unit 3
- Complete construction, turnover and commissioning of Unit 1/2 FGD systems
- Complete final tie-in of Unit 2 ductwork and begin operations, testing and tuning of Unit 1/2 FGD systems
- Complete final tie-in of Unit 1 ductwork
- Achieve Substantial Completion for Unit 1/2
- Achieve Marshall FGD Project Completion

Allen Steam Station SNCR, Unit 2

- Complete material procurement, installation and commissioning of SNCR equipment in time to support operation in summer 2007

Allen Steam Station SNCR, Unit 5

- Complete detailed engineering and material procurement activities
- Begin equipment installation activities in support of a 2008 project completion date

Buck Steam Station Burners, Unit 3

- Complete installation of burners in early 2007

Buck Steam Station Classifiers, Unit 3

- Complete installation of classifiers in early 2007

Buck Steam Station Burners, Unit 4

- Complete installation of burners in early 2007

Buck Steam Station Classifiers, Unit 4

- Complete installation of classifiers in early 2007

Dan River Steam Station Burners, Unit 1

- Complete detailed engineering and material procurement activities
- Complete installation of burners in late 2007

Dan River Steam Station Classifiers, Unit 1

- Complete installation of classifiers in late 2007

Marshall Steam Station SNCR, Unit 2

- Complete installation and commissioning of SNCR equipment in preparation for operation in summer 2007

Riverbend Steam Station SNCR, Unit 4

- Complete installation and commissioning of SNCR equipment in preparation for operation in summer 2007

Riverbend Steam Station SNCR, Unit 5

- Complete installation and commissioning of SNCR equipment in late 2007

Riverbend Steam Station SNCR, Unit 6

- Complete commissioning and small project close-out activities

Riverbend Steam Station SNCR, Unit 7

- Complete commissioning and small project close-out activities

7. A description of the applications for permits required in order to comply with the provisions of G.S. 143-215.107D that are anticipated during the following year.

Belews Creek Steam Station FGD

- Permit to operate the FGD Residue Landfill - Submit Certification Report 8/13/07, Expect permit to operate by 10/23/07

Cliffside Steam Station Unit 5 FGD

- Authorization to Construct (ATC) application anticipated September 2007

8. The results of equipment testing related to compliance with G.S. 143-215.107D.

No additional equipment related testing occurred in 2006. The SNCR and SCR tests that occurred in prior years that were used in evaluating technology selections are repeated in this 2007 report for reference.

Allen Steam Station SNCR, Unit 1

- SNCR Equipment installation was completed in May 2003 followed by equipment acceptance testing in late 2003. During this test run, it was determined that the SNCR system met all commercial performance guarantees with approximately a 25% reduction in NOx with ammonia slip of less than 5 ppm at full load.
- During the 2004 ozone season, Allen Unit 1 achieved a 0.162# NO_x/MMBTU outlet rate, 5% better than the 0.17#/MMBTU target established for the unit.

Belews Creek Steam Station SCR

- SCR Equipment installation was completed in 2003 in support of the EPA/SIP Call requirements for NO_x reduction. While Belews Creek had operational problems in the first half of the 2004 ozone season, many of these issues were addressed on Belews Creek Unit 1 by August, 2004. Subsequently, tests performed during the months of August and September showed that when the SCR Equipment was in service during this time, emissions averaged 0.07# NO_x/MMBTU

9. **The number of tons of oxides of nitrogen (NO_x) and sulfur dioxide (SO_2) emitted during the previous calendar year from the coal-fired generating units that are subject to the emissions limitations set out in G.S. 143-215.107D.**

   In the 2006 calendar year, **54,335.5** tons of NO_x and **286,639.2** tons of SO_2 were emitted from the North Carolina based Duke Energy Carolinas coal-fired units located in North Carolina and subject to the emissions limitations set out in G.S 143-215.107D.

10. **The emissions allowances described in G.S. 143-215.107D(i) that are acquired by the investor-owned public utility that result from compliance with the emissions limitations set out in G.S. 143-215.107D.**

    No emissions allowances have been acquired by Duke Energy Carolinas resulting from compliance with the emissions limitations set out in G.S. 143-215.107D.

11. **Any other information requested by the Commission or Department of Environment and Natural Resources.**

    No additional information has been requested to be included in this annual data submittal.

Expected Duke Energy Carolinas Compliance for NC Clean Air Plan as of 4/1/2007

[1] SNCR Technology in service on Marshall Unit 3 expected be replaced by SCR Technology in 2009 in support of 8-hour ozone attainment demonstration in the Charlotte region. Similar to other SCR additions to comply with other laws besides the North Carolina Clean Air Legislation, costs associated with this Marshall Unit 3 SCR project are not "environmental compliance costs" within the meaning of that term as used in the North Carolina Clean Air Legislation.

Technology

Burners – Overfired Air or Separated Overfired Air with associated Mill Classifier installations

SCR – Selective Catalytic Reduction

SNCR – Selective Non-Catalytic Reduction

Re: Annual NC Clean Smokestacks Act Compliance Report
Docket No. E-2, Sub 815

Dear Ms. Vance:

Progress Energy Carolinas, Inc. submits the attached report for calendar year 2006 regarding the status of compliance with the provisions of the North Carolina Clean Smokestacks Act. Section 9(i) of the Act requires that an annual report of compliance progress be submitted to the Commission by April 1 of each year for the previous calendar year.

Very truly yours,

Len S. Anthony
Deputy General Counsel-Regulatory Affairs

March 30, 2007

Mr. William G. Ross, Jr.
Secretary
North Carolina Department of Environment and Natural Resources
1601 Mail Service Center
Raleigh, NC 27699-1601

Dear ~~Secretary~~ Ross: Bill

Progress Energy Carolinas, Inc. (PEC, Company) submits the attached report for calendar year 2006 regarding the compliance status with the provisions of the North Carolina Clean Smokestacks Act (Act).

As you know, 2007 is a significant year for the Clean Smokestacks Act – the first year in which the nitrogen oxides (NOx) emissions cap is effective. Beginning this year, the Company's annual NOx emissions from its coal units in North Carolina cannot exceed 25,000 tons. We have developed plans and processes to assure we meet the requirement, and we are on track to achieve this milestone.

While the Act established stringent NOx and sulfur dioxide (SO_2) emissions limits from coal-fired power plants, it also allowed the affected utilities to determine how to meet the emissions limitations. We regularly review and refine our compliance strategy, weighing a number of factors such as system load projections, expected fuel selection, available control equipment, and anticipated performance and costs of emissions controls. For example, since our last filing, we have continued our evaluation of Furnace Sorbent Injection (FSI) technology. FSI may offer a more cost-effective compliance solution for our Cape Fear Plant than the original plan to use scrubbers. We plan to test the FSI technology at our Robinson Plant in Florence, S.C., in fall 2007. Since Robinson Unit 1 is similar in design to the Cape Fear units, we believe that the FSI test will indicate whether this technology will be effective at Cape Fear. We are happy to provide you and your staff more detail about our plans and the test results.

Progress Energy Service Company, LLC
P.O. Box 1551
Raleigh, NC 27602

We appreciate the excellent work of the Department staff, particularly those in the Air Quality and Water Quality divisions, who support our efforts to complete the projects in a timely manner to assure compliance with the Act's requirements. We look forward to continuing our positive working relationship to facilitate fulfillment of the Company's obligations with this important law.

Please don't hesitate to contact me at (919) 546-3775 if you have any questions.

Sincerely,

Caroline Choi
Director, Energy Policy and Strategy

Progress Energy Carolinas, Inc. (PEC)
North Carolina Clean Smokestacks Act
Calendar Year 2006 Progress Report

On June 20, 2002, North Carolina Senate Bill 1078, also known as the "Clean Smokestacks Act," was signed into effect. This law requires significant reductions in the emissions of nitrogen oxides (NOx) and sulfur dioxide (SO_2) from utility owned coal-fired power plants located in North Carolina. Section 9(i), which is now incorporated as Section 62-133.6(i) of the North Carolina General Statutes, requires that an annual progress report regarding compliance with the Clean Smokestacks Act be submitted on or before April 1 of each year. The report must contain the following elements, taken verbatim from the statute:

1. A detailed report on the investor-owned public utility's plans for meeting the emissions limitations set out in G.S. 143-215.107D.
2. The actual environmental compliance costs incurred by the investor-owned public utility in the previous calendar year, including a description of the construction undertaken and completed that year.
3. The amount of the investor-owned public utility's environmental compliance costs amortized in the previous calendar year.
4. An estimate of the investor-owned public utility's environmental compliance costs and the basis for any revisions of those estimates when compared to the estimates submitted during the previous year.
5. A description of all permits required in order to comply with the provisions of G.S. 143-215.107D for which the investor-owned public utility has applied and the status of those permits or permit applications.
6. A description of the construction related to compliance with the provisions of G.S. 143-215.107D that is anticipated during the following year.
7. A description of the applications for permits required in order to comply with the provisions of G.S. 143-215.107D that are anticipated during the following year.
8. The results of equipment testing related to compliance with G.S. 143-215.107D.
9. The number of tons of oxides of nitrogen (NOx) and sulfur dioxide (SO_2) emitted during the previous calendar year from the coal-fired generating units that are subject to the emissions limitations set out in G.S. 143-215.107D.
10. The emissions allowances described in G.S. 143-215.107D(i) that are acquired by the investor-owned public utility that result from compliance with the emissions limitations set out in G.S. 143-215.107D.
11. Any other information requested by the Commission or the Department of Environment and Natural Resources.

Information responsive to each of these report elements follows. The responses are given by item number in the order in which they are presented above.

1. **A detailed report on the investor-owned public utility's plans for meeting the emissions limitations set out in G.S. 143-215.107D.**

Under G.S. § 143-215.107D(f), "each investor-owned public utility...may determine how it will achieve the collective emissions limitations imposed by this section." PEC originally submitted its compliance plan on July 29, 2002. Appendix A contains an updated version of this plan, effective April 1, 2007. We continue to evaluate various design, technology and generation options that could affect our future compliance plans.

2. **The actual environmental compliance costs incurred by the investor-owned public utility in the previous calendar year, including a description of the construction undertaken and completed that year.**

In 2006, Progress Energy Carolinas, Inc. incurred actual capital costs of $272,819,000.

Asheville

We successfully placed in service the wet scrubber on Asheville Unit 2 in May 2006. A significant amount of work was performed at the Asheville plant in 2005 and 2006 in order to accomplish this milestone. This work included the installation of electrical power and control cables and circuits, piping, pumps, valves, oxidation air compressors, instruments and controls, agitators, absorber tower outlet hood, spray headers, trays and other tower internals. Work efforts also included completing ductwork from the precipitator to the scrubber tower and from the scrubber tower to the stack. The stack liner was connected in 2006. Mechanical and electrical work for the Unit 1 SCR was completed in preparation for placing the SCR into service in spring 2007.

Lee

We completed procurement and installation of the low-NOx burners for Unit 2, placing them in service in 2006. We also completed design, procurement and installation of the Rotamix equipment for NOx control at Unit 3. Construction activities related to Unit 3 Rotamix concluded in 2006, with operational status expected in early 2007.

Mayo

Contracts for the absorber tower and chimney were executed, along with contracts for the overall engineering and construction. Engineering and design work continued throughout the year, and in mid-October contractors mobilized and began construction activities. Long-lead procurement activities continued in order to ensure timely receipt of equipment on-site in support of a spring 2009 in-service date. During the fourth quarter of 2006, on-site activities focused on excavation and backfill of the scrubber island area, installation of rebar, and placement of base slabs for the auxiliary and startup transformers and bus supports.

Roxboro

Construction work for the scrubber project continued on the four units in 2006. In the Common area, installation of the pipe bridge was completed as well as installation of the equipment in the limestone prep building and gypsum dewatering building. The limestone unloading pit was completed, and work was started on installation of conveyors. The limestone slurry storage tanks, vacuum filter feed tanks, filtrate tanks, service water tanks, blow-down tank, and emergency storage tank were completed as well as the electrical equipment building and the oxidation air blower building. Commissioning began on most of the common systems in support of the Unit 2 outage scheduled for spring 2007. Specific unit construction activities completed include the following:

Unit 1
Significant construction included completion of foundations for the absorber, recycle pump house, primary hydro cyclone tank, and electrical building.

Unit 2
Significant construction included completion of the recycle pump house, final assembly of the absorber discharge to the stack, installation of the induced draft fans and associated flue gas ducting, installation of the hydro cyclone tank, and installation of the transformers. In addition, we started commissioning Unit 2 systems in preparation for the spring 2007 outage during which time the final scrubber tie-in will be completed and the scrubber placed into service.

Unit 3
Significant construction included starting installation of ducting from the existing stack to the new induced draft fans. Construction was started on foundations for duct support steel from the new induced draft fans to the absorber. We continued installation of the absorber and started assembly of the booster fan. Work also started on fabrication of the new flue gas ducting.

Unit 4
Significant construction included completion of the absorber and the start of erection of the recycle pump house and primary hydro cyclone tank.

Wastewater Project
Significant construction activity included starting the wastewater settlement and flush ponds which are scheduled for completion in early 2007. In December, we issued a request for bids on construction of the bioreactor facilities.

Sutton

We completed procurement and installation of the low-NOx burners for Unit 2 and placed them in service during 2006.

3. The amount of the investor-owned public utility's environmental compliance costs amortized in the previous calendar year.

Progress Energy Carolinas, Inc. amortized $140 million in 2006.

4. An estimate of the investor-owned public utility's environmental compliance costs and the basis for any revisions of those estimates when compared to the estimates submitted during the previous year.

Appendix B contains the capital costs incurred toward compliance with G.S. § 143-215.107D through 2006 and the projected costs for future years through 2013. The costs shown are the net costs to PEC, excluding the portion for which the Power Agency is responsible. The estimated total capital costs, including escalation, are currently projected to be between $1.1 and $1.4 billion. The current point estimate is $1.355 billion, a slight decrease from the 2006 cost estimate of $1.362 billion. Prior reports have discussed the cost impact of project scope changes and the impact of significant increases in the cost of materials and labor which have impacted construction projects across the Southeast. These factors continued to impact the cost of the projects during 2006 as indicated by the current estimates for Roxboro, Mayo, and Sutton.

The current estimates also reflect updates to PEC's compliance plan based on the expected performance of the scrubbers at Asheville, Roxboro, and Mayo, current resource plans, current fuel forecasts, and advancements in SO_2 removal technology. Under G.S. § 143-215.107D(f), "each investor-owned public utility...may determine how it will achieve the collective emissions limitations imposed by this section." We regularly review and refine our compliance strategy, weighing a number of factors such as system load projections, expected fuel selection, available control equipment, anticipated performance and costs of emissions controls, and knowledge of and experience with emissions control options.

For example, since our last filing, PEC has continued its evaluation of the potential to use Furnace Sorbent Injection (FSI) technology at our Cape Fear Plant. FSI technology may offer a more cost-effective compliance solution for Cape Fear Plant than the original plan to use scrubber technology. Use of the FSI technology also eliminates the need for a costly wastewater treatment system. We plan to test the FSI technology at PEC's Robinson Unit 1 in fall 2007. Since Robinson Unit 1 is similar in design to the Cape Fear units, the Robinson test will indicate whether the use of this technology will be effective at Cape Fear.

The current compliance plan also contemplates the use of a dry scrubber at Sutton Unit 3. A dry scrubber at that unit represents a more cost-effective compliance solution and also eliminates the need for a costly wastewater treatment system.

Lastly, the compliance plan calls for the use of Rotamix technology with combustion optimization at Lee 3 for NOx control. Prior plans had contemplated the use of rotating opposed-fired air (ROFA) and Rotamix technology at that unit. Engineering studies

completed in early 2006 indicated that combustion optimization combined with the existing Low-NOx burners with overfired-air would provide benefits equivalent to the ROFA and at less cost.

5. A description of all permits required in order to comply with the provisions of G.S. 143-215.107D for which the investor-owned public utility has applied and the status of those permits or permit applications.

Progress Energy Carolinas, Inc. applied for the following permits in 2006:

Asheville Plant

Air Permit

- Notification of 502(b)(10) permit change for SO_3 mitigation system submitted April 5, 2006. Notification that the permit change will be treated as an "off permit change" rather than a 502(b)(10) received June 30, 2006.

Erosion and Sedimentation Control Plan

- Several updates were submitted. Rev J for the construction of the de-mineralized pipe, pump and duct bank was approved in January 2006.

Roxboro Plant

Air Permit

- An update for coal handling and limestone handling was issued on February 9, 2006. An additional update was requested on November 10, 2006. The revised air permit incorporating this revision was issued on March 15, 2007.
- Revisions to address fugitive emissions of hydrogen sulfide from the wastewater treatment system were approved June 23, 2006.

NPDES Permit

- An Authorization to Construct (ATC) for the gypsum settling pond was received March 3, 2006.
- An ATC for the bioreactor was received July 5, 2006.

Erosion and Sedimentation Control Plan
Several updates were submitted:

- Rev K for the haul road, transformer, main plant area wastewater pipe trench and gypsum conveyor foundations was submitted January 18, 2006, and approved February 10, 2006.
- Rev L for burying the wastewater pipeline was submitted April 19, 2006, and approved May 2, 2006.
- Rev M for increased disturbed areas for wastewater pond construction borrow and stockpile area, construction parking area, and construction road widening was submitted June 7, 2006, and approved June 26, 2006.

Mayo Plant

Air Permit

- Construction permit application for the flue gas desulfurization system was submitted May 25, 2006, and the permit was issued July 28, 2006.

NPDES Permit

- Permit modification for wastewater treatment system was received September 14, 2006.

Erosion and Sediment Control Plan

- Rev D for the installation of the flue gas desulfurization system was approved November 9, 2006.

Lee Plant

Air Permit

- A prevention of significant deterioration (PSD) permit for the installation of low NOx burners was approved March 21, 2006.
- Construction permit application for the installation of the Rotamix System for NOx control was submitted April 5, 2006, and was approved June 30, 2006.

NPDES Permit

- A permit application amendment for the Rotamix Urea Injection System on Unit 3 was submitted May 15, 2006. A revised amendment was then submitted October 24, 2006, and approved December 18, 2006.

6. A description of the construction related to compliance with the provisions of G.S. 143-215.107D that is anticipated during the following year.

Asheville

Construction activities will continue in 2007 for the Asheville Unit 1 SCR. Construction activities related to installation of electrical power, control cables and circuits, piping, instruments and controls will occur. Installation of the additional urea-to-ammonia system modifications for Unit 1 SCR is planned. The Unit 1 SCR is scheduled to be operational in spring 2007.

Lee

For Unit 3, we will complete tuning of the Rotamix equipment for NOx emissions control and place the system in service in early 2007.

Mayo

During 2007, construction activities will focus on completion of the chimney and absorber foundations and subsequent erection of the absorber and chimney structures. Concurrently, equipment such as pumps, ball mills, induced draft fans, and conveyors will begin to arrive on-site. In support of major equipment installation, numerous foundations will be placed during 2007 including foundations for the recycle pump house, limestone prep and dewatering buildings. Engineering activities will continue during 2007, with the focus during the latter half of the year shifting from scrubber to wastewater treatment process flows and equipment.

Roxboro

For 2007, significant construction activities planned in the Common area include completion of the limestone conveyors. Specific unit activities are described below:

Unit 1
Significant construction activities planned include construction of Unit 1 absorber, electrical building, primary hydro-cyclone tank, recycle pump house, and induced draft fan foundations.

Unit 2
Significant activities planned include completion of commissioning and startup activities to support the tie-in of the new flue gas duct to the absorber. The scrubber will be placed in service in spring 2007.

Unit 3
Significant construction activities planned include completing the installation of the booster fans, final assembly of flue gas duct from the existing stack to the absorber, and the start of duct insulation. Additionally, work on the foundation for the recycle pump house will start in spring 2007. The expected start-up of the scrubber is spring 2008.

Unit 4
Significant construction activities planned include completion of the absorber internals, installation of all equipment associated with the recycle pump house, and installation of booster fans and associated flue gas ducting from the existing stack to the absorber. Commissioning of Unit 4 equipment in support of scrubber start-up planned for fall 2007 will be completed as well.

Wastewater
Significant construction activities planned for wastewater include completion of the wastewater settlement and flush ponds, construction and commissioning of the bioreactor facilities, and completion of the wastewater piping from the plant.

7. **A description of the applications for permits required in order to comply with the provisions of G.S. 143-215.107D that are anticipated during the following year.**

We appreciate the collaborative efforts the DAQ and DWQ staff has made to assure our construction and installation schedules remain on track. However, the potential for longer permit processing times continues to be a serious concern for future projects. PEC wishes to work collaboratively with the Department to prevent delays from occurring.

The following permit applications and permit approvals are anticipated for 2007:

Asheville Plant

Air Permit

- Current opacity rules pre-date saturated gas streams from wet scrubbers and require representative measurements where condensed water vapor is not present. We will request revisions to the permit and underlying rules for opacity monitoring to include references to current federal regulations that exempt units with wet scrubbers from continuous opacity monitoring requirements.

NPDES Permit

- A request for Sampling Reduction at the internal Outfall 005 (treated FGD wet scrubber wastewater) was submitted January 25, 2007. A response is expected by end of first quarter.

Roxboro Plant

Air Permit

- A permit application for the emergency fire water diesel engine was submitted in January 2007. Authorization to construct the fire water diesel engine has been received; however, the operating permit must be received to support operation of the Unit 2 scrubber during the second quarter 2007.
- Current opacity rules pre-date saturated gas streams from wet scrubbers and require representative measurements where condensed water vapor is not present. We will request revisions to the permit and underlying rules for opacity monitoring to include references to current federal regulations that exempt units with wet scrubbers from continuous opacity monitoring requirements.

Mayo Plant

NPDES Permit

- An ATC request for the wastewater treatment system is expected to be submitted in the first quarter with response desired by the end of the second quarter.
- An ATC request for a new oil/water separator is expected to be submitted by the end of the first quarter with response expected by the end of the third quarter.

Erosion and Sedimentation Control Plan

- Rev F. for the increase in disturbed land (from 35 acres to 98 acres) for the flue gas desulfurization system was submitted January 29, 2007. Additional plan revisions will be necessary as construction plans are developed.

Lee Plant

Air Permit

- A Title V permit application is due to be submitted in July 2007 in accordance with permit requirements associated with the low-NOx burner installation.

8. The results of equipment testing related to compliance with G.S. 143-215.107D.

During 2006, performance testing of the SO_2 scrubbers at Asheville Units 1 and 2 was completed. The testing confirmed that the scrubbers had achieved their performance guarantee of 97% removal efficiency.

During 2006, performance testing of the low-NOx burners (LNBs) at Sutton Unit 2 and Lee Unit 2 was completed. The testing demonstrated that the LNBs met their respective performance guarantees.

9. The number of tons of oxides of nitrogen (NOx) and sulfur dioxide (SO_2) emitted during the previous calendar year from the coal-fired generating units that are subject to the emissions limitations set out in G.S. 143-215.107D.

The total calendar year 2006 emissions from the affected coal-fired Progress Energy Carolinas units are:

NOx 46,501 tons
SO_2 175,226 tons

10. The emissions allowances described in G.S. 143-215.107D(i) that are acquired by the investor-owned public utility that result from compliance with the emissions limitations set out in G.S. 143-215.107D.

During 2006, PEC did not acquire any allowances as a result of compliance with the emission limitations set out in N.C. General Statute 143-215.107D.

11. Any other information requested by the Commission or the Department of Environment and Natural Resources.

There have been no additional requests for information from the North Carolina Utilities Commission or the Department of Environment and Natural Resources since the last report.

Appendix A

Progress Energy Carolinas, Inc's (PEC) Air Quality Improvement Plan Supplement

April 1, 2007

On June 20, 2002, Governor Easley signed into law SB1078, which caps emissions of nitrogen oxides (NOx) and sulfur dioxide (SO_2) from utility owned coal-fired power plants located in North Carolina. Under the law, G.S. § 143-215.107D, PEC's annual NOx emissions must not exceed 25,000 tons beginning in 2007 and annual SO_2 emissions must not exceed 100,000 tons beginning in 2009 and 50,000 tons beginning in 2013. These caps represent a 56% reduction in NOx emissions from 2001 levels and a 74% reduction in SO_2 emissions from 2001 levels for PEC.

PEC owns and operates 18 coal-fired units at seven plants in North Carolina. The locations of these plants are shown on Attachment 1. Under G.S. § 143-215.107D(f), "each investor-owned public utility...may determine how it will achieve the collective emissions limitations imposed by this section."

Nitrogen Oxides Emissions Control Plan

PEC has been evaluating and installing NOx emissions controls on its coal-fired power plants since 1995 in order to comply with Title IV of the Clean Air Act and the NOx SIP Call rule adopted by the Environmental Management Commission (EMC). Substantial NOx emissions reductions have already been achieved (46,500 tons of NOx in 2006 compared with 112,000 tons in 1997) and further reductions will ensure compliance with the Clean Smokestacks Act's 25,000 ton cap in calendar year 2007. This target will be achieved with a mix of combustion controls (which minimize the formation of NOx), such as low-NOx burners and over-fire air technologies, and post-combustion controls (which reduce NOx produced during the combustion of fossil fuel to molecular nitrogen), such as selective catalytic reduction (SCR) and selective non-catalytic reduction (SNCR) technologies.

Attachment 2 details PEC's North Carolina coal-fired electric generating units, their name plate generation capacity, installed NOx control technologies and those planned for installation. As technologies evolve or other circumstances change, a different mix of controls may be selected. Attachment 2 also projects annual NOx emissions on a unit-by-unit basis based on the energy demand forecast and expected efficiencies of the NOx emissions controls employed. This information is provided only to show how compliance may be achieved and is not intended in any way to suggest unit-specific emission limits. Actual emissions for each unit may be substantially different.

Sulfur Dioxide Emissions Control Plan

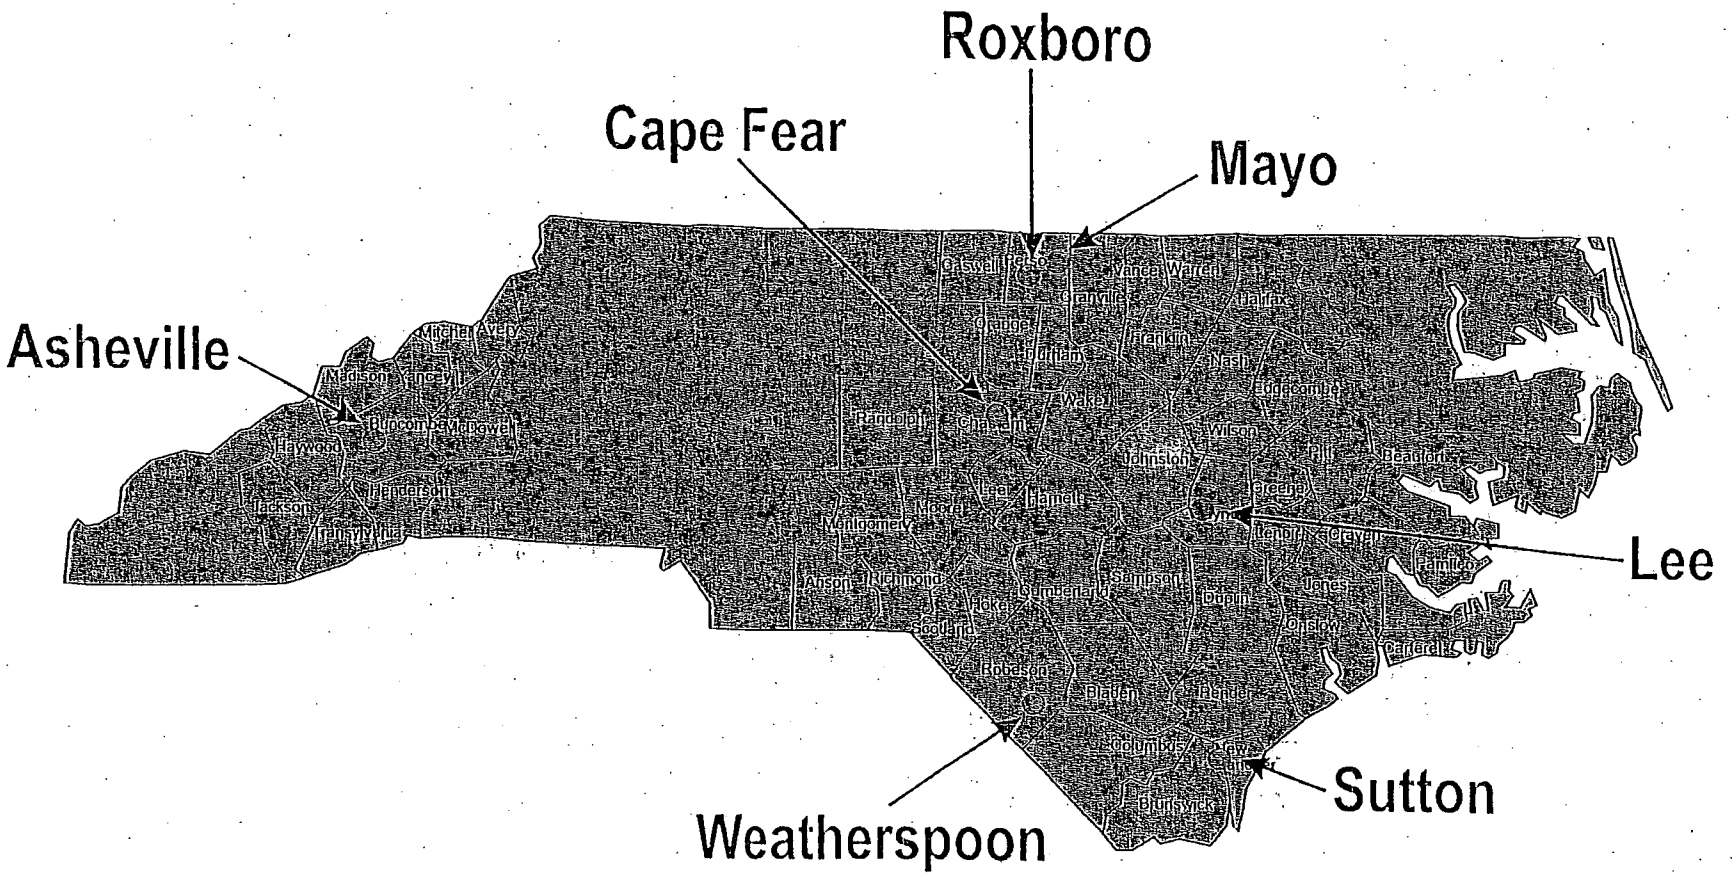
PEC will be installing wet flue gas desulfurization systems (FGD or "scrubbers") to remove 97% of the SO_2 from the flue gas of its Asheville, Roxboro and Mayo boilers. Since our last filing, PEC has continued its evaluation of the potential to use Furnace Sorbent Injection (FSI) technology at our Cape Fear Plant. FSI technology may offer a more cost-effective compliance solution for the Cape Fear Plant than the original plan to use scrubber technology. Use of the FSI technology also eliminates the need for a costly wastewater treatment system. We plan to test the FSI technology at PEC's Robinson Unit 1 in fall 2007. Since Robinson Unit 1 is similar in design to the Cape Fear units, the Robinson test will indicate whether the use of this technology will be effective at Cape Fear. The current compliance plan also contemplates the use of a dry scrubber at Sutton Unit 3. A dry scrubber at that unit represents a more cost effective compliance solution and also eliminates the need for a costly wastewater treatment system.

Wet scrubbers produce unique waste and byproduct streams. Issues related to wastewater permitting and solid waste disposal are being addressed for each site. PEC is treating the scrubber wastewater stream at the Asheville Plant using an innovative constructed wetlands treatment system to ensure compliance with discharge limits. A bioreactor technology will be used for the Roxboro and Mayo Plants.

A contract has been executed with a gypsum product end-user that will construct a facility near the Roxboro Plant to use the synthetic gypsum produced by the Roxboro and Mayo Plants for the manufacture of drywall products. PEC also has entered into an agreement that enables PEC to market and sell synthetic gypsum produced at the Asheville Plant.

Attachment 3 details PEC's North Carolina coal-fired electric generating units, their name plate generation capacity, installed SO_2 control technologies and those planned for installation. As technologies evolve or other circumstances change, a different mix of controls may be selected. Attachment 3 also projects annual SO_2 emissions on a unit-by-unit basis based on the energy demand forecast and expected efficiencies of the SO_2 emissions controls employed. These projections are based on the planned removal technologies and PEC's current fuel and operating forecasts. This information is provided only to show how compliance may be achieved and is not intended in any way to suggest unit-specific emission limits. Actual emissions for each unit may be substantially different.

Attachment 1: Location of PEC's Coal-Fired Power Plants in North Carolina



Attachment 2: PEC's 2007 NOx Control Plan for North Carolina Coal-fired Units

Unit	MW Rating	Control Technology	Operation Date[1]	Projected NOx Tons, 2007[2]
Asheville 1	198	LNB/AEFLGR/SCR	2007	1,304
Asheville 2	194	LNB/OFA/SCR		377
Cape Fear 5	143	ROFA/ROTAMIX		627
Cape Fear 6	173	ROFA/ROTAMIX		930
Lee 1	79	WIR		909

PAGE 20 OF 20

REPORT OF THE PUBLIC STAFF ON COSTS INCURRED AND AMORTIZED BY DUKE ENERGY CAROLINAS, LLC IN COMPLIANCE WITH SESSION LAW 2002-4

Docket No. E-7, Sub 718

May 25, 2007

Section 14 of Session Law 2002-4 ("the Clean Smokestacks Act" or "the Act") requires the Department of Environment and Natural Resources ("DENR") and the Utilities Commission ("Commission") to report, by June 1 of each year, on the implementation of the Act to the Environmental Review Commission and the Joint Legislative Utility Review Committee. The May 30, 2003, report of DENR and the Commission states that the Public Staff will audit the books and records of the investor owned utilities on an ongoing basis in regard to the costs incurred and amortized in compliance with the Act. The Public Staff has undertaken such a review, focusing on the verification of costs related to complying with the Act, the amortization of those costs, and the operating results of emission reduction equipment installed by Duke Energy Carolinas, LLC ("Duke"). This report presents the Public Staff's findings for the twelve months ended December 31, 2006.

I. Compliance Plan Summary

Duke's original plan to install Selective Non-catalytic Reduction ("SNCR") technology to remove NO_x and flue-gas desulfurization technology ("scrubbers") to remove SO_2 to comply with the Act remains practically the same with only minor changes to the compliance schedule and plan. Duke has indicated that it is installing Selective Catalytic Reduction ("SCR") technology at its Marshall Unit 3 to comply with other regulatory requirements for NO_x reductions in the Charlotte region. The new SCR replaces the SNCR equipment that was installed at Marshall Unit 3 to comply with the Act. Duke has redeployed the SNCR equipment from Marshall Unit 3 to Unit 4. The Public Staff is not aware of other similar modifications to the compliance plan.

II. Environmental Compliance Costs

Duke is required by the Act to submit a report to the Commission and to DENR on or before April 1 of each year containing its actual environmental compliance costs incurred during the previous calendar year. As defined by G.S. 62-133.6(a)(2), "environmental compliance costs" include only capital costs.

In its Compliance Plan Annual Update for 2007 ("2007 Compliance Update"), Duke reported that its actual environmental compliance costs in calendar year 2006 were $427,984,429. The cumulative environmental compliance costs incurred by Duke through 2006 were $901,380,056, as follows:

Year 2001	$ 692,433
Year 2002	1,024,223
Year 2003	18,424,921
Year 2004	106,834,479
Year 2005	346,420,000
Year 2006	427,984,429
Total	$901,380,485

Duke's expenditures to date involve emission reduction technologies at its Allen, Belews Creek, Buck, Cliffside, Dan River, Marshall, and Riverbend facilities. Environmental compliance costs were incurred primarily for engineering, equipment procurement, contracting, construction, and field performance testing.

As part of its review, the Public Staff requested information from Duke on the project costs, invoices documenting costs, and the purpose of the costs. Duke provided project cost sheets delineating actual project costs by year into the following categories: (1) direct labor costs; (2) labor loads; (3) contract costs; (4) material costs; (5) overhead costs; and, (6) other costs. These costs are as follows:

Direct Labor	$ 4,579,146
Labor Loads	1,306,856
Contracts	407,124,522
Materials	1,419,497
Overheads	213,822
Other	13,340,586
Total	$427,984,429

The project cost sheets were supported by project detail reports that incorporated all expenditures for a particular category or group. The Public Staff selected invoices in each category from the detailed spreadsheets and requested Duke to provide specific information on the selected costs. The Public Staff also had discussions with Duke personnel to gain a better understanding of the cost items charged to each specific project. Duke provided documentation to support each selected cost.

Duke has estimated its environmental compliance costs at $1,965,260,200, as set forth on Exhibit C in its 2007 Compliance Update, compared to an estimate of $1,731,510,400 filed as part of Duke's 2006 update. The 2007 projection represents an increase of $465,260,200 or 31% over Duke's original estimate of $1,500,000,000, as set forth in G.S. 62-133.6(b). According to Duke personnel, several factors have contributed to the increase in the estimate, including an industry-wide ramp-up of similar environmental compliance work nationwide and its effect on labor availability, and increases in the prices for materials.

Duke is using third party verification to ensure that its fixed price estimates for each project are consistent with market prices. The Public Staff will review the

verifications and will continue to monitor the factors causing increases in the environmental compliance cost estimates.

III. Amortization of Costs

In Section 9 of the Act [G.S. 62-133.6(b)], the investor owned utilities are allowed to accelerate the recovery of their estimated environmental compliance costs over a seven-year period, beginning January 1, 2003, and ending December 31, 2009. The statute requires that a minimum of 70% of the environmental compliance costs be amortized before December 31, 2007, when the rate freeze period expires. In Duke's case, this amount is $1,050,000,000. The annual levelized amount is $214,285,714. The maximum amount that can be amortized in any given year is 150% of the annual levelized environmental compliance costs or $321,428,000.

Using the protocols established by the Act and subsequent Commission orders, Duke reported that its environmental compliance costs amortization for 2006 was $225,236,000. The Public Staff reviewed Duke's quarterly amortization filings and supporting journal entries and concluded that the amounts appear to be accurate. The cumulative amortization to date is $862,665,142.

IV. Contracts

No contracts were reviewed during this audit period.

V. Site Inspections

On May 8, 2007, the Public Staff conducted an inspection of Duke's Marshall Steam Station in Mooresville, North Carolina. All but one of the scrubbers were completed and operational. The remaining scrubber is scheduled for tie-in later by the end of May. All of the related facilities (reagent storage and processing, wastewater disposal system, and byproduct removal) for SNCRs and scrubbers were installed and operational. Once the remaining scrubber is brought online, all of the work intended for the Marshall Steam Station to comply with the Act will have been completed.

The Public Staff will continue to inspect other facilities as Duke implements its compliance plan.

REPORT OF THE PUBLIC STAFF ON COSTS INCURRED AND AMORTIZED BY PROGRESS ENERGY CAROLINAS, INC. IN COMPLIANCE WITH SESSION LAW 2002-4

Docket No. E-2, Sub 815

May 25, 2007

Section 14 of Session Law 2002-4 ("the Clean Smokestacks Act" or "the Act") requires the Department of Environment and Natural Resources ("DENR") and the Utilities Commission to report, by June 1 of each year, on the implementation of the Act to the Environmental Review Commission and the Joint Legislative Utility Review Committee. The May 30, 2003, report of DENR and the Commission states that the Public Staff will audit the books and records of the investor owned utilities on an ongoing basis in regard to the costs incurred and amortized in compliance with the Act. The Public Staff has undertaken such a review, focusing on the verification of costs related to complying with the Act, the amortization of those costs, and the operating results of emission reduction equipment installed by Progress Energy Carolinas, Inc. ("PEC"). This report presents the Public Staff's findings for the twelve months ended December 31, 2006.

I. Compliance Plan Summary

PEC's original plan to install Selective Catalytic Reduction ("SCR") technology to remove NO_x and flue-gas desulfurization technology ("scrubbers") to remove SO_2 to comply with the Act, remains practically the same with minor changes being made to the compliance schedule and plan.

The scrubber at Asheville Unit 2 was placed into operation in May 2006. The SCR on Asheville Unit 1 is expected to be online in 2007. The Roxboro (Units 1, 3, and 4) and Mayo scrubber construction projects continue with substantial work being done at both facilities. The scrubber for Roxboro Unit 2 started operation in May 2007.

Lee Unit 2 and Sutton Unit 2 initiated operation of low NOx burners in 2006. Lee Unit 3 is expected to begin operation of a "Rotamix" system in 2007.

PEC is also looking into installing Furnace Sorbent Injection (FSI) technology that promises a lower cost means of SO_2 removal. PEC indicates that testing of similar equipment at its Robinson facility in South Carolina will affect its decision to pursue FSI technology rather than scrubbers at the Cape Fear units.

II. Environmental Compliance Costs

PEC is required by the Act to submit a report to the Commission and to DENR on or before April 1 of each year containing the actual environmental compliance costs

incurred during the previous calendar year. As defined by G.S. 62-133.6(a)2, "environmental compliance costs" include only capital costs.

In its calendar year 2006 Progress Report ("2006 Report"), PEC reported that its actual environmental compliance costs in calendar year 2006 were $272,819,398. The cumulative environmental compliance costs incurred by PEC through 2006 are $560,410,636, as follows:

Year 2002	$ 1,391,731[1]
Year 2003	26,604,199
Year 2004	78,321,742
Year 2005	181,273,566
Year 2006	272,819,398
Total	$560,410,636 [2]

PEC's expenditures to date involve emission reduction technologies at its Asheville, Mayo, Roxboro, Sutton, and Lee facilities. Environmental compliance costs were incurred for project studies and investigations, engineering, contracting, construction, and equipment acquisition.

As part of its review, the Public Staff requested information from PEC on the project costs, invoices documenting costs, and the purpose of the costs. PEC provided project cost sheets delineating actual project costs by year into the following categories: (1) company labor costs; (2) materials costs; (3) outside services costs; (4) burdens; and (5) other costs. These costs are as follows:

Company Labor	$ 2,964,099
Material	128,130,618
Outside Services	126,479,796
Labor Loads/Overheads	4,877,740
Other	10,367,145
Total	$272,819,398

The project cost sheet was supported by detailed spreadsheets for a particular category. The Public Staff selected invoices from the detailed spreadsheets and

[1] Per Appendix B, costs for 2002, 2003, and 2004 are slightly different from the costs reported for those years in previous reports. For 2004, a majority of the difference relates to a Company adjustment to include Asheville wastewater treatment (WWT) costs in the FGD line items for Asheville. In 2005, PEC began reporting WWT project costs separately.

[2] PEC's estimated and reported environmental compliance costs exclude certain costs attributable to the portions of its Mayo and Roxboro facilities that are owned by the NC Eastern Municipal Power Agency (NCEMPA). According to PEC's FERC Form No. 1 for 2005, PEC entered into an agreement with NCEMPA in 2005 to limit its aggregate cost associated with PEC's environmental compliance costs to approximately $38,000,000. In a November 2, 2006, filing with the Commission in this docket, PEC stated that its estimated compliance costs have now further increased and that the $37.9 million cap is $29.1 million less than NCEMPA's full ownership share of the total Clean Smokestacks costs.

REVISED

requested PEC to provide specific information on the selected costs. The Public Staff has had discussions with PEC personnel regarding the cost items charged to projects. PEC has provided documentation to support the selected costs.

PEC has estimated its environmental compliance costs at $1,354,577,000, as set forth on Appendix B in its 2006 Report. This represents an increase of $541,577,000 or 66.6% over PEC's original estimate of $813,000,000, as set forth in G.S. 62-133.6(b).

According to PEC personnel, several factors continue to contribute to the increase in the estimate, including significant increases in the price of skilled labor and materials, increases in equipment costs due to the limited number of suppliers available, and adjustments of future costs based on actual costs of projects already completed or substantially completed.

