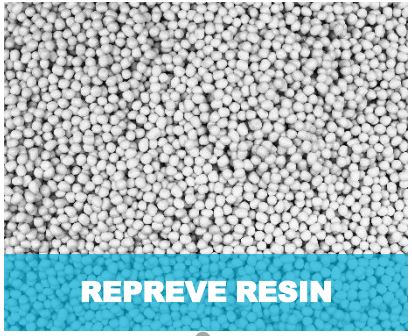
REPREVE POLYESTER PROCESS

Post-consumer waste is transformed into REPREVE through a four step process.

Post-consumer bottles are recycled

Bottled are washed and chopped into flake



Bottle flake is melted and formed into resin

Resin is melted and made into polyester yarn

ENVIRONMENTAL IMPACT

UNIFI® completed a third party reviewed, cradle-to-UNIFI gate LCA in 2023 focusing on multiple natural UNIFI products and supply chains to determine the savings REPREVE® has compared to UNIFI's virgin polyester.

1.24 BILLION

By producing REPREVE vs. UNIFI virgin polyester, UNIFI avoided 1,240,000,000 kilograms of carbon dioxide equivalents.

40 BILLION

REPREVE has diverted over 40,000,000,000 bottles from landfills and waste streams.

6.08 BILLION

REPREVE has conserved over 6,080,000,000 gallons of water.

These calculations are based on UNIFI's cradle-to-gate LCA completed in 2023, which was independently produced based on ISO 14040 and 14044 and third party reviewed according to ISO 14044 following ISO 14071.