PEC has previously cited its decision to change the scrubber technology on its units from a dry scrubber to a wet scrubber. This decision has further increased the costs because of the need for wastewater treatment. In its 2006 Report, PEC has indicated that it is now considering a dry scrubber for Sutton Unit 3, and that this represents a more cost effective compliance solution. While no expenditures have been made to date on developing the scrubber for Sutton Unit 3, the Public Staff understands that unit specific criteria, system-wide emission targets, existing scrubber performance, and costs are all factors involved in the decision-making process. The Public Staff will continue to monitor this development.

III. Amortization of Costs

In Section 9 of the Act [G.S. 62-133.6(b)], the investor owned utilities are allowed to accelerate the cost recovery of their estimated environmental compliance costs over a seven-year period, beginning January 1, 2003, and ending December 31, 2009. The statute requires that a minimum of 70% of the environmental compliance costs be amortized before December 31, 2007, when the rate freeze period expires. In PEC's case, this amount is $569,100,000. The annual levelized amount is $116,142,857. The maximum amount that can be amortized in any given year is 150% of the annual levelized environmental compliance costs or $174,214,285.

Using the protocols established by the Act and subsequent Commission orders, PEC reported that its environmental compliance costs amortization for 2006 is $140,000,000. The Public Staff has reviewed PEC's quarterly amortization filings, as well as the journal entries recorded, and concluded that the reported amounts appear to be accurate. The cumulative amortization to date is $535,218,808.

IV. Contracts

No contracts were reviewed during this audit period.

V. Site Inspections

On May 21, 2007, the Public Staff conducted a site inspection of PEC's Mayo and Roxboro facilities in Person County, North Carolina. Significant construction is occurring at both facilities. Roxboro Unit 2 is now being scrubbed, with gypsum being temporarily trucked to a holding area until the wallboard facility is completed. The wallboard facility will take ownership of the gypsum once it is conveyed across the intake canal. Most of the other support equipment common to all scrubbers is in place and the remaining units will be placed in service as each unit enters a scheduled outage period over the next two years.

With respect to the Mayo facility, foundation work is progressing on the scrubber itself, the building housing the equipment, and the stack. Construction on limestone handling and gypsum removal facilities has not yet started. PEC plans to truck limestone and gypsum to and from the Mayo facility to the Roxboro facility.

It is the intent of the Public Staff to continue inspections of other coal-fired generating facilities as PEC continues to install emission reduction equipment in its boiler units.

2007

ENVIRONMENTAL REVIEW COMMISSION

DECEMBER 19, 2007

MINUTES

MINUTES
ENVIRONMENTAL REVIEW COMMISSION
December 19, 2007

The Environmental Review Commission met Wednesday, Wednesday, December 19, 2007 at 9:30 a.m. in Room 544 of the Legislative Office Building. Co-Chairperson Charlie Albertson presided.

Members present were Co-Chairperson Albertson, Co-Chairperson Lucy Allen, Co-Chairperson Pryor Gibson, Senator Katie Dorsett, Senator A. B. Swindell, Representative Pricey Harrison, Senator Eleanor Kinnaird, Representative Ruth Samuelson, Representative Edith Warren and Representative Larry Womble. Staff present were Commission Counsel George Givens, Assistant Counsel Jeffery Hudson, Assistant Counsel Jennifer McGinnis, Assistant Counsel Susan Iddings, Commission Analyst Jennifer Mundt, Research Assistant Mariah Matheson and Commission Clerk Jessica Kozma Bennett.

A meeting notice was distributed to staff, members and outside parties via regular mail and electronically and is included as an attachment in these minutes as **Exhibit A**. The meeting agenda and visitor's registration sheets are attachments to these minutes and referred as **Exhibit B** and **Exhibit C**.

Co-Chairperson Albertson called the meeting to order at 9:40 a.m. and welcomed members after dealing with technical issues with the microphones. Senator Albertson then called on Commission Counsel Givens to give an overview of the day's agenda. Mr. Givens began noting a ready only packet **(Exhibit D)** and said that the agenda was largely self-explanatory. Read only reports, he said, are held for future presentations. He then said that minutes were distributed for members and would be voted on that day **(Exhibit E).**

Continuing to review the day's agenda, Mr. Givens noted that Item Five was a follow up on the drought following an extensive series of presentations on the drought at the October 31 meeting. In Item 6, the Hazardous Waste management presentation, Mr. Givens noted that the most important part would be the transfer of the number of sites to other areas. He continued saying there were two reports on legislative initiatives in recent years, including a Title Five Air Quality Program. Mr. Givens announced that the first of five Water Allocation Public Hearings was scheduled for December 21 in Charlotte. He also noted two meetings in Asheville January 9 and 10, on for Water Allocation and another for House Bill 1756 regarding the construction on steep slopes. He then briefly reviewed the remainder of the agenda and the meeting moved to Agenda Item Four.

Co-Chairperson Gibson asked Mr. Givens for a 30-second review of the Water Allocation Public Hearing December 21. Mr. Givens said he would look at how many would show up, then hopefully form a colloquy. It is Mr. Givens then said it was not his. intention to have people speak in the order they arrive but to beckon as many ideas from the public as possible. Co-Chairperson Gibson followed up asking how the public was

informed of the meeting. Mr. Givens said that he had been contacted by the media and that the meeting was not arranged as a media event but for the public. Co-Chairperson Gibson then asked if there was a second date chosen for the January 10 Steep Slope Public Hearing in Asheville.

Co-Chairperson Albertson then asked the Commission for approval of the October minutes. With no discussion that minutes were approval through unanimous vote.

Co-Chairperson Albertson then called on Mr. Thomas Fransen, Chief of the River Basin Management Section of the Division of the Division of Water Resources of DENR. Mr. Fransen is called to give an update on current drought conditions in light of current conservation efforts and rain events. Although a copy of Mr. Fransen's presentation was not given to member or the audience, a copy of the presentation is included for reference in the attachments and is noted as **Exhibit F.**

Mr. Fransen opened his presentation showing current drought conditions statewide. A rain event at the end of October, he said did not give the State the relief needed from the drought, "I wished our recent inch and a half of rain helped us but it didn't," he said. Despite the rain, the State's drought conditions had returned to the same severity as before the rain within weeks following. He showed how the drought had move eastward and not the entire state shared the same intensity of drought. The past 180 days were the driest on record in 80 years, he said, continuing that this was a long-term deficit which greatly impacts water supplies.

He then moved to a slide showing steam- and groundwater levels, noting that they are all in exceptional drought conditions. Mr. Fransen said that there had been slight improvement of steam- and groundwater levels in the West but not enough improvement to alleviate the drought.

Following the groundwater slide Mr. Fransen discussed public water supply systems statistics. Of the 292 public water supply systems in North Carolina 163 are under voluntary conservation and 173 are under mandatory conservation. None were considered in "emergency," but there were 800,000 people living in Tier 1 (extreme drought) areas. At the December 20 meeting there were 14 public water systems classified as Tier 1. Senator Kinnaird asked if Charlotte was Tier 1. Mr. Fransen replied that Charlotte had more than a 100 day water supply. Senator Dorsett asked about Greensboro. Mr. Fransen said that he had been in communication with the City but did not personally what Greensboro's water supply was. Had Greensboro have only 30 days of water supply remaining it would be on the list, but purchasing water may have helped Greensboro remain off the Tier 1 list. He also explained the fluidity of the list, some systems one the list currently were not in the list before.

Mr. Fransen said that forecast conditions were bleak and that we were in an La Nina effect, meaning conditions will continue or worsen thorugh the winter. Again, the far west may potentially see some slight relief later but the rest of the state will remain the same.

He then spoke of Army Corps of Engineers projects at Falls Lake, noting that Falls Lake is running at nine percent of normal flow, and added that Jordan and Scott lakes are down but not as severely as Falls Lake. Information from the Corps shows that water at Falls Lake—if current conditions continue—will be depleted of water by April.

Co-Chairperson Albertson called for questions and asked what will happen in a community that falls into emergency situation and what constitutes an emergency. Mr. Fransen answered that emergency is a function and that the only system in emergency was Siler City. In Siler City, water was trucked in for industry. Current thinking on the emergency situations, he said, was to solve it when an emergency happened.

Co-Chairperson Albertson followed up and asked if we are doing as much as we can. Mr. Fransen answered that we were. Co-Chairperson Albertson then recognized Senator Kinnaird.

Senator Kinnaird asked if the State was likely to start looking at statewide programs to save wastewater, citing a current program in California.

Mr. Fransen answered that the drought is starting to make people rethink how water is used in North Carolina. North Carolina has two issues: one, how to get through the current crisis and two) how do we deal with the longterm, he said.

Senator Dorsett was then recognized and asked if there was anything we could do at the state level to encourage those in Tier 1 status to be more serious about conservation.

Mr. Fransen said that he had worked with municipalities to encourage more conservation, including incorporating outreach with the League of Municipalities.

Representative Allen then asked if the state is working with private water supply companies. Mr Fransen said that such companies fall under the control of the North Carolina Utilities Commission and that there had been communication.

Senator Kinnaird questioned rates for water use. Mr. Fransen said that there is a downside to conservation and that there is a proposed drought rate structure to more appropriately charge those conserving. Sen. Kinnaird added that she knew of a rate structure similar to the suggested drought structure.

Co-Chairperson Albertson thanked Mr. Fransen and recognized Elizabeth W. Cannon, Chief of the Hazardous Waste Section of the Division of.Waste Management with DENR. A report entitiled "Resident Inspector Program, 2007 Annual Report" was distributed to Commission members and is attached to the minutes as **Exhibit G.**

Ms. Cannon opened her remarks thanking the Commission. She said she would discuss the hazardous waste report distributed to members and also the implementation status of SL 2007-107, which are recommendations from the Governor's Task Force on Hazardous Materials. The Resident Inspector Program began in 1991 to ensure a high rate of compliance among hazardous waste storage facilities by subjecting those facilities to frequent and unannounced inspections. On average, she said, a facility may be inspected two to six times a month depending on the "size and complexity" of the operation. Inspections are solely for commercial facilities that manage hazardous waste from other companies.

She continued that when an inspection occurs the inspector looks at not only compliance with hazardous waste regulation but also compliance with other regulatory programs, including workplace safety, transportation, air omissions and wastewater discharge. If an inspector finds a violation other than for hazardous waste regulation, proper authorities, such as OSHA, are altered.

There are ten facilities across North Carolina, she continued, consisting of four in the Charlotte area, three in the Greensboro-Triad area, one in metropolitan Raleigh, one in Granville County and one in Robeson County. The largest facility is in Reidsville and

receives more than half of all facilities combined. In all, some 6 million gallons of hazardous waste is processed annually by these ten facilities, or 26000 tons. Looking over the past two years there is a decline in processed waste: 3 million less gallons were processed in 2006-2007 as were in 2005-2006.

The program is staffed by a supervisor, four inspectors and an administrative assistant, she continued and is funded through fees from the facilities totaling $295,000 per year. In the past year there were two notices of violation at the ten facilities, 2 compliance order and fix corrected deficiencies. The primary order was issued to the EQ Hazardous Waste facility in Apex based on conditions that preceded a fire in March of 2007. Penalties of roughly $500,000 settled for more than $400,000, and EQ has voluntarily agreed to withdraw permit for facility. The facility is currently in the "cleaning" process and Ms. Cannon said she expects EQ to have a clean closure.

She then moved to the implementations of S. L. 2007-107 and explained the sections major provisions, including requiring facilities to have two new types of financial assurance to cover offsite sampling and onsite cleanup should a catastrophic event occur. Also because of the new law, the State is currently working with facilities and local governments to better communication between the two, facilities have to notify residents within a quarter-mile of the facilities existence, 24-hour security is required, and daily inventory information must be kept in a off-site location.

Albertson asked if Ms. Cannon felt good about the implementation of new regulation. Ms. Cannon replied that she did. Senator Dorsett was then recognized and asked what happens to funds raised from violations. Ms. Cannon replied that they go to school district as pursuant to State law.

Co-Chairperson Albertson thanked Ms. Cannon and then recognized Dexter R. Matthews, director of the Division of Water Management with DENR, to discuss a recent report on the Inactive Hazardous Sites Program. The report was distributed to Commission members and is included with the minutes as **Exhibit H.** A second report entitled "Annual Report to the North Carolina General Assembly: The N. C. Brownfields Program" was also distributed to members and is included in the minutes as **Exhibit I.**

Mr. Matthews began his discussion saying that he had two reports and that the majority of his discussion would focus on the reorganization within his department. He opened saying the prior presentation on the ground "really" focused the issue "throughout North Carolina so far as groundwater contamination" is concerned. He said the State needed to move as quickly as possible for groundwater contamination cleanup and that 50 percent of North Carolinians get their drinking water from groundwater sources.

Returning to the discussion of reorganization, Mr. Matthews said he was directed late last year to combine with the Division of Water Quality because of limited resources in the two divisions and crossed-remediation programs. The consolidation occurred February 20. Formerly both divisions as well as others may have remediation authority over a given site, including the Superfund. Divisions could have duplicate sites.

As a result of the consolidation, 16 positions and 300 cases were transferred from the Division of Water Quality to Waste Management. He continued saying the division on the Brownfields Program to look at new sites and see if they can be development. Such a concentration would run throughout the year.

Even with the consolidation the Division still sees 1200 sites a year for remediation, and those sites have to be handled on a priority basis due to limited

resources. Even so, Mr. Matthews said the reorganization was an "excellent step" and that given the drought and its impact on groundwater.

Co-Chairperson Albertson thanked Mr. Matthews and asked for questions. He recognized Representative Harrison, who asked what program the Department had to test groundwater in areas near schools. Mr. Matthews said such sites are being ranked for priority

Representative Harrison followed up asking if this pertained to all sites, of which Mr. Matthews said no, just for old landfills. The reason, he continued, was because of funding. Currently there is no funding from the EPA for inactive sites and existing money for orphan sites is running out. Mr. Givens asked why 1200 sites are coming in every year, and Mr. Matthews said that sites are taken from a number of sources and that a lot of sites come from real estate transactions.

Co-Chairperson Albertson asked if he saw 1200 sites coming in year after year, of which Mr. Matthews replied he did as numbers from recent years have remained consistent.

Representative Gibson asked if there is any way to model what kind of resources needed and costs needed for increase in sites. Mr. Matthews said a plus is that the Division can focus on the number of sites coming in, but as for costs to remediate sites is not established. Sites are being remediated on a priority basis, he continued. Representative Gibson followed up asking if budgetary considerations were made for the reorganization. Mr. Matthews replied that there were considerations.

Representative Allen then gave an example of a site in Franklin County of a country store when a gas line was torn. When investigated the store had an underground leak in a 5,000-gallon tank. She noted that there is no money to deal with these situations.

With limited discussion among member Co-Chairperson Albertson thanked Mr. Matthews. Mr. Givens then told the Commission that Waste Industries and Blackbear Landfill had recently filed a suit against the State in Wake County Superior Court and a report would be given to the Commission.

Edythe M. McKinney was recognized by Co-Chairperson Albertson to discuss the One-Stop Permit Assistance Program regarding environmental permits taking more then 90 days. She began saying a complete report would be ready in March. Today, she said, would be a progress report. A brochure was then distributed to Commission members and is in the minutes as **Exhibit J.** She explained that the brochure was to capture the attention of resident and to outline that "if you are doing certain things you need a permit."

An overview of the program was also distributed and is included in the Minutes as **Exhibit K. Exhibit L** shows permit issued through the program for the years of 2006 and 2007. She asked the Commission to understand that the program is new and getting an overview of the program will take time. But, in 2007 there was a 12 percent increase in permits—roughly 1200—with the vast majority in stormwater permits and sedimentation and erosion control. Ms. McKinney said that program began as a coastal program but has spread through the State.

Things that relate to the overall success of the program included that processing time had reduced and during the internal process had reduced as well. She noted a stable, consistent staff with the program and that the staff was surveyed on how to do a better job. Responses included adding engineers and adding another assistant.

Co-Chairperson Albertson called for questions among Commission members. Representative Samuelson commented that while serving as a town commissioner in Charlotte additional fees were added for those dragging on permits. Senator Kinnaird suggested that the General Assembly fund a program for all to have access to the One-Stop Program. Senator Kinnaird follow up asking how small businesses afford fees. Ms. McKinney said that the program's permitting did not cover residential homes and would not cover convenience marts.

Representative Harrison commented that she had heard concerns regarding review time from residents in the coastal area and asked when fees would allow for more staff.

Ms. McKinney replied that one issue is whether there is a balance between compliance and permitting. Particularly in the coastal area, she added, there had been a decrease in permits.

Co-Chairperson Albertson thanked Ms. McKinney and then recognized Mr. Keith Overcash, Director of the Division of Air Quality of DENR to discuss the "Title V Air Quality Permit Program Accountability Report," included in these minutes as **Exhibit M**.

Mr. Overcash said that the Division of Air Quality is fee supported and does not receive appropriations from the General Assembly. He then explained that Title V refers to the Clean Air Act of 1990, which put in a permitting program for major facilities with emit 25 tons or more of hazardous air pollutants or 100 tons of regulated pollutants. Authority for the program is statutory, he continued and fees are set by a rules process. Mr. Overcash said that regarding funding there had been a surplus for several years and because of that fees remained stable. Most industries covered under Title V include major utilities, major paper manufacturers and other large chemical users.

Mr. Overcash said there is a one time application fee for a five year permit. Permits last five years and there is not a renewal fee. Industries pay according to a rate of currently $18.10 per ton. He then said there was a potential of deficits due to an increased Consumer Price Index and increases in expenses. Because of the State economy the program's workload as well as regulatory demands are increasing, adding additional financial stress to the program, he added. He continued through his presentation which is included in the Minutes as **Exhibit N.**

Co-Chairperson Albertson thanked Mr. Overcash and asked for questions from the Commission. Hearing

RE: **Notice of Commission Meeting**
Notice of Planning Meeting
Schedule of Future Meetings
Meetings of Interested Parties (605 Working Groups)
Additional Information

COMMISSION MEETING:

The Environmental Review Commission (Commission) will meet at 9:30 a.m. Wednesday 19 December 2007 in Room 544 of the Legislative Office Building in Raleigh.

At this meeting, the Commission will begin or continue studies for which the Commission is responsible, hear reports from State agencies, discuss topics to be considered at future meetings, and attend to other matters. Listed below are potential agenda topics for this meeting and for future meetings. More specific information regarding the agenda for the 19 December meeting of the Commission will be developed at the staff planning meeting discussed below. Commission Staff may publish a revised notice/draft agenda following the staff planning meeting if circumstances permit.

STUDIES

1) Issues related to the franchise of solid waste management facilities by units of local government. (S.L. 2007-550, Sec. 18)

2) Issues related to the transportation of solid waste by rail or barge, including the extent to which regulation of the transportation of solid waste by rail or barge may be preempted by federal law. (S.L. 2007-550, Sec. 18)

3) Issues related to the use of pervious surfaces for vehicle parking areas, including associated costs, impact to the environment of stormwater runoff, and practices of other states with regard to stormwater best management practices. (S.L. 2007-323, Sec. 6.22.(b))

4) Allocation of surface water resources and their availability and maintenance in the State, including issues related to the transfer of water from one river basin to another, the withdrawal of

water for consumptive use, and the accuracy and tolerance of equipment used to measure the flow of water transferred from one river basin to another river basin. (S.L. 2007-518, Sec. 1.(a))

5) Preparation of a revised map entitled "Major River Basins and Sub-basins in North Carolina" as a recommended replacement for the map referenced in G.S. 143-215.22G. The revised map shall define the extent to which any river basin that encompasses any river that flows from another state into North Carolina or that flows from North Carolina into another state extends into an adjacent state. (S.L. 2007-518, Sec. 1.(b))

6) Other studies undertaken by the Commission.

REPORTS *(Report due dates are indicated in parentheses)*

General/Miscellaneous:

7) Annual report on the One-Stop Permit Assistance Program on the number of environmental permits that took more than 90 days to issue or deny, types of permits, reasons for extended processing time, and how the time used to issue or deny the permits compared with projected time provided to the applicant by DENR. (143B-279.12(e)) *(1 October)*

8) Annual report on the findings and recommendations on the success of the express permit and certification review program. (G.S. 143B-279.13(c)) *(1 March)*

9) Annual report on litter enforcement, prevention, and removal efforts. (G.S. 147-12(b)) *(1 March)*

10) Annual report on the evaluation and adjustment of the boundaries of the area served by each Metropolitan Planning Organization. (G.S. 136-202(d)) *(1 November)*

Air Quality:

11) Annual report on the cost of the Title V program. (G.S. 143-215.3A(c)) *(1 November)*

Coastal Management:

12) Annual report on the progress in developing and implementing the Coastal Habitat Protection Plans and reports on the completion or substantial revision of each draft Coastal Habitat Protection Plan. (G.S. 143B-279.8(e) and G.S. 143B-279.8(f)) *(1 September)*

13) Annual report by the Coastal Resources Commission evaluating the impacts on water quality and other environmental impacts from new urban waterfront area development. (S.L. 2004-117, Sec. 4) *(1 October)*

Hazardous Waste Management:

14) Report of Superfund cost share fund expenditures for cleanup of sites on the National Priorities List. (S.L. 1999-237(15.6)(b)) *(Floating, within 30 days of expenditure)*

15) Annual report on the Inactive Hazardous Sites Program (G.S. 130A-310.10) *(1 October)*

16) Annual report on implementation of the Resident Inspectors Program at commercial hazardous waste facilities (G.S. 130A-295.02(m)) *(1 October)*

17) Annual report on the North Carolina Hazardous Waste Management Plan (G.S. 130A-294(i)) *(1 October)*

18) Annual report on the Effectiveness of the Brownfields Property Reuse Act (G.S. 130A-310.40) *(1 October)*

Parks and Recreation / Land Conservation:

** Note: All reports under this heading are being held for presentation at the 18 March 2008 meeting of the Commission.*

Solid Waste:

** Note: All reports under this heading are being held for presentation at the 23 January 2008 meeting of the Commission.*

Water Quality:

19) Annual report on fish kills in the previous year. (G.S. 143B-297.7(c)) *(1 December)*

20) Interim report on the pilot program to streamline the process for the issuance of an improvement permit or an authorization to construct for an on-site subsurface wastewater system in certain counties by authorizing local health departments, authorized agents of DENR, and licensed soil scientists to complete soil and site evaluations in participating counties. (S.L. 2006-136, Sec. 3) *(1 October)*

21) Annual report on the Wastewater Discharge Elimination Program. (S.L. 2001-452, Sec. 2.9) *(15 October)*

22) Annual report on Basinwide Water Quality Management Plans. (G.S. 143-215.8B) *(1 October)*

23) Annual report on the Dry-Cleaning Solvent Cleanup Program. (G.S. 143-215.104U) *(1 October)*

24) Annual report on the status of leaking petroleum underground storage tanks, the State cleanup funds, and the Groundwater Protection Loan Fund. (G.S. 143-215.94M) *(1 September)*

25) Implementation of the Clean Water Management Trust Fund; projects and awarded grants. (G.S. 113-145.6A(a) and S.L. 2002-148, Sec. 3) *(1 December)*

OTHER MATTERS

26) Discussion of issues related to drought.

PLANNING MEETING:

To facilitate development of the agenda for the 19 December meeting of the Commission, to begin planning for subsequent meetings of the Commission, and to receive input from interested persons regarding the work of the Commission, the Commission Counsel will hold an informal planning meeting at **10:00 a.m. on Wednesday 5 December 2007 in Room 605 of the Legislative Office Building**. Persons who wish to participate in the development of the agenda for meetings of the Commission, or who are interested in any matter before the Commission, are invited to attend.

SCHEDULE OF FUTURE MEETINGS:

Below is a schedule of meetings of the Environmental Review Commission for January 2008 through May 2008. **This schedule is tentative and subject to adjustment.** For planning purposes, however, please reserve these dates. This schedule may be modified to allow for out-of-town business meetings or site visits and in the event that it becomes necessary to cancel a scheduled meeting due to hazardous weather conditions. Please note the following:

1. Meetings of the Commission normally begin at 9:30 a.m., often include a lunch break, and run until mid-afternoon. Please plan on meeting from 9:30 a.m. until at least 3:30 p.m. Meetings of the Commission are open to the public.

2. Staff planning meetings normally begin at 10:00 a.m. and adjourn by noon. Staff planning meetings are informal and are open to the public. Commission members are not expected to attend these meetings.

3. The March meeting is anticipated to focus on parks and recreation issues. This meeting may take place over two days at a location outside Raleigh.

4. The 2008 Regular Session is scheduled to begin at 12:00 noon on Tuesday 13 May 2008. The Commission may meet shortly after the beginning of the session to complete ongoing work and to consider any legislative proposals and recommendations and may meet at other times during the legislative session.

Commission Meeting	Location	Staff Planning Meeting	Location
Wednesday 23 January 2008	544 LOB	Friday 11 January 2008	605 LOB
Thursday 14 February 2008	544 LOB	Tuesday 5 February 2008	605 LOB
Tuesday 18 March 2008	***TBD***	Friday 7 March 2008	605 LOB
Thursday 10 April 2008	544 LOB	Friday 28 March 2008	605 LOB
Friday 9 May 2008	544 LOB	Tuesday 29 April 2008	605 LOB
Wednesday 14 May 2008	544 LOB		

MEETINGS OF INTERESTED PARTIES (605 WORKING GROUPS):

The Commission Counsel will hold meetings of interested parties on specific topics as indicated below:

Underground Storage Tank Working Group
2:00 p.m. Monday 17 December 2007 – 605 Legislative Office Building

Public meetings on the scope and direction of the study of allocation of water resources
4:00 p.m. to 7:00 p.m. Thursday 20 December 2007 – Charlotte
4:00 p.m. to 7:00 p.m. Friday 4 January 2008 – Greenville
4:00 p.m. to 7:00 p.m.Wednesday 9 January 2008 – Asheville
4:00 p.m. to 7:00 p.m. Wednesday 23 January 2008 – Raleigh
4:00 p.m. to 7:00 p.m. Thursday 24 January 2008 – Wilmington

Public meeting on the study of issues related to construction on artificial slopes
4:00 p.m. to 7:00 p.m. Thursday 10 January 2008 – Asheville

**Note: Specific locations for all meetings are TBD*

ADDITIONAL INFORMATION:

If you have questions related to the Commission, please feel free to contact the Commission Counsel or other Commission staff at (919) 733-2578.

AGENDA

9:30 a.m. Wednesday 19 December 2007
Room 544 Legislative Office Building
Raleigh, North Carolina

1. Call to order
   Senator Daniel G. Clodfelter, Presiding

2. Introductory remarks by Cochairs *(5 minutes)*
   Senator Daniel G. Clodfelter
   Senator Charles W. Albertson
   Representative Lucy T. Allen
   Representative Pryor A. Gibson

3. Report to the Commission and explanation of agenda items *(10 minutes)*
   George F. Givens, Commission Counsel

4. Approval of the minutes of the 31 October 2007 meeting of the Commission *(2 minutes)*

5. Update on current drought conditions in light of conservation efforts and recent rain events *(15 minutes)*
   Thomas C. Fransen, Chief
   River Basin Management Section, Division of Water Resources, Department of Environment and Natural Resources (DENR)

6. Hazardous waste management *(30 minutes)*
   Annual report on the implementation of the resident inspectors program for commercial hazardous waste facilities including implementation of the amendments to the program made by S.L. 2007-107 (G.S. 130A-295.02(m)) *(10 minutes)*
   Elizabeth W. Cannon, Chief
   Hazardous Waste Section
   Division of Waste Management, DENR

Annual report on the Inactive Hazardous Sites Program including discussion of the reorganization of contaminated sites program in the Department (G.S. 130A-310.10) *(10 minutes)*

Dexter R. Matthews, Director
Division of Waste Management, DENR

Report on the effectiveness of the Brownfields Property Reuse Act (G.S. 130A-310.40) *(10 minutes)*

Dexter R. Matthews, Director
Division of Waste Management, DENR

7. Permitting reports *(15 minutes)*

Annual report on the One-Stop Permit Assistance Program on the number of environmental permits that took more than 90 days to issue or deny, types of permits, reasons for extended processing time, and how the time used to issue or deny the permits compared with projected time provided to the applicant by DENR (143B-279.12(e))

Edythe M. McKinney, Director of the Customer Service Center and
Small Business Ombudsman, DENR

Annual report on the findings and recommendations on the success of the express permit and certification review program (G.S. 143B-279.13(c))

Edythe M. McKinney, Director of the Customer Service Center and
Small Business Ombudsman, DENR

8. Annual report on the cost of the Title V program (G.S. 143-215.3A(c)) *(10 minutes)*

Keith Overcash, Director
Division of Air Quality, DENR

9. Water quality reports *(35 minutes)*

Interim report on the pilot program to streamline the process for the issuance of an improvement permit or an authorization to construct for an on-site subsurface wastewater system in certain counties by authorizing local health departments, authorized agents of DENR, and licensed soil scientists to complete soil and site evaluations in participating counties (S.L. 2006-136, Sec. 3) *(20 minutes)*

Terry L. Pierce, Director
Division of Environmental Health, DENR

Annual report on the Wastewater Discharge Elimination Program (S.L. 2001-452, Sec. 2.9) *(15 minutes)*

Walter "Walt" T. Haven, Head,
Private Water Supply Branch, On-site Water Protection Section,
Division of Environmental Health, DENR

10. Commission discussion and announcements

11. Adjourn

SCHEDULE OF FUTURE MEETINGS:

Below is a schedule of meetings of the Commission for January 2008 through May 2008. This schedule is tentative and subject to adjustment. In particular, the March meeting may take place over two days at a location outside Raleigh in order to focus on parks and recreation matters.

To facilitate development of the agenda for meetings of the Commission and to receive input from interested persons regarding the future work of the Commission, the Commission Counsel holds informal public planning meetings for staff and interested parties. The schedule of these meetings is also set out below.

Commission Meeting	Location	Staff Planning Meeting	Location
Wednesday 23 January 2008	544 LOB	* *Friday 11 January 2008*	*605 LOB*
Thursday 14 February 2008	544 LOB	Tuesday 5 February 2008	605 LOB
Tuesday 18 March 2008	TBD	Friday 7 March 2008	605 LOB
Thursday 10 April 2008	544 LOB	Friday 28 March 2008	605 LOB
Friday 9 May 2008	544 LOB	Tuesday 29 April 2008	605 LOB
Wednesday 14 May 2008	544 LOB		

** Note the time for the staff planning meeting on 11 January 2008 has been changed from **10:00 a.m. to 2:00 p.m.***

MEETINGS OF INTERESTED PARTIES:

The Commission Counsel will hold meetings of interested parties on specific topics as indicated below:

Underground Storage Tank Working Group
2:00 p.m. Monday 4 February 2008

Public Meetings on the Scope, Direction, and Conduct of the Study of Allocation of Water Resources (Water Allocation Study (WAS))

Public Meeting	Location
Thursday 20 December 2007 4:00 p.m. to 7:00 p.m.	Room 280*, Charlotte-Mecklenburg Governmment Cente 600 East 4th Street Charlotte, North Carolina 28202 ** Meeting will move to Room 267 after 5:00 p.m. if additional space is required*
Friday 4 January 2008 4:00 p.m. to 7:00 p.m.	Room 153, Fulford Building Pitt County Community College 1986 Pitt Tech Road Winterville, North Carolina 28590

Wednesday 9 January 2008 4:00 p.m. to 7:00 p.m.	Lecture Room, Simpson Administration Building Asheville Buncombe Technical Community College 340 Victoria Road Asheville, North Carolina 28801
Wednesday 23 January 2008 4:00 p.m. to 7:00 p.m.	Room 544, Legislative Office Building North Carolina General Assembly 300 North Salisbury Street Raleigh, North Carolina 27603
Thursday 24 January 2008 4:00 p.m. to 7:00 p.m.	New Hanover County Public Library 201 Chestnut Street Wilmington, North Carolina 28401

Public Meeting on the Study of Issues Related to Construction on Artificial Slopes

Thursday 10 January 2008 4:00 p.m. to 7:00 p.m.	Lecture Room, Simpson Administration Building Asheville Buncombe Technical Community College 340 Victoria Road Asheville, North Carolina 28801

MEMORANDUM

To: Members of the Environmental Review Commission
From: Jennifer Mundt, Commission Analyst
Re: Reports to the Commission

The following reports have been submitted by the Department of Environment and Natural Resources (DENR) to the Environmental Review Commission (Commission) since the last reports distribution on 27 November 2007. These reports are designated as read only and are attached to this memorandum:

1) Annual report on fish kills in the previous year. 1 December 2007. Statutory Authority: G.S. 143B-297.7(c)).

2) Annual report on the progress in developing and implementing the Coastal Habitat Protection Plans and reports on the completion or substantial revision of each draft Coastal Habitat Protection Plan. 1 September 2007. Statutory Authority: G.S. 143B-279.8(e) and G.S. 143B-279.8(f).

The following report has been submitted by the Department of Transportation to the Commission since the last reports distribution. This report is designated as read-only and is attached to this memorandum:

1) Annual report on the evaluation and adjustment of the boundaries of the area served by each Metropolitan Planning Organization. 1 November 2007. Statutory Authority: G.S. 136-202(d)).

The following reports have been submitted by the Department of Environment and Natural Resources to the Commission and will be distributed in connection with today's agenda as follows:

1) Annual report on implementation of the Resident Inspectors Program at commercial hazardous waste facilities. 1 October 2007. Statutory Authority: G.S. 130A-295.02(m). ***Agenda Item #6***

2) Annual report on the Inactive Hazardous Sites Program. 1 October 2007. Statutory Authority: G.S. 130A-310.10. ***Agenda Item #6***

3) Annual report on the Effectiveness of the Brownfields Property Reuse Act. 1 October 2007. Statutory Authority: G.S. 130A-310.40. ***Agenda Item #6***

4) Annual report on the One-Stop Permit Assistance Program on the number of environmental permits that took more than 90 days to issue or deny, types of permits, reasons for extended processing time, and how the time used to issue or deny the permits compared with projected time provided to the applicant by DENR. 1 October 2007. Statutory Authority: G.S. 143B-279.12(e). ***Agenda Item #7***

5) Annual report on the findings and recommendations on the success of the express permit and certification review program. 1 March 2007. Statutory Authority: G.S. 143B-279.13(c). ***Agenda Item #7***

6) Annual report on the cost of the Title V program. 1 November 2007. Statutory Authority: G.S. 143-215.3A(c). ***Agenda Item #8***

7) Interim report on the pilot program to streamline the process for the issuance of an improvement permit or an authorization to construct for an on-site subsurface wastewater system in certain counties by authorizing local health departments, authorized agents of DENR, and licensed soil scientists to complete soil and site evaluations in participating counties. 1 October 2007. Authority: S.L. 2006-136, Sec. 3. ***Agenda Item #9***

8) Annual report on the Wastewater Discharge Elimination Program. 15 October 2007. Authority: S.L. 2001-452, Sec. 2.9. ***Agenda Item #9***

The following reports have been received and are being held for distribution either as read-only or for presentation at a future meeting of the Commission. If you would like a copy of one of these reports in advance of the next meeting, please contact Jennifer Mundt at (919) 733-2578 or jennifermu@ncleg.net for assistance.

1) *Annual report on the Parks and Recreation Trust Fund, Fiscal Year 2006-2007.* 1 October. Statutory Authority: G.S. 113-44.15(c).

2) *Annual Report on Litter Enforcement, Prevention, and Removal Efforts.* 1 March 2007. S.L. 2006-79, Sec. 15.

3) *2006 Annual Report NC Million Acre Initiative.* 1 October 2007. Statutory Authority: G.S. 113A-241(c)).

Please contact George Givens, Jeff Hudson, Jennifer McGinnis, Jennifer Mundt, or Mariah Matheson at (919) 733-2578 if you have any questions or comments.

North Carolina Division of Water Quality
Annual Report of Fish Kill Events
2007

Division of Water Quality
Environmental Sciences Section
Raleigh, NC

December 2007

Introduction

The investigation of fish kill activity across North Carolina currently involves protocols established by the North Carolina Division of Water Quality (DWQ) in 1996. The protocols were developed with assistance from DWQ Regional Office staff, North Carolina Wildlife Resources Commission biologists, and Division of Marine Fisheries personnel as a means to improve the tracking and reporting of fish kill events throughout the state. Fish kill and fish health investigation data are recorded on a standardized form and sent to the Division's Environmental Sciences Section (ESS) where the data are reviewed and compiled. Data from fish kill investigation forms, laboratory test results and supplemental information sent to the ESS are entered into a central database where the information can be managed, queried and reported. The procedure also requires the notification of appropriate state officials and scientists associated with the investigation of such events. The protocols have proven successful in standardizing reporting methods and enhancing the quality and quantity of information reported from kill events.

Fish kill information is posted weekly from June to November on the ESS website: http://h2o.enr.state.nc.us/esb/Fishkill/fishkillmain.htm. The following report will also be available at this website after submittal.

This document is a summary of fish kill events reported to the DWQ from January to early December, 2007. The report is mandated under Section 4 of Chapter 633 of the 1995 North Carolina General Assembly Session Laws.

2007 Fish Kill Event Summary

Field investigators reported 27 fish kill events from March to October, 2007. Kill events were reported from coastal waters as far west as Haywood County. Kill activity was documented during the year in 10 of the state's 17 major river basins. The ESS records fish kill events when at least 25 fish are affected and the event is confirmed by trained investigators from regional offices and cooperating agencies.

The cumulative fish mortality for all 2007 reports was 137,285 individuals. This figure represents an increase over mortality reported in 2006 but remains far below the peak total reported in 2003 (3.5 million). Mortality counts for individual events ranged from 31 to 100,000. The majority of events were observed in fresh waterbodies, however, the bulk of the year's fish mortality was reported from events occurring in estuarine waters.

• **Total Kill Events for 2007**	**27**
• **Freshwater Kills**	**18**
• **Estuarine Kills**	**9**
• **Cumulative Mortality for 2007**	**137,285**

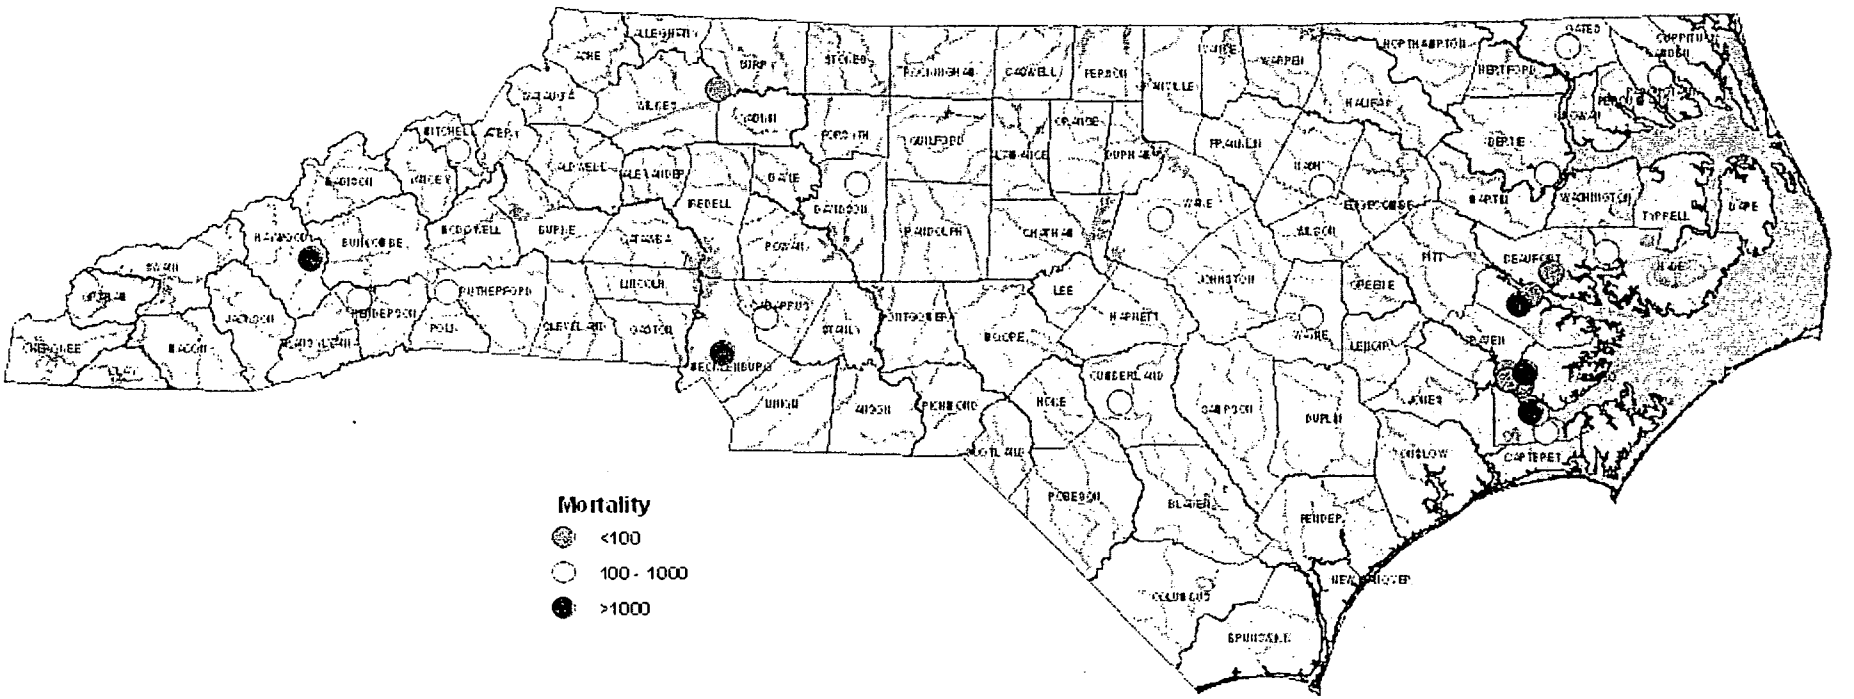
▪ *Freshwater*	*30,100*
• **Report Mortality Range**	**31 to 100,000**
• **River Basins with Activity**	**10 (of 17)**

Figure 1 : Fish Kill Events and Observed Mortality Reported to NCDWQ During 2007



Basin Activity

Investigators reported fish kill events in 10 of the state's 17 major river basins during 2007 (Figure 1, Table 1). Kill activity was most frequent in the Neuse Basin, with all but two of the events in the basin occurring within the lower watershed below New Bern. The lower Neuse, as well as the lower Pamlico estuary, have historically been plagued by adverse environmental factors such as low dissolved oxygen, high water temperatures, and fluctuating salinities. These factors have played a significant role in the frequency of events reported annually from the two areas. Activity in other river basins across the state remained relatively light or absent throughout the 2007 season. Since 1996, annual totals of statewide events peaked in 2001 with 77 reports, but have since decreased and remained relatively low over the last six years (Table 1).

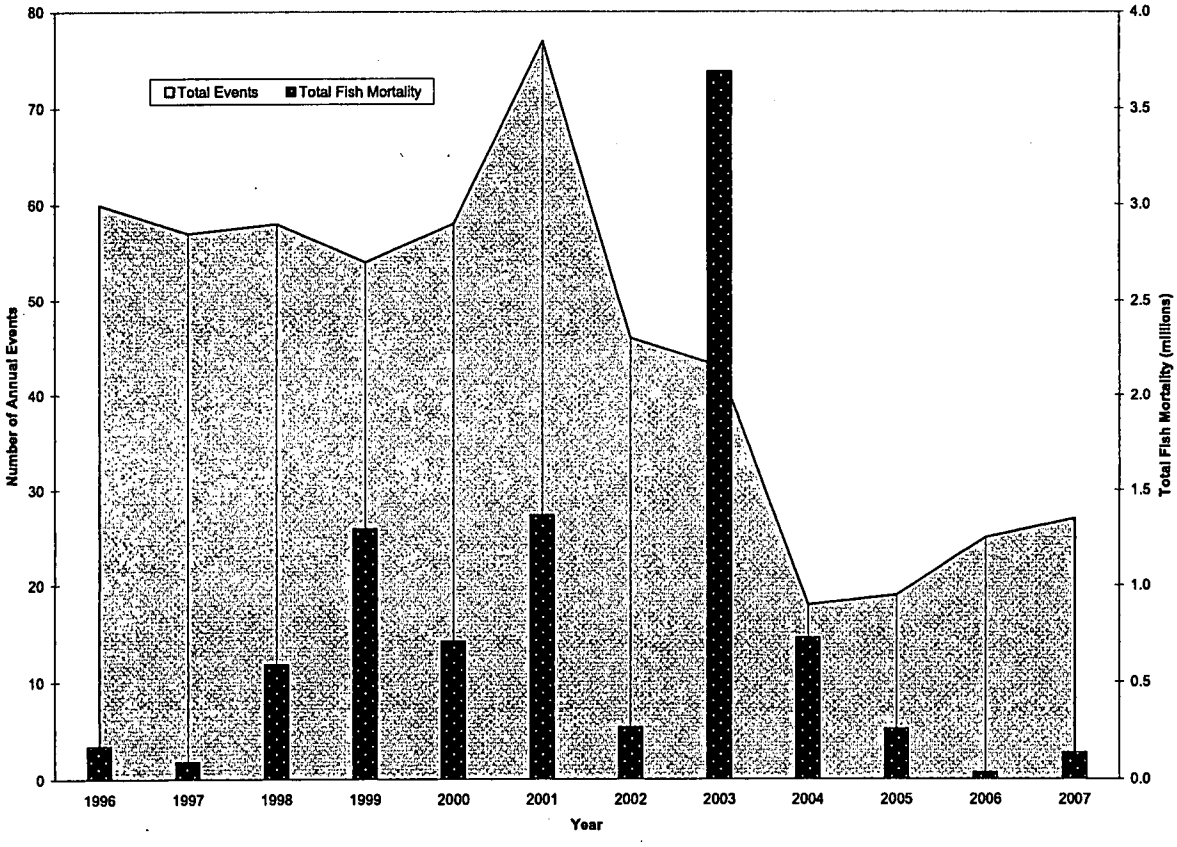
** No fish kill reports have been received from the Hiwassee, Little Tennessee., and Savannah basins since 1996.*

Fish Mortality

The 2007 season produced a fish mortality total of over 135,000 individuals reported in 27 events. (Figure 2). Reported events continued to increase from a low of 18 during 2004, however the 2007 mortality total is one of the lowest since reporting began in 1996 and far below the maximum of 3.6 million observed in 2003. Reports since 1996 have shown that the majority of the annual mortality is often the result of a few events. During 2007 nearly 75% of those fish reported killed were observed in just one event in the Pamlico River watershed near Blounts Bay.

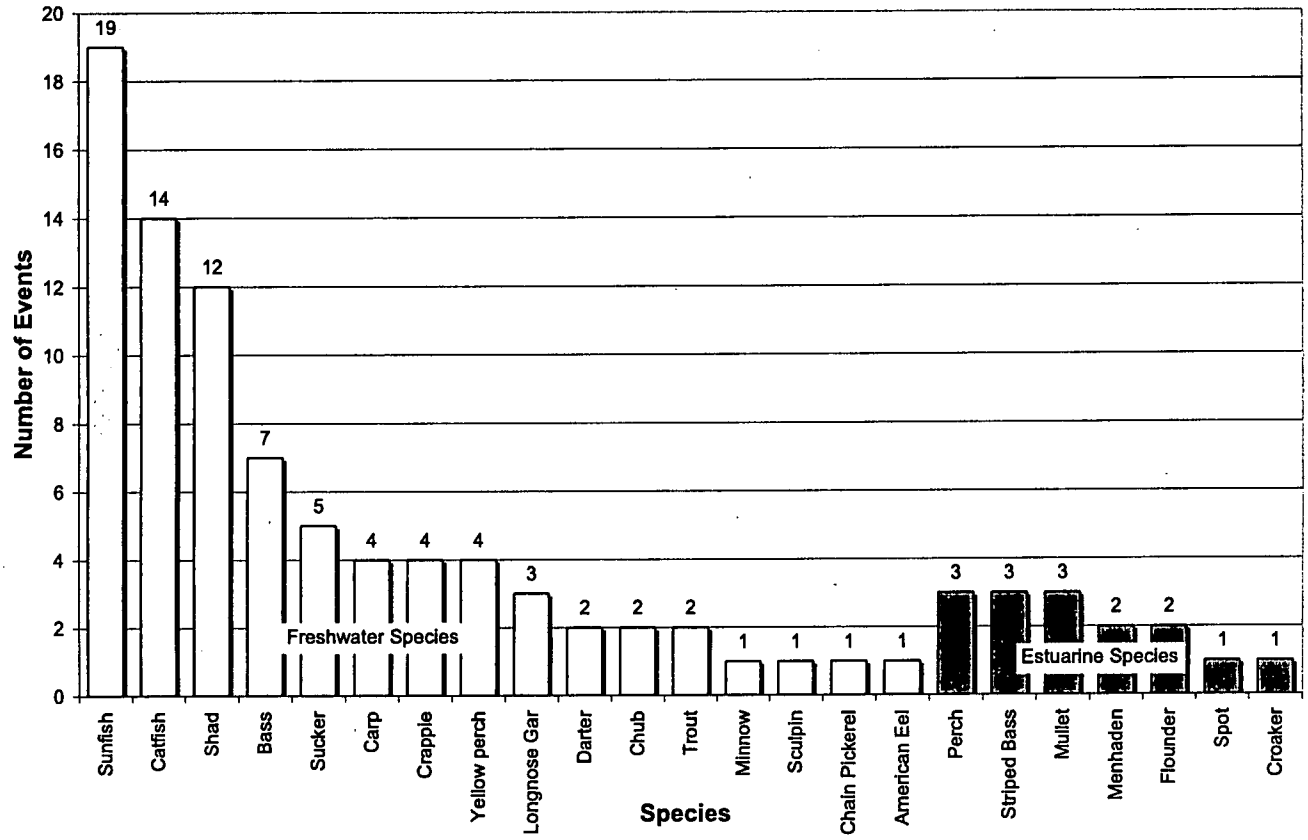
Figure 2: Reported annual fish kill events and mortality, 1996 to 2007



Finfish and Other Species Reported

Fish kill events in 2007 involved over 23 different species of fish in both estuarine and freshwaters (Figure 3). Freshwater species were most frequently observed during investigations included sunfishes, catfish, and shad. Estuarine species most frequently reported included perch, striped bass and mullet and menhaden. Non-finfish species were observed in six events during 2007. These included amphibians, macroinvertebrates, crayfish, clams, and blue crab.

Figure 3: Finfish observed during 2007 fish kill events



Suspected Causes of 2007 Events

Specific causes of fish kill events may or may not be obvious to investigators depending on a number of factors. Causes are often identified, but others remain unconfirmed or unclear due to an investigation occurring hours or days after the actual event. Kill events often result from many environmental factors, and sorting out the major reason(s) why a fish kill occurs is frequently a difficult and often subjective task. Investigators generally monitor environmental conditions surrounding an event and are encouraged to submit this information on reports along with observations regarding a suspected cause. This information aids in evaluating potential water quality trends and problems, and assists scientists and decision-makers with formulating future courses of action. Reported causes should not be viewed as a definitive label for a particular event.

Reported causes of 2006 kill events are listed in Table 2 in order of frequency. Those events where no specific causes could be determined were reported as "unknown".

Table 2: Major causes reported for 2007 fish kill events

Reported Cause	Number of Events
Dissolved Oxygen Depletion	10
Unknown	9
Spills	5
Bycatch	3

Dissolved Oxygen Depletion: Low dissolved oxygen (DO) was cited as a factor in ten kill events during 2007. DO depletion was reported as a likely cause in two large estuarine events observed during the summer in the Pamlico and Neuse estuaries. Estuarine fish kills have historically been associated with upwelling of hypoxic water from the river bottom or a depletion of DO in warm shallow areas, especially during the season's warmest months. Low DO was also a factor in a large freshwater event on the Pigeon River (Haywood Co.) and was attributed to ongoing severe drought conditions throughout the state (see Notable Events).

Unknown Causes: Causes for kill events are reported as unknown when investigators fail to cite specific reasons for an event. Investigations may not provide definitive causes when they are conducted too long after an event and no clear factors are determined, or when causes are suspected but not confirmed. Investigations for such events yielded few clues and environmental conditions or water quality measurements were often reported as normal by the time personnel arrived on scene. Investigators failed to cite or confirm causes for nine of the year's events. Events with unknown causes were relatively small (<1000 fish) and occurred most frequently in freshwaters.

Spills: Toxic spills may deplete DO levels in receiving streams or induce kills outright through physical or chemical toxicity. During 2007 investigators reported five events where the release of toxic substances induced a fish kill. These substances included pesticides, bleach, sewage, and an industrial degreaser. Spill induced kills all occurred in freshwaters and mainly in the western counties of the state.

Bycatch: Discarded fish from nearby fishing activity was reported as a cause in three events during the year. All bycatch events were reported to be small (<200 fish) and were apparent from net marks or knife injuries visible on the fish carcasses.

Algal Blooms: Although evidence of algal blooms was noted during several investigations in 2007, no such activity was determined to be a direct factor in any of the year's kill events. Phytoplankton species associated with kills and identified by ESS staff included the dinoflagellates *Karlodinium, Peridiniella*, the chrysophyte *Paulinella*, the filamentous bluegreen *Cylindrospermopsis*, and the flagellated raphidophyte *Heterosigma*. It should be noted that the presence of these species alone does not infer toxicity or environmental concerns. These assemblages may be typical for the summer in the areas where observed. Algae and other phytoplankton begin to negatively affect

water quality when excessive growths impair aquatic systems through physical and chemical means.

ESS staff routinely examine water samples associated with kills for the presence of harmful species. Samples that contain significant amounts potentially harmful algae are often sent to research laboratories throughout the state. The Center for Applied Aquatic Ecology in Raleigh has the ability to examine samples under scanning electron microscopy. Laboratories at the University of North Carolina at Greensboro and the National Oceanic and Atmospheric Administration laboratory in Beaufort can examine samples with molecular probes. Laboratories at UNC-Chapel Hill and UNC-Wilmington provide valuable taxonomic expertise. Algal samples and results are collected, exchanged, and discussed between labs.

Notable Events

Blounts Creek (Beaufort Co.), August: Investigators recorded multiple species fish kill along a 2 mile stretch in the headwaters of Blounts Creek adjacent to the Cotton Patch Landing. Official total numbers were from 50,000-100,000 fish affected. The event coincided with a previous strong wind and rain event in the area. The storm event exhibited north winds up to 65 mph gusts, and large amounts of rainfall. Real-time data near Channel marker 5 indicated surface salinity changes from 12 % to 0 % coinciding with DO drop to zero and a water level increase of 5 feet in less than 12 hours. Low DO and a sudden drops in salinity were cited as factors in the event. The area near Blounts Creek was also the site for a major kill in 2006. A multispecies kill of was observed after a sudden drop in DO occurred following a period of hot, calm weather.

Little Sugar Creek (Mecklenburg Co.), September: The kill in the area around the Carolina Medical Center involved multiple species including catfish, and sunfish as well as amphibians. The mortality count for the event was reported at 15,000. Investigators reported a runoff of degreaser (Orange Tough 90 used to power wash concrete) into the storm drain system and Little Sugar Creek. The DWQ Mooresville Regional Office initiated an enforcement action against the responsible party.

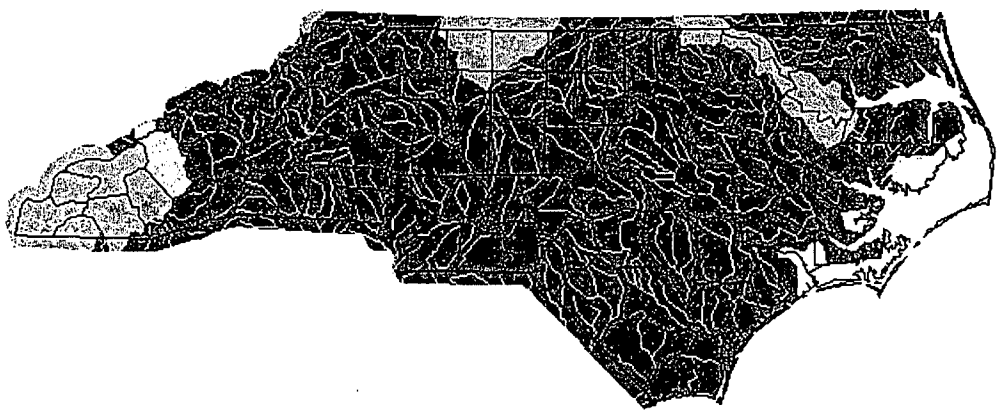
Neuse River (Craven Co.), July: A multispecies kill of over 6,600 individuals was observed for nearly a mile along the Neuse River near Carolina Pines. There was no indication of an algal bloom and no lesioned fish were observed. The fish kill appeared to have taken place approximately 12 hours prior to the investigation, coinciding with an observed upwelling event. DWQ staff review of water quality data from the nearby marker 11 water quality monitor indicated an upwelling event had occurred during the early morning hours. The upwelling event was characterized by a considerable decrease in DO and increase in salinity in surface water at the monitor location.

South Fork Mills River (Henderson Co.), July: Investigators suspected a kill of 1000 fish, mainly rainbow trout, was related to pesticide application in adjacent tomato fields. DWQ water samples showed the presence of Chlorothalonil in field runoff and samples collected from the river. The event occurred after heavy rain following pesticide

application. The event also had significant effects on the aquatic insect population. The affected area of the South Mills River supports a documented population of the federally listed Appalachian elktoe mussel (Alasmidonta raveneliana), an endangered species. A follow up survey conducted at the end of July indicated that all located mussels were in good condition.

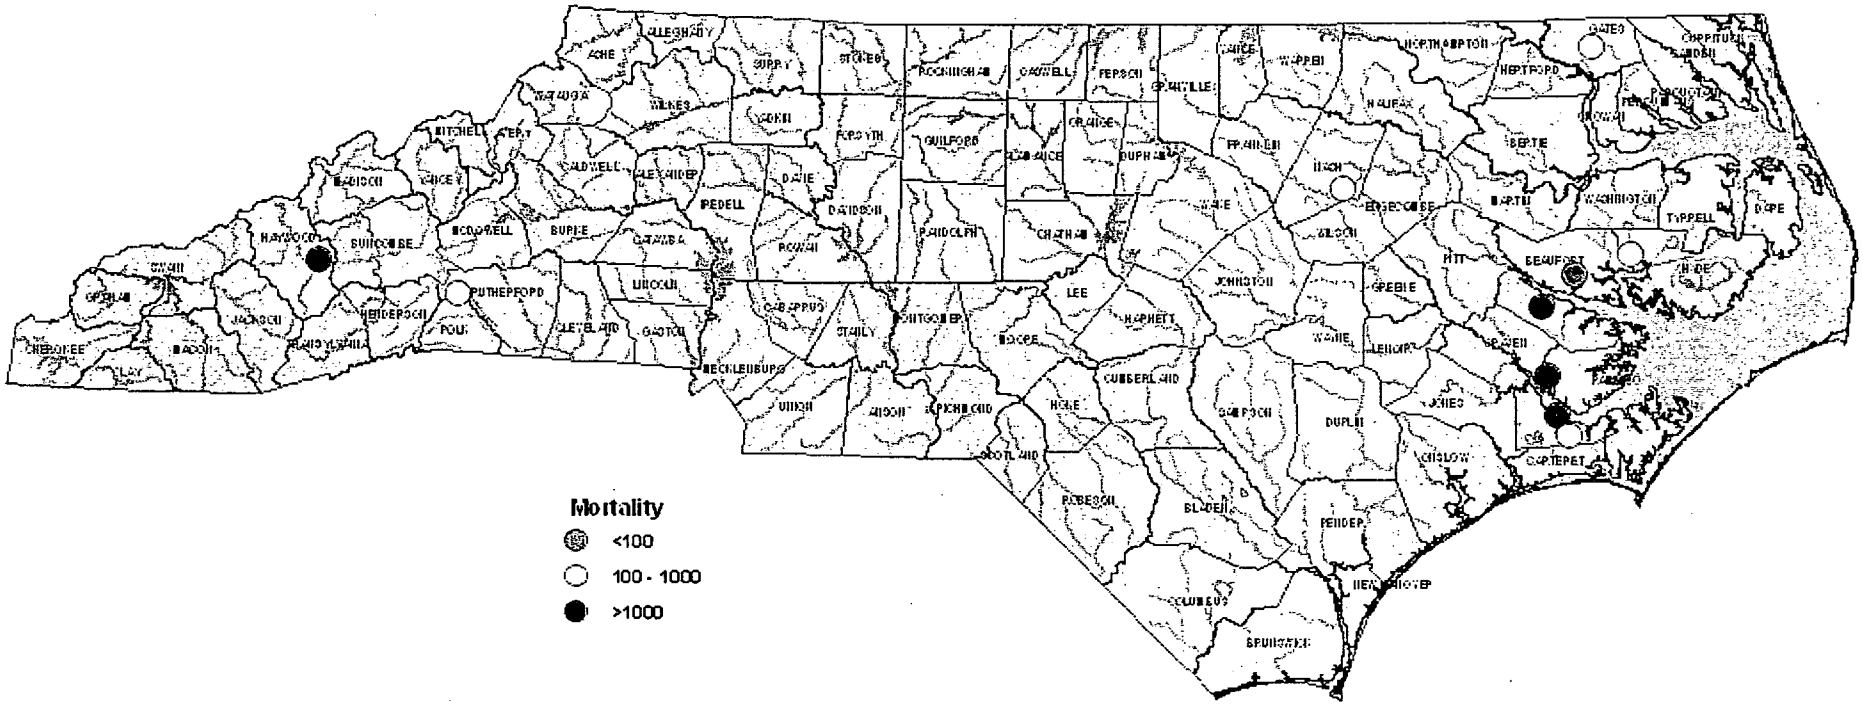
2007 Drought Conditions: North Carolina entered yet another period in 2007 marked by severe drought conditions statewide. During the course of the 2007 fish kill season the majority of monitored streams across the state reached severe to extreme hydrologic conditions, meaning they were at 5 percent or less than normal flow for that time of year (Figure 4, www.ncwater.org). Similar conditions were last observed across the state in 2002-2003 when streams reached 10 percent of normal flow.

Figure 4: Below normal 7-day average streamflow compared to historical streamflow, November-December 2007



Drought conditions were evident in nearly a third (10) of fish kill reports submitted by investigators during 2007 and may have been a factor in the year's largest events (Figure 5). Reports from the coastal areas of the state often mentioned low dissolved oxygen levels associated with low river flows and subsequent stagnation or sudden changes in DO and salinity following periods of low flow and calm weather. Coastal investigators also observed areas with high salinities due to the lack of freshwater inflow. Inland investigations revealed fish kills occurring simply from a lack of water where the absence of flow trapped fish without adequate oxygen levels.

Figure 5: Drought related fish kill events reported to DWQ during 2007



2007 Summary

Investigators reported fish kill events in 10 of the state's major river basins during 2007. In general, kill activity in basins across the state was light when compared to yearly activity reported since 1996. The number of fish kills reported during the year totaled 27, an increase from 2006 but a figure consistent with low totals reported for the last six years. Total fish mortality was reported near 130,000. This count is also slightly higher than the 2006 figure but remains well below the peak mortality figure reported in 2003.

Given the severe hydrologic conditions associated with the current drought, the modest number of kill events and associated fish mortality reported to DWQ for 2007 was unexpected. While drought conditions were observed over a majority of the state and suspected in nearly a third of the year's kills, including some of the largest events, they did not result in catastrophic die-offs throughout the state.

The frequency and intensity of fish kill activity over recent years remains relatively subdued compared to activity seen in the 1990's and into the early part of this decade. Reasons for the decrease remain unclear based on reported data. Results from investigations continue to suggest that a majority of North Carolina's annual kill activity (or lack thereof) may depend on crucial environmental conditions in key areas of the state, namely, the coastal basins and estuaries. Reports indicate that DO depletion continues to play a key role in the bulk of the state's kill activity. While occurring statewide in any given year, low DO levels are more common in coastal trouble spots such as the Neuse and Tar/Pamlico estuaries. Environmental conditions that determine DO levels in these areas (even in a drought year) may therefore be significant drivers of fish kill activity.

Appendix: 2007 Fish Kill Events (by County)

Total 2007 Fish Kills: 27
Total 2007 Fish Mortality: 137285

Date	Kill Number	Waterbody	Location	Mortality	Comments
Beaufort					
5/29/2007	WA07003	Pamlico River	Crystal Beach	31	Upon investigation PRRT staff discovered over 30 badly decomposed mullet, bream and striped bass in a canal near the mouth of Nevil Creek and Crystal Beach Community Campground. Decomposition suggested these fish died during the weekend. This area sees large numbers of recreational fishermen, especially during memorial day weekend. Staff notice the bream heads were cut off. There were no net marks visible. Real-time data near the area showed some drops in dissolved oxygen, but none for a long period of time. PRRT staff agrees that these fish most likely died as a result of some aspect of recreational fishing.
8/11/2007	WA07009	Blounts Creek	above Cotton Patch Landing	100000	Fish kill was reported by PTRF Riverkeep Heather Jacobs August 11th, 2007. PRRT's pager system was faulty and were not notified until August 13. On site, Riverkeeper 1st recorded multiple species fishkill along a 2 mile stretch in the headwaters of Blounts Creek adjacent to the Cotton Patch Landing. PTRF official total numbers were from 50,000-100,000. Their data indicated very low DO (2 mg/L) and salinities near 6%. PRRT staff arrived on scene 2 days later,August 13, approximately 10:45 a.m. Species affected included juvenile menhaden (80-200mm), striped bass (350 mm), shad, catfish (350 mm), mullet (300 mm), bluegill (200 mm), and perch (100mm). Water levels had dropped nearly 6-8 inches since the weekend. Fish were observed lying on shoreline banks. Count was not performed since most fish had decayed or were consumed within past days. PRRT transect data on August 13th showed salinities spanning from 3 % (headwaters) to 6 % (near Cotton Patch Landing). DO levels were from 3 mg/L (surface) to near 0 (bottom). An algae bloom was observed along the stretch of the kill area, however DO% saturation values were highest further upstream. Bloom samples were collected and sent to ESS for further evaluation. The kill event coincides with a previous strong wind and rain event in the area. The storm event exhibited north winds up to 65 mph gusts, and large amounts of rainfall. Real-time data near Channel marker 5 indicated surface salinity changes from 12 % to 0 % coinciding with DO drop to zero and a water level increase of 5 feet in less than 12 hours. These Northerly winds may have pushed waters levels up into Blounts Creek, while rainfall caused a pulse of freshwater in the system. Low DO and a sudden drops in salinity were cited as factors in the event . Water samples submitted to ESS showed a dense bloom of the raphidophyte flagellate Heterosigma.
10/19/2007	WA07016	Tankard Creek	at Hunter's Bridge	60	The Pamlico Rapid Response Team investigated a fish kill that occurred in the headwaters of Bath creek (Tankard creek) on Friday October 19th. The kill extended 1.2 miles up Tankard creek from Bath creek. The fish, mostly freshwater, averaged 150 mm in length, consisted of catfish, crappie, perch, bluegill, and sunfish. Some of these fish were partially eaten and appeared to be at least 48 hours old. No lesions were observed. Chlorophyll A, nutrient and phytoplankton samples were taken in the kill area, as a remnant algal bloom surface film was evident. The current drought conditions most likely created higher salinity conditions (12-14 ppt) than typically observed in this area. Saltwater stress and low dissolved oxygen readings (0.8 mg/l surface and 0.5 mg/l bottom) combined to create stressful conditions for these resident freshwater fish. Water samples indicated there was a bloom of the dinoflagellates Karlodinium and Peridiniella at the site. Both algal taxa are common in the state's coastal estuarine rivers. Karlodinium is known to produce toxins but it is not known to kill fish in the open waters of North Carolina.
					Total Kills for County: 3 Total Mortality for County: 100091

Date	Kill Number	Waterbody	Location	Mortality	Comments
Bertie					
5/29/2007	WA07004	Private Pond	near Sans Souci	500	Upon investigation PRRT staff discovered several homeowners that have routinely dumped in copper sulfate in the pond for years to kill algae. This year the owners also noticed emergent, floating duckweed (lemna spp) and considered it to be a nuisance plant and were further considering eradicating it. PRRT staff pressed no dumping of herbicides into the pond since there is no natural outlet except evaporation. PRRT also suggested the owners consult with their local Agricultural Extension County Agency to document and clarify appropriate measure of herbicidal application. Over 500 fish species were killed, most likely as a result of chemical and biological oxygen demand increasing and ultimately diminishing any available dissolved oxygen.
					Total Kills for County: 1 Total Mortality for County: 500
Cabarrus					
9/24/2007	MO07003	Coddle Creek	Near Concord	150	DWQ/MRO was not notified of the fish kill until 9/24/2007 at 10:43 a.m, (almost three days later). Instream dissolved oxygen (DO) and total residual chlorine (TRC) levels were measured by DWQ-MRO staff. TRC levels ranged from 66 ug/l (upstream of the PVC pipe) to 88 ug/l (directly below the location where the kids were playing and the majority of the dead fish were observed). In addition, DWQ-MRO staff did not detect any "bleach" odors. The instream DO levels ranged from 5.71 mg/l (same upstream TRC sampling site) to 5.9 mg/l (same downstream TRC sampling site). DWQIMRO staff performed a site inspection at the facility that owned the irrigation pipe. The facility was a pool chemical supplier with bulk sodium hypochlorite and sulfuric acid storage tanks (inside the building). A stormwater drain was observed at the loading/unloading area for these chemicals. The concrete driveway (adjacent to the stormwater drain) exhibited evidence of previous discharges/spills. Strong odors of sodium hypochlorite were detected in the stormwater drainage ditch (from the loading dock area) that discharges directly to Coddle Creek. The substrate in Coddle Creek adjacent to the outlet of the stormwater drainage ditch appeared dark red of unknown origin and was only observed in this immediate area of the creek. In addition, the soil throughout the stormwater drainage ditch was still damp from the previous discharges. Note: No discharges were observed to Coddle Creek by DWQIMRO staff during this site investigation. This Office will perform a follow-up inspection at this facility to ensure corrective actions have been incorporated.

Date	Kill Number	Waterbody	Location	Mortality	Comments
Craven					
7/20/2007	WA07006	Neuse River	Carolina Pines	6600	The investigation was prompted by NRRT staff review of water quality data from the channel marker 11 real-time water quality monitor. Data from the channel marker 11 monitor indicated an upwelling event had occurred during the early morning hours. The upwelling event was characterized by a considerable decrease in dissolved oxygen (DO) and increase in salinity in surface water at the monitor location. The observed drop in DO (down to 0.7 mg/L) created hypoxic conditions favorable for a fish kill. NRRT staff discovered the fish kill upon arrival to the Carolina Pines area at approximately 09:30. The fish kill extended approximately 3/4 of a mile and included spot, croaker, menhaden, silver perch, trout, flounder and needlefish. Team members estimated 6,666 fish were killed during the event. There was no indication of an algal bloom and no lesioned fish were observed. The fish kill appeared to have taken place approximately 12 hours prior to NRRT arrival, coinciding with the observed upwelling event. Physical parameters were measured with a Hydrolab MS-5 equipped with an optical DO probe. Additionally, water quality samples, including phytoplankton, nutrients, and chlorophyll, were collected during the investigation. Measured DO concentrations were 7.1 mg/L at the surface and multiple species of fish were observed swimming in the vicinity of the fish kill during the investigation. Data from the Carolina Pines NCSU real time water quality monitor was utilized by NRRT staff following the onsite fish kill investigation to corroborate data from the channel marker 11 real time water quality monitor. Samples showed algal assemblages typical for summer and resembles the Neuse River samples collected earlier in the month during the ambient monitoring run. The dominant taxa were the flagellated chrysophyte Paulinella, the filamentous bluegreen Cylindrospermopsis, and the flagellated raphidophyte Heterosigma.
7/23/2007	WA07007	Private Pond	near Fairfield Harbor	52	The groundskeeper at Fairfield Harbor contacted the Neuse River Rapid Response Team (NRRT) on July 23, 2007 regarding a fish kill in a private pond located at Fairfield Harbor. NRRT staff responded and counted 42 dead fish ranging in size from approximately 8" to 24". The fish kill consisted of multiple freshwater species including gizzard shad, grass carp, bluegill bream, yellow perch, largemouth bass, channel catfish, and american eel. During the investigation, pond water was blue/green in color and cloudy. Physical parameters were measured and did not indicate an algal bloom was in progress. Water samples were also collected for phytoplankton, chlorophyll, and nutrients. Fish appeared to have been dead at least 48 hours. It was difficult to establish the reason for the fish kill due to the state of decomposition and time lapse between the kill and the investigation.
7/29/2007	WA07008	Fairfield Harbor Canals		98	Mr. Mark Klipinger, resident of Fairfield Harbor, reported a fish kill on July 29, 2007 in the canal system at Fairfield Harbor. NRRT staff responded and counted 98 dead fish ranging in size from approximately 8" to 24". The fish kill consisted of three freshwater species; channel catfish (accounting for 91 of 98 dead fish), bream, and yellow perch. Dead fish associated with this fish kill were observed throughout the canal system although the majority were located in the northwest portion of the canal system (winds were out of the Southeast). Several species of estuarine fish were observed swimming in the canals during the investigation. Physical parameters were measured and did not indicate an algal bloom was in progress. Water samples were also collected for phytoplankton, chlorophyll, and nutrients. Fish appeared to have been dead at least 48 hours as evidenced by the state of decomposition. The algal assemblage in water samples was typical for the lower Neuse River during summer. The dominant algal groups were small chrysophyte flagellates, chain forming diatoms (Aulocoseira, Chaetoceros), and dinoflagellates (Karlodinium, Scrippsiella).

Date	Kill Number	Waterbody	Location	Mortality	Comments
8/13/2007	WA07014	Hancock Creek	above Cherry Point MCAS	118	The Neuse River Rapid Response Team received a report of a fishkill at the headwaters of Hancock Creek on Monday August 13, 2007. Upon investigation, team staff found 118 dead catfish and panfish in an area encompassing approximately 0.6 river miles. Fish appeared to be 48-72 hours old and highly decomposed. At the time of investigation, dissolved oxygen (DO) concentrations were low, measuring 1.0 mg/L at the surface and 0.2mg/L at 1 meter bottom depth while salinity was relatively high, measuring 4.7 ppt at the surface and 11.7 ppt at 1 meter bottom depth. Water color and clarity were indicative of an algae bloom although pH and DO measurements were not characteristic of an active bloom at the time of investigation. Weather may have contributed to this fish kill event as a period of strong north winds and heavy rains coincided with the estimated time of the fish kill. Physical measurements recorded at the real-time water quality monitor at Channel Marker 9 indicated an increase in water level that would likely have created a rise in salinity in the headwaters of Hancock Creek. High salinity combined with low DO concentrations and high water temperatures provided stressful conditions that likely led to the fish kill.
8/23/2007	WA07010	Neuse River	Marker 38	59	During routine maintenance of the Neuse River CM38 continuous water quality monitors, Mr. Maverick Raber of the NRRT observed dead gar in the vicinity. Upon completion of maintenance activities, Mr. Raber and Mr. Ryan Rassmussen of the USGS investigated the area and discovered a total of 59 dead fish, primarily longnose gar, that had been dead 24-48 hours. Conditions at the CM38 water quality monitors did not indicate the presence of an algal bloom and several species of fish were observed swimming in the area. The kill area covered approximately 0.75 river miles.
8/30/2007	WA07012	Neuse River	Hwy 70 Bridge	36	While commuting from the CM9 to CM38 continuous water quality monitors, Mr. Maverick Raber of the NRRT and Mr. Ryan Rasmussen of the USGS observed a total of 33 dead gizzard shad and 3 dead longnose gar just downstream of the Highway 70 Bridge in the Neuse River. Fish had been dead approximately 24 hours as noted by the state of degradation. The fish kill appeared to be the result of net fishing activities as net marks were observed on several of the fish.
9/3/2007	WA07013	Upper Broad Creek	near Lee's Landing	2200	Live fish observed in the fish kill area appeared lethargic and a few may have been dying. None of the fish observed in the fish kill had lesions. Algal bloom samples were collected in the area of the fish kill although there were no signs of an active bloom. Recent drought conditions combined with strong northeast winds during the previous few days has resulted in relatively high salinity concentrations in the headwaters of Broad Creek. The drought has caused higher salinity waters to move farther upstream than normal. The northeast winds created a wind-generated tide that "pushed" higher salinity waters even farther upstream. NRRT team staff measured salinities in the fish kill area as high as 13 ppt, or nearly half the strength of sea water. Additionally, measured dissolved oxygen concentrations in the fish kill area were low, ranging from 0.4 mg/L to 1.6 mg/L. High salinity concentrations combined with low DO concentrations created highly stressful conditions to freshwater fish species and are the likely cause of this fish kill event.
10/23/2007	WA07015	Slocum Creek	near mouth	183	The Neuse Rapid Response Team (NRRT) responded to a report of several dead longnose gar and other species in a pile at the mouth of Slocum Creek on October 23, 2007. Upon investigation, NRRT staff counted 183 dead fish, primarily longnose gar. The fish were located above the high water mark on a 15 square meter area of beach and appeared to have been dead less than 24 hours. This fish kill is apparently the result of gill net fishing activities as net marks were apparent on several fish. Several gill nets were observed set just outside the mouth of Slocum Creek on the Neuse River. Water quality samples were not collected for this fish kill event.

Cumberland					
7/10/2007	FA07001	Private Pond	Fayetteville	105	Kill appeared to be due to oxygen depletion due to turnover of water column. Upon talking with landowner, it was noted that he thought the kill began after a hard rain approximately a week ago. DO was 5.3 on shallow side of pond and 3.5 on deeper side. He indicated at first that he thought the kill was due to herbicide application nearby that occured approximately a month ago. Pond was uphill of herbicide application site so it is not believed to be the cause. Live fish, turtles, and frogs were seen still alive in the pond.
					Total Kills for County: 1 Total Mortality for County: 105
Davidson					
8/1/2007	WS07001	Lake Tom-A-Lex	near Thomasville	225	Fish had no signs of disease, no visible parasites, sores, tumors, etc. Two fish that were still alive were floating belly-up. Investigators did not see anything to indicate there was anything dumped. Water described as pea green, possible algal bloom.
					Total Kills for County: 1 Total Mortality for County: 225
Gates					
6/8/2007	WA07005	Bennetts Creek	below Merchants Millpond	400	Low dissolved oxygen was cited as the cause and most likely due to the ambient conditions of low water, high air and water temperatures and presence of a dense mat of duckweed. During low water conditions, pools below millponds are subject to these fish kills. Nearby bridge project possibly contributed to the situation.
					Total Kills for County: 1 Total Mortality for County: 400
Haywood					
9/7/2007	AS07004	Pigeon River	below Canton	8000	Kill event attributed to low flow/DO and high water temperatures brought on by ongoing drought conditions. Investigators observed numerous live fish during the investigation.
					Total Kills for County: 1 Total Mortality for County: 8000
Henderson					
7/27/2007	AS07003	S.Fork Mills River	near Mills River	1000	Investigators suspected event was related to pesticide application in adjacent tomato fields. DWQ water samples showed the presence of Chlorothalonil in field runoff and samples collected from the river. The event occurred after heavy rain following pesticide application. Majority of affected fish were identified as rainbow trout. Event also had significant effects on the aquatic insect population. This area of the South Mills River supports a documented population of the federally listed Appalachian elktoe mussel (Alasmidonta raveneliana), an endangered species. A follow up survey conducted on July 29 indicated that all located mussels were in good condition.

Hyde					
8/25/2007	WA07011	Pungo River Canal	above Leachville	778	PRRT staff responded August 25th. A fisherman noticed dead catfish along the Pungo River August 24th. The fish kill began north of the Leechville Bridge near the confluence of Herring Run and extended approximately 3.5 miles to where the Piney Grove Landing area connects with the Pungo Canal. Over 778 catfish were counted. Sizes ranged from 100 to 250 mm in length. These fish were estimated from 24-48 hours old. No obvious lesions were observed. Staff observed heavy organic algal film along the surfacewaters over several miles although there was no indication of an algal bloom at present. Physical water quality data closest to the upstream portion of the kill indicated salinities from 4 to 5 parts per thousand from the surface to the bottom with DO values from 4 to 1 mg/L top to bottom respectively. Downstream data seemed to be more homogeneous with consistent salinities of 5 ppt and and DO values of 3 mg/L. This area had periods of heavy rainfall on August 22nd. The cause of this fishkill may have been a combination of previous algal bloom activity, low DO, and sudden pulses of rainfall into the system.
					Total Kills for County: 1 Total Mortality for County: 778
Mecklenburg					
7/25/2007	MO07001	Stewarts Creek	Lawton Road, Charlotte	40	Fishkill due to sanitary sewer overflow from industrial property. Overflow reached Stewarts Creek. Overflow contained at least one type of dye with colored the water purple/blue. The overflow was stopped at the time MCWQP arrived at the site around 9:00am and may have been ongoing for some time before 8:00am. The event occurred at 701 Lawton Road in Charlotte NC.
9/1/2007	MO07002	Little Sugar Creek	Charlotte	15000	Kill event caused by runoff of degreaser (Orange Tough 90) used to powerwash concrete areas at Carolina Medical Center in Charlotte. Product was entering the storm drain system and discharging into Little Sugar Creek. Degreaser had been applied for 11 hours beginning at 10:00 PM on 8/31/07. Enforcement action initiated by DWQ Mooresville office.
					Total Kills for County: 2 Total Mortality for County: 15040
Mitchell					
5/1/2007	AS07001	Whiteoak Creek	near Bakersville	250	Sediment pesticide sample (organochlorine, organophosphorus, nitrogen) collected at most upstream site on White Oak Creek where dead fish observed. Pesticide sample collected due to Christmas Tree farm in the watershed.
					Total Kills for County: 1 Total Mortality for County: 250
Nash					
9/17/2007	RA07002	Tar River Reservior	Sapony Creek Arm	500	The drought conditions were severe in this area and played a significant role in this fish kill. The Sapony Creek arm of the Reservior is stocked in the fall-winter yearly with fish. It would be unlikely that the water body could support fish life anytime in the near future, as the Reservior is almost completely dry with little to no moving water. An algal bloom may have occurred during the low flow conditions, worsening the situation. Possible sources of agricultural chemicals and nutrients are in the area, as many farms surround the Sapony Creek, but no evidence suggest this was a primary cause of the fish kill.
					Total Kills for County: 1 Total Mortality for County: 500

Date	Kill Number	Waterbody	Location	Mortality	Comments
Pasquotank					
5/2/2007	WA07002	Knobs Creek	Elizabeth City	100	Low DO observed at time of investigation. Staff walked upstream of event taking hydrolab data. These data indicate DO levels increasing slightly, but the waters remained turbid and whitish in color. Further observation upstream indicated two prongs of this stream that split off. One prong was piped to the other side of highway 17 and seemed to have no riparian buffer and the other prong paralleled US 17 and had some buffer, although this stream 'ended' at a retention pond from Lowe's parking lot. This area is heavily urbanized. Water samples did not indicate algal bloom according to ESS staff.
					Total Kills for County: 1 Total Mortality for County: 100
Rutherford					
8/29/2007	AS07002	Broad River	Below Lake Lure Dam	100	Kill was attributed to a dissolved oxygen sag below the Lake Lure dam. Event occurred following several weeks of drought conditions, hot weather and low flow. The event involved mostly suckers up to 12 inches in length. The event was first reported in the evening hours of 8/28/07.
					Total Kills for County: 1 Total Mortality for County: 100
Wake					
3/26/2007	RA07001	Walnut Creek	Lake Johnson	600	Gizzard Shad kill throughout the entire lake. No other species noted. Park personnel stated water temps had risen significantly over the last few days (from 12.2 degrees C to 16.6 degrees C.) Water Temp was 18.7 degrees C at the time of investigation.
					Total Kills for County: 1 Total Mortality for County: 600
Wayne					
4/24/2007	WA07001	Long Branch	Goldsboro	100	Approximately 100 fish were found piled on a hill by PRRT staff on April 24th, adjacent to the pond shoreline. These fish were mainly gizzard shad less than 20 cm in length with no visible sores or lesions. Residents revealed some bass that died and were collected and dumped on the side of the pond that was not observed by PRRT staff. The pond was around 2 acres and was apparently dug to serve as stormwater retention when the adjacent condominiums were built over 20 years ago. The pond receives baseflow in from Long Branch, which drains the southern portion of the city of goldsboro and discharges to Stoney Creek. The cause of the kill could be due to several factors. Pond overturn and strong temperature variations may have stressed resident fish. Nutrient inputs from previous northeaster may have also caused algal blooms, as instruments revealed very high DO % saturation values downstream towards the widest portion of the pond. The homeowner's association meeting indicated previous fish kills in the past and new construction is slated adjacent to the pond shoreline in the next few months. This information is being forward to SWPS' Chris Pullinger for further investigation of potential buffer violations.

NORTH CAROLINA'S COASTAL HABITAT PROTECTION PLAN

2006 - 2007

ANNUAL REPORT

TO THE

JOINT LEGISLATIVE COMMISSION ON SEAFOOD AND AQUACULTURE

AND

ENVIRONMENTAL REVIEW COMMISSION

OF THE

NORTH CAROLINA GENERAL ASSEMBLY

FROM

NORTH CAROLINA MARINE FISHERIES COMMISSION,
NORTH CAROLINA COASTAL RESOURCES COMMISSION, AND
NORTH CAROLINA ENVIRONMENTAL MANAGEMENT COMMISSION
AND
NORTH CAROLINA DEPARTMENT OF ENVIRONMENT AND NATURAL RESOURCES

September 2007

Highlights

September 2006 – August 2007 Accomplishments

- Significant progress regarding stormwater runoff and rule development as the new Phase II rules went into effect and the proposed Coastal Stormwater rules went to public hearings
- Coordinated enforcement of rules between the Division of Marine Fisheries (DMF) and the Division of Coastal Management (DCM) and the continued cross training of Marine Patrol
- Funding of compliance (DCM) and mapping positions (DMF, DEH) by the General Assembly
- Interagency and intercommission coordination of rules and permits and the continued involvement of the CHPP coordinator based in the Washington Regional Office
- Developed comprehensive approach to problems identified in Wilmington/New Hanover County regarding infrastructure, maintenance, and capacity of wastewater management system. DENR worked with the city/county to establish benchmark, and the City/County system was placed under a Special Order of Consent (SOC) to correct the problems
- Oyster reef sanctuary program enhancement through increased funding and visibility
- Enhanced cooperative interagency work to map Shellfish and Submerged Aquatic Vegetation habitats
- Increased level of public involvement and outreach
- Completion and adoption of the Strategic Habitat Area (SHA process)
- Funding of the Beach and Inlet Management Plan (BIMP) and the beginning of a long term effort to put a plan in place
- Adoption by the Coastal Resources Commission (CRC) of Beach Sediment Criteria rules
- Enhanced ability to enforce coastal rules and increased CAMA civil penalties by the General Assembly
- CRC's Shoreline Stabilization Subcommittee completed its report and its list of recommendations regarding the placement and suitability of hardened shoreline structures along estuarine shores.

September 2007 – August 2008 Planned Action and Needs

- Continue work towards adoption and implementation of the Environmental Management Commission's (EMC) amended Coastal Stormwater Rules
- Ensure the progress of the BIMP (CRC/DCM)
- Delineate SHAs in the Albemarle Sound priority area (MDMF/MFC)
- Review "Inner Banks" development issues and address environmental issues (CRC/DCM, DWQ/EMC)
- APNEP to finalize estuarine environmental indicators
- DCM to complete marina and dock siting policies and initiate CRC rule development
- Continue to analyze dam removal and encourage removal where practical and necessary
- Begin to seriously address the challenges associated with Sea Level Rise
- Continue to increase public awareness on the value of and threats to coastal fish habitats and the role of the CHPP process to protect and enhance these resources.
- Facilitate state agencies' review and coordination of rules regarding Sea Level Rise and flooding which may result from major storms as they pertain to the siting of landfills and confined animal operation waste treatment lagoons
- Pursue non-traditional ways to mitigate and offset nutrient impacts
- Support use of dye tablets for vessels at marinas to encourage use of pumpout stations (for fear of enforcement tracing)

- Seek dedicated funding to staff DCM's Clean Marina Program and effectively implement Best Management Practices as a non-regulatory way to improve water quality in and around marinas and docks
- Continue development and refinement of shoreline stabilization rules that preserve ecosystem function and consider rising sea levels and a changing land/water interface
- Take steps to encourage more restoration of degraded waters
- Continue to identify problems regarding infrastructure for WWTPs and system maintenance. Work with the local governments to develop and implement plans to correct deficiencies

Introduction

Fisheries Reform Act

The North Carolina General Assembly established the Coastal Habitat Protection Plan program within the North Carolina Department of Environment and Natural Resources (DENR) with passage of the Fisheries Reform Act of 1997. The Act (General Statute or G.S. 143B-279.8) requires preparation of Coastal Habitat Protection Plans (CHPPs) for critical fisheries habitats in the coastal area. The Act states "[t]he goal of the Plans shall be the long-term enhancement of coastal fisheries associated with each coastal habitat." Within DENR, the Divisions of Marine Fisheries, Water Quality, and Coastal Management are designated as the lead agencies for implementing the CHPP program. Many other DENR agencies also participate in CHPP work. By law the CHPP includes:

1. A description of fisheries habitats and their biological systems;
2. An evaluation of the functions, fisheries' values, status, and trends within the habitats;
3. Identification of existing and potential threats to the habitats and impacts of those threats on coastal fishing; and
4. Recommended actions to protect and restore the habitats.

Role of the Commissions

The Coastal Resources, Environmental Management, and Marine Fisheries commissions adopted the CHPP in December of 2004. Now that the CHPP has been adopted, along with implementation plans which were adopted by each commission in June and July 2005 (see Implementing the North Carolina Coastal Habitat Protection Plan 2005), rule making and policy actions taken by all three commissions are to comply "to the maximum extent practicable" with the plan.

The three commissions are to report by 1 September each year to the Joint Legislative Commission on Seafood and Aquaculture and the Environmental Review Commission on their progress in implementing the Coastal Habitat Protection Plan. This document reports on the progress made by the respective commissions and their supporting agencies in implementing the CHPP during year beginning in September 2006 and ending in August 2007.

North Carolina Coastal Habitat Protection Plan (CHPP)

The CHPP focuses on six basic fish habitat: water column, shell bottom, submerged aquatic vegetation (SAV), wetlands, soft bottoms, and ocean hard bottom. A chapter is devoted to each type. Each of the habitat chapters is organized to provide the information specified in the Act:

- Description and distribution of the habitat,

- Ecological role and function,
- Status and trends,
- Threats, and
- Recommended management actions to deal with the threats.

The CHPP describes the functions of habitats necessary for production of economically important fish stocks and the links between those habitats and various life history stages of the fish. The CHPP also discusses the various types of threats to the habitats upon which productive coastal fisheries depend. Moreover, the plan summarizes the institutional structures for management of fisheries habitat, adjacent lands, water quality, and fisheries in eastern North Carolina. Finally, the plan includes 19 management recommendations for the Coastal Resources, Environmental Management, and Marine Fisheries Commissions, DENR (primarily the divisions of Water Quality, Coastal Management, and Marine Fisheries), and others to implement in order to address the identified threats.

Attachment 1 lists the current members of the CHPP Steering Committee.

Major Accomplishments of the CHPP Implementation Plan

After the CHPP was formally adopted in December of 2004, the commissions, their administrative divisions, and DENR also developed and adopted implementation plans during the summer of 2005. These implementation plans detail more than 100 specific steps they would take during the 2005/06 – 2006/07 fiscal years to implement the CHPP recommendations.

Numerous specific actions have been accomplished or are underway. All three commissions and their DENR agencies are active in using the CHPP and its recommendations as guidance in their regulatory and operational programs. Attachment 2 lists the major accomplishments which were part of the 2005-2007 CHPP Implementation Plan and were completed this past year. Attachment 3 is the newly adopted 2007-2009 CHPP Implementation Plan, which includes the action items for the Department, its agencies and their respective commissions.

Administration and Public Outreach

- Administrative Activities

  During the summer of 2007, a second two-year implementation plan was endorsed by the Department, its agencies and the regulatory commissions. This second iteration of the two year implementation plan once again details more than 100 specific action items DENR, its divisions and their respective commissions will undertake in the next two years to continue to carry out the CHPP recommendations. The draft and approved implementation plans were placed on the CHPP web site to facilitate public review. This new implementation plan will be placed on the CHPP web site, along with the accomplishments from the previous two years, to once again facilitate public review. In addition, this second two-year implementation plan will be included in a new publication which will be designed, printed and distributed to the general public early in 2008.

- Public Outreach

  The CHPP Steering Committee, comprised of two members each from the Environmental Management, Coastal Resources, and Marine Fisheries commissions, continues to be very active role in the CHPP implementation process. Members of the Steering Committee meet quarterly with senior DENR officials and technical staff from DENR divisions and the Wildlife Resources Commission

(CHPP Team) to discuss CHPP related topics and exchange information regarding CHPP implementation activities of the respective commissions and divisions.

The DENR assigned its Eastern Region Field Officer as the coordinator for CHPP implementation. This person is strategically housed in the DENR Office of Conservation and Community Affairs, which also include the Albemarle-Pamlico National Estuary Program (APNEP) and the One North Carolina Naturally program, both of which focus heavily on improved management of important habitats, including the coastal area.

The CHPP Coordinator and the CHPP Team members participate in relevant meetings and give numerous CHPP presentations at various gatherings concerning coastal issues: DENR and its agencies, the Commissions, Coastal Resources Advisory Council, North Carolina Sea Grant Program, APNEP, Outer Banks Association of Realtors, The Nature Conservancy, the NC Coastal Caucus, the North Carolina Coastal Federation, local governments, and several local civic clubs and groups with environmental concerns.

In 2005, the CHPP program published the booklet *Implementing the North Carolina Coastal Habitat Protection Plan 2005* to provide an easy-to-understand version of the initial two year CHPP Implementation Plan. This booklet continued to be a valuable resource this past year. The three posters produced in the summer of 2006 under the theme "Home is where the habitat is...." were widely distributed through the State aquariums, environmental education centers and the various DENR divisions. The posters feature seagrass habitat, shell bottom, and the water column.

The Coastal Habitat Protection Plan was also a continuing theme in the *One NC Naturally Quarterly Newsletter.* Articles about Strategic Habitat Areas, river herring, and the 2007-2009 Implementation Plan were featured in the newsletter in 2006. The newsletter is distributed by DENR's Office of Conservation and Community Affairs through the NC1 listserve.

The DCM produced a series of programs centered on the CHPP and specific habitat functions this past year. These programs were done in conjunction with *NOAA in the Carolinas* in May and featured SAV habitats, marshlands, soft bottom and shell bottom. The segments were seen by approximately 5,000 students during the three day on-line event.

The CHPP table top display was used at several meetings concerned with coastal habitat, such as the North Carolina Oyster Day held in Raleigh in late May. CHPP Team members gave talks at meetings of the NC Soil and Water Conservation Commission, the annual meeting of the Soil and Water District Supervisors, the Pamlico Tar River Foundation's quarterly meeting and the Onslow Bight Estuarine and Marine Conservation Planning Group. CHPP team members and the Eastern Regional Field Officer provided updates to the CRC, EMC and MFC on a regular basis. In the three months prior to this report, the website for the CHPP continues to be one of the most accessed sites that the DMF tracks averaging 4858 visits per month and 3224 downloads per month.

Other Accomplishments

The CHPP, as adopted in 2004, identified more than 90 research needs. In 2005, the CHPP Team summarized those needs in a report placed on the CHPP web site and distributed to the academic, and state and federal agency research community. The identified research needs continue to be a vital component of the CHPP and its 2007-2009 Implementation Plan and the original report of research needs continues to be available on the CHPP web site.

With assistance from the divisions of Coastal Management and Marine Fisheries, as well as the Albemarle-Pamlico National Estuary Program (APNEP), Elizabeth City State University (ECSU) continued to operate a remote sensing program and laboratory. Much of the justification for the grant was based on the need to obtain and analyze remotely sensed data (including satellite imagery and aerial photography) to aid in preparation of the CHPP. Under this program, ECSU staff is mapping sea grass beds in northeastern North Carolina, including Currituck Sound and Back Bay, Kitty Hawk Bay, and portions of Albemarle Sound.

The APNEP, in conjunction with NOAA, NCDOT, ECSU and several DENR agencies has taken the lead in funding and coordinating a statewide effort to aerially photograph all high salinity and low salinity beds of Submerged Aquatic Vegetation. The flights to digitally photograph the coastal waters of North Carolina will be flown this fall and next spring. The photographs will be used by several agencies involved with permitting, as well as used to help inventory docks, piers and hardened shoreline structures.

NORTH CAROLINA COASTAL HABITAT PROTECTION PLAN GOALS AND IMPLEMENTATION RESULTS

North Carolina has a number of programs in place to manage coastal fisheries and the natural resources that support them. The Coastal Habitat Protection Plan (CHPP) has identified gaps in the protection provided for important fish habitats under these programs, and also notes that these habitats would benefit from stronger enforcement of existing rules and better coordination among agencies. The focus of the CHPP, per the Fisheries Reform Act of 1997, is on activities regulated by the Marine Fisheries, Coastal Resources and Environmental Management Commissions. During the summer of 2007 each Commission and the Department of Environment and Natural Resources (DENR) adopted a second two-year set of plans to implement the recommendations found in the CHPP, once again with a focus on actions that could be taken based on existing resources and within the 2007-2009 budget cycle. Some actions are well underway towards being completed, while others are just beginning. -Most will be completed before the update of the CHPP scheduled for 2010. There continues to be a basic understanding among agencies that all recommendations and their associated actions will be supported regardless of lead agency. Listed in this attachment are some of the completed actions, as well as those which will be completed within the year.

Department of Environment and Natural Resources

DENR is the lead stewardship agency for the preservation and protection of North Carolina's outstanding natural resources. The Department, which has offices from the mountains to the coast, administers regulatory programs designed to protect air quality, water quality, and the public's health. Through its natural resource divisions, DENR manages fish, wildlife, and wilderness areas. The DENR implementation plan focuses on coordination among the Commissions and the Department, as well as ensuring that all DENR Divisions are taking actions consistent with the goals and recommendations of the CHPP.

Marine Fisheries Commission and Division of Marine Fisheries

The Marine Fisheries Commission (MFC) and Division of Marine Fisheries (DMF) manage the commercial and recreational fisheries in North Carolina's estuarine and ocean waters. These waters, including their specific physical habitats (water column, wetlands, sea grasses, soft and hard bottoms, and shell bottoms), produce the finfish, shrimp, crabs, oysters, and other economically important species sought by fishermen, as well as the forage base that supports them. The Division implements the Commission's rules and Department initiatives. The Division's mission is to ensure sustainable marine and estuarine fisheries for the benefit of the people of North Carolina. Division staff drafted the CHPP, and they will staff many of the groups working on implementation actions. Staff in DMF district offices will also utilize CHPP information to review potential impacts of coastal development projects.

Environmental Management Commission and Division of Water Quality

The Environmental Management Commission (EMC) is responsible for adopting rules for the protection, preservation and enhancement of the State's air and water resources. The Commission oversees and adopts rules for several divisions of DENR, including the Divisions of Air Quality, Water Resources, and Water Quality. The goal of the Division of Water Quality (DWQ) is to maintain or restore and improve the aquatic environment and to ensure compliance with state and federal water quality

standards. In coordination with the CRC and MFC, and their respective staffs, the EMC and DWQ have developed specific actions to implement the CHPP recommendations.

Coastal Resources Commission and Division of Coastal Management

The Coastal Resources Commission (CRC) establishes policies for North Carolina's Coastal Management Program and adopts implementing rules for both the N.C. Coastal Area Management Act (CAMA) and the N.C. Dredge and Fill Law. The commission designates areas of environmental concern, adopts rules and policies for coastal development within those areas, and certifies local land-use plans. The Division of Coastal Management (DCM) serves as staff to the CRC and works to protect, conserve, and manage North Carolina's coastal resources through an integrated program of planning, permitting, education and research. With jurisdictional authority at the interface of many of the habitats identified in the CHPP, the CRC and DCM take actions to compliment those of the MFC/DMF and EMC/DWQ.

GOAL 1

IMPROVE EFFECTIVENESS OF EXISTING RULES AND PROGRAMS PROTECTING COASTAL FISH HABITATS

Division of Coastal Management

(1.1) CRC has approved rule revisions for public hearing, which will strengthen DCM's enforcement programs after successfully seeking legislation to raise maximum Coastal Area Management Act penalties to $1,000 for a minor development violation and $10,000 for a major development violation. Anticipated effective date – December 1, 2007.

(1.1) The Coastal Reserve and DCM's Regulatory Branch hosted four workshops for marine contractors in February 2007. These workshops provided marine contractors with up-to-date information on rules for coastal development. The workshops included an overview of general permit fees, construction of bulkheads, placement of riprap, and construction of piers. Coastal Management's shoreline stabilization, and pier and dock development initiatives were also be discussed with comments included in drafts being considered by the CRC.

(1.1) The 2006-2007 North Carolina budget provided four new compliance and enforcement positions for DCM. These positions, one based in each of the four district offices, will focus primarily on compliance monitoring of permits issued under the CAMA and the State's Dredge and Fill Law and enforcement activity. In addition, these positions will provide compliance assistance to the regulated communities on how to comply with regulatory requirements. DCM has filled these positions.

(1.1) N.C. National Estuarine Research Reserve's System-Wide Monitoring Program (SWMP) has been integrated with DWQ, APNEP and DMF monitoring efforts.

(1.3) In conjunction with NOAA in the Carolinas on May 9, 2007, the NC National Estuarine Research Reserve produced a segment of Estuary-Live focusing on Shell Bottom, Marsh, Soft Bottom and SAV habitats. Approximately 5,000 students participated in this online 3-day event. CHPP habitats will be a recurring theme for Estuary-Live.

(1.3) The Mid-Atlantic Marine Educators Association held a conference at the Aquarium at Pine Knoll Shores for teachers and educators on March 2, 2007. Participants took part in several activities specifically addressing the CHPP habitats.

(1.3) North Carolina's Clean Marina Program and Clean Vessel Act activities will emphasize the threats to fish habitat and the benefits of BMPs

(1.4) DWQ Basinwide Planners are reviewing CAMA Land Use Plans including plans for Currituck County, Hyde County, Emerald Isle, Oriental, Manteo and Southport.

Division of Water Quality

(1.1) Two new full-time compliance positions were added in the Washington and Raleigh regional offices.

(1.1) DWQ continues to inspect high density Coastal Stormwater Permits as they come up for renewal.

Division of Marine Fisheries

(1.1) DCM trained DMF Marine Patrol to assist in noting and reporting possible CAMA permit violations

(1.1) DMF prepared draft Shellfish and Submerged Aquatic Vegetation (SAV) habitat survey methods for Division of Coastal Management to provide to CAMA permit applicants to use in the permit application and review process

(1.2) DMF and NOAA developing cooperative SAV habitat research program

(1.3) Incorporated CHPP information into DMF outreach activities

Department of Environment and Natural Resources

(1.2) Received funding for continuation of cooperative university-DOT water quality monitoring in Pamlico Sound through the FERRYMON program

(1.2) The Division of Environmental Health (DEH) completed the mapping of all permanent shellfish harvest area closures and created new closure maps for distribution. All closure maps are now accessible on the DEH Web Site: http://www.deh.enr.state.nc.us/shellfish/maps.htm

(1.2) GIS shellfish waters classification layer is now available on the NC One Map.

(1.2) DEH completed the new shoreline survey methodology for the four pilot shellfish growing areas.

(1.2) DEH received funding from the General Assembly for three new positions to expand the new Shellfish Sanitation Shoreline Survey methodology in all shellfish growing areas.

(1.2) DEH, through Shellfish Sanitation is developing a data system to share information with other DENR agencies.

(1.3) A draft of a new Memorandum of Agreement has been developed by NC Division of Forest Resources (DFR) and shared with staff of DWQ for their agency review and comments.

GOAL 2

IDENTIFY, DESIGNATE AND PROTECT STRATEGIC HABITAT AREAS

Division of Marine Fisheries

(2.1) Submerged Aquatic Vegetation (SAV) cooperative mapping:

- DMF signed MOU for cooperative SAV mapping and research efforts
- DMF accepted lead responsibilities for SAV mapping groundtruth process and overall data management
- DMF and partners trained 117 persons from various agencies in standardized SAV ground truth sampling methods to be used starting Fall 2007

(2.1) Shellfish habitat mapping:

- DMF received state funding to enhance mapping activities
- 4 new state funded mapping positions
- One GIS analyst to manage mapping data
- Begin mapping in Brunswick County
- Begin mapping deep waters in Pamlico Sound system

(2.2) Strategic Habitat Area (SHA):

- DMF completed the Strategic Habitat Area process report
- MFC approved the Strategic Habitat Area process report
- DMF began analysis to implement SHA process in Albemarle Sound area in support of River Herring FMP implementation
- DMF and Sea Grant funded a fellowship to assist in data analysis for the Albemarle Sound SHA determination

Division of Coastal Management

(2.1) DCM initiated a three Phase Monitoring Program for seagrass in the Coastal Reserves. Completed the mapping of Rachel Carson Reserve and will begin mapping of the Masonboro Island Reserve. The Coastal Reserves are tracking location, coverage by species, light, salinity and depth. They are considering adding nutrient load to the monitoring protocol. DCM signed MOU for cooperative SAV mapping and research efforts

Division of Water Quality

(2.1) DWQ signed MOU for cooperative SAV mapping and research efforts

(2.2) DWQ coordinated with DOT to conduct a feasibility study regarding SAV restoration and mitigation in the Currituck Sound.

Department of Environment and Natural Resources

(2.1) APNEP coordinated Interagency SAV mapping effort and managed the contract to obtain digital aerial imagery of the North Carolina coast for mapping of SAV. Mapping project currently over 75% complete and ongoing.

GOAL 3

ENHANCE HABITAT AND PROTECT IT FROM PHYSICAL IMPACTS

Division of Marine Fisheries

(3.1) DMF received state funding to enhance oyster restoration

(3.1) Oyster shell recycling

- One new state funded position to enhance shell recycling
- More than 100 recycling sites established, mostly with volunteers
- About 13,000 bushels of recycled shells annually
- New state laws to support shell recycling
  - No oyster shells in landfills (effective 7/1/2007)
  - State tax credit for donated shells (effective 7/1/2007)
  - State agencies cannot use oyster shells for landscaping (effective in 2007 upon passage)

(3.1) Oyster sanctuary management

- 9 managed oyster sanctuaries in Pamlico Sound system
  - All closed to shellfish harvest
  - All function as artificial reefs

(3.5) Anadromous fish spawning areas (AFSAs) for coastal waters were designated in MFC rules. The WRC is undertaking similar rule designations for AFSAs in inland waters.

Division of Coastal Management

(3.2) The Beach and Inlet Management Plan (BIMP) was included in DCM's CZMA Section 309 5 - Year Program Enhancement Strategy (2006-2010) which has been approved by NOAA. Included in the BIMP are:

- DWR and DCM are collaborating to develop a comprehensive Beach and Inlet Management Plan (BIMP) for the State. Contractor selection has been completed. DCM and DWR have consulted with the Department and selected an Advisory Committee to define what such a plan should include and a timeline for development, as well as defining the areas to be managed. The Advisory Committee is comprised of appropriate state and federal agencies and members from the affected coastal communities.

- BIMP Advisory Committee – DENR has established a BIMP Advisory Committee of stakeholders. The Committee consists of representatives from the NC Ports Authority; USF&W Service; USACE; New Hanover County Ports, Waterway and Beach Commission; Environmental Defense; US Coast Guard; NC Dept of Commerce; ECU, NC Fisheries Assoc.; NCSU; Town of Topsail Beach; NC Sea Grant; Carteret County Shore Protection Office; National Marine Fisheries Service; Town of Caswell Beach; NC Coastal Federation; Town of Kill Devil Hills; and NC Division of Tourism, Film and Sports Development. The Committee held its first meeting in June 2007 to discuss the project with the contractor.

- Beach Fill Project Database: A database of historic, ongoing and future beach fill projects including beach nourishment, dredged material disposal, habitat enhancement, storm protection, and dune construction is being developed. Portions of this dataset already have been compiled by state and federal agencies as well as academic institutions. DCM is currently merging these data sets.

- DCM's proposal to receive a NOAA Coastal Services Center Fellow for the period of August 2007 to August 2009 was approved. The Fellow will be assigned solely to tasks associated with the development of the BIMP (beach fill database, working with advisory group, etc.). The Fellow will begin working with DCM staff in August 2007.

(3.4) The CRC is considering rule changes to its general permit for Shoreline Stabilization to reduce the distance waterward in which bulkheads encroach into public trust areas, by moving structure locations further landward of marsh vegetation to allow for marsh migration and to minimize construction impacts, and by promoting the benefits of rock structures. Currently, the DCM and the DWQ are discussing the recommended implementation strategies in order to most effectively incorporate each agency's management objectives for the coastal and estuarine shorelines.

(3.4) DCM's CZMA Section 309 5-Year Program Enhancement Strategy (2006-2010) has been approved by NOAA. The following activities are proposed specific to the estuarine shoreline:

Delineate the Estuarine Shoreline along with the Associated Shoreline Type and Shoreline Structures. The Center for Geographic and Information Systems (CGIA) has been contracted to determine the methodology for delineating the shoreline and structures for North Carolina. They have evaluated techniques such as LiDAR, Feature Analyst, and digitizing from the best available aerial photography. By July 2007, CGIA will deliver a suggested methodology report as well as a completed shoreline and delineated structures for all public trust waters in Carteret, Craven and Pamlico Counties.

Department of Environment and Natural Resources

(3.1)(b) The DFR, along with NCDOT and EEP, has begun gathering preliminary information in order to reestablish riparian wetlands and stream hydrology within the Little River watershed in the Neuse River basin and the Claridge Nursery sight near the city of Goldsboro.

GOAL 4

ENHANCE AND PROTECT WATER QUALITY

Division of Coastal Management

(4.5) The CRAC-sponsored a Stormwater Retrofitting Seminar in Manteo in conjunction with its March 2007 meeting. Approximately 70 attendees, including CRAC members, local elected officials, and municipal staff were present to learn about some of the technical and practical issues associated with retrofitting existing facilities for better stormwater control. DWQ briefed attendees on current and proposed permitting standards. Presentations were made on the technical aspects of retrofitting, focusing on his 16 broad criteria for designing a project. Staff of the N.C. Cooperative Extension Service office in Craven County highlighted projects that they have been involved with, and the services they offer to assist local governments that wish to undertake projects. Attendees also heard about the City of Kinston's experiences with retrofitting projects. A second seminar was held in Greenville in May 2007, and a third in Wilmington in July 2007.

(4.7) The CRC has been considering changes to the docks and piers rules that would address the recommendations of the Multi-slip Docking Facilities Advisory Group and give property owners greater flexibility in designing docks and piers. Staff has presented the Commission with a square footage of public trust coverage formula based on lot width. Such a formula would give riparian property owners an "allowance" of coverage that they could use to fit their needs. Certain aspects of the draft rule (pier width and height) have been sent back to the P&SI Committee for further consideration.

Division of Water Quality

(4.3) DWQ completed a survey of all municipally-owned stormwater outfalls to saline waters, including a GIS data layer.

(4.5) DWQ completed revision of its updated Stormwater Best Management Practices (BMP) Manual.

(4.6)(b) EMC completed the rulemaking process for, and began implementation of, the new Universal Stormwater Management Program.

(4.6)(b) The EMC and DWQ initiated comprehensive revision of Coastal Stormwater Rules in the 20 coastal counties.

(4.6)(b) The DWQ initiated implementation of Phase II Stormwater Rules with reduced low density thresholds for Onslow, Brunswick, and New Hanover Counties.

(4.6)(b) The EMC designated Morehead City and Atlantic Beach as new Phase II municipalities.

Department of Environment and Natural Resources

(4.5)(a) Within the DFR's four coastal districts, existing DFR bridgemats were used on 10 harvest tracts, protecting 12 stream crossings and accessing 426 acres of timberland. Specifications for new bridgemats have been drafted; purchase is expected later in calendar year 2007.

(4.5)(a) Currently the work order and final production costs for publishing the *NC Forestry BMP Quick-Reference Field Guide* are being developed between DFR and Correction Enterprises. It is expected that this field guide will be available for distribution in the fall of 2007.

(4.5)(c) Significant progress was made on the construction of an outdoor education and training pavilion at Clemmons Educational State Forest in Clayton, located within the targeted Beddingfield Creek watershed. This pavilion will be dedicated to the topic of nonpoint source pollution prevention and instructional workshops focusing on North Carolina's river basins. This pavilion is the first effort 'on-the-ground' to provide training and educational opportunities to the nearby community within the watershed and visiting school groups that frequently utilize the services of the State Forest.

Attachment 3

2007 – 2009 CHPP Implementation Plan

Action#	Action description	DENR	DMF	DCM	DWQ	Time frame	Comments
1.1. Enhance enforcement of, and compliance with, Coastal Resources Commission (CRC), Environmental Management Commission (EMC), and Marine Fisheries Commission (MFC) rules and permit conditions.							
1	The Department will seek funding for additional compliance positions in appropriate programs.	Yes	No	No	Yes		DWQ needs one more for Wilmington. Land Resources needs positions; CRAC sending letter of support for establishment of additional DWQ compliance positions.
2	Cross train Marine Patrol officers to take note of and report violations of EMC rules and permits in Coastal Waters to appropriate agencies.	Yes	Yes	No	Yes	Plan in FY 2007-08; train in 2008-09; implement following training.	
3	Enhance DMF habitat alteration permit review capability.	No	Yes	No	No	Establish program and staff in FY 2008-09	One position in each regional office plus one clerical position (total=5) as requested in DMF expansion budget.
4	Design an effective Inspection Program to focus more resources on areas that are critical to coastal habitat protection similar to Shellfish Sanitation shoreline survey program (Lead: DEH-SS Shoreline Survey Coordinator)	Yes	No	Yes	Yes	2007-08 (1st step)	Steps: 1-Organize a DENR interagency inspection task force to examine the issue and develop a system to accomplish the objective; 2-Produce a report with proposed new inspection regime and list of

Action#	Action description	DENR	DMF	DCM	DWQ	Time frame	Comments
							additional resources necessary to execute the plan; 3-Begin implementing the plan
5	Conduct outreach to educate citizens in their jurisdictions about DWQ's Neuse and Tar-Pamlico riparian buffer rules.	No	No	No	Yes		
6	Share COE permit tracking system to address cumulative impacts.	Yes	No	Yes	No		
7	Coordinate DMF, DWQ, and Dept. of Agriculture and Consumer Services actions concerning aquaculture operations in order to protect and enhance surface waters and estuarine resources.	Yes	Yes	No	Yes	2008-09	
8	Develop permit application survey protocols for shellfish and SAV habitats for CAMA applicants to use.	No	Yes	Yes	No	2007-08	Draft protocols under review by DCM.
9	Ensure consistency in habitat definitions among agencies and commissions.	Yes	Yes	Yes	Yes		Draft rule language for SAV habitat being reviewed by MFC. CRC would change their definition to, "SAV as defined by MFC."
1.2. Coordinate and enhance water quality, physical habitat and fisheries resource monitoring (including data management) from headwaters to the nearshore ocean.							
10	Enhance dependable water quality monitoring by investing in Neuse Estuary MODMON and FerryMon.	Yes	No	No	No		Work to secure funding
11	The Department, through the Division of Environmental Health, will develop a data system for monitoring data and mapping of the closure of shellfishing waters to enhance the sharing of information among Departmental Divisions.	Yes	No	No	No		Maps available on DEH-SS and NC-One map websites
12	The Department, through the Division of Environmental Health, will continue to refine and expand the data gathered in shoreline surveys to more effectively assess	Yes	No	No	No		

Action#	Action description	DENR	DMF	DCM	DWQ	Time frame	Comments
	pollution impacts to shellfish growing areas.						
13	The Department, through the Albemarle-Pamlico National Estuary Program (APNEP), will develop a comprehensive monitoring plan for the estuarine system.	Yes	Yes	Yes	Yes	End of 2008	Coordinate with data sharing processes (Action# 16 below).
14	Analyze DMF data to develop fish-based habitat indicators.	Yes	Yes	No	No	End of 2008	
15	Develop a suite of indicators of estuarine and nearshore coastal health (APNEP action).	Yes	No	No	No	Start in 2006-07; complete development by Dec 2007	
16	Work with other DENR agencies to develop data sharing processes. Specifically address data types and standards, data sharing standards, definitions, web services, scaling, integration mechanisms, administration, QA/QC, and other issues.	Yes	Yes	Yes	Yes	2007-09	Coordinate with comprehensive monitoring program (Action ID 187)
1.3. Enhance and expand educational outreach on the value of fish habitat, threats from human activities, effects of non-native species, and reasons for management measures.							
17	The Department, through the Public Information Office will coordinate with the Zoo, Aquariums, Museum of Natural Sciences, State Parks, Educational State Forests and Environmental Education Centers to integrate the relevant components of the CHPP into exhibits and programs.	Yes	No	No	No	2007-09	
18	Develop an educational outreach plan for CHPP – NERR lead.	Yes	No	Yes	No	2007-08	NC-NERR included development of the plan in its activities for FY 07-08.
19	N.C. NERR will include a segment of E-Live to focus on fish habitat.	No	No	Yes	No		E-Live has featured shell bottom and SAV in its 2007 session; 2008 session will focus on soft bottom.

Action#	Action description	DENR	DMF	DCM	DWQ	Time frame	Comments
20	North Carolina's Clean Marina Program and Clean Vessel Act activities will emphasize the threats to fish habitat and benefits of BMPs.	Yes	No	Yes	No		DCM has partnered with Sea Grant to revitalize the Clean Marinas Program and to assist DCM with implementation of BMPs at all coastal marinas. Clean marinas BMP manual being reviewed by DWQ. An Advisory Committee has been established to review criteria and check list (June 2007). Clean Marina workshops are scheduled for December 2007 to focus on power washing. Clean Boating Guide distributed to marinas.
21	DCM and N.C. Sea Grant will incorporate CHPP into their research and education efforts.	No	No	Yes	No		
22	Create interactive display(s) showing habitat functions and threats for use at festivals, etc.	No	Yes	No	No	2008	
23	Develop and distribute brochures about fish, fish habitat, and fishing	Yes	Yes	Yes	Yes	2007-09	To be available for general distribution by DENR staff.
1.4. Coordinate rulemaking and enforcement among regulatory commissions and agencies.							
24	The Department will hold quarterly meetings on proposed projects and enforcement cases that are or may be subject to the permitting or enforcement jurisdiction of the programs of more than one division and invite other state and federal agencies to participate as appropriate.	Yes	Yes	Yes	Yes		Divisions and agencies that will participate in meetings include Division of Coastal Management, Division of Water Quality, Division of Marine Fisheries, Division of Land Resources, Division of Environmental Health, Wildlife Resources Commission and U.S. Army Corps of Engineers. Discussion will include cumulative

Action#	Action description	DENR	DMF	DCM	DWQ	Time frame	Comments
							impact and SEPA concerns
25	The NCDFR will revise its Memorandum of Agreement (MOA) documents with the NC Division of Land Resources and the NC Division of Water Quality to ensure compliance monitoring and enforcement policies are consistently practiced in a timely and seamless manner.	Yes	No	No	No	2007-09	These MOAs primarily address interdivisional communication on the nine forestry performance standards known as the Forest Practice Guidelines Related to Water Quality (FPGs) and the Riparian Buffer Rules applicable to NC's river basins. Additionally, the NCDFR will work with the US Army Corps of Engineers, Wilmington District, to create an additional guidance document for the forestry community that provides interagency consensus on what is allowable minor drainage in wetlands. Other forestry stakeholders will be involved in this guidance development process.
2.1. Evaluate potential Strategic Habitat Areas by:							
a) coordinating, completing, and maintaining baseline habitat mapping (including seagrass, shellbottom, and other bottom types) using the most appropriate technology;							
26	Map submerged aquatic vegetation (SAV) in coastal North Carolina.	Yes	Yes	Yes	Yes	Complete initial coastwide mapping 2007-08	APNEP will coordinate aerial photography in fall 2007.
27	Continue mapping of all shallow estuarine bottom and bottom types.	No	Yes	No	No		
28	Map deep (> 10 ft) estuarine bottoms, starting with lower Neuse River.	No	Yes	No	No	Begin 2007-08	

Action#	Action description	DENR	DMF	DCM	DWQ	Time frame	Comments
29	N.C. NERR will map SAV within reserve boundaries with data acquisition coordinated with multi-agency coastwide mapping effort: Repeat Rachel Carson mapping and map Masonboro and Currituck sites.	No	No	Yes	No	2007-08	
	b) selective monitoring of the status of those habitats;						
30	Conduct cooperative DMF/NOAA research evaluating environmental conditions needed to provide suitable SAV habitat.	No	Yes	No	No	Begin summer 2007	
31	DMF and NERR will initiate SAV monitoring of sentinel sites	No	Yes	Yes	No	2008	
	c) assessing effects of land use and human activities on those habitats,						
32	Conduct research on the effects of current dock siting practices on SAV and shell bottom, and determine design modifications that would minimize impacts.	No	Yes	Yes	No	2008-09	Possible federal aid or university research project
33	Develop and support graduate fellowship programs to address CHPP priority research needs.	No	Yes	No	No	2008-09	
	2.2. Identify and designate Strategic Habitat Areas using ecologically based criteria, analyze existing rules and enact measures needed to protect Strategic Habitat Areas, and improve programs for conservation (including voluntary actions) and acquisition of areas supporting Strategic Habitat Areas.						
34	Integrate information resulting from SHA committee into DENR Divisions' guidelines, policies, and rulemaking.	Yes	Yes	Yes	Yes	Start July 2007; continue through SHA designation	
35	Conduct SHA evaluation and designation process for Albemarle Sound area.	No	Yes	No	No	2007-08	Coordinate with DENR Strategic Conservation Plan
36	*MFC designate Anadromous Fish Spawning Areas.*	No	Yes	No	No	2007-08	Part of River Herring FMP actions
37	Work with DENR to include SHA priorities within EEP and Strategic Conservation Plan.	Yes	Yes	No	No	2007-09	
38	Conduct SHA evaluation and designation process for	No	Yes	No	No	2008-09	Coordinate with DENR Strategic

Action#	Action description	DENR	DMF	DCM	DWQ	Time frame	Comments
	White Oak basin.						Conservation Plan
	3.1 Greatly expand habitat restoration, including:						
	a) creation of subtidal oyster reef no-take sanctuaries,						
39	Enhance oyster sanctuaries in Pamlico Sound system. Expand several sanctuaries; plan new sites.	No	Yes	No	No		
40	Enhance Oyster Shell Recycling Program. Discourage use of shell material for landscaping or other uses besides shellfish cultch.	Yes	Yes	No	No		State law prohibits shell disposal in landfills.
41	Monitor all oyster sanctuaries for oyster recruitment, survival, and growth.	No	Yes	No	No		
42	Work with university researchers to monitor fish/invertebrate use of oyster sanctuaries and effect of oysters on local water quality.	No	Yes	No	No	Start 2007-08	
43	Cooperate with university researchers on oyster larvae distribution and movement investigations	No	Yes	No	No	2007-09	
44	DMF Resource Enhancement Section will initiate dissolved oxygen (DO) sampling in Pamlico Sound system to aid in determining suitable sites for oyster restoration.	No	Yes	No	No	2007-08	Coordinate with DWQ Rapid Response Program data collection.
45	Support funding for establishment and operation of shellfish hatcheries	Yes	Yes	Yes	Yes		
	b) re-establishment of riparian wetlands and stream hydrology.						
46	Work with the Corps of Engineers and the Department of Transportation on innovative mitigation projects and an appropriate crediting system for them under the Ecosystem Enhancement Program (EEP). Such projects may include the protection and restoration of SAV and oyster beds, and the removal of certain dams and other aquatic organism barriers.	Yes	No	No	No		More development of mitigation credit strategy using nontraditional means, ongoing data development for coastal cataloging unit screening. EEP is incorporating CHPP priorities into its coastal cataloging unit screening process to promote

Action#	Action description	DENR	DMF	DCM	DWQ	Time frame	Comments
							internally (via its Full-Delivery and Design-Bid-Build programs) and externally (via programs like CREP) the implementation of restoration projects in hydrologic units where coastal functions can be most improved.
47	DENR review of state agency requests to the Natural Heritage Trust Fund will place a priority on those proposals that would further the protection and restoration of critical fisheries habitats.	Yes	No	No	No		Coordinate with DENR Strategic Conservation Plan
48	Make protection and restoration of critical fisheries habitats a priority part of the One North Carolina Naturally initiative, such as developing conservation plans for the twenty coastal counties that identify potential conservation focus areas.	Yes	No	No	No	2007-09	Coordinate with DENR Strategic Conservation Plan
49	The Department will assist coastal local governments in identifying navigation and stream restoration projects of particular importance to both fish and fisheries with grants from the State-Local projects program of the Division of Water Resources.	Yes	No	No	No		
50	Survey previously identified Albemarle Sound river herring spawning areas to estimate current condition and spawning function, and identify stream obstructions on river herring spawning streams.	Yes	Yes	No	No	2007-08	EPA grant through APNEP to Environmental Defense to do this in NC portion of Chowan Basin; WRC involvement needed for more comprehensive effort.
51	Include Strategic Habitat Areas as a priority area for CREP (DSWC).	Yes	No	No	No	2007-09	
52	DSWC encourage local SWCDs to include Strategic Habitat Areas and other CHPP priorities in local priority	Yes	No	No	No	2007-09	Need strong emphasis on Community Conservation Assistance

Action#	Action description	DENR	DMF	DCM	DWQ	Time frame	Comments
	ranking system for the Agriculture Cost Share Program and the Community Conservation Assistance Program.						Program because it is the only retrofit program that can begin to reverse stormwater pollution.
53	Establish and maintain an inventory of restoration projects describing the location, amount, and type of habitat established in the coastal river basins. Contributors: EEP, DWQ, etc.	Yes	No	Yes	No		APNEP is conducting an inventory in northeast region; DWQ 319 Program and CWMT also have inventories.
54	The NCDFR will partner with the NCDOT and NCEEP to restore ~13,000 linear feet of stream and floodplain (Priority 2 Restoration) and create ~10-30 acres of wetlands in the Little River watershed (Neuse River Basin).	Yes	No	No	No	2007-08	
55	The NCDFR will work with other DENR agencies to start pre-construction water quality and water quantity monitoring of 'The Canal'.	Yes	No	No	No	Start 2007-08	This channelized stream runs through the Division's 700+ acre Claridge Nursery, located just west of the City of Goldsboro.
	c) and other habitat restoration.						
56	Study the feasibility and benefits of developing an SAV Restoration Program (Lead: EEP?).	Yes	Yes	Yes	Yes		Needs further discussion among agencies regarding exotic SAV species. Note: Split into stepwise actions - much more needs doing (research, policy); could be a DENR issue. NEED DENR DECISION.
	3.2 Prepare and implement a comprehensive beach and inlet management plan that addresses ecologically based guidelines, socio-economic concerns and fish habitat.						
57	Develop minimum criteria for monitoring beach nourishment projects.	Yes	Yes	Yes	Yes		Part of the Beach and Inlet Management Plan (BIMP); contractor selection has been completed.
58	Convene stakeholder group to identify data gaps, funding	No	No	Yes	No		Part of the Beach and Inlet

Action#	Action description	DENR	DMF	DCM	DWQ	Time frame	Comments
	needs, and framework, and develop a timeline.						Management Plan. The Advisory Committee is comprised of appropriate state and federal agencies and members from the affected coastal communities. BIMP Advisory Committee meeting held in May 2007.
59	DCM will serve as a clearinghouse for beach nourishment monitoring data.	No	No	Yes	No		This is part of DCM CZMA section 309 program for 2006-2010; portions of this dataset already have been compiled by state and federal agencies as well as academic institutions. DCM is currently merging these datasets.
3.3. Protect Submerged Aquatic Vegetation (SAV), shell bottom, and hard bottom areas from fishing gear effects through improved enforcement, establishment of protective buffers around habitats, and further restriction of mechanical shellfish harvesting.							
60	Prepare maps identifying areas where allowed use of bottom disturbing fishing gear does or could overlap areas with sensitive estuarine habitat.	No	Yes	No	No	By December 2008	Update GIS data layers for regulated area boundaries available - analysis required
3.4. Protect fish habitat by revising estuarine and public trust shoreline stabilization rules using best available information, considering estuarine erosion rates, and the development and promotion of incentives for use of alternatives to vertical shoreline stabilization measures.							
61	Support/promote efforts to develop shoreline stabilization demonstration projects along non-ocean shorelines.	No	No	Yes	No		DCM has identified possible funding sources and will be submitting applications for assistance July 2007.
62	Encourage alternatives to vertical shoreline stabilization methods through permit requirements and fees.	Yes	No	Yes	No		The CRC is considering rule changes to its GP for shoreline stabilization that reduce the distance waterward in which bulkheads encroach into public trust areas, by moving

Action#	Action description	DENR	DMF	DCM	DWQ	Time frame	Comments
							structure locations further landward of marsh vegetation to allow for march migration with sea level rise and to minimize construction impacts, and by promoting the benefits of rock structures.
63	Refine rule 15A NCAC 07H .2700 GP for Marsh Sills.	No	No	Yes	No	Ongoing	Included in ongoing effort of CRC Shoreline Stabilization Subcommittee.
64	Use NOAA grant to delineate estuarine shorelines; begin by developing mapping methods	No	No	Yes	No	2007-09	The Center for Geographic and Information Systems (CGIA) has been contracted to determine the methodology for delineating the shoreline and structures for North Carolina. They have evaluated techniques such as LIDAR, Feature Analyst, and digitizing from the best available aerial photography. By June 2007, CGIA will have delivered a suggested methodology report as well as a completed shoreline and delineated structures for all public trust waters in Carteret, Craven and Pamlico Counties.
65	Pursue and provide financial support for shoreline stabilization demonstration projects and studies	No	No	Yes	No		DCM has identified possible funding sources and will be submitting application for assistance July 2007.
66	Work with NOAA's Technical Advisory Committee members in their sponsored research program "Ecological Effects of Sea Level Rise" to develop information/tools to	No	Yes	Yes	No		DCM and DMF staff serving as management representatives; Presentations on SLR scheduled for

Action#	Action description	DENR	DMF	DCM	DWQ	Time frame	Comments
	better forecast and manage landscape responses of critical natural resources relative to sea level rise.						July 2007 CRC (Projects Status Report). DCM participating in EPA Coastal Elevations and Sensitivity to SLR study – focuses on coastal areas of NY to NC.
67	Consider erosion rates as an additional factor in the siting of structures along estuarine and public trust shorelines.	No	No	Yes	No	2007-09	The Center for Geographic and Information Systems (CGIA) has been contracted to determine the methodology for delineating the shoreline. They have evaluated techniques such as LIDAR, Feature Analyst, and digitizing from the best available aerial photography. Recommendations expected June 2007.
3.5 Protect and enhance habitat for anadromous fishes by:							
a) incorporating the water quality needs of fish in surface water use planning and rule-making							
68	The Department, through the Division of Water Resources, will participate in a study of Kerr Lake with federal partners. The study will include the evaluation of modifying releases from the dam to benefit anadromous fish in the Roanoke River.	Yes	Yes	No	No	Complete study by 2012	Conduct study under section 216 of the federal Clean Water Act; include other DENR agencies with appropriate knowledge and programs.
b) eliminating obstructions to fish movements, such as dams, locks, and road fills							
69	The Department, through the Division of Water Resources and the Ecosystem Enhancement Program will focus on evaluation and possible removal of lock and dams 1, 2, and 3 on the Cape Fear River.	Yes	No	No	No		Being pursued by CHPP Steering Committee and FMP implementation group
70	The Department, through the Division of Water Resources and the Ecosystem Enhancement Program, will pursue dam removal projects where appropriate.	Yes	No	No	No	2007-09	

Action#	Action description	DENR	DMF	DCM	DWQ	Time frame	Comments
71	Modify dam removal policy with ACE to provide for accomplishing action #s 69 and 70, above.	Yes	Yes	Yes	Yes	2007-09	
72	Survey coastal river basins systematically to locate obstructions to fish migration and prioritize sites for removal/restoration.	No	Yes	No	No		
73	Obtain funding to restore designated streams and associated wetlands designated as anadromous fish spawning areas in the Albemarle Sound area as implementation steps for the River Herring Fishery Management Plan.	Yes	Yes	No	No		APNEP also pursuing funding.
4.1 Reduce point source pollution from wastewater by:							
b) providing incentives for upgrading all types of wastewater treatment systems.							
74	Evaluate 15A NCAC 2H .0400 and 2B .0500 regulations for opportunities to provide incentives for upgrading all types of wastewater treatment systems and make recommendation to EMC.	No	No	No	Yes		
4.2. Adopt or modify rules or statutes to prohibit ocean wastewater discharges.							
75	Evaluate 15A NCAC 2H .0400 rules as they apply to ocean wastewater treatment systems and make recommendation to the EMC regarding modifications.	No	No	No	Yes		
4.3. Prohibit new or expanded stormwater outfalls to coastal beaches and to coastal shellfishing waters (EMC surface water classifications SA and SB) except during times of emergency when public safety and health are threatened, and continue to phase-out existing outfalls by implementing alternative stormwater management strategies.							
76	Work with DENR to prioritize stormwater outfall mapping efforts on areas near critical fisheries habitats and implement DOT's Stormwater Pilot Project on new and innovative technologies to clean up discharges from NC DOT outfalls and associated outlets (DWR action).	Yes	No	No	No		Money with DENR; "Smart sponge" experiment underway in Dare County. Note: Consider UNC-Coastal Studies Institute as another partner in research.
77	Evaluate impact of deep-water ocean outfall for	Yes	Yes	Yes	Yes	2007-09	

Action#	Action description	DENR	DMF	DCM	DWQ	Time frame	Comments
	stormwater management (Lead: DWQ).						
78	Actively seek research on innovative technology to remove stormwater outfalls with 319 grant funding.	No	No	No	Yes		
79	Develop a plan to phase out municipal stormwater outfalls to sounds.	No	No	No	Yes	2007-09	All estuarine outfalls have been identified
80	Enhance DWQ coastal/state stormwater database by mid-2007	No	No	No	Yes	2007-08	Awaiting report
4.4. Enhance coordination with, and financial/technical support for, local government actions to better manage stormwater and wastewater.							
81	Provide Phase II stormwater educational & technical assistance to local governments through the DENR Runoff Pollution Campaign and through partnerships with the Division of Community Assistance and UNC Institute of Government.	No	No	No	Yes		
82	Implement Community Conservation Assistance Program with emphasis on CHPP stormwater priorities in coastal counties (DSWC action).	Yes	No	No	No	Start in 2007-08	DSWC program patterned after Agriculture cost share program. Need strong emphasis on Community Assistance Program because it is the only retrofit program than can begin to reverse stormwater pollution.
4.5. Improve land-based strategies throughout the river basins to reduce non-point pollution and minimize cumulative losses to wetlands and streams through voluntary actions, assistance, and incentives, including:							
a) improved methods to reduce sediment pollution from construction sites, agriculture, and forestry;							
83	The NCDFR will use additional 319 Grant (NPS Pollution Prevention) funds in 2007 to purchase five additional sets of steel bridge mats for the Division's Bridge Mat Loan & Education Project.	Yes	No	No	No		Some of these new mats will be located at coastal plain district offices and made available to local loggers. Using bridge mats for stream or ditch crossings is a

Action#	Action description	DENR	DMF	DCM	DWQ	Time frame	Comments
							preferred BMP with respect to protecting water quality and improving forest operation efficiency and costs.
84	Enhance DCM education efforts such as the N.C. NERR Septic Systems Workshops.	No	No	Yes	No		DCM held grant-writing workshops (2006) introducing participants to various funding agencies that provide assistance to local communities to make environmental improvements that control stormwater runoff, improve local water quality and restore watersheds. Coastal Reserves staff conducted a workshop on Stormwater Management and Sustainable Development in Morehead City on Nov. 1, 2006. (move to 2005-2007 actions)
85	The NCDFR will complete, publish, and distribute statewide 10,000 copies of the NC Forestry BMP Quick-Reference Field Guide in 2007-08.	Yes	No	No	No	2007-08	This 140+ page color-illustrated handbook will complement the Division's 2006 release of the NC Forestry BMP Manual To Protect Water Quality. The Field Guide is a hands-on document targeted at reaching loggers including their heavy equipment operators and laborers.
86	The NCDFR will seek funding to purchase 'rehab' fire plows for five of its coastal-based district offices.	Yes	No	No	No	2007-08	Pulled by tractors or dozers, fire plows are used by the Division to install many miles of prescribed fire and wildfire control lines on an

Action#	Action description	DENR	DMF	DCM	DWQ	Time frame	Comments
							annual basis. Rehab plows leave a more environmental-friendly footprint on the landscape by minimizing sediment release and transport, while accomplishing similar forest protection goals as traditional fire plows. Rehab plows could be used to install control lines on prescribed burns and to mitigate wildfire control lines installed in sensitive areas under emergency conditions.
87	Obtain USDA approval to expand CREP to include the Roanoke, Pasquotank, White Oak, Lumber, and Cape Fear River basins. (DSWC action)	Yes	No	No	No		Awaiting USDA approval to include Roanoke and Pasquotank basins.
88	Implement enhanced marketing strategy for CREP to include education on Neuse and Tar-Pamlico buffer rules. (DSWC action)	Yes	No	No	No		
b) increased on-site filtration of stormwater;							
89	The NCDFR will begin long-term water quality and water quantity monitoring of Beddingfield Creek during 2007 in anticipation of implementing a 3,000+ acre watershed restoration effort in the Neuse River Basin.	Yes	No	No	No	2007-09	The Division is using 319 Grant funds to startup this watershed monitoring. The restoration will be part of the 10-year Urban Forest Watershed Protection and Education Initiative (UFWPEI). The UFWPEI seeks to improve the water quality in urbanizing watersheds by integrating managed forests with planned and existing development and protecting and enhancing sensitive areas in the

Action#	Action description	DENR	DMF	DCM	DWQ	Time frame	Comments
							watershed. Phase 1 of the project has already generated > $4.0 million in partnership funds, primarily used for land acquisition within the watershed.
c) documentation and monitoring of small but cumulative impacts to wetlands and streams from approved, un-mitigated activities;							
90	Coordinate with Wetland Functional Assessment Team to determine wetland status and trends.	Yes	No	Yes	Yes		Proposed for adoption by letter 21 May 2007.
d) incentives for low-impact development (LID);							
91	Implement five on-the-ground projects to increase understanding of the effectiveness of low impact development in coastal and piedmont North Carolina in meeting water quality goals, develop guidance for design considerations, and provide educational opportunities.	No	No	No	Yes	Dec 2010	Four LID demonstration projects funded with Section 319 funds in Neuse, Tar-Pamlico, and Cape Fear basins
g) other							
92	The NCDFR will seek funding to establish two Water Quality Forester (WQF) positions in coastal-plain Districts 6 (Fayetteville) and 13 (Fairfield).	Yes	No	No	No	2007-09	The Division's WQFs provide a diversity of services including preharvest planning, onsite technical assistance, FPG compliance inspection, and forestry BMP education and training. The WQFs also engage in special projects related to forest water quality, such as the recurring Forestry BMP Implementation Survey Project.
93	The NCDFR will implement 'Tailgate BMPs for Loggers' in 2007-08, a customer education outreach project designed to take the classroom into the woods.	Yes	No	No	No	2007-09	This new service will target equipment operators and laborers that can not financially afford to take off a workday to attend forestry BMP training in a traditional

Action#	Action description	DENR	DMF	DCM	DWQ	Time frame	Comments
							classroom environment.
94	The NCDFR will produce a 4th BMP video on forest operations.	Yes	No	No	No	2007-08	The video, entitled 'BMPs for Site Rehabilitation', will cover appropriate practices to use in stabilizing and closing out a harvested timber tract. Once completed, this video will be incorporated into NC Forestry Association's ProLogger Continuing Education program for water quality and other Division BMP training opportunities.
95	The NCDFR will produce a 2nd edition of the 'Riparian & Wetland Tree Planting Pocket Guide for North Carolina'.	Yes	No	No	No	2007-08	The Division produced 5,000 copies of this 77-page booklet in September 2006. The 1st edition is projected to be out-of-print by mid to late 2007.
96	Through the Division of Land Resources (DLR), work with the Sedimentation Control Commission (SCC) to include CHPP presentations on the Commission agenda and to include information on CHPP actions in SCC and DLR publications.	Yes	No	No	No		
4.6. Improve land-based strategies throughout the river basins to reduce non-point pollution and minimize cumulative losses to wetlands and streams through rule making, including:							
a) increased use of effective vegetated buffers,							
97	*EMC solicit public comment on a proposal to extend the vegetative setback for new development within the 20 CAMA Counties from 30 feet to 50 feet.*	*No*	*No*	*No*	*Yes*	*2007-08*	*The EMC has initiated rulemaking action to revise DWQ's Coastal Stormwater rules. EMC is soliciting comment on the proposal.*
b) reduction of impervious surfaces where feasible and reduction of the level of impervious surface allowable in the absence of engineered stormwater controls,							

Action#	Action description	DENR	DMF	DCM	DWQ	Time frame	Comments
98	*Require the use of engineered stormwater controls for all new development within 1/2 mile and draining to Shellfishing Waters that exceeds 12% impervious surfaces and new development that is not within 1/2 mile and draining to shellfishing waters would be required to install engineered stormwater controls is the impervious surface density exceeds 24%.*	*No*	*No*	*No*	*Yes*	*2007-08*	*The EMC has initiated rulemaking action to revise DWQ's Coastal Stormwater Rules (current threshold for engineered stormwater controls is 25% within ½ mile of shellfishing waters and 30% beyond ½ mile).*
c) expansion of CAMA Areas of Environmental Concern (AECs) upstream and landward, and							
99	Expand CAMA Areas of Environmental Concern (AECs) upstream and landward within CAMA counties.	No	No	Yes	No	2007-09	
e) Other							
100	Evaluate stormwater pollution control mechanisms and cumulative wetland and stream losses in the Cape Fear and White Oak River basins to determine if additional regulatory controls are needed and present findings to the EMC.	No	No	No	Yes		Study is underway.
101	Develop a mitigation policy for intermittent streams.	No	No	No	Yes		In development.
4.7. Develop and implement a comprehensive coastal marina and dock management plan and policy for the protection of shellfish harvest waters and fish habitat.							
102	Inventory docks and piers in the 20 coastal counties.	No	No	Yes	No		The Center for Geographic and Information Systems (CGIA) has been contracted to determine the methodology for delineating the shoreline and structures for North Carolina. They have evaluated techniques such as LIDAR, Feature Analyst, and digitizing from the best available aerial photography. By June 2007, CGIA will deliver a suggested methodology report as

Action#	Action description	DENR	DMF	DCM	DWQ	Time frame	Comments
							well as a completed shoreline and delineated structures for all public trust waters in Carteret, Craven and Pamlico Counties.
103	*Incorporate EMC's prohibition of marinas in ORWs into CRC rules.*	*No*	*No*	*Yes*	*Yes*	*2008-09*	
104	*Evaluate marina development standards (rule NCAC 7H .0208(b)(5)). CRC consider rule changes to implement in dock and pier management.*	*No*	*No*	*Yes*	*No*		
105	Improve wastewater/stormwater management at coastal marinas	No	No	No	Yes		Evaluating existing and potential water/stormwater management at coastal marinas.
4.8 Reduce non-point source pollution from large-scale animal operations by the following actions:							
a) support early implementation of environmentally superior alternatives to the current lagoon and sprayfield systems as identified under the Smithfield Agreement and continue the moratorium on new/expanded swine operations until alternative waste treatment technology is implemented;							
106	The Department, through the Division of Pollution Prevention and Environmental Assistance, will provide contract and independent swine farms with the technical assistance and training needed to implement effective Environmental Management Systems.	Yes	No	No	No		
107	Support early implementation of environmentally superior alternatives to lagoon and spray field systems. Encourage commissions to express their support for early implementation.	Yes	No	No	No		
b) seek additional funding to phase-out large-scale animal operations in sensitive areas and relocate operations from sensitive areas;							
108	Seek funding for fourth phase of voluntary program to buy out active swine operations in the 100-year floodplain (DSWC action).	Yes	No	No	No		DSWC seeking funding from CWMTF.

North Carolina General Statute 136-202
2007 Annual Report

Prepared by the NCDOT Transportation Planning Branch
December 11, 2007

North Carolina General Statute 136-202
2007 Annual Report

North Carolina General Statute 136-202 concerning Metropolitan Planning Organizations (MPO) requires the Department of Transportation to report annually on the evaluation and adjustment of the boundaries of the areas served by each MPO in the State. The following is a summary of MPO adjustments during the last calendar year.

Burlington-Graham MPO

The Burlington-Graham MPO (BGMPO) includes Burlington, Graham, Elon College, Gibsonville, Mebane, Haw River, Whitsett, Green Level, Village of Alamance, and Alamance County. This MPO experienced no boundary adjustments during the last year. The current Memorandum of Understanding establishing the structure and membership of the MPO is on file within the Transportation Planning Branch. Please contact Ms. Atefe Northcutt, Transportation Engineer with the Transportation Planning Branch, for any questions or comments relevant to the Burlington-Graham MPO.

Cabarrus-Rowan MPO

The Cabarrus-Rowan MPO includes Concord, Kannapolis, China Grove, Cleveland, Faith, Granite Quarry, Harrisburg, Landis, Midland, Mount Pleasant, Rockwell, Salisbury, Spencer and Rowan and Cabarrus Counties. This MPO experienced no boundary adjustments during the last year, but a new Memorandum of Understanding is underway to add East Spencer to the MPO. The current Memorandum of Understanding establishing the structure and membership of the MPO is on file within the Transportation Planning Branch. Please contact Ms. Linda Dossé, P.E., Transportation Engineer with the Transportation Planning Branch, for any questions or comments relevant to the Cabarrus-Rowan MPO.

Capital Area MPO

The Capital Area MPO consists of the all the area inside of Wake County, and parts of Franklin, Granville, Harnett, and Johnston Counties, which includes the municipalities of Angier, Apex, Bunn, Cary, Clayton, Creedmoor, Franklinton, Fuquay-Varina, Holly Springs, Knightdale, Morrisville, Raleigh, Rolesville, Wake Forest, Wendell, Youngsville, and Zebulon. The current Memorandum of Understanding establishing the structure and revised membership of the MPO is on file within the Transportation Planning Branch. Please contact Ms. Rupal Desai, Transportation Engineer with the Transportation Planning Branch, with any questions or comments relevant to the Capital Area MPO.

Durham-Chapel Hill-Carrboro MPO

The Durham – Chapel Hill – Carrboro Urban Area MPO consists of the Durham, Chapel Hill, Carrboro, Durham County (all), Hillsborough, Orange County (part) and Chatham County (part). This MPO experienced no boundary adjustments during the last year. The current Memorandum of Understanding establishing the structure and membership of the MPO is on file within the Transportation Planning Branch. At this time, the DCHC MPO considering a boundary expansion next year and has been actively studying it and soliciting interest. Please contact Mr. Jamal Alavi, P.E., Transportation Engineer with the Transportation Planning Branch, for any questions or comments relevant to the Durham – Chapel Hill – Carrboro MPO.

Fayetteville Area MPO

The Fayetteville Area MPO includes the City of Fayetteville, the Towns of Hope Mills and Spring Lake, Fort Bragg Military Reservation, Pope Air Force Base, the urban portion of Cumberland County, portion of Harnett County, and portions of Hoke County. This MPO experienced no boundary adjustments during the last year. The current Memorandum of Understanding establishing the structure and membership of the MPO is on file within the Transportation Planning Branch. Please contact Mr. Darius Sturdivant, Transportation Engineer with the Transportation Planning Branch, for any questions or comments relevant to the Fayetteville Area MPO.

French Broad River MPO

The French Broad River MPO includes the City of Asheville, Town of Biltmore Forest, Town of Black Mountain, Buncombe County, Town of Canton, Town of Clyde, Village of Flat Rock, Town of Fletcher, Haywood County, Henderson County, City of Hendersonville, Town of Laurel Park, Town of Mills River, Town of Maggie Valley, Town of Montreat, Town of.Waynesville, Town of Weaverville, and Town of Woodfin. This MPO experienced no boundary adjustments during the last year. The current Memorandum of Understanding establishing the structure and membership of the MPO is on file within the Transportation Planning Branch. Please contact Mr. Linh Nguyen, P.E., Transportation Engineer with the Transportation Planning Branch, for any questions or comments relevant to the French Broad River MPO.

Gaston Urban Area MPO

The Gaston Urban Area MPO consists of the following member governments: Belmont, Bessemer City, Cramerton, Dallas, Gaston County, Gastonia, Lowell, McAdenville, Mount Holly, Ranlo, Spencer Mountain, and Stanley. This MPO experienced no boundary adjustments during the last year. The current Memorandum of Understanding establishing the structure and membership of the MPO is on file within the Transportation Planning Branch. Please contact Ms. Shannon Ransom, Transportation Engineer with the Transportation Planning Branch, for any questions or comments relevant to the Gaston Urban Area MPO.

Goldsboro MPO

The Goldsboro Metropolitan Planning Organization includes the City of Goldsboro, Wayne County, the Village of Walnut Creek and the Seymour Johnson Air Force Base. This MPO experienced no boundary adjustments during the last year. The current Memorandum of Understanding establishing the structure and membership of the MPO is on file within the Transportation Planning Branch. Please contact Mr. James Upchurch, Transportation Engineering Supervisor with the Transportation Planning Branch, for any questions or comments relevant to the Jacksonville Urban Area MPO.

Greater Hickory MPO

The Greater Hickory MPO includes the municipalities of Brookford, Cajah's Mountain, Catawba, Cedar Rock, Claremont, Conover, Connelly Springs, Drexel, Gamewell, Glen Alpine, Granite Falls, Hickory, Hildebran, Hudson, Lenoir, Long View, Maiden, Morganton, Newton, Rhodhiss, Rutherford College, Sawmills, Valdese and the urbanized areas of Alexander, Burke, Caldwell and Catawba Counties. This MPO experienced no boundary adjustments during the last year. The current Memorandum of Understanding establishing the structure and membership of the

MPO is on file within the Transportation Planning Branch. Please contact Ms. Sarah Smith, P.E., Transportation Engineering Supervisor with the Transportation Planning Branch, for any questions or comments relevant to the Greater Hickory MPO.

Greensboro MPO

The Greensboro Urban Area MPO includes most of Guilford County, towns of Summerfield, Stokesdale, Oak Ridge, Pleasant Garden, and Sedalia, excluding the Gibsonville, Whitsett, High Point, and Jamestown areas. This MPO experienced no boundary adjustments during the last year. The current Memorandum of Understanding establishing the structure and membership of the MPO is on file within the Transportation Planning Branch. Please contact Mr. Michael Abuya, EIT, Transportation Engineer with the Transportation Planning Branch, for any questions or comments relevant to the Greensboro Urban Area MPO.

Greenville Urban Area MPO

The Greenville Urban Area MPO includes the City of Greenville, the Towns of Winterville and Ayden, the Village of Simpson, and surrounding areas of Pitt County. This MPO experienced no boundary adjustments during the last year. The current Memorandum of Understanding establishing the structure and membership of the MPO is on file within the Transportation Planning Branch. Please contact Ms. Elena Talanker, Transportation Engineer with the Transportation Planning Branch, for any questions or comments relevant to the Greensboro Urban Area MPO.

High Point MPO

The High Point Urban Area MPO includes High Point, Thomasville, Archdale, Jamestown, Trinity, Forsyth County and portions of Guilford, Davidson and Randolph Counties. This MPO experienced no boundary adjustments during the last year. The current Memorandum of Understanding establishing the structure and membership of the MPO is on file within the Transportation Planning Branch. Please contact Mr. Wayne Davis, P.E., Ph.D., Transportation Engineering Supervisor with the Transportation Planning Branch, for any questions or comments relevant to the High Point Urban Area MPO.

Jacksonville Urban Area MPO

The Jacksonville Urban Area MPO includes all incorporate areas of the City of Jacksonville and portions of Onslow County. This MPO experienced no boundary adjustments during the last year. The current Memorandum of Understanding establishing the structure and membership of the MPO is on file within the Transportation Planning Branch. Please contact Ms. Tammye Fontenot, Transportation Engineer with the Transportation Planning Branch, for any questions or comments relevant to the Jacksonville Urban Area MPO.

Mecklenburg-Union MPO

The Mecklenburg-Union MPO consists of all of Mecklenburg County and the urbanized portions of Union County. Member jurisdictions include Charlotte, Cornelius, Davidson, Huntersville, Matthews, Mint Hill and Pineville in Mecklenburg County, and Indian Trail, Monroe, Stallings, Waxhaw, Weddington, Wesley Chapel and Wingate in Union County. This MPO experienced no boundary adjustments during the last year. The current Memorandum of Understanding establishing the structure and membership of the MPO is on file within the Transportation

Planning Branch. Please contact Mr. Jonathan Parker, P.E., Transportation Engineer with the Transportation Planning Branch, for any questions or comments relevant to the Mecklenburg-Union MPO.

Rocky Mount Urban Area MPO

The Rocky Mount Urban Area MPO consists of the City of Rocky Mount, Town of Nashville, part of Edgecombe County, and part of Nash County. This MPO experienced no boundary adjustments during the last year. The current Memorandum of Understanding establishing the structure and membership of the MPO is on file within the Transportation Planning Branch. Please contact Ms. Anna Meares. Transportation Engineer with the Transportation Planning Branch, for any questions or comments relevant to the Rocky Mount Urban Area MPO.

Wilmington MPO

The Wilmington MPO consists of the City of Wilmington, the Town of Carolina Beach, the Town of Kure Beach, the Town of Wrightsville Beach, New Hanover County, the Town of Belville, the Town of Leland, the Town of Navassa, Brunswick County and Pender County. This MPO experienced no boundary adjustments during the last year. The current Memorandum of Understanding establishing the structure and revised membership of the MPO is on file within the Transportation Planning Branch. Please contact Mr. James Upchurch, Transportation Engineering Supervisor with the Transportation Planning Branch for any questions or comments relevant to the Wilmington MPO.

Winston Salem MPO

The Winston-Salem MPO includes Winston-Salem, Bermuda Run, Bethania, Clemmons, Kernersville, King, Lewisville, Rural Hall, Tobaccoville, Walkertown, and parts of Davidson, Davie and Stokes Counties. This MPO experienced no boundary adjustments during the last year. The current Memorandum of Understanding establishing the structure and membership of the MPO is on file within the Transportation Planning Branch. Please contact Mr. Andy Bailey, Transportation Engineer with the Transportation Planning Branch, for any questions or comments relevant to the Winston-Salem MPO.

KEY:
Drought to persist or intensify
Drought ongoing, some improvement
Drought likely to improve, impacts ease
Drought development likely
Depicts large-scale trends based on subjectively derived probabilities guided by short- and long-range statistical and dynamical forecasts. Short-term events -- such as individual storms -- cannot be accurately forecast more than a few days in advance. Use caution for applications -- such as crops -- that can be affected by such events. "Ongoing" drought areas are approximated from the Drought Monitor (D1 to D4 intensity). For weekly drought updates, see the latest U.S. Drought Monitor. NOTE: the green improvement areas imply at least a 1-category improvement in the Drought Monitor intensity levels, but do not necessarily imply drought elimination.

RESIDENT INSPECTOR PROGRAM
2007 ANNUAL REPORT

This annual report is presented to the Environmental Review Commission pursuant to Article 9, G.S. 130A 295.02(m). The report covers the activities of the Resident Inspector Program from July 1, 2006 through June 30, 2007.

I. OVERVIEW

The Resident Inspector Program has been operating for more than 16 years in the Division of Waste Management. This program monitors all aspects of the commercial hazardous waste facilities in North Carolina and assures compliance with all laws and rules administered by the Department of Environment and Natural Resources. It may also enforce laws or rules administered by any other state agency through a memorandum of agreement.

The Resident Inspector Program was established "... to enhance the ability of the Department to protect the public health and the environment by providing the Department with the authority and resources necessary to maintain a rigorous inspection and enforcement program at commercial hazardous waste facilities" [G.S. 130A-295.02(f)]. Under the program, commercial facilities, which receive and process a wide variety of hazardous waste from large quantity, small quantity and small quantity conditionally exempt generators, are subject to an inspection frequency of two, four or six times per month. This level of inspection presence helps to ensure a high compliance rate at these facilities, where the management of hazardous waste is their primary business.

II. PROGRAM STAFFING

For this fiscal year, the program was comprised of two resident inspectors assigned to home duty stations, one administrative assistant, a program supervisor and two part-time resident inspectors. The Resident Inspector Program resides within the Hazardous Waste Section's Compliance Branch. (See Attachment 1 for the Organization Chart)

III. THE RESIDENT INSPECTOR

Most state agencies perform their compliance monitoring inspections as required from their specific respective regulations. The Resident Inspector Program, however, is unique in that its inspections utilize a multimedia approach. This approach covers all regulatory responsibilities for which DENR is authorized, such as hazardous waste management and treatment requirements, workplace safety, air emissions requirements, wastewater treatment and discharge requirements.

There are inherent overlaps of DENR's regulatory requirements with regulations administered by other departments. Two examples include the North Carolina adopted federal regulations enforcing the Department of Labor's Occupational Safety & Health Act and the Department of Transportation's hazardous materials transportation regulations. Deviations from these regulations could adversely affect public health and the environment, as well as a facility's compliance with air, water or hazardous waste management regulations. As part of the Resident Inspector Program's comprehensive approach to monitoring commercial hazardous waste facilities, resident inspectors also evaluate these sites for potential violations in these other regulatory areas. When necessary, they make recommendations to the facilities and/or make referrals to the authorized agency or agencies. The mandated frequency of inspection at each facility gives resident inspectors the time needed to achieve this high degree of oversight.

To prepare resident inspectors for their multimedia approach to inspections, initial training typically consists of Hazardous Waste Operations and Emergency Response (40 hours), Environmental Surveillance, RCRA Hazardous Waste Training, Hazardous Materials Transportation and the care and use of Level B / Personal Protective Equipment.

Annual training for resident inspectors includes an 8-hour Health & Safety Basic Refresher, Level B Update and Environmental Surveillance Update. Depending upon the inspector's area of expertise and responsibility, other miscellaneous training may be received, including Hazardous Waste Incineration, Ambient Air Monitoring, Air Pollution Control Devices, Chemical Safety Audit, DOT Hazardous Materials Transport, OSHA Inspector's Course, Hazardous Materials Management, Emergency Management and various EPA regulatory workshops.

IV. SUBJECT FACILITIES

To be subject to oversight by the Resident Inspector Program, the facility must be a commercial hazardous waste facility. The term "commercial," as it relates to a hazardous waste facility, is defined as a facility "... that accepts hazardous waste from the general public or another person for a fee" [G.S. 130A-290(a)(3)]. Presently, there are 11 permitted commercial hazardous waste treatment, storage and disposal facilities in North Carolina under the jurisdiction of the Resident Inspector Program.

On the evening of Oct. 5, 2006, a fire broke out in the hazardous waste storage area of EQ - North Carolina, a commercial hazardous waste facility located in Apex, NC. This fire, consuming the majority of the hazardous waste in storage at that time, resulted in the evacuation of approximately 16,000 residents from their homes. The Resident Inspectors and various other members of the Hazardous Waste Section's Compliance Branch provided on-site coverage overseeing the facility's cleanup and waste disposal. Oversight coverage during this period ranged from 24 hours per day to being present only when EQ-NC operational personnel were present (HWS staff were present at all times when cleanup and disposal activities were conducted by EQ – NC). In total, for the five month effort at EQ-NC, the Resident Inspectors expended 1,500 man-hours with an additional 3,900 man-hours provided by other HWS staff.

The cause of the fire is still unknown at this time and the incident remains under review by the Chemical Safety Board, whose findings will be issued by calendar year end. A preliminary report by the Chemical Safety Board in June 2007 indicated that a box of unspent oxygen generators is likely to have contributed to the intensity of the fire. Based on subsequent findings, the Division of Waste Management has issued an Administrative Order with Penalty and a notice of intent to terminate EQ-NC's Part "B" RCRA Permit.

V. FACILITY CATEGORY RANKINGS

Each commercial hazardous waste treatment, storage and disposal facility is ranked to determine its required inspection fees and minimum inspection frequency as required under **15A NCAC 13A .0116**. The frequency of the inspections at each facility is dependent upon its qualification as a "special purpose" commercial hazardous waste facility and the category ranking assigned to it, which is based on such factors as the capacity of the facility, the nature of the hazardous waste and the type of treatment being performed. Currently, all existing commercial hazardous waste treatment, storage and disposal facilities in North Carolina qualify as "special purpose" facilities. (See Attachment 2 for current category rankings and primary waste treatment activities for these facilities.) The designated categories of 1, 2 or 3 correspond to a minimum inspection frequency of two, four or six times per month respectively.

VI. FUNDING & EXPENSES

The Resident Inspector Program is funded by fees collected from the commercial hazardous waste facilities. These fees are based upon each facility's category ranking and volume (tons) of hazardous waste handled. The category ranking system is designed to be an indirect measure of the costs associated with oversight at each commercial hazardous waste facility. While the commercial hazardous waste facilities' total tonnage throughput has decreased approximately 11percent this year, Program fees remained approximately unchanged from the previous year due to a facility ranking change. Resident Inspector Program operating expenses have increased due to increases in transportation / fuel costs. Due to the staffing demands to cover the EQ-NC fire and cleanup, it remained necessary for the Resident Inspector Program supervisor to conduct a portion of the required inspections. Only through the assistance of two Hazardous Waste Section inspectors (part-time) did the Resident Inspector Program meet the required minimum number of inspections mandated.

For FY 2006-2007, the budget was developed using anticipated revenues from Resident Inspector Program fees of approximately $275,000. The actual hazardous waste tonnage received by three of the commercial facilities significantly decreased over the previous year but was partially offset by one facility's tonnage increase. All other facilities remained relatively unchanged. (A detailed list of the individual tonnages received by each of the commercial hazardous waste facilities in FY 2006-2007 can be found in Attachment 3.) The actual Resident Inspector Program receipts in FY 2006-2007 totaled $295,000, while Resident Inspector Program expenses were held to $248,000.

VII. INSPECTION GOALS & ACHIEVEMENT

During FY 2006-2007, the Resident Inspectors conducted a total of 456 inspections, which includes 175 additional inspections of EQ-NC as part of the cleanup and waste disposal following the October incident, exceeding the required minimum of 450 inspections. These inspections included routine site inspections as well as specific inspections to monitor cleanup activity and other inspections to assist in improving compliance performance by other facilities. (A detailed list of the inspections performed by program staff at the commercial hazardous waste facilities in FY 2006-2007 can be found in Attachment 4.)

VIII. ENFORCEMENT & COMPLIANCE

Enforcement Activities

In general, the commercial hazardous waste facilities continue to be cooperative and, in most cases, have rapidly responded with corrective action in most cases when deficiencies or violations were cited or recommendations made. When either of these actions does not result in timely and consistent compliance, a more severe enforcement action is taken, such as a notice of violation or a compliance order with administrative penalty.

During the past fiscal year, resident inspectors issued two Notices of Violation to a commercial facility and one Compliance Order (see Attachment 5 for current and historic enforcement tracking). The overall compliance rate for the commercial facilities is 98.6 percent.

Compliance Assistance Activities & Homeland Security

Compliance assistance activities offered under this program are conducted routinely during the inspectors' site visits. Since the inspectors visit these facilities at least semi-monthly, they have the opportunity to become very familiar with the operations of each facility and may offer compliance assistance in several ways. Inspectors identify trouble areas observed at each and all of the other facilities and work with each facility toward permanent solutions. If a facility begins to have compliance problems, the inspectors increase scrutiny of these problem areas during each visit to keep the facility's compliance awareness high. Inspectors communicate frequently with facility management and front-line workers to clarify the permit and current regulatory requirements, the reasons for the requirements, and the potential risks incurred for noncompliance. Inspectors continue to develop, schedule and facilitate roundtable training workshops customized for each specific facility. These workshops cover the most frequent deficiencies observed overall at commercial facilities, the most frequent violations observed at their particular facility, any potential areas of concern and positive facility operations.

If a facility repeats a violation, the primary inspector and program supervisor will set up an informal enforcement conference with the local facility compliance managers, the plant manager, and, if applicable, the corporate compliance officers. They discuss the facility's current compliance issues and work with the facility to find a permanent solution, which may include formal enforcement.

IX. PUBLIC MEETINGS / HEARINGS & PERMIT RENEWALS

The Resident Inspector Program staff continues to observe and assist/support public meetings/hearings that involve the operation of and proposed modifications to the commercial hazardous waste facilities in this state. A continuing program goal is for the staff to be fully aware of public concerns and to be conscious of these concerns during oversight efforts at these facilities. Program staff members have provided assistance in facility compliance audits by generators, consultants, other agencies and the public. Program staff work with area schools to provide information in the classroom about environmental responsibility and how the facilities help with that responsibility.

The Resident Inspector Program staff continues to work with the Facility Management Branch (the permitting arm of the Hazardous Waste Section) and each commercial hazardous waste facility during the permit renewal/application process and other compliance reviews, such as closure of a permitted unit (storage tank, processing area, container storage area, etc.). The purpose of this joint effort is to provide clarification, address areas of concern, and assist in ensuring the permit application accurately reflects the facility as it is operated.

X. SUMMARY

At the conclusion of the program's 16th year, the Resident Inspector staff continues to provide rigorous oversight of the commercial hazardous waste facilities in this state. This is reflected in the facilities' overall compliance rate of 98.6 percent. The staff is constantly seeking new approaches and initiatives to improve the department's ability to protect public health and the environment. Additionally, the staff worked with the Governor's Task Force and the NC General Assembly to expand the current regulations governing the commercial TSD facilities. On June 26, 2007, Gov. Easley signed House Bill 36 into Session Law 2007-107. The major components of the law include increased assurance requirements, strengthened information-sharing requirements and enhanced technical requirements to improve the overall safety and security of commercial hazardous waste management facilities. The Resident Inspector Program will face new challenges in implementing the additional requirements of this law and will assist in the rulemaking process as required for this law. To ensure that new regulatory requirements are fully understood by the facilities so they can be implemented rapidly and correctly, the staff will continue to educate and instruct as the new requirements are enacted. With proactive approaches, such as workshops, program oversight and compliance assistance efforts, the Resident Inspectors will continue to target a high level of compliance at the commercial hazardous waste facilities in North Carolina.

Report to the North Carolina General Assembly on the Inactive Hazardous Sites Program

October 2007

Superfund Section
Division of Waste Management
North Carolina Department of Environment and Natural Resources

http://www.wastenotnc.org

EXECUTIVE SUMMARY

The Inactive Hazardous Sites Program was created by the North Carolina General Assembly to identify, control and correct properties contaminated with hazardous substances.

To date, 1,788 chemical spill or disposal sites and old, unlined dumps or landfills have been catalogued that are not being addressed by other environmental authorities. Of this number, 1,351 still require work to address their hazards. In addition, the program gained another 1100 to 2000 sites with a recent consolidation of remediation programs into the Division of Waste Management within the Department of Environment and Natural Resources. The Inactive Hazardous Sites Branch (the Branch) is in the process of reviewing and merging data records on these sites. A more precise cataloging will be available in a few months.

Currently there are 669 old non-permitted unlined landfills requiring action. The locations of the landfills are still being determined. The Branch has received state funds to hire contractors to locate these landfills, collect information on property use, and determine the potential for exposure. The Branch has also received federal funding for one full-time equivalent position to coordinate these contracts and to conduct the work in the 20 counties not eligible for the state funding. The location and conditions survey will be complete in the contract-eligible counties in early 2008.

Of the old dumps inspected thus far, 77 percent have a residence, school, church, day care or drinking water source on or within 1,000 feet of the landfill. More than 100 have drinking water wells within 500 feet. Based on observations at sites investigated by the USEPA and the North Carolina Division of Waste Management, most of North Carolina's unlined landfills can be expected to have groundwater contamination. These landfills pose threats from contaminated groundwater reaching drinking water wells and from hazardous substances and methane vapors off-gasing from the waste and contaminated groundwater, making it into structures on or near the landfill thereby posing health threats and explosion hazards.

Senate Bill 1492, enacted this session, establishes a state-wide tax on waste disposal to address the hazards posed by these sites. The provisions of the bill which relate to the assessment and abatement of contamination at these unpermitted landfills go into effect in July 2008.

Limited funds are available for non-landfill orphan site assessment and cleanup. The Branch has been able to collect some funds through bankruptcy claims for a few sites. All currently available funds are dedicated to specific site actions. Insufficient funds remain to address other orphan inactive hazardous substance or waste disposal sites.

To increase the program's effectiveness, the General Assembly authorized the use of private environmental consulting firms to oversee voluntary cleanup actions. Registered Environmental Consultants (RECs) are providing supervision for cleanup work on 33 sites. State staff audit a portion of the REC's work activities. In addition, oversight of remedial actions at two sites is being provided by federally-funded staff and oversight of work at 34 former

manufactured gas plant sites is being provided through an agreement with a consortium of utilities and municipalities that funds two staff members.

The following summarizes site cleanup activities over the past reporting year.

Sites Identified	
Chemical spill or disposal sites	1,119
Old unlined dumps and landfills	669
Total Number Sites Identified	**1,788**
Sites With All Work Complete Since last status report in 10/06	6
Total Number Sites Requiring No Further Action	**437**
Note: Two sites reactivated this year based on new evidence of contamination. Another site no longer has "no further action" status, but is being addressed by another agency. A fourth was an error addition and was removed from the inventory.	
Ongoing Cleanup Actions	
Ongoing REC-Supervised Site Cleanup Actions	33
Ongoing Priority Cleanup and MGP Actions Supervised by State Staff	96
Total	**129**

The Inactive Hazardous Sites Response Act requires annual reporting to the General Assembly. All of the reporting requirements specified under N.C.G.S. 130A-310.10 are met in this report.

I. THE INACTIVE HAZARDOUS SITES INVENTORY AND THE INACTIVE HAZARDOUS WASTE SITES PRIORITY LIST

The Inactive Hazardous Sites Branch is part of the North Carolina Department of Environment and Natural Resources' Division of Waste Management. It implements the Inactive Hazardous Sites Response Act of 1987. This act requires DENR to maintain a catalog of inactive hazardous substance or waste disposal sites. There are currently 1119 chemical spill sites and 669 old unlined landfills cataloged. Of these, 437 sites now have all work completed and are assigned "No Further Action" status. Six sites completed all work and were assigned "No Further Action" status this reporting year. Table 1, on the following page, provides a list of sites added to that inventory since the last program report in October 2006. Table 2, on page 3, provides a list of sites assigned "No Further Action" status.

N.C.G.S. 130A-310.2 requires that sites catalogued in the Inactive Hazardous Sites Inventory be prioritized based on their threat to public health and the environment. After discovery, sites are first cataloged in the "Evaluations Pending" category of the Inactive Hazardous Sites Inventory until their rank is determined. Site rankings are determined using the rules found in 15A NCAC 13C .0200. Once ranked, sites are transferred to the Inactive Hazardous Waste Sites Priority List. This list is provided in an appendix to this report. The entire inventory can be provided upon request.

II. SITES THAT MAY OR ARE KNOWN TO REQUIRE USE OF THE INACTIVE HAZARDOUS SITES CLEANUP FUND

Purpose of the Fund

The Inactive Hazardous Sites Cleanup Fund is used to: (1) address imminent hazard sites; (2) pay for assessment and cleanup when responsible parties do not comply with orders to clean up sites; (3) pay for assessment and cleanup of sites that do not have financially-viable responsible parties (orphan sites); and (4) pay for state-contracted survey and legal assistance necessary to prepare notices of Inactive Hazardous Substance or Waste Disposal Sites where owners do not comply with orders to conduct such work. The state must attempt to recover its expenditures from responsible parties in the first, second and fourth cases.

The Inactive Hazardous Waste Sites Priority List helps determine priorities for cleanup. Responsible parties for top priority sites are encouraged to voluntarily clean up their sites. When a responsible party does not comply with a request and subsequent order to clean up a site, the State must perform the cleanup using the Inactive Hazardous Sites Cleanup Fund. The demand for state funds to conduct site cleanups depends on two factors: (1) how often responsible parties refuse to comply with orders to conduct cleanup and (2) the number of sites that lack financially-viable responsible parties. To date, the program has been successful in obtaining cleanup by responsible parties. Funds are mainly needed for orphan sites where the responsible party either cannot be located or has no financial resources.

The statute requires that the program report the list of sites known to require funds and the list of sites suspected to require funds for cleanup. Determining if responsible parties exist (and thus, if funds are needed) is often a complex and lengthy process. This information can become dated as owners and operators of the facilities change over time. To avoid the need to update the information several times, responsible party research is not done until a site is next in priority for action. For this reason, the total number of orphan sites on the Inactive Hazardous Waste Sites Priority List requiring state funds is not presently known.

Orphan Chemical Sites

In previous years, limited assessments and cleanup actions have been conducted using the Inactive Hazardous Sites Cleanup Fund (the Fund) at priority sites not having financially-viable responsible parties. In FY 06-07, the Fund was used to conduct a groundwater assessment at the Riverdale Homes Site in Durham, Durham County, to ensure no contamination remained. The site has now been assigned "no further action" status. The Branch also began investigation of an area of contaminated private wells known as the Rim Lake Area in Fayetteville in September 2007. An assessment of additional potable wells and a source evaluation is underway at this site.

The Inactive Hazardous Sites Branch has also recovered some funds to address specific sites through bankruptcy claims. Approximately $450,000 was obtained through a claim for six Burlington Industry properties. While the amount of funds is limited, the funds will be used to remove sources of contamination, thereby reducing the further spread of groundwater contamination and encouraging natural attenuation processes. Approximately $26,000 was recovered to address two former Cone Mills sites. The Branch has also recovered approximately

$940,000 in funds through a bankruptcy claim against Texfi, Inc. that is being used to remove sources of contamination at the Fayetteville property.

Inactive Hazardous Sites Cleanup funds have also been used to conduct an ongoing interim cleanup measure at the Texfi site in Fayetteville, Cumberland County. Groundwater contaminated with hazardous substances migrated from Texfi to the adjoining City of Fayetteville's Hoffer Water Plant property. The contaminated groundwater has been in contact with the city's primary finished drinking water holding tank. This concrete tank sits, in part, below the groundwater table. In addition, the city's drinking water intakes on the Cape Fear River, 450 feet downstream from the Texfi property, and a city park adjoining the Texfi property, are also concerns. The interim measure involved construction of a subsurface barrier wall in 2001 to prevent additional flow of contaminated water toward the tank. Extraction wells were installed to remove contaminated water that had already passed on to the water plant property around the tank. Groundwater contaminant concentrations on the tank side of the wall have been reduced approximately 95% as a result of this action. Thus far, analyses indicate the drinking water has not been affected.

Funds of up to $50,000 were authorized in each fiscal year 04-05 and 05-06 from the state's National Priorities List Cost Share Fund to continue the monitoring and maintenance of the Texfi interim measure. An appropriation of $100,000 was provided in FY 06-07 for monitoring and cleanup of the site. If the entire $100,000 is dedicated to monitoring only, funds are sufficient to conduct this work through August 2009. Some of the $100,000 may be needed to supplement the bankruptcy funds being used to address contaminant source material.

There is a risk that the barrier wall will fail overtime. Thus, it is important to remove the source of the groundwater contamination on the Texfi property. The sources are solvents in the subsurface. Settlement of North Carolina's bankruptcy claim against the Texfi estate mandated that a portion of the proceeds from the estate's law suits and property sales are to be set aside to conduct the removal of contaminant sources. On June 20, 2006, when the final disbursement of funds was received from the bankruptcy trustee, a total of approximately $940,000 became available to conduct the source remediation. A pilot test for determining whether the preferred treatment technology will work at the site was initiated in November 2006 and will continue to run through November 2007. If successful, full-scale implementation will then follow. This technology involves subsurface injection of materials that are designed to break down the source material. In addition to the chemical solvents in the subsurface, abandoned chemicals in tanks, drums, and other containers have been removed as part of this work. After treating the sources contributing to groundwater contamination, it could take many years before significant reductions in groundwater contaminant concentrations occur.

Unlined Landfills

A total of 669 unpermitted, unlined landfills have been cataloged. Requirements for permitting of landfills did not go into effect until January 1983. Based on information on permitted, unlined landfills, the majority are expected to have groundwater contaminated with hazardous substances. Hazardous waste disposal regulations did not exist until the 1980s. Therefore, these older unpermitted landfills have an even larger chance of posing threats from releases of hazardous substances.

The Branch has received state and federal funds to determine the location and the current property and surrounding property use at these sites. Location and use information has been collected on 414 landfills thus far. Of those inspected, 77% have a house, school, day care, church or drinking water source within 1000 feet of the landfill.

Almost without exception, these landfills were operated either by private individuals with limited financial resources or by counties and municipalities that operated in the public interest and did not make a profit. Thus, these sites may be considered to have no responsible parties available to pay for any corrective measures required.

These landfills pose threats from contaminated groundwater reaching drinking water wells and from hazardous substances and methane vapors off-gasing from the waste and contaminated groundwater, making it into structures on or near the landfill thereby posing health threats and explosion hazards.

For these reasons, the legislature enacted S1492 which establishes a state-wide tax on waste disposal to address the hazards posed by these sites. The provisions of the bill which relate to the assessment and abatement of contamination at these unpermitted landfills go into effect July 2008.

Cleanup Funds Needed

Currently 68 sites, of which 43 are higher priority cases, have been identified that have no financially-viable responsible parties and require further action. As explained earlier in this chapter, the total number of orphan sites is not presently known.

The Branch has also recently gained another 1,100 to 2,000 sites with a recent consolidation of remediation programs into the Division of Waste Management in DENR. As part of this reorganization, the Branch has been consolidating site data formerly managed by the Division of Water Quality into the Inactive Hazardous Sites Inventory. This report does not reflect those changes. Additional record sorting is required before the merged catalog will be complete. Based on reviews conducted thus far of the transferred site information, many sites are expected to be priorities and many may be orphaned. Preliminary review of some of these cases has already indicated about 30 sites with potential drinking water well issues and no responsible parties.

Orphan site work can include assessment only, small-to-large soil and waste cleanup, water line installation or larger groundwater restoration projects. An average cost-per-site was determined by first calculating the average cost for orphan soil cleanup actions conducted by the Branch and averaging that figure with an average site cleanup cost for several state programs published by the Association of State and Territorial Solid Waste Management Officials, adjusting for inflation. That figure comes to $510,798 per site. The total cost for cleanup is estimated then to be $34,734,264 for 68 orphan sites or $21,964,314 for 43 higher priority orphan sites.

As of July 1, 2007, the balance of the Inactive Hazardous Sites Cleanup Fund totaled $1,041,068. Of this, $851,703 is bankruptcy proceeds dedicated to conducting contaminant source

remediation at the Texfi-Fayetteville site. An additional $100,511 is committed to continue the operation and maintenance of the Texfi interim remedy. $25,968 of the total is bankruptcy proceeds dedicated to addressing two Cone Mills sites. The remaining $62,886 will be used to address another priority, leaving no remaining funds. The $383,131 in remaining bankruptcy proceeds for the six Burlington Industry sites is held in separate trust funds.

III. NATIONAL PRIORITIES LIST SITES REQUIRING A STATE COST SHARE

National Priorities List sites are those hazardous substance or waste disposal sites that are priorities for cleanup under the federal Comprehensive Environmental Response, Compensation and Liability Act, more commonly known as Superfund. North Carolina has 31 NPL sites.

The NPL includes both sites with financially-viable responsible parties and orphan sites. Cleanup costs are financed either by responsible parties or by a federal trust fund with a state cost share. When the federal trust fund is used, CERCLA requires North Carolina to pay 10 percent of the cleanup cost plus 100 percent of the cost to operate and maintain the remediation system.

Table 3 provides a list of the North Carolina NPL sites, their locations, investigation/cleanup status, estimated costs, and projected start dates for cleanup. Part I of Table 3, found on page 9, includes those sites where the Federal Trust Fund/North Carolina cost share is required. A summary of North Carolina's cost share obligations is provided at the end of this part. Part II of Table 3, found on page 11, includes the status of responsible party funded cleanups.

TABLE 3. NORTH CAROLINA NATIONAL PRIORITIES LIST SITES

SUMMARY OF NORTH CAROLINA COST SHARE REQUIREMENTS
As of July 1, 2007

Estimated total cost of pending/ongoing federal trust fund/N.C. cost share cleanups:	$116,970,689*
N.C.'s 10 percent cost share for pending/ongoing cleanups:	$11,697,069*
Fund disbursements for cost share payments:	$6,414,660
Current fund balance:	$6,748,772
Encumbered amount of the fund balance for cost share payments:	$5,282,409

* This number will increase due to remedial action cost estimates not being available for all sites. Also, other sites may be added to the National Priorities List which will require a state cost share.

** Date applies to either entire site or operable unit.

IV. RESPONSIBLE PARTY VOLUNTARY SITE REMEDIAL ACTION

When the Inactive Hazardous Sites Branch solicits the cooperation of responsible parties in taking action at a priority site, most parties agree to voluntarily conduct a cleanup with Branch approval. In addition to these voluntary actions, responsible parties and owners often come forward on their own to initiate an approved assessment and/or remedial action. Due to the number of volunteers and very limited staff resources, the Branch was authorized by the General Assembly to privatize its oversight role at lower priority, voluntary site remedial actions. Sites with more severe public health threats or concerns are still reviewed by state staff.

The privatized portion of the voluntary cleanup program is called the Registered Environmental Consultant, or REC Program. Under this program, a responsible party hires an REC to both conduct, and to certify the regulatory compliance of, a site's assessment and cleanup. In order for a firm to qualify as an REC, it must demonstrate that it meets certain regulatory qualifications criteria. The REC certification replaces state oversight. The state audits a portion of the REC projects to ensure the integrity of the program. The state sanctions RECs where necessary. A state staff auditor is funded through fees collected from the voluntary participants.

A current list of sites which have parties conducting assessments and cleanups in accordance with administrative agreements with the state is provided in Table 4 on the following page. Table 5, found on page 15, is a list of additional, ongoing, Branch-directed priority actions not under consent agreements.

Note: There are about 65 additional sites with active ongoing bankruptcy claims, new site screenings, requests for "no further action reviews," or other ongoing evaluations for action. In addition, many other sites were transferred to the Branch with the consolidation of remediation programs into the Division of Waste Management. Staff are working to transition the lower priority voluntary cleanups to the Branch's Registered Environmental Consultant Program for privatized oversight.

V. IMMINENT HAZARD SITES

The N.C. Department of Environment and Natural Resources and the USEPA are committed to addressing imminent hazard sites when identified. Table 6 provides a list of sites where imminent hazards have been discovered, or where abatement activities have continued, in fiscal year 06-07. Their location, a site description, status and funding source are also provided.

TABLE 6. SUMMARY OF IMMINENT HAZARD SITES

Site	*City/ County*	*Site Description*	*Status*	*Funding Source*
Industrial Metal Alloy	Winston-Salem/Forsyth	Formerly a solder manufacturing operation. Highly elevated lead, arsenic and antimony present in soils at the property. Adjoining residential lots are also contaminated.	The USEPA has conducted some sampling and held a public meeting. The USEPA has approved a Sampling Plan and Removal Action Plan prepared by the responsible party. The responsible party began implementation of the Sampling Plan in June 2007.	USEPA/ Responsible Party
Rhoderia Drive Wells	Stallings/ Union	Buried drums in a residential area. USEPA previously connected residents to city water.	USEPA completed removal of buried drums and some soil cleanup. The state has requested further soil excavation be performed. USEPA's response is pending.	USEPA
Synthron Chemical Fire	Morganton/ Burke	An explosion and fire occurred on January 31, 2006 on the property. An individual was fatally injured. Sampling indicates several hazardous substances remain at the property.	The USEPA conducted demolition of the buildings then segregated, categorized and removed hazardous materials from the site including those in tanks, reactors, bulk and other containers. All work is now complete.	USEPA
Texfi Industries	Fayetteville/ Cumberland	Chlorinated solvent groundwater contaminant plume has migrated from a former textile mill to the City of Fayetteville's water plant property. The city's finished drinking water holding tank sits in contact with contaminated groundwater. The city's drinking water intakes on the Cape Fear River are 450 feet downstream from the Texfi property line.	The State constructed a subsurface barrier wall in 2001 to prevent further contaminant migration to the holding tank area and installed extraction wells to remove contaminated groundwater in the area of the tank. Concentrations have been reduced. The State has been provided special appropriated funds to continue to operate the extraction wells and monitor the groundwater on the City's property. The State is addressing the source area through use of funds from a bankruptcy settlement. A pilot test is underway in the source area employing enhanced reductive dechlorination. Wastes in drums and tanks have been removed.	State

VI. SUMMARY OF THE INACTIVE HAZARDOUS SITES CLEANUP FUND AND NATIONAL PRIORITIES LIST COST SHARE FUND

Inactive Hazardous Sites Cleanup Fund
As of July 1, 2007

Deposits (06-07)	
Interest	$48,757
No further action review fees	$0
Special Appropriation for Texfi-Fayetteville monitoring	$100,000
Emergency Response Cap Excess	$11,555
Total Deposits	**$160,312**
Withdrawals (06-07)	
Texfi Industries-Fayetteville emergency abatement contract	$49,810
Texfi Industries-Fayetteville source remediation contract	$89,511
Reversion (8/06) of unspent 05-06 funds to NPL Cost Share Account	$15,200
Orphan priority site sampling/removal contract	$14,807
Total Withdrawals	**$169,328**
Current Balance	**$1,041,068**
Obligations	
Texfi emergency abatement contract	$100,511
Texfi source remediation contract	$851,703
Orphan priority site sampling/removal contract (includes Cone Mills)	$88,854
Total Current Obligations	**$1,041,068**
Effective Balance	**$0**
Orphan Cleanup Cost Requirements (see Chapter II for more details)	
Funds needed for 43 priority orphan sites identified	$21,964,314
Funds needed for 25 additional orphan sites identified	$12,769,950
Orphan Site Cleanup Costs	**$34,734,264**

Funding Notes:
An additional $448,272 was recovered through a bankruptcy claim that is dedicated toward addressing six former Burlington Industries contaminated sites. This money has been deposited in two separate special trust funds. The work will be conducted under the orphan sampling/removal contract. A total of $65,141 of these funds was spent this fiscal year.

National Priorities List Cost Share Fund
As of July 1, 2007

Estimated cost of federal trust fund/N.C. cost share cleanups	$116,970,689
N.C.'s 10 percent cost share for pending/ongoing cleanups	$11,697,069*
Fund disbursements for cost share payments	$6,414,660
Current balance	$6,748,772
Encumbered amount of the fund balance for cost share payments	$5,282,409
Effective Balance	**$1,466,363***

* Cleanup cost estimates are not yet available for all sites. The cost share figure will increase as cost estimates become available. Also, other sites may be added to the National Priorities List that will require a state cost share. This account will also be required to pay for the state's operation and maintenance obligations which will begin in the next few years at some sites. Aside from interest, the fund has no continuing source of income.

Brownfields Property Reuse Act - Annual Report to the General Assembly

October 2007

Executive Summary

This report to the General Assembly is required by the Brownfields Property Reuse Act (BPRA) of 1997 (G.S. 130-310.30 *et seq.*) and describes the activities and status of the N.C. Brownfields Program for Federal Fiscal Year (FFY) 2007. In celebration of the completion of the program's tenth year, the Department of Environment and Natural Resources (DENR) is pleased to report continued success in the state's efforts to revitalize and safely reuse brownfields properties through the N.C. Brownfields Program and its partnership with the U.S. Environmental Protection Agency (EPA). The program continues to be a model of high return on public investment in the way relatively small sums of public funds are spent to leverage large sums of private investment in brownfields redevelopment. DENR receives no state-appropriated funds for the program. To date, all of the public dollars spent are federal funds from a cooperative agreement with the U.S. EPA. With these funds, the program has facilitated over $2.2 billion in committed private investment in brownfields redevelopment.

In previous years, the program was characterized by expansion in order to accommodate increasing demands for program services by the development community. In late FFY 2006, in response to increasing demands for program services, three additional brownfields positions were created that would be funded by initiation of the BPRA's existing fee provisions. However, due to uncertainty regarding the level of funding under the EPA cooperative agreement, the program felt it unwise to fill those newly created positions. In addition, one of the program's existing project manager positions was vacated on February 1, 2007. Due to concerns regarding federal funding, this position remains vacant. The cumulative effect of these challenges resulted in five fewer brownfields agreements being completed during FFY 2007 than during the previous year, an increased project load for existing staff, and a longer overall processing time-frame.

A portion of original EPA grant funding has been committed in FFY 2008 to partially restore funding, and the program is now in the process of filling three positions (Environmental Engineer, Hydrogeologist and an Environmental Senior Specialist). The program was amended to increase the fees paid by developers obtaining a brownfields agreement, and is planning to utilize funds that have accumulated in the BPRA Implementation Account to further supplement staffing during FFY 2008.

Program activity for the one-year period from October 1, 2006 through September 30, 2007 can be summarized with the following statistics:

- Program applications received: 50 (22 fewer than the 72 received during FFY 2006)
- Brownfields agreements finalized: 19 (5 fewer than the 24 finalized during FFY 2006)
- Estimated capital investment: $626 million (up from $383 million reported for FFY 2006)

The total number of completed agreements since the inception of the program now stands at 107. More important than the numbers themselves is what they represent: that the state brownfields agreement remains a sought-after mechanism for removing the barriers prospective developers encounter in obtaining financing on these environmentally-impaired brownfields properties.

Background

Redeveloping brownfields properties has become increasingly popular as developers and local governments realize that these properties offer viable opportunities to bring economic growth, public health protection, jobs, and quality-of-life benefits to cities and rural areas. Brownfields are abandoned, idled or underutilized properties where environmental contamination hinders redevelopment due to concerns about environmental liability. The BPRA gives DENR the authority to enter into brownfields agreements with prospective developers who did not cause or contribute to site contamination. The BPRA modifies the environmental liability barrier for prospective developers and motivates them to bring these properties and their hindrances to DENR's attention. DENR partners with the prospective developer to evaluate the possible risks associated with site contamination, and then negotiates a brownfields agreement stipulating the steps necessary to make the site safe for a specific intended reuse. The result is a redevelopment project that works economically and also protects public health and the environment.

Because brownfields agreements afford prospective developers liability protection for as long as they make and maintain the site safely for its intended reuse, the specter of open-ended financial uncertainty is lifted. This economic shield allows prospective developers to obtain financing previously unavailable for these properties.

Thus, the BPRA allows DENR to distinguish between prospective developers of brownfields properties and the properties' polluters. Instead of mandating that the site be cleaned to current standards, the BPRA requires developers who did not cause or contribute to the contamination to make the site safe for reuse. The program must examine the risks to public health or the environment posed by the site. Then, DENR determines what the prospective developer must do to ensure safe redevelopment. These actions can range from land-use restrictions to cleanup, or a mixture of both. In addition to holding prospective developers accountable to their agreements, DENR reserves the right to enforce against those parties responsible for the original contamination. The process is summarized below in Table 1.

Table 1. Summary of the Brownfield Process

Step 1 – A prospective developer (PD) with a brownfields site which it desires to buy or sell for the purposes of redevelopment, and for which it needs liability protection, submits a Brownfields Property Application. DENR determines if the PD, the subject property and the proposed redevelopment project are eligible under the BPRA statute. PD pays initial $2,000 fee at the time its project is deemed eligible by DENR.

Step 2 - DENR reviews existing site data to determine the risk posed by contamination at the site. If the data are insufficient to evaluate such risk, DENR advises the PD on further site assessment to gather the necessary data.

Step 3 - DENR determines what actions are necessary to make the site suitable for the PD's intended reuse and includes these actions in a draft brownfields agreement. The PD and DENR negotiate the provisions of the draft brownfields agreement and other required statutory documents.

Step 4 - The brownfields agreement is publicly noticed with a 30-day public comment period.

Step 5 - The brownfields agreement is finalized after any public comments are considered and incorporated. Prior to the execution of the finalized brownfields agreement, the PD pays the secondary $3,500 fee. The PD uses the final brownfields agreement, which provides liability protection, to obtain financing for the project. Liability protection is contingent upon the completion of the actions required by the brownfields agreement. The brownfields agreement makes the site eligible for the brownfields property tax incentive.

The ancillary brownfields property tax incentive for prospective developers allows them to recoup funds spent on assessment and cleanup. The program motivates the market to recycle these sites to productive reuse, while preserving or reducing the use of pristine or undeveloped "greenfields" property. While the environmental benefits are obvious, most redevelopments also create a significant number of jobs and put properties back on the tax rolls. This dual economic-environmental gain benefits the state, local government, and the brownfields developer. In the ten years since the BPRA was enacted, and as these benefits have become better known, the program's popularity and demand for its services have increased dramatically.

The overall result is a winning scenario for both the environment and economic development. Risk reductions and cleanups are achieved at sites that could have harmed the public or the environment, and prospective developers redevelop abandoned properties that once had little hope for productive reuse. The public benefits of job creation, improved quality of life in the surrounding neighborhoods, local tax base expansion and contribution to the general fund are other positive impacts. By the end of FFY 2007, more than $2.25 billion in capital investment has been committed to redevelop abandoned properties that afflict urban and rural landscapes.

The program also supports smart growth, sustainability and the One North Carolina Naturally agenda. Every project that reuses property, whether it is in an urban center or a rural area, preserves green space. Often it also reduces suburban sprawl and supports sustainable urban development. In a very real sense, for each brownfield redeveloped, a greenspace is saved. The properties that have received the 107 completed agreements are estimated to represent approximately 2,200 acres, and the other 116 in the pipeline represent another 2,700 acres. This is, in effect, acreage that is being recycled into reuse rather than pristine greenspace that is being developed and put at risk for future contamination.

Program Status

The program is preparing to receive its fourth year of funding from the U.S. EPA under its State Response Program Cooperative Agreement authorized under the federal brownfields act. The program is currently short one project manager from the full complement of staff under its planned cooperative agreement budget. That budget calls for 4.5 brownfields project managers, an environmental toxicologist, and an IT database professional. The present staff members are all fully engaged in processing and tracking of brownfields agreements. However, federal funds are diminishing, and the program continues to consider other funding sources to meet its future needs.

During FFY 2007, the program experienced its second occurrence of staff turnover, as one project manager left state employment effective February 1, 2007. Before that position was vacated, efforts began to re-fill it and to hire one additional project manager and one environmental specialist. However, those efforts were put on hold in March 2007 when the program became aware of a possible federal budget shortfall. By the end of September 2007, additional federal assistance was committed by the U.S. EPA, and the effort to fill these three positions has resumed. Although the program continued to benefit from efforts made to increase the efficiency of internal communication and to streamline agreement processing procedures, the loss of a project manager contributed to a reduced number of completed brownfields agreements for FFY 2007, from 24 to 19 this year.

During FFY 2007, the program received 50 applications for projects seeking entry into the program and a brownfields agreement for a specific brownfields redevelopment project. This compares to 72 applications received during FFY 2006.

During FFY 2007, the program completed 19 brownfields agreements. This is 5 fewer than last year's 24 (a 21% decrease). This decrease can likely be attributed, in part, to the program having one less project manager for eight months of FFY 2007, the increased workload for each project manager with an average of 22 active projects each, and in tracking land use restrictions and other activities at properties for which there is a completed brownfields agreement. Many agreements have frameworks where developers continually contact the program during redevelopment activities. The maintenance workload is increasing as the number of agreements rises.

Table 2 below shows the program's statistical trends since the BPRA became effective in 1997. One can see the steady upturn in demand for the program in the number of brownfields applications through FFY 2006 and the down-turn in applications for FFY 2007. Even with the lower number of agreements completed in FFY 2007, the number of cumulative brownfields agreements is clearly still on the rise.

Table 2. Brownfields Program Trends

	FY1997	FY1998	FY1999	FY2000	FY2001	FY2002	FY2003	FY2004	FY2005	FY2006	FY2007
Site Applications	2	15	8	16	15	23	29	42	59	72	50
Finalized BFAs	0	1	1	2	6	10	12	14	18	24	19
Cumulative Finalized BFAs	0	1	2	4	10	20	32	46	64	88	107

Federal brownfields act resources have facilitated an increase in the number of staff and a corresponding increase in the number of agreements completed over the past few years. However, the demand created by the existing and new projects continues to grow and is taxing the ability of the existing staff to provide services and brownfields agreements to developers in a timely manner. Because of these factors, and in combination with reductions in federal resources, the program cannot grow or keep up with obligations as they exist today. Hence, increased resources commensurate with the demand remain key to the continued success of the program. Current plans for accomplishing this are discussed in greater detail in the Improving Effectiveness section below.

Local interest in brownfields continues to grow and local governments in this state continue to have great success in competing for EPA brownfields grant funds. The federal grants for brownfields assessment and cleanup totaling $2.0 million were awarded by the U.S. EPA to North Carolina local governments in 2007 (increased from $1.45 million in 2006), including Robeson County and the cities of Greensboro, Greenville, Hickory and Sanford.

Among Region 4 states, only Florida local governments were awarded more individual EPA brownfields grants than North Carolina (and only *one* more grant), but the total grant funding awarded in both states was the same and topped the list in the Region. These local brownfields activities will serve to strengthen local interest in brownfields redevelopment and will certainly further increase interest in developers seeking brownfields agreements from DENR as these communities begin their local brownfields redevelopment efforts. Moreover, these grant funds dovetail with DENR's efforts to support brownfields redevelopment because the U.S. EPA

continues to recommend that these grantees seek entry into DENR's Brownfields Program in order to best utilize their grant funds. In this way, DENR's efforts are truly in concert with those of EPA and local government.

Outreach and Education

The program is largely market-driven in that prospective developers bring their redevelopment projects to the program in order to break liability barriers for financing. One of the on-going goals of the program is to educate the development community, lenders and local governments regarding the program's existence and usefulness as a tool for both private and public redevelopment stakeholders. We have again done so this year and efforts to increase awareness of the program continue to bring new redevelopment opportunities and their attendant public benefits into the program.

Through our staff person in Asheville, the program participated heavily in the outreach efforts sponsored by the Land-of-Sky Regional Council and the Western Piedmont Council of Governments. Likewise, our staff person in Charlotte fulfills important outreach functions at various private and public redevelopment-focused functions. Brownfields staff continue to conduct outreach at conferences and programmatic information booths and attend meetings held by EPA for local governments in order to meet and serve their interest in brownfields redevelopment. The program also has made concerted efforts to continually improve information offered on its web site (**www.ncbrownfields.org**) and receives consistent positive feedback on the informative nature of this important outreach component.

Cooperation with Local Government

The Brownfields Program has long held the strategy that brownfields redevelopment is largely a local issue, and therefore has made strong efforts to coordinate with local governments. The success of its cooperative agreement with the City of Charlotte that placed a DENR employee in city offices in May of 2002 was the culmination of much work with local governments. This provides direct face-to-face cooperation with the developers, lenders, and economic developers in that locality. This formula has enabled the completion of 40 brownfields agreements in the Charlotte area.

Seeking to duplicate this success in western North Carolina, in 2004 the program placed a project manager in the offices of the Land-of-Sky Regional Council in Asheville. Several projects came into the program as a result of this placement, and it has continued to yield very positive results. The project manager has improved the program's local effectiveness and developers have brought numerous projects to the program as a result. The manager is a participating member of the Land-of-Sky's Regional Brownfields Team and coordinates efforts with Land-of-Sky to encourage brownfields redevelopment in partnership with them. As part of the mutual benefits of such a relationship, the Land-of-Sky Regional Council continues to grow its federal brownfields grants such that to date they have received more federal grant funding than any other local government in the state.

Site Summaries

For brief descriptions of all brownfields projects in the program as of September 30, 2007, please see the Appendix. The table there is divided into three sections: active eligible projects, projects pending eligibility, and projects with finalized brownfields agreements.

Active eligible projects have been deemed eligible for a brownfields agreement under BPRA statutory criteria. These developers are working with DENR in some stage of data gathering, analysis or agreement negotiation. As of September 30, 2007, there were 116 active projects. Projects at this stage receive guidance from DENR as the developers gather the additional data needed to ensure protection of public health and the environment. Once research is complete, DENR analyzes the data, then drafts and negotiates the terms of the brownfields agreement with the prospective developer. At most of these sites, DENR is waiting for additional data requested by the program.

Projects pending eligibility are in the initial stage of the brownfields process as they apply for entry into the program. Sites in this category have yet to meet the requirements under the statute for eligibility for a brownfields agreement. For sites in this category, the program has requested clarification or additional information from prospective developers regarding a site. Normally, developers respond to these requests for clarification, the sites are usually deemed eligible, and are then quickly moved into the active eligible category. As of September 30, 2007, 36 sites were in this category.

Projects with finalized brownfields agreements have completed the public notice phase of the brownfields process and either have a signed brownfields agreement or are waiting for the agreement to be executed. As of September 30, 2007, 107 projects were in this category, 19 of which were completed in the one year period from October 1, 2006 to September 30, 2007.

Improving Effectiveness

Throughout its existence, the Brownfields Program has provided a high economic development value for the federal funds it uses. The program's 107 brownfields agreements and 116 other projects in the pipeline represent in excess of $2.25 billion in committed private redevelopment investment. The high ratio to which the federal funds have been successfully leveraged into private development dollars for brownfields redevelopment is just one measure of the effectiveness and efficiency of the BPRA.

The program is at a crossroads regarding resources and must address this issue for continued success in supporting the brownfields redevelopment economy of the state. By adding needed staff over the years, the program has significantly increased its volume capacity for brownfields agreements. The program has always recognized that encouraging brownfields redevelopment means that it must maintain the capability to respond quickly and provide brownfields agreements within timeframes that help developers make time-critical business decisions. The trend lines discussed above clearly show that demand for brownfields agreements continues to grow, while future federal resources are anticipated to be level or slightly decreased. The

program cannot serve the increasing numbers of applicants with the same effectiveness it traditionally has, so the fee plan was further evaluated to support the staffing levels need to maintain the current projects and develop new Brownfield Agreements.

The Brownfields Property Reuse Act requires that the program collect a $2,000 initial fee plus an additional fee equivalent to all costs to the Department. The brownfields program has historically defrayed the expenses of the program by using purely federal funds without cost to the Department. These funds grew from $100,000 in 1999 to nearly $1,000,000 in recent years. Therefore, in the past the program could grow in capacity through these federal funds and not have to pass on any fees to the prospective developer other than the statutory $2,000 initial fee. The program purposefully maintained these fees as low as possible in order to encourage developers to come into the program. However, as federal funds have leveled off, the growth in demand for program services has grown dramatically over the years. In response, the program was amended to include the payment of an additional $3,500 fee prior to the execution of the final brownfields agreement. The program now employs its statutory authority for imposing both fees, and prospective developers will be bearing more of the resource burden for the program as a result. By administering the new fee structure and obtaining as many federal dollars as possible, the program believes expanding the staff with the three (3) positions previously outlined will result in increased productivity in FFY 2008. Increasing staff will result in better project distribution and therefore less pressure on existing staff; the ability of the program to process more projects; and a return to faster project turnaround times, which is one of the programs more attractive qualities to the economic development community.

The program strongly believes that increased cooperation between DENR and local governments has yielded significant benefits and is a trend it wants to continue to strengthen. DENR has recognized the effectiveness of placing a staff person in the City of Charlotte offices and has duplicated that effort by placing a staffer in the offices of the Land-of-Sky Regional Council in Asheville. It is actively exploring the opportunity to affect a similar cooperative effort either in the Winston-Salem/Greensboro or Wilmington area.

Internally, as the program has more and more projects, its data management needs have increased commensurately. The program has been developing a business automation application along with a project inventory tracking database. This system is being developed as a completely web-based tool consistent with DENR's initiative to share program information across programs and with the public via the Internet. The first two modules of this application, the Project Tracking and Project Reporting modules, have been developed, implemented and are being actively used by program staff. They are available to other DENR programs as well. The database has enhanced program efficiency and is assisting the program in tracking project status, as well as tracking land use restrictions placed on the properties. In addition, the online Brownfields Property Application has been enhanced to capture more information upfront in the process in a format conducive to develop the brownfields agreement language, which will reduce the project managers' time constructing the agreement.

Fund Status

The Brownfields Property Reuse Act Implementation Account authorized under the statute receives the initial $2,000 fee charged to prospective developers at the time of eligibility and the

secondary $3,500 fee prior to the execution of the brownfields agreement. These funds are used by DENR to defray the cost of the program. For the reporting year from October 1, 2006 through September 30 2007, the Brownfields Property Reuse Act Implementation Account had a beginning balance of $187,390, receipts from fees and interest of $57,863 and disbursements of $34,699. This yields an ending balance in the fund of $210,854. In previous years, this fund has not been large enough to be used for hiring staff. It is now large enough to be used for such purposes and will fit into DENR's current plans for fee-funded positions for the program along with additional outreach, software, database development needs.

Further Information

For additional information on the Brownfields Program and how it works, please visit our Web site at **www.ncbrownfields.org**.

APPENDIX

Status Summary of Brownfield Projects as of September 30, 2007

Appendix A

Status Summary of Brownfield Projects as of September 30, 2007

Project Inventory is divided into three segments as follows:

Active eligible projects have been deemed eligible for a brownfields agreement under BPRA statutory criteria. These developers are working with DENR in some stage of data gathering, analysis or agreement negotiation.

Projects pending eligibility are in the initial stage that sites are in as they enter the program. Sites in this category have yet to meet the requirements under the statute for eligibility for a brownfields agreement.

Projects with finalized brownfields agreements have completed the public notice phase of the brownfields process and either have a signed brownfields agreement in-place or are waiting for the agreement to be executed.

ACTIVE ELIGIBLE PROJECTS (116)

ABBOTT LABORATORIES
16900 Aberdeen Road
Laurinburg, Scotland Co.
PD: Marketta, LLC and QualPak, LLC

AIRPORT EXXON
3305 North Liberty St.
Winston-Salem, Forsyth Co.

FINALIZED BROWNFIELDS AGREEMENTS (107)
(either in force or pending signature)

PD = Prospective Developer; RP = Responsible Party

301 FAYETTEVILLE STREET 301 Fayetteville Street Raleigh, Wake Co. PD: Highwoods Properties	The property consists of 0.833-acres with former retail uses including two "cleaning" establishments. The PD intends to redevelop the property into a 33-story structure for retail, office, banking/financial services, parking, and multi-family residential use.
A GREAT ESCAPE 1806 Funtime Blvd. Winston-Salem, Forsyth County PD: A Great Escape LLC	Prospective developer wants to purchase this approximately 5-acre abandoned amusement park (miniature golf and go cart track), which is located on edge of a former municipal landfill, refurbish it, and re-open it with in same use.
ABC ENGRAVERS 724 Montana Drive Charlotte, Mecklenburg Co. PD: Holden Business Park, LLC	Former engraving and plating facility with known chromium and chlorinated solvent contamination in soil and groundwater. PD intends to redevelop the site as an office complex.
ALAMAC AMERICAN 1885 Alamac Road Lumberton, Robeson Co. PD: Alamac American Knits, LLC	The former knit textile manufacturing facility has perchloroethylene contamination associated with former drycleaning operations. The PD is using the facility to also manufacture knit textiles but does not use perchloroethylene on the premises.
ALAMAC KNIT FABRIC NC Hwy 125 Hamilton, Martin Co. PD: Penco Products, Inc.	106-acre former textile manufacturing facility with known soil and groundwater contamination involving chlorinated solvents. Site is undergoing active remediation under NC DWQ. Intended reuse is as a non-polluting school locker manufacturing facility that will employ some 350 workers.

ALCAN PACKAGING FOOD
1600 Westinghouse Blvd.
Charlotte, Mecklenburg County
PD: Alcan Packaging Food & Tobacco

Approximately 9-acre parcel in a industrial portion of Charlotte. The soil and groundwater are impacted from historic operations with n-propyl acetate and n-propyl alcohol. The PD intends to sell the property for redevelopment of industrial and commercial uses.

ALPHA MILLS
312 E. 12th Street
Charlotte, Mecklenburg Co.
PD: Crosland, Inc.

A 5.77-acre parcel that was historically a textile mill. Most recently the site was the former Consolidated Group Incorporated engraving facility. The site has known soil, groundwater, surface water, and sediment impacts from historical site operations. PD intends to redevelop the property for residential apartments with compatible commercial and retail development.

AMERICAN CYANAMID
2200 Donald Ross Road
Charlotte, Mecklenburg Co.
PD: DRR of the Carolinas, LLC

The property has been vacant since approximately 1975, prior to which it operated as a resin and textile manufacturing company. The PD intends to redevelop the 4.1-acre parcel into parking for trailers, cars, and commercial vehicles and; in the future to commercial and light industrial facilities.

ANCHOR MILL
404 Church Street
Huntersville, Mecklenburg Co.
PD: Town of Huntersville

Abandoned textile manufacturing facility with known metals contamination in soil, and lead, chlorinated solvent, and petroleum hydrocarbon contamination in groundwater. PD intends to redevelop the 32-acre site as a mixed-use transit village that reuses the old mill building and adds new office, retail, and residential components.

ANDREX INDUSTRIES
180 Deaverview Road
Asheville, Buncombe Co.
PD: Milkco, Inc.

A 9-acre light manufacturing site formerly used as a textile production facility that operated a knitting, weaving and cutting business along with dry cleaning, shrinking and packaging of fabrics. Tetrachloroethylene groundwater contamination from drycleaning operations being remediated by RP with pump-and-treat system. PD is adjacent property owner, a milk processing and distributing plant. Initial plan is to use part of property for truck and trailer parking. Within 3 years they plan to demolish Andrex buildings and expand the Milkco Plant to double capacity within 8 years.

ARCHDALE MARKETPLACE
5801 South Boulevard
Charlotte, Mecklenburg Co.
PD: Eastbourne Investments, Ltd.

Approximately 13-acre parcel known as Archdale Marketplace Shopping Center. Groundwater is contaminated at the Property due to historical site operations by an A&P grocery store, Sno-White Cleaners, and K-mart auto service center. PD intends to redevelop the property for commercial and retail.

ARROW LAUNDRY & CLEANERS
4735 Monroe Road
Charlotte, Mecklenburg County
PD: Lake City Tractor Supply

The Brownfields Property consists of approximately 16.5 acres and comprises eight parcels at four addresses. The Brownfields Property is surrounded by land in commercial and residential use. Groundwater under portions of the Brownfields Property is contaminated. The businesses that formerly operated on the Brownfields Property included a textile manufacturing plant, a service station and a

	drycleaner. Prospective Developer plans to redevelop the Brownfields Property for commercial, retail, residential, office and open space use.
ASHEVILLE MICA 75 Thompson Street Asheville, Buncombe County PD: T. R. Enterprises	The former mica plant consists of four existing structures and approximately 3.0-acres. It has both soil and groundwater contamination from an on-site aboveground storage tank and possible off-site sources. The PD has committed itself to redevelopment for no uses other than residential, retail, office, common space, parking, pet park, and greenway purposes.
ATS MANUFACTURING FACILITY Hwy 321 & Rankin Lake Rd Gastonia, Gaston Co. PD: WDL Holdings, LLC	Past uses at the 6.65-acre property have included knitting operations, a furniture store, and remanufacturing of rear wheel drive transmissions. Groundwater is contaminated at the site with chlorinated solvents. The PD intends to remove the existing structures, an unoccupied single-story manufacturing building and residence, and redevelop the Brownfields Property for a mix of retail and other commercial uses.
BALDOR ELECTRIC 3821 Barringer Drive Charlotte, Mecklenburg Co. **PD: K. Brown Trust**	Former electric motor and motor component assembly and manufacturing facility with solvent impacted soil and groundwater. PD intends to redevelop the property for use as industrial condominiums.
BOULIGNY SITE 2320 N. Davidson Street Charlotte, Mecklenburg Co. PD: NODA Properties, LLC	Approximately 3.5-acre parcel that was the former R.H Boulingy facility. The site has known groundwater impacts from chlorinated solvents. PD intends to redevelop the property for mixed-use development with commercial, retail, industrial and residential.
BROMMA PROPERTY II 2285 Durham Road Roxboro, person Co. PD: Daniel Talbert, Sr.	The Brownfields Property is located at 2285 Durham Road, Roxboro, Person County, North Carolina, and is approximately 11.6 acres in size. Prospective Developer has committed himself to redevelopment of the Brownfields Property for no uses other than retail and commercial businesses, including restaurants and warehousing/distribution firms, and medical and other office space. The Brownfields Property was developed in the late 1950s by an entity that manufactured plastic crates and steel products. Bromma, Inc. purchased the Brownfields Property in 1992 and manufactured cargo spreaders (large metal clasps used to load and unload cargo ships) there until May 11, 2004.
BROWN'S SOLVENT CO. 2935 Griffith Street Charlotte, Mecklenburg Co. PD: Estate of K. C. Bell	Former paint and solvent formulation facility with known solvent-impacted soil and groundwater. PD intends to initially renovate & reuse the existing structure for office/warehouse use, and ultimately raze the building and redevelop the site as a mixed office/retail complex in keeping with other redevelopment taking place in Charlotte's South End.

BURKHART CAROLINA
1703 Dabney Drive
Henderson, Vance Co.
PD: MPP Properties, Inc.

Former pickle processing and packing facility with chloride impacted soil and groundwater and minor solvent contamination in groundwater. PD intends to redevelop the property for commercial retail use. Simultaneously, the responsible party will implement groundwater remediation at the site under separate action. The PD's development will provide an impervious cap on the site, further assisting remedial efforts.

BURLINGTON – JAMESTOWN
6008 High Point Road
Jamestown, Guilford Co.
PD: Alberdingk Boley, Inc.

A 22-acre site containing a abandoned chemical formulation facility operated in support of Burlington Industries textile manufacturing operations. Known chlorinated and petroleum hydrocarbon contamination exists in site soil and groundwater and is being addressed under a consent order with DENR. PD intends to redevelop the property as polyurethane and polyacrylate emulsions manufacturing facility.

BURLINGTON MILLS
476 S. Main Street
Mooresville, Iredell Co.
PD: Cherokee Investment Partners, LLC

Abandoned textile manufacturing facility with known petroleum hydrocarbon contamination in soil and groundwater, and chlorinated solvent contamination in groundwater. PD intends to redevelop the site as an auto racing industry complex with office, flex, shop, and R&D space.

C. C. DICKSON
1520 South Boulevard
Charlotte, Mecklenburg Co.
PD: C. K. Land Development

A large mixed use development on a former industrial services firm adjacent to a manufactured gas plant. Ground floor retail and studio with Office and residential units above. Project is in vicinity of Camden Square and provides redevelopment to economically depressed area. Capping and land use restrictions regarding PAHs in soil and chlorinated solvents in soil and groundwater.

CAL-TONE PAINTS FACILITY
5115 New Bern Avenue
Raleigh, Wake Co.
PD: Arbor New Bern Avenue, LLC

Soil and groundwater on this 2.75-acre site are contaminated with metals and petroleum constituents. Prior uses include agricultural and more recently paint manufacturing. The PD is planning a mixed-use redevelopment including commercial, industrial, and residential.

CAMDEN ROAD
1600 Camden Road
Charlotte, Mecklenburg Co.
PD: Harris Murr & Vermillion, LLC

Approximately 0.25-acre parcel in Historic SouthEnd of Charlotte. The site has known groundwater impacts from historical site operations as a gas station, tire repair, plumbing repair, and other uses. PD intends to redevelop the property for commercial and retail purposes

CAMDEN SQUARE
127 W. Worthington Avenue
Charlotte, Mecklenburg Co.
PD: Camden Square Associates

Abandoned Knitting and Printing Operations rebuilt into the "Design Center of the Carolinas". Development supported by the Wilmore Community as a vital redevelopment in an economically depressed area. Land Use restrictions for chlorinated solvents in groundwater.

CAMDEN SQUARE ADDITION 307 W. Worthington Avenue Charlotte, Mecklenburg Co. PD: Camden Square Associates	This project will add, by amendment, 4.5 acres to the first brownfields agreement completed in North Carolina, Camden Square, in Charlotte's South End redevelopment corridor. Contamination includes VOC- and SVOC-impacted soil and groundwater. Intended reuse is for mixed office and retail.
CAMDEN SQUARE AMENDMENT W. Worthington Avenue Charlotte, Mecklenburg Co. PD: Camden Square Associates	By amending the Brownfields Agreement, this project served to add residential to the uses approved under the Agreement for a portion of the Property. Prospective Developer conducted additional environmental assessment to evaluate the potential for vapor intrusion in the area of planned residential use, and will install a vapor barrier beneath the slab-on-grade construction.
CAROLINA LOG BUILDINGS Howard Gap Road Fletcher, Henderson Co. PD: Town of Fletcher	Former wood treating facility with known pentachlorophenol contamination in soil and groundwater. PD intends to redevelop the 30-acre site as the new heart of the Town of Fletcher to include various office and retail uses.
CAROLINA PRODUCTION FINISHING 105 Fairview Road Asheville, Buncombe Co. PD: Western Investments Co.	Former textile finishing facility with metals contamination in both soil and groundwater. PD intends to redevelop the site for warehousing and as a sewing operation. PD is in the process of reviewing DENR's draft brownfields agreement for this site.
CENTRAL PARK LANDFILL Salem and Main Streets Winston-Salem, Forsyth Co. PD: Salem Recreational Fields	Former municipal landfill for the City of Winston-Salem. Site is 7.23 acres in size, and has been used as a city park since the 1950s. Low levels of chlorinated solvents, with no surficial soil contamination. PD intends to redevelop the site for soccer and a softball field for the adjoining Salem Academy and College so their current fields can be used for additional building space. A passive methane collection system will be installed prior to installation of the recreational fields.
CHARLOTTE TANK TRUCK Border Drive Charlotte, Mecklenburg Co. PD: WR Deal Holdings LLC	The approximately 2.23-acre site has been used as a business to repair tanker truck chassis, with groundwater contamination potentially migrating from an off-site source. The PD intends to redevelop the property for commercial purposes.
CHEROKEE OIL 925 S. Summit Avenue Charlotte, Mecklenburg Co. PD: M & J Equities, LLC	Approximately 2-acre site was formerly a non-permitted hazardous waste storage facility and the site of an EPA removal action. Known arsenic, oil & grease, and solvent contamination exists in site soil and groundwater. PD intends to redevelop the property as a nightclub and parking facility.

CHESTER STREET PROPERTY
N. Chester Street
Gastonia, Gaston County
PD: City of Gastonia

Site contained former Carson Dry Cleaner located in the center city area of Gastonia. Property has known chlorinated solvents contamination in the soil and groundwater. PD intends to redevelop the site in commercial retail uses.

CHOWAN VENEER
259 Coke Avenue
Edenton, Chowan Co.
PD: Southern Bank & Southern Bancshares (NC)

The Brownfields Property is located at 259 and 262 Coke Avenue, Edenton, Chowan County, North Carolina and comprises approximately 12.4 acres. The Prospective Developer has committed itself to redevelopment for no uses other than residential, commercial office or commercial retail use. Chowan Veneer Company, Inc. has owned the Brownfields Property since before its January 1, 1959 incorporation, and manufactured hardwood veneers there until February or March 2005. On April 26, 2005, Chowan Veneer Company, Inc. filed for protection, in the Eastern (federal) District of North Carolina, under Chapter 7 of the U.S. Bankruptcy Code. The site is currently vacant. The groundwater is contaminated with petroleum constituents.

CITY WEST COMMONS
1506 West Boulevard
Charlotte, Mecklenburg Co.
PD: CMDC Westover No. 1, LLC

Dilapidated shopping center seized in a drug raid by the U.S. Dept. of Justice that has been approved for transfer to the city of Charlotte. Site had VOC and chlorinated solvent contamination in soil and groundwater. The City intends to transfer the property to a not-for-profit development corporation to redevelop the site as commercial retail shopping facility.

CONBRACO FACILITY
701 Matthews-Mint Hill Rd
Matthews, Mecklenburg County
PD: Carlton Development

The site is the former sediment and runoff basin for the former Conbraco Facility. The site was remediated in the EPA Superfund Program and given a "No Further Remedial Action Planned (NFRAP)" status. PD intends to redevelop the site as a medical office with other commercial uses.

COSTCO
Costco Wholesale Corporation
14.8 acres
2838 Wake Forest Road
Raleigh, Wake County

The former Pepsi manufacturing and bottling company was located on this site until it relocated in 2002. The southeastern portion of the property covers about 2.6 acres of a former City of Raleigh 44-acre municipal landfill. The former Alcatel site is upgradient and a potential source of chlorinated solvents found in the groundwater. Prospective Developer plans to build a 149,000 SF Costco membership warehouse and a membership gasoline station outparcel on the property.

COTTON MILL SQUARE
801 Merritt Drive
Greensboro, Guilford Co.
PD: Carl Johnson

Former cotton mill and manufacturing facility with chlorinated solvent contamination in soil and groundwater. PD intends to redevelop the site in mixed commercial retail/office and residential.

CUMBERLAND SHOPPING CENTER
709 E. Market Street
Greensboro, Guilford Co.
PD: Project Homestead

Site of former shopping center and dry cleaners with chlorinated solvent impacted soil and groundwater. PD is a not-for-profit community development corporation. The PD has performed soil remediation activities and intends to redevelop the site with affordable residential housing.

DAYCO FACILITY
2150 South Main Street
Waynesville, Haywood County
PD: Haywood Advancement Foundation

The property was formerly operated as a large industrial rubber manufacturer and has both chlorinated solvent and petroleum contamination in the soil and groundwater. The PD intends to redevelop the 35.942-acre site into a mixed commercial-retail development.

DON CHRISTIAN PROPERTY
Main Street
Carrboro, Orange County
PD: Main Street Properties

This approximately 0.5-acre underused site had been in use as a bulk oil facility and gas station since the 1920s and is currently in use as an auto repair shop. The site contains petroleum hydrocarbon impacts in soil and groundwater. PD intends to reuse the property in commercial/retail use as part of the renovation and expansion of the existing, adjoining shopping center.

DYNATECH INDUSTRIES
2213 Toomey Avenue
Charlotte, Mecklenburg Co.
PD: R. G. Automation, Inc.

Former plating facility with metals-impacted soil and groundwater. EPA conducted soil removal activities at the site and has classified it as NFRAP. PD intends to redevelop the property for use as mixed office/retail complex.

EAST GANNON PROPERTY
102 East Gannon Avenue
Zebulon, Wake Co.
PD: Berkshire-Hudson Capital XI, LLC

This property consists of four parcels of land totaling 1.75 acres with four existing structures (former restaurant, current auto sales, auto service garage and hair salon). Site planned to be redeveloped into a stand-alone Eckerd Drug Store, with other surrounding complimentary retail tenants. Soil and groundwater are contaminated with petroleum constituents from above ground storage tanks used by previous gas station.

EAST PARK – BOYER
1607 E. 4th Street
Charlotte, Mecklenburg Co.
PD: Torrence Street Partners, LLC

Approximately 0.39-acre parcel that is a portion of the East Park Development Project, with known chlorinated solvent and gasoline contamination. PD intends to redevelop the site as a pedestrian urban infill multiple use development with commercial, residential, recreational and common open space. The site is part of the City of Charlotte's East Park re-development zone.

EAST PARK – CRAVER
1609 Elizabeth Avenue
Charlotte, Mecklenburg Co.
PD: Providence Road Land Partners, LLC

Approximately 0.65-acre parcel that is a portion of the East Park Development Project, with known chlorinated solvent and gasoline contamination. PD intends to redevelop the site as a pedestrian urban infill multiple use development with commercial, residential, recreational and common open space. The site is part of the City of Charlotte's East Park re-development zone.

EAST PARK – DOROTHY HALL 1423 E. 4th Street Charlotte, Mecklenburg Co. PD: 1427 East Fourth Street, LLC	Approximately 0.8-acre parcel that is a portion of the East Park Development Project, with known chlorinated solvent and gasoline contamination. PD intends to redevelop the site as a pedestrian urban infill multiple use development with commercial, residential, recreational and common open space. The site is part of the City of Charlotte's East Park re-development zone.
EAST PARK – JOAL REALTY 1534 Elizabeth Avenue Charlotte, Mecklenburg Co. PD: Joal Realty	Part of the 24-acre site encompassing a six-block area with known chlorinated solvent contamination. PD intends to redevelop the site as a model for urban infill mixed use development with an emphasis on the needs of pedestrians in an urban setting. The site is part of the City of Charlotte's East Park re-development zone located between the CBD and the historic residential neighborhoods of Elizabeth and Myers Park.
EAST PARK – KOSSOVE 1515 E. 4th Street Charlotte, Mecklenburg Co. PD: David Kossove	Part of the 24-acre site encompassing a six-block area with known chlorinated solvent contamination. PD intends to redevelop the site as a model for urban infill mixed use development with an emphasis on the needs of pedestrians in an urban setting. The site is part of the City of Charlotte's East Park re-development zone located between the CBD and the historic residential neighborhoods of Elizabeth and Myers Park.
ECUSTA 1 Ecusta Road Pisgah Forest, Transylvania Co. PD: Ecusta Business Development Centers, LLC	In its prime, this 540-acre site was the world's largest non-wood pulp and specialty paper manufacturing facility. Closed since late 2002, the site has known metals, caustic and solvent contamination. PD intends to re-start flax pulping operations and to market the pulp to paper manufacturers. PD may also undertake other uses of site buildings and facilities, including office space and possible use of excess wastewater treatment capacity by local municipalities.
ELECTRONICS COMPONENTS CORP. 513 S. Dudley Street Burgaw, Pender County PD: MoJo Properties, LLC	The approximately 5-acre site was first developed in 1966 as a facility for manufacturing small transformers. The property was idled in 1999. Site groundwater is contaminated with chlorinated solvents. Prospective Developer intends to reuse the site to manufacture sound equipment and other music related equipment.
ERWIN SQUARE 2211 Hillsborough Road Durham, Durham Co. PD: WP East Acquisitions, LLC	This approximately 6-acre property is a portion of a decommissioned former Burlington Industries site, other portions of which have already been redeveloped. There is known chlorinated solvent contamination in groundwater, and these impacts are being addressed under an approved Division of Water Quality corrective action plan. PD intends to redevelop the site in high-density residential use.

FISHBURNE EQUIPMENT
Airport Road
Arden, Buncombe Co.
PD: R. & P. Van Praag

Former metal fabrication and tobacco press manufacturing facility with suspected VOC contamination in soil and groundwater, based on detection of these compounds on adjoining, downgradient property, the former Buncombe County landfill. PD intends to redevelop the site for light manufacturing/assembly, warehousing, and public storage uses.

FLEMINGTON LANDFILL
US Hwy 421 North
Wilmington, New Hanover Co.
PD: Cape Fear Soccer Association

Site of a closed (1979), privately operated domestic and industrial solid waste landfill with VOC-impacted soil and groundwater. Intended reuse is for a soccer complex. This is the first former landfill property proposed for redevelopment under the NC brownfields statute, and the project's feasibility and technical challenges are being carefully evaluated.

FLORENCE MILL
186 Mill Street
Forest City, Rutherford County
PD: Florence Mill Redevelopment

Consisting of approximately 8.2 acres, the Florence (Cone) Mill is a former industrial mill that went out of business in 2001. The property also has a number of former mill warehouses that are vacant, as well as dry cleaner properties that are separate from the Cone Mill but included in Prospective Developer's submittal. Site impacts include petroleum contaminated soil and PCE impacts to site soil and groundwater. The PD intends to redevelop the property into a town hall, residences, restaurant, cinema, and pavilion with open space.

FLYNT FABRICS MILL PROPERTY
202 S. Nash Street
Hillsborough, Orange County
PD: Falk Companies

Former Flynt Fabrics, a textile dyeing and finishing operation, closed in late 2000. Potential, but not confirmed, contamination at the site includes asbestos, lead, peroxide, acetic acid, #5 fuel oil, dyes, salts, bleaches, cleaners, and oils. Prospective Developer desires to purchase the old mill and parking portion of the Property and redevelop it in residential use.

FONTAINE 5th WHEEL
3883 South Church Street
Rocky Mount, Nash County
PD: New Standard Corporation

This former metals fabrication/manufacturing facility has been vacant since 2001 and the property contains chlorinated solvent and petroleum contamination in soil and groundwater. Prospective Developer intends to reuse the three site buildings for metal stamping, fabrication and assembly operations.

FOOD LION
Waughtown & Sprague Streets
Winston-Salem, Forsyth Co.
PD: Food Lion, Inc.

A new large supermarket placed on the site of an abandoned grocery store in urban Winston-Salem. Project had strong community support as a quality of life issue as the community had no supermarket. Land use restrictions for chlorinated solvent contamination in groundwater. Brownfield Assessment determined the source to be nearby drycleaner.

FULFLEX, INC. PROPERTY
500 E. 7th Street
Scotland Neck, Halifax County
PD: Town of Scotland Neck

Approximately 20-acres property contains a vacant 100,000 SF building, the site of rubber product manufacturing until 2002. Fulflex is the responsible party and is currently working with the Aquifer Protection program to remediate a petroleum and chlorinated solvent plume. The town plans to make site improvements to attract a new manufacturing tenant, who will purchase the site at a reduced rate if they bring enough jobs to the area.

GATEWAY AT OLD SALEM
1198 S. Broad Street
Winston-Salem, Forsyth County
PD: Southeast Gateway Ventures

Project size is approximately 51 acres. The property is planned for mixed-use redevelopment including offices, commercial/retail space, residences, a YWCA , a private school and parking. Contamination is from a former Duke Power Plant substation (PCBs, PAHs in soil) and groundwater contamination from a number of sources, mainly petroleum but with a few chlorinated solvents. Cleanup of contamination at the Duke Power facility under the Inactive Hazardous Sites Program is almost complete. The Duke Power site comprises only a portion of this large brownfields redevelopment project.

GENERAL WOOD
1901 Wood Treatment Road
Leland, Brunswick County
PD: Leland Land, LLC

A 120-acre pole treatment facility (creosote, chromated copper arsenate (CCA) and pentachlorophenol (PCP)) under Chapter 11 bankruptcy that is currently under RCRA jurisdiction. PD's intent is to be able to distinguish old from new contamination and then continue with pole treatment (CCA and PCP only). Groundwater contamination mainly associated with creosote and petroleum. Metal and PCP contamination in soil.

GRIFFITH STREET PROPERTY
565 Griffith St. & 536 Jetton St.
Davidson, Mecklenburg Co.
PD: Five Six Five, LLC

Prior industrial operations resulted in soil and groundwater contamination by petroleum and VOCs. The PD plans to redevelop the facility as a charter school and as retail and commercial space.

GUILFORD MILLS
W. Wendover Avenue
Greensboro, Guilford Co.
PD: Wendover Crossing, LLC

A 55-acre site containing former textile manufacturing facility with known VOC contamination in soil and groundwater. PD intends to redevelop the property in mixed retail uses. Public benefits include the creation of an estimated 500 jobs and substantial tax roles increases.

GUILFORD MILLS - W. MARKET STREET
4925 W. Market Street
Greensboro, Guilford County
PD: Kim's Greensboro Real Estate, LLC

A 19.8-acre vacant textile facility with ancillary buildings. Minor groundwater contamination associated with former underground storage tanks. Other non-UST contamination has been documented but information has not yet been sent to us. PD plans to use the site for general commercial property.

HAMILTON PROPERTY
216 Dunavant Street
Charlotte, Mecklenburg Co.
PD: Rush Family, LLC

As small, dilapidated property bought for the expansion of Cost Effective Maintenance Inc., a small business in the South End area of Charlotte. Expansion into this property allowed CEM to stay in Charlotte instead of move to suburbs. Land use restrictions for chlorinated solvent contamination in groundwater.

HILLSBOROUGH VENTURES
3011 Hillsborough Street
Raleigh, Wake Co.
PD: Hillsborough Ventures, LLC

Project involves redeveloping an area of parking lots and dilapidated, underused retail structures. Land use restrictions are in place for the petroleum hydrocarbon and chlorinated solvent contamination in soil and groundwater. PD intends to redevelop the property as mixed residential (private student dormitory for N.C. State University) and retail complex.

HILLSBOROUGH VENTURES ADDITION
3 Concord St, 24 McKnight Ave, 3101 Stanhope Dr
Raleigh, Wake Co.
PD: Hillsborough Ventures, LLC

Prospective developer added acreage to the footprint of original Hillsborough Ventures project, which involves redeveloping an area of parking lots and dilapidated, underused retail structures adjacent to N.C. State University for mixed residential (private student dormitory) and retail uses.

HISTORIC COTTON MILL
191 Riverside Drive
Asheville, Buncombe Co.
PD: RiverLink, Inc.

A 2.63-acre site formerly occupied by a cotton mill that operated from the 1900s but has been abandoned for many years. PD will conduct environmental assessment to determine if the site has any contamination. PD intends to redevelop the site in mixed commercial/retail and residential uses. This project is part of the Asheville French Broad Riverfront Plan.

HOME DEPOT – SOUTH BOULEVARD
4750 South Boulevard
Charlotte, Mecklenburg County
PD: CNR Properties, RLLLP

A 12-acre site currently occupied by a produce grocer and office rental store (1 acre), parking (7 acres), abandoned plant nursery (1 acre); the rest is undeveloped. Operations at adjacent Academy Steel Drum (ASD) from 1947-69 included the disposal of wastes and sludge from drums into pits/lagoons. The location of the lagoons and overflow drainage is suspected to have been partially on subject property. After ASD burned in 1969 the property was thoroughly re-graded with contaminated soil moved around. Elevated concentrations of lead, chromium, and PCBs in soil along with lead, 2-chlorophenol, and trichloroethene. PD plans to lease property to Home Depot for construction of a new Home Depot home improvement retail store.

INDUSTRIAL PLASTICS
4810 Clover Road
Greensboro, Guilford County
PD: Standard Tools & Equipment

The site comprises 17.77-acres and had a variety of industrial operations since the 1970s. The PD intends to redevelop the Brownfields Property for non-residential commercial and/or industrial uses.

KIDD LANE BATTERY DISPOSAL
3607 Kidd Lane
Charlotte, Mecklenburg Co.
PD: Joshua's Farm

Abandoned dairy farm with historical lead battery disposal operations. The approximately 1-acre parcel is adjacent to a 22-acre horse & animal farm area for the Joshua's Farm Operations. The site has a limited area with lead contamination in the surficial soils. PD intends to redevelop the area as a parking lot for the horse and animal farm operations.

LEWITH TEXTILE
3539 Wilkinson Boulevard
Charlotte, Mecklenburg Co.
PD: CMDC Wilkinson No. 1, LLC

Project involves the redevelopment of 50+ acres of abandoned and underused commercial and industrial property, including the former Lewith Textile facility. Contaminants include Petroleum hydrocarbon and chlorinated solvents in soil and groundwater. PD intends to redevelop the site as an industrial park for light manufacturing and warehousing/distribution.

MALLARD CREEK
3021 Driwood Court
Charlotte, Mecklenburg Co.
PD: Colonial Realty, Ltd.

A 21-acre site adjacent to former auto service station and chainsaw service center operations. Petroleum hydrocarbon and chlorinated solvent contamination in groundwater, sourced from underground and aboveground storage tanks releases on the adjacent site, has migrated onto the subject property. PD intends to redevelop the property as an apartment complex.

MIDTOWN MALL
401 South Independence Blvd.
Charlotte, Mecklenburg Co.
PD: Midtown Redevelopment

The Brownfields Property consists of two (2) parcels located at 401 South Independence Boulevard and 431 South Kings Drive, Charlotte, North Carolina; they bear Mecklenburg County tax parcel identification numbers 12522701 and 12522801, respectively. The Brownfields Property comprises approximately 10.3 acres and is the site of the former Midtown Square Mall. Prospective Developer intends to effect mixed use redevelopment of the Brownfields Property that may include commercial, retail, office, residential and institutional uses, as well as parking structures and open space. Groundwater and soil are contaminated at the Brownfields Property due to past activities.

MODEL LINEN
PD: QUB Studios
120 West Lewis Street
Greensboro, Guilford Co.

The site was used to manufacture wood stoves and has low levels of chlorinated solvents in the groundwater. The site will be redeveloped as a photographic studio and other commercial space.

MTE HYDRAULICS
105 Chickasaw Road
(intersection of Chickasaw Rd. & Pearson's Turnpike (state Hwy 2663)
Gastonia, Gaston County
PD: Liberty Land, LLC

A 9.76-acre parcel in Gastonia. The site has known soil and groundwater impacts from historical site operations which included the manufacturing of hydraulic components and brake pads and other uses. Prospective Developer intends to upgrade the property for manufacturing purposes and additional commercial use.

NATIONAL TEXTILES
100 Reep Drive
Morganton, Burke Co.
PD: Reep Drive, LLC

This former textile plant has contaminated soil and groundwater, likely from previous operations which included two drycleaning machines to clean textiles with perchloroethylene. The approximately 32-acre site will be redeveloped by the PD as a furniture manufacturing facility.

OXFORD PRINTING
8 Industry Drive
Oxford, Granville Co.
PD: FHO Partners, LLC

Former textile printing and finishing facility with VOC contamination in groundwater. PD has conducted remediation of floor drain contents. PD intends to redevelop the site for industrial/distribution use.

PARKER HANNIFIN
12415 Capital Boulevard
Wake Forest, Wake Co.
PD: St. Ives 220 Commercial, LLC

A 33-acre former air control devices manufacturing facility with known Trichloroethene contamination in soil and groundwater resulting from former wastewater treatment operations. PD intends to redevelop the site in mixed commercial, retail, and office space uses. Responsible party is currently undertaking assessment and remediation within RCRA and N.C. Hazardous Waste Section oversight.

PILOT MILLS
1121 Haynes Street
Raleigh, Wake Co.
PD: Capital Way, Inc, & Hedgehog Holdings, LLC

Abandoned, condemned turn-of-the-century textile mill in Downtown Raleigh redeveloped into office space and preserved on the National Register of Historic Places. Land use restrictions for chlorinated solvent in groundwater and capping of mercury in soils.

PPD HEADQUARTERS
SW corner of Harnett and Front Streets
Wilmington, New Hanover County
PD: River Ventures, LLC

Approximately 8-acre site is a small portion of the ~ 40-acre Almont Shipping site that will all eventually be redeveloped once Almont moves to the Wilmington Port Authority. Almont has been a dealer in bulk commodities (saltcake, urea, potash, phosphate, etc.). The site as a whole has been in business for almost a hundred years, with warehouses currently on this property being built in the late 1970s. Prior to that time it was operated as a fuel depot with large ASTs located on the site. Contamination from the adjacent CSX property spill of 2.2 million gallons of diesel in 1982 is suspected, although a Phase II assessment is currently underway. PD intends to demolish the buildings on site in order to construct a 400,000 SF office building.

QUALITY METAL PRODUCTS
1111 Oates Road
Gastonia, Gaston Co.
PD: Wede Corporation, LLC

This 11- acre site contains an abandoned facility of 48,000 square feet formerly used as for metal fabrication. Parts cleaning activities resulted in solvent impacts to site soil and groundwater. PD intends to refurbish the facility for metal fabrication utilizing high-tech, non-contaminating methods.

REA ASPHALT PLANT
2701 Youngblood Street
Charlotte, Mecklenburg Co.
PD: South End Silos, LLC

The Brownfields Property consists of three (3) parcels located at 2701 Youngblood Street in CharlotteThe Brownfields Property comprises 8.551 acres and is the site of the former Rea Construction Asphalt Plant. Prospective Developer intends to effect mixed use redevelopment of the Property that may include commercial, office, retail and residential uses. Groundwater and soil are contaminated at the Brownfields Property due to past activities.

REDMAN HOMES
Redman Road
Mebane, Orange Co.
PD: Barber & Ross Co.

Former mobile home manufacturing facility with metals and solvent contamination in soil and groundwater. PD has performed drum removal and soil remediation activities. PD intends to redevelop the site as a manufacturing facility to produce windows and doors.

REEVES SITE
8900 Research Drive
Charlotte, Mecklenburg County
PD: Linda Wolfe, Paul Ferrigan

Approximately 20-acres parcel that was historically the former Reeves Brother Facility that operated as a textile research and development laboratory. The site has known groundwater impacts from chlorinated solvents. PD intends to redevelop the property for commercial and light industrial uses.

RUSAK PROPERTY
3331 Griffith Street
Charlotte, Mecklenburg Co.
PD: CharMeck Board of Education

A 1.21-acre parcel that is adjacent to the Marie G. Davis Middle School. The site is contaminated from historical operations as a metal plating facility. The PD intends to incorporate the adjacent parcels into the new middle school construction. The brownfields parcel will be the plaza entrance.

SALEM UNIFORM
4015 N. Cherry Street
Winston-Salem, Forsyth County
PD: Winston Weaver Co. Inc.

2.53-acre site that has been vacant for many years. Was leased out from 1967-83 to Salem Uniform and from 1983-86 to Cintus Corporation who purchased the assets for Salem Uniform. During a Limited Site Assessment for petroleum USTs, high levels of PCE were discovered, probably from dry cleaning solvents. PD is currently leasing space, but would like to improve it for use for fertilizer storage and other commercial usage.

SANFORD WWTP
1351 Douglas Drive
Sanford, Lee Co.
PD: S. Wornnom & G. Perkins

Former municipal wastewater treatment plant site with petroleum impacted sewer sludge and metals impacts in site soils and low concentrations of volatile and semi-volatile compounds in groundwater. PD intends to redevelop the property in commercial use, including restaurant, retail space and a multi-screen movie theater.

SCHLAGE LOCK FACILITY
3551 North Wesleyan Blvd.
Rocky Mount, Nash County
PD: Community Resource Exchange

49.15 acre/196,000 square foot former manufacturing facility for lock/doorknob plating and assembly that used PCE as a degreasing solvent. Working with the Hazardous Waste Section as site is a RCRA TSD post-closure facility with active voluntary GW remediation system (Ingersoll-Rand is RP). Chlorinated solvents (PCE, TCE, 1,2-DCE, toluene and acetone are main constituents of concern in both soil and groundwater. PD is non-profit organization who needs loan in order to make improvements to former manufacturing facility in order to provide tenant space for non-profit organizations and possible outparcels for commercial retail businesses.

SHULER PROPERTY
US 23/74 & Hyatt Creek Road
Waynesville, Haywood Co.
PD: Waynesville Commons Retail Assoc, LLC

The property comprises 4.494-acres and was formerly a Drive-In Movie Theater, after which the property was used to dump construction and demolition debris. The PD has committed itself to redevelopment for no uses other than a roadway that provides access to the Brownfields Property to the west, and for restaurants, banks, retail shops, gas station uses, other commercial uses with prior written DENR approval, and offices, plus contiguous accessory uses such as parking areas and service drives.

SINGER COMPANY
357 Amilite Way
Chocowinity, Beaufort Co.
PD: DMB NC 2, LLC

Abandoned rural manufacturing facility with lead and phthalate contamination in soil and groundwater. The brownfields agreement provides for partial site remediation. PD intends to redevelop the site with mixed retail and light industrial uses.

SMITH METAL & IRON
725 W. 4th Street
Charlotte, Mecklenburg Co.
PD: City of Charlotte

Former site of a scrap metal yard and of a waste cell created for the temporary disposal of impacted soil removed during the construction of the adjoining Carolina Panther's practice field. The waste in the cell has been removed, and minor chlorinated solvent impacts remain in site groundwater. PD intends to redevelop the site in high density residential with additional office, entertainment, and retail potential.

SMITH PROPERTY
309 Campbell Street
Shelby, Cleveland Co.
PD: Cleveland County

Project involves the redevelopment of an area occupied by seven underused and dilapidated residential homes with petroleum hydrocarbon and chlorinated solvent contamination in groundwater. PD has the support of local residents to reuse the site as a parking lot serving the Cleveland County Offices.

SONOCO FLEXIBLE PACKAGING FACILITY
2203 Hawkins Street
Charlotte, Mecklenburg Co.
PD: Harris Murr & Vermillion, LLC

It is believed that groundwater and soil are contaminated at the Brownfields Property due to historical activities. The PD intends to redevelop the property for commercial (including retail and office), residential and ancillary purposes.

SOUTH TRYON STREET
2036 S. Tryon Street
Charlotte, Mecklenburg Co.
PD: Citiline, LLC

A 2.88-acre parcel near historic SouthEnd. PD intends to redevelop the property for commercial purposes such as office and showroom condominiums. Groundwater is contaminated at the Property due to historical site operations as industrial/warehouse storage.

SOUTHERN MANUFACTURING
1000 Seaboard Street
Charlotte, Mecklenburg Co.
PD: Fiber Mills, LLC

This 9-acre site located in inner Charlotte was a former asbestos tile manufacturing facility. Asbestos was discontinued in 1986, and the facility was closed in 1999. The site has asbestos contamination in soils. Intended reuse of the site includes an outdoor amphitheater, a technical business park, or a mixed-use development with industrial, commercial, and residential uses.

STATE FARM ROAD
660 State Farm Road
Boone, Watauga Co.
PD: Glen Wilde, LLC

Project involves the redevelopment of property occupied by a rural residence with chlorinated solvent contamination in groundwater and in a spring from an off-site source. PD intends to redevelop the site as a medical office complex.

STONEVILLE FURNITURE CO.
525 S. Henry Street
Stoneville, Rockingham County
PD: Community Resource Exchange

The site is a 22.5 acre historic furniture manufacturer that was idled in 2003. PD plans to redevelop the facility for light industrial, warehousing and flex space, thereby creating at least 200 jobs and greatly improving the tax base. The site has chlorinated solvent impacts to soil and groundwater.

TARTAN MARINE
S. NC Hwy 177
Hamlet, Richmond Co.
PD: Chair Specialist Co.

Former boat manufacturing facility with lead contamination in soil. Additional site sampling conducted by the PD has shown previous soil removal actions have left no health-based lead problems. PD intends to redevelop the site as a chair and table base manufacturing facility.

TERRELL MACHINE
3030 South Boulevard
Charlotte, Mecklenburg Co.
PD: SESCO Group-Carolina Bldg., LLC

Site of former textile manufacturing and gear box machining operations, property in Charlotte's South End district is being redeveloped with ground floor retail and office/residential above. Remedial actions to eliminate hot spot contamination included soil removal and groundwater pump and treat. Land use restrictions are in place to address chlorinated solvent contamination remaining in groundwater.

V F Site
2831 Wilson Park Road
Statesville, Iredell Co.
PD: Statesville Partnership LLC

This former textile plant has chlorinated solvent contamination as a result of on site drycleaning operations. The PD plans to upgrade the property for light manufacturing or distribution facility.

VANIER GRAPHICS
655 E. Meadow Road
Eden, Rockingham Co.
PD: A. C. Furniture Co.

Former printing facility with petroleum and chlorinated hydrocarbon contamination in the soil and solvent contamination in the groundwater. Developer intends to redevelop the site as a furniture assembly and upholstering facility.

WEST MOREHEAD 1310 W. Morehead Street Charlotte, Mecklenburg Co. PD: Addison Investments, LLC	Former automobile repair and maintenance facility with chlorinated solvent contamination in soil and groundwater. Developer intends to redevelop the site, to include both facility renovation and new construction for use as commercial office/retail.
WILLARD LEAD FACILITY 101 New Bern Street Charlotte, Mecklenburg Co. PD: Harris Murr & Vermillion, LLC	Groundwater at the approximately 4.5-acre site is contaminated with chlorinated solvents, while soil shows metals contamination. The majority of the property has been vacant since 1996, the PD intends to redevelop the property into residential, retail, and possibly other commercial uses.
WILMINGTON CONVENTION CENTER 525 Nutt Street Wilmington, New Hanover Co. PD: River Ventures, LLC	The property is a former industrial site, approximately 9.22 acres that was most recently used as a petroleum receiving facility for CSX Transportation. Soil and groundwater at the site are contaminated with metals and petroleum constituents. The PD plans to redevelop the property into a publicly owned convention center, parking deck and open space. The redevelopment plans also include a proposed privately owned hotel and restaurant.
WILSON LANDFILL US Hwy 301 South Wilson, Wilson Co. PD: Dillon Properties, LLC	This underused 14-acre site was formerly occupied by a wastewater treatment facility owned and operated by the City of Wilson. The site has known metals contamination in groundwater. Developer intends to redevelop in mixed commercial, warehousing, and residential uses.

NC DENR
EXPRESS PERMIT REVIEW PROGRAM

The Express Permit Review Program authorized by G.S. 134-B-279.13 began as a pilot in the Raleigh and Wilmington regions in 2004. It was expanded statewide in 2005. The following permits and certification are included in this program: Water Quality State Stormwater permits, Water Quality Wetland 401 Certifications and Stream Determinations, Water Quality Non-Discharge Wastewater Permits, Land Quality Erosion and Sedimentation Control Plans and Coastal Area Management Act major permits. This year Express review began on a limited basis to Water Quality Alternative Sewer permits. Future program expansion will be in response to the interest of communities and engineers.

GOAL-EXPRESS PERMIT REVIEW

To provide quicker, more predictable environmental permit application review, without compromising the quality.

Keys to success:

- Experienced, well- trained DENR permit staff dedicated to reviewing express projects.
- High quality applications, with the necessary documentation for decisions without significant delays awaiting information.
- Owner-involvement—including meetings with consultants, DENR staff would improve understanding of the review process and reinforce the need for complete applications.
- Higher fees charged for express would fully support the program.
- Increased customer service would open the door to better communication.

EXECUTIVE SUMMARY

The largest industrial facilities with emissions of air pollution in North Carolina are subject to the Title V permits program. The Title V program (referring to "Title V" of the Federal Clean Air Act), established in 1994, consolidates all Federal and state air quality regulations for a particular facility into a single permit. The Federal Clean Air Act requires the Title V program be funded entirely from fees collected from those facilities.

The enclosed annual report discusses the costs and other aspects of North Carolina's Title V permit program.

INTRODUCTION

North Carolina state law requires that the Department of Environment and Natural Resources (DENR):

> "... shall report to the Environmental Review Commission and the Fiscal Research Division on the cost of the Title V Program on or before 1 November of each year. The reports shall include, but are not limited to, fees set and established under this Article, fees collected under this Article, revenues received from other sources for environmental permitting and compliance programs, changes made in the fee schedule since the last report, anticipated revenues from all other sources, interest earned and any other information requested by the General Assembly." (NCGS 143-215.3A, attached as Appendix A)

This report describes the Title V Permit Program in North Carolina as carried out by DENR's Division of Air Quality. The report focuses on funding and staffing issues. It does not cover Title V permit programs under the jurisdiction of local air pollution control programs in Buncombe, Forsyth, and Mecklenburg counties.

Congress established the Title V Permit Program under the Federal Clean Air Act (1990 Amendments), primarily as a way to consolidate all air regulations affecting major emitters of air pollution into a single document. Under the Clean Air Act, Title V permits are required for certain industry groups as designated by the EPA as well as facilities that emit at least:

- 100 tons per year of any regulated pollutant, or
- 10 tons per year of any hazardous air pollutant, or
- 25 tons per year of any combination of hazardous air pollutants.

This Accountability Report includes:

- A discussion of program accomplishments and goals
- A discussion of current issues affecting the Title V program
- A detailed description of the Title V permit fee structure for calendar year 2008
- A detailed, line-item budget for state fiscal year 2007
- An account of Title V receipts and expenditures from state fiscal years 1992 to 2007
- Various appendices, including a list of acronyms used in this report
- An organization chart for total staff in the Division of Air Quality and Title V related positions

CURRENT STATUS AND RECENT ACCOMPLISHMENTS

A historical perspective of North Carolina's Title V Permit Program is included in Appendix B. This section focuses on the program's current status and recent accomplishments.

The Title V permit program encompasses the full range of activities associated with implementing the program, including:

- Reviewing, issuing, modifying, and renewing Title V permits
- Advising the regulated community on applicability issues
- Routinely inspecting permitted facilities
- Responding to citizens' complaints or concerns
- Gathering emissions inventory data
- Operating a network of air monitors
- Performing public outreach, including issuing daily air quality advisories to citizens
- Long-range planning (including computer modeling) to maintain adequate air quality for future generations
- Working with legislators and appointed officials to ensure adequate statutory and regulatory authority to carry out the DAQ's mission
- Taking enforcement actions against violators, including assessing penalties, revoking permits, and taking legal action to close down the worst offenders

The DAQ has a total staff of 303 managers, engineers, scientists, technicians, and administrators. About 10% of the positions are vacant at any time due to turnover. Although almost every position in the Division has some Title V responsibility, the full-time equivalent (FTE) staff dedicated to the Title V program is about 138 positions. The remaining staff is responsible for non-Title V permits, area sources, mobile sources, and toxics programs; these activities are funded with receipts outside of the Title V program and are not the subject of this report. The DAQ staff size has been relatively stable for about ten years and no growth in staff is anticipated in the future.

DENR operates a Small Business Assistance Program, employs a Small Business Ombudsman, and appoints a Compliance Advisory Panel to conduct citizen overview of small business activity. Title V fees also fund these programs, although they operate independent of the DAQ.

The DAQ reports its activities to the US EPA on a federal fiscal year (FFY) basis. In the most recently completed FFY (October 1, 2006 through September 30, 2007), the DAQ

- Completed action on 392 Title V permit applications
- Inspected 100% of permitted Title V facilities (357 inspections)
- Issued 112 Notices of Violations (NOV) to 87 different facilities
- Initiated 40 enforcement actions against 35 facilities, resulting in penalties of over $560,000 (penalties collected are transferred to local schools)

PROGRAM ISSUES

The most pressing issue facing the Title V program is its long-term funding, which has forced the DAQ to initiate rulemaking for the purpose of increasing the Title V fees. Other issues facing the program include

- New Federal regulatory programs
- Better documentation of staff time charged to Title V
- Program review by the Office of the State Auditor
- Personnel issues, including potential retirements

Title V permit fee increases

The DAQ has initiated a rulemaking process that will result in an increase in the Title V permit fees. This is the first non-inflationary fee increase since the Title V permit program was established in 1994.

Salary costs represent the major expense related to the Title V permit program. The North Carolina General Assembly approved salary increases for state employees in 2006 and 2007. Employee fringe benefits, office space, and other support costs are paid from the Title V permit fees on a pro rata basis relative to the total positions in the Division and are subject to inflation. Title V permit fees have not kept up with these rising expenses.

In pursuing the fee increase, the Division

- Discussed the concept with affected industries this past summer. DAQ received feedback from the regulated community on an early draft of the fee increase rule change and phased the increase over a longer period of time based upon that feedback.
- Took the draft rule to the Environmental Management Commission (EMC) in September.
- Held a public hearing in November. The EMC did not receive <u>any</u> adverse comments on the proposed rule change during the recent public comment period on the proposed rule.
- Anticipates that the EMC will approve the rules at their January 2008 meeting.
- Anticipates the fee increases would become effective in February/March 2008.

Appendix C discusses the fee increase in more detail. No new positions are established by the proposed fee increase.

New Federal regulatory programs

Title V permits are valid for five years after issuance, but it is rare that a Title V permit expires without being modified. Oftentimes the permit is modified at the facility's request, due to an expansion or a change in their process. But revised Federal regulations are also responsible for many permit modifications. Each of these modifications requires a careful review by a permit engineer.

A list of the most common Federal regulations would include:

- Maximum Available Control Technology (MACT)
- Reasonably Available Control Technology (RACT)
- Compliance Assurance Monitoring (CAM)
- Clean Air Interstate Rule (CAIR)
- Clean Air Mercury Rule (CAMR)
- Best Available Retrofit Technology (BART)

Although listed on a single line above, a Federal regulatory program may actually entail dozens of different rules, each specific to a particular industry or industrial process. These rules are under constant change, due to new technologies, new science, court challenges, and other factors.

Additionally, the US EPA:

- Has issued new national ambient air quality standards for fine particles,
- Has proposed new national ambient air quality standards for ozone, and
- May be required to regulate greenhouse gas emissions.

The DAQ must modify its strategy to ensure attainment with each of these evolving standards, which may require new regulations for existing and new industrial sources.

The point being, and the reason it is listed as a program issue, it is a continual challenge for an air quality engineer to maintain his/her expertise on emerging technologies and regulatory requirements. Losing experienced engineers and training new recruits is not only demanding for the Division, but can create delays in industrial expansion as facilities wait for their permit. Worse, it can expose citizens to unhealthy environmental conditions if an engineer misses a requirement that should be included in the facility's permit.

New accounting procedures for timesheets

In the summer of 2006, the US EPA conducted a routine review of the state's Title V program. The EPA was critical of the manner in which Division employees accounted for time spent on Title V work versus other work. Specifically, the EPA was concerned that non-Title V funds were potentially being used to fund Title V expenses. The Federal Clean Air Act requires that the Title V permit program be fully funded by Title V fees and no other funding sources. To be clear, the EPA did not specifically accuse the Division of misusing funds, but they were concerned about that potential. In response, the Division revamped its timesheet procedures beginning with the October 2006 pay period. Each employee was assigned two different funding codes (one Title V and one non-Title V), and was given a table of activities indicating which activities were to be charged to which funding code. DAQ believes we have resolved this issue to EPA's satisfaction.

Program Review by the Office of the State Auditor

The last annual report of November 2006 indicated the DAQ would develop and research staffing levels in both the permitting section and the entire Division. The Director has agreed to allow the

Office of the State Auditor to conduct an audit of the DAQ Central Office permitting procedures to gain insight into and improve efficiency in issuing Title V permits. The audit is scheduled from late Fall 2007 through Spring 2008 and will include training and review by the North Carolina State University (NCSU) Industrial Extension Service (IES). The primary purpose of NSCU IES involvement is to introduce "Lean Office" concepts to the permitting process. If successful, it is hoped that these concepts can be extended to non-Title V permitting as performed by DAQ Regional Offices.

Personnel issues, including potential retirements

For the first time in its history, the DAQ is facing serious turnover among its managers and most-experienced technical staff. The air program was first established in the late 1960s and expanded in the '70s and '80s by hiring mostly young engineers – there were no experienced air quality engineers in those days. Those initial hires are now reaching retirement age. For example, the primary engineer ("guru") for developing the air rules retired in 2007 with 39 years of service. There are many other examples where the Division faces losing long-time air quality staff with 30+ years of service

The Division is concerned with losing this "corporate knowledge," and also wants to ensure an orderly succession of its senior managers. We realize that, like other state agencies, the DAQ has a bit of a "silo mentality". Employees tend to stay in one area of the program, developing tremendous expertise in that aspect, but perhaps lacking the breadth of experience that would benefit them as a senior manager.

To improve this situation, the Division has initiated a trial "rotation" program where employees are reassigned for six months to a position in another branch of the Division. The employees are expected to totally immerse themselves in the new position, leaving their former duties to another employee who has rotated into that position. The program is currently voluntary, and both managers and staff are eligible to participate. In two years, about a dozen employees have participated, and the program has generally been successful. There are some productivity losses as participants move up the learning curve in their new position and as they develop working relations with the affected staff. However, participants have responded very positively to the new perspective they gain on how various work products of the Division fit together – which was a primary goal of the initiative. Other DENR divisions have taken notice and are interested in initiating their own rotation programs.

CALENDAR YEAR 2007 PERMIT FEES TABLE

Notes and explanation

The federal Clean Air Act requires that the entire cost of the Title V Permit Program, including both direct and other related expenses, be funded by facilities' permit fees and that Title V permit fees be used only for this purpose. The Clean Air Act set a presumptive minimum in 1990 of $25 per ton of air pollutant emissions. Annually, EPA publishes an update to the presumptive minimum, which includes a cost-of-living increase. In September 2007, EPA's update increased the presumptive minimum to $41.96.

The Clean Air Act Advisory Council established by the General Assembly recommended in 1992 that, because of the amount of work required to issue every Title V permit, regardless of the facility's emissions, half of the total title V fees come from an application fee (an annual flat fee for each permit) and the other half of the revenue come from annual per-ton charges.

The table on the following page provides the projected receipts for DAQ for FFY-09 using the presumptive minimum and DAQ's system, which follows the recommendations of the Clean Air Act Advisory Council.

CALENDAR YEAR 2008 PROJECTED TITLE V PERMIT FEES

ESTIMATES BASED ON PRESUMPTIVE MINIMUM

Title V Presumptive Minimum	276904 Tons	$41.96	=	$11,618,891.84
ESTIMATES BASED ON NC FEES RULE				$8,215,864.40
		Average Title V $/ton		$29.67

NC Estimates (Based on calculations below)

		% of Presumptive		70.71%
TITLE V	Annual Fees	Permits	Fee Rate	Fee Subtotal
	Basic	399	$6,311.00	$2,518,089.00
	Tons/Tonnage Factor	276904	$18.10	$5,011,962.40
	Non-Attainment	0	$3,297.00	$0.00
TITLE V	Application fees			
	Significant Modification	56	$8,910.00	$498,960.00
	Minor Modification	163	$867.00	$141,321.00
	Ownership Change	14	$62.00	$868.00
	New	5		
	PSD or NSR/NAA	3	$13,488.00	$40,464.00
	PSD & NSR/NAA	0	$26,235.00	$0.00
	Construction Notices	21	$200.00	$4,200.00

APPENDIX A

Historical Perspective

The Clean Air Act Amendments of 1970, reviewed and amended by Congress in 1977 and 1990 formed the basis of the federal air pollution control program currently in place. Health-based national ambient air quality standards are the strategic basis of the Clean Air Act. The standards were to be met through the application of control technology that would reduce emissions continuously and result in improved air quality. Costs of technological capability were to be subordinated to public health protection requirements. Also, all requirements were to be national, with no facility having a competitive edge by having to meet less stringent controls. The United States Environmental Protection Agency (US EPA) is responsible for carrying out the program.

Prior to the 1990 Clean Air Amendments, EPA set two kinds of National Ambient Air Quality Standards (NAAQS) specifying maximum acceptable levels of pollutants for outdoor air. Primary standards set limits that protect human health; secondary standards provide welfare protection (i.e. plants, animals, aesthetics and materials). EPA set primary and secondary standards for six criteria pollutants: carbon monoxide, nitrogen dioxide, lead, sulfur dioxide, ozone and particulates. Eight substances were listed as hazardous air pollutants: asbestos, beryllium, mercury, vinyl chloride, radionuclides, inorganic arsenic, benzene, and coke oven emissions. National Emissions Standards for Hazardous Pollutants (NESHAPS) were promulgated for sources of seven of these pollutants.

Most air pollution comes from either stationary sources, such as factories, power plants and smelters, or mobile sources such as cars, trucks and airplanes. To limit mobile source pollution, controls were established for automobile emissions. EPA also set standards that applied to new industrial plants and existing ones that were substantially modified. Additionally, state governments were required to draw up State Implementation Plans (SIP's) that set out other measures to achieve acceptable air quality.

Under the Federal Clean Air Act Amendments of 1990, Congress mandated the Title V Permit Program primarily for regulating major air pollution sources; that is, sources with greater than 100 tons per year of the six criteria air pollutants and/or greater than 10 tons per year of any of the 189 Hazardous Air Pollutants (HAPs) or 25 tons per year of combined HAPs. The North Carolina Environmental Management Commission (EMC) established the state Title V Permit Program in 1994 in accordance with state and federal laws and with guidance from the N.C. Clean Air Act Advisory Council. The state Division of Air Quality (DAQ) carries out the program, which received interim approval from the US EPA on December 15, 1995 and final approval in October 2001.

The DAQ in implementing the program was required to issue permits to existing major stationary facilities. The DAQ issued all permits to all existing facilities by the end of 2004. The DAQ is also required to issue permits to new major stationary facilities.

In North Carolina, the General Assembly enacted laws in 1991 and 1993 authorizing the Title V program. The legislature also established the North Carolina Clean Air Act Advisory Council to develop the programs needed to comply with the Clean Air Act, including the structure of the Title V

permit fees. The Clean Air Act Advisory Council issued a final report in August 1992, and the Environmental Management Commission followed the council's recommendations in adopting rules for the state Title V Permit Program in 1994. The EPA gave interim approval to North Carolina's Title V Permit Program on December 15, 1995, with final approval pending certain rules changes, which have been submitted to EPA. EPA gave final approval in October 2001. The Division of Air Quality started receiving Title V permit applications after EPA's interim approval of the program on December 15, 1995. Facilities were given until December 1996 to submit their applications or they would be considered in violation of the permitting rules. Applications received during the aforementioned timeframe were processed as "Initial Title V Applications" and all other Title V applications received after December 1996 were processed as "First Time Title V Applications." By January 1998, DAQ had 475 Title V applications under review.

Implementation of CAA 1990 - A Historical Perspective

Since program approval, the DAQ has processed (closed-out) a total of 4063 applications to date. To date DAQ has issued 78 First Time Title V permits and is currently reviewing 232 applications. Currently, DAQ has 339 (EPA TOPS Report 6-30-07) operating facilities classified as Title V facilities.

Accomplishments - Historical Perspective

1. The DAQ has established a Title V Permit Program based on rules adopted by the EMC (15A NCAC 02Q .0500). The program meets the requirements of state law (N.C.G.S. §§143-215.3 and 143-215.108) that authorized the program in North Carolina and set up the North Carolina Clean Air Act Advisory Council. The EPA gave interim approval to the program in 1995, and following the DAQ's revision to the Title V regulations, EPA gave final program approval in October of 2001.

2. In 2002 the DAQ revised the Title V application forms including the development of special forms for the renewal of Title V permits. These revised forms are intended to facilitate the application process, and they have been placed on the Division's website http://daq.state.nc.us/

3. The Federal Clean Air Act requires that Title V permit holders pay fees sufficient to cover the cost to administer the permitting program. The DAQ has developed and maintained a permit and emissions fee schedule that has historically generated an appropriate amount of revenue to carry out the Title V permitting program. The DAQ will continue to evaluate the fee structure to ensure that the necessary fees are collected.

In 1994 DAQ conducted its first comprehensive emissions inventory for facilities in North Carolina. This comprehensive inventory process has been repeated every three years for all non-Title V facilities until January 2003, when the inventory requirement was changed to every five years for non-Title V facilities. Title V facilities continue to be required to submit an inventory annually. This emission information is stored on a computer database that DAQ uses to calculate fees and for use in

regulatory planning. The DAQ has developed an electronic on-line inventory reporting system that has been available to Permittee's since 2003.

DAQ has provided a range of options to qualify facilities as non-Title V facilities. Many facilities have taken advantage of these options, which is one of the reasons why the number of Title V facilities is much less than initial estimates; that is, 339 operating Title V facilities now versus the 2000 estimated in the Clean Air Act Advisory Council's Final Report. For example, the DAQ established the synthetic minor program so facilities could avoid the Title V permitting program by taking permitted emission limits and/or operating restrictions. Also, the EMC adopted and EPA approved exclusionary rules to allow reasonable potential emission calculations in cases where standard methods would produce unreasonably high potential emissions thus subjecting such facilities to Title V.

APPENDIX B

NC GENERAL STATUTES RELATED TO THE TITLE V PERMIT PROGRAM

§ 143-215.3. General powers of Commission and Department; auxiliary powers.

(a) Additional Powers. – In addition to the specific powers prescribed elsewhere in this Article, and for the purpose of carrying out its duties, the Commission shall have the power:

(1d) The Commission may adopt and implement a graduated fee schedule sufficient to cover all direct and indirect costs required for the State to develop and administer a permit program which meets the requirements of Title V. The provisions of subdivision (1b) of this subsection do not apply to the adoption of a fee schedule under this subdivision. In adopting and implementing a fee schedule, the Commission shall require that the owner or operator of all air contaminant sources subject to the requirement to obtain a permit under Title V to pay an annual fee, or the equivalent over some other period, sufficient to cover costs as provided in section 502(b)(3)(A) of Title V. The fee schedule shall be adopted according to the procedures set out in Chapter 150B of the General Statutes.

a. The total amount of fees collected under the fee schedule adopted pursuant to this subdivision shall conform to the requirements of section 502(b)(3)(B) of Title V. No fee shall be collected for more than 4,000 tons per year of any individual regulated pollutant, as defined in section 502(b)(3)(B)(ii) of Title V, emitted by any source. Fees collected pursuant to this subdivision shall be credited to the Title V Account.

b. The Commission may reduce any permit fee required under this section to take into account the financial resources of small business stationary sources as defined under Title V and regulations promulgated by the United States Environmental Protection Agency.

c. When funds in the Title V Account exceed the total amount necessary to cover the cost of the Title V program for the next fiscal year, the Secretary shall reduce the amount billed for the next fiscal year so that the excess funds are used to supplement the cost of administering the Title V permit program in that fiscal year.

§ 143-215.3A. Water and Air Quality Account; use of application and permit fees; Title V Account; I & M Air Pollution Control Account; reports.

(a) The Water and Air Quality Account is established as a nonreverting account within the Department. Revenue in the Account shall be applied to the costs of administering the programs for which the fees were collected. Revenue credited to the Account pursuant to G.S. 105-449.125, 105-449.134, and 105-449.43 shall be used to administer the air quality program. Except for the following fees, all application fees and permit administration fees collected by the State for permits issued under Articles 21, 21A, 21B, and 38 of this Chapter shall be credited to the Account:

(1) Fees collected under Part 2 of Article 21A and credited to the Oil or Other Hazardous Substances Pollution Protection Fund.

(2) Fees credited to the Title V Account.

(3) Repealed by Session Laws 2005-454, s. 7, effective January 1, 2006.
(4) Fees collected under G.S. 143-215.28A.
(5) Fees collected under G.S. 143-215.94C shall be credited to the Commercial Leaking Petroleum Underground Storage Tank Cleanup Fund.

(a1) The total monies collected per year from fees for permits under G.S. 143-215.3(a)(1a), after deducting those monies collected under G.S. 143-215.3(a)(1d), shall not exceed thirty percent (30%) of the total budgets from all sources of environmental permitting and compliance programs within the Department. This subsection shall not be construed to relieve any person of the obligation to pay a fee established under this Article or Articles 21A, 21B, or 38 of this Chapter.

(b) The Title V Account is established as a nonreverting account within the Department. Revenue in the Account shall be used for developing and implementing a permit program that meets the requirements of Title V. The Title V Account shall consist of fees collected pursuant to G.S. 143-215.3(a)(1d) and G.S. 143-215.106A. Fees collected under G.S. 143-215.3(a)(1d) shall be used only to cover the direct and indirect costs required to develop and administer the Title V permit program, and fees collected under G.S. 143-215.106A shall be used only for the eligible expenses of the Title V program. Expenses of the Small Business Environmental Advisory Panel, the ombudsman for the Small Business Stationary Source Technical and Environmental Compliance Assistance Program, support staff, equipment, legal services provided by the Attorney General, and contracts with consultants and program expenses listed in section 502(b)(3)(A) of Title V shall be included among Title V program expenses.

(b1) The I & M Air Pollution Control Account is established as a nonreverting account within the Department. Fees transferred to the Division of Air Quality of the Department pursuant to G.S. 20-183.7(c) shall be credited to the I & M Air Pollution Control Account and shall be applied to the costs of developing and implementing an air pollution control program for mobile sources.

(c) The Department shall report to the Environmental Review Commission and the Fiscal Research Division on the cost of the State's environmental permitting programs contained within the Department on or before 1 November of each year. In addition, the Department shall report to the Environmental Review Commission and the Fiscal Research Division on the cost of the Title V Program on or before 1 November of each year. The reports shall include, but are not limited to, fees set and established under this Article, fees collected under this Article, revenues received from other sources for environmental permitting and compliance programs, changes made in the fee schedule since the last report, anticipated revenues from all other sources, interest earned and any other information requested by the General Assembly.

APPENDIX C

TITLE V PERMIT FEE INCREASE

Introduction

The Clean Air Act requires the Title V permit program to be funded entirely through Title V permit fees. Funding for the Title V permit program expenses is required to be available prior to disbursement and must be sustainable.

The General Assembly approved salary increases for state employees in 2006 and 2007. Salary costs represent a major expense related to the Title V permit program. There have also been annual increases in costs such as office space, utilities, and other support costs. The Title V permit program costs increased by 7.3 percent and 6.8 percent for fiscal years 2006 and 2007.

The Division of Air Quality (DAQ) collects Title V permit fees throughout the year and experiences fluctuating operating fund balances. In 2003, the balance brought forward represented 66 percent of annual cash disbursements, 54 percent in 2004, and 21 percent in 2007. The projected balance to be carried into 2008 is 9 percent of cash disbursements made in 2007. This balance will not be sufficient to fund and operate the Title V permit program. The Title V permit program account could potentially run into deficits in 2008 unless additional fees are collected.

Due to these added expenses and the requirement to fund the permit program entirely with the fees collected from the Title V facilities, DAQ has begun a rulemaking process to increase the fees to a level sufficient to fund the program at its current level for the foreseeable future. No new positions are established by the proposed fee increase. If Title V permit fees fail to match Title V operating permit program costs, operating costs are legally required to be reduced to match Title V permit fees. Reduced assets (less Title V funded positions) will influence service response time for Title V permits and the level of effort available to conduct thorough compliance facility inspections. An adequate Title V permit program ensures that the State can retain experienced engineers to issue accurate permits in a timely manner and experienced field inspectors to ensure that facilities are operating in accordance with those permits.

Description of Amended Rules

15A NCAC 02Q .0203, Permit and Application Fees, updates calendar year 1994-based fees that are applicable to Title V air pollution sources. The tonnage factor fee is being raised in four steps beginning on the rule effective date, until it reaches $30.00 per ton on January 1, 2011. A stepped approach was used to increase the Title V tonnage factor fee as recommended by the regulated community. This approach was chosen, opposed to a single large increase, to minimize the sudden impact to the subject fee payers. The related basic permit fee and nonattainment area added fee are being raised to $6,500 and $3,500, respectively.

15A NCAC 02D .0204, Inflation Adjustment, describes the method used for calendar year inflation adjustment of these Title V Permit and Application Fees. This inflation adjustment will be placed on hold until after the phased increase of the tonnage fee in 02Q .0203 is complete.

Authority

Please see Appendix B for reference documents that outline DAQ's authority to adopt fee schedules.

Motivation for the Proposed Rules

The reason for this action is to modify annual permit fees for Title V facilities and the inflation adjustment to ensure that the Clean Air Act requirements associated with the Title V permit program are met. This action is needed to ensure the current level of service quality in the Title V permit program is maintained into the foreseeable future. A fee adjustment will help ensure that the needs of the public, the environment, and industry are met.

"Title V" is the permitting program for major emitters of air pollution. "Title V" refers to Title V of the Federal Clean Air Act. The Clean Air Act requires the Title V program to be funded entirely through Title V permit fees. The United States Environmental Protection Agency (U.S. EPA) audited North Carolina's Title V program in June 2006. They found the technical aspects of the program to be satisfactory, but they did raise questions about whether or not permit fees were paying the entire cost of the program.

The current State rules allow annual permit fees for Title V facilities to be adjusted each year for inflation. However, from 2002 to 2006, no increases were made. Separately, the General Assembly approved salary increases for state employees (almost 10% over two years). No appropriations are made to the DAQ for these salary increases, which amounted to annual recurring expenses to the division of $2 million; these expenses must be paid out of Title V receipts and other non-appropriated funds that DAQ receives. Salary costs represent a major expense related to the Title V program. However, salary increases represents only a portion of costs associated with the Title V program expenses. Salary increases cause the Division's retirement and social security payments to increase. Employee fringe benefits, office space, and other support costs are subject to inflation. Title V costs increased by 7.3 percent and 6.8 percent for fiscal years 2006 and 2007. Funding for the Title V program cost increases is required to be available prior to disbursement and must be sustainable.

Additionally, there is a financial and operational need to carry a forward balance each year to operate the Title V program. Fee receipts are paid annually by facilities throughout the calendar year. In 2003, the balance brought forward represented 66 percent of annual cash disbursements, 54 percent in 2004, and 21 percent in 2007. The projected balance to be carried into 2008 is 9 percent of cash disbursements made in 2007. This balance will not be sufficient to fund and operate the Title V program.

The combination of the Title V fee not keeping up with inflation and the salary and benefit and operational cost increases has seriously depleted the Title V account – in fact, the account could potentially run into deficits in 2008 unless additional fees are collected. The proposed rule will

increase Title V receipts to allow the account to "catch up" to an adequate funding level. This will also enable the Division to demonstrate to the U.S. EPA that the program is entirely funded through permit fees, as required by the Clean Air Act. No new positions are established by the proposed fee increase.

Adequate funding of the Title V program is important to North Carolina's major industries and the environment. An adequate Title V program ensures that the State can retain experienced engineers to issue accurate permits in a timely manner and experienced field inspectors to ensure that facilities are operating in accordance with those permits. It is especially important to maintain the Title V permit program as the U.S. EPA has recently tightened the daily particulate standard, has proposed tightening the ozone standard, and is considering establishing greenhouse gas standards.

A Title V facility's annual fee consists of two or three parts:

- a flat basic permit fee,
- a variable tonnage fee that depends on the facility's actual emissions, and
- a flat, nonattainment area added fee which is applicable only to Title V facilities required to comply with 15A NCAC 02D .0531, 15A NCAC 02D .0900 (Volatile Organic Compounds), or 15A NCAC 02D .1400 (Nitrogen Oxides) and either are in a area designated in 40 CFR 81.334 as nonattainment; or are covered by a nonattainment or maintenance State Implementation Plan submitted for approval or approved as part of 40 CFR Part 52, Subpart II.

Identification of the Affected Sources

Amendments of the Annual Permit Fees in 15A NCAC 02Q .0203 and the Inflation Adjustment in 15A NCAC 02Q .0204 will increase the Title V permit fees of all facilities regulated by the State air quality agency. It does not affect facilities regulated by three local air agencies (Mecklenburg County, Forsyth County, and Western North Carolina). The local air agencies set their own Title V fee amounts.

Establishment of the Baseline

The current State rules allow annual permit fees for Title V facilities to be adjusted each year for inflation using a Code of Federal Regulation method that is based on the Consumer Price Index. The fee was initially set at $14.63 in 1994, and is currently $18.10. The current basic permit fee is $6,311 and the nonattainment area added fee is currently $3,297. The fees charged in 2007 represent the baseline for the purpose of this rulemaking.

Changes from the Baseline

Examining the current size of the Title V industry in North Carolina, the size and cost of the regulatory staff needed to service that industry, and then spreading those costs across industry by the amount of pollution they emit established the proposed fee changes, as shown below.

Year	Tonnage Fee	Basic Permit Fee	Nonattainment Area Added Fee (if applicable)
2007	$18.10	$6,311	$3,297
2008	$22.50	$6,500	$3,500
2009	$25.00	$6,500	$3,500
2010	$27.50	$6,500	$3,500
2011	$30.00	$6,500	$3,500
2012 and thereafter	Annual CPI increase	Annual CPI increase	Annual CPI increase

The following table summarizes revenues raised by the proposed tonnage fee increase. In addition, each facility's basic fee would rise by $189/year, and, if located within a nonattainment area, their added fee would rise by $203/year.

Year	Proposed Tonnage Fee	Total Revenue[1]	Total Impact on All Sources	Impact on Largest Sources[2]	Impact on Small Sources[3]
2007	$18.10	$5,430,000	(Not applicable)		
2008	$22.50	$6,750,000	$1,320,000	$72,600	$330
2009	$25.00	$7,500,000	$2,070,000	$113,850	$520
2010	$27.50	$8,250,000	$2,820,000	$155,100	$710
2011	$30.00	$9,000,000	$3,570,000	$196,350	$890
2012+[4]	$30.60	$9,180,000	$3,750,000	$206,250	$940

[1] "Total Revenue" is calculated by multiplying the tonnage fee by 300,000 tons, a "typical" annual amount based on major source air permits.
[2] Tonnage fees for the largest sources are capped at 4,000 tons per pollutant. The state's three largest sources were each billed for about 16,500 total tons of six different pollutants in their most recent annual bill. Annual increase is the fee increase multiplied by 16,500 tons.
[3] Small Business Title V facilities having less that 75 tons of all pollutant in their most recent annual bill. Annual impact is the fee difference from baseline multiplied by 75 tons.
[4] In 2012 and later years, an annual CPI would be applied. A 2% increase is shown for illustration purposes.

Estimating the Cost to the Existing Affected Sources

A. Summary of Costs/Savings Incurred by the Affected Private Sector Sources:
Industrial facilities holding Title V permits typically emit more than 100 tons per year of a specified air pollutant. These facilities are charged an annual tonnage fee up to 4,000 tons per year per pollutant (i.e., a facility emitting 10,000 tons of a pollutant would pay the same as a facility emitting 4,000 tons of that pollutant). Although most Title V facilities are very large, a facility that emits certain hazardous air pollutants may hold a Title V permit for having the potential to emit as little as 10 tons per year. Thus, the very largest facilities would see their annual tonnage fee per pollutant rise

from $72,400 in 2007 to $90,000 in 2008. Additionally, all facilities, regardless of size, would see their basic permit fee rise from $6,311 to $6,500. Those facilities within a nonattainment area would also see that added fee increased from $3,297 to $3,500.

B. Costs to Small Business:
A small business as defined by the Office of State Budget and Management (OSBM) is a business entity, including its affiliates, that is independently owned and operated, employs fewer than 500 employees or has gross annual sales of less than $6 million. A Title V facility has a potential to emit 100 tons of a single pollutant or 10 tons of a hazardous air pollutant or 25 tons of more than one hazardous air pollutant. There may be facilities that meet the OSBM definition of "small business" that are regulated as Title V facilities. The Clean Air Act does not exempt them from paying Title V fees but the fees can be reduced as noted in G.S. 143-215.3(1d) (see Appendix B).

Typically, the Title V program covers larger businesses, but applicability is dependent on potential emission levels rather than business size. Some smaller businesses, such as manufacturers of bricks, fiberglass, foam rubber, plastics, pharmaceuticals, and textiles along with smaller surface coating operations and landfills, are subject to the Title V program because their potential emissions are high enough to trigger Title V thresholds.

The Clean Air Act defines a "Small Business Stationary Source" as a stationary source that employs less than 100 employees and emits less than 75 tons per year of all regulated pollutants. In absence of employment data, and exclusively judging by emissions data, approximately 25% of the Title V sources in North Carolina emit less than 75 tons per year of all regulated pollutants. The total billable emissions from these 85 Title V facilities represent less than one percent of the total financial impact from increasing the Title V tonnage and permit fees. The average impact to these smaller Title V sources would be $330 in 2008, based on an average of 33 tons per year, for both annual permit fees and tonnage fees. The following table summarizes the aggregate and average impacts on small business stationary sources.

Year	Fee Impact on Smaller Sources	Average Fee Impact
2008	$28,300	$330
2009	$35,300	$420
2010	$42,300	$500
2011	$49,200	$580

Currently, facilities are not required to provide the data (e.g., number of employees, annual sales) in their permit application that would enable DAQ to identify which Title V facilities meet the OSBM and/or Clean Air Act definition of "small business." DAQ will look into the possibility of including that data element in future permit applications.

Conclusion

Title V facilities subject to fee increases will experience total aggregate impacts of $3,750,000 in 2012, based on this economic analysis. This aggregate impact is considered substantial as defined in North Carolina's Administrative Procedures Act in NC *§ 150B-21.4 Fiscal notes on rules*. The amendment to the Title V Annual Permit Fees in 15A NCAC 02Q .0203 will ensure that the North Carolina Title V Permit Program complies effectively with federal Clean Air Act requirements.

APPENDIX E

ORGANIZATION CHART EXPLANATION

The organization chart shown in this document lists all the positions authorized by State Personnel for the Division of Air Quality. Noting the requirement that all Title V work be funded by Title V fees, each employee is required to code his/her time sheet indicating the amount time spent on different functions. Accordingly, approximately 10% of the division's employees spend all of their time completing Title V tasks, and the other 90% of the staff will spend a portion of their time completing Title V tasks.

A work group established by the Division Director reviewed the work requirements of the Division's employees and determined that 138 FTE's are needed to complete Title V work on an annual basis.

Exhibit N

Title V Permit Program Annual Report

Keith Overcash, PE
Director, Division of Air Quality
December 19, 2007

Title V Permit Program

- Background
- Current status
- Fee increases

Title V Permit Program

- Refers to "Title V" of the Federal Clean Air Act of 1990
- Title V facilities are those which emit
  - 100 tons/year of regulated pollutants, or
  - 10 tons/year of any hazardous air pollutant, or
  - 25 tons/year of all hazardous air pollutants
- *Title V air permit program MUST be funded only by Title V permit fees*

Title V Permit Program

- North Carolina Clean Air Act Advisory Council, Final Report (1992)
  - Program is more than just issuing the initial permit, it includes all aspects of running the program
  - Air modeling, analyzing process change requests, inspections, responding to complaints, evaluating test results, monitoring, public participation, small business assistance, legal counsel

Authority for Title V Permit Fees

- NCGS § 143-215.3A authorizes fees
  - Set by the EMC, 15A NCAC 02Q .0203
- Statute allows a surplus balance
  - Compensate for temporary dips or delays in revenue streams
- Rebates offered to industry if surplus is too large

Title V Permit Program

- North Carolina has 300+ Title V facilities
  - Utilities (Duke Energy, Progress Energy)
  - Manufacturing facilities (Goodyear, Firestone, Triangle Brick, Blue Ridge Paper)
  - Other industrial sites (Nucor, PCS Phosphate)
  - Animal processing plants (Smithfield, Perdue)
  - Public landfills, universities, and hospitals
- Over 600 other facilities have accepted operating restrictions to opt out of the Title V program
  - Still permitted, but not subject to Title V

Title V Permit Program

- Fee structure
  - One-time permit application fee
    - Five-year renewals are no-cost
  - All Title V facilities
    - Annual flat basic permit fee
    - Annual variable tonnage fee
  - Certain Title V facilities, depending on geographical locale
    - Additional annual flat nonattainment area fee, applied in counties that do not attain the Federal air quality standards
  - Caps
    - Variable tonnage fee is capped at 4,000 tons per pollutant

Title V Permit Fees

- Fees were initially set in 1994
  - Annual inflation adjustment is allowed, but not always applied

Year	Tonnage Factor	Basic Permit Fee	Nonattainment Area Added Fee
1994	$14.63	$5,100	$2,600
2007	$18.10	$6,311	$3,297

Title V Program: Looming Deficits

- No Consumer Price Index (CPI) adjustment for a number of years, revenues were flat
- Expenses increased
  - Office space, utilities, other support costs
  - Recent legislative pay raises to employees
    - Zero appropriations
    - Must be met through permit fees
- Increase revenue or decrease expenses

Title V Program: Looming Deficits

- Workload is not decreasing
  - Growing state economy
  - Increasing regulatory demands
    - Tighter environmental standards (ozone, fine particles)
    - New issues (climate change)
- Maintain service to industry and public
  - Timely permit issuance
  - Timely response to concerns

Proposed Permit Fee Increases

- Discussed concept with affected industry this summer
- Took draft rule to the EMC in September
- Public hearing was held in November
- Anticipate that EMC will approve rules in January
- Fee increases would become effective in February/March

Proposed Fee Increases

Year	Tonnage Fee	Basic Permit Fee	Nonatt't Area Added
2007	$18.10	$6,311	$3,297
2008	$22.50	$6,500	$3,500
2009	$25.00	$6,500	$3,500
2010	$27.50	$6,500	$3,500
2011	$30.00	$6,500	$3,500
2012 and on	Ann.CPI	Ann.CPI	Ann.CPI

House Bill 1094 Pilot Project

2007 Annual Report to the North Carolina General Assembly

Terry L. Pierce, Director | Division of Environmental Health

Background

- Several counties experienced backlogs
- Increase in development – "building boom" – lead to favorable conditions for backlogs
- Cherokee County had largest backlog for Improvement Permits
  - 6 to 8 months waiting period
- Several solutions considered to address backlog
  - One proposed solution
    - Using licensed soil scientists to assist with permitting process

Proposal

- "Establish[ed] a pilot program to streamline the process for the issuance of an improvement permit or an authorization to construct for an on-site subsurface wastewater system in certain counties by authorizing local health departments, authorized agents of the Department of Environment and Natural Resources, and **licensed soil scientist to complete soil and site evaluations** in the participating counties."

Criteria for Selection

- A county must meet three criteria to participate in the pilot program:
  1. The population of the county must not exceed 25,000 according to the most recent federal decennial census.
  2. The county must have more than 900 applications for improvement permits or authorizations to construct that are pending before the local health department on the effective date of this act.
  3. The board of county commissioners and the local board of health for the county must both approve a resolution requesting to participate in the pilot program.

Process

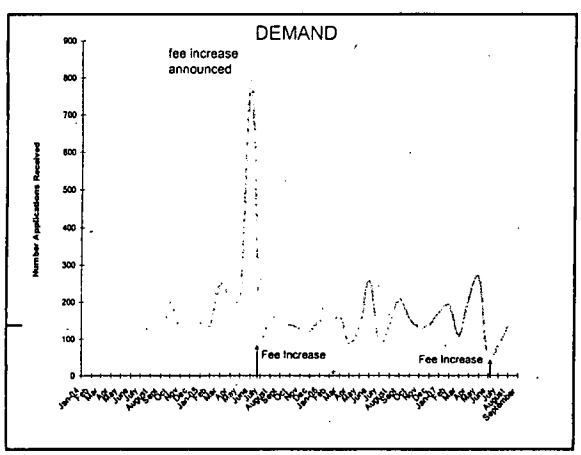
- Cherokee County request for Pilot Project
  - Resolutions by local boards in August 2006
- DEH staff provided:
  - Technical assistance
  - Orientation
  - Interpretation
- Licensed Soil Scientists (LSSs) required to:
  - Register with the health department
  - Provide proof of liability insurance

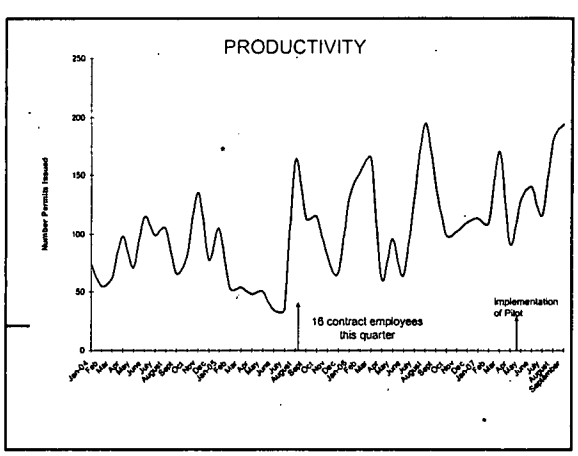
Process

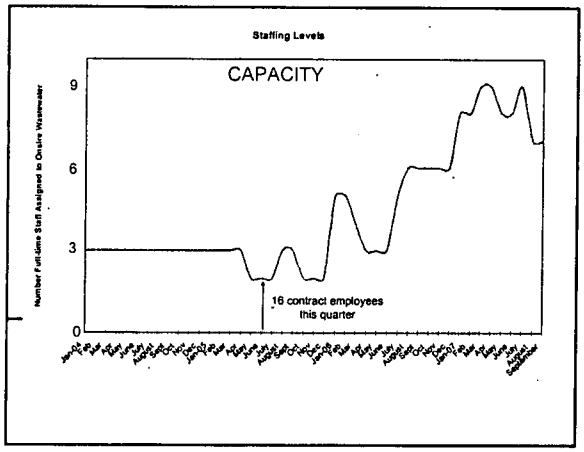
- Approved LSS may submit a completed soil and site evaluation to the health department.
- After determining the site review to be complete, the health department will issue an Improvement Permit (IP).
- The LSS must supply the appropriate information for an IP, and it must be signed and sealed by a licensed soil scientist.
- Upon review of application package for accuracy/completeness, the LHD issued an IP.

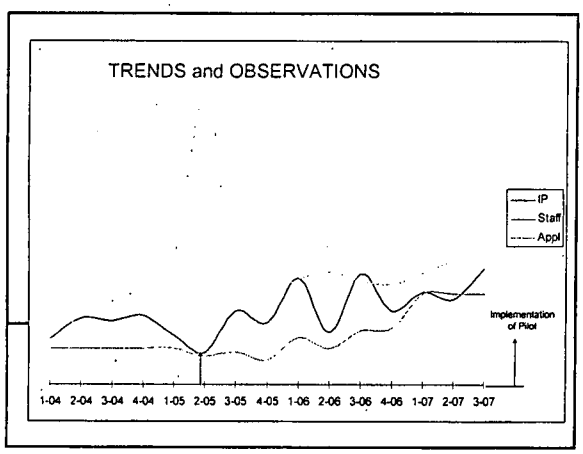
Findings

- Current backlog of applications for improvement permits = 450.
- Full-time Cherokee County employees assigned to on-site wastewater activities increased from three in 2004 to nine in 2007.
- The number of applications peaked in the first quarter of 2005 resulting in a dramatic backlog.
- The number of applications for improvement permits has dropped significantly during the summer of 2007.









Findings

Based on information provided by Cherokee County Health Department

- A total of 117 proposals were received since May 17, 2007.
- 56 proposals were permitted for installation.
- Six proposals were reviewed and are awaiting further information from the consultant.
- Eight of the permits were installed and received operation permits.

Concerns

- Staff limitations
  - Number of proposals being submitted by the LSSs is steadily rising
  - Only one health department LSS staffer was assigned to review work for pilot program

As the number of permits submitted by LSSs continues to rise, existing or new staff will be needed to review proposals for completion.

Evaluation – Criteria

- Three criteria (per legislation)
  i. "the program resulted in a reduction in the length of time improvement permits or authorizations to construct are pending in the participating counties;
  ii. the program resulted in increased system failures or other adverse impacts; and
  iii. the program resulted in new or increased environmental impacts."

Evaluation – Results

- Very few of the systems permitted through this pilot program have been installed.
- The few systems that have been installed have not been in use for a period sufficient to assess any failures or environmental impacts.

Recommendations

- Comments received from Cherokee County government officials.
  - DEH staff have considered suggestions
  - Would like to reevaluate in 2008

Recommendations

- More time is needed to determine the effectiveness of the pilot program as designed in HB 1094.
  - Only four months of data was collected.
- Participating LSSs should receive specific training on how to design, install, inspect and maintain septic systems through the many sources that provide this type of training.

Summary

- Administrative issues
  - Implementation was delayed
  - Clarification on legislation requirements
- Limited data resulting from implementation process
  - Only four months of data was collected this first year.

Summary

- Unable to determine the extent of backlog reduction attributed to the use of private LSSs
- Recommend continuation as currently implemented for at least a full year to determine its effectiveness

HOUSE BILL 1094 PILOT PROJECT

2007 Annual Report to the North Carolina General Assembly

Presented by:
Division of Environmental Health
N.C. Department of Environment and Natural Resources

December 19, 2007

Purpose:

Session Law 2006-136 (House Bill 1094), ratified on July 10, 2006 and approved on July 19, 2006 "establish[ed] a pilot program to streamline the process for the issuance of an improvement permit or an authorization to construct for an on-site subsurface wastewater system in certain counties by authorizing local health departments, authorized agents of the Department of Environment and Natural Resources, and licensed soil scientist to complete soil and site evaluations in the participating counties."

Background and Process:

The law was passed to allow for the use of private licensed soil scientists (LSSs) to help reduce the backlog of septic system permit applications in participating counties. As the basis of HB 1094, a county must meet three criteria to participate in the pilot program:

1. The population of the county must not exceed 25,000 according to the most recent federal decennial census.
2. The county must have more than 900 applications for improvement permits or authorizations to construct that are pending before the local health department on the effective date of this act.
3. The board of county commissioners and the local board of health for the county must both approve a resolution requesting to participate in the pilot program.

The only county which met these three criteria following the legislation's passage was Cherokee County. Pursuant to Criteria 3, the local board of health approved a resolution on Aug. 14, 2006, and the Cherokee County Commissioners passed a resolution on Aug. 7, 2006.

The Department of Environment and Natural Resources' Division of Environmental Health On-site Water Protection Section staff was assigned the responsibility of providing an orientation for LSSs and local health department employees. The section's staff would also provide interpretation and technical assistance to the local health department and the LSS in accordance with 15A NCAC 18A .1964.

As mandated for establishing this pilot project, licensed soil scientists were required to register with the health department prior to submitting completed soil and site evaluations. The Cherokee County Health Department was required to maintain a list of registered LSSs as the participating county. All licensed soil scientists must maintain licensure in accordance with G. S. 89F – 3.

All licensed soil scientists registered must have in force errors and omissions coverage or other appropriate liability insurance with limits of not less than one million dollars per claim and shall remain in force for at least six years after the date the improvement permit is issued. Participating LSSs are required to submit proof of insurance to the county health department on an annual basis.

Under the guidelines set forth in HB 1094, an approved LSS may submit a completed soil and site evaluation to the health department. After determining the site review to be complete, the health department issues an Improvement Permit (IP). The LSS is required to supply the appropriate information for an IP, and it must be signed and sealed by a licensed soil scientist in accordance with G.S. 89C, 89E or 89F. The application package included:

1. Application. A complete application, in accordance with .1937 (d), provided by the county must be submitted.
2. Soil/Site Evaluation for On-Site Wastewater System. An LSS must submit a completed 'soil/site evaluation for on-site wastewater system form,' which is provided by the county. The form shall include documentation as required in: 130A-335 (e), 15A NCAC 18A. 1939, .1955 and SL 2006-136, Section 2.(d). Documentation must also include any additional information needed by the local health department to issue an improvement permit and an authorization to construct (AC), including but not limited to, trench length and maximum trench depth.
3. Site Plan as defined in 130A.334 (13a).

Once the health department received the application package from a LSS, health department staff reviewed the application for completeness and accuracy. The health department staff has the ability to deny an improvement permit for any application that was incomplete or inaccurate. If the documentation was complete and accurate, the local health department issued an improvement permit, which must bear a statement in accordance with SL 2006-136, Section 2. (g).

All application packages submitted by a LSS and all improvement permits issued based upon work performed by a licensed soil scientist are tracked by the local health department in order to determine the effectiveness of the pilot program.

Initial Findings:

As reported by the Cherokee County Health Department, LSSs from two companies were approved to participate in the 1094 Program in April 2007, and a third company was approved in July of 2007.

Implementation of the project was significantly delayed while the method of obtaining proper liability insurance coverage for the LSSs was pursued. The law calls for six years of coverage after the permit is issued with the required amount of coverage being $1 million per claim. The Cherokee County Attorney worked with the state's Attorney General's Office to develop an affidavit by which the LSS could agree to carry a sufficient policy every year for six years after the permit was issued rather than have to carry six years of insurance in advance. This issue was not resolved until March 2007.

Different interpretations as to the meaning of the law also led to delays in implementation. Division and health department staff worked together with agency attorneys to develop clear explanations and guidance regarding the liability issues outlined in the legislation.

Other delays were the result of planning and providing orientation for health department staff and LSSs and for developing appropriate forms and documentation required for successful project completion.

Many of the initial proposals submitted were for systems that would be installed in off-site easements. The complicated nature of the submittals, along with newness of the program, resulted in only 25 percent of LSS proposals being initially permitted. Time needed to review the

proposals and write the permits took longer for the same reasons. The inexperience of the reviewer and a lack of county staff to review proposals also caused delays. The health department developed a comprehensive review form; however, even with these improvements, approximately 50 percent of the proposals could be permitted upon initial review.

Based on information provided by Cherokee County Health Department staff and the Division of Environmental Health staff, the following occurred as of Aug. 31, 2007.

- A total of 117 proposals were received since May 17, 2007.
- A total of 56 proposals were permitted for installation.
- Six proposals were reviewed and are awaiting further information from the consultant.
- Eight of the permits were installed and received operation permits.
- Current backlog of applications for improvement permits is approximately 450.

Full-time employees assigned to on-site wastewater activities increased from three in 2004 to nine in 2007, and the number of applications peaked in the first quarter of 2005 resulting in a dramatic backlog. The number of applications for improvement permits has dropped significantly during the summer of 2007.

Concerns:

The number of proposals being submitted by the LSSs to the local health department is steadily rising, which is a concern to both the health department and the Division of Environmental Health. The large amount of review work during this pilot program was assigned to only one health department employee. As the number of permits submitted by LSSs continues to rise, existing or new staff will be needed to review proposals for completion. Staff, who would be used to otherwise issue permits, may be pulled out of the field to perform proposal reviews, resulting in a greater backlog of permits.

Evaluation:

According to HB 1094, section 3: "In order to determine the effectiveness of the pilot program, the Department of Environment and Natural Resources shall evaluate whether:

(i) the program resulted in a reduction in the length of time improvement permits or authorizations to construct are pending in the participating counties;
(ii) the program resulted in increased system failures or other adverse impacts; and
(iii) the program resulted in new or increased environmental impacts."

Very few of the systems permitted through this pilot program have been installed. The few systems that have been installed have not been in use for a period sufficient to assess any failures or environmental impacts.

Recommendations:

The Division of Environmental Health proposes the following as recommendations for continuation of the pilot.

1. More time is needed to determine the effectiveness of the pilot program as designed in HB 1094. Because package proposals were not submitted to the Cherokee County Health Department until May, the limited duration of the program resulted in only four months of data being collected.

2. Division staff will continue to provide orientation for LSSs participating in the pilot program. Participating LSSs should receive specific training on how to design, install, inspect and maintain septic systems through the many sources that provide this type of training.

The Division of Environmental Health has received comments and suggestions from Cherokee County government officials to expand and modify this pilot (attachments A1 and A2). Division staff has considered the comments proposed by county officials.

Being that the pilot program has only been in effect for four months, division staff believe that it would be premature to take any action at this time. However, it is recommended that the Cherokee County Pilot Project be extended for another year as currently implemented. At the end of this year, the Division of Environmental Health will reevaluate the above-referenced Cherokee County recommendations.

Summary:

It was May, 2007 before package proposals were submitted to the Cherokee County Health Department, and the limited duration of the program resulted in only four months of data being collected. The short duration reflected above was not sufficient to determine if the use of private LSSs resulted in a significant reduction of length of time improvement permits and authorizations to construct were pending within Cherokee County. The actual duration of proposal submission and approval was limited this year by many administrative aspects that needed to be resolved prior to submission. The time it took to implement the plan within Cherokee County and receive clarification on several interpretation issues limited the ability of the program to analyze reductions in permit wait time or increases in system failures or other adverse impacts. The division does, in fact, recommend for the future implementation of the pilot program that private LSSs who participate in the pilot program receive specific training from outside training sources on how to design, install, inspect and maintain septic systems.

In summary, the Division of Environmental Health suggests that the pilot continues as currently implemented for a full year to determine its effectiveness as designed in HB 1094.

Terry L. Pierce, Director
DENR Division of Environmental Health
1630 Mail Service Center
Raleigh, NC 27699-1630

Dear Mr. Pierce:

At the September 17, 2007 Board meeting of the Cherokee County Commissioners Stuart Black LSS, RS presented the HB 1094 Annual Report as presented to the Cherokee County Board of Health and prepared for the Environmental Review Commission in accordance with HB 1094. The Board of Commissioners unanimously endorsed the report for your consideration and reporting to the General Assembly. The Board also encourages the NC Legislature and DENR to take prompt action on the following points:

1. To avoid delays and keep liability with the LSS, he/she should have the responsibility to do the Operation Permits for the IP/AC's that are issued based upon his/her 1094 proposals. That way, field changes could be instantaneous and all liability would belong to the LSS.

2. The LSS's that participate in this program should receive specific training on how to design, install, inspect, and maintain septic systems. Perhaps this should be a separate certification similar to the RS that the EHS's must hold.

3. The NC On-Site Wastewater Section should be responsible for reviewing the LSS's work for quality assurance much the same as they do for EHS's.

4. This pilot program should be tried in other counties that do not have the backlog problems that Cherokee County has. This would give a comparison basis in a "normal" county or a control study.

Sincerely,

Jonathan Dickey

Jonathan Dickey, Chairman
Cherokee County Board of Commissioners

N.C. Wastewater Discharge Elimination Program

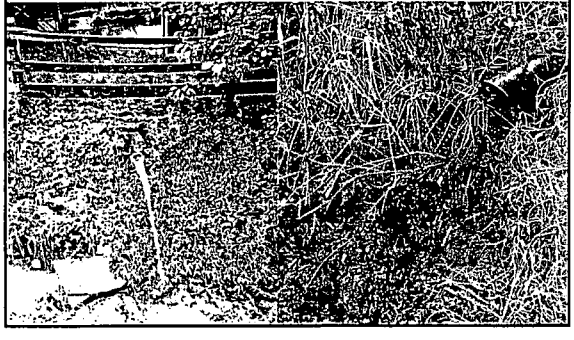
2007 Annual Report to the
North Carolina General Assembly

Walter T. Haven, P.G.

Program Description

- Established pursuant to S.L. 1996-18es2, Section 27.26
- Identify and eliminate discharges from straight pipes and failing septic systems to land surfaces and streams
- Varied funding sources including state appropriations

Examples



Program Accomplishments – 1997 to present

- Five survey projects conducted within first four years (projects are county or basin wide)
- 17 survey projects conducted since January 2002
  - Approximately 11,336 homes visited
  - 1,335 violations were identified

Program Accomplishments – 1997 to present

- New policy implemented in 2006
  - Allowed WaDE personnel to issue repair permits on behalf of the counties
  - Increased the rate that violations are corrected by 44 percent since 2006.
- Nearly 51 percent of all violations identified since 2002 have been corrected with many repair permits having been issued and awaiting system installation.

Program Accomplishments – 1997 to present

- Table 1 contains the WaDE Program statistics for January 2002 through September 2007.

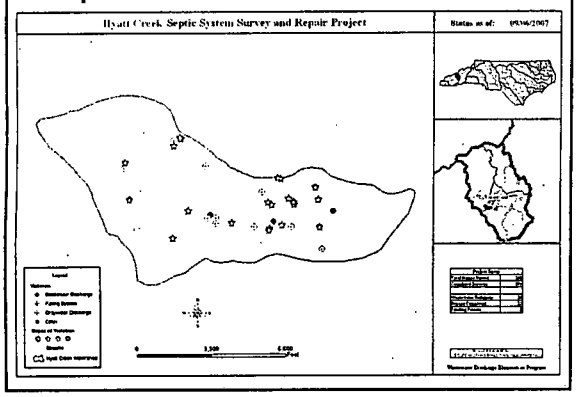
Results	
Total Homes Visited	11,336
Completed Surveys	6,945
Violations	1,335*
Repair Violations Corrected	
Repairs Completed	680*

*These totals include data from the referral program.

2006-2007 Program Overview

- Certified Intern Training (CIT) authorized agents of the state to assist counties with program and permitting.
- Limited to home revisits regarding existing violations
- Haywood Waterways Collaboration to address sedimentation, bank erosion, and bacteria with DEH, DWQ, DOT, Wildlife Resources, EPA, etc.
- Swannanoa River collaborative efforts and septic discharge – in development
- Database and GIS update – tracking and maintenance now in Asheville

Output of GIS Database



Future Directions

- Permanent staff
- WaDE Program expansion into Catawba County
- Statewide expansion and support
  - Geographical scope
  - Impact of straight-piping – both public health and environmental impacts

Discussion

Walter T. Haven, P.G.
Private Water Supply Branch Head
Division of Environmental Health
